America: Mr. Churchill's Tribute

The United States of America and the great part it has been playing in achieving success in different theatres of war formed a considerable portion of Mr. Churchill's masterly review of the war situation in the House of Commons on September 8. Mr. Churchill referred to the successful action off the Midway Island and how it was followed by the occupation of Guadalcanar, Tulagi and other islands in the Solomons by our American allies, with the active support of Australian forces. The Japanese attacks on Milne Bay have been frustrated by the American and Australian forces. Drawing attention to the Allies' growing predominance in air and America's contribution to it, Mr. Churchill said:

"The United States daylight-bombing is a new and increasingly important factor, and there is no doubt, both in the accuracy of high level aim and in the mutually defensive power, new possibilities of air warfare are being opened by Americans and their Flying Fortresses."

In July last, very important consultations took place in Britain, when President Roosevelt sent a "most important" military mission. The mission consisted of General Marshall, head of the United States Army, Admiral King, head of the Navy, and Mr. Harry Hopkins, the President's personal representative, and for a period of ten days, "the whole field of war was explored." Referring to this conference, Mr. Churchill said:

"Decisions of importance were taken affecting the whole future of the general conduct of our operations, not only in Europe, but throughout the world. Complete agreement was reached covering the whole field of war in every part of the world and the necessary productive and administrative measures."

In March last, Mr. Churchill had asked President Roosevelt to loan Britain sufficient shipping to transport additional 40 or 50 thousand men to the Middle East, with a view to

(Continued on page 4.)

ACKNOWLEDGMENT

THE Editor expresses his special thanks to the contributors of certain of the anonymous articles published in this Issue. Readers will doubtless count themselves fortunate in having certain aspects of the efforts and intention of the United States of America so vividly presented by eminent citizens of that great country.

The Editor records his thanks to the American Consulate in Madras for many of the excellent pictures in this Number.

PRAYER OF UNITED RELIGIONS. On Sunday, September 6, a unique function took place in the Victoria Public Hall, Madras. Leaders of different religious faiths united on a common platform to pray for the success of the Allies against the forces of evil. Their Excellencies Sir Arthur and Lady Hope were present at the function.

Common Prayer

[Contributed]

THERE is a famous Book of it, and now we have had a most notable evening of it. In the Book we were bidden, with the majestic insularity of a by-gone age, to commend to God's mercy "all Jews, Turks, Infidels and Hereticks." But on Sunday evening last, at the Victoria Public Hall we did not pray so much for them, as with them. The 'Turks' of the occasion were not those Saracens whom Europe once dreaded, but they were their descendent co-religionists, sons of mighty, changeless, and democratic Islam; 'Infidels' was perhaps an ignorant Tudor generic for the ancestors of those Hindus and Parsees and Buddhists who worshipped with us on Sunday evening; Jews we have always with us—proud, patient and, these days, pitiful; and as for the "Hereticks, there were Tom, Dick, Harry and myself—like the rest to be awed, uplifted, and comforted.

Some may suggest that the success of the National War Front's appeal to each creed and sect, dharma and philosophy of Madras—Shaivites and Vaishnavites, Catholics and

Protestants, Muslims, and Theosophists, Parsees and Buddhists—to share an hour of thanksgiving and re-dedication of self, was merely a manifestation of a growing urge among all with any faith in humanity (as contrasted with moronism)—a simple and piteous impulse to Togetherness, in a common admission of man's littleness in the face of cosmic catastrophe, and a common call for aid from the Most-High.

Whatever be the truth, there passed an hour from which all may draw their own moral. A Catholic prelate next to a Parsee priest with a Theosophist on his other hand; a turbaned Moulvi seated between a Sankarachari and a Chinese; and in the midst the central figure of our political life and his wife—themselves of differing Christian persuasion—standing with bent heads for prayer in six different languages, sitting for the sweetly-sung devotional music which intersected our orisons, and below and before them a massed crowd of polyglot, poly-credulous humanity, all filled—beyond reasonable doubt—with a sense of unity under, sacrifice for, and victorious faith in "whatever Gods there be"—they engraved on one mind at least a picture unlikely to be forgotten.

RUNNING COMMENTARY

(Continued from page 2.)

having a force to which we could turn in various theatres in which danger might develop. Referring to America's great help, Mr. Churchill said:

"At a critical moment, we had round the Cape a very large and well-equipped force which could be directed immediately to Egypt. A broadening stream of replacements of equipment, tanks, guns and vehicles of all kinds have also been flowing from this country and the United States to the Middle East."

The hour of liberation and retribution In conclusion, Mr. Churchill made another reference to America, he said:

"The hour of liberation strikes. It will also be the hour of retribution. I wish particularly to identify the British Government and the Commons with the solemn words of President Roosevelt that those who are guilty of Nazi crimes will have to stand before tribunals in every land where their atrocities have been committed, in order that an indelible warning may be given to future ages."

There are already indications, thanks mainly to the United States of America and its constant flow of supplies to the Allies right from the beginning of the war, that the day of this warning is coming nearer and nearer and the hour of annihilation of Hitlerism is approaching.

Britain's War Expenditure Introducing the vote of credit for £1,000 millions in the House of Commons on September 9th, Sir Kingsley Wood, the Chancellor of the Exchequer, said that during recent weeks Britain's average

expenditure amounted to £12½ millions daily, which represented an increase of £½ million daily over the figures for June. The increase of expenditure over the last two years, he said, was an eloquent testimony to the growing intensity of munitions production. Britain's total budget expenditure has grown from £3,884 millions in 1941-41 to the present estimate of £5,286 millions for the current year. During the last three years of war Britain has spent 10 million pounds. The total expenditure including the cost of debt and the normal peace time services amounts to £12,100 millions, forty per cent of which is met out of taxation. Sir Kingsley Wood said:

"We have been able hitherto to finance the war on sound lines, and if we proceed with equal circumspection in future and continue to husband our financial strength we shall face the task before us with confidence."

An Economic Miracle It is of interest to examine how the British Government have been able to husband their financial strength and economic resources and carry on this war. In 1938 the Government used only one-fifth of the national resources for war, leaving four-fifths for personal consumption. But within a period of three years, Britain achieved an economic miracle, and more than half the country's resources were turned into various means of winning the war. Direct control of labour, raw material, and industrial capacity by the Government prevented people from making things which the nation did not essentially need. This was further supplemented by increased taxation and rationing. On December 2, 1941, Mr. Churchill said:

"Britain had reached, at the twenty-seventh month of the war, the same employment of women in industry, services and forces as in the forty-eighth month of the last war. . . . We have a million more men in munition industries at this moment than at the end of the last war."

(Continued on page 8.)

Mr. CHURCHILL ON INDIA

"The course of events in India has been improving and is on the whole reassuring. The broad principles of the Declaration made by the British Government which formed the basis of the mission of the Lord Privy Seal, Sir Stafford Cripps, to India must be taken as representing the settled policy of the British Crown and Parliament. These principles stand in their full scope and integrity. No one can add to them, and no one can take anything away."

—Mr. CHURCHILL, in a statement on India in the House of Commons, on September 10.

President Roosevelt's Production Program is not Wishful Thinking

WHEN President Roosevelt announced to the people of the United States in his annual message to the Congress on January 6, 1942 that the production goal for the year 1942 was 60,000 airplanes, 45,000 tanks, 20,000 anti-aircraft guns and 8,000,000 tons of merchant vessels, and that for the year 1943 this rate of production should be stepped up to 125,000 airplanes, 75,000 tanks, 35,000 anti-aircraft guns and 10,000,000 tons of merchant vessels, it sounded fantastic and almost beyond the productive powers of even so great an industrial nation as the United States.

Before answering the question as to how this program is progressing, it may be useful to go back a little time in recent history and to examine the position of the United States from the standpoint of war production in the summer of 1940.

Fortunately for the United States and for the free world, the President of the United States at the time of the fall of France happened to be Franklin Delano Roosevelt. President Roosevelt had no illusions and had foreseen the danger and menace to the rest of the world (including the United States) inherent in the aggressive policies of Nazi Germany and of Japan, long before these policies led to the outbreak of open warfare. He had done his best to lead and to show the people of the United States that the successful culmination of these aggressive policies constituted a real and direct menace to the United States.

GROWTH OF NAVAL STRENGTH

A start had been made. For instance the Navy, which had seen practically no new building since the early twenties, received new life in the form of increased appropriations, largely due to the President's influence, which resulted in the modernization of numerous vessels, and the keels of several new ships were laid during the President's first term 1933-1937. The tempo of naval strength grew considerably in the President's second term, and this program has recently borne fruit in the launching last year and this of the new battleships *Massachusetts*, *Indiana*, *Alabama*, *South Dakota* and *Iowa*. Several new aircraft carriers have also recently joined the fleet.

But to go back to the dark days of June 1940 and the fall of France. The President in a radio talk to the nation explained just what this might mean to the individual American if the nation did not forthwith prepare to meet the menace, seeing that in mid-1940, in spite of war orders from Great

PRESIDENT ROOSEVELT

NEW AMERICAN SUBMARINE LAUNCHED. Day after day ships of all kinds take the water as they are launched from United States Navy yards to aid the United Nations' war effort. Photo Shows Submarine U.S.S. "Runner" hitting the water after sliding down the ways at the Portsmouth Navy yard, in the United States recently.

Britain and France, the United States was not on a real war production basis and only a few aircraft factories and machine tool plants were engaged on war orders.

In that year—1940—for the first time in the peace time history of the United States a conscription law was passed and the young men who were selected cheerfully went to camp to prepare themselves for any eventuality while the production of airplanes, guns, munitions of war and merchant shipping was commenced on a large scale.

LEASE-LEND BILL

If the transfer of 50 destroyers from the United States to the British Navy, at the instigation of the President in September 1940, did not convince the people where their interests in this war lay, then the passage of the Lease-Lend Bill in January 1941, again at the instance of the President, left no room for doubt. With the passing of this measure war production of all kinds received a tremendous impetus and new factories were speedily erected all over the country for the manufacture of airplanes, guns, shells, explosives and all the other accoutrements of war. New shipyards and shipways were built, for it was recognized that without the means to carry the production of the arms factories to the fighting fronts, all the rest of the effort was useless.

Thus, and thanks mainly to the foresight of the President, it came about that the United States was not entirely unprepared when the attack on Pearl Harbour brought the United States into the war on a full-fledged scale. The Pearl Harbour attack on December 7, 1941 served to galvanize the whole nation into action. People who had been isolationists before were isolationists no longer and the war efforts which had hitherto been made were completely dwarfed by the program laid down by the President in his message to the Congress on January 6, 1942.

And now how is that program being carried out and will it actually achieve the goal laid down by the President? Owing to the necessity for military secrecy it is impossible to give exact figures and information is not entirely up to date but it can be stated, and with authority, that the goal for 1942 will be met and in some categories actually surpassed.

MANUFACTURE OF "JEEPS"

The automobile factories in the Detroit area, the supreme example of American mass production, are now entirely converted to war needs. Every motor car factory is on an all-out war basis, working 24 hours a day, producing among other things tanks, airplane engines, airplane fuselages, guns, shells and other munitions of war, even pre-fabricated parts of ships, and, of course, military vehicles of all kinds, including the famous "jeeps," the army all-purpose vehicle, by the thousands.

Airplane production in July and August was at the rate of 5,000 monthly. Mr. Henry Ford, in what only a few months ago was an open field near Detroit, is now turning out complete bombing planes in a factory, said to be the largest one-storey building in the world, which covers an area over half a mile long by almost a quarter of a mile in width. This is the famous Willow Run plant, which when in full production will employ 90,000 people, a large percentage of them women and is expected to turn out a four-motored bomber every hour, operating on a 24-hour basis.

(Continued on page 9.)

AMERICAN ANTI-AIRCRAFT GUNNERS ON ATLANTIC PATROL. Photo shows: Anti-aircraft gunners on a warship attached to a unit of the United States Atlantic Fleet, at their stations while on patrol duty of the Atlantic shipping lanes.

Tribute to American C.-in-C.

Admiral King, the United States Navy Commander-in-Chief, was largely responsible for the planning and determination of the Allied blows against Japanese. There had not been adequate appreciation of the boldness and ingenuity of the recent northern thrusts of the United States and Australian forces over a great distance towards the Solomons.

—DR. EVATT, Australian Commonwealth Minister for External Affairs, in the House of Representatives, on 4th Sept.

AMERICAN PRODUCTION

A scene in a giant war factory in the U.S. Midwest, now turning out all-welded tanks in mass on three production lines. Lines of freight cars loaded with tanks wrapped in protective covering now leave the plant on a special track almost daily. The tanks are the new M-4's, called the "General Lees" by the British who already are using them in Africa. Among the principal developments in the M-4 tank over its predecessors is increased fire power and improved location of the 75-mm. gun in a turret that revolves in a complete circle. In addition, it is highly manoeuvrable and is protected by a tough hide of heavy armor plate. Photo shows: Laying the track for the M-4 which is one of the most spectacular operations in the manufacture of the 30-ton giant.

A train loaded with the latest type U.S. tank—the 30-ton M-4, pulls out of an arsenal in the Middle West. Now in mass production, the M-4 carries a 75-mm. cannon on a revolving turret, enabling it to fire in all directions.

RUNNING COMMENTARY

(Continued from page 4.)

Britain's Increased Production A systematic scheme was put into operation by which half the nation would be in arms and the other half at the battle stations, and the success of this plan was made clear by Mr. Ernest Bevin in a recent speech. Mr. Bevin said that no country in the world had ever been so fully organized at such a pitch of productive intensity as Britain was in 1942. British production had to go on under great difficulties as the *Luftwaffe* rained its bombs mercilessly as much on schools and hospitals as on factories. One of the methods by which production was carried on despite handicaps was by "dispersing" the factories. Mr. Churchill said in December 1941:

"A great Bristol firm was dispersed into 48 sub-centres. I can give instances of dispersion to 20, 30, or 40 sub-centres."

In December of the previous year (1940), Lord Beaverbrook told the British people:

"In four months from August to November, the output of aircraft in London was double the output of last year."

Britain's armament production has thus been rising by a phenomenal degree. Eighty-seven per cent of the Royal Air Force planes operating from home bases and 75 per cent at bases abroad are British-made. In 1941 nearly 10,000 planes were sent by Britain to battle-fields abroad, which figure represents four times the number it imported. Everyone of the 1,000 bombers employed in the colossal raid on Cologne in May 1942 was British-made.

Equally outstanding is Britain's record of ammunition output. Forty thousand big guns with 25 million rounds of ammunition and millions of small arms are produced every year. How great an achievement this is can be realized when one remembers Mr. Churchill's vivid description of people fainting in their lathes after Dunkirk to produce the goods Britain needed just to exist. Britain now produces twice as many tanks as in August 1941, three times as many as in February 1941, and five times as many as in August 1940.

Britain's Life-line and Hitler's "Rattle-snakes" As regards shipping which is Britain's life-line, all of Hitler's "Atlantic rattle-snakes" have not been able to starve Britain or check her shipping programme. In

1941 Britain launched over a million and a quarter ton of shipping. The naval tonnage produced in the last quarter of 1941 was four times as great as that of the last quarter before

the war, and the merchant tonnage was twice as great. In June 1942, Mr. Lyttelton said:

"We have increased our production of all war-weapons as a whole by 100 per cent during the last twelve months alone."

Production has increased, but there has been severe rationing of almost all foods, which the British people have willingly accepted. No one can buy more than two ounces of butter or more than two ounces of tea a week, and fruits are almost unobtainable. Britain however is the only country in a total war that has managed to increase its vital rations as years passed by. Four million extra acres of land are under cultivation and 120,000 tractors have made Britain the most highly mechanized agricultural country in the world. Britain is producing two-thirds of her needs and more than 5½ million families are growing their own vegetables in gardens. The acreage under wheat is greater than that of the last pre-war year by more than one-third, potato by more than two-thirds, oats by about twice and farm vegetables by about one-third.

As regards rationing of clothing, each person is given 66 coupons to cover the entire year's supply of clothes. A man's suit takes 26 coupons and a woman's dress 11, but such restrictions have not made Britain after three years of war as badly off as Nazi-ruled Norway, where a suit contains 75 per cent rayon and cotton, or as Germany where a thirty-shilling shirt is made up of cotton waste. The present

(Continued on page 10.)

TECHNICAL TRAINING

It is officially stated that the total number of seats now provided under the Technical Training Scheme of the Government of India is 41,407. On July 31, 1942, 31,400 men were actually under training, and up to the same date 15,000 trainees had passed out from training centres into the technical branches of the Services and war factories. The total number trained or under training on July 31 was therefore 46,400.

There are at present 353 training centres, of which 49 with a capacity of 5,403 seats are in Indian States. The Punjab has so far produced the largest number of trained men, the number exceeding 4,000, while MADRAS TAKES SECOND PLACE WITH 2,549, the United Provinces third place with 1,576 and Bengal fourth place with 1,262. In the case of the Indian States, Mysore leads with 313 and is followed by Travancore with 259 and Hyderabad with 200. Cochin comes fourth with 151.

PRESIDENT ROOSEVELT'S PRODUCTION PROGRAM IS NOT WISHFUL THINKING.

(Continued from page 6.)

The production of explosives, shells, cartridges, rifles, light and heavy machine guns is up to or beyond schedule. So also are tanks of which improved models, based on experience gained by the British on the Libyan front, are now being manufactured.

And now what about cargo ships, perhaps the most crucial of all war supplies? We all know that the Nazi submarine campaign in American waters has taken a heavy toll of United Nations shipping since March 1942. The latest information to hand is that launchings in August were greater than sinkings during that month. In July 71 cargo ships and tankers with a tonnage of 790,300 were launched and in August 68 vessels of 753,600 total tons took the water. One shipyard launched 12 ships in August, and the average delivery time for cargo ships was 119 days in June as compared to 156 days in May. One west-coast shipyard launched a ship in 24 days from the time of keel laying, but this is, of course exceptional. One shipyard launched five ships in one day in August. The President's shipbuilding programme has been stepped up, so that not 18,000,000 tons will be built in 1942 and 1943 but 25,000,000 tons. And it will be done.

MORE PEOPLE ENGAGED IN WAR WORK.

Every month more people are working on war production. By the end of June 1942 there were 12,500,000 so engaged as compared to 6,900,000 on January 1. This figure will be stepped up as fast as the war industry can absorb them. Present plans call for 17,000,000 by the end of this year, and by the end of 1943 it is expected that 20,000,000 people, men and women, will be engaged full time on the war effort. This is, of course, exclusive of the nation's greatly augmented and steadily expanding Army and Navy and its spirit. Well, on July 4th, the nation's greatest holiday, thousands of workers celebrated by putting in a full day's work in the war factories!

In truth it can be said that great as the program outlined by the President is, it actually has no limits in figures. War production will be limited only by the ability of the nation to obtain the raw materials essential for manufacture. Chairman Donald Nelson of the War Production Board recently put the matter in a nut-shell when he said that we have the production problems licked; it now is only a question of feeding raw materials to the machine.

It seems, therefore, fitting to close this article with the observation of General Somervell, Chief of the Service of Supply of the United States Army, who referring to mechanized warfare remarked that "When Adolf Hitler put his army on wheels, he drove right down our alley!"

SHIPBUILDING IN U.S. Photo shows a completed war cargo carrier sliding down the ways to join the United Nations' fleet.

RUNNING COMMENTARY

(Continued from page 8.)

scheme has released about 750,000 workers from luxury production to war work and 300,000 tons of shipping for war purposes. Britain is, of course, not as well off as in peace-time, but no country fighting for existence and liberty can be better off. Even after the war is over, the same problems may continue to face the British people. Sir Kingsley Wood referred to this in his speech in the House of Commons. He said:

"The domestic problems we have to face after victory will, in the earlier post-war period, be very like the problems we have to face to-day. It will be necessary to maintain for some time a considerable measure of the war-time system of control."

Munich and After : Magenot Phase

Sir Kingsley Wood has referred to post-war reconstruction. Let us look back a little and see how Britain reconstructed itself when all the odds seemed against her. The first period up to May 1940 may be called the Magenot Phase. It is commonly dismissed nowadays as a period of inefficiency and complacency, which is not correct from the point of view of historical perspective. Britain's desire for peace was earnest and profound, and public opinion was sympathetic and favourable to the peace-palaver of the Nazi war-monger. Mr. Chamberlain said after Munich:

"I have no doubt, looking back, that my visit alone prevented an invasion for which everything was prepared."

SERVICE IN THE INDIAN AIR FORCE

Service in the Indian Air Force has now become even more attractive with the news that considerable increases in the rates of pay of airmen have been sanctioned by the Government of India.

These new rates of pay, which have effect from July 1, have been devised further to attract the educated boy of good family from the colleges. Formerly, pay on entering the Indian Air Force was Rs. 30 per month; now this has been doubled to Rs. 60 per month for recruits selected for training in skilled trades and to Rs. 40 per month for unskilled. There are other increases all round according to rank and trade. These rates increase as a trainee makes progress and passes his trade tests.

The new rates of pay are about equal to those paid in civilian jobs for men of similar age and attainments. But it should be noted that the serviceman gets such additional advantages as free rations, uniform, accommodation, medical attention, railway travel when going on leave, sports and pastimes.

Life in the Indian Air Force is a life free from the ordinary worries of civil life. There are no barriers of class, caste or community. Airmen who show ability and powers of leadership are selected for commissions from time to time. It is not a matter of seniority, but they may be selected at any time in their careers.

A large number of airmen have been commissioned and many more are being taken into the commissioned ranks. Increased rates of pay have also been sanctioned for married officers. These rates vary from Rs. 450 per month for an Acting Pilot Officer in the general duties branch to Rs. 930 per month for a Squadron Leader, general duties.

Full details of pay, as influenced by ranks, service and skill, in the various groups—there are six and a special section for air gunners—and particulars of enrolment, discipline, training, etc., can be obtained from technical recruiting officers or from the Recruiting Directorate, General Headquarters, Delhi.

But the world was soon rudely shaken out of its illusion, and Hitler overran the Continent and occupied one country after another till his bloodthirsty hordes were divided from England by a mere strip of water. In May 1940, Mr. Churchill said:

"It would be foolish to disguise the gravity of the hour. It would still be more foolish to lose heart and courage."

Then came the prologue to Britain's "finest hour"—Dunkirk, and Mr. Churchill told the British people on June 4:

"British losses have exceeded 30,000 in killed, wounded and missing, perhaps a third as many as were lost in the opening days of the battle of March 21, 1918. Losses in material were enormous . . . this equipment, the first fruits of what British Industry had to give is gone."

Then came the second innings—the Battle of London. Hitler speaking in Paris in September 1940, announced his impending arrival in London. He said:

"Whatever happens, England will be broken."

On September 11, Mr. Churchill said in a broadcast speech:

"A heavy full-scale invasion of this Island is being prepared. . . it may be launched now."

A systematic attempt was made to bomb and destroy London. London showed that it could "take it." The Battle of London cost Germany 883 planes and more than 2,500 airmen. Hitler failed to break the resistance of the British people. The honours of the second innings also went to Britain.

M-4 Tanks by the Trainload at Factory Built in six months : Photo shows the long assembly lines at M-4 tank factory.

Battle of Britain

The second period may be described as the Struggle for Survival. It began on August 8, 1940, when the *Luftwaffe* attacked convoys near the coast and in the Thames estuary. Ports and aerodromes on the coast were bombed, and Goebbels and his gang fixed August 15 as the date of invasion. On that day 400 planes attacked Portsmouth, but the Royal Air Force repulsed the attack. British fighters and anti-aircraft guns made the Nazis pay a heavy price for their intrusion. A neutral reporter said:

"The first innings is in favour of England."

2-A

Invasion of Egypt

In September 1940, Graziani began his invasion of Egypt, but he began to rest content with strengthening his position inside the frontier at Sidi Barrani. General Wavell took the initiative and launched an offensive with limited resources. Though the Italians were superior in numbers, they were driven from one position to another. By February 1941, ten Italian divisions were wiped out and Cyrenaica was cleared of all the Italians. Sir John Dill said about General Wavell:

"He gave us confidence when we needed it most."

In 1942, the Battle for Egypt is being fought on a much greater and fiercer scale. The object of Rommel's renewed offensive on May 26 was the winning of essential communications so as to shut off Russia from any aid from outside. By July 1, Rommel had taken Tobruk and reached El Alamein in Egypt, and Hitler was hoping that he could smash his way through the Caucasus and meet Rommel near Suez. But Stalingrad still stands, and Rommel has not been able to make much headway on land.

He has no doubt repeated his former successful attacks in the El Himeimat region, and chose to strike at the Allied southern flank at Gazala, with the object of breaking through, then wheeling round and encircling the Allied forces. But the offensive lasted barely 36 hours.

Allied strategy: Rommel's withdrawal Why was the battle broken off? Something must have gone wrong somewhere. What happened was that, owing to the soundness of

Allied strategy, Rommel failed to by-pass the Allied southern flank at El Himeimat, and has therefore partially withdrawn for the moment. Reports have it that he has fallen ill on account of the loss in action of General Bismarck, his right-hand man, and is shortly returning to Berlin. Referring to the position in Egypt in his review of the war situation in the House of Commons three days ago (September 8), Mr. Churchill said:

"We have in Egypt a very good, strong, well-equipped and resolute army barring further advance of the invader. I feel able to assure the House that they may be confident in our ability to maintain the successful defence of Egypt for several months ahead. I say for months, but I might say more. I am strengthened in this view by the results of the heavy fighting last week."

Heavy fighting there has no doubt been, but now all is quiet: Rommel has failed and is returning home, and Egypt has been held—but the lull on the Egyptian front now, it is obvious, is only of a temporary character.

AUXILIARY NURSING SERVICE

Recruitment to the General Service category of the Auxiliary Nursing Service, India, which had been suspended temporarily pending the revision of the terms and conditions of training, will be resumed from October next. Under the revised terms, candidates will receive a preliminary training for 3 to 9 months in certain selected civil hospitals throughout the country, provided their services are not required in the meantime for military duty. During training the candidates will be provided with free accommodation and board in the hospital and will receive a small personal allowance in addition.

The Lady District Superintendents of the St. John Ambulance Brigade Overseas will, as usual, act as the recruiting agents.

'XMAS AND NEW YEAR MAILS

On account of the present uncertain conditions created by the War, the public are advised to post their Christmas and New Year mails for the United Kingdom by the end of September 1942, a further allowance of about two weeks being made for other countries in Europe and America. The air-cum-sea service via Durban takes three to four weeks less, but owing to the load difficulty on planes, the public are requested to utilize the all-sea route for their Christmas and New Year mails.

If, however, Christmas and New Year greetings are sent by airgraph (to the countries to which this service is available) or by the all-air route to U.S.A. and Canada, they may be posted by the 15th November 1942.

How Cordell Hull's Lima Conference has borne fruit

MR. CORDELL HULL

ALTHOUGH the Pan-American ideal of co-operation and understanding between the twenty-one American Republics dates back to the latter years of the nineteenth century and numerous Pan-American conferences have been held in the past, it was not until the adoption by the United States of the Good Neighbour policy of President Roosevelt and Secretary of State Cordell Hull that these periodic conferences have really begun to engage the attention of the world at large. The reasons for this are plain, however, when one stops to consider what the policy of the United States towards its Latin American neighbours has become since the Roosevelt administration came to power in 1933. For the advent of Roosevelt and Cordell Hull marked the end of "dollar diplomacy" and saw the last traces of "the big stick" policy, i.e., the use of force to maintain peace and order in Latin America, vanish from the Pan-American scene.

The results of this new policy of mutual understanding were soon plain and if any further evidence of its success were needed it has been abundantly supplied by the war. At the Buenos Aires Conference of 1936 the American republics, including the United States, all agreed to consult with one another if the peace of the American continents should be threatened, and the Lima Conference of 1938 provided the machinery to make that agreement effective. The Panama Conference of Ministers held in September, 1939, at the time of the outbreak of the war in Europe, put this

machinery under test and found that it would work. Shortly after the fall of France, a second meeting of Ministers of Foreign Affairs of the American republics was held in Havana, Cuba, and lasted from July 21 to July 30, 1940. The importance of the conference was so evident that ten of the republics sent their ministers of foreign affairs in person. Secretary of State Hull represented the United States and in his opening address to the conference he emphasized the dangers to nations who rely for their safety upon a desire for peace and upon avoidance of provocation. As a means of protection, he urged a specific programme of economic co-operation, the eradication of alien propaganda, and the establishment of a collective trusteeship to be exercised in the name of all the American republics over any European colonies where the existing status was threatened by cession or transfer, such trusteeship to be designed to further the interests of all the American nations as well as the interest of the region in question and the original sovereignty to be restored or independence declared when the conditions should permit. Mr. Hull had in mind, of course, the execution of the Monroe Doctrine with regard to the Caribbean colonies of France, such as Martinique, French Guiana, and other islands in the Caribbean area. As the fate of Great Britain and the Netherlands was also in the balance at that time their colonies in the New World were also threatened by the developments of the war in Europe.

LATIN AMERICA JOINS THE WAR

With the spread of the war to most of the major countries of the world as well as many smaller ones, and with the active entry of the United States into the war following the Japanese attack on Pearl Harbour, the machinery which had been built up over the past few years was quickly put into operation. Of the twenty-six United Nations who signed the Joint Declaration on January 1, 1942, no less than nine were Latin American nations, all of whom had declared war on the Axis. Since that time two of the leading nations of Latin America, Mexico and Brazil have also declared war and have thereby joined the ranks of the United Nations in their fight against the forces of barbarism and darkness.

At the Third Conference of the Ministers of Foreign Affairs of the American Republics held at Rio de Janeiro, Brazil, in January 1942, Mexico's Minister of Foreign Affairs, Senor Ezequiel Padilla said, "The men who have fallen in Wake and the Philippines have not fallen only to defend the honor and sovereignty

of the United States; they have also fallen to defend the human liberties and the common destiny of America." How different these words sound from those of twenty-five years before when the United States was forced to keep valuable divisions along the Mexican border, divisions that could have been used much better in Europe to help throw back the German offensive in the West, and all because Mexico was at that time considered a probable enemy of the United States!

MORAL SOLIDARITY OF AMERICAN REPUBLICS.

What were the concrete results of the conference at Rio de Janeiro? A declaration was passed by all the twenty-one republics recommending that the Americas break with the Axis, a step which many of them had already taken of their own accord. The subsequent declarations of war on the Axis by Mexico and Brazil, while prompted largely by the ruthless and unlawful sinkings of Mexican and Brazilian ships by U-boats in American waters, was also a fulfilment of this pledge, and showed the world still more clearly, that the moral solidarity of the American Republics was greater than ever.

The assistance now being rendered to the United States and to the other United Nations outside of Latin America by the nations of Latin America is of very great extent. Huge quantities of vital strategic materials are being supplied to the factories of the United States and Great Britain. Naval and air co-operation in defeating the Axis U-boat campaign in the Atlantic have been quickly furnished, and the entire resources and manpower of these nations are committed to the complete overthrow of the Axis. Although not sufficiently industrialized to train and equip highly mechanized or mobile armies of the type necessary in modern war, these nations by their important contributions of raw materials to the arsenals of the United Nations are helping to release American and British manpower for service overseas.

SUCCESS OF PAN-AMERICAN POLICY

The record of success in Pan-American relations which has resulted from President Roosevelt's wise and far-seeing policy cannot be gainsaid, no matter how hard Axis propagandists try to sow the seeds of discord among the twenty-one American nations. Their propaganda seed will fall on barren ground! Speaking with frankness and conviction, Sumner Welles, the United States Under Secretary of State, opened the session of the meeting at Rio de Janeiro, on January 15, 1942, with these words: "The peoples of the Americas face to-day the greatest danger which they have ever confronted since they won their independence. We are meeting together under the terms, and in the spirit, of inter-American agreements to take counsel as to the course which our governments should take under the shadow of this dire threat to our continued existence as free peoples. We meet as the

representatives of nations which in former times have had their differences and controversies. But I believe that I may speak for all of us, and not least in the name of my own Government, when I say that we all of us have learned by our past errors of omission and commission. We are assembled as representatives of the 21 sovereign and independent republics of the American Continents, now welded together as no continents have ever before been united in history, by our faith in the ties of mutual trust and of reciprocal inter-dependence which bind us and, most of all, by our common devotion to the great cause of democracy and of human liberty to which our New World is dedicated." The general acceptance of these sentiments by the nations of the Americas has been borne out by their deeds!

American Machine-Tools

THE United States is now manufacturing in a few days as many machine-tools as were manufactured in a whole year ten years ago. It is estimated that industry will produce more than 200,000 during 1942, which has already beaten the 1941 record output.

—MR. RALPH BARD, Assistant Secretary of Navy, in a speech on 4th Sept.

American Analyst's View

"The week ending September 4 looked a little better, but we are still a long way from victory and every American should plan his affairs for a minimum of five years' war."

—REAR-ADMIRAL YATES, United States Naval Analyst, on 6th Sept.

The Importance of India to America Industrially and Strategically

Mr. WENDELL WILLKIE—the American leader, who is expected to visit India in the course of his world tour as President Roosevelt's unofficial ambassador of goodwill.

IN this world-wide struggle or "global war," as President Roosevelt has described it, every one of the United Nations is important to the others, strategically as well as industrially. This is true regardless of whether the various nations are near neighbours or separated from each other by great distances. A perfect example of the truth of the above statement is to be found in the relation existing between India and America in this total war.

In peace time India's principal exports to the United States consisted of raw and manufactured jute, hides and skins, lac, raw cotton and raw wool, to mention only a few. Now that the United States is interested primarily in war materials, some of which are of great strategic importance, such as mica, manganese, various mineral sands, vegetable oils, etc., the character of this trade has changed somewhat, but many of the products exported in great quantities in normal times are also of vital importance in war. One of these is jute, and without India's jute the United States, which is by far the largest purchaser of this product, would have to turn to more expensive and less suitable substitutes. This is only one instance of India's industrial importance to the United States, but it could be many times multiplied.

STRATEGIC MATERIALS FROM INDIA

It may be pertinent here to give some indication of the importance of India as a supplier of strategic materials. One-third of the world's output of manganese ore, without which steel cannot be made, comes from the Indian fields,

which at present produce over a million tons of ore per year. India is the world's largest producer of sheet mica, vital in the manufacture of electrical equipment of all kinds as an insulating material. Three quarters of the world's supply of sheet and block mica comes from Indian mines. Besides these essential materials there is also a plentiful supply of bauxite, ilmenite and chromite.

In many of the materials mentioned the United States is already well supplied, either from its own resources or from countries closer home, such as Brazil. Nevertheless, with the huge expansion in America's production of war materials increasingly larger quantities are needed. So much so, that it may be asserted with the certainty of truth that the only limit to America's capacity to produce the weapons of war lies in the amount of raw materials that can be delivered to American industry. The problem of production is really one of raw materials since the labour force, the skill, and the plant capacity are abundantly available. It may, therefore, be stated that America is leaning heavily on India to supply many of the vital materials of war on a larger scale than ever before in the peace time trade relations of the two countries. India's unique position with regard to jute, of which she enjoys a virtual monopoly and produces nearly nine million bales annually, has been mentioned. In addition, one-third of the world's cattle population is in India and vast quantities of hides and skins are exported to America every year. The importance of these hides and skins for leather in the war effort is obvious. India is also the world's largest producer of oilseeds, the most important of which are linseed, castor seed, rape seed, groundnut and sesamum. In addition a host of other less well known products, such as medicinal herbs, nux vomica (from which the important drug strychnine is made), rutile, monazite, cashew shell oil, coir rope and matting, etc., are being exported to the United States in considerable quantities.

INDIA, A STRATEGIC SPHERE

In the strategic sphere India is also indispensable to the United Nations. The United States was quick to see the importance of India as a supply base and a base for military operations against the Japanese on the one hand and the Axis in their bid for the Middle East on the other. India faces both ways. It constitutes a huge land mass, a sub-continent in fact, located between the areas occupied by Japan in the Far East and Germany and Italy

(Continued on page 18.)

AMERICA'S MAIN CONTRI

A striking action picture of the United States Army's Jeep, all-purpose military car, as it blasts through a sand embankment during manoeuvres somewhere in the United States.

BUTION TO MODERN WAR

"Jeeps" moving up the ramp to enter the wide doors of the Commando.

WHAT IS A "JEEP"?

"JEEP," the smallest combat vehicle used by the United States Army, is only 11 feet long, 56 inches wide and 40 inches high. Its performance is so remarkable that the British Army proposes to use great numbers of them.

General Marshall, Chief of the United States Army Staff, describes it as "America's main contribution to modern war." With six speeds forward and two on the reverse, and a 60-h.p. engine, it can claw up or descend steep banks, be kept going through water, carry a machine-gun, or tow an anti-tank gun. It can lay a smokescreen or be used for reconnaissance.

American airborne units have been equipped with "Jeeps," which weigh 2,200 lb. and can be carried in army planes. Its nickname comes from its American manufacturing classification, "G.P."

Infantrymen and a "Jeep" inside one of the Commandos.

THE IMPORTANCE OF INDIA TO AMERICA INDUSTRIALLY AND STRATEGICALLY.

(Continued from page 15.)

in the Mediterranean and Caucasus areas. It is of great importance for the whole future course of the war that these two areas of conquest are not allowed to unite. India bars the way. So long as the United Nations control the Indian Ocean from bases in India proper and Ceylon, this junction cannot be effected. On land, too, India's geographic position is almost unique. All aid to China must go forth from India as a base until Japan's grip on Burma, Malaya and Thailand is broken. Any attempt to drive the Japanese back from these areas would have to come from India. Similarly, the reinforcement of the Middle Eastern countries, such as Iran, Iraq, Syria, Palestine and Egypt can be effected from India. Of course, the control of the Red Sea and the coasts of Africa, both east and west, is also of great importance, but it is doubtful whether this could be accomplished if India were to fall to Japanese land and sea power. India is the apex of the triangle of Allied strength in the Indian Ocean, which has its bases on the west-coast of Australia and the east-coast of Africa (including Madagascar). The loss of any one of these three pivots would be disastrous.

BASE FOR ALLIED OPERATIONS

If the Nazi tide should ever erupt over the Caucasus barrier into Iran the role of India would become doubly important. Such outlying countries as Iran, Afghanistan, and Iraq are merely the shields guarding India and in order to defend them successfully and launch a counter offensive against the Nazi hordes a safe and strong base from which troops and supplies could be moved to the battlefronts as rapidly as possible would be indispensable to Allied success. India is just such a base.

In view of these strategic considerations the presence of American troops on Indian soil is readily comprehensible. The United States is vitally interested in utilizing any base or combination of bases in this war against the Axis powers. The bombings of airfields and troop concentrations in Japanese-occupied Burma, as well as Japanese positions in the Andaman Islands, by United States heavy bombers is merely one phase of the war on the Axis. India has already served as a base for American attacks on the enemy and will continue to do so.

The fact of the matter is that although the strategy of the present war is global, certain key areas can be singled out as particularly important theatres of war. India is such an area, and the strategy of the United Nations will make full use of that fact.

"The Same the Whole World Over . . ."

THE U.S. *Air Forces News Letter* recently compiled a glossary of red-tape officialese in wartime Washington :

Under consideration means : never heard of it.

Under active consideration means : will have a shot at finding the file.

Has received careful consideration : A period of inactivity covering time lag.

Have you any remarks ? : Give me some idea of what it's all about.

That project is in the air : Am completely ignorant of the subject.

You will remember : You have forgotten, or never knew, because I don't.

Transmitted to you : You hold the bag a while—I'm tired of it.

Concur generally : Haven't read the document and don't want to be bound by anything I say.

In conference : Gone out—don't know where he is.

Kindly expedite reply : For God's sake try and find the papers.

Passed to higher authority : Pigeon-holed in more sumptuous office.

In abeyance : A state of grace for a disgraceful state.

Appropriate action : Do you know what to do with it ? We don't.

Giving him the picture : Long, confusing and inaccurate statement to a newcomer.

An American View of what Democracy is to mean after the War

AT a time when all the forces of the United Nations are being exerted to the utmost in the supreme task of winning the war, it is sometimes difficult to put aside consideration of this more immediate problem and to devote one's attention to what, after all, is equally if not more important—a consideration of what kind of world we expect to live in after the war has been won against Fascist aggression.

It is important to remember that even before the United Nations were formally associated together in the common struggle, and at a time when victory, though never despaired of, seemed, nevertheless, far away, President

been forcibly deprived of them. (4) It sets forth that these nations propose to further the enjoyment by all states, great and small, victor or vanquished, of access on equal terms to necessary trade and raw materials. (5) It proposes collaboration between all nations to secure improved labour standards, economic advancement and social security. (6) And when a final victory shall have been achieved, it proposes that the resulting peace shall afford assurance that all men in all lands may live out their lives in freedom from fear and want. (7) It proposes a peace which will enable all men to traverse the high seas without hindrance. (8) And finally, it proposes disarmament.

Canada is now producing every type of equipment needed by the Allied fighting services. In addition, the Dominion is making a 1,000,000,000 contribution to Britain to help her pay for munitions, foodstuffs and other supplies which are being delivered in increasing quantities to Britain and the Allies. Picture shows : Unloading 500-lb. bombs from a Canadian ammunition supply ship immediately on arrival at a British port.

Roosevelt and Prime Minister Churchill jointly published to the world on August 14, 1941, their blueprint for the future—the Atlantic Charter. Briefly summarized, this charter which is, in substance, an International Bill of Rights, provides for the following: (1) It outlaws aggrandizement, territorial or other. The era of attempted domination must end. (2) It abandons territorial changes, except as they accord with the freely expressed wishes of the people concerned. (3) It requires respect for the right of all peoples to choose the form of government under which they will live, and it proposes restoration of sovereign rights and self-government to those who have

ment of nations which have threatened or may threaten aggression, and a lightening of the crushing burdens of armaments. In the words of Cordell Hull, the Atlantic Charter "is a statement of the basic principles that have received the support of all civilized nations and shall continue to receive their support until they are completely restored throughout the world."

The Atlantic Charter was formally subscribed to by the twenty-six United Nations on January 1, 1942, and their joint declaration has since been adhered to by a number of other nations.

ROOSEVELT'S MESSAGE

In his annual message to Congress on the state of the nation on January 6, 1942, President Roosevelt, after outlining his gigantic production-for-victory programme, said "We of the United Nations are not making all this sacrifice of human effort and human lives to return to the kind of world we had after the last world war. We are fighting to-day for security, for progress and for peace, not only for ourselves but for all men, not only for one generation but for all generations. We are fighting to cleanse the world of ancient evils, ancient ills. . . . We are fighting, as our fathers have fought, to uphold the doctrine that all men are equal in the sight of God."

It has been said by many, cynics perhaps, that all these high-sounding principles are familiar stuff, that they have been reiterated before, that nothing was done to implement them after the last war. It is true that the high promise for humanity which many idealists believed would be the outcome of the last war was not realized, but, in more than one sense, the present war is merely a continuation of that struggle, and with the lessons learned it should be easier this time for enlightened men of good will throughout the world to avoid the errors of the past. "Notwithstanding the hideous blundering - of the past generation; notwithstanding the holocaust of the present moment, that great ideal of a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free still stands untarnished as the supreme objective of suffering humanity." These are the words of Sumner Welles, United States Under Secretary of State, spoken at the Third Meeting of Ministers of Foreign Affairs of the American Republics at Rio de Janeiro on January 15, 1942. We Americans like to think that the successful co-operation in Western Hemisphere and world affairs that has resulted from the Pan-American conferences and the Good Neighbour policy can be extended to a world concourse of free nations. We Americans believe that the example of the American Republics and the British Commonwealth of Nations can and will provide the basis for a post-war world settlement.

BROAD SPIRIT DEMOCRACY

Americans, because of their deep-rooted heritage of democracy, naturally desire the democratic way of life, which has been responsible for the advancement of their own welfare and civilization, to be given more

universal application. This is not by any means, however, a narrow attempt to export a system of government and a hide-bound political philosophy, or to impose an unwanted alien system upon other peoples whose traditions, culture and individual genius may not coincide with those of America. Such an attempt would be the very essence of Fascism, which we so earnestly desire to destroy. No, American interest is not in the minute details but rather in the broad spirit of the democratic way of life. It matters little to Americans whether the free nations of the world have a republican form of government or a monarchical form. The real concern of Americans is that the power of the government should be broadly based in the people, and should not spring from a ruling absolutism at the top.

The essence of democracy is respect for the individual man; yet with respect and freedom for the individual goes responsibility. It is most devoutly to be hoped that the democracies of the future will have now learned the lessons of the past and will realize that the world of to-day is too interdependent to permit a return to isolationism and narrow nationalism. The universal problems which concern all humanity, as embodied in the Atlantic Charter, will have to be solved by mutual co-operation and understanding in the new world order which is to follow the present war. It may be necessary for States to surrender certain sovereign rights, hitherto considered inviolable, in order that the common good may be advanced. But surely this should not be too difficult or even distasteful. In fighting the war most of us have learned how to subordinate our own individual desires in the common struggle. In the same way nations will learn to subordinate their own individual desires if mankind is served thereby.

A great deal is now being written about the shape which the new world after the war ought to take. Hardly a day goes by that does not bring forth a speech by some statesman, a book or article by some famous writer, on the "brave new world" to come; countless learned societies have already put their experts to work on blueprints of the future world order; and many governments are also giving earnest study to this problem. Yet it is safe to say that all the various schemes that are being worked out will place the emphasis on those simple democratic principles that were given broad expression in the Atlantic Charter, the Four Freedoms of President Roosevelt, and the Joint Declaration of the United Nations. These together form our creed. It is only necessary for us to live up to their tenets. The geopolitics of the future will be a democratic geopolitics.

America and Japan

Former U.S. Ambassador's View

THE former Ambassador of the United States in Tokyo, Mr. Joseph Grew, gave an account of the Japanese military machine in a speech at Washington on August 31. He said:

"I have lived for ten years in Japan. I about the Japanese military machine which brought on this war and against which we are fighting to-day. But before turning to that subject, there is something else I cannot leave unsaid.

"I have lived for ten years in Japan. I have had many friends in Japan, some of whom I admired, respected, and loved. They are not the people who brought on this war. As patriots they will fight for their emperor and country to the last ditch, if necessary, but they did not want this war and it was not they who began it.

"Even during our imprisonment in Tokyo many of those friends used to contrive to send us gifts in spite of the usual obstruction of police who wished to cut us off completely from the outside world. They were not the usual gifts of flowers, but gifts of food, sometimes a piece of meat, which was the most precious gift they could confer because they themselves could seldom get meat. . . .

THE OTHER SIDE

"But there is another side to the picture, an ugly side of cruelty, brutality, and utter bestiality, ruthlessness and rapaciousness—the Japanese military machine which brought on this war. That Japanese military machine, military caste, and military system must be utterly broken for the future safety and welfare of the United States and the United Nations, and for the future safety and welfare of civilization and humanity. In a nutshell: There is not sufficient room in the area of the Pacific Ocean for a peaceful America or for any and all of the peace-loving United Nations and a swashbuckling Japan. . . .

TRAINED MACHINE

"I would like to tell you something about the Japanese military machine against which we are fighting to-day. That machine has been trained and perfected through many years, for it has always had in view, even before the invasion of Manchuria in 1931, the prospect of eventually sweeping not only to the north against Russia, but to the west and south in order to control what the Japanese have lately termed 'the co-prosperity sphere of Greater East Asia, including the South

Seas.' It need hardly be said that that phrase 'Co-prosperity sphere' denoted in fact the intention to exert Japanese control politically, economically, absolutely—over all those far-flung territories.

"In 1931 came their invasion of Manchuria. In 1937 came their invasion of China south of the Wall, and while their army eventually floundered in China because of the magnificent fighting spirit of Chiang Kai-shek, his courageous armies, and his determined people, nevertheless, the warfare that then ensued proved to be practical training for the Japanese soldiers and sailors who tirelessly

John Liska, United States Navy aviation radio man, flashes his victory grin after the U.S. Navy dive-bomber plane, in which he was the rear gunner, shot down seven Japanese Zero fighters in two successive days in the Southwest Pacific.

developed and perfected tactics that they subsequently used in their landings and conquests southward.

NEW SITUATION ACCEPTED

"The idea should not for a moment be entertained that the failure of the Japanese forces in China has discouraged the Japanese people. It has instead served to steel them for

still greater sacrifices and better to prepare them for the war of deadly purpose whereupon they have finally embarked.

"As the realization came home to them of the need for greater and greater efforts, they accepted the inevitable war footing and reorganization of the life of the country with characteristic calmness and determination."

Strongly warning his audience of the spartan hardness and fighting spirit of Japan's army and navy, and the fact that the Japanese High Command counts heavily on gaining complete control of all East Asia before the United States is thoroughly aroused, Mr. Grew declared:

SHORTENING THE WAR

"I know my own country even better than I know Japan, and I have not the slightest shadow of doubt of our eventual victory. But I do not wish to see the period of our blood, sweat, and tears indefinitely and unnecessarily prolonged. That period will be prolonged only if our people fail to realize the truth of what I have just said, that we are up against a powerful fighting machine, a people whose morale cannot and will not be broken by

economic hardships, a people who individually and collectively will gladly sacrifice their lives for their Emperor and their Nation, and who can be brought to earth only by physical defeat, by being ejected physically from the areas which they have temporarily conquered, or by progressive attrition of their naval power and merchant marine which will finally result in cutting off their homeland from all connexion with and access to those outlying areas—by complete defeat in battle. . . .

MAXIMUM EXERTION NECESSARY

"Nothing less than exertion of our maximum capacities will bring our beloved country safely through these deep waters to our longed-for heaven and victorious peace. We are fighting this war for the preservation of righteousness and law and order, but, above all, for the preservation of the freedoms that have been conferred upon us by our glorious heritage, our American citizenship, and for these same freedoms in other countries of the United Nations. And while we are fighting against the forces of evil, lawlessness and disorder in the world we are primarily fighting to prevent the enslavement that actually threatens to be imposed upon us if we fail."

FROM BASES HACKED FROM JUNGLES, U.S. AIRMEN CARRY WAR TO JAPS :—Down a runway cut through trees move the planes, one by one.

America and Britain : Two-way Lend and Lease

THE Notes exchanged between the American and British Governments on September 3 formally set out the principles which apply to "reciprocal aid in the prosecution of the war against aggression." The principles are not new; they have been followed in practice for many months, declares *The Times*. They are now defined precisely, but not so precisely as to restrict the munificent spirit which lies behind and inspires the great adventure in partnership rather prosaically known as Lend and Lease. President Roosevelt's Secretary of State, Mr. Cordell Hull, expressed great satisfaction with what he rightly described as "this further integration and strengthening of our common war effort." And no less satisfaction will be felt here.

The latest agreement reaffirms the essential principle of Lend-Lease that reciprocal aid shall be in such form as to reduce to a minimum the need of each Government for the currency of the other—that wise provision adherence to which will still further stimulate the whole war effort, hasten victory, and consolidate peace. A debt-ridden world, as recent history all too clearly proves, is not one in which peace can be made secure.

The volume and variety of British aid to the United States appear broadly and formally in the agreement itself. They are described

graphically in more detail in a statement issued simultaneously by the American authorities in Washington and in London. It is a proud record of practical collaboration. It shows how we and other members of the British Commonwealth have been helping, and shall continue to help, American forces in many lands and on many seas.

Reciprocal Lend-Lease will grow. Already more than 500,000 sons of America are serving abroad, and many more will cross the ocean in the coming months. Much of the material and supplies they need are provided on the spot. On the other hand, British equipment and men have been sent to reinforce the air defences of Western America and the anti-submarine defences of Eastern America.

These are a few among the more tangible forms of two-way Lend-Lease. There are less tangible but not less vital forms. Experience gained by many trials and reverses, knowledge won by sacrifice, and inventions and contrivances born of hard struggle—these too have been freely placed at the service of the United States. Lend-Lease is no mere matter of accountancy and balancing of debits and credits, but a partnership of help and hope. It provides the foundation of victory now; and if the next peace is not to be lost as after the last war, its spirit must continue after victory.

AMERICAN LABOUR AND THE WAR

"THIS is, indeed, Labour's grave hour, as it is the grave hour of the farmer, the industrialist, the teacher, the preacher and the aproned housewife and the smallest child in its cradle. All these are beneficiaries and heirs of the democratic system and it is democracy itself, which evil men from west and east seek to destroy."

—PRESIDENT ROOSEVELT in his *Labour Day Statement*.

American Workers' Appeal to Indian Congress

An appeal to the Indian National Congress to call off the civil disobedience campaign and a pledge that "at the hour of victory we will do everything in our power to help you realize your rightful claims" are contained in a resolution adopted by the New York State Federation of Labour. The resolution says:—

"To the Indian National Congress: The New York State Federation of Labour, representing 1,500,000 organized workers in the State of New York, sends fraternal greetings to the people of India and urgently appeals to Congress to abandon the ill-timed, ill-advised civil disobedience campaign which cannot but injure India's own rightful cause.

"We are sending you this message from our 79th annual convention. Over 1,000 delegates feel impelled with the deepest regret to express their dismay at the tactics inimical to the cause of the United Nations.

"From a sense of friendship, we advise you that our dismay is shared by an overwhelming majority of Americans.

NOT DEFENDING IMPERIALISM

"We, the workers of America, have never condoned imperialism. We have never defended it. We do not defend it now. We are glad and proud that our brothers in the British Trade Union Conference have taken a stand against imperialism, recommending India's independence.

"You know that your aspirations found wide and deep sympathies among our people. Our interest in your many and complex political and social problems have risen from our esteem for you. Our interest has grown with our ever-growing hope of seeing a speedy solution to your difficult problems which would

assure you an independent and secure national life. Your rightful reverence for your great leaders is shared in this country by millions of our citizens.

PLEDGE TO INDIA

"We pledge you that at the hour of our victory we will do everything in our power to help you realize the rightful claims to independence.

"To-day we are at war. India's position is not a question of principle. India is a geographic and military reality.

"We and all free peoples of the world are engaged in a life-and-death struggle against the Axis. There must be no misunderstanding between us. The workers of America and the American people as a whole stand solidly behind President Roosevelt in the iron determination to fight this war anywhere and everywhere that circumstances make it necessary. We are committed to destroy the Axis and shall not be stopped until we have carried the war to a successful conclusion.

"FOR YOUR OWN SAKE"

"We workers of America urgently appeal to you for your own sake not to play into the hands of your enemies. Do not prodigally throw away your own cause and compromise the cause of China and all the peoples of Asia by indulging in ill-advised obstructionist tactics which can only alienate India's true friends.

"People of India, we appeal to you because we are confident that your aspirations and great ideals will bring you inevitably to our side as allies, friends and co-workers in building a peace that shall be a peace of the common free peoples."

AMERICAN WAR PRODUCTION

"THE production of war materials is now the greatest in our history, but it is not yet enough. It will be greater still. There are certain to be stormy days ahead. We are certain to be asked for sacrifices. There may be sacrifices of wage increases or crop price increases or profit increases or bodily comforts. All this is little enough for free men to sacrifice in a world in which freedom is imperilled."

—PRESIDENT ROOSEVELT in a Labour Day Statement on 5th Sept.

American Flying Fortresses Naval and Air Bases wrested from Japan

On all fronts from the islands of the Southern Pacific to the North of France and the Low Countries, air attack is developing greater power and continuity, declares the *Daily Telegraph* in a leading article entitled "Key to Victory." The daylight operations of the American Flying Fortress bombers, combined with the heavy night onslaughts by our Halifaxes, Stirlings and Lancasters, have begun to work up to the full pressure of an offensive without respite.

Night sorties penetrate deeper and deeper into the Reich. Nuremberg repeats the warning of Gdynia that distance from British airfields will not save any armament factory in Germany and that places which Hitler delights to honour by his wildest boasts and his worst abominations of cruelty, he cannot now protect.

What the Fortresses have done from great heights to aerodromes, factories and power stations in occupied territory, they may be doing before long within the German frontier, but already the ancient German fear of being caught as between two fires has come true. While our bombers hammer Western and Central and Southern Germany, Russian bombs fall on the East and North—Berlin, Silesia, the sacred land of East Prussia.

As fervently as when they flung the Luftwaffe on Warsaw and Rotterdam, the Nazi leaders still believe that air attack is the key to victory. Though the balance of power sways against them, attack is still the order. Thousands of aircraft were sent to bomb the Russian armies defending Stalingrad and to destroy the city and its communications. The end of that struggle is not yet, but much of the strength of the Luftwaffe is being expended there while the Allies multiply blows at the machinery which sustains its existence.

The Americans have established themselves on six of the Solomon Islands, and thus wrested naval and air bases from enemy hands. This was only made possible by the American supremacy in the air. Aircraft from carriers put up an "umbrella" for landing. Long-range bombers co-operated. Without such assistance, the marines could not have gone ashore, and ships could not have approached. As soon as the marines had made progress, fighters were based on land. This is indeed only the beginning of the offensive against Japan.

With fixed bayonet, a trooper of the U.S. Army's Airborne Command clears a wire barricade with ease during training at an eastern post.

AMERICAN PRODUCTION SCHEDULES

THIS time it is not a question of 'How Long?' but 'If.' Arms production schedules for September and October are so great as to exceed the capacity to provide materials. Schedules in the month to come would be much heavier.

—MAJOR-GEN. BRETON SOMERVELL, Commander of the U. S. Army Supply Services, on 4th Sept.

Mexico Planning Expeditionary Force?

PLANS are being laid for the formation of a Mexican Expeditionary Force of 400,000 men, to be sent to any theatre of war where it may best serve the interests of the United Nations, writes Leon Pearson in his syndicated column "Below the Rio Grande."

Such a move would be reversal of what was expected last May when Mexico declared war on the Axis, for at that time President Avila Camacho clearly indicated that the Government did not intend to send Mexican forces abroad.

Great numbers of young men, most of whom are not professional soldiers, have been clamouring for military action and have petitioned the United States Government to let them join the U.S. Army. It is believed that the Expeditionary Force will be recruited from volunteers.

The sending of such a force would be unique not only in Mexican history but in the entire history of Latin America, says Pearson. None of the 20 American republics ever sent an army overseas to fight, though Brazil during the World War sent naval units to the Mediterranean.

Keeping Home Fires Burning

ACTING as "father" to perhaps a quarter-of-a-million Indian families is just one of the duties of each Civil Liaison Officer, the officials to whom India's fighting men send their worries and problems.

Aware of the anxiety which Indian soldiers on active service feel for loved ones at home, the Indian Army has set up Military Welfare Offices in the Presidencies. In addition to looking after the needs of military families, these offices are responsible for the welfare of the families of Indian sailors and airmen.

Typical of welfare work throughout the country is that carried on by the Military Welfare Office in the Madras Presidency, where the staff consists of a Civil Liaison Officer, a Deputy Military Vice-President and twelve District Military Welfare Officers stationed over the area.

Many and varied are the services these officers render to the families under their care. Educational concessions to children, hospital

treatment for the sick, applications for land, and the issue of free passes for cinemas are a few of the most common requests.

The Welfare Office deals with complaints regarding non-receipt of letters or money, delay in payment of family allotments or pensions, and the addresses of serving personnel or prisoners of war. It keeps a close watch on the legal interests of soldiers on active service.

Neither is the fighting man forgotten when his service concluded, he returns to civilian life. A special department has as its responsibility the care of discharged soldiers, finding employment for them, arranging medical treatment where necessary, and assisting the poorer cases from the Indian Army Benevolent Fund.

The Civil Liaison Officer is constantly in touch with his huge "family" of 270,000, touring the various centres of population, co-ordinating welfare work, and lending a kindly and understanding ear to the complaints and worries of Service families.

America and Greenland: Foresight of Danish Minister in U.S.A.

(By SVEN TILLGE-RASMUSSEN)

THE EVENTS of the early summer of 1940, when the fighting in Norway came to an end, and the resistance of France was broken, had a profound moral effect upon the Danish public. Denmark was under the German heel, and in those dark days saw little hope of help and liberation.

The Danish nation serried its ranks to pursue one vital aim, which was the raising of all possible strength on the defensive, to preserve Danish institutions from attempts at Nazification. For upon their preservation depended the very courage and faith which was needed to defend Danish language, culture and spiritual freedom against the worst eventuality, and to save Denmark for the future.

There are few even now in Denmark who realize how far-reaching in its effects has been the stand taken by the Danish Minister in Washington, Mr. Henrik Kauffmann.

KAUFFMANN'S STAND

When he learnt that his country had been invaded, Mr. Kauffmann's first step was to declare himself independent of any orders he might receive from Copenhagen, such as might be inspired by the Germans. The State Department in Washington did not hesitate to acknowledge his declaration, and published a statement that it would continue to recognize Mr. Kauffmann in his full diplomatic capacity as Envoy of the Danish King and Government. Mr. Kauffmann would be regarded as the authoritative spokesman and negotiator on behalf of Danish interests. And, if the Danish Government should, under German pressure, recall him, or disagree with his words and actions, it declared that no other Danish representative should be recognized in Washington, as long as the Danish Government was under duress.

When he thus declared himself unwilling to follow instructions seeming to conform with German orders, Mr. Kauffmann found himself in no disagreement with any other of the Danish Envoys in the free world. The Minister in London declared the same principle: if such orders reached him, he said, he would not carry them out. Mr. Kauffmann's attitude brought him the responsibility of representing true Danish interests in negotiations which ensued concerning the century-old Danish colony of Greenland.

This huge island in the Arctic, in the protection and development of which the Danish people have taken the very greatest pride, belongs geographically and strategically to the Western hemisphere. At the time of the invasion of Denmark, in April 1940, the United States were not involved in war, and not even participating as non-belligerents in the Battle of the Atlantic. Nevertheless, it was important for America that Greenland, with her far-stretched shores and potential bases, should not come under the domination of, nor be used in any way by, the Nazis.

GREENLAND AND BATTLE OF ATLANTIC

Before this had been stressed by official circles in Washington, or pointed out in the American Press, Mr. Kauffmann fully realized the implications of Greenland's strategic position in the North Atlantic, involving the very questions of future Danish sovereignty over the island, and of the position of its Danish population.

By his Declaration to the Washington Government in April 1940, breaking off his own relations with Copenhagen, Mr. Kauffmann wrested from the Nazis their opportunity of bringing pressure to bear on the Danish Government in Copenhagen to obtain concessions regarding Greenland.

DO YOU SPEAK JAPANESE?

Many do.

They repeat wild rumours

Causing unrest and grave distress,

Stock market panics and reckless loss.

They come from Japan, these rumours.

Do not heed them.

Do not pass them on.

DON'T BELIEVE RUMOURS
BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

The march he stole over the Nazis by that act has earned him the name of Germany's "Public Enemy No. 1" among the Danes. His stand had the effect, too, of demonstrating to the world how a free Denmark, when in a position to act and defend herself, would always stand. Further, his act prevented the Danish Government from being able to make concessions under duress and to commit itself to undertakings against which Great Britain, Canada or the United States would have to oppose themselves. *He saved Denmark from the possibility of coming into open military conflict with powers towards whom the Danish people were friendly, on behalf of their hated oppressors.*

WHEN U.S.A. TOOK OVER DEFENCE

The full implications of Mr. Kauffmann's policy became clear a year later. From April, 1940, the supervision of Greenland's administration, its supplies and the protection of its civil and cultural life remained under Danish control. But the small population and resources of Greenland were insufficient for her to undertake the defence of the coastline, fjords and settlements.

When, therefore, the United States made the important decision that it would secure its own defences by means of a widespread system of bases stretching out into the Atlantic, Mr. Kauffmann, as custodian of Danish interests in the northern part of the Western hemisphere, on the very anniversary of the German occupation of Denmark, 9th April, 1941, signed an agreement on behalf of the Danish King and Government with

the United States of America. According to this agreement the United States took over the responsibility for the defence of the Danish Colony of Greenland, while respecting Danish sovereignty over the island.

KAUFFMANN'S DISMISSAL

Mr. Kauffmann could not, of course, ask for the King's consent before signing the agreement. He knew also that it might be inevitable that the Danish Government should condemn his action, which in fact they did. He was called traitor, his possessions in Denmark were threatened with confiscation, and he was dismissed from the Foreign Service for "gross disobedience."

Such is Mr. Kauffmann's position now in Denmark officially. The Danish Government's reaction was in no way a surprise. It might even be regarded as a discreet move, if not altogether valourous. *To condemn Mr. Kauffmann so strongly and promptly might have had the effect of forestalling more serious political demands from the provoked Nazis. And by condemning their envoy, the Danish Government spared itself the humiliation of having to bend its knee to Germany and denounce the United States.*

What was actually felt in Denmark is fully illustrated by the fact that Mr. Kauffmann became the hero of his people overnight and was praised for his initiative and political foresight not only in hundreds of thousands of Danish homes but also by the very people who were forced publicly to approve the official view—*Free Denmark.*

Among the often unrecognized heroes of the sea are the men of the British Royal Naval minelayers, who slip out night after night, in all weathers and under all conditions, laying minefields round the coasts of Britain and in the approaches to enemy shores. Picture shows: Duffle-coated sailors pushing mines to the stern of the ship ready for laying.

Diary of the War

AIR ACTIVITY OVER GERMANY AND ENGLAND

5th Sep.—The Royal Air Force attacked objectives in the north-west coast of Germany.

Two enemy aircraft dropped bombs at a place on the south-east coast of England.

6th Sep.—The Royal Air Force raided Bremen. Soviet raiders bombed Budapest and Koenigsberg.

An air raid alert was sounded in London.

Long-range German guns bombarded across the Channel.

9th Sep.—The Royal Air Force bombed Emden, Bremerhaven and other targets in Western Germany.

Speaking in the Commons, Mr. Churchill said: "I regard the Dieppe assault as an indispensable preliminary to full-scale operations."

An alert was sounded in London. A small number of German aircraft flew over the coastal districts of north-east England.

10th Sep.—The Royal Air Force attacked objectives in the Rhineland, particularly Frankfurt. The docks at Le Havre were bombed.

Both the British and the Soviet air forces are now keeping up a "round the clock" bombing offensive. The Nazis have sustained terrific air losses on the Russian front, and are being forced to divert more and more fighters to face the British attacks in the West. Picture shows bombing up in the glare of searchlights at a Red Air Base, preparatory to plastering enemy troops and fortifications.

7th Sep.—German prisoners in Britain broadcasting on the B.B.C., denounced the Hitler regime and the Nazi atrocities.

8th Sep.—A small number of German aircraft flew over the coastal districts of north-east England.

The International Youth Day Rally in London was attended by more than 60,000 delegates from all countries.

The Royal Air Force raided Duisburg, a German industrial city.

11th Sep.—The Soviet aircraft raided Berlin. A number of eastern German towns were attacked and fires started.

There was a general strike throughout Luxembourg as a result of Nazi announcement that the Grand Duchy had been incorporated in the Reich.

An enemy convoy was attacked off the Dutch coast.

UNITED STATES OF AMERICA AND THE ATLANTIC

5th Sep.—Senor Salgado Filho, the Brazilian Minister for Air, confirmed the reports that several enemy submarines had been sunk in the South Atlantic waters.

6th Sep.—Major-General Breton Somervell, Commander of the Supply Services, United States Army, told Americans not to take the war lightly.

7th Sep.—One hundred and forty-two enemy aliens were arrested in New York.

8th Sep.—There was an air raid alarm in New York.

There was a German air raid on Iceland.

The State Department announced the signing of a far-reaching military agreement with Cuba, arrived at the prosecution of the war by the two nations.

9th Sep.—President Roosevelt, in a fire side chat, said: "Our aim in the European area is an offensive against Germany. . . . You may rest assured that preparations are being made here and in Britain toward this purpose."

10th Sep.—Henry Douglas Temple, son of a German Reichwehr officer, enlisted in the American army. He said: "I want to fight everybody left in Germany—including my father."

INDIA, BURMA AND CEYLON

7th Sep.—The Royal Air Force bombed Akyab.

The Commander-in-Chief of Ceylon warned the public against a false sense of security and exhorted them to be ever on guard. He said: "The enemy still has plenty of sting left in his tail."

Picture] shows: R.A.F. pilots walking to their "Douglas Boston III" bombers while a train of bombs is brought up for loading in readiness for an attack on German objectives.

8th Sep.—The Allied air force raided Akyab. Bombs fell across the barracks near the aerodrome and direct hits were scored on other buildings.

10th Sep.—The Royal Air Force attacked the enemy-occupied port of Akyab.

11th Sep.—The Royal Air Force made a successful attack on an enemy supply ship and its escort in Akyab harbour.

ITALY, AFRICA AND THE MEDITERRANEAN

5th Sep.—Allied land forces continued their pressure on the enemy in the area between Himeimat and Ruweisat.

Commenting on the situation in the Western Desert, Mr. Wendell Willkie said: "I think we are going to win fairly soon."

6th Sep.—Rommel's attack was halted by the British whose armour he failed to split.

An enemy merchant vessel and probably a destroyer were sunk by the Royal Air Force in the Mediterranean. Shipping in Greek harbour were also bombed.

Three Italian sea planes were shot down into the sea off Alexandria.

7th Sep.—United States bombers attacked enemy shipping facilities and the power station in Candia Bay.

Three enemy aircraft were shot down over Alexandria area by the Royal Air Force.

Pursued without rest by the Eighth Army's mobile columns, Rommel was forced back to the position he started from a week ago.

8th Sep.—Rommel's initial offensive failed. The Nazis lost a large number of tanks. The Eighth Army won the battle.

General Von Bismarck in command of the 21st Panzer division was reported killed.

An Italian convoy was attacked in the Mediterranean.

9th Sep.—Six enemy aircraft were shot down on the Egyptian front.

10th Sep.—According to an Ankara report, Rommel had been taken ill and was returning to Berlin.

An Axis convoy was attacked by Allied aircraft off the Libyan coast.

Field Marshal Smuts in an address at Pretoria, said: "The most vital theatre of

7th Sep.—Russian forces held out at Stalingrad. The Nazis claimed Taman Peninsula.

8th Sep.—Marshal Timoshenko, throwing in powerful reserves at the eleventh hour, stemmed the German onslaught on Stalingrad.

9th Sep.—In the last 24 hours, the Red Army definitely improved its stand before Stalingrad.

According to a Vichy report, all telephone and wireless communications from Stalingrad had ceased. The Russians brought up reserves. The Germans suffered heavy losses.

Hundreds of Russian airmen who had bombed Berlin and other German cities held a meeting at the Russian front to discuss the best methods for further attacks on Germany.

Armaments of every description are now pouring from British factories for use by the British, Imperial and Allied forces in every theatre of war. Photo shows train loads of newly-built British "Valentine" and "Matilda" tanks on a railway siding in Britain.

this war is the Mediterranean base, and we cannot win this war without clearing this base."

11th Sep.—Further military operations were launched in Madagascar.

Royal Air Force bombers raided Tobruk.

RUSSIA AND FINLAND

5th Sep.—Twenty-five divisions and 1,000 German planes were concentrated against Stalingrad. The Nazis drove a wedge near Novorossisk.

6th Sep.—The Nazis advanced in the Caucasus. North-west of Stalingrad, one Soviet unit broke into German defences.

10th Sep.—Red troops withdrew near Stalingrad. There was fierce fighting in Novorossisk.

11th Sep.—Position around Stalingrad became more critical. There was bitter fighting in Novorossisk.

NEUTRAL COUNTRIES

5th Sep.—The reconstructed Spanish Cabinet held its first meeting. It was expected to follow a more neutral policy.

8th Sep.—Mr. Wendell Willkie arrived in Ankara.

9th Sep.—Mr. Wendell Willkie told press correspondents at Ankara: "Rommel tried to take Egypt. He used everything he had but he was stopped. He was badly beaten."

10th Sep.—Mr. Wendell Willkie was received by the Turkish Foreign Minister, M. Menemecioglu.

ITALY AND OCCUPIED FRANCE

8th Sep.—American flying fortresses raided Occupied France and bombed the air field at Abbeville.

10th Sep.—The United States Government rejected the Vichy Government's protest against American bombing of towns in Occupied France.

THE FAR EAST

5th Sep.—United States submarines sank five Japanese ships.

Several new attempts were made by the Japanese to land and establish troops in the various islands in the Solomons group.

An Allied ship was attacked by a Japanese submarine off Australia.

The Japanese withdrew from Kuntien in China. The Americans bombed Nanchang.

6th Sep.—Vice-Admiral Terajima, Chairman of the Imperial Rule Assistance Association, warned Japanese people to be prepared for a long war.

A United States destroyer and auxiliary transport were sunk by the enemy in the Pacific.

7th Sep.—The Chinese advanced in Kiangsi. The Japanese withdrew on Kwangtung front.

8th Sep.—Twenty-six Japanese planes attacked Guadalcanar.

The Japanese suffered heavy casualties in the battle for Kinkwa. Sixty-one Japanese aircraft made an offensive sweep in the provinces of Kwangtung and Hunan.

9th Sep.—The Japanese attempted landing at Guadalcanar was smashed. They advanced in Kokoda.

10th Sep.—Sir J. G. Latham, former Australian Minister, declared: "Large-scale successful bombing of Tokyo, Kobe, and Osaka will produce the greatest results in shaking the Japanese supreme self-confidence."

Admiral Shimada, the Japanese Navy Minister and Captain Fritz Wiedemann, former German Consul-General in San Francisco, were severely burned in a derailment caused by terrorists near Tokyo.

The Japanese on the Kokoda front advanced towards Myola. Enemy warships were attacked off Normanby Island.

11th Sep.—The Japanese continued to advance in New Guinea. American aircraft bombed Gizo island.

THE GOLDEN CROPS OF IND...

IN German-occupied Europe and Japanese-occupied China, the rich golden crops are harvested by the enemy while the rightful owners starve and die. Are you going to let this happen to India, where our mainstay is agriculture? India with her huge resources is the most tempting prize of all to the enemy. Japan uses soft words to woo us into submission! But beware of those words. Resist Japan with all your combined might, for Japan's coming will mean starvation for your women and children.

No. 2

TURNED THE TIDE OF WAR

SIR CHARLES PORTAL

IN the second anniversary of the climax of the Battle of Britain, Lieutenant-General H. H. Arnold, Commanding General, United States Army Air Forces, sent the following message to Air Chief Marshal Sir Charles Portal, Chief of Air Staff:

“On behalf of the fliers of the American Army, I wish to extend our tribute to the fliers of the Royal Air Force on the second anniversary of their brilliant victory in the Battle of Britain.”

“On September 15, 1940, fliers of the Royal Air Force, seconded by the Royal Navy and the fire of the British ground batteries, brought down 185 enemy planes.”

“The deeds of your fliers on that day turned the tide of the war, ending for ever the Nazi hope of world conquest, and made possible the final United Nations victory that is to come.”

“Free men everywhere will ever observe this day in remembrance of those brave men who gladly gave their lives to secure freedom and victory.”

Air Chief Marshal Sir Charles Portal replied: “Your generous tribute will be deeply appreciated. We are proud to welcome to these islands squadrons of the American Army Air Forces. Already they have greatly distinguished themselves in action.”

“We watch with admiration their growing strength which, joined with our own and that of Russia, will surely overwhelm our enemies and bring about their final destruction.”

Running Commentary

Mr. Churchill The most important point in on India: Mr. Churchill's statement on Declaration India is his reaffirmation of Re-affirmed the Cripps Declaration, which was quoted in our last issue. Mr. Churchill made it once again clear that the declaration must be taken as representing the settled policy of the British Crown and Parliament, and this must remove any doubts which might persist on account of enemy propaganda in spite of repeated assurances from Britain. As regards the detention of Mr. Gandhi and other Congress leaders, Mr. Churchill referred to the "conditions of the highest comfort and consideration in which they were placed." It may be recalled that on August 30th a *communiqué* issued by the Government stated that Mr. Gandhi is in a private house with his wife and certain companions, including his own medical adviser, and is supplied with everything necessary to secure his comfort and the kind of food he requires. The other Congress leaders are also accommodated in suitable quarters and are supplied with all necessary conveniences. An officer of the Indian Medical Service is attending on them. All the leaders are keeping good health and are permitted to correspond with members of their families on personal matters and are provided with newspapers. In his statement, Mr. Churchill paid a well-deserved tribute to India's martial races and said that though there was no compulsory military service in India "upwards of one million Indians have volunteered to serve the cause of the United Nations in this world struggle" and during the last difficult two months over 140,000 new volunteers for the army have come forward. This shows that the country as a whole has not been deflected, by the actions of a certain political section, from its support to the common cause of the United Nations.

Madagascar: The successful operations of Axis Menace the Allied troops in the and Allied Madagascar island have resulted in the Vichy Governor-General, M. Annet, suing for "cease fire and opening of negotiations." The Allied troops met with very little resistance from the French forces, the population was very friendly, and most of the officials there collaborated with the British forces. The cause for the reopening of military operations in Madagascar is to be

(Continued on page 4.)

FIREARMS IN POSSESSION OF EVACUEES

SOME instances have come to light in which arms brought into India by evacuees from Burma and other places are being kept by them without a proper licence. It is perhaps not realized that firearms cannot be possessed in India without a licence from the Commissioner of Police or the District Magistrate. Any arms, therefore, in the possession of evacuees for which they do not hold a licence valid in India should be at once declared and deposited with the Police authorities. If the arms are Government firearms, details should be furnished at the time of the deposit of the name of the unit to which the arms belonged and a brief account of the circumstances in which the evacuee came into possession of the weapon. Evacuees connected with the Forces may deposit unlicensed weapons with the Station Commander instead of the Police authorities.

Hand out on the Exercises

THE Southern Army held large-scale manoeuvres in North Arcot district from September 4 to 14. The area of operations covered about 5,000 square miles and all arms of the Army participated, the strength of the troops engaged being many thousands. The force comprising the enemy was known as the Blue Army.

The scheme of the manoeuvres was as follows: One regiment of the Blue Army landed near Ponneri, north of Madras, on September 4. At the same time two Blue Regiments landed near Sadras. Our divisional commander beat the regiment which landed

The Blues were encircled. But as their object was only to hold our forces inland and thereby provide a screen for further landings of the Blue Army on the East Coast, the Blue Commander on September 13 decided to withdraw his forces to the Madras-Chingleput sector and draw our forces with him to cover the landings near Sadras.

BLUE REGIMENT WIPED OUT

But our forces reached out for the withdrawing Blues near Kalavai and the Ranipet-Arni road and in the resulting engagement one Blue regiment was completely wiped out while the other was badly mauled and lost a third of its effectives. The remnants retreated rapidly making in the direction of Chingleput.

Thus ended the manoeuvres.

These manoeuvres were very valuable in the practical training they afforded to the troops, the co-ordination of all modern arms of the

British destroyers carrying out exercises at sea recently. Photo shows the Flotilla in line ahead.—E.N.P.

near Ponneri and wiped it out. But by the time he could meet the two regiments which had landed further south, the latter had penetrated inland as far as Ranipet. Our Commander had three brigades and one mobile force at his disposal.

He sent down his mobile force to keep the bridgeheads on the Palar river and deny the Blues a crossing to the north. One of our brigades was sent due west towards Ranipet while the other two were brought to the south-east of the enemy. The mobile force split up into columns and occupied positions astride important roads barring passage to the Blues in all directions from Ranipet except to the south. The first few days were occupied in jockeying for positions and the opposing forces made contact on September 12. On this and the following day tanks, artillery, bren-guns, and infantry were all engaged on both sides.

army, the numerous practical field problems which it helped to solve and the insight it gave to the spectators of the unostentatious but effective preparedness of the Southern Army to meet any threat to South India.

The administrative work of keeping up a regular flow of supplies to units scattered in ever-changing positions over an area of 5,000 square miles was done with clock-work precision.

The Southern Army may not be front-page news everyday. Its training and work may not reach the notice of the average citizen in South India. But in spite of all that—perhaps because of that—it is a great fighting force, capable of withstanding whatever threat South India may be subjected to. That is the main lesson learnt from the manoeuvres just concluded.

RUNNING COMMENTARY

(Continued from page 2.)

found in the fact that the Vichy Government have been permitting Japanese aircraft to reconnoitre the Vichy part of Madagascar and giving supplies from the island to Japanese submarines. The danger of such a policy to the United Nations is only too obvious. Madagascar lies right across those vital communications that run from Britain or the United States round the Cape of Good Hope to Egypt, to the Persian Gulf and to India. The air fields in the island can be used by enemy planes and the communications through the Indian Ocean can be jeopardised by a hostile fleet. If the Allied communications with North Africa were seriously threatened, there would be no alternative route and there would be little to stop the German drive to Suez and the Middle East. The Allies would be losing one entrance to Russia and the products of the oil fields on the Persian Gulf and, ultimately, South Africa itself would be threatened. Taking account of all these factors the United Nations had no other option but to prevent the penetration or occupation of any part of Madagascar by the Axis powers by occupying the Island themselves. Both the United States and Britain, it has been made clear again, have no territorial designs on Madagascar, which would be restored to France after the war, or at any time before it when it is felt that the occupation of the island is not essential to the common cause of the United Nations.

Egypt: Germans Suffer a Rebuff

Speaking at a reception of the American Legation in Baghdad, Mr. Wendell Wilkie, the most influential leader in America's Opposition Party, said: "I am confident about the situation in the Western Desert, where we recently achieved a sound victory." His confidence is particularly borne out by the recent seaborne raid on Tobruk and the present position in Egypt. They are definite indications of the growing strength of the Allies. On the night of September 13, light naval forces and a small army force raided Tobruk in conjunction with air attacks. The British forces landed in the face of strong opposition and after inflicting casualties and damage on the enemy, withdrew. Another light force successfully bombarded enemy lines of communications in the Daba area.

As regards Egypt, the Axis, says a message from El Alamein, is taking much keener interest in sending out night patrols than was the case before Rommel's abortive attack. It

is stated that the enemy is now anxious to obtain more exact information as to the Eighth Army's dispositions than is provided by aerial photography, on which he formerly relied. As it is, nothing has been decided yet, and another attack may have to be faced, but says, *The Times*, "there can be little doubt that the Germans have suffered a rebuff." The German advance has been checked and their armoured forces have withdrawn to their previous positions. *The Times* points out that the fact that the whole of the Afrika Korps took part in the incursion into the British flank position makes it almost certain that an assault with all available forces would have been launched had any weak chink been revealed, and that throughout the engagement not one of the British fortified keeps in the main positions was penetrated.

Egypt and Russia: A Secondary Front?

The paper compares Egypt with Russia and says that, though Egypt is still a secondary front, it contains potentialities which might render it very far from secondary in the general current of the war. It says:

"The defence of Egypt becomes a major interest of direct importance not only to the British Empire but also to Russia. Egypt becomes still more significant if considered from the opposite point of view. In this world-wide war, the issues of which depend to so great an extent upon world communications, Egypt is a natural centre of offence. It has been robbed of some of its qualifications by the defection of France and the strength of hostile air power in the Mediterranean. If that situation can be even partially remedied, the possibilities become immense and Russia would assuredly share in the profit."

The Battle for Egypt has well been described by the *Daily Herald's* correspondent with the Eighth Army as "a contest in which each side is striving to hinder the other from starting a fresh offensive while hurrying its own preparations." The correspondent says that British light armoured columns are keeping an aggressive watch on the bruised German forces like dogs snapping at an enemy who has withdrawn to a place of safety. Egyptian newspapers welcome Mr. Churchill's statement on the Egyptian situation and point out that it indicates that those who direct war and high policy deserve to be entrusted and supported with the fullest confidence. *Al-Balagh* a leading Cairo newspaper, says: "We can rest assured of their permanent vigilance and continuous watchfulness, even though they are sometimes compelled to keep silent because of the nature of the grave responsibilities that they bear." The paper gives details of feats of British submarines in chasing and fighting

Rommel's supply vessels in the Mediterranean and says: "These attacks would continue because they are the surest way of clipping the wings of Rommel's forces."

Russia: Attempt to Force a Decision

A gigantic struggle is going on before the gates of Stalingrad. The Red Army is fighting with its back to the Volga and resisting the ever-growing number of Axis forces, and what gain the enemy has made has been made at enormous loss. The German, Rumanian and Italian death-roll has increased by about 12,000. The most stubborn resistance is being put up by the Soviet defenders and the Red Army has been ordered not to give up any-

option. Somehow or other a decision has to be forced—a decision which has eluded the Germans ever since their initial drive in Kharkov. The German High Command had now recognized, said a German military spokesman to a press correspondent from Zurich, that it was impossible to occupy the whole of Russia, and so they would choose as their goal some line marking the extremity of advance which could easily be held against Russian counter-attacks and behind which occupied Russia could be economically exploited without hindrance. He said:

"Little, however, would be gained if the Russians succeeded in withdrawing their armies intact behind the Volga, nor would the German purpose be achieved unless

Scots Guards moving forward under cover of a smoke screen and protected by the Tanks.—E.N.P.

thing as long as one Red soldier is left with a single bullet or grenade. Referring to the losses inflicted on the enemy, a British Military Commentator says,

"The enemy is suffering more than he expected to suffer, and he is achieving less than the minimum he needs."

There has been heavy strain and drain on the German military machine which is much greater than what it had bargained for. But von Bock is prepared to pay the price, however heavy it may be, for he has no other

Soviet military equipment were utterly destroyed and its resuscitation effectually prevented by the occupation or paralysis of Russian war industries and the blockade of the Lease-Lend routes via Persia, Murmansk and Archangel."

The German spokesman felt that if the Russians were not smashed and isolated they would be able to organize a winter offensive, as they did last year, which would tie down millions of German soldiers whose release during the winter for munition production was highly necessary.

Long-distance Air Raids

An important feature of recent Russian operations is the Russian air raids on East Prussia, Poland and Berlin.

At a time when the Russian Air Force is grappling with the full strength of the *Luftwaffe* on the Russian front itself, it speaks volumes for the strength and courage of the Russians that they are able to stage these long distance air raids. Russian planes have to fly 800 miles to raid Berlin, 480 miles to Königsburg in East Prussia and over 500 miles to Warsaw. Such raids may not have the same weight and importance as the British raids on Western Germany, but they form a very useful supplement to the main effort in the west. Germany is thus placed under two fires as in last year. But the fires are now significantly bigger and of more sinister portent to German minds, particularly when it is remembered that the American bombing offensive has not begun.

No Decisive Success before Winter

Referring to the German offensive on Stalingrad, *Reuter's* Special Correspondent in Stockholm says that the situation is more dangerous than before and that it is felt in Moscow that either the colossal German losses will halt them in the next few days or that the City will enter a long period of agony which would only delay its loss. The situation in Russia has been described as "critical" times without number, but the Russians have shown such immense tenacity and power of recovery that confidence is growing in the inability of the Germans to win any decisive success before the winter. The Russians have brought up reinforcements on a scale which has surprised the Germans. This is clear from the change in German comments from confident predictions of Stalingrad's imminent fall to complaints at Russian tenacity and surprise at Russian reinforcements. Should Stalingrad fall, it will no doubt be a serious loss, not so much on account of its industrial equipment, which has already been removed, as the interruption that may be caused to the Volga supply route. But it may be stated that this route will not be serviceable for barges and oil transport in winter, because the Volga will be frozen. The one clear fact that emerges from the present situation is that, whatever the fate of Stalingrad, the Russian armies will remain intact and Hitler will face another winter campaign and a Russia in full force in 1943.

Enemy Begins to Mention Weather

It is worth noting that the enemy has begun to mention the weather. Germans have reported the first shower of rain for eight weeks in the Stalingrad area and say that there is a touch

of autumn in the air. Winter conditions in the Caucasus, where the German campaign seems to have been launched essentially as a cover on the right flank for the Stalingrad thrust, begin in mid-October. At about the same time, the autumn rains are due in the west of Russia. The rains are bad for mechanized transport as they produce mud. Frost begins in early November and there is a short period of greater mobility until full winter, the Russian date for which is November 25. The intensity of cold, it may be noted, increases as one goes east, and not as one goes north as the northern climate is tempered by the presence of the sea, while the cold winds come from Siberia.

"OUR BOUNDEN DUTY"

"WE owe a responsibility, not only to the peoples of India, but also to our Allies, the United Nations, who along with us are fighting shoulder to shoulder for the thing we all value most—our freedom. Party and other internal differences have disappeared in all countries which are fighting against the Germans and the Japanese. All questions of internal administration and Government have been pushed into the background by one great danger, the danger to liberty. If the Americans, if the Russians, if the Chinese, if the British, in their part of the world can forget all their internal differences, it is our bounden duty to do the same.

"It is a matter of great regret that there is not the unity of purpose among us which is essential for the fulfilment of our political ambitions. But I have no doubt in my mind that the day is not far off when we, the people of India, will rise above our internal differences and take our rightful place in the great comity of world nations."

—SIR FIROZ KHAN NOON.

LETTERS TO WAR PRISONERS

INFORMATION has been received from the International Red Cross that, whenever possible, letters to Prisoners of War in the hands of the Japanese should be typewritten in English, French or German.

In order to secure prompt transmission of letters, correspondents are advised to make every effort to comply with these suggestions.

Planning Power Augments Bombing Power

BY
OLIVER STEWART

MANY things go to make an air offensive possible, and the one that is sometimes forgotten—or at any rate not given proper recognition—is what might be called the office side. The designers of planes are—quite rightly—much admired. When the people see a Spitfire flying overhead they think of R. J. Mitchell and his genius for thinking out and putting down on paper the lines and figures from which the Spitfire grew.

But when Rostock is bombed on successive nights with comparatively light losses and with big effect, the planning, the lines and figures on paper, that made the attack possible, are not often considered.

One reason is that we cannot see the attack and we cannot even have full particulars of it. Some of the best and most interesting features of heavy bombing raids have to be kept secret. The special scheme for helping to outwit the defences is sometimes extraordinarily ingenious; but they cannot be given out in the official communiqués for obvious reasons.

All that emerges is that a heavy raid takes place and achieves success with small loss to our raiding force. Then we know that the planning has been sound and that the lines and figures on paper, from which the whole complex operation grew, were well conceived and ingeniously worked out.

A brief review of the amount of staff work which must precede a big night air raid, like those on Lubeck and Rostock, or a big day raid, like those on objectives in Occupied France, will give some faint hint of the size of the job.

SELECTION OF TARGET

First there is the selection of target. That is a thing in which all the departments concerned in waging the war have to play a part and the final decision has to be approved by the War Cabinet as the last stage.

Recent targets have been chosen because of their influence on the war in Russia or the war at sea or the war in the air. The raid on

BY DAY AND BY NIGHT

"We shall bomb Germany by day as well as by night in ever increasing measure, casting upon them month by month a heavier discharge of bombs and making the German people taste and gulp each month the sharper dose of the miseries they have inflicted upon mankind."

—MR. WINSTON CHURCHILL
in June 1941.

Augsburg was undertaken to interfere with the German U-boat building programme by damaging the factory where the diesel engines for the enemy submarines are made. The Lubeck and Rostock raids were for putting a check on the flow of supplies to the German armies engaged in Russia, and for damaging the Heinkel aircraft works. Each target goes up or down in the list of priorities according to the general war situation.

In the past, perhaps, there was too much willingness on the part of the Royal Air Force

An observer attached to an R.A.F. night-operational fighter squadron.

to change their targets with changing conditions. Now it is recognized that there must be concentration of effort, and that light bombing in many places is less effective than heavy bombing in one place. At any rate, the choice of target must first depend on the war situation. Then there must be a consideration of the defences. Here the intelligence departments produce what is known from reconnaissance and other means. Special attention has to be paid to the enemy's arrangements for laying smoke screens over important objectives and for diverting the attention of the attacking pilots by means of decoys. When our pilots were going regularly over to bomb Brest they sometimes were able to see nothing but a huge carpet of smoke covering the entire harbour area and perhaps dotted here and there with fires. They then had absolutely no means of identifying the warships which—on those occasions—were their target.

It is hardly necessary to say that plans for attacks on many different targets are always ready, and that putting them into operation waits first on priorities and then on the weather.

PLANNING A RAID

Modern aircraft of the large night-bomber type, fitted with numerous special navigating instruments and carrying at least one expert navigator, are not so much influenced by the weather as the old types. During the Rostock raids a strong east wind was blowing. It was strong enough to have cut down drastically the range of the older, earlier bombers with their full speeds of about 150 miles an hour and cruising speeds of about 100. But with cruising speeds of our modern bombers about double that, the effect of a high wind is relatively less. Wind is only one of the weather items that have to be taken into account in planning a raid. Visibility is another, which becomes more important as wind speeds become less important. All these things are preliminary to the planning of the raid itself, and there are many other preliminaries. But finally there is the decision as to the size of force to be used; the groups from which it is to be drawn; the time period during which the attack is to last; and the take-off arrangements.

The Lubeck raid lasted about three hours; the first Rostock one of this recent series only about an hour. In both cases aircraft had to be taken over a relatively small area of ground at the rate of two a minute or more.

A bombing run is not a thing that can be hastily contrived like the plunge of a dive bomber. So the timing of the individual aircraft movements is a matter of supreme importance. And you will notice that Bomber Command is managing to obtain higher concentrations of aircraft over the targets.

In the raid on Renault works near Paris the anti-aircraft defences were light and one of the pilots told me that the only serious risk during the raid was of collision with our own machines, because the concentration was so high. These high concentrations are of value to the attackers for many reasons; but they demand a lot of staff work as well as high flying discipline in the captains and crews.

THE TAKE-OFF PROBLEM

The take-off problem, when large numbers of machines are concerned and the night is dark, has become progressively more difficult. Some of the big four-engined bombers want a long run to get into the air when they have a full load of bombs on board. The marshalling of them and the take-off itself can be successful only when the staff work is good.

The landing is not less difficult to arrange so that everything goes smoothly. If one of these big machines has been damaged by gun fire during the trip and if, on landing, the undercarriage—for instance—gives out, a big part of the aerodrome is blocked and the business of getting all the other machines back safely is complicated.

Sometimes these landing and taking-off difficulties may be added to by enemy attacks. So when you come to look at a bombing operation of this kind the vast amount of staff work involved becomes obvious at first glance.

Sometimes the most ingenious plans go wrong. Then losses go up. Sometimes the Royal Air Force has suffered heavily when making its big night raids. But on many occasions it has done much damage to the enemy with small loss to itself. That is partly because the Royal Air Force staff work is good. With every increase in the complexity of modern aircraft and with every addition to our bomber strength the planning problems become more difficult. These strong forces that have been going out at night to strike at Germany are guided by well-knit plans; their augmented bombing power has been accompanied by improved planning power.—(Broadcast in the B.B.C.'s *Empire and North American Services*.)

THREE GERMAN VIRTUES

TEACHERS in Danish schools are at pains to explain to their pupils the three German virtues: Honesty, Membership of the Nazi Party and Intelligence. It has not as yet, however, been possible to find anyone possessing all three virtues at once. The honest and intelligent cannot be a member of the party. The honest party member is not intelligent. And the intelligent party member cannot be honest!

—"Frit Danmark."

Air Front against Hitler

A flying Epic of all Time

BY

GROUP CAPTAIN W. HELMORE

NOBODY takes any personal pleasure or glory at the devastation of Lubeck and Rostock, but they're standing between the people of Leningrad and their food and arms, and no amount of very natural sentiment will

As I sat down—a sorry Tennyson with the story of this greater 'Light Brigade of the Air' still dormant in the inkpot—I could see those twelve thirty-ton monsters on which they rode their charge. I had a memoried vision of trees blurring past the leading edge of a wing, of cannon shells rocketing into a little white-washed village, of the tense steely eyes of the pilot looking forward, never more than a field or two ahead, hour after hour.

DEADLY BREEDING GROUND

And then I'm sorry to say, I gave it up: the brush was too shaky, the canvas too small. But I can at any rate try to retell you the story somehow. They were called in for Briefing at twelve o'clock noon on April 17—some eighty-four young men, mostly in their early twenties. They weren't specially picked, trained, or doped with benzedrine on the German model: they were just normally interested to find out what all the excitement

In constant night raids on enemy aerodromes in Germany and the occupied countries, Britain's R.A.F. Fighter Command have hampered German bombing operations considerably. Picture shows R.A.F. Armourers "bombing up" a D. B. 7 "Havoc" aircraft before a night sweep over German-occupied territory.

save our gallant Allies and their imprisoned families from a worse devastation if ever they fall under the cultural care of the Hun.

Apart from this bombing by us of centres of strategic importance to the course of war such as Rostock, or the acts of spiteful vandalism by the enemy in bombing places of no strategic importance, such as Bath, Norwich, and York, there is the bombing of perpetual motion being suffered by gallant Malta.

It had been my ambition to tell you the story of the daylight raid on Augsburg in the way it deserves to be told, to weld into words this great flying epic of all time, which will rank—not merely in air history but in war history—more highly as the years go by and its glory takes on the legendary lustre of the great deeds of the past.

was about, and when they were told that they were to take on the sort of job which the *Luftwaffe* had given up two years ago as impossible, they seemed chiefly concerned with the contours of that last wooded hill before Augsburg over which in a few hours' time some of them were to get their first glimpse of the deadly breeding ground of the submarine diesel.

Then, later in the afternoon, the hunt started—a hunt for a thousand miles at fifty feet over hedges and ditches which has made every airman in the world who has ever tree-hopped for half a mile see in imagination a picture of the most fantastic chase that probably the history of pursuit has ever known—a hunt to the tally-ho of roaring engines that would have made Jorrocks turn in his grave.

Near Paris, thirty Me. 109s pitched into them: not a machine of that first squadron of six Lancasters swerved, but four went down, shot to ribbons. No one will ever know how many of the enemy went with them, for the rear-gunners were taking them one at a time as they came in, with eyes for nothing save each successive swerving shadow down the line of the sights.

Of that first formation of six, two aircraft alone went on from Paris. From above they were invisible—flat camouflaged patches with their bellies to the earth. From the ground they were just a great shadow and a roar of engines, which sent cattle stampeding and troops rushing to telephones, so that one can imagine the anxious ripple of warning running ahead of them like a bow-wave, as worried staffs plotted their course from town to town. Was it Munich, was it Nuremburg, was it madness?

BOMBED IN FLAMES

As Nettleton and his one lone follower pulled up over the ridge and roared practically down the streets of Augsburg at three hundred miles an hour, guns already trained spouted from the buildings in a panic of inaccuracy.

We have his own account of how the delay bombs went up behind him on the target; of how, last seen on fire, his friend also bombed and disappeared; of how as leader and sole survivor of that first squadron he ploughed a lone furrow homewards into the gathering dusk.

The second formation of six, following a few minutes later, reached Augsburg intact, and bombed. Two of them, with fantastic courage which baffles even the understanding, went in and bombed whilst they were already in flames. Then the remainder turned and swept homewards—later to keep an appointment at Buckingham Palace as worthy representatives of those who were already keeping a greater appointment elsewhere.

Perhaps you are asking yourself, what does all this mean—this lavish expenditure of machinery, these heroics, this loss of life? The more practical minded among us will rightly say: 'Where does it get us with the war, and what is the dividend?'

THREE-WORD REASON

It gets us this far—we, Napoleon's 'nation of shopkeepers,' the earth dwellers of an obscure island, which was once the abode of blue-painted savages—it gets us to a place from which we can realize once more the reason for our own evolution; the reason why this little pin-point on the map became the hub around which the civilized world revolved. In brief, it gets us to the three-word reason for our past greatness—attack, initiative, daring.

That's what shakes and has always shaken our enemies; that is what has pushed a hole in the submarine sheds at Augsburg—and an even greater hole in Germany's self-esteem. It has given the German radio the hardest job of its life in explaining to a people long taught to worship air power as a god why their god has now deserted them and why all the promises of the inviolability of German soil have fallen flat—flatter even than Lubeck and Rostock.

Until the dawning of that happy day when our men set foot on the continent of Europe in force, we still have more than one second front against Hitler. We have our air front, to his lasting shame and confusion, and we have the front of our own boldness and resolution—a front on which, as long as we have men like these, we shall never fail.—In a B.B.C. talk.

Indian Searchlight Crew's Feat

NOT content with doing their own job—which was holding enemy aircraft in their lights—an Indian searchlight crew in the Middle East manned a machine-gun and shot down a German raider.

This feat of skill and courage, performed while heavy bombs were exploding all around, has earned the searchlight men a congratulatory message from the Air Officer Commanding, Egypt.

Here is the full story of the action, as told to an Indian Army Observer by a searchlight officer:

Very tired after travelling all day, and having been in action most of the previous night, the searchlight crew arrived at their new rendezvous—an important airfield—at dusk.

By nightfall they had their lights in position, and were ready for trouble. They did not have long to wait. A force of German aircraft came over, and having identified the target by dropping flares, began to straddle it with bombs.

One plane was immediately picked up by the searchlights. Trying to drive out of the beams it passed within a few feet of one light. Taking a leaf out of the Ack-Ack gunners' book, searchlight men opened fire with a machine-gun. To their delight the plane—a Ju 88—received a stream of bullets and crashed.

This so disconcerted the pilots of following aircraft that they did not press home their attack on the aircraft, but released their bombs harmlessly eight miles away.

R.A.F. Offensive on Germany Does with Bomb what Germans do with Torpedo

THERE is a trend in our choice of bombing targets which will be worrying the German High Command, observes the

RAIL TRANSPORT, THE TARGET

In their attacks on this heavily laden system, the Allies are doing with bomb what the Germans seek to do by torpedo. Our intent was shown when fighters had orders to riddle the boilers of engines working along the lines in Northern France. We have since chosen towns which have important junctions and railway works of one kind or another. Kassel is one of the chief locomotive-building towns and the centre of a knot of lines joining North Germany to the middle Rhine. Osnabruck is where the shortest route from Berlin to Rotterdam crosses the line from Bremen to the Ruhr. Saarbrucken commands a group of railways leading from Germany into the middle of France. Karlsruhe is where the line running from Frankfurt to Switzerland and Italy is joined by lines from Saarbrucken and in the east from Stuttgart. Like Kassel, these three towns have important railway work-

R.A.F. men making a concrete perimeter road round an airfield in the West of England.—E.N.P.

Manchester Guardian. For the time being we have slackened in our valuable defensive bombing of submarine works. Instead, we are maintaining a severe bombardment of Germany's railway towns and main lines. To her they are as important as the shipbuilding yards and ocean routes on which we depend. What also supports the mighty thrust in Russia but those railways which Hitler said were so strained in last winter's frosts? By what other road could armies be brought quickly back to meet an invasion in the west? Not only do the German railways carry enormous military traffic (Italy and North Africa too are served by them) but the internal life of Germany is fed by them and her canals and rivers.

shops as well as warehouses natural to such ports on land.

VALUABLE LONG-TERM POLICY

Wearing down the German railway transport a system by bombing would be a valuable long-term policy. It would hasten that slow deterioration produced by its neglect before the war and its over-use during it. Yet the High Command cannot have an assurance, unpleasant enough in itself, that this is our real intention. Did they see any connexion between these raids and a campaign they must have studied, that planned and directed so brilliantly against France by the great Moltke when he set up his headquarters at

Mainz and kept two army corps there because of its admirable position for moving troops either up or down the Rhine? It is surely noticeable that all these railway towns lie on the main railways which would be used by Germany for any movement of troops to France.

Germany's leaders are much moved by the prospect of invasion, and their inability to drop the subject of Dieppe is one sign. Admiral Lutzow said in a broadcast on August 26 that Dieppe was not an invasion attempt. But five days later someone produced a British "operational order" which was meant to show that Dieppe really was our second front. If one raid can thus excite German strategic imagination, we may wonder what it is making of our concentrated attacks on western railway towns. Are the British, the Germans may ask, hoping to increase our difficulties in supplying the Russian front this winter? But if we were really trying (they may think) to break up or slow down communications across the Rhine, it might reveal a more imminent threat. After all, if we were thinking of landing in Europe next spring, would we be attacking the Rhine crossings now

and leaving all winter for them to be repaired? "Can it be, then," they will ask, "that these bombings herald something much closer?"

THE SOVIET SOLDIER

"The Soviet soldier does not give up even when his position is utterly hopeless. When his artillery is silenced, he fires with machine-guns. When his machine-guns are put out of action, he uses his rifle and hand-grenades. There are no trees or bushes to give cover, and the enemy fires from everywhere all the time."

—A Berlin message published in *The Daily Express*.

What is a Dive Bomber?

Its Advantages and Limitations

BY

WING COMMANDER L. V. FRASER

WHAT is the attitude of the British Air Staff towards dive-bombers? Few questions have been asked more frequently throughout this war. The Air Staff has been accused of pooh-poohing the dive-bomber. It has been accused of "ignoring the lessons of a dozen campaigns." It has had all manner of attacks levelled at it—all because of the dive-bomber.

But what are the facts?

The Air Staff has never at any time pooh-poohed the dive-bomber, never ignored its possibilities as Britain understood them. The Air Staff would in fact have been quite happy to have, as a powerful part of the strength of the Royal Air Force, a strong and numerous fleet of dive-bombers.

FIRST THINGS FIRST

But when war broke out, the Royal Air Force had to build up to the powerful weapon it is today. That was a gradual process, carefully planned to meet the needs of the time. Certain essentials were necessary. A strong fighter force for one thing. The Battle of Britain proved that. Could dive-bombers have resisted the enemy as did the Spitfires and Hurricanes? Then a bombing force had to be built up—a bombing force which could operate far over Germany from Britain. Dive-bombers could have reached Germany from France. But Britain was not operating from France for so very long.

So the Air Staff concentrated for home production on immediate needs. Home production met, and is continuing to meet, those needs. But there was nothing then to spare for anything else.

PRE-WAR EXPERIMENTS

Meanwhile the Air Staff had its eye on the dive-bomber and weighed up just exactly what this new weapon could do. Long before the war Britain had experimented with dive-bombers. The Hart was designed and used experimentally as a dive-bomber. It showed faint possibilities, nothing more. So the Air Staff looked to America and placed orders for dive-bombers.

The "Vultee Vengeance" dive-bomber is rolling off the American assembly lines of the Vultee Aircraft Corporation and the Northrup Aviation Corporation. The aircraft—here seen in flight—is being supplied in quantity to the R.A.F.

When was that? A week or two ago? Last year? No; the orders were given in July 1940. It is true that deliveries are only coming through now. There is nothing unusual in that. The Halifax, just off the secret list, was put into commission 19 months ago. Yet the plans were prepared almost five years ago. Three years from blue-prints to production is not bad going for a new-type aeroplane.

All belligerents, then, are going to have dive-bombers—the United Nations as well as the Axis. But what exactly is a dive-bomber? What are its advantages, what its limitations?

ACCURATE BOMBING

The dive-bomber is a specially designed aircraft equipped with diving brakes enabling it to dive at an angle of some 60 degrees at a high rate of speed. The Stuka is generally recognized as the top line in dive-bombers. Perhaps the Royal Air Force already has its answer to these. The sharp angle of attack gives great accuracy to bombing.

Questions why Britain does not have dive-bombers usually come after such reverses as the loss of the aircraft-carrier *Hermes*, the sinking of which was claimed as "another triumph for the dive-bomber." In point of fact the *Hermes* was not sunk by dive-bombers but by waves of high-flying aircraft. It is admitted, however, that it is under just such circumstances that the dive-bomber is at its best. It can operate successfully just so long as it has adequate air superiority. With adequate superiority dive-bombers can attack

a target from all points of the compass in such a manner and at such speed as to give anti-aircraft defences little or no chance of shooting them down in the short period it takes to release the bombs.

ITS DEFECTS

Much has been written about the shattering effect of dive-bombing upon a concentration of troops. Given air superiority, this is a powerful method of attack, but on the other hand it is no more devastating than strafing by the cannon-firing and multi-machine-gun Spitfires and Hurricanes. It has been proved times without number that a modern fighter can shoot a dive-bomber out of the sky. The fantastic figures of the Battle of Britain provide one example. Malta, even where the enemy has substantial air superiority, is another. And, again, a dive-bomber is fairly easily shot down by light anti-aircraft and small arms fire from the ground, always provided that the man on the target takes advantage of the "no allowance" shot offered by the aircraft as it dives "down the barrel of the gun." Then successful use depends on sufficient air superiority—and there have been more occasions than not in the war when the Royal Air Force has won victories against heavy odds.

Now, however, the picture is changing. Future historians may say that Britain got her dive-bombers just when they could be used to the best advantage.

U.S. Bombers Redesigned

"AMERICA'S four-engined bombers—the Flying Fortress, the Liberator, and the B-24—are being redesigned with the particular view to bombing Germany," recently announced Colonel John Jouett, President of the United States Aeronautical Chamber of Commerce.

The present bomb-carrying capacity of these planes will be more than doubled. A bomb-load now is about three and one-half tons. This change will not materially affect the planes' speed or high-altitude performance.

"Only the range of the Flying Fortress, originally and primarily designed for flights of 4,800 to 6,400 kilometers over the Pacific, will be affected, but even if the range is halved, sacrificing fuel for bombs, the plane will still be able to go far into Germany and occupied Europe from British bases and return."

India's Silent Guardians of the Skies

COASTAL and other important towns and cities of India and Ceylon are now protected against possible dive-bombing and low-level attacks by the setting up of balloon barrages. At some centres the balloons have already become familiar objects, and during the next few weeks barrages will be seen floating over other vital spots in India.

Royal Air Force officers and men engaged in the balloon barrages in India come from some of the cream of the balloon Squadrons who have been on duty in the United Kingdom throughout the three years of war. One Squadron is composed of personnel drawn from the London Barrage. In every case the barrages now in being in India are manned by the most highly trained Royal Air Force personnel.

Plans are being developed for the introduction of Indian Army officers and men into the balloon service, and shortly Indian servicemen and Britishers will be working side by side in manning the barrages.

Shipping round the Indian coasts is also being protected by balloons. Merchant Service skippers of North Sea convoys have long appreciated the great value of balloon protection against low-level attacks, and the system of balloon and gun protection, in which the Royal Navy and the Royal Air Force co-operate, is now being extended to Indian coastal shipping.

JAPANESE SURPRISED

It is now generally recognized that the barrage balloon is one of the most successful defensive weapons of air warfare. During the Japanese raid on Trincomalee the barrage proved an unqualified success and all reports suggest that the enemy were uncomfortably surprised.

The main object of the balloon is not to destroy aircraft but to deter the enemy in dive-bombing and low-level attacks. To the pilot of a high speed aircraft the balloon cable is invisible and unless he is prepared to face great risks he is forced to fly so high that accurate bombing is more difficult and ground strafing impossible. The pilot who suddenly finds himself in a balloon barrage meets with the most nerve-wracking of experiences.

Balloon crews are highly trained as ground troops. Should their balloon be in danger of capture they can quickly destroy it by the mere cutting of the cable and they at once become infantrymen, efficient with grenade, machine gun and rifle.

Indian Pilot's Bombing Raids over France

RECENTLY back from Great Britain, F/O R. S. Shahi, of Lahore, one of the 24 Indian Pilots who volunteered two years ago for service overseas, gives a vivid account of bombing raids he participated in over Brest and Dunkirk.

Giving his impressions of the first daylight raid on Brest and the bombing of the German battleships "Scharnhorst" and "Gneisenau",—nicknamed Salmon and

in fact, I can only describe it as being rather good fun! I feel proud about this raid, particularly because my Captain won a bar to his D.F.C."

NIGHT RAID

Flying Officer Shahi's first operation was a night raid on the docks at Dunkirk.

"It was a grand night with the moon at the full", he says. "We could see the German searchlights as we crossed the English coast, and great quantities of flak. The searchlights were so brilliant and there was so much light caused by the coloured flak that I thought at first that Dunkirk had no black-out!"

"We were the last aircraft over the target and were caught in a cone of searchlights. Our tail gunner then reported that a fighter was behind us and we took sharp evasive action, diving down and making out to sea."

A convoy with its kite balloons.—E.N.P.

Gluckstein by the Royal Air Force, F/O Shahi, who was co-pilot of his bomber, says:

"We were one of a large force of British planes. As we approached the target we could see Stirlings and Halifaxes already bombing the warships. Our fighter escort was intercepted by German fighters and dog fights broke out all around us."

"The anti-aircraft barrage was said to be the heaviest that had ever been met over this target. But we passed through it, in formation, dropped our bombs at the exact moment pre-arranged for our aircraft and came away, still in formation, from the target. I looked down and could see smoke coming from one of the ships. The photographs which we took showed that our bombs had hit their mark."

"This was my second raid and although I felt a little nervous in my first experience of bombing, on this occasion I felt quite tranquil;

We made a second run in and this time dropped our bombs and got away safely."

"In the Brest raid," says F/O Shahi, "We came back with eleven holes in our fuselage, tail plane and wings and our navigator had a narrow escape. In the Dunkirk raid our aircraft was holed in seven places."

During his 19 months in Great Britain, F/O Shahi, who was formerly with Indian National Airways and an instructor to the North India Flying Club, had experience in flying in the latest types of Royal Air Force bombers including the Lancaster, of which he spoke enthusiastically. The crew of the Lancaster in which he was Captain included a Canadian navigator and a New Zealand air gunner.

KINDNESS IN BRITAIN

Flying Officer Shahi is enthusiastic about the kindness shown to him and the other Indian pilots in Great Britain.

"Everywhere we went invitations were showered upon us. One of our outstanding memories is the visit we paid to Windsor Castle where we had tea with Their Majesties, the King and Queen.

"We were so kindly treated at all the Royal Air Force stations and by the many people outside the Service whom we met that we were never allowed to feel that we were so far away from home.

"Twice I was entertained to lunch at the House of Lords and I also visited the House of Commons. There and everywhere we went it was the same, people could not do enough for us.

"Another impression I have brought back to India is the welcome I received in the Royal Air Force Squadrons. I am exceedingly proud to have served with the Straits Settlements Squadron and shall always remember the brotherly feeling among its members, who included Britishers, New Zealanders, Canadians and Australians. I was the only Indian."

One of F/O Shahi's regrets is that he had been recalled to India and was on his way back when his squadron made the famous daylight raid on Augsburg.

Flying Officer Shahi, who joined the Indian Air Force in August 1940, is now with an operational squadron in India.

W.V.S. Finds the Jobs

THE Women's Voluntary Service, which has done such noble work in Britain, is growing rapidly in India. It is primarily an association of women who are keen to help in the present emergency and are not waiting for the possibility of active war operations.

Headquarters of the Women's Voluntary Service aim to establish bureaux to give information and assistance in all spheres of women's war service in India. They will be able to find the war job for which a woman is best suited and supply information about opportunities for service in secretarial work, lecturing, Air Raid Precautions, blood transfusion, Air Defence Corps to quote a few of the many activities about which advice will be available. They will also help families of Service personnel and evacuees who need guidance.

'India Needs You Now' is the slogan of the Women's Voluntary Service, particulars of which can be obtained from the General Secretary, Headquarters, Women's Voluntary Service, Simla.

PLANE TO PLANE, WE ARE SUPERIOR

"There is no reason not to be confident. From our point of view we are just getting in stride. We know we have this tremendous reservoir of production behind us. We know that we have our united people supporting us to their full capacity, we know we can count on the co-ordinated support of all the United Nations. We are confident that plane for plane, and man for man, our forces are superior to those of the enemy. With quantitative as well as qualitative superiority, on behalf of my own Command, the Tenth Air Force, I am happy to say that we are carrying the attack to the enemy, and we shall continue to do that until the enemy has been overwhelmed."

—MAJOR-GENERAL LEWIS HYDE BRERETON
U.S. Army Air Forces in India.

Production of Rice in India India Producing Parachutes

How to Attain Self-Sufficiency

THE present food drive in India and the threatened shortage of rice due to the difficulty of replacing supplies formerly obtained from Burma, Indo-China and Thailand invest the publication of an abridged edition of the Agricultural Marketing Department's Report on the marketing of rice with more than ordinary interest. Normally India, though the world's second largest producer of rice, imported considerable quantities of paddy and rice. Of her normal production of 29,530,000 tons of rice in 1937-38, India exported only 250,000 tons, while she imported 1,398,000 tons of paddy and rice so that her net available supplies were 30,678,000 tons valued at Rs. 292 crores.

The Report suggests that as one step towards self-sufficiency, better farming and improved seed can do much to improve the yield per acre. Figures given in the report show that in 1938-39 the average yield of rice per acre in India was 731 lb., a figure which compares very unfavourably with those of the United States, Japan, Egypt and Italy where the yield per acre during the three years 1936-37 to 1938-39 averaged 1,481 lb., 2,307 lb., 2,079 lb. and 3,000 lb. per acre respectively.

The Report stresses that by a proper system of financing and a more direct participation in the marketing of his produce, the grower can secure an increased share of the price paid by the consumer. It observes that co-operative organizations of growers for financing, storing and milling rice are needed.

It also observes that in the interests of the producer a greater degree of standardisation is needed and describes the steps taken to grade rice under the Agmark scheme and the success already achieved in that direction.

TRAINING of parachute troops in India is being greatly facilitated by the bringing into service recently of parachutes manufactured entirely at the Government of India factory established specially for this purpose.

A year ago the manufacture of parachutes in India had not been seriously considered and it was only at the beginning of this year that active steps were taken to set up a factory.

Then Mr. Leslie Irvin, inventor of the well-known parachute used by the Royal Air Force, came out to India and personally supervised the factory organization. Such rapid progress was made following his visit that the first parachute came from the factory for testing within a few months. To-day parachutes are being produced so quickly that there is an ample supply for immediate needs.

Before they are put into service the parachutes are subjected to the severest tests. For instance, a Ghurka parachutist weighs on the average 120 lb. to which must be added the weight of his Tommy gun and other kit. But the parachutes are tested with weights which are three times those they will have to bear.

EXPERTS' PRAISE

Under such tests it is impossible to "break down" the Indian-made parachutes, which have earned the highest approval of experts whose experience extends over 20 years.

Indian pure silk is ready to hand for the making of the canopies and steps are being taken for the extended cultivation of mulberry to secure increased silk production.

The making of parachutes is yet one more wartime enterprise in which India is becoming independent of supplies from Britain.

India, too, is making much of the equipment of paratroops, including arms containers, valises in which arms and ammunition are packed, folding operating tables and folding stretchers and containers used for food dropping.

Paper Economy New R.I.N. Ship 'Drive' Launched

War Resources Committee Tackles Problem

A serious shortage of paper is likely to develop unless consumption is drastically reduced in the coming months. Fortunately, however, there is still considerable scope for economy in the use of paper. This conclusion has been reached by the War Resources Committee of the Viceroy's Executive Council who are understood to have under examination the whole question of paper supplies and consumption.

The need for economy affects private individuals, commercial organizations, public and private bodies, homes, Societies, Associations and Departments of Government. The War Resources Committee have decided that the dire need for economy should be brought to the notice of both public and Government users of paper.

In regard to Departments of Government, certain measures are already in force. The War Resources Committee have urged that these measures should be more rigorously applied. They have also suggested reduction in the number of Government publications by the suspension of those which do not appear essential in wartime, or else the substitution of brief summaries. Demands for stationery are to be subject to the most stringent scrutiny. Provincial Governments will be asked to adopt similar measures.

The Committee feel that Chambers of Commerce, business houses, associations and various learned societies can adopt with profit similar measures for economy and it is proposed to address them all with a view to securing the suspension of publications and reports which may not be essential in wartime. Among the measures recommended for both public and private users are the use of economy labels on envelopes, use of small sheets typed on both sides, the omission of forwarding letters or minutes and of formal acknowledgments in all cases where these are not essential. It is hoped by energetic action on the part of all Government servants and co-operation on the part of the public that it will be possible to avoid the drastic restrictions that have been imposed on the use of paper in England.

Minesweeping and Anti-Submarine Duties

A new ship for the Royal Indian Navy was recently launched at an Indian port. She will be employed on minesweeping and anti-submarine duties.

The first vessel to be built for the Navy in an Indian yard was H.M.I.S. Travancore, which was followed by H.M.I.S. Baroda. Since then a number of vessels, some named after Indian States and important Indian towns, have left the stocks at regular intervals, while others are under construction. In various parts of India shipyards are working to capacity on orders for naval vessels and smaller craft, a new keel being laid as soon as possible after a launching has taken place. In this way more and still more ships of modern design and with up-to-date equipment are becoming available for the defence of India's long coastline and enormously valuable sea-borne trade.

To provide officers and men for them the Navy's training establishments have been and are being constantly expanded.

The latest methods of hunting and destroying submarines, which will be one of the new ship's main duties, are taught to Royal Indian Navy personnel at a short establishment whose expansion illustrates the Navy's present development. At this school the number of officers and men under training has increased 2½ times in the last six months alone. In its class rooms Royal Indian Navy personnel are able, by the use of ingenious instruments, to practise operations against submarines in conditions as closely resembling those at sea as is possible. Ratings who specialize in this type of work wear a highly prized badge displaying a coil of rope crossed by a harpoon and flash of lightning. So great is the demand on the School's facilities that an entirely new establishment has been planned.

War of Nerves Germany and Turkey

AS had been expected, German propaganda is using the advance of the German forces on the Caucasus as a pretext for intensifying the "war of nerves," says *The Times* correspondent in Ankara. According to these propagandists, the Caucasus will be entirely occupied by the Germans by the end of October, and thus Turkey, after what

was really part of his projected tour of the entire country—as being due to anxiety caused in Ankara by the possible effects of the German approach to the Turkish frontier of the Caucasus.

What lies behind this propaganda can be surmised from some elaborate "indiscretions" committed by von Papen during recent months, in which such phrases as "closer economic collaboration" and "certain transit facilities" were recurring with remarkable ring with remarkable frequency and persistence. In fact, the great efforts which have been made by Germany to promote Turco-German trade exchanges since after June when direct railway communication was resumed, and the offer to Turkey of war

A total of 56 personnel is needed to maintain, service and fly a heavy bomber of the Stirling type. In this lay-out the sectional activities are shown. Group in foreground: The Air crew-Captain and 2nd pilot, Air gunner-bomb aimer, Flight engineer, Observer (navigator), Wireless operator and two Air gunners. On verge of grass: L. to R. Meteorological Officer, W.A.A.F. Parachute Packer Flying Control Officer. Group on left: Flight maintenance numbering 12. Group on right: Ground service numbering 18. Group at back: Bombing up team, numbering 11. To the right: Bomber tractor driver. The little machine middle right, is the starter battery which is operated by the Flight maintenance crew shown left hand group. has happened in Bulgaria, Greek Thrace and the Aegean islands, will find herself in direct contact with the German armies at yet another point. It is not yet openly stated by the Germans what would be the result of such as eventually, but enough is insinuated to make it clear that Turkey may be called upon to reshape her foreign policy. Broadcasting stations of the Axis are trying to represent the visit of M. Sarajoglu, the Prime Minister, to the eastern provinces of Turkey—which

material and rolling stock—of which Germany is in sore need herself—are considered part of a plan to acquire at all costs a predominant position in Turkish economy.

Therefore one can well imagine von Papen arriving some day at the Turkish Foreign Office, prim, smug and jaunty as usual and, after repeating some cliché about German friendship for Turkey and his personal love for the Turks, adducing the theory that

military developments near the Turkish border have created a new situation which requires a readjustment of Turco-German relations which should take the form of repudiation of the Anglo-Turkish alliance, closer economic co-operation between Germany and Turkey, and some transit facilities to Germany through Turkish territory.

If such a demarche were ever made, what Turkey's interpretation of and reaction to it would be, leaves no room for doubt. The Turks would certainly consider such proposals tantamount to a demand for Turkish adherence to the "New Order," and their answer would decidedly be an emphatic "No". On every occasion since the war began—last year at the opening of the Grand National Assembly and in recent speeches at Smyrna and Samsun—President Inonu has proclaimed his unswerving determination to preserve unconditionally and at all costs Turkish independence and honour from any encroachments; and the new Prime Minister, M. Sarajoglu, said recently that the Turks will fight to the last man if their independence is threatened.

For that reason, having made up their minds what they will do, the Turks maintain an imperturbable calm before the German propagandists' game of intimidation. The Turks' long history is free from any stain of cowardice; there is no possible reason to doubt that, if an emergency arises, they will be true to their national traditions.

THE "YAK"

The Soviet Army's latest and fastest fighter plane, the "Yak", was named after Alexander Yakovlev, Russia's leading fighter designer and now Vice-Commissar for aeroplane construction, cables the *Daily Telegraph's* Moscow correspondent. Comparing his Yak to the latest type of Messerschmitt put into mass production, he claims for it not only higher speed but considerably greater fire power. Messerschmitts, even when in superior force, do not like to take on the Yaks. In anything like an equal fight, their losses are always higher.

Marriage of Convenience

Japan and Germany

"THE Axis relationship between Germany and Japan is merely a 'marriage of convenience' and nothing more," writes Frederick Oppen, former Shanghai correspondent of the *Christian Science Monitor*. Elaborating this statement, Mr. Oppen declares:

"It is problematical whether Japan distrusts Germany more than Germany detests Japan. In Shanghai, the Germans have not gained a single advantage from the result of the liquidation of American and British concerns there; and the Germans are bitterly disappointed over this.

"Tokyo is determined that Japan should be the sole Power to profit by any gains made available through the Japanese Army or Navy. Germans living in some of the Japanese-occupied areas have been forced to wear armbands. Also, they have been unable to obtain gasoline for their automobiles. In fact, the Germans have been pushed about by the Japanese in a way that makes many wonder if Japan includes Germany on her list of enemy countries.

"The reason for this double-barrelled animosity is simple enough. The Japanese have no intention of giving away any of the fruits of their victories, particularly to a nation that has given evidence of Germany's voracious appetite. Nor does Germany have any desire to see what it considers as a second-rate, inferior people hoard the vast resources of Asia which Berlin eyes greedily. Japan feels quite sure that a victorious Germany would never be satisfied with seeing oil, rubber, and tin from Southern Asia going elsewhere than where Germany wanted them. Equally, the Germans know that the Japanese eradication of American and British concerns from China will not long precede German business in the same areas."

Japan and Manchuria Gang

JAPAN'S "New Order" plans call for the world to be reorganized, first regionally and later on a world-wide basis, into "one household" with Japan at the head, says Otto Tolischus, former Tokyo correspondent of the *New York Times*, who has recently arrived in America with other American newspapermen, diplomats and nationals.

These plans are sponsored by a group called the "Manchuria gang," composed of military-minded Japanese who seized control in 1931 with the "Manchuria incident."

Until 1931, partly as the result of a democratic wave following the last war and partly due to the economic shock of the 1923 earthquake, Japan was undergoing a steady process of democratization, Tolischus says. It was signalized by Japan's participation in the Washington disarmament conference of 1921-22; by the universal suffrage grant of 1925, which awakened the working masses and led to the formation of infant proletarian parties; by the 1928 Paris Pact that outlawed war; and finally by the London Naval Conference of 1933, the results of which were rammed down the throats of the Army and Navy by a democratic Cabinet.

SECRET SOCIETIES

Military influence was waning and military appropriations were cut. Military ultra-nationalist secret societies like the Black Dragon, to which many of the "Manchuria gang" belonged, viewed with alarm the trend that threatened to introduce liberalism among the masses and make them conscious of their own power, and to wean the masses from the ancient tradition of docile obedience to the divine order personified in the Emperor.

"The Manchuria incident" put Japan at war and the military in the driver's seat. All who tried to check the headlong plunge were themselves checked by assassins' bullets. Between Premier Hamaguchi and Prince Konoye nearly a score of Japanese statesmen, including Premiers and Cabinet members and various other moderates, were killed.

No nation has seen so many of its statesmen killed by traitors and assassins as Japan, with the result that presumption of treachery has become the basis of the Japanese warrior code and assassination has become the recognized instrument of politics against which public opinion no longer recoils. So completely have this system and its ideas become entrenched in Japanese politics, that, as one Japanese liberal said, only a political, religious and ideological revolution could overthrow it.

IRAQ WITH UNITED NATIONS

"The Premier (General Nuri Pasha) declared that Iraq will declare war on the Fascists if they transgress its boundaries... We know the world is divided into two camps, a camp fighting for truth, freedom, human civilization and the honour of nations, and a camp knowing nothing of the meaning of life except violence, aggression and tyranny. Iraq can do nothing but walk on the side of the nations seeking after truth, goodness, security and all-inclusive human liberty."

AL ZAMAN (Baghdad).

Diary of the War

AIR ACTIVITY OVER GERMANY AND ENGLAND

12th Sep.—The Royal Air Force raided Dusseldorf, centre of German steel industry.

13th Sep.—There was slight enemy activity over the south and south-east of England. Bombs were dropped at two places.

15th Sep.—British bombers attacked the north-west German coastal area. High explosive and incendiary bombs caused material damage.

16th Sep.—Bremen was heavily bombed by the Royal Air Force.

Soviet bombers raided Koenigsberg in Germany and Bucharest and other Rumanian towns. Ploesti was in flames.

British bombers attacked a harbour town in northern Germany.

According to reports received in Washington, German merchant sailors on the North Sea and Baltic Sea coasts had mutinied and attacked their officers.

17th Sep.—The Royal Air Force swept over the channel. The docks at Cherbourg were bombed. Districts in Bulgaria were also bombed.

18th Sep.—The Royal Air Force bombed objectives in Ruhr and swept over France.

The Minister of Production, Captain Oliver Lyttelton, declared: "Nineteen or twenty days remain and at the end of that time the war definitely begins to enter a new phase."

A few enemy aircraft flew over parts of East Anglia.

UNITED STATES OF AMERICA AND THE ATLANTIC

13th Sep.—Speaking at Beirut, Mr. Wendell Willkie told a press conference that Allied monthly losses, at half a million tons, were being replaced by a monthly production of 600,000 tons.

14th Sep.—Mr. Stimson, Secretary of War, announced the formation of an experimental unit of women pilots to be known as the Women's Auxiliary Ferrying Squadron.

15th Sep.—The President of the Indian League of America, New York, stated that he was sure that Japan was almost ready for an attack on India and that it would take place within three or four weeks.

16th Sep.—Mr. Attlee arrived in Newfoundland on his way to Ottawa.

17th Sep.—Rear Admiral W. H. B. Blandy, Chief of the Bureau of Ordnance, said: "I think we are in a position to hold the Japanese in the Pacific."

President Vargas of Brazil signed a decree ordering general mobilization throughout the country.

INDIA, BURMA AND CEYLON

14th Sep.—The Royal Air Force attacked Mandalay.

17th Sep.—According to a New York message, the Grady Report proposed great expenditure of money and materials to assist India to enlarge the productive capacity, particularly of war materials.

18th Sep.—The Royal Air Force raided Mandalay and Myitkyina.

TREMENDOUS AIR DEVELOPMENTS

"In the very near future the tremendous air developments growing out of this war will result in passenger aircraft flying to Europe in 12 to 15 hours—not only everyday but probably every hour. Gliders are the freight cars of the air. It is possible to visualize a locomotive plane towing a train of six gliders in the very near future. By the use of the glider system the cargo capacity will be doubled. By dividing the load it would be practical to unhitch a glider at Philadelphia, another at Washington, another at Richmond, another at Charleston as the plane flies over each city without a slowdown."

—MR. GROVER LOENING,
U.S. Aeronautical Engineer—in a recent speech at New York.

A Metal Air Umbrella

"Anti-aircraft batteries will become more automatic. The ultimate will be a self-aiming, self-loading battery which, at the press of a button, will throw an automatic umbrella of metal into the air."

—MR. PAUL SCHUBERT,
U.S. Naval and Military Expert.

ITALY, AFRICA AND THE MEDITERRANEAN

12th Sep.—Three important places were captured in Madagascar.

13th Sep.—Field Marshal Rommel issued instructions to his troops that there should be no withdrawals.

British troops occupied Majunga and Nosi Be in Madagascar. There was heavy fighting along Betsiboka river.

Tobruk was bombed.

14th Sep.—Tobruk, Rommel's main supply base, was attacked in force by allied bombers.

15th Sep.—Ambanja, on the west coast of Madagascar, was taken by the British.

16th Sep.—Enemy lines of communications in the Daba area were successfully bombarded.

A British Flight-Commander at the controls of his "Beaufighter" aircraft, about to take off on a daylight "sweep" over enemy-occupied territory, with the R.A.F. Coastal Command.

17th Sep.—Allied patrols were active in all the sectors. Docks in Crete were bombed.

The Governor-General of Madagascar, M. Annet, sued to cease fire. Peace envoys were sent to British Commander.

18th Sep.—Tobruk was again raided.

RUSSIA AND FINLAND

12th Sep.—The German threw in more divisions in the attack on Stalingrad. Street fighting occurred in Novorossisk.

13th Sep.—The situation round Stalingrad remained tense and heavy fighting took place for an important height. The Germans were unable to break through the Soviet positions. A fierce attack was launched on Nazis near Razev. The Red Army evacuated Novorossisk.

Winter set in in the Caucasus mountains.

14th Sep.—General Merezkhov, developing a new offensive east of Leningrad, reached a point about 15 miles from the city. A fierce battle raged on the Neva river.

15th Sep.—A battle of annihilation was fought before Stalingrad. The enemy withdrew in Caucasus. German hopes of taking Stalingrad faded.

16th Sep.—Berlin was troubled by Stalingrad's stand. Hitler himself, it was reported, was "appalled at the sacrifice of manpower."

Soviet marines carried out a landing somewhere on the Barents Seacoast.

17th Sep.—Soviet troops continued to advance in the central sector. At some points in two sectors west of Stalingrad, the Germans succeeded in driving wedges. Stalingrad continued to resist German attacks.

NEUTRAL COUNTRIES

12th Sep.—Mr. Wendell Willkie left Turkey.

13th Sep.—Mr. Wendell Willkie arrived in Baghdad.

15th Sep.—Mr. Hammond Namazi, a prominent Persian businessman, on his return to Teheran from Tokyo said that the Japanese people, as a whole, had lost all enthusiasm for the war.

17th Sep.—The majority of the members of the Chamber of Foreign Relations Committee approved a resolution, urging the Argentine to break off relations with the Axis countries.

SHIPPING

13th Sep.—Successes were scored in a series of actions against a German convoy off Holland.

16th Sep.—One hundred officers and men were lost from four United States merchant-ships off the east coast of America.

17th Sep.—His Majesty's ships **Sikh** and **Zulu** were lost in a recent operation off Tobruk.

THE FAR EAST

12th Sep.—The Japanese thrust towards Moresby was checked.

A huge Japanese battleship and a heavy cruiser were damaged.

13th Sep.—Japanese advance was stemmed in south-west Pacific. Allied bombers attacked enemy objectives in Normandy island, Buna and Teon island.

14th Sep.—The Japanese fell back in China. The Chinese forces recaptured Kufang.

The Koreans revolted against the Japanese.

15th Sep.—The Japanese raided Guadalcanar.

16th Sep.—The Japanese withdrew from Hopei. Their positions in Chaoan were raided.

The Japanese reorganized their forces for another big battle in the Pacific.

According to the diplomatic circles in Chungking, the Japanese were waiting for the fall of Stalingrad to strike against the Russians in Siberia.

17th Sep.—The Japanese succeeded in landing in a fresh attempt to recapture Solomon islands. They made further progress towards Port Moresby.

The Japanese lost in the latest actions at Guadalcanar 5 bombers, 13 fighters and 3 seaplanes raising to 165 the total losses in the Solomons since August 7.

Japanese troops in Manchuria were increased to 20 divisions, besides the 20 mixed brigades of Chinese "puppet" troops.

The Chinese troops reached the suburbs of Tanki, Chekiang Province.

18th Sep.—The United States marines held Guadalcanar and Japanese attacks were repulsed.

There were heavy United States attacks on Kiska. Ten Japanese ships were sunk and six planes destroyed.

Cripps Proposals Mean Swaraj

Speaking in the Central Legislative Assembly on Friday last (September 18), the Hon'ble Sir Syed Sultan Ahmed, Law Member to the Government of India, replied to the criticism, that the British Government had not produced any constructive programme of reforms to deal with the situation in India. He said that he was surprised that such a demand was made at the present time when rebellion had still not been completely quelled and when the barbarities and excesses committed by the rebels had not fully subsided. He felt that it was exceedingly unreasonable to expect that under such circumstances Government would sit down to consider constructive measures, whatever the meaning of the phrase might be. He said:

"Apart from that, the Cripps proposals were, and to-day remain, the constructive proposals put forward by His Majesty's Government. That unfortunately has been spurned. Let me frankly tell the House that the acceptance of those proposals, in my opinion, would have resulted in the 'swaraj' for which India had been longing. But they were rejected on the ostensible ground of Viceroy's veto and so on. Has it ever been realized that the convention which the Congress demanded would have come in as a matter of course, once the sanction of the representatives of the people is present. Conventions would not be conventions if they were put on the statute, or for which there was an express agreement. Conventions grow up, as all customary rules do, in sensible gradations. Some small deviation from the precedent itself becomes a precedent; so the constitution broadens down."

Constitution and Growth of Conventions Sir Sultan Ahmed pointed out that in England the greatest changes in the Constitution were not brought about by legislative enactments, but by the growth of a purely unwritten and conventional code. Neither the Prime Minister nor the Cabinet was known to law, and yet the whole system of Parliamentary Government hinged on the working of the

DEPENDANTS OF HONGKONG GOVERNMENT EMPLOYEES

The Colonial Office have decided that dependants in India of employees of the Hongkong Government, who are now presumed to be in enemy hands and who were unable to make provision for their families will be granted maintenance allowances on the same terms and conditions as is being given to Hongkong Police employees who remained in the island at the time of the Japanese occupation. Such persons are, therefore, advised to apply with full particulars regarding the length of service of the employee, his pay in Hongkong, particulars of other assistance (if any) received, relationship to the employee in Hongkong, particulars of remittances (if any) previously received from him, etc., to the Government of the Province in which they are resident through the district authorities.

Cabinet or on the collective responsibility of certain members of the Executive to Parliament and to the nation for the conduct of public affairs. The Cripps Declaration, it may be pointed out, provided for the establishment of a Constitution around which will grow healthy conventions, which will make the administrative machinery function always in the general interests of the mass of the people. The British Government and the British people were, and are, solidly behind the Cripps Declaration and Britain's offer to India of a Constitution of her own devising, after victory is gained, is a genuine offer which remains open.

House of Commons on April 28th whether he would give an assurance guaranteeing British commercial interests in India. Replying categorically to the question, he said:

"The British Government has made it clear in connexion with the recent offer that a guarantee of special protection for British commercial interests in India would not be a condition for the acceptance of whatever constitution Indians might evolve after the war, and that any such provisions could more appropriately be a matter for negotiations with the future Government of India."

As dawn breaks over a British port, ships of a coastal convoy, with steam up, prepare to leave. Guarded by naval escort ships and an R.A.F. "umbrella", they will also have the additional protection of barrage balloons which may be seen through smoke. These kite balloons give the ships immunity from dive-bombing attacks, and have been responsible for the end of several attackers.

European Group and Britain's Pledge

The attitude of the European community in India was explained by Sir Henry Richardson, Leader of the European Group in the Central Legislative Assembly. In his speech in the Assembly on September 15th, he emphasized the fact that freedom had been promised to India by Britain and that they (Europeans)

"as a community, would exert themselves to assist in every way the implementing of the promise given."

It may be recalled that Britain renounced any guarantee of her commercial interests as a condition for settlement. Mr. Amery, Secretary of State for India, was asked in the

It will thus be seen that the statement of the Leader of the European Group in the Central Assembly, in spite of the absence of guarantee of European commercial interests, gives added emphasis and support to Britain's pledge to grant the fullest freedom to India after the war.

The Battle for Stalingrad

A message from Moscow says that the defenders of Stalingrad are showing increasing aggressiveness over the battle area as a whole and have made advances in some sectors. Every room in every house in Stalingrad has become a battle-field, says The Moscow Radio. Staircases are strewn with German corpses. Hand-to-hand fighting

is going on in the streets. In a recent broadcast from Stockholm Mr. David Anderson gives the following description of the city's defences:—

"Every house and building in Stalingrad has been turned into a fortress. On the outskirts of the city, cement bunkers, iron turrets with revolving towers, tank traps, minefields and artillery positions, besides the usual barbed-wire entanglements, guard the entrances to the city. Inside these defences stand a Russian force determined to die rather than surrender. This may sound like Russian propaganda, but in fact this is what Berlin says to-day."

The *Red Star*, the organ of the Red Army, says, "Civil life may be paralysed but possibilities of defence remain. In ruins impregnable defences can be organized."

Press reports of the battle tend to alternate between gloomy prophecies of immediate collapse and reassuring news about Russian defence. The explanation for this lies in the fact that the Germans attack a narrow front with a tremendous concentration of men and equipment, which is followed by a lull to bring up supplies and repair losses, during which period the Russians, whenever possible deliver counter-attacks.

Miles and Yards: Russian Resistance

While a week ago the Germans were gaining miles, they are now only gaining in yards. The Russian defenders are, no doubt, in a very tight corner, but it is worth recalling that when the Russian defence reaches the present stage, it does not suddenly collapse. The ultimate result may be a success as at Moscow, or a defeat as at Sebastopol, but resistance would continue until it becomes humanly impossible to go on fighting. The fate of Stalingrad, it may be said, will be decided away from the city itself, and not inside it. According to a Swedish military expert, the main Russian force is not inside the Stalingrad defences, but to the north of the northern panzer wedge to the Volga. If this is correct, the issue of the struggle will depend on the ability of the defenders inside the city to hold out long enough for Timoshenko to bring up reserves, and then strike south against von Bock's left flank between the Don and the Volga. The Germans are already giving indications that they are uneasy about their long and exposed left flank. How long Stalingrad can hold out to enable such a counter-stroke to be developed depends upon two things—physical endurance and reduction of the supremacy of the Germans in the air. If Stalingrad stands, the German plan for 1942-43 falls to the ground. If Stalingrad falls, a large part of von Bock's army of a million men and between 2,000 to 3,000 tanks and as many aeroplanes will be released for action elsewhere.

Later news indicates that Soviet reinforcements have reached Stalingrad and that the Red Army is advancing in the north-western sector.

The Battle for the Caucasus

The capture of Stalingrad is important to Germans, because it would give them sufficient control of the northern exit of the Caucasus. They have first struck in the region of Northern Caucasia with a view to getting a grip between the Don, Volga, Terek and Kuban rivers. Their drive has brought them to the Black Sea naval base of Novorossisk which, if it falls into German hands, will ease their problem of communications by opening a direct sea route from Constanza, but before this can be done the Russian Black-Sea Fleet should be put out of action. Even if Novorossisk goes, Russian war ships still have the harbours of Tuapse, Sukhum, Poti and the roadstead of Batum at their disposal. The question is, will the Germans be able to force the passage over the western extremity of the Caucasus range and then push down the road which follows the Black Sea coast southwards? There are many tunnels and cliffs, steep gradients and hairpin bends in this highway, and it is extremely difficult, but not impossible, for an Axis drive, to proceed along the coast to Batum, the capture of which would be the prelude to a sea-borne invasion of Trans-Caucasia. But the Germans would meet strong Russian forces supported by British Indian troops of the reinforced Ninth Army.

The other major thrust of the Axis follows the oil pipeline and railway from Rostov to the Grozny oilfields and thence to Makhach

TRAVEL DOCUMENTS OF SOUTH AFRICAN INDIANS

In August 1940, the Government of the Union of South Africa agreed to extend the validity of the travel documents of South African Indians who were on visits to India and who could not return to South Africa within the period of the validity of their identity certificates, owing to shipping difficulties. The Union Government have now decided to extend this concession to South African Indians who came to India on temporary visits before May 1, 1942, and who have not been able to return as a result of causes arising out of the war situation. Applications for extension of permits, stating the reasons in full, should as hitherto continue to be made to the Provincial Governments concerned before the expiry of the period of validity of the identity certificates.

on the Caspian Sea. Bitter fighting may be expected in this region. Given adequate and timely supplies of equipment, the defence of the triangle, Grozny-Kisliar-Makhach, which covers the last line link between Trans Caucasia and the west of the Soviet Union, should be stubborn. It is difficult to believe that a serious invasion of Trans Caucasia can be undertaken across the mountains. Looking at the picture as a whole, it seems the Germans want to prevent serious incursions against the 500-mile flank in the Caucasian plains in the Black Sea and the Caspian by capturing the northern exits of the Caucasus, after which they want to interrupt the main oil supplies of the Soviet Union from Baku to Ashtrakhani both by land and sea. But the entire plan falls to the ground unless Stalingrad can be captured. The German objective in undertaking the one-hundred mile journey of blood from Kharkov to the gates of Stalingrad is really the same thing that they sought on

Redemption, New Delhi. Many tributes have till now been paid to the great work and the valuable services of the Royal Air Force, but none has expressed in so few and eloquent words the freedom-loving world's gratitude to the Royal Air Force as Mr. Churchill. The British Premier, it may be recalled, said that never in the history of the world did so many owe so much to so few. Among all the glorious achievements of the Royal Air Force, one stands out very clearly against the background of the war as a whole. On September 15, 1940, it scored the most brilliant victory in the Battle of Britain by bringing down 185 enemy planes. In a message to the British Air Chief, Sir Charles Portal, on the occasion of the second anniversary of the celebration of this magnificent achievement, Lieut.-Col. H. H. Arnold, Commanding-General of the United States Army Air Force, said: "The deeds of your fliers on that day turned the tide of the war ending for ever the Nazi hope of world

British "Commando" troops, such as those who took part in the daring and successful raids on the French and Norwegian coasts, go through a realistic school of training. Photo shows: "At the ready." Commandos waiting in small dug-out holes for the order to attack. Live ammunition is used to make the men "tough."

their trail to Moscow last year, namely, the annihilation of the Red Army, says the *Daily Express*. But what the Russians seek in their turn is the bleeding to death of the German Army. The paper says the Battle for Stalingrad should be viewed not as an end in itself but as a mighty incident in a duel that has lasted for 15 months between the Russian and German armies and will continue to the death. The *Express* adds:

"Dangers that have appeared suddenly to our eyes have been plain to Russian leaders all this year. They have not quailed in their plan. They do not flinch now. Timoshenko's armies have fought for time. With their lives they have gained, and are still gaining, time until winter comes again to help Russia destroy the invaders."

R.A.F. Achievements: A Review Sunday, September 20th, was observed as the Royal Air Force Sunday, and a special service for officers and airmen was held that evening at the Church of the

conquest, and made possible the final United everywhere will ever observe this day in remembrance of those brave men who gladly gave their life to secure freedom and victory." It is of interest to review a few of the achievements of the Royal Air Force in its great fight for freedom and victory. During the first 15 days of this month (September) ten major offensive operations were carried out by Royal Air Force bombers against targets in Germany, apart from other activities over the occupied territory and over the sea. These ten incursions cost the Royal Air Force 91 bombers. Two years ago when the Battle of Britain was reaching its climax, the *Luftwaffe* lost 696 aircraft over Britain in the first 15 days of September 1940. In the first half of this month (September 1942), the *Luftwaffe* was over Britain on only one day in every three and on every other night and flew mostly in ones twos and fours. On the night of September 8-9, the peak was reached when 12 enemy aircraft were reported over East Anglia. In the course of these 15 days, 10 aircraft were sho

down over Britain. All these figures show that the Battle of Britain has been superseded by the Battle of Germany.

Decline in Enemy Air Activity

The decline in enemy air activity over Britain can be further seen from the number of civilian casualties. The average monthly toll of British civilians killed in German air raids is as follows:—

1940	3,869
1941	1,647
1942	325

In September 1940, 6,955 civilians were killed, whereas last month the number killed was only 403.

The figures of comparative losses during the three years 1939-1942 tell their own story. The figures compiled from official Air Ministry records are as follows:—

	Axis.	R.A.F.
1939-40	1,549	383
1940-41	2,080	501
1941-42	286	7
	3,915	891

In June 1941, the main bomber force of the *Luftwaffe* turned east against Russia and south to the Mediterranean theatre, and since then, enemy air activity over Britain has been comparatively slight as can be gathered from the fact that in a whole year the defenders have lost only 7 planes. Side by side with the decline of enemy offensive activity in the West, the Royal Air Force was gathering momentum for offensive action. The British raid of 1939-40 seemed mere offensive reconnaissances as compared with the average British raid of 1942.

Offensive operations entail heavier losses than defensive operations. In 1939-40, the Royal Air Force loss, however, was only two-thirds as large as the German. The bombing of Germany began in right earnest after the fall of France and British losses in 1940-41 were almost double the enemy losses. In the third year of the war the losses trebled. The following are the official figures for losses over Western Europe:—

	Axis.	R.A.F.
1939-40	1,082	671
1940-41	662	1,173
1941-42	744	1,993
	2,488	3,837

In 1941-42 a minimum of 40,000 sorties were flown by the Royal Air Force against Hitler's Europe, and during the same period, at a conservative estimate, not more than 4,000 sorties were flown against Britain.

Growing Advantage in Air War

Britain, in the fourth year of the war, enjoys growing advantage in the air war. Flying Fortresses of the United States in Britain are carrying out frequent daylight attacks on targets in occupied territory dropping bomb-loads of about 100 tons in an average attack. These represent only the vanguard of the American Air Force which will occupy 150 aerodromes in Britain. Canadian bombers made their first raid on Germany this month on September 8th and subsequent raids were carried out on September 13th and 14th. It is expected that eventually 40 Canadian Air Force Squadrons will be based in Britain.

American and British factories are now turning out about 7,500 aircraft every month, which means that close on 5,000 planes of operational types are being added to the Anglo-American strength every month. This marks a steady increase in the offensive air strength for use against Germany and German-occupied Europe.

A WARTIME PROBLEM

How can an infant be best brought up on fresh milk when breast feeding becomes impossible?

An attempt to answer that question for the general public is made in a pamphlet prepared by a committee of experts appointed by the Indian Research Fund Association which has just been published. An important question at all times, it is of particular importance in wartime when supplies of dried milk must be conserved and the anxiety of those who would normally depend on such infant foods must be allayed.

The pamphlet tells how to select, purify and prepare the different types of milk available—cow's, goat's and buffalo's—during the first six months of a baby's life. Copies may be had of the Nutrition Research Laboratories, Coonoor, or the Meternity and Child Welfare Bureau of the Indian Red Cross Society, New Delhi.

Madagascar Action

Preventing Another Indo-China

NO surprise will be felt at the news from Madagascar, unless it be over the four months of patience that have been allowed to pass before the clearing-up now set in motion, observes *The Times*. An enemy controlling or using Madagascar would be in a position to disrupt, with grave—even decisive—consequences to our strategic plans, our dispositions which stretch from the Western Desert to beyond the Eastern Ghats. The seaway round the Cape ranks only second in importance to the Atlantic lanes. Its safeguarding is in the strictest sense an inescapable factor in the strategy of the United Nations. What was so well begun in May—and then followed by prolonged diplomatic interlude and abortive talks—will now be brought to completion and all danger eliminated from an area where tardiness cannot be tolerated if we are not merely to contain the enemy but to strike back at him.

The new operations are under the general direction of Lieut.-Gen. Sir William Platt, whose fine record in Abyssinia is a guarantee that they will be carried through with speed and decision. So far little opposition has been encountered and casualties have been light. Madagascar, however, is a large island—a little larger than pre-war France—and roads and communications are sparse. Political considerations rather than any hard resistance are likely to limit the speed at which the operation can be completed.

IN TRUSTEESHIP

Britain and South Africa are providing the means. The mandate under which they are acting derives from all the United Nations. Tokyo speaks of British "piracy"; Vichy of "unspeakable aggression"; and Berlin—as always touchingly jealous of others' rights—of violated sovereignty. These thin laments will not impress. The supposed neutrality of Madagascar under Vichy has been regularly abused by the Japanese both before and since our occupation of Diego Suarez, and German agents have been active there. All evidence and every assumption pointed to a repetition of the shameful procedure in Indo-China. Vichy has shown that it has not the will to

defend the honour of France either at home or overseas. Even if it had the will, it has not the power. Britain and South Africa will hold Madagascar in trusteeship for freed France. Their military action will not be misunderstood, nor will their pledge be underrated, by those millions of French men and women in the homeland who suffer under the yoke but do not despair.

They will crack again

"The Germans are truculent, bullying and domineering when on the crest of the wave, but are demoralized in defeat. They cracked in 1918, and I believe when the tide of battle turns against them, as assuredly it will turn, they will crack again."

—MR. JOSEPH GREW,
former United States Ambassador in Tokyo,
in a speech on 18th September.

One of the most important branches of the R.A.F. is the Maintenance Command. Photo shows: Rolling out a Stirling wheelhub at Maintenance Command depot.

Britain's Exertions and Example

MR. Walter Lippmann, the American columnist who is visiting London, said that the Americans realized that the people of Britain had "once again saved the world", reports the *Daily Telegraph*.

"I have not been in England since the late winter of 1940", Mr. Lippmann said. "Measured by what has happened, that is a very long time indeed. The meaning of these years is understood in my country by all those who are capable of understanding it. They know that once again the people of this island have stood fast, that once again they have saved themselves by their exertions and the world by their example; that once again they have shown how, in a good cause and with an honest conscience, men can dare to stand alone as solitary defenders of right—yet never doubting that at long last there would arise about them a grand alliance of nations. This is what men will remember because it will now fix the course of the war and will determine its results and will shape the world."

Mr. Lippmann said that the American people were irrevocably committed to the war. He added: "The shortest estimate that I can give of the American war effort is that it is already much better than sober judgment would have deemed possible and that every one is complaining that it is not very much better."

Speaking of Anglo-American relations, Mr. Lippmann said: "They are now so numerous and complicated that it is meaningless today to ask whether they are good or bad. To make the association flourish, we are going to have to learn to widen our minds, soften our pride, improve our manners and, if I may say so, hold fast to the idea that together we are engaged in reshaping a world that can never be restored to what it was."

BRITISH GIRL WORKER'S RECORD

Evelyn Duncan, 22-year-old Capstan lathe operator in a Birmingham factory, is in the news again. A year ago she created a world record by turning out 6,150 shell components in a week, and received a letter of congratulation from the Prime Minister. Now she has easily broken the record production for a single shift by turning out 1,700 components in a night.

Great Air War over Britain Impending?

SEPTEMBER 15: Two years ago this day the British people were fighting their Battle of Stalingrad. September 15 was the day they shot 185 German planes out of their skies and won the battle. We did not know it at the time. But, because of what happened on September 15, 1940, the Germans there and then abandoned the vast preparations they had made to invade Britain. They turned from an all-out air war to their plans for an all-out land war against Russia.

For 12 months alone Russia has had to face the full might of Germany on land. For 12 months alone Britain faced the full might of Germany by air.

At Stalingrad we have come to a new turning point. This battle affects every home in Britain as well as every home in Russia. For its conclusion, successful or not from the German point of view, will release bomber strength to be hurled once more at Britain.

Raiding Britain will be costly for Germany, but every day the German public are given the assurance that it will be attempted. High-flying raiders which come in daylight at 40,000 feet are proof of Germany's intentions. She has nothing as good as the Lancaster, nor has she the aircraft factory capacity of the Allies.

But the British people must get ready to win another great battle in the skies over their own land. It may never happen, but the prospects are that it will. Two things can help to keep it away; still greater support for Russia, where German air power is locked up now; still better preparations inside Britain to meet air war. Both demand harder work from the British people—The *Daily Express*.

She says that she made up this number by "putting on a spurt" when she found that she had done 1,650 shortly before knocking-off time.

And this is what an official at the factory said about her effort: "Evelyn has just 'played skittles' with all pre-conceived ideas of what a girl could possibly do on a Capstan lathe."—The *Daily Herald*.

In Spite of Blackout and Blitz

Work of British Yards

MERCHANT ships have been launched from British yards in three months and completed in four and the cost is half of what it would be in the United States. Fast patrol boats have been built all over the world from parts produced in Britain.

Soviet's New Four-Engined Bomber

THE bomber command of the Red air force appears to be steadily extending its operations. This increase in bombing of enemy territory has been made possible by placing in service the TB-7 long-range heavy bomber, observes the *Manchester Guardian's* aeronautical correspondent. It is a 120-foot-span, four-engined monoplane capable of carrying about four tons of bombs over long distances, and has a high service ceiling. It is also very well armed with gun turrets in the nose, middle fuselage and tail, and

Trawler saves British air crew in North Sea. A boat from a trawler picking up the crew of a Wellington still floating in the North Sea.

These facts about the British shipbuilding effort were disclosed by Vice-Admiral W. F. Wakewalker, the Third Sea Lord, in a broadcast to America.

"Nearly half the shipbuilding labour of the country is employed on repair work," he said. "More than 23,000 warship repairs and refits have been needed, while 140,000,000 gross tons of merchant shipping, or 35,000 vessels, have been put back into service. Because of the cramped nature of the building slips on the Tyne and the Clyde, and inability, owing to insufficient time and labour, to lay out new shipyards elsewhere, we have had to build in the yards we had. Yet in spite of this, blackout and blitz, our achievement has been one to marvel at."

movable guns mounted in the wings and operated by a remote-control system. Like the short Stirling, the TB-7 has a single fin and rudder and 1,300-H.P. liquid-cooled engines.

This new Soviet bomber was designed by A. N. Tupolev, who came into prominence in 1929 when he designed the first U.S.S.R. all-metal three-engined aeroplane, Antnine. This monoplane was built in four and a half months, and afterwards it was flown on a demonstration tour throughout Europe. The machine was built entirely of a special alloy evolved by Soviet scientists.

The efficiency of the new bomber is the result of 13 years of study and experience with large long-range multi-engined aeroplanes.

In the Western Desert: Race for Time

TOBRUK is gradually earning the distinction of being one of the most-bombed towns in the world. During the eight months of our occupation, enemy aeroplanes seemed to come over daily, but they relied mainly on dive-bombing and did not drop anything like the weight of bombs which Allied airmen have rained on Tobruk during the past two months. But, until our raids can reach the much larger scale to which they seem to be working up now that heavy British and American bombers are being used, it is nearly impossible to make the harbour entirely unusable writes *The Times* Cairo correspondent. Jetties, warehouses and harbour installations may be smashed—as they are—but they can be repaired, or makeshifts can be improvised to enable cargoes to be landed.

Thus, although very heavy toll has been taken of Rommel's supplies both in Tobruk and on their way there, he is still able to get in enough to build up his Afrika Korps—even though the process is extremely costly—and he is able to make Tobruk his administrative centre.

BUILDING-UP PROCESS

This process of building-up is going on at top speed on both sides of the Alamein line. Recent experiences, both of the enemy and ours, have shown that on a restricted line such as that which is being held at present, and one provided with excellent natural defensive positions, an attack to succeed needs almost overwhelming superiority in armaments. It also needs massing of enough supplies in the front line to enable the attacking force to be self-sufficient long enough to press home its attack methodically and slowly. The enemy is far better situated in this respect than we are, for his supplies have a far shorter distance to come.

On the other hand, while Rommel's convoys are small but many, ours are few but large; moreover, ours nearly always have arrived intact.

It is certain that the lulls in the past two months have enabled General Alexander to build up a formidable force which is further strengthened by the appreciable American assistance which has now arrived in the form not only of aeroplanes, tanks and other weapons of war but also of men.

NOT INVINCIBLE AFTER ALL

Another important point is that Rommel's reputation as an invincible General is now shattered, for he has suffered two major defeats. The first of these was at the beginning of July when the enemy announced to the world that the Eighth Army had been beaten and that Axis forces were preparing to march into Cairo; and the second was at the beginning of this month when again the Afrika Korps was set in motion for a triumphal entry into the Nile Valley. That neither advance occurred was a definite and serious but unfortunately an unspectacular defeat for Germany's crack African General. This has had an appreciable effect on the enemy's previously high spirit. While the Germans' spirit is now said to be "sound but without its previous élan," that of the Italians is definitely poor.

On our side, spirits have rarely been higher. There was tremendous encouragement for our troops in the fine generalship which our new commanders showed in beating off the recent all-out attack by the Afrika Korps. The Eighth Army is in grand form and is waiting only for a chance to settle accounts with the Afrika Korps. It is impossible to forecast events in the Western Desert. The lull may last for weeks, or may be broken at a moment's notice. What is going on now is a race against time as each army strives desperately to be the first to be in positions to attack. Meanwhile our air arm rules the Libyan skies and, with the invaluable assistance of the navy, is dislocating—even if it cannot entirely break up—Rommel's supply arrangements.

NO LONGER ALONE

"Eleven years ago today, the Japanese militarists instigated the so-called Mukden incident, thereby starting a chain of aggression which has finally involved the whole world. At that time, China was facing the ruthless aggressor alone, fighting courageously what she knew was not only her own battle. Today China still confronts the same ruthless aggressor, but she is no longer alone."

—GENERAL WU TECHEN.

Secretary-General of the Central Kuomintang, in a speech at Chungking on September 19th, on the occasion of the commemoration of the Mukden incident.

Germany and Turkey

THE German capture of Novorossisk, which robbed the Russians of their last efficient naval base on the Black Sea, and the German delay in reaching the mountains have together led to an intensification of Axis propaganda in Turkey, writes Vernon Bartlett in the *News Chronicle*. On the one hand Hitler must be sure that the Russian Black Sea Fleet has no opportunity, if things become worse, of passing through the Dardanelles. On the other hand, he must prepare an advance on the oilfields of Baku by passing to the south of this formidable mountain range.

Although no regular lists are issued of Allied destruction of Axis submarines, it is known that the toll has been steadily mounting. Photo shows: U-boat survivors en route for a prisoner-of-war camp leaving a British destroyer, which sank their U-boat and picked up 36 survivors.

The possibility of a German demand to land troops at Trebizond, on the south-eastern shore of the Black Sea, has long been a source of worry to those Turks who did not seek to persuade themselves that Hitler would show any more respect for their neutrality than he has done for that of any other people that happened to stand in the way of his ambitions.

Turkey's military situation has been complicated by the fact that at the beginning of the war France rather than Britain agreed to supply material for the strengthening of her defences. Since the collapse of France, not only Turks but the British themselves have been short of military supplies. Recently the Germans rushed in with pressing, generous offers of armaments of every kind, but it is understood that they have not fulfilled their promises.

(Continued on page 12.)

2-A

Russia's "Second Baku"

IT is naturally impossible to estimate with any accuracy the effect on Russia's war economy of the interruption of waterborne oil from Trans-Caucasia. For, the most important factor is Russia's oil reserves; these are secret, though it is reasonable to assume that they are very large. But, apart from what is hidden away, the Soviet Union has important alternative sources of supply and refining centres, says *The Times* Moscow correspondent.

There have been substantial increases in oil production in regions other than the Caucasus

since 1939, when the more recently developed centres began to figure appreciably in the production tables. Although total production has increased remarkably—seven years ago it was 25,000,000 tons; in 1938 it topped 30,000,000; and two years later Russia was producing oil at the rate of 35,000,000 tons, aiming at almost 50,000,000 tons a year in 1942—an interesting feature of these increases is that, whereas until 1938, they were due mainly to greater production in the older Caucasian areas, since that year they have been largely caused by the rapid development of other fields.

In what is known as a "second Baku", oil deposits are believed to be at least as great as those in Trans-Caucasia. Although this district, the main wells of which are at Ishim-baevo, Kuibishev, Perm, Buguruslan and on

(Continued on page 12.)

Turkey's "Broad" Nationalism

THE German advance on the Caucasus provides the occasion for a German propagandist attempt to impress Turkish opinion with Axis successes as opposed to Allied impotence. Turkish commonsense, however, remains unperturbed, as is proved by the following remark the like of which is often heard these days: "Two years ago the great question was whether the Germans were going to invade the British Isles and, if so, when and how; now the question is being put about an Allied invasion of the Continent."

This reflection sums up the entire situation at the third anniversary of the outbreak of the war, says *The Times Istanbul* correspondent.

An instance of the unscrupulous methods of German propaganda is the misrepresentation of one sentence of the speech made by M. Sarajoglu when he presented his Government to the Grand National Assembly. The Turkish Prime Minister, defining Turkish nationalism, said that it should be taken in a broad and not a narrow sense. This has been interpreted by German propagandists and sympathizers as meaning that the Turkish Government was tending to adhere to the Nazi-racial theories and was encouraging pan-Turanism.

M. Almet Emin Yalman, one of the Turkish journalists who is on a visit to Britain, in his newspaper *Vatan* refuted this false construction put upon M. Sarajoglu's statement, and said that what the Turkish Prime Minister had meant was that the qualification of "Turk" within the borders of Turkey should not only apply to those of pure Turkish stock but should embrace all those who, whether of Albanian, Bosnian or Georgian origin, had acquired Turkish culture and Turkish national consciousness. Thus, M. Sarajoglu, who in another passage of the same speech had stated that Turkey did not pursue a policy of territorial aggrandizement, far from expressing sympathy for theories fostering racial prejudice, had on the contrary contrived to give a broad hint that these theories were not suitable for republican Turkey.

THE BRITISH MOOD

"The British mood has changed. It is no longer 'we can take it.' We feel that when Hitler starts again, our night fighters and anti-aircraft guns will be able to take a bigger toll. I found the recognition that while capacity to take punishment might avert defeat, only capacity to hand it out would bring victory."

—LORD HALIFAX,
British Ambassador in U.S.A.,
in a broadcast on September 20th.

GERMANY AND TURKEY

(Continued from page 11.)

The visit of a party of Turkish editors to Britain takes place at a very suitable time, since these editors have been able to see with their own eyes the extent of British and American preparations. Members of their Government at home have also received encouraging details from Mr. Wendell Willkie. There is in consequence no indication that the German propaganda blitzkrieg is having much effect upon the Turks.

RUSSIA'S "SECOND BAKU"

(Continued from page 11.)

the borders of the Tatar and Bashkir Republics, was a little slow in getting under way, development during the past three years has been rapid. The biggest trust, Bashneft, increased its output by one-half in 1939 and others have increased their output by as much as 60 per cent. The 1940 plan for the "second Baku" envisaged the sinking of 600 new wells.

War has speeded up all these plans, and it would be surprising if the "second Baku" has no more than beaten the task set to it to produce 14 per cent of the total Soviet supplies this year.

Germans Unpopular in Japan

THE *Daily Mail* publishes an account by an Englishman recently out of Tokyo on the Japanese attitude to their fellow partners of the Axis:

"There is a very strong—and growing—anti-German feeling throughout Japan. It dates from the time Hitler began pouring Germans into the country, and it did not take the Japanese long to realize that every one of these Nazis was a fifth columnist," says the Englishman. "In the gaols of Japan to-day, there are more Germans probably than any other nationals awaiting trial or under sentence for espionage. They are of course there as the result of the secret police system which functions so earnestly and ruthlessly for the security of the Japanese empire."

"Japanese intellectuals know every expurgated passage of *Mein Kampf* in which Hitler has lumped them in his categories of sub-men, and a Japanese officer once said to me that if Hitler won this war, every man in Japan knew that they would have to fight the Germans to retain their empire. Japan did not enter this war at Hitler's behest, but it was a significant fact—which has contributed largely to the deterioration of German-Japanese relations—that the very day they did enter it, Hitler stopped advancing on the Russian front. The inference that Hitler was trying to work a double-cross on them is ineradicable from their minds."

"Of course, the typical Nazi arrogance has only served to inflame the relations further. Japan always had plenty of foreign advisers. She is willing to be advised, but she will not tolerate dictation, which is the attitude that the Nazis are always assuming. The Nazis are spending an enormous amount of money in Japan and entertaining lavishly, but they have made so few friends that the unhappy German Ambassador, Major-General Ott, was once heard to remark, 'If Germany loses this war, I would rather be a rat on a sinking ship than German Ambassador in Tokyo.'"

Like A Precious Stone

"After three years of war, Britain's prestige shines as a precious stone does after grinding."

—THE SHANG WU JIH PAO,
(Chungking).

FIGHT TO THE FINISH

"I found grim confidence in the ultimate outcome—in victory and the destruction of the Nazi invaders. The Russians are determined to fight to the finish—they ask and give no compromise."

—Mr. AVERELL HARRIMAN.

Britain's Hurricane-bombers which beside their guns carry 250 lb. bombs, are taking a large part in the R.A. 24-hours-a-day offensive against the enemy. Photo shows: R.A. ground-staff preparing Hurricane-bombers for such a sweep.

Drive on Port Moresby

Japan's Object

IT is the view of an American admiral who has returned to Washington from a tour of the Western Pacific that the United Nations now hold the balance of striking power in that vast theatre of war. Certainly for some time the Japanese have not extended their area of conquest except in New Guinea, where they are clearly making a bold effort to strike at Port Moresby. But even there (thinks the *Scotsman*) the enemy's concern may be mainly defensive—to prevent Port Moresby from being used as a base for an Allied counter-offensive, as much as he has made repeated attempts to recover islands in the Solomons which may serve the United Nations for the same purpose.

After the fall of Burma it looked as if the Japanese intended to concentrate upon eliminating China, then almost entirely cut off from outside assistance. But although the Japanese did drive the Chinese armies further inland for a time, the latter have come back and have now recovered a great part of the provinces of Chekiang and Kiangsi which provide the bases from which Japan herself can be bombed. When the American air squadrons in China have been sufficiently strengthened, such an air offensive may become practicable.

CONSOLIDATION OF ILL-GOTTEN GAINS.

For a time also it appeared that Japan was preparing to stab Russia in the back in Siberia, but the season is now so far advanced that such a development seems less probable. An offensive against India would be a drain on Japanese resources. These resources are probably now no more than equal to maintaining and consolidating the Japs' farspread territorial acquisitions.

Indeed, the defence of her ill-gotten gains may henceforth be Japan's main preoccupation. No doubt they will be tenaciously held and it will be a tough job to eject her from them. A beginning has been made in the Solomons in recovering the bases that she has established in the Pacific, but that advantage would be offset if the Allied foothold on New Guinea were lost. General Blamey, who now commands the Allied land forces in Australia, has returned from a visit to New Guinea with an impression of confidence of the Allied forces there from commanders to men, that the enemy will be

prevented from taking Port Moresby. By means of infiltration tactics the Japanese have succeeded in crossing the Owen Stanley range, but it may be that when they come to more open country, they will be at a disadvantage unless they can contrive to get artillery support. But further landings in conjunction with naval attack may threaten Port Moresby from sea as well as land. However, the air supremacy over the island which the Allies at present possess may hold any enterprise of the kind in check.

Jap High-handedness in Indo-China

THE Japanese campaign to win the allegiance of the people of French Indo-China has failed, and the anti-Japanese spirit is common among the people, according to information reaching American Government officials.

For short period after the Japanese troops arrived, there were indications that the newcomers were not unwelcome to the people. The Japanese made overtures to the Annamite circles with separatist tendencies, and played up to the people by paying double rickshaw fares and distributing free cigarettes.

However, the early impression of Japan was nullified as additional troops arrived. Large numbers of people were subjected to partial conscription. The Japanese allowed them only a minimum wage for double work. Trainloads of men were moved from north to south without any consideration for family ties. People were inadequately housed and jammed into military trucks and carried to points where the Japanese wished work to be done.

On one occasion at Haiphong, the Japanese, unable to get more than half a trainload of volunteer labour, sent out a military band to play popular airs. Soon a crowd of listeners gathered around the band. Then the Japanese formed a cordon around the crowd and allowed the people out one by one. Those who could not prove they were regularly employed were marched off under guard to the train. A high French official stopped the train before it reached Hanoi, and after a lengthy argument, the Japanese took the train back to Haiphong and released the prisoners.

Japan's Confidence Shaken

“THE Chinese have in latter months done much to shake Japan's confidence in eventual victory,” observes an editorial in the New York *Herald-Tribune*. The article continues:

“They have done so much to deflate the confidence of the Japanese army that their successes seem incredible to those who read of the reckless fury of the Japanese soldiery elsewhere. Yet it does not make sense to assume that the Japanese sent 170,000 men through Chekiang and Kiangsi on a sightseeing jaunt, or have given the all-weather airfield at Shushsien—wherefrom they still suspect the Doolittle raid was launched—back to the Chinese because all they wanted was to have a look at it.

“Also, Japanese reports to their own people about their position in Chekiang and Kiangsi are grotesque lies. They have lost nearly 150 miles of strategic railroad and a score of cities, and three airfields wherefrom Tokyo can be bombed. Yet they claim to be holding everything they went after.

“The only reasonable explanation is that the Chinese are elated by the work of the American fliers, and have turned on the Japanese and have got the arrogant little savages on the run. The Chinese are entitled to some token of appreciation from their allies, and there can be no doubt of any kind about the form it should take—planes and more planes.”

British Naval Strength

If Britain had saved herself by her exertions and the world by her example, it would also be found when the history of the war was written that in the days of the deepest disaster, the Navy had once again saved the situation. The Navy's strength had grown and grown to an extent which the people would never think possible.

—MR. A. V. ALEXANDER,
the first Lord of Admiralty,
in a speech at Sheffield on September 20th.

“I heard it from a man who was actually there”

Was he? Are you certain?

Don't pass on idle rumours.

They cause uncertainty, unhappiness and loss.

They are started by the enemy

who rely on gullible people to pass them on.

Increased pay for R.I.N. Officers Benefits Under Revised Regulations

CHANGES in regulations governing their pay and allowances will, from October 1 next, confer considerable benefits on commissioned and warrant officers of the Royal Indian Navy. Ratings in all branches have already received a substantial increase of pay under the scales that came into force earlier in the year.

The main benefits accruing to all commissioned officers may be enumerated under three headings.

Officers will be housed by Government on payment of rent amounting to 5 or 10 per cent of their pay according to whether they are single or married.

Provision is made for an allowance on the lines of overseas pay to be drawn by all officers serving outside their country of domicile.

Under the present regulations officers serving ashore draw, in addition to their pay, a shore allowance not received by officers afloat. This distinction is now to be abolished. From next month all officers may elect to receive the new scales of pay which abolish the necessity for a shore allowance, and to that extent are assured of an income that does not fluctuate according to whether they are serving ashore or afloat.

For all officers serving afloat this means a net increase of pay. A Sub-Lieutenant, for instance, will draw not less than Rs. 455 if he is single and not less than Rs. 515 if he is married. The increase in the pay of a Lieutenant means that he will draw not less than Rs. 530 if he is single and not less than Rs. 590 if he is married.

Such officers will, in certain circumstances, be eligible for separation and messing allowances.

There will in future be no distinction in pay based on service in a particular branch. That is to say, Engineer Officers and Officers of all other branches will be brought into line.

The status of Warrant Officers of all branches has been established as equivalent to that of warrant officers in the Royal Navy, and their pay will be substantially increased. For instance, a warrant officer on appointment, now drawing Rs. 130 a month, will receive a

minimum of Rs. 300, and corresponding increases go with seniority in service. Important benefits are also conferred in regard to housing, marriage, messing and separation allowances.

The revised regulations apply to all officers, both commissioned and warrant, Regular and Reserve, in their respective scales. All officers naturally have the right to elect to remain on the existing rates of pay if they so desire.

An Air "Ace" from China

THE other day I met a fighter "ace" from China—Major John Pun Yung-hwang—who after five years of active service against the Japanese has been sent to London as Air Attache at the Chinese Embassy. Here is a hero for you, writes the *Daily Mail's* aeronautical correspondent.

Most of his battles took place under conditions in which individual tallies had to be forgotten, but he has nine "certified" victories to his credit—and a row of ribbons on his breast.

It would do good if this Chinese airman could be persuaded to talk to British factory workers. No man knows better the bitterness and hopelessness that is the lot of the soldier who fights with inferior and insufficient weapons. No man has a clearer understanding of the immensity of the task that lies ahead of the Allies.

Major Hwang is a young man grown old rather sooner than is just. Five years is a very long career for a fighter pilot who has never had a truly top-rank plane in which to fight. He has been at war since he left school, and now he is a man with an important post, a wife and a child. He is a lucky man. Of the other youths with whom he entered the Chinese air force, only one or two are alive today.

Major Hwang says that the Chinese actually had air superiority for the first fortnight of the war, and if they could have held it, the whole course of the struggle might have been changed. But, when the Chinese lost planes, there were no replacements. While the Government scoured the world for replacements, surviving pilots formed themselves into salvage gangs. They gathered up pieces of wrecked planes, and from these they fashioned the fighters with which to continue the battle.

Major Hwang believes that there is now an opportunity to weight the scales against Japan. Japan, he says, is at the cross-roads. She must attack either Russia or India. In both cases her flank would be exposed to aerial attack from China.

Diary of the War

AIR ACTIVITY OVER GERMANY AND ENGLAND

19th Sep.—The Royal Air Force hit with torpedoes a large Axis supply ship off Egersund, south Norway. Enemy supply ships were attacked off the Norwegian coast by the Coastal Command aircraft.

An enemy bomber was destroyed over England.

A large contingent of American troops arrived in England.

20th Sep.—It was revealed that United States parachutists were in the British Isles.

The Coastal Command aircraft made an attack on enemy supply ships off the Norwegian coast.

21st Sep.—The Royal Air Force raided Munich and started large fires. Shipping were attacked off Dutch coast.

Mr. A. V. Alexander, First Lord of the Admiralty, announced: "The battleships, aircraft carriers and cruisers of the Royal Navy lost in the last two and a quarter years have been replaced."

22nd Sep.—Bigger raids on Germany and the occupied territory by Flying Fortresses were forecast by one of the leading United States Army Air Force officers now in Britain.

23rd Sep.—The Royal Air Force attacked industrial objectives in the Lille-Lens area. Power stations at Mazingarbe and Port Vendin were among the targets hit. The iron and steel works at Ijmuiden were also attacked.

There was slight enemy activity over the south-east coast of England.

25th Sep.—The Royal Air Force attacked objectives in north and north-west Germany, including submarine yards at Flensburg. An enemy convoy was attacked off Dutch Coast.

The Duke of Norfolk, Parliamentary Secretary to the Ministry of Agriculture, speaking at Cardiff, said: "We may have to meet a fifth or sixth year of war."

According to unimpeachable sources, Marshal Rommel was seen in Frenndstadt in south Germany. He was believed to be suffering from throat trouble.

UNITED STATES OF AMERICA AND THE ATLANTIC

19th Sep.—Rear-Admiral Yates Stirling, United Press Naval Analyst, suggested the possibility of the east coast having to face German bombers in winter.

20th Sep.—Mr. Joseph Grew, the former United States Ambassador to Tokyo, said: "The Japanese will not crack morally, psychologically or economically even when eventual defeat stares them in the face. . . They will fight to the bitter end."

The War Production Board announced that orders had been placed for three giant experimental cargo-carrying planes costing 18 million dollars.

23rd Sep.—Major-General Hershey, Selective Service Director for the United States Army, stated that more than 10 million Americans would be under arms by the end of 1943.

25th Sep.—One hundred and eleven enemy aliens were arrested in New York by the police.

Ten days after laying the keel, a 10,500-ton Liberty freighter was launched at an American west coast port.

INDIA, BURMA AND CEYLON

23rd Sep.—The United States Air Force bombed enemy installations in Burma and Yunnan.

24th Sep.—The Japanese Radio announced the death in action of Major-General Tateo in Akyab on the Burmese coast.

The 8th Princess Louise (New Brunswick) Hussars, a famous Canadian cavalry regiment, are now training in England as a mechanized unit, fight in American-built "General Lee" and "General Stewart" tanks. New tracks are seen being fitted to a "General Lee" tank.—E.N.P.

News of extensive plots to assassinate high Japanese personalities in Malaya was disclosed by the Tokyo Radio.

ITALY, AFRICA AND THE MEDITERRANEAN

19th Sep.—Allied patrols and artillery dispersed enemy working parties in northern sector. Enemy landing grounds between Mersa Matruh and Fuka were bombed.

A German fighter was destroyed over Malta.

British terms for an armistice in Madagascar were rejected by Mr. Annet, the Governor-General, and French resistance was continued.

20th Sep.—Tobruk was again raided and harbour jetties were attacked.

The British forces advanced towards the capital of Madagascar.

21st Sep.—Tobruk was subjected to yet another raid.

Axis shipping were attacked in central and eastern Mediterranean. Many hits were scored.

The British occupied Ankazob in Madagascar.

22nd Sep.—British forces were 37 miles from Antananarivo, capital of Madagascar.

On the Egyptian front, there were artillery exchanges in the southern sector.

Bardia and Tobruk were attacked by Allied bombers.

23rd Sep.—Allied columns in Madagascar continued their advance on the capital.

There was patrol activity in the Western Desert.

Two United States merchantmen were lost in the Mediterranean.

24th Sep.—British troops occupied Antananarivo, capital of Madagascar.

Air Vice-Marshal Wilfred Ashton McClaughry succeeded Air Vice-Marshal K. Rodney Park as Air Officer Commanding, Egypt.

A force of United States heavy bombers attacked shipping in Benghazi harbour.

Military Awards

The following military awards to personnel of the Indian Army in recognition of gallant and distinguished services in the Middle East have been announced:

D.S.O.

MAJOR KUMARAMANGALAM.

M.C.

CAPT. VEDANTHA RANGACHARI,
M.B., B.S. I.M.S.

I.D.S.M.

15342 NAIK GOVINDAN, Madras S. & M.

Russian goods sent in exchange for supplies from Britain being unloaded.

25th Sep.—Enemy landing grounds between Daba and Matruh were bombed.

RUSSIA AND FINLAND

19th Sep.—There was hand-to-hand fighting between the opposing armies in the streets of Stalingrad. The Soviet army launched a successful offensive in the Mozdok area.

20th Sep.—Street fighting continued in the suburbs of Stalingrad.

Fierce fighting continued in Sinyavino area.

Soviet forces landed in Motovski Bay on the Murmansk front.

sectors all round the city. Two Nazi regiments were annihilated. Street fighting had been going on for four days.

The Red Army continued to maintain heavy pressure along the whole Voronezh front.

23rd Sep.—The Germans in the past 24 hours did not make any progress in Stalingrad. Enemy thrusts were repelled. There was street fighting in an unnamed town near Voronezh and an important German position captured.

Nazi positions were pierced at Rzhev.

24th Sep.—The Red Army, fighting on Stalingrad's north-western approaches, slowly

Day after day, British aircraft swarm over the enemy-occupied coastline, attacking and impeding war activities. Photo shows: "Spitfires" setting out on a daylight sweep. H.M. King George was at this fighter station at the time, and talked with the pilots before they set out and after their return.

21st Sep.—General von Kleist, reported a Soviet communiqué, was killed in the Mozdok area. He was Hitler's second best tank expert after Guderian and General von Bock's right hand man. The Germans denied the report.

Stalingrad still stood, bloody but unbowed, after four weeks of the most terrific onslaught in history.

Mr. Wendell Willkie arrived in Moscow from Kuibishev.

22nd Sep.—Mr. Willkie was received by M. Molotov.

Literally, yard by yard, the German army arc, from south-west to north-west of Stalingrad, closed in. Battles raged in several

gained ground. Thousands of Germans were wiped out. In the last 48 hours, belief had grown in Russia that Stalingrad would not fall.

According to a Swedish newspaper, Von Bock was dismissed service a week ago.

Frequent falls of snow were reported from the Arctic front.

Mr. Wendell Willkie visited the Red Army Staff College in Moscow.

A big Anglo-American convoy reached Archangel.

25th Sep.—Italian fighters were shot down over the Leningrad front.

Fighting inside and outside Stalingrad reached greater intensity.

SHIPPING

22nd Sep.—The Canadian destroyer *Ottawa* was sunk by an enemy torpedo.

The U-boat which torpedoed a British ship off Cape Espichel in Portugal was itself sunk by the aircraft escorting the vessel.

23rd Sep.—An enemy flak ship was set on fire off the Dutch coast.

VICHY AND OCCUPIED COUNTRIES

20th Sep.—The Germans shot 20 hostages from the Croat village of Bugo Selo as a reprisal for ambushing and killing two German soldiers.

Herr Stuelpnagel, Commanding German military forces in Paris, announced that 116 "communist terrorists" were shot for complicity in attacks on German troops.

22nd Sep.—An attempt was made on the life of the Slovak President, Dr. Tiso.

23rd Sep.—According to the figures compiled by the Inter-Allied Information Committee, the total number of persons executed in Occupied Europe up to September 21 was, 207,373.

THE FAR EAST

19th Sep.—The Allies raided Buna. Fifteen Japanese barges were sunk.

Japanese attack on Lanchi was repulsed.

20th Sep.—Fighting in the Owen Stanley area was reduced to patrol activity. A Japanese patrol was wiped out.

The Chinese advanced on Kinhwa.

21st Sep.—The American Navy Department announced that Flying Fortresses hit two Japanese battleships north-east of Tulagi in the Solomons.

Opinion generally held in China was that the Japanese wouldn't dare to attack Siberia so long as the Russians held Stalingrad.

The Japanese diplomat to Russia was recalled.

22nd Sep.—Milne Bay was cleared of the Japanese. Enemy advance in New Guinea slowed down. Allied aircraft attacked enemy supply installations in Kokoda, Lae and Buna.

23rd Sep.—United States planes bombed Japanese bases at Rekata Bay and Cizo Island in the Solomons, hitting another Japanese cruiser.

The Japanese fleet withdrew.

24th Sep.—United States Army heavy bombers bombed Gizo Island and strafed shore installations at Rekata. The Japanese suffered heavy air losses in the Owen Stanley area.

25th Sep.—Allied forces kept up heavy pressure on Japanese bases and supply routes in New Guinea.

Japanese planes were worsted in air battles over the Solomons.

LOCAL INHABITANTS need not apply!

In occupied China the Japanese have ousted the Chinese from every decent job from the top to the bottom of the business world. There are no Chinese industrialists any more, no Chinese shopkeepers, no Chinese professional men or stenographers or clerks, not even Chinese street-vendors. These jobs are for the Japanese, the rewards of conquest. This is what happens when the Japanese come. Do not stand by and see this happen in India! The energies of every man and woman are needed to make our defences sure.

Spirit and staying power will win

GENERAL WAVELL

I don't think it is going to be easy for the Germans to come down the Caucasus now, or next spring, and capture the oil supplies in Persia. This is of interest to me, as it is the western flank of India

I am satisfied with the situation here. Though the disturbances while they lasted, had a certain effect on the war effort, the important thing is that 70,000 recruits continue to come in every month, and there has been no sign whatever of trouble in the Army

I have no doubt about the final result of this war. Spirit and staying power will win. America, ourselves, Russia and China are going to fight to the end

—GENERAL SIR ARCHIBALD WAVELL, Commander-in-Chief, India, at a dinner in Delhi, on September 28

Running Commentary

General Wavell on Importance of Burma

Speaking at a dinner given in his honour by British and American correspondents in New Delhi, General Wavell, Commander-in-Chief of India, referred to the importance of Burma in the scheme of counter-attack against Japan. His Excellency said, "Ever since the loss of Burma, I have been planning its re-occupation, because, strategically, it is one of the most important areas in the war with Japan. It is necessary for re-establishing contact with the Chinese, and we want a base for attack on Japan itself." The question of re-occupation of Burma has been occupying the attention of military authorities now since the situation has improved and India is getting the equipment she wants. The advance of Rommel towards Egypt and the German threat to the Caucasus necessitated the sending of supplies and reinforcements which postponed the adequate consideration of Burma as a base for the counter-attack. To the question what Japan would do next, General Wavell compared Japan to the boa constrictor which has swallowed a large animal it cannot easily digest, and said, "I don't fancy that they want to take on anything big at the moment like the invasion of Australia or India." Japan's weakest point is her air force, and she has got to consider, firstly, the home front, secondly, Manchuria, and thirdly, the South-West Pacific, in each of which she has to keep a fairly large air force. In order to realize her dream of becoming a great power in Asia, said the Commander-in-Chief, Japan must first try and take into account the Russian menace and then try to settle the war with China. "The heart of the problem is Russia, and it is a question affecting India." General Wavell pointed out that Germany's hope was to put the Russian army out of business this summer as she did in 1917, and she would probably try a pincer movement

in the Middle East next year, but she would not achieve her objective so long as the Russian army was intact in the north and the Caucasus intact in the south. Even if Stalingrad is lost, the situation would not be altered a great deal, as the line of the Volga in the lower reaches would be frozen towards the end of the year and the southern passes of the Caucasus were getting snow even now. "I don't think," said General Wavell, "that it is going to be easy for the Germans to come down the Caucasus now or next spring, and capture the oil supplies in Persia." He added, "This is of interest to me, as it is the western flank of India." His Excellency expressed his satisfaction with the situation in India now. Though recent civil disorders in the country had a certain effect on the war effort, he pointed out, that it was important to note that 70,000 recruits continued to come in every month and there has been no sign whatever of trouble in the army.

MADRASI LANCE-NAIK AWARDED I.D.S.M.

LANCE-NAIK CHOCKALINGAM, of the 9th Indian Infantry Brigade signal section, a Hindu Tamilian from Melmangalam village, Periyakulam taluk, Madura district, is awarded the Indian Distinguished Service Medal for his acts of heroism in recent fighting in the Western Desert.

In the course of his speech, General Wavell pointed out that "the biggest fight of the war is the fight for shipping." This important question was referred to by Mr. Churchill. In a message to the American people he said that one of the most remarkable examples of courage, resourcefulness and industry was the American ship-building programme. It is almost unbelievable, he said, that nearly 500 large ocean-going cargo vessels were completed in the short space of the past twelve months since the launching of "Patrick Henry," the first Liberty ship. Mr. Churchill exclaimed, "It is a record beyond compare. It is an achievement beyond the most optimistic hopes and expectations." During the last one year, America has placed in service in intense sea battle a total of nearly 5,300,000 dead-weight

Nations," and says that he has given the general argument for a Second Front the weight and point of a disinterested testimony and that he is evidently convinced that time is better treated as an enemy than as an ally. The paper observes that the call for a Second Front may at times be "uninformed and misleading, and even mischievous," but says that it is based on sound and essential notions.

"It is certain," adds our contemporary, "that before victory can be won, Germany must be brought to battle on two fronts, or more, and German soldiers defeated on the field by British and American soldiers as in 1918."

Red Army tank men pushing forward on captured German tanks after they had been repaired for their own use.

tons of shipping. This added tonnage meant a very great deal to the armed forces of the United States and the enslaved peoples of Europe who were depending on those armed forces to free them from the yoke of Nazi tyranny. Great strides have been made in shipping, and the rate of production counterbalances to a great degree the shipping losses and portends the ultimate doom of the Axis Powers.

Second Front and "Strategy of Victory"

In an editorial article entitled "The Strategy of Victory," *The Times* refers to Mr. Wendell Willkie's visit to the Middle East and Moscow "as a most timely service to all the United

Opinion in America has generally opposed Mr. Willkie's suggestion "for public producing" of the military. *The New York Times* says in an editorial on Tuesday:

"From Moscow, through London, to New York there is only one ground for difference of opinion on the Second Front—when and where it ought to be and whether the decision shall be partly political or wholly strategic."

The paper points out that a United Nations disaster in Europe would not aid the common cause and that commonsense would soon justify us in hitting Russia's enemy and hitting him hard where hitting will hurt him

most. Emphasizing the need for a Second Front at the proper time, it says:

"We know by the ruins of Stalingrad and by the men who have died and are dying there that the Russian people will never be conquered. Britain and America may not be able to raise the siege of Stalingrad, but in the spirit which has defended that City, they can and must lift the siege of Russia."

Anglo-Soviet Discussion and speculation Understanding with regard to the Second Front has thus come into the forefront again. There are several reasons for this. It may be recalled that, at the time of the signing of the Anglo-Soviet Treaty last June, a *communiqué* was issued by the British Foreign Office which contained the statement that "a full understanding" had been reached between Britain, United States and Russia "with regard to the urgent tasks of creating a Second Front in Europe in 1942." It may be pointed out that this statement did not promise a Second Front in 1942, but only recognized its urgent desirability. But many have regarded it as a definite promise of such a front this year. Subsequent to the treaty, there have occurred in succession the Anglo-American Military Conference of July and the visits of Mr. Churchill and Mr. Wendell Willkie to Moscow. It was even supposed in some quarters that Mr. Churchill actually went to Moscow to fix the exact date of the Second Front with M. Stalin.

Aid to Russia : Paramount Principle

Two questions are being asked. If the Second Front is to be opened at all this year, ought it not to be opened almost immediately? And if it is not opened at all, will not Russia be let down? The heroic and magnificent defence of Stalingrad has added an extra sense of urgency to such arguments. It is universally recognized that an offensive in Egypt or the air offensive over Germany, however valuable they may be, are not complete substitutes for a Second Front in Europe. Why then is not the Second Front in Europe opened immediately? The question is to be judged strictly from one point of view, and that is the basis for the demand, which is that Russia should be helped. It is obvious that a Second Front which failed would injure Russia in the long run far more deeply than it would help her for the time that it actually existed. The losses that may take place would require to be replaced, and this means another prolonged period during which Russia would be exposed to the full weight of the German war machine. But if Russia endures for a little time longer, it will be possible for the Allies not only to open, but also to maintain a Second Front, which will sound the death-knell of Nazism. In other words, the question of a Second Front must be decided solely from the military standpoint.

Six essential conditions

Six essential conditions are necessary for a Second Front, and they are as follows:—

- (1) There must be air mastery to establish a solid bridgehead.
- (2) There must be sufficient shipping to transport and supply permanently a force sufficient to compel the enemy to transfer his principal strength from east to west.
- (3) The equipment of that force must be equal in quantity to anything which the enemy can bring to bear against it.

Is British Business A Bogey?

"Special protection for British commercial interests in India would not be a condition of acceptance of any constitution, such a provision would properly be a matter of negotiation in the future with the Government of India. In India we have passed from the conception of tutelage to that of free and frank partnership."

—DUKE OF DEVONSHIRE,
in the House of Commons,
on July 30.

INDIA AFFIRMS

"The whole of the European community stands behind the promise (of His Majesty's Government). To the best of our ability we will help in implementing it. If by any chance the Government goes back upon that promise I will be the first to lead a movement against the Government."

—MR. P. J. GRIFFITHS,
Deputy Leader of the
European Group, in the
Assembly Debate in Delhi
on September 17.

(4) We must be sure that the opening of a Second Front in Europe would not disastrously affect the defence of Egypt and India.

(5) We must be certain of our ability to reinforce the new front from Britain and America.

(6) We require the power to harass and interrupt enemy communications.

It is thus clear that an unsuccessful Second Front will be much worse than no Second Front at all. But a Second Front will come, and it will come as soon as there is a reasonable chance of success and the means of maintaining it. We have to remember that it is not merely a question of effecting a landing in France, but of advancing into the interior of Germany. A Second Front cannot stand still—it must go forward, or else it will go back. It requires enormous and careful preparation and that is

efforts to bring about a compromise or settlement and want to encourage unrest and confusion. For instance, the *Azad Hind*, which is Germany's stooge radio operating from Hamburg, advises Indians on September 10th to "bring war production to a standstill." The *Indian National Congress*, another German radio station, in a broadcast in Hindustani on September 11th, ridiculed the attempts of "a handful of admirers of the British Government and obscure men who are striving to bring about a compromise between the British and Indians." Now that Berlin approves of the Congress attitude, this so-called *Congress Radio* says, "Our saviour, Mahatma Gandhi, has given his blessing to the course of action we have decided upon." In an Urdu broadcast, Tokyo said on September 10th, "We would like to tell you that Japan never had, nor will have, any evil designs on India." But the real purpose

First news that "Combined Operations" in which the Army, Navy and Air Force take part are being held in India is contained in this photograph of soldiers learning the technique of beach landings at a Training Centre situated on a lake several thousands of feet above the sea. Instructors are Commandos who took part in the Madagascar raid.

why only military considerations can enter into the final decision. Only the inner ring of leaders who have all the facts and figures before them can forecast the day and the hour when a Second Front to help Russia can be opened, and it should be left at that.

Axis Propaganda and India

Japan and her Axis partners have been continuing their nefarious radio propaganda with a view to misleading the Indian people. They profess sympathy for India and Indian "Independence" and talk of "India for Indians" and India's "Golden Opportunity." But they really want chaos and disruption in India and are trying their best to engineer, prolong and intensify internal disorders and sabotage in this country by over a dozen transmitters in Europe and East Asia. They deride all

underlying Japan's hypocritical advocacy of Indian independence has been revealed by their own statements. "The conquest of India and Australia," says the Japanese newspaper *Tariko Shimpō*, "is an indispensable condition for the setting up of the New Order in Asia." This point has been clarified in an article by Admiral Hiraide in the March issue of the paper *Fujin Keren*. The Japanese Admiral says, "We must bring India and Australia completely under our control." It may also be recalled that a Japanese Lieutenant wrote in his diary "Indians are a cowardly people, fit only to be slaves." Can there still be any doubt about the real attitude of Japan towards India?

The Technique of Axis Propaganda It is of interest to examine the technique of Japanese radio propaganda. Their methods are threefold, viz., (1) to spread confusion and work for civil

war, (2) to prevent a settlement at all costs, and (3) to sow seeds of dissension between India and her friends. The *Azad Hind* is not deterred by the fact that Indian recruiting figures are increasing in spite of, perhaps because of, Axis hate-propaganda, which has been at full blast during the last few months. There have been about 70,000 recruits coming in every month, as pointed out by General Wavell, but this German station asks, "Can any sane and self-respecting man think of joining the British army? Is it not an insult to yourself and your nation?" Confusion is sought to be spread by fantastic stories. *Rome Radio* says, for instance, on September 8th, "Further troops have arrived from the United States. These include coloured detachments. So India's old civilization is to be outraged by the presence of these barbarians." The German *Indian National Congress Radio* says that the scheme of sabotage and arson in India is exactly as the Congress wanted it to be. Muslim tribesmen in North-west India were asked, last spring, by *Rome's* fake station, the *Himalayan Radio*, to take up their swords and "make war on the Hindus."

Congress Programme and Axis Plans

An important part of the Axis game is to see to it that there is no settlement between Britain and the Indian parties. Those who work for such a settlement come in for a good deal of abuse. Sir Tej Bahadur Sapru, Dr. Jayakar, and lately Dr. Mukerjee, have had their share of this abuse. Now that the Congress-programme seems to fit in with the Axis plans, there is nothing but praise for Congress leaders. But it may be recalled that the same leaders were roundly abused by the Axis radio a few months ago. In a Hindustani broadcast on July 5, 1942, the *Rome Radio* declared, "Gandhi and some other Congress men are pleading for aid to Britain against the so-called aggressors. Are they not ashamed of talking in this manner? Thousands of Mahatma Gandhis can be sacrificed." In a Berlin broadcast on February 4, 1942, Dr. Farooqi, a German agent, referring to Pandit Jawharlal Nehru said, "He will be a mere tool of British machination, because he was brought up and educated in England and his ideas have been strongly influenced by the British environment."

When the British Government's proposals for a settlement were about to succeed, the *Tokyo Radio* said on April 6, 1942, simultaneously with the bombing of Vizagapatam and Cocanada: "Japan is anxiously waiting for your decision this way or that,

she cannot afford to lose time." On April 13th, the *Helsinki Radio* said, "Cripps' disappointment in India is as great a success to the Tripartite powers as a major military victory."

Jap attempt to create split between China and India

The third method of Axis propaganda has been used in a subtle and cunning manner. Japan wants to divide India not merely from Britain and America but also from China. On July 20, 1942, the Chungking paper, *Ta Kung Pao*, is deliberately misrepresented by Tokyo as saying: "Britain will do well to give only nominal independence to India." This supposed disagreement between Chungking and London has been enlarged by the *Berlin Radio* which said in a broadcast to the Germans, "What leading Chungking circles thought about British colonial policy is clearly proved by the 'leader' of the influential paper *Ta Kung Pao* which advocates India's independence."

The main object behind all these varied methods of propaganda is the subjugation and enslavement of India. Saigon may say "Refuse to co-operate with the Government in any way," and Singapore may shout "Follow your Movement," but India knows who are her friends and who are interested in making her a slave of Nazism.

LABOUR IN EMERGENCIES

Military Commanders have been empowered to require persons to assist in doing work which in their opinion is necessary to meet an attack, or to repair or reduce the damage resulting therefrom, or to facilitate offensive and defensive operations against the enemy. In such circumstances, the success of military operations might depend on the immediate carrying out of work for which labour could not in the time available be obtained through the normal channels. Military Commanders have therefore been empowered to call upon any local labour forces which may be available to do vitally important work. Any labour so employed will receive full remuneration.

Battle for Stalingrad

Race between Two Armies

TO-DAY (Oct. 2), the Battle for Stalingrad enters on its thirty-sixth day. A terrific struggle is going on, and the Russians are repelling the panzer and aircraft attacks of the Germans, with a ferocious courage and tenacity which are unparalleled in the history of human warfare. Marshal Timoshenko's forces coming

improved during the last few days, but this is only a matter for gratification, and not for premature jubilation. Marshal Timoshenko's forces north of Stalingrad are playing the part of Blucher to Stalingrad's Wellington, but it is as yet too early to say anything definite. The Russians are fighting with the exaltation that possessed the defenders of Sebastopol, but the Crimean fortress was isolated at the end of a peninsula, whereas Stalingrad can receive supplies and reinforcements across the steppes beyond the Volga.

KEY TO THE SITUATION

The opinion of military experts in more than one neutral country is that the Battle for Stalingrad has already prevented the Germans from carrying out their planned conquest of Trans-Caucasia this summer. The importance of Stalingrad's stand will be more

Red Army artillerymen covering an advancing infantry unit during the fighting for a German-occupied village on the Southern Front.

from the north are reported to have broken through the strong German defence lines erected by the Germans after their crossing the Don elbow over a month ago. The question that is being asked is: "Will the Russians be able to cut off the communication along which German reserves reach Stalingrad before the Germans reach the Volga in a wide front?" And the answer is, if Marshal Timoshenko can continue his advance along the eastern bank of the Don, the supply line of the German left flank may be cut, exposing the entire flank to being rolled up from the rear. In other words, the Battle for Stalingrad has developed into a race between the Russian relieving force and the German armies which are trying to break the city garrison's resistance, before they are compelled to abandon their venture. The situation has no doubt

clear if we visualise the consequences of its fall a month or even three weeks ago. If such a disaster had fallen at about that time, the Germans would have mounted a concentric attack on Moscow from the west and the south, and would have had a chance of knocking Russia out of the war as a major factor before winter set in. As the Stalingrad situation stands at present, the Germans may or may not win a tactical victory, which now can be no more than Pyrrhic, but the major strategical triumph, which they had planned has already escaped them.

The key to the present situation lies in the line of the Don from Kletskaya to Voronezh, which the Red Army is holding. If winter finds the Russians still holding the strategical position along the German left flank, the

chances are that they will win the Battle of the Volga, even though they may have lost the Battle for Stalingrad itself.

CAUCASUS DEFENCE STRENGTHENED

One important result of the continuing Battle for Stalingrad is that the defence of the Caucasus region, which was at one time disquietingly weak, has been granted precious time.

Now that the situation is like this, what will the Germans do? The possibilities are that, finding Stalingrad too costly to take but still being strong enough to take the offensive, they may divert their efforts elsewhere. German hints that Stalingrad is not worth taking, reported from Switzerland, may be an indication of this attitude. The most probable direction in which German effort may be diverted is, of course, the Caucasus, where lie the much-wanted oilfields that lured Germany to take a step which would prove her ultimate undoing. Or the Germans might launch a direct attack on Moscow from the west with the object of taking it before full winter comes in late November.

DOMINATING FEATURES

The two dominating features of the war in Russia, however, remain as before—Russia's heroic resistance and the great help of the Allies. Recently a large convoy has reached Northern Russia, after eight days of continuous attacks by the enemy in the Arctic. Now that the worst season of Arctic convoys has passed with the Equinox and the season of perpetual daylight has given place to lengthening darkness in the Arctic, dangers from enemy aircraft will be much less. Germany knows this, and that is why she wanted to convince her people that a heavy toll of this convoy was taken, though she formerly pretended that the route was closed altogether. Such pretences cannot overcome facts, neither can they influence or affect the spirit and staying power of the great Russian people.

Passed the Period

"I personally think that we have passed a serious and dangerous period, not without credit, but also not without hardship and disappointment."

—LT. GEN. N. M. S. IRWIN,
in a broadcast to troops of the
Eastern Army from Calcutta,
on September 27.

War Miscellany

BRITAIN'S WOMEN FIGHT HITLER

A new welding machine recently sent to Britain from the United States is being used with great success in training the women who are to-day helping to build ships for the Battle of the Oceans.

The women become good electric welders after a brief training. A growing number of them are now working alongside their men-folk in the yards of the Tees, Tyne, Wear, Mersey and Clyde.

They are taking over the lighter jobs such as painting a ship's structure; every week more and more of them are to be seen high up on the staging.

Heavier work like riveting is not quite their line, but they make excellent rivet heaters. They are to be found on repetition work in the machine shops. They make piston rings. They assemble valves. In oil engine works on the Clyde theirs is the chief labour used in building oil coolers.

Women are even taking over work as fitters on the lower parts of heavy marine engines which can be reached from the floor or the first staging.

And everyone is agreed that they are a success: the Government, the employers, the trade unions, and—the women themselves.

BRITISH ARMY'S BOOTS

The British Army is on the march in boots which weigh 1 lb. less than in 1918. Their average weight in the last war was 5 lb. a pair; their average weight to-day is 3 lb. 13 oz.

The achievement is the total result of a number of tiny reductions. Material is a little less thick. In 1914-1918 when the Army got its first machine-made boot uppers had a thickness of 2 millimetres. To-day it may be 1½ millimetres.

There are still toe-caps, with a reinforcement of cement under them; but the old toe-case has gone; and that was in solid grain leather of not less than one-tenth of an inch. Outsoles, too, are not so heavy. There are fewer metal studs and the metal for heel tips and toe plates is also lighter.

Finally there was the new design for the Army boot of this war, incorporating the ideas of a famous orthopaedic surgeon who is also a knight. The new boot grips where it ought to and gives room where room is needed. And the result, almost accidentally, is yet another reduction in weight.

The sum total is a boot which is not only less heavy and more comfortable, that is to say, less tiring to the man on the march, but one which wears longer than its clumsier predecessor.

Battle of Britain

Whole Trend of War Changed

THE importance of the Battle of Britain was not fully realized when it was fought. What it meant to the course of the war has only been revealed with the passing of time. In 1940 it was perhaps chiefly thought

A NEW FEATURE

There was, however, one new feature. Drake and Nelson were able to win in a matter of hours. The Battle of Britain was prolonged. The Luftwaffe which in six weeks had subjugated the whole of Western Europe was held for three months, and, in the end, was shattered.

There is no doubt that invasion was prepared. Evidence is conclusive. For many months reconnaissance aircraft watched the whole of the Channel coast, and their reports showed, from the time of the fall of France, a steady assembly in every suitable port and river of necessary transport and equipment

Britain's sub-stratosphere "Stirling" bomber, the largest four-engined bomber in the world, has figured prominently in raids over Germany and the occupied countries. It has a speed of 300 m.p.h. and a range of 2,000 miles and is very heavily armoured, its defensive armament including 3 gun turrets. Dimensions: Length over 87 ft., wing span 99 ft., height 22 ft. 9 ins.

of as an extensive and prolonged air victory in which the losses of the victors were remarkably small compared with those of the vanquished.

The Battle of Britain was in fact the defeat of the third attempted invasion of these islands. It therefore ranks with Drake's action against the Armada and Nelson's fight at Trafalgar. The only difference was that the Battle of Britain was fought in a new element. In essence all three achieved the same result in the same manner. That is to say, by denying the use of the Channel, they prevented the transportation of a large armed force from the Continent, which armed force in all three cases, if it had made its bridge-head, was sufficient to conquer and hold this country.

with a tonnage sufficient to carry decisive forces. Accumulation continued until late autumn, and then began to decline, the ships going back to what had become very urgent commercial and military transport duties. This dispersal was decisive proof that the Battle of Britain had brought the whole design to nought.

The consequences of what happened in the autumn of 1940 have been insufficiently appreciated. The destruction of over 2,000 German aircraft, though it did not affect the productive capacity of Germany, kept her net operative force on a low level in 1941. The same result has been achieved by the Russian air force in 1942. It has been made impossible for the graph line of German air power to rise.

TIME GIVEN FOR PRODUCTION

Further, the Battle of Britain protected the productive capacity of this country, and but for the victory, the programme for the construction of "heavies" which are now being aimed effectively, at the sources of German supply, could never have proceeded. In a word, the immediate material result of the Battle of Britain was that it cleared the way for that race of output in which the superior power of the Allies is calculated to be the decisive factor on which our hopes of victory are chiefly based. For the first time in the war, the will to victory of Great Britain was improved by positive and successful action, and the myth of German invincibility was shaken.

To-day it is difficult to recall the feelings of June 1940. The world believed that final German victory was imminent and would be complete. Britain was thought quite unable to prevent it. Mr. Churchill quoted a remark made at this time by French Generals and the French Prime Minister: "In three weeks, England will have her neck wrung like a chicken."

The first recovery was due to a speech of the Prime Minister. In the midst of these disasters, speaking in the House of Commons he said: "Now it has come to us to stand alone in the breach and face the worst that the tyrant's might and enmity can do. Bearing ourselves humbly before God, but conscious that we serve His unfolding purpose, we are ready to defend our native land against the invasion by which it is threatened. We are fighting by ourselves alone, but we are not fighting for ourselves alone."

EFFECT ON NATIONS

But these fine words demanded deeds. The Battle of Britain provided them. It took time, of course, for the implications of this victory to affect what little was left of independence among European Governments

and to sink into the minds of the subjugated peoples. In the summer of 1940, opinion was very divided in the United States, and there was certainly no majority for entry into the war at the side of Great Britain. President Roosevelt, who had to carry the burden of responsibility for a third term, was clearly strengthened by the outcome of the Battle, and especially by a timely report by General Strong, who had left England on September 18, and had actually witnessed the fight on September 15. Fifty destroyers had been transferred on September 3, and on November 5, Roosevelt became War President.

A final word as to Eastern Europe. The Soviet Government had always proclaimed to its people that they would inevitably be called upon one day to defend the Union. The non-aggression pact with the Germans was a time-saver. The Germans exploited Russian fears in order to extract raw materials of which they were greatly in need. But nothing ran smoothly and the visit to Berlin reluctantly paid on November 12 by M. Molotov did little to relieve the situation. On October 17 the *Red Star* paid a glowing tribute to Britain's air effort.

NO MORE "EACH FOR HIMSELF"

It looked perhaps as if Russia was beginning to see that some collective action was desirable; the encouragement given to the Yugoslavs, culminating in the patronage extended to the Belgrade coup d'etat in the spring of 1941, which delayed for many weeks the attack which even then was projected against Russia, confirmed this view.

In general, this can be safely said: The hopes stimulated by the speeches of the Prime Minister and the Battle of Britain began to reverse the fundamental principle of international policy, which had been "each for himself." The ground was clear for a grand alliance of Britain, America, Russia and China, in which lies the present augury of victory.—*The Sunday Times*.

WE SHALL STILL BE IN DEBT—

"With our growing ship production we must build a bridge of supplies to Russia. We can help by sending food here this winter. If we don't, millions may go hungry. A hungry man even though he has the heart of a lion cannot go on fighting. We can help by sending medical supplies to ease pain and suffering among the Russian people. We can help by going all out immediately with giant bombing raids on Nazi cities. If we, in America, do all these things to the limit of our strength and ability, we shall still be in debt to the Russian people for what they have done and are doing to stamp out Hitlerism."

—MR. WENDELL WILLKIE, in a statement to the Foreign Press, on September 26.

Fight for Control of the Channel

FOUR times in the last thousand years a great army has been assembled opposite our southern shores confident in its ability to conquer this island provided only that it could achieve even temporary control of the narrow seas. The first time, a divided England faced with war on two fronts went down in defeat. That disaster has never been allowed to be repeated. In 1588 Howard and Drake maintained mastery of the Channel by a battle in the Channel itself. From 1803 to 1805 Nelson held it by operations ranging from Toulon to the West Indies and finally prevented the fulfilment of the threat by destroying the hostile fleet at Trafalgar.

In 1940 a battle for the control of the same narrow waters was fought out in a new element, with the same immediate result. The greatness of the victory then achieved was understood by very few at the time. It had been shown that short-range fighter squadrons flying over their own territory—provided the inferiority of numbers was compensated by high technical skill and heroic endurance and devotion—could maintain mastery of the air against an assault of large and strongly escorted bombing forces, and inflict crippling losses on them. But subsequent military history has shown that more was decided than that.

BENEFIT OF VICTORY

The benefit of the victory has accrued not only to the people whose homes it saved but to all nations then and since arrayed against oppression. Every month that increases the muster of Allied forces on British soil enhances the significance of that which was accomplished by those few airmen who kept inviolate this one stronghold off the shores of ravaged Europe within which power to strike finally back against the enemy can be built up.

To repeat the victories of heroic times, however, is no longer our objective. Then we were alone, fighting for bare survival; now that we hold the central stronghold of worldwide fellowship, we need strategy to attack.

In an hour of peril air power alone acting in its own element saved an island, but it cannot deliver a continent. The value of our raids to the Allied cause depends on their capacity, by disorganizing German supply, to contribute now or soon to the defence of the Volga route to the Caucasus. That defence in its turn will give no return for the blood that our Allies have shed unless the respite it has gained be used to the full in massing the strength of the western Powers to carry out a concerted offensive plan conceived and executed in the three elements. Therefore the

fight for control of the Channel—or any other waters that it may be expedient to cross—may soon have to be fought out afresh with a reversal of the roles of attack and defence. It will take new forms, and the Dieppe raid is more likely to provide the model than the Battle of Britain. The part of the R.A.F.—whose achievement in that raid was exceptionally brilliant—will again be indispensable and not less glorious because this time it cannot be separable from a concerted plan of all Services.—*The Times*.

Taking Definite Form

"British and American plans for the counter-offensive are beginning to take a more definite form. The real developments of the war will be seen in the future."

—GENERAL TOJO,
The Japanese Prime Minister, in a
speech in Tokyo on September 26.

British submarines—most silent ships in a silent service—take heavy toll of enemy shipping during their ceaseless and far-reaching ocean patrols. Photo shows a British submarine officer looking through the periscope of a British submarine during a patrol.

Quality of Allied Planes

THE Germans lost the Battle of Britain because their fighters and bombers were inferior to our defenders and because our whole defensive organization was superior, writes *The Sunday Times*. It adds:

The same fine qualities in our machines, now turning to attack, can win the battle of Germany. A maintained superiority in the quality of our fighters and bombers must go with a supremacy in numbers.

Recent air-operations in all the parts of the world emphasize these facts. On all fronts at last the United Nations are beginning to have available enough aircraft of high quality to remove the worst inequalities of the days when they were forced to fight on the defensive.

How much difference a high technical quality can make was illustrated vividly recently in Malta, where the arrival of Spitfires transformed the scene. It is illustrated equally well over Germany where night raids have begun to have telling effect now that a higher proportion of the forces taking part consists of four-motor heavy bombers.

The output of operational aeroplanes by the United Nations is now well ahead of that of the Axis. The great thing is to keep our production flexible enough despite its size so that new machines can be introduced rapidly as occasion demands.

TECHNICAL POSITION FAVOURABLE

Fortunately the United Nations stand in a favourable position as regards technical quality. Of a dozen principal categories of military aircraft, Great Britain or America can claim supremacy in all but two. The enemy are alive to these facts and are likely to press forward with those of their types which might gain an advantage.

A clear idea of how wide is the qualitative superiority of the United Nations will be obtained by examining aeroplanes now in active service. Based on publishable information and figures, the following would appear a representative list of the best all-round military aircraft in the world in 12 categories that matter:

(1) Single-seat fighter—Super-marine Spitfire (British), (2) Long range night fighter—Bristol Beaufighter (British), (3) Heavy bomber—Avro Lancaster (British), (4) Medium bomber—Dornier Do-217-E-2 (German), (5) Land-based torpedo bomber—Savoia Marchetti (Italian), (6) Army coop Scout—North American Mustang (United

States of America), (7) Long range patrol boat—Consolidated Coronado (United States of America), (8) Transport land-plane—Douglas C-54 (DC-4) (United States of America), (9) Transport seaplane—Boeing Clipper (United States of America), (10) Naval fighter—Vought Sikorsky Corsair (United States of America), (11) Naval torpedo bomber—Grumman Avenger (United States of America), (12) Naval dive bomber—Curtis Hell-diver (United States of America).

WORLD'S BEST PLANE

Of the twelve types, the United States are building the world's best aeroplanes in seven categories, Great Britain, three and Germany and Italy, one each. The most important among these is the single-seat fighter. In addition to the Spitfire we have both Hawker Typhoon (British) and Republic Thunderbolt (United States of America) coming into service with high hopes for great success as fighters.

In the heavy bomber class, the new American Boeing B-29, a super-Fortress, should prove a very fine machine. An interesting point is that in two most important types, fighter and heavy bomber, the Royal Air Force has the best equipment.

This survey is perhaps not strictly fair to the British equipment as a whole because there can be no doubt that in general in all categories the Royal Air Force is the best equipped service in the world. Stirlings, Halifaxes, Beauforts, Sunderlands, Sea-Hurricanes and the vitally important trainers, Tigers, Moths, Oxfords, Ansons, Magisters and the like are giving magnificent service everyday with little attention or publicity.

In each and every category, the heart of an aeroplane is its engine. The aero-engine development is as vital as that of new airframes. Fortunately the United Nations are well served in this respect.

Shining brightest of all is Rolls Royce Merlin which saved the world in the Battle of Britain two years ago and to-day an improved form is being built both in Britain and the United States of America. New and unmentionable types of aeroplanes and aero-engines now on the stocks and even in action give a reasonable hope of success in consolidating and even enhancing our present superiority.

SALVAGING IN U.S.

The United States War Production Board announces that used tin cans salvaged from kitchens throughout the United States are expected to yield more than 3,000 tons of pure tin and 297,000 tons of steel scrap annually.

The United States Navy has authorized the commissioning of civilian pilots between the ages of 19 and 32, who previously were ineligible because of age, marital status, or minor physical defects, for probable assignments as instructors and ferrying pilots.

Anglo-American Co-operation in the Air

BY

WING COMMANDER L. V. FRAZER

BRIGADIER-GENERAL Ira C. Eaker, Commander-in-Chief, the American Bomber Command in Great Britain, has been living in the same house with Air Marshal Sir Arthur T. Harris, Commander-in-Chief, Britain's Bomber Command; this in itself shows the closeness and harmony of the air relationships between the two countries.

Canada is now producing every type of equipment needed by the Allied fighting services. Photo shows: Canadian sailors on board an ammunition supply-ship at a British port.

As soon as Brigadier-General Eaker arrived in Britain and began working with Air Marshal Harris, it was found that it would be a great convenience, in fact a necessity for them to be in consultation any moment during the 24 hours. Air Marshal Harris, therefore, had a special room fitted up in his private house for General Eaker to use as often as he pleased and General Eaker has been there constantly. This intimate collaboration has quickly extended throughout the two services.

I have just been visiting a number of the American army's operational air bases under General Eaker's command and I have never before seen such constructive collaboration as that which exists in every aspect not only of flying but of the complicated ground organization which keeps a modern bombing force in the air.

RAPID GROWTH OF STRIKING POWER

Not only is there an unprecedented expansion of the Royal Air Force but now forces of America are multiplying every day. Within

a very short space of time, American bombardment forces, often escorted by Royal Air Force Spitfires, have been able to carry out raids which already run into two figures; they will reach their century before very long.

Their presence, however, means that while the striking power of Great Britain as a base is rapidly extending, new problems are added to the intricacies of the ground organization which only an enthusiastic conception of give and take can solve.

I went to several stations, which are just becoming operational, having been taken over by the Americans from the Royal Air Force bomber personnel. The Stars and Stripes flew over these bases but that does not mean that collaboration was at an end.

In the handing over, the preliminary work of organizational alignment may have been completed, but that is where a constructive collaboration of flying operations begins.

GETTING USED TO NEW CONDITIONS

The American air crews are arriving fully trained and they are more than anxious to have a smack at the Germans immediately. Several of them told me, however, how glad they were of the Royal Air Force help in accustoming themselves to the European flying conditions. After the wide-open spaces of the American continent, with clearly marked roads, railways and rivers, the fine close-knit pattern of the British countryside is a little bewildering. The Royal Air Force bases are naturally much closer together and a pilot must consequently be much quicker in recognizing landmarks.

After exceptionally good visibility in America they must also accustom themselves to the British weather which only very occasionally gives them the visibility to which they have so long been accustomed. Three years of war, of flying in all weathers and handling huge air forces within a small space have given the Royal Air Force ground organization a specialised experience unequalled anywhere in the world.

At the Wing Headquarters which I visited, there was a Royal Air Force officer, who has been in service for many years and who has an unrivalled experience of signalling and aircraft safety devices, in charge of the whole signals organization for various operational stations controlled by the Wing (equivalent to a Royal Air Force group).

"My No. 2 is an American, as you see," he said. "And if you should need any proof of how we get along together you have only to listen to us for a few moments."

The American officer, later, took me aside and expressed his admiration both of his chief and of the signals organization which they were so quickly absorbing.

SHARING SECRET DEVICES.

War experience has put Great Britain in possession of many signalling and radio-location devices which the Americans are now using for the first time. Upon every operational station these are still being handed over and the British Personnel are being retained to work them alongside their American colleagues.

Even in the mess of an operational station, where I had lunch, I was served with the first course by an American orderly and with the second course by a Royal Air Force steward. It is no exaggeration to say that the two peoples are getting to know each other in the daily routine of duty in every branch of the great ground organization which is mounting the United Nations' bomber offensive.

All the American lads share the great eagerness for operations, an eagerness which the Royal Air Force crews are all too quick to recognize because they know what it means.

WHAT SHE GOT FROM RUSSIA

SAM WOOD, the Hollywood director, tells about the German *hausfrau* who was enumerating for a friend the various gifts she had received from the countries invaded by the Nazi army. "From Norway," she related, "I got the most beautiful gloves. From Holland I got a lovely pair of shoes. From France I got a wonderful dress!" . . . "What did you get from Russia?" interrupted the friend.

"From Russia," was the reply, "I got my widow's veil."

—WALTER WINCHELL,
in the "New York Daily Mirror."

NEW ZEALAND SENDS SUBMARINE MEN HONEY

The men of the Royal Navy got—

310 footballs,
500 tins of tobacco,
2,000 dartboards,
7,032 packs of playing cards,
14,000 books,
16,465 games and puzzles, and
60,000 packets of cigarettes,

and large quantities of boxing gloves from the Navy League Seafarers' Comforts Supply last year. The success of the League's effort to liven up lonely hours at sea is a tribute to the few workfolk making sports goods and games in Britain: their numbers have been reduced to next to nothing by the call to munition making.

In addition to their share in this contribution to cheer the tedium of sea warfare, the men of the submarines get honey, sweets and cakes from the Navy League every month. Hundreds of tins of honey have come in from New Zealand and Canada has contributed many consignments of cakes.

From South Africa hundreds of sheepskin coats, strong and warm, have come to England: these are issued only on very special occasions. And the good work of the League includes parcels of shaving tackle, handkerchiefs, razor blades and pyjamas to prisoners of war.

IS THE ENEMY WHISPERING TO YOU?

Every time you hear a rumour

It is the Japanese whispering in your ear.

They are trying to poison your mind,

Weaken your resistance.

Don't help the enemy by believing

And spreading unconfirmed news.

DON'T BELIEVE RUMOURS BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

Chinese Students in Wartime

BY

H. U. LIEM

STARTING from scratch in 1919, the Chinese students had built up a nation-wide movement. Their influence had wrecked the intrigues of the corrupt Pro-Japanese An-fu clique in 1919, who tried to sell China piecemeal to Tokyo. Their vigorous dissatisfaction against the treatment of China's claims at the Versailles Conference had caused the people of the world to realize with a jolt that at last the days of treating China as they pleased were over; that China was fully alive

Government and the Chinese Communists. They called for an armed resistance against the enemy to the bitter end whatever be the cost. Meanwhile the Generalissimo, Chiang Kai-shek, was quietly making preparations for a total resistance. The Chinese Communists, too, were agitating for national unity and resistance, promising to shelve their Sovietisation and propaganda programme in the interests of national unity, and announcing their readiness to fight, shoulder to shoulder, within the ranks of the Government forces, against the enemy who was fast encroaching on North China. Consequently, when Japan struck on July 7th, 1937, the foundation for unity and resistance was laid, unity became an accomplished fact overnight. The students, true to their spirit of sacrifice, rose to the occasion. To-day they are to be found in the vanguard of the forces of resistance, in defence, the home front, political and social and other work of national reconstruction.

The Soviet Forces continue to hold, and in many places hurl back the strong attacks made in several sectors of the Russian Front by the Germans. Photo shows: Red Army men moving forward during a strong attack on a populated place on the Western Front.

to her new responsibilities towards herself and to the world at large. Whenever any corrupt regime of the Peking period tried to seek self-aggrandisement at the expense of the nation, the students had been instrumental in causing nation-wide strikes of labourers, merchants, peasants and students throughout the country. And so the student movement grew and grew until it towered, like a giant, in strength and in proportion. It has always been the vanguard of any important national movement in the pursuit of China's greatness. No wonder the Chinese students to-day enjoy the full confidence and support of the nation as a whole.

Those were the days before Manchuria was invaded by the Japanese on September 18th, 1931. When it became clear that the Manchurian invasion was to be the prelude to Japanese conquest of the whole of China, the students started a nation-wide agitation for ending the civil war between the Central

THREE WAR AIMS

The Chinese people have vowed and pledged themselves to carry out three war and peace aims. The first is Unity and Resistance—in other words, the people should be united and resist the enemy until victory is won, whatever be the cost. The second is National Reconstruction—to carry out a gigantic programme of national reconstruction which will make China emerge from this war, not exhausted, but greater and stronger than when she entered the war in 1937; with the country well-developed, ample employment for everyone and the people's standard of living raised to a new high level. The third is Democracy—to consolidate Chinese democratic principles and institutions so that China will become a pillar of World Democracy.

In carrying out these war and peace aims, particularly in National Reconstruction, education undoubtedly must play an important part. In a long war of attrition, the duration of

which no one can foresee, the cultural life of the nation, which has never been interrupted for five thousand years, must go on. The Government, therefore, decided to open up new universities, colleges and schools in the interior, which has been converted into a base of resistance against the invader. As the result of this plan new universities, new colleges, new schools sprang up like mushrooms there. They were merged together for reasons of economy and expediency. At that time, few students were to be found in the interior. The Government therefore made an appeal to the students to come to the newly established schools and universities. Thus began the great epic trek of the students from the coastal areas into the great interior. Boys and girls, young men and women, having no railways, steamships, cars, boats, or even bicycles with which to travel, trudged on foot. They covered distances ranging from six hundred to a thousand miles. When they reached junction towns, they formed a stream of human beings. Along the way they performed the most marvellous reconstruction work. They set up schools to teach the illiterate people to read and write. When it was time for them to leave, they handed over the administration of the school to the newcomers. And so, a school built is a permanent one. The agricultural students would go to the farmers to teach them better farming methods and to learn from them the wealth of their experience. They set about to improve the village rural work, sanitation and hygiene. They did propaganda work to rouse the spirit of the people to resist the enemy and maintain their morale at a consistently high level. They invoked the greatness of the people to build up a new and greater China by carrying out the gigantic programme of National Reconstruction. They helped the Chinese Industrial Co-operatives to spread and organize new branches. They enlisted in the fighting forces, guerrilla units, civil defence, A.R.P., hospitals, clinics and schools. They went through rigid discipline and vigorous military training. They promoted mass education by extraordinary methods. In fact, they did the most incredible work that has ever been recorded in the history of any student movement in the world. They have risen to the occasion during China's period of crisis. It sounds like a fable, but it is true.

Let me give you an example of their extraordinary versatility and adaptability, or, if you prefer to call it, genius. For instance, they have raincoats. To us a raincoat serves only one purpose; to keep ourselves dry and warm in rain. To them, it serves three purposes. The first is to keep themselves dry and warm in rain. But when they walk through the fields,

they are afraid of being machine-gunned from the air, so they paint it all over and it becomes a camouflage—that is the second purpose. When they pass a village or town they paint the coat with slogans calling for resistance, unity and reconstruction; and so it becomes a propaganda sheet. Still another example: the Little Teacher's Movement. This method could be used to combat illiteracy or carry out propaganda. They would collect a number of the active and intelligent youth of the village or town. They would teach them intensively and tell each of them to teach their still younger comrades. The youths of fifteen to twenty should teach those of ten to fifteen. Those of ten to fifteen should teach those of seven to ten. These children would be told to teach somebody else. Having no one to teach at home, they would gather and teach their grandfather and grandfather or the maid-servants. So this method reaches a perfect circle in range of age.

STREET PLAYS

Another effective method is the street plays. The theme is usually a peasant family making merry after harvest. Down come the Japanese, killing the old folks, massacring the youngsters, doing violence to the women, looting and burning the house. A lad would survive. With blood streaming down his face, he would crawl and cry: "Why did the Japs kill us? Why did they steal our land and destroy our property? We must protect our country, our folks, our homes and our soil! We must fight! But we must also find comrades. Oh, who will fight with me?" Then the actors, who are distributed among the audience, would rise and say: "We will fight with you!" These peasants and people have felt the pang of reality from their own experience. And so, the next day when recruiting time comes, everybody goes to the recruiting station of their own free will. They know what they are fighting for.

When at last these students reached the universities and colleges, they lived in Spartan fashion. They used caves and huts as dormitories, libraries and classrooms and meeting rooms. They bathed and washed in the rivers and brooks which abound. During their spare time, they continued with their good works which they had begun during the long trek, and, as a result, profited by their experience. They have gained invaluable knowledge from school and experience from life. That is why the enemy is so afraid of the Chinese students. That is why to-day the first military objectives to be bombed are the universities and colleges; the first batch of victims to be tortured and bayoneted are the students and youth of China—(A B.B.C. broadcast).

Mechanised Might in Madras

Tanks passing through Madras City after the manoeuvres

South Seas and Japan

THE conquest of the South Sea Islands does not mean a treasure-trove for Japan, says Mr. Kung Teh-po, an authority on Japanese affairs, writing in a recent issue of *Japan Review*, a magazine published in Chungking.

What Japan needs most, the writer observes, is iron and steel. These are found nowhere in the South Sea Islands. Throughout Malaya, the Netherlands East Indies, Philippines, Thailand and French Indo-China there were prior to the war no installations for the mining or refining of iron and steel.

Resources which Japan can have in plenty in her newly seized territories are tin and rubber. But no ingenuity of the Japanese can make use of rubber for the manufacture of tanks or tin for making airplanes.

Some people, the writer continues, are under the illusion that Japan's conquest of the South Seas would contribute towards the solution of her food and petroleum problems. To correct this erroneous conception, the writer quotes Premier Tojo as saying in his report to the Japanese Diet on May 27 that up to the end of April the Japanese Army had shipped home 700,000 tons of materials. This is a miserably small amount, even if Tojo had tried to boast.

In peacetime, Japan's merchant vessels plying between home waters and the South Seas amounted to 1,300,000 tons each month. The total of materials shipped to Japan each year accordingly amounted to more than 13,000,000 tons. Japan occupied the Philippines, French Indo-China, Thailand, half of Malaya and a greater portion of Borneo as early as January this year. The amount of 700,000 tons, therefore, represents four months' seizures. Calculated on this basis, Japan gets only 2,100,000 tons each year, one-sixth of what she got in peace time.—*China Information Bulletin*.

Wartime Hawaii

THE strange contrast between beauty and grimness presented by "Hawaii at war" was described by Hanson Baldwin, military commentator of the *New York Times*, in a telephone message to his New York office. He said:

"The surf at Waikiki still breaks in lacy foam across the coral reef, but the lazy beach-boys are gone. Ukeleles strum no more. The roar of planes is now an ever-present part of life on the island.

"In Honolulu and Hilo, on Oahu, Maui, and Hawaii blackout regulations are strictly enforced, and the people must be indoors at 10 p.m. Today the importance of the islands as a tourist centre is completely subordinated to the sombre purposes of war.

"As a keystone in our Pacific strategy, the Hawaiian Islands now represent the major focus of our war effort. As such, entry and departure are rigidly controlled, and those who leave are not likely to be allowed to return for the duration.

"The raid on December 7 completely scotched the 'it can't happen here' psychology, and Hawaii is prepared. . . . Everywhere people are working. Pearl Harbour is filled with workers. The earth is scarred and new. Everywhere there is construction—new buildings, new air raid shelters, new roads. In Honolulu the streets are always crowded—soldiers with gas masks and helmets strapped together, and sailors and civilians with gas masks.

"The large Japanese population—very important as workers and in the general economic life of the islands—is rigidly controlled and carefully watched, particularly at night, by specially constituted civilian and military battalions.

"The islands today are a grim place of beauty dedicated to one purpose—victory. Their people are determined that it won't happen here again, and from what this correspondent has seen, it won't."

Great and Grave Responsibilities

"The Eastern Army of India bears great and grave responsibilities, firstly to ensure that no aggressive intention on the part of the Japanese succeeds, and secondly when the word to advance is given, to move forward inexorably to the destruction of the enemy."

—LT. GEN. N. M. S. IRWIN,
in a broadcast to troops of the
Eastern Army, from Calcutta,
on September 27.

War and India's Finances

Astonishing Accumulation of Assets

ONE of the most striking financial feats of this war has been the ability of India to pay off the bulk of its sterling debt, writes Oscar Hobson, City Editor of the *News Chronicle*. Just before the outbreak of the war,

treatment of that country has been generous in the extreme.

The Finance Member, Sir Jeremy Raisman, who was recently on a financial mission in London, and who has now returned to New Delhi, gave in the Central Assembly some interesting information, not on the precise nature of his mission, but on the general financial position of India. In particular he revealed that no part of the expenditure incurred in the employment of Indian troops in the Far East or in Burma has been debited to Indian revenue. On the contrary, under a special financial settlement, the British Government had undertaken charge of the following expenditure in respect of supply and defence in India: £3,000,000 for the financial year 1939-40; £40,000,000 for 1940-41; £140,000,000 for 1941-42; and a budgeted figure of £290,000,000 for 1942-43. This is quite apart from Government's undertaking to supply India free of

Among the often unrecognized heroes of the sea are the men of the British Royal Naval mine-layers, who slip out night after night, in all weathers and under all conditions, laying minefields round the coasts of Britain and in the approaches to enemy shores. Photo shows a member of a minelayer crew fixing a "horn" to a mine.

this debt stood at about £376,000,000. The only Government sterling loan still outstanding is the 3½ per cent issue, amounting to about £78,000,000. This has already been called for redemption, and will disappear next January. With this operation, £260,000,000 of India's sterling debt will have been repatriated.

In spite of this almost miraculous achievement of re-buying in three years a debt contracted over many decades of capital expansion and investment in India by this country, India has found it possible to continue accumulating sterling assets at an astonishing rate. The Reserve Bank of India held at the end of last month sterling balances and securities totalling about £290,000,000. Out of this, of course, the coming redemption of the 3½ per cent issue will have to be financed, but this operation will leave a very substantial balance in hand. The fact is that, whatever we may think of our political treatment of India, our financial

charge with aeroplanes, vehicles, guns, etc., of an estimated value of £45,000,000 for the current year. It also excludes the American and Chinese forces in the country.

In the light of these facts, it is not altogether surprising that in purely monetary terms, India should find herself very much in credit as the result of the war. Now that the bulk of the sterling debt has been repatriated, the continued accumulation of sterling assets by India has acquired a somewhat new aspect. There may in particular be political objections from India to piling up sterling resources which can no longer be used for repatriating debt and which for the duration at least must be regarded as virtually blocked. The answer to this is, of course, that sterling will be available in the post-war period to finance public works programmes and other schemes of capital development which must sooner or later be launched in India.

Drive Against Corruption

FIVE YEARS penal servitude and "To be cashiered" was the sentence passed by a recent Court-Martial on Lieut. N. B. Gifford, I.A.O.C., inspection staff, Delhi Fort, for accepting bribes from contractors.

An N.C.O., Sgt. D. W. Latham, Tent-Pole Section, Delhi Fort Inspectorate, received a sentence of five years penal servitude and was discharged with ignominy for a similar offence.

Convicted of stealing Government petrol, Trooper H. Simmonds, Dragoon Guards, and Sgt. C. Bardsley, Dragoon Guards, were each sentenced to six months' detention, as were two chaukidars employed in a supply depot.

These convictions are among the achievements of the Special Staff deputed by the Government of India to combat corruption in the Defence and Supply Services. In co-operation with the provincial police and service authorities, this staff of picked investigators, drawn from almost every province of India and led by an Indian Police Officer from the Punjab with an impressive record for work of this kind, has already a number of such successes to its credit some of which are described below.

Amba Parshad, Madan Lal, Fazal Ahmad and Lachman Singh, all of Lahore, have been sentenced to six months' imprisonment and fined for offering bribes to a member of the Ordnance Inspection Depot, Lahore.

L. Karam Chand Sood, Head Clerk, R.I.A.S.C., Supply Depot, Sialkot Cantonment, was sentenced to nine months' rigorous imprisonment and a fine of Rs. 200 for accepting a bribe from a contractor, and Mr. Moody, Examiner, Ordnance Inspection Depot, Lahore Cantonment, has been sentenced to a fine of Rs. 300 or, in default, to three months' rigorous imprisonment for a similar offence.

For offering bribes to members of the Ordnance Inspection Depot, Ram Krishna,

Proprietor of Ram Krishna & Co., Cawnpore, has been sentenced to six months' rigorous imprisonment and a fine of Rs. 350.

In a large number of cases departmental action against Government servants found guilty of corruption has been taken, and 8 firms of contractors have been black-listed for offering bribes and cheating.

The introduction of petrol rationing has greatly increased the profits to be derived from stealing Government petrol and apart from other vigorous measures taken by Government, the Special Staff has been set on the track of the petrol thieves, a number of whom have already been convicted and sentenced.

HOW THE PUBLIC CAN HELP

It is emphasised that Government is not content to rest satisfied with results so far achieved, but is determined to intensify the fight against bribery and corruption—those twin evils which can do so much to sap the strength of the nation's war effort.

In this fight the whole-hearted co-operation of the public is sought, for without the full backing of public opinion, expressed in active help to the Special Anti-corruption Staff, the latter can do no more than touch the fringe of the problem.

No one who has the welfare of the country at heart can tolerate for a moment the illegal diversion into private pockets of any part of the tax-payers' money, and Government looks with confidence on public opinion to help in the drive against corruption in the Defence and Supply Services.

THEY TALK ONLY OF VICTORY

"Five million Russians have been killed, wounded or missing. At least, sixty million Russians are now slaves in Russian territory controlled by Hitler. Food in Russia this winter will be scarce, perhaps worse than scarce. Fuel will be little known this winter in millions of Russian homes. Clothing, except for the Army and for essential war workers, has nearly gone. Many vital medical supplies just do not exist. Yet no Russian talks of quitting. The Russian people have chosen victory or death. They talk only of victory."

—MR. WENDELL WILLKIE, in a statement to the Foreign Press, on September 26.

Diary of the War

AIR ACTIVITY OVER ENGLAND AND GERMANY

26th Sep.—There was some enemy air activity over the south-east coast of England. Bombs were dropped at three places.

The Coastal Command shot down two enemy bombers into the Bay of Biscay.

27th Sep.—The Royal Air Force raided Nazi headquarters in Oslo.

One German bomber was destroyed in raids on Britain.

28th Sep.—The Royal Air Force raided north German coastal region.

Speaking on the Second Anniversary of the Tripartite Pact, Von Ribbentrop, German

Mr. Churchill told the House of Commons that very heavy losses were sustained in the raid on Dieppe.

2nd Oct.—An enemy convoy was attacked off Dutch coast by the light coastal forces and a supply ship blown up.

A small number of enemy aircraft flew over parts of East Anglia.

* * *

UNITED STATES OF AMERICA AND THE ATLANTIC

26th Sep.—Diplomatic interest was focussed on Mr. Willkie's blunt statement about Soviet disappointment and dissatisfaction over the Allied failure to open a second front.

27th Sep.—The American mighty aircraft-carrier **Lexington** was launched at Quincy.

Amphibian Naval aircraft of the Vickers-Supermarine Walrus class—here being started up by a British Naval Air mechanic—have been doing magnificent work in rescuing air crews, and protection of British Naval convoys in the Mediterranean.

Foreign Minister, said: "The enemy is still attempting to contest the positions gained by us and hard battles therefore lie ahead."

29th Sep.—According to a Stockholm report, the Germans were taking active steps to stop the rumour in Berlin that the Gestapo Chief Himmler was dead.

Hitler, making an unexpected appearance in Berlin, addressed a gathering of 12,000 officers and cadets in the Sports Palast.

30th Sep.—A high officer of the British Army broadcast from the B.B.C. another invasion warning to the French people.

1st Oct.—German aircraft dropped bombs at several places in south-western and southern England. A school was hit and 20 children were killed.

28th Sep.—A four-day running battle with Axis submarine packs in the mid-Atlantic led to the loss of the Canadian destroyer **Ottawa**.

29th Sep.—H.M.S. **Lulworth** rammed and sank an Italian submarine in the Atlantic.

1st Oct.—Mr. Macdonald, Canadian Minister of the Navy, announced the sinking of four U-boats and the probable sinking of two others.

An Icelandic ship was bombed and machine-gunned by a German flying boat off the east coast of Iceland.

2nd Oct.—Commenting on Hitler's speech on the winter-help campaign in Berlin, Mr. Cordell Hull, Secretary of State, said: "Evidently he is desperately preparing his people for greater hardships. It is a quiet come down from loud boasts and bombasts."

INDIA, BURMA AND CEYLON

29th Sep.—General Sir Archibald Wavell, Commander-in-Chief of India, speaking at a dinner in New Delhi, said: "Ever since the loss of Burma, I have been planning its reoccupation because strategically it is one of the most important areas in the war."

30th Sep.—Brig. Chennault, Chief of the United States Air Force in China, in a press interview, said: "Japanese dreams of conquering India before the Germans will be unattainable while the Americans continue to hit Japan's conquests from bases in China."

1st Oct.—Plans for the rebuilding of Burma were discussed by the British War Cabinet.

2nd Oct.—The Royal Air Force attacked Akyab. Mandalay was bombed.

ITALY, AFRICA AND THE MEDITERRANEAN

26th Sep.—There was an air raid alert in Gibraltar. A small number of Italian aircraft flew over the rock.

Enemy working parties and patrols were attacked and dispersed in the Western Desert.

Troops in Madagascar still under Vichy orders retired into the southern part. M. Annet, Governor-General of Madagascar, who left the capital, arrived at a "fairly inaccessible place" in Madagascar.

27th Sep.—Five enemy ships were sunk in the Mediterranean.

Allied aircraft attacked enemy landing grounds in the Sidi Haneish area.

The headquarters of the Vichy Governor-General of Madagascar, M. Annet, were established at Fort Dauphin.

28th Sep.—Tobruk was attacked again. The dock area and port facilities were bombed.

29th Sep.—German planes bombed and machine-gunned Cairo.

30th Sep.—Black-out regulations in Durban were partly relaxed.

Mr. H. G. Lawrence, South African Union Minister of Interior, in the course of a speech in Capetown, said: "Neither Germany nor Japan will have overlooked South Africa's strategic importance. . . It is known that the Japanese could send submarines from Tokyo to Capetown without refuelling. These submarines could transport smaller submarines."

The last remaining port in the southern part of Madagascar, Tuléar, surrendered without opposition to the British forces.

1st Oct.—The Royal Air Force raided Sicily.

The British forces captured Behenja in Madagascar.

RUSSIA AND FINLAND

26th Sep.—Soviet troops still held up the German onslaught on Stalingrad. Over 25,000 Germans were killed in the battle of Stalingrad during last week.

The Red Army continued to make headway on the Western front. Mr. Wendell Willkie visited Rzhev front. According to the Moscow Radio, Major-General Rettan, the German Commanding Officer and other high officers were killed at Rzhev.

27th Sep.—Stalin's city stood firm.

The Germans dropped parachute mines in the Volga. The Nazi army was pushed back near Mozdok.

A Soviet submarine sank the Rumanian destroyer *Marasesti* in the Black Sea.

28th Sep.—The Soviet army drove a wedge in the Nazi lines north-west of the city, compelling von Bock to divert more men and tanks and planes to his left flank.

In a written statement handed to the foreign press, Mr. Wendell Willkie stated: "I am now convinced that we can best help by establishing a real second front in Europe with Great Britain at the earliest possible moment that our military leaders will approve."

29th Sep.—The battle swayed to and fro in Stalingrad. Two more streets were wrested from the Germans.

An enemy transport was sunk in the Black Sea.

The Russians crossed the Neva river and advanced east of Stalingrad.

Violent air battles took place over the Soviet Arctic base of Murmansk.

U.S. Tribute to Australia

"In every theatre of war before Japan's entry, Australian airmen played a prominent part. Japan's entry into the war and the immediate threat to Australia necessitated an immediate revision in training. New schools were opened for operational flying. So well had the groundwork been laid that Australia immediately came into the picture as one of the world's major air training centres."

—From a U.S. Navy Dispatch to the "New York Times."

30th Sep.—Marshal Timoshenko launched a second 'relief offensive' south of Stalingrad.

The Vichy radio quoted unconfirmed rumours that Marshal von List had taken over command from von Bock.

1st Oct.—Pierce battles raged in the Steppes along the Don river north-west of Stalingrad. The initiative remained with Timoshenko.

The Moscow Radio reported that the Rumanian troops massacred 25,000 Russians in Odessa. They were locked in the barracks which were blown up.

2nd Oct.—The position was still very grave in Stalingrad. The Russians advanced in the south and the Germans made a thrust in the north-west.

Speaking on it, M. Laval said: "I shall not tolerate that the authority of the Government is attacked."

M. Laval's plan to get skilled French workers to fight on Germany's war production front was announced in a Vichy Decree.

1st Oct.—The German-controlled Paris Radio stated that a new contingent of 500 workers left for Germany from Paris.

THE FAR EAST

26th Sep.—The Japanese drive from Myola and Naoro was at a standstill. Allied fighters strafed Kokoda.

Lord Beaverbrook, British Supply Minister to the United States, stated that the production of British tanks had been doubled in the past six months. Photo shows: Workmen riveting tank turrets in a British tank factory.

NEUTRAL COUNTRIES.

28th Sep.—A small Egyptian merchantman was torpedoed and sunk by a submarine about mid-August in the Caribbean Sea.

1st Oct.—The Argentine Chamber by voting, recommended a rupture with the Axis.

SHIPPING

27th Sep.—A medium-sized Axis merchantman was hit off the Dutch coast.

29th Sep.—The British submarine *Thorn* was lost.

1st Oct.—The British 600-ton corvette *Dianthus* rammed a German U-boat.

Two United States naval transports were sunk in the south Pacific.

VICHY AND OCCUPIED COUNTRIES

28th Sep.—M. Benoit-Mechin, Secretary of State in Laval's Government, resigned.

AIRCRAFT CARRIERS

"Our enemies in the Pacific understood the significance of this change in naval warfare and started the war with superiority in carriers. But no country in the world can employ these weapons as effectively as the American Navy. This was proved first by the Battle of the Coral Sea, and later, by the Battle of Midway and by subsequent actions in the Pacific."

—REAR-ADMIRAL FREDERICK C. SHERMAN, at the launching of the "LEXINGTON," on September 26.

27th Sep.—United States planes raided Gizo Island in the Solomons.

Jap aerodrome in Hanoi was raided.

28th Sep.—The Japanese withdrew in the Owen Stanley area.

General Tojo, the Japanese Prime Minister, said: "British and American plans for the counter-offensive are beginning to take a more definite form. The real developments of them will be seen in the future."

The Chinese advanced in Chekiang and penetrated deep into enemy territory.

29th Sep.—Mr. Wendell Willkie arrived in China.

Japanese attacks were repulsed in Hupeh and Kwangtung.

Allied planes raided Kiska. Seven Japanese sea-planes were destroyed.

The Allies attacked Rabaul and a Japanese ship was hit.

30th Sep.—The Navy department, Washington, announced that since Friday, 42 German planes had been brought down in the Solomons.

The United States Air Force in China attacked Japanese installations in Wanting and Tengchung.

1st Oct.—The Allies advanced in New Guinea and captured Iorabaiwa Ridge.

2nd Oct.—The Allies took Nauro in their successful drive in New Guinea.

The Chinese attacked Lanchi.

THE LOVED NAMES WILL BE CHANGED

IMEDIATELY the Japanese took Singapore, that great city was given a Japanese name. If the Japanese should capture our towns and holy places the same will happen here. Places with deep historic and religious associations will be desecrated and given Japanese labels—by law. The Japanese are not going to respect Indian sentiments. Are we of this great land going to allow such treatment without a blow? Never! Let us resist these barbarians with our combined might.

RENDEZVOUS IN RANGOON

H.E. SIR REGINALD DORMAN-SMITH

- We have no doubt that we will soon recapture Burma, and I can tell you that the day we again establish ourselves there, we will start reconstructing the whole country
- Here you are all exiles from your own country. I have no doubt that you are greatly worried as to what is happening now to your families, and I know you all want to get back to your homes as quickly as possible
- I am fully convinced that, as things are moving now, the day is not very far distant when we will meet again in Rangoon

—H.E. SIR REGINALD DORMAN-SMITH, *Governor of Burma, addressing the personnel of the Royal Burma Navy at Calcutta, on October 4*

India— From the Defensive to the Offensive

We have referred in our last issue in some detail to General Wavell's address to the press correspondents and drew attention to the definite change-over from the defensive to the offensive outlook on the Indian front. A master of brevity of speech, caution of forecast, and surprise of action, General Wavell has told India to prepare for an attack on Burma. But a Japanese attack from Burma on India must not be ruled out of the bounds of possibility. It is important, however, to note that an allied attack on Burma from India is now a more definite possibility. Six months ago General Wavell bluntly admitted the mistakes that have been made in Malaya and the losses that might further be expected, and still left in his audience a feeling of increased confidence in his own powers. His confident tone about the re-occupation of Burma and his revelation that he had been planning it for some considerable time indicate the opening of an important operation of far-reaching consequences in the near future. Mr. Wendell Willkie was evidently referring to this when he stated at Chungking on Sunday last that he regarded a bold offensive action in the Asiatic zones as important as the opening of a Second Front. There have been troop reinforcements in India as well as many indications that the Allied air strength here is mounting rapidly. The Japs have got to be expelled from Burma and the isolation of Free China has got to be ended. It is then that the forces of Marshal Chiang Kai-shek can be made into an Allied spear-head against the land corridor which links Japan with her southern conquests.

Scorched Earth Policy: China and India

China has been carrying on a magnificent fight against the Japanese aggression. In a message to the United Aid to the China Fund meeting addressed by Sir Stafford Cripps in London, Dr. Wellington Koo, the

Chinese Ambassador, said that during the past five years China had been carrying on the fight against a powerful war machine in Asia. There had perhaps never been a struggle in which the opponents were so unequally matched. China was convinced, in spite of her great suffering and tribulations, that her cause was a just one and it was the common cause of all liberty-loving people. Dr. Koo added that China "has now the satisfaction of seeing her resistance merged into a joint fight of the democracies against the forces of barbarism and tyranny and the cementing of this partnership has given her therefore inspiration and added impetus to play an active part in the joint struggle of the United Nations." One of the important features of

NO HAJ PILGRIMAGE BY SEA ROUTE

In view of the existing danger from enemy action to which pilgrim ships and their passengers would be exposed, the Government of India have decided not to arrange the Haj Pilgrimage this year by the sea route. This decision, it is realised, will inevitably cause severe disappointment to many intending pilgrims, but the Government of India are clearly of opinion that the risk to their lives at the hands of an enemy who will have no regard for civilian lives nor pay any attention to the peaceful religious purpose of the voyage is such that they would not be justified in permitting the sailings. They have consulted representatives of the Port Haj Committees, members of the Central Haj Committee who were available in Delhi and other representative Muslims, who are agreed that the circumstances are such as to render the decision inevitable.

this struggle is the scorched earth policy followed by China. This policy which was also followed with considerable success by Russia has been the subject of controversy in India and the subject-matter of Axis canards. It may be stated clearly that this policy is not considered suitable for India. Scorched earth means not merely a destruction of objects of military value such as bridges, railways and munitions factories, but also the burning of crops and homesteads, the destruction of the whole countryside and the emigration of the whole population, as exemplified by the great trek of the Chinese to Western China. There is a sharp distinction between the scorched earth policy and the denial of military facilities to the enemy. Reference was made to

place in an Indian State. All those places were outside towns and on none of them were bombs dropped. The action taken was preventive and not punitive in each case. A plane can fire its machine-guns over the heads of rioters or saboteurs, or direct its bullets at people actually engaged in disorder. In both cases, the fire is controlled, and not indiscriminate. Bombs cannot be dropped near a crowd with a view to scaring it, without actually injuring people. That is to say, bombing in any inhabited place is to some extent indiscriminate. The difference between machine-gunning from the air and indiscriminate bombing is the difference between Allied and Axis technique. It may be recalled that Ribbentrop boasted that he would cow

A trainee from India who went out to Britain with the fifth batch of Bevin Boys at work on a plane wing, watched by Mr. Robert Cary, M.P. (left), Parliamentary Secretary to the Secretary of State for India.

this by General Hartley when replying to questions in the Council of State on September 26th. He said that instead of the scorched earth policy, there will be the recognised military policy of denial of facilities by the destruction of whatever may help the enemy. This is quite different from the destruction of what will enable the civil population to live.

Air Action Against Rioters in India

General Hartley also contradicted the Axis canards of wholesale bombing of towns in India. He said that riotous crowds have been machine-gunned from the air since August 9th at four places in Bihar or Bengal and at one

down occupied Europe with dive-bombers and tanks. In contrast to this method of indiscriminate terror what is used in India is the method of discriminate prevention. In other words, only that degree of force is being used which is necessary to quell disorder.

Japan's Next Move— A Problem of Consolidation

What will be Japan's next move? It seems from what is happening in the Far East that she is focussing her attention on the immediate objective of cutting the communications between America and the Allied base in Australia. The concentration of the Japanese forces in the south-west Pacific, her repeated attempts to regain foothold in the

Solomons and her determined drive towards the key-point of Port Moresby—all these make Japan's intentions clear. Her move now seems to be to retain and consolidate the territories that have been occupied by her forces. A vast empire has been conquered, and from Indo-China to the Indo-Burmese frontier and from the Philippines to New Guinea, her sway extends, but this territorial bloc is exposed to attack from four different quarters, namely, from Vladivostok from the north, from full-scale naval action in the Pacific, from Indo-Burmese frontier in the west, and from Australia in the south.

So far as the first source of danger to Japan is concerned, this cannot become an actuality unless and until a war breaks out between Japan and Russia. There have been rumours of a possible Japanese invasion of Siberia, during the last many weeks. Japan has concentrated one-third of her land forces in the north. It is officially declared that the dismissal of Togo as Foreign Minister did not indicate any change in Japan's fixed policy of neutrality towards Russia, but this declaration is as trustworthy as the pledge given in Washington by the Japanese representatives immediately before the assault on Pearl Harbour. Whatever this be, Soviet Russia is vigilant and ready. The Red Army of the Far East is formidable in numbers and equipment, and it has been announced that the reserves transferred from Siberia to the Stalingrad front come from Western, and not from Eastern Siberia. This does not, however, mean that a Japanese attack on Siberia may not be launched in the immediate future. It is stated that the Japanese place the elimination of the sea and air menace from Vladivostok against Tokyo and other industrial centres of Japan high up on the list of priorities. But this rests on the basis that Russia is contemplating an attack on Japan. Russia avoided this over a year ago when her resources in the West were in full strength, and now she is in the middle of a life-and-death struggle with the Axis armies.

The whole attitude of Japan now seems to depend upon the extent to which Germany will be able to cripple the Russian military machine in the immediate future and the pressure which the Allies will be able to exert on the Japanese in the south and west. Japan will have to see some advantage for herself as well as for the Axis as a whole, before she attacks Siberia. That has been the very basis of totalitarian policy. It is hinted from neutral sources that Germany is desperately urging Japan for that relief and aid which is being withheld. But these reports must be treated with reserve. For it is to the advantage of Germany to create such an impression in case Japan's attack in the north is part of the Axis plan. As regards India there seems to be no concrete sign of a major move for invasion, for no heavy troop reinforcements have been

despatched to Burma by Japan to seal the western gateway of the conquered area. Further, there has been a considerable withdrawal of troops from the provinces of Chekiang leaving two of the "bomb-Tokyo" air-fields to revert to the Chinese. After this withdrawal, the Tokyo boasts of a knock-out blow to Chungking have ceased.

South-West Pacific: The South-West Pacific area may, therefore, be stated to be the main centre of attention for Japan. Conquest of New Guinea and its keypoint, Port Moresby, and the re-occupation of the Solomon islands seem to be the essential steps in an indispensable programme of consolidation. It may reasonably be supposed that Japan has concentrated her maximum possible hitting power by sea, air and land in this area as against the great strength of the Americans and the Australians. A grim struggle has begun in front of Port Moresby and it is likely to continue with growing fury. But the Japanese are faced with the prospect of losing the initiative, upon the retention of which all their gains depend. Though the battle for Port Moresby is most important, it is well to remember that events from the South-West Pacific, on the frontier of India, on the border of Siberia, and in the streets of Stalingrad are all pieces of a single mosaic pattern.

INCREASING JAPANESE DILEMMA

Japan's many reverses in the Coral Sea, at Midway, in the Solomons and in China have increased the dilemma in which Japanese strategy has been placed by the length of her communications, writes the Military correspondent of *Dagens Nyheter*, Swedish paper.

He adds: Japan has four alternatives for the next attack: Australia, India, China or Russia. An attempt to attack Chungking from Burma failed, and Japan burnt her fingers in the Indian Ocean. An offensive against India on land seems improbable. Japan is wondering whether to attack Russia and make a new enemy when she already has her hands full. Japan's air force is insufficient for simultaneous attack on Australia and Russia. Several of Japan's undertakings have obviously been badly planned and prepared and there are signs that all is not right with the Japanese war plans.

The "Stay Put" Issue

A National War Front Survey

WHEN a fleet of enemy men-of-war and transports were in the Bay last April, the Government, and the people of Madras, had to think quickly. Owing to pardonable

'A very great deal' is the correct answer to such a question. The likelihood of enemy invasion, or even of spasmodic raids, may be remote, but their possibility is obvious, and the public will like to be assured that Civil, Military and National War Front authorities have co-ordinated relevant ideas into a general plan to be readily applicable to circumstances which we may reasonably hope will not arise, but which are patently still on the tapis.

There are two main factors to be considered. The first is Public Order and the second is Military Efficiency, and the latter is largely dependent on the former. The National War Front has for some time past been inculcating the doctrine of "Stay Put" into the districts of the Presidency, and so this article may not come amiss to the citizens of Madras itself,

The 10,500-ton Liberty freighter slid into the water at a U.S. West Coast ship-building yard just 240 hours after the laying of the keel. To quicken the pace of ship-building, U.S. shipyards are employing new and progressive operating devices.

unpreparedness, they thought separately and the effects of the process were too variegated for universal satisfaction.

More than six months have passed; the south-west monsoon is over; the Japanese are still in Burma and the Andamans; and people's thoughts naturally turn to a possible repetition of the threat that once caused such confusion and distress, and wonder what has been done in the meantime to meet such an eventuality.

for, despite the implications of the details which follow, "Stay Put" is a wholesome slogan for any man, as many a sufferer from the aimless, comfortless and useless migrations that took place in April will agree.

From the general point of view an unauthorized and ill-considered evacuation may mean the total dislocation of normal existence—factories stop, supplies stop, the war-machine is hampered, the whole war-effort hazarded. More personally, our sense of duty demands

that every man who is ordinarily of use to the community (and only the too young, too old or those whose escort is positively necessary for womenfolk, can escape this sense of duty) should stay at his work. Self interest alone should tell people that where services and supplies are kept working, where shops and customers remain, where there are A.R.P. protection, medical attention and police security to look to, they must be better off than as homeless, unprotected and hungry stragglers on strange railway stations, or in over-crowded mufassal villages. In short, business—an interest life—a what you will—goes on, if the citizen stays put.

The other consideration—Military efficiency—may be less obvious, but it is even more important. Recently there has been a partial demonstration of the military resources now available for our defence, or rather for the destruction of the enemy, but the average man has little idea of the amount of space and freedom from obstruction which a large army requires for its efficiency, and we have a very large army indeed within campaigning reach of Madras. It should be taken as axiomatic that the army MUST have first and unhampered claim on all communications, railways, roads, bridges, telegraph lines and so on. They cannot afford to allow the least congestion of these communications by civilians; there simply cannot be swarms of julkas, bullock carts, pack animals, or samans on handcarts to hamper their speed when moving to a battle front. How to defeat the armed forces of the enemy by the power of their own arms is, and must be, the army's sole consideration, and to this end, even if the Japanese never come, the army must be kept fit for their coming. So, in the daily exercise of their duties, as also on frequent large-scale military manoeuvres, the normal life and conveniences of the civilians they are here to protect, must rightly take second place. That is why the military authorities wholeheartedly support the 'Stay Put' slogan.

Is this a counsel of perfection? Will the nerve of the people of Madras be so steady under stress that civilian and military activities alike can hope to remain unhandicapped? Let doubters then suppose that a couple of air raids start a panic, and that more than the expected efflux of women and children and aged and infirm feel prompted suddenly and simultaneously too look for more secure resting places. They may also suppose that public opinion will, with familiar vehemence, demand to know "what Government have done about it". Now although the facts were published, many have forgotten that certainly two months before the enemy last arrived in the Bay,

Government had constructed large temporary camps with food and other supplies, water, medical and sanitary arrangements at half a dozen places within 24 hours march or so of Madras. Three lakhs sixty thousand people—that was the number for whom rice and vegetables, shelter and water for a week was ready then! So, though the sites of those camps and the duration of stay allowed in them may have been altered since, it can reasonably be assumed that after six months' breathing space "Evacuation" arrangements are now better rather than worse.

The facts are that in a certain western direction (the precise road will, of course, receive timely publication) the timid wayfarer will find rest and shelter every 20 miles. But he will find no trains! all vehicles are bespoken for essential traffic plus military requirements—and he will have to travel by a route which will not interfere with military dispositions. Moreover, he will have to travel light for, except possibly for a short distance on one road, there will be no bullock carts or julkas or any wheeled traffic (except automobiles which can speedily be cleared from any given strip of country). Finally, those who choose to hike, will hike for a long way, for the camps will not entertain for more than one night. Inconvenient? Yes, *mais c'est la guerre*—and it is hard to see how a Government which has undertaken to tell the public of Madras if, when, and how they must go, can be expected to do more for those who go before they need.

Let us sum up then: (i) If trouble comes and we repeat that there is quite a good chance of its NOT COMING—duty, common sense, Government's wishes, and the Army's efficiency point to every man who is of use to his friends, his office, his service or his community, STAYING PUT! (ii) If rumour and panic should gain the upper hand, and the feeble-spirited decide to make a journey, Government have made provision for them. (iii) If the worst comes to the worst and this ancient city has to be evacuated (which may the gods forbend!) Government's dispositions are equally ready. (iv) In this time of War, all these circumstances are subject to the requirements of the army. If people behave sensibly the army will not interfere with the adequate civil arrangements for the security of the ordinary man, but they will insist on not being cramped and hampered in the field of action, and every regulation relating to communications should be as faithfully adhered to by the layman as it will be rigorously enforced by the soldier. We are at War—every one of us in this City and Province. This War is a Total War, and what we have written is merely something of what Total War means.

Good News!

AS from September 1st, 1942, the basic pay of all Indian other ranks and of enrolled non-combatants is increased by Rs. 2 per month.

Proficiency pay, hitherto granted after one year's service, and giving an addition of Rs. 2-8-0 per month, will now be payable after six months at the rate of Re. 1 per month and after a year at Rs. 3-8-0 per month. The rules governing good-service pay for N.C.O.'s have been modified so that it may be drawn after one, two or three years service, instead of two, four and six years as formerly.

In addition, in recognition of the effect of the recent rise in prices, the messing allowance for Indian soldiers on peace time ration scales

and his community after the war. Incidentally, it might be mentioned that free issues of clothing have been substituted for the old kit allowance, under which, after an original free issue, the soldier received Rs. 2 per month as an allowance from which he was expected to replace his clothing.

The minimum pay of an Indian serving soldier is made up of a number of rates. His basic pay on enlistment, including the new increase, is now Rs. 18 per month. After six months, in addition to this, he can receive an extra Rs. 2-8-0 per month. If not on field service, in addition to both the above, he gets a messing allowance of Rs. 3 per month and a hair-cutting and washing allowance of 10 annas per month. Apart from this he is credited throughout with Rs. 3 a month Deferred Pay, and Government also pay Rs. 2 on his behalf into the Reconstruction or Resettlement Fund. Therefore, per soldier, not

The 25,000-ton ESSEX, first of a scheduled class of eleven similar aircraft carriers, launched in the eastern United States. U.S. shipyards set new world records in July by delivering 71 ships of 790,300 dead-weight tons.

in Indian stations is raised from Rs. 2 to Rs. 3 per month. These increases, which represent an addition to the Indian Army pay-bill of roughly 5.3 crores a year, constitute the third direct increase of pay to the Indian soldier since the outbreak of war.

RECONSTRUCTION FUND

Improvements in pay previously introduced during the present war included one relating to present and two of future benefits. In regard to the former the messing allowance was raised from 10 annas per month to Rs. 2 per month. To safeguard his future the rate of deferred pay was increased from Re. 1 to Rs. 3 per month and a Reconstruction or Resettlement Fund was started to which Government credited Rs. 2 per month for every serving soldier to be used for the benefit of the soldier

on Field Service, Government pay to him or on his behalf Rs. 26-10-0 per month and after a year Rs. 30-2-0.

HIGHER SCALE ON FIELD SERVICE

When the soldier goes on Field Service in India he receives the higher scale of rations and batta at the rate of Rs. 5, so that a soldier on Field Service with 12 months' service earns Rs. 31-8-0. If he goes on service overseas he gets a further Rs. 7 per month Expatriation allowance. Thus, an Indian Soldier on Field Service overseas who has been in the army for 21 months or more earns a total of Rs. 38-8-0. Overseas, in hard cash, the Sepoy receives Rs. 33-8-0, the L/Naik Rs. 35-8-0, the Naik Rs. 46 to Rs. 48, and the Havildar Rs. 49 to Rs. 53.

In addition to his pay and allowance he is fed, clothed and accommodated free, receives free medical attendance and lighting, free travel when granted furlough, and travel concessions when granted leave. He is exempt from local taxation for municipal services, and when necessary receives free fuel. At a conservative estimate these concessions in kind represent at least Rs. 21 per month in cash to the man not on Field service and a correspondingly larger amount to the man on Field or Overseas service.

Although the supplies and services received in kind by the soldier not only represent a substantial saving to his pocket but also protect him to a large extent from price fluctuations, Government recognize that the soldier, particularly the man who has to maintain a family or dependants, is not wholly immune from the effects of the general rise in prices. It is in order still further to protect the soldier and improve his position that Government have now decided to afford these new benefits.

Increases granted since September 1939 now involve an additional annual expenditure of between 10 and 11 crores.

Parcels for Troops

BIGGER and better parcels may now be sent to troops serving overseas. Parcels which are too bulky to be sent by the Postal Service are now handled by a special Military Forwarding Organization, which has been set up at Bombay and Karachi.

Whereas the weight of parcels which may be sent by the postal service is limited to 22 lb. (25 lb. in the case of Aden), the Military Forwarding Organization will deal with parcels exceeding the above limits but not exceeding 56 lb.

Parcels for despatch through this organization will be sent by rail to the Commander, Base Sub Area, Bombay (for troops located in Egypt, Palestine, Syria, Abyssinia, Eritrea, Kenya and Great Britain) or Karachi [for troops located in Iraq and Persia (Iran)] and will be addressed as follows:—

1st Line—"Number, Rank and Name."
2nd Line—"Appointment or sub unit (Sqdn., Battery or Coy.)."
3rd Line—"Unit (Regiment)."
4th Line—"C/o. M.F.O. at—."
5th Line—"Through Commander, Sub Area,—".

In the blank space following "M.F.O. at" the words "Port of discharge Middle East" should be inserted if the parcel is intended for troops located in Egypt, Palestine or Syria; "Massawa" will be inserted if the parcel is intended for troops in Abyssinia or Eritrea; "Mombassa" for troops in Kenya; "Basra" for troops in Iraq and Persia (Iran), and "Port of Discharge U.K." for Indian troops in Britain.

Parcels for other than Indian Army personnel will not be accepted for carriage to the U.K. and parcels will not be sent to Dominions, Colonies, or foreign countries other than those mentioned in the preceding paragraph.

Parcels will be marked "M.F.O." by senders in red letters approximately two inches in height. Carriage within India will be prepaid by the sender, but no charge will be made for conveyance from the embarkation port to the destination overseas. Parcels will be carried at the owner's risk.

The railway receipt, together with a copy of the packing note or invoice, or, in the case of private parcels, a statement declaring the contents, will be forwarded to the Commander, Base Sub Area, Bombay/Karachi, on the same day as the parcel is despatched.

Parcels received by the Commander, Base Sub Area, Bombay/Karachi, which do not conform to the above requirements will be returned to the sender "Freight to pay."

CHINA'S FUTURE

"We think, sooner or later, China is bound to kick the Japanese from the mainland of Asia, including, of course, Manchuria. From that point we look forward to China going ahead and becoming a strong military nation . . . and organizing a big peace-time industrial set-up, for lifting the standard of living of the people. If they do those two things, China will become a great continental Power, while Japan will be cut down to the status of an off-shore island Power . . . Looking further into the future, it seems more than possible that in the 21st century China will blossom out as a dominant Power in Asia if not in the world."

—THE NEW YORK DAILY NEWS, in an editorial.

Destruction of Germany by Air

General Eaker's Plans

IMPORTANT new facts about the plans of the United States Air Force in Europe and the methods by which in combination with the Royal Air Force they hope to bring about the destruction of Hitler's fighting machine were given by their Bomber Chief, General Ira C. Eaker, in an exclusive interview with the Aeronautical correspondent of the *Daily Mail*.

There is nothing that can be destroyed by gunfire which cannot be destroyed by bombs. The only things that are not within range are the underground factories and submarine pens.

"But it is still possible to deal with these because everything built underground must come to surface for distribution. The German work people must have houses to live in and the utility services to keep them alive. These are very vulnerable to air attack. No man is going to be happy about going underground to work when he knows that his home may be destroyed and his family wiped out in his absence.

"It is like saying that you can't destroy a submarine with bombs when it is 200 feet below the surface of water. May be, you can't but then a submarine cannot stay under water indefinitely. It must show itself sooner or later.

Here is a British "Beaufighter." This most versatile of all aircraft, is used as a night fighter, a long range day fighter, an escort fighter, convoy protector and ground-target attacker. Its 1,400 h.p. engines sweep this 9-ton giant fighter into combat at a speed of well over 330 m.p.h.

General Eaker's full title is: Commanding General Eighth Bomber Command, the United States Army Air Force.

He spoke with frankness and began by giving this heartening piece of news: "There are," he said, "enough aerodromes in the British Isles now, built or building, to accommodate all the allied air forces needed for the destruction of Germany."

Asked whether the phrase "the destruction of Germany" needed qualifying, he replied: "I believe it is possible to destroy the enemy from the air. By destroying his aircraft factories, you can put an end to his air force. By destroying his munition plants and communications, you can bring his armies to a halt. By destroying his shipyards, you can make it impossible for him to build submarines.

OUR MOST POWERFUL MEANS

"It should be recognized that air power is one of the most powerful means we have to win the war. We should of course use every weapon—except one—but don't let us miscalculate the power of air. The winning side in this war will be one that has the biggest and the most effective air force."

General Eaker talked specifically of his bombing plans and discussed the Flying Fortresses under his command. He was with those bombers when they made their first raid on Europe. He knows what he is talking about from practice as well as theory.

General Eaker went on: "There is no opportunity for hitting the enemy in strength that will not be investigated and demonstrated by the United States Bombers within the next few months. There is hardly a corner of Germany we will not reach."

General Eaker said frankly that some phases of his programme would require bigger forces than were at present available. These, however, will be rapidly assembled. He also indicated that the Americans might not confine themselves solely to day bombing. It was, however, a happy coincidence that the Royal Air Force habitually bombed by night. In this way, the Americans could supplement their work. "Two good reasons," he said "make this highly desirable. First it would reduce congestion in air space and aerodrome space which would be difficult to avoid if the Allied air forces were operating in force at the same time.

Secondly, it would prevent the German defences from getting any rest. They would have to double their strength. No body could be efficient working 24 hours of the day."

AREA BOMBING

General Eaker was impressed with the results of the "area bombing" practised by the Bomber Command of the Royal Air Force. It had, he thought, much greater effect on civilian morale than day-light precision bombing, so far employed by the Fortresses. People soon learned that when bombers came over by day, their attack would be confined to precise targets. The very uncertainty of "area bombing" by night was tremendously un-nerving for the civilian population.

"Both types of bombing should be continued," declared the General.

When asked whether the Fortresses had yet had sufficient opportunity to prove their defensive ability against the German fighters, he referred to their experience at Rotterdam. The Fortresses had no fighter escort, while over the target, where they were attacked by something like 100 fighters. Yet the Fortresses carried out their job and returned home without loss. Many of the enemy fighters were not so fortunate.

Discussing the conditions in winter, he said that there would be fewer days on which high altitude precision bombing would be possible. Then he laid this principle: "It is much better to bomb heavily and effectively on a few days which suit you, rather than to peck away in dribbles in unsuitable conditions."

"But," he added "it should not be assumed that we are committed to high level bombing. The United States army air force will bomb anywhere in any way that the weather indicates is the most suitable. Contrary to the general belief the weather can be made a friend in air attack. We don't look upon it as unfriendly. Clouds for instance can be exploited for cover and this is more often possible by day than by night."

Tobruk and Jalo Exploits

It is one of the minor tragedies of this war that many of the best "stories" which are often also the bravest and brightest exploits of our armed forces must for various reasons remain untold or at least only hinted at. Such is the case to-day, writes the *Times* Special Correspondent in the Western Desert.

Behind the terse and unrevealing sentence in the announcement, "Our desert forces have carried out successful operations over 500 miles behind the enemy's front"—an announcement on which official sources remain obstinately silent—lies one of the most dashing operations undertaken in this theatre of war for some time. All that can be said to amplify the extremely uncommunicative announcement is to emphasize that these operations took place 500 miles inside the enemy's lines.

At the same time as our air and naval forces were attacking Tobruk on the night of September 13, our mobile patrols, having gone through the enemy's forward positions, trekked hundreds of miles across uncharted desert where they might at any moment run into enemy patrols and positions, and reached the enemy's main rear base and aerodromes at Benghazi and Barce. Stealing in silently in pitch darkness, they destroyed more than 30 enemy aircraft and did other damage to his administrative machine. Their presence could not then be concealed, and the alarmed and enraged enemy attacked on a huge scale, putting in against half-seen and swiftly moving patrols the fury of concentrated air and land attack. Our patrols had accomplished their mission, however, and they withdrew successfully.

JALO GARRISON SHOT UP

Two nights later other columns not only attacked the isolated oasis of Jalo hundreds of miles away down in the southern part of the Libyan desert, but actually occupied it long enough to destroy vast dumps of ammunition and supplies stored there and entirely to dislocate the lines of communication. The enemy garrison was badly "shot up," and, when their task was completed and large enemy reinforcements, German as well as Italian, had arrived, our forces withdrew in parade ground order, and they have now arrived at their bases.

These magnificent exploits are part and parcel of a systematic plan of damaging and disrupting the enemy's supply arrangements, and this is preventing—or at least delaying—Rommel's immediate task of building up his battered Afrika Korps.

France in Fragments

IN totalitarian States relations between government and opposition cannot be compared with those in democratic States; they are much less simple and obvious, and in no country have they become as intricate and complicated as in France. Apart from all

French opinion differs most widely upon foreign affairs, which nowadays are of paramount importance to France. Foreign observers as a rule take three movements only seriously: the pro-British sympathizers of General de Gaulle; the *attentistes*, who try to put off any important decision until they can see how things are going to turn out; and the adherents of co-operation between France and Germany. This is a superficial differentiation and leaves out of account all the more variegated shades of opinion—and these are found even amongst the pro-British—relating to foreign as well as home affairs.

HATRED OF GERMANY

One thing unites all the different factions (except the collaborationists), and that is their

A new amphibian tank which will swim ashore and carry soldiers into combat is in mass production now in the U.S.A. It was devised and constructed after years of hard work behind closed doors. Powered by a stock-model automobile engine, it runs over land or through water on a caterpillar tread. It can ferry troops to shore, carry them up the beach to the enemy and give them a mobile fortress to fight from. Photo shows the new tank in mass production at a mid-western war factory.

the confusion and tension caused by the armistice and the occupation of the greater part of the country, one must take into consideration the fact that in France the totalitarian system has not yet had time to mature. Marshal Pétain is the first to admit this; he even touched upon it in his New Year message, admitting that the national revolution was still in the world of ideas and had not yet reached the world of reality. He also hinted at the difficulties which beset the National Government, due to the various oppositional movements of the country.

inexorable, inextinguishable hatred of Germany. This suffices to make them allies and enables them to work together, although they have not as yet found it possible to join into a single organization. Nevertheless, they conjointly publish pamphlets and leaflets in Occupied as well as in Unoccupied France. Besides the Communist, Socialist, Trade Unionist and Gaullist movements there exists in France a strong underground movement bearing the name of its paper, *Libération Nationale*. This movement expects the liberation of France through a renewed alliance with

the enemies of the Axis, but fears on the other hand that General de Gaulle has bound himself hand and foot to Great Britain and will therefore be unable to consider the real national interests of France as a perfectly free agent could. The movement of *Libération Nationale* has been of greater assistance to the anti-German opposition than all the other underground organizations. It has rapidly become a collective movement, embracing not only different groups from the old Left wing, but also Catholics and members of the Right. Its clear separation from Gaullism has enabled *Libération Nationale* to attract those circles who agree theoretically with the new State created by Marshal Petain but are absolutely opposed to co-operation with Germany. For this reason the very active national revolutionary "intellectual" organization in Lyons, with its own underground review *Verites*, has joined *Libération Nationale*. And the fact, that, in the last twelve months, highly placed civil servants of the new State like Under-Secretary of State Tixier-Vignancourt and officers like Generals Bastion, Cochet, Fornel de la Laurencie (who led the heroic resistance against the Germans on the Loire) and Colonel de Lacran Loustenau have been disciplined, proves that the outposts of the opposition are to be found even amongst members of the Vichy Government, and especially in the army.

IN OCCUPIED FRANCE

In Occupied France co-operation between underground anti-German organizations is still closer. They have their own clandestine paper, *Resistance*, which has a large circulation. The fact that many acts of sabotage and attacks on Germans are much too involved to have been instigated and executed by a single person proves the strength of the underground organizations. Only one man has somehow managed to keep a strangely solitary position: Gustave Herve, once a Social Anarchist, then a violent Nationalist, is publishing in Occupied France, instead of his old paper *La Victoire*, an underground bulletin with the same title that keeps the balance between *attentisme* and Gaullism, and at the same time combats all such foreign ideas as anti-Semitism, racialism, and so on. The pro-German press hates him and continually denounces him.

The second opposition against Vichy is led by those men and organizations who desire still closer relations with Germany. This movement enjoys a legality not conceded to the anti-German organizations, and, while Vichy sometimes bans one or other of the anti-German publications, the Paris press can write as it likes. Besides the Parisian press the pro-Germans possess the Doriot papers in the South—*L'Emancipation Nationale*, *Midi Libre*, the very popular and widely read *Gringoire*, *L'Union Française*, *Le Pays Libre* and the so-called non-political illustrated papers of which *L'Illustration* is the best known.

The pro-Germans rely upon a few literary, "intellectual" circles in Paris and, much more, upon Doriot's *Mouvement Populaire Français* and Deat's *Rassemblement Nationale Populaire*, as well as Eugene Deloncle's *Collectivistes Nationales*. To the Free French each of these groups seems as vile and despicable as the other, but, on looking closer, one can distinguish two chief divisions: those who desire German-French co-operation for its own sake and out of enthusiasm for Germany (sometimes too, it must be conceded, for other more profitable reasons), and those who hope thus to ease the strain on France and desire to collaborate only in so far as Germany is ready to grant concessions.

The latter movement is headed by men belonging to the Government, like Darlan, Benoist-Mechin, Scapini, and De Brinon. The last-named has more than once been the subject of violent attacks in Doriot's *Emancipation Nationale*, which calls De Brinon's conduct "sterile, senseless and disguised *attentisme*." Jean Luchaire, De Brinon's friend, demonstrated the difference between

Press Telegrams for Russia

A press telegram service between India and Russia has been started. The rate per word for telegrams sent from India is nine annas.

AIR MAILS FOR FORMER ITALIAN COLONIES

Communications by air mail for the former Italian colonies of Eritrea and Somaliland are now accepted by post offices in India. Besides the usual air mail label, correspondence should bear the superscription "India-Eritrea" or "India-Somaliland." The air mail surcharge per half ounce on letters and packets is Re. 1-1-6 in the case of articles for Eritrea and Re. 1-4-0 in the case of Somaliland, while the total fee on postcards (including postage) is eight annas to Eritrea and nine annas to Somaliland.

the two pro-German camps in his Paris paper *Les Nouveaux Temps* in which he attacked those who criticized Marshal Petain's New Year message, thus taking the Government's part and the part of those whose co-operation is founded on *attentisme*.

DIFFERENT CLASSES

The two pro-German movements represent different classes. The politicians who wish for an understanding with Germany without too great a degree of co-operation belong to the old aristocracy, the upper middle classes, the financiers, and their literary followers; while the more violently pro-German group is recruited from the urban middle class, a certain section of the higher clergy, intellectuals of all schools, the pauperized middle class, such professionals as have lost their jobs, and rank outsiders. The last-named include the men who have joined the voluntary anti-Bolshevik Legion and who are fighting in Russia with

Even Marcel Deat is trying not to exaggerate his anti-Semitism; he sees that Doriot's friend, the writer Louis Ferdinand Celine, who became an anti-Semite for purely personal reasons, has, by his violent anti-Jewish diatribes, done more harm than good to the movement. For Celine is not only an insane anti-Semite, he has also put himself terribly in the wrong and committed the unpardonable sin by scoffing at the misfortune of his own country, sneering at the collapse of the French Army with the term "*fuite motorisée*." His friend, Pierre Clementi, a leader of the *Collectivistes Nationales*, whom Doriot accused in public of having received foreign money for his political propaganda, has become intent upon taking revenge on the other pro-Germans for the abandonment of Celine. He also reproaches Deat and Doriot with the fact that, although they attack the mistakes of the past (their failure to prevent them notwithstanding), they

Framed by heavy girders a new cargo ship for Britain takes shape in a busy British shipyard, while in the foreground, platers punch out angle bars. The U.S.A. also has embarked on the biggest shipbuilding programme in her history, and ships of her "Liberty Fleet" have already been launched.

the Germans. Anti-Bolshevism is one of the most effective propaganda slogans of the pro-Germans; other useful means are hatred for the late regime and its men, and denunciation of the Freemasons. Doriot's movement, whilst leaning on all these propaganda props, is beginning to concentrate more and more on anti-Semitism, which always had mouthpieces in *Gringoire*, *Le Pays Libre* and *Je Suis Partout* and which nowadays expresses itself without the least restraint. But even on this question the pro-German groups cannot always agree; thus the *Union Française*, a paper preaching radical anti-Semitism, has suddenly started a campaign for the admission of "loyal" Jews into the national revolutionary movement.

are to-day behaving like parliamentary hypocrites by supporting Marshal Petain on the one hand whilst they fight his policy in Occupied France, where they feel secure under German protection.

Thus the pro-Germans not only fight the pro-English, but also each other. But, however great the din they raise and however many papers and reviews and weeklies they publish, one must never forget that they represent only a tiny minority which is without the least influence upon the French masses, and that they have by their policy put themselves beyond the pale in the eyes of all French patriots.

—Condensed from *Die Weltwoche*, Zürich.

Shipyards Gaining on Submarines

THE wild exaggerations from Berlin of the number of ships sunk by air and submarine attack on a convoy of British and American supplies to Russia exhibit the anxiety of the Nazi High Command, writes the *Daily Telegraph*. It adds:

The last convoy to Malta was also "destroyed" by the Axis—wireless though the material reinforcements which the island needed came safely through. Russia's needs are great and urgent, so heavy has been the consumption of munitions during the long fierce battle of Stalingrad and so severe were her losses in raw material and productive power in the German advances towards the Volga and the Caucasus.

The United Nations must support the stubborn heroism of the Russian armies by all supplies that can be sent by every means.

United States bombers have been for some time taking part in the air offensive against Germany and the number of Flying Fortresses will soon be doubled or trebled. These blows struck at the sources of power and communications of the German armies in Russia multiply the effect of the munitions sent to the Russian front.

The long route to the Red Sea and the Persian Gulf, however, requires not only shipping but the development of land communications over a vast area in Iran and Iraq. The Middle East has called for large numbers of aircraft, tanks, guns and the establishment of bases with harbour and engineering installations on a large scale.

China, as Mr. Roosevelt noted, wants air strength and mechanized equipment. India and Australia have their claims. The supply to each and every one is limited not only by production but by the capacity of sea transport. Big bombers can be and are being flown over thousands of miles—for example from Brazil to West Africa and over huge spaces of the Pacific but fighters can only cross the ocean by ship. Ground equipment for air forces also requires shipping while the amount which must be assigned to any large movement of tanks and guns strains the available tonnage.

Shipyards are gaining on submarines. They provide more ships than are being sunk. The lamentations of recent German broadcasts over the hard task of the U-boat suggest a failing confidence. We must, however, make our account with the certainty that there will be severe losses on routes against which the Nazi strategy concentrates attack. The utmost skill and gallantry of the navy and the merchant service, though they have done miracles, cannot make the seas safe till Nazidom has struck its flag.

"The United Nations," said President Roosevelt in the spring, "need more and still more sea transport." The sinkings of summer made the need greater for distances by the Cape to our supply points in the Middle East and from the American coast across the Pacific keep ships for many months on the round voyage.

Mr. Roosevelt's declaration that the Allied strategy must plan an offensive which "will drive to the heart of the Axis" should still be the guiding principle of every council of War. To make the most of the strength of the Allies, it must be combined and applied at points where it will inflict the greatest damage to the enemy. No operation should take precedence of the development of an air offensive against Germany.

BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

Poland's Martyrdom

(BY A POLE)

THERE can be no better indication of the real spirit and attitude of a nation than its treatment at the hands of the Germans. Those that are indifferent to the Allied cause, or inclined to collaborate with Hitler, are exploited economically, but otherwise allowed to live their own lives. Nations which continue the struggle and believe in the victory of the Allies are cruelly persecuted.

The story of Poland's martyrdom is the best evidence of that country's indomitable faith in the ultimate victory for freedom.

The persecution is thorough and all-embracing. First of all the Poles are condemned to poverty and semi-starvation. Their rations are half or less of those of the Germans themselves, which are not very generous either. There are, in Warsaw, restaurants where a German can get an excellent meal for as little as two shillings. A Pole would have to pay several pounds in the black market to get the same kind of food.

With low wages and high prices, with their businesses and houses taken from them, with no freedom of any kind, the Poles in Poland live miserable lives.

But they are fortunate compared to those that have been pressed into labour gangs and sent to Germany, to work there as slaves. About two million Poles have been deported to Germany in this manner. The usual method is to round up everyone in a street, or a square and pack them into cattle trucks, which carry them straight to forced labour in Germany.

IN PRISON CAMPS

Even worse, however, is the fate of the thousands of prisoners in prison camps—especially the notorious camp of Oswiecim—where torture is a daily occurrence and the chances of survival are very small indeed.

Perhaps those that are executed from time to time may count themselves lucky, for they escape the horrors of the prison camp. The executions, by hanging or shooting, take place in public. Sometimes school children are compelled to attend executions, to 'educate' them after the Nazi manner. Some children may thus have seen the death of their own parents, or brothers and sisters. A conservative estimate of the number of people executed in Poland since the German invasion is 80,000—to say nothing of those slowly put to death in prisons and camps, or of those that died in labour gangs, or starved.

The German aim is to exterminate the Polish nation. Their first objective is the destruction of the educated class, which provides leaders. That is why the professors of Cracow university were sent to a prison camp, where many of them died.

Can the Germans succeed in their attempt? They cannot, for the vitality of the Poles is such that before the war the population increased every year by half a million—more than the natural increase in Germany itself. After the war Poland will be able to make up her losses quicker than most nations. But that won't bring back to life the victims of the Germans and there will be accounts to be settled.

SPIRIT OF POLAND

The spirit of Poland is unabated. Resistance and sabotage continue in spite of everything. There is a secret press and scores of newspapers continue to be read by everybody. People listen secretly to the Polish broadcasts of the B.B.C. and then they pass on the news to their friends. Four days after the declaration of the Atlantic Charter, Mr. Churchill's and President Roosevelt's photographs on board a British battleship appeared in the Polish secret press. How they got there is still a mystery.

A Polish soldier leaps from a specially constructed tower during a demonstration of parachute troop training in Britain, before General Sikorski, Polish Premier and Commander-in-Chief, and other high officers of the British and Polish armies.

The resistance of Poland is a matter of serious concern for Germany, especially as all the supply lines for the Eastern Front pass through Poland. There was a moment when the German governor-general wanted to negotiate with the Poles. He made an offer, which may have seemed tempting: all Polish prisoners to be released, no food to be taken out of the country, a degree of autonomy and economic freedom to be granted. In return for these substantial concessions, the Germans asked for one thing only: they wanted the Poles to give up resistance and to abandon the idea of an Allied victory.

True to their Allies and to their honour, the Poles refused to collaborate. Their refusal filled the Germans with amazement and anger.

WAVE OF TERROR

A new wave of terror swept the country. The Germans proclaimed conscription—in western Poland, which is formally annexed to Germany, the Poles are forced to join the German army. This is the height of cruelty, for nothing could be more revolting to a Pole than fighting for Germany. In the 'General-Gouvernement,' the Germans introduced a veiled kind of conscription, by forcing Poles into special labour battalions, a sort of pioneer corps. The idea is, of course, that it would be dangerous to give them other arms than picks and spades.

The very ferocity with which the Poles are persecuted is proof of their strength. Had they been weak, the Germans would have subdued them long ago. Fear is the motive of oppression. Fear dictated the offer made to the Polish nation by governor Frank. The Germans are afraid of Poland, even though they have the country in their power. Their fear is not unjustified, for there is punishment in store for the torturers.

Poland is making a sacrifice that has no equal in history. But it will not be in vain—(A.B.C. Broadcast).

Lost Her Start

"If Germany has to face—as she will have to face—a campaign in the Spring, she can hardly maintain both her military and industrial efforts at their present pitch, but will have to choose between them. The race is still on and the finish a long way off, but Germany has lost her start."

—LORD HALIFAX, *British Ambassador in U.S.A., in a speech in New York, on 3rd October.*

Turban Tale Headgear Made History

THIS is the story of Jasjit Singh, his beard, his turban—and how they made history.

When war broke out Jasjit Singh was in Britain, studying engineering at a college in London. Very soon he was at the War Office, offering his services.

"We shall be glad to have you in the British Army," said the officials, "but first you must shave off your beard, and discard your turban."

"But I am a Sikh, and a beard and turban are part of my religion."

The officials shook their heads, and said they were very sorry, but it was an Army regulation that officers must wear the headgear of their regiments, and must not have beards.

Jasjit Singh's reply was spoken very quietly.

"I thought one of the reasons we are fighting this war was that men might practice their religion according to their beliefs," he said.

It was a point, and General Auchinleck, to whom Jasjit Singh was sent, was quick to appreciate it.

The regulations were amended. To-day Jasjit Singh proudly wears the uniform of a Captain in the British Army—and, of course, his beard and turban.

Inspired China

"The Chinese have shown the most passionate determination to develop their country's resources and are determined that the new China shall become the leading exponent of peaceful civilisation in the Far East. When I was in China two and a half years ago, I felt the same vitality and inspiration then as I later found among the Russian people."

—SIR STAFFORD CRIPPS, *at the United Aid to China Fund meeting, on 3rd October.*

Vladivostok Key-point of Eastern War

AT one end of the Svetienskaia, the wide main street of Vladivostok, there stands a big bronze statue of Lenin. The founder of the Soviet State points towards the sea as if to tell the men of the Red Army and Navy that out there, in the Pacific, decisive battles would one day be fought. At the other end of the Svetienskaia there is another statue, that of the Tsarist admiral, Nevelskoi, who as early as the middle of the last century advised the Tsar to build here, where the river flows into the sea, a Constantinople of the Far East.

victory at Tsushima and the fall of Port Arthur, the Russians managed to keep Vladivostok.

"LORD OF THE EAST"

Perhaps in 1906 the port, which was frozen for a great part of the year, did not seem very important. Nowadays powerful ice-breakers keep it open the whole year round, and, what is of still greater importance, Vladivostok has become a dangerously strong air base. From here Soviet bombers have only to fly about 595 miles to reach the densely populated centres of Japan—a distance which is flown night after night by the R.A.F. in Europe. And, while German territory is well protected by anti-aircraft measures, Japan cannot boast of the same. Japan's air chief, Okada, has himself confessed that, as things are, a single squadron would suffice to destroy sixty per cent of all the buildings in Osaka.

Vladivostok, "Lord of the East"; the name given to the town by the Tsar has become

A Maintenance Unit of the British R.A.F. in the Middle East, assembling new Curtiss "Tomahawk" fighter aircraft that have just arrived from the U.S.A. The aircraft arrive in two crates, wings in one, fuselage in the other. They are assembled in a day.

On the plinth of Lenin's statue is engraved in many languages—including Japanese—the slogan, "Workers of the world unite!"; on the plinth of Nevelskoi's monument one may read the famous sentence of Tsar Nicholas I: "Where the Russians have once hoisted their flag, they will never retreat."

In 1858, when the clever diplomat Muraviev took over the small Chinese port of Aigun, which in due course was to become Vladivostok, Japan as a nation was still half asleep. Thirty years later, after the Meiji Restoration had given a new impetus to the peoples of the Japanese isles, the Russians would hardly have been able to occupy without resistance this ideal strategic point, situated exactly between the two bights of the Japanese Sea, nor could they have built the port. At the beginning of this century the Japanese tried hard to oust the Russians from this position in the Far East. But, notwithstanding the Japanese

its motto. The first colonists came from Manchuria—they were Chinese, Kalmuks, Tartars, Kirghiz and a few Russians, and were exiles or men who were in disgrace for one reason or another. They built the first absolutely straight, mathematically measured streets and ugly, primitively painted wooden houses. In 1889 the town was proclaimed a fortress and the boom began. Barracks and forts, dockyards and arsenals, were constructed. The hills framing the town were ruthlessly cleared of their forests; the Siberian pines were turned into new warehouses and enormous granaries, where wheat, soya beans and oil cake from Manchuria were stored. By the beginning of the new century Vladivostok had equalled the other Siberian city, Irkutsk, in importance. The population doubled, then trebled, and soon reached, by leaps and bounds, the figure of nearly 100,000. Tsar Nicholas II had a special liking for the town ever since he had been welcomed there as Crown Prince with a

gigantic triumphal arch and Chinese fireworks. He showed this liking by founding a Far Eastern University at Vladivostok.

A REAL METROPOLIS

Since the Bolsheviks came to stay at the city of the Far Eastern Golden Horn, it has become a real metropolis. Today it has over a quarter of a million inhabitants. This sudden rise, accompanied by the strengthening of the Fleet and the extension of dockyards and warehouses, is due to several causes. Vladivostok is a town full of revolutionary traditions. It was here that a violent insurrection against Tsarism broke out in 1905 and 1906; part of the Far Eastern Fleet mutinied and could only be subdued by force.

In 1917 the city had to surrender to Czech legionaries returning from the broken-down front of Europe. The Japanese hastened to the town on the pretext of protecting their countrymen, although their real desire was to seize the dangerous Russian base. But they were routed. In 1922 the second revolution broke out in Vladivostok. The Red Partisans came by the partly new Trans-Siberian Railway; the city, occupied until then by English and American troops, became Russian once more, thus ending the Civil War.

The Communists have always felt a special affection for Vladivostok, because for them the town possesses a historical and symbolical significance. They have worked furiously at the construction of this, their most Eastern port, because their interest in Asiatic problems is much greater than that of the Tsars ever was. After the collapse of the Chinese Communists in 1926 and 1927 Russian policy appeared to turn its back on the East, but this soon proved a delusion. Fundamentally, Russian policy did not change. Imperceptibly, the U.S.S.R. continued to penetrate into Outer Mongolia and strengthen Vladivostok as a fortification and also as an ideological centre. In olden times the Tsar had sent the enemies of his regime to Vladivostok; Stalin, on the contrary, sent his best men. In 1924 the Far Eastern State University was founded; it stands upon a hill overlooking the city and the sea. This university became the meeting place of Chinese, Japanese and Korean revolutionaries, and represented one aspect of the "white peril," feared by the Japanese. They are still afraid that the "white idea" fostered at Vladivostok will make their "New Order" impossible.

There is also the strategic "white" danger, which has grown tremendously through the probable co-operation of Japan's two foes—Russia and the United States. It is doubtful whether the Russians alone would be able to hold out against Japan in this part of the world. Their submarines and destroyers might easily be caught in the mousetrap of the Japanese Sea. But now that American bombers, flying from Seattle by way of the Aleutians and the Soviet base Petropavlosk,

can reach Vladivostok in two days or even, flying non-stop, in ten hours, the situation takes on a different aspect. On the island in front of the city the Soviet has constructed Russia's most modern base. Here a "Town of Wings," Aerograd, has been built.

That is why Japan fears Vladivostok and the significance of its name, "Lord of the East," and the pointing finger of Lenin's statue.

—Die Weltwoche.

American Ingenuity

OFFICIALS in Washington announce that 44 of the best suggestions by American workers for increasing war production are already in effect. These were selected from 1,200 submitted.

One worker suggested the substitution of a machine operation for hand filing, resulting in 100 per cent increase in production.

Another machinist suggested eliminating the super-finish on half of the faces of bolt heads. This reduced 16 operations to 8.

An assemblyman devised a fixture to hold a gear in place so that the machine could replace his hand action, saving four hours of labour on each engine.

A new design log for performing slitting operations on quartz crystals now prevents 75 per cent of the breakage.

Aviation workers have saved tons and tons of steel by substituting plastics in fuselage construction.

The Times are Better

"I can say with conviction that the times are better than when I arrived and one can look forward with confidence to victory. I have sought to interpret China's mind to India, explaining how the independence which the Indians desire and demand, can arise only on the foundation of unity and agreement between the Indian communities themselves."

—SIR MUHAMMAD ZAFRULLAH KHAN,
Indian Agent-General in China, in a farewell message, on 3rd October.

In Occupied Europe

THE shooting of 116 Frenchmen on orders of General Stulpnagel, Commander of the German forces of occupation in France, brings the total number of persons executed in Occupied Europe up to September 22 to 207,373.

This figure compiled by the Inter-Allied Information Committee covers executions which have followed trials or court-martials, the shooting of hostages in reprisal for attacks on German or Italian troops of occupation and persons whom the Germans have announced they have shot. A part of the figures for each of the occupied countries has been obtained from Governments in London who have confirmed them and in most cases the Governments in question have the names of victims.

FRANCE

In the first six months of this year 1,500 have been shot or sentenced to death in France and North Africa. Since Germans overran France, they have in addition shot 250 hostages. Many have also been condemned to death but their actual execution has not been announced. Most victims have been accused either of sabotage or of helping the United Nations or of being "communists or terrorists."

GREECE

In Crete alone 3,000 have been killed since May 1941. In Athens 40 people were shot this summer, another 40 in the island of Mytiline. Most of those had been accused either of trying to escape abroad or of helping other people to get away.

Several thousand have been executed in Macedonia by Bulgars following a revolt against the Bulgarian troops of occupation.

British Naval spotting aircraft of the Fleet Air Arm dropped flares to illuminate the target when enemy coastal positions menacing Tobruk from the east were bombarded by the Mediterranean Fleet. The picture shows bombing up a Naval aircraft in the Western Desert.

The table of executions has been made up as follows:—

BELGIUM

Definite information has been received of the execution of 130 Belgians, mainly for sabotage, although some have been shot in actual fact as hostages. The German procedure as regards hostages in Belgium differs from other occupied countries. People have been condemned to death for such offences as sabotage, reprieved and then shot on the occurrence of fresh outbreaks of sabotage by other people.

CZECHOSLOVAKIA

Since the shooting of Heydrich 1,765 Czechs have been executed, 525 of them were accused of being directly responsible for his death. In addition, 1,000 have died in concentration camps.

3-A

NORWAY

Since the German occupation 106 persons have been shot. Of these 100 have been executed since September, 1941 when a state of siege was declared in Oslo. Most of the victims were accused of sabotage or attempting to escape to England. Thousands have died in concentration camps as a result of ill-treatment.

POLAND

The Polish Government in London states that 200,000 people have been executed since the Germans overran the country. Of these, 100,000 were shot after trial according to the German law, 70,000 as hostages and 30,000 have died in concentration camps.

Long-Range Light day Bomber

MOSQUITOES, Britain's fastest bombers, have begun a new kind of daylight bombing. They are being used for long range, and without fighter escort, to hit accurately small but vital targets. The Germans have never sent over this country so fast a long-range bomber, says the *Daily Herald's* aeronautical correspondent.

Mosquitoes were first mentioned recently in connexion with the Royal Air Force daylight raid on the Gestapo headquarters at Oslo, but they have been attacking enemy targets for some time. On September 8, the German High Command communique said, "Two British aircraft made a sweep over Germany during the day. One Mosquito was shot down." A week later the Air Ministry

reported that "light bombers" flying without escort and without cloud cover had attacked at dusk targets near Wiesbaden. Wiesbaden is nearly 400 miles from London and the greater part of the flight would be over enemy territory. Yet not one of the "light bombers" was missing. Only light bombers of very high speed, able, as the Mosquitoes were over Oslo, to escape from Fockewulf fighters, could have made a daylight raid so deep into Germany without cloud cover.

To Oslo and back is a 1,000 mile flight from the nearest air bases in Britain. This means that Mosquitoes could, for instance, have managed the famous Augsburg raid which was made by Lancasters. A light bomber cannot carry such a heavy bomb-load as a bomber of the Lancaster type, but it can be replaced very much faster and more cheaply, and it carries a much smaller crew.

Now that Mosquitoes are being used, the argument for and against the light or heavy day bomber will be put to the test. Fortresses have still to be tested on a large scale over Germany by day without fighter escort. Probably both the Fortress and Mosquito types will have their place in our daylight offensive.

MADRAS CASUALTIES

New "Leave City"

EVERY new draft of British reinforcements arriving in India increases the problem confronting Army authorities and voluntary workers who are striving to improve the welfare of troops serving in India.

Just how much can be done in this direction is shown by developments in a Southern India city which is rapidly acquiring a big reputation as a leave resort—Bangalore. Here British soldiers can find most of the comforts and amenities of a military town in Britain, with the added advantage of an equable climate.

Through the Station Staff Officer, the ladies of the cantonment invite soliders to their homes for meals and parties once or twice a week. One such lady, overhearing a young soldier at a whist-drive say that his 21st birthday was during the following week, promptly arranged a party for him and his friends at her home.

The Women's Voluntary Service Canteen, now about four months old in the city, provides a library of periodicals for both British and Indian troops, and a writing-room for correspondence.

Toilet articles are on sale; hot baths, light meals, table tennis and darts are provided, inter-services tournaments at various games are arranged. There is a concert every Sunday night.

Lt.-General Sir Frederick Pile, Bart., Commander-in-Chief of the British Anti-Aircraft Command (right), with General Zajac of the Polish Forces, were photographed watching a Bofors gun detachment during a demonstration of gun drill.

Soldiers on leave are assured of a comfortable holiday at a reasonable cost. There is a leave camp, with accommodation at present for 250, where the soldier can take his well-earned rest and where rules and regulations are cut to the minimum. It is situated within easy reach of the city's main centres of amusement, where except for one hotel and one restaurant practically every establishment is "In Bounds For Troops."

In the city the soldier can take his choice of cafes' dance halls and cinemas, of each of which there are several. Every Sunday afternoon a "Contact Canteen," of which the president is a Minister of the Government of Mysore, invites British and Indian troops to meet civilian guests at a tea party which is frequently attended by as many as 300 persons. After tea, there is usually music, or conjuring, snake-charming, or a display of riding by the Mysore Lancers.

Another canteen, run by the Y.M.C.A., opens early each morning, does not close until 11 p.m. (midnight on Saturdays), and is always well filled. Good food is available at low rates, and a whist-drive is held once a week.

And so Bangalore comes to be numbered among the centres foremost in enterprise on behalf of the welfare of soldiers, many of whom have so suddenly been snatched from their accustomed environments and set down in a—to them—strange country not always well provided in the particular comforts, amenities and amusements among which they have been brought up.

There is a great deal to be done in this direction in many other cities and centres of India and it is to be hoped that the lead given by Bangalore will swiftly be followed—and perhaps overtaken.

Diary of the War

AIR ACTIVITY OVER ENGLAND AND GERMANY

3rd Oct.—The Royal Air Force attacked submarine yards at Flensburg and other objectives on the Baltic Coast of Germany.

4th Oct.—Four-hundred British fighter aircraft operated over a wide area of northern France. Iron and steel works near Liege were bombed. Objectives in the Rhineland were attacked.

5th Oct.—Goering, at a special mass meeting of the Nazi Party in Berlin, said: "The German people come before all other peoples for food. The whole German army is fed from the conquered countries."

7th Oct.—A German mine-sweeper was attacked and set on fire off the French coast near Berek.

The Royal Air Force attacked objectives in western Germany.

Enemy E-boats were attacked off the Belgian coast.

With reference to a second front, Mr. Churchill stated in the House of Commons: "No statement from the British Government is called for at the present time than those that have already been given."

8th Oct.—The Royal Air Force attacked Osnabruck.

UNITED STATES OF AMERICA AND THE ATLANTIC

3rd Oct.—The Mexican Government ordered that all 18-year old youths should register for military service.

4th Oct.—Hitler's nephew, William Patrick Hitler (British born), joined the Canadian Air Force.

5th Oct.—American shipyards reached the promised goal of three ships daily by delivering during September 93 new freighters.

The United States War Department disclosed that a new specialised American troop unit nicknamed "Swimmandos" was training for attack in river areas.

8th Oct.—President Roosevelt refused to comment on M. Stalin's recent statement.

INDIA, BURMA AND CEYLON

4th Oct.—The Royal Air Force raided Central Burma. Barracks at Meiktila, south of Mandalay, were bombed.

5th Oct.—British determination to recapture Burma at the earliest opportunity was re-emphasized by His Excellency Sir Reginald Dorman-Smith, Governor of Burma, when addressing personnel of the Royal Burma

India's Great Citizen Army

"THE INDIAN SOLDIER of to-day represents the Indian people as a whole more than ever before. Never has India had so many men trained to war or drawn from a wider section of the population. They are certainly more of a citizen army and less of a military class than ever before."

—GENERAL SIR ARCHIBALD WAVELL, *Commander-in-Chief of India, in a speech on Oct. 3.*

THEME OF VICTORY

"The noises in American shipyards are the theme of our coming pageant of victory and their din can already be heard, we need have no doubt, in Berlin, Tokyo and Rome."

—MR. J. V. FORRESTAL, *U.S. Under-Secretary of the Navy, in a letter to Rear-Admiral Land, on September 27.*

MET EFFICIENTLY

"When I gave directions, first for 12 million, and then for 8 million, finally for 22 million tons of merchant ships to be built by American shipyards in 1942 and 1943, I issued a challenge to the ship-building industry and the Maritime Commission. That challenge was accepted and is being met efficiently."

—PRESIDENT ROOSEVELT, *in a letter to the Commission's Chairman Rear-Admiral Land, on September 25.*

Navy. "I am fully convinced that as things are moving now, the day is not very far distant when we will meet again in Rangoon."

7th Oct.—The Royal Air Force attacked targets at Yenangyaung in Central Burma. Objectives in Chindwin and Myittha Valleys were also attacked.

8th Oct.—Hostile aircraft were over various points in Bengal within recent weeks.

ITALY, AFRICA AND THE MEDITERRANEAN

3rd Oct.—The Royal Navy intercepted two Vichy French ships which had escaped from Madagascar.

The Eighth Army launched an attack and captured positions which were consolidated.

An Axis merchant vessel was hit in a naval base in Greece.

4th Oct.—At Stalingrad, four major battles raged. Three German attacks were repulsed.

5th Oct.—Timoshenko advanced along the wide front south-west of Stalingrad, crushing German counter-attacks. German drive to Grozny was halted.

M. Stalin stated that Allied aid to Russia so far had not been effective.

6th Oct.—Referring to M. Stalin's statement on second front, Lord Halifax said there was no misunderstanding between M. Stalin, Mr. Churchill and President Roosevelt.

Great fires swept Stalingrad afresh. A new call was issued to the defenders: "Hold on, whatever it costs."

Von Langermann, a General of the Panzer Corps, was killed in the Don battle.

There was fierce fighting in the Caucasus and the battle reached a climax in the Mozdok area.

The protection of convoys bringing supplies for the British Forces in Libya, entails considerable air escort. Amphibian Naval aircraft of the Vickers-Supermarine "Walrus" class are used in constant patrol of the Mediterranean. Photo shows one of the air gunners of a British "Walrus" Amphibian aircraft, which carries machine guns fore and aft.

4th Oct.—Axis convoy was attacked in the Mediterranean. Allied aircraft raided Tobruk.

5th Oct.—Axis aircraft raided Alexandria and bombs were dropped harmlessly.

6th Oct.—According to a Tass Agency report, differences had occurred between Hitler and Rommel.

Three Axis supply ships were sunk in the Mediterranean.

Three thousand alerts had been sounded in Malta since the war began.

8th Oct.—Tobruk and Benghazi were raided.

RUSSIA AND FINLAND

3rd Oct.—All German efforts to regain lost positions in Stalingrad were beaten off. Timoshenko's relief offensive north-west of Stalingrad gathered momentum.

Over 200 German planes were destroyed in a week near Leningrad.

7th Oct.—The Russians launched a new offensive against German positions south of Stalingrad. The Germans suffered heavy losses. German thrust to Caucasus was halted. German defence lines were broken at Voronezh.

8th Oct.—The battle for Stalingrad reached a new climax of ferocity. The Germans threw in all available reserves.

NEUTRAL COUNTRIES

5th Oct.—General Franco, speaking at the National Youth Congress at Madrid, said that the doctrine of the Falange was built on the foundation of the principles of the Christian Church.

7th Oct.—The Iraq Cabinet resigned.

SHIPPING

6th Oct.—The American submarine Grunion was lost.

VICHY AND OCCUPIED COUNTRIES

4th Oct.—The German Radio said that M. Herriot, former French Premier, was under house arrest.

In the first six months of this year, German occupation cost France 72,700 million francs.

5th Oct.—According to the Moscow Radio, M. Laval was organizing special troops on the German model to suppress the patriotic movement in France.

6th Oct.—According to telegrams from Ankara received in New York, territorial differences had occurred between Rumania and Hungary over Transylvania. Rumanian officials in Bucharest expected a war with the other Axis satellite state.

Men in the Yugoslav province of Slovenia were to be conscripted for the German army, according to a German Decree.

Between 3,000 and 4,000 German soldiers were imprisoned for mutiny at Alta in Eastern Finmark in Northern Norway.

7th Oct.—According to the Vichy Radio, a state of emergency was proclaimed throughout the province of Trondheim because of acts of sabotage.

As the result of an agreement between the Croatian Government and the Reich, the Germans evacuated from the entire areas of Dalmatia, Croatia, Bosnia and Herzegovina.

THE FAR EAST

3rd Oct.—The Allies advanced in New Guinea and the Japanese supply lines were attacked.

4th Oct.—In an Allied raid on Rabaul, a Japanese cruiser and transports were hit.

5th Oct.—In a surprise raid on the Solomons by the Allies, three Japanese cruisers were hit. The Australians advanced in New Guinea.

American troops occupied positions in the Andreanof group of the Aleutians.

6th Oct.—Mr. Wendell Willkie had a talk with General Chiang Kai-shek.

The Australians advanced in New Guinea and took Efogi. A naval engagement took place off the Solomons.

7th Oct.—The Americans bombarded Kiska. Five Japanese sea-planes were shot down.

The Japanese landed in Guadalcanar in the Solomons.

Rekata Bay was attacked by American naval dive-bombers.

A Japanese convoy at Buna was attacked.

8th Oct.—More Japanese landings were effected in Guadalcanar.

THE GOLDEN CROPS OF IND...

IN German-occupied Europe and Japanese-occupied China, the rich golden crops are harvested by the enemy while the rightful owners starve and die. Are you going to let this happen to India, where our mainstay is agriculture? India with her huge resources is the most tempting prize of all to the enemy. Japan uses soft words to woo us into submission! But beware of those words. Resist Japan with all your combined might, for Japan's coming will mean starvation for your women and children.

Keep Right on

Mr. Churchill with Lt.-Gen. Montgomery, Commander of the Eighth Army, in the Western Desert

We must all drive ourselves to the utmost limit of our strength. We must preserve and refine our sense of proportion. We must strive to combine the virtues of wisdom and of daring. We must move forward together united and inexorable.

Light is broadening on the track. And the light is brighter too.

Let me use the words of your famous minstrel, words which have given comfort and renewed strength to many burdened hearts—'keep right on to the end of the road, keep on right to the end'

—Mr. CHURCHILL, in a speech on Monday, October 12 at Edinburgh

Running Commentary

India Debate: The House of Commons passed the Third Reading of the India and Burma (Temporary and Miscellaneous) Bill, on Tuesday. The Bill now goes to the House of Lords. It was on the Second Reading of this Bill that the India debate took place. Last week our readers would have read the speeches of Mr. Amery, Secretary of State for India, Mr. Arthur Greenwood, Labour leader, and Mr. Attlee, Deputy Prime Minister. Though much of the ground covered by these speeches is old there are certain broad impressions and certain new features, which deserve emphasis. The first broad impression is the general condemnation of the Civil Disobedience Movement from all sides of the House. One thing is very clear; the British Parliament, and the British people behind it, cannot come to a settlement with those who launched a subversive movement at the most critical moment of the war, until that movement is called off and the acts of violence to which it has led are disavowed. Another clear impression left by the debate in the House of Commons is the general determination not to allow any one party to secure sole control of the Government to the prejudice of others who have equal claims to consideration. There can be no party-State in India if there is to be a free and contented India. These are the negative impressions.

The Path to Self-Determination and Independence As regards the positive side, there was a general recognition of the principle of self-determination for India and that that self-determination means independence if India so desires. Mr. Amery made this point very clear in his speech. He said:

"What was offered to India was control over her destinies within the partnership of the British Commonwealth, or without that partnership if she preferred to forego it . . ."

Mr. Maxton, leader of the Independent Labour Party, went out of his way to express his belief in Mr. Amery's sincerity. He said: "Indians were promised complete independence, even to breaking with Dominion association, if so desired."

The anxiety of all parties for a settlement at the earliest possible moment which would be honourable to all concerned was another positive impression left by the debate. His Excellency the Viceroy has shown the desire for such a settlement by continuing his talks with Indian leaders. But when will such a settlement take place? What are the conditions necessary for it? Firstly, the Civil Disobedience Movement must be called off. Secondly, there should be an agreement between the parties on India's future constitutional structure. Aspirations of the various groups must be integrated into the needs of India as a whole, for it is only then that compromise can be reached without a feeling of loss or grievance. Political negotiations have

Shall not go Unpunished

"We are resolved that they shall not go unpunished. We are not animated by a spirit of revenge, natural though such a spirit must be to so many in Europe to-day, but my conviction is that civilized justice will only be restored to its rightful place in the affairs of men when the criminals who have sought to destroy it are made to answer for their deeds. The retribution must be swift and sure."

—MR. ANTHONY EDEN,
The Foreign Secretary, in a speech
at Lamington on September 26.

taken on a new sternness and intractability, because they consist of manœuvring for the substance of power, and not of bargaining for the trappings of office. Planning, not bargaining, is the need of political India to-day, as lighting, not indifference, is the call to India in the great world arena. By fighting, India will secure the possibility of independence, and by planning, she will turn that possibility into reality when victory comes.

Mr. Gandhi and the Axis The 74th birthday of Mr. Gandhi, which fell on October 2nd, was celebrated by the Axis Radio by a number of special broadcasts

Government: To come to terms with the British would defeat the aim of Mahatma Gandhi's move for freedom to which he has dedicated fifty years of his life."

But what did Berlin say on February 4, 1942? It said:

"Gandhi's principle of non-violence and Ahimsa has miserably failed to achieve any effective results. The majority of the people in India, being disappointed with the fluctuating policy of the Congress, are now forming different parties with a view to attaining independence in the near future."

His Majesty the King-Emperor inspecting men of the Royal Indian Navy at a town in the United Kingdom.

to India. They have once again revealed that the Berlin-Tokyo-Rome Combine praise only those who advocate and follow policies, whatever the intent of the authors, which are calculated to advance the Axis project of conquering and enslaving the world. Their estimate of Congress leaders has changed with the changing wind, and their heroes of to-day may well be the scoundrels of tomorrow. The Axis will praise them only so long as they play their game. Let us compare what the enemy radios were saying during the Gandhi week with what they were saying only a few months ago. The German Azad Hind Radio said in a news broadcast in Tamil on October 1:

"We, the Indians, are glad that Gandhiji did not come to a compromise with the

In its Hindustani broadcast on April 10, 1942 Berlin said:

"Mr. Gandhi and Mr. Nehru are miserable British agents."

A day earlier it said:

"The Indian leaders are the deluded henchmen of London."

Now the Axis radios are showering praise on Mr. Gandhi. Tokyo says on October 2nd:

"Gandhi is a great man in history. He is characterized by his meekness, his undaunted spirit, his spirit of sacrifice and his unwillingness to be utilized by others."

Berlin praises "Gandhi's unflinching sacrifice and devotion to the cause of India." The previous venomous diatribes of the Axis partners and their present glowing tributes show the real motive of the Axis propaganda. They are praising Congress leaders because the results of the Civil Disobedience Movement are expected to be helpful to the Axis.

Let us contrast this attitude with the attitude of the United Nations. In spite of Mr. Gandhi's politics, his moral eminence has been accepted by great leaders in the Allied countries. Men like General Smuts and Lord Halifax have paid their tributes to Mr. Gandhi on the occasion of his 70th birthday. Even now, living amidst the clash and clang of political controversy, the dominate note is one of disappointment, sorrow and, in some quarters, anger, that one so morally distinguished should have seen fit to pursue a barren path—a path that implies so much frustration to his own people and delights the enemies of India and the other United Nations.

Allied Shipping Losses: Axis Propaganda

When receiving the freedom of the City of Edinburgh last week, Mr. Churchill made a speech reviewing the general war situation. He pointed out Hitler's mounting difficulties and the growing strength of the Allies. The months of August and September, he said, saw the new building of merchant ships substantially to outweigh the losses; they saw the greatest tonnage of British bombs dropped upon Germany; they covered the most numerous safe arrivals of United States troops in the British Isles; they marked the definite growth of Allied air superiority over Germany, Italy and Japan; they saw in the Pacific Australians with their American Allies making good advance in New Guinea. "It is not my habit," he added, "to encourage vain expectations, but these are solid and remarkable facts. Surveying both sides of the account good and bad with equal composure and coolness we must see that we have reached a stern and sombre moment in the war which calls in a high degree for firmness of spirit and constancy of soul."

Mr. Churchill laid emphasis upon one aspect which has been the subject of Axis propaganda for some considerable time. U-boat warfare, said Mr. Churchill, still remained the greatest problem of the United Nations, but there was no reason whatever why it should not be solved by the prodigious measures of offence and defence and of replacement on which Britain, Canada and above all United States were now engaged. Prodigious is also the word for the enemy propaganda to magnify the United Nations' shipping losses. This subject seems to be a perennial news item for Dr. Goebbels, his associates and satellites, and the claim of losses is expanded or contracted to suit the needs of the moment. It

may be recalled that in his address to the Berlin University on December 1, 1941, Dr. Goebbels laid down the dictum: "News is trickery by which to defeat the enemy." A study of enemy propaganda over a long period shows that when news from other fronts is bad for the Axis "shipping news" is built up and embellished to distract attention from failures elsewhere. If news from other fronts is good from the Axis point of view, the shipping losses become less and are relegated to the background.

Rise and Fall in Axis Claim: The Technique Behind it

In the first four months of this year, when Japan was forging ahead in the Pacific and Germany was confidently looking forward to a successful spring offensive in Russia and Libya, Berlin's claims of Allied shipping losses averaged 554,325 tons which was a very modest figure for Dr. Goebbels. In May the Allies had a big victory in the Coral Sea Battle in the Pacific and Hitler's spring offensive both in Russia and in Libya was in temporary difficulties, and so Berlin inflated shipping losses in that month to 924,000 tons which represented a sudden jump by 67 per cent. There was a decline in the succeeding month, for in June Rommel broke through to Egypt and the offensive in the Caucasus gained momentum. So the shipping losses fell to 886,000 tons. Further successes in Russia in July and August brought down the Axis claims still lower. In July it was 815,900 tons and in August 808,000 tons. Bad news for the Axis came last month (September) when Japan lost half the Solomon Islands and was trying in vain to regain them. In Egypt, Rommel could not advance further and for a whole month German soldiers were trying their best to take Stalingrad without any appreciable results. To all these facts must be added the achievement of the United States which turned out 93 new ships totalling 1,009,800 tons in September. These are the reasons why Dr. Goebbels pushed up his claim for September right up to 1,011,700 tons.

Daily Totals and Monthly Claims Vary

It is a well-known fact that Berlin's false claims are exposed by its own later announcements. Every day the Berlin Radio announces the number of ships claimed as sunk in the preceding 24 hours and on the 2nd of each month detailed figures of the number of persons and the total tonnage sunk in the previous month are given. But the total of the daily sinkings does not tally with the monthly claim. If we total the daily claims of the Berlin Radio during August 1942 we arrive at the figure 339 ships (excluding warships which are announced separately). But the monthly total given out by the Berlin Radio on September 2nd is only

125. For September, the same thing happened. The daily claims totalled 281 vessels, but the monthly claim was only 161. These discrepancies show clearly how Dr. Goebbels's dictum that news is trickery is being put into practice.

Ship-building: America is making such great strides in ship-building that the Axis claims of Allied shipping losses would make even the most glib listener become sceptical. In the first quarter of 1942 Berlin's claim exceeded American replacement by 111 per cent. In the second quarter by 35 per cent and in the third only by 3 per cent. The progress of American ship-building can be gathered from a glance at the figures for the outturn of American ship-building yards. In the first quarter of 1942 only 70 ships were built, but in the second quarter this was more than doubled; 160 ships (1,768,000 tons) were built. In the third quarter, American yards turned out 232 ships totalling 2,553,700 tons, that is to say, during the last three months the outturn was as many ships as were built in the first six months of this year.

This astonishing progress is further supplemented by Canadian shipyards which are producing at the rate of one ship every three days, while the United States' outturn is three ships a day. In 1942 Canada has completed so far 50 cargo vessels of 10,000 tons, whereas only one ship of this type was built last year. So far as Britain is concerned, it will add 150,000 tons this year to the United Nations' merchant fleet. By the end of this year, Axis has to sink Allied ships at the rate of more than 1,500,000 tons every month if it is to keep pace with the combined replacement by the United Nations' shipyards!

Battle of Transportation—Allies Getting Ahead

This is a formidable task for the Axis and no amount of false claims by the Berlin Radio can mislead the public as to the real facts of the shipping position of the United Nations. This was stressed by President Roosevelt in a broadcast talk on Tuesday last. He said that the total tonnage of ships coming out of American, Canadian and British shipyards had increased so fast that we are getting ahead of our enemies in the bitter battle of transportation. In expanding her shipping, America had enlisted many thousands of men for her merchant marine and they were doing magnificent service. They

were risking their lives every hour, said the President, so that guns, tanks, planes, ammunition and food might be carried to the heroic defenders of Stalingrad and to all the United Nations' forces all over the world.

U.S. BOMBER CHIEF.—Brigadier-General Ira C. Eaker, Commanding General of the Eighth Bomber Command of the U.S. Army Air Force, who, led the first all-American Bombing raid against the Germans, is seen at an American base in England with "Winston Churchill" the mascot of the U.S. Army Corps in England. General Eaker is confident that there is hardly a corner of Germany which the U.S. bombers will not reach within the next few months. According to him, air power is one of the most powerful means the Allies have to win the war and he is sure it is possible to destroy the enemy from the air. An interview with General Eaker was published in our last issue.

England A Year ago and Today

An American's Impressions

By ALLAN NEVINS, Professor of American History, Columbia University.

AN American returning to the island after a year paints a bright picture—the War machine running efficiently and the spirit confident.

Worse or better? This question fills the observer's mind on his return to Britain after a year's absence. Is food scantier? Is the clothing supply uncomfortably low? Have transportation, lighting, mails and other public services deteriorated? What has happened to the nation's morale under additional months of nervous strain, exhausting effort and loss of life? These are serious questions, for Britain in 1941 lived close to the margins of her strength.

Yet it is soon plain that a reassuring answer can be given. Internal economy has held its own. In some respects ground has even been gained. While British war production has been kept on a level which America only in recent weeks equalled, the island has adjusted itself more effectively to its tremendous burdens, remedied some of the most grievous hardships and perceptibly reduced nervous tension. If Britain faces the present situation with less exaltation than when she was fighting the Axis alone, she looks to the end of the war with firmer confidence and to the ensuing peace with brighter hope.

NEATNESS AND ORDER

A year ago when I left England, the mid-summer sun shone on cities where evidence of just-ended raids lay in great heaps of rubble, some exhaling the acrid odour of smoke, some

the ghastlier stench of death. Now the debris has been cleared away and English neatness and order have been so well restored that one often passes unnoticed a spot where huge bombs had fallen. A year ago everyone took for granted that the trains would be late. To-day they are punctuality itself. A year ago London looked half desolate, now it is so crowded and busy that living quarters are hard to find. A year ago everyone talked nervously about food, for when warehouses filled with stores had gone up in flames, when distribution from certain ports was disorganized at a time when communal eating places were few, food was worrisome if adequate. To-day the national diet is more abundant and so well assured that nobody is preoccupied with it.

Life still has many minor inconveniences, a few graver hardships and, where raiders pounce, occasional dangers. But it is much less bleak than trans-Atlantic newspaper readers would suppose. Reports have been circulated to Americans that the British lack soap, but a glance at a few shop windows dispels the idea. While soap is rationed, as one Briton remarked, "We've enough to wash elephants."

Shabbiness in dress was becoming evident in 1941. It hasn't increased and perhaps is even less noticeable. In the first year of clothes rationing just ended, the drop in sales

THEIR CAUSE WILL TRIUMPH

"To-day marks the eleventh anniversary of the Japanese attack on Mukden. On the night of September 18, 1931, the Japanese Army marched out to conquer China, Asia and the world. China understood its meaning and called the attention of the chancelleries of Europe and America to the Japanese aggression. She appealed to the highest international authority at Geneva for timely intervention. Our purpose in commemorating this day is not to allocate responsibility for the failures, but rather to stress the fact that international aggression, wherever arising, is a matter of general concern and must be dealt with by concerted action. We all have become wiser through experience. To-day, liberty-loving peoples are fighting shoulder to shoulder, the forces of aggression in the East and West, and though the United Nations are not yet out of the wood I feel certain that their cause will triumph in the end."

—DR. WELLINGTON KOO, the Chinese Ambassador,
at a press reception in London.

was under 10 per cent by value, 20 per cent by quantity. People have continued to buy clothes almost as before rationing; while stocks of men's wear remained nearly constant and women's wear increased. More of both sexes are uniformed and ordinary folk have more time than in the Blitz period to look after their appearance.

TWO PRESSURES

Everywhere are evidences of the two great pressures of the war—on materials and on man-power and woman-power. Signs shout at you to economize. "Waste-paper must not be thrown away, destroyed or mixed with refuse," reads a notice on all rubbish bins, with a list of the penalties. "Is your journey necessary?" demands a placard above every ticket seller's window. Newspapers advertising

The Times fulminates against their theft. Yet men keep shaved, even if they have revitalized the joke about the Scot who was asked "What do you do with your old razor blades?" "Shave with them." They keep their shoes neat even if nobody believes in the engaging sign, "Shoe repairs in five days."

LABOUR SITUATION

Labour is as scarce as materials, and grows scarcer. Of 8,000,000 women registered for war employment, railroads employ over 50,000. Nevertheless, journeys are made difficult by the absence of anybody to give directions where platforms swarm with people given a few minutes to change trains at crowded junctions. Taxicabs sway under six to eight people at rush hours, for drivers to make up parties going in the same general direction.

TANK THAT SWIMS.—A new amphibian tank which will swim ashore and carry soldiers into combat is in mass production now in the U.S.A. It was devised and constructed after years of hard work behind closed doors. Powered by a stock-model automobile engine, it runs over land or through water on a caterpillar tread. It can ferry troops to shore, carry them up the beach to the enemy and give them a mobile fortress to fight from.

Here it proves its sea worthiness on the rough waters of Lake Erie, one of North America's Great Lakes. A fighting craft, it can also be used as a transport.

a variety of wares carry, alongside, the picture of a citizen and his wife looking at shop-windows across a raging torrent, wherein a swastika-marked shark bares razor teeth, and the rebuking caption "Would you buy if you had to swim for it?" "Turn Down the Gas," exhorts another advertisement. Britain is reminded that if everybody wastes half an ounce of bread daily a convoy of thirty freighters must brave the Atlantic both ways for more wheat.

Metal articles particularly show the insatiable demands of war factories. Woolworth contains almost everything, even crumbled mushroom spawn, for people who have nothing but a cellar for a garden, but it has little metal. One can buy toothbrushes aplenty, but collar buttons require some search. Shaving brushes are abundant but blades scarce. Questions are asked in Parliament about baby carriages, and bicycles are growing so precious that even

Teachers in rural areas complain of the rising rate of truancy, for farmers insist children are needed in the fields. Postal collections have been restricted. Arriving at a big northern shipbuilding town, I was told that the Mayor might be late in introducing me to the audience, for he worked as an engine driver from 6 a.m. to 2 p.m., after which took up his mayoral duties. London clubs make members serve themselves cafeteria-style breakfasts. Under the demand for labour many look more tired than they did a year ago. Under the double burden of office or factory work in the daytime, and firewatching, home guard and other community service in the night, many are desperately tired. There is a general agreement that Government officers in Whitehall must be forced to take a week's holiday, yet somehow labour seems better adjusted to the nation's task than it was a year ago.

—New York Times Magazine.

Strengthening of British Navy

Replacement of Warship Losses

BY

H. C. FERRABY

APART from any news of fighting of the immediate present, we have had quite a lot of items of official news about the war at sea in the past few days. They tell us about the general progress, both at sea, and in what I may perhaps call the background to the sea war. Without attempting to put them in any particular order of importance, I think we ought to note these five separate pieces of evidence of our progress.

Firstly, British merchant ships travelling in convoy have covered 125,000,000 miles at sea during the war. This is considerably more than the distance from the earth to the sun.

TOLL OF ENEMY SUBMARINES

Secondly, British submarines in three years of this war have sunk more enemy submarines than they did in the 51 months of the last war. If we know that that total was 19, we can safely assume that 20 and more of the enemy U-boat losses so far, have been due to our submarine service.

Then in the third place, in about 27 months, as the First Lord of the Admiralty has told us, British shipyards have delivered enough new warships to make good our losses in battleships, aircraft-carriers and cruisers, and have more than made good the losses in destroyers.

The fourth point is that, on top of this, the shipyards have carried out repairs and refits to 23,000 warships, and to 35,000 merchant ships, to several of the ships, obviously, on more than one occasion.

MINESWEEPING AND MINELAYING

And as a fifth point, British minesweepers have destroyed German mines in our coastal waters, more than enough to have sunk every ship in the British Merchant Navy. The number of mines we have laid in enemy waters exceeds 100,000.

That seems to me to be a pretty good record of activity, but replacing losses alone does not build up the strength to win the war; more is needed, and more has been done. The Navy to-day is stronger materially than it was in September 1939, so naturally much of the information about that must still be secret.

Perhaps the most interesting of these items of news concerns the replacement of our lost warships. The Navy has suffered very severe material losses in the three years.

SINKINGS MADE GOOD

You can recall dramatic cases like the blowing-up of the *Hood*, the aerial destruction of the *Prince of Wales*, and the torpedoing of the *Ark Royal*, but these are only a fraction of the losses. Eighteen times we have had bulletins announcing the sinkings, by one means or another, of a British destroyer; 24 times the Admiralty has told us of the sinking of a British cruiser; nearly 40 times, we have been told of the loss of a submarine; as for minesweepers and trawlers, and other auxiliaries, the losses in these classes have been more than 150.

All the sinkings in the main classes of warship in the last two and a quarter years have been made good. The battleship *King George V* has replaced the *Royal Oak* and her sistership the *Duke of York* has replaced the *Hood*. Now we know that the other two ships of the class are on service, so that the *Anson* has replaced the *Byron* and the *Howe*, the *Repulse*.

INTERESTING DISCLOSURE

The British Navy's strength in capital ships is the same to-day as it was when the war began. Four aircraft-carriers lost in the last 27 months have all been replaced by vessels of more modern design, with a greater number of planes on board. When we come to cruisers, we find a most interesting disclosure.

We know that our losses during the period have totalled 22 cruisers, including those of the Royal Australian Navy. We know also, that when the war began, we had only 17 of this type building. So that, as the losses have been replaced, the shipyards must have completed at least five cruisers over and above the pre-war programme. We know nothing of their design or size, but we do know that normally it takes two and a half years to build a medium-size cruiser.

It is clear, therefore, that some very rapid building has been carried out by our shipbuilding yards, in their battle to ensure that Britain's naval strength is not reduced by any of the blows that the enemy may inflict on us. The new destroyers built for the British and Dominion Navies in the first 30 months of the war totalled at least 160. Since our losses total 80 in this type, you can see that the number built is more than double the number lost.

REPAIRS AND REFITS

This is a useful addition to our strength, though it is far from sufficient for all our needs. In this war, as in the last, the destroyer flotillas have had to be cruelly overworked, because there were never enough ships available for all the jobs that had to be done. Some of the boats that were on service when the war began have now steamed about 150,000 miles, or an average of 4,000 miles a month. When you think what that means in strain, not only for the men on the bridge and at the gun, but for the engineers and the boiler-room men, you begin to realize what sort of a war effort has been put up, both by personnel and material.

That figure of 23,000 repairs and refit to warships, is another indication. No doubt a lot of the job was what we call minor repairs—railings and superstructure damaged by heavy seas, or by bomb splinters; small breakdowns of auxiliary machinery; a shell hole through the above water plating, and so on. These could be carried out in a few hours, and they do not keep the ship long away from the fighting line.

MILLIONS OF MAN-HOURS

But 23,000 of them gives an average of some 640 jobs to be done every month to maintain fighting efficiency. The shipyards have done that on top of replacing and more than replacing every lost warship. And then, on top of that again, they have carried out 35,000 repairs to merchant ships.

Here again, probably a good many of them were minor repairs, the sort of job that is always done in merchant ships during their turn round, while the work of loading or unloading goes on. And every one of those 35,000 jobs has involved man-power, and it is the shipyard workers who provided it.

Many of the jobs have been very long and very complicated. Damage by aerial bombing has provided a lot of new technical problems to the ship repairers. Damage by the magnetic mine, and later by the acoustic mine, provided quite a lot of headaches when we first had the shattered ships brought into the shipyards to be made whole and seaworthy again.

Millions of man-hours have been expended on this repair work, though few of us have ever given much thought to that side of the war effort. Now that we have a few figures to go on, we can begin to form an outline at least of the picture, and the toil that has been given in the background—toil to support the personal bravery and hardihood of the men, who steamed in the face of danger more than the distance from the earth to the sun.

—In a recent B.B.C. talk.

Britain has A New Fleet

ALL but a few of the fighting ships—they amounted in aggregate to a large well-balanced fleet—which Britain had under construction at the beginning of the present war are now completed, writes the *Yorkshire Post*. It adds:

This naval programme comprised in addition to the numerous destroyers and other light vessels about 20 cruisers, and five battleships of *George V* class. Of even more importance in the present age of naval warfare are six large aircraft carriers of the *Illustrious* class.

When war broke out, these ships were still on the stocks and at that time our naval shipbuilding capacity was very limited. Through years of wishfully-conceived naval disarmament, of the three Admiralty yards, which might have been developed, one was surrendered to Eire, one closed down and the largest reduced to a base for small supplies only.

But that first war programme went through to completion and has been succeeded by so many others that now they are virtually continuous. It had long been known that when war came a colossal building programme of merchant ships would also be necessary. With our greatly reduced shipping facilities, the extent of that naval war programme had to be carefully balanced against our anticipated needs of cargo carrying tonnage and for this reason merchant shipbuilding was also placed under the control of the Admiralty.

Side by side, therefore, under one centralized control, our Royal Navy and merchant navy are being rapidly expanded. On the naval side our efforts have been mainly directed to countering the U-boat and dive-bomber menace. That these have been successful is proved by the fact that of all European nations we are still the best fed, best clothed and our needs have still to be imported.

LARGE NUMBER OF LIGHTCRAFT

Shortly after the outbreak of war corvettes, escort vessels and other lightcraft were being laid down in considerable numbers and the fact was generally known. Few realized, however, that this great naval war programme was planned in detail by the Admiralty many months beforehand and kept on ice ready for immediate application.

Our greatest need now is more aircraft carriers. These are big ships—they must be about 800 feet long and 50 feet or more above water in order that the aircraft may land on them—and they take several years to build. But the Admiralty has not lacked foresight in the matter of necessity for providing them.

Gigantic Air Surprise Force

AMERICA to-day is building a gigantic air surprise force, far greater than even the wildest dreams of Hitler. An armada of huge bombers and troops-carriers are under way, writes Glenn Martin, the well-known aircraft manufacturer, in the magazine *This Week*: Army, air-borne, infantry, parachutists, and glider troops are being trained for sudden blows on a dozen fronts. Long-range fighters have been developed to strike from hidden advanced bases, and new secret devices will enable them to make surprise attacks even in foggy weather.

Flying battleships like the 70-ton Flying boat *Mars* could strike any spot in the globe to-day, adds Glenn Martin. Germany and Japan have so extended their lines of communication that they are exceptionally vulnerable to this type of surprise attack. But to hit and run is not enough. We must hit and capture ground that can be taken by air

power. Crete taught us that. A ground soldier becomes a flying infantryman striking with fantastic speed surprise. Our Army and Marine Corps are training such men by the thousand. Huge planes will carry them or tow their gliders and trains into action.

Our aircraft industry has already done the impossible, says Glenn Martin. To-day we are approaching the 1942 goal of 5,000 planes a month. The 1943 goal is set at 10,000 planes a month.

There is no technical limit to the size of the planes. We have already designed a 250,000-pound flying boat about twice the size of *Mars*. With such a ship we can strike across the Pacific and return with spare fuel. Five hundred of these planes might turn the tide of war. Before the war is over, we may need flying battleships of 500,000-pound or larger. If such super planes are found necessary to victory, we shall build them.

SAVING PETROL

By converting 600 motor vehicles to producer gas, it has been computed that it is possible to save one million gallons of petrol per year.

With charcoal selling at Rs. 2-12-0 per maund, a bus or a lorry, converted to producer gas and running about 2,000 miles per month, can show a saving of Rs. 200 per month. Such a vehicle running for this mileage at 12 miles per gallon on petrol, or one gallon per day when working on producer gas, saves the country about 140 gallons of petrol a month, or 1,680 gallons per year.

Steady progress in the conversion of petrol-driven vehicles to the use of producer gas continues to be made, the latest total number of such converted vehicles in India being about 7,000. Steel materials made available by the War Transport Department from its quota are being absorbed by manufacturers from the various stockyards from which the materials are available. As the stocks at the stockyards become augmented, further progress is anticipated in the near future.

The question of providing steel material for the manufacture of producer plants for motor cars has received the attention of the War Transport Department. A certain amount of material licensed to makers may in future be utilized for the conversion of cars employed on official touring and by others whose work involves regular touring.

The important question of the provision of suitable charcoal fuel has been, and is, receiving the active attention of forest officials throughout the country. Work is in progress towards the provision of an easily portable type of kiln manufactured from reinforced concrete. In the United Provinces, arrangements have been completed for distribution of high grade charcoal for vehicle use. Similar arrangements are being undertaken elsewhere.

The question of briquetting charcoal, so as to provide a supply of uniformly moulded briquettes, is under consideration. Particulars of plant have been received from abroad for implementing the valuable work which has already been done in this direction by the Forest Research Institute.

The examination of coke as a possible fuel for producer gas operated vehicles is being undertaken.

Record Munitions Output in India

INEXORABLY India's munitions programme gathers increasing momentum and with the arrival of new equipment and expansion of existing capacity, new records are monthly being obtained.

Record outputs for August included some 17 new categories of production, of shells, bombs, explosives, bayonets, cartridges and various equipment, including a record output of special kinds of alloy steels.

This is not to say that India's requirements of plant and machinery have been completely met. Problems of a world-wide war are the problems of allocation and co-ordination of industrial effort. The progress that India has registered is in the increasing uses made of her present possibilities for production aided

processing rubber replaces oil previously obtained from the oilfields. The importance of this discovery lies in the fact that every gallon of solvent oil drawn from the oilfields decreased production by two potential gallons of aviation spirit. Increasing new uses for coconut oil as a substitute for sperm oil in certain operations connected with munitions manufacture have also been found, displacing an average import of nearly 9,000 gallons of sperm oil.

Under a contracting supply position with the consequent close scrutiny and limitation of demands, the position emerges where everything released is essential and the difference between defence and non-defence really

A young Indian gunlayer at a twin Lewis gun in one of India's coastal defence ships.

by supplies on generous proportions of new equipment and machinery as will enable the construction and stimulation of further industries.

The endeavours of scientists and research workers are directed towards greater and more efficient use of available and indigenous material. A new technique in the production of high-speed tool and high die steels economises ferro-alloys—the group includes ferro-tungsten, ferro-molybdenum, ferro-chrome and ferro-vanadium on the imported list. The new technique will eventually result in the saving of nearly Rs. 40 lakhs of ferro-alloys and valuable shipping space.

A new use for detoluated benzol obtained from India's toluene industry as a solvent in

vanishes. Thus United States of America has released under Lease-Lend to India articles such as wireless sets and steel baling hoops. The latter, for example, do not go into munitions, etc., but they are essential for moving the cotton crop, and the importance of these high pressure hoops for handling this crop has an obvious bearing on transportation also.

Dependent on American supply of machinery, a new saw mill factory has been laid down in South India, while at a steel mill, India's plate mill capacity is to be extended by 25 to 50 per cent at a cost of over Rs. 35 lakhs. The present mill supplies all the plate for ship-building and repairs, bullet-proof and other heavy armour steel. Additional demand will be met when the new plant is installed.

Imperial War Graves Commission

An Appeal to the Indian Public

THE names of civilians in India who become victims of enemy attack are to be commemorated by the Imperial War Graves Commission.

The Commission, which was established in Britain during the last War, was originally concerned with the commemoration of members of His Majesty's Forces who gave their lives and of whom the greater number fell in foreign lands. For more than 20 years it has helped to keep their names a living memory. Now that war takes its toll of the non-combatant population as well, the Commission has been charged with a new duty—that of collecting the names of all civilians who become victims of enemy attack, so that their memory also may be preserved, for all time, side by side with those of the Fighting Services.

The Commission's duty extends to compiling records for every civilian subject under His Majesty's protection and suzerainty and every national of any territory mandated to His Majesty who has died, or may die, during the present war from war injuries, wheresoever sustained.

As regards the peoples of India, therefore, the Commission is concerned with all classes of civilian British, British Indian and Indian Nationals, whether residing in British India or in Indian States, and also with British Indians and Indians residing in countries outside India.

COMMISSION'S APPEAL

The Commission approached the Government of India through the High Commissioner for India for advice and assistance in the matter.

Advice was requested as to:

- (i) the most suitable form in which the records should be compiled, and
- (ii) the particulars which would be appropriate in the case of Indian Nationals.

Assistance was requested in obtaining lists:

- (i) of civilians so dying in territories under the control of the Government of India, and
- (ii) of civilian Indian Nationals so dying elsewhere, so far as information might be available.

It has been decided, in consultation with Provincial Governments, Chief Commissioners and the Imperial War Graves Commission, that the records should be arranged according to Provinces, sub-classified into divisions, districts, subdivisions, towns and villages, showing the civilians who die in any particular place, irrespective of their place of domicile.

DETAILS TO BE RECORDED

Regarding the particulars appropriate for Indian Nationals, the particulars recorded in the United Kingdom are:—

- (1) Name; (2) Permanent home address; (3) Degrees, Honours and Decorations; (4) Service, Service Number, Rank or Appointment (only in cases of members of Civil Defence Services); (5) Sex; (6) Age; (7) Son or Daughter, and Husband or Wife of (name and address), family details being added if desired; (8) Nationality; (9) Date and place of death; (10) Date of incident causing death; (11) Place of incident causing death; (12) Place of burial; (13) Other details (if desired).

As the Commission's object is to commemorate the sacrifices made by all classes of Indians in the same form as those of their British comrades, it has been decided that all the above items should be collected, that a new item "Religion and Caste or Sect" be added after item 2 and also that the words "or cremation" be added to item 12 above.

APPEAL TO PUBLIC

The co-operation of the public is requested especially in regard to civilian Indian Nationals who die, or who have died, of war injuries outside the territories under the control of the Government of India. It is likely, for instance, that persons now residing in India have information regarding civilian Indian Nationals who died of war injuries in Burma.

Anybody who is aware of any British Indian or civilian Indian National who is definitely known to have been killed, or to have died of war injuries, outside territories under the control of the Government of India should get in touch with the local authorities, in order that the necessary information may be recorded and sent to the Imperial War Graves Commission, through the Civil Defence Department and the High Commissioner for India in London.

Bullets for Hitler

A student from New Delhi has sent annas four to the Viceroy's War Purposes Fund out of his pocket money "for the purchase of bullets for Adolf Hitler and his colleagues."

Cell in A Stalingrad House Headquarters of "Miracle Men"

A Russian Poet's Description of the City

THE Russian poet Koustantin Sumonov has returned to Moscow from Stalingrad and describes the amazing organization within the city which has achieved the miracle of its defence.

This miracle is being worked, he writes, by some men in a cellar and over them stands a burned out block of flats. Against the brassy glare of the night sky, the block stands out like a skeleton.

and herring at their desks. Their hot meal daily is thick scalding cabbage soup with a big lump of mutton. In the deep cellar the air is so foul that matches will not strike.

A staff officer telephones to a forward Command post on a southern sector of the Stalingrad front. Here is where the biggest threat lies for the moment. The Command's post is on the fifth floor of a block of flats in the dining room of an engineer. The officers

The Leningrad sector. A delegation of the working people of Leningrad visiting the Red Army men at the front.

You go down the steep steps from the street into the basement area. The entrance is sand-bagged like a bomb shelter. There are many more steps in the dark inside. Here dug below the ruins is the General Headquarters. Working in a murky room with thick timber props, are the staff of the General Commanding Stalingrad's defence. The name of that General is for the present not being revealed. It will become well known.

A MODERN DUNGEON

Down in this modern dungeon staff officers have been working now for a month without break. They are unshaven. They eat bread

sit on good velvet arm chairs. On a mahogany table, beside military maps, is still a child's exercise book. On the floor in front of a window are pots of geraniums, dahlias and a big green fern.

A MENACING ATTACK

You don't need glasses, you can see the Germans. There is one on a motor-bike. This is the sector where the enemy launched against a Red Guard's unit their most menacing attack of the past week. They started as usual with junkers and an artillery blitz and then threw in 200 tanks followed by motorized infantry. They attacked 12 times in the day.

After 42 tanks had been knocked out by the Guard's artillery, the Germans switched over from a frontal attack to a flank infiltration by tommy-gunners.

Here a most fierce fight began in one tall building. The Germans gained possession of every storey. They commanded all the approaches with their fire. Still the Red Guards went in. They fought from the first to the second storey and they fought corridor by corridor. Several rooms changed hands many times. But they could not throw out the Germans, so a decision was taken to blow up the building.

Five guardsmen went forward under fire with 25 lb. of dynamite each. The Germans were buried in the ruins. I do not know whether these five guardsmen escaped their own explosion. It is unlikely.

GERMANS FORCED BACK

Now on this sector the Germans have been forced back on the defensive. They are dug in on the nearby corner that can be seen from the Command Post windows. Driving back in a little American jeep from the Command post, a sharp-eyed man would notice that the tommy gunner, who stands where the traffic cop used to direct cars, is new. The man there an hour ago was killed by a shell.

Here is a Stalingrad factory. It is a vast place. Workers of this plant continue at their benches with intervals for fighting. Last week, the Germans broke through to the factory. The repair shop hands jumped into tanks they were working on and drove them straight out of the factory gates into the battle. They were followed by a Home Guard battalion of workers, commanded by Professor Pachenko, Dean of the Chair of the Institute of Mechanics. Another battalion was commanded by the Chief Constable of Stalingrad and the tough old steel smelter called Krigulin.

FOLLOWING THEIR FATHERS

They fought in overalls just as their fathers did in the revolution. May be that some of them had fought themselves in those days. They went out to the battle with their wives and daughters. Women brought up ammunition and food. Girls went up into trenches and treated the wounded and carried them back to the factory. They held their position at a stone bridge all day until the evening brought reinforcements to the Red Guardsmen. When guardsmen came up workers marched back to their factory and continued their job of making fighting tanks.

There is no moon over the Volga. It has been blotted out by a blanket of smoke screen, that drifts and curls over the broad sleek waters. Ferries bring in men, ammunitions, food and guns.

There are girls too. They are Red Army nurses, crossing to the First Aid posts in the city to bring back the wounded over the river. All the wounded are evacuated across the Volga by these girls and then taken by lorry to a hospital in the rear far from that red hell that used to be Stalingrad.

Just by the landing stage there, dark logs are lying along the fore-shore by the hulk of a burned out steamer. Logs? No those are not logs. They are bodies of women and children trapped in a steamer when it was hit by a bomb as it left the landing stage to evacuate these poor folk to a quieter stretch of their river. Many women and children died when they tried to leave Stalingrad. Now there are none left in the burning city. Houses that still stand are empty.

BRITISH HEAVY BOMBERS

The maximum bomb-load in the British heavy bombers is about a quarter of the total loaded weight. The important feature, which must be built into all modern heavy bombers, is the inter-changeability of the bomb-load with fuel for range. Just as range will be limited when racks are full so must bomb-load be limited when tanks are full or the maximum permissible load will be exceeded. This means that enough tanks must be provided to give the greatest possible range when the bomb-load is reduced to the economical limit—say 4,000 tons.

Speed is the next criterion in determining the value of the big bomber. Speed is the function of a clear design and power-weight ratio. Wing loadings are going up and we have now reached more than 40 pounds per square foot as common loading for large machines. Runways are now essential at all heavy bomber stations. As a result of this and of the development in aero-motors, the cruising speeds around 220 m.p.h. are normal to-day.

On the question of production, hours of experience with the Lancaster shows that a heavy bomber need not be expensive in man hours to build. This particular bomber probably takes less man hours than many medium bombers needed in the past.

A modern heavy bomber compared with the heaviest bomber at the beginning of war carries three times the load. It has two and a half times the armament and half the crew in relation to the weight of bombs delivered. Furthermore the percentage of the casualty rate in heavy bombers is lower. How much this achievement depends on the essential quality of the British aircraft industry can be seen from the fact that the machines in question, the Lancasters, Halifaxes and Stirlings were planned six years ago.—*The Aeroplane*.

Japs want to make Burmans into Drug Fiends

INDIAN and British guerilla patrols, penetrating deep into Burma, report that the Japs are encouraging the Burmans to take drugs. Opium and heroin dens, run by undesirables imported from Japan, are springing up in Mandalay, Rangoon and all the other big towns.

When they had sold their produce, the peasants were approached by Jap agents offering them drugs very cheaply so that they could try them. Heroin, morphine and opium were offered for sale and some of the Burmans have already become addicts.

The Japanese idea, which they have practised in China for years, is to make the peasants so addicted to the drugs that they will sell their farms and cattles in the long run to buy them.

Everywhere in Burma to-day, the Japs are eliminating the small man and establishing big chain organizations directed by Japanese. Opium is one of the methods by which they eliminate him.

Japanese officials and Army officers in Burma are interested in the establishment of

WAR THROUGH A PERISCOPE.—This unusual picture shows a Japanese destroyer just before she went down in the Western Pacific. It was taken through the periscope of a United States submarine which fired two torpedoes into the destroyer. Arrows point to two men in white uniforms—one on the bridge and the other below it. Atop the forward turret can be seen the Rising Sun insignia. The line through the middle and marks at left are periscope etchings.

This is part of a deliberate plan of the Japanese authorities similar to the one they have followed in China and other Jap-occupied territories.

Special areas in Mongolia have for a long time been under particular cultivation for poppy growing. The drugs that the Japs are bringing into Burma come from those areas.

The Japanese authorities aim their drug campaign particularly at the country people of Burma. Burmese peasants arriving in Rangoon recently with farm produce have found dope shops flourishing under Jap management. Many of them were crowded.

opium dens for another reason. Information received shows that they derive a large part of the profits from the sale of the drugs.

Japanese merchants—and more than 700 Jap traders and their families have just arrived in Moulmein from Rangoon—who deal in canned goods and medicines, often use this as a screen. They are opening shops in Burmese towns to sell their ordinary merchandise, and in another part of the town—in some cases in a private room in their own shops—they are opening dope dens where for a few annas the Burmese can buy opium or heroin.

Siam and Japan

THE question what has Siam gained by her alliance with Japan is now easily answered if one accepts the German and Japanese definitions of what constitutes "gain," observes *The Times* diplomatic correspondent. Rulers of both these totalitarian States insist that living under a strict system of control, paying heavy taxes and sacrificing freedom of speech and election is so beneficial to their own subjects that vassal nations, for their own good, must lead the same life. They are also to have the honour of supplying the needs of the herrenvolk of Europe and Asia.

Such has been the burden of numerous messages broadcast by the German Trans-Ocean agency and the Japanese Domei agency. Last spring the Domei agency informed the world that the number of Siamese newspapers was to be reduced by half in conformity with a new press law; the Siamese official wireless broadcast from Bangkok on June 19 that, according to the new decrees, newly elected members of parliament could take their seats only after they had been approved by the Prime Minister, Cabinet and Legislative Assembly.

After this insertion of the thin or political end of the totalitarian wedge, the Japanese began to hammer it into the economic butt. Rationing was introduced in early summer. A law imposing strict control of foodstuffs was passed, apparently in July, for at the end of the month Trans-Ocean announced that it empowered the authorities to search buildings, stores and ships and provided for fines of 10,000 ticals (roughly £1,000) or ten years' imprisonment, which might be doubled in case of serious violation of these regulations. On August 13 Trans-Ocean went on to say that breaches of these regulations would now be dealt with by military instead of civil courts.

Further confirmation of increasing Japanese pressure came from the Bangkok wireless on August 2. After informing listeners that forced labour had worked well in Germany, it continued: "Government is contemplating introducing forced labour in Siam. All labourers would thus become Government workers and be subject to the new military law regarding derelictions of duty."

But Bangkok has sometimes shown less enthusiasm for "Co-Prosperity" and its consequences than the broadcast mentioned above would seem to indicate. While the Japanese had been boasting of large shipments of rice which they had received from Siam, Bangkok sounded a plaintive note on July 31: "Japan is now the sole foreign source from which we receive goods. We cannot get everything from Japan because there is even greater shortage of goods in Japan itself than in Siam. The Japanese have no time to manufacture goods for Siam."

PRODUCTION OF PRESERVED MILK IN INDIA

The difficulty of importing tinned and preserved milk and milk foods from overseas simultaneously with the increase in the demand for these commodities has led to the starting of Indian ventures to meet the need, but such enterprises should not be launched without a careful study of the methods of milk utilization and the securing of properly trained men, according to the Annual Report of the Imperial Dairy Department for 1940-41.

The department handled a large number of inquiries from the milk trade and private and public institutions, Provincial Governments and Indian States.

At the Imperial Dairy Institute, Bangalore, research work was done on indigenous methods of making butter, the preparation of Indian cottage cheese and the manufacture of rennet casein for plastics. Fifty-eight students from all parts of India, Burma, Ceylon and Malaya underwent various courses of training at the Institute.

DO YOU SPEAK JAPANESE?

Art of Jungle Fighting

AUSTRALIAN troops in New Guinea are now beating the Japanese in the art of jungle warfare, cables the *Daily Mail* Melbourne correspondent.

Tricks and tactics of Japan's specially trained soldiers which served them so well in Malaya are now being applied against them in the rain-soaked tangled growth on the slopes of the Owen Stanley Mountains.

a few "wrinkles" which are likely to result in the relaxation of some of the service regulations governing troops defending Port Moresby.

BEARDED SOLDIERS

Soldiers for example may be allowed to grow beards.

Mr. Forde said that he had seen many Americans who had given up the attempt to keep their chins clean but Australians as yet were clean shaven because rules insisted on it.

Mr. Drakeford announced that slacks and shirts with long sleeves may replace the traditional dress of airmen in battle areas. This

THE SPOTTED MARINES.—Wearing mottled uniforms for jungle camouflage, United States Marines train for jungle fighting.

Lessons of Malaya have been absorbed and Australians, specially trained to fight in the thickly wooded islands of the South Pacific, are now beating the Japanese at their own game. They are putting into practice ideas of their own which have improved on the Japanese tactics and are no longer a prey to surprise attacks, ambushes and cunning infiltration and encirclement.

One of the Australian innovations is wearing green uniforms. Mr. Forde and Mr. Drakeford, Australia's War and Air Ministers, have just returned from a visit to the war zone with

reformation was based on medical advice, economy and utility.

Royal Australian Air Force's medical advisers say that sickness can be minimized by covering legs and arms as protection against dengue, malaria and bush sores. Gaiters would be worn with long trousers and boots would replace shoes.

Mr. Forde and Mr. Drakeford will report to the Federated Parliament at a secret session.

Motor Vehicles Manufactured in India

THE assembly and body-building of unarmoured motor vehicles has expanded considerably during the past year and efforts are being made still further to increase the rate of production. Many thousands of vehicles have been completed and delivered so far and output is steadily mounting from week to week. An index to the rapid expansion that has taken place in this field is the fact that whereas before the war the Indian Army possessed only 5,000 of these vehicles, to-day there are in service or on the way more than 60,000.

A large number of firms all over the country are engaged in the work of body-building. One workshop alone is building several hundred bodies per month. The material required for these operations also run to huge proportions. Large quantities of steel, timber, canvas, and other components are delivered to the workshops every week, while train-loads of chassis are despatched to them from the various assembly plants almost every day.

The manufacture of tyres also has correspondingly increased, and plans are in hand for a further large expansion. Most of the special types of heavy tyres required by the Army are now made in India.

German Quarrel with Denmark

IT is not a coincidence that Germany has threatened Denmark with the same treatment as Norway while treating the Norwegians worse than ever, remarks the *Daily Telegraph*. Hitherto the Germans have pretended that the State of Denmark showed how much a country had to gain by not fighting against German occupation. The Danes have been ruthlessly plundered, but they were allowed to keep a parliament and government and king of their own. Now Herr Buhl, the Prime Minister, tells them that the hour is grave, and hints that saving their independence and freedom may be impossible.

Denmark was forced into the Anti-Comintern Pact last year which amounted to formal acceptance of the Nazi "New Order." Now a quarrel is forced on her. German motives are plain enough. Nothing more can be obtained from Denmark without violence, but, as Goering announced at his harvest festival, all occupied countries must suffer to feed the Germans.

Controllers of German policy and strategy have become nervous over the state of things in North-West Europe. Wails about sabotage and disrespect for German authority in Denmark betray alarm no less clearly than the proclamation of a "state of emergency" around Trondheim and 400 miles to the north. "Oderint dum metuant" (let them hate provided they fear) is the essence of the Fuehrer's creed. Germany now finds that terrorism will not subdue a brave people, and still dreams of averting retribution by more brutality.

Fortunes of War

THE part sometimes played by luck in war was described by General Henry Maitland Wilson, Commander-in-Chief, Persia-Iraq Command, in an address to the British Institute, Baghdad. Introducing General Wilson, Al-Fariq Ismail, Namiq, the Iraqi Chief of the General Staff, observed that it was indeed an honour to have as guest such a distinguished general whose reputation as a brilliant strategist and tactician was so well-known to them all. History would surely tell of his destruction of Graziani in North Africa, his great rearguard action in Greece, and his systematic reduction of Vichy Syria.

calm weather in May 1940 which allowed the embarkation of the B.E.F. at Dunkirk.

Summing up his deductions from a study of the subject, General Wilson affirmed that where the fates of nations and the lives of individuals were at stake, one could not rely for certain on winning a battle. On the other hand, if the plan for operations was too rigid, it could not be rapidly adjusted to meet changes of fortune. A commander's plan should, therefore, be sufficiently flexible to enable him to take full advantage of any good turn, and at the same time to counter any bad turn in the fortunes of war.

PRESS INTERVIEW WELL RECEIVED

Great satisfaction is expressed by the Baghdad press over General Wilson's interview on September 30. *Alam-ul-Arabi* declares that no

General Wilson on rising to speak was greeted with enthusiastic applause by the audience which included members of the Cabinet and the diplomatic corps.

General Wilson chose as his subject the theme "Fortunes of War." He recalled General Wavell's famous speech on generalship in which he stated that "one of the requisites of a good commander is that he should be lucky." The fortunes of war, observed General Wilson, meant the manner in which events worked to the advantage of a belligerent by such trivial agencies as the action of an individual, the character of the adversary, the finding of a piece of paper or the weather. He cited the changing wind to which Joan of Arc owed her success in Orleans; Moltke's illness, which contributed to the halting of the German army before Paris in the last war; and the

one can fail to appreciate his sincerity or the earnest desire of Iraq's ally, Great Britain, to satisfy Iraq's needs.

Al-Zaman compares General Wilson's assurances with the intentions and conduct of Axis commanders who rob and starve friend and foe alike. The British commander, it says, regards it as his duty to take every possible care for the welfare of Iraq, and to assist in solving the supply problem and make the population happy. The British Army, it says, is permeated with the same generous spirit. That is why Iraqis have never at any time found anything in the army of their ally to offend them. These troops mix with the inhabitants and always behave as perfect gentlemen—a behaviour which differs completely from that of Fascist armies, with their violence and oppression.

Diary of the War

AIR ACTIVITY OVER GERMANY AND ENGLAND

9th Oct.—Two enemy aircraft dropped bombs at a place on the south-east coast in England.

There was a British Commando raid on Sark, a Channel Island.

The German Radio stated that British Dieppe prisoners had been put in chains. A statement issued by the British Government declared: "His Majesty's Government will be

A German communiqué stated that 107 British officers and 1,269 N.C.O.'s were fettered.

11th Oct.—A short alert was sounded in London.

12th Oct.—Allied bombers carried out an air blitz over western Europe. Forty-eight German planes were shot down.

More United States forces arrived in Britain.

13th Oct.—The Royal Air Force attacked Hanover, a manufacturing centre of tanks and locomotives.

German raiders were over a north-eastern town of England.

The North-Western front. Flying "Hurricanes," Major Kondratiev, Senior Lieutenant Krikunov and Junior Lieutenant Volkov encountered ten Messerschmitts. Engaging the enemy, the fighters shot down six planes and safely returned to their aerodrome. Left to right: Senior Lieutenant Krikunov, Junior Lieutenant Volkov and Major Kondratiev.

compelled, in order to protect their own prisoners of war, to take similar measures upon an equal number of enemy prisoners of war in their hands."

It was disclosed that the total number of German and Italian prisoners in British hands was 285,000—23,000 Germans and 262,000 Italians. The total number of British prisoners in German and Italian hands was 115,000—90,000 in German hands and 25,000 in Italian hands.

10th Oct.—Five hundred fighters of the Royal Air Force swept over France. United States bombers raided Lille.

Two enemy aircraft flew over south-west England and dropped bombs.

14th Oct.—The Royal Air Force attacked industrial targets in northern Germany. High explosive bombs caused damage in several Baltic towns.

Four enemy aircraft were over the south coast of England.

15th Oct.—The Royal Air Force raided Kiel. The Duke of Devonshire, speaking in the House of Lords, said that during the coming winter, there would be a serious danger to England from aerial attacks.

16th Oct.—The Royal Air Force swept over Holland.

A German supply ship was sunk in the Channel.

UNITED STATES OF AMERICA AND THE ATLANTIC

9th Oct.—Senator Mead stated that the United States Navy was "gaining very rapidly on the submarine menace."

12th Oct.—The Canadian Department of National Defence in full agreement with the United Kingdom, put in chains German prisoners equal in number to the Canadian prisoners in the Dieppe raid.

13th Oct.—Six naval vessels including four 'special ships' and two submarine chasers were launched at three shipyards.

Mr. Wendell Willkie arrived in Alaska.

An alert was sounded in Reykjavik.

14th Oct.—Two more American destroyers were launched.

15th Oct.—Five ships for the navy were launched from a new yard at an eastern coast port.

INDIA, BURMA AND CEYLON.

9th Oct.—The Royal Air Force attacked Akyab.

10th Oct.—Targets in central Burma were attacked. The railway bridge south of Mogaung was destroyed. Japanese barracks south of Tingka were attacked.

14th Oct.—The Royal Air Force raided Burma. Japanese base at Kalewa was bombed.

15th Oct.—The Royal Air Force attacked targets in the Gangaw area of the Myittha Valley.

ITALY, AFRICA AND THE MEDITERRANEAN

9th Oct.—The Royal Air Force attacked targets between Derna and Sidi Barani, including the seaplane base at Bomba.

The British forces occupied Sakaraha and Tongobory in Madagascar.

10th Oct.—Ethiopia joined the ranks of the United Nations.

12th Oct.—Allied bombers attacked enemy landing grounds in Egypt.

13th Oct.—American forces arrived in South Africa.

The Allies bombed Cretan airfield. Fifteen German planes were shot down over Malta.

14th Oct.—Tobruk and the landing grounds in Daba were raided. A huge fire was started in a petrol dump.

There were continuous air raid alerts in Malta for two days. Many enemy planes were shot down.

15th Oct.—Allied bombers attacked Tobruk and El Daba.

16th Oct.—Rommel returned to Egypt. Twenty-three enemy planes were shot down over Malta.

On the south-western front: An officer congratulating a bombing crew on a successful raid.

RUSSIA AND FINLAND

9th Oct.—Rzhev city was in flames. German drive to Volga was checked. Russian position improved at Mozdok.

10th Oct.—The Russians broke through. The Don was recrossed at several points.

11th Oct.—Von List replaced Von Bock. Non-stop attacks were launched by Timoshenko.

M. Stalin issued a new decree creating a single military command.

12th Oct.—Nazi attacks were held. The Russians advanced in north-west. Soviets were on the offensive at Rzhev.

A decisive stage started in the battle of Stalingrad.

SHIPPING

10th Oct.—H.M.S. *Coventry* was sunk. It had a displacement of 4,290 tons and a complement of 400. It was launched in 1917.

12th Oct.—The United States Navy Department announced that a medium-sized United States vessel was torpedoed and sunk by an enemy submarine off the Pacific Coast.

13th Oct.—An American coastal vessel was torpedoed by a Japanese submarine.

Arms production forms an important item in the great contribution India is making to the Allied war effort, and increasing numbers of young Indians are under training now in England. Photo shows a young Indian munition worker.

13th Oct.—Artillery duels took place at Stalingrad and German pressure slackened. The Red Army wrested initiative at Mozdok.

14th Oct.—A tank battle raged near Tuapse. Repeated attacks by Nazis were repelled.

15th Oct.—Nazis regrouped their battered forces for what may be the final assault on Stalingrad.

According to unconfirmed information, Field Marshal Von Bock was arrested on Hitler's orders.

16th Oct.—The Nazis launched a drive to Grozny.

NEUTRAL COUNTRIES

9th Oct.—A new Iraqi Cabinet was formed with Nuri Es Said as Prime Minister.

VICHY AND OCCUPIED COUNTRIES

9th Oct.—Germany gave an ultimatum to Denmark that the Danes must co-operate in the proposed "Great Germany."

13th Oct.—An air raid alert was sounded in Oslo.

16th Oct.—Four-thousand followers of the Croat peasant leader, Doctor Matchek, revolted against the Quisling Government.

THE FAR EAST

9th Oct.—The Japanese abandoned Attu and Agattu in the Aleutians. There were more allied raids on Kiska.

The allied troops occupied the Owen Stanley area. Three Anglican British Missionaries were killed in Papua.

11th Oct.—Mr. Wendell Willkie left Chungking for the United States.

12th Oct.—The Kiska seaplane hanger was bombed.

Japanese continued to land in Guadalcanar. An enemy destroyer was sunk and a cruiser hit.

13th Oct.—The Australians were 12 miles from Kokoda. A Japanese seaplane tender was hit.

14th Oct.—Two Japanese cruisers were damaged in the Solomons by United States bombers. The Allies advanced in New Guinea. Enemy positions in Buna were bombed.

It was revealed that a big Japanese fleet was headed towards South Pacific.

15th Oct.—In the naval engagement off the Solomons, six Japanese warships were sunk. An American destroyer was lost.

United States planes bombed Kiska. Japanese fighters were driven out of the Aleutians.

Heavy damage was inflicted on the Japanese base at Rabaul.

United States submarines sank one heavy Japanese cruiser in Far Eastern waters. Four Japanese auxiliaries were sunk, one probably sunk and two damaged.

16th Oct.—The Japanese reinforced Guadalcanar.

Japanese attempt to land in Kowloon was foiled.

A Wish—And the Result

The Soviet Navy newspaper *Red Fleet* tells the story of an American naval lieutenant who insisted that he and his men be allowed to operate the anti-aircraft guns on a Russian ship when they were picked up after their own boat had been torpedoed. The Russians granted his wish as soon as a Nazi plane appeared. Hall promptly dived it.

ARE YOU

SPREADING

INFECTION?

There is a dread disease in the

land. It poisons man's mind

and robs him of his courage.

The disease is RUMOUR. It

was started by the common

enemy, Japan. Don't help to

spread it by infecting your friends.

DON'T BELIEVE
RUMOURSBUILD NATIONAL WAR FRONT
AGAINST THE JAPANESE

IN A NUT-SHELL

[We are indebted to a Rasipuram Correspondent for this neat acrostic—Ed.]

NEVER BELIEVE or broadcast unconfirmed news.

Aid to your utmost the country's War-Effort.

Think in terms of world peace and democracy.

India should be strengthened to defy and defeat the Axis forces.

Our rich and hoary culture and civilization must be saved.

No effort should be spared to stamp out Nazism.

Actively promote internal peace and unity.

Labour assiduously for a just and lasting peace.

Whatever your lot in life do your duty in this period of world's crisis.

Abandon all your petty differences and unite in serving the common cause.

Responsibilities, great and grave, should be cheerfully borne by all of us.

Forge ahead in the hope and faith of certain victory.

Recognize the gravity of the war situation and act manfully.

Obey the call of the country, the dictates of prudence and do your bit for victory.

No sacrifice is to be counted great in securing the total defeat of our enemies.

Think of these perils and problems and build the National War Front against the Japanese.

A CRADLE OF HEROES

H.E. LORD LINLITHGOW

WHEREVER in the world there is talk of brave deeds and soldier-like qualities of endurance and fortitude, the men of this land are brought to mind. Here for centuries, generations of sturdy farmers have won their harvests from the hard earth, and have defended their heritage with courage and resolution. Since the dawn of history, India has bred famous soldiers; the hills and plains which surround us can justly claim to be a cradle of heroes, a soil which has nourished the flower of India's armies. There are among us to-day brave men who fought for freedom and civilization in the last world war, and now that these two precious jewels are in peril once again, their sons and grandsons are keeping bright and sharp the sword they forged and are facing our common enemies with the same stout shield

—His Excellency LORD LINLITHGOW in a speech at Rawalpindi on Monday, October 19

Running Commentary

India Debate in the Lords—Britain's Policy and American Opinion

The debate on India in the House of Lords on Tuesday (October 20th) has once again drawn attention to the fact that the Cripps offer stands. The Duke of Devonshire, Under-Secretary of State for India, said, "The Lord Privy Seal went to India with the full and comprehensive offer of Self-Government for India. He made a great and sustained effort to get the offer accepted. He overstayed his original timetable by a long time, but it was not accepted, not because it was not sufficiently comprehensive. We offered India all that we had to offer. . . I believe that the next move must come from India. When that fact is realized, the next move may come; but, until it is realized, the deadlock will continue."

Britain's policy towards India was emphasized in the House of Commons by Mr. Amery a few days ago. He said the Government policy was not one of reluctant retreat, but willing advance; not one of enforced abdication; but freely proffered partnership in freedom. "That is a fact," reiterated the Government spokesman in the House of Lords, and added, "Self-Government for India was the ultimate goal of British statesmanship long before there was any conscious demand for it from India, long before there was such a thing as the Congress Party." Winding up the debate in the House of Lords Lord Simon, the Lord Chancellor, said, "I claim to say on behalf of the Government that the aim of the Government's policy is that Indians should themselves mould the destiny of India, free from external dictation and control." He pointed out that the great fact

about the Cripps proposal was that it recognized that a great patriotic development in a great country must come from within. But the Cripps negotiations broke down and, in the words of the Duke of Devonshire, "stuck upon the sand-banks of the Congress Party's unwillingness to come to any compromise with the Indian parties and with the Government." The Duke added: "Since the breakdown which the Congress Party deliberately brought about, the Government of India had been confronted with a formidable conspiracy designed to paralyse the Government of India." The disorders staged in India with a view to gaining this objective were principally directed against communications, such as railways, buses and telegraphs, and were most serious in those parts of India where such activities would have been most paralyzing in the event of a Japanese invasion. The Under-Secretary for India said that there was "evidence, strong evidence, that the Congress Party has so directed its campaign as to do maximum damage to India's war-effort and render India vulnerable in the most dangerous quarter." And Lord Simon said, "It is quite plainly revealed that the Congress Party has been engaged, though it said that it is supporting a policy of non-violence, in some of the most shocking violence and has committed some of the most frightful crimes." These crimes and the methods of the Congress Party at the present time do not command approval or support of American public opinion. America has no doubt taken a good deal of interest in Indian affairs and shown a sincere desire for positive steps to end the deadlock, but American opinion has almost unanimously condemned the Congress Party's attitude and approved the Government's action.

SPECIAL ARMY SUPPLEMENT

With this Number is issued a Special Army Supplement of
28 PAGES

THE Editor wishes to express his thanks to the Military authorities who have contributed articles and pictures to this Supplement, and would welcome any further suggestions that may increase mutual respect and good fellowship between the Military and the civil population

British Mission to China—Allies' Gesture of Friendship

The British Mission to China is on its way. It consists of two members from the House of Lords and two from the House of Commons. The Mission has been sent in response to Generalissimo Chiang Kai-Shek's expressed wish that such a delegation should visit Chungking this autumn. It passed through Lisbon on Saturday last. The delegation will have a particularly warm welcome in China, which deeply appreciates the great gesture of friendship which Britain and America have extended to her by renouncing their extra-territorial rights and privileges in that country. An official *communiqué* issued on October 10th in London recalled that in public announcements made on January 14, 1939, July 18, 1940, and June 11, 1941, His Majesty's Government declared that they were prepared, at the conclusion of hostilities in the Far East, to negotiate with the Chinese Government for the abrogation of extra-territorial rights and privileges hitherto enjoyed by their nationals in China. A similar announcement was made by the United States Government that in order to emphasize their solidarity with the Chinese Allies, they would relinquish extra-territorial rights and privileges in China and settlement of questions intimately connected with it.

Three Important Implications: The 1926 Pledge

This declaration has three important implications. Firstly, it is a fulfilment of the pledge made by Britain many years ago to surrender such rights and privileges. Secondly, it represents the first formal announcement of Anglo-American co-operation in planning the future of the Pacific. Thirdly, it is a direct challenge to Japan's "Co-prosperity sphere" and a psychological spear-head of the forthcoming Anglo-American offensive against the Japanese. Drawing attention to these implications, *Reuter's* Diplomatic Correspondent recalls the 1926 pledge, which declared that Britain was prepared to make the British residents in China subject to new Chinese law codes and courts. In accordance with that pledge, the British concessions at Hankow, Chinkiang and Kiukiang were handed back to China. The abolition of extra-territorial privileges in China is not a sudden and isolated act, but the end of a process which has long been under the favourable consideration of the British and American Governments. The first step of this process was the admission of China into the League of Nations, and the second was America's handing over to China her share of the Boxer indemnity, which greatly helped in building up a new educational system in China. The third step was, as stated earlier, Britain's return of Hankow and other concessions 16 years ago. There is a long history behind the principle of extra-territoriality, which is

merely an arrangement by which strangers living in a foreign country are allowed to live as a separate community, observe their own customs, and administer their own laws and their own codes.

THE WESTERN FRONT—Sappers clearing a river-bed of mines.

Extra-Territoriality: Encroachment on Sovereignty

In modern times, extra-territoriality was recognized by the Ottoman Turkish Empire under which non-Muslim communities, such as Greeks and Armenians, were allowed to govern themselves by their own law. This administrative convenience became a serious political danger when the Turkish power declined. What was intended to save trouble came to have the impress of political inferiority.

The same thing happened in China. Extra-territoriality which was first granted as an easy way of dealing with unwanted foreigners led to the growth of a series of compact foreign settlements, supported by formidable power, in the midst of China. Extra-territoriality sometimes came to be considered as an encroachment on sovereignty.

Significance of Abolition of Atlantic Charter and Asia The justification of extra-territoriality lay in the vast differences of law and custom between nationals and foreigners, but in modern times the tendency has been towards amalgamation of law and custom, and this is the result of the free movement of ideas. The Code Napoleon, which was inspired by the principles of Roman law was generally the basic inspiration of all new systems of law. It may be said that the whole non-Anglo-Saxon world acknowledges the principle of Roman law, while the Anglo-Saxon law is itself deeply influenced by Roman concepts. The abolition of extra-territorial rights and privileges is a recognition that a common standard of public conduct and justice exists. Further it has also another significance. Along with similar action in Persia it means that the principles of the Atlantic Charter are being applied to Asia. These significant features of unity and closer friendship will be further strengthened by the visit of the British Mission to China.

Russia : Germans to Adopt New Defensive Technique *Reuter's* Special Correspondent, in a despatch from Moscow on October 20th, says that the issue of the whole Stalingrad battle hangs dangerously in the balance, and that if the Germans once install themselves in the northern part of the City, the position in the centre will become very precarious. The situation looks extremely critical, but it is well to bear in mind that, whatever may be the ultimate result of this battle, Germany has failed to break up the Soviet Union or to destroy the Red Army as a fighting machine. It is significant that surprisingly frank admissions on this point have been made by General Dietmar and other German military commentators in recent weeks. Germany now seems to feel confident that the original purpose of her attack on Russia can be secured by an alternative method. The Germans have gained considerable experience in fighting in the Leningrad and Moscow sectors, and afterwards in holding the Russian counter-offensive last winter. That experience seems to be responsible for the emergence of a new defensive technique. The Germans have learned that a web of fortified

positions, protected by minefields and supported by mobile field and anti-tank batteries, can offer formidable resistance to tank formations. During the winter, the German army which had almost reached the limit of endurance, escaped disaster by this network of fortified positions at key points such as Rzhev, Briansk, Vyasma, Orel and Kharkov. Again this summer, this defensive network of the German Command prevented a break-through by Russian diversionary assaults.

Hitler's Boast : Weaknesses in the German Plan Hitler boasted that once Germans were in Stalingrad they would never be got out of it. This indicates that the German plan is to extend this defensive wall to the Volga and then rely on it to hold the Red Army indefinitely. The Germans think that the striking power of the Russian forces would steadily diminish as a result of the lost resources of oil, iron and coal, and that this would help the progressive reduction of the German garrison in Russia. But this ignores the fact that the loss of fuel and raw materials can be temporarily met by increased Anglo-American supplies by way of Murmansk and *via* Persia and by reserve stocks accumulated in Central Russia and the Ural regions. These reserve stocks were steadily built up as a matter of precaution, as the Russian Command had, at an early stage, envisaged the possibility of having to withdraw to the line of the Volga. There are also other weaknesses in the German plan.

AN A.R.P. WARNING

"IT WAS NOTED AFTER THE Japanese air raid near Chittagong (some months ago) that a yellow or yellow green powder formed around or near the bomb craters," says a Training and Operations Circular issued by the Civil Defence Department, Government of India, for the guidance of A.R.P. Services which deal with the disposal of unexploded bombs. The Circular continues :

"It has been confirmed that this powder is part of the high explosive filling. This powder, if it comes into contact with the skin, will cause acute Dermatitis with extreme irritation which, in some cases, may result in serious secondary infection. Any such powder found near the bomb crater should not, therefore, be touched with bare hands. Gloves or other suitable protection should be used."

The German assumption that they would be able to contain the Russian armies in the south by means of a continuation of the fortified belt down to Stalingrad does not take into account that the enormously long lines of communication on the Stalingrad sector and in the Caucasus are dangerously exposed to Russian attacks for several hundreds of miles along the upper Don southwards from Voronezh. As a matter of fact, the scale and weight of Russian counter-attacks all along this line have been increasing instead of diminishing.

Western Front : British-American Offensive Now let us turn to the Western front. The Germans are expecting a fresh and extremely formidable enemy attack to appear at any time in Western Europe. And here also they are putting their faith in the same sort of fortified network as in Russia. Just as they are relying on the progressive weakening of the Russian military machine by depriving it of necessary raw materials, so also they are counting on their U-boats to starve off the British-American offensive. But the submarine menace is now being steadily mastered on account of new devices and stronger escorts. It is true, however, that Germany saved itself from defeat this summer on account of the losses she inflicted on Allied shipping.

Now the broad feature of the German plan is to harness the whole enslaved Europe to their own war-machine. They have already bolted and barred the doors leading to Europe from east to west and from the Mediterranean. They have seized so large a part of Russia that they command sufficient wheat, iron, coal and nickel (though not yet oil) to carry on indefinitely. It was to this that Goering referred when he said in a recent outburst, "Do not forget that we have taken from the Russians their best territories. Swamps do not interest us. There they may remain. We did not intend to expand in this direction and become reptiles. But we have planned properly and taken that part which is useful."

Enslaved Europe to Supply More Man-power to Germany Now the Germans want more and more man-power. They are determined to convert all Europe into an enormous Nazi workshop manned by helots. Poland, Czechoslovakia and France particularly are under a regime of terror. France has been asked to give 150,000 skilled workers and Laval is trying his best to find the required men for Germany. Ruthless action is being taken and the brutalities perpetrated in Norway and Belgium may be repeated in France. The idea is to carry out the German plan of

increasing her labour-power by a scientific and carefully planned terror in the enslaved lands of the west. As one observer has remarked :

"It will consist in breaking up European nations, and it means the physical destruction of the recalcitrant, systematic starvation of the useless, and mass deportation of the useful rest on an hitherto unimagined scale. Its agents will be Himmler and his henchmen, and its instrument had been created in the armed Waffen SS."

The Germans thus want to harness the whole conquered Europe's man-power, raw materials, food and factories with modern scientific precision and cold-blooded savagery. They want to make Germany and German-occupied Europe into a self-sufficient fortress capable of withstanding the Anglo-American siege for an indefinite period. In other words, **The Germans who won their conquests by offensive strategy are being constrained to hold them by defensive measures.**

United Nations : Perilous Stage of War has Passed Hitler's recent speech was a tacit but clear admission that the German plan of achieving decisive and final victory by concentrating on each opponent singly, and in turn, has failed, and that Germany is now about to adopt a policy of strategic defence. That is to say, **Hitler has lost the race against time and now wants to make time his Ally.** So far as the United Nations are concerned, the most perilous stage of the war has passed. This is certainly good ground for solid satisfaction. But it does not mean that victory is yet within our grasp. It is the immediate task of the British and American military authorities to work out new combinations and devices which will break the back of the German military machine and bring the eagerly hoped-for victory much nearer.

Troops Entertained

BRITISH and American soldiers and civilians ate Indian foods off plantain leaves with their fingers when they were entertained by the Bangalore City Y.W.C.A. A three course dinner was served in the quadrangle of the Medical School and this was followed by music and an exhibition of Indian dancing.

Diary of the War

AIR ACTIVITY OVER GERMANY AND ENGLAND

17th Oct.—The Royal Air Force bombed Cologne. The docks at Le Havre were attacked.

Hess, it was stated in London, was a military prisoner of war and not a prisoner of State.

18th Oct.—The Royal Air Force attacked targets in Holland. An enemy ship was sunk off the French coast.

A large Atlantic convoy arrived safely in Britain.

20th Oct.—Three air raid alerts were sounded in London. Two German bombers were brought down over East Anglian and the Thames estuary towns.

Mr. Churchill, in a message read at the Wembley Stadium, stressed the possibility of "heavy and menacing" German raids on British towns.

21st Oct.—Scattered German planes were over England.

The Admiralty announced that two new British battleships, sister ships of the ill-fated *Prince of Wales*, were now at sea.

22nd Oct.—Addressing the Parliament, Field-Marshal Smuts (South African Prime Minister) said: "Once the time has come to take the offensive, it would be folly to delay, overpare and perhaps miss the opportunity."

23rd Oct.—An enemy supply ship was torpedoed off the Norwegian coast. Targets in northern France were raided. Factories and barges were attacked in western Germany.

Army Religious Teachers

RELIGIOUS teachers are now authorized by Government for all units of the Indian Army. The scale is one teacher for each religious group, provided the authorized establishment of Viceroy Commissioned Officers and Indian other ranks in the unit is not less than 120.

EXEMPLARY CONDUCT

THE MADRAS FORTRESS Command has, in a press note, appreciated the exemplary conduct of RAJU, son of SENI CHETTIYAR, and CHINNAPPAN, son of MURUGAPPA CHETTI, life-savers and watchmen of the Madras Bathers' Protection Association.

At a recent accident at Elliotts' Beach on the 24th September 1942, both RAJU and CHINNAPPAN rushed, without fear or hesitation and at considerable risk to themselves, to the assistance of 2nd Lieut. R. M. SHEPARD, 25/16 Punjab Regiment, who was being attacked by a shark. Their prompt action almost averted a fatal accident.

UNITED STATES OF AMERICA AND THE ATLANTIC

17th Oct.—Reykjavik had its fourth air raid alert in five days.

It was revealed that a new weapon against the U-boat called "Fairmiles" was in operation with the Canadian navy. They are submarine chasers.

The possibility of post-war development of flying motor cars—travelling both on land and in the air—was pictured by Mr. E. E. Wilson, President of the American United Aircraft Corporation.

18th Oct.—Mr. Mackenzie King, Canadian Prime Minister, stated in a speech in Montreal: "After three years of war, nowhere is the balance turned decisively against the enemy."

21st Oct.—Mrs. Roosevelt was expected to go to London at some future time.

INDIA, BURMA AND CEYLON

17th Oct.—United States Army aircraft raided the Japanese aerodrome at Lashio in northern Burma. Several hits were scored. Fires were visible for 40 miles.

General Wavell inspected the forward positions on the north-east frontier.

19th Oct.—Mr. Li Shao-ta, a Chinese leader from Johore, who arrived in Chungking, reported large-scale systematic killing, plundering and burning by the Japanese in Malaya.

20th Oct.—The presence in New Delhi of Generals Wavell, Auchinleck and Stilwell was interpreted as connected with an Allied drive against Burma.

21st Oct.—The Royal Air Force attacked enemy transport vehicles in the vicinity of Kan in the Myittha valley.

23rd Oct.—The Royal Air Force attacked objectives at Monywa.

ITALY, AFRICA AND THE MEDITERRANEAN

17th Oct.—The British troops advanced in Madagascar and occupied the town of Ambo-sitra.

Tobruk was attacked by the Royal Air Force. It was revealed that Greek troops were fighting on the Egyptian front.

Three Axis supply ships were sunk in the Mediterranean.

18th Oct.—The Royal Air Force again raided Tobruk. Ships in Benghazi were attacked by United States bombers.

According to the Vichy Radio, absolute calm prevailed at Dakar.

19th Oct.—United States troops arrived in Liberia and occupied several points.

20th Oct.—Rommel lost his reinforcements. More than 230 Axis planes raided Malta four times yesterday.

21st Oct.—The British forces took prisoner the French Commander in Madagascar.

Enemy targets at Tobruk and Fuka were bombed.

22nd Oct.—Four enemy ships were sunk in the Mediterranean.

A few Italian planes flew over Gibraltar. Enemy ships in Tobruk were attacked.

23rd Oct.—Landing grounds in Fuka and Daba were attacked.

RUSSIA AND FINLAND

17th Oct.—The Red Army withdrew from the north-west suburb of Stalingrad. The Germans suffered heavy losses in men and tanks. Timoshenko's "Relief Army" succeeded in breaking down enemy resistance.

According to a report from Zurich, Field Marshal Mannerheim of Finland sent a letter to the Pope discussing the possibilities of a separate peace for Finland.

18th Oct.—Soviet troops withdrew in the north of Stalingrad. Fierce fighting raged in the city.

Russia and Luxemburg agreed to re-establish relations and exchange diplomatic representatives.

19th Oct.—Timoshenko's armies hammered at the German left flank. The Soviet army consolidated positions north-west of the city.

20th Oct.—The Germans did not make any progress in Stalingrad. The decisive stage of the battle began.

Five German transport ships were sunk in the Baltic.

21st Oct.—The situation was extremely critical in Stalingrad. The Germans won some slight gains near Novorossisk.

22nd Oct.—The Germans made a bid for Grozny, but their attacks were repelled. Stalingrad's defences were still intact.

23rd Oct.—German assault slowed down. The defenders improved their positions. Over 2,200 German tanks were destroyed in the eight weeks of battle.

SHIPPING

17th Oct.—A west-bound merchantship was torpedoed and sunk off the south shore of the St. Lawrence river. The 4,000-ton ship was one of a small convoy.

21st Oct.—A German ferry boat was torpedoed by a submarine between Germany and Sweden.

VICHY AND OCCUPIED COUNTRIES

17th Oct.—According to the Stockholm correspondent of the Independent French Agency, tension was mounting between Berlin and Vichy.

18th Oct.—Countrywide disturbances took place in France. There was an explosion in the Lyons railway station. Another bomb explosion took place in M. Doriot's District Headquarters.

DON'T BELIEVE RUMOURS
BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

19th Oct.—In the heaviest daylight raid of the war, the Royal Air Force attacked the Great French armament factory at Le Creusot, about 170 miles south-east of Paris.

20th Oct.—An attempt on the life of the Croat Quishing Premier, Pavelitch, was made at Zagreb.

Queen Wilhelmina of the Netherlands warned the Dutch of serious consequences for those who assisted the Nazi terror regime.

Registration took place for work in Germany of all male Frenchmen between the ages of 18 and 50.

21st Oct.—Three Belgians were executed by the German Court Martial.

THE FAR EAST

17th Oct.—The Allies raided Kiska. United States troops occupied another Island in the Aleutians.

Enemy positions were strafed in the Owen Stanley area.

A large number of Japanese troops landed in Guadalcanar. American positions were shelled.

A big air and naval battle was being fought out in the Solomons Islands.

18th Oct.—The Japanese were forced back in the Owen Stanley area. The Allies raided Timor and Buin. Japanese assaults were held by the American forces in the Solomons.

19th Oct.—The Japanese met with reverses in East Chekiang. Enemy forces were attacked east of Canton and heavy casualties inflicted.

There was a heavy raid on Kiska.

20th Oct.—United States bombers put two Japanese destroyers out of action north-west of Kiska.

Three Japanese cruisers were hit in Allied bombing raids on Northern Solomons.

Japanese advance on Hupeh was checked.

21st Oct.—There was another attack on Kiska by United States bombers.

The Japanese took the offensive in the Solomons. An Allied counter-offensive against Rabaul in New Britain was expected.

The Tokyo Radio announced that punishment in accordance with military regulations had been meted out to United States fliers captured after the raid on Japan on April 18.

22nd Oct.—The Japanese were pushed back in New Guinea.

23rd Oct.—United States lost two destroyers in the Solomons. The Japanese retreated in New Guinea.

An alert was sounded in Chungking.

A town in Yunnan was bombed by the enemy.

LOCAL INHABITANTS
need not apply!

In occupied China the Japanese have ousted the Chinese from every decent job from the top to the bottom of the business world. There are no Chinese industrialists any more, no Chinese shopkeepers, no Chinese professional men or stenographers or clerks, not even Chinese street-vendors. These jobs are for the Japanese, the rewards of conquest. This is what happens when the Japanese come. Do not stand by and see this happen in India! The energies of every man and woman are needed to make our defences sure.

Recruiting and Recruits

A recruit is a volunteer and he is not suddenly snatched out of his village. For months he has probably come across some form of Recruiting Propaganda such as talk of or seeing a poster. Most probably he has heard described the experiences of some one who has already joined up and has returned on leave to his village to describe the wonders of the Indian Army.

He makes up his mind to join the Army. He settles his affairs and then goes to the village headman or perhaps to a paid recruiter of the Recruiting Organization.

The paid recruiter feeds him and pays for his travelling until he produces him before the Extra Assistant Recruiting Officer.

There is an Extra Assistant Recruiting Officer's office in every district in the Madras Presidency; some districts have two, if not three offices and no recruit has to proceed farther than 70 miles before he comes to one of these officers. The Extra Assistant Recruiting Officer is constantly touring and so the prospective recruit can meet him in his own village if he wishes to.

New recruits at rifle drill.

Paid recruiters number several hundreds who constantly tour all the villages of the Madras Presidency and are known in most of them. They are easily distinguished by their khaki uniform and the green band on their arm. After the meeting the paid recruiter who gives him information regarding pay, etc., the recruit proceeds with him to the Office of the Extra Assistant Recruiting Officer.

From the moment the recruit decides to join the paid recruiter he is provided with food and has to think no more of money.

WITH THE E.A.R.O.

The Extra Assistant Recruiting Officer is an Indian gentleman of a high standing such as a retired Subedar or Subedar-Major or a Tahsildar lent by the Madras Government for the time, i.e., an honourable civilian. The Extra Assistant Recruiting Officer questions the would-be recruit as to his wishes, measures him, weighs him and has him examined by a doctor. He then tells the recruit that he thinks that he would make a sapper, or a gunner, or an infantry man, or any of the various branches that are open to him.

The recruit stays at the Extra Assistant Recruiting Officer's headquarters for a day or two. After a batch of recruits is collected he with the others are then forwarded by bus or train with one of the paid recruiters as a guide to the headquarters of the Assistant Recruiting Officer.

Assistant Recruiting Officer's headquarters contain barracks, wash-places, cook-houses, etc., which hold 200 to 500 men awaiting despatch; he is fed here for the first time on the plentiful rations given in the army. He comes under elementary military discipline and parades on the call of the bugle for roll-call for food and for inspection by the Assistant Recruiting Officer. He is given elementary training such as marching in threes, standing in line and spends his spare time at games and other forms of amusement.

Assistant Recruiting Officers are Indian or European gentlemen with a sound knowledge of the districts in which they work and who speak the language of their districts.

AT THE A.R.O.'S OFFICE

At the Assistant Recruiting Officer's headquarters each recruit is again medically examined, his height, weight and education are checked and he is finally selected by the Assistant Recruiting Officer in person for the Corps or Arm of Service which he wishes to join.

Each man is graded in accordance with his physical standard or his educational qualification. Tall, big men go to the gunners, others to the M.T. Branch of the R.I.A.S.C., Infantry or to the Q.V.O. Madras Sappers and Miners. Educated men, i.e., those who have passed II Form and over and those who can speak English can become cadet N.C.Os. signallers, stokers, and seamen in the Navy and so on.

The next procedure is enrolment and this is carried out with some formality. The recruits are lined up and each recruit answers thirteen questions. When the officer is satisfied that these questions have been understood and answered properly, he signs the enrolment form and the man becomes part of the Indian Army.

He is then despatched with a batch of recruits numbering anything from 10 to 100 by train; reserved accommodation is obtained or, if necessary, whole carriages are reserved. Again the paid recruiter travels as a guide and takes him to his new unit where he is to be trained to be a soldier.

The next time the family sees the recruit, is, when he comes back on leave very proud of his uniform, with money in his pocket and anxious to discuss the Army with those who listen to his experiences.

Recruiting is like a snow ball. The more and more it rolls the bigger it gets. The finest publicity for the Indian Army and for recruiting is the soldier who comes back on leave.

"Thirty-eight inches! Fine!"

The Modern Recruit

WHAT misconceptions there are in some people's minds about being a soldier! Even after three years of war, the idea of being a private soldier or sepoy seems to frighten many people and they still seem to think that the soldier is some kind of menial with nothing to do but march about with a rifle in his hand. This war has shown, very vividly, the evil and disastrous results of that misconceived impression. Nothing could be farther from the truth, for indeed the private soldier of to-day needs to be the most intelligent, educated and highly developed of men.

The training of a recruit is a fascinating education, a physical rebuilding and a moral regeneration. In order to become a self-contained and formidable fighting man, the

for hours at a stretch in the sun, without smoke or water, erect barbed wire and protect himself against gas. He must always be seeking to attack his enemy and must be always alert. Above all, he must have an unhesitating habit of willing, immediate, and cheerful obedience to orders.

To accomplish this is not easy for many recruits and that is why the highest standard of material is required. But when the recruit does achieve it, he is a far better, healthier and happier man than most who remain in civil life.

The recruit may feel confused at first when he hears what he has to undergo, but the system has been worked out so well that

New recruits doing physical training, with instructor in foreground.

soldier must learn the real essentials of education. He must be able to review a series of events in his mind and condense it into a clear message, which he must write clearly. This is not easy even for a well-educated person. He must be able to find his way on a map, know his position, and be able to report it exactly. It can be readily understood that these two essentials require a good knowledge of Reading, Writing, Arithmetic and Geography.

He must become physically fit so that his eyes sparkle with the gladness that comes when limbs move freely, easily overcoming obstacles and long distances. He must become confident and expert in the use of many different weapons. He must be able to dig

with the good food which he gets and the good treatment which he receives, coupled with the enthusiasm and intelligence of his instructors, he soon finds himself progressing through his course with cheerfulness and real enthusiasm.

We have heard a great deal during this war about "morale". Indeed the regiment with a high morale can repeatedly rout and defeat many times its own numbers of regiments with low morale.

LORD CLIVE with 3,000 Madrasis defeated an enemy of 50,000 at the Battle of Plassey in Bengal. His energy and enthusiasm had produced such high morale among his troops that they were ready to do anything and take

on anybody. They did it in a storm of pouring rain, lightning and thunder, and the result was astounding.

Regimental pride is closely connected with "morale" and that is why every recruit is taught the history of his regiment. Every Officer should always have one great object in view, to see that his own Battalion has the highest morale and the best fighting spirit in the whole army.

Curiously enough morale is connected with such apparently minor things as saluting, a clean kit, shaving every morning, and personal pride.

It is an astonishing thing how quickly new recruits assimilate the morale of their new regiment. Famous battalions have been cut to pieces over and over again, and new batches of reinforcements have rapidly become just as good as the original soldiers. It is the spirit of the regiment that counts.

There are many other things that go to make up the spirit of the regiment. Regimental sports, the band, regimental concerts, regimental customs and personal connections between the Officers, Warrant Officers, Non-Commissioned Officers and men.

It should be the aim of every Commanding Officer to see that when the war is over his men are much more fit for a useful position in civil life than they were as recruits. He cannot, in war time, give them training in civil occupations but he can give them a mental training which will stand them in good stead all their lives.

Any man who learns properly how to obey orders easily learns how to give orders. This means that his mind has been taught to think properly and see things clearly. Therefore, he will learn to adapt himself to whatever occupation later comes to his hand.

It is in this respect that the modern army is so different from the old army, wrong ideas about which are still in the minds of so many people. There is nothing fixed or stereotyped in the army to-day, and originality is always encouraged. When it comes to real war, a man is expected to use his imagination and by every ruse or stratagem to get the better of his enemy.

Stolid ignorance can always be defeated by intelligence. It was soon found out that tough bad characters were no use as Commando Troops. For all types of Guerilla or Commando fighting, high discipline and education are required, since it is the brain that has to be used and physical fitness is attained because the brain directs it.

What is the conclusion that experience of modern Military training brings to the young soldier to-day? It is that it is the finest thing he has ever known. It combines the glamour of the Boy Scouts, the team-spirit of a college side, the friendship of good companions, with the faith in his leaders and in the great cause for which he is fighting. It makes him in truth, healthy, happy and a magnificent citizen for the peace that we all see in the far distance and which we know is coming to us in full and good measure some day.

The Assault course: A touch of realism—Shell fire in foreground; beyond, cadets work their way through a barbed-wire obstacle.

Special Army Supplement

Three Months' Experience

(By A Havildar)

IT will be interesting to you to learn my experiences in the Army during the past three months.

During my journey to join the unit I was told by a civilian clerk in the Army that as a combatant I will feel uneasy and that I will have to subject myself to severe and serious discipline and errors may lead even to a Court Martial. Of course, this frightened me to some extent since I have read frightful accounts of Court Martials in England, in the old days, leading to lashes with the cat (whip we call) on a triangle. After coming here I find that it is not so, as represented and apprehended by me.

A sensible and thoughtful man will easily realize that there are many good things to learn in Army life, such as discipline, team spirit and sense of duty since everything has a set time, place and manner, though it is considered by the general populace at large that joining the Army means having obtained a passport to walk into the jaws of death and that rudeness will only be prevalent since they heartlessly commence shooting when ordered. Barring my personal case, as a believer in Fate, I will straightaway state that such an idea is not wholly correct and that it is to a great extent due to the lack of martial spirit in many of us. This misapprehension will be cleared and people will become heartened if they come to know that there are many South Indian Officers in the Army, some of whom started their career as an ordinary sepoy of Rs. 7 or Rs. 9 and not Rs. 16 as now.

Many of the officers referred to by me were made officers on account of service and capability in military duties and not for educational achievement. Consequently they did not, even if they mixed with the people explain in a convincing manner the merits and demerits of army life and consequently people did not learn much about the good traits of army life. Now, I find many young and enlightened people of all classes are also in the Army and the pay also has decidedly increased.

SOLDIER CLERKS

Well, coming to my experience about which I wanted to tell you and from which I wandered on a reflection on the army conditions then and now, I am pleased to say that I am stationed in a countryside about 5 miles from a city and enjoy a salubrious climate. As a lover of nature I like the opportunity of having easy communion with nature since all around the camp you have a vast expanse of open countryside and no smoky township.

I and my other colleagues have the unique advantage of being called soldier clerks as of course we wield the pen and the gun. It is somewhat difficult to wield a gun of about 10 lb. after having wielded the mighty half-tola pen all these years, but it becomes easy after a short while.

As a soldier I have to do drill every day both physical and military. The physical drill does immense good.

As for clothing we are given complete set of clothing for ordinary daily wear; for cold weather, a great coat to protect us from cold as well as from rain and besides a set of mufly—clothing called Hindustani clothing, which will seem odd to you. However, there is a uniformity in this matter as the colonel of our battalion down to the sepoy wear almost the same uniform while on parade. According to military rules every commissioned officer has to be saluted by officers or men lower in rank to him. This is returned in the same manner, unlike in civil life where certain dignitaries will nod, smile or lift one finger and so on.

RECRUITS AND CLOTHING

With regard to food all ranks are treated alike and great interest is evinced by the officers to see that the men are properly and timely fed and that there is no room for complaint.

Medical attention is very nice, I must say. Because every man, though he is expected to resist disease and not foster it fondly, has to submit himself for prompt treatment if there is real ailment. Medical leave, when recommended by medical authorities, is given with full pay and free passage home. Besides, I find every man will be given periodical voluntary leave by Government with free passage home and when going on casual leave he is given half-fare concession.

About games, they are encouraged and the officers take interest by mixing with the men and thus infuse enthusiasm. Amenities such as radio, magic and other shows, etc., are also arranged for the benefit of the soldiers.

Many new recruits are coming day by day and some of them are Lilliputians when compared to me of even lesser height than the old proverbial soldier of 5' 6" and more. Many of these people who come from the country parts with only the *dhoti* on them or—sometimes a torn shirt also on, as soon as they are given a warm and comfortable bedding, 2 sets of uniforms, 3 kinds of footwear and a great

Training at the O.T.S., Bangalore

coat are contriving ways and means to utilize them. So much so many are fondly sticking to the uniform days on end, some try to sleep in it and some try to wear the great coat continuously except on parade, where it is not allowed to be worn. Some think it necessary to be chain-smokers and some to do things according to their fancy since they are away from home. For the officers put over them it becomes a laborious job to put them to proper understanding while they are anxious to train them as efficient soldiers. Some finding that there are restrictions (since they were dreaming from what they were told at the recruiting office, that they will have food and clothing and not much to do) run away little realizing that after having joined the army willingly cannot slip out and that for so doing they are liable to punishment, though these are very few and are usually the ones afraid of work.

RELIGIOUS OBSERVANCES

Religion is not affected; on the other hand is encouraged to be observed provided it does not interfere with military duties. Educational aspect is also not wanting since all are made to learn Urdu and Elementary English. Promotion in rank is also not remote as deserving men are given quick lifts.

I shall not bore you by lengthening this. Before concluding I would tell you, asking you not to take me for a toady, that our battalion has got a full set of enthusiastic and kind officers (not tolerant for breach of discipline) and any young man who wants to be active and thorough cannot do better than to join the army where he will learn many good habits which will be to his advantage in the years to come.

Concerning a play that recently opened on Broadway a critic wrote: "The man sitting behind me told a fascinating story about the Boer War."!!

—Parade, U. S. A.

THE Officers' Training School at Bangalore has just celebrated its second anniversary, and in this space the number of Cadets under training have grown steadily from four hundred to well over fourteen hundred, and it does not appear that this figure is likely to diminish as long as Cadets are forthcoming for training.

Officers' Training Schools are of interest, we hope, to a continually widening circle of the general public, but to present them in a proper and just perspective is always a matter of some difficulty. There are, in fact, only two classes of persons who may be said to be "in the know," and their knowledge and opinions are from two totally different standpoints—that of the Staff and that of the Student, and it can hardly be expected that these points of view are wholly untinted with bias.

Training has become gradually tougher and more intensive, hours of work longer, and standards possibly more exacting. It is difficult for the Cadet to regard an O.T.S. as anything except a necessary state of purgatory which has to be undergone before the comparatively blissful state of Emergency Commissioned Officer can be reached; so it can hardly be expected that these same E.C.Os. will look back to their school days as being the happiest of their military life! It is those having no previous military background or ideas whatsoever, and who have never experienced discipline, except perhaps the very mildest, in any form, that find the greatest difficulty in adjusting themselves to what must be a totally unfamiliar rule of life. This state of affairs is now being to a large extent remedied by the fact that all Indian Cadets will now pass through certain Pre-Cadet Training Schools, and those who had no knowledge whatsoever of the implications of military service, will be able to discover whether they can adapt themselves to it or not.

MILITARY BACKGROUND TRAINING

What results are we trying to achieve at Bangalore and the other Officers' Training Schools? For those who are going to services other than Infantry and who will receive further technical training, such as Gunners, Signallers and the R.I.A.S.C., we aim to give them as comprehensive a military background as the short time available will allow. For those who are going to Infantry, we aim at making them competent platoon leaders, with sufficient insight into the training and tactics of a company to enable them, after a period

Special Army Supplement

of further experience with their unit, to be competent to take over the command of a company. Most Cadets will be seconds-in-command of companies on joining their regular units and this means that at any moment they will be required to step into the shoes of the Company Commander and do his job.

For the bulk of the Cadets attending Courses, map-reading, tactics and leadership are the things in which proficiency is more particularly demanded, and in which the Cadet, if he fails at all, is least likely to reach the required standard. Some there must be who, however good their scholastic qualifications may be, lack this quality of being able to exercise leadership and display power of command. Without these qualities, however, it is impossible that they can be entrusted with the lives of those whom they will be called upon to command in the field.

As much opportunity as possible is given to all Cadets to show their capacity for leadership. They are given a variety of commands from section to company, and of duties both routine in barracks and field in tactical exercises. Naturally a very high standard is not demanded, and it is only those who show themselves to be possessed, not even in the smallest degree, of initiative, and power of command, who are reckoned to have failed in this respect. A certain definite alertness and toughness is also required, and the obstacle course and the assault course feature both in ensuring that a definite standard of toughness is obtained and also in assessing a Cadet's standard of physical courage, without a good share of which it is impossible that any one can stand up to the trials of war and continue to exercise effective command. Perfect performance is not demanded, what is looked for is determination, which will carry the individual over somehow no matter how exhausted he may be. When a Cadet has mastered the obstacle course in full fighting kit, on top of a short forced march, and can pass his swimming test in the same full kit, he is well on his way to reaching the desired standard of toughness which every young officer should possess.

INTELLECTUAL SIDE

While rightly insisting on toughness of mind and body, the more intellectual side of soldiering is by no means neglected. Over and above the usual lectures and tactical exercises, the latest methods in warfare are clearly brought home to all by means of the excellent series of training films which are now available. Periods are also set aside for questions and discussions on the course of

the war, and in fact on any subject which has a bearing on the military or political situation, or on military training or doctrine in general. All the schools, and Bangalore is no exception, have well-stocked libraries, in which are books giving all that is most up-to-date in military and political thought; at the same time not neglecting the romance or the thriller which provides a welcome mental relaxation, or works on Art or Letters, a boon to those who may feel cut off from the more gracious and intellectual Arts of Peace.

A maximum of six months is a short time in which to make a competent reliable commissioned officer, and it requires a considerable amount of hard work and good-will on the part of all concerned to make the training a success. The training is intensive in every way, there is an element of the survival of the fittest about it, but it is the fittest that we require to lead our men in battle if we are going to win this war.

A MIRACLE

During the War I was privileged to watch the famous French doctor, Lemaitre, in his treatment of the wounded. One night I entered the waiting-room to find a huge French soldier with one of the most terrible wounds I had yet seen. He was being dressed, preparatory to operation, and in the exhaustion stage of hæmorrhage, he was deathly pale, his eyes lustreless, his hands icy, his pulse running 180 and hardly perceptible. To my utter surprise, Lemaitre, after feeling his pulse, roughly threw aside his hand, and fell into a terrible rage, calling the poor suffering man a coward in every barnyard term in the French language of abuse.

Astounded, I walked away with Lemaitre. When we were out of hearing, he said: "Go back and take his pulse, and let me know what it is." I went back and found that a miracle had been worked. The man had half risen on his elbow and was shaking his fist in the surgeon's direction. I could not believe my watch: pulse rate only 120 per minute! I returned and made my report, whereupon Lemaitre remarked: "You may have him brought in now."

And he was successfully operated on
—Col. Bailey K. Ashford,

A Soldier in Science.

What's wrong with soldiering?

Southern Army Manœuvres

A Spectator's Impressions of Final Operations

ON Sunday morning (on the occasion of His Excellency Sir Arthur Hope's visit to the scene of action), we were routed out early by the mess boys and after breakfast, took the road to Arcot. Near Kalavai, an officer (who had had no sleep for three nights running), told us that if we hurried up, we might see the grand sight of tanks going into action. A word of thanks and we scrambled in, and off went the trucks jolting and bumping, over bad roads full of pot holes—all in a thick cloud of dust, which our driver compared to a London fog in November—and reached a terrain where the forces were about to join battle.

In the evening, down Timiri road, we saw tired British troops preparing for mopping up operations and cutting off the enemy's retreat to the coast. Men caked with dust and clay, fatigued beyond all reason, sweat pouring down their unshaven chin, tramp, tramping on the sides of the road to the next camping place—despatch riders in crash helmets and goggles, dashing in and out of the dust—supply transport moving in a never-ending column, blazing a trail through uncharted fields—a steady stream of vehicles pouring down the road taking men and munitions to the front—men bivouacking in the open, labouring to set a fire

Infantry advancing during manœuvres.

The Blue or enemy forces, in gas masks, held a broken ground with a good cover, facing the advance of the tanks and behind them, on elevated ground we stood—officers, Advisers to His Excellency the Governor and visitors. We had a grand stand view—free of cost and free from danger.

Soon from a belt of dark trees, there began to roll out tanks and more tanks. They spread out like a fan across the open and advanced on the enemy followed by the infantry.

This was the fitting end to a long drama of manœuvre and counter-manœuvre. The tanks began to fire—red and green pellets—and pit, pat went the enemy rifles. The Blue force wavered, broke, and were lost. The tanks cut through them in the flanks and the middle and the captured Blue force (Jats) sat down under the trees for a well-earned rest and smoke.

The tanks won the day, magnificent creatures as they are. Nothing daunted them, hill or dale or water course. They crashed their way to victory.

going, collecting fuel, preparing a tub, fishing for the tooth-brush and shaving tackle (at 5 in the evening!)—THIS IS WAR!

Thus we witnessed the spurts of development and the *denouement* of the drama. The army was on its toes all the time—fighting engagements during the day, moving up to new positions during the night. Here was army life in all its nakedness—work, work, and yet more work, with no sleep, no rest—until the Blue force was crushed!

We were under canvas for three days and experienced life under war conditions. The Governor's Advisers also lived in tents along with us and we sat at a common table. It was time of good fellowship and utmost friendliness. Where everybody endeavoured to see that we had a pleasant and profitable time, we must also raise to the ranks of the exalted our cheerful Cockney truck driver (a grocer in London before he joined up—only 22, with a young wife and kid at home). Good luck, Private Banks, *CARRY ON!*

Infantry on the march during manœuvres.

Madras S. & M.—Jemadar's Story

ON 30th January 1942, Jemadar Maligarjunan was Section Jemadar of 3rd Section under Command of Captain X of a Fd. Coy., Q.V.O., Madras S. & M. The Section was detached from the Coy., and worked on demolition and essential services at Moulmein under Command of C.R.E. During withdrawal from Moulmein—night, 30th/31st January 1942—after completing his demolition, Captain X placed Jemadar Maligarjunan and his Section on a steam launch preparatory to moving off to Martaban. At this time the Japs were filtering through and pressing hard. Just as the boat was about to leave off, a party of stragglers arrived. The Brigade Major of . . . Brigade ordered Captain X to unload his men and hold the top of 'the jetty in order to make room for and allow the unarmed stragglers to get away. Captain X

Japs placed their mortars on the jetty and shelled Martaban while we were hiding immediately below, not daring to move lest our presence below should be detected. Darkness fell and a little later I hear odd sounds emanating from the yard (Steel Brothers') adjoining us. When I looked around, the Sappers with their Jemadar had disappeared. I thought they must have tried to get away and had been probably discovered by the enemy. However, the sounds persisted; so I decided to investigate. On advancing cautiously and peeping round a wall, I was staggered to find the Sappers industriously building a petrol barrel raft with their Jemadar standing on a packing case, conducting operations and giving instructions and orders in loud whispers. Having completed the raft, they launched it, but the Jemadar apparently not being satisfied,

The famous Sappers' Band

said, "Yes, Sir," jumped off the boat with Jemadar Maligarjunan and his Sappers, went to the top of the jetty, made a sangar out of bedding rolls from a lorry parked close by and kept the enemy at bay while the boat got away. Soon after, Captain X became a casualty from a sniper perched in a house overlooking the top of the jetty, and Jemadar Maligarjunan took charge. A little later Commandant of a Burif battalion, O.C. Burif, arrived on the scene and here is the story of the events that followed as told by the Commandant of a Burif battalion to C.R.E. :—

"We stayed in the sangar and kept the enemy away until it was obvious that the ferry boats were not coming back. I decided it was no good staying where we were, indefinitely. So I, with the Sapper Jemadar and his men, hid under the jetty where we stayed knee-deep in mud, hoping to make our get-away under cover of darkness. An hour or so later, the

they pulled it ashore, took it down to pieces, replaced a leaking barrel and re-launched it. The Jemadar still did not appear happy about it, so on re-building and re-launching the raft for the second time, he smiled his satisfaction came up to me and saluting smartly, said, "Raft tayar hai, Sahib." We climbed on to the raft and gently heaved off. We didn't dare use paddles for fear of attracting attention by the noise, so the Jemadar ordered his Sappers to remove their clothes and with them he slid off the raft into the water and gently guided it to safety.

"Jemadar Maligarjunan certainly distinguished himself by keeping calm and cool in the face of the enemy, thinking clearly, and, by setting the fine example to his men not only saved me, two other officers and his men from being captured, but by his initiative led them all to safety."

Rare Devotion to Duty:

A Madrassi's heroism

ON the morning of the final withdrawal from Moulmein on 31st January 1942, Coy. H.Q. and No. 2 Section of a Fd. Coy., Q.V.O., Madras S. & M. were employed at Martaban.

Detachments were responsible for running launches and flats for troops and stores crossing from Moulmein.

Several ration stands and kitchens were run for civil personnel and stragglers. Cook Laxmanan was on duty at one of these kitchens.

anywhere. I collected as many of my sappers as I saw coming off the boats and took them to my Coy. area. Later I took these men to the jetty area for the purpose of 'denying' the launches of the I.F. Coy. and the destruction of the jetties when to my very pleasant surprise I found 1851 Laxmanan—Cook I. T. still at his post, ready with rice and a pot of steaming hot dhol. He had stayed at his post throughout the confusion of the morning and the shelling and calmly carried on with his job of cooking a meal. I said a few hasty words of 'Shabash'

Building a post round the camp.

1851 Laxmanan ran his 'cook house' for six days under difficult conditions during which he not only provided food for his own men but for any stragglers that came through.

Finally on 31st January 1942 the last boats leaving Moulmein were actually fired upon by the enemy with Machine Gun and Mortars. When these boats arrived at Martaban, complete chaos reigned as every one pushed everyone else in order to get off the boats quickly! To 'finish it off' the Jap at this moment shelled the jetty. Whereas chaos reigned a few minutes before, now, in a twinkling, and with little or no noise, the whole place was cleaned out and not a soul could be seen

to him and took him back to our lines where the whole of the Coy. Equipment had yet to be loaded on to 4 railway trucks! I had 6 sappers to do this with—all the available remainder being employed at the jetties. These six sappers ably assisted by 1851 Laxmanan—Cook I.T. in spite of the continuous shelling of the area in which the unit lines were, got down to it and finished the loading in time for the trucks to be attached to an outgoing train.

"1851 Laxmanan—Cook I.T. under difficult conditions, trying circumstances, and continuous shelling, showed a rare devotion to duty and stuck to his post like any brave soldier would be proud to have done."

The Madras Guards: A Retrospect

THE Corps was first raised as a separate unit of the Madras Army in 1780, when Lieutenant Moorhouse of the Madras Artillery, then Commissary of Stores, was ordered to form a Corps of Pioneers of two companies, each 115 strong, for the better execution of the pioneer and road-making duties required in the undeveloped country in which the Madras Army had to operate and for the siege operations entailed in the reduction of the numerous fortresses. This Corps, whose officers and non-commissioned officers were drawn from Artillery and Line Regiments, replaced the temporary pioneer companies of native civilian labourers, known as "Mamootie Men"—which had hitherto been raised as demanded by the exigencies of the campaign.

The Corps of Pioneers expanded rapidly, until in 1823, it consisted of two Battalions, each of eight companies—a total strength of some 2,400 men. By this time the scope of its activities had widened and become more technical; thus demanding a higher standard of skill both from officers and rank and file. Reorganization was accordingly decided upon, and effected in 1831, by the conversion of the eight companies; the 2nd Battalion remaining as Pioneers until 1833, when it was also absorbed into the new Corps.

Captain Lawe of the Madras Engineers was the first Commandant of the new Corps; and it was intended that all officers should also be drawn from the Madras Engineers. After the initial appointments, the shortage of engineer officers necessitated a reversion to the old system of posting officers from other regiments. It was not until 1885, that the present system, whereby the Corps is officered by Royal Engineers, was finally established.

The introduction of technical training of the rank and file known as Sepoys until 1885, when the present designation of Sapper was adopted, was a feature of the reorganization of 1831. To this end, maistries were authorized, both at headquarters and with companies, and the equipment of tools was gradually extended and improved. For the better execution of field works and bridging, the European non-commissioned officers of the Corps were sent from time to time, to Chatham for training until, in 1861, the present system of posting trained non-commissioned officers of the Royal Engineers was adopted.

In 1876 Her Majesty Queen Victoria conferred on the Corps the title of "Queen's Own" with permission to wear the Royal Cypher within the Garter upon its Colours and appointments. His Royal Highness The Prince of Wales was, at the same time, appointed Honorary Colonel, which appointment he held until 1903, when, as King

Edward VII, he was pleased to become Colonel-in-Chief. Minor alterations to the title of the Corps have been made from time to time. Its best known form of "Queen Victoria's Own" Madras Sappers and Miners was adopted in 1923; to this was added in 1941 "Group Indian Engineers." Indian ranks have been enlisted into the "Corps of Indian Engineers" since 1933.

On the disbandment of the Madras Pioneers in 1933 their Colours and Records were handed over to this Corps and 930 men were absorbed into the ranks.

In its 162 years' service, companies of the Corps have served in three continents. Among other honours, the Corps is entitled to bear the commemorative badge of "a Golden Dragon wearing an Imperial Crown" for service in China, 1840-42; and is the only non-British regiment awarded the device of "Egypt"; with Sphinx for Sir R. Abercromby's Egyptian Campaign in 1801.

In India, in addition to the numerous wars of the Honourable East India Company, the subjection of Burma and loyal service throughout the Mutiny, companies of the Corps have taken part in the many campaigns in Afghanistan and on the North-West Frontier. During the 1914-18 War, units served in the separate theatres of France and Flanders, Egypt, Palestine, Iraq, East Africa and North-West Frontier.

In 1780, the strength was some 250 men. In the 1914-18 War, the strength rose from 1,816 to 7,000. Units of the Corps now serve in every theatre where the Indian Army is represented and its strength is very many times greater than the 3,300 of September 3rd, 1939.

Men are enlisted from all parts of the Madras Presidency. During training, in addition to military training and field engineering, all are taught the rudiments of a trade and those with aptitude are given artificer training. A percentage are taught to drive and maintain motor transport.

The reputation, which the Corps has been fortunate enough to acquire, is very largely due to its Indian Officers, non-commissioned officers and men. To them, in conclusion, no more fitting tribute can be paid than that of General Viscount Wolseley in 1888:—

"The best Native soldiers, taking them all round, with whom I ever served in India, were the Madras Sappers. Their coolness under fire, indifference to danger, their discipline and pride of regiment, marked them, on all occasions, as first-class soldiers."

The Madras Guards A.F.I.

IT is now over 420 years since the Portuguese first settled in San Thome, near Madras, and it is over 320 years since Francis Day first landed on the strip of sandy beach near the River Cooum and built a fort on the ground given to the East India Company by the Raja of Chandragiri. From those early days Anglo-Indians have played an important though often unnoticed part in the development of Madras and of South India, and there have been many Anglo-Indian names famous in the various wars that took place in all the early days until peace came to South India at the time of Wellington. Since then the Domiciled European and Anglo-Indian Community has held its place in all forms of administration, enterprise, police, railways, trade and labour, and has ever wished someday to take its proper place in the defence forces of the Crown.

In 1857, at a time of emergency, Lord Harris, Governor of Madras, felt the need for a volunteer force in Madras, and on the 2nd of July of that year he founded a volunteer regiment from the Europeans in Madras. It was the first volunteer regiment in India and bore several successive names, "The Madras Infantry Volunteers," "The Infantry Volunteer Guards," and has not for many years been "The Madras Guards." Its

composition has long included Anglo-Indians as well as Europeans, and it has had important off-shoots.

The Madras Artillery Volunteers were founded by the Duke of Buckingham and Chandos when he was Governor of Madras, in the seventies, and bore the title "The Duke's Own" which name is carried by its descendant, the Madras Coast Battery to-day.

The Mounted Company of the Madras Guards went to the Southern Provinces Mounted Rifles about the year 1910.

Another off-shoot was the Madras Signal Company which was separated from the Artillery about 15 years ago.

In the old days, "A" Company was a Cyclist Company, composed mainly of medical students but it ceased to be a cyclist composed company in 1904. The Military medical students formed an important part of the Madras Guards until its embodiment earlier in this war and there must be many distinguished I.M.D. officers who remember their happy days with the unit.

"B" Company was the European Unit, while "C", "D" and "E" Companies were composed of Anglo-Indians. To-day of

Wiring in.

—W. J. Moylan.

course the Battalion is European and Anglo-Indian entirely and happily inter-mingled, with efficiency as the only object.

The South African War saw individual members going on service, while in the war of 1914-18, the Madras Guards mobilized two companies immediately after the raid on Madras by the German Cruiser "EMDEN." Two companies continued serving throughout the war with re-drafts, the Officers taking part-time employment. No actual detachment went on active service though individuals went. The Madras Artillery Volunteers, however,

The present war has, for the first time, seen real active developments in this famous Infantry Unit.

The emergence of a full fighting battalion has awakened the unanimous wish for general service—the long-felt desire of the whole Anglo-Indian community. Hard training and discipline over nearly three years have had their effect, and when the day comes for the Army in India to require their services for greater things, there will be an unhesitating answer from all ranks.

The Messenger.

—W. J. Moylan.

sent a detachment to make up the Anglo-Indian Battery which went from India and fought in Mesopotamia.

The headquarters of the Madras Guards was in Chepauk in 1898. In 1903 a building near Egmore Station was bought with a loan from Government, and the Headquarters remained there until it was taken over as a Police office in more recent years when the Madras Guards moved entirely to Fort St. George.

An interesting episode in the regimental history was the close and happy association with the Maharajah of Venkatagiri.

The Madras Regiment

TO-DAY, September 23, an event took place which is of great interest to all people of Madras. That great and famous Regiment—the 3rd Madras Regiment—has again come into its own after a lapse of 15 years curiously enough on the very day when the old Madras Army won the famous victory of Assays.

Many honours were carried in the past, and who can doubt on seeing the splendid material in the Training Centre, that the men will be worthy of that great tradition?

Once again we saw the Colours for which the Madrassis died, bearing amongst many others, the battle honour of *Kenandine*—a unique honour held by no other Regiment. Once again we saw the name of *Seringapatam*.

On parade to-day, honoured by His Excellency, was a veteran Indian Officer, aged 92, Jemadar Ismail Khan—and with him were many other Indian Officers of the Old Madras Army. Who would not have been moved when a British Officer of the old 3rd Madras Regiment handed over the old colours to the new reconstituted regiment with the stirring words, "As the representative of the old Madras Army I hand over these colours to you, the Training Centre of the new 3rd Madras Regiment, for safe custody."

Already, there are in existence a number of battalions of this famous old Regiment and

though the figures cannot be disclosed, all people of Madras must be proud of the extent to which the Madrassi has come forward in this short period.

To-day, His Excellency honoured the Training Centre of the Regiment by attending the official opening of the Training Centre. He saw the training of the future representatives of the Madras Presidency who will take their place in the fighting line when the time comes. The Training Centre is the home of the Regiment. In it are men who are proud of the great traditions handed down to them. They learn to work and to make themselves efficient guardians of India in association with their Officers in work and in play. Thus, they help to keep the tradition of friendship between the Officers and men of the Indian Army.

It is too early to say now whether these men will defend the Empire in the desert, on the North-West Frontier or on the Eastern Borders of the Indian Empire. But we know that wherever they are called and whatever their duty may be, they will carry it out with the old spirit and valour which earned the old Madras Regiment its great name.

To-day is a great day. Once again the Madras Regiment under its old number and its old colours is ready to take its place alongside the many other Madrassis who are already in the fighting line.

A Visit to a new Madrassi Battalion

THERE are very few people in my village who have ever been in the Army from whom I can enquire, and so if I join the Army I wonder if I shall like the life? Shall I be fed all right? Shall I be beaten every day?

These are questions hundreds of young men in Madras Presidency must be asking themselves to-day.

I visited a Battalion, consisting entirely of Madrassis, only a few days ago, and I will leave you to judge the answers to those questions after you have read about what I saw during my visit.

I stopped and spoke to the first man I saw. His name was D. Baskar from KADAPA village, CUDDAPAH district. He was wearing a stripe on his arm and was in charge of about twenty recruits who had just arrived from the Recruiting Officer. He was assisting them to draw from the stores an enormous pile of brand new clothing, boots, blankets and the dozens of things that a new recruit is given within a few hours of arrival, and was showing them how to wear the many types of clothes not usually in use in the villages. I spoke to him and he said he had been in the Army exactly two months and was very happy. That was quite clear from his face, and the very smart salute he gave me made it very clear that he had not wasted a moment of his training and that he already knew how a keen man can make his way quickly.

A FINE OLD SOLDIER

Next door happened to be the Ration Store. There I saw a very fine old soldier, with two rows of medals, waiting to issue rations. I asked him his name and found it was Havildar RAMISAMY of Mysore Police Lines, Bangalore. A veteran of the last war, he has come forward again and, in spite of his age, is fit for Active Service and not only medically fit but fit in every way. In fact to quote his own words "I look forward only to the day I can go out again and fight for my King-Emperor."

My next visit was to the Parade Ground where I saw No. 214474 HUSSAIN KHAN of VADASAIRY village, KOTTAR, TRAVANCORE State. He was being taught how to be an instructor which, considering he has been in the Army only five weeks, struck me as pretty quick work. He was very good too and, from the way he was getting his squad to move about, I am sure it won't be long before he is going to the tailor to have a stripe or two sewn on his sleeve.

Several squads of recruits with bare chests were playing leap frog and similar types of games as part of their Physical Training

parade. Their faces all one large broad grin, their obvious happiness, and their physique already improving with large regular meals and extra meals, were perfect answers to the questions as to how men are treated and fed. In spite of myself also being a veteran of the last war I felt how much I too would like to be joining in their games and sharing in their comradeship which was obvious to even a casual observer.

A BUSY HIVE

Some of the men had already had several months training, amongst them being quite a number of evacuees from Malay and Burma. I found them busy on the rifle range, learning to drive lorries, building roads, learning how to handle explosives and to ride cycles. In another part tradesmen were busy at their trades. In fact everyone was as busy as in a hive of bees and were far too interested in the hundred and one things which go to make up the life of a modern soldier to worry about any doubts they may ever have had about life in the Army.

I could not help but be impressed at the obvious keenness and cheerfulness of everyone I saw and felt that if these men I saw are typical of the Madrassis, and I have no doubt they are, who are being enrolled in such large numbers to-day, then the Madrassi will not only add fresh laurels to the glorious military tradition of Madras of days gone by but will retain in the Indian Army of the future a place high amongst those classes who have been fortunate enough to have had greater opportunities in recent years to cement their military reputations.

AN HONEST DOUBT

Into the cosy cottage of the dear old lady came two billeted soldiers. She greeted them with a friendly smile, showed them to their room, and watched them dump their belongings—tin helmets, gas respirators, packs, kit-bags, etc.

Then a worried look came into her faded eyes as she asked, "Young men, are you sure you came by all those things honestly?"

—PORT ARTHUR, *News-Chronicle*,
Canada.

"A Proud Moment"

H.E. Sir Arthur Hope's Speech

His Excellency Sir Arthur Hope, Governor of Madras, with Lieut.-Gen. Sir Noel Beresford Peirse, K.B.E., D.S.O., G.O.C., Southern Army.

THE following is the text of His Excellency Sir Arthur Hope's speech on the occasion of the Reconstruction of the 3rd Madras Regiment at Madukarai on 23rd September:

It is a very proud moment for me as Governor of Madras to be here to-day to celebrate the reconstruction of the old 3rd Madras Regiment. As you know the policy in days gone by was to stop recruiting down in the South and it is only the exigency of war that has made people realize what the Army has lost in the intervening years.

There are people who said that the Southern Indian did not make a good soldier. That is untrue. It has been proved time and time again both in previous wars and in this war that the Southern Indian—the Madrassi—makes as good a soldier as anyone coming from any part of the world.

Ever since I have been Governor here I have been doing all I could to get the authorities to reconstitute not only one Regiment but many units of the old Madras Army and here to-day we have gathered together to celebrate this reconstitution, the presentation of the old colours and the re-union of the old Madras Officers, N.C.Os. and men with those on the present Madras Army.

Now Officers, N.C.Os. and men what we are visualising at the present time in this battalion—in this 10th Battalion is the training of people to go out as V.C.Os. and N.C.Os. to other battalions to other Madras units and also to throw off from this battalion other battalions which will go on to make more and more battalions of the Madras Regiment. But owing to the old policy in the past, there is great difficulty at the present time in getting V.C.Os. and N.C.Os. from South India. We have had to draw from a very meagre stock indeed and that is our great difficulty—to get V.C.Os. and N.C.Os. to officer the various units.

There are people who say that it is difficult to get recruit in India at the present time. That is absolute nonsense and absolutely untrue. Recruits are coming forward in a magnificent manner from all parts of India, to defend their own country and fight for a common right. But the difficulty is to officer them and to get non-Commissioned Officers and it is the primary job of this

Special Army Supplement

battalion at the present time, as I have said to produce the right type of men who will be V.C.Os. and N.C.Os. of various Madras Units.

Everybody in the Army has got an equal chance. It does not matter who you are, where you come from, what your religion or caste is. You can all go right up to the top and I have not the slightest doubt that many of you whom I am addressing here this morning will before very long earn glory and earn distinction in the Army and long may you continue in its service. It is impossible to say what will happen in the years to come; but as long as anything can be permanent I have every hope that this Madras Regiment now newly constituted will be a permanency. You have had a great tradition in the past. You are living up to that tradition now and I exhort everyone of you in the days and months and years that come, wherever your lot may take you, whatever your task may be and whatever the dangers and difficulties, I know you will do your duty. Do it cheerfully for your own sakes, for your families' sake, for your country's sake and above all for the sake of your Regiment, the 3rd Madras Regiment—a regiment which has had a famous history in the past and which I know will have a famous history in the future.

I have all along been watching Madras Units with great interest, and anything that I can do to help this battalion, I will do. If there is anything that I can do your Commanding Officer will of course inform me.

I once again repeat how grateful and proud I am to be here to-day to celebrate this occasion, which also happens to be the anniversary of the famous battle of Assaye, in which the Madras Battalions were the only Indian

troops present. I congratulate you on the progress you have already made. I look forward to seeing you again and I wish everyone of you from the Commanding Officer to the latest recruit the very best of luck and good fortune and happy return when victory is won.

The Perfect Camouflage.

"What are your men supposed to be doing, Mr. Forescue? Some crawling in the undergrowth, others climbing trees."

"Well, Sir, we camouflaged a machine-gun this morning and now we can't find it."

The Evening News, London.

FIGHTER'S PRAYER

O Lord, Thou knowest how busy I must be this day. If I forget Thee, do not forget me.

—Spoken by LORD ASTLEY, before the Battle of Edgehill (1642).

"Boys of the Old Brigade."

The Travelled Indian Soldier Influence on Post-War Village Life

(By An Indian Observer)

THE impact of wide travel on the Indian soldier has scarcely been visualized. Before coming out to the Middle East, I saw and spoke to a number of our men at the ports of embarkation. And I have seen and spoken to them now after a year or more of a varied life here. Gone is that shy uncertain look that many recruits had in Bombay or Karachi. Some had never seen the sea. Others had been astounded at the hurry and bustle of a big city.

That is all past history to them now. They have an assured self-confident attitude about them that speaks volumes. They are sturdier after a year of campaigning and both in their gait and bearing there is a new air of independence. They seem to be conscious of good and valiant deeds done and the praise bestowed on them by their Commanders has encouraged them in their efforts to keep clean and healthy.

This education by travel of thousands of our men in the Middle East and elsewhere will be one of the most enduring after-effects of the war and is bound to have a deep influence on the development and progress of Indian village life.

Our forces have seen many new peoples and new lands. They have come in contact with modern civilization in various stages of development. In Cairo and Alexandria they have seen a life-pattern, rich with a mixture of the East and West. In Palestine they have admired the industry and perseverance of the Jewish race that is turning that country once again into a land of milk and honey. They have been impressed by the contrast in Iraq where the village people are perhaps poorer than in their own motherland.

THE VALUE OF TRAVEL

Travel teaches unconsciously. The daily kaleidoscope impresses scenes on the mind more vividly than any book or picture. And as troops—including the thousands behind our actually fighting front line forces—have been shifted from one point to another, they have seen the conditions of life in various lands and have also learnt the value of frugality and industry and of thinking for tomorrow.

Recruitment in India has been widespread throughout the country and not confined to the martial races or provinces as in the last war. Almost every taluka has given its quota. Men have joined from Kashmir and Nepal in the north to Cochin and Cape Comorin in the

south. The Bengali and the Baluchi have been in the field together with the Deccanese and Madrasi. The benefits of this education will therefore be felt all over India when they return to their valleys and fields and their mud villages.

In far Cyprus—not far from our swift and expanding army, but for peacetime India—I came across a peasant lad from a little Satara village in the Bombay Presidency. Laxman Bhosale was born of poor farm labourers. He had had no education except the little Marathi he had been taught in school. The lad would have continued to live the dull and uneventful life of an Indian peasant, working in the fields from morning till nightfall to eke out a bare subsistence. He would have soon set up a little hut for himself where he would have lived with his young wife as his forefathers did before him. The great event of his life would have been a visit to Poona or perhaps even Bombay.

THE OLD ORDER CHANGED

All this has now been changed. Laxman has not only seen Bombay. He has been overseas and has visited many important cities of the world. He has yet but a dim idea of the great progress made by mankind from his small primitive village to the metropolis of Cairo. His stay for several months in Egypt and in Cyprus, however, is teaching him how far behind the elders of his village were in their pontifications.

When he returns home after the war, that little village in the Satara district is going to profit by his varied experience. He will tell his co-villagers something of the agricultural economy in Cyprus—how trees are being planted there, how new types of ploughs are being used, drawn by horses or moved by motor. Travel has broadened his outlook, making him more respective to new plans and to reforms. His Army training has given him initiative and power of command. He will surely endeavour to improve the condition of life in his village, accustomed as he has been to a higher standard of living.

And there are thousands of such young men who will take their experience and knowledge back with them to their village homes. The discipline, courage and powers of endurance instilled into so many of them by their Army training will be valuable influence of India's future village life. The wider outlook, engendered by travel, will be one of the major beneficial factors in the solution of our problems of post-war reconstruction.

Faithfulness and Courage

Story of a Prince and an Orderly

KESHAV BHOSLE

KESHAV'S mother died when he was 8 years old and Keshav's father married again which did not make it happy for Keshav.

The Ruler of the State where Keshav lived was a certain Maharaja who took pity on him and took him into his own house to be brought up amongst his own household. As he grew up Keshav became very much attached to the Maharaja who taught him to shoot and ride and when he was old enough Keshav began to accompany the Maharaja in all his expeditions for shikar and pig-sticking. In fact he became the Maharaja's shadow and devoted servant.

Then this war broke out and the Maharaja left the care of the State in the very capable hands of his Maharani and went off to train as an officer of the Indian Army.

He first studied at the Cadet School at Indore and Keshav accompanied him. He then went to the Officers' Training School at Mhow. Again Keshav accompanied him. Finally the Maharaja passed out of the school and was given His Majesty's Commission, and went down to the Regimental Training Centre.

KESHAV'S REQUEST

After a short period there he was detailed to proceed overseas, and joined the battalion to

which he was gazetted. The Maharaja was allowed to take a special orderly from his own State with him. So he took a few days leave up to his State to settle his affairs and collect an orderly. He decided to take an old and experienced Havildar of his own Bodyguard.

Keshav hearing of this went to the Maharaja and asked to be taken instead. Of course the Maharaja answered that it was quite impossible as Keshav knew nothing about soldiering and anyhow was still much too young. Young Keshav begged of the Maharaja to take him. But the Prince was adamant. Keshav said nothing but went away broken hearted.

Next day he came back to the Prince and said he had come to say good-bye as if the Prince would not take him with him he would not be in the State when the Prince came back. Questioned he explained that people would say that he was always with the Prince when he went shikar, pig-sticking and generally a jolly life but when the Prince was going into danger he had stayed behind, and he was not prepared to face that. The Maharaja was so touched by this that he finally agreed to take him. Keshav overjoyed rushed off to get ready, and returning to the Training Centre with his Maharaja he was sworn in, collected his kit and went overseas with him as his personal orderly.

When he joined his battalion in the Western Desert the Maharaja was given a dug-out to live in and his orderly a separate one. But this was not Keshav's idea. He protested loudly and said that any bullet that was likely to hit the Maharaja must hit him too. It was an unheard of thing and quite outside military custom for an orderly to sleep in the same dug-out as his Officer. But Keshav's devotion was so apparent that a special case was made of it and he was permitted to do so and from that time on, he always slept at the Maharaja's feet while they were overseas together.

AT THE POST OF DANGER

On one occasion, the Prince in the course of duty as an officer of the battalion was sent with an anti-tank gun to guard a pass about eight miles away against a possible enemy tank column. Knowing the hazards, the Maharaja decided to leave Keshav behind and say nothing to him about it.

About sunset, Keshav began to worry as to what had become of the Maharaja and started asking questions. Finally, being very suspicious that the Maharaja had gone off to some dangerous job and had told him nothing, he went to the Subedar-Major and asked him point blank. Mildly amused, the Subedar-Major told him where he had gone and the nature of the duty. He promptly demanded to be sent out to join the Maharaja. He was told that that was not possible. However young Keshav made such a fuss that finally the Subedar-Major allowed him to jump into a passing vehicle which was going out there and about 9 p.m. he arrived at the pass and in his haversack, he brought food and drink for His Highness, and there he spent the night on guard watching over His Highness to see that he got into no danger.

After this episode it became an accepted fact that wherever the Maharaja went Keshav accompanied him.

NARROW ESCAPES

Shortly after this, the battalion became seriously engaged with the enemy and it was noticed by every one that from whatever direction the bullets seemed to be coming Keshav always managed to get on to the side of the Maharaja to cover him. They had one or two narrow escapes but fortune favoured them and they subsequently arrived back into the rest area both of them completely unscathed. From this rest area, the Maharaja was permitted to return to India by air on leave, to settle some affairs of his State. By that time, every one had got so used to Keshav being wherever the Maharaja was that he

automatically was given a seat in the same aeroplane and both are back happily again in India.

The little story is an epic of faithfulness and courage which should not go unrecorded. The Maharaja who temporarily foresook the luxury and comfort of a ruling Prince and went through the rigorous training necessary to become a fighting Officer and then shared with the Battalion the discomforts and dangers of a fighting leader in the true tradition of his ancestors and the Great Shivaji was Lieut. Sir Vikramasingrao Powar, K.C.I.E., Maharaja of Dewas Senior and of Maharatta Light Infantry and the devoted orderly was Keshav Pandurang Bhosle of Dewas Senior, Maharatta Light Infantry.

Primarily this is the story of Keshav Bhosle the orderly. But, in it, there is another lesson. In time of danger to his country, His Highness laid aside his high estate, took his training as an ordinary cadet to equip himself for the fighting leadership of those tough soldiers the Mahrattas and was content to accept the lowest officer's rank and so gain experience and fit himself for higher things.

He realized that to lead men in War was an entirely different matter to his exalted avocations in peace, and that it was necessary to learn from the beginning in order to fit himself to lead without unnecessarily risking the lives of the fighting Mahratta soldiers. As long as this spirit survives amongst the Mahratta leaders we need never fear that the spirit inculcated by Shivaji the Great will ever die.

DUTY OF INDIAN CITIZENS

"I should also like to impress on all in India that what the soldier of any nationality appreciates even more than comfort, more than clubs or canteens, is the feeling that he is welcomed, that he is appreciated, that he is treated as a fellow-countryman and a friend, who is making some sacrifice for the common cause. All that any of you can do to make the soldier, whatever his nationality, rank or creed, feel at home and welcome will be deeply appreciated our common effort by helping to maintain the high morale of our army in India, which I have the great honour to command."

—GENERAL WAVELL, in a speech on October 3rd.

Siege of El Adem

Indians' Successful Defence and Withdrawal

THE performance of Indian troops in the El Adem "box" during the recent campaign will long be remembered as an example of tenacious defence against great odds.

El Adem was a strong point of great importance in the defence scheme we had organized to meet any emergency. It lies about 30 miles south of Tobruk, on the bypass to Derna, and was the terminus of the desert railway built by New Zealanders and Indians (writes an Indian Army Observer). There is a fine aerodrome here, and about three miles from the aerodrome was the defence position known as the El Adem box. While this box held out no attack could develop on Tobruk itself.

The box had been carefully prepared, but it was overlooked by an escarpment. The garrison was originally intended to be maintained at brigade strength, but at the time of the German advance it consisted of two battalions, one of the 5th Mahratta Light Infantry and the other of the 2nd Punjab Regiment.

Between May 27 and June 16 El Adem was besieged thrice, and repeated assaults were beaten off with heavy enemy losses. Up to the time of our withdrawal no enemy penetration had occurred in any sector.

In the first rush German tanks occupied Ed Duda and even Belhamid (on the El Adem-Tobruk road), but they were thrown back almost immediately. An attack on El Adem proved abortive, too.

After the evacuation of Bir Hacheim the 90th Light Lorried Infantry, supported by tanks of the 21st Panzer Division, again surrounded El Adem, and put in a furious assault. They were beaten back, and when the Garhwalis counter-attacked from the north, the German infantry fled in confusion, leaving behind them a number of British and Indian prisoners taken from intercepted convoys. It was here that ten unarmed Garhwalis prisoners came back with 11 German prisoners, and a Mahratta L/Naik was entreated by 12 Germans to allow them to accompany him as his prisoners!

SUCCESSFUL WITHDRAWAL

When on June 13, as a result of an unfortunate engagement, our armour suffered a crippling blow, and troops had to be withdrawn from the Gazala line, the enemy's full pressure was exerted against El Adem. The box was completely cut off. Heavy guns

poured in shells continuously. Planes bombed and machine-gunned the garrison, and then tanks advanced to crush the battered (as they believed) Punjabis and Mahrattas.

On June 14 the first two attacks were directed against the Mahratta's sector. The attackers must have had a rude shock, for instead of coming up against demoralised and shell-shocked troops, as they had expected, the Germans received a hot reception from alert defenders. The Germans went back and tried the Punjabis' defences. Here they discovered that they were even less welcome, and they retired to think it over.

The garrison was not entirely on the defensive even in these circumstances. A Mahratta patrol went out and spotted a gun which had been proving troublesome. Jem. Raja Ram Nikam, who led the patrol, was wounded, but he brought his men back safely, and reported the position to our artillery. The enemy gun position was shelled to pieces.

At night patrols went outside the wire and kept watch. They even took the opportunity to raid and harass the enemy. A Punjabi patrol saw a tank prowling about in the dark. The tank was ambushed and destroyed with bombs, one prisoner being taken. A truck and an armoured car accompanying the tank managed to escape at top speed. This, the Punjabis thought, was a poor show, but they pleaded to be excused as poor visibility had hampered them.

Mahratta anti-tank guns claimed two tanks for sure and one probable. Hav. Sakha Ram Sawant got both tanks, but at a cost of his own life. Next day these guns came in for heavy shelling by the enemy, and two two-pounders were destroyed by direct hits. No attack developed in this sector, however.

HEAVY AXIS CASUALTIES

Enemy sorties continued, but were all beaten back. Axis casualties in these futile attacks can be gauged from the fact that in one day alone the German and Italian ambulance fleets made six trips towards the wire to pick up their dead and wounded.

On June 16 orders were given for a withdrawal, but soon afterwards they were cancelled. The battalions were told that they would hold El Adem regardless of cost. The decision was greeted by the men with whole-hearted enthusiasm. They did not relish the idea of running away after having foiled all the enemy's thrusts.

Later, the same night, it was decided not to sacrifice these two valiant battalions, and they were ordered to withdraw as soon as possible. Methodically the men set about destroying everything they could not carry. At about 0100 hours on June 17, the battalions sallied out into the night, and began the hazardous passage through the enemy concentrations.

Such transport as was inside the box had to pass through the main gaps. The original scheme was that the Royal Air Force should come over at the same time, and bomb and machine-gun the enemy, making as much noise and causing as much confusion as possible to cover the sound of the withdrawing vehicles. This was not found practicable. The result was that the withdrawal was discovered quickly, and the gaps came under heavy fire. Vehicles were damaged, or were set alight, and only a few of them managed to get out of the box.

The Infantry went out on foot through specially made paths across the minefields. They had a comparatively easy time to begin with. Once outside the box, however, they ran into enemy lagers and camps, and most of the way back—they had to walk about 20 miles—they kept encountering enemy columns. In this withdrawal, the Punjabis had only some casualties and the Mahrattas a number of men missing.

A WEIRD MARCH

It was a weird march, a night full of incidents and accidents. Queer things happened to each of the small parties into which the battalions had split up in order to make the withdrawal easier for us, and more difficult to tackle by the enemy. A general idea of the happenings of that night can be had from the experiences of Subedar Dera Singh, I.O.M. (2 Punjabis) and his party of about 30 men. Soon after leaving the box, the Subedar Sahib contacted the enemy. He organized his party in the form of a rough circle and ordered them to go through, firing as they went. The first enemy position was passed without difficulty. Then came a greater concentration. The Punjabis went straight into it, and emerged with their bayonets reddened and rifle butts dented. It was hot work while it lasted. One L/Naik grappled with two Germans. He quietened them with the spare barrel of a Bren gun he was carrying.

The Germans were in very shallow trenches (the Subedar Sahib commented on this as showing their inefficiency). Dera Singh stepped on a German hiding in one of these trenches, and another German tried to get hold of his legs and pull him down. The

Subedar Sahib, who was in the centre of the circle, had not drawn his pistol, as he was afraid of hitting one of his own men, but he had a stick in his hand. He put one foot on the neck of the German, and beat him unconscious with the stick. The German had a thick skull, it broke the stick. Dera Singh complained that the action had cost him 16 piastres, and claimed that he should be indemnified by the authorities. The other German received a bayonet thrust.

GERMANS SURRENDER

The Subedar Sahib asserted that he saw Germans standing up with their hands raised high. "My men urged me to take prisoners along with us," he said "but I protested, and argued that we could scarcely take so many being so few ourselves. I explained that guarding them would hamper our progress, and the men finally agreed with me, though somewhat half-heartedly."

Some of the Punjabis were wounded. Most of them kept up, still firing, but at least one man was seriously hurt. The Subedar Sahib had carried him about 200 yards when the wounded man insisted that he be left behind. "I will curse myself always afterwards if on my account you are captured," he told Dera Singh. He did not budge from his resolution, and remained where he was.

The Punjabis had been instructed to shout and create as much noise as possible in order to give the impression that they were a powerful body. This had the desired effect in the immediate vicinity, but attracted more and more enemy forces towards them. Carriers and tanks rushed to the conflict and began to chase the Punjabis. The darkness prevented them spotting Dera Singh and his men as long as they remained quiet, but the sound of movement could be heard by the carriers, who were close to the party. These carriers then signalled to the tanks with Very lights to come up.

A game of hide and seek went on throughout the night. The Punjabis would move a little distance and then keep quiet, while the carriers tried to follow and bring up the tanks. At 0400 hours, the enemy was still close, and the Punjabis were worried for the first time.

At last, growing tired of the game, they decided to risk everything on a final rush. Throwing caution to the winds, they set off at top speed. Their courage was rewarded. They had doubled two miles when they fell in with one of our motor brigades.

How to be happy in India

[The following unofficial memorandum throws an interesting and humane light on the importance attached by British officers to the study of their men and to their feelings and behaviour in a strange country.]

THE British soldier, who may previously have never left his native land, enters a new world on arrival in India.

His happiness depends to a large extent upon himself. It depends on whether he intends merely to lament his enforced absence from his home, or whether he proposes to extract from new surroundings the maximum of enjoyment.

"But what about the language difficulty" the reader may ask! Well, in the Madras Presidency very many Indians speak English, while soldiers in the Bombay Presidency should have little difficulty in picking up sufficient Urdu to make themselves understood.

No British man need hesitate to be on good terms with Indians and the British Officers of the Indian Army are proud to regard their men as personal friends.

Each man when abroad in his country's ambassador, and much depends on how each one of us behaves in India. Every instance

British Officers and Indian sepoy together in the water, enjoying a most welcome bath and swim.

Provided the soldier adopts the right attitude, he will find himself embarked on a great adventure which becomes more interesting as time passes, and his knowledge of the country increases.

First of all he will want to know something about the inhabitants of India. The Indians are, it is true, a different race from the British, but not an inferior one. Their customs are unlike ours and so are their manners, though no one can deny they are among the politest people in the world. Of course there are good and bad in every race, but I have never known a case where an Indian has failed to respond to politeness and kindness. Intensely sensitive they know at once if you like them, and will be only too pleased to talk to you about their customs, other than purely domestic, and manners.

of rudeness detracts from the War efforts, each example of courtesy helps our own country.

The Army is trying to help every British soldier, by providing information on Southern India but you on your side remember, "God helps those who help themselves." If you do so you will find yourself amply rewarded, for the cities are rich in buildings of architectural interest, while the country provide scenes as beautiful as any in England—but they are often beautiful in another way and again it is a case of not inferior but different.

One last word don't talk politics. And if any Indian wishes to do so with you, tell him you are a soldier and not a politician, but none the less a man who, when victory has been gained over the Axis, looks forward to seeing India prosperous and free.

A start has been made

General Bernard Montgomery, Commander of the Eighth Army (right), with General Sir H.R.L.G. Alexander, Commander-in-Chief of the Allied Forces in the Middle East

★ A start has been made on what General Smuts has called the offensive. In this battle the Eighth Army and the Air Forces supporting it are one. In this I believe lies their great strength. I have always found in my long association with British troops that they will never let their leaders down

—GENERAL MONTGOMERY, General Officer Commanding the Eighth Army, in an interview to Press correspondents at Cairo on Friday last (October 23)

Running Commentary

Stalingrad: Sprawling City Stands Like Prepared Fortress Bitter fighting is going on in Stalingrad, and the Russians are inflicting heavy losses on the enemy. The return of good weather has helped the Germans to launch another heavy assault on one of the factory forts of Stalingrad, and over 25,000 men, 100 planes and powerful tank forces are battling at the area. Under continual shelling and bombing, underground workshops are functioning, repairing guns and tanks, day and night. During the last few days, strong reinforcements have been shipped across the Volga by the Russians. Soviet troops have gained ground and improved their positions north-west of Stalingrad, and German reports emphasise that Marshal Timoshenko's attacks against the Panzer wall north-west of Stalingrad are increasing in violence. Berlin's spokesmen are saying that the capture of Stalingrad must not be expected within the next few days. After more than two months of heavy and continuous assault, the Germans have yet to capture the City of Stalin, which has been converted into a huge fortress. The astonishing thing is that when Stalingrad appeared to be almost within the German grasp, a campaign of rapid movement was halted and converted into a long-drawn-out siege, as though the sprawling industrial city, forty miles long, was by nature a prepared fortress like Gibraltar.

Astounding Feat: Clausewitz's Saying Comes True The prolongation of the defence of Stalingrad is one of the greatest and most astounding feats in the world's history. It demonstrates the truth of the saying of

the great strategist, Clausewitz, that the final factor in any military engagement is the *Will*. Russians willed that the City named after their great leader should not fall into German hands, and so they found ways and means every time to repulse the German attacks. The tactical weakness of the Russian position lies in the fact that they are fighting with their backs to a river which is a mile wide and across which the bulk of their supplies and reinforcements must be ferried and their wounded evacuated. Smoke-screens and the fire of the Volga gunboats were hitherto keeping the pontoons and ferries going. But recent reports seem to show that they are now within range of German field-batteries on high ground overlooking

A Soldiers' Battle

"We all realise what a tough proposition we are up against in turning upon an enemy so well dug in and who so recently appeared to be marching victoriously on Cairo. But we also know that air co-operation has been on a scale which our soldiers have not previously experienced and that the Royal Navy has done exceptionally fine work in the Mediterranean, where submarines and bombers have taken a big toll of Axis supply ships. Above all, we know that the morale of the Eighth Army is very high. Once again it is a soldiers' battle."

—LORD CROFT,

Joint Parliamentary Secretary of War,
on October 28.

the river. The capture of ruined Stalingrad, according to some commentators, is of little more than prestige value, as the Volga supply route between Trans-Caucasia and Central Russia has already been closed. But this is a misconception. The Germans are desperately in need of the City for their winter quarters. They also require it as a protective bastion for their long and precarious line of communication, trailing through northern Caucasia to the Grozny and the mountain passes.

a million men, with tanks, aircraft guns and supplies in proportion. The Germans departed from their usual method of tackling one objective at a time, and committed the blunder of attempting simultaneously the capture of Stalingrad and the penetration of the Caucasus range. This gave Marshal Timoshenko his chance. His offensive against the German left flank was intended to relieve the pressure on the Stalingrad garrison. His drive has been slowed down, but not halted.

"Hey—you're dead!"

A recent news is that von Bock has been sacked by Hitler. (Reproduced from the "Daily Mirror" of September 21, 1942. The above cartoon was radiocast from London to Cairo and flown to India.)

Stalingrad and Caucasus: German Blunder and Timoshenko's Chance Looking at Stalingrad from a general point of view, we find that Marshal Timoshenko has achieved outstanding successes in stemming the great offensive, which the Germans have attempted on the Russian front this year, and to which they devoted

Every day that Stalingrad's defenders can hold on is of the greatest value in assisting an offensive which, if it continues its momentum, will threaten the whole German position in the Don elbow. It would be unwise, however, to under estimate the strength of the Axis forces and expect Marshal Timoshenko to achieve a decisive break-in.

behind the army massed in front of Stalingrad, but it must be recognized that Russian pressure against the German left flank all the way from Vorenezh to Stalingrad is steadily mounting, and *it is not impossible that the German invasion of the Caucasus may be defeated along the banks of the Don.* It is said that Hitler dismissed Von Bock because the German General wanted to follow up Stalingrad with a northward drive against Moscow, while Hitler wanted to switch on to the south—still hankering after the Persian and Iraqi oil fields. The Russian Command was faced with the task of preventing the Germans from doing either, and this it has done exceedingly well. Now both the German and Russian armies are fully extended in an all-out struggle for mastery.

Stalingrad A Stalemate : Russian Victory of Great Importance The war in the Eastern front has reached the decisive stage. The Russian chance of holding Stalingrad has now greatly increased. The autumn rains have begun, and they are sufficient to turn the Steppe, which in the summer is one broad highway for mechanised transport, into a vast quagmire. The prospect of wintering outside the City is most unwelcome to German troops, for this region is much colder than the Ukraine, and the Germans have to face the bitter Siberian winds, the coldest winds in the world outside the Arctic regions.

The recent announcement by a German military spokesman that instead of infantry assaults on Stalingrad there would be systematic devastation with heavy artillery is a clear indication that the Germans want an excuse to have a breathing space rendered necessary by the terrible losses inflicted on them by the Russians. This breathing space seems to be a prelude to what the Germans hope will be the final assault. Now it appears that Stalingrad has become a stalemate. This amounts to a Russian victory of great importance.

Field-Marshal Smuts' Trafalgar Day Address The Trafalgar Day address of Field-Marshal Smuts, South Africa's veteran Premier, was a unique event in Parliamentary annals. It was a unique event in the history of the British Empire as well. He is one of the last survivors of Britain's first World War Cabinet and he spoke in the presence of Britain's present war leader to a united meeting of both Houses of Parliament, which was presided over by Mr. Lloyd George, his own old chief and Britain's leader in the last World War. There is only one precedent for a statesman of his calibre addressing the British Parliament. It may be recalled that, on the eve of the war, President Lebrun addressed the Lords and the Commons in Westminster Hall. The place, the gathering, and the occasion lent a unique importance to the Field-Marshal's great speech. The speech and the occasion

A Front on which you can all fight.

"The National War Front, which is gaining so steadily in strength throughout India, is a front on which you can all fight. Scotch idle rumour and scorn the insidious and lying propaganda of the enemy. Build up a strong bulwark in your hearts of confidence and resolution. Take courage from the certainties which are before your eyes. We have been swimming against a strong current. But the tide is surely turning now. At one time we fought alone, but look now at the great peoples and armies of our Allies who are by our side: the people of the United States, of Russia, of China, and many others. Consider the mighty armaments which we are accumulating day by day and with which we shall soon outstrip and overwhelm the enemy. He is still strong and formidable, but he is becoming desperate and his days are numbered. His strength is the strength of ruthlessness, oppression, cruelty and treachery, but our strength is the strength of all free men and our cause is just. Hold on then grimly and with determination. Put every ounce of your strength of body and mind into a supreme effort and you will find that the day is not far distant when we with our Allies shall sweep forward like an irresistible flood, which will drown deep the forces of evil and wash the memory of their foulness for ever from the earth."

—H.E. THE VICEROY, at Quetta, on October 22.

emphasised the continuity of the present and the past, for a veteran of the old World War had come to the Allied counsels at a time when tremendous decisions were being taken. The Field-Marshal said that this war was really a continuation of the last war and that the intervening Armistice was a "period of feverish rest or unrest and dreams and delusions".

Remarkable Career of a "Foremost Statesman of His Generation" Mr. Lloyd George who presided, introduced the Field-Marshal as "one of the foremost statesmen of his generation", and said: "He has had his experiences of conducting this great war, and no one knows better than myself his value and his judgment on that

and only retired when victory came with the Armistice. In September 1919 he became Prime Minister of South Africa on the death of General Botha, and held office for five years. Then he retired into private life and studied philosophy, like Lord Balfour. In 1932 the great depression called him back to General Hertzog's National Cabinet, where he remained till the outbreak of the present war. Then once again he stepped forward to save his country in the new world crisis, just as he did in the old.

Stage Set for an Offensive : Smuts' Important Declaration An elder statesman of the British Empire, Field-Marshal Smuts spoke to Britain and the world with unrivalled authority. "The fourth year of the war

The Russian Black Sea fleet—Preparing for an operational flight.

occasion". That judgment has ripened as a result of experience in the years of war and in the years of peace. During the Boer War of 1899-1902 he won his spurs as a Boer guerilla leader. Then he joined General Botha, one of the signatories of the peace treaty, in the policy of responding by co-operation to the British Government's grant of self-government to the ex-Boer republics in 1907. In 1910 South Africa became a Dominion of the British Empire under the title of the Union of South Africa. In 1913 Smuts became the second man in General Botha's Ministry. In 1915 he conducted a campaign in German East Africa which left the German General Lettow Von Vorbeck, a hunted guerilla commander for the rest of the war. In June 1917 he joined Mr. Lloyd George's War Cabinet,

had now been reached" said Smuts. "The defensive phase had ended, and the stage was now set for an offensive. The Allies' resources had been mobilized on a large scale, while the enemy's were declining." This represents a formal declaration from the United Nations that the war is entering a new phase, and the declaration has in fact been put into practice by the new offensive launched in Egypt last week. One of the moving passages in his speech is that which proclaims this struggle to be one of the spirit. "It is a struggle of life and death, between the contending systems and ideologies which now divide mankind." "Which do you choose," he asked; "—the free spirit of man and the moral idealism which has shaped the values and ideals

of our civilization, or this horrid substitute, this foul obsession now resuscitated from the underworld of the past?" "Decency, sympathy and mercy are not words found in this new code". The Field-Marshal contrasted the Cross of Christ with the Crooked Cross and referred to Christian principles and Nazi *Kultur*. But this should not be understood as a narrowing of the outlook or excluding other religions and cultures. As he was addressing a Christian audience, he has spoken in that manner, but a perusal of his whole speech clearly shows that the principles to which he appealed were those which are universally acclaimed by all the major religions. A Nazi attack on these principles threatens the root of all the religions, and attempts to drag mankind back to the jungle.

Post-War Problems: Blend of Idealism and Realism In his address the Field-Marshal dealt with the post-war problems with an admirable blend of idealism and realism.

He said:

"We have agreed on certain large principles of social policy involving social security for the citizen in a

matter which has lain at the roots of much social unrest and suffering in the past. Certain patent social and economic evils could be tackled on modest practical lines on an international scale almost at once."

Referring to the "United Nations," he said that it was a new conception much in advance of the old concept of the League of Nations. It was a fruitful conception, he said, on the basis of which the practical machinery for the functioning of an international order could be ordered.

Referring to the Atlantic Charter, he said that certain large principles of international policy in the social and economic sphere had been accepted and it marked a great step forward by laying the foundations of a world Magna Carta. His idea was "Justice and Fairplay or All." He said, "We cannot hope to establish a new Heaven and a new Earth in the bleak world which will follow this most destructive conflict in history", but we can hope to attack social and economic evils and bring about a better state of things. Thus spoke the true statesman who reminds one of Pericles and Asoka, Richelieu and Akbar.

ARMY POSTAL VACANCIES

Civilian recruits are being accepted for employment as havildars in Indian Army Postal Units for the duration of the war, with a likelihood of permanent appointments in the Posts and Telegraphs Department when victory has been won.

Recruits, who must be between the ages of 18 and 25 (in special cases 30), will be enrolled in the Indian General Service Corps. During a training period extending over three or four months they will receive the basic pay of a sepoy, plus a training period allowance of Rs. 29 per month. Candidates who undergo training as postmasters will have their training period allowance increased to Rs. 44 per month after the third month.

Immediately they have completed their training, recruits will fill vacancies in war establishments of Army Postal Units. They will be granted the war substantive rank of havildar, and will receive pay of rank, plus grade pay. Candidates filling the appointment of postmaster will receive grade pay at grade 1 rates. Clerks will be paid at grade 2 or grade 3 rates.

Minimum educational qualifications for employment in Army Postal Units will be matriculation, or any equivalent examination, but in exceptional circumstances these may be waived.

After discharge from the Army, personnel with one year's satisfactory service in the field will be eligible for permanent appointments in the Posts and Telegraphs Department. Fifty per cent of the vacancies in this Department are being reserved for such personnel. The condition of one year's field service will be relaxed in the case of those who do not fulfil it due to an earlier end of the war.

Prospects of rising to Rs. 300 per month, with free rations, clothing and accommodation, exist for capable men, and fuller details may be obtained from any Technical Recruiting Officer.

The Eighth Army Strikes!

"GOOD show, keep it up." This was a message sent by the Eighth Army to Allied bombers which carried out a terrific bombardment of the Axis ground forces on Monday last, within full sight of the Allied troops in the northern area of the battle-front in Egypt. This can well be a message from the freedom-loving world to the Eighth Army as a whole on their opening successes. The Eighth Army's vigorous assault in front of El Alamein is really an all-out attempt to smash the Axis positions. The operations which are of a massive character appear to be along the whole front. The Axis was expecting such an offensive, and this was evident by the increased air attacks on Malta and the attempts to rush reinforcements and supplies through at all costs.

The Offensive Starts

THE Allied offensive was launched on Friday night (October 23), in bright moonlight under cover of the greatest artillery barrage ever seen in North Africa. "A start has been made on what General Smuts has called the offensive," said General Montgomery, Commander of the Eighth Army, to pressmen before the launching of the attack. He observed that in this battle the Eighth Army and the Air Forces supporting it were one, and therein lay their great strength. The offensive which has behind it such strength is taking place almost on Egypt's front door, and it represents a great and mighty effort which will

have consequences of a far-reaching character. For it will be a real trial of strength between the Allied and the Axis forces. The severity of the attack of the Eighth Army has already cracked the hard crust of the enemy's defences, and the gaps created are now being widened by steady and increased Allied pressure.

A Thrilling Feat

IT may be recalled that the Eighth Army did a magnificent job in halting Rommel's headlong offensive and regaining the initiative sometime ago. Its achievement in

Reuter's Special Correspondent reports that a number of Italian and German prisoners were taken by the Eighth Army during its advance last week. Photo shows German prisoners captured by the Eighth Army a few months ago being lined up and marched away.

turning at bay and pinning down the Axis forces in front of El Alamein after heavy defeat and long and exhausting retreat is one of the most thrilling feats of the war. A very ugly corner was turned at a time when defeat of the first magnitude appeared to be imminent. By clever counter-attacks, the Eighth Army prevented Rommel from putting through his favourite device of massing a numerically superior force at a given point and following it up with a swift enveloping movement. These counter-attacks inflicted the maximum punishment on the enemy's striking power. "Rarely or never," reported the *Times* Cairo Correspondent, "has any Army in the field taken such a beating from air as has been the lot of the Afrika Corps . . . the moral effect has been shattering." The Eighth Army was then suffering under serious disadvantage. The depressing effects of defeat and continuous retreat and a sense of impotence due to serious weakness in tanks might have deteriorated the *morale* of any army, but not of the Eighth Army. As against this, the Axis forces had the encouraging effect of successful advance and the exhilarating prospect of a dazzling victory and the hope of rest and refreshment in Alexandria and Cairo. Though desperately weak in tanks and depleted in field and anti-tank guns, the Eighth Army dug its toes in along the front of about 35 miles between the sea and the edge of the Quattera depression.

Race for Reinforcements

THE situation was thus one of deadly peril, and there was an hourly danger of a sudden enveloping movement by tank formations which Allied guns and tank units could not ward off. The Germans were dangerously close to the Nile Delta area, and the temptation on Rommel's side to rush the short last lap to Alexandria must be very great. But lack of reinforcements forced a lull on a situation fraught with dangerous possibilities. What was once mobile desert warfare became a battle of positions. This was only a temporary phase, and behind an apparently static front there was high pressure activity on both sides to build up full-scale striking power. Neither side was strong enough to undertake a great offensive, and the whole issue depended on who won the race for reinforcements. During his short stay in Egypt, Mr. Churchill told the troops, "You have done magnificently. Plenty of stuff is coming." And plenty of stuff came to start the new Battle for Egypt. Mr. Churchill told the Egyptians that Britain was "determined to fight for Egypt and the Nile Valley as if it were the soil of England itself." And that fight is now on with the greatest vigour possible.

THE Battle for Egypt has been going on for the last two years. It was in June 1940 that Italy thought fit to enter the war and began to dream of a great African Empire. It was on September 15, 1940, that Italians began to advance across the Egyptian border. Marshal Graziani predicted September 18, 1940, as the date for his entry into Alexandria. Neither Graziani in September 1940 nor Rommel in September 1942 could achieve the feat of entry into Alexandria.

THE Eighth Army which was built up from scratch stands in the way. It is one of the most efficient fighting entities of this war and stands guard at a crucial theatre of the world—a theatre which is the southern hinge of the Russian army and the front-door to British East Africa and the Union of South Africa. It is holding apart the Axis powers in Europe from the Japanese in Asia.

Has a good hand

GENERAL MONTGOMERY has a good hand, and is playing it with courage and confidence. On him and his great army depends the future of the southern front of the Allies.

Grow More Food—His Excellency Sets An Example

Government House Gardens, Madras.

Why People Run Away

Lack of Familiarity With Danger

BY

THE HON. MR. JUSTICE
S. WADSWORTH

HAVE you ever noticed what happens when an old woman is crossing the street and suddenly hears the horn of an approaching motor? She gives a start and then begins to run forward and, more often than not, she changes her mind and dodges back again, with the result that the driver of the car has to jam on all his brakes to prevent an accident. Of course if the woman stopped to think, she would realize that she only has to stand perfectly motionless, or better still, walk steadily forward, for the driver to avoid her with ease. But all of us have a natural tendency to run when scared. We call it the instinct of self-preservation, but too often it results in self-destruction.

Nowhere was this seen more clearly than in Belgium and Northern France in May 1940. Perhaps you have read some of those terrible books which described the flight of the refugees from those parts. They make grim reading, the more so because they are true. It was the same everywhere—long before the Germans were anywhere near a town, rumours started that the enemy was at hand. The whole population was seized with panic and this treacherous instinct of self-preservation led it to its doom. In their thousands they poured out on to the congested roads—cluttering them up with hand-carts and wheel-barrows and perambulators, laden with luggage. The roads were so jammed with panicky crowds and uncontrolled traffic that the troops moving up to the front could not advance, thus enabling the Germans to push forward with little resistance. If the hordes of refugees showed any signs of stopping, enemy planes swooped down with bombs and machine guns, butchering the helpless people and stirring up fresh panic. Families became separated in the confusion, and old folks and little children were left to die by the road side.

The irresistible westward flow of this great torrent of suffering humanity did more than anything else to hamper and demoralize the defending forces. But when the advancing forces of the enemy eventually caught up with

the jam of refugees, they quickly cut a path through it with machine gun bullets—a method which the Allies could not contemplate. What the loss of civilian life was in those tragic weeks, none will ever know, but it must have been enormous. What is quite certain is that, if these millions had stayed quietly in the shelter of their homes, the vast majority of them would have been perfectly safe and the defending armies would have had a far better chance of arresting the German advance.

RUNNING AWAY—ARRANT FOLLY

Running away from an invasion is dangerous enough; but running away from an air raid is arrant folly. We now know that the very heavy casualties caused by the first Japanese raid on Rangoon were almost entirely due to the madness or ignorance of the people who streamed into the streets and tried to run away while the enemy planes were still overhead. The result was a death-roll which would have been almost entirely avoided if the people had had the sense to stay within the shelter of their houses. Did you see the figures of the casualties from air raids in England during the first three years of the war? When you think of the thousands and thousands of bombs which have been rained down indiscriminately upon the London area during this period, the figures of deaths due to enemy action were amazingly low. It is difficult to say what would be the percentage to total population, because there has been a good deal of evacuation of children and non-workers from the most vulnerable areas; but certainly the death-rate for the whole period cannot be more than a small fraction of one per cent. Compare this with what happens when cholera strikes an Indian village and often decimates the population in a few weeks. Yet people

Greetings to Greece

"Outside their own country the armed forces of Greece—Navy, Army and Air Force, are now once again in the field, already testing their growing strength in the face of the enemy anxious for the day, not far off now, when they will be with you in avenging your present sufferings. The British people greet you in admiration and sympathy and in the firm confidence that the day of freedom will surely dawn."

—MR. WINSTON CHURCHILL,
*the Prime Minister, in a message to the
Greek people on October 28, the second
anniversary of Mussolini's attack on Greece.*

take cholera almost for granted but are prepared to run away in tens of thousands if half a dozen bombs are dropped in the neighbourhood. It is not that the people of this country have less courage than the citizens of London.

COURAGE OF AN INDIAN VILLAGER

The courage of the Indian villager in a cholera epidemic is sometimes remarkable. I shall always remember an incident which happened in Malabar, where a prisoner was being taken by road in the custody of a constable to stand his trial before the magistrate. They had about fifteen miles to walk and when they had got about half way, the constable was suddenly taken ill with cholera. A fine chance for the prisoner to escape, you will say. Not a bit of it. What that poor criminal did was to put the constable on his back, vomiting and purging as he was, and carry him several miles to the nearest town, where a doctor saved the man's life. I have heard a few braver or nobler acts than that and I am glad to say that it was rewarded. No, it is not lack of courage that makes people run away from bombs. It is lack of familiarity with the danger. I hope that the occasion will not arise, but I have little doubt that if air-raids on Madras became frequent, the people of this city would get used to them and would carry on their daily tasks with an imperturbability not much inferior to that which has earned for the citizens of London the admiration of the world.

We all have the feeling that the United Nations are getting the upper hand in the air, both in the east and in the west. We do not know what the future may bring forth, but we have reason to think that a serious attack on our coast is far less likely now than it was a few months ago and that, if it did come, we are much more prepared to meet it. But this is a war in which the unexpected has been almost the rule. It would be very foolish of us to bank on the belief that the danger to our coast-line is past and to be unprepared for what may happen if we are wrong. Suppose the unexpected happens and there is a recrudescence of attacks on the Madras coast. What is the duty of us ordinary citizens who are not engaged in A.R.P. or other defence duties? I venture to think that it can be summarized in two words—stay put.

AFTER THE FIRST AIR RAID

Don't start rushing about looking for a safer place. Get into the nearest building or trench, and stay there. If our fighters go out to engage the enemy, don't run into the middle of the street to see the fun—the chances are that, if you do, something unpleasant may drop on you. Above all when the first raid is over, don't dash to the railway station with all your family and belongings and clamour wildly for a ticket to the other end of India. To do this is to let your instinct for self-preservation get the better of your common sense,

just like the old woman who dances about in front of an oncoming motor car. If enemy planes are about, railways and roads are places to avoid and probably your own house is as safe as anywhere else, especially if it has a shelter trench handy. Moreover we have all got a duty in this matter. Not only ought we to resolve to do nothing to spread panic, we ought also to make up our minds to do nothing which will in any way impede the defence of our country. Nothing helps the enemy more than the disorganization of our communications. A mad stampede for railways and roads impedes the movement of the defence forces and may be fatal to their success.

We who live in South India have, in the past, been so far removed from the dangers of war that we have grown up unfamiliar with warlike men and warlike things. Many of us have been brought up to regard sepoys and soldiers as dangerous animals like tigers and lions, to be avoided by peaceable folk. Now most of us have grown more familiar with the sight of the Indian sepoy and the British soldier and we are beginning to recognize him for what he is—an ordinary decent fellow made of the same stuff as ourselves and sent here for our defence. Those of you who have mixed much with the soldiery will know that most of them have wives and children at home whom they are missing dreadfully, they are suffering constantly from home sickness and respond gladly to any little bit of friendliness they may receive from the strangers they have come to defend. We can do much to make the lot of our defenders easier. We may not all be able to entertain them in our homes, but we can at least show them courtesy and friendliness whenever we meet them. Let not our political views blind us to the fact that these

FROM BRITAIN: WINTER CLOTHING FOR RUSSIANS

BIG SHIPLOADS of warm winter clothing for Russians will soon be dispatched from Britain, reports the *Daily Herald*. Garments of all kinds—some of them specially prepared for the Russian climate—will be included in the consignments

LAST year Britain sent to Russia more than 500,000 blankets and more than 400,000 woollen garments. The supplies Britain is about to send will be substantially greater

men, whether they be Indian or British, are strangers in a strange land, sent here for our protection. Surely they should be treated as honoured guests. They are not concerned with policies or parties. They have left their homes to fight the forces of evil and are prepared to undergo dangers and hardships in the common cause, which is our cause just as much as theirs. Let us therefore greet them as friends, whatever their community.

THREE SOLDIERS AND A DOCTOR

I was much cheered by an incident which happened in Madras a few weeks ago. Three soldiers were wandering late one night along the Poonamallee High Road, having missed the last train back to their camp and not knowing where to go or what to do. An Indian doctor returning from a professional visit, saw them, thought they had lost their way and asked them if he could help. They told him of their plight and he took them into his house, gave them a bed for the night and a cup of coffee in the morning and set them on their way with a feeling of friendliness towards India and Indians which no amount of lecturing could have given them. I venture to think that this hospitable doctor did more for the cause of Indian freedom than those who preach the pernicious doctrine of national hatred.

True nationalism is love of one's own country, not hatred of other people. It is the duty of all lovers of India to be jealous of India's good name and to do nothing which will hamper her defence. If the time of trial comes and we are once again threatened by hostile action, let the defence of our country, not the safety of our own skins, be our first concern. Let us avoid panic which reduces men to the level of the beasts and generally results in the direst peril. If bombs come, let us remember that it is our duty to our country to remain calm, to set a good example to others and to avoid any action which will hamper the movements of those who are defending us. I earnestly hope that the occasion will not arise, but if it does and if you hear the bombs falling and the machine guns rattling, keep calm, take shelter and stay put.

—A recent broadcast talk from A.I.R., Madras.

Stalingrad will not fall

"Stalingrad will not fall. The Grozny oilfields will remain in Russian hands. The Germans will not get the Baku oil region this winter."

—ADMIRAL STANDLEY,
U.S. Ambassador to Moscow, in an
interview, on October 28, at Washington.

A Sizzle in the Frying Pan

Jap Admirals' Visit to Ankara

BY

LEONARD KIRSCHEN

REAR-ADMIRAL Nomura and Vice-Admiral Abe recently visited Turkey. They came and went with no more noise than a sizzle in the frying pan. For one day they were seen feeding their emaciated stomachs in Ankara's most famous restaurant Karpic and the next day they were sunning their newly acquired paunches on the terrace of the German-infested Parc Hotel in Istanbul. Then they disappeared as noiselessly as they had come.

It is hardly likely that these famous Admirals had come to Turkey only to tuck in a good meal which I am sure they had been badly in need of, seeing that Nomura is naval attache in Berlin and Abe fills the same place in Rome. Their trip to Turkey seems to have been an extension of a Cook's tour to the Balkans including Bucharest, Sofia, Belgrade and Athens.

The Japanese investors in the Axis company, already doomed to certain bankruptcy, have lately been asked by their already weakened partners to place some more capital in the rotten firm. It was whispered all over Europe at the beginning of this year that the Japanese were going to attack Russia in the late summer and it had been thought possible that the initial attack on Stalingrad on July 18 would coincide with a Japanese attack on Russia. This would have helped Von Bock a good deal and might have diverted to the Far East—if not the men—at least a substantial quantity of Russian war material and planes. The Japs, however, did not attack.

CAUTIOUS BUSINESSMEN

The Japs disappeared from the Bay of Bengal too. The famous Jap air-carriers which had at one time been having what seemed a field day all on their own have had to ingurgitate some of the bitter medicine handed them at the battle of the Midway and Solomon islands, especially in the Coral sea battle. In China too it seems that the Jap household gods are about to turn their faces away and the China incident is just beginning for the Japs to develop into something really worth calling an incident.

All this, however, does not seem to impress the European partners of the Tripartite Pact. Everyone is extremely keen in saving his own skin and even if Berlin and Rome have already had plenty of time to digest the news from the Far East, it seems to the strategists in both capitals that the fate of the whole bankrupt going tripartite firm hangs on the willingness of the Japs to do a little more, just a tiny weeny little bit more until winter is over and Mussolini has time to polish his several million bayonets and Hitler time to sew the buttons on the several million new greatcoats.

But the Japs are extremely cautious business men. They have their fingers in one or two pies amongst the most important of which is greater Asia. They would be rather unwilling to risk one venture for another uncertain one and as good business men they have sent their men to investigate in Europe what their partners are doing and whether it is indeed a sound proposition to make fresh investments in a firm that has already swallowed a good deal more capital than had at first been estimated. This is the real significance of the recent Jap visit to Turkey and Ankara.

JAPANESE DIPLOMACY

It has always been the acknowledged policy of the Japs to visit and entertain cordial relations with all the countries bordering Russia on the West. Thus the Japanese have always entertained the most cordial relations with Poland and Rumania. It will be remembered that ex-King Carol, when Crown Prince, visited Japan. The Japs have always hoped that when they would attack Russia some day the other peoples would give them a helping hand. Now it so happened that Russia was attacked by the others and the Japs feel that it is their duty now to be at least so honest and go from time to time and shake these people by the hand and tell them what honourable gentlemen they all are. But there is just one honourable gentleman who does not seem at all inclined to go and blunt a spear-head for the Tenno and that is the Turk. So the two Admirals came to Turkey in order to see why the Turk is neutral.

They must have found here a totally different atmosphere. Turkey is to-day the only country where one can get an impartial perspective of all the happenings in the world. If the Japanese diplomats and soldiers posted in the European capitals find it difficult to obtain information about what is going on in the world there is certainly no difficulty of informing oneself of the truth in Turkey. Therefore, the Japs came to Ankara to take a breath of fresh air and find things out for themselves, which they most probably did.

TURKEY'S FIRM ATTITUDE

In Turkey the Jap sailors certainly learned the truth. But there is just one more reason for their presence here. Since the expulsion of the Jap diplomats from Iran the Axis have

found it extremely difficult to spy in the Middle East and especially in the Caucasus. The Japanese Legation in Teheran would inform the Axis partners immediately of the slightest development in Iran and Iraq and were days ahead with the news. It was sometimes uncanny the way Radio Berlin broadcast the day's happenings in Teheran. Now all this has collapsed overnight. If the rainy season ceases and the Japs will try another attack on India they must know beforehand what the conditions in this part of the world really are if they want to join hands with the Germans over the Gulf of Persia. The Axis information service has broken down completely and the Japs were here to try and see what can be done about it. There is, however, precious little chance that the Turks will allow their territory to be used as a sort of universal key-hole. A few high-spirited Vichy French and Italian adventurers have already paid a high price for trying to use Turkey as a convenient look-out or suitable spot to foment trouble in neighbouring countries.

ISSUE LIES IN EUROPE

Officially the Jap visitors had no contact with the Turkish Government. Even if they have had informal contact with Turkish sailors and soldiers they must have noticed how the latter were reserved. It was certainly not lost on the two visitors that the Turks do not attach much importance to the issue in the Pacific and that they consider the Japs as nothing more than potential nuisance makers. It is clear to the Turkish people and that they have expressed best in the Press that the issue lies in Europe and not in the Pacific. The Japs departed as noiselessly as they had come and the Turkish people have not even noticed their presence.

More Refugees from Burma likely

Steps are well in hand to meet the situation which may arise if there is a further influx of refugees from Burma into India after the monsoon. It is impossible to estimate how many more evacuees from Burma are likely to come into India during the next few months, or indeed whether any more evacuees will arrive at all, but the authorities feel that they should be prepared for all eventualities.

An Uneasy Partner

Siam, the Enigma of Asia

BY

F. WHITTINGHAM-JONES

SIAM to-day is the enigma of Asia. Sir Josiah Crosby, formerly British Minister at Bangkok, who has been repatriated, will doubtless have some revelations to make on the situation there. To what extent has Siam identified herself with Japan's "New Order" in Asia? That is the crucial question.

Reading between the lines of the meagre trickle of news which has reached the outside world during the past nine months, I find significant and growing indications that Siam is an uneasy partner in the "New Order" and indeed only participates under duress.

JAPAN'S INTENTIONS

Japan's intentions are apparent from her creation of "Ministry of Greater East Asia" on September 1. That Ministry is to provide political machinery for the largest-scale adventure in militarism that the world has seen. It will control all matters concerning Japanese residents in "Greater East Asia," all companies doing business there, and the development of natural resources such as mines, and it will protect Japanese trade. Japanese embassies and legations (and presumably, all consulates) in "Greater East Asia" will be merged in the new Ministry.

In short, at a single stroke Japan creates a vast system of extra-territorial rights for her own nationals and proclaims colonial status for all occupied territories, the pretence of whose pledged "independence" is thereby abandoned. If Japanese ambassadors are to be controlled by the Colonial Office instead of by the Foreign Office, it means that they will become civil servants rather than diplomats. From Manchukuo to New Guinea, from Nanking to Rangoon, politics, economics, trade and culture will fall more and more under the direct control of Tokyo.

FEELING THE PINCH.

Siam is already feeling the pinch of "Co-Prosperity." There is increasing shortage of food, though not yet to the point of starvation. Labour troubles are acute, and all goods are scarce. Rationing is foreshadowed.

First it will be tried out on matches. Experience gained from the control of matches will be applied to bring other commodities under control.

It is evident, from the much-advertised lack of sugar and petroleum in Siam, that Japan is unable to bring these articles up from Java. Lack of shipping has killed Siam's export trade in tin, rubber and rice, on which the prosperity of the country depends.

Popular discontent was manifested by riots in Bangkok last June. The "ten-year plan" to promote "Co-Prosperity for Thailand" launched by the puppet Government in that month gives small promise of alleviating the stringency. "Revolutionary plans" are said to have been formulated to bring about "self-sufficiency" in several selected industries—tin, fuel, matches, meat and canning, vegetable and dairy production.

A MIRAGE

Meat, canning and dairy products are of little importance, and Siam may continue to make her own matches and produce more vegetables, but the prospect of attaining profit-yielding industrial "self-sufficiency" implied (though not promised) by Japan is a mirage. Siam has no heavy industries, and always had to import her metals, metal manufactures, machinery and engineering plant and tools. Large quantities came from Europe, Britain and America; now Japan is the sole supplier. As Japan cannot produce enough of such things to cover her own needs in wartime, there can be none for Siam, and the "plan" makes no attempt to supply the deficiency.

Then, too, it would take a long time before skilled labour on any scale could be provided. A new labour code introduced on August 14 "to increase industrial output and food supply" imposes compulsory service on every male, under 50 except priests and students. The main purpose of the decree is obviously to augment food supply.

ALL TRADE LOST

Yet present conditions leave Siam with no alternative but to become "self-sufficient" even at starvation level. Total disappearance of international trade and shipping in that part of the world has thrown her wholly upon her own resources. "Co-Prosperity" in practice means just that—loss of all external trade except that enforced by Japan, who gives little or nothing in return. So little does Japan care for the prosperity of her subject States that Siam is threatened with a compulsory change-over of production from rice to cotton; and cotton, when produced, is to go to Japan. In July the puppet Government urged the population to grow more vegetables "as a country which cannot nourish itself always runs a risk of famine in wartime." Although the vegetable position was difficult before the war, it has steadily deteriorated since.

WORK OR PERISH

On the tenth anniversary of the Revolution in June, Premier Luang Pibul Songgram issued a warning against rumour-mongering "which might produce evil effects" should important articles become scarce, "adding that this state of affairs "could be improved only by thrift and increased production at home." On August 26 Bangkok Radio warned the people: "The truth is that Thailand cannot get goods from abroad any more. We must make things we cannot get, or we will have to do without them and die a slow and certain death from starvation."

war when Bangkok's exposed situation was considered against the possibility of "enemy invasion." At that time the motive was purely strategic. Now Japan revives the proposal for the purpose of loosening the Government's hold on the country and breaking the influence of the large Chinese population in Bangkok which constitutes a formidable source of trouble. Tokyo, however, would still keep the banking and commercial centre at Bangkok, for she would more easily dominate that with the Siamese Government safely out of the way. It is rumoured also that Japan contemplates leasing Bangkok harbour.

GENERAL WAVELL ON BURMA SOIL.—General Wavell recently inspected forward positions on the north-east frontier. During this visit he crossed the Burma border. A High Burmese Chief greets General Wavell on his arrival.

This was followed on September 3 by a further appeal to the public "not to be extravagant and not to buy anything unless it was urgently needed."

Thus "self-sufficiency" means that Siam must stew in her own juice, with the prospect of relapsing into a poverty-stricken peasant economy which will give the Japanese imperialists greater scope for interference later on.

PROJECTED CHANGES

Even now Japan is projecting such changes as the removal of Siam's capital from Bangkok to Saraburi, a small town in the hills 124 miles to the north-east. There was talk of moving the seat of government before the

STEP BY STEP

Since the signing of a treaty of alliance between Siam and Japan on December 21, 1941, the re-orientation of Siam's policy has been pronounced in foreign affairs. As the next step, on January 27 she duly declared war on Britain and America. Then came recognition of the Wang-Ching-wei regime in China and the claim that that recognition "completed the encirclement of Chungking."

Japan was always anxious to repudiate "colonial" aspirations. "Planned collaboration between Thailand and Japan does not mean that Japan will consider Thailand as a colony," said the Japanese spokesman in

Bangkok recently. "Japan does not want to repeat the mistakes of the British."

Not that the British ever did interfere in the internal affairs of Siam. In the old days we enjoyed certain treaty rights accorded to us by successive Siamese Governments, but the last vestige of extra-territorial rights disappeared with the signing of an Anglo-Siamese Treaty in 1937 when Siam achieved complete fiscal and financial autonomy.

FREE SIAMESE

Although the Siamese at home are unable to express their real feelings at this moment, the true mind of the people may be gauged from the fact that, whereas all Siamese in Britain and America were given an opportunity of being repatriated, only 18 in America and 15 in Britain availed themselves of the offer. The rest refused, and almost all able-bodied men have enlisted for the fighting services. Led by Mr. Mani Sanasen in Britain and Mr. Seni Pranoi in America, free Siamese in both countries are endeavouring to win official recognition and so throw their full weight into the Allied cause.

Down the centuries Siam has had little contact with Japan until in recent years students began to go to study in Tokyo partly because it was cheaper—though admittedly it was second rate—and partly because of travel difficulties in Europe at war. Japanese occupation of the country has intensified the hostility of the Siamese masses, and it seems unlikely that "Co-Prosperity"—even if it looked at all like prosperity—will ever command allegiance any more than it will fulfil the anxious ambitions of Japan.

—The Daily Telegraph.

CHINESE TRAINING IN INDIA

There is a training camp somewhere in India for Chinese soldiers, who are getting ready to fight their way back to their country through Burma. They are being trained under United States officers with arms and equipment such as their comrades fighting in China are clamouring for.

Guns used by these Chinese are among the latest American weapons, constructed after fifteen years' study. The Chinese are the first non-Americans to handle them and are taking to them with the greatest enthusiasm and thoroughness. The firing ranges and training grounds cover many hundred acres ringed by jungle-covered hills, which reverberate all day to the rattle of artillery and small arms.

Colonel Fredrick McCabe from Los Angeles is in charge of the infantry training and is Camp Commandant. Colonel George W. Sliney from San Francisco is in charge of the field artillery training section.

Two Epic Defences

NOT just by an accident do Malta and Stalingrad stand side by side in headlines each day, writes the *Daily Express*.

We see the deathless city and the indomitable island as two nodal points in one vast strategic battle-line—one battle wherein the Germans are on the offensive in two directions. Both these places must be neutralized before the Germans can develop their main design which is to join up Marshal Rommel threatening the Nile with Kempff menacing Caucasia, our supply line to Russia and our own oilfields in Persia.

The Malta assault, regardless of losses, continues day and night. It cost the Axis over 1,000 airplanes and well over a hundred in the latest campaign. Our forces like the defenders of Stalingrad are outnumbered but they are far ahead in the kill. Yet the enemy comes on asking for more punishment and is getting it.

Why is this? What is afoot? You may be sure that the enemy are seeking cover for their African convoys. But their ferocity seems to mean even more. Malta was reinforced heavily by a battered convoy that got through with men, planes, fuel and ammunition. The Germans seem mighty eager to destroy or put out of use all the cargo borne by that armada.

"I heard it from a man who was actually there"

Was he? Are you certain?

Don't pass on idle rumours.

They cause uncertainty, unhappiness and loss.

They are started by the enemy

who rely on gullible people to pass them on.

DON'T BELIEVE 'RUMOURS
BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

Air War over Mediterranean

A heavy bomber war is developing over the Mediterranean, writes the *Daily Herald* air correspondent:

Soon the 4-engined bomber will be the most powerful air weapon of the United Nations in the Middle East as it is in this country.

empty gliders back to Crete. But tanks and other heavy material had to come by sea.

Hence the 10 days of intense raiding was designed to keep the Malta defenders too busy to attack Axis convoys. Such raids would have been more effective a year ago when Malta was regarded more as a bomber than as a fighter base and the island's main defenders were A.-A. guns.

Now Malta is the Mediterranean's advanced fighter base just as we have our advanced fighter bases in the south of this island while big bomber bases are farther away from the continent.

GENERAL ALEXANDER VISITS INDIAN TROOPS.—General Alexander recently inspected Indian troops at an Indian Reinforcement Camp. Here he is seen talking to three Indian soldiers, who recently escaped from a Nazi Prisoner of War Camp in Libya.

Allied heavy bomber forces based on Egypt are being increased as fast as is possible. It is now recognized that every 4-engined bomber sent to Egypt makes the job of maintaining supplies for Rommel's army more difficult.

Malta's great Spitfire battle, directed by Air Vice-Marshal Keth Park fits into the pattern of this new air war. During his last limited offensive in Egypt, Rommel lost heavily in tanks. They had to be replaced. Troops could come by air. The Junkers-52 air transports, attacked by our long range fighters the other day may have been towing

Malta has Spitfires, long range fighters and torpedo bombers. Long range fighters can attack the enemy's bombers over their bases in Sicily, torpedo bombers can attack any ships that come within reasonable distance of the island, Spitfires can keep island secure as base for light naval forces. And the Axis supplies which slip past Malta can be attacked in the harbour and supply dumps in Libya by our 4-engined bombers based on Egypt. That is the Mediterranean air picture. Our success in the land battle depends on how far our 4-engined bombers can destroy Rommel's supplies at long range.

Importance of the Air-Raid Warden Public's Guide, Philosopher and Friend

By WING-COMMANDER T. J. HODSELL, *Inspector-General of Civil Defence in Britain*

THE original charter of the Wardens Service, stated, among other things, that warden should be 'the guide, philosopher, and friend of the civil population.' How right was this idea, and how well the wardens have achieved it, experience has fully shown. I am not exaggerating when I say that the Wardens Service has been one of the biggest factors in helping us to defeat the blitzkrieg against the civil population.

To realize the value of the wardens it is important to understand the nature of total war as conceived by Germany, Italy and Japan. Total war means just what its name implies; war in which everyone is personally and physically involved. And, as has been truly said, under these conditions the civil population becomes the base of the triangle of which the Armed Forces are the apex and production the sides. Knock away the base and the whole structure comes tumbling to the ground. This base can be attacked and destroyed in a number of ways. But here we are only concerned with bombing.

ATTEMPT TO DESTROY MORALE

We realize that part of Hitler's strategy would be an attempt to destroy the morale of the civil population by bombing attack both by day and by night; and that if this action succeeded all would be lost. Therefore we set about creating an organization of the citizens themselves to help defeat this strategy.

Bombing is an unpleasant form of entertainment for anyone; but especially for ordinary civilians who have received no military training, and who are, of course, under no form of discipline. We have got our police forces. But we realize that, with all the will in the world, they could not be in more than three places at once. And so we decided that we must have as well, a force of wardens to cover every street and village in the country who, because they were trained, would know what to do, and would by their bearing and steady action inspire the civil population with confidence.

They would also provide a most valuable link between the civil population and the Civil Defence organization, and indeed, between the Government and the civil population.

ACCURATE AND SWIFT REPORTING

To be a leader of the population in his area is, therefore, one of the warden's most important jobs. But there is another and

equally important job—the reporting of damage caused by bombing of all kinds. In fact, on accurate and swift reporting depends the working of the whole Civil Defence machine. And I would like to say something about it.

Directly a warden hears or sees bombs falling in his sector he must listen for the explosion and watch where the bomb or bombs strike. If he hears the bomb fall with no explosion following then he will realize at once that it is a time bomb. Whatever happens he must go at once to the scene, discover what has happened; whether there are casualties, whether there are people trapped, whether fire, gas, water or electricity mains are damaged. Then he must make an immediate report—we call it an express report—giving minimum details, to the Report or Control Centre.

The officer in charge wants to know what services are urgently required—rescue, first-aid, and so on. The warden's report should give just this information so that help can be got to the scene with the least delay. If there is fire then the warden reports direct to the nearest fire station in order to save time.

It is probable that there will be more than one warden available at the scene of damage, and as soon as the express report is got away one of them will make a more detailed reconnaissance with the object of sending a second and fuller report for the information of Control, while the rest will do all they can to help with casualties—rescuing trapped people, putting out fires—until the mobile services (that is, the rescue squads, fire-fighters, and first-aid parties) arrive.

So the first thing is to report, the second to render immediate aid. And don't forget that if the raid is heavy and the mobile services are fully extended, the saving of life and property may depend on the warden. And so we train our wardens also in first-aid and the principles of rescue work and give them some first-aid equipment. We also, of course, teach them how to tackle incendiary bombs. In other words, a warden must be trained to turn his hand skilfully to any work that the immediate situation may demand.

WARDEN MUST KNOW HIS SECTOR

Now, while this training is important, there is a complementary part to it, no less vital, if a warden is to give his best service. That is knowledge of his sector. It must be a real and detailed knowledge—where everyone lives; where people shelter; the position of

fire hydrants, telephones, gas mains, water mains, the nearest first-aid post, rescue depot, and so on. It is information that may make all the difference in handling the situation in the confusion, dust, and possibly darkness where a bomb has fallen. This information takes time to collect and to know, and the really good warden will carry it in his head. We encourage all wardens' posts to have a plan, on a largish scale, of the area their post covers prominently displayed. It is very useful and is always there for study. But that study must be made on the ground in daylight and in darkness.

Now I expect you will understand why it is so essential for the warden to have the confidence of the public. They must help him in his task and be ready to give him any reasonable information he wants. They won't do it unless they trust him. If they go away for the week-end they should tell the warden; if they have friends to stay, the warden should know. His information about his sector must not only be thorough but it must be up-to-date and kept up-to-date every day. Lives may depend on the accuracy of the warden's knowledge.

The wardens should also be able to help and advise the public about shelters, where is the best place in their house to take cover, and other things concerning their personal protection.

We make the wardens take an important part in the training of the fire guards and the public in how to put out incendiary bombs and deal with small fires. Again you will see how important it is that wardens should be well trained in all their different duties. We go on this principle: a warden may meet with fire, high-explosive damage, and gas and, therefore, must know just what to do in all circumstances. And he must keep a cool head.

Wardens must know how to look after themselves too. They must be exposed to risks, as to do their job they must be out during the raid. But it is most important to avoid unnecessary casualties among them.

WOMEN MAKE JUST AS GOOD WARDENS AS MEN

I have spoken of wardens and it may have been inferred that I was talking only about men. But I should like to emphasize that women make just as good wardens as men—sometimes better. And there are obviously some jobs which women alone can do successfully. We have many women in the wardens service, some of them holding positions of great responsibility. I know one, and she is not unique, who has several hundred wardens working under her. And they would follow

her anywhere. As for the public she looks after, they have told me that so long as she is about and they know she is there they don't mind what happens. Could you have a finer tribute?

And that is just what you want—the public to feel that because the wardens are there helping and encouraging with a cheery word, everything is all right. That is the spirit that has helped us to stick out the raids. That is the spirit that breaks the Blitz. And that is what the wardens have managed to achieve.

CAN'T HAVE TOO MUCH PRACTICE

So may I leave this thought with you. The wardens can't know too much about the area of which they are in charge; they can't have too much practice, especially in sending messages and in summing up a situation quickly and accurately. Message-writing and sending sounds easy. But it is not quite the same thing to do it under ordinary conditions and to do it with bombs bursting and fires raging. That is where practice tells, and practice means instinctively doing the right thing however difficult the position. And also all wardens must be prepared to act on their own responsibility. We do not normally let them call out services direct. But if communications go, they may have to do it and we do not want them to be afraid to act on their own.

I have told you a little about the importance of wardens. I believe there may be a future for this organization of gallant men and women after the war. But in the meantime if they are and remain the guides, philosophers, and friends of the civil population they are making their contribution to our ultimate victory in no uncertain way.—(Broadcast in the B.B.C.'s North American Service.)

The caged beast.

There was, and is, no outlet for the caged beast in the west. Desperately he tries to force an outlet in the east, but the brave and indomitable Russians hold him in check.

—SIR ARCHIBALD SINCLAIR,
*Air Minister, in a speech in
London on October 27.*

MADRAS CASUALTIES

We regret to announce the following casualties which occurred on various dates:—

No. 141.

OTHER RANKS AND NON-COMBATANTS.

Missing, believed Prisoners of War.

I.A.O.C.			
O/73897	Sep. Dvr.	Perumal.	
O/73252	Sep. Dvr.	Prakasam, P.

Diary of the War

AIR ACTIVITY OVER ENGLAND AND GERMANY

24th Oct.—Mrs. Roosevelt arrived in England.

25th Oct.—A few enemy aircraft crossed the Channel and dropped bombs at several points.

Addressing a South African audience in London, Field-Marshal Smuts said: "The time for striking out is come."

26th Oct.—Prof. J. B. S. Haldane, addressing a Civil Defence Workers Conference in London gave warning of a possible gas attack on Britain.

27th Oct.—An air raid alert was sounded in London. Two enemy bombers were shot down over Britain.

UNITED STATES OF AMERICA AND THE ATLANTIC

26th Oct.—Another United States destroyer named **Daly** was launched.

27th Oct.—Mr. Joseph Grew, former United States Ambassador said: "The Japanese work well under orders—they are disciplined. They will not bend. They will fight until they can do it no longer."

INDIA, BURMA AND CEYLON

24th Oct.—In the course of a Press interview, Maulvi Mutabir Hussain Chowdhury, Minister for Civil Defence, Assam, said that any Japanese attempt to invade India was bound to fail.

It was revealed that a powerful British battle squadron was operating in the Indian Ocean and off the east coast of Africa.

25th Oct.—The Royal Air Force dropped bombs at Prome and an enemy-occupied village in Akyab.

26th Oct.—A Japanese plane over Assam was intercepted near Digboi by an American fighter.

27th Oct.—Japanese aircraft attacked the aerodrome at Chittagong and some aerodromes in north-east Assam.

28th Oct.—The Royal Air Force attacked Japanese objectives in the Akyab area.

30th Oct.—American planes raided Lashio. Japanese aircraft again attacked aerodrome in north-east India.

Seeing the dawn.

As a result of over five years of dogged resistance, China is beginning to see the dawn of victory.

—GENERAL CHIANG KAI-SHEK,
in a speech in Chungking, on
October 27.

Never again.

We will use our combined strength to help the world as a whole so that we may not live through periods such as this again.

—MRS. ROOSEVELT, in a speech
at a London luncheon party given
in her honour on October 27.

ITALY, AFRICA AND THE MEDITERRANEAN

24th Oct.—The Royal Air Force heavily bombed Genoa. The Italian naval base was damaged. Turin also was raided.

Aerodromes in Crete were bombed.

25th Oct.—Genoa was bombed again by the Royal Air Force.

Vichy air force was mopped up in Madagascar.

The Eighth Army opened an offensive in the Western Desert. Mersa Matruh was bombarded.

Three enemy aircraft were destroyed over Malta.

26th Oct.—Five Italian supply ships were sunk in the Mediterranean.

The Royal Air Force raided Milan and bombed important arms works.

Allied troops penetrated the main Axis line in Egypt.

27th Oct.—German and Italian prisoners, 1,450 in number, were taken. The Allied air force proved its supremacy in the Western Desert.

28th Oct.—Axis ships in Tobruk were destroyed. Allied troops enlarged their area of occupation.

29th Oct.—A big tank battle was fought. Thirteen enemy aircraft were destroyed.

Lord Croft, Joint Parliamentary Secretary of War, described the offensive in Egypt as a "battle of great moment."

Three Axis transports and one barque carrying reinforcements to Libya were burnt at the Greek port of Navarino.

30th Oct.—An Axis tanker was sunk in the Mediterranean.

An enemy counter-attack was beaten off.

losses in the past 15 days were 30,000 men killed and 500 tanks and several hundred planes lost.

29th Oct.—German drive to Tuapse was repelled. The Russians gave some ground in the north of the city. The position was described as critical for both sides.

Admiral Standley, United States Ambassador to Moscow, in a press statement at Washington, said: "Stalingrad will not fall. The Grozny oil fields will remain in Russian hands. The Germans will not get the Baku oil region this winter."

30th Oct.—The Red Army withdrew near Nalchite. The Nazis attacks were repulsed in Stalingrad and the Russians captured a village south of the City.

Russia: the Southern front.—Photo shows pontonier unit crossing the river N in close proximity to the front. Under the fire of enemy airforce the pontoniers transport arms, ammunition, fuel and food to their unit.

RUSSIA AND FINLAND

24th Oct.—The Germans were held at Stalingrad. Enemy wedge in Mozdok area was wiped out. Fighting still raged on the outskirts of the City.

25th Oct.—There was fierce fighting in Novorossisk. The Nazis were bogged at Stalingrad.

26th Oct.—The Russians launched violent attacks north-west of Stalingrad. German attacks were repelled at Novorossisk.

27th Oct.—The Nazis attacked in factory area in Stalingrad. German advance on Tuapse was held.

28th Oct.—Fierce fighting raged in the northern factory belt of Stalingrad. The Germans were flung back in one sector. Nazi

A QUICKER VICTORY

"There is a possibility of a clear victory for the democracies coming more quickly than we dare hope today, coming so quickly that the essential forms of democracy may yet remain unchanged. In that victory we may be sure China will have a great share in peace, as well."

—PEARL BUCK, in a Boston
broadcast on October 25.

NEUTRAL COUNTRIES

25th Oct.—There were air raid warnings at Berne and Geneva.

SHIPPING

26th Oct.—Two United States merchantmen were torpedoed in north Atlantic.

VICHY AND OCCUPIED COUNTRIES

24th Oct.—An air raid warning was sounded in Vichy.

German authorities in Paris announced that the German occupation army would use force unless French workers left for Germany.

25th Oct.—Two air raid alerts were sounded in Vichy.

27th Oct.—Eighteen more Czechs were executed in Prague.

28th Oct.—German troops occupied the whole railway line from Oslo to the Swedish frontier.

29th Oct.—German shipbuilding yards at Flensburg near the Danish border were raided. Objectives in Holland and Belgium also were bombed. One merchantman was set on fire.

THE FAR EAST

24th Oct.—United States bombers strafed enemy positions in Owen Stanley area. Allied air forces raided north China.

25th Oct.—Ten Japanese ships were damaged and four believed sunk in Rabaul.

Japanese forces were repulsed near Paotou.

26th Oct.—Twelve Japanese planes raided Darwin. The Allies were seven miles from Kokoda.

Allied aircraft bombed Hong Kong.

Japanese assaults on Kinkwa were repelled by the Chinese.

27th Oct.—Hong Kong was again raided and the power station was destroyed.

American airmen damaged five Japanese warships and destroyed 21 planes. Rabaul was raided.

28th Oct.—The Japanese launched a major offensive in the Solomons. Two Japanese aircraft carriers and one light cruiser were damaged. A United States destroyer was lost and a carrier crippled.

29th Oct.—In the naval action south-west Pacific, two Japanese warships were sunk and at least three damaged. Enemy land attacks in Guadalcanar were repulsed.

Hong Kong was raided again.

30th Oct.—Allied aircraft bombed shipping in Rabaul. The Chinese aircraft raided south Shansi and extensive damage was done to the Japanese airfield at Yungcheng.

THE LOVED NAMES WILL BE CHANGED

IMMEDIATELY the Japanese took Singapore, that great city was given a Japanese name. If the Japanese should

capture our towns and holy places the same will happen here. Places with deep historic and religious associations will be desecrated and given Japanese labels—by law. The Japanese are not going to respect Indian sentiments. Are we of this great land going to allow such treatment without a blow? Never! Let us resist these barbarians with our combined might.

BUILD THE NATIONAL WAR FRONT

against the Japanese

THE ROLE OF BRITAIN

Mr. HERBERT MORRISON making an inspection from the top of a water tower of the National Fire Service. The above photo was taken on the occasion of the anniversary of the last great London "Blitz"

BRITAIN'S war production per head is greater than that of any country in the world, ally or enemy

SOME of us in our right and proper admiration for Russia and in our wish to be associated more directly with her tremendous achievements have come to think and talk as though Britain was at present playing only a marginal part. This is indeed a superficial and misguided view. When we look at the pattern of the war as a whole and remember the real meaning of the never-ceasing struggle at sea, we may begin to realise that the role of Britain on the stage of the world conflict is as near to the heart of achievement and centre of action as ever it was in the days when we stood alone

—Mr. HERBERT MORRISON, Minister of Home Security, in a speech at Cardiff, on Sunday (Nov. 1)

Running Commentary

Haj Pilgrimage by Sea Route : Some 300 Haj pilgrims had arrived in Karachi some time ago and representations were made on their behalf to the Government of India to arrange for shipping facilities. In reply, the

Government of India sent a telegram to the Port Haj Committee on Saturday last (October 28), stating that the pilgrims who had arrived in Karachi had done so in spite of the widest publicity given by the Government to their decision not to organize the Haj pilgrimage this year by a direct sea route. They pointed out that the reasons which influenced their decision applied equally to the sea portion of the Iraq route and therefore regretted their inability to undertake to provide shipping facilities. This decision of the Government is as regrettable as it is unfortunately unavoidable. The reasons for this step that the Government were reluctantly compelled to take were, it may be recalled, explained in a *communiqué* issued last month. The *communiqué* stated that "in view of the existing danger from enemy action to which pilgrim ships and their passengers would be exposed, the Government of India have decided not to arrange the Haj pilgrimage this year by the sea route." This decision was reached after consultation with representatives of the Port Haj Committee, members of the Central Haj Committee who were available in Delhi, and other representative Muslims. And they all agreed that the circumstances were such as to render the decision inevitable.

Conditions in 1940-41 Recalled: Italy and Japan—Attitude towards Muslims

It may be asked whether the conditions in 1940-41 when the Haj pilgrimage was performed safely and successfully were different. The conditions in those two years were not fundamentally different. In 1940 Britain was fighting Germany and Italy. The dangers to

AIR LETTER CARD SERVICE

PROVIDING A MUCH LARGER space for correspondence at a cost very little more than that of an air-graph, an air mail letter card service for British troops in India came into operation on October 26.

The cost of sending an air mail letter card will be four annas, as compared with the three annas which is the special concession rate for airgraphs. The ration of air mail letter cards is one per man per week.

These will not be issued by civilian Post Offices, but Commanding Officers will indent for supplies on a scale appropriate to the requirements of their units.

The new service will be restricted to Service personnel, and in the first instance it will be available only to, and not from, the United Kingdom.

The advantage of the new service from the operational point of view is that, whereas an air mail letter weighs half-an-ounce, nine or ten air mail letter cards weigh only an ounce.

shipping came mainly from the latter. There were many Muslims under the domination of Italy, and Mussolini was then playing the role of "Protector of Islam." It was therefore not in Italy's interest to alienate Muslims by attacking pilgrim ships, but with the coming of Japan into the war, conditions have changed. Japan has few Muslims in her own territories and is quite indifferent to the feelings of Muslims in its occupied areas. There is, therefore, danger to the pilgrim ships from Japanese submarines, which are known to be operating in the Indian Ocean and the Arabian Sea, and it is on account of that that Government decided to discontinue facilities for Haj pilgrimage by the sea route this year.

* * * *

Battle at El Alamein : The Battle at El Alamein has entered a decisive stage. It is clear, says *Reuter's* Military correspondent, that Allied troops have broken through the Axis defences and established themselves west of Rommel's extreme left flank. The correspondent goes on to point out that a considerable number of Rommel's troops are thus in the net but, he adds, it remains to be seen whether the net will be strong enough to hold the catch. Rommel's heavy tank attack was launched in the hope of relieving the situation. But some of his tanks have got into the net and will find it difficult to make their way out again. There is no doubt that a stiffer battle is ahead of General

through the Axis defences and established themselves west of Rommel's extreme left flank. The correspondent goes on to point out that a considerable number of Rommel's troops are thus in the net but, he adds, it remains to be seen whether the net will be strong enough to hold the catch. Rommel's heavy tank attack was launched in the hope of relieving the situation. But some of his tanks have got into the net and will find it difficult to make their way out again. There is no doubt that a stiffer battle is ahead of General

H.E. the Commander-in-Chief photographed with General Lo Cho-ying and other staff officers, British, Chinese and Americans, during a visit to the training base of the Chinese Forces in India. General Wavell was much impressed by the training of the Chinese soldiers.

Axis Radio Propaganda Mislead Muslim Opinion

The enemy radio has been making much of the decision of the Government of India and trying to mislead Muslim opinion against the British. An Italian broadcast in Arabic on October 4 said that "last year also, the British prohibited the Muslims from performing the pilgrimage on this very pretext that they could not guarantee safe passage owing to the danger from Axis submarines." But a day earlier the Rome Radio gave the more superficially obvious but equally untrue reason that this decision was due to shortage of shipping. It may be pointed out that there were nine Haj sailings in 1941 as compared with five in 1940 and that 10,713 Muslims sailed from India last year to fulfil their holy vows.

Montgomery. He is wrestling, as a *Daily Express* correspondent says, with a military jigsaw in a battle with flanks and trying to fit a flank into it through a maze of mines, trenches and traps, so that he can hit the enemy on two sides.

The most difficult operation in war, namely, trying to destroy an army by frontal assault is being attempted by General Montgomery. The fight is bound to be long and arduous, but there are four encouraging preliminary signs. One is air mastery. An idea of the Allied concentration of air power can be gathered from a brief review of the activity of the Allied airforces in the Mediterranean area. Ever since Rommel's failure in September, enemy ports and supply lines were being hammered by Allied heavy and medium bombers destroying reserves and aircraft, petrol,

ammunition and transport vehicles and a number of Axis vessels were sunk on the way across the Mediterranean.

* * * *

Air Attacks on Italian cities : The air attacks on Genoa, Turin and Milan are also part of the general Allied action against Axis supplies to North Africa. Genoa is the chief Italian port from which Axis supplies go to Sicily and thence to Libya. Turin is an industrial city and Milan is the main junction from which German landborne supplies are directed to Genoa and South Italy for shipment to North Africa. The bombing of Maleme aerodrome, south-west of Suda Bay in Crete, was intended to hamper German airborne reinforcements to Rommel.

The second favourable preliminary sign is the ability of the British infantry to stand their ground against the worst that Rommel could send against them.

Thirdly, there is a growing gap in the first two lines of the enemy's defences.

The gaps created in the minefields by Allied sappers and the destruction of some strong points by a concentrated artillery barrage and aerial bombing have enabled British and American heavy tanks to move forward in support of the infantry, but mass attacks in mobile sweeps are not possible within the present battle area between the sea and the Qattara depression until the forward Axis defence positions are destroyed by the infantry. Such sweeping mechanised movements cannot take place.

* * * *

Use of Tanks : *The Times* refers to the revolution that has occurred in the tactical handling of tanks. The object of this new weapon, when it was first introduced into war, was to break through fortified positions, which bombardment could not wholly demolish. But now it has been discovered that tanks which are not baulked by entrenchments can be halted by minefields and then destroyed by enemy's guns.

LETTERS TO PRISONERS OF WAR

There appears to be some misunderstanding as to how letters to prisoners of war in German and Italian hands should be addressed. The following methods will ensure that letters reach prisoners of war with the minimum delay.

If the camp address in enemy territory is known: First line—Regimental number (in the case of other ranks only). Rank, name and initials in block letters. Second line—British prisoner of war number (if known). Third line—Camp address in full. Fourth line—Country.

If the camp address is *not* known: First line—Regimental number (in the case of other ranks only). Rank, name and initials in block letters. Second line—British prisoner of war in German or Italian hands (if known), C/o Agence Centrale des prisonniers de guerre. Third line—Palais du Conseil General. Fourth line—Geneva, Switzerland.

Envelopes should be endorsed "Prisoners of war post" in top right hand corner, followed by the equivalent word "Kriegsgefangenenpost" in the case of letters addressed to prisoners of war in German hands, and by "Service des Prisonniers de Guerre" in the case of prisoners of war in Italian hands.

Letters sent by surface mail will be conveyed free of postage and should be posted in the normal manner. Letters forwarded by airmail are conveyed at a concessional rate of 8 annas.

The sender's name and address should be written in English on the reverse side of the envelope. Letters should be written in English whenever possible but if written in Urdu, Hindi or other Indian languages the letter should be enclosed in a cover and addressed to the regimental depot in India of the prisoner of war. There it will be translated into English and reposted. These covers addressed to regimental depots are conveyed post free and should be endorsed "Letter for prisoner of war."

Letter should not exceed two sides of a sheet of notepaper and should contain reference to personal matters only.

These instructions do not apply to letters intended for prisoners of war in Japanese hands for which separate instructions have been issued.

Consequently, says *The Times*, it is now the infantry assisted by the artillery that has to prepare the way for tanks and these, when their passage had been made clear of minefields and the enemy's front line has been weakened, will eventually take up the role of heavy cavalry.

The fourth favourable sign is a diminution in the enemy's advantage in terrain as he is dislodged in the Qattara depression which rises to 700 feet.

* * * *

General Montgomery's Tactics : As against these favourable factors stand natural obstacles, artificial defences and the stiff resistance of the reinforced Afrika Korps which will fight with the utmost tenacity to

retain its strong position. It is not likely, points out *Reuter's* Special Correspondent in Cairo, that there will be any spectacular news from the front line at this stage, as Rommel's defences are extremely strong and the job of reducing them will be a fairly long one. These defences constructed in considerable depth consist of anti-tank defences, extensive minefields, barbed wire entanglements, machine gun nests, and artillery posts, behind which stand the whole weight of the Italo-German mechanized forces.

General Montgomery has now departed from the usual desert warfare tactics of aiming to cause a break-through for the infantry, and is adopting quite different tactics. He lays down the greatest artillery barrage ever known in the Middle East and then sends in picked infantry supported by continuous air bombardment of Axis gun position and supply lines. General Montgomery wants to wear down the Axis defences by the sheer weight of shells. There can be no doubt that the present battle will be grimly fought by both sides.

* * * *

Stalingrad, a First-class Blunder : A *Reuter* message published in Tuesday's papers says that the fight between the Nazi Party and the German Army as to whether the Battle for Stalingrad should be continued is still proceeding, according to a well-informed observer from Berlin. A German Officer told this observer :

"Viewed from the military standpoint, an immediate retreat from Stalingrad to winter lines is indispensable, but

politically it is impossible. The situation is about the same as in last year's attack on Moscow, which was also made at Hitler's and the Nazi Party's insistence. Before Stalingrad is through, many more heads of Generals will fall."

The officer added that von Kleist, whose death had been claimed by the Russians, was not dead, but was dismissed at the same time as von Bock and Halder, Chief of Staff, in August. The differences between Hitler and his Generals do not warrant the conclusion that there is a political clash between Hitler and the military leaders. For it must be clearly recognized that every prominent German, whether an ardent Nazi or not, wants to save Germany from catastrophe and safeguard her

EMPLOYMENT FOR EVACUEES

Male European British subjects coming to this country as evacuees from Burma, Malaya and the Far East are required by law to register their names, qualifications, etc., which are supplied to National Service Advisory Committees and considered for suitable employment. No such scheme has hitherto existed for Indian evacuees. The introduction of a compulsory registration scheme for them is not contemplated but a scheme of voluntary registration is now being introduced to give them an opportunity of offering their services. Under this scheme, which will operate forthwith, the Defence Department (Man-power Section) will receive and register offers of service or applications for employment from any such evacuee. Applications for registration should be accompanied by full particulars of age, qualifications, experience and type of employment sought. The names of applicants will be communicated to Government Departments and to responsible private employing agencies who ask for them. The scheme is intended particularly for those possessing some technical, business or professional qualifications.

Government obviously cannot offer any guarantee of employment to persons registering their names. But it is hoped that the proposed scheme will help by bringing to the notice of prospective employers the names of persons suitably qualified for the kinds of employment which they have to offer.

future "destiny" by converting German-occupied Europe into a strong and self-sufficient fortress.

The dismissal of Halder who was considered to be the directing brain behind German strategy, however, seems to show that there is some serious disagreement between him and Hitler in regard to military matters. Such disagreement seems to have been brewing for some weeks. It may be recalled that on October 4th Goering went out of his way, in his speech, to criticise "those amusing pen-pushers who continually try to belittle the military genius of the Fuehrer" and who spread the tale that the "Fuehrer knows nothing at all and everything is done by the Chief of the General Staff." Goering then explained at some length the part played by the General Staff in German military affairs during the last 80 years, and said:

"A fundamental change has taken place . . . According to a very clear National Socialist principle, there can only be one leader in any field. The Chief of the General Staff does not bear the responsibility—this is borne by the Fuehrer."

It seems evident from this speech that Halder's dismissal had been decided on, or had actually taken place, at the beginning of last month, when Goering's speech was made. But it has been stated in some quarters that Goering and other Nazi leaders have been laying emphasis on the "sole responsibility" of the Fuehrer for the conduct of military operations with a view to avoiding responsibility themselves, if things go wrong. But this explanation does not fit in with known facts. Goering and the others have been "building up" Hitler as a military genius in order that public confidence may not be shaken by the dismissal of von Bock and Halder in the autumn of 1942 in the same way as Braunschweig and other Generals were dismissed on the eve of the terrible winter of 1941.

* * * * *

Stalingrad, Moscow and the Caucasus: It may be asked what is the fresh decision which Hitler has taken as against the advice of the Chief of Staff. It is possible that Halder might have impressed on Hitler that a frontal assault with mass infantry and tanks against a city like Stalingrad was contrary to the whole tradition and character of German tactics

and that street fighting should not be conducted according to classical rules. As one commentator has remarked, use of tanks in a built-up area is like employing battleships in the middle of an archipelago. It is true that results can be obtained, but the cost is disproportionate. Therefore Halder and Bock seem to have been in favour of sealing off Stalingrad by a fortified arc and then concentrating on a multi-pronged assault on Moscow. But Hitler was determined to have the city itself at any cost, firstly because of reasons of prestige, and secondly for the purpose of protecting the left flank of the thrust towards the Caucasus on which his mind was set. Whatever may be the true explanation for the dismissal of the Generals, the fact remains that the prolonged hammering of Stalingrad has been a first-class blunder.

Time-table Delayed by Two Months: A Factor of Greatest Importance

The net result of it all is that the magnificent Russian resistance has delayed the German time-table by at least two months. But to the credit side of Hitler's campaign can be put down the fact that the German defensive system from Leningrad to the Don has successfully withstood Russian attacks and enabled him to maintain a concentration in the south, which has won rich territorial gains. On the debit side stand the failure to break the Red Army and inability to capture Trans-Caucasia this year. Then there is also the necessity of defending a winter line twice as long as that of 1941. Hitler does not lack manpower for adventures in the Eastern Mediterranean, or for a powerful diversion in the west when the need arises, but Russia's great achievement in resisting Hitler's hordes so long cannot fail to be a factor of the greatest importance when the United Nations begin to time their great blows in unison.

TRIBUTE TO RUSSIA

"No words can express adequately Australia's admiration for Russia and her people for the stand that they are making."

—DR. H. V. T. EVATT, in a speech at Sydney on Monday, November 2.

War Production in Britain

THE *Journal of Commerce* again gives prominence to recent figures on ship-repairing quoted by Vice-Admiral Wake Walker. Twenty-three thousand and more warship repairs and refits during three years of war, 140 million tons gross of merchant-ships or 35,000 vessels put back into service.

Commenting on these figures the journal says:

"In considering what has been accomplished and the great burden which has been thrown upon our ship-repairing resources and labour, these figures would seem to indicate that since in June 1939 there were on the British register 7,009 merchantships of 100 tons gross and upwards, totalling 17,948,158 tons. Each ship of the merchant navy had come in for repairs of some kind or another at least five times since the war began or on tonnage basis seven times."

This is truly a tremendous task which has been performed by our ship-repairing establishments and workers. Some of the repairs may have been small and effected whilst the vessel was discharging cargo but there are many other cases where repairs entail anything up to eight months in repairers' hands.

"We have reason to believe that on one occasion much more than two million tons of shipping were receiving attention at the same time. It is against that background and with the knowledge that there are 100,000 fewer workers in the ship-building repairing yards than during the fourth year of the last Great War that we should estimate our ship-building effort."

As to the output of new ships we have reason to believe that during 12 months ended May 31, this year, British shipyards turned out a far larger amount of new merchant tonnage than they did in 1917 and we were well within a measurable distance of the total built in 1918"

A higher percentage of repairs was provided for and in addition shipyards have turned out a large number of tank landing craft and vessels of different types which were not required in the last war, all of which have further taxed our labour force of shipyards.

ORGANIZATION

Mr. N. U. Kipling, Head of the Regional Division of the Ministry Production, in an address to a meeting of engineering industries on October 8, 1942, mentioned that the Ministry's task was that of "placing orders for roughly £7,500,000 worth daily or £5,000 per minute spread over 30,000 firms employing several millions of people."

Sir Louis Beale in an address delivered in Cleveland, Ohio, United States of America, gave an example of the changes in strategy of the war of production, quoted in the *Engineer* of October. "It is from England that I can give you a most interesting example of the disappearance of competition between firms in the same industry and the 'pooling' system under the control of the parent company."

Sir Louis described what a large garage company are doing in the way of war work. They have brought into active and continuous production 100 small firms in the neighbourhood (chiefly garages) of which 52 employ less than 10 persons, 36 between 10 and 25 and only 17 more than 25. Groups completed most satisfactory work on gun carriages and ammunition. They have produced shells, bomb parts, small arms, and gun carriage parts. Reports of inspectors are excellent. The Company are now unable to accept all the work that is offered them. The turnover has risen from nothing to 50,000 dollars weekly; 99 per cent of the work passes inspection. The output is secured by relatively unskilled workers and simple tools. Of the 2,000 employed 1,300 are women, 700 men; 1,800 unskilled and 200 skilled. Many small shops are working three shifts. All the responsibility for finance, accounting and inspection rests with this garage company.

REGISTRATION OF BRITISH MEN

It is believed that many male European British subjects, who have been evacuated from Burma, Malaya and the Far East, have not yet registered themselves under the Registration (Emergency Powers) Act, 1940. The Government of India draw attention to the fact that registration of all male European British subjects between the ages of 16 to 50 within 14 days of arrival in India is compulsory. The Registration Authorities are Commissioners of Police in Presidency Towns and District Magistrates in all other parts of British India, and all enquiries should be addressed to them. Those registered are required to inform the Registering Authority, with whom they have registered, of every change of address exceeding 15 days within 7 days of the change. It may be pointed out that failure to register or to intimate change of address is a punishable offence. The penalty will not however be enforced against people who comply with the present notice within the next month.

Britain Building More Ships

R.A.F's Promising Future

BRITAIN is now building more ships and at a faster rate than ever before. Practically every shipyard has broken its previous record in turning out merchant ships, and the target which the industry set itself in 1939 has been achieved.

These facts were given by Mr. J. Ramsay Gebbie in his presidential address to the North-East Coast Institution of Engineers and Ship-builders at Newcastle, reports the *Daily Telegraph*. When it was possible to disclose the figures for warship production, he said, they would surprise the world. The industry's achievements were equalled only by the obstacles and handicaps which stood in its way at the outbreak of war.

It is clear, from what Mr. Gebbie was able to disclose, that even measured by the spectacular achievements of Mr. Henry Kaiser in the United States, British yards have reached a remarkable level of output. This is the more creditable in view of the difficulties that they have had to contend with from which the United States is happily free. There is no British shipyard working on the three-shift system which is usual in American yards. Blackout makes that impossible here.

One shipyard is launching a new 10,300-ton merchantman every three weeks. It not only makes engines for all its own ships but supplies engines for vessels being built by other firms. A firm of marine engineers is turning out a ship's complete engine set every fortnight, and this record is by no means an isolated one.

Prefabrication—building of ships in sections, often at widely dispersed points—which Mr. Kaiser has developed to an extraordinary degree, is often spoken of as though it were a purely American practice. Actually, prefabrication has been in operation in the British ship-building industry for considerable time. All over the country engineering works, many of them miles inland, are making standardized parts of ships which are carried by road, rail and canal in sections weighing several tons, for assembly at the shipyards. Some firms are specialists in masts. Others make deckhouses, hatch covers and sections of hulls. In the assembly of new ships both welding and riveting are employed.

This work has been organized by the Department of Merchant Ship-building and Repairs at the Admiralty.

SIR Archibald Sinclair reviewing the progress made by the Royal Air Force had reason to speak with pride of its achievements, writes the *News Chronicle*.

Two years ago the Royal Air Force saved Britain from invasion, perhaps from complete disaster. A handful of Hurricanes and Spitfires—there were only just enough for them—shot Goering's Luftwaffe to pieces over South England. Since then we have built up little by little an air force which is now wresting from the enemy the mastery of the air.

"Our aim must be," said Sir Archibald, "to keep the German fleets and armies at full stretch." Take for example, the work of the Coastal Command. The units of this Command collaborate with the navy in the never-ending task of seeking out and destroying U-boats. Improved methods of search resulted last month in a figure of air attacks on submarines 45 per cent higher than the previous best. The battle of oceans is the most important battle of all and the Royal Air Force is likely to play an increasingly significant part in it. While the Luftwaffe has already been pegged down in Russia and in the Mediterranean, our attacks on appropriate targets in Germany have been steadily increasing in tempo and in weight.

In June and July this year, we dropped 13,400 tons of bombs on Germany as compared with 8,300 tons during the corresponding months of the last year, 500 or more tons were unloaded on each of the nine raids during the first fortnight of September. Sir Archibald's figures throw in relief what is perhaps the most striking development in our air strategy—our growing capacity to carry out long range bombing raids.

The achievements of our Lancasters, as exemplified in recent raids on Le Creusot, Milan and Genoa open a new chapter in aerial warfare. The strain thrown on the enemy's anti-aircraft defences is such as Hitler can never have foreseen. Mussolini's frantic appeal to Hitler for aid in combating our bombers shows that Italy has been taken unawares. Note too that the work of the Bomber Command is now for the first time being fully integrated with other aspects of the war. Our raids on Northern Italy are directly related to the battle now raging in North Africa. They have their place as Sir Archibald Sinclair emphasised in the strategic pattern of Montgomery's offensive. This is a development which holds out a high promise for the future.

Defender of Stalingrad

MAJOR-GENERAL Alexander Rodimtsev, defender of Stalingrad, learned the art of street fighting side by side with British soldiers. He fought in Madrid during its long siege by the Fascists, for the Government of Spain. His companions—volunteers like himself—were members of the International Brigade which included among its numbers many Britons. Month in and month out, the young Russian, with volunteers of many

General Staff Academy. The clever young soldier became a cadet and graduated with high honours.

WON THE GOLD STAR

Five months ago he was a full colonel in the Red Army, having fought both in Spain and Finland. He was given the Gold Star of a Major-General and put in command of a Soviet Guards Corps. Guards in the Red Army are given the name as an honour. Any regiment can become a Guards regiment if it distinguishes itself sufficiently on the battlefield.

Rodimtsev, who shares with great men one valuable gift—he can command sleep whenever he likes and get along with very short hours—held his Guards in readiness at

This was a work camp established by the Japanese on Guadalcanar Island. U.S. Marines set it ablaze when they popped in on the enemy, and now it's no more.

other nations, held the suburbs of Spain's capital against a numerically superior and far better equipped foe.

Rodimtsev went back to the Red Army with knowledge of tactics in close fighting, which Marshal Timoshenko, his supreme Commander, gave him an opportunity to demonstrate when the German legions swept up to the gates of Stalingrad.

Rodimtsev is a son of the Revolution. He is now 36, and remembers the Czarist days only vaguely. His father was a revolutionary working man who took active part in the 1917 rising. Young Alexander, joining the Red Army—as several boys of his age did—in 1924, attracted attention for his soldierly qualities. He was brought to the notice of Marshal Shaposhnikov, one of Russia's greatest strategists, who was then head of the

Stalingrad for the German onslaught that Timoshenko knew was on its way. One of his divisions held off two divisions of German infantry and a hundred tanks for ten days, and then counter-attacked. They annihilated their enemy and cleaned up that particular section of the city. He went to the north-west suburbs where he is standing to-day, and was put in charge of the defence of the workers' settlement.

UNORTHODOX TACTICIAN

Rodimtsev is an unorthodox tactician. He operates with small self-sufficient groups of men who have tremendous fire power. Another trick he learned in Madrid has been used devastatingly. He has allowed Germans to occupy whole blocks of buildings. Holding flank forces in reserve, he has then cut them off, having a number of small sieges

within a greater siege going on at one time. His troops with their great fire power and his tunnellers with thier dynamite have done the rest.

Rodimtsev is an unmarried, squarely built and briefly spoken young man. He has proved that the lines of determination on his clean-shaved face mean something—*The Daily Express*.

IN THE NICK OF TIME

For the first time I can tell the thrilling story of how General Rodimtsev's Guards were thrown in the battle of Stalingrad in the nick of time, writes a Moscow correspondent of a London paper.

They arrived a month ago when the position was so grave that von Bock counted on beating down all resistance in a matter of hours.

Then came the Guards pounding across the steppes to the Volga in a long column of racing lorries, with boiling radiators, with halts scarcely long enough to permit the men to get a cup of water and to shake the dust off their clothes.

For the men the journey was a mad almost a nightmare rush. Only Rodimtsev felt that they were going too slowly for he knew the city's fate was in the balance.

The Guards arrived at the east bank of the Volga in daylight.

They saw vast pillars of black smoke towering from the skyline of the ruins on the opposite side as the city's largest oil depot blazed.

ASKING FOR DEATH

A daylight crossing with Stukas perpetually diving down and heavy shells ploughing up water was asking for death but Rodimtsev decided that he could not afford to wait. With high explosives bursting all around them, their green steel hats bobbing in water, the Guards began to go over.

Only reserves of heavy artillery were left behind.

All night the crossing continued; in the morning Rodimtsev himself went over in a fast motor-boat. He was at once confronted with a problem sufficiently serious to weigh down any General.

The Germans were then thrusting into the city from the centre and its north-western suburbs. In fact the Germans had advanced so dangerously that they had captured heights in the town and both banks of the Volga. So the Russian front had been broken.

Rodimtsev had put one regiment on one side of the wedge and two on the other.

The question he had to answer was whether to dig in and try to hold his positions or to attempt against colossal odds to restore the position by counter-attacks.

Rodimtsev is a quiet level-headed man. He showed this once again a few days ago.

A STIFF FIGHT

When the Germans broke through so deeply that a grenade splinter penetrated his underground headquarters near the Volga and Teutonic words of command were heard, he continued working calmly at a bare wooden table until the attack was repelled. He is ever cautious but his watchword was: "Attack where it is least possible to attack."

So it was and a counter-attack was ordered. While one of his regiments recaptured street by street the district which the Germans had just occupied, aided by heavy artillery from across the Volga, the other two launched an assault on vital heights.

The heights are so important that on both the Soviet and the German staff maps they are ringed in red.

The Germans never suspected that Russians were capable of launching infantry assaults.

All the same the fight was stiff. But the heights fell to the Guards, who re-established a continuous Russian front in most favourable positions.

Russia Helps with Submarines

ANGLO-RUSSIAN campaigns are being waged against German shipping, writes the *Daily Herald* naval correspondent.

There are reasons for believing that mines sown in different waters over several months by the Royal Air Force have been yielding useful dividends. Now comes the news that increasing interference by Soviet submarines is causing Hitler's shipping chiefs much worry. According to the Helsinki correspondent of a Swiss paper, there are 33 Russian submarines among the Soviet naval forces based on Kronstadt.

Germany is facing an increasing danger at her weakest spot—scanty tonnage. Indication of the importance Germans attach to their merchant ships is the fact that a single empty tanker moving along the German side of the English channel has an escort of anything up to eight warships—E-boats, armed trawlers, mine-sweepers and a flakship.

Straining to meet her tonnage deficiency, Germany is chartering Swedish and Danish ships to take iron ore to the Reich from Scandinavian ports. Big bonuses are paid to seamen who sail ships through danger zones.

Stalin's "Secret Weapon"

BY

JOHN SCOTT

STALIN has a secret weapon. It is not the Comintern, nor the OGPU. It is the immense heavy industry base far behind the Ural mountains in the centre of the largest country in the world.

More than a decade ago Stalin became convinced that sooner or later Russia would be attacked by a combination of powers and would have to fight for its life. In his speech to business managers early in 1931 Stalin said that Russia would have to catch up to and surpass the other countries of the world in industry and in production of arms or be annihilated. In the early 30's, therefore, Stalin set out to catch up to and surpass the other nations.

IMMENSE BLAST FURNACES

Under his leadership the Russians sank billions of roubles, thousands of human lives and untold energy into the construction of some 200 big modern industrial enterprises. They built a first-rate industrial machine which produces iron, steel, copper, machine tools, tanks, motors, chemical apparatus and many other things. Four gigantic metallurgical plants were built—Magnitogorsk, Tagil, Bakal and Khalilovo.

To-day all these plants produce armour plate and other steel articles necessary in the war effort. They produce more than six times as much steel as the 40-odd old primitive metallurgical plants in the Urals, some of which were built in the early 18th century.

At Magnitogorsk there are four immense blast furnaces as large as the largest in the United States, 20 open hearth ovens and nearly as many rolling mills—all built in the middle of the barren steppe in a few short years. Magnitogorsk sends its steel to several large machine-building plants in the Ural's, particularly to Sverdlovsk, where half a dozen powerful armament and machine-building plants produce everything from carburettors for planes and tanks to the largest cannon.

UNEQUALLED

Another industrial centre worthy of mention is Perm (now called Molotov), in the Northern Urals. Just to the north of Perm—in Berezniki and Solikamsk—explosives

are made, as well as metallic magnesium for the manufacture of incendiary bombs, shells and tracer bullets.

A remarkable plant at Khalilovo, in the Southern Urals, near Orsk, operates on local iron ores which have a very high nickel content. The steels produced are nickel, cobalt and, in some cases, vanadium and tungsten alloy steels whose toughness and resilience are almost unequalled in the world. This Khalilovo plant has gone into operation during recent months after almost ten years of construction work.

The second newest of the big iron and steel plants is the Bakal plant in Chelyabinsk. It is composed of three blast furnaces and several open hearths and rolling mills. It runs on coke made from Ural and Kazakhstan coal and iron ore from the Bakal iron deposits several dozen miles west of Chelyabinsk. These iron deposits are among the richest in the world, and so far have been almost untouched.

EXTENSIVE ADDITIONS

One of the most impressive of the new Ural plants is the vast combine in Tagil. An old metallurgical plant built in the early 18th century is still at work there beside an immense new plant with three large blast furnaces and numbers of rolling mills.

During recent months the Ural and Siberian industrial regions have received unexpected and extensive additions. Whole factories, complete with machines, stocks, material and labour power, have been evacuated from all the cities of the Ukraine and from the western districts of the Soviet Union. The Rybinsk airplane plant has been moved to a previously uninhabited point, between Sverdlovsk and Magnitogorsk; the entire Putilov tank and armament works has gone from Leningrad to an unnamed point in the Urals.

LARGE RESERVES

The Urals had large reserves of electric power production which are now being used. In addition, generators which have been brought from the Ukraine are already producing power in the Sverdlovsk district, burning peat from the immense bogs of the central Ural district.

From 1930 to 1940 the Russians built a powerful industrial plant in the Urals and Siberia. They sank more than half the national incomes on capital investments for several years running. Sacrifices were enormous, but an industrial base independent of the Ukraine and capable of keeping the Russian army in the field was created. Something else was created at the same time. A technically competent industrial proletariat was trained, and a technical intelligentsia—*Star Weekly* (Toronto).

Ships for the Red Navy

THE output of the Soviet ship-building industry has increased by over 20 per cent during the past three months. Construction and repairs now take a mere fraction of the time that used to be needed before the war. A number of new ships will be handed over to the Red Navy by the 25th anniversary of the Soviet Revolution in November.

Urgent repairs had recently to be carried out on a ship at the dockyard directed by Duronchev. Its displacement considerably exceeded the capacity of the floating dock. Experts found a way out. A section of the ship was admitted to the dock while the rest remained in the water. Repairs were successfully completed.

Trushkin, director of a big shipyard, states that his present output is eight times the pre-war level. A shipyard directed by Surguchev, only recently evacuated from a front-line town, now turns out 50 per cent more than it did on its old site.

Soviet river shipyards are now building ships for the Red Navy. A shipyard directed by Tolstykh has multiplied its output by six as compared with last year. A shipyard directed by Nikiforov has trebled its output.

Despite artillery bombardment and air raids, the shipyards of besieged Leningrad are building and repairing warships in record time. Recently one shipyard working day and night completed repairs to a naval vessel two months earlier than would have been possible before the war.

150 NEW FOOD FACTORIES

Every two or three days sees the launching of new enterprises of the Soviet food industry, mainly in the eastern regions. This year's State plan stipulates that 150 new food factories are to be established. Fifty of them are already working. They include sugar mills, distilleries, oil-extracting mills, canneries and bakeries, as well as tobacco factories. In the Central Asian republics the number of canneries has considerably increased. Not only are new factories going up but 108 old ones are being restored in the liberated districts of the Moscow, Tula, Kalaminsk, Smolensk and Ryazan regions. The Akmolinsk meat combine in Kazakhstan, Central Asia, has increased its output two and a half times without any additional equipment—*Soviet War News*.

Hollywood at War

A survey made by the American motion picture industry shows that the importance of American movies as a war and post-war educational medium is becoming more and more evident. Hollywood has become one of the great wartime information centres. Already 38 films have been made for agencies of the United States Government and 15,000 theatres throughout the country are now showing them.

Each of these films, most of which are shorts, has a graphic message to give the American people—what the United Nations are fighting for, the heroic fight of the Chinese, Russian, British and other allied peoples, the creation of the new American Army, the production programme, what to do in case of air raids, how to conserve food and how to salvage scraps valuable to the war effort.

The armed forces as well as civilians are benefiting from this Hollywood service; the studios are making many films which the United States Army is using to teach infantry men, artillery crews and air force personnel. America's war industry is being provided with films for factory workers, showing new processes and new techniques.

Another new aspect of wartime Hollywood—attuned to the serious total war spirit increasingly taking hold of America—is the conservation of materials important to war production. Before the war, the motion picture industry's elaborate studios—known all over the world for their lavishness—used an estimated 21,000,000 feet of lumber each year for building sets, as well as 12,400 kegs of nails and over 150,000 gallons of paints, shellacs and lacquer.

Now the studios are using little new material. Old sets are being refurbished and used again, and in many cases, instead of creating sets, studios are renting and photographing actual houses and natural scenes.

The film industry has donated to the United States Armed forces overseas 4,700 full-length film programmes on 16 millimetre film, and the small size making transportation easy.

In addition, Hollywood has presented nearly \$3,000,000 to Army and Navy relief funds, and scores of actors and actresses are touring the country to raise money for the United States Treasury at their own expense. The motion picture industry took charge of the national bond-selling campaign for September, with a goal of \$1,000,000,000.

Finally, Hollywood is giving one of its most valuable assets—male stars—to the armed services. The dearth of actors is becoming a real problem, particularly in the case of studios such as Metro-Goldwin-Mayer, which, after losing stars like Clark Gable, is now faced with the impending enlistments of Robert Taylor, Spencer Tracy, Mickey Rooney and Van Heflin.

New Air Route “New” Planes across Africa

THE *Manchester Guardian* in a leading article comments on the Royal Air Forces new air route across Africa.

It says:

The Royal Air Force Middle East news service has given some particulars about the new air route from the west coast of Africa to the Sudan, which is proving so useful.

OVER 70 per cent of the bombers and 90 per cent of the fighters which can be recovered after crashes are made to fly again, thanks to the Repair and Salvage Unit of the Royal Air Force in India and the India Air Force.

The task of the Repair and Salvage Unit is hard. Often long treks have to be made to the scene of a crash; days have to be spent there. And, in cases where the aircraft is methodically dismantled and brought into base, many hours of re-assembling and re-fitting are necessary in the workshops.

A picture from Madagascar—The capture of Majunga. Every type of conveyance, including the local dust cart was commandeered for patrol purposes.

There are 6,000 miles to be flown and each journey takes a pilot more than 24 flying hours.

Various air fields and many emergency landing grounds have been constructed, but, with great tracts of bush and jungle and some 2,000 miles of desert at the finish to be flown over, there are chances enough of mishap. Actually more than 1,000 machines have been flown from the point of assembly somewhere on the west African coast to the Sudan, and loss has been only 2 per cent. That is small, but it incidentally illustrates the safety nowadays of crossing the Atlantic, for the last figures of trans-Atlantic losses published were smaller than those on this African air route. (Sand storms are as bad as sea storms.)

When a crash is reported, an engineer officer of the Repair and Salvage Unit leaves immediately for the spot. There he has to decide whether or not the aircraft can be repaired without removal. If it can, a completely-equipped, self-contained mobile repair unit is sent out.

TOUGHEST TASK

But if, as is usually the case, the damage necessitates bringing the plane back to base, lorries specially designed for carrying fuselages, wings and other parts are required.

The toughest task falls to the officers and personnel who man these vehicles, travelling often hundreds of miles over dusty roads and tracks or, in the monsoon season, through mud and floods.

Turkey's Attitude

IN an article in the *Daily Telegraph*, Huseyin Cahid Yalchin, editor of the Turkish newspaper *Yeni Sabah*, who has just visited England, writes:

"Immediately on the fall of France, the Turkish Prime Minister pledged his country's loyalty to the Turco-British treaty of alliance. In conjunction with this statement, the Turkish press continued to defend and uphold the democratic cause even more staunchly than British newspapers themselves.

"Although Great Britain, after the collapse of France, encountered on her stony path nothing but military failures, she enjoyed the sympathy and friendship of the Turkish press in increasing measure. Since then, her reverses have not loosened Turkey's ties with Great Britain. Neither German pressure brought to bear on Turkey—sometimes directly, sometimes by devious means—nor German promises have had any influence upon Turkey's line of action which she had adopted since the beginning of the conflict. Thus the Turkish and British peoples have entered the fourth year of a severe test.

WHY NOT AN ACTIVE PARTICIPANT

"The non-participation of Turkey in actual battle though she is bound by treaty to Great Britain has not been seen in its proper perspective in certain quarters in Great Britain, though this cannot be said of official circles. However, Turkey's line of action is not in contradiction to the letter and spirit of the Turco-British alliance. This state of affairs is amply justified by the absence of misgivings and questionings between the two Governments about the interpretation of the treaty. The Turkish Government has pursued a straightforward policy and has always informed the British Government in advance of any political moves which it contemplated undertaking.

"Now, it may be asked, 'Why is Turkey so loyal to the Turco-British alliance?' It might be thought that she would have sided with Germany in order to recover as many lost Ottoman provinces as possible, taking advantage of her situation. The answer to this question must be sought in the change of outlook and spirit brought about by the Revolution. Ataturk's Turkey is not only a new regime, but it is imbued with a new spirit and mentality. The Turkish public believes in the self-determination and self-government of each country, and is convinced that the existence of free nations enjoying equal rights is the best guarantee for Turkey's own freedom and independence.

CRUX OF THE MATTER

"In the event of a German victory we do not doubt that a dark era of slavery would descend upon all nations including our own. That is crux of the whole matter, and that is why we identify ourselves with the cause for which Britain is fighting. We see Great Britain and her ally, the United States, as great champions of freedom. So long as the Allies remain faithful to the principles of the Atlantic Charter, there is no possibility of Turkey's diverging from the cause of the Allies, because it is the cause of freedom.

"Turks are convinced that helping Germany to victory is equivalent to committing suicide. Neither German threats nor German promises, nor fear of being drawn into conflict, can cause an estrangement of Turkey from Britain. Turkey is ready to fight for her freedom. She will never allow passage to foreign troops through her territory.

"Post-war years will not be easy in Europe. Consequently nations whose relations have stood the trials and tribulations of war must co-operate more closely than ever in order to meet the difficulties brought about by the ravages of this titanic conflict. In post-war years Turco-British friendship and alliance will be a necessary instrument in the establishment of peace, security and happiness for the Near East and its peoples. Only then will all concerned fully appreciate the importance and necessity of a strong Turkey standing erect and enjoying a healthy constitution."

IS THE ENEMY WHISPERING TO YOU?

Every time you hear a rumour

It is the Japanese whispering in your ear.

They are trying to poison your mind,

Weaken your resistance.

Don't help the enemy by believing

And spreading unconfirmed news.

DON'T BELIEVE RUMOURS
BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

U.S. Marines at Work against Japs in Solomon Islands

In the afternoon of the first day, when U.S. Marines landed in Solomons, Jap bombers came over. Here an anti-aircraft gunner helps drive them off.

The Solomons gave the United States its first chance to test the amphibious tanks with which Marines have been training for upwards of a year. Here's one of the tanks, called "Alligators" by the Marines, coming into the beach on its own power.

How Japs Treat Women and Prisoners

NINE thousand girls forced into Japanese Army brothels—Indian prisoners of war stripped to their underclothes—a ten days horror of street executions.

These are the kind of facts about conditions in Japanese-occupied countries which continue to leak out through people who have seen for themselves who have suffered at Jap hands.

A grim document, obtained in circumstances which cannot be disclosed for reasons of security, describes how the emblem of the Rising Sun has meant for Malaya and Burma a regime of darkness spreading like a blight across the land.

The document illustrates the Japanese way of keeping promises that civilians would be kindly treated. It says, concerning Singapore:—

“After the island's fall numbers of Chinese were rounded up, forced to dig their own graves, and then compelled to kneel in them. A Japanese officer beheaded the first man in line, after which a subaltern carried on beheading the remainder of the victims. A second line of victims was then compelled to bury the first lot, and prepare their own graves.”

DISTRACTED PARENTS

These executions were carried out in the streets of Singapore, streets which a little while before had been gay with the laughter of carefree peace-loving people. They went on for ten days without an interval.

Dealing with the treatment of women, the document says that the Japanese carried out registration of the Chinese population, and goes on: “Every girl between the ages of 13 and 25 was taken from her home. Pleas of distracted parents failed to elicit any information, and later 9,000 girls were located in official brothels run by the Japanese Army.”

As for prisoners, “large numbers of Indians have been stripped of their uniforms and left with nothing but their underclothes. They are being used by Japanese as slaves. A Viceroy Commissioned Officer was shot dead for the ‘crime’ of asking for a drink of water.”

The Eyes of India

IN a Royal Air Force Control Room “somewhere in Ceylon” a wireless operator adjusts his headphones. Far out over the Bay of Bengal a voice begins to speak. The Dawn Patrol is reporting to Base.

Every morning, as the first streaks of grey appear in the night sky, great roaring shapes cut a path of foam across the dark waters, rise majestically into the still air. No matter who else sleeps, the Eyes of India are awake.

Throughout the hours of daylight, from first dawn to deepening dusk, giant Catalina flying boats range over the vast sea wastes, ever alert for the danger which threatens India from across the ocean. Remote, in a world of their own, the crews of these twin-engined aircraft daily dare perils of sea and sky in the protection of India's eastern coastline.

How vital is their work may be gauged from the epic of Squadron-Leader L. J. Birchall, who was flying a Catalina on the Dawn Patrol one memorable day a few months ago.

Few details of that epic are known—ever will be known, for Squadron-Leader Birchall found his grave in the waters he guarded so faithfully. But before the seas closed over him his wireless crackled a warning.

Back at Base the wireless operator took down the message which enabled the defences of Ceylon to send the Jap Fleet scurrying away to lick its wounds.

For all its dangers the task of the Dawn Patrol is a dull one, with few incidents to relieve the monotony. The men who comprise it have rightly been called the “Hermits of the Heavens,” for they spend their waking hours in a world apart from their fellow men.

The great flying boats which are their waking homes have many secret features, but, with a wing span of 104 feet, and propelled by two 1,000 horse-power engines, they provide accommodation which includes such comforts for the crews as galleys in which they can prepare hot meals. They have a speed of nearly 200 miles-an-hour, a vast range and are heavily armed for combat.

Unconquered Greece

THE TIMES in a leading article pays tribute to unconquered Greece. It says:

Two years ago to-day (October 28), Fascist Italy presented a shameless ultimatum to the Greek Government. It met with an appropriate reply from the Government, armed forces and people of Hellas, and five months later, the aggressor, superior in all but military capacity, seemed likely to lose his foothold in the Balkan Peninsula.

He invoked German aid. The Greek army and British and Imperial forces sent, as honour commanded, to its aid, were overwhelmed. The Greeks lost all but their honour. Their scanty resources were plundered; the population of their cities was driven to extremity by an artificially induced famine; and their country was seized by Bulgarians, Italians and Germans. The execution of hostages, the installation of a despised government of quislings, deportations and repression of every vestige of freedom were but part of the price paid for their honourable resistance.

Yet Greece still stands, undaunted by oppression. Outside Greece, its King and his Government stand firmly with the United Nations. The Greek army and air force, re-equipped and re-organized, are fighting beside the British and Imperial forces in Egypt. The Greek navy, its heavy losses largely made good, fights beside our Mediterranean fleet. The Greek mercantile marine, though thinned by sinkings, plays its valiant part in the Battle of the Atlantic.

National resistance which forced Hitler to postpone his invasion of Russia and to defer his attack on Western Asia, still ties down large Axis armies and strengthens our counter-offensive in Egypt and the Mediterranean. The Greek people has sacrificed much for honour and it has a particular glory that no disappointment, no oppression, has been able to rob it of its faith in itself and victory.

Greek guerrilla bands are vying with one another in a ceaseless struggle against the enemy, and fresh bands of patriots are appearing everyday in new regions. In Macedonia guerilla warfare is being carried out under the leadership of M. Binopoulos, a former Deputy. Other groups are active in the region of Florina, where they are continually harassing the Italian troops in co-operation with Serbian forces operating in the Babuna range of mountains, where they are inflicting casualties on the Bulgarian invaders.

The war-weariness of Italian troops has reached such a stage that there have been many cases of refusal to obey orders. An

entire Italian regiment has been disbanded for this reason, and the men sent to various islands as punishment. It is learnt that 400 Italian troops were on board an Italian ship which was recently sunk in the Mediterranean by a Greek submarine. All were drowned except 18, who were picked up and saved by the submarine.

While the Germans are resorting to widespread and systematic deportations from one end of Greece to another, thus breaking up the families and ruining the businesses of those deported, Gotzamanis, when in Berlin, was persuaded to promise to send a greater number of Greek workers to German factories. If this promise is not fulfilled, the position of the “Athens Government” is likely to become difficult. Tsolakoglou's appeals to Greek workers to go to Germany are, however, falling on deaf ears, as the workers show no desire whatever to slave for the Nazis.

Officer Dived for German Secrets

HOPING to prevent us learning details of their aircraft, a German bomber crew shot down over the Western Desert, deliberately came down in the sea. The ruse was seen by a party of Indian soldiers, with the result that a Royal Air Force officer, working twenty-four feet below water in a diving helmet improvised from his gas mask, was able to explore its secrets.

Grinning Germans, coming ashore in their rubber dinghy, gave the Indian troops their cue. They marched the Nazis off to captivity and reported the incident to the Royal Air Force.

Over the crashed plane an officer of an Inspection Unit donned his gas mask, tied a knot in the tube, and dived down. He found the cockpit, and had a look inside, but was unable to remain under water long enough to remove the equipment.

Nothing daunted, he rowed ashore, and returned later in a diving helmet borrowed from the Navy. At the beginning he kept floating to the surface, but another search enabled him to “anchor” himself with a piece of railway line.

Working inside the cockpit, he removed all the parts he fancied, and handed them to another officer, who continually dived down to collect them. When the “bag” was complete they brought it ashore in the Germans' dinghy.

Vital Part of Supply Battle

R.A.F. Attacks on Enemy Shipping

THIS is perhaps above everything else the quartermaster's war, and the quartermaster will have the last word, declares the *Daily Telegraph's* special correspondent in Cairo. Both Britain and the Axis have to supply their troops by sea, and one of the major lessons of this war is the extreme vulnerability of such routes to air attack.

The Allied cause in general, and the Eighth Army in particular, owes an incalculable debt to the work of the Royal Air Force in the Middle East. There is no "off" season for the Royal Air Force. They cannot just lay off when there is nothing happening on land. So the men who saved the Middle East at Alamein must go to it again . . .

STRIKING AT THE ROOT

A good part of the Royal Air Force's work consists in hunting out the enemy force in its own lair and destroying it there. In other words, continually bombing and shooting up airfields in Egypt and in Libya. But it is attack on the enemy's seaborne communications that yields a dividend deferred but no less sure.

Never since the Mediterranean war started nearly two and a half years ago has the Royal Air Force had to operate under conditions of such extreme difficulty. Our hold in the Mediterranean, apart from the outlying posts of Gibraltar, Malta and Cyprus, is virtually confined to the restricted south-eastern angle.

Two main supply ports for the Axis are Tobruk and Benghazi. Despite all the hammerings that it has received in the last past two years, Tobruk is better. Reconnaissance over a period of weeks has shown that the Royal Air Force has to a great extent achieved the task that it set itself at Tobruk. Not only has it slowed down the rate of entry and unloading of supplies considerably through the destruction of harbour installations and shipping, but it has caused a diversion of at least part of Axis shipping to the remoter port of Benghazi.

DECISIVE IMPORTANCE

Attacks on enemy shipping will perhaps represent the decisive aspect of this phase of the campaign. It seems established that the lack of drive behind the enemy's recent abortive offensive in the Himeimat area and the failure of their commander to continue after the initial check were due to the failure of war material to arrive in the quantity anticipated.

Planned and detailed reconnaissance flights dovetailed with planned bombing attacks yielding maximum damage, with maximum information, sums up the work of the Royal Air Force in harassing enemy shipping. The enemy have shown a tendency to rely more and more on fighter escort for his convoys. They have helped many a convoy at the cost of immobilizing to a remarkable extent the Luftwaffe in its operations over Libya. The detachment of fighters for the protection of convoys has had cumulatively a depressing effect on enemy morale and consequently on the effectiveness of his air force in the Western Desert. That is what Royal Air Force attacks on enemy shipping have done.

RUSSIA'S "AERIAL

MOTOR CYCLE"

The Russians have brought a "new weapon" into use at Stalingrad. It is the 15-year old U-2 plane, formerly used as postal transport, made of wood and canvas and with a speed of little more than 50 miles an hour.

When it is in the air, it sounds like a motor cycle going over a bad road, and the Russians call it their "aerial motor cycle", says the *News Chronicle's* Moscow correspondent.

It can take off anywhere in complete darkness, and land anywhere by the smallest light.

With its cargo of bombs little bigger than hand-grenades, which are simply dropped overboard, it can bomb by night with greater precision than a dive-bomber because of its slow speed.

Nazis in trenches or moving along the road or lying in ditches are excellent targets, while it is even possible to bomb one half of a building containing Nazis and leave untouched the other half containing Russians.

These planes have such a low speed that the Nazi flak has not easily adjusted itself to the risk of getting their speed range. When the flak began to become dangerous, these Russian "flying fleas" started to climb to their maximum ceiling before gliding down.

U-Boats Meeting their Trafalgar.

THE First Lord of the Admiralty's announcement that 530 enemy submarines have now been sunk or damaged does not include the last results of growing vigour by American action but, as it stands, it records a great achievement, writes the *Daily Telegraph*.

A comparison with the figures of the last war is necessary to realize its full significance. The total of German submarine losses then was 199 and at that price Germany worked up to the peak sinking of 849,000 tons of merchant vessels per month. Nazi U-boats have come close to that peak but never reached it, although their attack was stronger both numerically and strategically than that of 1917.

What proportion of 530 submarines became total loss cannot be determined but the Nazi Admiralty complaint that the "U-boat warfare for us is hard and will grow harder" gives the means of estimating reactions of the U-boat service. It should be remembered that our naval and air-reports must omit some numbers of submarines destroyed by mines and accident.

In the U-boat campaign, the enemy has had much greater advantages than in the last war. His submarines are more formidable and have longer endurance.

More U-boats have been sunk than in any equal period before but they are still numerous enough to be the "greatest problem of the United Nations." Most strenuous endeavours are required from all shipyards of the Allies for a speedy victory. Mr. Alexander gave a well deserved praise to our own ship-building industry. We have been producing more tonnage per man in our yards than methods in America have yet attained.

Expansion here is limited by lack of labour. Production for the Navy has not only made good the heavy losses—of which the news that the *Anson* and the *Hove* are now with the Fleet is an example—but much increased the strength of the classes of ships most needed. The basis of strategy in this world conflict is sea communications. If Nazism could break those links between the Allies, all else would be added unto it but despite the writing on the wall, convoys will go through and the U-boat campaign meet "their Trafalgar".

Plight of Italy

TO what has Fascism brought Italy in 20 years? What have the Italians to celebrate?

Sunny Italy is to-day, a land of 50 million war weary, brow beaten, hungry, ill-clad and bewildered people. War weary because they have been fighting or toiling on war work for more than seven years. Abyssinia, Spain, Albania, the stab in the back of France and the attack on Greece. Then defeats of Libya, Eritrea, Somaliland and Abyssinia.

The Empire won and lost—and Italy's sons have still to fight but now they fight only as German mercenaries in Russia, Egypt and Yugoslavia. The mood of Italy now is one of wishful defeatism. For with their country as a vassal of Germany, Italians see no joy even in the doubtful prospects of victory.

Victory they see now means only slavery. Their country is ruined already and they see no future for it. So they just want war to end.

Peasants attempt to hold back their grain and other produce from official collectors. Some cases of this practice have led to riots. Yet food flows in an unending stream to Germany and Italians watch bitterly as they see loaded trains travelling to the north.

Agricultural workers have gone to Germany also in tens of thousand, further complicating the food situation in Italy. They go unwillingly but a refusal means a term in prison.

With wool and cotton cut off by blockade, Italians have only shabby clothes of substitute materials. German soldiers with pockets full of cheap lire have long since stripped shops bare and posted their purchases back to their families in Germany.

The army of which Italians became so proud as they listened to Duce's boasts has proved itself a failure in the field. Not because Italians cannot fight. They can, but when they surrender in thousands it is because they have no enthusiasm for the present war or for Fascism.

Mussolini's much boosted navy is impressive on paper but much less so on the sea.

Mussolini bewilders his people himself now with earnest speeches about Italy's "difficulties." His people know their country is a weak link in the Axis. They are failures of the New Order. Fascism has brought them only blood, toil, tears and sweat—but without the prospect of reward.

Mussolini, grey and paunchy now, has ruled for 20 years. He can still strut on the Italian stage and put up a show to his disillusioned people. But as President Masaryk of Czechoslovakia said once: "Dictators can always look good until the last five minutes"—W. M. Towler, The *Daily Herald* Foreign Editor.

Decline in German War Output

THE reduction of German war output by the Royal Air Force is possibly the most important single fact for the future development of this war. The total German arms production in the first half of 1942 actually shows a decline over the German production of the first half of 1941. This coupled with the fact that United Nations' production is rising steeply each month must prove decisive since steel wins war.

Britain has been responsible for two out of three main factors causing this decline in the German war production. These factors are: (1) The British blockade—the diversion of the German manpower. (2) Russia's wastage and diversion of the German power. (3) The Royal Air Force bombing.

The Royal Air Force bombing itself operates in six ways to reduce the German war production: (1) The diversion of the German power to anti-aircraft, air-raid precautions and demolition squads, etc. (2) The direct destruction of German factories and mine plants. (3) The diversion of German labour from steel factories, etc. for rebuilding destroyed factories, houses, etc. (4) The loss of man-hours by German workers in bombed areas due to time spent in shelters, etc. (5) Probably one of the greatest of all—the stoppage of other factories far outside the bombing area due to the hold up of supplies from bombed factories. (6) The smashing of transport and the lines of communication causing bottlenecks in coal, iron and other supplies—thus dislocating factory production over the whole of the Reich.

EXTENT OF DESTRUCTION

After most raids, in spite of air photography, it is difficult to tell precisely to what extent the arms factories have been smashed. But in some cases precise data is known and from the evidence of these cases it is possible to estimate roughly the effect of some 4,000 Royal Air Force attacks on targets in Germany, and the occupied countries since the outbreak of war.

The Renault factory near Paris, one of the largest automobile factories in Europe, was producing 100 tanks, 200 lorries and 600 aircraft engines monthly. In other words enough tanks yearly to equip four armoured divisions, enough aircraft engines to replace a large percentage of the total German aircraft engine losses in the eastern front. The Royal Air

Force raid on this factory (March 3, 1942) made the entire factory, in the words of the official British description, "useless for many months."

Four raids on Rostock, besides other enormous industrial damage, destroyed the Heinkel works producing about 13 per cent of the planes monthly, i.e., in four months the front line strength of the whole air fleet lost by Germany.

Three raids on the Matford factory in Poissy stopped the production of a thousand lorries monthly for the German army.

PLANE OUTPUT REDUCED

These eight raids alone are estimated to have cost Germany, for at least some months, nearly five per cent of her total plane output, up to six per cent of her total tank output and 10 per cent of her output in mechanical transport. Obviously not all raids are so successful. But even at minimum reckoning, if eight raids did this damage, over 2,000 attacks on targets in Germany alone since the beginning of war have caused a major hole in the total German war production by the direct destruction of arms factories.

Some other examples of direct destruction of war plants, about which accurate data is available, are: The destruction of the component factory Stahlwerke Krieger, Dusseldorf (two raids—July 31 and July 11). This factory made parts for planes, guns, warships and bombs.

The destruction of the equipment factory, Drägerwerke Luebeck (March 28). This factory made service respirators, oxygen apparatus for the Luftwaffe and U-boats.

It is clear that if the destruction of the Renault and the Matford works alone was equivalent to depriving the German army of armoured vehicles and transport for five armoured divisions, (Sir A. Sinclair, August 23, 1942) this result must be multiplied many times to get even a conservative estimate of the direct destruction of the German armament production by the Royal Air Force.

DISBELIEF IN HITLER'S PROMISES

"R.A.F. raids are definitely affecting the morale of the German people. Their minds are reaching the stage of disbelief in Hitler's promises, giving us an opportunity to lessen the grip of the Nazi propaganda machine on the German people."

—MR. W. NASH, New Zealand Minister in Washington, speaking in New York on Saturday, October 31.

British Women's "Win the War" Competition

A new spirit is sweeping over British women both in uniform and in "civvies." It is the shock brigade spirit—something to make war production soar. And it springs from a big new "win the war" competition started by the London Women's Parliament.

In this competition, women in factories, streets, boroughs, offices and depots will form themselves into shock brigades to compete for increased production, better time-keeping, less absenteeism, and saving of fuel and salvage. A grand finale to the competition will be inter-factory and inter-street competitions culminating in the fourth session of the Women's Parliament, when the results will be announced and the winning teams will tell "the secret of their success."

The Parliament hopes that 350 factories will enter the competition for increased production, and that 200 housewives' teams will compete for increased salvage and recruitment for industry. The first factory to enter the competition is a London one employing 3,000 people, where the women in the assembly shop, machine shop and outlying shops have formed themselves into shock brigades to rival one another's output. A mass meeting of workers accepted the idea with enthusiasm when it was

put to them. They plan to have charts displayed in each department and a grand total production chart in the form of a barometer, outside the office building. Three prizes of savings certificates will be given each month to operators in each section showing the greatest output. The leading department will display the banner. A committee of shop stewards and management representatives will make the decisions.

A Spy's Nightmare

This story is about the sort of man who is a spy's nightmare, from Calcutta to Karachi, from New York to Sydney.

Two officers walked into a bar in London. "Dry Martini" said one.

The barman put three drinks on the counter. Just a mistake, perhaps.

But something flashed across the mind of one of the officers.

He and his companion went out—and a few minutes later the barman was arrested. He was a German Spy.

What had struck the mentally alert officer? Just this that in German "Drei" means "Three."

Indian listeners heard this example of speed "in the uptake" during a recent broadcast talk by Lieut.-Col. A. Boyes Cooper.

Can any of them parallel it from their own experience in this war or the last?

AN OLD CUSTOM

Despite war conditions the much-loved custom of exchanging Greeting Cards over Christmas and the New Year will doubtless pertain this year.

It is hardly too much to suggest, however, that in these times of stress the manufacture and sale of Greeting Cards are difficult to justify unless the profits accruing are to benefit a deserving charity—more particularly perhaps the wounded and the sick.

Certainly, no better object could be chosen for such profits than the Indian Red Cross, and so the whole country will shortly be able to buy the "Red Cross Christmas Card", the total nett profits from sales of which will be devoted to this admirable object.

The card will be on sale at all General Post Offices throughout the country from early December. Keep a little money by till then, so that you may benefit a great cause by gratifying a good friend.

Diary of the War

AIR ACTIVITY OVER ENGLAND AND GERMANY

31st Oct.—The Royal Air Force attacked targets in west and north-west Germany. The German Baltic port of Lubeck was battered.

1st Nov.—In the biggest day raid since the Battle of Britain, about 50 German bombers were over the English Coast, 9 of which were shot down. Canterbury was the main target of attack.

The Royal Air Force attacked a goods train near Ostend and an enemy supply ship near Zeebrugge. Ships were attacked off the Coast of Holland.

2nd Nov.—The Royal Air Force attacked targets in north-western Germany and factories and industrial objectives in northern France and Belgium.

Enemy raiders were twice over south-east England and bombs were dropped at a number of places.

3rd Nov.—Many hits were scored on an enemy convoy and escort ships off Sept Isles.

4th Nov.—Four enemy aircraft (two of which were destroyed) attacked a place on the south-west Coast of England.

5th Nov.—The Royal Air Force raided industrial objectives in western Germany. Objective were also attacked in Occupied France.

UNITED STATES OF AMERICA AND THE ATLANTIC

31st Oct.—Mr. Wendell Willkie in a broadcast said: "General Montgomery is confident that his command will beat Rommel this time." He also prophesied that the Germans will never take Russia.

1st Nov.—An official announcement stated that Ford would build gliders for invasion purposes. The gliders will each carry 15 invasion-equipped soldiers.

3rd Nov.—President Roosevelt asked the Congress to enact legislation empowering him to suspend for the duration of the war trade barriers, import duties, customs and other regulations of any character likely to impede the free flow of munitions, supplies, persons, property and information between the United States and others of the United Nations.

5th Nov.—Congressional and State elections took place.

PARCELS FOR PRISONERS IN ITALIAN HANDS

Persons sending parcels to prisoners of war in Italian hands are warned that packages bearing the full address of camps will *not* be delivered and will be returned to the sender.

Such packages should bear only the number of the camp and reference should not be made to its location.

CHINA'S DESTINY

"The recent war situation is more favourable than that at any other time when the Council has met. The fate of the nation is now in the balance. We must look to ourselves for the way to win survival for our country. Its destiny will depend upon the men of our generation."

—GENERALISSIMO CHIANG KAI-SHEK,
addressing the Third People's Political Council, on October 31.

Unity of Purpose

It is particularly fitting that the United States and Greece should exchange Ambassadors as a symbol to our friends and to our enemies of the unity of purpose of the two nations equally determined to maintain their freedom against the assault of evil forces.

—PRESIDENT ROOSEVELT,
in a message to King George of the Hellenes, on October 30.

INDIA, BURMA AND CEYLON

31st Oct.—The Royal Air Force raided two Japanese aerodromes in Burma.

1st Nov.—The Royal Air Force made an offensive sweep over the Shwebo area and attacked the Japanese occupied aerodrome.

ITALY, AFRICA AND THE MEDITERRANEAN

31st Oct.—The Allies further extended their gains in ground formerly held by the enemy. A number of German prisoners were taken. Enemy-occupied landing grounds and other targets were bombed and machine-gunned.

4th Nov.—A big tank battle was fought in Egypt. The Allied troops made an important advance, capturing many prisoners, to the south of El Alamein.

5th Nov.—Axis troops retreated in disorder in Western Desert. Allied forces occupied strategic points.

Over 9,000 Axis prisoners were taken, including General Ritter von Thoma, Commander of the German Afrika Korps.

RUSSIA AND FINLAND

31st Oct.—The Red Army was pressed back near Nalchik. The Soviets gained ground in Tuapse area. The Russians held Nazi onslaughts on Stalingrad.

Being assembled here are Russia's latest and fastest fighter planes, the "Yaks." Their designer claims for them not only higher speed but considerably greater fire-power than the latest type of Messerschmitts.

The East African troops entered Fianarantsoa, the most important town in South Madagascar.

1st Nov.—Axis counter-attacks were beaten off. A number of conscripts deserted from Rommel's army.

2nd Nov.—The Eighth Army renewed attack and many German prisoners were taken. Five Axis aircraft were destroyed over El Alamein.

3rd Nov.—Rommel attacked British flank. The Battle of El Alamein reached a definite stage. Cretan aerodrome was bombed. Axis troops fell into an Allied "net."

1st Nov.—The Russians advanced in Tuapse area. Winter set in. The German position was considered very serious. Four enemy attacks were repelled.

Two enemy transports were sunk in the Baltic Sea.

2nd Nov.—The German thrust in Stalingrad lost its momentum. Mountains of German dead were piled up. Strategical results unfavourable for the Germans were achieved.

3rd Nov.—German losses before Stalingrad were estimated in Berlin at over half-a-million killed or wounded.

The Russians evacuated Nalchik.

4th Nov.—The Nazis launched a wide pincer movement against the Mozdok front. Nalchik was in flames.

5th Nov.—Soviet forces landed on Volga bank. Nazi attacks on Stalingrad failed.

SHIPPING

1st Nov.—His Majesty's ship *Veteran*, a destroyer of 1,500 tons, was sunk.

VICHY AND OCCUPIED COUNTRIES

1st Nov.—Eleven persons were sentenced to death by court-martial in Hungary.

5th Nov.—A reign of terror was inaugurated by the Nazis in Bohemia and Moravia as a reprisal for Czech resistance.

The Vichy Government handed over 35 former Allied merchant vessels in French ports in the Mediterranean to the Axis.

THE FAR EAST

31st Oct.—United States bombers raided the Japanese naval base at Buin in the Solomons.

It was revealed that the Japanese fleet had retired from the Solomons.

It was revealed that the Japanese had imprisoned in a wooden cage in Manila, Amleto Vespa, author of the best seller "Secret Agent of Japan," a book disclosing Japan's brutal police methods in Manchuria.

1st Nov.—The first round of the fight in the Solomons was over. The American army held complete control of the situation in Guadalcanar.

2nd Nov.—An United States aircraft-carrier was lost in the South Pacific. A Japanese cruiser was destroyed.

3rd Nov.—Seven Japanese ships were believed to have been sunk or damaged in the Battle of Stewart Isles. Two American ships were lost.

4th Nov.—Allied troops captured Kokoda. A very large Japanese convoy was routed at Buna. In the Savo Isle battle, two more Japanese cruisers were sunk.

5th Nov.—Allied forces passed beyond Kokoda. Allied aircraft battered Dilli harbour.

THE GOLDEN CROPS OF IND...

IN German-occupied Europe and Japanese-occupied China, the rich golden crops are harvested by the enemy while the rightful owners starve and die. Are you going to let this happen to India, where our mainstay is agriculture? India with her huge resources is the most tempting prize of all to the enemy. Japan uses soft words to woo us into submission! But beware of those words. Resist Japan with all your combined might, for Japan's coming will mean starvation for your women and children.

M. Stalin's Speech : Division of the World into Two Opposing Camps.

The enemy radio has been carrying on propaganda for a considerable time that there are differences and dissensions among the Allies, particularly between Britain and America on the one hand and Russia on the other. This myth has been exploded time and again, but nothing would have shown the utter hollowness and untenability of the Axis propaganda in a more definite and categorical manner than the address of M. Stalin to the "solemn session" of the Moscow Soviet dedicated to the 25th Anniversary of the Soviet Revolution. In the course of his address, the great Russian leader referred to the formation of two opposite camps—the camp of the Italo-German Coalition and the camp of the Anglo-Soviet-American Coalition—in the war imposed on freedom-loving nations by Hitlerite Germany. These two Coalitions are guided by two different and opposing programmes. Racial hatred, supremacy of chosen nations, subjugation of other nations, economic enslavement of conquered nations, depredation of their national wealth, destruction of democratic liberty, and the establishment of a Hitlerite regime everywhere—these form the programme of the Italo-German Coalition. But the programme of the Anglo-Soviet-American Coalition consists of the following: abolition of racial exclusiveness, equality of nations and the inviolability of their territory, liberation of enslaved nations and the restoration of

their sovereign rights, right of establishing whatever regime they like, economic assistance to the countries which have suffered and help to be given to them in achieving material welfare, restoration of democratic liberty and the destruction of the Hitlerite regime.

M. Stalin pointed out that the moral and political resources of the Anglo-Soviet-American Coalition were daily increasing and that it was gradually winning millions of sympathisers willing

Aid to Russia

Figures of aid to Russia were given yesterday (November 12) in the House of Commons. The supplies sent from Britain through the northern route, include 3,052 aircraft, 4,084 tanks, 30,031 vehicles, 831,000 tons of miscellaneous supplies, including machine-tools, metals, foodstuffs and medical supplies, 42,000 tons of aviation spirit and petrol and 66,000 tons of fuel oil. These supplies, most of which reached Russia, cover a twelve-month period.

to fight side by side with it against Hitler's tyranny. He believed that the programme of this Coalition was sufficient to organize the common struggle against Hitlerism and achieve victory. He emphasised that an important step in Anglo-Soviet unity was the visit of Mr. Churchill to Moscow, "in which complete understanding was reached." Towards the end of his speech, he referred to the three war aims of Soviet Russia, namely, to destroy the Hitlerite State and the men who inspired it; to destroy the Hitlerite army and wipe out its leaders;

Strongest and Most Enduring Coalition : Review of Allied Achievements. This speech gives the lie direct to the propaganda of Goebbels and his satellites that there are dissensions among the Allies. There had been so much lying propaganda in regard to this matter that it is worth our while to review the Allied achievements which have made the Anglo-Soviet-American Coalition the strongest and most enduring force that it is to-day. First of all, let us take the pledges of co-operation by which the Allies have

MR. CHURCHILL GREETES INDIA'S REPRESENTATIVES.—Left to right : Mr. Amery, Secretary of State for India ; Hon. Sir Ramaswami Mudaliar ; His Highness The Maharaja Jam Saheb of Nawanagar ; Mr. Winston Churchill and Lord Cranbourne, Secretary of State for the Colonies.

and to destroy the New Order in Europe and punish its builders.

"Comrades," said M. Stalin addressing the Moscow Soviet, "We are waging a great war of liberation, but we are not waging it alone. We are fighting together with our Allies. It is going to bring us victory over the dastard enemies of mankind, over the German Fascist Imperialists."

plighted their troth to fight to the finish till the forces of Hitlerism are completely annihilated. The Atlantic Charter of 14th August 1941 occupies the most important place in this list. 26 nations first signed this Charter; later four more nations joined in the galaxy of the fighters for freedom. This charter of the United Nations embodies President Roosevelt's Four Freedoms and is applicable, in the words of the President,

to "all humanity." On February 23, 1942, President Roosevelt said that the United Nations constituted an association of independent peoples of equal dignity and importance. "All of us," he added, "must play our several parts, each of us being equally indispensable and dependent one upon the other." This resembles Lord Balfour's declaration of 1926 which defined Dominion Status with the Commonwealth.

Then came the United Nations' Declaration of January 1, 1942, by which "each Government pledges itself to co-operate with the Government's signatory hereto." This was followed by a series of numerous other agreements which formed a network of unity across the globe. Most important of these are the Anglo-Russian Treaty of May 1942, the Polish-Soviet Agreement of July 1941, the Polish-Czech Agreement of June 1942, the Greco-Yugoslav Agreement of January 1942, and the Agreement of the South American States at the Rio Conference in February 1942. These declarations and agreements have brought together all the nations who stand for freedom and democracy, on one side.

* * * *

Co-ordination of the United Nations : Joint War Councils and Production Boards. Let us see how this unity in thought and outlook in regard to the present war has worked out in actual practice. Step by step, a vast joint war machinery has been built up. In June 1942, a committee called the Chief of Staffs

Committee consisting of three American and three British officers was set up in Washington to co-ordinate British and American war plans. This was carried a stage further by the visit of General Marshall to London. In Moscow there is no combined staff, because the Russians do not need the Anglo-American help in conducting their campaign, but the presence of three-service British and American Military Missions in Moscow and Russian Missions in London and Washington make the closest liaison possible. Mr. Churchill's conference with M. Stalin in August is an indication of the fact that, in addition to mutual exchange of information and mutual help, there is joint planning.

As regards the Pacific theatre of war, a special war council was set up, which sits both in London and Washington. This Pacific War Council contains representatives of all interested powers including China. Special contact is maintained with China by the appointment of General Stillwell as Generalissimo Chiang Kai-shek's Chief of Staff, and by a series of journeys and conferences by the Generalissimo himself, General Wavell, General Stillwell and others.

With regard to production and distribution of war materials, a number of joint boards have been formed. The first of them is the Combined Production and Resources Board formed in January 1942, which co-ordinates British and American production programmes into an integrated whole. An instance of this co-ordination is the concentration of

Notable Steps Towards Final Victory

"In this fourth year of war, my peoples look forward with unshakable courage. They are determined to fight on to complete victory with no thought of parley. I look with gratitude and pride upon the great, ever-growing war effort of my loyal subjects throughout the Empire. In the last few days, Providence has blessed our arms and those of our American Allies. The brilliant victory in the Western Desert and the great operation forestalling an attack of our enemies upon French territories in Northern Africa, are notable steps towards final victory."

—H.M. THE KING-EMPEROR, opening the new Session of Parliament on Wednesday (Nov. 11).

production of fighters by Britain and bombers by America. In the field of munitions, the Combined Munition and Assignment Board carries on a similar work of integration. There is the Combined Shipping Adjustment Board which treats the shipping output of Britain and America as a single pool to be used to the advantage of the Allies. The Combined Food Board has been of very great help to Britain in tackling the food problem. All these boards have consultations with representatives of interested Allied nations.

* * * *

co-operation of British, Chinese and American troops in Burma. The joint highway to Alaska recently opened and the Joint Air Training Scheme for North America are two other examples. The Lease-Lend principle has also been of very great mutual advantage to Britain and America. Britain lends ships for the American anti-submarine campaign. The American Congress had sanctioned up to March 3, 1942 lend-lease aid to a total value of £12,561,160,000 and goods valued at £1,301,250,000 had actually been sent up to June 1942. Besides the British Empire, 35 countries are eligible

MEN WHO MADE THE VICTORY.—In reviewing the war situation in the House of Commons on Wednesday (Nov. 11), Mr. Churchill said: "Taken by itself the Battle of Egypt must be regarded as a historical victory. In order to celebrate it, directions are being given to ring the bells throughout the land next Sunday morning." The above photo taken on the occasion of the visit of General Smuts to the Middle East, shows leaders who planned and achieved this "historical victory." In the group are seen the General Smuts, Air Chief Marshal Sir Arthur Tedder, Air Officer Commanding in Chief, Middle East, Mr. Richard Casey, Minister of State, and General Alexander, Commander-in-Chief, Middle East.

Pooling of Allied Resources : Unity and Co-operation in the Post-War Period.

Bases to America in 1940 and the close

There has also been close co-operation and co-ordination in regard to the pooling of Allied resources such as bases and troops. Examples of such co-operation are the lease of the Caribbean

for lend-lease aid including several neutrals.

The unity and co-operation of the United Nations extend also to the post-war period. Considerable progress has been achieved in regard to the planning of post-war political and economic military co-operation. The Atlantic

Charter, the Anglo-Soviet Treaty which provides for a 20-year period of co-operation after the war, the Anglo-Soviet Mutual Aid Agreement of February 1942, the Inter-Allied Committee on post-war requirements, and the Inter-Allied Wheat Pool are examples of preparations of plans for the post-war world. In the face of all these hard facts of Allied co-operation on a gigantic scale, never before dreamt of in the world's history, the Axis propaganda of dissension and disunity among the Allies is ludicrous in the extreme.

**Hitler's
Munich
Beer Cellar
Speech :
"Defence is
Cheaper"!**

In his speech at the Munich Beer Cellar on Sunday last (November 8) Hitler has indulged in an outburst of bravado mingled with apology. The failure of the

Axis forces in Egypt and Stalingrad has made him exclaim: "If a blow does not knock a man down, it only makes him stronger." Referring to Stalingrad in particular, he said, "People say, why are we taking so long over Stalingrad? If the enemy wanted to attack, I for one, would not wish to stop him. For defence is always cheaper"! In an appeal to the Germans, he said, "To-day every German knows that we are engaged in a life-and-death struggle. Every German must believe in me. He must become a fanatic." The note of fear and nervousness in his speech is only too evident. Five weeks ago Hitler publicly pledged his word that Stalingrad would fall. But after paying the prize

of a quarter million killed in three months' fighting, the coveted prize is still eluding his grasp.

The desperate attack launched ten days ago (November 3) is the fourth of its kind since October 15. The situation at Stalingrad is still tense, but the Soviet forces have relieved the situation in the factory area by a daring night landing on the Volga bank above the city. A despatch from *Reuter's* Special Correspondent in Moscow published yesterday says that Soviet troops continued to strengthen their positions inside Stalingrad and repel small enemy attacks and that in the south of Stalingrad several German strong points have been captured. From the start the Stalingrad campaign has failed to move according to Hitler's plan, and every day that passes makes Hitler's need for winter quarters more pressing. It was reported yesterday that severe winter had set in at Stalingrad.

Already Berlin propaganda has been busy stressing that the Battle of Stalingrad is now more important than the fate of Stalingrad.

What is likely to be Hitler's next move? Having failed at Stalingrad, Hitler is anxious to seek success in other directions and the switching of reserves to the Central Caucasus is an indication of the fact that Hitler wants to find in Trans-Caucasia the winter quarters which were denied to him at Stalingrad.

The fighting in and evacuation of Nalchik should be judged in the background of Hitler's need for winter quarters

TURNING POINT REACHED

"The Japanese are not in India and I don't mind stating that they never will be in India. If they do come, even for a short distance, they will be hurled out of the country, not only by the Indian and the British Army, but by the whole-hearted hostility of the Indian people as a whole.

"I do honestly and sincerely believe that we have now reached the turning point. I don't say that we are going to win the war before Christmas or before Easter, but I do believe the turning point has been reached."

—H.E. SIR ARTHUR HOPE, *Governor of Madras, at Trivandrum, on November 6.*

and his anxiety to find the spring-board of attack in coming summer. About 11 weeks ago, the Germans first forced the Terek river, and the resumption of heavy warfare in that region reveals the anxiety of the Germans to control the area which dominates the mountain routes leading into Trans-Caucasia. The Germans may try to see that the entire railway net in the Nalchik sector is secured against a Russian threat to their right flank in the Mozdok area. For this purpose they have launched a pincer movement on the Nalchik-Mozdok sector and have synchronized their big thrust south-east of Nalchik with an offensive in the Mozdok area.

further base for a drive to Grozny. Latest reports indicate that Russians have brought up their heavy guns in that sector and that the Germans have not been able to make appreciable progress. In October last year, Hitler prophesied that the "greatest victory in the world would be achieved by the Germans." Then winter came, but the prophecy remained a prophecy and Brauchitsch was dismissed. This year, Hitler prophesied that Stalingrad would fall. Winter has come, but nothing has gone according to plan, and Halder has been sacked. Now Hitler talks of conserving his gains. He says, "We cannot secure new successes every week. This is

The threat to Grozny, therefore becomes obvious, but the immediate objective of the enemy seems to be Orzhonokidze, the big industrial centre commanding the Georgian military highway which leads across the mountains into Trans-Caucasia. There are two roads crossing Caucasus, one of which, namely, the Ossetic Military Road over the Mamison Pass running to Kutais, is not fit for heavy traffic, but the other, the Georgian Military Road over the Darial Pass, is in common use and in good order. The fight for Orzhonokidze, therefore, becomes highly important, for once they capture this the Germans get a headway to the Georgian Military Road or establish a

impossible. It is also unnecessary. What is necessary is that we should hold what we have." There stands the dreamer who aspired for world conquests, but is trying to hold his ill-begotten gains as long as is possible!

Germans Enter Vichy: Hitler's troops marched into Vichy France on the Armistice Day (November 11). Only three days earlier, Marshal Petain came out with a protest against the American invasion of French North Africa, which was launched with

the declared purpose of "helping the French to liberate themselves from the Axis aggression." President Roosevelt, in a broadcast to the people of France and the French in Africa, had stated, "We are coming amongst you to repulse cruel invaders who wish to strip you for ever of the right to govern yourselves, to deprive you of the right to worship God as you wish and to snatch from you the right to live your lives in peace and security." Replying to this, Marshal Petain, in a special broadcast from the Vichy Radio, said, "I have read your message. You have invoked a pretext which nothing can justify. You ascribe to your enemies an intention which has never been translated into action." But the intention of Hitler has now, at last, become clear to Marshal Petain, for he has lodged a protest against the entry of German and Italian troops into unoccupied France.

The protest is as ineffective as it is meaningless, for the whole policy of the Triumvirate of France, Petain, Laval and Darlan, has been one of abject subservience to Hitler's orders. Of the three, Laval has made himself particularly detestable by his over-anxiety to please his master at the expense of the people of France. By the end of last month, he was asked to send 150,000 skilled French workers to German factories. The original date was October 15, but an extension of time was given. Even this was of no use. Laval was not able to get the required number. The brave attitude of the workers of France,

and of the City of Lyons in particular, stood in the way of the sacrifice of the French workers. For the first time, an ultimatum expired, and nothing happened. The Germans could shoot hundreds and thousands, but not an entire nation. Therefore, a further extension of time has been given, but now the situation has been made worse by the entry of German troops into Vichy France, and it is highly doubtful whether Laval could do the trick within the thirty days of grace allotted to him by Hitler.

Warriors Four

All the four sons of the Roosevelt's are now with the armed forces outside of continental United States. Marine Corps Major James Roosevelt is in the Solomons. The two youngest sons are lieutenants aboard destroyers—John as a Supply Officer for four destroyers in the Pacific, Franklin Jr. as a Gunnery Officer on a destroyer in the Atlantic. Lieutenant-Colonel Elliott Roosevelt is with the Army Aviation Command in England.

General Wavell's Congratulations

The following message was sent by His Excellency the Commander-in-Chief, General Sir Archibald Wavell, to General The Hon'ble Sir Harold Alexander, Commander-in-Chief, Middle East Forces :—

Your splendid victory has heartened us all and I would be grateful if you would convey to Air Chief Marshal Tedder, General Montgomery, Air Vice-Marshal Conyngham and all others concerned the warm congratulations of the India Command. It is a matter of particular satisfaction to us here to know that *Indian Units which were amongst the first to take the offensive in the Western Desert in 1940, are playing their part in the present operations.*

MAGNIFICENT WORK

His Highness the Jam Saheb of Nawanagar, after a visit to the Madras Squadron of the Royal Air Force stationed somewhere in England, sent the following message to His Excellency the Governor of Madras :—

"I have recently visited Madras Squadron in England. They have done, and are continuing to do, magnificent work. I promised I would convey their greetings through you to the Province whose name they are proud to bear."

In reply His Excellency the Governor of Madras replied as follows :—

H.H. THE JAM SAHEB.

"Please convey to the Madras Squadron the grateful thanks of the people of Madras for their greetings which we warmly reciprocate. We follow with pride their brilliant exploits. We also much appreciate Your Highness's early visit to the Squadron."

—HIS HIGHNESS THE JAM SAHEB'S
Tribute to Madras Squadron.

Stalingrad will not Fall

I want to introduce to you Iuri Evgenitch Dorozh, young commander of an anti-tank rifle platoon who has just arrived in Moscow from the Stalingrad battle front, cables the *News Chronicle* Moscow correspondent.

He is only 20 years old and is a fine type of a young Communist, intelligent, modest and sincere. He has been in the Red Army studying and acquiring technical knowledge for some months and Stalingrad gave him his baptism of fire.

He told me what Stalingrad looks like, of its strong defence and what it feels like to a man who himself has been in some of the hottest fighting.

"I can tell you most about tanks," he said. "Nazis are losing a tremendous number of them, particularly in street fighting where anti-tank weapons are very effective. Our anti-tank weapons are very good and plentiful. The rifle we use can do immense destruction. If you aim for the petrol tank, you can set the tank ablaze or you can jam the turret with an accurate shot after which the tank's gun fires only one way.

BRITISH TANKS IN ACTION

"One day the Nazis sent four tanks against my platoon on a half-mile front and we disabled all the four. On this occasion they managed to tow them away. Both sides always make great efforts to remove damaged tanks."

The Germans, Dorozh said, are using mostly medium tanks. Some British tanks have been in action with the Russians. "It is perfectly true that Nazi casualties in men have been tremendous," he went on.

"Descriptions of them lying in heaps are no exaggeration. I have seen them with my own eyes particularly after one of their psychological attacks. Prisoners taken by my unit included sappers. In general our artillery is better than the Nazis and it has played an enormous part in the defence of Stalingrad. Our guns on the east bank of the Volga keep pounding away with great accuracy at enemy positions doing tremendous damage."

I asked Dorozh an obvious question, though of course no one can give a positive answer to it. "Do you think Stalingrad will fall?"

He thought for a moment. "No," he said. "I don't. The defences now are very strong. They won't be able to turn us out of the buildings we have fortified.

"Our army there is very good. Many of them are young Communists determined never, never to give up the city and Major-General Rodimtsev is a young fighting leader, whom they will follow anywhere."

A Practical Impossibility

"The rich Russian oil centres at Baku and Petrovsk are still remote from capture, and even if the wells were captured the Nazis still could not derive much benefit from them. They would have to get the petroleum home where they have refinery facilities.

"Were the Germans to rely on rail movement to carry the petroleum 2,000 miles from the Caucasus to the refineries at home, 13,750 cars would have to be moving at all times with 13,750 empty cars returning in the opposite direction.

"You don't have to be a railroad man to see that that is a practical impossibility."

—KIRTLEY MATHER, *Professor of Geology at Harvard University, in a recent speech.*

The Rout of 'Rommel'

Speaking at the Lord Mayor's annual banquet at Mansion House on Tuesday Mr. Churchill made a reference to the defeat of the Axis forces in the Battle of Egypt. "Rommel's army," he said, "has been routed and very largely destroyed as a fighting force. The battle was fought with one single idea, to destroy the armed forces of the enemy in a place where disaster will be most punishable and irrecoverable." The Prime Minister paid a tribute to the part played by Indian troops, Fighting French, Greeks, Czechoslovakians and others and referred to the Americans' "powerful and invaluable service in the air." He added that the Battle of Egypt was designed and timed as the prelude to the momentous enterprise undertaken by the United States at the western end of the Mediterranean, namely, the American invasion of French North Africa. "The President of the United States", added Mr. Churchill, "is the author of this mighty undertaking and I am his active and ardent lieutenant." The two African undertakings, continued Mr. Churchill, were part of a single, strategic political conception, which they had laboured long to bring to fruition and about which they were now justified in entertaining good confidence.

Reuter's Special Correspondent with the Eighth Army at Sidi Barrani says in a despatch published in today's (Nov. 13) papers: "Rommel's retreating forces have had a bad time in the Sollum 'bottle neck.' The Battle of Egypt is over, or almost over, and the Battle of Libya is on." The above photograph taken in Tobruk after the evacuation by the British forces, shows Rommel taking refreshments! Tobruk was the target of our bombers on Tuesday night.

The first of these two undertakings, which, in the words of Mr. Churchill, "is a British victory of the first order, may now be referred to in some detail. The attack which General Montgomery launched against Rommel's forces from the El Alamein line is the modern version of the frontal offensive of 1916-18 and is fundamentally different in method from previous assaults in North Africa, both British and German. From the day Rommel's drive towards Alexandria was halted, the Germans were using all their ingenuity and industry in constructing a defensive system in great depth. The British forces were faced by this defended position on a narrow front, buttressed on one flank by the sea and on the other by the Qattara depression.

General Montgomery's New Technique

The standard form of attack in the Western Desert in such circumstances was to swing around the enemy's southern flank with armoured columns. But this was rejected by General Montgomery. He evolved a new technique and devised new tactical methods to repulse Rommel. This may be summed up as the use of infantry, artillery and aircraft in complete co-ordinated unity as a battering-ram preceding the launching of tank attacks.

For several weeks before the actual offensive was launched, the Allied air force in Egypt used its superiority over the enemy to carry out a tremendous day-and-night bombardment of his lines of communications, transport concentrations, ports, dumps and air fields. This has weakened the enemy's capacity, both for attack and defence, by reducing his mobility. There have also been heavy and effective air attacks on Axis shipping. British submarines have taken a heavy toll of Axis supply ships crossing the Mediterranean. The Eighth Army itself took a hand in this preliminary work with their land raids on Tobruk, Benghazi and Jalo.

When "zero hour" struck on the night of October 23, the co-operation between the three services instantly became a complete integration into a single fighting instrument. The complete identity of the air arm with military forces on the ground was the dominating feature of this great and momentous attack. The R.A.F. not only provided an aerial umbrella for the troops against the enemy dive-bombers by means of a continuous shuttle-service, but also continued an artillery barrage from the air. The entire enemy area from the battle-front right back to the main bases was brought within range of the devastating bombardment.

A Unique Feature

Some idea of the unique feature of this offensive can be gathered from the fact that not only the lines of communication for Mersa Matruh and Tobruk, but also those from Benghazi—600 miles away—and Genoa have been bombarded. The cumulative effect of these air raids on communications on the campaign as a whole has been found to be considerable. The advantage of Allied superiority in the air was thus fully exploited by complete co-ordination both in offence and defence. The pounding of Axis ports and supplies on roads and rail and the intensity of raids on Tobruk by Allied bombers have had such a terrible effect that a German war reporter in South Africa in a broadcast emphasised the "impressive numbers" of Allied air formations and said, "We are fighting against a numerically superior enemy and this had been going on for days now."

This air superiority is one of the main causes of Allied success in the Battle of Egypt. The enemy has been driven from anchorage in Egypt in a non-stop retreat to Libya. The Eighth Army has thus accomplished what the Afrika Korps failed to accomplish two months ago. What Rommel wanted to attempt on September 1st was to overwhelm the Eighth Army by the whole weight of his mechanised forces and reach the Nile Valley. A week's fighting made him withdraw after suffering heavy losses. Almost exactly two months later, General Alexander pierced the enemy's formidable defence and, after 12 days' fighting, forced him to abandon his positions along the desert front and retreat westwards.

Over 13,000 Axis prisoners have been taken in this battle including Ritter Von Thoma, Commander of the German Afrika Korps. Over 320 German and Italian tanks and about 270 Axis guns were captured. Three-hundred and sixty Axis aircraft were shot down and about an equal number were destroyed on the ground. It is important to note that the spearhead of the retreating forces consists mainly of Germans, Italians being left behind to fight rearguard actions.

The successful defence of Egypt by the Allies recalls the battles of the last war. The adoption of the principle of frontal assault, as at Verdun, Ypres, the Somme and Passchendaele is the most important feature of this battle, which has shown that a position can be "outflanked" from above as well as from the sides. It has also shown that infantry and artillery are still needed to puncture a static line so that the gap cannot be filled in time to prevent a real break-through.

• The fact that tanks are more and more taking the place of the cavalry of old is yet another feature of this important battle.

Threat to Egypt Removed

The general position, as it stands today, may be briefly summed up. Rommel has been routed completely, and the Battle of El Alamein has ended in a glorious and decisive victory for the Allies. But the Battle of the Western Desert is not yet over. In spite of his enormous losses, Rommel's striking power still remains. Axis reinforcements are on their way to South Africa to stem the retreat. It must, in this connexion, be borne in mind that the Allied advance westwards means the lengthening of the Allied lines of communications. On the other hand, the Axis forces are having the advantage of shorter lines of communications. For the present, the immediate threat to Egypt has been removed and the Allied forces have scored a great victory, which demonstrates the high qualities of military leadership, organization and morale of the Eighth Army.

The conferment of high distinctions on General Alexander and General Montgomery, the heroes of the Battle of Egypt, by His Majesty the King-Emperor in recognition of their most valuable services for the cause of the United Nations, at a critical time, will be widely welcomed and greatly appreciated.

Caucasus— “Graveyard of the Invaders”

BY
M. KALININ

NAZIS are surging towards the Caucasus. They are pressing in two main directions, along the North Caucasian railway skirting the great mountain chain area of Mozdok and the Kong-Maikop-Novorossisk route along the Black Sea coast.

The German advance is steadily slowing down while the resistance of our troops is steadily growing stronger. The enemy's losses increase with every passing day. For every mile of his advance he pays a dearer price.

The conquest of the Caucasus is an old German dream. In 1918 when Germany was already facing a defeat, the chief of the Austrian General Staff, Artz, wrote to his superiors: “She (Germany) wants to ensure for herself for ever the safest road to Mesopotamia and Arabia via Baku and Persia. This possibility is especially attractive to Germans, now that they have occupied the Ukraine. The road to the east passes Kiev and Sebastopol whence it goes by sea route to Batum and Trebizond. In my opinion, the Germans intend to retain Crimea for this purpose as a colony or in some other form.”

THE UKRAINE—CRIMEA—THE CAUCASUS—PERSIA—INDIA.

Then this former Chief of the Austrian General Staff launched into a long discourse to the effect that unfortunately Austria was

too weak to prevent the German aggression to the east. Herr Artz called on the Austrian Government for “a sincere collaboration with Germany” in order with the latter's permission to wrest something from the spoils. It is characteristic that the Austrian military circles failed to see the disaster approaching—the total defeat, which overwhelmed both the Germans and themselves.

The same document contained the following statement: “These intentions (to occupy Ukraine) are confirmed by Lieut.-General Groener's open declaration that since Britain restricts Germany in the west, Germany's chief interest lies in the direction of India via the Ukraine and the Crimea.” As far back as 1918, Germans set themselves the object of seizing the Ukraine, the Caucasus and the Turkish port of Trebizond, all Asia Minor and attacking India—intending this way to achieve world domination. To-day the Fascist press is recalling with relish the German invasion of the Caucasus in 1918. For instance, this is what a German newspaper the *Deutsche Ukrainer Zeitung* wrote on September 8 this year: “In April 1918 General Kress set out with his troops from Constantinople across the Black Sea for Batum and then sent Bavarian Alpine detachments from Tiflis to the Georgian Military highway where they kept watch against the Bolsheviks. When one thinks to-day that the German Alpine troops have appeared once more in those districts in order to carry out the behest of 1918, the logic of world history must be clearly realized. To-day Germany is materializing her victory which was postponed 25 years ago.”

GERMAN RIGHTS.

Many German papers are full of similar articles. Magazines and special theses seriously attempt to prove Germany's right to possess the Caucasus. This propaganda has gone on year after year. Heads of the German Philistines

Borne the Burden and Heat.

“I recognize the force of all that Premier Stalin said in his last speech about the enormous weight that has been thrown on Russia. My heart bled for Russia. I have felt what everyone almost in this House must have felt—that intense desire that we should be suffering with her. Everything that M. Stalin said about the disproportionate burden thrown upon them is perfectly true. It is evident, however, that Russia is at least three times as strong a living organism as she was in the last war. The Russians have borne the burden and heat of the day”

—MR. CHURCHILL, in the House of Commons, on Wednesday (Nov. 10).

have been stuffed with it for decades. Nazis have added nothing to the essentials of this propaganda. They have merely freed it from all restraints. The peoples of the Caucasus are in mortal danger. German planes are circling over regions where our poet, Lermontov, wrote with such inspired love. An implacable, ruthless and perfidious enemy is trying to break into their valleys and gorges and tops of mountain peaks.

One German General taught by bitter experience in the struggle against guerillas in other parts of the Soviet Union instructs his men not to plunder the Caucasian people too much, not to offend against their customs and be especially careful in their approach to women as the outraging of women in those parts may produce an outbreak of relentless popular vengeance.

But no order can put a stop to crimes of soldiers corrupted by Nazis. Only guns, machine-guns and rifles can stop them. The order itself is based on deceit. The German General merely urges his men to wait, to postpone their looting and humiliation of women until everything has been captured. Then they can reward themselves hundredfold.

Nazis seem to think that the world is peopled entirely by fools and Germans Fascists are the only clever ones who can cheat other peoples endlessly. For instance, the German Gestapo regularly resorts to the following primitive methods. Out of hundreds of prisoners, it selects a coward or a person with a criminal past, isolates him for a time, feeds him well and conceals conditions from him and then sends him across the front line with orders to praise life in the German rear and paint rosy pictures of the German regime.

In doing this, Nazis count on people's stupidity. But in counting on the stupidity of others, one may find that one has fooled himself.

The population of the Caucasus consists of many nationalities. Distrust and hostility between them had been cultivated for centuries in the interests of exploiters. The Socialist revolution not only liberated the working people from the capitalist rule, it also removed the veil from their eyes.

They realised that they were not enemies of one another but on the contrary by their joint efforts they could build life worthy of mankind. The people of the Caucasus built such a life. The outward expression of this success was rapid economic and cultural development of all Caucasian republics.

CHANGED PEOPLES

Countless factories were built—roads, hospitals, schools and theatres. Cultural standards of the people were raised.

THEY FOUGHT TO A STAND-STILL.—German soldiers collapsed from exhaustion during a recent action in Russia. The attack was brought to a stand-still.

The school, club, theatre and the foot-ball field have brought the people closer together, mentally, while new mountain roads and improved transport have brought them closer territorially. The peoples of the Caucasus have started living in close communion with each other. They have become more friendly and most significant of all, they are not hindering but helping one another.

The Caucasus, that medley of nationalities, has developed a bright colourful culture and national life. Each people shines with its own individual lustre but these individual characteristics do not prevent the Caucasian people from living in one single family on the Soviet soil. On the contrary, each nationality has grown wings for long-range flights. The whole of the Caucasus has become one mountain village for its peoples. The whole of the Soviet land from border to border has become their beloved home. National enmity has given way to mutual understanding, and estrangement to

co-operation. The struggle for narrow personal interests has given way to emulation in collective farm fields, in factory workshops, in spheres of science, literature and art.

The Red Army is checking the enemy's advance. The mass of the people have organised themselves and are battering at the rear of the Nazi Army annihilating its man power. The guerillas of the northern Caucasus are derailing enemy trains, blowing up bridges and destroying ammunition and field depots. In village Nizhynagbash, German soldiers killed a youth, Dodaaliev. His father, brother and grandfather lay in wait for four days under a bridge on a high road. A German staff car appeared. They held it up and stabbed three German officers and two drivers to death with their knives. Then they fled to the mountains to carry on the struggle.

One guerilla detachment operating in the foot hills of the North Caucasus has already killed over 500 German soldiers and officers. Thus flames of the people's war are spreading over the occupied districts of the northern Caucasus. The Trans-Caucasian republics have also risen in defence of the northern Caucasus. Georgian, Azerbaidjanian and Armenian units are fighting with the Red Army against the Germans. Trans-Caucasian workers, collective farmers and intellectuals are toiling indefatigably to increase their aid to the front. The Germans wish to enslave the Caucasian peoples and lay a road to India across the mountains. We have every opportunity to inflict on them a mortal blow. Let us turn the Caucasus into a graveyard of the invaders.—*Soviet War News.*

Training Workers in U.S.S.R.

TRAINING women workers for the Soviet industry is steadily extending in scope.

Every month thousands of housewives, office employees and girls straight from school graduate as fitters, turners, milling machine operators, welders and experts in a multitude of other trades. Nowadays skilled workers are turned out in between two and three months instead of 18 months.

A few days ago Ailik Nurmagambetova, chairwoman of the women's council of a Kalinin mine appealed to miners' wives to help their menfolk with underground work. Next morning many of them went down the mine.

Ailik Nurmagambetova taught them their new jobs—to load coal on conveyors, to unload it and to run the underground tramway.

During the past two years about one million skilled workers have been trained for the Soviet industry. Within the next few months more than 500,000 youths now being trained in railway and vocational training schools will start work in defence industry and transport or on the constructions of new factories. Factories and railway managements state that these young workers display a high standard of efficiency and have already, while still training, reached a high output. Thousands of young workers are exceeding their assignments two-fold, three-fold, five-fold and even ten-fold.

According to a statement by the Central Administration of Labour Reserves which is in charge of the training scheme, even more young people will be trained during the coming season so as to release the maximum number of adults for army service.—*Soviet War News.*

DO YOU SPEAK J A P A N E S E ?

Many do.

They repeat wild rumours

Causing unrest and grave distress,

Stock market panics and reckless loss.

They come from Japan, these rumours.

Do not heed them.

Do not pass them on.

DON'T BELIEVE RUMOURS
BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

Navy's Part in Egyptian Battle

THE battle which has just opened in the western desert is chiefly a land battle although it is already clear that both naval and air forces are playing a not inconsiderable part in it, writes Commander Kenneth Edwards, the *Daily Telegraph* naval correspondent.

Its implications and possible results are, however, predominantly naval. After the defection of France which cost the Allies the coast of French North Africa with its naval and sea bases at Oran, Bizerta and elsewhere came the loss of Greece and Crete and finally Rommel's offensive two-thirds of the way from the Libyan frontier to the Nile Delta. These enemy successes placed in jeopardy our sea communications in both the western and eastern Mediterranean.

Malta became the outpost whose supply entailed major naval operations of great danger. The passage of Malta convoys during the past months has demonstrated that two dangerous routes are available, that from the east has been more vulnerable than that from the west. From Port Said to Malta is just under 1,000 miles. The enemy is in possession of Crete and "the bulge" of Cyrenaica which leaves a channel little more than 100 miles wide. However, for a large part of the voyage from Port Said to Malta, therefore, any ship must be within easy range of the enemy shore bases. It is no exaggeration to say that every mile which the Eighth Army advances along the southern shores of the Mediterranean reduces risks and problems with which Admiral Sir Henry Harwood as Commander-in-Chief of the British Fleet in the Mediterranean is faced.

THE EFFECT ON CRETE

It is, moreover, virtually certain that a clean up of the situation in Egypt, Libya and, if possible, Tripolitania, would have profound effect on the enemy's hold on Crete and the Dodecanese and even on the mainland in south-eastern Europe. This again would react most favourably on the naval situation and the problem of our sea communications.

With the fundamental naval implications of the offensive in Egypt, it is gratifying to know that both the navy and the air forces have played and are playing a great part. There has been a complete co-operation between the services even when they are operated from as far apart as Alexandria and the United Kingdom.

The bombing of Genoa from the United Kingdom had a great naval and military objective. It was undoubtedly designed to disorganize supply and reinforcement of the Axis armies in Libya at the point of embarkation. At the same time, our aircraft, both the fleet air arm and the Royal Air Force, has been co-operating in the discovery and the destruction of enemy reinforcements and supplies at sea, while British and the United States aircraft have repeatedly attacked their ports of disembarkation.

TIRELESS WORK OF SUBMARINES

Meanwhile our submarines by their tireless work and determination in the face of the most dangerous and difficult conditions have levied a heavy toll on the enemy's reinforcements and supplies at sea. In the last few days they have sunk five supply ships, one of which carried vital cargo of petrol and another a cargo of military motor transport, and damaged five others and probably sunk a destroyer and an armed merchant cruiser which were escorting the Axis supply convoy. During the first 3½ weeks of this month these craft have sunk or damaged 24 Axis transports and supply ships. The Admiralty with proper reluctance to make a claim unless it is fully substantiated pointed out that only

The End of the Beginning.

"In the last war, we were uphill almost to the end. We met with disasters far more bloody than anything we have experienced in this. I never promised anything but blood, tears, toil and sweat. Now, however, we have a new experience — a remarkable and definite victory. . . This is not the end. It is not even the beginning of the end. But it is perhaps the end of the beginning."

—MR. CHURCHILL, at the Lord Mayor's annual banquet at Mansion House, on Tuesday (Nov. 10).

14 of these ships were actually seen to sink. It is probable that the other ten ships did not sink but in any event none of them could have continued with their task of ferrying supplies to Rommel's armies.

In the face of these losses superimposed on those inflicted on the enemy at sea and harbour by attacks of air forces of the United Nations it is probable that the enemy shipping problem in the Mediterranean is becoming acute.

The Royal Navy is also giving great assistance to the advancing Eighth Army. The enemy's advanced harbours on the Egyptian coast have been bombarded from the sea while light coastal forces have been harrying his lines of communication along the coast roads and railways. These operations from small fast motor-craft have a dual object. These vessels are only lightly armed and cannot, therefore, be expected to engage fixed shore defences. Their harrying tactics, however, can cause casualties and confusion among the enemy's main lines of communication which run close along the coast. Moreover, after the experience of the combined raid on Tobruk, the enemy must always be ready in case the operations of craft are a prelude to landing. Fast coastal craft operating at night close to the enemy's coast must try his nerves and immobilize many of his forces which he badly needs to employ elsewhere.

Japan and Germany: Opportunist Friends

THE Japanese don't want Germany to win the war. They want the war to end with an exhausted Reich—one that won't be able to challenge Japan. Next to defeating the United States and Great Britain, the Japanese want, and want very badly—the downfall of Germany."

So writes Ray Cromley in the *Wall Street Journal*, of which he was formerly Tokyo correspondent.

"The Japanese don't like the Germans," Cromley continues. "There have been suggestions in two of Japan's leading newspapers, which, like all Japanese publications, are heavily censored, that in the event of a German victory in Europe there will come as a grand finale a German-Japanese war. . . .

COMMERCIAL RIVALS

"Japanese business circles have complained bitterly about German commercial activities in the Far East. My own pre-Pearl Harbour studies of Japanese industrial and German foreign trade trends convinced me that Japan and Germany were destined to be the most bitter commercial rivals. They would want to export the same sort of goods and import the same type. This was true some time before the European war. As Germany withdrew from China and South Africa, Japanese trade opportunities grew by leaps and bounds. But that rivalry was nothing in comparison with the new sort of rivalry foretold by Japan's attempts to build up her chemical and cheap machinery industries . . .

BOTH WANT RAW MATERIAL

"The Japanese feel that they and the Germans are potential heavy rivals for the raw materials of south-eastern Asia. German occupation of large parts of Europe and sizable portions of the Soviet does not lessen but rather increases the Germans' need for south-eastern Asia. The Japanese know that. One of Japan's most pro-German diplomats, a leading figure in Japan's signing of the Axis pact and a professional anti-American, told me that he favoured the pact because it made clear that the Japanese, not the Germans, were to control the Dutch East Indies. 'Otherwise,' he said, 'we might have to fight the Germans for the Indies' . . .

"The Japanese believe that the Germans are trying to get political control of Japan. While I was in prison in Tokyo a group of Germans whom the Japanese had rounded up by police was brought to the same prison. . . . Germans are under constant suspicion in Tokyo. They are restricted in their movements and constantly followed. Americans returning on the *S.S. Gripsholm* from internment and jail in Shanghai reported friction between the Japanese and their Axis partners in China and Japanese mistrust and ill-treatment of their supposed allies.

USEFUL PRESENT

One of Japan's leading geopoliticians wrote before Pearl Harbour that Germany was useful to Japan 'at the present time' . . . Japan could use German patents, German experts, industrial advice, technicians and equipment . . .

"Though Japanese leaders remember Hitler's derogatory remarks about the Japanese in *Mein Kampf* they work with the Germans . . . but keep their own counsel. On one occasion in Japan I overheard a German economic expert talking indiscreetly. He said that Germans were not being allowed in arms plants. They were being forced to give advice without seeing factories, to outline chemical operations without seeing apparatus. The Japanese were taking no chances."

France at the Cross-Roads

BY

VERNON BARTLETT

THE extent to which, in the last few days or so, Nazi-controlled newspapers in Paris have been talking about enemy action by the United Nations is interesting. Some of these papers talk about the north coast of France; most of them talk about Dakar and Casablanca, and the western entrance to the Mediterranean.

I noticed the other day that Radio Paris is claiming that American contingents have arrived recently in Sierra Leone, Nigeria, the Gold Coast, Liberia, French Equatorial Africa and the Belgian Congo.

Rumours follow strange meanderings in wartime. The best example I have seen recently was a Danish Radio report on October 7, that the Lisbon correspondent of the official Japanese News Agency had quoted an Australian Radio message to the effect that Admiral Darlan had ordered the French Fleet in Toulon to proceed to Dakar.

THE PRINCIPAL REASON

This agitation in the Paris papers is significant. The effort to concentrate French people against the British has never been more obvious or more important; important, because of the failure of Laval's attempt to find an adequate number of so-called volunteers to be transported to Germany. These rumours are useful as pegs upon which to hang arguments in favour of handing over French ships to the Germans, and of making the French forget about the German efforts to get all this slave labour for Germany.

But the principal reason why the French ships had not been handed over long ago, was mainly that the protest inside France would be so strong that Laval dare not face it and Hitler dare not urge him to do so. That reason will remain.

THE CHOICE

I am afraid all this is a rather involved and long-winded way of saying that just as we see it here in Britain the situation in France is fast approaching a first-class crisis, in which she must choose between a surrender to German demands so abject that she will lose all hope, at any rate, for generations, of regaining her status as a great power—she will have to choose between that, and a hard and bitter attempt to take up the struggle again against the invader.

In our view, if she once allows the Germans to control her last assets, that is to say her African colonies and her ships, then she will become just as enslaved as the smaller occupied states of Europe; and having lost those assets, she will be made to feel the effects of all that anti-French hatred that Hitler shows in *Mein Kampf* and elsewhere . . . In a recent B.B.C. talk.

Bevin Boys

APPRECIATIVE references by Birmingham landladies to Bevin Boys whom they have boarded are contained in the following report published by the *Birmingham Evening Despatch*.

Excellent impressions are being left by the Indian trainees who come to Birmingham to study English methods of engineering under the Ministry of Labour scheme by which groups are brought over from their country and spend some months in England.

The welfare department of the Ministry of Labour and National Service in Birmingham receive appreciative notes from landladies. Three recent examples are:—

"I would like you to know how very much I enjoyed having Mr. K. here during the last two months. He is such a nice and intelligent young man and was so appreciative of everything done for him. A perfect gentleman in fact. Such a young man will, I feel sure, be a great asset to the future of India. We here are missing him terribly" . . . *West Heath, Birmingham*.

"With much regret I understand Mr. D. and Mr. N. are leaving here next week. . . . I am sorry, as during their stay at my home we have all been one happy family" . . . *King's Norton, Birmingham*.

"The Indian trainee, Mr. R. who for a short time stayed with me. . . . is a boy of an excellent character and well-mannered. He is an unassuming and polite boy. It gave me immense pleasure to board him . . . I wish him every success and prosperity" . . . *Northfield, Birmingham*.

Lean of the Land

A farmer to a soldier peeping out from a tank:

"How do you manage to exist in such a small space?"

"We live on condensed milk and short-bread!"

Growing Power of Day Bombing

NOW that the 24-hour air offensive against Germany is gathering weight a new tactical conception begins to appear, writes the *Sunday Times* aeronautical correspondent.

Any conclusions about the revolution in tactics which the higher bomber speed may work must be tentative, yet there do seem to be signs of temporary diminution in the supremacy of the fighter. The see-saw appears to be tilting towards the side of the fast bomber. Eventually the fighter will recover its advantage but Germany may have been mortally smitten before then.

What is the best means of continuously penetrating defences in depth? Obviously we must use all the flexibility of the air power to confuse and harass the enemy—the low flying raid by Lancasters one day, the short range high flying attack by Fortresses the next, the high speed thrusts by Mosquitos followed by Mustangs shooting up locomotives—all projected against the solid background of the heavy night bombing. The holding of initiative makes possible the application of all this versatility to maximum advantage.

THE FORTRESS AND THE LIBERATOR

The Fortress and the Liberator are heavily armed and are capable of flying high. This means sacrifice in bomb-load but they have already shown how they can be at short range both in bombing and in shooting down enemy fighters. Though cloudy skies of the winter may prevent high flying attacks for weeks, on end they give opportunities "for cloud hopping" tactics. The Lancaster and its brethren combine great load-carrying capacity with high speed and fairly strong armament. They showed their quality against Le Creusot using speed and range to strike the enemy unawares evading interception.

The new Mosquitos employ still greater speeds. Naturally their bomb-load though useful does not compare with the Lancaster. But their harrying effect is very great. Finally, fighters have been most successful of late in deep penetration to shoot up enemy communications. The Mustang is particularly effective for this because of its fuel capacity of 141 gallons (compared with the normal 85 of the Spitfire) which enables it to fly long distances and use its speed to escape.

THE VALUE OF DAY BOMBING

The present comparatively small day bombing is most valuable in accumulating experience which can be applied at night also and will have to be if we are to keep down losses against the steadily improving night defences

and method of detection. Some people appear to have been puzzled by a recent suggestion regarding the advantage of the bomber in rear fire.

The fact is at modern speeds the rear fire from the tail turret of a bomber is doubly effective against the fighter attacking from behind and firing forward. Undoubtedly this fact accounts for much of the success of Fortresses during the past few weeks. The all important thing is for a bomber to have large calibre guns of high muzzle velocity so that the weight and the range of fire are great. The best reply the fighter can make is new guns and a still higher muzzle velocity—but they would be available for the bomber also. Thus tactical inclinations are all towards high speed in the bomber with good rear armament and specially trained crack marksmen to take full advantage of long-range shooting which speed makes possible. If the bomber can keep the fighter at arms length in this manner some basic conceptions of air power may be upset—the fighter may no longer reign supreme.

Devil's Garden

SAPPERS with delicate hands, sensitive feet and uncanny instinct for hidden evil are saving hundreds of British lives by removing booby traps and mines, cables the *Daily Herald* Cairo correspondent.

One section of the Axis lines was so filled with lurking death that a notice board was placed beside it with a grim warning inscription in German and Italian "devil's garden."

Yet every one its booby traps was moved without accident. So much danger may hide beneath the most harmless object that all our soldiers are taking infinite care in picking up anything on the battlefield.

"In some places even a twig will explode a buried mine," I was told.

Fortunately, sappers seem to have a second sense for them. There is one incredible lance corporal who just kicks his way through minefields.

He is a grey-haired Australian, who walks along giving a kick here and a kick there, finds mines and digs them up.

A young officer of the Royal Engineers told me: "One night my men had to clear two minefields. They searched for them with bayonets under criss-cross machine gun fire of the British and the enemy."

"When they had cleared a lane, eight yards wide, tanks moved forward. Then they started on a second minefield where they had to dismantle an elaborate system of wires. When we had cleared a gap we charged and took many Italian prisoners."

Diary of the War

ENGLAND AND GERMANY

8th Nov.—The Royal Air Force and American bombers bombed Brest Harbour.

9th Nov.—Hitler spoke in the Munich Beer Cellar on the anniversary of the Beer Cellar Putsch. He said: "I wanted Stalingrad because of its importance of a junction. If anybody asks why we did not take immediately the strong points held by the enemy, I reply because they are not worth a second Verdun."

10th Nov.—In his Munich Beer Cellar speech, Hitler admitted "In North Africa the enemy has moved forward and we have moved back."

11th Nov.—Speaking on United States invasion of French Africa, Mr. Churchill said at the Lord Mayor's annual banquet: "Mr. Roosevelt was the author of this mighty undertaking and I, his active and ardent lieutenant."

UNITED STATES OF AMERICA AND THE ATLANTIC

7th Nov.—Senator W. F. George, Chairman of the Senate Finance Committee, introduced a Bill to give President Roosevelt authority to set aside tariff and customs barriers to permit free flow of aid to the United Nations.

9th Nov.—The White House, Washington, announced that American forces landed in North Africa in order to "forestall an invasion" by Germany and Italy.

10th Nov.—Two Axis submarines were sunk in northern Atlantic.

11th Nov.—President Roosevelt expressed regret that M. Laval had severed diplomatic relations with the United States.

Judge Robert P. Patterson, Under Secretary for War, promised a second front in Europe in 1943.

12th Nov.—President Roosevelt revealed at a press conference that Mr. Churchill and he had decided that a second front was impracticable before next year.

U.S. TROOPS IN ALASKA.—After digging a slit trench, a soldier on patrol slides into it and covers himself with camouflage cloth.

The Royal Air Force raided north-west Germany, including Hamburg. St. Nazaire and Le Havre were also attacked.

Mrs. Roosevelt arrived in Northern Ireland on a flying visit to troops and naval units.

12th Nov.—Speaking on the Battle of Egypt in the House of Commons, Mr. Churchill said that the British had won a victory of the first order.

Opening the new session of Parliament, His Majesty the King said: "The declaration of the United Nations endorsing the principles of the Atlantic Charter provides the foundation on which international society can be rebuilt after the war."

13th Nov.—The west German radio stations Leipzig, Munich and Stuttgart went off the air. Le Havre was attacked.

INDIA, BURMA AND CEYLON

7th Nov.—Sir Bertram Stevens, formerly Australian Member of the Eastern Group Supply Council in New Delhi, in the course of a speech at Sydney (Australia), said: "In the post-war New Order in Asia the westerners will have no special advantages simply because their skins are white . . . Europeans and Americans will regard the Chinese, Indians, Malays and Javanese as friends of equal status."

9th Nov.—United States bombers raided Rangoon and attacked docks and shipping.

10th Nov.—General Noyes, Army Commander, said at a press conference at Rawalpindi: "Troops of the north-western army are ready for instant action anywhere along the frontier."

11th Nov.—Bombers of the Allied air force heavily bombed docks and warehouses in a mid-day raid on Rangoon and Syriam.

13th Nov.—The Royal Air Force raided Akyab and two enemy ships were damaged.

ITALY, AFRICA AND THE MEDITERRANEAN

6th Nov.—Axis troops were in full retreat in Egypt. Four divisions of troops from the Russian front were rushed up to the aid of Rommel.

General Montgomery's order of the day stated: "The enemy is in our power and he is about to crack. I call on all the troops to keep up the pressure and not to relax for a single moment."

The Italians in one sector asked for an armistice to bury their dead.

Allied bombers scored hits on a heavily laden merchant vessel in the central Mediterranean.

Allied medium bombers pounded the retreating Axis forces for 9 hours.

Sir Stafford Cripps, the Lord Privy Seal, speaking in London, declared that new offensives would be opened up in other areas besides North Africa.

7th Nov.—British submarines sank six Axis ships in the Mediterranean.

Allied troops advanced beyond Daba, 50 miles west of El Alamein. Four thousand more prisoners were taken bringing the total of captured to 13,000. It was expected that Rommel would make a stand at the rear of Halfaya Pass.

The death of the German General von Stumme in the Battle of El Alamein on October 24 was confirmed.

Hostilities ceased in Madagascar on November 5. Armistice terms were signed.

8th Nov.—For the second night in succession, Royal Air Force were over Italy. Genoa was the objective where large fires were started.

The Eighth Army was West and South of Mersa Matruh.

American Army, Navy and Air Forces landed on French North Africa.

The Eighth Army pursued the enemy westwards. Axis troops fought a rear guard action on the coastal road. The enemy suffered heavy losses. The total number of prisoners was 20,000; 350 tanks, 400 guns and many thousands of vehicles were captured.

9th Nov.—Mersa Matruh fell into the hands of the Allies. Six Italian infantry divisions were trapped and captured. Rommel's position deteriorated as the Axis troops continued to run.

A big Allied convoy passed through the Mediterranean.

10th Nov.—Algiers fell into the hands of the American army. Hostilities were suspended.

Axis forces retreated into Libya. Enemy troops at Mersa Matruh surrendered. Halfaya Pass road was partially destroyed. Forty thousand prisoners were taken. Major Burckhardt, famous parachutist who took part in the landing at Crete, was taken prisoner. Two Italian Princes, Prince Marescotti Ruspoli and his brother Prince Constantino were killed within 48 hours of each other in Egypt.

A big naval engagement began off Casablanca between the French fleet and the Allied units. The 3,500 ton French cruiser *Jean Bart* was hit. A large number of landings were effected by the American army at Oran.

France broke off relations with the United States.

President Roosevelt notified the Bey of Tunis that American armed forces "hope for the great privilege of passage through Tunisia."

11th Nov.—United States troops entered Tunisia and advanced in the direction of Bizerta.

American troops captured Oran and American naval forces, overcame French resistance in Casablanca.

Admiral Darlan was a prisoner in the hands of the United States troops at Algiers.

COMMANDER-IN-CHIEF'S TRIBUTE TO RUSSIA.

The following message was sent by H.E. the Commander-in-Chief, General Sir Archibald Wavell, to the British Military Mission in Moscow:

Please convey to the Supreme Commander of the Russian Armed Forces our congratulations on the twenty-fifth anniversary of the U.S.S.R., and the unbounded admiration of the Indian and British forces under my command for the undiminished courage and resistance of their Russian brothers in arms.

Allied forces engaged the enemy rear guard at Sidi Barrani and Sollum.

Five Axis supply ships were sunk in the Mediterranean by a British submarine.

It was reported that Hitler, Mussolini and Laval would shortly meet in Rome.

12th Nov.—American troops took Rabat and poured into Casablanca.

The Germans landed air force and air-borne troops in Tunisia. Italian troops entered Nice and Corsica.

The Eighth Army entered Libya as the Royal Air Force continued to attack the retreating enemy.

13th Nov.—All strategic points were taken over by Nazi troops in France. Switzerland was completely surrounded by Axis forces.

The Eighth Army entered Cyrenaica.

Enemy warships were hit in the Mediterranean.

RUSSIA AND FINLAND

6th Nov.—The Nazis renewed offensive in Mozdok area. Groups of German Alpine troops were cut off near Tuapse. The brunt of the German attack was switched to the Caucasus.

7th Nov.—M. Stalin addressed "a solemn session" of the Moscow Soviet dedicated to the 25th anniversary of the Soviet Revolution.

A big German attack was repelled in the battle north of Voronezh. There was fierce fighting at Stalingrad and the Red Army captured height after height.

8th Nov.—A Nazi battalion was wiped out in the Stalingrad area.

9th Nov.—Nazi advance was halted on the Nalchik front. German troops were driven out of several buildings in Stalingrad.

In an order of the day, Stalin stated: "We can and must clear the Soviet soil of the Hitlerite vermin."

10th Nov.—More German attacks were repelled at Stalingrad.

12th Nov.—Winter set in Stalingrad. In the Baltic, Russian warships sank one enemy transport of 10,000 tons.

13th Nov.—More Nazi attacks were repelled in Stalingrad area.

Honour and Duty.

"We have not entered this war for profit or expansion, but only for honour and to do our duty in defending right."

— MR. CHURCHILL, at the Mansion House banquet, on Nov. 10.

THE "CEASE FIRE" ORDER

"Our engagements having been fulfilled and bloody battle became useless, order is given to all land, sea and air forces in North Africa to cease the fight against the power of America and their Allies and return to their barracks and bases and observe the strictest neutrality."

— ADMIRAL DARLAN, in an order to French forces in North Africa.

THE MISSING DETAIL.

It was kit inspection, and the Orderly Officer approached Private Jones with the usual questions.

"Three shirts, Jones?"

"Yes, sir. One on, one in the wash, and one in the box."

"Two pairs of boots?"

"Yes, sir. One pair on and the other in the box."

"Two pairs of socks?"

"Yes, sir. One on and one in the box."

"Good. Now where is the box?"

"Don't know, sir, I've lost it."

VICHY AND OCCUPIED COUNTRIES

7th Nov.—Fifteen Vichy merchant-ships bound for the Dardanelles from North Africa were handed over to the Axis for use in the Black Sea.

9th Nov.—The Vichy Radio stated that all sea traffic between France and North Africa had been suspended.

10th Nov.—The German-controlled Paris radio, mentioning the Armistice at Algiers, said that it was made out of consideration for the civilian population who could not be evacuated in time.

11th Nov.—Vichy radio announced that Marshal Petain had assumed Admiral Darlan's post of Commander-in-Chief of the French land, sea and air forces.

The Germans executed 13 more Czechs.

12th Nov.—German and Italian troops entered Vichy in spite of Petain's protest.

THE FAR EAST

6th Nov.—Allied troops advanced on Wairpoi, a key point on the road to Buna.

Col. Knox, Secretary to the Navy, warned that the Japanese were making ready for a new attack.

7th Nov.—Allied ground forces continued to advance beyond Kokoda towards the north New Guinea coast.

8th Nov.—United States troops advanced in Guadalcanar.

9th Nov.—The Allies gained control of Papua. The Japanese were pushed back in New Guinea.

10th Nov.—There was severe fighting in New Guinea. American troops poured into Papua. Japanese ships were sunk off Guadalcanar.

The Japanese retreated from Shasi.

11th Nov.—American troops further advanced in Guadalcanar. One Japanese destroyer was hit.

The Japanese launched an attack on the Chinese stronghold of Yishan.

12th Nov.—The battle for Oivi reached a decisive stage. The Japanese were encircled.

13th Nov.—The Japanese retreated with heavy losses in New Guinea. They also retreated north of Canton.

Two enemy cargo vessels were damaged at Kiska.

Triumph of Democracies is near

Mr. NAHAS PASHA

I am sure the Day of Triumph for Democracies is near. The Axis forces have been driven from Egypt and pursued into Libya. The danger to our country has been removed. The memory of the anxious hours through which Egypt and her allies have passed will strengthen their friendship, their alliance and their mutual confidence.

Mr. NAHAS PASHA, Prime Minister
of Egypt, in a speech at
Cairo on Saturday
(Nov. 14)

Running Commentary

Vichy North Africa: The American Landing—Supply Routes Shortened

The Washington correspondent of *The Daily Telegraph* cabling to his paper the reactions in America on the landing in Vichy North Africa, says, "This is it!" was the reaction of most Americans to the thrilling news that, for the first time in this war, American troops have gone into action on a grand scale. Excitement and enthusiasm were intense. Coming on top of British successes in Egypt, this has changed the nation's views of the war almost overnight." The correspondent points out that, in spite of excitement over the fact that a major American expeditionary force was at last in action, most newspapers made it clear that this was a great Allied operation, in which the Americans, the British, and the Fighting French and others were playing their part.

One of the features of the new offensive in French North Africa was the fact that American troops were assigned the task of making the initial landing and that Americans were in charge of the "combined operations." It is stated that American military commentators are giving full reins to speculation and foresee in this victory the complete clearance of Axis strength on the African shores of the Mediterranean. They feel that the African successes would, to some extent, relieve the pressure on the Soviet front and would also have its effect on Far Eastern operations by shortening the line of communications and relieving the strain on shipping.

The U.S. War Shipping Administrator, Vice-Admiral Emory S. Land, referring to this, has stated that the eventual opening of the Mediterranean would greatly shorten the supply routes of

HIT THEM FOR SIX!

"When we began the Battle of Egypt on October 23, I said together we could hit the Germans and Italians for six right out of North Africa. We have made a very good start, and to-day, November 11, there are no German and Italian soldiers on Egyptian territory except prisoners. In three weeks, we have completely smashed the German and Italian Army and pushed the fleeing remnants out of Egypt, having advanced ourselves nearly 300 miles up to and beyond the frontier."

—General MONTGOMERY, in a personal message to the Eighth Army.

American and other United Nations' shipping. He says, "As soon as the Mediterranean can be used safely, long voyages around the tip of South Africa to Suez, the Persian Gulf and India will be eliminated to a great extent." He points out that the more direct Mediterranean route would save thousands of miles, oil, coal and considerable time for ships now in service. This is as good as adding many ships to the United Nations' shipping pool and will result in more

greatest "combined operations" the world has ever seen, has been accomplished with remarkable success, because of the strength of Allied sea power. As *The Times* points out, up to the time of actual landings, the operation was a wholly sea affair, and even most of the widespread air reconnaissance, which had to cover hundreds of miles round selected landing places and indeed all over the Western Mediterranean, must have been carried out by ship-borne air forces,

FIGHTING FRENCH IN THE WESTERN DESERT—Some of the gunners of the Fighting French are here seen with their guns. Speed and prompt action is the greatest necessity, so their main consideration is the upkeep and perfect maintenance of their guns.

cargoes being carried out in a shorter time to the Near East, Russia, and India by means of the Persian Gulf.

Remarkable Success of Combined Operations: Tribute to Admiral Cunningham

The importance of shipping and sea power has been well illustrated particularly in the operations in French North Africa. The task of carrying through at a sea distance of over thousand miles from the nearest base one of the

until the Moroccan and Algerian air fields became available to the R.A.F. and the American Army Air Forces. *The Times* pays a tribute to the clockwork precision with which the occupying troops in North Africa have been delivered in such quick succession to their several points of disembarkation and their immediate successes at every landing place in establishing their foothold ashore.

The main technical work of bringing troops safely to places required by General Eisenhower's plan was entrusted

to the Royal Navy headed by Admiral Cunningham who, says *The Times*, "is the first and foremost of fighting seamen and a born leader of men afloat."

The purpose of this great American landing was explained by President Roosevelt in a broadcast, to which we referred in our last issue. It was intended to liberate France and destroy German and Italian forces in North Africa. When the Axis threat is completely removed, the sovereignty of France over French territories will be completely restored. This action on the part of the Allies was necessitated by the growing subordination of the Vichy Government to the Axis threats and the development of relations of a more sinister character on the part of one or two important personages of the Vichy regime towards Germany, which, it was felt, would affect adversely Allied position in the Mediterranean theatre of war.

* * * *

Vichy and the Axis : It is of interest to outline some of the general features of the relations between Vichy and the Axis. After the collapse of France in 1940 and the conclusion of the Armistice, it was hoped that the Vichy Government would at least

resist Axis attempts at infiltration into the French Empire.

But Axis attitude very soon made it clear that this hope would be falsified. The Nazis began their usual methods and tactics of sapping the internal strength of the French Empire by undermining the morale of, and creating unrest among, the local population. The Armistice Commissions which descended upon North Africa in large numbers did this work only too well.

To what extent the German tactics succeeded will be evident from a statement made by Count De Brinon, Vichy's representative in Paris. On March 27, 1941, he said to an American press correspondent, "If we believe that England has already lost the war and if, as we should do, we consider the interests of our country, we should come to an agreement about collaboration in Africa." This statement stands in glaring contrast to the earlier French attitude of defiance to the Germans in North Africa. Vichy became powerless, as more and more of Axis agents penetrated into the Empire in an insidious manner. Vichy surrendered itself to the inevitable, and this was largely due to the fact that men like Darlan and Laval played a game of treachery to France and intrigued with the Nazis. After the Nazis installed themselves in North Africa by means of

Enemy Propaganda Nailed to the Counter!

One of the favourite topics of enemy propaganda is to suggest that Britain invariably makes Indian troops do the fighting for her while British soldiers in a battle remain behind the front line. Figures of British and Indian casualties in the Western Desert have disproved this suggestion in the past. During the period November 1941—July 1942, British official casualty figures were as follows :

United Kingdom troops	...	...	...	50 per cent
South African troops	...	...	...	25 per cent
Indian troops	...	...	...	20 per cent
Remainder	...	...	...	5 per cent

In the present battle the percentage of United Kingdom casualties is 9 per cent above the previous figures, and (in the absence of official figures) it seems safe to assume that the percentage of Indian casualties will be smaller than before.

As an ironic and disgraceful pendant to Axis propaganda comes the German abandonment of their Italian allies in the Desert!

Armistice Commissions, they had Vichy completely under control. No protest against the growing infiltration could be made, lest worse should befall the Vichy regime.

The infiltration of the Axis first began in the economic sphere. The agricultural and raw produce of the French colonies were taken to Germany and the Occupied Europe. The Nazis no doubt paid a high price for the produce, but it must be remembered that the payment was in paper marks and French currency manufactured to order. Money was spent lavishly in North Africa by the Axis Armistice Commissions with a view to giving the impression of Axis solvency on the Continent. The extent of Nazi exploitation of the French Colonies came to light when, last December, General Jacquet, who was in charge of both military and civil supplies in Tunisia, resigned as a protest against the sending of food stocks from Tunisia across the frontier to the Axis troops in Libya.

French North Africa : In the industrial sphere also the Nazis tightened their strangle-hold. The **Laval Men** French African industries such as mines, power, **Sell Their** motor transport, and **Country** production of petroleum **for Silver** and phosphates were controlled by the *Quimum Nord African*, a Nazi concern, and run by the group of French Moroccan industrialists called *Laval Men in North Africa*. They played the Axis game, because they found a market for their goods. Thus did they sell away the national honour of France for a few pieces of silver!

The most important aspect of the Axis infiltration was, of course, the military one. It was carried out with characteristic Axis thoroughness and deceit. At Bizerta, Algiers, Oran, Kenitra and Casablanca, Axis Armistice Commissions were established with the sole object of acquiring a military hold in North Africa. The presence of German troops in French Morocco was revealed for the first time in the House of Commons on March 5, 1941. Since then German military infiltration had been going on continuously. German technical experts came and fortified the French naval bases in Africa such as Casablanca and Mers-el-Kebir, and made new aerodromes in Morocco. There were three or four hundred planes at Casablanca at the time of the

Armistice, and they were all taken over by the Germans.

* * * *

Darlan's Revenge on Hitler and Laval Darlan's regime at Vichy resulted in further increasing Axis military strength in North Africa. His reshuffle of civil and military posts was intended to entrust positions of power into the hands of men trusted by the Axis. But Darlan turned inimical to the Axis, when Laval became Hitler's trusted Quisling in France. He was evidently biding his time, and he had his revenge on Hitler and Laval when he co-operated with the Allies in the landing operations they carried out recently. His present position is now the subject-matter of controversy. Marshal Petain has disclaimed him, as also General de Gaulle. President Roosevelt's statement at the press conference on Tuesday, November 17, explains the position so far as the Allies are concerned. The President says that he has accepted General Eisenhower's political arrangement with Darlan made for the time being in Northern and Western Africa and that he thoroughly understands and approves the general feeling that, in view of the history of the past two years, no permanent arrangement should be made with Darlan. "But present temporary arrangements in North and West Africa," he adds "is only a temporary expedient justified solely by the stress of battle."

This temporary expedient has served to rescue French North Africa from the clutches of the Axis and remove their threat to the United Nations and to France herself.

Moving Forward

"We have got great armies, powerful weapons and a strong air force and navy, and we are moving forward and success is attending our arms."

—MR. CHURCHILL, at Harrow School, on Wednesday (November 18).

The Beginning of

Addressing the students of his old school at Harrow on Wednesday (November 18), Mr. Churchill said that Britain was making her way through the dark valley and gradually coming out, although there were many dangers and deceptions still besetting her. Nevertheless, he assured them that Britain was marching forward stronger every month, with more knowledge, confidence and power. "The day will surely come," he added, "when we shall reach that broader and brighter light which, when once it has shone, will never be quenched."

As usual, Mr. Churchill's speech shows great confidence in the ultimate victory of the United Nations. That this confidence is abundantly justified has been borne out by recent Allied successes in different theatres of war. We referred to the rout of Rommel in Egypt in our last issue. The greatness of this defeat is testified to by Rommel himself. In an interview in Berlin to the German Press six weeks ago (October 3), he said:

"The gateway of Egypt is in our grasp—Our intention is to act."

MR. CHURCHILL

The German General no doubt acted, but not in the way he intended. He evidently thought that his forces were strong enough to take the offensive, and certainly strong enough to defend themselves. And this was no doubt apparently correct, for Rommel's forces were numerically superior, being twelve divisions to ten. But Rommel was defeated in the Battle of Egypt. He was defeated by better armament, better men, better generalship, and by better planning. It was, in fact, better planning that made the victory possible by bringing all the necessary materials 12,000 miles by sea and made Rommel's retreat assume the non-stop character it did. The troops of the Eighth Army are still pursuing the enemy on a wide front, and at the time of writing, they are closing in on Benghazi.

General Alexander, the Commander-in-Chief of the Allied Forces in the Middle East, referring to the campaign at a press conference in Cairo on Wednesday said:

"If any action deserves the description of BLITZKRIEG, it is the Eighth Army's feat in getting from El Alamein to Tobruk in a week, and in only half the time the enemy took to come in the other direction."

The enemy has lost heavily in this engagement. There were about 500 Axis tanks in the battle area, of which only 15 escaped! The total losses in men are computed at 75,000 men, as against the Allied losses of less than 14,000. Of these, 58 per cent are from Britain, and the remaining 42 are divided between the Dominions, India, the Fighting-French, Greeks, Czechoslovakians and other Allied nations. These figures show that the Battle of Egypt was very largely fought by the British supported by various other elements in the Eighth Army.

the Final Round

The reason why the enemy so miserably failed in this important encounter, which he ought to have expected, was, in the words of General Alexander, that he was "surprised by the actual time and place of its delivery, and also by the terrific weight of our artillery and air force and by the support and fighting of our infantry."

Another Battle of Libya?

What is likely to be the next development? General Alexander expects that the enemy will make a temporary stand at El Agheila, where he has strong prepared defensive positions, and keep up the rearguard action in an effort to hold the Allied armies back, as long as there is a possibility of his getting reinforcements by air and sea. The Commander-in-Chief says, "There may be further heavy fighting in North Africa." In other words, the decisive victory in the Battle of Egypt does not mean that another Battle of Libya will not be fought out.

The Anglo-American landings in North Africa which are dealt with in some detail under "Running Commentary", form another feature of the United Nations' grand strategy, which is fraught with immense possibilities. The taking of Rommel in the rear, the control of the Mediterranean, a direct threat to Italy, and the transformation of the situation in Vichy France and French North Africa—all these are factors the effective working out of which will depend on time. Referring to the North African operations in his speech in the House of Commons on Wednesday, Sir Stafford Cripps said that there could be no better demonstration of the manner in which unification has already been met than the combined Anglo-American operations.

Sir Stafford has also referred to the Allied counter-offensive in New Guinea, which is still progressing satisfactorily. Thanks to Australian vigour and American enterprise, the tide in New Guinea has turned. So also in the Solomons. Here the Americans are more than holding their own, but the Japanese are still strong and a long and hard struggle lies ahead of our Allies.

As regards Russia, Sir Stafford points out that the valour of the Russians has once again resulted in the failure of Hitler to gain his avowed objective. It was on October 3 that Hitler promised to take Stalingrad. And he is still offering excuses as to why he didn't keep his promise. He says that a few strong points do not warrant risking a second Verdun, but he himself admits that he wanted to take Stalingrad, not because of its name, but because of its importance. And so it *was* a second Verdun, and the flower of the German army was broken on it in vain.

Red Army's Winter Offensive

Now the Red Army seems to be preparing for a great winter offensive against the Nazis. According to the Vichy Radio, seven big Russian armies are now being massed along the front from Leningrad to Stalingrad, suggesting an imminent winter push. In a despatch from Moscow, *Reuter's* Special Correspondent says that the tide of the Nazi advance into Russia has reached its highest point and, in some places, has even begun to recede. He points out that, with the disappearance of shock forces of tanks and planes from Stalingrad and the onset of winter there is now no prospect that the Nazis will have any important new success against the city. Summer, it is stated, is Germany's time, and winter, Russia's. The fighting both at Nalchik and Tuapse seem to strengthen the force of this saying.

Thus, it may be said that the war situation as a whole has been transformed. Mr. Churchill told the Harrow boys two years ago that "the days were very dark", and that they could not see then by what means they could get out of their troubles, but they were determined to find their way out. He told them day before yesterday that Britain was gradually coming out of the dark valley.

The Allies, said Dr. Benes, President of Czechoslovakia, at an International Students' Rally in London on Monday (November 16), were "now at the beginning of the final round with the Axis Powers." He has said in the language of the ring what Mr. Churchill told the Harrow boys. It is a good beginning for the final round, and all the facts of the situation point to one ultimate conclusion—the elimination of the Nazi heavy-weight by a count of ten.

“Toughest General in the British Army”

BY

SIDNEY HORNIBLOW

THEY reckon he is the toughest General in the British Army—54-year-old Bernard Law Montgomery who recently took over command of the Eighth Army in Egypt.

He is a ruthless disciplinarian, but there is not a man under his command who does not respect and admire him.

When he was General Officer Commanding-in-Chief, South-Eastern Command of Britain, he had every single officer and clerk under 40 at his headquarters out at 7 o'clock every morning for physical jerks. And everybody from private to Brigadier had to run six miles each week over a stiff cross-country course. General Montgomery himself ran the course, so no one could complain on that score.

Ruthless himself, this new Eighth Army Commander, has no illusions about the utter ruthlessness of the enemy. That is why he has always planned the training of the men under him along the severest possible lines. Never have soldiers on manoeuvres in the British Army been set such grim and brilliantly-planned endurance tests as those devised by Montgomery. Many a man has said that he would rather be on active service than training under the General.

A MAN AMONG MEN

Where Montgomery gets the pull is that he is a man among men. The less time he has to spend at his desk and the more he can get out among his troops, the better he likes it. He so organized his office work at South-Eastern Command headquarters that he got it all done between six and seven in the morning. All day he was out in the field; testing defences, talking to his troops and also to the Home Guard in the area. On a wet night he would be just as happy sleeping under a hedge as he would in his own bed.

He makes it a rule to be asleep by nine o'clock, or as soon after as possible, and he is up before most men in the morning.

A great believer in Youth, he never smokes and rarely drinks alcohol. He reckons a soldier is at his fighting best between 23 and 30. A company commander should not be more than 35, whilst a Brigadier is at his best at 40. And the finest soldier, so long as he has the brains as well, is the agile, tough, 100 per cent fit man, in Montgomery's view,

GENERAL MONTGOMERY

The fact is, Montgomery expects a lot of his men—health, intelligence, courage, ingenuity and a rigid self-discipline. He is the son of a bishop, grandson of a Lieutenant-Governor of the Punjab. Keenly religious, severe but sympathetic, alert, alive, exacting, and always with a boundless enthusiasm and tireless energy. At 54 he is as fit and full of life as when he joined the Royal Warwickshire Regiment as a Second-Lieutenant 34 years ago. That was when he left Sandhurst.

GREAT WAR RECORD

He was among the first men to land in France in August 1914, and was no sooner there than he was promoted to the rank of temporary captain. For three years he saw service on the Western Front. He was twice wounded, six times mentioned in despatches, and won the Distinguished Service Order and the French Croix de Guerre.

For several months towards the close of the war he was temporary Lieutenant-Colonel and General Staff Officer, First Grade. He was a Staff Officer on the Rhine, and in Ireland, England and India. He passed through the Staff College, and was later an instructor at both Camberley and Quetta.

In August 1937, Montgomery was given a brigade in the Southern Command, Britain, with the rank of Brigadier. In the spring of 1938 he was promoted Major-General and when this present war started he took the 3rd Division to France and led them throughout the campaign there. After the return from Dunkirk he commanded an Army Corps in Britain and later took over the South-Eastern Command.

Now he is in charge of the Eighth Army in the Desert. The short, tough man with the bronzed open-air look about him has the chance to put into practice the tactics he planned with such vigour and precision among his men at home in England.

Indian Troops in Mersa Matruh

AN Indian Army Observer was the first pressman to enter Mersa Matruh after the enemy covering party, holding the old British tank ditch, dispersed before our armour attack.

A convoy of winter clothing abandoned by the enemy on the roadside was discovered by Indian troops. Having equipped themselves thoroughly, the troops tossed gifts of under-pants and undershirts to each passing vehicle.

Sniping was still progressing but the welcoming party at the corner of the main thoroughfare comprised fourteen Gurkhas, two Punjabis and two ambulance men.

Captured in Tobruk and brought to Mersa to work in the docks, were also two South Africans. They in turn had taken five prisoners, including a German officer.

Tribute to the British Soldier

A special correspondent of the Turkish newspaper, *Yenisabah* and the *La Turguie* who has just visited Egypt writes on British soldiers. He says: "Of the many remarkable things I have seen in Egypt perhaps the most impressive is the individual fighting character of the British soldier. The British are well known for their gift for improvisation and this peculiar racial characteristic is exploited throughout their military training.

"The 'tommy' of to-day is a highly intelligent man who retains his civilian initiative and has through application and hard work transformed military training.

"Just as his father in the last war showed himself generations ahead of soldiers who fought in the South African war, so the young soldier of to-day is far better than his father. British officers pay spontaneous tribute to the intelligence of the men they command.

"The British soldier of to-day is like a member of a theatrical repertory company, trained to play any part. For the corner stone of British military training is that every private should think for himself."

Britain: Ever the Centre of Action

WE are going forward as the conference of the Prime Minister with miners brings home to us through a test of national energy which demands the utmost of the British people. From the thundering battle line in Egypt comes the news of far ranging air attack and the army's advance against desperate resistance while every other front—Russia's 2,000 miles, the air over Germany, the sea-ways round the world and the Far East—must have its share of our manufacturing power and our fighting men.

The report which Mr. Herbert Morrison was able to give in a recent speech recording our achievement, greater than most people knew, will generate still more strenuous and effectual endeavour.

There is no limit to the number of bombers or the number of ships which the commanders of the forces of the United Nations require; but the contribution now being made by British industry justifies pride. Not only in ship-building but every department of war production the output per head of our workers is greater than any other country in the world has yet attained.

The Air Minister spoke the other day wanting many more bombers. During September, British aircraft factories completed six tons of planes for every five in the month of August and have not yet worked up to the peak of planned capacity. The reason why the attack on Germany with 1,000 bombers is still as, Sir Archibald Sinclair put it, "an exceptional feat of organization" is that 80 per cent of our war production is sent overseas.

Every man for whom shipping can be found has also, Mr. Morrison tells us, gone to distant fronts. This island fortress of freedom which Hitler had to capture if he was to win the war, which for long held out alone against all the Axis could bring against it, is developing, while its own armed strength has become the central arsenal of a world alliance, a centre of worldwide distribution of arms, and still remains the centre of action against the triple enemy.

Allied capacity to develop air and sea strength into overwhelming co-operation is an assurance of victory. In this the nature of things has given our island the central part and we shall "know no dread nor ease" as we work on to the end.—*The Daily Telegraph*.

To Defend or Abandon Italy Choice Before German High Command

DURING the next few days Hitler and the German High Command and Mussolini and the Italian High Command will be forced to make political and strategic decisions of life or death importance for their two countries, writes the diplomatic correspondent of the *News Chronicle*.

Hitler and the German High Command will have to decide whether to defend Italy or abandon Italy to her fate and retire to Brenner. For Mussolini and the Italian High Command the choice is even more invidious: the choice is between continuing to fight with an ally who may desert them at any moment of crisis, or of making peace with the Allies and thereby exposing Italy to the fury of Hitler's vengeance.

For Italy under Mussolini or any other Government the choice cannot be peace or war. There can be no peace for Italy now. She must fight on—either with Germany or against Germany.

Without German help, Italy would be quite unable to withstand the mass of military, naval and air force which it will be possible for the Allies to concentrate against her once they have established complete control over the coast lines of North Africa and sea and air supremacy in the Mediterranean.

On the other hand, should Mussolini or even a new non-Fascist Government of Italy attempt to seek an armistice or peace with the Allies, Hitler could wreak terrible vengeance on his defaulting vassal. Quite apart from Hitler's vengeful rage, it would be sheer military necessity for the German High Command, if Italy attempts to make peace, to destroy everything in Italy which could ever be of military value to the Allies. Before they abandon Italy or any other occupied country the Germans can be trusted to scorch its earth even more ruthlessly and effectively than the Russians scorched their own.

For Italy, peace with the Allies would only mean exchanging bombs of the Royal Air

Force for the bombs of the Luftwaffe. In Italy, great industrial cities and centres of communication like Genoa, Turin and Milan would feel the full fury of the Luftwaffe operating from Bavarian air fields less than 300 miles away, across the Alps.

So far there have been no indications in the shape of German air and troop movements into or out of Italy to show whether or not Hitler has already reached a decision about defending or abandoning Italy. Observers in London are watching developments in Italy with intense interest for the first signs which may give a clue to Hitler's decision.

R.A.F.'s Four-Engined Bomber No Part of Germany Safe from the Lancaster

BY
PETER MASEFIELD

FOUR outstanding features contribute to make the new Avro-Lancaster four-motor heavy bomber the most formidable machine of its type in the world to-day.

The first of these is speed. The Lancaster can achieve a maximum speed little short of 300 m.p.h. even with full load. As a result a long chase must result if Axis fighters have to climb up and attempt to catch the Lancaster with little warning. The fighter may even run out of fuel before it can intercept. This high speed of the Lancaster has made it specially suitable for the long daylight raids in which it has won so much fame.

HUGE BOMB LOAD

The second feature is the enormously heavy bomb load. A maximum load of 15,800 lb. of bombs can be carried in the huge bomb compartment, 33 feet long. There is stowage of the huge yellow 4,000 pounders packed in with an assortment of 500 pounders and incendiaries to make up the weight. Or, alternatively, half a dozen 2,000 pounders with more 500 lb. bombs can be accommodated.

This enormous maximum load can be carried for more than a thousand miles whereas with a load reduced to several tons the range goes up towards the 3,000 miles mark. No part of Germany is safe from the great striking power of the Lancaster.

The third feature is the powerful defensive armoury which it carries into battle. Four hydraulically operated gun turrets contain ten guns between them and all can be aimed with precision and turned at a touch of the hand even when a 300 miles an hour airstream is roaring past. The four guns in the tail are fed by long ammunition tracks extending along the sides of the rear fuselage so that in a long flight there is no danger of running short of ammunition.

CAN SMASH FIGHTER ATTACKS

There are no blind spots on the Lancaster, except those inevitable from the small area blanketed by the fins and rudders. But that area is too small to shield an attacking fighter.

On one raid more than a dozen Lancasters set off from a station. All returned a few hours later, and when the bag was counted up they were found to have shot down four German fighters between them without loss.

Several bore many bullet holes and had been hit by cannon shells. But the Lancaster will stand an enormous amount of punishment. All the vital parts are armoured—in fact in all something like half a ton of armour plate is carried, some of it built in as an integral part of the structure.

The Lancaster is almost invulnerable to machine-gun fire and cannon shells have to hit a lucky part to bring it down.

There is a fourth strong point—production. Very careful planning before production began has made the Lancaster the easiest heavy bomber to build which is yet flying. The man-hours—and the “woman-hours,” for 40 per cent of the workers on Lancaster production are girls—have been cut down to an extraordinary extent and far below the smallest figure believed possible not very long ago. Just how far this saving in production time has been carried, the Axis would dearly love to know. So it cannot be told.

WIDELY SPREAD MANUFACTURE

In one way production of the Lancaster suffers in comparison with what can be done in the United States. And that is because of the need for dispersal. In America vast single plants can be set up to turn out aircraft from one central point. In Great Britain that cannot be done because of the danger of bombing. A vast assembly shop, for instance, would be an ideal target.

So Lancaster production is very widely spread so that at no point could heavy, accurate bombing seriously block production. Yet so well organized is the routine that the completely assembled components each with all its equipment installed, come together at the various major assembly points—and in an astonishingly short time fly away as complete machines.

The Royal Air Force is delighted with the Lancaster. It is described by experienced pilots as the best aeroplane they have ever

flown—it is delightfully light on the controls and even with two motors out of action on one side it still performs well.

HAS EVERYTHING

There is an instance in which a Lancaster, seriously hit by flak, struck the water and bounced three times before pulling clear and flying home across the North Sea with only two motors working, both on the same side.

By careful and inspired design, by fine workmanship and by that streak of luck which still enters aerodynamic science, Mr. Roy Chadwick, Avro's Chief Designer, has turned out a really exceptional machine—an aeroplane which will go down to history. The Lancaster has got everything and it packs a terrific punch. In company with the other great four-motor bombers of the United Nations it is starting to set about that task of "scourging Germany" which Air Marshal Sir Arthur Harris has promised to the Nazis.

Damage to German Cities by R.A.F. Raids

BY

V. POMERANTSEV

I have talked with many German soldiers and officers taken prisoner in recent battles. Some of these men had been transferred to the Russian front from occupied France. Others had arrived recently from the German rear. Still others had been on the Russian front for many months. These conversations shed some light on what is now taking place in the German rear and in the Nazi-occupied countries.

The first thing mentioned by one and all is the tremendous damage to German cities caused by British air raids. One of the prisoners I talked to happened to have with him a letter from his wife who had taken a trip to her relatives in Cologne after the bombings and described her impressions in the following words:

"I cannot tell you how awful it is. The ruins are terrific. All I can say is that the photographs you sent me of the Russian cities demolished by our aircraft are nothing to what I have seen here. There is no more Cologne, my dear, and that is all."

WIPED OFF THE MAP

"Not long ago I received a letter from my relatives in the village of Bieck, Rhine region," Hubert Wiltz, corporal of the 458th Infantry Regiment, 258th Infantry Division, told me. "They say that Cologne and Dusseldorf have been practically wiped off the map. Father is very worried about what will happen next."

Max Dietmann, corporal of a machine-gun battalion of the 258th division, said that he had been receiving letters regularly from his mother in Jazenetz, near Stettin, and from a girl he knew in another town. "Both," he said, "of late had mentioned the British bombings."

"Most of the letters the other men received from home spoke of the same thing. Some are afraid to write about such matters, so they send newspaper clippings, merely adding that actually the result of the bombings was far worse. I know from the letters the men in my unit have been getting that Cologne, Bremen, Flensburg, Kiel, Wilhelmshaven and Hamburg have been seriously damaged."

GREAT DEAL OF DESTRUCTION

I heard similar statements from many other prisoners. But what do they themselves think about the British bombings?

"There is a great deal of destruction and those directly involved suffer keenly, of course. But those who don't are not inclined to overestimate the importance of the bombings," said Private Gronauer, 342nd division, who arrived recently from Germany.

"They console themselves with the argument that these raids do not affect the army. Far more people would have to suffer from the bombings before they could affect the war and before the feelings of the people would be transmitted to the army."

FROM FRYING PAN

Soldiers of the 342nd division who had been in France and then in Serbia fighting the guerillas had some interesting statements to make.

"We were never able to cope with the Serbian guerillas and we never shall," they said. "We were glad to get out of Serbia, where we were surrounded by hatred and death. But coming to Russia was like falling out of the frying pan into the fire."—*Moscow News*.

VERY GROGGY

"We have decisively won the first round and the enemy is very groggy, but the battle will not be ours until he is lying senseless."

—GENERAL ALEXANDER, at a Press Conference in Cairo, on Wednesday (November 18).

Latest Pictures of the Western Desert Campaign.

On the evening of October 23, hundreds of 25 pounder and other British guns opened up the greatest artillery barrage the Western Desert has ever seen. Tons of thousands of shells hurled across into enemy positions for hours on end. Photo shows: Troops waiting to go into action when the barrage is lifted.

This battle is different from the previous ones in the desert. Usually tanks lead the attack but this time the tanks waited until artillery and infantry had cleared gaps in the minefields. Here are some of them waiting in the early morning behind our forward positions.

A Russian in Berlin

THE Soviet authorities have received a letter from a former Nazi-appointed superintendent of the Flaginsky rural district of the occupied Pitebsk region in Byelorussia, named Kozlov, who has now fled from the Germans and joined a guerilla detachment.

Kozlov is an ex-kulak (village profiteer) who was sentenced to a term of imprisonment by a Soviet court for setting fire to grain. Afterwards he worked on a collective farm. When the district was occupied by the Germans they appointed Kozlov, first as burgomaster, and then as superintendent of the rural district.

For propaganda purposes the German authorities organized excursions to Germany for so-called peasant "representatives," i.e., local traitors who sold themselves to the Germans. As a former kulak who had served a term of imprisonment, Kozlov seemed to the Germans a suitable person, and he was included in one of the excursions. Kozlov writes:

'ESCORTED' TOUR

"I went to Germany on a so-called excursion of representatives of the peasantry from the Mogiliev, Vitebsk and Smolensk regions. Twenty-seven of us, escorted by German policemen, were assembled in Minsk.

"On the way I examined my fellow-travellers—all were former kulaks, White Guards, horse-thieves, and similar wastrels. From Minsk to Berlin we were escorted by 30 SS guards who never left us for a moment. When the train stopped we were not allowed to leave the carriage. All the way to Germany we were not allowed to speak to strangers. The correspondent of the Vitebsk Fascist paper, who was in the pay of the Nazis, was spokesman for the entire delegation.

"In Berlin we were escorted by Gestapo agents in plain clothes. Each 'delegate' had one agent attached to him. We spent three weeks in Germany. During this period we visited a large factory turning out uniforms. We were forbidden to linger in the workshops or talk to the workers, and were led and driven forward like prisoners.

HAGGARD AND EXHAUSTED

"However, the scenes we saw with our own eyes was more convincing than any words. Most of the workers in this factory were women. They worked in filthy, damp,

underground departments. Their clothing was very old and worn. They were all haggard and exhausted, with wrinkled faces.

"Most of the people could hardly stand and were exhausted and no longer able to work. We managed to learn that nearly all the women in this factory had been brought by force from the occupied countries.

"Among the women working in the factory were many who had been torn from their families, their villages and towns—Ukrainian, Russian and Byelorussian women.

"In the factory we saw SS men armed to the teeth. We did not visit a single worker's home. We visited a Berlin theatre in the company of the Gestapo agents. The audience consisted of SS men, Nazi officials and Gestapo agents. We saw no ordinary people from the factories and workshops.

"During our stay in Berlin a meeting was held of the Fascist gasworks which the Nazis call the Reichstag. Before the opening thousands of armed SS men appeared in the streets driving the people to a 'demonstration'.

WEARINESS REIGNS

"Weariness reigns in Berlin. Many people roam the streets very shabbily dressed. Clogs are very frequently to be seen. It is hardly possible to buy anything in any of the shops. They are empty. Minister Rosenberg tried to throw dust in our eyes by giving each of us a set of underwear—made by our own Bialostok weavers . . .

"In the Berlin suburbs we were shown the estates of Hitler, Goering and Ribbentrop. Working on these estates were people who had been brought there by force from the occupied Soviet districts as well as from the vassal countries. Those people lived worse than cattle. We saw hundreds of people and they were all like skeletons dried up through hunger and hard work.

"The life of the people forcibly torn away from their families and country is terrible. This has convinced me finally that such is the fate of all the people whom the Germans carry away from the captured districts.

"When we returned home the Nazis gathered the peasants together in Vitebsk, drew up the text of a speech which I was to make, and compelled me to address them. They wrote all kinds of lies about what I was supposed to have seen in Germany. Against my will I was compelled to tell out-and-out lies."—*Soviet War News*.

The Balkans in Ferment Nazis Harassed by Guerillas

BY

LEONARD KIRSCHEN

IF one wants to know something about Hitler's new order in Europe there is nothing like having a good look round the Balkans in order to see what has been achieved there and find out how things are in general in this Nazi paradise. It looks as if the Germans really do not know what to do with the Balkans after one and a half year's virtual possession or control. One finds out about this German uncertainty from time to time just about when the Germans pull out of their dusty files the various alternatives they have mapped out for the reorganization of this part of the much tried European continent.

NAZI MACHINATIONS

There have been a variety of plans and drafts of plans: for a Confederation of south-eastern Europe—aped on the idea of a Balkan Federation which had been the idea of Alexander I of Yugoslavia and Kemal Ataturk—, or a greater Macedonia copied from the wild cat dreams of Vanciu Mihailoff the famous Macedonian terrorist, for a Danubian confederation after the model proposed to suit the old Habsburg monarchy, and many other plans and planlets. Now and then the Germans dust the files, chose a plan and relapse into silence after much sounding, whispering and suggesting.

Every time this happens it shows that the Nazis are having a particularly difficult time organizing and reorganizing the Balkans. This territory has proved a hard nut to crack for the Teutonic nut cracker, as it had proved for the Ottoman Empire to be one of the costliest provinces to subdue and administer. One cannot help drawing a parallel between the blowing-up of railway lines and trains carrying goods plundered from these countries with the attacks of the kind carried out by one time outlaws against the heavily laden coaches and carts of the Ottoman tax-collectors carrying the tribute and taxes to the Sublime Porte.

Yes, times have changed but not the methods and means of eighty million people living in some of the most fertile or most barren regions of Europe. They are simple folk, hard working and poor, who have not had time to meddle with politics and who have been betrayed by their politicians. But it is the simple people that react against oppressors, not the politicians who have swollen the ranks of the local Quis-

lings. The men who resist German domination are peasants and workers under the guidance of regular army officers who lead them.

PLIGHT OF GREECE

But before saying something about this stout resistance it is necessary to say something about Greece. This brave country which has proved to be the military surprise of modern age, which has fought so gallantly against the Italians before being overpowered by sheer mechanical superiority is going through what will be called the blackest period of its history. The present war seems to have chosen Greece as an everlasting memorial to Nazi bestiality for all future generations of mankind. Disarmed and helpless, brutalized by an occupation army of ten Italian and four German divisions, Greece is writhing in the agonies of total hunger worse thousand times than the experience with total war.

The Nazi brutes are robbing Greece of her nickel, we can understand that. But after that fearful last winter the Greeks had experienced when they had eaten up the seeds of their next harvest, the Germans are now taking away the meagre harvest Greece and her islands had managed to produce. They are doing this encouraged by the fact that monthly 15,000 tons of wheat are sent in specially chartered relief ships from Canada through the International Red Cross organization. Reports have even come through that even the small quantities which are distributed individually by this organization from these insufficient cargoes are being requisitioned by the Germans who sneak round corners and listen for the footsteps of the relief worker to die away.

Relief workers who have recently returned from Greece say that the whole generation of children to the age of puberty will never live to reach the twentieth year. This generation is the crowning piece to the Nazi memorial of bestiality: children with twisted legs, distended stomachs, thousands of helpless little bodies dying with fever, dysentery, typhus and consumption. Such is the agony of these tens of thousands of Greek children that their mothers prefer to kill their babies rather than see them suffer the prolonged torture of slow famine. The position is worse on the Greek islands and in the towns, for on the land one could find herbs and milk stray goat.

Autumn would have brought a certain amount of relief. The starved population of Greece had expected the olive harvest and fruit and vegetable harvests with a certain impatience. Here again they were disappointed: the olives have been taken away from them and transported to Germany which is extremely short of oils and fat, the fruit and fresh vegetables are carried daily in special goods-trains to Rommel's Africa Corps. Greece has been turned into a sort of vitamin base for the Germans. It is really a miracle if the

desperate miners and workers and peasants of Greece revolt only to be mown down by the machine gun squads of the living black pest? Such is the Greek version of the Nazi new order, the modern version of ancient Greek tragedies.

SLAUGHTER OF SERBS

Further to the west: the same tale of rape, murder and plundering. Here gallant General Mihailovitch with a small army composed of regular and irregular troops has withstood the Nazi oppressor for twenty months. He fights in and occupies a territory half as big as Bosnia and his spirit and that of his men is undaunted. Recently the Germans sent a woman to a concentration camp. This is what she did. When her son was twenty years old she called him and told him: "The beasts have killed your father in this war and your father's father in the last. You have my blessing, go into the forests and avenge their death." He went and now he will have to look for the traitor who gave his mother away. For forty years Yugoslavia had forgotten the law of blood, now they have remembered it. They derail trains and kill Germans wherever they meet them, and for every German one hundred Serbs are massacred and for every Serb ten Germans. And so the fight goes on undiminished in intensity, dying down here, flaring up there. The story of the Chetniks is known to all but the story of the partisans is just being told.

Partisans are those who do not belong to General Mihailovitch's army. They are mainly recruited from the discontented Croats who do not want to see themselves identified after this war with the Ustachi's. The Nazis and the Croat fascist guard the Ustachi's have killed over 400,000 Serbs among them according to Yugoslav reports. This may be exaggerated but they have massacred tens of thousands between them.

The Croats have lately openly shown their disappointment in the, Poglavnik—which is Croat equivalent for Fuehrer—over the Dalmatia which Pavelitch has given Italy. Dalmatia is the pearl of Croatia—that is what Croats used to call this province—and ever since his followers have grown fewer and fewer and sabotage has increased. Hitler gave Pavelitch a good shaking down when the latter visited him and as a result decrepit Marshal Kwaternik was sacked from the supreme command of the Croat army—or such as there is. Now we learn that the Chief of Staff General Axa has been replaced by General Papitch who will probably be as helpless against the rising wave of resistance as his predecessor had been.

The partisans resist and fight the Germans and kill them wherever they have an opportunity. They even possess a secret radio station which transmits bulletins three times a day in Serbian and Croat language: it is called the Free Yugoslav broadcasting station.

The Albanians are under the Italians who have found out that it is wiser to leave the

sturdy mountain population of this rugged country who are mostly Moslems alone. They occupy Tirana and the harbour Durazzo and during the night it is not wise to travel on the road linking the two.

A WIDENING GULF

This is the story of the officially occupied Balkans. And now comes Rumania the potential ally. Whilst hundreds of thousands of Rumanians are leaving their bones in Russia, the leaders at home are intriguing against each other. Scores of small scale palace revolutions fizzle out like blobs of fat on an over-heated stove. Their food is "traded" to Germany for goods which they will get after Hitler has managed to reorganize occupied Russia. Their sons are killed in the so-called crusade against the Red terror whilst under their very noses three and a half million Rumanians are ill-treated by their allies, the Magyars, on a territory which is Rumanian and which they are not allowed to fight for. Feelings between Rumanians and Hungarians are running high—I have mentioned this in one of my previous dispatches and before the armistice is signed, the Rumanians will certainly have a crack at the Hungarians and all the pent-up feelings will be let loose.

Making the News Live!

News as it actually happens on the war fronts will be brought to the microphone for the first time in an All-India Radio programme on Sunday, November 22.

Journalists and broadcasting experts have collaborated to make the news live. All the resources of a modern studio will combine to make the team's first "real news" radio show a most dramatic presentation.

Dramatised episodes of war from all over the world will be brought to the studio with sound effects. The East and Middle East will have special attention.

Some of the men whose exploits are described may themselves come to the microphone.

BULGARIANS' ILL-TREATMENT OF TURKS

In the middle of this turmoil reigns Boris of Bulgaria, the profiteer of this war. Bulgaria which is profoundly pro-Russian did not see the collaboration with Germany with good eyes. This co-operation, however, carried an attraction which turned the scales in favour of such a new political orientation. It is certain that the Bulgarians had long coveted an outlet to the Mediterranean but the prospect of building a rearguard to a German army occupying Turkey made them lick their lips. When Hitler adopted the alternative to bypass Turkey—oh! these alternatives—the bottom fell out of Bulgaria's pro-Axis policy. They are now showing their disappointment in their ill-treatment of the Turkish minority in Bulgaria. These Turks go for days without their meagre daily bread ration although they have ration-card and are refused all employment by Bulgarians. These and other points are mentioned by the Istanbul newspaper *Yeni Sabah*, which says that thousands are starving. The newspaper even alleges that hundreds who went to Bulgarian doctors to be treated were injected with so-called tonics and died afterwards.

Boris was successful in double-crossing the British Minister in Sofia, M. Randall, but he is not quite as successful in double-crossing Hitler. But among all the Balkan crooks, crowned or uncrowned, he is so far the luckiest because the Germans are so busy in Russia that they have no time to see to these minor eye-sores.

So in their idle moments, the German organizers, pull out their various plans in the hope that they will find a solution. Every time they give it up as hopeless. The day will come when the whole crumbling edifice of the New Order in Europe will collapse over the Balkan corner-stone. That day will be when the United Nations will have set firm foot on European soil. The day is not far off and when it comes it will be the signal for the whole Balkans to rise like one man and shake the remnants of the oppressor off their tired soil.

Our Fighting Men Get More Money Now

EVERY Indian Soldier, of whatever rank, is now much better off financially than he was two years ago.

So many increases of pay have been granted that sometimes soldiers and their families do not quite understand exactly how much they are entitled to draw.

Here is a simple table of the new rates of pay which will guide them:—

BASIC PAY

The basic pay of all Indian soldiers and enrolled non-combatants was increased by two rupees a month from September 1, 1942. This brings the basic pay of a soldier up to Rs. 18 a month and that of enrolled non-combatant up to Rs. 17.

PROFICIENCY PAY

This is granted at the discretion of the Commissioned Officer. The original rate of Rs. 2-8-0 a month could be granted after one year's service. Proficiency pay of one rupee a month can now be granted after six months service. This can be increased to Rs. 3-8-0 a month after one year's service.

GOOD SERVICE PAY

This is again at the discretion of the Commissioned Officer and is granted to Non-Commissioned Officers who satisfy him as to their zeal and efficiency. Non-Commissioned Officers with two, four and six years service could be granted Rs. 2, 4, and 6 a month respectively. These rates now apply in half the time—in other words after one, two or three years service as Non-Commissioned Officers.

XPATRIATION ALLOWANCE

This is granted to Indian troops serving overseas. This was increased by two rupees a month in December 1940 which brought the rates to the following which are still in force:

	Per month.
	RS.
Subadar Major	22
Subadar	22
Jemadar	14
Havildar	11
Naik	11
L/Naik	7
Sepoy	7

BATTA

This allowance is sanctioned when Indian troops are serving in a field service area. This also was increased by two rupees a month in December 1940 bringing the rates up to the following figures:

	Per month.
	RS.
Subadar Major	18
Subadar	18
Jemadar	11
Havildar	8
Naik	8
L/Naik	5
Sepoy	5

MESSING ALLOWANCE

This is granted for supplementing rations supplied in kind when the peace scale is in force. It was increased from ten annas to two rupees in December 1940. A further

increase of one rupee was sanctioned with effect from September 1, 1942 bringing the present rate up to three rupees a month.

DEFERRED PAY

A soldier earns this for every month of service but is not paid to him until he is discharged or is promoted V.C.O. It is a compulsory form of saving designed to ensure that the soldier has some capital to assist him to settle down in civil life when he leaves the army. This deferred pay was increased from one rupee to three rupees a month in April 1942 for soldiers. Non-combatants on this date were also granted deferred pay of one rupee a month. They did not previously receive any deferred pay.

POST WAR RECONSTRUCTION FUND

Two rupees a month for each serving soldier is to be paid annually into a fund designed for financing welfare schemes for the benefit of Indian soldiers and their families. This came into effect in April 1942.

World's Largest Volunteer Army

350,000 Indian Troops Fighting Overseas

THE Indian Army has grown from 177,000 in 1938 to 1,500,000 to-day, which is the largest volunteer army in the world, declared Major Raj Kumar Shri Rajendrasinhji in a recent interview in New York. He said that if given the equipment the Indian Army could hold its own against any comparable force, especially the Japanese.

Major Rajendrasinhji, a member of the Second Bengal Lancers, was decorated for service in the earlier North African fighting.

He said that caste restrictions, which formerly limited Army enlistments, had been eliminated, resulting in a recruiting rate of 70,000 a month. A total of 350,000 Indians, he declared, were fighting overseas in defence of their country.

Major Rajendrasinhji said that India realized in 1939 that its frontiers would be extended to Aden, Suez, the Sudan and Malaya, and speedily dispatched troops to those points. He cited the veteran Fourth Indian Division, which is now participating in the attack on Rommel.

Indian war production is increasing, including guns, ammunition, boots and blankets, he

said. He continued that India has an "excellent" plane assembly plant, where American planes are assembled.

Indian Red Cross Help to Russia

THE despatch of surgical instruments worth over a lakh and a half of rupees to Russia; substantial allotments for the relief of homeless Polish evacuee children in India and for Chinese Red Cross work; the grant of a sum of Rs. 2,000 for Sind flood relief work; and a message of thanks for help offered to the American Red Cross were reported at the meeting of the Managing Body of the Indian Red Cross Society held in New Delhi this morning. Lieut.-Gen. Sir Gordon Jolly, Director-General of the Indian Medical Service, presided.

The surgical instruments sent to Russia were paid for out of funds totalling over Rs. 1,82,000 received by the Society from various sources for Red Cross aid to Russia.

On hearing of the recent floods in Washington the Society sent a message of sympathy to the American Red Cross and offered its help. The Chairman of the American Red Cross replied: "On behalf of flood victims American Red Cross deeply appreciates very thoughtful expression of sympathy and offer of assistance from Indian Red Cross. Floods have now subsided and situation is well in hand."

The Society has been able to help the various provinces to organize their blood transfusion services and has decided to apply to the International Red Cross Committee, Geneva, for a grant from the Empress Shoken Fund for the further development of this service.

WON THE SECOND ROUND

The United States had clearly won round two of the battles for the Solomons, but it must not be forgotten that there may be round three. In terms of the forces engaged and the destruction wrought, this was the greatest surface battle in this war, with the possible exception of Cape Matapan.

—COLONEL KNOX, in an interview in Washington on Tuesday (November 17).

Madras Sappers and Miners

Good food—

—and good training

—make fine soldiers.

Jap Regime in Dutch East Indies

RADEN Lockman Djajadiningrat, former Director of Education in the Netherlands East Indies, and now a member of the Netherlands Economic Mission in Washington, said in an interview that "the Japanese are wooing my people with one hand, and whipping them with the other."

Mr. Djajadiningrat is an Indonesian Muslim who spent many years developing schools of law, agriculture, economics and engineering, and hopes to return to consolidate them into a single university.

The Japanese, said Mr. Djajadiningrat, knew that most of the Netherlands East Indies population was Muslim, and realized that Muslims were highly unsympathetic to their so-called "New Order." The Japs were making futile attempts to support the teachings and practices of Islam. For instance, although all Christian holidays had been abolished and Japanese feasts substituted, Muslim holidays were still scrupulously observed. The Japanese had even gone so far as to add one—the first day of the Muslim New Year, which was not considered a holyday by Muslims.

Japanese support was a propaganda show which fooled no real Muslims, asserted Mr. Djajadiningrat. They knew that the Japanese in reality have as little respect for Islam as for all other true religions.

The Japanese were ruthless in extracting supplies of all sorts from those they ruled, added Mr. Djajadiningrat. In the Netherlands East Indies, most selling was done by pedlars. The Japanese had stripped pedlar after pedlar with no reimbursement, and now none of these travelling salesmen were safe. On the other hand, the Japanese were ruthless in punishing even the slightest theft committed by local inhabitants, who were starving as a result of the occupation. Stealing meat was punished by cutting off a hand. Other minor crimes were punishable by death.

Mr. Djajadiningrat affirmed that Queen Wilhemina's recent statement concerning new policies being worked out in the Indies was very hopeful; "After the war, we will hope to build a system based on co-operation rather than on domination." His reaction to the Queen's statement was that she expected the people of the East Indies to work out a set up with the Dutch wherein they would have the majority of say. They did not want to cut off completely their relationship with

people who had taught them much in the years they had been in the Indies, declared Mr. Djajadiningrat. They wanted co-operative independence, for they were all striving for common ends.

Peasants Loot Town

BURMAN peasants are turning into dacoits in large numbers as a result of the economic chaos under the Japanese occupation.

They are forced to this in order to provide themselves with the bare essentials of life.

Already these peasant-dacoits have attacked and looted the town of Tharawaddy, on the Rangoon-Prome Road. In many other districts Indian and Burman landowners, terrorised by these brigand bands, are seeking sanctuary in the mountains.

Their plight is made more pitiful by the fact that, under the influence of subtle Japanese propaganda, the peasantry has come to look upon the landowners as being responsible for Burma's present troubles.

One of the worst features of the situation is that the police force, to which the people would normally look for protection against such terrorism, is not only inadequate but also corrupt.

In a despatch to his newspaper after visiting India's Eastern Frontier, a famous United States War correspondent describes how Burmans who have escaped into India are now imp'oring the Allies to return as quickly as possible to Burma, re-occupy the country, and restore order.

Some of the stories told by these Burmans give a vivid picture of the anarchy prevalent in their country. They state that not only have the Japanese refused to provide the Indian landlords with protection from physical violence, but that in fact the Japanese are powerless to protect anyone.

The Japanese administration in Burma, they declare, is following exactly the same policy as that pursued in occupied China. That is, only the railroads, coastal, and other vital areas are policed, while the remainder of the countryside is mercilessly exploited with the connivance of "Quislings."

Yet another familiar method of exploitation and plunder practised by the Japanese in Burma has been the debasement of the currency. The rupee has been divided arbitrarily into one hundred cents. Silver annas have been recalled, and in their place millions of notes have been issued in denominations as low as one cent.

Diary of the War

ENGLAND AND GERMANY

15th Nov.—The Royal Air Force were over Holland and Brittany.

President Benes, addressing the Czechoslovak State Council in London, expressed the hope that the war was in its third and last period.

Church bells, stilled since Dunkirk, rang throughout Britain to commemorate the triumphant Battle of Egypt.

17th Nov.—An international air force to maintain world peace was forecast by Sir Stafford Cripps in a broadcast to America. He said: "After the war, we must devise a better method by which the freedom of nations can be preserved against brutal attack. The power of the air provides an opportunity which has never before existed for the control of world order."

The Royal Air Force attacked and damaged a number of locomotives in Northern France and Belgium. German bases at La Pallice and at Lorient were also attacked.

UNITED STATES OF AMERICA AND THE ATLANTIC

15th Nov.—President Roosevelt announced that the Spanish Chief of State (General Franco) had thanked him for his assurances that United States forces in North Africa would not violate Spanish neutrality.

17th Nov.—Broadcasting on the seventh anniversary of the Commonwealth of Philippines, President Roosevelt disclosed that he and President Quezon of the Philippines had agreed to set up a joint Commission to work for the preservation of the stability and security of the Philippines.

18th Nov.—President Roosevelt called the Solomons naval action a major American victory.

Some of the first prisoners to be brought in, after the Egyptian Victory.

18th Nov.—The Royal Air Force attacked a number of objectives in the Low Countries.

General de Gaulle and the French National Committee announced their opposition to Vichy regime in North Africa.

19th Nov.—According to a Stockholm report, von List and other German Generals insisted on a reorganization of the German High Command and restoration of von Brauchitsch and von Leeb and other experts.

Col. Knox, Naval Secretary, said: "At the moment we have naval supremacy around Guadalcanar . . . We can lick them—I will not qualify that."

The Kaiser shipyards on the American West Coast claimed a new record when a naval craft was launched 2 days, 23 hours and 40 minutes after the laying of the keel.

President Roosevelt stated that no permanent political arrangement would be made with Admiral Darlan.

19th Nov.—Mrs. Roosevelt returned to America.

Two Rumanian orthodox priests and the editor of a group of Rumanian publications were arrested in Detroit for espionage.

President Roosevelt in a broadcast said that it would seem that the turning point of this war had at last been reached.

INDIA, BURMA AND CEYLON

15th Nov.—According to well-informed circles in Washington, the promised Allied offensive on other fronts, in addition to North Africa, may include a move into Burma.

Sir A. Ramaswami Mudaliyar, in a message to Indians in the Far East (at present under the domination of the Japanese), said: "By what I have seen during these two months in Britain, I am convinced of the inevitability of the victory of the United Nations. Your trials will soon be over and you will be free to join the great federation of nations."

19th Nov.—The Royal Air Force attacked a group of Japanese-occupied buildings in Kalembo in Burma.

ITALY, AFRICA AND THE MEDITERRANEAN

14th Nov.—Allies retook Tobruk. Sollum and Bardia were occupied. Axis ships tried to get away from Benghazi. Nine Italian Generals were captured.

Admiral Darlan broadcast a message to the Commanders of units of the French fleet at Toulon, asking them to "remove themselves from German grasp" and bring their ships to North African ports.

Twenty Axis planes were destroyed in the raid on Tunis by the Allies.

15th Nov.—The Royal Air Force attacked Genoa. The Allied troops reached Gazala. Petain censured Darlan. A naval engagement was fought off Algiers.

The French garrisons in Tunisia fought the Germans in Tunis and elsewhere.

President Roosevelt directed the Lease-Lend Administration to extend food, clothing and arms to the peoples of the North African territories occupied by American troops.

16th Nov.—Admiral Darlan appointed General Giraud Commander-in-Chief of North Africa.

German troops were sent to Italy to make preparations to meet an invasion.

Allied troops advanced up to Tmimi, about 75 miles beyond Tobruk. Enemy losses amounted to 75,000 men.

Allied air force raided Benghazi.

The Italian fleet in co-operation with Italian and German air forces, engaged British and American naval forces off North Africa. Thirteen U-boats were destroyed.

Hundreds of British and American paratroops captured the Bone aerodrome.

The Egyptian Prime Minister, Nahas Pasha, praising the Eighth Army's "striking triumph" in the Battle of Egypt, said in a speech at Cairo: "I am sure the day of triumph for Democracies is near."

17th Nov.—It was authoritatively stated that Rommel was in Munich, having discussions with Hitler, Himmler and others. Major-General Rameke was in command of the retreating Afrika Korps in Libya.

IMPERIAL WAR GRAVES COMMISSION

The Imperial War Graves Commission, established during the last war, was originally concerned with the commemoration of the names of members of His Majesty's Forces, who gave their lives for the Empire and of whom the greater number fell in foreign lands. For more than twenty years it has helped to keep their names a living memory. The Commission is responsible for the same sacred duty to the dead of the fighting services to-day; and now that War takes its toll of the non-combatant population as well, it has undertaken a new duty—that of collecting the names of all civilians who are victims of enemy attacks, so that the memory of their names also may be preserved for all time.

The help of every citizen in this Province is needed if civilian names are to be recorded side by side with those of the Fighting Services without exception or mistake. The Government earnestly desire that any one who is aware of the death of any British Indian or Indian national through enemy action outside the territories under the control of the Government of India, should get into touch with the revenue authorities of the district and supply information to be sent to the Imperial War Graves Commission, through the Government of India, Civil Defence Department.

The form showing the particulars on which information is required in respect of those who have lost their lives will be supplied on application to the Collector of the district.

The Royal Air Force raided Genoa again.

The natives of Corsica violently resisted Italian occupational forces. A state of siege was declared in Ajaccio.

British troops occupied Mertuba. Enemy forces were bombed beyond Benghazi. Axis forces continued to retreat in Cyrenaica.

German forces in Tunisia were ordered by Hitler to hold on at any cost.

General Giraud in a broadcast appeal to the French forces said: "We have but one enemy, one who has occupied our country and keeps one million of our comrades prisoner. We shall first have to drive him out of Africa, then out of France."

18th Nov.—Admiral Darlan in the name of Marshal Petain instituted a Legislative Council to assist him as High Commissioner for French North Africa.

Allied troops occupied Derna and Mekili.

Several hundreds of Indian troops were released from Axis imprisonment in the course of the Allied advance in Libya.

British bombers attacked Turin.

The Royal Air Force from Malta attacked Tunis aerodrome.

RUSSIA AND FINLAND

14th Nov.—The Germans resumed their offensive on Stalingrad on a large scale. A wedge was driven into Soviet positions. The Russians advanced near Novorossisk.

15th Nov.—German offensives on Stalingrad and the Caucasus failed. Winter warfare began in Karelia. Several Axis positions were captured in Nalchik.

16th Nov.—Nazis renewed their attacks on Stalingrad. The Soviet 'scorched earth' policy at Maikop oil fields was thorough.

17th Nov.—Russian troops, in a 21-day battle, killed about 15,000 Germans and Rumanians in the north-east Black Sea Port of Tuapse. Nazi attacks on Stalingrad

WESTERN DESERT ACTIVITIES: Tanks of an Armoured Brigade wait to go into action.

The Germans retreated in the first reconnaissance clash with American troops in Tunisia. The French garrisons at Bizerta fought against the Germans.

19th Nov.—American parachutists were warmly received by French soldiers at a Tunisian aerodrome. Rommel was reported to be in Tunisia.

Allied forces were within 70 miles of Benghazi. Only 15 out of 500 Axis tanks escaped destruction.

The Sultan of Morocco told General Patton, United States Commander-in-Chief in Morocco: "We are glad to receive the Americans as friends and express the best wishes for the prosperity of our countries from now on."

20th Nov.—British advance units contacted Rommel's army south of Benghazi. Ten German transport planes were destroyed by at all key points in the Stalingrad and the Royal Air Force.

failed. The enemy attacked with infantry, no tanks being available.

18th Nov.—The Red Army retook villages near Nalchik. Points near Stalingrad were also recaptured.

M. Fagerholm, Finland's Minister for Social Affairs, in speech at Stockholm, said: "Finland is not fighting for any European 'New Order.' The Finnish people are democratic and no other regime suits us. We are compelled to fight as long as is necessary."

19th Nov.—Seven big Russian armies were massed along the front from Leningrad to Stalingrad to open a Russian winter push. The Nazis retreated near Nalchik.

20th Nov.—Soviet troops gained successes at all key points in the Stalingrad and Caucasus fronts.

NEUTRAL COUNTRIES

15th Nov.—Air raid alerts were sounded in Geneva and Lausanne.

19th Nov.—A partial mobilization of the Spanish army, naval and air forces was ordered.

20th Nov.—General Franco refused to grant Germany naval and air bases.

SHIPPING

17th Nov.—The British submarine *Talisman* was lost.

VICHY AND OCCUPIED COUNTRIES

15th Nov.—A Vichy official communiqué stated: "We are able to declare that the political and administrative services will continue to fulfil their functions in complete independence and under the sole authority of the French Government."

16th Nov.—Strong forces of police surrounded Marshal Petain's official residence at Vichy.

A large number of French troops arrived to occupy the Toulon fortified region.

17th Nov.—According to well-informed circles, General Weygand was arrested by Vichy on the orders of the Germans.

An extensive revolt broke out in the Axis-occupied Western Croatia district of Yugoslavia. Between 10,000 and 15,000 guerillas captured two towns.

Marshal Petain issued a statement repudiating that Admiral Darlan represented himself or his views.

19th Nov.—Many arrests were made following a new outbreak of fire which caused serious damage to Rumanian oil fields.

Mr. Anthony Eden, Foreign Secretary, said in the Commons that Albania's future would not be influenced at the final peace settlement by any changes brought about through Italian aggression.

Six Greek airmen were executed by the German military authorities.

M. Laval was appointed presumptive successor to Marshal Petain. M. Laval was granted full powers.

THE FAR EAST

15th Nov.—American and Japanese units suffered losses in the naval action in the Solomons. A Dutch submarine torpedoed a Japanese supply ship of 5,000 tons.

16th Nov.—Allied forces captured the Kumusi river crossing, the Australian sappers having rebuilt the Wairpoi bridge. Allied troops advanced in New Guinea. A Japanese transport was sunk.

17th Nov.—Australian and American troops converged on Buna and joined forces. Two enemy vessels were hit in Rabaul harbour.

The Japanese were pushed back North of Canton.

Twenty-three Japanese warships were sunk and the Americans lost eight in the four-day naval battle off Solomons.

18th Nov.—About 24,000 Japanese died when eight transports headed for Guadalcanar were sunk.

Gen. MacArthur took direct command of the Allied campaign to drive the Japanese from their invasion base at Buna in New Guinea.

19th Nov.—Australian and American troops continued to advance on Buna in New Guinea.

The full total of Japanese losses in Guadalcanar was 23 ships sunk and 7 damaged.

20th Nov.—A Japanese naval force was off New Guinea.

Following Britain and United States, Belgium also decided to relinquish extra-territorial rights in China.

A Japanese attack on Kunming was imminent.

Morocco:
American Friends

"We know the feeling which animates the United States of America; we are glad to receive the Americans as friends and express the best wishes for the prosperity of our countries from now on, united in reciprocal understanding and in sincere friendship."

—THE SULTAN OF MOROCCO,
to Major-General Patton, on
Wednesday (November 18).

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV

FRIDAY, NOVEMBER 27, 1942

No. 12

Mr. HERBERT MORRISON

Britain's Offer to India

Britain has offered to the people of India full liberty to make their own constitution for themselves, even if it means complete independence. Whatever destiny they want for their country after the War they can have, provided only nothing is done during the War to prejudice the victory for the United Nations. Can you tell me any other example in history of a ruling power making such an offer on such a scale, with so much at stake to a subject people? What do you make of it? I make of it one more proof that the British people are looking to the future with exactly the same motives and purposes as brought them into the War

Mr. HERBERT MORRISON, Home Secretary and Minister of Home Security
(now member of the War Cabinet), in a broadcast
to the United Nations.

Running Commentary

South-West Pacific Operations : Importance of Kokoda

Air power is the key to success. This fact has been well recognized by the Allies, particularly in the New Guinea and Solomons theatres of war. They have occupied the important airfield of Kokoda in New Guinea at the beginning of this month, and the key Henderson airfield in Guadalcanar continues to remain in American hands. It was on November 2 that Australian troops re-occupied Kokoda, the strategic centre in the heart of New Guinea, which was in Japanese hands for three months. Within 44 days of their capture of Kokoda in July 28, the Japanese had infiltrated southwards across the Owen Stanley Range to within 40 miles of Port Moresby, the principal Allied base north of Australia. They advanced as far as Ioribaiwa, but two months ago, that is in the last week of September General Sir Thomas Blamey's troops began the counter-offensive against the Japanese, and they reached Kokoda within 35 days, as compared with the 44 days the Japanese took to cover the same distance.

The importance of the occupation of Kokoda lies in the fact that it has removed the threat to Port Moresby and provided the Allies with a new airfield. This represents a great stride towards the planned expulsion of the Japanese forces from the Buna-Gona sector. It was reported on Tuesday that Allied troops are steadily closing in on the dwindling Japanese positions in this sector, and it is now stated that General MacArthur's forces are now very near Buna and that Gona has been captured. Hard fighting

is going on in that area, and in the face of heavy resistance Allied ground troops are steadily advancing.

Two recent news items show that the Japanese are gravely concerned about the reverses that they have sustained and are making strenuous efforts to recoup their losses. The reinforcements of air units in New Guinea with 'O' fighters and their major attempt to land large-scale reinforcements at Buna reveal their great concern and anxiety. But their efforts have been frustrated by smashing Allied air attacks. With a view to preventing further landing attempts on the part of the Japanese, Allied forces have occupied Goodenough Island, which is about a hundred miles to the east of Buna.

Jap Defeat in the Solomons : 142 Major Combat Ships Sunk

Nearly four weeks ago the main body of the Japanese fleet withdrew from the Solomons area. After the indecisive first round of an all-out counter-offensive, it was believed in Washington that this withdrawal was necessitated by the heavy Japanese losses. During last month (October) not less than 369 enemy aircraft were shot down in the South-west Pacific area as a whole. In the three-day action in the Solomons, from November 13 to 15, the Japanese have suffered great naval losses. From U.S. Navy communiqués up to No. 194 describing the Solomons Battle and General MacArthur's communiqués up to November 16th, the Japanese naval losses since Pearl Harbour show a grand total of 142

R.I.N's Glorious Achievement !

THE report published in yesterday's papers that a minesweeper of the Royal Indian Navy played a leading part in the destruction of a heavily-armed Japanese raider in the Indian Ocean would have gladdened the hearts of all who have been watching with growing pride the rapid development and progress of the Royal Indian Navy. The minesweeper *H.M.I.S. Bengal*, under the command of Lieutenant-Commander W.J. Wilson, of the Royal Indian Naval Reserve, was escorting the *Ondina*, a Netherlands tanker when she encountered two Japanese raiders about a 1,000 miles south-west of Java. They were the *Kikokumaru* (10,000 tons) and the *Kunikawamaru* (6,863 tons). The R. I. N. minesweeper immediately headed straight for the larger ship with a view to enabling the *Ondina* to escape. This the Dutch tanker refused to do. The minesweeper and the tanker, both mounting single 4-inch guns, returned the fire of the Japanese ships armed with six 5.5-inch guns. A hit on the big raider started a fierce fire. This was followed by many more hits which destroyed the *Kikokumaru*. The Japanese raider finally sank into the sea with two of her aircraft. Indians would feel particularly proud of the glorious achievement of the R.I.N. minesweeper. The Indian Navy is playing its part, and playing it very well, too ! . . .

major Japanese combat ships sunk, possibly sunk, or damaged. The details are as follows :—

Battleships : two sunk or destroyed five damaged ;

Aircraft carriers : six sunk or destroyed, six damaged ;

Destroyers : 45 sunk or destroyed, four probably destroyed, 18 damaged ;

Cruisers : 27 sunk or destroyed, one probably destroyed, one possibly destroyed, 27 damaged.

Referring to these losses, the U.S. Navy Secretary Col. Knox said on Friday last (November 20) :

"It is fair to say that our hold on the Island is now very secure—it is, of course, always possible that they will bring in more reinforcements, but they will have to fight their way, and they have not been able to do that yet."

Axis Failure at Both Ends

Coming as it did in the midst of the serious reverses of the Axis in North Africa, the American naval victory off the Solomons must have had a further depressing effect on the Axis powers. The Japanese have been beaten, not once or twice, but three times by the U.S. Navy. In several combinations of sea battles which have followed the use of aircraft, Americans have shown a definite superiority over the enemy.

Referring to the Japanese failure in the Solomons Battle, *The Daily Mail* says :

"The actions of the Coral Sea and Midway were long-range engagements, fought entirely by carrier-based aircraft. But the Solomons battle was a stand-up gun fight on both sides. It showed that battle squadrons are still the backbone of sea power."

The latest U.S. Navy department communique reports that slow American advance westward continues in Guadalcanar with air support.

The Axis, it may be pointed out, has met with failure at both ends, the Middle East and the Far East. The trump

(Continued on page 6.)

PRESTIGE

Working in a munition factory, a man got his coat caught in a revolving wheel.

He was whisked up and whirled round and round till the foreman managed to switch off the machine. The workman fell to the ground and up rushed the foreman.

"Speak to me, speak to me," he said.

"Why should I?" said the workman. "I passed you six times just now, and you didn't speak to me!"

The Mediterranean Master Plan

"The story of the last five weeks reads like a fairy tale. Then we were facing a formidable foe, full of confidence. Now he is scattered seeking refuge at his old lair at El Agheila. Tobruk is avenged and will remain in our hands till the end of the war."

FIELD-MARSHAL SMUTS said these words soon after his arrival in Cairo from England by air on Saturday last. The story of the war in the Mediterranean theatre no doubt reads like a fairy tale, but was it the result of a wave of the wand?

Commenting on the wonders that have been achieved in the last few weeks and how they have been worked out, *The Times* points out that operations from one end of the Mediterranean to the other proceed according to what may be fittingly described as a master plan. Massive in conception, the execution of this master plan, has been, the paper adds, marked by secrecy and skill, by timeliness and daring. The German High Command must have been, perhaps for the first time in this war, rudely surprised as much by the vigour as by the moment of the blow, and, says *The Times*, its own occupation of all that remained of France is a poor compensation for the plans now thrown violently into disarray.

Axis Plans Upset

How were these plans thrown into violent disarray? The German High Command have, it is stated, made three fatal mistakes. Firstly, they allowed the British to bluff them into retaining an unnecessarily large force in Western Europe when a few extra divisions might have made a crucial difference to Rommel last summer; secondly, they grossly underestimated the strength of General Montgomery's force, and thirdly, they have initiated a battle in Tunisia, which they have small prospect of winning.

It is of interest to note that the most vociferous propaganda for a Second Front was carried on by Goebbels and his gang, and they sought to spread the impression that Russia was dissatisfied and that something should be done by the Allies to remove that dissatisfaction. The curious part of it all was that they themselves became a victim to their own propaganda, and kept a very large army in Western Europe. The spectacular Dieppe raid further strengthened this belief that the opening of a Second Front to relieve the strain on Russia was in the offing. Britain gave the impression that Dieppe was the "dress rehearsal" and that the regular show would be put up in the near future. There are definite grounds for believing that Hitler was hoodwinked by this Second Front publicity and by the Commando raids on occupied France. Mr. Churchill himself has referred to "deceiving the enemy", but never misleading an ally. Events in Russia in the last few days particularly show that this deception of the enemy and the results that have followed from it have contributed to ease the situation. It is stated that a very large part of the *Luftwaffe* has left the Russian front and gone to Sicily and Sardinia.

The Passing of a Phrase

With regard to the phrase "Second Front" itself, it already seems to be falling into disuse. For it has by now been made very clear that the Mediterranean developments are the prelude to an eventual Continental offensive by the United Nations. Mr. Churchill has acknowledged the fact that the relegation of the Continental phase on purely military grounds, to a second place in the time-schedule of the United Nations, had caused disappointment to Russia, but M. Stalin has declared that in his conversation with Mr. Churchill, who conveyed to him in person an explanation of the position and the plan, "complete understanding was reached". This complete understanding on grand strategy and the Allied successes in North Africa may contribute to the gradual decline of a now largely meaningless usage.

It may be pointed out that the complete understanding on strategy in relation to the Mediterranean area of war was reached many months ago, the plans were developed in the strictest secrecy over a considerable time, and even the approximate date of the landings was known in London, Moscow, Cairo and Washington for more than two months previously. The secret was well kept, and the enemy who is noted for his elaborate systems of espionage had not the slightest inkling of what was afoot. In fact, some Frenchmen in North Africa itself were well acquainted with Allied plans, but not a word leaked out to Berlin!

Cunningham: From Alexandria to Washington

The nature of the brilliant long-term planning of the Allies will become clear when it is recalled that six months before he was appointed Supreme Commander of the United Nations naval forces in the Mediterranean and the North African Atlantic, Admiral Sir Andrew Browne Cunningham was posted from Alexandria to Washington as Chief of the British Admiralty Delegation. This happened in May last; the purpose of his appointment was to enable him to co-ordinate his plans with those of the U. S. Navy Department. He was selected because of his intimate knowledge of Mediterranean waters and proved ability to co-operate with land and air forces. He became Commander-in-Chief in the Mediterranean three months before the war began, and

gained his reputation as the greatest British Commander afloat after Taranto and Matapan, two of the greatest naval battles of this war. It was in these two engagements that his use of air power as a catalyst to the action of sea power was shown in all its brilliance. His great experience in these mighty engagements was summed up by him on August 16, 1941, in these words:

"In future, my strongest recollection of the past year will be the lesson of co-operation. We three Services have come to know one another as never before, and that knowledge breeds strength."

It was this knowledge and strength that achieved the miracle of concentrating no less than 350 warships simultaneously in one small sector of the front which extends over all the seven seas. This was done without causing any inconvenience in, or interruption to, the routine duties of the British and American navies. This great Armada of 350 warships escorted more than 500 transport ships over distances ranging from 1,500 to 3,500 miles, and were at sea for periods of from seven to fifteen days and nights, but only one of them was sunk by enemy action! What happened to the U-boats? Were they looking for a stray ship or two in their new hunting-ground off Cape Town or waiting to intercept an Allied assault on Dakar, which Berlin said was "imminent," but which did not materialise? Or were they frightened off by the immensity of the offensive power which protected the convoys? Whatever it be, the fact remains that Admiral Cunningham achieved a very remarkable feat and contributed largely to the success of the American landing operations in North Africa.

Opening the Mediterranean

Let us examine the immediate results of the North African operations. The object of the Allies was not merely to gain vantage-ground from which they could open a new front against the Axis, but also to open the Mediterranean to Allied sea and air power. It is an obvious fact nowadays that there can be no sea power without air power, and in an enclosed sea like the Mediterranean, land-based air power must supplement carrier-borne air power. The importance of this was realised keenly in the series of naval operations undertaken in recent months in order to reinforce and supply Malta's garrison. The escorting forces required were large, but the quantity of supplies actually delivered was out of all proportion to these. This does not mean that Malta did not deserve the help, but the naval operations on that account were nonetheless wasteful from the point of view of strategy. The convoys to Malta relied for air-cover on aircraft-carriers and to some extent by the Malta-based planes. The Allies lacked land-bases to counter the enemy air-bases in Sardinia and Sicily.

Convoys to Malta

But now, thanks to patient and masterly planning and its brilliant execution, the Allies have acquired air bases all along the North African Coast from Oran to Bone, which is within 400 miles of Malta, and as a result of this, convoys to Malta will be having adequate land-based air cover throughout the thousand-mile voyage from Gibraltar. The new naval bases at Oran and Algiers mean increased and intensified Allied naval patrol activity in Axis home waters. For instance, Naples is 975 miles distant from Gibraltar, whereas from Algiers it is only 580 miles. Naval patrol ships from Algiers would, in future, be able to cruise in the neighbourhood of Naples. If further air-bases are acquired in Tunisia and Tripolitania, Allied convoys, protected by fighters, can do the whole 2,000-mile voyage from Gibraltar to Alexandria with some ease. This means a great gain to the Allies, for all the supplies to the Middle East can come through the Mediterranean, instead of going all the way round the Cape.

Another advantage is the saving in shipping space caused by the shorter route. For instance, the distance from U.K. ports to Alexandria is less than 4,000 miles or one-third of the distance round the Cape to Suez. This shorter route means a direct saving of about two million tons of shipping space, equivalent to 16 months' output from U.K. shipyards. Convoys to Basra with Aid-to-Russia cargoes can be diverted to ports in Palestine and Syria, and then more shipping space will be saved.

"Going with a swing"!

These are some of the great advantages resulting from the planned strategy in the Mediterranean war zone. The future holds out the possibility of Africa being completely rid of the Axis and Italy coming under the cognisance of the R.A.F. in a greater measure than before. In the words of General Smuts,

"Africa will be cleared, and the whole world will be cleared of the enemy. Tunis is going, and pincers are coming together from both sides. Things are going with a swing."

The great war veteran and statesman addressing a parade of the South African Fighter Wing personnel further said that night had changed into day, the skies were clearing, and the Allies now saw daylight and vast opportunities were now springing up before them. It is the beginning of the end of the Axis.

RUNNING COMMENTARY

(Continued from page 3.)

cards in South-West Pacific continue to remain in Allied hands—Kokoda in New Guinea and Henderson airfield in Guadalcanar. The enemy is bound to make strenuous efforts to regain them or neutralise them, but the Allies are watchful and vigilant.

* * * *

Great Turn in N. Africa : Speaking at Cairo at a parade of the South African Fighter Wing General Smuts said that Montgomery's Triumph: he had always held the view that North Africa Rommel's Blunder would be the scene of a great turn and that recent events had justified it. Momentous happenings which are likely to turn the future course of the war as a whole have taken place in Egypt and are taking place in Libya. The victory of the Allies in Egypt has given the Axis a rude shock. It may be pointed out that the strategical implications of this victory are even greater than its immediate rewards. But what would have happened if Rommel, after realising the terrific hitting power behind General Montgomery's assault, had promptly withdrawn the bulk of his army at high speed to Tobruk? In all probability, he could have postponed a decision and given the Allies a good deal of trouble. But he was feeling confident that his southern flank could not be turned, or orders might have come from Berlin inducing him to commit the whole of his forces to the defence of his forward positions.

As things stood, General Montgomery was faced with the formidable task of hammering a path right through the massed forces of Rommel's Afrika Korps, which were holding positions fortified for months past with every device known to modern war. In the formidable task itself lay a great opportunity, the opportunity to effect a break-through, which, once effected, would be a catastrophe for the defenders. But Rommel relied on the power of his counter-attacks by panzar formations to break off the spearhead of each British thrust and so wear down the offensive, but this reliance was misplaced.

Rommel's Previous Retreats Compared : Battle of Tunisia on

What happened was that the Axis army was dissolved in a gigantic swirling tank battle and its line of retreat became a road of destruction. Remnants of the Afrika Korps tried to make a stand near Fuka, at Mersa Matruh, and at El Adem, but in vain. Rommel's previous retreats had this advantage: he was able to go back far and fast and gain time to regroup, re-supply and be ready to meet his opponents when they came near. But this time this could not be done by a force that was handicapped for want of transport. Five Italian infantry divisions were abandoned by the Germans without transport or supplies, even as in the last war the Turks were abandoned by the Germans when Allenby broke through in the plain of Jezreel.

The Eighth Army has, said Mr. Churchill, avenged Tobruk. It has pursued the beaten foe very far. Now its task as well as the task of other Allied forces co-operating with it is to eliminate the enemy from Africa altogether. There are three favourable factors in favour of Allies. They have air superiority, shorter supply routes and more petrol than the Axis forces. The battle of Tunisia has to be fought out, and its course will be watched with the greatest interest.

Speaking in the House of Commons on Wednesday, Mr. Eden, Foreign Secretary, said that the battle in North Africa was in an extremely critical phase, and that the First British Army strongly supported by American forces were making their way eastward over enormous distances with the greatest speed and that French troops in Tunisia were vigorously resisting the German and Italian invaders.

MADRASIS ARE NOT FORGOTTEN

Madrasi soldiers who are serving away from their own districts are not forgotten by "the old folks at home".

A recent month's despatch of Madras specialities to its sons in uniform included 92,500 "beedis" 25,000 "poppadums," 625 lb. of cashew nuts, 21 doz. bottles of Madras pickles, four cases of books and papers, and 220 gramophone records.

Authority on Strategy and Tactics

General "Ike" Eisenhower

LIEUTENANT-GENERAL Dwight Eisenhower (who is now Commander-in-Chief of Allied Forces in North Africa) is probably one of the best-loved soldiers in the

"Ike" was a good cook as a boy, but no sissy. A good athlete, he played football and baseball at West Point until his leg was broken in a football game. He was an average student at West Point, but after his graduation he became an omnivorous reader and student of military science and later an authority on mechanized warfare. He graduated with top honours from the Army War College in Washington and from the Command and General Staff School at Fort Leavenworth. To-day he is a recognized authority on strategy and tactics.

In 1940 Eisenhower was made Chief of Staff of the Third Army. When the United States entered the war, he was made Chief of War Plans. Some time ago he went to Britain as Commander-in-Chief of the American forces.

Photo shows gunners of the Light A.A. Regiment in Egypt, who might have had a hand in forcing the non-stop retreat of Rommel's forces. They have a record of ten enemy planes in two weeks and are taking care of the guns which "did the trick"!

American Army. He has been a fighting man since 1915, but until now the breaks have kept him from actual combat. He barely missed the last war. He was supposed to sail for France on November 12 but got crossed up by the Armistice on the 11th.

General "Ike" (his boyhood nickname) is the son of a Quaker family in Kansas. His father, a farmer and ice-maker, was a strict disciplinarian. "Ike" was the third of six brothers. The Eisenhower's mother, now 81 years old, lives in Abilene, Kansas.

General Eisenhower is well-liked by both officers and soldiers. He knows when to be tough. He hates indecision and mistakes. When aroused, he has a razor-sharp tongue. He is generally considered a brilliant conversationalist. A good mixer and bridge player, he still likes to cook.

General Eisenhower's wife Mamie lives in Washington. Their first son died. Their second son is now a second-year man at West Point.

OTHER AMERICAN GENERALS

Major-General Clark

Major-General Mark W. Clark, Deputy Commander-in-Chief of Allied Forces in North Africa, has been in command of American Ground Forces in the European war theatre since May. He has also been General Eisenhower's Chief of Staff in London. He is an infantry warfare specialist.

General Clark graduated from West Point in 1917, serving with the Supply Services in France, Belgium and Germany in the last war. He was awarded the oldest American military decoration, the Purple Heart.

General Clark did post-graduate work at the Infantry School, Fort Benning, Georgia; at the Command and General Staff School, Fort Leavenworth, Kansas; and at the Army War College in Washington.

He was a member of the staff at the Army War College until he received the European assignment.

Brigadier-General Doolittle

Brigadier-General James H. Doolittle, who led the American air raid on Tokyo last April and is now commanding the United States Air Forces in North Africa, is a veteran of two wars who won aviation fame in peacetime as a pilot.

General Doolittle was born in Alameda, California, on December 14, 1896. In World War I, he served as a flight gunnery instructor at air training centres in the United States. In September 1922, he made the first cross-country flight from Florida to California and won the Congressional Medal and international fame.

He won the Schneider Trophy Race and the Mackay Trophy in 1925, then travelled in South America giving demonstration flights in 1926. He broke both his ankles in Chile, but demonstrated his plane with his ankles in a cast. While an army flyer, he made several more trips to South America and won the Harmon Air Trophy in 1930. He resigned from the Army in 1930 and became Aviation Manager of the Shell Oil Company.

In 1940, General Doolittle returned to the Army as a Major in the Air Corps Reserve. He supervised aviation procurement in Indianapolis and later supervised the conversion of automobile plants to aircraft production in Detroit.

General Doolittle arrived in London on August 17, four months after the Tokyo raid. Some of the flyers of his squadron in the Tokyo raid joined him in London and are now supporting the American forces in North Africa.

The following are brief biographies of some of the American military and naval chiefs in North Africa:—

Major-General Patton

Major-General George S. Patton, Jr., Commander of American Forces landing on the west coast of Africa, is a noted exponent of tank warfare who organized and commanded the first American tank brigade in the last war. He recently taught American troops the type of fighting which is now underway on the Egyptian front. Born at Sea Gabriel, California, in 1885, he graduated from West Point and in World War I on foot led a tank brigade into the Meuse-Argonne offensive. After the war, he commanded a tank brigade, then a horse cavalry unit, but returned to tanks in July 1940. General Patton was an Olympics swimming champion in 1912.

Rear-Admiral Hewett

Rear-Admiral Henry K. Hewett, Commander of American Naval Forces, was the Captain of the cruiser *Indianapolis* on President Roosevelt's South American tour in 1936. He was born in Hackensack, New Jersey, in 1887. He won the Navy Cross for Distinguished Service in the last war for convoying troops and supplies successfully through dangerous waters. After the war Admiral Hewett taught at Annapolis and at the Naval War College.

Major-General Ryder

Major-General Charles W. Ryder, Commander of American Forces landing at Algiers, served in the infantry in the last war. He won the Distinguished Service Cross with an Oak Leaf Cluster, the Silver Heart, the Purple Heart, the Croix de Guerre with Palm, and was awarded a membership in the Legion d'Honneur. He was with the Military Intelligence Division of the War Department from 1934 to 1937 and then served as Commandant of Cadets at West Point.

Britain Impresses

"I was impressed by the way every citizen in Britain fitted into a necessary war function after special training by the Government or by private industry."

—MRS. ROOSEVELT, at a Press Conference in Washington after her return from Britain.

Objects of American Landings

ALLIED operations in North Africa can be divided into two spheres, writes the *Daily Telegraph* correspondent, recently returned from North Africa.

For the moment landings in Morocco and Algeria may be thought of as having two distinct immediate objectives. Morocco is a protectorate with its own Sultan and Government, and Algeria is an integral part of France, in theory at least as much a part of France as the Isle of Wight is a part of Britain. The Atlantic coast of Morocco is for the most part flat and presents no great obstacles to landing operations.

All the main ports seem to have been occupied with the exception of Mogador. Safi lies to the south of Casablanca. Casablanca itself with its magnificent modern port is the largest town in North Africa outside of Egypt. Fedhala, north of Casablanca, is a smallish place with important fish canneries. Kasbabouznika and Mehdi (not to be confounded with Medhia on the east coast of Tunisia) are all points on lines of communication, which in Morocco in addition to excellent roads consist of a normal gauge double-track railway. This runs from Marrakesh in the south of the country via Casablanca, the principal port, Rabat, the capital; Meknes, Fez, Taza and Oujda just beyond which it joins the Algerian railway system. In fact there is an effective railway link between southern Morocco through Algeria and Tunisia.

MOROCCO'S LIFE-LINE CUT

The only obstacle to the intensive use of the lines is the comparative lack of fuel. By their occupation of Morocco's life-line the Allies have cut land communications with Dakar, which is joined to Casablanca by a 1,800-mile road, mostly a desert track.

Operations in Algeria constitute a more immediate threat to the whole Axis military position. Algeria is a mountainous country. In most places its Mediterranean coast is precipitous and steep.

The communications, however—although all from east to west—are excellent. The main railway which runs just back from the coast goes as far as Algiers, then continues along the shore into northern Tunisia.

Allied forces seem to have attacked or occupied the most strategic points along the Mediterranean from Arzeu, just near Oran

to Mostaganem. Sidi Ferruch, where the French Expeditionary Force which conquered Algeria in 1830 landed, 30 miles east of Algiers, has been occupied by American troops. It is clear, therefore, that vital communications in Algeria are either in Allied hands, or are about to fall in them.

East of the Algiers City, a coast railway and two main roads into Tunisia afford ample opportunity of swift advance into the vital Tunisian area. It cannot be doubted that the occupation of Tunisia is the main objective of the Allies. Northern Tunisia may be taken as a geographical extension of Algeria.

BIZERTA

Bizerta is perhaps the finest harbour in the whole of the Mediterranean. From the extremity of Cape Bon, just south-east of Tunisia City, it is but 90 miles to the shores of Sicily. To the south of Tunis itself there is not only a double-track narrow gauge line with electric locomotives running as far south as Gabes, but the eastern portion of Tunisia, being a flat plain is covered with a network of excellent roads. It is a 5-hour run from Tunis to Gabes. From there, there are good roads to Mareth, and a line 30 miles wide from the last spurs of the North Africa mountain system to the sea. The line was heavily fortified although it was, under the armistice terms, to be dismantled and it is still susceptible of making an effective barrier to an advance from the south-east.

Beyond Ben Gardane, the road is not so good. The French have never wanted to make it easy for the Italians to invade Tunisia. But it is perfectly manageable as far as Bou Chemmesc, the Italian frontier post. From there through Zuara and Sabraha, a first-class tarmac runs into Tripoli and through it to the Egyptian frontier. It is a matter of five hours' run or less from Tripoli to Ben Gardane.

'Not a Single Soldier Lost'

Wes Gallagher, correspondent of the American Associated Press, reports that Admiral Cunningham, Commander of the Allied fleet which supported the North African landings, said: "I believe I am correct in saying that the British and American navies brought this vast force of troops to their assault points without a single soldier being lost at sea."

Significance of Allied Success in Egypt

BY

WICKHAM STEED

THE British and Allied victory in Egypt is the best thing that has happened for a long time. It may turn out to be as important as the Russian stand before Moscow last December, which converted Hitler's offensive into a frost-bitten defensive, and brought the German armies to the verge of disaster.

Militarily, and above all, psychologically, the splendid deeds of the Eighth Army may have consequences even more far-reaching than those of the German failure in Russia 11 months ago. For the first time since this war began a strong enemy army, entrenched in depth on a comparatively narrow front, has been routed by frontal attack in a pitched battle.

REMARKABLE ACHIEVEMENT

This would, in any event, have been a remarkable achievement, but when it is remembered that the enemy could be supplied and reinforced from a base in Italy, and from secondary bases in Greece and Crete that were near to the scene of action, whereas the British

and Allied forces had to be transported and supplied by sea routes 12,000 miles long, the achievement becomes more remarkable still.

Much, of course, may depend upon the way in which this initial victory can be followed up by the effective destruction of the enemy's power in North Africa. We shall know before long, how far it has been possible to do this. A good deal of it seems already to have been done. For the moment, what interests me most are the moral or psychological effects of the victory throughout the Middle East, in the Mediterranean, in Italy, the Balkans and among all the satellites of the Axis.

EFFECT ON SATELLITES

I said something recently of the imponderables in war, which as Bismarck clearly understood, may weigh heavier than the heaviest armour. Hitler had staked everything on a swift victory by overwhelming force and I thought that a stage had already been reached in which overwhelming force would no longer be on the side of the enemy. This was my conclusion as an observer at some distance from the actual fighting.

It did not follow that Hitler's satellites, or even neutral countries still threatened by German power, would have reached the same conclusion. But now the victory in Egypt will give a jolt to their imaginations, and will weaken their belief in German invincibility, if it does not immediately convince them that Germany is doomed to total defeat.

There will be a change in the set of their feathers. It will become more noticeable in the near future, and I should not be surprised

Controlled Materials Plan

"During the coming year we shall produce in military goods alone more than the entire nation produced for all purposes during the biggest peacetime boom year. We are fighting an enemy who does not care what happens to his own business people, his own industrialists, his own labour or indeed to any single right or privilege which any of his people may have been lucky enough to have retained . . . We are going to beat him but we cannot without stripping for action, and we have still a long way to go . . . We are fighting to maintain a way of life based on the greatest possible degree of plenty for the greatest possible number of people. We have evolved a new method of distributing materials to war plants, that is going to be essential in civilian economy. This new plan, called the 'Controlled Materials Plan', will ensure that materials will be distributed to spots where they will be needed on time and in the proper quantity."

—MR. DONALD NELSON, *Chairman,*
U.S. War Production Board, in a recent speech.

if the change were noticeable in places, as far apart as Japan, Vichy France and French North Africa. In Italy we may be sure that Mussolini has got one of the worst headaches he has ever had.

It is especially good that the great news from Egypt should have coincided with the capture of Kokoda by the gallant Australians in New Guinea; with the successful defence of the Solomons by the United States; and with the failure of desperate, and perhaps despairing, German attacks at Stalingrad. Not even the limited German gains in the Caucasus would have availed to temper the disappointment and gloom in Germany.

There had been some talk of appointing Rommel to be Commander-in-Chief of the whole German Army under Hitler. He was given a huge ovation when he attended Hitler's "Winter Help" harangue in Berlin a few weeks ago. And on October 3 he said proudly to representatives of the Press: "The gate-way of Egypt is in our grasp—our intention is to act." He could hardly have meant that his action would be to skidaddle westwards, away from the gate of Egypt, with the Eighth Army at his heels. So his chances of becoming Hitler's Commander-in-Chief may to-day be fainter.

R.A.F. "KILLS" A SUPPLY TRAIN

Photo shows an Axis supply train in Libya with 26 trucks left shattered and burning after an attack by the R.A.F. An ammunition truck was blown to pieces and the locomotive set on fire, as the fighters, flying low, raked the train, time after time, with fire from their cannon.

ROMMEL'S DISCOMFITURE

Outside the concentration camps, in which the Nazis keep and outrageously maltreat their German victims, I can think of only one quarter in the Third Reich where something like malicious satisfaction will be felt at the discomfiture of Rommel. This quarter is among the Field Marshals and Generals of the older Prussian military caste, who look upon Rommel as a Nazi guttersnipe, whom Hitler has been delighted to honour.

2-A

CONCEIVABLE CONSEQUENCES

But till we know how far, and with what effect, the brilliant victory of the Eighth Army can be followed up, it would be premature to speculate over-much upon its conceivable consequences. Anything like the complete destruction of enemy power in North Africa might, indeed, open the Mediterranean once more to Allied shipping.

The latest victory over French and Allied interests by the wretched Laval—the landing

SIGNIFICANCE OF ALLIED SUCCESS IN EGYPT

(Continued from page 12.)

Roosevelt a slap in the face, just as the enemy might rejoice if any considerable number of by-elections in Great Britain were to go against the war-monger," Churchill. What the enemy does not understand is that in the United States as in Great Britain, this war is a people's war, not a war of Government or dictators; not an imperialistic venture, and that the common people mean to see it through until so complete a victory has been gained over the forces of oppression and enslavement that the world can again be a place, or rather a better place, for free peoples to live free lives in.

MID-TERM ELECTION

Speaking personally, and without any title or desire to interpret British public opinion, I think it is not a bad thing that the critics of President Roosevelt's Administration should now be enabled to bear a fuller share of responsibilities for the conduct of the war. I think it good, too, that this mid-term election should have been held while war is still being waged, and not, as was the case in November 1918, when victory had been won and the Armistice was in sight.

The defeat which President Wilson suffered in the election of November 1918, created a situation so ambiguous that it led to serious misunderstanding of the position in America by more than one Allied people and Government. This misunderstanding was not least among the causes of European surprise, that President Wilson should have been unable to

secure ratification of the Peace Treaty, and American membership of the League of Nations.

NO COMFORT FOR ENEMY

In Europe, he had been welcomed as the First Citizen of the world, at a time when his own people were doubting whether he was fully representative of them as the First Citizen of the United States. Now there could be no room for doubt that the Republican as well as the Democratic Party stands behind the President for a vigorous prosecution of the war, and that whatever contribution the United States may make to a progressive solution of the problems of peace, will reflect the views and the feelings of the American people as a whole.

So, in the long run, as well as in the short run, I am inclined to agree with ex-President Hoover that there can be no comfort for the enemy in the outcome of the 1942 mid-term elections.

I have a notion that in the weeks and months to come, the enemy in Europe and Africa, no less than in the South-Western Pacific and the Far East, will sorely need every scrap of comfort he can extract from a threatening, and presently a disastrous situation. Hitherto one thing has been lacking in the discomfort which, from the bottom of my heart, I wish him to experience in full measure. Until now, the enemy had not felt the impact of unquestionable military defeat, in a fair field without favour.

Now he has felt it. May he continue to feel it, until he cries "Hold, enough," and the United Nations answer his cry by beating him remorselessly to the ground.

—In a recent B.B.C. talk.

ON PARADE AT 92

This old soldier when he reaches the age of 92, puts on his uniform again, travels 30 miles,—and goes on parade.

Jemadar Ismail Khan with many other Indian Officers of the old Madras Army, attended the official opening of the Training Centre of the 3rd Madras Regiment.

He became young in heart again when he heard the familiar words of command and the call of the bugle—so young that he went on to the sports, ate the splendid tea in the Indian Officer's Mess and would not have missed any of it for anything.

The opening of the centre, which was attended by the Governor of Madras celebrated the reconstruction of the old 3rd Madras Regiment, after a lapse of 15 years. The day was the anniversary of the famous victory of Assaye, when the Madras Battalions were the only Indian troops present.

Supreme moment was the handing over to the 'new' Regiment of the old 3rd Colours.

Libyan Campaign in New Perspective

THE announcement of American landings in Algeria and Morocco places in a new perspective the meaning of General Alexander's great victory over Rommel writes *The Times*. It shows at once, how vast were the issues that hung upon the attack of the Eighth Army and how complete was the confidence reposed in it; for it is obvious that the latest operation must have been planned far ahead in expectation of just such a defeat as has been inflicted on the Axis power in Egypt.

It is the culmination of a strategic process which has been in motion with many vicissitudes of fortune for more than two years and which in its course has been compelled to embrace the whole of the continent of Africa. It has included the most completely successful campaign waged by any Allied army in this war which resulted in the liberation of Ethiopia, and the total overthrow of Mussolini's East African Empire; the maintenance of the supply route, 14,000 miles long around the continent, and the transport over that great distance of multitudinous necessities of mechanized war with which General Alexander was to achieve his resounding success; and such episodes as the occupation of Madagascar by the British and Liberia by American troops which were incidental to the protection of that route.

RE-OPENING OF THE MEDITERRANEAN ROUTE

Now all lines of African strategy converge upon the supreme objective that gives its meaning and justifies all the sacrifices that have been made for the mastery of this continent. This objective is the reopening of the sea way of the Mediterranean to the traffic of the United Nations—a way of double possibilities. For it is of the highest importance to substitute a short passage from Gibraltar to Asen for the long journey round the Cape into the Indian Ocean and so give relief throughout the world to the extreme strain that has been imposed on Allied sea power.

The prospects are now opening of establishing Allied power along the whole coast of North Africa so as to confront across the comparatively narrow sea all the southern shore of enslaved Europe and threaten by many possible routes the ultimate blows at

the heart of Germany. Events are now marching with such speed that few can have foreseen the attainment of this objective. The means to achieve it is the total destruction of the Axis power in North Africa.

The basis of enemy's military strength there was Rommel's mechanized army in the desert. This has been struck shattering blows. Leaving the Italian infantry to its fate, the remnant of the panzer divisions is still in headlong retreat. Meanwhile the principal supply port of Genoa on which the enemy depends for survival is being battered by the Royal Air Force and heavy toll is taken of such ships as still attempt the Mediterranean crossing.

A FRESH BLOW

Now while the structure of the Axis power in North Africa is swaying at last, a fresh blow is struck against the German political domination of French territories to the west. The enemy has been aware for some time of the assembly of a formidable fleet of war-ships and transport at Gibraltar and has not concealed perturbation. He was not, however, able to forecast the time and place of the coming blow; or if he was, he knew himself that he was powerless to forestall it. The Italian fleet, for instance, has conspicuously refrained from any attempt to intervene which may be an admission of the irresistible power of the Allied naval armament.

To equip this great force is in itself a notable achievement at the end of a year in which Allied production and shipping had been so severely taxed to maintain the supply of materials of war both round the north Cape to Russia and round the Cape of Good Hope to Alexandria.

Egypt and Britain

"Egypt has been able to realise how much the representatives of the British Government and forces understand Egypt's viewpoints in respect of the sovereignty and independence of the country and value Egypt's rights and interests."

—MR. NAHAS PASHA, at the
Egyptian Parliament.

Bizerta and Beyond

AXIS counter-action has yet to reach its peak. The importance of Bizerta is as well understood in Berlin and Rome as in London and Washington. Its immediate importance is as a point of rallying and escape for Rommel's broken and fleeing forces—"advancing to the west" as the latest German euphemism puts it. Virginio Gayda, who has served Mussolini so long as mouth-piece, sounds the alarm but also states facts when he says that Allied operations in the Mediterranean threaten the whole Axis.

Outside the Axis, the military and psychological effects of the events in Africa have been wholly encouraging and have afforded a fresh stimulus to the sense of common destiny and common effort binding together the great company of United Nations. Stalin, with the sure strategical insight which he has shown ever since the German attack on his country, and with the hard realism which has throughout marked his own political career, has in a few sentences explained to the Russians what the new battle of the Mediterranean means to them and to total victory. His statement is telling and forthright.

When, in his recent report to Parliament, Mr. Churchill spoke of the sense of frustration at the absence of a second front while the Russians were bearing an almost unbearable burden on land, he was expressing the true sentiment of the nation—a sentiment reinforced by the British people's recollection of their own hard fight when they held the breach alone. Stalin has dispelled lurking suspicion and created among the Russian people a clear consciousness of the magnitude of what is now on foot in Africa. He truly sees the Anglo-American offensive as a major operation among the results of which will be an easing of pressure on the Russian front, the possibility of forcing Italy out of the war by a decisive blow and the setting-up of necessary conditions for a second front "nearer Germany's vital centres". Finally he gives assurance of the certainty—of which Russia's proved services and sacrifices are ample and unimpeachable testimony—that Russia herself "will fulfil her task with honour" when the moment comes, as come it will, for her to join her own offensive action with that of her allies.

Recovery by the United Nations of command of the Mediterranean is a vital preliminary to those further and still more powerful blows which they will have to strike in common before the enemy is laid low—*The Times*.

Indians' Part in Defence of British Isles

MEN and women from India and other Eastern countries are now playing an active—in some cases a prominent—part in the defence of the British Isles, reports the Arab News Agency.

Several hundred, particularly women, are giving their services in a civilian capacity, but there are many more men from the East in the fighting forces in British than is generally known.

The Royal Air Force has been a great attraction for young men who were students in England when the war broke out. Many have been outstandingly successful in the air and about 40 have been commissioned from the ranks of the Royal Air Force.

A remarkable reputation has been gained by the Indian Pioneer Corps in Britain composed principally of students, seamen and others to whom a life in khaki appealed. All receive British service rates of pay, and when the Luftwaffe harried London they earned every penny of it.

Accustomed to working without heavy gear, they astonished the more orthodox British Pioneers by the speed with which they cleared away awkward debris. They won such a reputation that it was common place for them to be assigned to tasks where the introduction of heavy clearance machinery was impracticable.

Many doctors from India are serving in the R.A.M.C. Numbers of students unable to return to their own countries have undergone Government engineering courses and the majority are now earning an average of £7 a week in munition factories.

Organizations which in peacetime had frequently to assist needy students report that they have had no call on their funds for a long time, as all those in whom they take a beneficent interest are earning good money and are far removed from financial stringency.

So far there is only one girl from the East in the Auxiliary Territorial Service. She is from India. But there are hundreds in the fire-fighting, nursing and comfort-distributing organizations. These women did especially fine work during the London and Liverpool blitzes when they operated in bands, usually under the direction of male relatives who are doctors or medical students.

A Madras Battalion on the N.W. Frontier

(From a Correspondent)

A very pleasant function took place in the V.C.O.s' Club of the 3rd Madras Regiment a few days ago to bid farewell to two senior V.C.O.s. whose excellent services have been rewarded by their being sent shortly to Dehra Dun to qualify for an emergency commission. They are Subedar Major K. C. Govindan and Subedar K. O. Kunni Raman Nambiar.

All the officers of the battalion were present as also the British officers' wives, and although socially enjoyable, it was a very sad day for the battalion. Whilst tea was being served, the departing V.C.O.s. and the senior officers and their wives were garlanded. The sunset glow on the hills across from the V.C.O.s' Club typified the closing of the services of those two distinguished Indian Officers as V.C.O.s.

Subedar Neelambaran in well-chosen terms eulogised the services of his departing brother officers, and the outstanding ability of the Subedar-Major in guiding and advising the junior officers in a very tactful but firm manner.

The Commandant referred to the help he had always received from these two officers in the difficult task of virtually raising a new battalion. He wished them, on behalf of all present, the best of luck in their new venture.

The departing officers in very able speeches thanked the gathering for their good wishes and affirmed their intention of returning, so far as it lay in their power, to their present unit.

Subedar-Major Govindan is the second senior in service of the remaining personnel of the 12th Malabar Battalion from which territorial unit the battalion was formed. He joined the 12th Malabar Battalion in 1931, and has been Subedar-Major for the last seven months.

Subedar Nambiar joined the 12th Malabar Battalion in 1932 and like the Subedar-Major was embodied with the battalion in September 1940.

The function terminated all too soon by the necessity of the married officers having to leave the battalion hatted camp and re-enter the main perimeter before sunset. A hearty farewell was taken of the two guests of honour.

TWO GALLANT ACTS

Meanwhile, the battalion is learning as quickly as possible its role among the frontier hills. Two recent instances of gallantry bear witness to the spirit which animates the battalion and which will enable them to deal effectively with the enemy. On the afternoon of 2nd November Sepoy M. Subbiah Pillai of "B" company showed great presence of mind

and disregard of danger when line sentry over a gate on the road leading down from the battalion camp. Two mules in an A.T. cart took fright and bolted down the hill and Sepoy Subbiah Pillai, in the nick of time, managed single-handed to drag a knife rest across the road and stop the runaways. But for his coolness, the mules might have caused much damage to life and property in the station. Sepoy Subbiah Pillai is a Tamilian from Anaikulam village in Tinnevely district.

A Boston of Bomber Command R.A.F. which recently made an unescorted attack in daylight on objectives at Sluiskil, an inland port in South West Holland, returned with photograph showing bombing from roof-top height. Photo shows remarkable close-up of bomb explosion.

Just before the unit recently left Kohat, Sepoy Selvam of the Pioneer P-1 displayed ingenuity and bravery in dealing with a rabid dog which attacked him. Although unarmed and bitten in the process he managed to seize the animal by the hind legs and continued swinging it around his head till he reached a convenient wall against which to dash it and kill it. Sepoy Selvam, aged only 18, is a Christian from Venganthur village in South Arcot district. His gallant act prevented other jawans from incurring possible injury and a spell in hospital such as he is himself undergoing at present.

Behind the Enemy Lines in Russia

BY

Y. CHERNUKHIN

"BEHIND the Enemy Lines," the first book of the Soviet war correspondent, A. Polyakov, was translated into English and received a warm reception in Great Britain and the United States. The Soviet Writers' Publishing House has just published a new book by Polyakov, "White Mammoths."

The "White Mammoths" are the Soviet fifty-ton "KV" heavy tanks. Their armour-plating can withstand any amount of enemy shells and is invulnerable even to German land mines. "KV" tanks can simply cut straight through the woods, crush enemy artillery batteries and armoured cars, reducing them to mere slabs of metal. Polyakov's new book tells the story of five of these titanic machines from the day they left the large tank works in the Urals.

He also tells you about their builders, the plant director, the Assistant Peoples' Commissar of the tank industry, Hero of Socialist Labour, Yaltsman and the daughter of the famous Russian military leader, once the Peoples' Commissar of Defence, M. Frunze. Tatyana Frunze is now a military technician employed in the plant's laboratory. He tells you the story of youthful Kostya Vladek, the twelve-year old apprentice, who is proud of his job of cutting tiny bolts for tank parts. Kostya, too, is a tank builder. Neighbouring the plant is the tank training school. The future crew of each tank is attached to the machine when it is only in the stage of metal framework and together with the workers', help, build and assemble the vehicle.

One of the most stirring pages in Polyakov's books is the description of a meeting between fresh tank corps recruits and veteran front-line fighters. Among the latter one tells the new-comers about Major Segeda who commanded several important tank operations, Senior Sergeant Nydin, an artillery gun commander who disposed of eleven enemy tanks.

TANK SEES 40 ATTACKS

There was also the tank driver, Sergeant Tsekalov who saw his machine through forty attacks. His tank received 212 direct hits, but even the biggest shells failed to do anything more than dent the armour. The author introduces Junior Sergeant Gordeyev, the "master of ramming tactics." Here is a brief description of one of Gordeyev's numerous exploits. During an engagement his tank broke into a village occupied by the enemy and

crushed two German field pieces. But there were two more concealed behind a stone wall. The village street was too narrow for the tank to manoeuvre and reach the guns. Gordeyev put his machine in reverse, broke through the stone wall and rammed the guns. Volley after volley was discharged at his machine from a roof nearby. Gordeyev dashed his giant into the house, went clean through it with the roof on top. Then he turned and shot down the surviving Germans with his machine guns.

Another incident described by Polyakov is the feat of the tank crew under Commander Astakhov. For two days Astakhov's brave men held their own against heavy odds, their only shelter being the damaged tank. They refused to surrender and shot down over 100 attackers. Finally they dismantled their machine-guns, wrecked the tank and broke through the German lines to our positions. The damaged machine was salvaged later.

ACROSS A FROZEN RIVER

The reader will undoubtedly be moved by Polyakov's description of a tank column crossing a frozen river. At times it seemed that the ice was just about to crack under the mighty machines. In the words of one of the participants, it was "like walking on a shaky mattress." But here, too, the tank corps was able to cope with the situation and overcome numerous difficulties.

One is moved by the story of the heroic death met by the tank crew commanded by Kalinchev. His machine penetrated deep into the enemy's lines and disappeared forever. Only with the help of the police dog nicknamed "Trophy"—captured from the Germans were the Soviet troops able to locate the bodies of the crew. "Trophy" was very much attached to the driver, Dormidontov and when the latter disappeared the dog became terribly restless. It was sent out on a fresh scent and returned to the Soviet lines with a note from Kalinchev: "These will probably be our last lines and I'm sending them with 'Trophy.' We're still alive and using up our last rounds of ammunition. We shall not surrender."

BURNT ALIVE

These men were burnt alive by Hitler's monsters. Like a cliff, the grave of steel containing the bodies of these valiant men stands out on the scorched field. Our soldiers visit this spot time and again, remove their helmets and stand in silence before the ruins of this tank. Very often Dormidontov's mascot "Trophy" is with them. Polyakov's description of a British tank going into battle side by side with one of the "KV" machines reads like a symbol of the fighting unity which binds two freedom-loving peoples in a joint struggle against the German forces.

Soviet tankmen fondly call their British tanks "Pals." In one battle a Nazi plane dived to bomb a British machine operated by a Soviet crew. There ensued a bitter duel between tank and airplane. But the British "pal" emerged victor.

Soviet Psychology

BY

MAURICE HINDUS

I have been in this country three months. I have travelled extensively. I have been at the front. I have talked to all manner of people, soldiers and civilians, peasants and city folk, adults and children. Now my mind teems with so many impressions that it is difficult in a brief article even to hint at them.

Everyday I see or hear something new and full of meaning. For example, at Pogoreloye Gorodishche, which the Red Army re-

beneath the dignity of his position or his person. There can be no doubt that this spirit of democracy is in no small measure responsible for the high morale of the Red Army.

CHILDREN AND WAR

The other day while strolling along a remote section of Moscow I came upon a group of children in a side street who were leaning over a box of sand talking excitedly. I stopped to watch them and asked what they were doing. "Putting out bombs," said a sprightly little girl of about five or six. "But I see no bombs," I said. Lifting a round little stick out of the box, she said, "Here is the bomb," and with a scoopful of sand proceeded to demonstrate how to put it out.

Soon other children in the street gathered about. Older folk also stopped. There was much animated talk as there always is whenever a Russian crowd gathers in the street. From this talk I learned for the first time the momentousness of the part that children played in putting out incendiary bombs and

NAZI RULE IN THE UKRAINE.—This picture which reached London through a neutral source, was taken in the scorched earth of the Ukraine, where the Nazis are using old men, women and even children to replace horses. A Russian family is seen forced to draw a harrow.

cently reconquered from the Germans, one of the cars in which correspondents travelled lurched into a rain-soaked rut and the chauffeur had difficulty in getting it out. A Red Army major came along, glanced around the road and asked the chauffeur where he kept his spade. The chauffeur told him. The major got the spade, dug dirt into the rut and the track and told the chauffeur to go ahead. The car rolled out as easily as if it were on an asphalt road. The major put the spade back into the car and after brushing off his hands and his clothes went on his way.

The sanctity and the glory of labour, any kind of labour, anywhere, has become such an integral part of Soviet psychology that no one in or out of the army, however high his position, even has the feeling that the handling of a spade, a hammer, a saw, performing any kind of menial task, is in and of itself

preventing fires in Moscow in the days when the Germans were making air raids on the city.

I was in America at the time and had read of it in the press. But the printed stories could not convey the heroism of children in those days as vividly as did the living words of the children themselves and their parents. In this war of wars the part that children are playing in the defence of the country not only in Moscow but all over the land—on farms, in hospitals, in guerilla detachment behind the enemy's lines—constitutes one of the most dramatic chapters in the history not only of the Soviet Union but of the world. I do not know of any other time anywhere when children rendered their country as much service as Russian children are doing now.

Yet to me the one outstanding thing of the so-called Russian rear is the magnitude of the

work that the collective farms are now performing. Perhaps it is because I am by my original profession an agronomist that collectivization holds so much meaning for me. I watched this extraordinary revolution in Russian agriculture since the days of its inception, and only now when Russia is fighting a war "not of life but of death" as the Russian press keeps continually emphasizing, is the purely military aspect of it so impressive.

ENGINE-MINDED

This is a war of engines. To fight nowadays, the soldier has to understand an engine as well as a gun. Prior to collectivization the peasantry in the mass had not the least conception what an engine was. But collectivization, riding, one might say, on the wheels of a tractor into the Russian countryside, made the engine as much an everyday fact as the plough. Within about five years millions and millions of young folk in the villages, boys and girls, became engine-minded. Suppose there had been no collectivization and no tractor in the Russian village in the years preceding Germany's attack on Russia. One shudders to think what the consequences would have been. But because the Russians, especially the youth, are so intensively engine-minded the country can fight on and on with no other thought than to achieve complete victory over the enemy.

I have visited a number of collective farms in the Kuityshev region. I saw how well-tilled were the lands, how fine were the crops, the rye, the wheat, the potatoes, the sunflower—this despite the fact that the work is largely in the hands of women and older folk. I couldn't help wondering what would have been the condition of the crops had the fields been worked in the old-fashioned way—each peasant ploughing, harrowing, sowing, weeding, cultivating his own patch of land, in his own manner, with no particular regard for climatic conditions, for selection of a seed, for any of the other purely scientific requisites to good farming with which collectivization has richly endowed the Russian countryside.

Collectivization has made Russian engine-minded nation and has made possible not only scientific tillage of the land but planned distribution of food, so that the army and the civilian population can be adequately nourished in these grim fighting times. I am certain that the future historian will point to collectivization as one of the most stupendous achievements not only of the Russian revolution but of all times. Indeed, without it victory over Germany would have been impossible; with it, in this writer's judgment, it is more than certain.—*Moscow News.*

The Soldiers' Oath

[We gladly reprint an illuminating extract on the important subject of civilian and military relations—*Ed.*]

"I would remind you that every soldier takes the oath to lay down his life for the protection of the civilian, and he will be your protection in future." These were the words of a senior military officer speaking at a joint civilian-troops tea party in the Presidency recently. He also made the point that "civilians had a harder time in many ways than the services who went to war." "I think there is too much difference of opinion between civilians and the services and this is usually because we don't know sufficient about each other", he added.

Certainly this type of joint tea party is doing a great deal to bring the two closer together, and these functions taking place now in all parts of the Presidency are proving increasingly popular and entertaining. Moreover, the effect on the morale of the troops is admirable for they can see that their sacrifices are appreciated, while the civilians can get to know the sepoys much better and to understand them.

Prominent civilians were present and over 100 men from various services were entertained by an Indian orchestra comprising veena, tabla, mridangam and violin.

The host, Rao Bahadur P. S. G. Rangaswami Nayudu, struck the note prevailing at the party when he said: "the public have to realize well the responsibilities that the Fighting Forces undertake and they must be sympathetic towards them. Soldiers should for their part show due respect to the public. Mutual respect and friendliness will beget great good in the defence of the country and its well being."

RANGOON IS HERE

"Saturday Soldiers"—the name given to men of the Rangoon Field Brigade because they were civilians who donned uniform only at weekends in peacetime—have now been entirely re-organized, and are manning some of the big coastal guns which defend India's shores against the dangers of a sea-borne invasion.

U.S. GLIDER TROOPS

In 1884 an American, Professor J. J. Montgomery, made the first successful glider flight in history—a glide of some 600 feet from the top of a hill on the U.S. West Coast. Today the glider is one of the most spectacular developments of warfare. These photos, made at one of the glider-troop training grounds in the U.S., show how American soldiers are preparing for offensive action with the aid of these motorless sky carriers.

In a burst of dust, a triple-tow formation of light gliders leaves the runway. The gliders, being lighter than their tow ship, leave the ground first and stay slightly above the tow ship throughout the flight. The deceptive appearance of the gliders behind the plane in this picture is due to the angle from which the photograph was taken.

Released by the tow ship this glider soars toward its destination.

Out of nowhere, glider fighters drop to earth to attack enemy positions. The man on the right holds a gun ready though he is still discarding his parachute.

Diary of the War

ENGLAND AND GERMANY

22nd Nov.—The Royal Air Force attacked an enemy convoy off the Dutch coast near the Hague.

23rd Nov.—Sir Stafford Cripps was appointed Minister of Aircraft Production. Mr. Herbert Morrison was appointed in his place in the War Cabinet (in addition to the post of Home Secretary and Minister of Home Security). Mr. Anthony Eden, Foreign Secretary, was appointed Leader of the House.

24th Nov.—The Royal Air Force attacked Stuttgart, the heart of the industrial district in Germany.

According to the Berlin correspondent of a Swiss paper, "The German people fervently desire peace."

UNITED STATES OF AMERICA AND THE ATLANTIC

22nd Nov.—The United States Treasury decided to borrow from non-banking investors and commercial banks 9,000 million dollars, the largest sum ever borrowed by any Government in a single operation.

Mrs. Roosevelt, in a broadcast to the American nation, said: "There is very little grumbling among the British people. If we can voluntarily give work and make sacrifices in the same spirit that the British people are giving, we may be able to shorten the war."

War-time powers were granted to President Roosevelt.

23rd Nov.—It was revealed that the war to date had cost the United States 60,000 million dollars or twice the total cost of the last war.

24th Nov.—The independence of French West Indies and French Guiana from Vichy Government was considered assured by a new agreement concluded between the United States Department's representative in Martinique and the French High Commissioner.

INDIA, BURMA AND CEYLON

21st Nov.—The Royal Air Force attacked the Japanese aerodrome at Pakokku in Burma.

22nd Nov.—The Japanese aerodrome at Magwe in Burma was bombed.

23rd Nov.—The Royal Air Force attacked Japanese aerodromes at Mingaladon and Toungoo in Burma and Mandalay.

24th Nov.—The Royal Air Force raided Akyab. Japanese river steamers were attacked.

25th Nov.—Japanese reinforcements were sent to Burma, Siam and Indo-China. Barges and tanks were concentrated on the west bank of the Salween river. Japanese warships arrived at Kwangchow. Three hundred aircraft arrived at Saigon.

The Royal Air Force attacked the enemy aerodrome at Meiktila and Mandalay.

CAN WE FORGET?

"We cannot reckon the full contribution of those gallant fighting Russians who believed death itself far better than surrender. It was their unflagging determination to maintain intact an organized military force, their grim and desperate stubbornness against overwhelming odds, that diverted the German armies from the west to the east, thus snatching for us a precious period wherein we could muster combined Allied resources of production and men, reorganize our strength and so deliver telling blows against the enemy before it was too late.

"Of the British Commonwealth and England, our prodded memories must lead us to say, 'They gave us and Russia the chance to fight.' Can we forget the risks the British ran when they stripped their island under attack and sent equipment halfway around the world to hold Suez? . . . Can we forget, after the fall of France, the way that the R.A.F. repelled Hitler?"

—MR. LEWIS W. DOUGLASS, Deputy of U.S. War Shipping Administration, in an address to the Academy of Political Sciences.

26th Nov.—One heavily armed Japanese raider was sunk in a battle in the Indian Ocean. Two of her aircraft also were sunk by an Indian mine-sweeper, H.I.M.S. Bengal and a Dutch tanker.

ITALY, AFRICA AND THE MEDITERRANEAN

21st Nov.—Allied troops continued to advance in Tunisia and were within 32 miles to Bizerta. The French forces rejected the Nazi ultimatum to evacuate Tunisian territory or join the Axis.

German troops evacuated Benghazi. The Allies retook over 120 enemy landing grounds in Cyrenaica from Daba to Mechili. Over 550 Axis aircraft were destroyed.

Admiral Darlan broadcasting over the Algiers Radio said that Petain was still "the living incarnation of France," but that with the invasion of unoccupied territory, he had lost his freedom of action.

22nd Nov.—British troops occupied Benghazi and contacted enemy troops near Agedabia. The whole of Cyrenaica fell into British hands.

The Allies launched a three-pronged drive on Bizerta. Four large enemy aerodromes in Sicily were bombed.

It was revealed that a German submarine fleet was concentrated off Gibraltar.

Algiers was bombed.

Turin was again heavily bombed.

23rd Nov.—West of Tunis, Allied shock troops attacked German defensive positions and gained possession of a road junction. German troops crossed over from Tripolitania. Nine German planes were shot down. French troops captured several German groups west of Gabes.

American shock troops took Kasbah with a combined assault of artillery, and dive bombers.

24th Nov.—Tunis and Bizerta were surrounded. Gabes harbour fell into Axis hands but their forces were driven out of Gafsa Oasis. Axis bombers attacked Algiers. German troops were forced to withdraw from Agedabia.

According to well-informed circles, Marshal Badoglio was the head of a movement for separate peace with the Allies.

Admiral Darlan announced that French West Africa had placed itself freely at his disposal.

25th Nov.—Allied advance towards Tunis-Bizerta slowed down. The Germans had a larger number of bombers and fighters operating against the Allies, most of them withdrawn from the Russian front. The Royal Air Force attacked Bizerta harbour.

British troops occupied Agedabia and Gialo in the interior of Libya.

26th Nov.—An air raid alarm was sounded in Cape Town.

According to Mr. Anthony Eden, the battle in North Africa reached an "extremely critical stage."

The Royal Air Force attacked Trapani. British and American troops made their way eastwards over enormous distances. The Eighth Army continued to press the retreating Axis forces between Jedabaya and Agheila. Nazis were thrown back south of Tunis.

RUSSIA AND FINLAND

21st Nov.—The Germans were in full retreat in the Caucasus, having been defeated in the battle in the approaches to Ordzonikidze in which 5,000 Germans were killed. Nazi assaults on Stalingrad were held.

22nd Nov.—The Russian army took the offensive in Mozdok area.

23rd Nov.—The Russians launched an offensive north-west and south of Stalingrad. Kalach, a town on the eastern bank of the Don, was recaptured. The Germans left 14,000 dead on the field.

HI, GENERAL!

Attending a chemical warfare demonstration somewhere in India was a General who had forgotten to bring a waterproof.

Rain threatened, and he was glad to accept the protection of a golf-umbrella which somebody produced.

A moment later the voice of the demonstrations' controller, a junior officer, boomed from the loud-speaker—

"Will the officer using a golf-umbrella please note that it is no adequate protection against gas? And will he please sit down as he is obstructing the view of others in his vicinity?"

24th Nov.—The Red Army launched double offensive round Stalingrad. According to *Pravda*, that in the fighting for Stalingrad, the Germans lost 800 tanks, 1,000 planes and 100,000 officers and men killed.

25th Nov.—The Soviet army closed round on the Germans besieging Stalingrad. German line south-west of the city was penetrated. The Nazis fled precipitately from Chernyshevskaya. Eleven thousand prisoners were taken.

26th Nov.—The siege of Stalingrad was lifted. The Soviet army broke through the German fortified lines in the industrial area north of the city and pursued the retreating Nazis. Thousands of prisoners were taken. Russian forces broke through the German positions on the Rzhev front also.

NEUTRAL COUNTRIES

21st Nov.—According to a New York report. General Franco informed both the Axis and the United Nations that Spain would immediately accept help from the enemy of the aggressor if any of her sea or air bases were seized.

22nd Nov.—Air raid alerts were sounded in Basle and Berne.

VICHY AND OCCUPIED COUNTRIES

21st Nov.—The Royal Air Force carried out offensive patrols over France, Belgium and Holland.

General Weygand was arrested and taken to Germany.

Marshal Petain, broadcasting to the French people, said: "In the interests of France I have decided to extend M. Laval's powers."

22nd Nov.—The Vichy Radio announced the dissolution of the Committee set up for promoting better relations between France and Germany.

M. Laval, in a public speech, said: "The situation to-day is tragic. Without her empire, France cannot live. It is in the interests of France to come to direct reconciliation with Germany."

THE FAR EAST

21st Nov.—The Japanese occupied Lanten in Portuguese Timor. There was renewed Japanese air activity over Attu island in the Aleutians.

22nd Nov.—There was heavy fighting in the Buna-Gona region. It was estimated that 10,000 Japanese were killed in Guadalcanar.

23rd Nov.—American and Australian troops breaking through Japanese positions, captured Seputa, a port in Buna. American troops advanced in Guadalcanar.

24th Nov.—General MacArthur's forces were within a mile of Buna. Australian troops broke into Gona. The American forces continued to advance in Guadalcanar.

American aircraft raided Haiphong in Indo-China.

Japanese attempt to cross the Sintsang river in northern Hunan was repulsed.

First pictures of the new device used most successfully in the defense of ships against dive bombers. The rocket apparatus shoots parachutes into the sky from which are trailed long wires—these form a deadly "wire barrage" into which many a Nazi dive bomber has had its wings cut off before being able to swerve out of the way. Photo shows the rocket leaving the gun carrying wire aloft.

25th Nov.—The Australians entered Gona, one of Japan's last two foot-holds on the New Guinea coast. Cape Endaiadere near Buna was captured.

26th Nov.—There was heavy fighting by air and land in Buna.

A new and important naval battle was raging in the Solomons.

Lead
Us
To
VICTORY

Mr. CHURCHILL

SALUTE and best wishes to the youthful veteran of 68, coupled with warm congratulations upon your brilliant war survey last night I returned from my English visit confident that you, in company with other grand leaders of the United Nations, will yet under the heaven's blessings lead us to one of the great victories in world history

GENERAL SMUTS, in cabling birthday greetings to Mr. Churchill on Monday (Nov. 30)

Running Commentary

History Repeats itself in Russia : Another great step in the Soviet plan for the destruction of Hitler's armies in Russia was taken by M. Stalin by the new offensive he has started on the Central Front. Here the Red Army has effected a break-through along a distance of 19 miles in the area of the town of Velikie Luki. To the west of the town of Rzhev, the enemy's line was broken in three places. It may be expected that the Red Army will succeed in carrying the new attack to a successful conclusion and establishing itself in the Moscow-Smolensk road area. If this is done, Smolensk itself might be captured soon and all the German armies in the Central sector facing Moscow would be in direct peril. The German armies further north would also be threatened. The successes in the Stalingrad Front will

go to affect the position of the German Caucasian armies, for over the entire southern front, from Serafimovich along the Don Elbow to the Central Caucasus, the Red Army has taken the offensive. It has achieved successes in the counter-offensive operations at Novorossisk, Tuapse, Nalchik, Kalmuch and north and south of Stalingrad. These successes show that the Axis troops were not given the chance to dig in and consolidate their victories of the Summer.

History has repeated itself in the Russian campaign. Last year, at this very time, the Nazis were denying winter-quarters in Moscow and Leningrad, and this year German plans to establish winter-quarters in Stalingrad, Grozny and Trans-Caucasia have been frustrated by the Red Army. The present position bears a close resemblance to that of November of last year. The position on November 22, 1941 was that

Mr. Churchill

Mr. Winston Churchill, Britain's great Prime Minister, celebrated his 68th birthday on Monday, November 30.

A birthday greeting from Field Marshal Smuts is published on the front page. The photograph of Mr. Churchill published on that page was taken soon after the outbreak of the war. Mr. Churchill who was appointed First Lord of Admiralty (the post he occupied at the outbreak of the war of 1914-18), is seen arriving at the Admiralty, London, on September 4, 1939.

Stalin's Leadership

"All the world wonders at the giant strength which Russia has been able to conserve and to apply. The invincible defence of Stalingrad is matched by the commanding military leadership of Stalin."

—MR. CHURCHILL.

the Germans had reached the environs of Leningrad and had taken Tikhvin; encircled Moscow on three sides; advanced beyond Yeletz in the Central sector; over-run the Ukraine and Crimea; and entered the town of Rostov-on-Don. This year, at about the same time, the Germans were entrenched near Stalingrad; and having crossed the Don had swept into Northern and Central Caucasia; and were threatening Novorossisk, Tuapse and Grozny. Last year, the Russians were on the defensive all along the front, and they were helped by the advent of winter and General Auchinleck's drive to Benghazi. This drive diverted a considerable portion of the *Luftwaffe* to the Western Desert. This year winter has set in, and Allied operations in Egypt and French North Africa

Hitler on the Defensive : Hitler used the winter of 1941 to recoup his losses. **Will Napoleon's Retreat be Put into Shade?** and strengthen his forces, but this year's winter will now see a further dissipation of his strength. Tremendous casualties on the Russian front have affected the position considerably. No decisive victory has been achieved by the Germans, in spite of the enormous cost of men and material. The defensive line of the Axis is now longer than it was last winter. Hitler's U-boats have to patrol, not only the vast spaces of the Atlantic and the Arctic, but also the Mediterranean route, to prevent Allied aid reaching Russia. Hitler has to fortify the "East Wall" to prevent a Russian break-through, and the "West Wall" to prevent an attack

German troops taken prisoner in the Western Desert Campaign.

have diverted the *Luftwaffe* from the Russian front, enabling the Russians to launch offensives in more than one sector.

It may be said that the situation, so far as Hitler is concerned, has worsened. Last winter, Hitler was able to stabilize his winter line at a comparatively low cost and send some of his soldiers back to German factories to produce munitions for the coming spring and summer. At that time, there was no threat of Allied activity in the West, and to offset the lull on the Eastern front Hitler called in his last reserves, the Japanese, on December 7, to engage the Allies in the Pacific. But, this year, he will have no respite of that kind, thanks to the great Allied victories in North Africa, Russia and the South Pacific. The Axis has now been definitely put on the defensive in Africa, Europe and Asia.

from Britain, and construct a "South Wall" to protect Italy, in the first instance, against the threat of Allied action from the newly-acquired bases in North Africa.

Hitler must have realized only too well that this means the beginning of his end. He said in his Munich speech on November 8 that Germany must now defend what she holds. So far as Russia is concerned, her immediate task is to remove the two dangerous salients north and south of Stalingrad, in the same way as she relieved the threat to Moscow last year. A good beginning has been made by the capture of Kalach, north-west of Stalingrad, and by the launching of an attack from the direction of Krassonoarneisk in the South. The other task facing the Red Army is also the same as that of a year ago, namely, to prevent

(Continued on page 6.)

France Will Rise Again

IN a broadcast to the people of France five months ago (July 3), General de Gaulle said, "It is a great thing in war to have won the first battles, but it is the last one which decided everything. It will take place in France France herself will fight this battle. In it, she will play a decisive part. Let every Frenchman prepare. This is his sole duty. This is the only solution." Many things have happened since the great General's exhortation. So far as France is concerned, Hitler's stranglehold tightened, and tightened, till it brought about its complete annihilation. In the words of Mr. Churchill, the sorry farce and fraud of the Vichy Government has become extinct by Hitler's occupation of the "free" French zone and his futile attempt to capture the French Fleet at Toulon. Mr. Churchill, in his broadcast on Sunday night, further pointed out that these developments in France were to be welcomed by the

United Nations, because they were a necessary prelude to that reunion of France without which French resurrection was impossible. Now that the artificial position between occupied and unoccupied territories was swept away, all Frenchmen in France were equally under the German yoke, and would learn to hate it with equal intensity. Mr. Churchill agreed with General de Gaulle that the last scales of deception had now fallen from the eyes of the French people.

Clemenceau's Choice

It has taken nearly two-and-a-half years for the disillusionment of the French people to become complete. Three men stood in the way of this awakening—Petain, Laval and Darlan. Petain symbolised the defeatist spirit and weakness of France. He was always a defeatist. It may be recalled that Clemenceau preferred Foch to Petain in 1917. He said, "I had to choose between a General who wanted us to retire to the banks of the Loire and lay down arms, and another General whose only wish was to keep on fighting. The choice was obvious, since I did not wish to capitulate." What France avoided in 1917 happened in 1940. Petain had a remarkable inferiority complex before the Germans and it was this which was responsible for France laying down arms on 22nd June 1940. Petain's faith in the good intentions of Hitler was childish in the extreme. Otto Abetz remarked of him that he had "eyes of a child in the head of an old man." Petain is personally an honest man and a patriot. He regarded himself as something like a French Hindenburg. In fact, he resembles him in some respects; he is old, he is honest, and he is a Marshal. Petain had been a sincere believer in the idea of "regeneration through suffering." Now that belief must have been shattered. He has been compared to a respectable *facade*, behind which all those elements of big business, finance, professional politics and treachery, which combined to ruin France, were taking cover.

GENERAL DE GAULLE

The Vichy Regime

The regeneration of France, he thought, could be best achieved by collaborating with Germany, instead of fighting her. He believed that, under his paternal guidance, France will become industrious and disciplined and recover her old strength. He seemed incapable of understanding the responsibility of the army for the collapse of France and preferred to think that political corruption and intrigue were responsible for it. The Vichy regime which he established was inspired by mediæval authoritarian notions. He ignored the fact that such a thing as the French Revolution took place in 1789.

He wanted France to revert to its old position as a Catholic peasant country with industry taking a second place and concerned mainly with the production of high-quality artistic goods. He thought his simple, paternal, and authoritarian rule would bring about a renaissance of the old French virtues and finally the salvation of France.

A true soldier, he thought he would treat honourably with Germany's greatest soldier, Adolf Hitler. But he never bargained for the fact that corporal Hitler would break the Armistice of 1940 and over-run unoccupied France. Petain believed that the policy of appeasement which brought about the Armistice saved France, but the Armistice has led to the annihilation of France, and he himself had to lodge a protest! Hitler's new act of aggression must have rudely awakened the Marshal, and his protest must have been the protest of a soldier who has been deeply wronged. Evidently, he now realises that he has made a mistake. But it is too late!

Marshal Petain created the most deplorable situation in France by his policy of weakness and surrender. Referring to the tragedy that overtook France and the "guilty Frenchmen" who were responsible for it, an English writer says, "It is all the more deplorable that the name of Petain—which in French eyes is still synonymous with personal honesty and public integrity—should be used to rivet the chains on France; that the man with whom is associated the heroic *Ils ne passeront pas* should be the man who is opening the door to the Germans in France. Had it been done by Laval, without the cover of Petain's name, it would not have been so dangerous, for there are no illusions in France about Laval. It is a tragi-comedy of the most ironic kind that all this should be done with the formal sanction, at least, of the old military gentleman who believes in 'peace with honour, as between soldiers'."

The Villain of the Piece

Laval is the real villain of the piece. He never made any secret of his desire to see the Germans win, and he did all in his power to help them and betray France. He helped them not only in France itself, but in Indo-China, and he attempted to do the same in Madagascar and Martinique. Though he is not popular among the French people, he became the real 'boss' of France under cover of Marshal Petain and the patronage of Hitler. Some mystery has surrounded the conduct of the men of Vichy long after the capitulation at Compiègne in 1940. Were they misguided patriots, or confirmed traitors? Were they intent on saving France or themselves from the fury of Hitler and his hordes? Different events gave different conclusions, but so far as Laval is concerned, his path seems the most clearly marked and most sinister in treacherous behaviour.

Darlan, the last of the Vichy Triumvirate, has come into the picture now with a saving grace, because of the help he rendered to the Allies in North Africa. His co-operation with the Allies has brought about a somewhat delicate and difficult situation, but President Roosevelt has made the position of the Allies clear by stating that the arrangements made by General Eisenhower with Admiral Darlan were purely of a military character, and they were made because it was essential to save American, British and French lives from unnecessary danger. Help had to be taken wherever it could be found. In a time of crisis, one cannot pick and choose.

But the one man picked and chosen to symbolise the spirit of *La France Combattante* is General de Gaulle. He joined the struggle for freedom before the men of Vichy enslaved France to the Germans. The turn of events in North Africa must have given him satisfaction, because of the great accession of Frenchmen to the cause which has as its slogan, the old Jacobian cry, *Liberte ou-la mort*, and not the Vichy watchword, *L'esclavage plutot que la mort*.

The first of French patriots, General de Gaulle never pretended or aspired to be the head of a legal Government in exile like those of other nations in London. His "French National Committee" is nothing else but the directing organ of the Fighting French Movement. And it will go on and on fighting, till the Nazis are driven out from the land of the free and the brave—which owing to weak and treacherous leadership became the land of slaves and cowards.

France will decide fate of *Festung Europa*

France, as Mr. Churchill said on Sunday, will rise again, and men like General de Gaulle will play a leading part in it—a part that will restore to her the lost freedom and dignity. As the great French patriot pointed out six months ago, the real battle will have to be fought out in France, and it will decide the fate of Hitlerism in Europe. If Hitler's *Festung Europa* is to be shattered, it will have to be done mainly on the French soil. And then, France will rise, as though from a long sleep, and freedom will dawn. Meanwhile, the freedom-loving world will continue to exclaim: *La France est mort, Vive la France!*

RUNNING COMMENTARY

(Continued from page 3.)

the Germans from establishing a straightened winter line within easy striking distance of their major objectives. It is gratifying to note that the Russians have cut the railway supply route to the German troops on the eastern bank of the Don. Their great victory at Ordzhonikidze has relieved the pressure on Grozny oil-fields, one of Hitler's very important objectives.

Viewing the whole position it is clear that Hitler's dream of capturing Leningrad, Moscow and the Caucasus is as far off as ever—perhaps further off than ever before, and we may wonder with *Reuter's* Military Commentator whether this winter and early spring may not see a German retreat from Russia which would put Napoleon's retreat from Moscow into the shade.

* * * *

Fighting in Tunisia : A great struggle has begun in right earnest for command of the strip of water in the Mediterranean bounded by Sardinia, Sicily and the Tunisian peninsula. In German hands, this will be a forward bastion for the defence of southern Europe. In Allied hands, it will be a spring-board for the invasion of France or Italy, or both. The object of the German airborne invasion of Tunisia was to get control of the entire territory under the Bey of Tunis from the Mediterranean coast to the borders of Tripolitania. They want to establish in this region air bases which would give them control of the Central Mediterranean and enable them to cut Allied sea communications between East and West North Africa. Their object is also to prevent an Allied back-door entry into Libya. It is with a view to preventing any Allied infiltration into Tunisia from Algeria that German forces have spread out west and south-west of Bizerta and Tunis.

But in spite of stiff resistance of the enemy, Allied troops have successfully effected entry into Tunisia. Advanced elements of the opposing forces are fighting each other a few miles west of Bizerta. Allied parachutists have attacked Italo-German positions near Mateur, an important railway junction on the Tunis-Bizerta line, 24 miles from

A Good Job Done Well!

Our readers must have read in the papers about the exploits, in Solomon Islands waters, of the U.S. light cruiser *Boise*. It might interest them to know that the *Boise* underwent repairs in an Indian yard at Bombay last March by Indian labour.

To judge from the account of herself given near the Solomons, the repair job done on the *Boise* by Indian labour must have been first-rate!

Bizerta and 38 miles from Tunis. Further south, Allied forces were operating from bases along the Feriana-Gafsa railway line and are gradually advancing eastward. This advance affords a serious threat to German forces which are likely to be split into two. To prevent such a danger it is reported that German troops in Southern and Central Tunisia have been ordered to cut their way through to the North.

Germans are digging in both in the Tunis area and some 30 miles south-west of Bizerta with a view to making a resolute stand. The *Luftwaffe* is well entrenched in Tunisia, and it is expected that severe fighting will take place before the enemy is ousted. Recent reports show that Germans are using air attacks in an endeavour to hold up Allied advance but only with moderate results. Transport planes are being used by the Allies to supply troops and air forces from the main base.

Later reports state that British and American forces have driven their wedge between Tunis and Bizerta and that the Battle for Tunisia has reached a decisive stage.

* * * *

Confusion in Enemy Radio Propaganda—Berlin and Rome on African Fighting

There has been a good deal of confusion in enemy radio propaganda as a result of the sudden burst of Allied offensive activity in the Mediterranean area. In a broadcast, Mr. W. A. Sinclair, B.B.C. propaganda expert, has

analysed and interpreted recent trends in Axis propaganda. A few extracts from his broadcast are given below :—

"Apart from confusions among themselves, the Italians as a whole and the Germans as a whole have gone on separate propaganda lines. The German line was that the campaign in Egypt and Cyrenaica did not greatly matter. Hitler, you will remember, in his last speech dismissed it in half of one sentence and, since then, Nazi propagandists have tried to minimise the African fighting by filling up their news bulletins with reports of enormous Allied shipping losses.

"The Italians, on the other hand, took the line that the African fighting was the most important in the whole war In his effort to exaggerate Italy's importance, the radio commentator Mario Appellius, on November 7 made the absurd statement: 'Britain has throughout the war concentrated her main forces against Italy', Mario Appellius, later in the same broadcast, said: 'This has been a heavy burden, but it is also a great honour that we Italians have constantly and soundly withstood the age-old might of the greatest modern empire.'

"We know, of course" (Mr. Sinclair continued), "that, when things were going well for the Axis in Africa, the Italians carefully pointed out that the Commander-in-Chief was an Italian Marshal (whose name I have forgotten). Of late, they have taken to speaking of Rommel as being in command. It is quite plain that the Italians dislike the Germans and fear them; and it is quite plain that the Germans despise the Italians, but they have put themselves in the same boat and they have got to make shift to get on together."

Axis broadcasts give the general impression that their Governments are disturbed and alarmed about the present military situation and about the stability of the home morale of their own people. Mr. Sinclair says:

"Italian morale does seem to be at a low ebb. It seems to be fundamentally unhealthy. That is the only conclusion that anyone can draw from the weird mixture that constitutes Italian Home Propaganda. Some of it consists in almost pathetic appeals to stand firm and the rest is bombastic stuff about their lion-hearted soldiers.

THE DAWN OF 1943

"The dawn of 1943 will soon loom red before us, and we must brace ourselves to cope with the trials and problems of what must be a stern and terrible year. We do so with the assurance of ever-growing strength and as a nation with a strong will, bold heart and good conscience."

—Mr. CHURCHILL.

British "Valentine" tanks are being supplied to Allied armies in various theatres of war. Numbers sent to Russia were used in the defence of Stalingrad and Moscow. Picture shows: A British "Valentine" Mark II tank being lowered into the hold of a supply ship.

He points out that one of the queerest points in Italian Home Propaganda at present is that Italians are being urged to behave with courage and composure similar to that of the British at the time of Dunkirk. Italian broadcasts say, "the behaviour of Churchill and the British was not without greatness,"

and implore the Italians to behave similarly. He also refers to considerable discontent among the German civilian population. He says:

"The German Government seems to have resigned itself to the fact that there is widespread discontent, and it seems to have decided that mere discontent as such will have to be tolerated. What will not be tolerated is action arising out of that discontent. Goebbels made this very clear in his weekly article in *Das Reich*. This was even more extensively broadcast and commented on than usual, so he must have regarded it as particularly important. He drew a distinction—I think quite a sound distinction—between the German people's mood (the German word was *Stimmung*) and their attitude or bearing, their *Haltung* as he called it. Moods of discontent and the like, he said, are temporary, they pass, they do not matter; but bearing—*Haltung*—does matter. And then he went on to explain tactfully that the German people might indulge themselves in having a despondent or discontented mood, or *Stimmung*, from time to time, but that they would get into trouble if they had a despondent or discontented bearing."

This does not mean, Mr. Sinclair makes it clear, that because the Germans are discontented they are therefore a weaker enemy to overcome, for though discontentment in a democratic country may weaken the Government, and even bring about its downfall, in a totalitarian country like Germany, such discontent will be only a minor inconvenience. The German Government can control, not the mood of the people, but only their bearing, and it is their bearing that affects us in that it makes them fight the Allies. But if that discontent reaches a high pitch as the result of a crushing military defeat, it will affect the bearing of the German people directly as it did in 1918.

WAR IN EUROPE

"It may well be that the war in Europe will come to an end before the war in Asia. The Atlantic may be calm, while in the Pacific the hurricane rises to its full pitch."

—Mr. CHURCHILL.

A 267-Day Adventure

AFTER 267 days of travel by foot, naval pinnace, canoe and raft, three A.I.F. sergeants who were in the Rabaul garrison on January 23 when the Japanese made their successful invasion have now arrived at a New Guinea base. These soldiers are three Victorians: Sergeants J. Flucker, A. Vine and P. Beenie.

Evading the Japanese they made their way from Rabaul to the south coast of New Britain but got away when a Japanese naval landing party, which was subsequently cleared out by Australian forces, landed there. Flucker and his companions, hiding on a river bank, saw the Japanese emerge from the jungle on the opposite side. Continuing down the coast of New Britain, the Australians came upon a rich plantation and established camp. They assisted a number of other Australians who arrived during the few days they were there. On the beach they found a 15-foot open boat. They were not experienced sailors but decided that they would try to reach Australia.

For a week they and a few others were at sea trying to get along the coast of New Britain. The weather was bad and they were blown back to where they began. Some became sick and one died of fever. They went ashore to bury him. Returning to a small harbour on the southern coast of New Britain, the Australians were told that troops were being evacuated from the northern side of the island. They arrived five days too late to get aboard the last evacuation ship. They remained for a few days and found plenty of food.

When a small naval pinnace showed up, the party went along the coast seeking others who might be attempting to escape and were close to being picked up by a Japanese naval patrol. They landed on a small island where they hoped to be picked up, but after waiting months for transport they decided to try to push across to New Guinea. After an amazing trip from small island to small island they finally reached the north-east coast of New Guinea 200 days after first leaving Rabaul. They then tramped for weeks through the New Guinea jungle evading districts where there were Japanese. Finally they made a raft and sailed down a river to the south coast. Even then they were still 260 miles from an Allied base. It is estimated that altogether they travelled 800 miles on foot and 2,000 miles by boat. All are fit and will be posted to their unit soon.

The Blockade Weapon

BY

LEONARD INGRAMS

WAR, in its former sense of conflict between armed forces, will hardly describe this present opposition of whole economies to each other. The challenge of the Axis War States is corporate, concerted force. Their striking power is rooted in the daily lives of all their nationals. The clear dividing line between the soldiers and the people is quite untraceable. The railway, the larder, and the workshop are fronts on which their enterprise can fail. Every process in their planned economies is part of their military campaigns.

The answer to this challenge of the Axis War States is twofold. They must be met by force to match and to exceed their own, and their concentration of their own resources must be limited, confused, and dissipated in every possible way. The threatened citizens of the free world must equally concentrate their energies to the single purpose of offensive force, and while they are building up their armies the enemy must be prevented by all means possible from adding to his strength and maintaining his effort.

The day of his defeat must be hastened by mobilising the resources of the United Nations and by immobilising simultaneously the resources of the Axis—by attacking the whole complex of materials, machines, men, organisation, and will that go to make up his economic fighting power. This latter task is economic warfare. Its most impressive weapon is blockade.

The seas were out of bounds to German shipping when the war began, and contraband, which means in practice anything to help the enemy, was seized off neutral ships as well. Britain's international commercial strength was mobilised to help the Navy. British controlled bunkers and water, repairs, towage, Britain's banking facilities and insurance, were reserved around the world for friendly ships, and by the end of 1941 the enemy's supplies from neutrals overseas, however indirect, were being effectively cut off at the source.

Important penalties were placed on help to Germany from neutral territory and Europe too. Private businesses who dealt with Germany were listed as declared enemies of Britain. Now they're proclaimed enemies of America as well, and aiding or abetting Germany is most unprofitable.

The American Government, co-operating increasingly in economic warfare, has also frozen European funds in the United States, and works with Britain to buy up supplies of vital materials within reach of Germany on the European mainland in competition with the Axis.

CONQUEST OF EUROPE DID NOT BREAK THE BLOCKADE

Within their legal frontiers, neither Germany nor Japan had natural resources enough to maintain for long the effort of modern warfare against determined opposition. The plan of both was to rely on force, as bandits do, to get them what they lacked. The method of both was to pile up vast quantities of raw material and general supplies. The intention of both was to win with blitzkrieg tactics if not final victory then

BRITISH FLEET AIR ARM ACTIVE IN MEDITERRANEAN: This photograph taken aboard a British aircraft carrier shows a torpedo being loaded on to a "Swordfish" torpedo bomber aircraft just before it took off, on a search for the enemy fleet.

new resources to reinforce their own and vantage points to defend them from, and then to plan, if need be, further conquest. If need be! Hostilities were far from finished when Germany's lightning conquest of almost all of Western Europe was completed. Above all, the blockade was unbroken. The Japanese explosion in the Pacific was equally impressive in its results. But of these results, by far the most important occurred on the American Continent. In neither case had the Axis partners yet gained control of an area rich enough of itself to feed the hungry mouths of their huge victorious war machines for ever. Broadly speaking, Japan has more raw materials than she wants, and Germany—with lack of raw materials and man-power—has in Europe more factory space than she can use. Both of them are short of cotton, wool, and copper, but both have huge advantages to offer to each other if they could easily exchange their products. Their greatest

need in either case is victory to give them time to exploit their gains and check the wastage of their strength in battle. And failing victory, they both must base their strategy on economic factors. The importance of military decisions will be reckoned in terms of their economic consequences, the plus and minus of resources they entail.

Germany started the war with a large reservoir of strength. Something of that ran out in the campaigns of 1939 and 1940. But her strength was replenished with loot and plant and workers when Western Europe capitulated. Early in 1941, brother Mussolini was bogged and beaten in Greece and hollering for help. In aid of Italy, the Balkans were invaded. Here on balance, the plus and minus of economic gains and losses was not so favourable; in fact, the trade agreements carefully built up for years before the war to ensure steady flow of food to Germany were thoroughly upset. Men and horses were mobilised from the fields, sowing and reaping were interfered with, and the Balkan peasantry turned actively hostile to the conquerors. In June last year Germany attacked Russia, while, as she calculated, there was still enough reserved in blockaded Europe to tide her over until Russia could be conquered and Russian territories organized to yield rich dividends.

HOW RUSSIA HAS HELPED IN THE BLOCKADE

The effects of blockade have been tremendously accelerated by the drain on Germany's reservoir that Russia's heroic resistance has made. Here was not blitzkrieg, and no loot; no systematic winter pause for men to return for a while to the fields and the factories; better still, as winter gave place to spring of this year, still more men had to be combed out of industry and agriculture for the forces. Material resources, too, ran out at a far greater rate than they could be replaced. To keep the Army up to strength and fully equipped and supplied has meant in practice that the Army has first call on manpower, oil, leather, textiles, transport and food; industrial production, agriculture, fisheries, and civilian life generally have to make do with what is left over.

In those cases particularly that I have mentioned it hasn't been enough, and now, while the blockade of Europe is still maintained, aggressive weapons in the economic war grow daily with the growing strength of the United Nations. Sea and air forces are relentlessly driving the enemies' coastwise traffic off the seas and on to over-burdened inland traffic lines. In Northern waters the offensive against shipping has notably increased this year. Bomber Command, meanwhile,

has entered the scene in force. Raids on a greater scale than German raids on Britain in the winter of 1940-41 have now been carried out for several months on the key war industries of German Europe. Well-placed bombs on plant and machinery are hampering production, and more important still, they are dislocating the nice balance of the enemy's resources of man-power and materials as between his home front and his battlefield. They are striking at those daily lives of enemy nationals in which the enemy's striking power is rooted. The Germans have had to calculate—as we have seen—how much of effort could be spent upon the Army and its needs, and how little could be allocated to meet the barest civilian necessities and to maintain the health and stamina of the people and their efficiency.

Like a camel, their home front has been told to live off its hump, to make things do till the war ends; and like a camel its master has placed upon it just as much as its back is calculated to bear without breaking.

Heavy air raids create new tasks of re-equipping and rehousing displaced populations, restarting interrupted services, and reorganizing civilian life. These new tasks must call for their accomplishment, not on reserves of labour and materials—of which there are none—but on the very sinews of the war machine itself.

SPIRITUAL FORCE OF FREEDOM-LOVING PEOPLES

There is another factor in the economic war, which has grown daily in force and which can equally help to paralyse the striking arm of Germany. The United Nations have no monopoly of the spiritual force that men and women derive from man's passionate insistence on his right of freedom. There is no country of Europe in which this force is not at work. In the West, workers resist pressure to fill up under duress gaps in German manpower. In the South-east, peasants rebel against an imposed lease-lend which forces them to lend to oppressors they dislike on a lease, the terms of which they distrust. Peasants of South-east Europe who exported last year only one-fifth of the corn and maize and only half of the oil seeds that they did before the war are blockading Germany as truly as a British policy that stops Argentine maize and Indian oil-cake from reaching her.

All these factors—blockade in the West and fighting in the East, dislocation from the air and rebellion on the border—are forming themselves to-day into a single scheme in which the Axis War States will be finally overthrown by military defeat—A recent B.B.C. talk.

Italy's Cancer of Corruption

ON the credit side, Italy, in this war, has gained a few square miles around Mentone, the holiday resort on the French coast; a couple of barren border districts in Western Greece; and an Italian prince has been made King of Croatia but has not yet dared to set foot in his kingdom. On the debit side, Italy has lost half her imports and exports. Her war production to-day is little more than half of what it was three years ago. Her African Empire has crumbled to pieces and, worst of all, Italy herself has come virtually under German control.

To-day this question of German control is certainly the most vital and crucial problem, because it affects all walks of Italian life. Nazi officials are sprawling in all Italian ministries. Plain clothes Gestapo and S.S. officers, arriving in batches of fifty or a hundred, spread themselves over the country. Officially they are 'undergoing special colonial training.' German engineers and technicians hold key positions in the more important factories, mainly in chemical and armament works. The Germans have established a rate of exchange between the German reichsmark and the Italian lira to their own advantage, and they are thus able to buy up stocks of many goods sorely needed inside Italy. Specially appointed German-Italian committees are taking stock of all plants and machinery in Italian key industries. Some people say that they are preparing for a wholesale transfer of Italian factories to Germany.

ITALIAN BUSINESSMEN'S GRAVE FEARS

At a recent meeting of Italian businessmen at Pisa grave fears were expressed about the Nazis' future plans for Italy. Some Italians fear that the Nazis want to smash all Italian industries so laboriously built up in the years of Mussolini's big self-sufficiency drive. These fears and doubts were certainly not allayed by recent Nazi statements about German war aims. Italians must have heard of the sensational article by Gestapo leader Werner Best, who mapped out a plan for Germany's future rule in Europe and allotted to Italy the place of a German colony.

A prominent Fascist paper recently reproached Germany for not paying any attention to the real conditions in Italy. Italy, so the paper said, has lost its bargaining power in negotiations with other countries. Since Germany grabs all that Italians have to give, Italy cannot fulfil her obligations towards third countries in return for goods imported from them. More than 600,000 skilled

Italian workers are toiling in the Reich—on East Prussian fields, in Ruhr mines and Rhineland factories. Not only manual workers, but clerks and typists have been conscripted to work in the Reich.

To-day Germany is the destination of many Italian men and women in need of work and livelihood, just as the United States was the destination of the masses of Italian emigrants before and immediately after the last war. With the difference, however, that to-day the Italians are forced and conscripted to work in a country they do not like.

BRITAIN'S "FOREIGN LEGION".—Among the aliens serving in the British Army Pioneer Corps, and largely employed in constructing camps in various parts of the United Kingdom, are engineers and architects, doctors and chemists, musicians and writers, mostly Germans and Austrians incorporated in one company. Many of them fought against Britain in the last war, yet a large number have passed through the horrors of Nazi concentration camps. They are commanded by British Officers. Here a carpenter from Vienna is seen at work in one of the camps.

FOOD PROBLEM IS VERY SERIOUS

The food problem is now very serious in Italy—it is probably worse than anywhere in Europe, except perhaps Greece and Finland. If you want to grasp the whole relationship between the junior and the senior partners of the Axis, you only have to compare Italian and German food rations. The Italian housewife gets only half as much bread a week as her opposite number in Germany. She gets one-third as much meat, just over half as much sugar, and just about half as much fats. The bread situation has lately grown worse, and the daily ration of the Italian

amounts to little more than an equivalent of two small rolls. Potatoes are rationed locally. In Rome, for instance, the ordinary citizen, this summer, was allowed one small potato a day.

In industrial districts the food shortage makes itself particularly felt. Mussolini himself admitted this recently in a message to the workers of Milan. Nearly every day Italian newspapers contain appeals asking the public to be patient with those in charge of food distribution. One day Rome housewives find the fruit and vegetable markets empty. The next day women in Turin or Genoa search in vain for meat.

As a matter of fact, the first proper Food Offices to supervise rationing regulations and food distribution were only set up in August of this year. Italians who were asking for an explanation of this state of affairs were given one reason. It was stated bluntly in the annual report of one of the most important Italian financial concerns, the Bank of Naples. It said: 'We Italians have made a mistake about the duration of this war, and the result of our miscalculation, which we have maintained for fifteen months, was that the most important requirements of the war effort have been neglected.'

If this is a plausible reason for faults of organisation it is certainly no excuse for the extent of racketeering and profiteering going on in Fascist Italy to-day. The Black Market is thriving. Day by day scores of butchers, grocers, wine merchants, and innkeepers are taken to account before emergency tribunals. Restaurants and bars sell food and drink at exorbitant prices. Farmers who are ordered to sell their produce at fixed rates to the so-called Wheat Pools, which the Government established at the outbreak of the war, now prefer to sell on the Black Market. This Black Market has not only become a general problem, but one involving the leaders of the Fascist Party. The cancer of corruption has penetrated deeply into the body of Fascism.

SEVERE REVISION

Officials of the Fascist Party have taken advantage of their special privileges. They have forged ration cards, hoarded foodstuffs, and sold stocks from the State Depots. They have discredited the prestige of the Fascist Party and its Duce in the eyes of even the most tolerant Italian. Little more than a month ago Mussolini summoned the chiefs of the Fascist Party to his marble-walled study at the Palazzo Venezia. At the end of this conference he signed a decree expelling some sixty-six thousand members of the Party and dismissing scores of officials. A fortnight later he appointed two new regional inspectors and five provincial leaders of the Fascist movement. But the crisis is by no means over. Only a few days ago one of the Vice-Secretaries of the Fascist Party, Carlo

Ravasio, said in a speech at Trieste: 'Party comrades: at present a severe revision of the Fascist Party's ranks is being made.'

The task of carrying out this 'revision' of the declining Fascist movement has fallen to a new man—to Vidussoni, Mussolini's twenty-six-year-old Secretary of the Fascist Party. Vidussoni is a fanatic. He belongs to that young generation of Italians who only know Fascism, who have grown up in the Fascist mentality, fed by such empty phrases as 'Italian glory,' 'living space,' 'Italy's imperial mission,' and so on. To-day these young Fascists are perhaps the most disappointed of all Italians. They are disgusted with the inefficiency, slackness, and corruption of the bigwigs. To Mussolini they might become dangerous. He, therefore, decided to take the wind out of their sails and appointed one of them, Vidussoni, his second in command. The indifference, the almost cynical attitude of many Italians to this war comes out in a quip which is current in Italy at the present moment. It runs: 'If England wins the war, we are losers; if Germany wins it, we are lost.'—From a recent B.B.C. talk.

Warrior Stalin Hits Back

THE Germans expected the Russian blow between Leningrad and Moscow. It has come at Stalingrad. Every man hopes that it is only the start, writes the *Daily Express*.

All through the dangers of the summer, warrior Stalin has been putting by. He has been grouping armies and assembling supplies for an offensive that has hit the invaders with its first blast.

A few months ago the Germans would not have regarded the fact of being partly surrounded as danger. They would have found safety in attack. They would have snapped bigger pincers outside the Russian pincers. They would have held hedgehog defences even nine-tenths surrounded. They would have been ready to burst out as Rommel has done more than once.

That is no longer the German attitude. More prisoners are among the Russian booty. What has made this difference? The difference is that the Allied attacks have been smashers. They have not under-estimated the enemy. They were designed to paralyse his power to hit back of which Hitler and Goering have been talking.

The Russians have learned the need to hit hard or not at all. So has the Bomber Command of the Royal Air Force. So have the men who planned the Allied campaigns in Africa and crowded big-guns into every 23 yards of the Egyptian front.

Italians Want Peace

By GUIDAO DELLA ROSA

ONE important result of the Allied victories in North Africa is their reaction among the Italian people. The invincible Rommel has been routed, abandoning a large part of the Italian forces to their fate—destruction or imprisonment—while the occupation of French North Africa by the Americans has brought a direct threat to the Italian mainland.

More than ever before the Italians feel that the continuation of war can bring them no advantage and that they are merely pawns in the German game and their only hope for the future lies in a speedy end to hostilities. The longing for peace was widespread among the Italians long before the events in Africa brought the danger close to Italy itself.

The causes of this war-weariness are not difficult to find. Here we will summarise the more important.

(1) Italy has known no respite from war for nearly eight years. The war in Abyssinia launched in 1935 was followed by the Albanian and the Spanish campaigns until Mussolini dragged his country into the world war.

MORAL SICKNESS

(2) The Italian people are profoundly dissatisfied with the Fascist regime. The antagonism of the individual citizen to the existing regime can best be likened to a moral sickness affecting the life of the whole country. During the nine months of dangerous equivocal neutrality from September 1939 to June 1940 there was a certain revival of faith in Mussolini as saviour of the people but disillusionment was all the greater when on June 10, 1940, war was declared on the Allies and now dissatisfaction has become general loathing of Mussolini and his regime.

(3) All Mussolini's propaganda has not been able to counteract the strong Catholic traditions of the Italians and his attitude to the Church has not made him more popular with the deeply religious masses of the people. The Pope's frequent denunciations of dictators have only served to intensify the people's fundamental hatred of the Fascist party and war.

(4) Hatred of the Germans is now stronger than fear of Allied victory. The Italians have never felt any particular fondness for the Germans and their dislike has been sharpened to outright hatred by resentment at the arrogant behaviour of the German soldiers, the secret police and officials who are interfering in so many fields of Italian life and at the German treatment of the Italian Divisions in the battle of Egypt.

FOOD SHORTAGE

(5) Food shortage has brought unparalleled privation and hardship to the Italians during the last two years. Yet under cover of "trade agreement" the Germans continue to rob Italy of its home-produced supplies. In recent months, it has frequently happened that trains on their way to Germany from Italy have been stopped and pillaged by angry crowds.

(6) The economic and financial crisis is growing month by month more acute and the German policy of withholding raw materials and war products is reducing Italy to complete economic dependence upon the Reich.

(7) It can no longer be hidden from the Italian people that their army and navy have suffered one defeat after another—in Greece, Abyssinia, Libya and in frequent engagements with the British fleet in the Mediterranean—now in new battles in North Africa.

(8) The Royal Air Force bombing attacks on large Italian towns have brought home to the Italian civilian population the full horror of modern war and have filled them with terror and panic from which only an end to the war can save them.

OVERSTAYED HIS WELCOME

All these factors have influenced in greater or lesser degree the different classes composing the Italian population each of which has its own particular reasons for desiring peace.

(1) The Crown is realizing more and more clearly that Mussolini has overstayed his welcome and that the hour is ripe to translate the wishes of the people into action against the Fascist party before it is too late.

(2) The Church has for years watched the fluctuations of Fascist policy and is ready at the right moment to exert the powerful influence that it has always had among the Italian people.

(3) The armed forces have lost all hope of victory and are realizing that the only way to avoid disaster is to leave the Germans to fight their own battles.

(4) The peasants and workers alike long for peace, the peasants because they are compelled to surrender their crops and are suffering more and more from labour shortage, and workers because they see their own factories on the verge of closing down altogether for lack of materials and live in constant dread of transfer to Germany.

(5) The industrialists have realized that their country is ruined economically, with its industry and resources pledged to Germany and that only one way of escape lies open—to ask for peace. Peace can only be attained in one way—by the overthrow of Mussolini and the Fascist regime. Italy must pay the price for peace, she must pay for the years she has allowed herself to be dragged along the German war path and prove her readiness for peace by cleansing her own country of Nazis.

Nazi "New Order" in Baltic States

BY

J. PALECKIS,

Chairman of the Presidium of the Lithuanian Soviet Socialist Republic.

WHILE indulging in demagogic talk about rights of self-government and promising the Baltic peoples a "fitting place" in the "New Europe," the Nazis are actually robbing them of all state sovereignty, obliterating the very names of Lithuania, Latvia and Esthonia from the map by designating them all under the general title of "Ostland." Hundreds of thousands of persons are languishing in prisons and concentration camps, or have been transported for slave labour.

In order to weaken the Baltic nations and paralyze their resistance, the German Fascists are shipping large numbers of workers, particularly the youth, to Germany for slave labour either in Germany or to the region of the front. Moreover, a certain number of men have been deluded and forced to take up arms against their countrymen. According to a recent announcement, high school graduates are admitted into college only on condition that they serve in Hitler's army or work in Germany.

COUNTRY STRIPPED BARE

Openly declaring that all the interests of the Baltic are wholly subordinated to the task of supplying the Nazi army stationed in the Baltic states, the occupationists are stripping our countries bare. Peasants are made to give up all their produce but a small quantity barely sufficient to keep body and soul together. The population has been forced under the threat of severe punishment to give up all metal and rubber articles, bicycles, warm clothing and footwear.

In view of the wide boycott of such orders, particularly on the part of the peasants, the Hitlerite authorities have threatened to deal with offenders as with enemies at the front, i.e., shoot them on the spot.

In the kingdom of lawlessness and oppression established by the occupationists in the Baltic, the Germans are placed in a privileged position. Every German receives twice as much bread as a Lithuanian, Latvian or Esthonian worker. The Baltic peoples are made to feel at every step that the German is the master in their lands.

POLICY OF "GERMANIZATION"

The policy of "Germanization" is being systematically carried out through the schools, the cinema, radio and other cultural institutions. The German language has been declared the first official language, and a knowledge of it is obligatory for students enrolling in local colleges. Publishing houses are engaged in issuing Fascist, anti-Semitic literature.

There is no doubt that the aim of the Fascist "new order" in the Baltic is to exterminate the local peoples and turn the Baltic into an adjunct of Germany as has been done in the case of west Poland.

This aim, however, is too obvious to the peoples of the Baltic, and they are resisting it with all their strength. The guerilla movement is spreading steadily in Lithuania, Latvia and Esthonia.

A large number of men from these countries are fighting in national units in the Red Army.

The peoples of the Soviet Baltic firmly believe that the heroic struggle of the Soviet peoples, supported by their brothers-in-arms in Great Britain and the United States and the other countries at war with Hitler, will bring liberation and victory.—Condensed from *Moscow News*.

Mussolini Squeals

Referring to the R.A.F. raids on Northern Italy, Mussolini said in an address to the Fascist Party on Wednesday, that the Italian casualties, as a result of R.A.F. raids on Northern Italy, were 1,876 killed and over 3,300 injured. In Genoa the number of houses destroyed was 5,772. "We have made hundreds of millions of lire on shelters that can resist the biggest bombs," he said.

Mr. Herbert Morrison, Britain's Home Secretary, in a speech in London on the same day said that it is clear from the Duce's figures that the R.A.F. must have been exceedingly successful in finding military targets at which it aimed. He added: "When Britain underwent its blitz, the British did not squeal. Mussolini does."

R.A.F.'s Work in Middle East

THE first thing that struck me on visiting the Royal Air Force in Egypt was the complete absence of traditional English class distinctions. In the Royal Air Force of to-day the only criterion is courage. Mechanics, clerks, writers, lords, sergeant-pilots or officers share the same mess, and one cannot help being struck by the complete camaraderie between them, writes the Special Correspondent of the *Yeni Sabah* and *La Turguic*.

Another noticeable fact in the Royal Air Force is that there is none of the traditional stern military discipline but, instead, an instinctive understanding that every man has his duty and will do it. These new hard, courageous youngsters who have learned to fight and to kill are very different from when they first came out. Then they regarded fighting as a gentlemanly sort of sport. If they have any regrets to-day, it is only that they could not kill more.

Another striking fact about the Royal Air Force is their extreme conservatism in claiming the destruction of enemy aircraft. Unless a pilot can actually see a plane crashing on the ground and bursting into flames, he cannot claim it as shot down. An enemy machine may be coming down completely wrapped in smoke, so that there is not the slightest doubt that it will crash, but the pilot can only claim it as probably lost.

MAGNIFICENT WORK

Every officer I met could not give enough praise to the magnificent work being done by the Royal Air Force ground crews. On busy days these men work from two hours before dawn all the day through in insufferable heat far into the bitterly cold desert night. Fighters will be taking off and landing all the day long, and the task of reloading, refuelling and repairing never ceases. One Royal Air Force officer told me that he had once landed with the tail of his machine shot to pieces, but in a few hours a new one had been fitted and he could take off again.

With such adversaries it is not perhaps surprising that nowadays German and Italian airmen show no desire to fight. Spitfires are the *bete noire* of Axis flyers. Whenever they see Spitfires, they invariably bolt for home. Even the best Axis fighter, the Messerschmitt-109, always does its utmost to avoid Spitfires.

One has to be out in the desert with the Royal Air Force and see them at work, to appreciate the truth of General Auchinleck's words when he spoke of the "great and glorious part played by the Royal Air Force."

Another remarkable feature in the desert is the work of the tank and aircraft salvage units. They work in the frontline, often under enemy fire, and share all the hardships and dangers of fighting men. I have seen the heaviest tanks hauled back on tank recovery trucks to desert workshops, or rather factories, where repair work goes on 24 hours a day.

The Eighth Army paratroops are the toughest possible individual fighters. All are picked men between 20 and 25, and their training is harder and more strenuous than any other unit. They have nightly marches of between 20 and 30 miles in the desert, and

The extreme simplicity and unequalled efficiency of the "Owen" gun has proved it to be the best light sub-machine gun of the war. With a lower trajectory over 300 yards it is far deadlier than other Tommy-guns, firing with greater velocity, deeper penetration and less recoil. It is mudproof and sandproof, can fire 30 rounds in three seconds. A flick of the finger gives either automatic or trigger control, while a simple catch allows spent magazines and hot barrels to be released instantly. Invented and being mass produced in Australia, the "Owen" gun weighs 10½ lb. and costs less than six Australian pounds.

Picture shows: An Australian soldier charging the 30-round magazine of the "Owen" gun, so named from its inventor.

learn to jump on and off trucks moving at 30 miles an hour.

I have seen British service women in thousands in the Middle East doing splendid work. They drive heavy lorries, cook, do cyphering and many other kinds of work to release men for the frontline. The devotion and heroism of British nurses will never be forgotten. They are everywhere, even in the most forward positions, working night and day. They never grumble, and always think of their patients, never of themselves.

India's Sailors in Action

SAILORS of the Royal Indian Navy who have recently brought to India some of the Navy's new warships constructed in the United Kingdom describe experiences of submarine warfare during the voyage to their motherland.

In protecting merchantmen in convoy they helped to beat off several attacks by enemy submarines.

One of India's new warships towed a badly damaged vessel for no less than 500 miles. Another sighted survivors from a torpedoed vessel and picked them up. Her log book tersely tells the story:

"1015, Raft bearing Green 90. Away sea-boat's crew." A little later: "Sea-boat secured. Resume course and speed."

A further entry reads: "At sea. A ship torpedoed astern."

The convoy system, under which merchantmen proceed in company escorted by warships, has reduced the loss of merchant shipping to small proportions. Some losses are, nevertheless, bound to occur, but fortunately a steady toll is taken of the attacking submarines.

At one period the warship mentioned above formed part of the escort for a convoy of 40 vessels.

Officers and men serving in the new warships are now eager to play their part in the defence of the sea lanes round India—and they serve in ships whose capabilities match this enthusiasm.

Compact and fast, these additions to the fleet are well equipped for dealing a death-blow to marauding submarines and aircraft, and are also fitted for minesweeping.

By Candlelight!

Old Lady: "Ten pence a pound for candles. That's very dear, ain't it?"

Grocer: "Yes, but you see they are dearer now on account of the war."

Old Lady (in surprise): "Lor' a mussy! You don't say so. An' be they a-fightin' by candlelight now?"

Stick on Axis Ant Heap

BY

MAJOR LEWIS HASTINGS

WHAT does it mean, this great design, as the Prime Minister called it, this rapid extension of Allied power over the coast of Africa? The first objective of the operation—reaching from the Nile to Casablanca, and surely this must be the biggest synchronised task in military history—of course, is the possession of the whole North African coast—every yard of it. What will this mean, if it comes about?

Well, first of all, far more effective command of the Mediterranean, and together with that immense relief to our shipping. As the air-fields fill with Allied aircraft all along this coast, sea power in the great inner sea will come into its own again. The value of a powerful fleet to-day such as, thank God, we possess, is not doubled, but quadrupled, when it can operate under the protection of shore-based aircraft.

INESCAPABLE FACT

Then it means that the soft flank—what the Prime Minister called the "under belly"—of the Axis, is now exposed to attack, first from the air, and next, well, as it may seem good to the Allied command. And then, dispersion of force, which has had tragic consequences for us in the past, is now a weakness inflicted on Hitler. You can see something of that already. The effect on the Axis has been just like pushing a stick into an ant heap—all Nazi Europe is buzzing with anxious activity.

The fog of war is pretty dense just at present. We are not giving anything away to the enemy, and there is no sense in guess-work, but it is an inescapable fact that at last, at long last, the strategic initiative of this war is in the hands of the Allied Nations. Of course, the Germans will react with all the violence with which they are capable—they are reacting already—but I do not believe they will ever regain that control of events that they have had for three full years.

Something has been started in the Mediterranean, and there is not going to be a fade-out. Things may often be slow, but they will keep going.

—In a recent B.B.C. talk.

Turkey and the War

FOR the moment it seems as though the immediate danger of which President Inonu recently warned the country has been postponed, at least for weeks, perhaps for months (observes Gordon Young in a cable to the *Daily Express* from Istanbul). But, calmly studying plain military facts, Turkish experts see a number of compelling reasons why, as the President said, Turkey is now nearer war than she has ever been before.

THREE REASONS

There are three reasons why Turks think this possible, if not probable. First, it would give Hitler a quick, spectacular move admirable for the propaganda purpose of diverting attention from German failures elsewhere. Secondly, if successful, it would give him control of the Dardenelles and enable him to send Italian ships against the Russian Black Sea fleet. Thirdly, it would allow him to make the best possible use of Bulgaria's half a million soldiers by sending them against Turkey, exploiting the traditional hostility between the two countries.

The clearing of North Africa by the Allies would alter the whole Mediterranean picture for the Turks in many important ways. For

BUILDING GIANT BOMBERS: Girls in every part of the British Isles are working on the construction of Stirling heavy bombers, which weigh 30 tons and carry 8 tons of bombs. Once their bomb load is dropped these monster aircraft possess exceptional manoeuvrability, often surpassing that of German fighter aircraft. This photograph shows five British girls working on a section of a "Stirling" bomber.

Nobody supposes that Turkey could be invaded by Hitler like France or Holland. Obviously he could not make a sudden sweep in winter through a vast country stretching 1,000 miles into Asia and traversed everywhere by rugged mountains while about a million Turkish soldiers stand under arms and another million can be mobilised at short notice. But he could, and might, decide on a sudden blitzkrieg with limited objectives on that small corner of Turkey which lies in Europe. He might try to thrust quickly through the 150 miles of plain which is all that lies between the Turco-Bulgarian frontier and the Bosphorus—the entrance to the Black Sea.

one thing, it would mean that Turkey could receive Allied shipments of food and other supplies much more quickly. There would also be changes in the Balkans to which Turkey could hardly remain indifferent.

FACED WITH GRAVE DECISIONS

It seems clear, therefore, that by next spring—if not before—Turkey is going to be faced with some grave decisions of her own on matters of both internal and external policy. In making these decisions, she will certainly bear in mind her desire to remain neutral and unmolested and her determination to be represented at the final peace conference.

That determination is strong. All Turks to whom I have spoken made it clear that no post-war settlement in Eastern Europe can be permanent or satisfactory if Turkey does not have a voice in it corresponding to the importance of her strategic and political position.

You can be sure that any decisions that Turkey may take in the coming months will be influenced neither by Nazi threats nor foreign propaganda nor emotionalism but by the strictest military and political considerations. As far as the country's private sentiments go, conversations that I have had with Turks of every class show that their natural friendship for Britain has been strongly reinforced by our successes in North Africa. It was Premier Sarajoglu himself who recently referred to the Turco-British alliance as the "most fundamental factor in our political system."

Opening Blows of 1943 Campaign

IT is scarcely too much to say that before he has begun to recover from the Russian campaign of 1942 the enemy has felt the opening blows of the campaign of 1943, declares *The Times* in a leading article. The paper refers to the German attempt to blame the Rumanians for the failure at Stalingrad and observes that Germany's satellites, fighting as they do in the cause of their own enslavement, can scarcely be expected to maintain their enthusiasm when their faith in the invincibility of their masters is shaken. Signals of distress from Italy have already shown that this flagging among his helots may become an increasing factor in the enemy's embarrassments, says *The Times*; but his own direct losses are likely to be the greatest of all. Within the past month he has seen two panzer divisions smashed in Africa and two more badly mutilated in the Caucasus, while now three have come to grief between the Volga and the Don. At the same time it is now known that since the beginning of the war British and American tanks to equip 20 divisions have been delivered to Russia.

Even if the demands of defence against the new threat from Africa were not about to drain Nazi strength, the enemy would at this date be looking for a respite and recuperation on the eastern front, continues *The Times*. But he is well aware that Russian strength is being marshalled at many points of it and that the offensive spirit of the Soviet will not be quenched by winter.

China and Britain

THE official *Chung Yang Sao Tang Jih Pao* in a leading article welcoming the British Parliamentary Mission observes that the visit will not only create a new page in the history of Anglo-Chinese relations but leave an indelible record in the history of democracy. It is the first time in the 700 years' history of the British Parliament that a goodwill mission has been sent abroad on behalf of both Houses of Parliament. The paper says that the Mission's four members are old and distinguished statesmen, representative not only of both Houses of Parliament and of the three major parties of Britain but also of British business and labour.

Relations between Britain and China have a long history, observes the paper. Between the two cultural intercourse has been unceasing. In her reconstruction China has received much assistance from Britain. British influence over China has been prominent. Since the beginning of China's war of resistance, Britain has given China great assistance in communications and technical matters. Had it not been for this assistance, declares the paper, China's situation to-day might not have been what it is. Such kind assistance from the British Government and people will linger for ever in China's memory.

RE-BUILDING WORLD PEACE

The paper proceeds to say that it is not only necessary to retain their present friendship but to promote it so that it may become a most effective link between the two nations. In war the two countries have fought shoulder to shoulder and shared tribulations and perils. After the war they will shoulder jointly the great task of re-building world peace. They must co-operate not only economically but also politically, militarily and culturally. China needs a strong and prosperous Britain no less than Britain needs a free and prosperous China.

The *Ta Kung Pao* (independent) observes that the creation of a new front in North Africa is in accordance with the demands of Anglo-American strategy. It will have a vital bearing on the future of the war and can produce the same effect as a second front in Europe. Allied control of the Southern Mediterranean will render easy the invasion of the Continent from Africa. When the Allies stage this invasion, the Axis will not only move their guns stationed along the Atlantic coast to the Mediterranean but also move troops from the Russian front to the Mediterranean, thus relieving pressure on the Soviet. The Allies are passing from the defensive to the offensive and Axis collapse is not far off.

The Job Britons Have Done

BY

WALTER KARIG

LET us take a look at the job the English are doing and have done. If they had not done it so superlatively well, Hitler would be in Windsor Castle today. He might even be in Ottawa, to hearten his troops invading the United States.

Remember that for more than two years the concentrated Nazi might and power has been perched only 18 miles from England, and that the island has been under almost continuous bombardment all that time. Old stuff, but remember it anyhow.

Everything in Britain is mobilized for the winning of the war—everything and everybody. Two out of every three persons—not men alone but women and children, too—who are able-bodied and between the ages of 14 and 65 are working full-time in the armed forces, in civilian defence, or in war industries.

Every able-bodied male between 18½ and 51 has been drafted into the armed forces unless irreplaceable in an essential industry. In England you work in a munitions factory or you fight, unless you are bedridden or imbecilic.

Seven million British women have been registered for the draft. Unmarried women between 20 and 30 are being sent into the uniformed auxiliary services of the army, navy, and air force. Women of any age can be drafted for war work. Already 5,500,000 are toiling in the munitions industries, and millions of other housewives are working part time.

Ever since the treacherous German invasion of Holland, Dutch warships and submarines, escaped from their bases, have operated as an integral part of the British Royal Navy. Dutch submarines in particular have taken part in many successful actions against the enemy. Photo shows a typical rating aboard a Dutch submarine.

What the British are doing and have done is of tremendous importance to each and every one of us who are their partners in this war and in the peace to come. It is also an object lesson in what "all-out war" means, which we are going to find out for ourselves as sure as shooting.

EVERYTHING MOBILIZED

The time is not far off when the petty inconveniences of sugar, gasoline, and tyre rationing are going to seem like fun. What we are going to do without is not just silk stockings and trouser cuffs. Before this war is many months older we are going to live almost as austere as the British have been doing for a long, long time.

CIVILIAN DEFENCE

Every person able to walk is trained in some duty during air raids. There are 1,500,000 trained civilian defence workers, 4,400,000 fire-fighters, 2,000,000 invasion-repelling Home Guards—all civilians who undertake these duties after the day's turn in mill, mine, or field is finished.

Industrially, the 6,500,000 unionized war workers cannot quit their jobs nor can they be fired without Government permission. In the factories joint labour-management committees work out what troubles arise, be they problems of personnel or production.

One home in every five has been destroyed or damaged by bombs, and more than 44,000 civilians have been killed in air raids.

All right. What are these British accomplishments with all this daily regime of blood, sweat, and tears?

Last year we sent the British about 2,500 airplanes. Britain sent out to Allied war fronts 9,781 of her own manufacture. We sent them about 200 tanks; they put 3,000 into action. Sure, we are doing better this year, tremendously better, and the best is yet to come. But the same things are true of the "limeys." Their production of airplanes has doubled in the last 12 months.

A pair of shoes has to last the average British wearer, strictly rationed on clothing, two or three years. But that is because the British have sent some 4,000,000 pairs to Russia.

For every airplane England imports from the United States she exports four of her own manufacture to Russia. She has sent the Red Army 2,000 tanks in eight months. British railroad shop workers did a year's work in ten weeks to build 1,000 freight cars for the Trans-Persian line which American engineers completed to carry British and American supplies from the Persian gulf to the Caucasus.

To amplify this transportation, the British built an automotive assembly plant on the Persian Gulf, and every month it turns out 200 big trucks which are loaded with supplies and delivered, complete, to the Soviet forces.

On top of all that, Britain is maintaining an army of more than 2,000,000 men, is equipping and supporting military and naval units of the Free French, Norwegian, Polish and Netherlands Governments in exile, and is not doing a bad job with its own navy.

There are no profiteers in England. On an income of \$3,000 a married man pays \$955 in direct income-taxes; on \$25,000 he pays \$15,000. Excess profits are taxed 100 per cent. But the per capita purchase of war savings bonds is \$318, and the English have subscribed \$15,000,000 to Russian War Relief. —Condensed from *Liberty*, New York.

JAPANESE NOT TRUE ASIATICS

There is a very good reason why Japan's war-cry of 'Asia for the Asiatics' does not, and never will appeal to the rest of Asia, namely, that the Japanese are not *true* Asiatics themselves—and this is admitted by the author of 'The True Face of Japan.' They are chiefly a mixture of the aboriginal stock of Ainos who now inhabit the far north of Japan, Mongoloids from the continent and Malays from the southern Pacific islands of Polynesia. The temperate climate of Japan has turned this mixture into a hardy, maritime, if somewhat imitative race, but it has not eliminated that spirit of ruthlessness and that want of sensitiveness to the dictates of humanity which is said to be so characteristic of 'a savage.'—Dr. Reginald le May, in a recent *B.B.C.* talk.

British Supplies for Russia

IN September 1940, Britain was sorely pressed to make good the heavy losses in war materials she had sustained in France. Today, in the space of those two years—years of battle in many theatres of war—she has succeeded in building up a vast arsenal, enough not only for her own needs, but also to help supply those of her mighty Russian ally.

British tanks are shipped to the U.S.S.R. at the rate of 50 every week. For every hundred planes Britain promised her companion in arms, she has sent 111, as good measure. And she has sent many a hundred and eleven. Moreover, an endless flow of essential raw materials—aluminium, rubber, copper, tin, wool, lead, jute, shellac, cobalt and many others—pour forth from the British Isles, to reach Soviet factories via one or other of the two main supply routes. Everything that Britain undertook to send has been despatched to Russia, from the last ounce of phosphorus, to the last yard of army cloth. That is one of the ways in which two great nations make common cause to defeat the common foe.

NAZI LOSSES

Then, too, the Anglo-Soviet forces are slowly, but inexorably, draining Germany of a commodity for which the Nazis can supply no 'ersatz' substitute—man-power. Nazi losses on the Eastern battlefield are colossal.

Furthermore, the British blockade in playing an important part in increasing Germany's man-power problem. Huge quantities of war materials must now be made synthetically by the Nazis—a method that is highly extravagant in its use of men. For instance, to produce the 4,000,000 tons of synthetic petrol needed every year, the Nazis must employ not only 100,000 workers in the actual factories, but 50,000 miners in the pits who must first of all bring up the necessary coal. And petrol, of course, is but one of the commodities which Germany is forced to produce by synthesis.

On land, the effects of Britain's blockade are even greater—the lack of imported food-stuffs and fertilizers has forced the Nazis to employ 4,300,000 extra farm hands to grow the same amount of crops she produced in 1939. Altogether, it has been estimated reliably that no fewer than 5,000,000 Nazi workers, who might otherwise be directing their efforts to the support of the German forces in Russia, must now try and make good the deficiencies caused by the British stranglehold.

Schoolboys Bring in Wartime Harvest

By HOMER SMITH

HAD it not been for the fact that one of them was riding an ox into the field, the three Kuibyshev schoolboys on the big Volga collective farm where this writer was a week-end guest might have been called the "three horsemen."

A few months ago Genadi Grafkin, 14, and Ilya Frenkin, 15, fifth-class pupils in Kuibyshev Secondary School No. 25, would not have approached any too close to the horses parked on Kuibyshev's streets. As for Victor Smirnov, 15, sixth-class pupil in the same school, I doubt whether he was any too familiar with the habits of oxen.

The war has changed all that, as it has radically altered so many other aspects of Soviet life. Now these three city boys not only nonchalantly ride these animals, but drive them all day long during the harvest campaign. Even the country lads born and bred, we were told by one of the farmers, are beginning to envy the skill with which their temporary city-born fellows handle their animals.

"SIGNED UP"

Along with thousands of other city school pupils who swarmed to the countryside to help with the crops, Genadi, Ilya and Victor signed up "for the duration" (of the school holiday) at the Way of the Peasant Collective Farm.

"They arrived with big eyes, loads of ambition and 'pep,' but no knowledge of farm work," stated Kirill Safonov, chairman of the farm. "Everything was new to these young city greenhorns and I hardly knew what to do with them. But here they were, I was short of help, so I decided that they might like to become acquainted with horses as a change from the automobiles of Kuibyshev."

When Genadi and Ilya were first handed the harness for their horses they were not sure whether the bridle bit went into the horse's mouth or under its tail, and when the horse looked around at them, as horses will do, they quaked inwardly. Three days of instruction by a farm boy, and all the "mysteries" were solved.

CHAUFFEURING ONE-SPEED BEAST

As for Victor, he admits that at first he thought they were "pulling his leg" when they gave him the ox. But since no more horses were available, he resigned himself to "chauffeuring" this docile and one-speed beast.

"Weren't you afraid at first?" we asked Victor.

"Just a bit," he, confessed, "but I soon found him to be quite gentle and harmless. The only trouble with him is that he's too slow and seems always to be half asleep. I tried speeding him up but the country folk tell me it's no use."

Threshing of rye was almost over when we arrived at the collective farm. Genadi and Ilya and their horses and wagons hauled the threshed grain from the threshing machine to the grain elevators about one mile away. Victor covers less territory—he drives his ox and rake only a few feet, drawing the straw away from the threshing machine to the hay pile nearby.

"GETTING FINE"

During the dinner intermission we asked Genadi and Ilya how they were getting along with their work.

"Khorosho" (Fine), they answered in unison, as they buried their sun-tanned faces into slices of watermelon from the farm's melon patch. Without being asked, Genadi proudly added that his father was driving a tank at the front. When we suggested that within four years he would be of military age and could also drive a tank, he looked up and in a tone of assurance mixed with disappointment, remarked that "the war won't last that long."

Ilya seemed somewhat downcast at the thought that the secondary school would be re-opening shortly, and that he would have to leave his horse and the broad, golden steppe, the chug-chug of tractors and mountains of rye around the threshing machine for the four walls of the class room.

TYPICAL OF THE DOZENS

"These three lads are typical of the dozens of Kuibyshev school pupils helping us this summer," declared chairman Safonov, when we asked him for a brief estimate of his youthful auxiliary help from the city. "Once they are 'broken in,' they work just as well as, and in some cases better than, farm-born youngsters."

"They show comparatively better discipline and susceptibility to organization, which is natural and characteristic of city folk in general, as compared with rural people. They have coped well with all the tasks assigned them. And there was plenty to be done before the present threshing: weeding potatoes, pulling corn, sheafing wheat, gathering vegetables, etc."

—Moscow News.

Diary of the War

ENGLAND AND GERMANY

27th Nov.—The Royal Air Force attacked targets in north France and Brittany.

28th Nov.—Two German fighters machine-gunned in a coastal district in south-east England.

29th Nov.—The Royal Air Force attacked and scored a hit on an enemy supply ship off the Dutch coast.

30th Nov.—In a broadcast, Mr. Churchill said: "We are becoming ever more entitled to be sure that the awful perils which might well have blotted out our life and all that we cherish will be surmounted for further service in the vanguard of mankind."

The Royal Air Force attacked targets in Holland and northern France.

Mr. Churchill was the recipient of good wishes and congratulations from all parts of the world on the occasion of his 68th birthday.

1st Dec.—According to "Frontline, 1940-41", a book issued by Mr. Herbert Morrison, Minister of Home Security, revealing official secrets of Nazi blitz on Britain, "In three months from September 1940, 36,000 bombs fell on London and nearly 13,000 people were killed. London was bombed for 57 consecutive nights. In 11 months, between 45,000 and 50,000 bombs hit London. In nine months, 1,150,000 London homes were destroyed and 375,000 people made homeless. During the whole air attack on Britain, 43,667 civilians were killed and 50,387 seriously injured."

2nd Dec.—The Royal Air Force raided railway yards in northern France.

UNITED STATES OF AMERICA AND THE ATLANTIC

27th Nov.—President Roosevelt and more than 200 leaders of armed and civilian services led the nation in a special thanksgiving ceremony at the White House, Washington, joining in prayer for peace to ultimately unite the world in "firmer fellowship" for the good of all mankind.

INDIA, BURMA AND CEYLON

27th Nov.—The Royal Air Force attacked the railway station at Myingyan in Burma. Three Japanese aerodromes in Heho, Mingaladon and Meiktila were also attacked.

29th Nov.—British troops occupied Reunion Island in the Indian Ocean.

30th Nov.—The Royal Air Force attacked the Japanese aerodrome at Shwebo in Burma.

1st Dec.—The Royal Air Force attacked the Japanese aerodrome at Magwe in Burma.

2nd Dec.—American aircraft made a daylight raid on Port Blair in the Andamans. Docks and warehouses at Rangoon were heavily bombed in a night attack.

It was revealed that the Japanese do not hold the whole of Burma.

3rd Dec.—The Japanese brought up supplies to Akyab from Rangoon. The Japanese Commander-in-Chief in south-west Pacific inspected Burma, Thailand and Indo-China. The Royal Air Force raided Akyab and Toungoo. A Chinese military spokesman revealed that the Japanese were preparing for an invasion of India.

ITALY, AFRICA AND THE MEDITERRANEAN

27th Nov.—It was revealed that in the Royal Air Force raid on Genoa on November 13, the aircraft carrier *Roma* was sunk and a 35,000-ton battleship *Impero* was damaged. The damage done in Milan was enormous.

Allied forces contacted enemy between Jedabaya and El Agheila.

It was revealed that many Italian paratroops refused to jump.

Bizerta was heavily bombed.

General Smuts said at a press conference: "The initiative now rests with the Allies and for them the war is entering the offensive phase."

28th Nov.—Toulon was occupied by German forces. French troops offered resistance to German and Italian troops. All vessels of the French squadron at Toulon harbour scuttled themselves. A big wave of Nazi bombers flew over Toulon.

Allied troops were 10 miles from Tunis. Ships in the harbour in Homo and Tripoli were bombed. American planes raided Tunis.

Mussolini assumed command of the Italian forces in Libya.

According to a Vichy Radio announcement, Admiral Darlan and General Giraud were deprived of their nationality.

Francesco Agello, Italian ace fighter pilot, was killed in a test flight.

29th Nov.—Nine Axis supply ships were sunk and three damaged in the Mediterranean.

British troops infiltrated into Axis lines in the Medjez El Bah region.

Three hundred and fifty thousand people left Milan from fear of further British air raids.

30th Nov.—The Royal Air Force bombed targets in Bizerta. Allied troops occupied Djedeirda, north-east of Tebourba. Two German paratroops in Arab dress were captured by an Allied patrol.

Allied troops contacted Axis forces near El Agheila.

The Royal Air Force raided Turin and great damage was caused.

1st Dec.—Hitler held an extraordinary meeting of his High Command at Berchtesgaden to discuss future operations in Africa.

A simultaneous conference was held in Rome.

It was reported that all Axis forces would be withdrawn from Tunisia and Tripoli within six days.

Tunis and Bizerta were bombed by Allied aircraft. Fighting continued on the eastern side of Djedeirda.

It was reported that Mussolini was seriously ill. Hitler sent more Gestapo men to Italy.

The Royal Air Force attacked Turin. About 300,000 people evacuated Turin.

Plans were made for the trial of those responsible for scuttling the French Fleet at Toulon.

2nd Dec.—Allied forward units maintained pressure on enemy's positions near Matour and Djedeirda. American Flying Fortresses attacked Bizerta, Tunis and Gabes.

Riots broke out in the naval arsenal at Toulon. The French army and navy were disbanded.

French submarines that escaped from Toulon reached Algiers and Valencia.

3rd Dec.—Mussolini, speaking to Italian officials and Fascist party members, said that in the Royal Air Force raids on Italian cities, 1,876 were killed and 3,300 injured; 5,772 houses were destroyed in Genoa. During 30 months of war, 40,000 Italians were killed, 232,700 taken prisoner.

The Italian Socialist Party distributed leaflets, appealing to the Italians to launch a civil disobedience movement.

British and American forces smashed the biggest German counter-offensive in Tunisia. Coast between Sfax and Gabes was reached.

Admiral Darlan assumed the powers of Chief of State in French Africa.

RUSSIA AND FINLAND

27th Nov.—Axis troops, 300,000 in number, were trapped in the Don elbow as the Russian pincers closed in. The Kharkov-Stalingrad railway was cut. There was no sign of a German counter-offensive to save the trapped troops from annihilation.

28th Nov.—The Russians made new thrusts near Nalchik and Tuapse. They made a fairly deep penetration on the Toropetz front. German forces retreated across the Don. The Red Army reached the area of Veliki Luki, an important key-centre north west of Smolensk.

UNITED NATIONS AND CHINA

"The United Nations cannot afford to let China be cut off . . . This is fully appreciated in London, Washington and Delhi, of course, and the Anglo-American raids on Burma are presumably just tokens of what will be done about it. Let no one doubt that it is worth doing thoroughly, for a Japanese failure to make good there, before communications with India are reopened through the Mediterranean, would have as depressing an effect on Tokyo as Japanese occupation of the Kunming airport would have on Chungking."

—New York Herald Tribune.

29th Nov.—Russians retook Kletskaia. The Russian pincer closed on the Don, south of Kalach, surrounding the large Axis army in the Stalingrad pocket.

30th Nov.—The Russians opened an offensive in the Central Sector; 30,000 Axis troops were killed. Soviet forces were near Voronezh. The entire factory area in Stalingrad was recaptured.

According to *Izvestia*, the total of Germans killed on all fronts in Russia in the past 10 days was 100,000.

1st Dec.—The Red Army advanced on the Rzhev-Vyazma front. Enemy defence line was broken through on the eastern bank of the Don.

2nd Dec.—The Red Army made 4 to 6-mile advance before Stalingrad. Between Kalinin and Toropetz, a great tank battle was in progress.

M. Stalin assumed personal command of the Russian forces in the Central Sector.

3rd Dec.—It was reported that M. Stalin was personally directing the battle at the Rzhev front. The Red Army repelled seven German counter-attacks north of Stalingrad.

NEUTRAL COUNTRIES

27th Nov.—All members of 1938, 1939, 1940 and 1941 classes in all military regions were called up under partial mobilization order in Spain. Spain also strengthened her garrisons in the Canary Islands, Spanish Morocco and the Balearic Islands.

28th Nov.—Air raid alerts were sounded twice at Lausanne and Geneva.

1st Dec.—An air raid alert was sounded in West Switzerland.

VICHY AND OCCUPIED COUNTRIES

27th Nov.—Hitler ordered the extermination of all Jews in occupied Europe by the end of 1942.

All Jews in Norway numbering 2,300 were arrested by Nazis.

Mass murders of the Jewish population were carried out in Poland by the order of Herr Himmler.

1st Dec.—Mr. Cordell Hull appealed indirectly to the people of Albania to revolt.

2nd Dec.—It was revealed that when British and American forces landed in North Africa, the Vichy Cabinet refused, by 8 to 6 votes, against the German demand, to declare war on the Allies.

THE FAR EAST

27th Nov.—Allied bombers sunk two Japanese destroyers and damaged a third in south-west Pacific. Japanese aircraft raided Guadalcanar.

American aircraft attacked the Japanese controlled oil refinery in Bangkok, Thailand.

28th Nov.—The Japanese landed reinforcements in Buna. Darwin was raided by Japanese bombers. Damage was slight.

29th Nov.—The Japanese bombed Guadalcanar. Their counter-attacks were repulsed in New Guinea.

30th Nov.—Allied aircraft raided Timor. The Japanese reoccupied Attu island.

1st Dec.—One Japanese destroyer was sunk and another probably sunk in south-west Pacific.

In an air raid on Canton by the American air force, 19 Japanese planes were destroyed. A 10,000-ton ship was sunk and another damaged.

2nd Dec.—United States aircraft bombed the Japanese coaling station and power station at Hongay in Indo-China.

Twenty-three Japanese planes were shot down over Canton by American aircraft.

A Japanese convoy west of New Georgia were attacked by American aircraft. Three enemy planes were shot down.

3rd Dec.—The Japanese renewed their attempts to reinforce Buna. It was revealed that the Japanese sustained heavy shipping losses.

Two Messages

"When I was leaving the Kremlin, in the middle of August, I said to Premier Stalin: 'When we have decisively defeated Rommel in Egypt, I will send you a telegram'; and he replied, 'When we make our counter-offensive here'—and he drew an arrow on the map—'I will send you one.' Both messages have duly arrived."

—MR. CHURCHILL, in a Broadcast on Sunday (November 29).

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV

FRIDAY, DECEMBER 11, 1942

No. 14

GENERAL WAVELL

Axis Design Checked

We have already been successful in helping to check the Axis design of a great pincer drive from east and west towards India, or of forcing on us a fatal dispersion of our strength in men, ships, aircraft and equipment at the crisis of last summer when the enemy's offensive power was at full blast. We have thus greatly aided the successes we are now winning in Africa and the Russian counter-offensive

The United States forces in the South-West Pacific can justly claim to have avenged Pearl Harbour and our other setbacks at sea. The day will come when you will also avenge our reverses on land. I can assure you that I am doing all in my power to hasten the approach of that day

GENERAL WAVELL, in a broadcast to the armed forces in India on Tuesday (Dec. 8)

Running Commentary

"French Pearl Harbour :" published by the Col. Knox's Fighting French newspaper, *La Marseillaise* on Sunday (December 6th) General de Gaulle said, "French soldiers whether they fought in Tunisia, in Libya, or in the Pacific, were not soldiers of any one person, they were soldiers of France."

It was a realization of this fact which was mainly responsible for the great act of self-immolation of the French Fleet at Toulon, an act which has excited the admiration of the whole world. Referring to the fate of the French fleet General de Gaulle said some time ago, "In

one brief instant, captains, officers and ratings saw through the odious veil of lies which, since June 1940, has hung before their eyes. In one instant, they understood to what a terrible end they had been led." This great act by which France redeemed its honour has deprived Hitler of a prize which the occupation of the whole of France would have given. It is not generally known that the French Navy till recently was a considerable fighting force and had suffered but small losses since the outbreak of the war. All that France lost up to Dunkirk was one cruiser, a mine-layer and two destroyers. At Dunkirk itself, when the British and French forces were withdrawing, seven

MADRAS'S GENEROUS GIFT

◆ ◆ ◆

The following letter has been received from the Commanding Officer of the 7th Light Cavalry :—

I have the honour to write on behalf of all Ranks of the Regiment to thank you most sincerely for your most generous gift of nineteen Armoured Carriers and five Armoured Cars, a gift which is greatly appreciated by all.

The Regiment is proud of the fact that it was originally in the Madras Army and bore the title of Madras Cavalry. Now by your generosity our old connections are freshened in our memories, and we will be proud to go on service with some of our armour named after certain communities of the Madras Presidency.

(Signed) J. M. H.....

Lt.-Col.

destroyers, and several minor vessels, which were giving them cover, were sunk by the enemy. Before the tragedy of Toulon, Vichy France had four great battleships, excluding *Jean Bart* which was damaged during the Allied landings in North Africa, namely, *Richelieu* (35,000 tons) at Dakar, *Strasbourg* and *Dunkerque* (26,500 tons each) and *Provence* (22,000 tons) at Toulon. In addition to these battleships, Vichy France had 2 aircraft-carriers, 35 destroyers and about 50 submarines. At the time of

Fleet at Toulon has been captured intact by the Axis forces. Only four French submarines escaped from Toulon. Altogether fifty warships had been damaged or sunk and fifteen warships were left "afloat and apparently intact." The battleships *Strasbourg*, *Dunkerque* and *Provence* were damaged. The seaplane carrier *Commandant Teste* was severely damaged. Out of 19 submarines originally at Toulon, six were in dry docks; two of these were damaged. Of the remaining 13 submarines four are in

scuttling, Toulon was supposed to contain the following units of the French Fleet :—

Battleships : *Strasbourg*, *Dunkerque* and *Provence*.

Heavy Cruisers : *Colbert*, *Algerie*, *Foch*, *Dupleix* (10,000 tons each).

Light Cruisers : *La Galissoniere*, *Jeanne de Vienne* and *La Marseillaise* (7,600 tons each).

Seaplane Carrier : *Commandant Teste* and 25 destroyers and 26 submarines and sloops.

The report of Col. Knox, U.S. Navy Secretary, published in Wednesday's papers, reveals details of what happened at the "French Pearl Harbour." Col. Knox says that one-quarter of the French

Allied ports. The fifth is reported to have hit a mine and been sunk while attempting to escape. Eight submarines remain unaccounted for.

The two old battleships *Paris* and *Courbet* are in English waters. The Free French Fleet which consists of forty warships is mainly composed of submarines and destroyers.

Beast In a speech from the wounded, but steps of the Bradford not stricken : Town Hall on Saturday Mr. Churchill's (December 5) after a tour of factories in North-East War Review. England, Mr. Churchill stated that the struggle was approaching

(Continued on page 6.)

Pearl Harbour Avenged

A year ago Japan entered the war. On December 7, 1941, she attacked Pearl Harbour, the U.S. naval base in the Pacific. It was a stab in the back. There was not the slightest provocation or excuse for it. Negotiations were then going on in Washington between the emissaries of Japan and the representatives of the United States Government to see whether a peaceful settlement could not be arrived at. Subsequent events proved that these peace talks were intended to be a blind, under cover of which Japan wanted to prepare and launch a large-scale attack in the Pacific with a view to putting the American fleet out of commission altogether.

The full story of the treacherous Japanese attack has now been told, after the lapse of one full year, in all its detail. "If everything had been told about our losses," said Senator Russel of the Senate Naval Committee, "the Japanese would have been in there over-running the place. And if we had lost our bastion at Hawaii the war would have reached our own west coast by now." Senator Walsh, Chairman of the Senate Naval Committee, said it was unfortunate that owing to a desire to prevent the Japanese from having information the losses at Pearl Harbour could not be given to the public earlier.

The secret was well kept. Its disclosure now is coupled with the revelation that the heavy losses inflicted by the Japanese have been set right. Senator Walsh said that the most outstanding fact was that 105 enemy aircraft destroyed 177 Army and Navy planes, killed or wounded over 4,000, and sunk or damaged 19 vessels, including eight battleships, and observed that the American Navy's record in repairing the damage was "most gratifying."

Pearl Harbour has been avenged—and more than avenged. The Japanese claimed to have irreparably crippled 42 per cent of the Pacific Fleet of the U.S. Navy, but it is this "crippled" Navy which has inflicted heavy losses on the Japanese in the Solomons area during the last year. The Pearl Harbour anniversary record of loss inflicted on the enemy is as follows:—

Three battle-ships, six aircraft-carriers, 28 cruisers, 47 destroyers and 7 submarines sunk, at least 265 war vessels damaged, and a large number of transports and supply vessels sunk or damaged.

Referring to these and other successes, General Sir Archibald Wavell, our Commander-in-Chief, said in a broadcast from Delhi on Tuesday night: "The United States forces in the South-West Pacific can justly claim to have avenged Pearl Harbour and our other setbacks at sea." "The day will come," he added, "when you will also avenge our reverses on land." He was addressing the naval, land and air forces under his command in India. Mr. Churchill in a message to them, which was read out by General Wavell, said:

"As Britain has been held in the West, so India must be held in the East, and all the time you, to whom this defence is entrusted, must ceaselessly prepare for the day when you will advance and drive the aggressor from the peaceful lands which he has overrun."

Mr. Churchill observed that the period of waiting must be irksome to all of them who were eager to share in the victories which Allied arms were winning elsewhere, but he added, "the great forces assembling in the India Command are destined to play, before the end, a glorious part in achieving the downfall of our enemies." The day of this downfall is being hastened by a number of factors. For instance, Japan's maritime strength has considerably diminished, and is diminishing.

In the words of Col. Knox, the U.S. Navy Secretary:

"The time is actually close when the Japanese forces in the occupied islands in the Pacific will suffer from lack of replacements of manpower, weapons, ammunition and medical supplies, owing to lack of ships to transport them."

Col. Knox said that the patient whittling away of the ship strength of the enemy lessened the magnitude of the task of the American forces along the road to Tokyo.

This task is lessened not only by the diminishing naval strength of Japan, but also by her growing insufficiency in machine-power. An American writer points out that every undertaking upon which Japan embarks has its genesis in one small area in Japan, from which must come every plane, every spare engine, every spare tread for a tank, every torpedo, shell and bomb. No matter how far-flung Japan's temporary gains may be, he says, a knock-out blow against her areas of productive power must bring inevitable collapse. How is this to be done? He draws attention to the fact that America has produced a long-range of heavy-bombers unprecedented in size and destructive power. They can fly well over 1,000 miles at 300 miles an hour, do their job, and return without refuelling.

He says:—

"This great air armada is now beginning to emerge. By 1943 the United States will produce those great four-engined bombers at the rate of more than 500 a month, and also a much larger number of long-range medium bombers. This is an air striking power as different from that of Hitler, as Niagara is different from a fire-hose."

He estimates that, for the destruction of Japan, we require more than 1,000 heavy bombers operating from bases 700 to 1,000 miles from their objectives—bases which will contain all the maintenance and repair facilities essential to the task of keeping 1,000 great planes in the air. In fact, the Pacific War, particularly in the south, may be said to be a battle for air bases. If the Allies are to make their counter-attacks successfully effective, they must gain suitable air bases, and that is the object of the American and Australian attacks on Japanese positions in that area.

Japan must be deprived of her ill-gotten gains, and she will be, either by the long arm of the Allied air forces or by the heavy guns of Allied fleet in the Pacific, or by both. The growing power of the United Nations, says Mr. Churchill, will press steadfastly on till Japan is stripped of her conquests, punished for her treachery, and deprived of her powers of evil. He adds, "Retribution was always sure: It is now growing near." In a reply message to Mr. Churchill on the occasion of the anniversary of the Americans' entry into the war, President Roosevelt said:

"Partial retribution in kind has been meted out to Japanese forces during the last seven months. This is only the beginning. We will continue to strike them with ever increasing forces. I welcome your statement and join with you in the resolution that Japanese aggressive power must be totally destroyed. In no other way can we be certain that their infamous aggression will not be repeated."

After the Washington Conference in 1921, which averted a war in the Pacific, Mr. H. G. Wells felt sympathetically inclined towards the Japanese. He said, "The idea of them as of a people intensely patriotic, patriotically subtle and treacherous, mysterious and mentally inaccessible, has been largely dispelled." But the fact was an illusion was created, not dispelled. This was made very clear in December last year, and to-day it remains more clear than ever before that the treacherous aggressive military imperialism should be totally destroyed to save the East from barbarism.

RUNNING COMMENTARY

(Continued from page 3.)

its most tense part and that the hard core of Nazi resistance and villainy was not yet broken in upon. In his previous broadcast speech also, Mr. Churchill uttered a word of warning and caution. He said he could guarantee nothing, not even "that more successes are not on the way." He said, "I know of nothing that had happened yet, which justifies the hope that the war will not be long, or that bitter and bloody years do not lie ahead." Therefore, he added, "do not let us be led away by any fair-seeming appearance of fortune." He then gave a catalogue of German strength and said that the beast was wounded, not yet stricken, and it would be all the more ferocious for its pain and fear.

As regards the future, he gave an encouraging account of the rapidly growing Allied air strength as against that of the Axis. The Axis construction was not keeping pace with their losses and their front line was weakening both in numbers and quality. He referred to the U-boat campaign as one of the chief Axis dangers which remained to be overcome and pointed out that the Allies had sunk or heavily damaged an Axis submarine in the Mediterranean for every supply ship lost and had gained two tons for every ton sunk.

Mr. Churchill's broadcast speech may be regarded as the British reply for Hitler's taunts in October when he boasted of the greatness of the German achievement and ridiculed Allied efforts. Within two months, Mr. Churchill was able to throw these words back at Hitler and point to a string of Axis failures and Allied successes. In October Hitler expected a winter devoted to quiet defensive warfare, except perhaps in Egypt, while he recruited his strength to resist an invasion of France next spring. But now, he finds himself confronted with a new front in North Africa which threatens the whole Mediterranean position.

This has happened at a time when Rommel's forces have been sent reeling out of Egypt and the Russians are revealing unsuspected reserves of strength by opening two major offensives on the threshold of winter.

The Russian Counter-Offensive—Powerful and Methodically Planned.

Last Friday was a memorable day for all Soviet citizens, for it marked the anniversary of the beginning of the successful Russian counter-offensive which pushed back the Germans before Moscow. This year, the Soviet counter-offensive was launched three weeks earlier than last year, and is inflicting heavy losses on the enemy. Axis forces attacking Stalingrad have lost more than 100,000 men. After three months of grinding frustration, they are now having the disheartening experience of seeing the defenders of the "doomed" City take up the offensive and cause devastating attacks upon their rear. Axis forces have already lost much of their striking power by the annihilation of three of their armoured divisions.

The Russian armies are advancing north and south towards each other. Their movements represent, not hastily improvised diversions, but a very powerful and methodically-planned counter-offensive. The Germans had constructed a shield of fortified positions along the right bank of the Don and across to the Volga above Stalingrad. This was so strong that Marshal Timoshenko's pressure against it, when Stalingrad was

Rewards for rescue work

Rewards are offered for the rescue of airmen who come down into the sea around the coasts of India. Fishermen and others using coastal craft are asked to co-operate in short distance rescues of Air Force personnel in distress.

The Government of India has sanctioned as a wartime measure money payments to private individuals and bodies who effect rescues.

The rewards, which will be paid through the local civil authorities, are—

	Rs.
For each person rescued alive.	100
For each dead body recovered.	50

Owing to the vast extent of coast-line along which our aircraft operate, the aid of the public will be a valuable supplement to officially organized rescue services.

very much hard pressed, made little headway, but now, a new striking force, supported by mass artillery and heavy tanks, has pierced through the fortified positions to a present depth of about 80 miles.

If the Russian forces west of Stalingrad and Rostov consolidate their present positions and press westward towards the estuary of the Don, they will be closing the gateway of the Caucasus and Hitler will have to clear out of North Caucasus bag and baggage. Realizing the magnitude of this danger, it may be

positions in front of Stalingrad, particularly at this time when the freezing of the Volga will deprive the City of its military significance until the spring? Will he persist in trying to hold the 700 mile bulge in the Caucasus because of possible Russian attacks in the Northern and Central Sectors? Or will he conserve his manpower by shortening the line, that is to say, by exchanging 700 miles in the Caucasus for the 300-mile stretch between Vorenezh and Rostov, as advised by Halder, his former Chief of Staff, and, before him, by Brauchitsch a year ago.

STANDING LABOUR COMMITTEE: The Standing Labour Committee, set up on the recommendation of the recent Tripartite Labour Conference, held its first meeting on November 30, and December 1, 1942, in New Delhi, when representatives of Provinces, States and the Government of India and of labour and employers discussed a wide range of subjects relating to labour.

Our photo shows the Hon'ble Dr. B. R. Ambedkar (black coat), Labour Member of the Government of India, who presided, with the Hon'ble Mr. H. C. Prior, Secretary, Labour Department, Government of India, by his side and some of the representatives of Provincial Governments.

expected that he will send in a very powerful force to keep the gateway of the Caucasus open, and, if possible to extricate his army in front of Stalingrad. But if Hitler diverts a considerable number of the Axis forces from the north to the south, he will be taking a very grave step, for the Red Army has already shown itself capable of launching a heavy counter-offensive in the north as it did last winter.

* * * *

Causes of Hitler's Failure in Russia What will Hitler do in the present position? Will he, for the sake of prestige, face the appalling losses that would be incurred if he tries to maintain

Whatever decision he takes, the Nazis will still be faced with a terrible winter, during which all their resources and powers of endurance will be needed to hold the line. There may not be much chance of withdrawing a considerable number of divisions from the eastern front either for rest and recuperation or for meeting commitments in Southern and Western Europe.

It is clear beyond any doubt whatever that Hitler's military record in Russia this year is "failure." He failed because he under-estimated the Russian capacity of patriotic sacrifice and endurance. He thought that the breaking

point in Russian resistance would be reached this winter when the Russians went hungry from lack of Ukrainian and Caucasian wheat and began to despair as they saw farm tractors and factory machines cease working for want of oil and coal. Hitler was confident, from wide experience of resistance in other countries in Europe, that there was a point of Russian suffering at which her endurance would break. But all his confidence and calculation went wrong. He could not cripple the Russian war-machine, nor could he bring about the physical destruction of the Red Army. It stands to the great credit of Marshal Timoshenko that he avoided the break-up of the Red Army, though this was done at colossal sacrifice of rich food-growing and mineral-bearing territory.

Battle for Stalingrad : Now the Battle for Stalingrad is still going on. Three weeks ago, the Russians launched their offensive. The Germans are beginning the counter-attack in an organized manner and are moving up reinforcements from Rostov along part of the North Caucasian rail line which they still control. They fiercely counter-attacked advanced Soviet positions on the south-west of Stalingrad front, but they were thrown back with great losses. The Red Army pressure north-west of Stalingrad is not slackening both inside the triangle and along the river Chir area. Thus Stalingrad still stands as a great challenge of the spirit of resistance of the Russians to German aggression.

The Soviet Command decided to take very great risks with regard to Stalingrad—risks which have proved to be worth while. Hitler said that he would take the City at all costs and pledged his credit. The Russians said that they would defend the City named after their great leader, Stalin, at all costs. In deciding to wage one of the greatest battles of all time to save Stalingrad from the grip of the Nazis, the Soviet Government acted on three calculations. They were :—

(1) The superb quality of the Russian soldier with his back to the wall could hold the Germans in a dangerous salient until deadly counter-strokes could be prepared and delivered.

(2) The Russian people could survive and surmount the winter's suffering.

(3) The prodigious organizational effort of Central Russia and the Urals helped by enormous quantities of tanks and other material sent by Britain and America could keep the war-machine going at full pressure, at least during the critical winter months.

All these calculations have proved to be well-based. Hitler was lured into dissipating his resources. He has already lost 12 divisions in "killed" and prisoners, apart from wounded, and has suffered tremendous losses of valuable equipment since the Russian offensive on the Stalingrad front. His great blunder lay in battering at Stalingrad and creating a danger for himself at the Caucasian gateway and proceeding to invade the Caucasus without waiting for the danger to be removed. He had two simultaneous objectives, namely, to seize the Grozny oil fields and expel the Red Fleet from its harbours on the Black sea coast, so that a way may be opened for an advance into Trans-Caucasia and the great oil fields of Baku. His attempts at both these objectives have been halted, and the Germans are now faced with the possibility of complete failure in this campaign. This is due to the great quality of the Russians to face losses and endure suffering, which would break the heart of most people, and then strike back at the enemy when he has become distended and over-confident.

MALE NURSES FOR MILITARY HOSPITALS

Last April the Government of India in a press note announced their intention to recruit male nurses for military hospitals during the present emergency.

They are now pleased to announce improved terms and conditions of recruitment in respect of this category of Medical personnel. The scale of pay has been raised from Rs. 50-5-75 to 75-5-100 with an additional emergency allowance of Rs. 25 per mensem. Male nurses will be given the rank of Warrant officers, Class I, in the Indian Medical Department and on appointment will also be entitled to travelling allowances as for second-grade officers.

Amenities for Troops

THE Joint War Charities Depot in Madras has been doing Amenities for Troops work since the beginning of the War. At first there was not much that could be done beyond the purchase and knitting up of wool into warm garments for the men in the Middle East. A further step was taken with last year's special appeal for Christmas presents for the troops overseas; presents of food were packed in standard cases for 21,000 men, in the proportion of 9 Indians to 1 British, and extra gifts of radios, gramophones, biscuits and sweets were also sent.

cases at the mercy of unscrupulous contractors, because they knew no better; and they had little or no provision for any kind of recreation.

FORMS OF HELP

It was to help these troops, both Indian and British, that His Excellency the Governor made his special appeal for funds. Grants have been made to voluntary canteens opened for their benefit all over the Presidency, and also to mobile canteens operating in the district round Madras. The Joint War Charities Depot at the Banqueting Hall has become a centre for the supply of wireless sets, gramophones, outdoor and indoor games and all the other necessities for making life a little pleasanter for men living out in the fields, away from any opportunities of recreation. Where they have

The first Women's Auxiliary Air Force formed in South Africa, took its origin from the South African Women's Aviation Association begun in 1938. It has over 4,000 W.A.A.F.'s on full-time service under the command of 24-year old Lieut.-Col. (Mrs.) Dunning. The W.A.A.F.'s work at aerodromes as artisans, parachute-packers, meteorologists, photographers, draughtsmen, armament instructors, link trainer instructors, decoding and technical education officers and range-finders, etc., filling posts on S.A.A.F. establishments all over South Africa, East Africa and the Middle East. Here two South African W.A.A.F. specialists are seen working on the metal work of a main plane of an aircraft.

A further amenity for the troops provided at this time was the Joint War Charities Harbour Canteen for troops embarking for Burma, which provided them with tea, cold drinks, cigarettes, biscuits, soap, etc.

In April 1942, however, the whole nature and scope of the work changed completely. It was no longer a matter of doing what we could for troops overseas or embarking for overseas; Madras itself was threatened, and it became our task to do what we could for the comfort of the troops who came here to defend us. Most of them had and are still having a very uncomfortable time; they arrived in a great hurry, with no time to make any proper provision for them; they came at the beginning of the hot weather, when many of them had only just arrived from England, and had no experience at all of a tropical climate; they were in many

money to pay for these, we help by buying the goods in bulk, and passing them on at a price well below the ordinary retail rate; where they have a little money but not enough, we provide the goods and take only part payment; in some cases, particularly of small isolated units, we provide gramophones and games free. If more money came into the fund we could do more in the way of free gifts.

The Depot also provide a free circulating library of books and gramophone records for troops within reach of Madras; some who are sixty or seventy miles away, but can manage to get in once a fortnight or so, avail themselves of this service.

The work of the Joint War Charities Depot is not limited to the troops in the Madras Presidency. These have a special call upon us, but so have the Madras Units serving

overseas and also in other parts of India, where their own languages are not spoken. To them we have sent off consignments of Tamil, Telugu and Malayalam books and gramophones, records, musical instruments, games, beedies and cheroots, pickles, poppadums, tamarinds and cashewnuts, which have been enthusiastically received. Here again we could do much more, if there were more support to the Amenities for Troops Fund. It is obviously reasonable that we should cater for the needs of the Madras Units, since we can get books in the languages they speak and the kind of musical instruments and foodstuffs that they like. It would make things much easier if some organization in the north of India would do the same for the soldiers from the north now in the Madras Presidency; but since so far there does not seem to be anything of the kind we are doing the best we can. It is not easy for us to get Urdu and Punjabi literature and gramophone records and the men ask for musical instruments that are unfamiliar in the south; but we are making arrangements to supply these needs as well.

THE ESSENCE OF THE WORK

There is one other activity of the Joint War Charities Depot which, though it ultimately pays for itself, yet necessarily requires a good deal of capital. The Troops who arrived here, either from Great Britain or from the North of India, found themselves in a completely unknown country; they did not know the language, they did not know where to get anything, and most of them were a long way from any shopping centre. They were dependent upon contractors, and many of these seized the opportunity to make enormous profits. To remedy this, we tried an experiment with one or two units; they ran their own canteen without the intervention of a contractor, and we supplied the stock as cheaply as we could get it. The experiment was so successful that we now

supply nearly all the units who can come into Madras by lorry, and many to whom we send consignments by rail; we provide cigarettes, tobacco, soap, razors, tooth brushes, sweets, lime juice, vests and pants, and many other items; and the work has grown till we are now a kind of co-operative wholesale supply stores, making no profits and charging no overheads.

That is the essence of the work of the Joint War Charities Depot; there are no overheads. *Every anna subscribed to this work goes for the benefit of the troops. The workers at the Depot are all voluntary, and the small clerical staff and other overhead charges are paid by the Government of Madras.* The troops themselves express the greatest appreciation of the work being done here; but unless more financial support is forthcoming, there is grave risk that it may have to be curtailed. Prices go up all the time; radios and gramophones are hard to get, and unless we have enough money to buy them in quantity as and when we can get hold of them, we cannot supply the needs of the troops.

Some districts may like to adopt a special unit, or the Tamils, Telugus or Malayalees in certain units. It will be realized that the location of any individual unit has to be kept confidential but *consignments of literature, musical instruments, games and foodstuffs can be forwarded from the Joint War Charities Depot to any individual unit*, and will certainly be most gratefully acknowledged.

Or perhaps some district may like to adopt one of the military hospitals in this Presidency, all of whom we supply with Red Cross equipment and amenities for the patients. The Joint War Charities Depot is responsible for all such assistance to *military hospitals, casualty clearing stations and field ambulances* in the whole Madras Presidency, and it will be understood that the need of financial assistance is very great.

THE TURNING POINT

“The battle about to begin will be one of the decisive battles in history. It will be the turning point in the war, and will swing our way. It may be a hard battle, and the Germans will fight, but we shall drive the Boche out of Africa. There is no alternative.”

—GENERAL MONTGOMERY, in an interview before the battle of El Agheila, on December 8.

Cheerful and Courageous Warriors

(By a British officer in a B.B.C. talk.)

[A British officer who does not know India, but during the last year and more has served beside Indian troops of all kinds in battle in Syria, Egypt and Libya, pays tribute to Indian soldiers.]

I know nothing of the internal conditions in India, but during the last year and more I have seen Indian troops of all kinds in battle in Syria, Egypt and Libya. I do not know whether it is generally realized that an infantry brigade in the Indian Army consists of two Indian battalions and one English or Scottish battalion. The gunners are usually British. The Indian battalions themselves frequently consist of companies from different parts of India, Punjabis or Sikhs or Mahrattas or Rajputss or Jats or units from other parts of India or the Gurkhas from our ally Nepal.

IN DAMASCUS

I was lucky enough to be present on more than one occasion when these fine fighting troops went into action. The capture of Damascus in June last year was largely, if not wholly, due to an Indian infantry brigade, whose sole survivors at the end of a bloody battle consisted of one company. I shall never forget the house and garden in the suburbs of Damascus where the gallant troops, having forced their way in through intense fire, held out to the last round and to the last man. When they were finally overwhelmed by tanks and guns at short range, there was not one of the 50 survivors who was unwounded.

Nor shall I forget November last year at Sidi Omar, when a very strong position occupied by Germans and Italians was being attacked by the Sussex Regiment, the Sikhs and the Punjabis, the stirring sight of the Indians coming up into battle in their trucks—packed 20 to a truck—through heavy enemy fire, singing their battle songs, smiles on their faces and high courage in their hearts.

JOBS WELL DONE

To tell of all their battles during the last few months would take up too much time. I should, however, like to give you one or two examples of the sort of jobs they did so well. At Derna, for instance, where the Sikhs stormed the aerodrome while German aircraft were still coming down and taking off, there is a very steep cliff or escarpment facing the sea, with a most important road cut into its face—incidentally, a great feat of engineering. Huge portions of this road had been

demolished. By manual labour, piling stone upon stone, the Indian sappers had got the road open, and we were able to make use of it with our heaviest vehicles.

Again, the roads were heavily mined; no traffic could possibly use them until the sappers had been along and removed the mines and other traps laid for the unwary. The sappers were up at work almost before the enemy had gone.

A JOB AND MORE

Later in the campaign, when we were on the Gazala line, and mines were being laid, my battalion had taken up a position next to an Indian brigade, and it was my job to find out how far the Indian sappers would go with their mine-laying before nightfall in order that our patrols might not unknowingly cross the mines. So keen, however, were these sappers to get on with their job that when night came and our patrols went out, it was found that they had laid mines nearly a mile beyond the limit which could have been expected. You can imagine the confusion in the dark when a patrol of Scotsmen came unexpectedly upon a patrol of Indians. This was not lessened by the Indians' insistence on trying to extract the password—which was the only English word they could speak—from a number of Scotsmen who did not know it!

This particular minefield was a monument of labour and ingenuity, for these sappers had suffered casualties from enemy bobby-traps and were determined to get their own back. On this occasion they filled the minefield with so many ingenious contraptions that I don't envy any human being who endeavoured to walk through it.

RELIABLE FRIENDS

Whenever one came across Indian detachments in the desert and they were scattered wide and far—one could always rely on obtaining from them—if they had it—whatever one required in the way of petrol, water, food or anything else.

I spent a few weeks on a course in anti-tank gunnery with some of these Indian soldiers. It was really amazing to see how in a few days they picked up the intricacies and the drill in spite of the handicap of working through an interpreter who knew no more of the subject than they did. At the end of ten days, when it came to firing at moving targets, British units did well if they got off 15 rounds with ten hits in the allotted time. These Indians I am speaking of, however, had no difficulty in getting off 22 rounds and making 20 hits.

In conclusion, I for one could wish for nothing better than to fight with my unit alongside these cheerful and courageous warriors. Their utter dependability to support their sister British battalions in a tight spot in the past is well known throughout the Middle East. This high standard will, I am convinced, be maintained wherever British and Indian troops find themselves together.

Seven Men who sank A Raider

Two Madrassis in R.I.N.'s Achievement

"NO praise is great enough for their magnificent conduct in face of the greatest danger." In those words the Commanding Officer of H.M.I.S. *Bengal* summed up their shipmates' tribute to the Indian gunners who manned the 12-pounder in the epic fight against two heavily armed raiders. With Japanese shells exploding around, and sharpnel whipping over the ship, these seven ratings of the Royal Indian Navy wanted to keep on firing even when the order came to cease fire.

Their names are Petty Officer Mohammed Ibrahim, Mohammed Khan, Ismail Mohammed, Raghunath Sahee, Ismail Babar, P. K. Nair and Balachandra. Three of them come from Bombay, two from Madras and two from the Punjab.

ENEMY OPENED FIRE FIRST

Petty Officer Mohammed Ibrahim, the Stalwart Gunner's Mate, has served for nine years in the Navy, and his home is in Bombay. Describing the gun crew's experiences during the battle he said:—

"I was cleaning the starboard machine gun when action stations sounded. We immediately ran to our gun, as we have often done during drills, and saw the Japanese ships coming at us at full speed. The enemy opened fire first, and it seemed they would get us very quickly. But the Captain went straight for them, and the command came to open fire. We were very glad to have a go at the Japanese, and fired as quickly as we could.

"When the sixth round got the raider's magazine, we all cheered but kept on firing. It was wonderful and we were all very pleased.

"A shell burst just below our gun—a near miss—but my men carried on as though nothing had happened," added Petty Officer Mohammed Ibrahim.

"We were very sorry when the Captain ordered 'cease fire,' for we all wanted to go on firing. But we had scarcely any ammunition left. It was wonderful to see the enemy ship go up in flames, and we knew we had done a good job, but I didn't think we should ever get away."

NONE OF THEM EVER IN ACTION BEFORE

Lieutenant J. Mehra, Royal Indian Naval Reserve, who is a Punjabi and was in action in the Red Sea during the campaign against Italian East Africa, said:—

"As navigating officer I was on the bridge when the raiders were first sighted. It was wonderful to see the excitement among the men when 'Action Stations' was sounded. None of them had ever been in action before. They went to their stations with perfect discipline, all of them obviously eager to have a shot at their first raider.

"The Captain was magnificent. He never turned a hair, inspired us all with his coolness and courage . . . It seemed hopeless from the start, and there is no doubt that his prompt decision to chance everything on a bold dash saved the day."

An amusing incident took place during the heat of the action, when H.M.I.S. *Bengal* was under heavy fire from the 10,000-ton raider's 5.5 inch guns.

The Engineer Officer, leaving the engine room for a peep above to see what was happening, called to the Captain: "And what are the wild waves saying now, Sir?" That got quite a laugh.

A jest in the midst of a life and death struggle—in that little incident can be seen the spirit of all on board H.M.I.S. *Bengal*.

H.M.I.S. *BENGAL'S* EPIC BATTLE

The photograph, taken in port after the battle, show Lieutenant-Commander W. J. Wilson, Royal Indian Naval Reserve, (third from the right) and other officers of H.M.I.S. *Bengal*. This Royal Indian Navy warship engaged two Japanese raiders, which were ten times her size and far more heavily armed, in a successful endeavour to save a tanker she was escorting. She sank one 10,000-ton raider. The officers are holding "Souvenirs" of the battle—pieces of sharpnel found on the decks.

The photograph shows the gallant gun crew of H.M.I.S. *Bengal* at action stations at the 12-pounder gun. Three of these Royal Indian Navy men come from Bombay Presidency, two from Madras Presidency and two from the Punjab.

Author of the Grand Alliance

[The following sketch of Mr. Churchill whose 68th birthday was celebrated last week will be read with interest.]

THE British Prime Minister is the living embodiment of those traditional qualities of dynamic statesmanship, experience and vision which show the outstanding contribution which British leadership has made to the war and will make in the post-war world. There are two centuries-old principles in Britain's policy: armed resistance against any attempt to dominate the Continent by force—Philip of Spain, Louis XIV, Napoleon, Kaiser and Hitler have learnt this—and maintenance of peace in the world for free development of independent peoples. British idealism is also realistic since Britain's interests increasingly tend to coincide with those of other peoples.

Churchill is especially fitted to guide and interpret Britain's policy by being a bold man of action and an imaginative historian (a descendant of Marlborough). He combines determination and vision. In April 1939 Churchill summed up Britain's twofold policy by saying: "Let me say with regard to the action of our country for centuries that in all great struggles in which we have been engaged we have survived and emerged victorious not only because of the prowess of great commanders or famous battles gained on land and sea but also because the true interests of Britain have coincided with those of so many other States or nations and that we have been able to march in great company along the high road of progress and freedom for all."

"ARMS AND THE COVENANT"

Churchill before the war steadily advocated "Arms and the Covenant" as the modern expression of Britain's traditional twofold policy. On March 14, 1938—the day after the German annexation of Austria—Churchill urged a Grand Alliance against aggression to prevent the coming of war. He was not heeded till too late.

On September 3, 1939, Churchill was First Lord of the Admiralty as in the Great War. (Britain's strategy was vital on the seas.) He stated the same day: "In this solemn hour it is a consolation to recall and dwell on our repeated efforts for peace. All have been ill-starred but all have been faithful and sincere. This is of the highest moral value—not only moral value but practical. This moral conviction alone affords that ever-fresh resilience which renews the strength and the energy of a people in long, doubtful, dark days.

Our consciences are at rest. We must expect many disappointments and many unpleasant surprises. If great trials were to come on our island, there is a generation of Britons here and now ready to prove itself not unworthy. We are fighting to save the whole world from the pestilence of Nazi tyranny and in defence of all that is most sacred to man."

THE BATTLE OF BRITAIN

Churchill became Prime Minister on May 10, 1940. On May 13 he said: "I have nothing to offer but blood, toil, tears and sweat." In Britain's supreme testing time the Prime Minister's leadership inspired the British to uprise with clearer vision, and nobler effort in the national renaissance when the British Empire stood alone against the great German might.

After Dunkirk on June 4, 1940, the Prime Minister declared: "We will not be content with a defensive war. We must put our defences in this island into such a high state of organization that the fewest possible numbers will be required to give effective security and that the largest possible potential of offensive effort may be realized. We will prove ourselves once again able to defend our island home, to outlive the storm of war and outlive the 'menace of tyranny, if necessary for years, if necessary alone. We will go on to the end; we will never surrender.'"

BRITONS BEAT BLITZ

The Royal Air Force beat the Luftwaffe—"Never in the field of human conflict was so much owed by so many to so few."

Britons beat the Blitz—there were over 90,000 raid casualties in 1940. Meanwhile the Prime Minister worked day and night often in his air raid shelter addressed in his famous siren suit.

FORGING THE GRAND ALLIANCE

The Prime Minister worked for the realization of the pre-war Grand Alliance project. Britain had become the rallying point for weakened but undaunted Allies. On June 18, 1940, the Prime Minister stated: "We abate nothing of our just demands, not one jot or tittle do we recede. The Czech, the Poles, the Norwegians, the Dutch and the Belgians have joined their causes to our own. All these will be restored."

On June 12, 1941, an Allied conference took place in London. Ten days later Germany invaded Russia. The very same day the Prime Minister said: "We must speak now and at once, without a day's delay. We have but one aim, one single irrevocable purpose. We are resolved to destroy Hitler and every vestige of the Nazi regime. From this nothing will turn us—nothing. We will never parley, we will fight him by sea, we will fight

him in the air until with God's help we will rid the earth of him and liberate other people from his yoke. That is our policy, that is our declaration. It follows, therefore, that we will give whatever help we can to Russia and the Russian people."

On July 12, 1941, an Anglo-Russian agreement was signed pledging mutual assistance and no separate armistice. Meanwhile, Britain had also strengthened her ties with America. A destroyer-bases agreement was signed.

THE ATLANTIC CHARTER

Anglo-American economic partnership was expanded to an idealistic partnership on August 14, 1941, by the Atlantic Charter. It was typical of Churchillian enterprise and defiance to steam into the U-boat-infested Atlantic.

On August 15, 1941, Churchill and Roosevelt sent to Stalin a message of solidarity proposing co-ordination, which resulted in the Beaverbrook-Harriman meeting in Moscow on September 28. Two days later the Prime Minister warned: "In order to enable Russia to remain indefinitely in the field as a first-class war making power, sacrifices of the most serious kind and the most extreme efforts will have to be made by the British people."

The greatly extended British war effort was further strained by the Japanese entry into the war about which the Prime Minister frankly warned on December 11, 1941: "It may well be that we will have to suffer considerable punishment. We have a very hard period to go through."

The United States and China became our new Allies and in December 1941, Wavell went to Chungking, Eden to Moscow, and the Prime Minister to Washington—Britain's activity in consolidating Churchill's long-advocated Grand Alliance which was formally achieved on January 1, 1942, by a pledge in the Atlantic Charter by 26 United Nations.

On January 27, 1942, the Prime Minister proclaimed: "We have formed a league of 26 United Nations which will march forward together."

The United Nations co-operation was largely based on the Anglo-American machinery—the combined Chiefs of Staffs Committee, the Pacific War Council, the Mutual Aid agreement and Combined Board for War Economics. Britain and the United States were working in close collaboration with Russia.

On May 26, 1942, a 20-year Anglo-Soviet Alliance was signed followed by Molotov's visit to Washington achieving a Russo-American understanding.

In July an American mission to London agreed with the British Government on the North African attack. In August the Prime Minister travelled to Moscow to inform Stalin of this agreed alternative to attacking in western Europe. Britain was keeping faith with her Allies.

UNITING THE UNITED NATIONS

The Prime Minister stated on November 11, 1942: "President Roosevelt has not found it possible to leave the United States nor Stalin to leave Russia. Therefore, I have had to make journeys in each direction carrying with me to and fro the most important military authorities and other experts and to labour so far as possible to bring all plans into concert and harmony."

That is the key to the importance of the Prime Minister's individual initiative and vital personality in uniting the United Nations. The Prime Minister's spacious vision and purpose embraced not only the formation of the United Nations but also the strategy essential for their victory.

Japs Following German Methods

By NICHOLAS GREGORY

JAPAN is employing virtually the same type of economic robbery as the Germans invented and perfected in exploiting occupied Europe. The Japanese are using the same attempts at legality and outright seizure in occupied China, Burma, Indo-China, the Netherlands East Indies and the Philippines.

Official Japanese broadcasts, monitored by the Federal Communications Commission and compiled by the Office of War Information, reveal the trickery that the Japanese are using in the Far East in a desperate attempt to put the occupied territories on a paying basis. The broadcasts reveal the frantic preoccupation with adverse economic conditions in Japan.

One problem that the Japanese are tackling is the disposal of many manufactured goods, mostly textiles, which have jammed warehouses, either because of no shipping space or because of the fear of American submarines operating in waters off the Japanese mainland. A special Government committee will purchase the goods, which will probably be forced on merchants of occupied countries.

One broadcast disclosed that Japan is experiencing a shortage of consumer goods at home. To meet the shortage, the Japanese announced on November 7 plans providing that "material shortages at home will be filled by the direct import of raw materials from the Southern regions."

A shortage also exists in foodstuffs, as is indicated by a 20 per cent increase in the price at which the Government purchases wheat, rye and barley.

Do the Nazis Know They're Licked?

[By ALEX DREIER, former Berlin corresponding of the National Broadcasting Company.]

I saw the first crack in German morale when the blitz victory over Russia, promised by Hitler, failed to materialize. Later, I saw the widespread uncertainty of victory grow into a conviction of defeat.

A year ago I would not have bothered to ask the man on the street what he thought of Hitler or the war. But, on the eve of Pearl Harbor, Germany had been so undermined with hopelessness that taxicab drivers, shopkeepers, and even Nazi officials talked to me openly of their fears of ultimate disaster. I don't mean that the Nazi regime is about to crack up. Far from it. Its fighting machine is still magnificent—despite losses on the Russian Front estimated at upwards of 1,000,000 men killed. In fact, recent setbacks have given Germany a will to fight with new ferocity.

The Germans believe that when they stop fighting, a murderous horde of avengers—Russians, Poles, Czechs, Serbs, Norwegians, Belgians, Danes, Dutch and French—will swarm over their land.

"If Germany is defeated," a Nazi officer told me, "thirty million Germans will die—and not on the battlefield."

Where we of the United Nations are fighting for victory, the Germans are fighting to delay defeat. Hitler's personal insistence on the Russian war has shaken the people's confidence in his omniscience, and I question whether any later victories can completely erase the doubt they have acquired in recent months.

To-day the average German—and I talked with persons in every segment of society—faces the war like this: "We've knocked over nine countries, and what has it got us? Our food isn't better, and our clothes are worse. Something has gone wrong in Russia, and now we've got the United States against us, too. We'll be licked in the end, but can't quit."

HITLER'S BIG MISTAKE

One day, shortly before I left Berlin, an army captain who serves as an official spokesman for the High Command was sitting with me in the bar of the Kaiserhof Hotel.

"Not going exactly as you boys planned in Russia?" I ventured.

The captain hesitated, then muttered confidentially, "Trouble is, there is no terminal point. In every other campaign, there was. In Holland, Rotterdam; in France, Paris. In England, it would be London. But in Russia where is it? Not Leningrad or Moscow—those Bolsheviks would keep right on fighting." He grinned sourly. "May be it's Vladivostok?"

"But, now that you've started it, when are you going to finish it?"

"Who knows?" he shrugged. When he spoke again, there was a tinge of sadness in his voice: "Perhaps never. It was his big mistake."

The next day I was in a Berlin apartment with a half dozen German friends listening to a BBC news program. Watching the group, you'd never suspect that they could have lost their heads if the Gestapo had caught them listening to "foreign propaganda." Among the guests was a German major-general, a brilliant geologist, whom I had known for some time. Within a week he was to go to Occupied Russia to search for chemicals and minerals to help supply the Nazi war machine. He told me, in short, bitter sentences, what he thought of the Nazis.

"You may think you hate them," he said gravely, "but really to hate them, you've got to be German. Look at the situation they've put us in. If we win the war, they'll have a tighter grip around our necks than ever. If we lose . . ."

In what he left unsaid I sensed that universal fear of postwar reprisals.

"Then why," I asked him, "do you keep on obeying the orders of the Nazi leaders?"

His eyes flashed as he replied. "What else could I do?" Yet he gave me at least a hint that there is little love lost between the generals and the Nazis.

A CHALLENGE

One evening shortly before I left Berlin, I challenged the military censor of the German radio, a Lieutenant Obermeyer, to make a tour of Berlin with me. "We'll talk with cab drivers, waiters, newspaper vendors, and grocery clerks," I proposed. "We'll ask them what they think of the government. If more than one in five say anything favorable, I'll pay you 50 marks. Of course, you'll have to wear civilian clothes and keep your mouth shut. How about it?"

Lieutenant Obermeyer's only reply was to laugh uneasily and stride haughtily away.

For Americans, it's difficult to imagine the disbelief with which the average German reads his papers or listens to the radio. When Colonel Werner Moelders, Germany's 26-year-old war ace, credited with shooting down 115 enemy planes, crashed to death in a transport plane on November 22, Goering

published in the party newspapers a moving tribute to the dead aviator. But another story spread through Berlin like wildfire.

According to this account, Moelders, a Catholic Youth leader prior to the Nazi regime, was disturbed by the increasing government seizures of church property. He was especially distressed when he heard that the Gestapo was about to close a cloister in Breslau where his sister was a nun. The Bishop of Breslau appealed to Moelders to intercede with Hitler, and Moelders acted without delay. "I cannot continue to fight for the Fatherland," he telegraphed to the Führer, "if the Gestapo continues to attack the home front." The Gestapo revenge was prompt: its agents engineered an explosion in the transport plane in which Moelders was a passenger.

I can't vouch for that story. But it's significant because I heard it from a dozen German citizens and minor officials during my last days in Berlin. They were, in short, charging their own government with lying and murder.

Grumbling in Germany increased tremendously when the promised Russian blitz turned into a prolonged campaign. To-day the average German is grumbling about taxes—for five years now, he has been paying one-third of his income to the government in direct taxes, to say nothing of dozens of indirect taxes which bring his tribute up closer to 50 per cent. He seldom sees eggs or bacon, and he never sees coffee—unless he knows some Nazi bigwig. Although he knows he won't starve, he's grumbling about the shortage of food.

TERRIFIC DEATH TOLL

But what disturbs the German far more fundamentally than these inconveniences is the terrific death toll on the Russian Front. The people aren't accustomed to German deaths. Berlin has been practically untouched by Royal Air Force bombings. For the first time, the Russians brought the realities of

war home to the Germans. As I left Berlin, families were being informed of the deaths of their sons in the curt manner of Nazi officialdom: "Several weeks ago your son, Hans Wolfgang, died in the greater glory of his Fatherland and Führer. It is the wish of the German High Command that the relatives concerned do not go into obvious mourning."

I met innumerable Germans who reacted to the racial and cultural theories of the Nazis as if they were pure nonsense. During my entire stay in Germany, I never saw a German civilian participate in an attack on a Jew, despite the relentless press campaign exposing the "Jewish menace." A Berlin rabbi told me that only Hitler's SS troops continue to torture the Jews. He added that many Aryan Germans risk their lives by giving milk and fresh vegetables to Jewish families. But the Nuremberg laws and the SS men suffice to make the lot of the Jew in Germany pitiable. When I left Berlin, Jewish suicides were running as high as 300 a night. As many as 2,000 Jews were being transported in trucks to Poland every day. In Switzerland I heard reliable reports that hundreds were being gassed to death en route.

After two-and-a-half years of war, Germany is rife with anti-war and anti-Nazi sentiment but the Allies must not commit the unpardonable sin of underestimating German strength. There is no immediate chance of internal collapse in Germany. There is no organization among the dissatisfied elements. Catholic and Protestant clergymen are not prepared to take political action. Communist units are springing up again throughout the Reich, but they are waiting until the day of defeat to act openly. So far as I know, only one secret radio station is operating, and I suspect it is controlled by the army. It attacks only the Nazi party, never the military leaders or Hitler himself. These are not the days of the French Revolution. You can't overthrow a government with leaflets, pitchforks and ideals.

—Condensed from 'The American Magazine'.

A King prays with Jawans

High Egyptian Army officers and Government officials gave up their places to enable Indian soldiers to sit around King Farouk in Cairo, recently.

A huge crowd assembled to offer prayers in the historic Mosque of Amr, when it was learned that the King was to pray there. The officers and officials insisted that the Indian troops, many of whom bore marks of Western Desert fighting, should occupy the front rows.

Soon after the troops had taken their places in the seats of honour the thunder of guns was heard firing the Royal Salute. A great volume of cheering indicated that the King was on his way.

It was a proud moment for the Jawans when the King entered, and took his place among them.

Italy in Two Years of War

ITALY'S present front-line army totals about 75 Divisions—something over a million men. In the two and a half years that Italy has been in the war it has lost nearly half its strength—as well as an empire.

Before General Alexander's present campaign began on October 25, we held 262,000 Italian prisoners. Now that figure considerably exceeds 300,000. It includes 80 Generals and complete staffs of dozens of Divisions.

Few armies in modern times have fought worse or suffered more severely in proportion to its size. Yet it would be wrong to suppose that it will fight badly in defence of its own land—supposing it gets a chance to do so.

At present there are some 25 Divisions of front-line troops in Italy and the Italian islands. After them come probably 750,000 second-line troops—the Fascist Militia and partially trained units.

Mussolini sent 10 Divisions to be butchered in Russia. From Albania across the Balkans to the Dodecanese he has spread 30 Divisions to act as policemen for the Axis. The remainder—10 to 11 Divisions—are in North Africa, the majority of them casualties.

This is how the Duce's soldiers have melted away in casualties:

General Wavell's Libyan campaign—

Four regular Divisions, four Black Shirt Militia Divisions and two Colonial Divisions.

In Eritrea, East Africa and Abyssinia—

Twelve Italian Divisions and 25 Colonial Divisions.

*The Greek invasion—*Eleven Metropolitan Divisions.

*General Auchinleck's campaign—*Two Metropolitan Divisions.

*General Alexander's offensive—*Eight Metropolitan Divisions.

*The Russian and the Balkan campaigns—*Five Divisions.

What Mussolini is left of the "eight million gleaming bayonets" he once bragged about is an army ill-equipped in armour, fairly strong in field artillery but desperately weak in anti-aircraft power. There is probably only one tank division in it. The best Italian tanks match with the fourth best British model. The air cover supplied by the Regia Aeronautica is quite inadequate to a modern army. Italy's first-line aircraft production does not exceed 700 aircraft per month. No type is comparable with the best British and American models. The Italian army has not only to face a possible invasion from the forces of the United Nations but from the German army.

Man who did not Believe in Peace

HERE are extracts from Mussolini's speeches in the past 20 years:—

"To me violence is perfectly moral—more moral than compromise or bargaining. Words are very fine things, but rifles, machine-guns, warships, aeroplanes and cannon are still finer things."

"The legend that Italians are not fighters must be dispelled."

"War is to man as maternity is to woman. I do not believe in perpetual peace."

"I hold out an olive branch, but it is one that springs from 8,000,000 bayonets."

"Let it be said again that the foundation of our doctrine and civilization is a preparation for ever more intense use of the Italian people for military life."

"Great Britain has not revealed marked warlike tendency for the past few years."

"Between gold and iron, Machiavelli chose iron. In the dilemma 'gold or guns' we have already made our choice—guns."

From his speech at the review of Italy's armed forces in March 1938:—

"Army—If need be, Italy can mobilize 9,000,000 men and can put 4,000,000 men into the field. The morale of these troops is simply superb."

"Navy—Italy has the most powerful submarine fleet in the world. To those who say in future that battleships will remain locked in ports, I reply that this will not happen to Italy. All Italy's ships will be on the water, fighting."

"Air force—The Italian air force has become one of the first in the world. Italy's first-line machines number several thousands, all of the most modern type. As for the air-men themselves, their prowess has become legendary."

"The whole technique of bombing has been improved and therefore the possibility of hitting targets has been improved."

"With our air force and submarines with Germany, we are now engaged in a bitter war against England. I asked for and obtained permission from the Fuehrer to take part with planes and submarines in this war against England."

So really the people of Genoa, Milan and Turin cannot complain if the British strike back, writes George Murray in the *Daily Mail*.

Alarm in Italy

[By a Special Correspondent of the *Daily Telegraph*]

ALARM spreading among Italians caused by our bombing raids is clearly revealed by the propaganda campaign undertaken post haste by the Fascist Government. Even Count Grandi has been exhumed from his political grave for the purpose. Official and unofficial mouthpieces have been asserting that it is not true that Italian people are in a state of panic or that any wind of defeatism is flowing in Italy. Government's unsolicited denials are only indicative of a spirit which, under

that he has only 17½ ounces of potatoes in comparison with 157 ounces per head available in Germany.

DEPENDENCE ON GERMANY

Italy's tragic industrial position again may be visualised by glancing at the figures of the country's minimum requirements of essential raw materials not for war production but for the needs of the civilian population. Italy depends on Germany for 70 per cent of her requirements of coal—or 12,000,000 tons a year—and it has long been common knowledge that Germany finds it an impossible task to send her 200 trains of coal daily. As regards petrol, 85 per cent of what is required must now come from Rumania and that, of

WITH APOLOGIES TO NERO

(After 18 months of silence, Mussolini made a speech in Rome on December 2.)

the increasing strain of military events in North Africa and bombing raids on Italian cities, is bound to deteriorate very rapidly.

ITALIAN AND GERMAN RATIONS

Moreover, this strategical catastrophe occurs at a moment when warweariness is being brought to breaking point both by food conditions and by the enslavement of Italian industry to Germany. It hardly makes the Italian more inclined for war to realize that his weekly bread ration is one of 37 ounces in comparison with the German's 80 ounces, that he must subsist on 3½ ounces of meat a week in comparison with the German ration of 12½ ounces, that his 4½ ounces of sugar and 3½ ounces of fat are approximately half of what his "partner" receives, and

course, only when Germany can spare it. Italy also depends on Germany entirely for copper and nickel, and in great part for iron and steel. All her heavy machinery and her precision and optical instruments come from the Reich, as also a very large part of the ingredients for making high-explosive bombs.

Moreover, Italy produces only 7,000 tons of wool, whereas her normal requirements are 15,000 tons. Equally she should import 95 per cent of her cotton needs, and again she is getting none. She should import 80 per cent of her leather, and she is getting none of that either. To complete the picture, Italian agriculture will now suffer by the loss of 900,000 tons of phosphates which Italy used to import for fertilisers from North

Africa. As to the once prosperous textile industry of Northern Italy, that is completely ruined.

HAND TO MOUTH

Generally the economic life of the country has been reduced to a hand-to-mouth basis dependent entirely on the goodwill and needs of Germany, and she in her turn has transport problems enough as the result of Royal Air Force raids and the immense length of her communications with the Eastern Front.

Developments in North Africa can be taken as the last straw. Tension had already approached breaking point on account of the cowardly way in which Germany left in the lurch Italian divisions in the battles of Egypt and Libya. Italian people now see Mussolini being reduced to asking Hitler to come and occupy Italy. The Fascist regime can continue to survive only in so far as German troops and bayonets reinforce the Gestapo already installed within Italy. But Italians are well aware that Germany is not going to defend Italy for Italy's sake. High political and military circles have always realised that Nazi Germany has held for Italy as a military ally nothing but contempt.

A Raid a Day

Allied Attacks on Burma in November

DURING the past month (November) Royal Air Force activity over Japanese-occupied Burma has shown a decided increase. Compared to October, when a total of thirteen daylight raids were made on enemy objectives, last month our aircraft were out on eight days and ten nights and the tonnage of bombs dropped was considerably greater. Night bombing started in the middle of the month when medium bombers made a series of attacks on enemy shipping at Akyab. The operations continued well into the following day and, in addition to the damage caused along the water-front, resulted in sinking one Japanese merchant vessel and damaging another. It was on that day that strong enemy fighter opposition was encountered and our own fighters, which had accompanied the bombers on the last two attacks, found plenty to occupy them in the combats that ensued. Four Japanese fighters were destroyed and several others damaged—our losses were five aircraft. To-day the damaged jetty at Akyab is a desolate sight with two sunken vessels nearby resting on the harbour bottom.

RAID EVERY NIGHT

From November 17th to 25th our bombers were out against enemy aerodromes every night, with the exception of the nineteenth. Bomb loads were dropped on Mingalden, Magwe, Meiktila, Toungoo and their satellites. Photographs taken later have confirmed that bombing was accurate and that many hits were registered, particularly on runways and dispersal areas. Crews reported that the fires they had started were visible as far as 120 miles away.

Daylight raids by Blenheim bombers were directed against a variety of targets which included enemy aerodromes, railway stations, and many Japanese-occupied buildings.

As well as escorting bombers on several of the daylight raids, our fighters have made many attacks on their own account, often combining their escort duties with the successful shooting up of such targets as aerodromes, oil installations, enemy troops, rivercraft carrying men and supplies. A Japanese river steamer was sunk by their cannon fire.

The normal and arduous routine of shipping-escort and anti-submarine patrols was carried on throughout the month and, as usual, the big flying boats covered thousands of miles of ocean in their unceasing search for the enemy.

WELLINGTON BOMBERS

The operations carried out during November reveal the interesting fact that Wellington bombers, capable of long range attacks, have now added their weight to the raids we are making from India. With its superior range and bomb loading, this famous bomber is a welcome addition to the growing strength of the Air Forces in India.

Concurrently with the Royal Air Force operations, heavy bombers of the United States Air Forces have continued to strike hard at enemy objectives. Of nine raids last month their most spectacular was a damaging attack on the Japanese-controlled oil refinery at Bangkok—the only petroleum refinery in Thailand. Railway yards at Mandalay were also singled out for particular attention and many tons of heavy bombs were dropped on this important transport centre. At Rangoon the Allied Air Forces chose different targets. The Royal Air Force attacks were directed against Mingaladon aerodromes while the American bombers, operating on different occasions, made two midday raids on which large bombs were dropped with good effect on docks, shipping and warehouses.

American fighters carried out constant offensive patrols throughout November and in addition to bringing back valuable information made effective low level attacks on the Japanese forces at Shingbuiyang and Maingkwan and inflicted casualties on enemy personnel at Taihpa-Ga.

“One-Ship Fleet”

Exploit of the U.S. Cruiser “Boise”

THE light cruiser *U.S.S. Boise* has arrived from the Solomons with scars left by enemy shells and the fighting record of a veritable “one-ship fleet,” says a Navy announcement in Washington.

During the weeks preceding the action off Cape Esperance, the Japanese had been successful at making sneak night landings of troop reinforcements at Guadalcanar from cruisers, destroyers and small transports. Navy and Marine Corps planes from Guadalcanar persistently attacked the landing parties, but air attack alone did not stop them. A task group of which the *Boise* was a member was ordered to do the job. It did.

On October 11 the *Boise* and her sister ships had been patiently waiting outside the range of the enemy's air reconnaissance. The trap was set, and that day the game was discovered approaching. U.S. planes spotted an enemy task force composed of cruisers and destroyers steaming at high speed toward Guadalcanar. The U.S. task group made all speed to intercept it. That evening the *Boise*, in a column of cruisers with a destroyer screen, was chasing along at 25 knots. The sea was smooth, with long swells running. The night was dark. The enemy was somewhere ahead.

The *Boise* made out six enemy ships on her starboard side—three appeared large, and three were smaller. Captain Moran laid his main batteries on the leading heavy ship and his anti-aircraft batteries on a smaller one, then gave the order to fire.

In a matter of seconds the first target was lit up—afire amidships. By the light of the blaze she was tentatively identified as a heavy cruiser of the *Nati* class. The *Boise's* guns hit her again and again for four minutes, and she sank, going down bow first, her screws still turning.

Meanwhile splashes from the *Boise's* lighter guns were observed on either side of a smaller ship in the enemy van. Shortly this ship could no longer be seen, although shell splashes were still visible. Reports from other U.S. ships said she was a Jap destroyer, which broke in two and sank.

A few minutes later the *Boise* had her main batteries trained on another target, believed to be a destroyer. This ship exploded and disappeared after one minute of the *Boise's* murderous fire.

A minute later the shifty *Boise* was concentrating everything her guns could throw on a fourth target. Fires broke out on the bow of this ship, illuminating her mid-section. She was observed to be a two-stacker Japanese cruiser which was returning the fire of the *Boise* in kind. This contact lasted four minutes, in which the *Boise* took a hit from an eight-inch shell and several hits from five-inchers. The Captain's cabin was demolished and the wreckage fired. A direct hit put one of the *Boise's* five-inchers out of action. But soon the enemy ship, which had been burning brightly, exploded violently several times and was not seen again.

For two minutes the *Boise* had no target. During these minutes she turned on an enemy destroyer. After two minutes of attention from the *Boise's* guns she, too, disappeared.

Five minutes later, while the *Boise's* crew was busy extinguishing the fire in the remains of the Captain's cabin, a torpedo wake was reported ahead. The ship was brought about, with a hard right rudder, parallel with the torpedo's track. As this torpedo hissed by, a few feet from the *Boise's* bow, another passed aft along the starboard side and missed the stern by 30 yards.

In the short time which had elapsed since the firing of her first salvo, the *Boise* had engaged five Japanese ships. The sixth was now disclosed abaft her starboard beam. As the *Boise* directed her fire at this target, a heavy enemy cruiser opened up from somewhere forward to the starboard. For three long minutes this ship fired on the *Boise* unopposed, shooting “beautifully,” with eight-inch twinmounts repeatedly “straddling” the *Boise* along her forward deck. Then this enemy ship blew up under the fire of the *Boise* and other ships of the U.S. force.

The action over and intensive damage-control measures under way, Captain Moran set his course to rejoin the rest of the force. The *Boise*, given up for lost by her sister ships, slipped like a ghost into her regular station at 20 knots. Her fires were out. She was down by the head, but her keel was even. Her bulkheads were shored up, her holes were plugged with bedding and pumps were sucking out the water which had been taken in through her torn sides. Her wounded had received such efficient medical aid that every one subsequently recovered but the lives of 3 officers and 104 men were victory's price to the *Boise* personnel.

Diary of the War

ENGLAND AND GERMANY

4th Dec.—The Royal Air Force attacked Frankfurt in western Germany.

The invention of Noctovisor, weapon to locate enemy planes and ships at night, by J. L. Baird, inventor of television, was announced.

5th Dec.—There was some enemy air activity over the coastal area, north-east of England.

6th Dec.—In a speech at Bradford, Mr. Churchill said that the war was approaching its most tense part: "Our enemies are very powerful. They have many millions of soldiers."

8th Dec.—There was slight enemy air activity over the south coast of England.

The Royal Air Force raided Karlsrube and Iffezheim.

9th Dec.—The Royal Air Force attacked canal barges and trains between the Dutch coast and Dortmund Ems Canal.

UNITED STATES OF AMERICA AND THE ATLANTIC

4th Dec.—Two German submarines were sunk off the east coast of Canada.

9th Dec.—President Quezon of the Philippines said in an interview: "Recent Japanese broadcasts show that Japan has utterly failed to win the Filipino people to her side."

INDIA, BURMA AND CEYLON.

4th Dec.—The Royal Air Force attacked the enemy aerodrome at Magwe in Burma. Railway stations at Kadu and Haungton on the Mandalay-Myitkina were also attacked.

6th Dec.—The Royal Air Force attacked a concentration of Japanese transport at Pyawbwe, 75 miles south of Mandalay. A Japanese steamer on the Kaladan river was damaged.

7th Dec.—Japanese aircraft made a brief attack on Chittagong area. Only slight damage was caused.

The Royal Air Force attacked an enemy railway station near Katha in Central Burma.

8th Dec.—According to American military experts, Japanese eyes were on Yunnan rather than India. "Invasion of India impossible."

His Excellency Lord Linlithgow's term of office as Viceroy of India was extended by six months until October 1943.

ITALY, AFRICA AND THE MEDITERRANEAN

4th Dec.—A second Axis counter-attack near Tebourba was repelled. New Nazi attacks on French positions at Port du Fahs were repelled. United States planes raided Tripoli. German aircraft raided Cyrenaica.

Mussolini, in a broadcast, appealed to all Italian Mayors "to get to work with the minimum of red tape" on the evacuation of Italian cities.

Liberia granted airbase rights to the United States for the duration of the war.

5th Dec.—An Italian torpedo boat was sunk off Eastern Tunisia. Two merchant vessels were also sunk.

The siege of Tunis began. There was violent fighting in the Mateur sector.

British and American troops crossed the border of the French Colony of Ivory Coast in West Africa.

LIMITLESS SACRIFICE AND SUFFERING

"Devastation, rape, murder and starvation have invaded all Europe, and under the command of Japan, half Asia as well. The quicker the ruin can be made good and the people relieved of their starvation, the sooner shall we be able to set out upon a firm reconstruction of our international life, social, political and economic, which alone can justify the almost limitless sacrifice and suffering of the peoples . . . The power of the air provides an opportunity which has never before existed for the control of world order. An international air force could reach the most remote corners of the world and could strike at any who sought to break peace for his own advantage."

—SIR STAFFORD CRIPPS, in a broadcast to America.

A troopship carrying Italian and German prisoners of war was torpedoed off the coast of Portuguese East Africa.

The Rome Radio said that Italians were fighting to prove to the world that Italians were not just a nation of pub-keepers, fiddlers, tourist guides, waiters or hotel-keepers.

According to the Morocco Radio, Hitler had asked Mussolini to withdraw the privileges granted to the Vatican under the Lateran Treaties.

6th Dec.—Axis troops re-occupied Djedeida and entered Tebourba.

An Italian battleship and two cruisers were hit during an air raid on Naples by American aircraft.

8th Dec.—Axis strength in Tunis-Bizerta exceeded 22,000. There was heavy fighting near Tebourba. Admiral Darlan and General Eisenhower exchanged messages. British Commandos and paratroops were active behind enemy lines.

Evacuation of civilians from towns throughout Italy began.

9th Dec.—General Eisenhower announced that Dakar had been handed over for the use of United Nations.

United States Navy Secretary, Col. Knox, announced that one-quarter of the French fleet in Toulon had been captured intact.

There was a great tank battle in the Tebourba area.

British destroyers bear the brunt of the unceasing battle of the Atlantic, their never-ending duties including the hunting and destruction of German U-boats, patrolling and convoying, in addition to fighting major engagements beside the capital ships. Picture shows a British "Fulmar" fighter from an aircraft-carrier making a practice dive-bombing attack on a British destroyer at sea.

According to an American wireless commentator, Mr. John Mcrane, "Darlan is strengthening his grip on French North Africa." According to the Morocco Radio, "Admiral Darlan, High Commissioner for the French Empire, has assumed leadership *de jure* and *de facto* of the French colonial empire."

7th Dec.—According to the Morocco Radio, members of the Italian Senate made representations to the King of Italy on the question of putting out peace feelers.

Marshal Badoglio was arrested by the Italian secret police for being involved in a plot against the Duce.

Violent fighting was in progress in the triangle of Djedeida-Tebourba-Mateur. Eleven Axis ships were sunk off Tunisia.

Rommel was estimated to have 50,000 Axis troops in the El Agheila region. General Montgomery said in an interview: "We shall win the battle of El Agheila."

10th Dec.—Twenty enemy tanks and 7 Axis planes were destroyed. Admiral Darlan held up American radio campaign by refusing to allow use of Rabat station.

Mussolini ordered urgent evacuation of the whole civilian population from southern Italy.

RUSSIA AND FINLAND

4th Dec.—The Russians pierced the second Nazi defence line of the encircled enemy north-west of Stalingrad. Soviet troops closed in on Rzhev and Veliki Lukie. Flocks of large German transports brought in reinforcements to the Don-Volga area.

5th Dec.—Desperate German counter-attacks on the Rzhev front failed.

It was revealed that on Hitler's orders all the Germans wounded in Stalingrad were sent to the Balkans instead of Germany. All contact between the German wounded and the population was forbidden.

Field Marshal Mannerheim informed the International Red Cross that 20,000 Russian prisoners had died of starvation in Finland.

6th Dec.—The Red Army launched an offensive in the direction of Novocherkassk and Rostov. Nazis rushed reinforcements to Rzhev.

The Russians built an invisible underwater bridge on the Central Front, across which Russian monster tanks were hurled at the Germans.

7th Dec.—More places were retaken by the Red Army in its advance west of Rzhev. The Germans were held at Tuapse.

8th Dec.—There was violent fighting north-east of Tuapse. The Red Army launched a new offensive west of Rzhev.

9th Dec.—The Red Army launched a new offensive near Voronezh. Two German supply ships and two transport ships were sunk.

10th Dec.—The Nazis resisted fiercely in most sectors. Russian positions at Velikie Luki were attacked. Forty-three Nazi transport planes were destroyed.

NEUTRAL COUNTRIES

5th Dec.—Air raid alerts were sounded in Berne, Neuchatel and other places in Switzerland.

8th Dec.—General Franco warned Hitler that he would resist any German attempt at crossing Spanish territory to bring help to the Axis forces in Africa.

SHIPPING

4th Dec.—The Royal Air Force attacked an enemy convoy and sank two destroyers and four other ships.

8th Dec.—The British submarine *Unique* was lost.

VICHY AND OCCUPIED COUNTRIES

4th Dec.—Vichy Government was transferred to Paris.

General Tsolakoglu, Prime Minister of the Axis-occupied Greece, resigned, handing over the premiership to M. Logothetopoulos.

5th Dec.—The former French Prime Minister, M. Herriot, and Jean Borotra (the famous Davis Cup French tennis star) were arrested by the Vichy authorities.

8th Dec.—The Royal Air Force attacked the Philips Wireless Valve and Radio Works at Eindhoven in Holland.

American Flying Fortresses attacked the Lille locomotive and carriage works and bombed an enemy airfield at Abbeville.

THE FAR EAST

4th Dec.—Japanese attempts to reinforce trapped troops in Buna-Gona were frustrated by Allied aircraft.

5th Dec.—Allied aircraft raided Koepang. Twenty-one enemy planes were set on fire.

Mr. Peter Frazer, Prime Minister of New Zealand, said: "In many respects the Japanese are more dangerous than the Germans. The war with Japan is going to be a hard and bitter struggle."

6th Dec.—Japanese troops made their last stand at Gona and Buna. Enemy forces were split up. A Japanese convoy was bombed off the Solomons.

7th Dec.—Japanese bases were destroyed in Guadalcanar.

8th Dec.—The Japanese were isolated in Buna. Rabaul was bombed.

9th Dec.—Twenty Japanese planes were destroyed over New Guinea in fierce fighting.

Heroes' Hotel

They call it Heroes' Hotel, because of the gallantry of its gatherings.

The town in which it is situated plays a key part in India's defence, and every evening, when their duties permit, Service personnel drop in for a drink.

The decoration ribbons they wear embrace every type of bravery on land, on the sea, and in the air.

There is the wearer of a D.S.O. won in Libya, a Sidi Barrani M.C., a Battle of Britain D.F.C., a Malayan D.C.M., and a Crete M.M.

Navy men don't wear any medal ribbons on their shirts, but among the sailors are a Narvik D.S.O., a Matapan D.S.C., and a submarine D.S.M.

Mr. STIMSON

Three Objectives

The main big work has still to be done. Co-operation with the French has been very hearty. We mean to develop a co-operative spirit between the Allies and the French on which so much depends. Most of the attacking forces in Tunisia have been those of our ally, Great Britain. We had some forces there and had a chance to make a show which was very gratifying to our men and most disheartening to the enemy.

When air superiority has been obtained three objectives will lie ahead—to expel or destroy Axis forces in Tunisia; to attack Tripoli and destroy the Germans under Rommel by getting behind him; and to co-operate with the British in making the North African coast and the Mediterranean a safer line reaching to the Egyptian area.

Mr. STIMSON, United States Secretary for War
in an interview on December 12

Running Commentary

Stern and Terrible year of 1943: Danger of Over-confidence.

Allied successes in different theatres of war have given rise to a feeling of great confidence in the victory of the Allies. Important successes on the Russian Front, North

Africa and South-West Pacific have given the impression that the war is practically over and that the Axis powers are almost finished. There is no harm in having a feeling of robust confidence in ultimate victory, but the danger of over-confidence must, at all costs, be avoided. While we should all rejoice in the successes of the Allies, we should not relax in our task of putting forth our utmost energy and enthusiasm in the war effort. The joy in achievement should be tempered with warnings of a long and stern climb. What is required at this turning point of the war is neither deflation of confidence, nor acceptance of the idea that victory is now assured because defeat has been put behind us. A mental revolution is required at the present time, which will inspire and enthuse the factories, offices and firms of the United Nations all the world over with a sacrificial offensive ardour, which would forearm us against setbacks which will surely occur from time to time during the stern and terrible year of 1943. We must train ourselves to judge all successes in their proper perspective and subject everything to a cool realistic analysis. We should not permit our enthusiasm to run away with our sense of judgment.

Let us first consider Germany's strength in Europe. There are about 180 German divisions on the Russian Front. Many of these have suffered

NOTICE

AS Friday, December 25, is a Christmas holiday, there will be no issue of the MADRAS WAR REVIEW on that day. The next issue will be published on January 1, 1943.

slaughters and privations and have lost in size and number heavily. Some thirty reserve divisions are stationed in the Baltic countries and about an equal number in the region of Kharkov. The Red Army is pinning down and eating into the German reserves by multiple counter-strokes. Not only "General Winter," but also General Stalin is freezing the great German Army in the Eastern Front.

In the occupied countries there are about forty German garrison divisions. The occupation of France, Sardinia and the coastal strip of Tunisia mean another thirty divisions, which might have been drawn from the Eastern Front reserves, or more probably from the general strategic reserves in Central Europe. If Germany invades Spain, which is at present unlikely, more than thirty divisions would be required to crush Spanish

resistance and maintain the lines of communication through a hostile country. There are about five German divisions in Italy, which has become an increasing liability to Germany and a further drain on German military manpower. It is estimated that the total number of German divisions is approximately 290.

It will be clear from these figures that if the Allies are able to follow up the Russian blows by a yet further major action of their own, apart from their two offensives in the Mediterranean, they will complete the process of freezing Hitler's

west before it was too late. In the present war, if the Allies can successfully freeze the German defence of the European Fortress and deliver co-ordinated assaults at widely separated points, their strategic position will be stronger than it was in 1918.

This does not, however, mean that the German defence is about to be "stretched to the limit" and a total collapse of the German military machine can be brought about by a few swift blows. For even if the German divisions are frozen from Norway to the Western Mediterranean

His Highness the Jam Sahab of Nawanager, one of the Indian representatives at the War Cabinet and Pacific War Council, recently visited an Indian contingent in the Scottish Command, where he saw Pack Mule Companies of the Royal Indian Army Service Corps. Photo shows His Highness talking to a Reinforcement Unit during his visit.

defence arrangements. In other words, if a major attack is made at any one point, Hitler must find it extremely difficult to concentrate sufficient force to repel it.

German Defence System: Its Strength and Weakness.

It has been pointed out by German Generals such as von Leeb that Germany lost the last war because she kept her armies too long evenly divided between the east and the west and so lost an opportunity of massing an overwhelming force for an attack in the

and from the Eastern Mediterranean to the White Sea simultaneously, the German defensive system will still be formidable.

It must be remembered that the estimate of the positions of the German Army that we have given are only approximate and does not take into account the armies of Italy and other satellites. Further the fighting quality of the Axis forces should never be underestimated.

Germany to-day commands more territory and therefore more resources, more

(Continued on page 6.)

El Agheila: Rommel

GENERAL MONTGOMERY

General Montgomery has "done it again"! Rommel has been turned out of El Agheila. The news, it is stated, has taken Cairo completely by surprise. As for the outside world, the surprise is even greater. It was expected on all hands that the haste with which Rommel staged his retreat from El Alamein westwards was only to reach the well-fortified positions of El Agheila where he would make a stand. It was thought that one of the biggest battles in North Africa would be fought out at that place. But Rommel has disappointed. He has repeated El Alamein at El Agheila, without a great fight.

Ten days ago, General Montgomery said to pressmen, on the eve of what he called "one of the decisive battles in history":

"It (the battle) will be the turning point in the war, and will swing our way. It may be a hard battle, and the Germans will fight, but we shall drive the Boche out of Africa. There is no alternative."

Walked out of the Ring

The Germans did not fight; they walked out of the ring, as it were, before the knock-out blow could be administered. They were compelled to do so, because the Allied forces operating to the south had outflanked their defences, and they realized that their position was untenable. The heavily-mauled Africa Korps thus escaped further mauling at the hands of the Eighth Army.

The R.A.F. played an important part at El Agheila. It is reported that the attacks of the R.A.F. on Rommel's withdrawing forces registered a record number of sorties for fighter bombers in any theatre of war anywhere. Rommel has also registered a new record—for retreat!

Rommel told the press in Berlin on October 3:

"The gateway to Egypt is within our grasp. We have not gone there to allow ourselves, sooner or later, to be thrown back again."

Within a short period of less than two and a half months, Rommel has allowed himself to be thrown back. He has in fact been flung so far back that the gateway to Egypt, far from being within his grasp, is not even in sight, however hard he may strain himself. He has been thrown out, not merely from Egypt, but practically from Libya.

Re-starts Retreat!

Benghazi, which played an important part in supplying the Eighth Army and enabling it to score a walk-over victory at El Agheila.

Benghazi plays Important Part

Commenting on the Rout of Rommel in Egypt in the middle of last month, we said that the Battle of El Alamein ended in a glorious and decisive victory for the Allies but that the Battle of the Western Desert was not yet over and that Rommel's striking power still remained. Now it seems to be practically over and done with, and Rommel's striking power seems to be useful only in striking westwards! In helping this great westward trek, the harbour of Benghazi, it is reported, has played an important part, for it was through Benghazi that supplies reached the Eighth Army.

The disaster that has befallen the Axis forces in Libya will need a lot of explaining by Goebbels and his disciples. It is obvious that great importance was attached to the operations in Libya, which King Victor Emanuel, after the completion of its conquest in 1912, compared to the bone of the chop—the meat part being Tunisia, on which modern Italy always cast its covetous eyes. Now the bone has gone, and with it the meat also is about to go!

Italian Colonists and Forces leave early

It is of some interest to note that some time after Rommel began his great retreat, Italy decided to remove *en masse* all Italian colonists who settled in Libya four years ago. It may be recalled that, in 1938, General Balbo, Governor of Libya, organized a great colonization scheme under which a large number of Italian families migrated from Italy to Libya. Only large families were chosen to take part in this scheme which was based on the ancient Greek model of not employing outside labour. The colonists had to be strictly families, and not even cousins were permitted to accompany them. Large convoys taking about 20,000 Italians left the port of Genoa under the leadership of Balbo, and now, after four years, the homeward bound trip had to be undertaken under the compelling force of circumstances created by the advance of General Montgomery's troops.

As for the Italian troops themselves, they did not wait to be abandoned by the Germans as in Egypt. They packed up their kit bags first, says *The Daily Mail's* Air Correspondent, and got out of the crumbling Axis lines.

A Great British Victory

The Axis has suffered yet another defeat in Africa. Rommel's retreat may be a strategic retreat, but it is still a great British victory. The cause of the United Nations has been taken yet another step on the glorious road to ultimate triumph.

RUNNING COMMENTARY

(Continued from page 3.)

manpower and more armament output than the Kaiser did at the height of his military power. All these facts should be borne in mind when we feel justifiable joy and optimism at the magnificent successes of the United Nations.

German Propaganda Methods : A New Device. An ingenious device in German propaganda methods has been brought to light by Mr. W. S. Sinclair, B.B.C. propaganda expert, in a broadcast talk given recently. He describes Berlin's clever method of creating a news agency which does not exist anywhere except in the imagination of Goebbels. This news agency is called the International Information Bureau and it is quoted by the German Radio in its news bulletins from time to time. It was invented some time in October last. The German Radio pretends that it is quoting from a neutral news agency. At the beginning of last month, the German Radio said that the special correspondent of the International Information Bureau in North Africa reported that the large-scale British attack which was started by heavy artillery a day earlier on the El Alamein Front had collapsed, and so on. Such reports may give the impression of unreliability, but the listeners will be led to believe that such a news agency does really exist. But the fact is there is no such agency, and no correspondent of the agency exists in North Africa or anywhere else.

The pretence that the "International Information Bureau" is a real agency

is kept up by the Germans by an attitude of outward detachment. At the end of October the German Radio quoted the International Information Bureau as reporting that the U-boats in the Atlantic had sunk 100,000 tons of Allied shipping. The same radio reported half an hour later a correction from the Bureau to the effect that the total was really 165,000 tons. Three and a half hours later, on the same day, the German Radio said that the figures given by the International Information Bureau might not be altogether reliable, as the German authorities had not yet issued their official figures. Mr. Sinclair says: "It's rather like a literary man publishing a novel under a pen name, and then writing a review of it under his own name." Continuing he says:

"You see that the invention of the imaginary news agency is for the Germans a most ingenious and useful device. When the Nazis want to say something which they would like to say, and which they yet feel to be so extreme and absurd that they don't want to risk having it quoted back at them later, they can do this by saying that this so-called neutral news agency has reported it. This enables them to start rumours and drop hints in the hope that some fool somewhere or other will believe them. It enables them also to publish extreme claims and then to escape the consequences afterwards when the full facts become known, by saying that it was not the Germans who made the statement, but only this regrettably unreliable news agency."

Mr. Sinclair points out that the German Radio frequently had resort to this imaginary news agency for reporting the fighting at Stalingrad and observes that

Commander-in-Chief's Tribute to Madrassis

◆ ◆ ◆

We did not enlist a great many Madrassis for a long time. We have recently had experience of a Madras battery of artillery in the Western Desert. They did very well indeed. I hope all the Madrassis will live up to that reputation. We have got a number of Madras soldiers in the artillery and anti-aircraft artillery. I was in Bangalore a few months ago and found them to be very fine type of men."

—GENERAL WAYELL, in an interview on December 14.

reports from such an agency enable Nazi propagandists to give themselves an appearance of moderation, caution and reliability by periodically warning their listeners against believing much of what the news agency announces, unless it was officially confirmed by the German Propaganda Ministry.

* * * *

"International Information Bureau : Two Reasons for Invention. Why was it that the Nazis had to invent such a news agency? Mr. Sinclair gives two reasons. Firstly, the old Nazi trick

of attributing wild statements to neutral newspapers was not working well, as the B.B.C. exposed the trick by getting hold of the neutral newspaper referred to and reading over to listeners the actual passage distorted by the German propaganda experts. The second reason was the change in the military situation or the change in the kind of the situation that the Nazis had to report. This will be clear when it is pointed out that in the early days of the war when the Germans overran Norway, Holland, Belgium and France, when they advanced regularly day after day in Russia, the German High Command communiqués came to have an air of accuracy and reliability. The impression that was generally spreading was that Nazi propaganda was all lies, but that the German High Command communiqués were accurate. What happened was when the Germans were very near a certain town, the German High Command reported it as having been already captured. This in fact would be happening a few days later. In other words, the German High Command communiqués, like the rest of Nazi propaganda, were frequently plain lies, but these lies were detected only by those making a special study of the subject

like Mr. Sinclair. The Germans resorted to these lying tactics, because they wanted to give the impression of continuous military successes. This was going on practically quite well until they began to meet with the reverses, when everything did not go according to plan.

When the Battle of Britain was at its height, the German High Command announced that the R.A.F. had been driven out of the skies of England and that the *Luftwaffe* had complete air control. This was not at all true. But the German High Command thought that it would come true in about a week's time or so. But many weeks passed, and it became clear that far from being driven out of the skies of England, the R.A.F. was proceeding to control the air on the other side of the Channel.

When Germany invaded Russia the same thing happened in regard to the communiqués of the German High Command. Then again people began to believe them, because the statements made, though not true at the time, did become true some days later. It was only when the Nazi advance was halted by the Russians in the early winter of last year that it became clear to the general public that the communiqués were simply not true. The same thing happened this winter also, and the Nazi propagandists thought it was time to invent the "International Information Bureau" to cheer up the German people by reports of imaginary successes. A recent instance is the report of this International News Agency that the whole factory district of Stalingrad was in German hands. This again was not at all true. But such reports created a general atmosphere of military achievement without committing the German High Command itself to a definite statement which might turn out to be a plain lie.

Britain and China

"As a result of the Japanese aggression, the British people took their place with pride and determination beside your gallant countrymen. I share your conviction that this spirit of comradeship will be of lasting benefit to both sides and will find expression in the ultimate construction of a new world wherein free peoples shall live together in peace and amity."

MR. CHURCHILL, in a message in London, on December 12.

Mr. Sinclair examines the interesting question whether anything at all exists corresponding to this impressive name of the International Information Bureau. He says:

"It may simply be a name, and nothing more. It may be like that Mrs. Harris in Dickens' novel, who was always being quoted by Sarah Gamp. You remember how it is only after a long acquaintance with Sarah that one realized that the loquacious Mrs. Harris existed in Sarah's imagination only, and nowhere else . . . Whether it's just a Mrs. Harris or whether it does consist of a small office of some kind, it's simply an invention of the German Propaganda Ministry, and it's invented for the announcements or the things the Propaganda Ministry does not want to risk saying itself."

Reports from this imaginary news agency have been, says Mr. Sinclair, appearing with increasing frequency in the German Radio news bulletins during the last few weeks. It is expected that, in the coming months, when the military events continue to go more and more against Germany, this news agency will be quoted more and more.

Japan's Ship- In a leading article ping Losses : *The Daily Telegraph* says that the sentiment common to the messages exchanged between Mr. Churchill and President

Roosevelt, on the anniversary of America's entry into the war, is that Japan's aggressive power must be utterly destroyed. The paper points out that "partial retribution" has already been inflicted on Japan and that the rulers have themselves admitted about a fifth of the damage known to have been caused to her fighting forces and mercantile marine. But even this admitted fraction is quite substantial. Colonel Knox, U.S. Navy Secretary, has expressed the view that Japan's shipping losses are reaching a point gravely menacing her essential supply lines. But it must be clearly recognised that the extent of Japan's resources or the fanaticism of her

people should not be underestimated. Japan has become a very grave menace to the freedom and prosperity of the peoples of the East. In a recent article, Mr. Empson, an English scholar who has spent many years in Japan and worked in the Tokyo University, points out that the reason why Britain and other nations co-operated with the Japanese in the early years of the century was because they thought that if Japan became a great industrial nation, she must help the liberation of the rest of Asia. Japan got the co-operation and help of the Western powers by a policy of hypocrisy and pretence. She paid lip service to democratic ideals and pretended to abide by the conventions of international ethics. She required tools of war and the patents of designs of the engines of the war, before she could master sufficient insolence to declare war on the world. So she was cautious. She dallied with the Axis Powers and smiled towards Britain and America. She carried on commercial negotiations with America for scrap iron, machine tools, oil, etc. When she felt that the situation in Europe was such that there was a chance of her dreams of aggrandizement being realised, she threw to the winds all her pretensions and embarked on a policy of violent aggression. She was faced with a great obstacle. It was China. After the easy conquest of Manchuria, Japan felt that within a few months, if not weeks, China would completely come under her sway and all would be well. But China stood up as a champion of freedom in Asia against Japan's aggressive might and has been fighting Japan with magnificent courage, in spite of great handicaps. Tojo, the Japanese Premier, has been forced to admit this year that the war in China is "a difficult and costly enterprise." This must have been an unpleasant shock to the Machiavellian gang of the Mitsubishi and the Military, who felt that the war against China would be a walk-over for Japan. China has been frustrating their nefarious schemes with great heroism to such an extent that Japan seems to realise that she can never conquer China easily.

THE KEY

"Air superiority is the key to victory, and we have that key."

—GENERAL SMUTS, at a lunch in Capetown, on December 12.

Indian Troops' Part in Defeat of Rommel

By CAPT. M. L. KATJU, M.C.

I have just come back from the Middle East. I spent about a year and a half there with the Indian Troops. I shared in their joys and sorrows; I was with them in their triumphs and reverses. We rushed together

It is of the battle of Alamein that I propose to tell you to-day, a battle that lasted from July to the early days of November when the Panzers, battered and broken, cried "enough!" and ran as they had never run before.

It was a great battle, one that may well come to be known in history as a decisive one not only in the fight for the mastery of the Middle East but in the greater fight to save the world from the Axis.

MEN OF THE HOUR

I remember that day I arrived at Alamein from Matruh. Our men were pouring in from all over the desert. Dusty and dishevelled,

U.S. AIR FORCE BOMBS TRIPOLI.—Bombs find their objective in the Spanish Mol (upper left), as United States Army Air Force bombers successfully raided the harbour at Tripoli. Their objective was the Spanish Mol, and not the ships in the harbour.

to Benghazi and Agedabia; we came back grimly fighting to Gazala. Then came the dark days of June. I was with them in the cauldron, then at El Adem and Bel Hamid, Rommel threw everything at us and we held him for a time. Forced by the weight of the armour to give way, the Indians fell back on Halfaya. Outflanked there, they fought through to Matruh. Surrounded, they cut a lane to El Alamein and there they stayed and all Rommel's men and all his tanks could not shift them.

clinging to such equipment as they could save, they gathered at their rendezvous. Weary and worn but grim-faced they set to work digging and mining before yet the sweat had dried on their aching bodies. They had the knowledge that Destiny had picked them out as the men of the hour and they were keeping faith.

I remember going down the Alamein track to the Qattara Depression. All along it New Zealanders and Indians, just arrived, were hastily improvising defences, I remember

thinking aloud "My God, we will never hold Jerry here," but I was thinking in terms of mines and wires, in terms of tanks and guns. I had not taken into account the human element, the indomitable spirit which is stronger than steel and gunpowder and says "the enemy shall not pass."

He did not. He made a little advance or two, but the Indians held on Ruweisat Ridge and we hold the Middle East to-day, threat and a promise to the Axis, a stepping stone to ravaged Europe.

RUWEISAT RIDGE

Ruweisat Ridge runs almost parallel with the coast and about ten miles away from it. Between the ridge near the coast and Ruweisat there stretches a valley with very soft going. Whoever holds Ruweisat controls this valley and, therefore, the main road along the coast. Ruweisat itself is an ill-defined ridge, not very broad and with a series of bumps on its northern side. These bumps were known as Points 64, 63 and so on according to their height. A constant effort was being maintained to control these bumps as they served the purpose of observation posts along the valley and on the southern side of the ridge as well. Any side holding an important point, say 63 for example, could make it impossible with artillery fire for the other side to consolidate ground to a considerable distance. The ridge itself was stony with depressions and hollows filled with soft sand. The bumps were, without exception, extremely rocky and it was tremendously difficult to dig in and consolidate these points. Such, in brief, was Ruweisat Ridge which cost Rommel his reputation.

ROMMEL'S INVITATION TO HITLER

He had invited the Fuehrer to Nile fish and wild duck at Mina House, just outside Cairo. He had promised his men the loot of Alexandria. I saw his men going into Alexandria—to the prisoners of war cage: what sort of a welcome the Fuehrer is preparing for Rommel I cannot say, but I am sure it will not be to the latter's liking.

In August, when we were advancing our front line and strengthening our hold on Ruweisat, we captured an Italian General and two of his principal staff officers. While we were driving them back to Alexandria, the General grew loquacious.

"We had long hoped to do this journey," he said, "in our own trucks or possibly captured British trucks. Look at the Mediterranean, isn't it pretty? I suppose Alexandria is a beautiful city. We never thought we could see it like this."

And his companion chimed in, wringing his hand, "It's hard, very hard. We (meaning the Italians) will never see Alexandria as we hoped to."

ROMMEL'S FINAL EFFORT

In September, Rommel made his final effort to fulfil his promise to Hitler. He came through the southern minefields with all his armour. In two or three days time, he told his men, "you will be in Alexandria." Instead he was back where he started. The German General, Von Thoma, captured recently said that the German strategy was to cut north-east after crossing the minefields. They hoped to get to the coast through Ruweisat Ridge and thus cut off the Eighth Army. General Von Thoma admitted that this attack failed because Ruweisat Ridge, still held by Indians and British troops, was too strongly defended. The Germans had not expected defences in such great depth.

That, as Rommel knew himself, was the last attempt. Our reinforcements were pouring in. Rommel began to dig in and organize his defences in depth. He knew the day was coming when he would have to fight desperately to hold his ground and the day came late in October. On that fateful day, the Australians and the South Africans were along the coast. The Indians guarded Ruweisat Ridge and positions vacated by the New Zealanders who had been taken out to form a support group. Further south were a British division and the famous 7th Armoured Division. Behind the Australians and South

Neutral Enemies!

A STORY going round in Washington says that a couple of Swiss journalists arrested in Tokyo protested that they were neutrals.

"No; you are neutral enemies," replied a Tokyo police officer.

"What do you call the United States and Great Britain?" asked the unhappy Swiss.

"They are belligerent enemies."

"What are the Germans and Italians?"

"They are friendly enemies."

Africans was massed a terrifying strength of armour waiting for a gap to be opened through which they could pour out.

The enemy had been led to presume that our attack was coming from the south and he had split his armour. German troops held the northern sector and special paratroops were opposite the Indians. In the south, enemy troops were mainly Italians.

ZERO HOUR

Zero hour came. Our main attack was to be launched in the north, with a subsidiary attack in the south while the forces on Ruweisat Ridge were to demonstrate and keep the enemy anxious.

You must have heard of the opening barrage. Hundreds of guns hurled shells at the enemy's forward defence lines while hundreds of others maintained extremely accurate counter-batter work, thus saving our forces from defensive fire. It would take all my time to give you just an idea of that battle, but I am telling you only of the Indians' part in the show. Gurkhas and Punjabis that day crossed the wires and minefields and raided the enemy's Ruweisat Defences. Dummies, carefully prepared by a young Parsi officer (a well-known cricketer from Bombay), played a part as well and were mown down by tremendous fire from the enemy. The Gurkhas penetrated deep into enemy *sangars*. The Punjabis were held up. But they created the impression that we were attacking along the centre as well, thus causing great confusion amongst the enemy.

As we progressed, slowly but surely, in the north, the role of the Indians was to hold on and prevent the Germans from counter-attacking. Every night our patrols were busy. We were containing a strong enemy force, part of it being his best men.

As our wedge deepened, the Indians began to shift from Ruweisat to the north, moving on along the widening bulge. The Germans were holding on grimly and we expected any moment to be called upon to deliver the *coup de grace*.

THE CALL

The call came on November 4. At a moment's notice one of our brigades, the famous 5th Indian Infantry Brigade, was whistled up for a night attack. They went in behind a creeping barrage of 400 guns. Before first light they had gained their objectives and the bulge had been so widened that armour could pour through without fear of anti-tank guns traps. At dawn, the tanks started passing through the Rajputs and the Essex. There were hundreds of them. Armoured cars flashed past in scores. We were through. The rout had begun.

The Corps Commander sent his congratulations to the Indian Brigade for their excellent performance.

In the fulness of his pride, Rommel, as he was coming back to Gazala, is reported to have said that the Eighth Army was a rabble except perhaps the Indian Division which was not altogether a rabble. What does he think now, I wonder! What would he say now if he were asked about the Eighth Army?

TIRED BUT HAPPY

When I left Alamein, the Indians were bathing along the coast, washing their clothes and looking tired but happy. For five months they had been in the line and now they were getting a rest which they had well deserved. Alongside was the South African Division both of them being engaged in collecting the booty left behind by the Jerries and the Itys.

I was sorry to come back. I would have liked to go on to Benghazi and beyond with our troops, but I knew I was thinking selfishly. I had had a rest and comfort in Cairo and Cyprus while these troops were holding on firmly with rationed water and food and a pest of flies, more annoying than the dive-bombers.

One day we shall all meet again. It will be a great reunion.—A recent A.I.R. broadcast from Delhi.

A New Phase

"Since my last report the war has entered a new phase. The Axis Powers have temporarily at least lost the initiative. We must do all we can to keep them from regaining it. We must bring the full strength of all the United Nations to bear directly against the enemy. We must bring together our joint productive capacity and our material resources, our finished munitions and fighting man-power and we must do this in accordance with the single world strategy."

—PRESIDENT ROOSEVELT, in a Lease-Lend report to Congress on December 11.

“MADRAS’S OWN”

[Almost as this goes to press the previous story of the Madras R.A.F. Squadrons will be available to the public in the form of an illustrated booklet called MADRAS HAS WINGS. These two articles will bring that notable history of MADRAS’S OWN fully up to date.—Ed.]

“MADRAS” DEFIANTS SQUADRON

OVER the breaches of Dunkirk in the spring of last year everlasting fame was achieved by the Squadron of Defiants. In defence of the retiring British Expeditionary Force it accounted for 60 German aircraft most of them brought down in a period of three days. In one day alone—May 29th, 1940—the squadron set up a record by destroying no less than thirty-seven enemy aircraft. Not even in the Battle of Britain was this record broken and it still remains the highest “bag” of any Fighter Command squadron in a single day’s fighting.

THE Defiants got their victims in two patrols. Leaving their aerodrome in England just before mid-day they met more German fighters and dive-bombers than they could count. Seventeen of the fighters and one dive bomber were brought down.

IN the afternoon they got in amongst a big formation of Ju. 87 dive-bombers and their gunners were able to blaze away without any interference from enemy fighters. Eighteen of the Junkers went down and then to round off the day’s work the squadron shot down a Ju. 88 before turning for home.

INDIVIDUAL EXPLOITS

NOT yet can the full stories of the individual exploits of the men of this squadron be told. Some day when the fog of war has lifted the stories of their deeds of daring which won the many awards which the squadron has to its credit, will add a brilliant page to the history of the Empire’s fight for the freedom of the world.

ONE air gunner of the squadron shot down a complete formation of five dive-bombers. Unseen by the Germans, his pilot flew underneath them and swinging his guns upwards the gunner picked them off one by one as coolly as bringing down sitting birds on a tree.

WHEN the Defiants came upon the Junkers they were dive-bombing ships. Three small vessels were set on fire but the cost to the enemy was a heavy one. The pilots and crews who took part in that famous fight were of an average age of twenty-five.

COMPARATIVELY the squadron did not play such a big part the Battle of Britain but during that epoch-making time in three fights over South West England in August they shot down fifteen of the enemy.

LATER in the year the squadron went into training for a new duty—night fighting—and in October bagged their first night raider. Since then they have been steadily bringing them down and have now at least fourteen night raiders to their credit, with many more claimed as “probables” and “damaged.”

ONE night in May two of the squadron’s Defiants flew to France, shot down two enemy bombers over their own aerodromes and seriously damaged two others. The first pilot dived down on his victim and the gunner gave it two bursts which sent it plunging down through the clouds. The second Defiant destroyed another bomber with its first short burst sending it crashing on the outside of its aerodrome. They hit another just as it was touching down at a 100 feet.

TEAM SPIRIT

THE team spirit of the Royal Air Force has been effectively demonstrated by one perfect example provided by this squadron. A Flight Sergeant Pilot and a Sergeant gunner fought together as a pair for nearly two years. Both have won the D.F.M. and bar and together they have destroyed thirteen aircraft. The pilot, joined the R.A.F. as a boy in 1926, was trained as a wireless operator and mechanic then as an air observer and finally as a pilot, winning his wings in November 1939. Before the war the gunner worked in an office in Clerkenwell, and trained as a wireless operator and gunner with the Volunteer Reserve.

THE story of their first introduction as told by the pilot is perhaps of interest. His flight commander came to him one day saying “Here’s your gunner” adding in an undertone, “If you don’t like him, let me know and I’ll make a change.” He discovered afterwards that the flight commander has said to the gunner, “I’ll introduce you to your pilot. If you don’t like him let me know and I’ll make a change.”

IN the autumn of 1941 the pilot was commissioned and a few months later the long partnership was at last broken when he was posted to command a Hurricane squadron.

THE home towns of the members of the squadron who have now destroyed 89 enemy aircraft, are spread out all over the country. From peaceful little Surrey villages, from the roar of the metropolis; from Yarmouth and Portsmouth and from the Midlands they have come together from busy offices, stores and rural occupations to find high adventure in the air as a perfect team against a brutal enemy.

IT is indeed a squadron to be proud of.

“MADRAS” SPITFIRE SQUADRON

STATIONED for many months in 1940 in the English West country, the pilots of this squadron of Spitfires kept a constant watch on the convoys passing along the Cornish, Devon, Dorset and Hampshire coasts. The squadron has earned a high reputation for its patrols in protection of British and Allied shipping.

IN September, 1940, it was ordered to the South East to reinforce the defences of London. During their first flight in their new theatre of war, they shot down thirteen enemy aircraft and in four days had brought their “London Defence total” to thirty.

THE squadron then went back to the West country, where on November 29th, 1940, they carried out one of their outstanding exploits—protecting the damaged destroyer “Javelin” (Commander Lord Louis Mountbatten) from air attack.

FOR several hours the Spitfires fought off a series of attacks by relays of German bombers on the partially disabled destroyer after she had been torpedoed in a naval action in the Channel. When the “Javelin” had been safely escorted into port the fighters had accounted for three German bombers destroyed and one damaged. Their own casualties were nil.

FIRST ENCOUNTER

THE first encounter with the enemy took place off the Lizard shortly after 11 a.m., when one of the Spitfire pilots, forming part of the destroyer’s escort, saw three British aircraft in line astern followed by what he described as “a very doubtful fourth.” The doubtful fourth was quickly identified as a Do. 17 bomber and the pilot immediately attacked. Chasing the bomber in and out of cloud from 2,500 to 6,500 feet and opening fire at close range, he saw pieces break away from the Dornier which went into a spin and crashed into the sea. One member of the crew of five was seen to bale out and fall into the water.

LATER in the day another pilot of the squadron bagged a Ju.88 which dived out of the clouds and let go four bombs from a height of about 3,000 feet. “I chased after him” said the pilot “and got in several good bursts from my machine-guns before he disappeared into cloud with smoke coming from both engines. I followed him through the cloud, caught him again in the open, and smashed the rear gunner’s cockpit with a burst of fire from close range.” When last seen the Ju.88 was on fire with bits breaking off in mid-air and plunging into the sea.

ANOTHER pilot caught sight of a Dornier climbing hard in an effort to reach cloud cover. When the enemy saw the Spitfire he turned but the pilot got in a burst which put the Dornier’s port engine out of action. He fell a few hundred feet and made for low cloud bank but several more bursts from the Spitfire’s guns from close astern sent him crashing in flames.

THE third German bomber, also a Dornier, was shot down by a Flying Officer who, after chasing him in and out of cloud, saw his victim “start falling to pieces and go spinning down through the clouds into the sea.”

THE fourth bomber, a Ju.88, which had also unsuccessfully attempted to bomb the “Javelin” was severely damaged by another Spitfire before being lost to view in the clouds.

NEW HEROES

PLYMOUTH and the West country, always proud of their naval traditions, have thus found new heroes in these R.A.F. pilots who fly daily in their defence.

ON September 15, 1940, when the record number of 185 raiders was destroyed this squadron’s bag was 4 Me.110’s and one Me. 109 shot down in battle off the South coast.

SINCE the Battle of Britain the pilots of this squadron have won many more victories over the Luftwaffe. They have continued to provide effective air cover for convoys in the Channel and have taken part in many offensive operations over Northern and North-western France.

ON one occasion in May 1941, four of the squadron’s pilots ran into about 40 Me.109’s near Portland and promptly shot down five of them into the sea.

SINCE Fighter Command launched its big offensive in June 1941, the squadron has been carrying out raids over enemy territory and the pilots have also provided escort for bombers attacking land and sea targets and torpedo bomber raids on German warships.

A former commanding officer of the squadron was once shot down into the sea after destroying two Me. 109’s. He was nine hours in his dinghy before being picked up but it was not long before he was back in action again.

THE squadron is officially credited with the destruction of 96½ enemy aircraft, but the pilots’ total is probably well over the 100 mark.

British General who helped to Defeat Rommel

THIS story I have had to wait nearly three months to tell—the story of a “new” British General who is a wizard of tank tactics, writes William Stapley in the *Sunday Despatch*.

Horrocks is his name—Brian Gwynne Horrocks. Official reference books barely mention him and surprisingly little is known about him outside a small circle.

For a long time he has been one of the army's “hush hush” men. There has been very real and official reason for all this of course. He was one of the key pieces on the Egyptian chess board, a vital leader destined to pit his wits and tank fighting genius against Rommel. He is a man of whom the German General Staff had no knowledge whatever. That simply was why this article could not be read before to-day.

Brian Horrocks has now done his stuff—and done it so well that to-day that screen of secrecy can be lifted. A day or two ago, it was revealed that he is one of General Montgomery's three Corps Commanders.

WENT TO EGYPT

His is the 13th Corps and he went to Egypt at the special request of the Eighth Army's Commander. Horrocks was made Lieut.-Colonel in 1937. He was promoted to the rank of Major-General only last year and to acting Lieutenant-General only last August. He served throughout the last war with the Middlesex Regiment and won the M.C. To-day he is 48.

Last August he went secretly to Egypt knowing that at last his day had come.

This was soon after I had met and talked to him. He was in the middle of a 4-day mock battle in which hundreds of tanks were being used. There is nothing of the immaculately uniformed General about his spare workaday figure. He wore a beret of the

Royal Armoured Corps, a high necked jersey, a thick dark wool and oil-stained open tunic and trousers.

He talked of his tanks. Above all we talked of his men. It was here that Horrocks' earnestness and enthusiasm were most apparent. “They are just grand fellows.” He told me as he chewed a stalk of grass he had plucked at his feet.

Then his eyes grew suddenly serious as he added, “My only concern is that I shall prove the right man mentally and as a soldier to lead them into battle when the time does come.”

Horrocks fights his tank battles, real or mock, right up to the front. When I saw him, he had a small staff car fitted with wireless. It had been everywhere in the battle zone that day and whenever a tank action was joined, Horrocks was up their somewhere with the leading vehicles.

“You see,” he explained to me “battles to-day are fought 35 or 40 miles per hour. Leading a Division means you have got to be right up with your men. And it is a good thing.”

HIS BED

Under dripping trees, I spied a ground sheet and a rough air mattress. Horrocks followed my gaze, “That is my bed for the night,” he said with a grin.

“May be rained out” I hazarded with a glance at the lowering sky.

“Then” said Horrocks, “I'll just sling a bit of tarpaulin over a branch if I can find one.”

He is like that. Roughing it with his tank boys gives him real joy—and teaches him innumerable sidelights about them that point the way to greater efficiency and tank fighting skill. Well, that is Brian Horrocks, soldiers' dream General, if ever there was one.

“Give me another month,” he told me as we parted, “and we will be ready to take up and lock the very best panzer army any German ever thought of.”

Out in the Egyptian desert, Horrocks had a chance he had planned and dreamed of. He put into practice all the battle manoeuvres and tactical schemes he had tried out. Rommel's defeat shows that he had planned and practised well.

JAPAN AND INDIA

“The threat to India is much less to-day than what it was seven or eight months ago. Now, we have got a different picture. If the Japanese undertake any attempt on India they will get a warm reception. The Japanese have had many reverses since the last spring, so that the threat to India is nothing like it was some months ago.”

—GENERAL WAVELL, in an interview on December 14.

Psychological Triumph follows Military Victories

By WICKHAM STEED

THE outstanding importance of military and naval successes gained by the United Nations in the past weeks is now beyond

been held by the Axis. Now it has passed, perhaps finally, to the United Nations. This is more than a military change in the fortunes of war. It is a psychological change of immense political and moral significance.

Less than six months ago when Rommel stood at the gates of Egypt, it looked as though the southern jaw of Hitler's strategic pincers might soon close on Egypt and the Middle East while the northern jaw should bite through the Russian defences and envelop the Caucasus. Like the British Eighth Army in Egypt the Russian armies were on the defensive. Now Rommel has been driven in a headlong flight from Egypt and Libya. Anglo-American forces are entering Tunis and threatening to expel the Axis from North

INDIAN SEAMEN AWARDED B.E.M.—At a recent investiture held by H.M. the King, two Indian seamen were awarded the B.E.M. On the left is Quarter-Master Noon Hossein who, when his ship was attacked by enemy planes and set on fire, took up a rope, jumped overboard, swam to the quay and made the rope fast so that his shipmates could get ashore by sliding down the rope. With him is the other recipient—Abdur Rahman, who was a Mess Steward. Abdur Rahman's ship was torpedoed and sank in 18 minutes. She was abandoned in good order and in three boats the men stayed in the vicinity for 36 hours in the hope that help might come in response to their S.O.S. They then made for the nearest land. The boats became separated but all reached safely after 13 days. By his cheerful bearing Rahman kept up the morale of his companions throughout the ordeal.

dispute. Behind those successes lies something still weightier. This is the revelation of a grand design, carefully framed, well executed, and imposed by surprise upon an unprepared and perplexed enemy.

With the exception of General Wavell's first Libyan campaign that swept the large Italian armies out of Libya two years ago and the subsequent conquest of Abyssinia and Eritrea, the strategic initiative had hitherto

Africa entirely. The southern jaw of the pincers has been dislocated and broken. The northern jaw is being sent back in the Caucasus and Stalingrad stands firm.

HITLER ON THE DEFENSIVE

Hitler has been compelled to occupy all France and organize defensively the southern European front. The Mediterranean is no longer under Axis control and the plight of Italy has grown precarious. As though to

crown these changes in Europe and Africa, Japan has suffered a heavy naval defeat off the Solomon islands.

Considerable though these changes are both in themselves and as foreshadowing the possibility of further changes, I think the psychological change is more considerable still. For the first time since the war began, a constructive Allied plan has appeared. In the battle of wits, Allied minds have shown themselves superior to those of the enemy.

From the outset the moral force of the Allied cause has been superior to the immoral predatory force of the Axis. The economic force was also certain to tell in favour of the Allies sooner or later. Yet there seemed room for doubt whether the Allies were or could be mentally superior to the Axis and whether in point of mental co-ordination, they could overcome the advantage possessed by Nazi Germany who could operate on interior lines and enjoyed an effective unity of command.

Now this doubt has been dispelled, thanks to the manner in which victory was organized and won in Egypt as an opening stroke for the liberation of North Africa by the greatest amphibious operation ever recorded in warfare. This psychological triumph must bear fruit in many directions.

A WORLD-WIDE CHANGE

Taken together with the victories of the United States and Australia over Japan in the southern Pacific, it marks the beginning of a world-wide change in the prospects of the war. The Russian confidence in total victory within a calculable future has been redoubled. The satellites and the accomplices of the Axis are wondering how best they may escape the wrath to come. Even in quarters where the ultimate defeat of the Axis was believed to be a moral certainty, it has now assumed the shape of a tangible reality. Italy trembles under the grip of her German master. The desperate efforts of Japan to recapture the Solomon islands foreshadow the disheartening effects of the defeats she has now sustained. In Germany the earlier assurance of victory has been transformed into the cold comfort of Hitler's denial that he will ever capitulate.

Practically the question how soon the progressive Allied achievement will lead to the final triumph resolves itself into the question of Germany's power to continue the struggle indefinitely. Without Germany's support Italy would collapse overnight. Less directly the fate of Japan also depends on the German resistance. In what degree will the German people and the German army continue to stand behind Hitler and the Nazi system when world mastery and unlimited loot are seen to be beyond their reach? Will they face the unshaken prospect of total ruin and unlimited

disaster? We do not know. Britain, Greece and Yugoslavia, to name only these, have stood undismayed by adversity. Their cause called forth their moral strength.

Will the Germans derive more strength from reflections on unsuccessful brigandage? Upon an answer to this question the duration of war will, I believe, depend.

Dullest Capital in the World

DAKAR is the capital of French West Africa whose 15 million people are governed from it.

And it is probably the dullest capital in the world. Its dullness is the product of its climate. Constant dull skies and steamy enervating heat sap the strength of those who have to live there and are almost unbearably depressing even to the casual visitor. But because of its position on the edge of Africa, where it bulges out towards Brazil, France spent millions of pounds on its development as port and on measures to defend it against invasion. In peacetime 7,000 ships went in and out of its harbour every year. It was a coaling and oil fuelling station and a naval base.

It was long suspected that Axis submarines operating against our convoys in the South Atlantic used it as base or at least were supplied by ships using it.

Dakar first leapt into war news two years ago when General De Gaulle made his abortive move to occupy it with a Free French force. He abandoned the attempt when the garrison resisted.

The Governor-General of French West Africa, M. Pierre Boisson, seemed a willing tool of Vichy in its anti-Allied policy in Africa.

He threw himself eagerly into the task of strengthening the defences of the capital and the colony and in stamping out any open De Gaullist sympathies.

But he, just as persistently, opposed all German designs to send military missions to Dakar and he stubbornly resisted suggestions that German troops should be sent to help in the protection of the colony. Nevertheless, the Germans sent plenty of agents there and they were all busy preparing for Axis plans of the future. Those plans have been thwarted now.—*The Daily Express*.

Egypt's Role in the War

Great Help Given to Allies

[By DR. HASSAN NASHAAT PASHA; Egyptian Ambassador to Britain, in an interview to the *Manchester Daily Despatch*.]

A question that may be asked at this important turning point in the war is what part Egypt has played in the North African campaign and what help Egypt has given to the Allies. Better put the same question as from the beginning of the war up till now.

The first and most important help that Egypt rendered her Allies was a welcome home to all forces. Fighting forces were not only sure of security in their rear but were also sure that the whole nation—Government and people—were ready to help at any critical moment. When, in July, General Auchinleck had to retreat and Rommel's guns could very distinctly be heard in Alexandria and localities nearby, the true spirit of the Egyptian nation became apparent—confidence, calmness and faith in her Allies.

Attacking forces in any battlefield rely on the co-operation of the great number of people operating behind the lines. Defences of all strategical points in the country, such as bridges, railways, ports and stores, were

undertaken by the Egyptian army. The anti-aircraft defences of Egypt were all manned by Egyptian soldiers. Many thousands of Egyptian workmen of all kinds were engaged by the Allies in works necessary for the campaign.

Priority on roads and railways was given to the forces and materials concerned with war. The railways had a very difficult task. Deprived of renewal of materials generally imported, they had to do their best to satisfy both ordinary and military traffic. The help of the railways was vital to the Allies, and to give you a small example of their tremendous effort, I shall quote from the *Railway Gazette* of November 6, 1942, which stated that in spite of a shortage of locomotives and rolling-stock, they could by careful control satisfy all military needs.

Everything that the country possessed or produced was placed at the disposal of Egypt's Allies, and help has even been sent to neighbouring countries under the control of the Allies.

If Egypt did not declare war, this step was taken after consultation with her British ally, and for many complicated reasons. But, generally speaking, the help that Egypt would have rendered had she declared war in the circumstances would not have been greater than the help she has actually been giving.

I think I can say that Egypt, with the Suez Canal running through her land, and with the goodwill and alliance of the British people, will be a large factor in the maintenance of the Mediterranean as a free waterway to all countries of the world.

IS THAT AN ARMY BIRD?

MEMBERS of the public finding or capturing a pigeon that is in difficulties are requested by the military authorities to examine the bird in order to ascertain whether it is a part of India's Fighting Services.

Military birds carry a metal identification ring on one leg, stamped with various particulars. For instance, the ring on an Army pigeon shows first the letters C.M., then the last two numbers of the year the bird was hatched, and a further number (the pigeon's individual serial number).

Whatever the mark, the bird should be taken with the least possible delay, and without interference with any message it may be carrying, to the nearest police station.

It is, of course, possible that the bird may be carrying a message, but not any means of identification. In this case also the bird should be taken to the nearest police station.

Timoshenko's Great Offensive

By MAJOR-GENERAL SIR CHARLES GWYNN

TIMOSHENKO'S great counter-offensive in Russia is a masterpiece of timing and well-concealed intentions. If its initial tremendous success can be exploited fully, it will lead to the greatest disaster that the Germans have yet experienced.

It has of course been evident for a long time that Timoshenko's relief armies constituted a potential threat to the Germans at Stalingrad if they could muster sufficient striking power to break through the Axis flank defences. But that was a big "if" and little indication was given that Timoshenko could do more than relieve some of the pressure on the city and throw an increased strain on German communications and resources.

How has Timoshenko been able to acquire a striking power which has enabled him to break-through the elaborate German defences? It seems probable that British and American weapons have been accumulated for this major effort—and German reports admit their appearance. If so, it gives fresh reason to believe that weapons have been forged capable of penetrating the defensive systems on which the Germans have placed great confidence.

Has the Axis over-confidence in the value of defensive methods been the primary cause of their disasters in Egypt and now in Russia? In each case they have thrust their offensive armies into a strategically unsound position and clung dangerously long to the offensive advantages they had gained. The result has been that their defences have broken down.

LOOKING BACK AT RUSSIAN DEFENCE

Looking back, it is more than ever clear how immensely important was the successful Russian defence at Voronezh. If the Germans had been able to push eastwards towards the Volga cutting the railways leading from Central Russia to the south and prolonging the defensive flank of their great southern offensive, the isolation of the lower Volga and Caucasus would have been completed.

Without those railways, Timoshenko's relief armies could never have been assembled in a threatening position. The probable course of action of the German force, now in such a dangerous predicament, is a subject of much speculation. It is argued that it might still retreat before the Russian pincers close, despite the fact that both railways forming its main lines of communication have been cut. No doubt the mobile element of the army might get away by road in somewhat the same

manner as Rommel saved a part of his force at El-Alamein. The retreat would, however, entail vast sacrifices of material and probably much of the less mobile personnel.

As in the case of Rommel, it is probable that the greater part of the supply depots of the army has been formed in the forward areas between the Don and the Volga in the neighbourhood of railheads. In that case, it is almost certain that a large army, dependent on mechanized transport, would in a long retreat run short of supplies, especially petrol. The intermediate depots would suffice only to meet the needs of a comparatively small force.

OPPORTUNITY FOR RUSSIAN CAVALRY

Weather conditions at this season would militate against mechanized movement and Russian cavalry might have many opportunities for exploiting traditional harassing tactics. I find it difficult to believe that the Germans will retreat except as a desperate measure to save a part of their army. It seems more probable that if they cannot counter-attack to recover the use of railways they will attempt to follow the Staraya Russa precedent and establish a hedgehog position dependent on supplies accumulated in the forward areas supplemented by air transport; in this way they may hope that a rescue army, forward from reserves and withdrawals from the Caucasus front, will eventually re-open communications.

But the delivery of Timoshenko's stroke at a time when some German reserves may be on the move to other theatres might make the formation of a rescue force difficult. Incidentally, it may be noted that the stroke was also timed to bring the maximum assistance to Stalingrad at a critical period when ice movements on the Volga made supply and reinforcements particularly difficult and when frozen ground favoured a renewal of German attacks.

INDIAN TANKMEN CHANGE HATS

In order to bring them more closely into line with the men of the Royal Armoured Corps, personnel of the Indian Armoured Corps are changing their head-dress.

First step has been taken in Iraq and Iran, where every officer and man of an Indian Cavalry Regiment has been issued with a black beret.

Sikh personnel are, of course, excepted. They retain their familiar turbans.

The boys like their new berets, and find them both comfortable and convenient. They say that the similarity of head-dress gives them a greater feeling of comradeship with the British.

Japanese Aims Foiled

WHAT were Japan's aims in starting the war when she did?" asks the *Sunday Times*. Answering its own question, it says:

Because of the enormous potential strength of America, it was timed to be coincidental with and dependent on German victory in Europe. Therefore, it was planned in the autumn of 1941 when Germany looked like beating Russia.

with aircraft-carriers against Japanese bases with land-based planes and the result might have been crippling to the American navy. The scheme fell through.

Firstly, Germany did not beat Russia; secondly, the Allies in the Pacific from the battle of the Macassar Straits onwards inflicted heavy losses.

After a very shaky start from December to the end of March, the handling of the American fleet and the deeds of the Fleet Air Arm shine as one of the brightest stars among all the Allied victories. The steady toll taken also played an important part and there has been a slow but quite perceptible decrease in the efficiency of the Japanese air force all

The work of the Maintenance Command of the British Royal Air Force, of which little is heard, is of vital importance in the struggle against Germany as it supplies all service requirements, from a split pin to a complete aircraft. Huge reserves of bombs are also stored in long tunnels bored out of the solid rock. Here are rows of large American-made bombs being stacked by a British Air Sergeant with the aid of a crane.

Had Japan been ready with enough first-class modern planes, it might have been started one or two years earlier when things looked black for Great Britain. No doubt, Japan imagined that in the far distant future, America might be crushed completely between the Japanese and the German millstones; but, it seems, her immediate object was quite practicable.

One, it was to occupy quickly the whole of the Indonesian and Australasian territories which might serve as base for America to attack Japan when her strength was awakened. If she could do that, she would force America to attack Japan over along ocean distances

through the year while that of the Allies has been increasing with better planes and more experience.

The conclusion is then that if after the cleaning-up of the Solomons and New Guinea, the Allies are strong enough to attack Rabaul which will be within the range of quite a number of Allied air bases, the Japanese will simply be forced to send everything they have to this furthest extremity and the key point of their advance or else give up all hope of achieving that great oceanic, strategical position which alone could give them even the faintest hope of withstanding the rising tide of American power.

The Strategy of Initiative

By LORD STRABOLGI

THE immediate reaction of the German High Command to the new strategical situation in the Mediterranean was the occupation of the remainder of France and the despatch of all immediately available aircraft and seaborne troops to Tunisia.

These were defensive measures and the movement to Tunis can probably only have a delaying effect.

Unless the Axis powers are prepared to resign themselves to the loss of initiative and all that it means, new offensive campaigns must be embarked upon with little delay. Ever since the outbreak of the present world war, Germany has enjoyed initiative in every direction and has been able to throw her opponents on the defensive for three years in all the main theatres of war. Even the entry of the United States of America as an active combatant did not affect this situation for the United States was thrown on the defensive by the Japanese attack on Pearl Harbour and the serious blows struck there and elsewhere in the Pacific against American naval power.

The total defeat of the German and Italian armies under Field Marshal Rommel followed by almost simultaneous landings of large British and American expeditionary forces in Algeria and Morocco has obviously been a surprise to the Axis High Command and the initiative now passes to their opponents.

To appreciate how serious is the general situation for the Axis High Command, it must be remembered that it has lost initiative or is rapidly losing it on the eastern front also. The coming of winter has found the Axis armies in Russia held up on the Volga and in the Caucasus, witnessing preparations for counter-attack by numerous Russian armies standing along the central and northern sectors of the immense front. Some counter-stroke must be embarked upon and it must be on a large scale. Merely to pour further reinforcements into Tunisia would not meet the situation especially as the local population and garrisons are aiding the opponents of the Axis.

THREE AXIS DIRECTIONS

There are three other directions in which an attempt could be made to regain initiative. First, and by far the most effective, would be a successful invasion of the British Isles across the English Channel and the North Sea. This can be ruled out, partly because the

weather is too uncertain for the next months for such an immense undertaking partly because the vast preparations now would take too long. In any case, in the absence of sufficient naval and air strength, the disposal of the Axis removes such an invasion beyond the bounds of military practicality.

Two, other offensives which could be embarked upon would be a thrust through Turkey or an attempted occupation of the Iberian Peninsula. Either of these strategical moves would, if successful, restore the initiative to the Axis but both would create very great difficulties and obstacles.

It would be an obvious policy of the German High Command to try to induce the Turkish Government to open the Dardanelles and permit the use of Turkish roads, railways and aerodromes for the passage of the Axis forces, but it would appear to be highly improbable from all the evidence available that the Turkish Government would follow the example of the Bulgarian Government when the Axis were attacking Greece. If Turks fought, a new army of a million men with a good military tradition would have to be overcome. The Axis powers and their minor allies have large concentrations of troops, materials and aircraft in the regions affected and could advance in force through Roumania and Bulgaria to the shores of the Bosphorus. The United Nations could send reinforcements to Turkey by way of Syria and Persia.

VALUE OF SPANISH PORTS

If the Iberian Peninsula could be brought under Axis control, fine Spanish and Portuguese harbours on the Atlantic and the Mediterranean coasts would be of great strategical value and Gibraltar would be invested. The capture of Gibraltar by assault would be a desperate undertaking, for it is common knowledge that its fortifications have been immensely strengthened in the last three years. But the harbour and the roadstead of Gibraltar could be made useless, for its present valuable purpose for the assembly of convoys, by the heavy guns mounted on the Spanish mainland. The very passage of the straits of Gibraltar could be rendered hazardous to the shipping of the United Nations by long-range artillery and aircraft based on Spanish aerodromes and by submarines operating from Spanish harbours. If the island of Minorca could be brought under Axis control, it would also have great value in the forthcoming Mediterranean operations.

So much for theory. In practice, the rape of Spain and Portugal by German forces would have serious political repercussions particularly in South America, where Axis powers still hope to retain certain friendships and connections.

London in Wartime

By DALE COLLINS, the well-known short-story writer.

AN awful lot of praise is handed out to wives and mothers in wartime; during these three years in Britain they have certainly earned it. In fact, I have joined in the chorus myself on occasion, but what about the poor old husbands?

Speaking as one myself, I think we deserve a pat on the back.

Here's a snapshot that surprises me. In it I find myself. Under one arm I have a huge bundle of washing, done up in a sheet: a month's cargo of the stuff that simply can't be done at home. Two large empty shopping bags are in my left hand. That's very odd, surely. Only for the fact that the camera does not lie, I would not believe it.

THE NATIONAL LOAF

The laundry deposited, I go on my way and run into Edward Rigby, the film actor, who has just made a big hit in "Salute John Citizen" after doing much fine work in British pictures for many years. In other days we might have met in a golf club and talked about stymies and drives of amazing length. Now we stand together in the queue at the baker's and talk about the national loaf, which, we agree, is darned good eating.

This reminds Rigby that he played Friar in the Australian production of Maeterlinck's "Bluebird" before the last war. And that reminds me that as a small boy in the front row of the gallery at the Theatre Royal, I fell madly in love with the child who played Tytyl. We wonder what has happened to her. Then, tucking the bread into our bags, we part.

"I'm off to the grocer's", says Gossip Rigby. Gossip Collins replies: "I'm going to the butcher's for our weekly two bob and four penn'orth. The wife chose it, beef, this week."

And Gossip Rigby says: "We got a nice little of mutton."

AT THE BUTCHER'S

At the butcher's I run into Fennymore, the Secretary of the Institute of Art and Design at the National Gallery. He's pally to every artist in England from John and Epstein down, but he has a shopping bag too, and Gossip Collins and Gossip Fennymore compare their pieces of beef, each a little afraid that the other may have the better bargain.

There was a time when the only places Taffy or I would have met were the Savage or Arts Clubs, or the Cafe Royal. Imagine

our faces then if we had been told to go to the butcher's and pick up the joint. We take a glass of stout together, as two busy house-husbands are entitled to in the middle of Saturday's shopping.

SO IT GOES

At the greengrocer's I find a Paymaster Commander. He is shrewdly weighing the merits of two cauliflowers. He prides himself on his shopping prowess and whispers to me: "They've fine lobsters on at Smith's."

"Have they, b'jove," say I, "thanks a lot for the tip."

And so it goes. And the wives, they have a million things to do. Believe me, a man would have to be stony-hearted and selfish not to lend a hand.—A recent B.B.C. talk.

1917 and 1942

By WICKHAM STEED

IS there any likeness between this year 1942 and 1917? History never repeats itself, say "scientific" historians; and philosophical controversy is full of warnings against arguments from analogy. Yet I sometimes wonder whether future historians will not find a striking likeness between 1917 and 1942.

Then, especially toward the close of 1917, Germany appeared to be on the top of the wave. Its crest seemed to be sweeping her irresistibly onward to total victory.

But by November 1918 Germany had fallen into the trough of the wave and was engulfed. Are the United Nations entitled to see in this precedent an omen?

OUTLOOK TO-DAY

To-day the Allies are stronger, not weaker, than they were in 1918. Soviet Russia, united as Tsarist Russia was never united, is strong and indomitable; though her armies, like those of France up to June 1917, have been bearing the brunt of the struggle on land.

On sea, the silent pressure of the British and—since December 1941—of the American blockade is helping to strangle the German beast. Under the hail of British bombs, soon to be increased by more American bombs, the Rhineland and Western Germany are devastated regions. Great British, Canadian and American armies, supported by air forces stronger than those of Germany, await impatiently the hour to strike the final blow.

That hour will come. This war against the German-Fascist beast is one war, indivisible, as victory and the peace must be.

Yet I see to-day a difference between 1917 and 1942. It is that the outlook twenty-five years ago was far blacker than the outlook now is. In other respects I think the analogy between 1917 and 1942 close enough to warrant belief that 1943 will make the Germans look back on 1918 as a comparatively happy year.

Axis too Late to Avert Biggest Blow

By H. C. FERRABY

IT is now clear for everyone to see that the German Supreme Command failed to make preparations in time for the interception of the great expedition that the United Nations sent by sea to North Africa.

The plain fact appears to be that no great concentration of U-boats was available for attack on the expedition at the start of the operations. Even more surprising was the inactivity of the Italian battle squadron. Italian naval bases are within easy striking distance of the Algerian coast.

It was evident from the outset that the naval strength of the United Nations had been perforce divided into separate forces, a tactical situation in which no Admiral likes to find himself.

The Italians had available as far as is known at least four modern 35,000-ton battleships—the new *Impero* and *Roma* with the *Littorio* and *Vittoria Veneto*—and two, possibly three of the older battleships of the *Cavour* class. No public reference has been made to any movement by this powerful battle squadron.

Taken all round, the Axis reaction at sea to this big offensive by their antagonists was deplorably weak. Freedom of the sea was conceded without struggle in the crucial 48 hours of the opening of the campaign.

FORCED TO DANGEROUS TACTICS

Some effort to restore the position was bound to be made subsequently. Almost certainly a rapid assembly of U-boats into the Straits of Gibraltar and the Mediterranean must have commenced.

Obviously they had to set about making an attempt to interfere with the free use of the new sally ports now taken over by the United Nations. Two consequences must follow: a lessening of the pressure on more distant convoy routes such as that round the Cape of Good Hope and the exposure of U-boats to a concentrated attack of hostile patrols confined to the waters.

It will have been noticed that throughout this war German submarines have avoided narrow seas such as the English Channel and the Irish Sea and the approaches to the south of Ireland. Modern anti-submarine devices are particularly deadly in such an area.

Now because they were "too late" in the first week of November the U-boats will have to give battle under conditions that are unfavourable to them from the start. The change that has come over the general picture of the battle of trade-routes by the successful move into the Mediterranean is startling. It is perhaps more important in its effect on the naval campaign than it is on the future of the land campaign. Success at sea is and must remain the key to the ultimate success of the whole war and the Nazis were "too late" to avert the biggest blow to their sea campaign that has yet been struck.

Position in the Pacific

THE position in the Pacific in December 1942 wears a very different aspect for the Japanese than did that which arose immediately after Pearl Harbour. They have gained vast territory as they planned but they have had their naval strength reduced by half.

The American navy has recovered from its fractured limb and moves again in full strength whereas the Japanese resources are not great enough to replace all the lost aircraft-carriers, cruisers and destroyers that have been expended during the year on glittering adventures. And the harbours of Singapore, Sourabaya and Manila are static. They can play no part in a sea struggle round the Solomons.

The Japanese grasped the shadow of land conquest and find themselves threatened with the loss of that sea control which is the sole defence of an island power.

The year's naval operations in the Pacific began with a spectacular success for the air weapon. Pearl Harbour was soon followed by the destruction of two of Britain's capital ships off Malaya. As the American fleet recovered its balance, the two remarkable battles of the Coral Sea and Midway added to the historic achievements of the air weapon though success then went to the other side.

But recent weeks have shown that surface ships are still the ultimate arbiter in a dispute for sea passage. The three battles of the Solomons since the middle of October have been naval fights in which the air weapon played a part not more important than that of the gun or the torpedo.

The story of those engagements must give pause to any who are asked to believe that air power and not sea power is the decisive element in an oceanic war.—The *Manchester Guardian*.

Diary of the War

ENGLAND AND GERMANY

11th Dec.—It was revealed that Hitler had begun widespread preparations to defend the west-coast of Europe against a possible invasion.

12th Dec.—The Royal Air Force attacked enemy shipping off the Belgian coast.

All prisoners of war who had been shackled in Britain and Canada were freed from the shackles.

Long-range guns on both sides of the Channel were engaged in a duel. British guns opened first.

13th Dec.—There was a little enemy activity over the coastal areas of north-east England.

INDIA, BURMA AND CEYLON

11th Dec.—Speaking at a public meeting at Cuddalore, South Arcot, His Excellency Sir Arthur Hope uttered a warning that an attack may be made on India and that a few Japanese may come by air.

12th Dec.—Japanese aircraft raided Chittagong. Slight damage was caused. The Royal Air Force destroyed three of the raiders.

13th Dec.—United States planes raided Rangoon. A direct hit was scored on the dock.

Mr. William Phillips was appointed American Ambassador to India.

The Royal Air Force raided Mandalay and Naba, north of Mandalay.

A 8,000-ton German freighter carrying valuable cargo, scuttled herself in the Indian Ocean when intercepted by Allied naval forces.

British shipyards, launching merchant vessels with all possible speed, are now producing more than twice as many ships in three months as in the last quarter before the war. Widespread use of pre-fabrication has helped this speed-up, and welding instead of riveting is saving time and steel. A 10,000 tonner now gets its last coat of paint only 5½ months after the keel laying. Picture shows: A worker "getting down to it" with a pneumatic riveter.

Two enemy ships were sunk in the Channel.

14th Dec.—United States aircraft raided Rouen.

UNITED STATES OF AMERICA AND THE ATLANTIC

11th Dec.—Mrs. Roosevelt suggested in a broadcast the creation of a volunteer women's land army to augment America's agricultural man-power.

13th Dec.—The United States Navy took over the Elk Hills oilfields in California.

14th Dec.—It was announced that the first wooden military transport plane was rapidly nearing completion.

15th Dec.—The Royal Air Force attacked the Japanese aerodrome at Magwe.

16th Dec.—The Royal Air Force bombed the Japanese occupied villages in the Kaladan and Mayu river in Burma.

A rousing reception was accorded to General Wavell in Colombo.

ITALY, AFRICA AND THE MEDITERRANEAN

11th Dec.—Turin was again bombed. Many buildings were hit.

Both sides in Tunisia speeded up preparations for new large-scale operations.

There was intense air activity over the El Agheila front.

It was reported that representatives of industrial concerns led by Senator Pirelli and Count Volpi were attempting with the help of the King of Italy to win over the army.

12th Dec.—Axis forces launched an attack in the direction of Medjez El Bah. A number of enemy tanks were destroyed.

13th Dec.—The Royal Air Force attacked Naples and Turin. French forces occupied Bir Hakeim. Mr. Stimson, Secretary for War, U.S., revealed that Allied operations in that Allied operations in Tunisia were successfully proceeding "about a month ahead of schedule."

An Axis freighter was sunk by the Greek submarine *Papanicolis*.

14th Dec.—An Axis convoy was attacked in the Mediterranean and an armed merchant cruiser was sunk.

According to the German News Agency, "the attack of the British Eighth Army against Rommel's forces began" in El Agheila area.

As the result of Royal Air Force raids, it was disclosed that 5,772 houses were destroyed in Genoa and 161 were destroyed and 3,200 damaged in Turin.

Enemy efforts to infiltrate in the neighbourhood of Medjez were stopped.

15th Dec.—In the battle of El Agheila, Rommel was thrown out and he retreated. Allied aircraft pounded the enemy troops.

The French troops captured an important position west of Sidi Bousid in Central Tunisia.

The administration of Madagascar was handed over to General de Gaulle.

16th Dec.—German troops retreated 40 to 90 miles west of El Agheila. British army moved into El Brega.

RUSSIA AND FINLAND

11th Dec.—The Germans brought in reinforcements to the Central Front. German counter-attacks were beaten off in Stalingrad.

12th Dec.—Russian army broke through the enemy lines near Lake Ilmen.

13th Dec.—An important German base was captured on the left bank of the Don, north-west of Stalingrad.

14th Dec.—The Nazis launched strong counter-attacks in south-west of Stalingrad and east of Velikie Luki.

15th Dec.—There was severe fighting in Kotelnikovo area. The Germans were on the defensive in the Central Front.

NEUTRAL COUNTRIES

12th Dec.—Rioting broke out in the streets of Teheran. Troops fired on the demonstrators.

SHIPPING

13th Dec.—The United States' former liner *President Coolidge* was sunk recently in the South Pacific.

The British mine sweeper *Cromer* was lost.

15th Dec.—The British destroyer *Penylan* was lost.

VICHY AND OCCUPIED COUNTRIES

11th Dec.—Forty-nine tons of gold were taken away by the Germans from the vaults of the Bank of France.

THE FAR EAST

11th Dec.—Gona was completely cleared of Japanese forces.

12th Dec.—A Japanese counter-attack collapsed under Allied fire in Buna.

Severe fighting was in progress in Western Yunnan on Chinese-Burmese border.

Admiral Lutzow, official spokesman of the German navy, broadcasting from Berlin, claimed that Japan was "satisfied" with her Pacific conquests and contemplated no further conquests.

13th Dec.—South of Somada, repeated Japanese counter-attacks were repulsed. Six enemy aircraft were shot down over northern Solomons.

14th Dec.—A Japanese destroyer was sunk and seven others were damaged off the Solomon islands. Japanese bases at Lae and Salamana were raided by Allied aircraft.

15th Dec.—Japanese positions in Buna were shelled.

16th Dec.—Allied troops captured Buna in New Guinea. The Japanese landed troops north of Gona.

"KING'S FAIRY AIR FORCE."

The Times of India Press, Bombay, have published a book entitled "King's Fairy Air Force" by Mrs. Dart, an exhibitor of the Royal Academy, with a foreword by Her Excellency the Marchioness of Linlithgow. The proceeds of sales of the book go to Her Excellency's Silver Trinket Fund and the first edition has been produced free of charge by the publishers. The pictures in themselves are, in Her Excellency's words, "a delight and the fact that every copy sold goes to provide comforts for our troops, Indian and British, as well as ambulances for the sick and wounded should make a special appeal to us all, men and women." The book is priced Rs. 5 and is available with all booksellers.

STERED No. M 4345 NEW YEAR SPECIAL NUMBER

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV FRIDAY, JANUARY 1, 1943 No. 16

H.E. SIR ARTHUR HOPE, Governor of Madras
(A New Year message from His Excellency appears in this issue)

FOURTH New

H.E. SIR ARTHUR

His Excellency the Governor of Madras
for the New Year issue of the

January 1st, 1943, will be the fourth New Year's Day of this world-wide war.

Looking back on the year 1942 we have every reason for sober confidence in our ultimate victory.

The year started with serious reverses. In the East, the loss of Malaya, the Philippines, and the Netherlands East Indies, followed by that of Burma, brought the war to the frontiers of India. In Russia, the Germans occupied the Don Valley and part of the Caucasus, and in Africa Rommel drove us back almost to Alexandria. But in the last few months the tale has been very different. The Germans have met with a decisive reverse at Stalingrad, and are left to face the rigours of a second winter in Russia. We have won a great victory in Egypt, smashing Rommel's army and driving him out of Cyrenaica also. At the same time American and British forces, now supported by the resurgent French, have gained possession of all West and North Africa except Tripoli and part of Tunisia, which may soon also be in our hands. In the East, the Japanese have suffered heavily in New Guinea and the Solomons, and their fleets have repeatedly met defeat.

These successes should not induce in us a feeling of complacency. As Mr. Churchill said, they are not the beginning of the end, but the end of the beginning—the end of eternal defensive fighting and the beginning of the Allied offensive. Let them rather spur us on to greater efforts to hasten our final victory.

Year of the WAR

HOPE'S MESSAGE

has kindly sent the following special message

MADRAS WAR REVIEW :—

Here in India much of our thought and energy has lately been diverted to combating the forces of disorder wilfully let loose upon the country by those who thereby do so ill a service to the cause of human liberty which they profess to admire. Had these forces not been promptly quelled, India would soon have fallen victim to Japanese invasion, and not only political liberties, but education, justice and personal freedom would have been ruthlessly crushed beneath the tyrant's heel, as they have been in Burma and Malaya, and as they will remain until our forces with ever gathering might come to liberate these countries once more.

Let it therefore be the duty of every patriotic citizen of this country to do all he can to quell riot and disorder wherever it may rear its ugly head, and to devote his energies to mobilizing the people whole-heartedly behind the war effort, that the cause of liberty may triumph and the curse of Nazi tyranny and Japanese aggression be abolished for ever.

Arthur Hope.

Governor of Madras.

1943

WHITHER INDIA?

By Capt. G. T. B. HARVEY, Director of War Publicity

TO-DAY we look into a New Year, into a Piece of the Future. Crystal-gazers are probably finding the prospect of New Year itself rather opaque—"visibility poor," as our jargonesque communiqués put it. We pray leave here to consider 1943 rather as a Piece of the Future, a piece of India's future, pregnant with splendour undreamed of, or misery untold, according to her preparedness for that future. In doing so, we have the temerity to ignore the War except to assume that comparatively early in the future with which we are concerned the Allies will have won it. What we who live in India should attend to, and attend to now, is the winning of the peace. Our New Year message therefore is an ancient and classical one, "Gnothi seauton" for in India to-day the necessity for "Knowing ourselves" is rather painfully obvious.

THE perils of neglecting to classify and deal with the intellectual, social and economic problems arising from the last war have been terribly exemplified for Britons in the last three years. Will the policy of drift which served Britain so badly, do for post-war India? We suggest that even as the war proceeds, this country sets out on a great journey. She *must* know where she is going, and war or no war, she must set about determining the direction and speed of the adventure which is upon her.

"Think, Man, Think!"

HERE are some of the knots to be unravelled, some of the mines to be cleared:—

Rapid industrialization has provided a long list of evils in many a country before now. How can India avoid those evils?

How does a Free India intend to orientate herself, internationally?

A country's economic problems are, generally speaking, either agricultural or industrial. How are the widely conflicting interests of the classes so engaged to be resolved?

More than a million Indians are now in military employment. This number will largely increase. Most of them will have to become civilians again. What is India going to do for the men who have preserved her safety and honour when she ceases to pay them to fight?

SUCH are some of India's internal problems. There are plenty of others which, though more abstract, must affect the mentality and outlook of both Government and People in a Free India, e.g. :—

Is World Federation practicable, and if so, how is it to be achieved?

We have with us the rump of the League of Nations. Millions of people want the League to be revived. How are we to set about it?

We hate both the practice and the ideology of our enemy—the Axis Powers—while we are fighting them. What should be our attitude, or the attitude of the United Nations, towards Germany, Japan, Italy, Vichy France and the rest of Hitler's satellites after the war?

Scientific inventions seem to be the arbiters of our destiny to-day. They have almost become the masters of men. How is mankind to regain control of the production of armaments and other lethal or destructive agencies and all that they aim at and imply?

WE do not suggest that, until peace has been declared and life takes new shape, definite or final solutions can be devised for these problems, but the trouble is that once fighting ceases, they will descend with such rapidity on India and the world, that those whose minds have not been prepared in advance will inevitably find it beyond their power to contribute to their solution.

SOME may suggest that in our catalogue of problems we have omitted one which is nearest and most obvious, viz., the constitution of this country. We have deliberately done so. In the present atmosphere an impartial study of so highly controversial a subject seems well nigh impossible, so raw are tempers and so chaotic are party demands. That is why we have limited our thesis—being convinced of two fundamentals; first, that when peace is declared, India will be free and independent; secondly, that even if the legal details of that free and independent polity cannot at present be advantageously debated, all the other subjects we have mentioned, can.

Research Organization—A Design for the New Year

IN this submission we are inspired and upheld by the prescience and energy of the National War Front, that now great organization which gives daily proof of its devotion to this country's best interests, and its determination that these shall not be overlooked for want of public presentation. There is in course of erection in the capital, a Research Organization composed of Indians eminent in most of the technical aspects of the problems suggested above—in international law, in fiscal matters, in political economy, in sociological problems, in education and so on—which will have as its task the building up of a great Central Library from which to disseminate authoritative advice on the burning questions of the time to hundreds of Groups of thinkers, talkers and writers all over the country. These Groups are to be formed of men and women of intelligent patriotism who will themselves receive, debate and propagate specialised material on every subject on which they seek guidance. The idea is that in every centre in every province, where a group of people can be got together to see India big, to grasp the vision of India's potential mightiness, and to grapple with the puzzling and often distressing problems which must inevitably befall her (and to this end set aside all minor considerations arising from religion or caste or political affiliation), they should be able to call upon this Central Research Organization for the most up-to-date pronouncements, theses, books, blue-books, legal instruments, etc., etc., and even for trained visiting lecturers, without fee and without delay.

WE have not the space for details of this admirable design. All we do in this New Year Editorial is to commend it to the attention and encouragement of every thinking man who intends to continue to be "proud to be a citizen of India."

Resolutions

By The Hon'ble Mr. Justice S. WADSWORTH

WE are not concerned now with the sort of resolutions bred by political conferences with their subjects committees, party intrigues, type-written eloquence and hot air. Something nearer the mark is the watch-night service with its midnight meditation on past shortcomings and its stern resolves not to repeat those errors in the coming year. Let us ignore, for the moment, the sneers of the cynic who reminds us that the path to hell is paved with good resolutions; for so is the path to heaven. It is good for a man, at the end of the year, to have a moral stock-taking and settlement of accounts, so that he may start the new year with a clean sheet and an honest resolve that there shall be no blots on the sheet in the next twelve months.

And what is good for the individual is salutary for the nation as a whole. For the moment, let us stop blaming each other for the things that have gone wrong, and let us show our national solidarity by reciting together that "we have done those things that we ought not to have done and have left undone those things that we ought to have done." And having made a common confession of error, let us make a common resolution to do better in 1943.

THE PAST YEAR

Heaven knows, there have been failures enough in 1942. The first nine months of the year seemed to be one continual series of reverses, military and political. Now that the magnitude of the loss caused by Japan's dastardly attack on Pearl Harbour is known, the reason for our military reverses in the East is not far to seek. They are almost entirely due to the loss of command of the Eastern seas; and as the process of regaining this command advances, so will the enemy be driven back on land. But the speed of this recovery will depend on the smooth working of the forces behind it and in this we can all help. Whatever we can do to maintain morale, to check the baneful activities of obstructionists and of their poor relations, the non-co-operators, whatsoever we can do to help recruitment and to keep up the enthusiasm of the men recruited, that we must do unceasingly.

One hears so many stories of young men anxious to join the forces, who are kept back by the dissuasions of over-fond mothers or over-anxious friends. The war for freedom cannot be won without taking risks, and those who are not prepared to do their part in the fight do not deserve to win the prize.

Think of the crores of Chinese men and women who have suffered and died during these last five years rather than submit to a brutal and licentious invader. This is not the time to stay at home and save your skin; if you do so you are asking for your home to be bombed with all inside it. Our young men must go forward to meet the enemy and drive him from our borders, or we shall never have real peace or lasting liberty.

FAILURE AND FUTILE TALK

In the sphere of politics too, the year 1942 has been a year of common failure, unredeemed by the closing spell of success which has brightened the military outlook. There has been much futile and unedifying recrimination as to the causes of this failure. Each party is convinced that the other is solely to blame; no party seems able to put the common cause first or to surrender its sectional interests for the good of the nation as a whole.

This is not the place for political discussion; but it is both the time and the place to impress upon the people of India that a spirit of mutual mistrust and suspicion, of sectional selfishness and refusal to compromise, is calculated to imperil that considerable freedom which the people of this land already enjoy and to banish to a distant future those greater liberties to which we all aspire. Is it too much to hope that in 1943, realizing the deadly peril which threatens India along with all freedom-loving people, all parties will join together and resolve to do everything in their power to help the common cause of the freedom of the world? Surely it is unreasonable to say: "I will not help those who are fighting for the freedom of the world, unless and until I am given that precise degree of liberty and power which, in my personal opinion, is fitting for the community to which I belong."

MINORITIES AND LIBERTY

All liberties are the result of compromise. No constitution, except perhaps that of the fascist state, is entirely satisfactory to any one party. Party tyranny, sooner or later, becomes a personal dictatorship, with all the evils which have been so manifest in Germany and Italy. Minorities are entitled to liberty just as much as majorities, and no constitution which does not give them a reasonable degree of protection can afford any real guarantee of national freedom. The task of

evolving a satisfactory constitution for India is one of stupendous difficulty, even when approached in a spirit of the utmost goodwill. To evolve a satisfactory constitution in a spirit of hostility and mutual distrust is frankly impossible. It is therefore the duty of all men of goodwill, who love their country and the cause of humanity, to do everything within their power, during the coming year, to put an end to the spirit of rancour and faction which stultifies the efforts to those who seek India's good.

What a blessed day it would be for India if on New Year's day, men of all parties—princes and bureaucrats, Brahmans and outcasts, Congress and Muslim League—would meet together and solemnly vow before God that, from this day forth, they and the parties which they represent would support, with all their might, any proposal which was for the good of India as a whole, notwithstanding that it might adversely affect the party to which they belong.

It is, perhaps, too much to hope that the coming year will be unmarred by military setbacks or political failures. But we can at least resolve that, so far as we personally are concerned, there shall be no effort spared which can help the common cause. It is in the interests of humanity in general, and of India in particular, that Germany, Italy and Japan be utterly and speedily defeated and that the doctrine of hate and oppression by which they are inspired, be finally replaced by a saner political theory. When that final victory will come, we do not know; but that it will come sooner or later, we fervently believe.

NEW YEAR SPECIAL NUMBER

WAR OF SURPRISES

This is a war of surprises which has confounded the prophets and wiseacres times without number. We may be nearer peace and victory than any of us realize; remember that in 1918 victory came with dramatic suddenness. On the other hand, we may well have to endure long months or years of toil and strife and blood and tears. But whether the fight be long or short, it has to be fought to a final and victorious conclusion.

In the absence of victory, the world is doomed. It is no good flirting with the notion that India can be free when the rest of the world is enslaved. India could never maintain her freedom in a world in which aggression had triumphed. The freedom of India postulates an ordered and civilized world. It could never exist in the midst of empires ruled by international gangsters. How long would India retain her liberties if Japan were rampant on the Irrawaddy and Germany victorious on the Euphrates?

INDIA'S HOPE

Whatever be your political views, if you love your country and desire for her a free and orderly existence, you must join forces with those who are fighting for the common ideals. You may not agree with all the views of Mr. Churchill, any more than Mr. Churchill agrees with all the views of Mr. Stalin. When thieves attack the flocks, all parties unite to drive them away. There can be no parties in the hour of common peril.

The only hope of India lies in the victory of the United Nations. For that hope every true Indian, whatever be his political or religious faith, must be prepared to fight, even unto death.

Tunisia: The Fighting French

♦ ♦ ♦

"The battle is being fought in Tunisia. A renowned French military chief, General Giraud, of whom I can testify that the Government of the Republic had deplored at the worst moments of the Battle of France that he could not be appointed the Generalissimo because he had fallen into the hands of the enemy, has begun to lead into battle part of the troops of North Africa. These troops have already obtained successes. Their comrades, who on land, at sea and in the air resumed the fight at different dates, acclaim their co-operation and their glory and desire that all those who bear the arms of France shall be merged, as they should be, in one army, one navy and one air force."

—GENERAL DE GAULLE in a broadcast on December 28, 1942.

Out of the Dark

By Rao Bahadur M. C. RAJAH, M.L.A., *Regional Leader, National War Front*

ONE great change in the attitude of the people towards the War brought about by the National War Front Movement inaugurated by His Excellency the Viceroy a year ago, is the defeat of defeatism. Nobody now indulges in pessimism about the final outcome of the War. Nobody wallows in the Slough of Despond, not even the propagandists of fear.

A great difference, one must have noticed, in their respective approach to the War problem in India between Jawaharlal Nehru and Mr. Gandhi in their discussions about the position the Congress should adopt in regard to the War, was that all Nehru's thoughts about the War prospects ran towards the Allies winning the War; whereas Mr. Gandhi's thoughts went in the direction of the Japanese coming to India and occupying it. That was the time when the peril from Japan was most grave. The Congress formula which Mr. Gandhi devised, namely, "passive non-co-operation towards the enemy," apparently very peaceful and friendly towards the present Government, was based on the subtle implication that the Japanese would land in India; whereas Jawaharlal, a straightforward thinker that he was, had no doubt or misgiving about the ultimate victory of the Allies, comprising Russia, America, China, Britain and India, though at the time the fate of nations was hanging in the balance. In each case the wish was father to the thought. Mr. Gandhi thought that when the Japanese came to India he would have the opportunity of going forth, like another Pope Gregory, to meet the invaders at the gate, and applying his favourite mantram of conquering by peaceful methods, appeal to them to cease fighting and allow them peacefully to occupy the country, giving to him and the Congress the right to rule over the people under their sanction.

That all these hopes and calculations are being foiled is patent to every one who observes the trend of events and the developments of the War. Victory is no longer merely a matter of faith or hope, but a conviction based on facts, of friend and foe alike. This is partly due to the National War Front Movement which has succeeded in silencing those who were more or less openly gloating over the Axis successes and Allied reverses. No doubt President Roosevelt and Premier Churchill are never weary in telling that the way to victory is yet long and requiring

RAO BAHADUR M. C. RAJAH, M. L. A.

the utmost exertion and sacrifice; but our arrival at the winning post is certain. The darkest hours of the night are passed. Light is glimmering in the eastern sky. The day is dawning. We are getting out of the dark.

Say not the struggle naught availeth,
The labour and the wounds are vain,
The enemy faints not, nor faileth,
And as things have been they remain.

If hopes were dupes, fears may be liars;
It may be, in yon smoke conceal'd,
Your comrades chase e'en now the fliers,
And, but for you, possess the field.

For while the tired waves, vainly breaking,
Seem here no painful inch to gain,
Far back, through creeks and inlets
[making,
Comes silent, flooding in, the main.

And not by eastern windows only,
When daylight comes, comes in the
[light;
In front the Sun climbs slow, how
[slowly!
But westward, look, the land is bright!

—Special for Madras War Review

SYSIPHUS OF THE FAR EAST

PROSPECT AT HOME

Such is the prospect of the War in the world at large, but what is the prospect at home in India? The advent of the Allied Forces in India and their operations from the Indian base in air and ocean and their readiness to fight on land, if necessary, is like a kind of insurance policy for keeping India safe from outward aggression. I am afraid we are not sufficiently appreciative of what is being done for the people by the military, both Indian and non-Indian—by the Indian soldiers in the Middle East and Northern Africa and by British and the American Forces stationed in India. What is being done by the Indian Soldiers abroad is well known and is becoming one of the brightest chapters in the history of the War. What is being done by the British and American soldiers stationed in India is not so well known at present, and it is good that their activities are not published while they are in progress, but when everything is done and finished, I am sure it will be seen that they have not been here in vain and that they are a great power, making for security and inspiring confidence and encouragement; friends in need and friends indeed.

We are fortunate in having at the head of affairs in this country two men like Lord Linlithgow and General Wavell who are watching developments every moment and directing and ordering operations in every department, civil and military, economic, industrial, political and administrative, which bear upon the efficiency of the organization for

winning the war and ushering in a constructive peace. We are fortunate too in having in our Presidency Sir Arthur Hope as Governor, who with his well informed Advisers, is not only maintaining Law and Order, but organizing the popular will for winning the war by enlisting co-operation and support in every form of war work.

What will be the result of all this—of what is being done to win the war and of the sure victory in the end—on the life of the various communities which inhabit the country? I say various communities advisedly, because there is no use in speaking of all these communities as one. Much harm has been done in the past in postulating a unity such as does not exist. That there are several features in common between communities will not itself make them a united whole. The differences have also to be taken into account, and in practical life these differences tell, and form determining factors. This is specially so in the economic sphere. The fact that all men have stomachs does not mean that they have one common stomach, and that if one person eats, the hunger of all others is appeased. What is wanted in the country at present is not unity but harmony—not a superficial unity which could be advanced as an argument for wresting power from those who have wielded it on the whole with benefit for the people, but what is wanted and is wanting is *harmony* between the various communities which will secure their co-operation for common ends by securing for them justice and fair play in the

distribution of that power. Once this is secured, harmonious co-operation will follow which after long practice will result in what is called political unity.

FUTURE OF THE COUNTRY

The great question which weighs heavily on the minds of thoughtful persons in India at the present moment regarding the future of the country is not whether the British are willing to part with power—that, they have said over and over again, they are not only willing but anxious to do, and only those who are badly in need of a political slogan will pretend not to believe it—but whether they will divest themselves of the responsibility which has gone with the possession of power towards the weaker communities, and hand them over to the tender mercies of the stronger, this weakness and the strength being in respect of cultivated intelligence and hereditary social power and prestige. There is a genuine fear in the minds of the Depressed Classes in India as to whether, when victory comes—as come it must and come it will—they will be treated justly and sympathetically as the British Government have hitherto been trying to do in spite of difficulties placed in their way by, and the silent opposition of, Caste Hindus, who will form the majority in any general electorate which may be set up. Past experience shows that without British supervision and overhead authority, these classes will not only be sadly neglected but subjected to various restrictions and difficulties in pursuance of the Caste Hindu policy initiated by Mr. Gandhi of absorbing them and depriving them of that political independence which is essential for their intellectual progress, social efficiency and economic prosperity. The serfdom of the past is being translated into social submission and may yet be converted into intellectual and political repression. It is the British Government who have helped us so far to come forward and hold up our heads against those who oppressed us for ages. Their democratic instincts and their sense of justice and fair-play, however much restrained and obstructed

NEW YEAR SPECIAL NUMBER

in their expression by economic and political considerations, have prompted them to do the best they could for these classes in the past and would not allow them, I venture to hope, to sacrifice their interests in the future exigencies of so-called “constitutional” warfare. It is easy to say that their care and concern for these classes is prompted by unwillingness to part with power, the assertion of which by political parties is inspired by an eagerness to grasp power without correspondingly sincere sense of justice and fairplay towards weak communities.

THE DEPRESSED CLASSES

What in these circumstances are the prospects of the Depressed Classes who form a large and important section of the population? The prospects are not altogether gloomy nor altogether bright. A great deal depends upon the attitude which the British Government will take towards the demand made by other communities in the name of National Independence. The Government are pledged to the granting of full self-government involving their divesting themselves not only of all power but of all responsibility for the administration of the country. Fortunately they insist that the transfer of power could take place only with the consent of large minority and backward communities.

The question is whether they would stick to this essential condition in face of the pressure of financially organized and skilfully manufactured public opinion in this country and abroad by persons who have for ages practised domination over the voiceless and suppressed communities. Will the Government quiver before the accusation of insincerity and unwillingness to part with power hurled at them from all quarters of the globe—from America and China, not to speak of England and India. Will they betray these victims of age-long oppression out of fear and a desire to stand well in the eye of people who do not know, or knowing wish to grasp power for themselves.

PARTY FOR TOMMIES

TWENTY-FOUR “other ranks” of the American Army Air Corps somewhere in Southern India decided it was time they saw fresh faces in the Mess.

A LITTLE while later British troops walking about in the town were invited to board a couple of lorries. They accepted, a bit hazy as to what it was all about—until they walked into the Americans’ Mess to a wow of a surprise party!

HIGH TEA came first and then a football was produced. The efforts of the Tommies to teach the Doughboys Soccer and the Americans’ efforts to impart ideas of their kind of football led to a sort of British-American rugby that was at least novel and vigorous.

AFTER this, hospitality reached a new height with the appearance of English bottled beer which, in turn, paved the way to a free-for-all sing-song.

WHEN the Tommies left they had already decided on a return party and another attempt to prove that Soccer is really the best game after all.

MADRAS BOMBER SQUADRON

His Excellency the Governor of Madras has received the following message from the Commanding Officer, Madras Bomber Squadron:—

“All ranks wish me to convey our appreciation of Your Excellency’s message of greetings and good wishes which we heartily reciprocate. We are firm in our confidence that the coming year will see that day in sight when we may all join in celebration of freedom from strife.”

Two dangers lie ahead of the Depressed Classes. Both arise from ignorance—from two kinds of ignorance. One danger is from the ignorance of well-meaning idealists in the West and the other is from the ignorance and illiteracy of caste-ridden and priest-ridden people in the country who will constitute the Hindu majority in any general electorate. Caste is not an institution which has merely divided the people into numerous sections, each enclosed by walls of custom and superstition, but it has arranged them, tier over tier, in degrees of superiority and inferiority, inculcating an exclusiveness which breeds undue partiality on one hand and unjust prejudice on the other, and which is responsible for keeping down the so-called untouchable classes for centuries past. If those well meaning and ill-informed friends of India in America wish to do good to the people of the country, they would do well to depute a batch of competent detached social thinkers who would investigate the social attitudes and relations, objective and subjective, which prevail among the people of India, and which so powerfully influence their political actions and judgments. If President Roosevelt will send such a deputation who will spend sufficient time to move among the people and study social conditions existing in the country to-day and the disabilities under which the backward communities suffer, he will have taken the first step towards laying the foundation of a social and political structure which will endure for generations.

WHAT Mr. CHURCHILL SAID

Mr. Churchill speaking of the sufferings of the people overrun by Hitler in Europe states as the symbolism and message of the Atlantic meeting between him and President Roosevelt: "The tunnel may be dark and long but in the end there is light." The Depressed Classes of India have all along been dragging on in a long and dark tunnel with openings towards the sky only in certain periods of India's history, e.g., in the days of Buddha and Asoka, of Ramanuja, of Raja Ram Mohan Roy and Keshub Chandra Sen and Ranade and Dr. T. M. Nair and in the days immediately following the Montague-Chelmsford Reforms. It looked as if the Reforms Act of 1935 giving them separate electorate opened up the sky for them, but the Poona Pact to which they unsuspectingly gave their consent, shut them up in a political prison from which they have not yet emerged. It is their fond hope now that the Victory of the Allies will bring about conditions which will not only emancipate them from the thralldom of ages and thwart the attempts of those who wish to keep them in social and political subjection to them but release forces of freedom which will ensure their independence.

People talk of independence as if it is only for national groups and not as regards their relation to one another. They do not like to

think of it as applying to the relation of communities towards one another; an independence which lends itself to cheerful inter-communal co-operation but cuts across the domination of one community over another and the subjection of weaker by stronger communities. There is such a thing as communal exploitation leading to communal slavery and serfdom. It is to be hoped that these things will go so far as the Depressed Classes at least are concerned. It should be remembered that so far as the Madras Presidency is concerned the Depressed Classes have supplied the largest number of soldiers to the Army and that these men have done distinguished service in the war fields of Middle East and Northern Africa. It will be an ill-return for their self-sacrificing patriotism if on coming back from war front they find their position and that of their community which has sent them is not better than when they went forth ready to lay down their lives if need be in the cause of Freedom and Righteousness.

If the politicians are to have their way, these fighting men will be nowhere in the body politic. It is the duty of the British Government before they part with power to see that the saviours of the country from the aggressors, including Depressed Classes, are not subjected to the dictatorship of those who have stayed at home indulging in cynicism and discounting their services to the country. The Four Freedoms of the Atlantic Charter, though they owe their enunciation to a particular juncture in the war, are no doubt intended to be applied to all communities and all peoples. Their application should not be confined to nations but should penetrate into the social life of the people of all countries. The Depressed Classes of India in particular need freedom from poverty, freedom from fear, freedom from domination and freedom from religious degradation.

It is their fervent prayer that these four freedoms should be realised in the social life of the people of India.

CHINA—The New Year

"China is facing the New Year with the brightest future, militarily, politically and economically, but nevertheless with the hope that an Allied counter-offensive will be launched in the Far East soon."

Dr. K. C. WOO, Political Vice-Minister
for Foreign Affairs at a Press Conference
in Chungking on December 29.

Indian Youth and the New Year

By Sir MEVEREL STATHAM, C.I.E., I.E.S., Director of Public Instruction, Madras

I most sincerely wish the Indian youth of this Province, boys and girls, safety, prosperity and happiness in the coming year. It has been my privilege to spend more than half of my service in daily and intimate contact with the youth of this Province and I think that I can legitimately claim to know something of the outlook, ambitions and the difficulties of Indian young men and women. The war, which has now reached the shores of India, has naturally affected, along with all other members of the community, the Indian youth of this Province. During the year 1942, in particular, those young men and women who were under training for future careers have felt the strain and uncertainty of war-time conditions. The war, however brutal and destructive it has been, has, in many ways both temporarily and permanently, considerably altered the problems with which young men and women are normally faced. The war effort has come very near to the youth of this Province and the call for assistance in the shape of man power, monetary help and the upkeep of public morale has been answered by the young men and young women of this Province in the most stirring manner. We can and should be proud in the Madras Presidency of this response to the Nation's call. I think it is probably true to say that this Province has, in recent centuries, experienced much less of the horrors of war, both internal and external, than the more northerly Provinces of India and yet, in many ways, recruitment to all forms of war and Civil Defence work, financial support and many other types of assistance to the war effort have generally been as good as and in some cases better than similar efforts in other Provinces. I need not give details of recruitment, etc., since they have been published officially from time to time. But it is well known that the response has been good and has in many cases, I understand, been only limited by the needs of equipping and training all those who have come forward to offer their services. This response has by no means been confined to what are commonly called the 'martial classes.' Thousands of families who have never experienced service in the fighting forces or subsidiary services have sent their young men, and even their young women, to help to defend their country and to serve in what may be regarded, in many cases as a new and dangerous type of occupation. During my extensive touring of this Province I have learned with the highest admiration of how many young men, who would normally have

SIR MEVEREL STATHAM, C.I.E., I.E.S.

entered the professions, done clerical or teaching work, etc., have in the last three years volunteered for active service. My profession, the teaching profession, which might perhaps be the last to be expected to contribute largely to active service, has contributed extremely well to the services. Amongst the war technicians, for example, of which this Province has been training the largest numbers of any Province or area in India, a very large number of school teachers and of those who would normally have gone for teachers' training are to be found in war technician training centres. Again, the schools of this Province have sent large numbers of students to be trained for the Indian Merchant Service and the Indian Navy. There is also scarcely a college which has not a proud record of the number of its students who have joined the Army and the Air Force. I believe also that there has been no paucity of applications for the Civil Defence and Nursing Services. My own department has usually been considered to be more mighty with the pen than with the sword; but as head of the department I see no reason why I should not publicly announce my pride in the fact that out of approximately 3,800 subordinates (men and women), over 1,100 have as many as 2,300 close relations who

have joined the fighting services or the subsidiary services. These figures include over 1,000 in the Army, 120 in the Navy and 130 in the Air Force. No longer I think can it be said that the teaching profession as such is afraid of playing its part in the defence of its country. Even in the National War Front movement, after only a short campaign in a limited number of districts in this Province, I and my subordinates have enrolled up to date over 130,000 teachers and students. I regard this willingness on the part of teachers and students to take the National War Front pledge and abide by it as extremely significant of the attitude taken by the youth of the country towards the war.

HIGH MORALE OF STUDENTS

We have every right to be proud of the youth of this Province from another point of view. During 1942, Madras City and a number of other places, such as Vizagapatam, Cocanada and Cochin have experienced the difficulties consequent on evacuation and war scare. I am fortunately in the position of being able personally to bear testimony to the high morale of the students during many difficult months after January of this year. Nobody, I think, can escape the significance of the following facts. At Vizagapatam, where for various reasons the war scare was perhaps greatest, the girl students in the VI Form of the Government High School for Girls, a school situated right on the edge of the harbour, all sat for their S.S.L.C. Public Examination and all passed and became eligible for college study. This was the only Government High School in the Presidency to obtain a 100 per cent passes. Even after Vizagapatam and Cocanada had been bombed, all the students who had to sit for the Government Technical Examinations were asked whether they would like to take their examinations at mufassal centres and 75 per cent of the candidates elected to be examined at Vizagapatam and Cocanada themselves. All the S.S.L.C. candidates from Madras City were similarly asked if they would like to be examined at mufassal centres and over 75 per cent elected to be examined at Madras itself. The public knows that there was a natural anxiety with regard to the reopening of the colleges and schools in Madras in June and July this year. But in spite of that necessary and proper anxiety, the three women's colleges in Madras City had a larger enrolment on reopening than ever before and there was very little fall in the number of applications for admission to the men's colleges. At the Engineering College, Guindy, a college which is now working almost throughout the year, the rush for admissions, as far back as May, was unprecedented. It is all to the credit of the youth of Madras that the student population has so far stood up so well to the strain and anxiety in regard to the possibility of invasion and bombardment. Even in regard to

the War Fund the student population, which on the whole is very poor, has played its part. The Education department had collected by March 1942 Rs. 2.3 lakhs for the War Fund, most of which money was contributed or collected by the youth of this Province, including a sum of over Rs. 31,000 collected from college students.

ADVANTAGES TO INDIA

While the war has undoubtedly caused strain and suffering in India, there have fortunately been distinct advantages to India coming in the train of the war. These advantages will, I sincerely hope, be still further available in the coming year. It is the youth of the Province which has been making the most use of these advantages. Unemployment amongst young men has been very considerably reduced. Some of the new avenues of employment are obviously temporary, due to war conditions; but even these temporary avenues of employment have enabled young men to have a radically new outlook on employment and the type of work which they are willing to seek for. For example, the needs of war time industry and of war technicians training have obviously already permanently changed the attitude of almost all those who were not hitherto willing to consider artisan employment and manual labour of any type as form of careers for educated youths. On the other hand, the war has brought definitely many new and permanent openings for the young men of this Presidency. The Indian Army, the Indian Navy, the Indian Air Force and all the subsidiary activities of the fighting services will unquestionably continue after the war and provide avenues of employment, careers and adventures which were largely missing, particularly in South India, hitherto. Even the work of the security services, A.R.P., First Aid, etc., has given a big new incentive to what after the war may well be called social and civic services. The war has also given a tremendous impetus to the industrial development of India and I am sure that there are few people in India who do not believe that this industrial development will be of a permanent nature and will give ever-increasing opportunities to the youth of this country. War conditions in India have been responsible for the local production in India of innumerable manufactured articles which had hitherto been only or mainly imported from abroad. There are very few trades in India which have not been permanently affected by this development. To the older generation, who have experienced, particularly in my Department, the acute difficulties of finding suitable openings for young men and young women, the present conditions and future prospects are infinitely better than they have been for many years in the past.

SPIRIT OF SELF-DEFENCE

But the youth of South India has also been affected in an entirely different manner. We do not want the youth of this country to imbibe the Nazi spirit of brutal militarism and army domination but we do want and have always wanted the youth of this country to be imbued with the spirit of self-defence and the defence of their own country. In this sense the expansion of India's power to defend herself and the rapid and huge development of the Indian fighting forces are much to be welcomed and the Indian youth has demonstrated, by sending hundreds of thousands of young men to the fighting services, that this spirit is already a big force in the life and future of this country. No one believes more strongly than the fighting man that war is brutal and horrible; but out of evil there cometh good and no young Indian man or woman can serve in and go through a long and disastrous war without gaining the spirit of courage, endurance and self-sacrifice and these are characteristics which can endure after war into peace. I am not, for a moment, suggesting that these qualities were not with Indian youth even before the war, but obviously these qualities have become more prominent owing to the courage and self-sacrifice which the war has demanded.

It should not, I think, be forgotten that in considering the position of Indian youth in war time and in the future, the part that young women have played and will play in future has been and is of immense importance. The women of India have always possessed to the full the spirit of endurance and self-sacrifice, but the war has necessarily added enormously to the need for endurance and self-sacrifice amongst the women who have sent their husbands, their sons and their brothers out in the defence of India. I am confident however that these sacrifices will not be without avail in the years to come. I may perhaps be forgiven in quoting in this connection from a speech of my own delivered to the Women's Educational Conference held in Madras in October 1941 in which I stated, what I most sincerely believe, that "The modesty, unselfishness and self-sacrifice of the women of India are historic and when to those qualities the quality of an educated outlook is also added I am convinced that many of our problems in India, far outside the educational sphere, will be solved and happily solved."

Perhaps, however, the greatest benefit that youth is enjoying at the present time, and will, I believe, enjoy in future, comes from the spirit of comradeship and unity which can sometimes only be achieved by common perils and common sufferings.

MANY PROBLEMS TO FACE

There will obviously be many problems to face in 1943 and afterwards, even if final victory comes during 1943 itself, as well it may, but I think we can confidently go forward in the hope and the belief that on the whole the prospects of the youth of our Province for the future are bright and the possibilities great. As I have been trying to show, it is an ill-wind which blows nobody any good. Whether in peace time or in war time, I have been striving to get under instruction all the boys and girls of all communities in this Province and I am quite sure that after the war large classes of parents, who hitherto have been difficult to persuade as to the advantages of universal education, will have an entirely new outlook on the value of education. We do not have to go outside India for a proof of the basis for this confidence. After the last war there was an immense and rapid progress in education in the Punjab, particularly in rural areas, and this was directly traceable to the return to the Punjab, with a fresh outlook, of hundreds of thousands of war-scarred warriors to whom education and the openings to be reached through education meant something quite different to what it did in the past.

All those who are interested, and they are many, in the welfare and happiness of the youths of this country will, I am sure, join me in offering to the young men and young women of this Province all good wishes for 1943.

Victory and Democracy

Victory in war is essential to our life as a nation, and as free individuals, and every effort from every man and woman in the country is required for its achievement. Nevertheless, our future depends also upon our democratic system which operates through Parliament, and people who believe in the same principles and have the same objects in view must co-operate to achieve their purpose.

—MR. CHURCHILL, in a message
to the Scottish Unionist Association
Conference.

A Critical Year for War Charities

By Mrs. G. G. ARMSTRONG, Hon'y. Secretary, Joint War Charities Committee

SOME people have objected to the term "War Charities," on the ground that what we are able to do for our defenders, whether in the way of supplies to hospitals or amenities for the fighting forces, or of contributions towards supplies for prisoners of war or towards the maintenance of the families of those killed in action, are not "charities" at all, and that it is the right of those who are fighting for us to expect that we as civilians shall do our utmost for them in all these ways. Of course, it is; but still these are all "charity" in the proper sense of the word, which really means love and affection, not a condescending distribution of alms, a bad corruption of the true meaning. We need an omnibus term to cover all the many ways in which we may show affection and gratitude and sympathy for those fighting in the war and those injured by it, as distinct from those other contributions towards planes and armour for winning the war; and it is difficult to think of a better and more comprehensive term than War Charities.

But the very fact that our support for War Charities springs from affection and sympathy for those on whom the burden of the war has fallen more heavily than on ourselves, may mean that 1943 is going to be a critical year for such charities. We are all human, and so much of our sympathy depends on our imagination being roused; and when it is roused, it so very easily goes to sleep again. At the beginning of the war, there was a great desire to help, but no one quite knew what to do about it; nothing very much seemed to happen, but the desire to give what personal service was possible led to the formation of a great many working parties to make hospital supplies and knit warm garments, in preparation for no one quite knew what. Some people grew discouraged by the long time which elapsed before there appeared to be any definite object for this work; many gave it up and said they would not go on working at things which just went into stocks; but those who went steadily on without wanting to see immediate results, have been triumphantly justified. Without the steady work of all those months, which made so little appeal to the imagination, we could never have been ready, when the war did suddenly come to our very doorstep, with large stocks of hospital linen all ready for distribution where they were needed.

REAL TEST OF CHARITY

There was another appeal to the imagination in the Christmas Gifts Scheme at the end of 1941, for gifts to our troops overseas; the

appeal was sent out all over the Presidency and the response was excellent. But here again, the real test of charity comes when a single isolated appeal to the imagination has got to settle down to regular everyday work. Ever since April 1942 the troops have been with us; our defenders are here, in the Presidency itself, ready to fight for us either here or overseas, as the need may be, and having a very uncomfortable time of it while they are here. A burst of Christmas charity, just when we feel worked up to it, will not do; it is our business, as His Excellency said in his appeal for the Amenities for Troops Fund, to make things as little uncomfortable for them as may be, and this is a full-time job. They want canteen supplies, not just when our sympathies are touched, but all the time, even when we don't feel much like it; they want games and recreation; they want hospital supplies. Thanks to those steady workers who kept on at the job even when nothing much seemed to be happening, we have got ample supplies of hospital linen to last for a very long time to come, even in case of demands very much greater than anything we have ever had; but hospitals want a good many other things besides linen, and money is needed to pay for these.

There is an immense fund of sympathy and help in this Province, as is shown by the generous response to every individual appeal. The liberal support given to the Madras Ambulance Fund, the Lord Mayor's Air Raid Relief Fund, the Christmas Gifts Fund, shows what generosity there is; but all such appeals go well for a time and then die down. Yet it would be a desperate thing for us if the troops fought for us with enthusiasm for a few months, or for two or three days a week, and then got tired of it and lost interest. And can we say to the prisoners of war, and the air-raid victims all over the world, "Well, I was extremely sorry and anxious to help you for a time, but I really can't keep on remembering about you indefinitely"? Yet it is more than ever necessary that we should keep on remembering in 1943, because in addition to the troops now here in the Madras Presidency, and the Madrassi Units serving overseas and in other parts of India, whose needs are being supplied as far as possible by the Amenities for Troops Fund, we are also responsible for doing all in our power to help that quarter of a million civil and military prisoners of war in Japanese hands in the Far East. For so long there has been nothing we could do for them, but now there is something. Cargoes of bulk medical stores and foodstuffs are being sent by the Indian Red Cross to Lourenco Marques for transmission by the

Exchange ships to the Far East for the prisoners there. News was received in November that a number of these prisoners were being transferred from the tropics to the colder North, and at once arrangements were made to ship 20,000 sets of warm clothing for them. Individual parcels to prisoners in the Far East cannot be sent, but we can all help to provide these cargoes of mercy. One gift for this purpose is a great thing; but steady support is much greater, since the prisoners' need is always there.

IMPULSE TO GENEROSITY

The question of publicity for War Charities work is always difficult. It is most natural that people should want to know what is being done with the money and they have every right to know this. It is natural, too, that the impulse to generosity should largely depend on the imagination being stirred by detailed descriptions of the need for help among the sick and wounded, the prisoners of war, the air-raid victims, the soldiers and sailors and airmen leading tedious and uncomfortable lives while they wait here in our defence or go to attack the enemy. Yet to convey such information fully to every one takes a very great deal of paper, and that is very scarce nowadays; space in the newspapers is so limited that it is impossible to publish everything; broadcasts reach only a limited number of people. Also all the writing takes so much time, and the number of regular full-time workers is so small, compared with the work that has to be done. The response to last year's appeal for Christmas presents for the troops was magnificent, very largely owing to the immense amount of work which was done in sending out individual letters of appeal all over the Presidency. This year it was impossible to send out such letters, owing partly to the severe shortage of paper, partly to the fact that most of those who worked so hard at it last year have been fully occupied elsewhere; and the response has consequently been very much less. Publicity is going to get more and more difficult, and the work for the prisoners, the war victims and the troops is going to depend more and more on the steady support of those who remember that such work is being done all the time, and give it their

Mrs. G. G. ARMSTRONG

continual help. One very excellent scheme has been started in this Presidency, an "Anna a Week Fund" for Amenities for Troops. Some of us can afford more than an anna a week; some of us would like to help prisoners, or other war sufferers; but the idea that as the work must needs go on all the time, so the support should go on all the time too, is most admirable. Some people who are anxious to help but are obliged to live at a distance from the centres where the work has to be done, have regretted that there is nothing they can do. There is much, if they would organize regular help on these lines, however small, and would undertake to spread as far as they can the information given to them about what is being done, so as to give it the widest possible publicity, this would go very far indeed towards making 1943 a less critical year for the War Charities work, which has grown so immensely here in 1942, and is going to grow much more.

DOES HITLER KNOW?

"The man who imagines that God has been at particular pains to select him as His Mouthpiece on earth soon discovers that he has been the instrument of Satan."

—JACOB WASSERMANN in *Adam Urbas*.

DOES Mr. GANDHI KNOW?

Outlook for International Law

By The Hon'ble Mr. Justice J. A. BELL, I.C.S.

IT may seem a somewhat hopeless task, the consideration of the future of international law, in these days of widespread and bitter international strife and conscious as we must be of the presence of many lawless elements in our very midst; but, nevertheless, to those who are firm in their belief that better and more honourable days are not far ahead a brief survey may not be without its use when the time comes for "winning the peace."

First of all, is International Law international law at all? It has been variously defined as the law governing the relations and intercourse of states with one another. States, not nations, it will be observed. And then, is it "law"? Lord Coleridge, Lord Chief Justice of England, said: "Strictly speaking, international law is an inexact expression, and it is apt to mislead if its inexactness is not kept in mind. Law implies a lawgiver and a tribunal capable of enforcing it and coercing its transgressors, but there is no common lawgiver to sovereign states and no tribunal has the power to bind them by decrees or coerce them if they transgress. The law of nations is that collection of usages which civilized states have agreed to observe in their dealings with one another." This view is probably due to the influence of the great Austin who in

"The Province of Jurisprudence Determined", (1861) said that the law obtaining between nations is only law set by general opinion, with duties which are only enforced by moral sanction or by fear on the part of nations or on the part of a sovereign of provoking general hostility or even war in case they should violate maxims generally respected.

SANCTITY OF TREATIES

Much had been accomplished in the way of broadening these views by the outbreak of the last Great War in 1914. So far back as 1871, when the negotiations for the Treaty of London were being conducted by the representatives of Austria-Hungary, France, Great Britain, Italy, Germany and Turkey and concerning the Black Sea, a resolution was agreed on the sanctity of treaties that "no power can liberate itself from the engagements of a treaty, nor nullify the stipulations thereof, unless with the consent of the contracting powers by means of an amicable arrangement." And when, in 1908, Austria-Hungary annexed Bosnia-Herzegovina without obtaining the consent of the high contracting powers who, under the Treaty of Berlin of 1878, had allowed her to occupy temporarily the provinces so annexed, she answered their protests

by saying that she had done nothing contrary to the law of nations, or affecting the sanctity of treaties, because the powers had given their tacit consent to the practical transformation of her temporary occupation into a permanent one. There was therefore prior to the Great War of 1914 much of lip-service, at any rate, to the great ideal that states and nations are bound to deal fairly with one another and to keep promises which have been solemnly confirmed.

It is not without interest that the conception that rules of conduct are necessary between states as well as between individuals can be traced to Italy and the ages when the Italian City States fought and traded and intrigued with one another. Then began the passport system, the distinction between armed forces and civilians and the development of rules for shipping in time of peace as well as war. The horrors of the Thirty Years War in Northern Europe reminded men that in Italy more humane practices were in vogue, and that it was quite possible to have an effective war without injuring innocent civilians, killing or ill-treating wounded or allowing the soldiery to ravage wantonly the countryside in which they fought.

GROTIUS AND OTHERS

The great Grotius in his work *De jure belli ac pacis* (1625), put the matter beyond further argument to the contrary. His masterly and exhaustive analysis of the rules which humanity required to govern international relations both in war and peace has remained the chief guide for succeeding ages. It has been said that nobody has since brought to light any new conception of the foundations of international law. Other great names have illumined the subject. Another Dutchman, Bynkershock (1673-1743), a practical lawyer as well as jurist, wrote that a state's dominion sea-wards was limited to the extent to which it was possible to enforce it, i.e., within range of cannon shot, and so prepared the way for the doctrine of territorial waters. Vattel's *Droit des gens* (1758) is still an authority on the principles of international law. Great English judges such as Lord Mansfield and Sir William Scott (who dealt with many shipping cases arising out of the long Napoleonic wars), the American Chief Justice Marshall and others have all played an important part in raising the study and the application of those principles to the high standard which had been reached by 1914.

The Hague Conferences appeared to crown the work. By 1899 rules on the usages of war had been drafted and agreed by all the great powers. The Geneva Convention which regulated such matters as the treatment of

THE HON'BLE MR. JUSTICE J. A. BELL, I.C.S.

wounded, of prisoners of war and the making of war on civilians had been applied to wars at sea. A Court of Arbitration was set up at the Hague to deal with international disputes. In 1907 the nations went still further on the path of good sense and humanity. Rules were made with regard to the opening of hostilities, the conversion of merchant vessels into warships, the rights and duties of neutral states, the laying of mines, the bombardment of undefended places by naval forces and the use of poison gas as a weapon.

But that is not to say that there did not exist persons who felt that despite all the formalities of solemn agreements, conferences, protocols and all the modern jargon of diplomacy, there still existed those who would like to avail themselves of—

"... the good old rule,
... the simple plan,

That they should take who have the power
And they should keep who can."

GERMANY'S BEHAVIOUR

They proved to be right. In the years from 1914 to 1918, Germany, who had been a signatory to most if not all of the agreements of the previous years, broke all of them. All that counted with the Germans was victory at any cost and by any means. They invaded Belgium, whose integrity they had guaranteed,

OUR WAR AIMS

"Our first aim is the destruction of the Hitlerite State and of the men who inspire it.

"Our second aim is to destroy the Hitlerite army and wipe out its leaders.

"Our third aim is to destroy this New Order in Europe and punish its builders.

"Comrades, we are waging a great war of liberation, but we are not waging it alone. We are fighting together with our Allies. It is going to bring us Victory over the dastard enemies of mankind, over the German and Facist Imperialists."

—M. STALIN, in an Order of the Day.

they bombarded undefended places with their naval forces, they used gas as a weapon, they torpedoed hospital ships and bombed hospitals, they used prisoners-of-war for military purposes and ill-treated them and they sacked and ravaged the countries they occupied.

The clock had been put back. The Great War proved no less barbarous and inhumane than the Thirty Years War whose horrors had so profoundly influenced Grotius and his successors. Peace gave rise to a conflict hardly less important, namely, the struggle between those who desired to make International Law real "Law" in the sense before indicated, to provide it with a tribunal and with powers to coerce and therefore with armed forces under its control or at its call, and those to whom all idea of force had become anathema. The pacifists by which name the latter came to be known, triumphed in the main and from the Treaty of Versailles there was a steady declension in the ranks of those who insisted upon enforcement of the law if it was to be called a law at all. The chief principles, viz.—

(1) Recognition by all states of each other's existence and integrity as states,

(2) Recognition of each other's independence,

(3) Recognition of equality, one with another, of all independent states,

received much adulation but little practical support. The League of Nations did much good work in minor ways but the abstention of the United States in the beginning was a fatal weakness. The subsequent defections of Italy, Germany and Japan enfeebled it to the point of death and, looking back, one cannot wonder that those powers who were left, themselves self-disarmed beyond immediate remedy, found it impossible to prevent such obvious breaches of the law as the invasion of Abyssinia and Albania by Italy, and the

wanton interference with the affairs of Spain by Germany, Italy and Russia and, then, the inevitable descent into Avernus which led us to the present war.

What of the future? Can we again trust to the promises of any nation, even of our own? Governments change, political passions will still run high, opinions will vary and there will always be the danger of alliances and blocs as a menace to world peace.

ECONOMIC RECONSTRUCTION AFTER THE WAR

After the war, economic rather than political considerations will probably take first place. The lands now occupied by the enemy must be cleared of them and their starving populations fed, clothed and housed. Only the United Nations have any means at their disposal to attain these ends. They will have to continue their alliance to do so. May it not be hoped that, the relief accomplished, they will go on to seek for a further unity for political ends?

Imagine such a federation pledged and armed to secure world peace on sea and land, its navies keeping the seas free from pirates and its armies enforcing order where warring elements still contend. As time goes on, and economic recovery becomes more plain, then other nations may be admitted to the fold, until in the perhaps distant future there will exist the world federation to which the League of Nations seemed, in the minds of its creators, the first step.

But far more than words will be needed. It will be necessary for us all to surrender something. . . and something which to the Anglo-Saxon in particular has always been priceless . . . namely our free will. For if the seas and lands are to be kept safe from evil-doers there must be a directing hand. All who belong to the federation must be ready and willing at all times to supply the weapons, the men and the munitions so that we must

AIR SLANG

AIR-WAR has produced its own set of slang terms of which we sample a few below. An air-raid is a form of *blitz* which results in children *vackies* (evacuees) and *browned* adults. *Mona* is the morning siren or *Wailing Winnie* and *Clara* is the bonny lass signalling the all-clear. Search-lights are *fire-works* and their diffused glare a *bearded lady*. The A.A. gun is *ack-ack*, an enemy plane is *ferry*, the balloon, *rat-trap*; the A.A. barrage, *flying-elephant* and aerial torpedoes *flying-pigs*. German bombers when they release bombs *lay eggs*, while the R.A.F. returning after a raid *leaves visiting cards*. An *erk* is an aircraft-mechanic; *Op* is operator; *Wom* is the wireless operating man, and *Snoops*—the service Police. *Mets* is the meteorologist who knows all about *cu* (cumulus) and *muck* (dirty weather). We have *Spits* (spitfires), *Hurries* (Hurricanes), *Lizze* (Lysander), *Maggie* (Miles Magister) and *Wimpey* (Wellington); and last and not least "*He, Me and You*", the Heinkel, the Messerschmitt and the Junker.

envisage a portion of the British Navy being always ready to put out to sea with other navies, the control being exercised, not from the Admiralty, but from another centre, say, Geneva . . . it might be from any other place, of course, but, after all, considering that about a couple of million pounds was spent in erecting suitable buildings for the League of Nations there, it seems a pity that they should not be used!

In any event it is the mental attitude which is all-important, and if nations can be made, by reason, to see the necessity for sacrifice of part of their sovereignty, there may be hope that the errors of the past will be remedied and made, not only improbable, but impossible in the future. Like the labourers in the vineyard of the parable we may feel it unfair that we who have "borne the burden of the day and the heats" should be asked to put ourselves upon an equality with those who have "worked but one hour" or even less, but only in that way lies any hope of peace. Not again should the world watch, helpless, when aggression and greed and brutality raise their head, when small nations are devoured, minorities ill-treated, and treaties shamelessly broken before the ink of the signatures has hardly dried.

SANCTIONS

The history of the years since the last to the present war shows that just as sanctions are required for the law as it affects individuals, so they are necessary for international law. Sanctions imply a police force. There must be an international police force or one at

any rate which is made up of contributions from the forces of the willing nations. There are no doubt no inconsiderable difficulties in the way and much persuasion will be needed before the majority of peoples will toe the line. But without that conception and the willingness to turn the dream into a reality the future will be as the past, international law will remain as it has been, a law only in name, to be observed when it is convenient, to be broken when it comes in the way of those who, as Mallet in his *Northern Antiquities* says "look upon war as a real act of justice and esteem it an incontestible title over the weak, a visible mark that God intended to subject them to the strong."

Is that the outlook for 1943 and for the years to come? The countless sacrifices which have been and are being made, the depth of misery into which the world has been plunged, this orgy of blood and hate and murder and destruction which alas! is so familiar, are all these things to be forgotten again because of—pride?

There is no reason why it should be so. A measure of humility in our dealings with our fellow men, a desire to seek out their point of view, an ability to apply rules, well-considered and agreed, to facts, and then the will and determination to enforce them will strengthen ourselves . . . no man is so strong or so inflexible as when he is convinced he is doing the right thing . . . give hope to those who have suffered unjustly, and usher in a new era in which international law will be known and respected—and obeyed.

Soldiers' Sons will follow Father

Boys of the three King George's Royal Indian Military Schools are themselves responsible for a standard of discipline which any soldiers would find difficult to beat.

Responsibility, particularly in the junior grades, passes hourly from boy to boy. One advantage of this is that it bars any possibility of victimisation.

The schools, run on the British public school model, were inaugurated by the late King George V and Queen Mary, who dedicated to this purpose a huge sum sent them by India's ruling Princes as a silver wedding gift.

The boys are soldiers' sons. They may study up to Matriculation and need not, necessarily, enter the army upon leaving. They are, however, almost unanimous in eagerness to join.

The National War Front Looks Forward

By Sir ROBERT DENNISTON, *Kt., Regional Leader, National War Front*

FEW things are certain, but the most cautious prophet would probably subscribe to the view that the year 1943 will be a year of great happenings. It may well turn out to be a miraculous year—a year of deliverance for half the population of the globe. I often wonder, when I read the petulant vapourings of fractious politicians whether they have the slightest conception of what we in India have escaped. Let us examine the lot of the people in this country in relation to that of those countries now overrun by an enemy whose malignancy exceeds that of all the most noted tyrants of history, and whose methods lead one to the conclusion that, if they lived at the present day, the torturers of the Spanish Inquisition would be dismissed as incompetent bunglers.

Any country at war must expect to suffer certain inconveniences, but I should like to place those inconveniences in their proper perspective. Food prices are rising, but we are not starving, as are millions of people in France, Belgium, Poland, Norway and Greece. Such work as we are called upon to do is voluntary. Our men and women are not drafted to work for a ruthless foe under conditions of slavery and semi-starvation. We have no concentration camps—those hell-inspired inventions of the Nazi and Fascist parties, nor do we see children tossed in the air and impaled on the point of the bayonet. In this particular pleasantry (it is called the New Order for Asia) the Japanese have reverted to the jungle, and if this is one of their forms of gentle relaxation we may perhaps view with mild scepticism their promises to deliver India. As for their 'deliverance' of other countries which they now occupy temporarily, this is marked

by organized sapping of the morale of the inhabitants by the deliberate inculcation of the drug habit.

NOT SENTENCED FOR GRUMBLING

Again, we do not see our crops harvested and despatched to our enemies, as do the inhabitants of Belgium, Holland, Denmark, and (there is a certain poetic justice about this) Italy. We cannot be told by the pot-valiant Goering that Germans must be fed first, and if there is any food left over we can have it. We are not sentenced to long terms of imprisonment for grumbling, as are the people of Berlin—else most of us would be in prison. What would you say if you were sentenced to two years imprisonment for "talking impudently during the packing of parcels"?—this is the latest Berlin antic. We may, if we are so minded, and if we are fond of fiction, listen to the Tokyo radio hissing hatred, or to the hysterical outpourings of the malignant dwarf who is Mr. Schicklgruber's mouthpiece and accomplice. If we were in Berlin or Tokyo and listened to a British or Indian broadcast we would be sent to a concentration camp, or we would die—which would be preferable. Our experience of air raids has hitherto been practically nil—perhaps a couple of dozen bombs in all have been dropped on South Indian soil—a horrid experience for those on the spot I grant you, but we have not had 1,000 air raids in five days (think of it!) as have the people of Malta, and we do not have to spend the greater part of our lives underground, as the Maltese—those brave people—do. Our air raid casualties cannot be numbered by the hundred thousand as in Great Britain, neither are our homes, our places of worship, our historic buildings razed to the ground, as they have been in England.

EGYPT AND INDIA

"It gives me a deep source for happiness to be amongst the brave soldiers from India now serving the cause which is so dear to us all, the cause of liberty. Both you and we are linked by innumerable bonds which have made us brothers. I also remember that both Egypt and India, at the very dawn of history have been the cradle of civilisation and the West owes to both of us the revelation of a higher ideal of life."

—MR. NAHAS PASHA, the Prime Minister of Egypt, at a party
given by Indian soldiers, on December 27.

LIVE IN COMPARATIVE COMFORT

And so, while the greater part of the world lives precariously and in varying degrees of misery, we in India live in comparative comfort. Ought not we to do something about it? Great Britain, although herself experiencing the full force of the Axis air arm has done quite a lot for other people, and raucous advocates of a second front (ignoring the fact that there is a second front in Libya, a third in North Africa and a fourth in India) might be interested to learn what Britain and America have done to help Russia. They have despatched during the year which is past one aircraft every 172 minutes, one tank every 128 minutes, one motor vehicle every 17 minutes, one ton of oil or petrol every 4 minutes and one ton of machine tools and metal every 38 seconds. And the Berlin Radio tells us "The Soviets are bitterly disappointed with the failure of Britain and the United States to keep their lavish promises of war material." Really Dr. Goebbels!

And what is the measure of the contribution which we in India are making towards the re-establishment of civilization? It is considerable. The Indian Army has never stood higher in world esteem. The Indian Navy has added cubits to its stature and *H.M.I.S. Bengal* is responsible for one of the epic adventures of the war. Our factories and mills have redoubled their production and our technicians are playing a worthy part. But there is another side to the picture. What, do you think, is the world's opinion of the outbreak of lawlessness, of destruction and murder which we have recently witnessed? How does this organized banditry look against the background of the Allies' help to Russia? Against 3,052 aircraft despatched to Russia, 32 policemen murdered; against 4,084 tanks, 550 post offices attacked; against 30,031 motor vehicles, 70 police stations and 140 other Government buildings burnt; against 118,000 tons of oil, 3,500 instances of wire cutting; against 831,000 tons of metals, damage to Railways and post offices of over a crore of rupees. Here is work after Hitler's own evil heart, and the Tokyo radio pours forth ecstatic congratulations.

WHAT OF 1943?

So much for the past year; what of 1943? Never has there been a year so full of promise; never one in which men of goodwill can play so large a part. Never in the history of war has the role of the civilian been so important. I venture to suggest a few New Year resolutions for members of the National War Front. Let us resolve to remain at our posts in all circumstances, remembering that the chances of our being hit by an enemy bomb are less than those of our being run over in the street. Let us eschew those horrid phrases "wishful

SIR ROBERT DENNISTON, *Kt.*

thinking" and "scorched earth" with their dangerous implication of defeat. Let us organize resistance to the breakers of the law, and pay the goonda back in his own coin. Let us help to instil "guts" into the faint-hearted, expose the hoarder of food and pillory the scaremonger. By so doing we shall assist in the discomfiture of Mr. Schicklgruber and his slightly shop-soiled accomplices and shall have contributed in some small degree to the victory which is already looming on the horizon.

A Vital Factor

"From our point of view, restoration of China's lifeline—the Burma Road—is the most immediate vital factor in our fight against Japan."

—COL. CHI WANG, in an
interview to Reuter on
December 28.

Fifth Columnists Again!

Truth About the Coin Shortage

THERE has lately been a considerable amount of Press comment on the shortage of small coin. Despite the Press Communiqué issued by the Government of India on the subject comments continue to appear criticising the Government rather than exposing the root cause of the trouble. It should be recognized that the problem is a social one, the solution of which depends almost entirely on the public itself. Anti-social elements in the country who, for personal gain or other motives, are trying to exploit the situation deserve no sympathy and should be exposed.

What the public can do in present circumstances is :—

(i) Refrain from hoarding coin even on a small scale.

(ii) Whatever the need may be, refuse to buy coin for other than its face value.

(iii) Help the authorities to bring the offenders to book. Government desire to prosecute all such offenders, but can only do so with the active assistance and co-operation of the public. Inform the police whenever there is evidence that a person is hoarding coin or selling coin for profit, and if possible encourage and organize others to do the same.

The Government point out that :

All classes in India, especially the poor, are being subjected to inconvenience and loss because there is not enough small coin in circulation for their daily transactions.

Government are doing their share by supplying the public with small coin on a scale never before known in this country; since war began they have manufactured and distributed 180 crores of pieces of new coin and every month 7 crores more are put into circulation.

These huge quantities, as well as all the small coin which was in existence when war broke out, are now in the hands of the people

in this country. In spite of this very little is available for the daily needs of the people.

Government have not withdrawn any of this coin. The shortage can therefore only have been caused through private persons hoarding coin in excess of their requirements.

Some hoarders hoard by way of precaution through fear of a still more acute shortage. By so doing they only help to make matters worse and their ill-advised action is unfair to their fellow citizens.

Other hoarders hoard for their own personal profit, either with a view to selling the small coin for notes at a premium or to melt the coin for the sake of the metal of which it is made.

It is an offence against the law to hoard coin in excess of reasonable requirements or to buy or sell coin for other than its face value.

Keeping socks at full stretch

Soldier's socks are expected to last fifty per cent longer as a result of a new process of treating wool now in use by the Indian Army.

When a sock shrinks extra strain is put on heel and toes, with the result that holes soon appear. The new process reduces shrinkage to a minimum.

G.H.Q. Supply Development Committee has found that treatment with a special compound makes woollen garments last half as long again, and three plants have been set up in India to carry out this work.

Christmas Message to R.A.F. Squadrons

The following message was sent by His Excellency Sir Arthur Hope, Governor of Madras, to the Madras R.A.F. Squadrons :—

"The Madras Presidency greets its squadrons who have done so magnificently in the past year, and wishes them continued success in the coming year."

1942: A Bird's-eye View

1st Jan.—British Commandos and Free Norwegian troops raided Lofoten Islands.

2nd Jan.—Twenty-six nations, including Britain, United States, Russia, China, India and the Netherlands, signed a joint declaration against Axis powers.

General Wavell was appointed Supreme Commander-in-Chief in the Pacific.

31st Jan.—The British Government concluded an agreement with the Emperor of Ethiopia.

9th Feb.—Marshal Chiang Kai-shek arrived in Delhi.

10th Feb.—The French liner **Normandie** was damaged by fire in New York harbour.

13th Feb.—The Russians re-entered the Soviet Republic of White Russia.

The German warships **Scharnhorst**, **Gneisenau** and **Prinz Eugen** were bombed in the Straits of Dover.

15th Feb.—Singapore fell.

19th Feb.—Port Darwin was raided for the first time by Japanese aircraft.

The Riom War-guilt trial opened.

24th Feb.—A new Anglo-American Lend-Lease Agreement was announced by President Roosevelt.

3rd Mar.—General Wavell was made Commander-in-Chief of India.

6th Mar.—The Dutch evacuated Batavia.

25th Mar.—The Japanese occupied the Andaman Islands.

28th Mar.—St. Nazaire was raided.

1st Apr.—The first meeting of the Pacific Council was held in Washington.

3rd Apr.—American Flying Fortresses attacked a Japanese invasion fleet in the Bay of Bengal.

5th Apr.—Ceylon had its first air raid.

6th Apr.—Vizagapatam and Cocanada docks were bombed.

7th Apr.—Madras had its first air raid warning.

9th Apr.—Japanese aircraft attacked Trincomalee.

10th Apr.—Fighting in Bataan ceased.

13th Apr.—The Riom trial was suspended.

14th Apr.—Iran broke off relations with Japan.

18th Apr.—Tokyo was bombed by American aircraft.

Surcouf, the world's largest submarine belonging to the Free French, was lost.

M. Laval was made chief of the Vichy Government.

23rd Apr.—M. Laval refused the Japanese sending a military mission to Madagascar.

29th Apr.—Longer working hours for the native population of Java was decreed from to-day (the Japanese Emperor's birthday).

4th May.—Japanese forces entered Mandalay.

6th May.—British troops landed in Madagascar.

7th May.—Corregidor and other Philippine island fortresses were surrendered to the Japanese.

The Burma Road was cut.

9th May.—In the great Coral Sea Battle, the Japanese navy was defeated.

16th May.—Mexico broke off relations with the Axis powers.

17th May.—Prinz Eugen was attacked and damaged.

31st May.—Mexico declared war on the Axis.

7th June.—The Japanese navy was defeated in the Battle of Midway.

11th June.—His Royal Highness the Duke of Gloucester arrived in India.

14th June.—The Japanese landed in the Aleutians.

15th June.—President Roosevelt spoke on the Four Freedoms.

21st June.—Tobruk fell into the hands of Rommel.

27th June.—The first of the '1,000-plane raid' by the Royal Air Force was made on Bremen.

2nd July.—Sabastopol fell.

MADRAS WAR REVIEW, Jan. 1, 1943

28th July.—Rostov fell into the hands of Nazis.

9th Aug.—Mr. M. K. Gandhi and members of the Congress Working Committee were arrested.

10th Aug.—The Nazis captured Maikop and Korasnodor.

18th Aug.—General Alexander succeeded General Auchinleck as Commander-in-Chief in the Middle East.

19th Aug.—Dieppe was raided by British Commandos.

24th Aug.—The Nazis launched a frontal attack on Stalingrad.

His Royal Highness the Duke of Kent was killed on active service.

20th Sep.—Mr. Wendell Willkie visited Moscow.

8th Oct.—Dieppe raid prisoners were chained. Britain ordered reprisals.

5th Nov.—Hostilities ceased in Madagascar.

10th Nov.—American and British troops landed in Tunisia to open a Second Front.

Vichy France broke off relations with United States.

14th Nov.—The Allies retook Tobruk, Sollum and Bardia. Church bells, stilled since Dunkirk, rang throughout Britain to commemorate the victory in the Battle of Egypt.

24th Nov.—H.I.M.S. "Bengal" engaged and sunk an armed Japanese raider in the Indian Ocean.

The siege of Stalingrad was lifted.

27th Nov.—Hitler ordered the extermination of all Jews in occupied Europe by the end of 1942.

28th Nov.—The French fleet at Toulon scuttled itself.

29th Nov.—British troops occupied Reunion Island in the Indian Ocean.

12th Dec.—All prisoners of war in Britain and Canada were unshackled.

15th Dec.—The Battle of El Agheila was won by the Allies.

19th Dec.—Mr. Churchill put the Beveridge Report "on the official map."

20th Dec.—Allied troops moved into Burma. Calcutta was raided for the first time.

24th Dec.—Admiral Darlan was assassinated.

27th Dec.—Sir Sikandar Hyat Khan, Premier of the Punjab (who visited the Middle East), died of heart disease.

28th Dec.—General Giraud succeeded Darlan as French Commander-in-Chief in North Africa.

Tea shop—New style

High up in the wild Naga Hills of Assam thirsty drivers in the convoys between base and forward positions are fond of stopping for a rest and a "real" cup of tea at a tea shop which is "different" because it is operated by three B.O.R.'s.

Empty kerosene tins over a wood fire do duty for urns, but however unorthodox their equipment these British soldiers can produce anything up to 400 cups of tea in next to no time. And all who taste it say it's good.

SAID IN 1927

"Peace! All that is necessary for eternal peace in Western Europe is to civilise Germany and to humanise France!"

—GEOFFREY MOSS in *New Wine*.

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV FRIDAY, JANUARY 8, 1943 No. 17

PRESIDENT ROOSEVELT

BORNE RICH FRUIT

ONE year ago, twenty-six nations signed the Washington Declaration by the United Nations. The world situation then was grim indeed. Yet, on that last New Year's day, these nations bound together by the universal ideals of the Atlantic Charter signed an act of faith that military aggression, treaty violation and calculated savagery should be remorselessly overwhelmed by their combined might and that the sacred principles of life, liberty and pursuit of happiness should be restored as cherished ideals of mankind. They thus created the mightiest coalition in history—mighty not only for its overwhelming material force but still more for its eternal spiritual values. Three other nations have since joined that coalition. The unity thus achieved amidst dire danger has borne rich fruit

Running Commentary

The Calcutta Raid : "Yours is the first capital city in India to suffer in this war a baptism of fire and her citizens have provided an admirable example of steadiness and fortitude. Well done Calcutta!"

This was the message sent by His Excellency the Viceroy to the Governor of Bengal soon after the first enemy air raid on December 20. Since then there have been four more raids on the city. It may be pointed out that the Japanese were in a position to launch these air raids nearly eight months ago. On April 22 last year when Japan was in the plenitude of power, General—now Field Marshal—Wavell said, "The immediate danger is that of air attack . . . Consider the distance the Japanese are from their bases, the enormous area over which their war effort is already dispersed, the vulnerability to sea and air attacks of their line-of-communications towards India." He added, "It is not in the power of the Japanese to bring air attack against the cities of India on anything approaching the scale, intensity or continuity of the German attack on Great Britain or of our attack on Germany." Calcutta's experience bears out the soundness of General Wavell's observations. The raids have been on a small scale and are as nothing as compared with enemy raids on Britain or the R.A.F. raids on Germany. It may be recalled that the *Luftwaffe* dropped, during the blitz on London, as much as 450 tons of bombs in a single raid. The R.A.F., in the course of its 1,000-bomber raid on Cologne in May last year, dropped 3,000 tons of bombs in 90 minutes. It is no

doubt true that raids of this type are of an exceptional character. But the fact remains that now-a-days 200-bombers of the R.A.F. drop on an average 450 tons in a raid and that such raids are fairly frequent.

Japan, a Wounded Tiger—Must Strike Somewhere. Can Japan launch raids of this character? It can, if it possessed in Burma scores of aerodromes, a very large trained ground personnel, a well-knit system of communications and factories manufacturing munitions of war. Inherently these facilities are

GREETINGS

The following message was received from the Officer Commanding another Madras Squadron of the R.A.F. by His Excellency the Governor of Madras:—

All personnel send their best wishes to Your Excellency and people of Madras Presidency, and thank Your Excellency for kind Christmas message.

His Excellency has received the following message from yet another Madras Squadron of the R.A.F. For security reasons, the number of the squadron or the place of origin of the message is not mentioned:—

"Officer Commanding and airmen of squadron thank Your Excellency and the people of Madras Presidency for greetings and send to all in Madras best wishes for the New Year."

largely unobtainable in Burma. Further the R.A.F. and the 10th American Air Force see to it that Japan is not allowed any respite. It is of interest to mention in this connexion that the American Air Force in their raid on Heho on December 26th dropped bombs which were greater in weight than that dropped by the Japanese in their first four air raids on Calcutta. In fact the Allied air forces have been plastering the enemy-occupied military targets in Burma. As General Clayton Bissen remarked at a press conference on December 26th, the enemy aerodromes in Burma were constantly under fire and he was shifting

target. An attack on it could well be utilized for purposes of propaganda by Japan. In these raids, the Japanese have used anti-personnel bombs, thus belying their own propaganda that their bombs are directed only against military installations.

Advance Into Arakan, Not a Regular Invasion of Burma.

We have referred to the Allied advance into the Arakan Division. This has caused a thrill of interest and excitement throughout India. But it is necessary to understand the exact position and not allow

GENERAL WAVELL, India's great Commander-in-Chief, has been made a Field Marshal. The above photograph was taken on the occasion of a recent inspection of forward positions on the north-east frontier. During this visit he crossed the Burma border. Here he is seen with an influential local Burmese chief. A British civil officer is also in the party.

his air force from one to the other. Further the Allied advance into the Arakan Division required some sort of reply from Japan. The Calcutta raid was, however, a very poor reply indeed! The Japanese bombers came by night and the fact that they were flown very high is a tribute to Calcutta's fighter-craft and A.A. guns. The high morale of the citizens of Calcutta at the time of these raids was commended by the Viceroy, the Bengal Governor and the Premier of the Province.

The raids on Calcutta are nothing but an obvious move in the offensive tactics intended to conceal the defensive character of Japanese strategy. Japan is like a wounded tiger; it is far from exhausted and it has to hit somewhere. Calcutta was a near and important

speculation to outrun facts. As stated in the Indian Command's communique of December 19th, troops have crossed the Burmese frontier between Chittagong and Akyab and occupied the Maungdaw-Buthidaung area, which is about 60 miles north-west of Akyab. This advance of about half-way from the frontier to Akyab is an improvement in the Allied positions, for Maungdaw is at the mouth of the Naf river, which is navigable for 30 miles of its course, and Buthidaung is due east of Maungdaw and is connected with it by road. The control of Maungdaw gives us a double advantage. Firstly, it can be used for bringing supplies by sea, and secondly, the river Naf can supplement the military road as a means of communication on the land side.

(Continued on page 6.)

Russia: Prospects of Victory

IN a review of the war broadcast on New Year's Eve, M. Kalinin, the Chairman of the Presidium of the Supreme Soviet, said that the offensive spirit of the Russian people was rising from day to day; it was increasing their productivity; the Red Army was being well supplied with everything it needed by the great efforts of Russian workers and collective farmers. "The prospects of victory can be seen clearer on the threshold of 1943," declared the Soviet President, "Our united effort will give us victory in the near future under the leadership of our great Chief, M. Stalin." He pointed out that the position in Russia was now more advantageous than it was a year ago. For, this year the enemy's offensive was not carried out on the whole front, but only on the south and south-western sectors. The Russian offensive at Stalingrad and on the Central front, as well as in the Middle Don and the North Caucasus, had changed the situation in Russia's favour. Over two-thousand inhabited localities, district centres and towns had been captured by the Red Army.

Three Stages of the Offensive

In an impressive review of six weeks' fighting in Southern Russia, the Soviet Information Bureau has given a detailed account of the progress of these Russian successes. It refers to three stages of the Russian offensive in the Stalingrad area. Firstly, the Red Army began to assume the offensive north-east and south-west of Stalingrad. Powerful blows were inflicted on the enemy in the south-western Don and the Stalingrad fronts. The second stage was the offensive of the Russian troops in the area of the Middle Don. They were entrusted with the task of effecting a break-through on this front, penetrating the defences of the enemy to the rear in the Don bend, and preventing German troops surrounded on the approaches to Stalingrad from escaping or being relieved from outside. This task was skilfully carried out. The third part of the offensive was staged south of Stalingrad. The German Command which led its troops at Stalingrad into a blind alley attempted desperately to relieve its troops surrounded by the Red Army, and launched an offensive in the area north of Kotelnikovo, but Soviet troops operating south of Stalingrad were instructed by the Soviet High Command to rout the new enemy concentration, to roll the German south and deprive them of the last chance of breaking-through to the German divisions surrounded at Stalingrad. Thus the encirclement and the defeat of the German and Fascist troops on the approaches to Stalingrad were carried out in three stages.

Two-fold Objectives

The Russian objectives in the great winter offensive may be said to be of a two-fold character. The first is the improvement of their tactical positions wherever possible and the stretching of the German resources to their fullest limit. The second objective is to cause a general retreat of the German troops. We are now concerned only with the first objective. In this the Russians have achieved great successes by following their

own distinctive plan. The German plan is to deal a sledge-hammer blow in one place, break through by sheer weight of numbers, and follow through with thousands of vehicles. But the Russian plan is to deal a series of blows of gradually increasing intensity in different parts of the front and produce a simultaneous disintegration throughout the front.

Though complete success has not yet been achieved in the carrying out of this plan, the working of it can clearly be seen. The offensive at Stalingrad and in the Don bend compelled the Germans to bring up their reserves in order to release the troops encircled by the Red Army at Stalingrad. The Russian offensive in the north aimed at the whole lateral system of enemy communications upon which the free movement of German reserves depends, and it has forced the Germans to bring in more reserves to save their communications. The attack in the Middle Don was aimed at a point from which German reserves may have been moved either north or south, and this has had the effect of drawing on German troops intended to rest in winter.

Future Course of Campaign

The future course of the Russian campaign will depend upon a number of factors which are not now clearly known. Have the Germans any unused reserves? If so, can they move them in time to places where they are urgently required? Can the Russians maintain their advance and can they bring forward their supplies quickly enough to enable them to continue it? Will the winter weather which seems to be milder than last year, continue for some time longer? There are three possibilities. The Germans may produce reserves to stop the latest gap, or they may bring reserves from their troops recuperating in the rear and thereby weaken themselves for the spring, or they may be forced into a general retreat in the depth of winter.

Whatever it be, one thing seems clear. Hitler is faced with the problem of switching all reserves without leaving a spot where a break-through might occur—a break-through which, under the Russian system of attack, might develop into a general defeat of the German forces. It seems as though the real issue may be decided only in spring, for which Stalin is preparing. In the West, the British and the Americans are also preparing for a great and mighty effort to deal a smashing blow at Hitler's "Fortress of Europe."

In the Centre of the Ring

The wonder of it all is that the Russians, after suffering losses in men, territory and war resources, that would have taken the heart out of most people and thrown them out of the ring, have stood the ground. They are not even leaning against the ropes: they have moved into the centre of the ring and are dealing out powerful straight lefts to the enemy's body. The recapture of Nalchik, key town on the Caucasus Mountain roads, announced on Tuesday night, is one such powerful blow.

The prospects of a great Russian victory, to which M. Kalinin referred, are now brighter than they have ever been before. The Red Army has definitely seized the initiative on the entire battlefield in Russia, and Stalin's master plan to immobilise and eat into German reserves must tire the enemy and bring him down.

RUNNING COMMENTARY

(Continued from page 3.)

This move into Arakan may be described as an exercise in aggressive defence. It should not be considered as the beginning of a regular invasion, but as a local operation successful in its execution and convenient in its effects. This is not a move eastwards into Burma proper, but southwards along the coastal tract of Arakan. There lies a range of steep and jungle-covered mountains between Arakan and the rest of Burma, where the rainfall is the heaviest in the world. Control of the whole of this strip would still leave a formidable barrier to be crossed into Burma proper.

* * * *

Situation in North Africa— Political conditions in North Africa after the assassination of Admiral Darlan continue to be in a state of flux. Darlan by throwing in his lot with the Allies barely a month before his death saved for the Allies, according to Mr. Stimson's calculation, at least a month's time and perhaps 15,000 lives. The career of this most enigmatic figure in the history of war-time France will be a subject of controversy for many years to come. The full story will be known only after the war is over when all the records are opened and published, but it may be stated that he was, according to his lights, a patriotic Frenchman. Love of the French Fleet was his ruling passion. He was completely disillusioned by constant German bad faith, and he seized the first opportunity of joining the Allies when the Nazis broke the Armistice. Darlan's action shows how German methods have outraged even those who, having no hope of Allied victory, were willing to negotiate with their conquerors. Darlan, the ruler of North Africa, has been well summed up by General Eisenhower. The United States General said, "He never, so far as I know, broke his word in attempting to carry out anything he promised."

Frenchmen in North Africa have found a great leader in General Giraud who is the first heroic figure thrown up by

France after General de Gaulle. His appointment as leader of the North African French has been widely welcomed. A Fighting French spokesman said in Washington recently that General Giraud was undoubtedly the best man available and that he, more than any other, was in a position to reconcile effectively all patriotic elements in the French colonies and in France itself. General Eisenhower said that he was delighted to have a man of such standing and character to deal with. There are, however, certain difficulties in the way of a general reconciliation. Though a preliminary contact has taken place between the Fighting French leader and General Giraud, there seem to be some differences of opinion regarding the elimination of the present Imperial Council in North Africa. But things are bound to come to some settlement or other in due course.

◆ ◆ ◆

CLOTHING FOR INDIAN PRISONERS OF WAR

Information has been received that the War Office in London have supplied complete outfits of battle-dress, boots and greatcoats for all Indian soldiers taken prisoner of war in the Middle East. The Red Cross have also despatched two shirts, two vests, two underpants, three pairs of socks and one pullover for each prisoner.

A report received from the International Red Cross Committee at Geneva indicates that all Indian prisoners of war in German and Italian hands are now supplied with special clothing for the winter and that sufficient stocks of clothing, etc., for replacements are held at Geneva. Clothing parcels are also being sent by the Indian Comforts Fund Section of the British Red Cross Society, at the rate of 700 per week in order to maintain these stocks.

Arrangements have been made for the supply of suitable headgear for Indian prisoners of war and stores of these are now being despatched to Geneva through the British Red Cross Society.

The Invisible War

By WICKHAM STEED

BEHIND the visible military fronts in this war an invisible struggle of unknown quality and extent is proceeding on what may be called political and moral fronts. Every Allied success increases the intensity of this struggle.

The other day an important member of an Allied Government in London said that secret reports from many parts of Europe were

American air raid on Turin or Naples. In Finland symptoms of warweariness are frequent. In France Laval publicly recognizes strong opposition to collaboration with Germany when he announces his determination to stop it. The population of the coastal districts of Holland is being removed into the interior. Even in Germany nervous unrest is spreading, though the German people have not yet been told either of German losses in Russia or of Rommel's withdrawal from El Agheila without giving battle.

OUSTING THE AXIS FROM AFRICA

Militarily the North African fighting may decide the fate of Italy. Morally the expulsion of Axis forces from Tripoli and Tunis would

A Torpedo School for the Royal Indian Navy was opened at Jamnagar a few days ago. The opening ceremony was performed by Her Highness the Maharani of Nawanganagar. Photo shows Her Highness inspecting the Guard of Honour.

compelling him to believe that, unless tension on the invisible front relaxed, something would crack or explode among the peoples of the Axis or those subject to Axis control. He had striven against this belief because he was anxious not to deceive himself or mislead his Government. Yet evidence was becoming too strong to be rejected as insufficient.

EFFECT OF ALLIED SUCCESSES

Certain it is that the Allied successes in North Africa have caused a ferment throughout the Balkan peninsula and even in Finland. Some time ago a Nazi organ in Rumania protested indignantly against rejoicings among Rumanians over the Anglo-American landings in Morocco and Algeria. In Italy cries for peace become louder with every British and

be likely to decide whether Hitler and Mussolini can keep the Italian people in the war. The process of ousting the Axis from Tunis may be hard and slow. More than 400 miles of waterless desert remain to be crossed before the remnants of Rommel's Afrika Korps can be driven to the Tunisian border. Meanwhile much may depend militarily and morally upon the success or failure of Hitler's commanders to save the German divisions surrounded between the Don and the Volga and to stop the loss of those in the Caucasus, Crimea and South-Eastern Russia. Nor is it only a question of avoiding military disaster. The German grip on Rumania, Hungary, Bulgaria, Yugoslavia and Greece is at stake. The vestige of faith in German victory would v among Hitler's satellites just as f

permanent enslavement would vanish among his victims. The invisible moral struggle would then produce visible effects.

JAPANESE DEFEATS

To these possibilities in Europe must be added the imponderable influence of the Japanese defeats in New Guinea and of the full restoration of Madagascar to Fighting French rule by agreement between Britain and General de Gaulle. Throughout India, Burma, China and the Southern Pacific these events will be seen to foreshadow the ultimate overthrow of Japan. In those wide regions also Japan will feel the growing strain of the moral struggle.

NOT A BRAKE ON EFFORT

Far from interpreting these relatively favourable circumstances as pledges of a swift or easy triumph, the British Government and people, like those of the United States, are determined to intensify their exertions against the enemy. The British age-limits for military service may be extended to include boys of 17 and men of 50. Out of a population of 33,000,000 men and women of working age, 22,000,000 are already doing war work. This number will shortly be increased. In Britain there is neither warweariness nor unwillingness for further effort and sacrifice. Victory which for three years was a matter of faith—sometimes a lonely, obstinate faith—is now seen to be within the grasp of the Allied nations if they throw their whole moral as well as material force into the task of seizing and holding it.

On the Allied side too the tension of the moral struggle is growing greater. Yet it is not accompanied by any feeling of strain. It is the tension of body and mind that marks the supreme successful effort of an athlete to reach the winning post and to break all records in gaining the prize.

THE COMMON STRUGGLE

Our common struggle against evil and cruelty, against that denial of human personality which lies at the base of the Nazi and Fascist creeds has brought together Christian and Jew, Muslim, Hindu and Buddhist, and the free followers of every religion in the world, as well as those who belong to no Church but are nonetheless convinced supporters of essential decencies and spiritual values, which lie at the root of all religions.

—SIR STAFFORD CRIPPS, in a speech in London, on January 1.

Role of Airplane and Telephone

By RAYMOND CLAPPER

IT is a spectacular thing that President Roosevelt could write a note to Generalissimo Chiang Kai-shek and have it delivered in facsimile in Chungking within an hour or so.

That sort of communication will certainly facilitate relations between nations. Yet it is not as spectacular or as important as facilities which are already being used to bring the heads of the Allied Governments into closer contact with each other.

One of the best stories going around Washington now relates to a supposed telephone conversation on post-war questions between President Roosevelt in Washington and the Generalissimo in Chungking. A telephone conversation between the White House and No. 10, Downing Street, and with Moscow, is as simple as a telephone conversation around Washington.

POWER OF THE AIRPLANE

The making of personal contacts by airplane is much easier. Prime Minister Churchill has been here twice since Pearl Harbour and has been to Moscow. Soviet Foreign Commissar Molotov has been to London and Washington. Admirals and generals of the High Command have gone back and forth between Allied countries frequently. It is not much more of a problem that of getting from Washington to San Francisco.

Of course there are a great many differences between this war and the last one, and I think that likewise there will be many differences in working out the peace. One of the most important differences this time is the facility of contact among the leaders of the United Nations.

The men who are running this war and who will make the peace can talk face to face, and between times can converse by telephone.

A Negotiated Peace is Impossible

By LORD STRABOLGI

THERE has been a certain amount of discussion recently as to the possibility of the second world war being terminated by a negotiated peace, with neither group of combatants decisively defeated. Promoters of such efforts can always plead the sanction of humanitarianism. That the majority of Italian people in all walks of life would welcome peace on almost any terms at the earliest possible moment is well known and established. Leaders of their German ally would probably welcome a negotiated peace as soon as possible also, and there is little doubt that the majority of their followers would accept it even more gladly. For rather different reasons their Japanese partner will be equally ready.

WHAT THE GERMANS KNOW

In Germany the General Staff as well as leading members of Hitler's entourage knew perfectly well that the Axis in Europe has no hope left of gaining a decisive victory, or indeed any other kind of victory. The best that they can hope for now is a stalemate, and this is tacitly accepted by Hitler himself and by other leaders in their public declarations to the German people that they will now concentrate on defensive strategy.

Japan's position is different in that she has gained the main objectives of her preliminary campaigns. She has the necessary raw materials and foodstuffs for a long struggle and is well placed strategically. It would be a great advantage, nevertheless, for Japan, whose resources have been badly strained, to be granted a period for recuperation and economic digestion of the vast territories that she has conquered.

NOT AN ORDINARY WAR

If this were an ordinary nationalistic or dynastic struggle, powerful elements might be found in the councils of the United Nations ready to give serious consideration to the possibility of a negotiated peace. But it is not an ordinary war, and it is impossible for the Governments of the British Empire, the United States and Russia to lend themselves to any parleys or discussions to that end. In Britain, for example, no Government could last 48 hours if it were suspected of readiness to negotiate an armistice at the present time.

The principal reason for this feeling and determination, shared by all peoples of the United Nations, is that this time an end is to be made of the institution of war. The immense sacrifices already endured and those still to be faced would be grudged but for the belief that, when this second world war has ended, there will never be a repetition. Means must be taken to remove the possibility of future aggressions by the disarmament and control of the Axis Powers. That would be impracticable until they had been decisively defeated and deprived of the means of further resistance.

DESIRE FOR RETRIBUTION

Secondly, there is a genuine and very serious demand for retribution. The methods employed by the Germans in Poland and in a number of other countries as well would have been thought impossible in the 20th century. They have given rise to such horror and alarm that the infliction of punishment on their perpetrators is accepted both as a moral duty and as a safeguard for the future. Any peace or compromise with either the Germans or the Japanese which would leave them in a position to renew war at some future date is unthinkable.

Lastly, and even more important is the ideological conflict which has been exposed in this second world war. It is impossible for the Fascist and democratic systems to exist side by side in the modern world. The one or the other must be destroyed.

France on the Road to Victory

"When the Allies disembarked in North Africa, they put France on the road which leads to Victory. General Giraud has shown his ardent desire that we should participate in the war. We are under his command. I am sure that high officials of the American Military Mission will facilitate our co-operation in the war of liberation. This is only the beginning. The tempo of our activities will accelerate in the near future."

—M. PIERRE BOISSON, Governor-General of French West Africa, on January 4.

We'll Work to Win

By PHILIP MURRAY, *President of the Congress of Industrial Organizations*

OUR President is now our Commander-in-Chief in a world war which threatens not only our nation's security and our very lives, but all our freedoms, our way of life, and our living standards, as no previous war has ever done. There can be no question of the response of true American working men and women to the demands of our Commander-in-Chief in such a war. It is the wholehearted and enthusiastic response of true American working men and women to the demands of our Commander-in-Chief in such a war. It is the wholehearted and enthusiastic response of good soldiers of democracy, who know that everything depends upon united and disciplined support of our great leader.

But I can go much further than this. For I speak for the working people, who have more at stake in this war than perhaps any other section of our population. We are fighting nations whose economy is based on slave labour. In Germany, Italy and Japan there are no labour unions. On the contrary, the first aim of any Nazi or Fascist movement is to destroy the labour unions. Labour leaders are stood up against the wall and shot. Workers who seek better conditions in the shop are hounded, beaten, placed in concentration camps or murdered.

PRIMARY RESPONSIBILITY ON LABOUR

Without union, protection and without democracy, the workers are ground down to extremely low wage levels and intolerable working conditions. They are treated as voiceless instruments of their dictators, their war lords and their industrialists. In every country conquered by Hitler and his gang, like conditions, or even worse, have been imposed on the working population.

We know that this is labour's war. We of labour are and must continue to be leaders in the demand for more production and for every step that is necessary to win the war.

We pledge our complete and wholehearted support to our Commander-in-Chief, President Roosevelt, for the achievement of the production goals which he has set. In doing so, we are mindful that upon the shoulders of labour rests the primary responsibility for achieving those goals.

Mr. Donald Nelson, our Production Chief, has announced a concrete programme for increasing and speeding up war production. We welcome this programme most heartily and pledge our enthusiastic co-operation for placing it into execution. In fact, we of the Congress of the Industrial Organizations take

pride in the knowledge that we have been pioneers and leaders in the demand for just such a programme for mobilizing American industry for all-out war production. We were the first to put forward concrete proposals for producing more steel, more aluminium, more copper, more airplanes and more of all the other goods and services that are needed for victory. The goals cannot be set too high.

FIRST CONSIDERATION

Labour's position is firm and consistent—that winning the war must be our first consideration, and that nothing must be allowed to interrupt war production. Labour itself was the first, of its own free will, to advance an effective programme for the ending of strikes. No sooner was war declared than both the Congress of Industrial Organizations and the American Federation of Labour, assembled in conference with representatives of industry and government, solemnly pledged themselves to set aside the strike weapon for the duration of the war. We also advanced proposals, accepted by the President, for the peaceful solution of all labour disputes, through mediation, conciliation and arbitration.

There has not been a single authorized strike in a war industry since that time, and all the efforts of the Congress of Industrial Organizations and its unions have been directed to ending at once such minor incidents as have occurred.

168-HOUR WORKING WEEK

Production Chief Nelson has called for a 168-hour working week for the machinery of industry. We are wholeheartedly in favour of working our plant and equipment every hour of the week that it can be utilized. Our unions, in many cases, have been the first to call for 24-hour and seven-day week production.

To labour, and particularly to the members of the Congress of Industrial Organizations, whom I have the honour to represent, I say: Get on the job at once! Heed the call of our Commander-in-Chief and our country! Let our slogan be: Work, work, work! Produce, produce, produce!

The Russians say:

"Come to me in small numbers and I will defeat you. Come to me in large numbers and you will defeat yourselves."

Story of a Secret Expedition

THE valuable experience gained at Dieppe and in the commando raids greatly helped the Allied forces under General Eisenhower, writes the *Observer* special correspondent.

This is revealed in the new details which have now become available of the part of the British planning and organization played in the operation in North Africa. The details provide a story of completely unselfish Anglo-American co-operation from the start to the finish.

In Great Britain the naval and military forces, both British and American, were trained at the combined training centres whose work to-day is becoming more and more important.

These centres are under the orders of the Chief of Combined Operations, Vice-Admiral Lord Louis Mountbatten.

MASS PRODUCTION OF CREWS

On the naval side they are able to mass-produce from raw material to the finished article, landing craft and crews, beach-masters and other essential personnel.

On the military side they instruct trained troops of infantry armoured regiments and artillery in the art of becoming amphibious,

INDIA PROVIDES ITS OWN CARRIERS.—Many rulers of Indian States and communities are giving money for the purchase of carriers. The armaments of these vehicles vary slightly, but all carry a Bren gun on an Ack-Ack mounting. The armour plating is entirely made by the Indian State Railways. Photo shows carriers on Ack-Ack defence exercises.

As soon as General Eisenhower was assigned command of the Allied expeditionary force, he asked the Combined Operations Headquarters to provide him with several complete inter-service planning syndicates.

These syndicates, which included American officers attached to the Combined Operations Headquarters produced outline plans for assaults on all the beaches. They were based on the experience gathered at Dieppe and elsewhere. In addition the experts of all three services flew to the United States to assist the planning there.

that is to be able to live in a parent ship and become expert in the use of landing craft.

They also instruct units of the Royal Air Force regiment in similar tactics.

Apart from the British troops, four American regimental combat teams, equivalent of British Brigade groups, were trained by the staffs of these C.T.Cs.

The First Army also sent instructors to these centres. On the return of their units, they completed the training of their own men.

The engineering and maintenance of all landing craft requires a high degree of training. Several thousand British and American officers and naval ratings went through these courses.

COMPLEX PROBLEMS

Problems of communications were extraordinarily complex. General Eisenhower decided that the Combined Operations Command was the only organization capable of working out a signals system for assault involving the navies, armies and air forces of the U.S.A. and the British Empire. Other special problems included navigational aids for ships and aircraft and the organization of signal stations on landing beaches.

For special headquarters, ships were fitted with operation rooms equipped to the last detail as combined naval, military and air Headquarters afloat. These ships carried out their task to perfection.

Before the expedition sailed, elaborate exercises in landing and assault were conducted by all the British and American forces based on Great Britain under the supervision of the Combined Training Centre. In all these exercises the closest secrecy was maintained.

LANDING CRAFT

It can now be revealed that in addition to the several hundred landing craft, the Combined Operations Command provided its own ocean-going assault ships.

These ships are larger and faster than the cross-channel raiding vessels which took part in the previous operations. All ships required special outfitting, particularly as regards the hoisting of the gear for landing craft. The Combined Operations Command used its own craft for inter-port ferrying. Complete secrecy was kept and the destination and objective of the expedition was unknown to all except the planners and the Commanding Officers until it passed through the Straits of Gibraltar.

Italy's Growing Confusion

MESSAGES reaching Berne from Italy reveal a growing confusion which is being created by the mass evacuation of people, alarmed by the Royal Air Force raids, from the largest cities, cables the *Daily Telegraph* Berne correspondent.

It is stated that nearly two-thirds of the population is to be moved. About half the population of Turin and Genoa has already been evacuated and others are leaving Florence, Bologna and Trieste. Roads and railways everywhere are packed with "refugees" whose movement has dislocated whole transport services.

Italian newspapers complain about the strain placed on train and road services. Offices and shops, they say, are also having to solve the problem of depleted staffs. The mass evacuation has also complicated the education problem although the closing of many schools is said officially to be due to lack of coal. Between December 28 and the middle of February 300,000 children are to be educated by radio.

The Italian Government in an effort to allay discontent among the public is trying to devise a scheme to save the capital from aerial bombardment, according to Rome messages. All "military objectives", these reports say, are being removed from Rome in the hope of inducing Allied air forces to refrain from attacking the city. It is stated that the Pope is behind the scheme.

Unity of Purpose and Common Effort

"Our people and the people of the United Nations will need to have in future, as they have to-day, unity of purpose and willingness to make appropriate indispensable contributions towards the achievement of military victory and towards the establishment and maintenance of peace that will endure. With unity of purpose and common effort, there can be achieved peace that will open to all mankind greater opportunity than has ever before existed for the welfare and progress in every avenue of human endeavour."

—MR. CORDELL HULL, in an introduction to U.S. White Paper on foreign policy, published on January 3.

The End of a Legend

By OSWALD DUTCH

IN 1933, when Hitler seized power, one thing was drummed into the German population which was to form the backbone of the whole Nazi regime: "We are invincible." And it is only logical that, together with the myth of Hitler's godlike personality, the omnipotence of the National Socialist Party and the infallibility of dictatorial decisions, a legend should have been woven around the new German army.

The first years of the war seemed to confirm this myth. The German population had long since lost its faith in Hitler's godlike personality and the omnipotence and infallibility of his organization, but, in spite of setbacks in Russia in the winter of 1941-42 (which had never been fully acknowledged), confidence in the German army had not been shaken until these last few weeks.

BATTLE OF BRITAIN

The German population was never told anything of the one great defeat that was to prove decisive for the course of war—the loss of the Battle of Britain in the autumn of 1940. Even now no German seems to know exactly what happened then. At the outset of the war Goering actually seems to have believed that the "German fortress" was unassailable from the air and at first German generals were also convinced that this war could be fought out at lightning speed and without setbacks.

Goering's assurances were given the lie a year ago, and now the other legend—that of the invincibility of the German army—has also come to an end.

NEW WATCHWORD

Rommel's retreat from El Alamein was still represented to the German public as a great tactical victory. This, however, was the last attempt to deceive the home front regarding the real situation of the German army. Those who returned from Russia knew too much of the situation around Stalingrad, and Rommel's latest retreat at El Agheila cannot possibly be described as a success of the "greatest German General." German propaganda has, therefore, had to make a complete volte face. The watchword now given out is: "No army can be proof against setbacks, not even the German army."

HERCULES AND HYDRA

This has made the fallacy of Goebbels' propaganda manifest to the German population and to the whole world. Lieutenant-General Dietmar, speaking for the German Army Command, was forced to admit in his explanations regarding the situation on the Eastern Front on December 12: "Local reverses could

of course not always be avoided when faced with such a powerful opponent . . . Only at one point has the enemy succeeded in hammering a deep indentation into our defensive positions. We may say that the resultant situations were in some respects very grave. The German people must have no illusions regarding the severity of the fighting everywhere—but particularly at Stalingrad. Once again we have seen what masses of men the Soviets can still bring up against us. Our fight against them is like Hercules' fight with the hydra, many-headed dragon of Greek legend, whose severed heads always grew again."

EFFECT OF CONFESSION

What Dietmar said about Russia had already been said three days before—on December 9, 1942, in the *Hamburger Fremdenblatt* by Halfeld on the subject of events in North Africa. "Our campaign," he wrote, "will perhaps not be free from setbacks, and reverses must be expected in every war. In Africa the Allies have certainly succeeded in removing Rommel's threat to Egypt."

Although the truth of the situation has long ago dawned on the German public—in so far as it is still able to think—confession of these defeats has first and foremost profoundly shaken the self-confidence of the German army. However illusory or false the faith might have been, it was something to hold on to. This last bulwark has now been destroyed. Soldiers who have once been beaten cannot possibly be as self-confident as troops who have lived surrounded by the glamour of invincibility and in fact for two years were invincible.

Opponents of the German army now also know that this legend of invincibility was but a fairy tale. And this has considerable influence not only on self-confidence but also on strength and success.

—(Condensed from an article.)

A New Situation

Hitler is now faced with a new situation, no longer having the monopoly of initiative in Europe and forced to envisage the dreaded war on two fronts Russia must be sustained to the utmost in our joint interest. Our own staying power depends on sea communications, and this is a decisive factor in the war.

—LORD HANKEY, in an article in *The Sunday Times*, on January 3.

Prospect of Mediterranean Battle

By CAPT. V. CHEKUROV

THE successful landing of Anglo-American troops on the African coast and the occupation of a number of support points there together with the British offensive in Libya have completely changed the situation in the Mediterranean.

It is now clear that Axis attempts to entrench in Africa have suffered a defeat.

The Mediterranean is a closed theatre of military operations; both ocean exits—Gibraltar and the Suez Canal—are in the hands of the British. Our Allies are able to control the correlation of surface craft. At the same time the Allies are extending their bases along the North African coast.

As for the Italian navy, it still bears traces of heavy blows inflicted on it by the British. Its losses in the course of the war have greatly decreased its fighting activity. Some of its ships have had to be docked for extensive repairs and others prefer to keep to the Adriatic ports.

GROWING ALLIED STRENGTH

Since the outbreak of war, the strength of the Allied navies is growing steadily step by step with the development of operations in the Mediterranean. If need be, Britain and the United States of America can assemble a

numerical strength that will give them considerable superiority over the united navies of the Axis powers. Even before landing on the northern coast of Africa, the Allied navies were firmly established in the Mediterranean. Gibraltar and Alexandria close both the ocean exits. The forces based there threaten the flanks of the territory captured by the Axis powers.

The coast of French North Africa affords our Allies many naval bases. Casablanca, situated on the Atlantic coast, can accommodate a large number of modern warships. From this base the Allies can secure their communications in the southern waters of the Atlantic. Casablanca and Rabat, bases farthest removed from the enemy territory, can also serve as intermediary ports for materials in transit to the Allied armies in Africa.

CAN INFLICT A HAMMER BLOW

With strong air support, powerful Allied naval groups are in a position to operate extensively throughout the Mediterranean. This will compel the Italian navy either to split its forces along several directions from the very start and so weaken itself or test its manoeuvrability by throwing the bulk of the craft in the most menaced directions from its bases in Southern Italy. This will not save the enemy from destruction, however, for the Allies can concentrate in every one of these areas groups numerically superior to the whole Italian navy.

The possession of the North African coast will give the Allies naval and air bases which will enable them to strengthen their forces in the Mediterranean still further and get the upper hand over the enemy. In this theatre, the Allies can inflict a hammer blow, which the Axis will not be in a position to avert—*Soviet War News*.

A Speech from "Mrs. Miniver"

(An outstanding War film.)

"We, in this quiet corner of England, have suffered the loss of friends very dear to us. Some—close to this church. George West—choirboy. James Ballard, station-master and bell ringer, and the proud winner, only an hour before his death, of the Beldon Cup for his beautiful Miniver Rose. And our hearts go out in sympathy to the two families who share the cruel loss of a young girl who was married at this altar only two weeks ago. The homes of many of us have been destroyed, and the lives of young and old have been taken. There is scarcely a household that hasn't been struck to the heart. And why? Surely you must have asked yourself this question. Why, in all conscience, should these be the ones to suffer? Children, old people, a young girl at the height of her loveliness. Why these? Are these our soldiers? Are these our fighters? Why should they be sacrificed? I shall tell you why. Because this is not only a war of soldiers in uniform, it is a war of the people—of all the people—and it must be fought not only on the battlefield, but in the cities and in the villages, in the factories and on the farms, in the home and in the heart of every man, woman, and child who loves freedom! Well, we have buried our dead, but we shall not forget them. Instead, they will inspire us with an unbreakable determination to free ourselves and those who come after us from the tyranny and terror that threaten to strike us down! This is the people's war! It is our war! We are the fighters!

"Fight it, then! Fight it with all that is in us! And may God defend the right."

Winter Comes, but Where is Nazi Victory?

By DAVID TUTAEFF

FOR the last two years Hitler has peddled the mirage of final victory to the only audience which could not help but listen to him—the German people.

But to-day the formula of final victory has undergone a profound change. The Royal Air Force statistically "annihilated" in the late summer of 1940, sends a thousand bombers over Cologne, Essen and Bremen. The Russian armies "conclusively" wiped out by Hitler's speech in October 1941, defy the Wehrmacht and wear its power down.

There is only one conclusive and undeniable fact which Hitler has to offer his people and his army. Another winter on the vast plains of the Don and the Kuban. Nor is the "white hell"—as German radio commentators aptly described the bitter cold and eternity of snow—any more gentle before Leningrad or the forests of Briansk.

GERMANY'S DILEMMA

Despite Hitler's heart-searchings last April, he could not help but admit to his tame Reichstag that he was compelled to take personal command because "nerves were at breaking point, obedience wavered . . ." In his "mea culpa" he went so far as to say that he had not made adequate preparations for the dreadful winter—a winter of 50 degrees below zero, far more terrible than the one which smote his predecessor, Napoleon.

Had the Fuehrer of the German Reich been more literary-minded, rather than literally-minded, he might have learnt from Tolstoy, and other Russian writers, that during a Russian winter only a mad man would march his men around in leather boots.

The dilemma facing Germany is this. Which is it to be—more arms for next year or more men fighting this year? Speer has chosen. Hitler has chosen. It is more men, more cannon-fodder to attempt the capture of Russian towns regardless of cost and the wiping out of the Russian armies.

DECLINE IN OUTPUT

With the army monopolising the most skilful and healthy of the German population, Hitler cannot hope for a period of inactivity during which to withdraw his man-power from the front to the factories. The winters of 1939-40 and 1940-41 will not repeat themselves. But the winter of 1941 with the Russian armies engaging the German hordes in countless local attacks—will repeat itself. Nor will the guerillas give them rest.

Whilst the army's fighting strength has been kept up by constant combing out of skilled factory personnel, a terrific strain has manifested itself behind the lines. Not only has the durability of machinery had to suffer, human stamina has been stretched. Germany's war effort reached its "ceiling" in the latter part of 1941. Since then there has been a marked decline both in the output of armaments and the productivity of labour.

This state of affairs may be contrasted with that of British and American economy. The fruits of planning, so long sneered at by German propagandists, are now giving the weapons to fling at Germany's heart.

CONTRIBUTORY FACTORS

The severe tension which is manifested in German industry, has been brought about by three factors: the Russian campaign, the British economic blockade, and heavy British bombardment of industrial and communication centres. The Royal Air Force this winter will not fail to make those "sore spots" still more sore. The indirect effects of bombing—dislocation and delay in industry and transport—are spreading in ever-widening circles.

The Nazi Labour Chief Sauckel pays an unwilling tribute to the efficacy of this "hitting-where-it-hurts-most" policy of the Royal Air Force. He has laid down that A.R.P. work must be given priority over war production of all kinds. If necessary workers must stop their shift even on the most important jobs in order to do emergency A.R.P. in other factories where bombs are falling. Sauckel says that "saving the nation's factories" from the Royal Air Force is an even more important job than producing munitions for the Russian front.

And meanwhile—like a melodramatic sequel in the cinema, the leaves of the calendar fall before German eyes. Even Himmler cannot control the passing of the seasons. October cannot be shot for sabotage, nor the winter confined in a concentration camp. And Hitler's "final victory" remains the mirage it always was and always will be.

Stalin's Master Plan

THE Red armies in the Middle Don are rapidly extending the gains in their clear-cut victory which is the worst blow that the Reichswehr has suffered this winter, writes Morley Richards in the *Daily Express*. The German High Command agree that they are withdrawing to the west "with their defence position broken in some places." In fact they are to a large extent retreating in disorder. Enemy armies in this strategically vital area

a force took many weeks to assemble. In the German summer campaign the Russians allowed the enemy to reach the suburbs of Stalingrad. Its defenders were stretched to breaking point; yet Stalin held back divisions that were in existence and not far away. But he would not allow the enemy to stay in Voronezh. At cruel cost he was expelled from the city and chased to the west bank of the Don. Hitler was stretched further and further. Now he is overstretched. Of that there can be no doubt. Otherwise a big army on a 70-odd-mile front would not be retreating up to 100 miles and showing little sign of stopping its flight. Do not forget that at this time of year the Russians have their maximum mobility and the enemy their maximum

The death of Sir Sikhander Hyat Khan, who symbolised the great war effort of the Punjab, is mourned all over India. The above photograph shows Sir Sikhander chatting with a member of the Poona Horse during his visit to the Western Desert.

have been broken. This is the third group which in six weeks has been deprived of its offensive power and a high proportion of its total strength.

This is no Soviet flash-in-the-pan. It becomes increasingly plain that Stalin with Marshal Shaposhnikov and his small group of military advisers had been working to a long-prepared plan which took months to organize. For one thing, Generals Golikov and Vatutin are using a quarter of a million men or more in this drive, with masses of material. Such

immobility. Long-term possibilities arising from the three Soviet offensives are these: (1) the trapping of three German groups—in Caucasia, before Stalingrad, and the triangle between Millerovo, Rostov and Kotelnikov; (2) recovery of the Ukraine and the riches of the Donetz basin; and (3) a blow to the German army from which it could never recover.

The Russians have a long way to go before these things can happen. But the gains already secured—and the assurance from Stalin himself that this is by no means the

completion of the winter plan—leave little doubt that the whole of Hitler's tactical successes last summer are going to be nullified.

TO FOLLOW UP SUCCESS

The Russians are determined to follow up their Stalingrad success to its logical conclusion, which is the destruction of those German armies which have battered the city for three months, cables *The Times* Moscow correspondent.

In a 40 to 80-mile wide Russian belt, stretching from the western side of the Don bend south towards Kotelnikovo and beyond to the Russian held Volga country are caught 14 to 16 German divisions between 130,000 and 150,000 men. Soviet pressure, west, north and south is supplemented by further pressure from positions in Stalingrad itself.

There the Russians are pushing the Germans back towards the western outskirts, daily destroying dozens of firing points and dug-outs and recapturing many blocks of houses. In Stalingrad the Russians now have unquestionable superiority in guns. These have been replenished since a juncture was made with the Russian forces north of the city.

The German armies are enclosed in an area which is slowly becoming smaller daily. The diameter of the ring in which they are caught between Stalingrad in the east and point about 10 miles east of Kalach averages 25 to 30 miles. It is open country with few natural defences. Nearly all the troops encircled are Germans—those Germans who in August were writing letters home announcing the imminent fall of Stalingrad and an early end of the war.

GERMAN TRANSPORT PLANES IN ACTION

Transport planes are feeding and supplying them as best as they can. Such planes ultimately saved from destruction the German Sixteenth Army at Staraya Russa last spring. But the Russian corridor then was very slender and the break through was comparatively easy. To-day the Germans are faced with a wide Russian belt with considerable Russian forces which continue to be reinforced from both ends.

German transport planes have suffered heavy losses. During the two days when weather was relatively clear more than 100, including all sorts of passenger and postal planes not ordinarily used in war, were shot down.

In two respects the Germans have been lucky. The low clouds and blizzards have often made it impossible for Russian fighters

to operate. This has enabled transport planes to operate with impunity. Then, the winter has so far been fairly mild and the Germans who are not adequately clothed have not felt its full rigour yet in the steppes.

Nevertheless, the Germans in the encircled area appear to be suffering great hardships. They are already living on iron rations, less than four to seven ounces of bread daily and not much else besides.

GERMAN PROSPECTS

How do the Germans estimate their own prospects? It is hard to say, but it is perhaps significant of their gloomy view of the situation that large numbers of their staff officers should have left the encircled area for the rear. But it is certain that the Germans will try to break out before they are frozen to death.

If they fail—and they have failed so far—they will expect the German forces from outside to come to their rescue. There are indications that an attempt to break through the Russian line is in preparation by the German troops brought by rail from the Caucasus.

The Stalingrad battle is not over yet but the Russian prospects at the moment are good. The casualties of the Germans and their Rumanian allies have been extremely heavy—incomparably heavier than those of the Russians.

ONE WORD

A story of a verbal victory scored by an Indian soldier over a German officer is told by prisoners of war, captured in the Western Desert, and released following the Eighth Army's victorious drive.

Two Sikhs were being interrogated by a Nazi officer, who, after asking why they were fighting against the Axis, attempted to convince them that the Germans' only wish was to "free the down-trodden peoples of the world".

With a chuckle a Sikh havildar recounted how he replied with the single word "Poland".

After that the German officer gave it up.

Soviet Submarines Busy

NOT so long ago the *Deutsche Zeitung* in *Norwegen* published an article by Lieutenant-Colonel Kerman, adjutant to the Commander-in-chief of the German forces in North Europe, Dietl, entitled "Why The German Troops Have Not Yet Occupied Murmansk."

The author says: "Many ask why the Germans have not yet occupied Murmansk. I shall try to explain. In Lapland German troops are fighting who have been there since the beginning of the campaign. Since then we have received no reinforcements. Fighting has been very severe and the difficulties baffle description. The devil himself invented the tundra for the benefit of the Bolsheviks. In our rear, we have to fight partisans and regular troops who filter their way through."

THE REASON

Why does not General Dietl receive reinforcements? Firstly, because Germany's reserves are not unlimited. Secondly, because the few reserves which Hitler does dispatch to the north do not reach their destination.

Dietl's army is supplied by sea, by way of the Norwegian coast. And along this sea lane German transports are faced by a serious obstacle—the Soviet submarine fleet.

Especially credit in harassing Germany's sea communications is due to the guards submarines D3, M171 and M174 and to submarines M172, Sh402 and Sh421, which have been decorated with the Order of the Red Banner. Each of these submarines has destroyed not less than 50,000 tons of enemy shipping.

CONTEMPTUOUS OF DANGER

The submarines of the Soviet Northern Sea Fleet not only sink German transports on the open seas; time and again, overcoming all obstacles and contemptuous of danger, they have penetrated into enemy harbours and sunk German vessels lying at their moorings.

In forcing their way into enemy harbours, besides mines and wire-netting, the Soviet submarines have to encounter even more serious dangers. Some of the fjords are so narrow that submarines cannot turn in them while under water. After the attack they have to grope their way blindly out of the harbour. To raise the periscope above the surface, even for a single second, would lead to the instant betrayal of the submarine. Submarine barriers, surface vessels with their depth charges, aircraft and shore batteries—all lie in wait for the submarine that is daring enough to penetrate into an enemy harbour.

Nevertheless, Soviet submarines continue to pay visits to German sea bases.

NAVIGATION CONDITIONS

Navigation conditions in the Barents Sea are very stern. Cold winds give rise to dense mists; storms often reach hurricane violence. However, Soviet submarines have learned to cruise in any weather. It is interesting to note that many German transports were sunk during the Arctic nights, when it would seem they enjoyed maximum concealment and security from attack.

In spite of all the Germans' efforts to improve their defences against submarines, their communications are kept under constant menace, and reports are received almost daily of German transports sunk by Soviet submarines.

And the Soviet Northern Fleet, supported by the British Navy, helps the submarines in their arduous tasks.

British Raids on Germany

THERE are abundant signs that the blitz attacks on Germany's key industrial centres have begun to shake the morale of the working population in the Ruhr and the Rhineland, writes Mallory Browne in the *Observer*.

There are indications that saturation point is being approached in the efforts of the Nazi authorities to absorb evacuees and re-clothe and re-house those who have lost their homes and possessions by bombing.

One important point is often overlooked in assessing the effectiveness of the bomber raids on Germany. It is often said that just as the German raids on Britain failed to have any conclusive effect on our own war production so the British raids on the Reich cannot hope to disrupt war production there. This fails to take account of a very fundamental difference in the two cases.

In 1940 and the first half of 1941, Britain was just beginning to expand its war industry. There was plenty of slack to be taken up. There was abundance of labour for clearing and demolition purposes. There were plenty of factories of civilian work which could be switched over to war work in replacement of those plants that were knocked out. Above all, there were enough empty houses to take care of the evacuees and the homeless. In Germany to-day the opposite is the case.

Admittedly, it must be kept in the perspective. No one suggests that our offensive against the Axis is to be restricted to bombing. It is not even proposed that all our air resources are to be directed to bombing alone. But Air Marshal Sir Arthur Harris has been able to say without contradiction recently that what he has achieved has been done in spite of the fact that he has only been able to use 10 per cent of Britain's first line aircraft strength for his raids on Germany.

Air Transport of Tomorrow

By GLENN L. MARTIN

WHAT's ahead for aircraft in peace and war?

I am not a military expert. But I have spent a lifetime in the design and production of military aircraft. In 1913 it was my privilege to help conduct the United States Army's first bombardment experiments. So fascinated was I with the airplane's demolition possibilities that I made this statement, culled from newspapers of August 7, 1914, which were headlining the beginning of the first World War.

"The aeroplane will practically decide the war in Europe. Veritable flying death will smash armies, wreck mammoth battleships, and bring the whole world to a vivid realization of the awful possibilities of a few men and a few swift aerial demons. For the old-time war tactics are no more. The generals who realize this quickest and fight first with the flying death, will win."

I was one war too early in making that prediction. But to-day we find air forces the most powerful influence in victories; lack of them, the outstanding cause of defeats. No armed force can be successful in any major project without air supremacy in its theatre of war.

VERSATILE CRAFT

Few people stop to consider the versatility of aircraft in this war. In addition to its more spectacular functions of bombardment and defence, the airplane is maid-of-all-work for the armed services. It performs long-range reconnaissance, patrol and scouting work for both Army and Navy. It transports troops and heavy loads of supplies at high speed. It is a moving and elusive machine-gun nest. In some situations it is a basic supply source for land forces.

Too few understand the power of the airplane—rather, the fleet of airplanes—as long-range artillery. For purpose of contrast, suppose word arrives at a battleship station that a hostile force has been sighted 1,000 miles away. The battleship is stocked with supplies and ready for battle. In 38 hours, if the enemy target has not moved too far, the battleship can overtake it and fire a salvo of nine tons of explosives.

Now suppose a fleet of 150 bombers, costing about the same as a battleship, gets word of the force 1,000 miles away. Six and a half hours later these planes discharge 750 tons of explosives on the target; in 38 hours, after three trips, 2,250 tons of bombs will have fallen on the objective. Even

a continuous cannonade from the battleship could not approach the destructive power unleashed by the air fleet.

Again, the extreme mobility of great naval air forces would answer in large part America's need for a two-ocean navy. A powerful air force can serve in either the Atlantic or Pacific Oceans in full strength on short notice.

BUILT LARGEST FLYING BOAT

The subject of the very large airplane is dear to me because my company made the first transoceanic clippers. We have tested recently the world's largest flying boat, the 70-ton "Mars"—a plane three times the size of the China Clipper. Such ships have a definite place in naval and military plans; they carry extremely heavy bomb loads, they carry large numbers of men or large cargoes, and their ocean-landing and take-off areas are unassailable. Bombs can't make a hole in water.

Commercially, the extremely large air vessels have a great future. Organized airline travel not only has been the safest means of transport since the war began, but it was safer for several years before the war. In the future, it will be safer yet, largely because of developments during the war.

The world is destined to have winged vessels larger than we have yet dreamed of. Transoceanic operations are at present based on aircraft having a gross weight of slightly more than 40 tons. These flying boats can carry a payload of about 4,000 pounds for 3,000 or 4,000 miles, depending on head winds and fuel reserve needed, a technical achievement considered impossible a few years ago.

Out of the perils of war is coming, paradoxically, safety for post-war air travel. The very instruments by which we locate hostile aircraft and assail them will assure both air and surface craft safe passage in any weather.

HIS MISTAKE

A workman was called in to do some repairs to an A.R.P. warden's post, and before he started his labours he looked round for something to stand on. Spotting a rough wooden structure, he picked it up.

"Hi, what are you doing with that?" exclaimed the warden on duty.

"I'm only borrowing this soap-box to stand on. I won't hurt it."

"Soap-box be hanged! That's our chief warden's roll-top desk."

Russia's "Secret Weapons"

By EMIL LENGYEL

FROM the Arctic to the sun-parched Kirghiz steppes, from the Baltic to the Pacific Ocean, the Soviet Union is training tens of millions of its people to be "secret weapons." Young boys of 16 and men of 60, girls of 18 and women of 50 are drilling in the tent settlements of the slant-eyed Mongols, in the Buriat villages of the Lake Baikal region, on the plains of perennially frozen Lapland.

These millions of secret weapons are preparing to defend every inch of Russian soil. While they are on the alert, the Soviet Union is not beaten. Theirs is the world's largest civilian-defence army.

Because of the work of this organization, the Soviet's pool of manpower is never exhausted. The army and guerilla forces can call on it for huge numbers of men who are already partly trained for warfare. "The miracle of the winter of 1941" might never have come to pass without this great civilian force.

"A NATION IN ARMS"

The tongue-twisting, telescoped name of this organization is "Osoaviakhim," which means Society for Assistance in Defence and in Aviation-Chemical Construction. All Soviet citizens, unless physically incapacitated, must join it to learn how to deal with incendiary bombs and poison gases. They must lend a hand in improvising air raid shelters, building up the terrain for home defence and other such tasks. That is the compulsory part of the programme.

It also has a voluntary branch with about 20,000,000 members. Such members take training in parachute jumping and many other special military activities.

"A nation in arms" would be a correct description of the real nature of the Osoaviakhim. In its essence it is a nationwide preparatory school of both sexes and all arms-bearing ages to stem the enemy tide.

MANIFOLD DUTIES

That rifle fire one hears in the depth of the woods of the Siberian forest belt comes from a target range of the Society. There, high-cheek-boned natives compete with one another to qualify for the title of "Voroshilov Sharpshooter."

Vicious-looking anti-aircraft guns are manned by young girls and their mothers, by bearded peasants and their grandsons—all members of the Society.

Their gnarled peasant fingers are also taught to handle sensitive machine-guns, to transmit signals, to use the field telephone. They are taught to see the terrain with a soldier's eyes. They are instructed in taking advantage of the terrain, and in helping the military by scouting and patrolling.

IMPORTANT ROLE

The more skilful among them are taught to handle the deadliest of modern warfare weapons, such as the flame-throwers. They, who learned to read only yesterday, now learn to read the mysteries of military maps.

Members of the Society are being taught to race on skis. Last winter many of them sailed into the midst of enemy troops and demoralized them. Members of the Society are also taught to take military advantage of their knowledge of the horse.

While the Society is not, strictly speaking, a military organization and is not an official part of any of the armed forces, large numbers of its members have joined the army or the guerilla bands, and some of them have achieved great fame.

When the history of the Soviets' resistance to the invaders is written, an important chapter will be devoted to the work of the Osoaviakhim—the people of Russia in arms.

—(Condensed from *New York Herald-Tribune*).

OH!

A Soldier whose main trouble was extreme talkativeness, was on escort duty with a corporal, taking an important prisoner to headquarters.

Before starting, he had been told that on no account was he to speak; a bet of a packet of cigarettes had been made that he couldn't remain silent until reaching headquarters.

They went in single file, the soldier quite mute.

On arriving at headquarters, the corporal without looking round, said, "Well, Tommy, you've won the bet."

"Yes," replied Tommy, "but you nearly had me when the prisoner escaped."

Diary of the War

ENGLAND AND GERMANY

17th Dec.—The Royal Air Force raided targets in France and Belgium.

18th Dec.—German daylight raiders crossed the coast south and south-east of England in a number of places. About 20 towns and villages were attacked. Two Nazi aircraft were destroyed.

19th Dec.—Although two prominent Cabinet Ministers were unsympathetic, if not hostile, Mr. Churchill himself put the Beveridge Report on the official map.

The Royal Air Force raided western and north-western Germany. Eighteen bombers failed to return.

21st Dec.—Mr. Amery launched the *Narbadu*, a new flagship of the R.I.N.

22nd Dec.—The Royal Air Force attacked Duisberg.

23rd Dec.—The Royal Air Force bombed Munich.

24th Dec.—The Royal Air Force swept over France and Holland.

25th Dec.—The Royal Air Force raided France and Belgium.

31st Dec.—The Royal Air Force made sweeps over Northern France. An invasion warning was broadcast to the French people.

1st Jan. 1943.—A naval engagement took place between German and British units in the North Sea. An enemy destroyer was sunk. "Germany will not collapse," boasted Hitler in a New Year Order of the Day.

2nd Jan.—The Royal Air Force swept over Northern France.

United States bombers attacked St. Nazaire docks.

6th Jan.—The Royal Air Force attacked the Ruhr.

UNITED STATES OF AMERICA AND THE ATLANTIC

24th Dec.—According to a New York message, the Germans brought heavy pressure on Spain for permission to occupy Balearic Islands in western Mediterranean.

25th Dec.—Mr. H. L. Stimson, the United States Secretary for War, said at a Press Conference: "Christmas this year holds better prospects for the United Nations than the Christmas a year ago."

30th Dec.—Mr. Henry A. Wallace, Vice-President of the United States, spoke on "America's part in world reconstruction."

31st Dec.—President Roosevelt confirmed that General de Gaulle was coming to the United States.

1st Jan. 1943.—Stalin was named "The Man of the Year" for 1942 by the *Time* Magazine, New York.

5th Jan.—Mr. Joseph Grew, United States Ambassador to Japan, in a broadcast, characterised the Japanese as a "relentless and brutal foe."

INDIA, BURMA AND CEYLON

17th Dec.—Chittagong area was again raided. Three enemy planes were destroyed.

United States planes raided Myohaug in Burma.

18th Dec.—The Royal Air Force attacked a Japanese-occupied village in the Maungdaw-Pathidaung area in Burma.

Japanese aircraft again raided Chittagong and Feni.

20th Dec.—Allied troops moved into Burma and pushed into Arakan. The Royal Air Force bombed Akyab and Rathedaung.

Calcutta was bombed for the first time.

21st Dec.—The Royal Air Force attacked Toungoo aerodrome.

23rd Dec.—There were two more raids on Calcutta. Casualties and damage were slight.

The Royal Air Force raided Akyab area.

24th Dec.—The U.S. planes raided Rangoon.

25th Dec.—Allied troops occupied a district in Burma. United States planes raided Lashio.

26th Dec.—Calcutta was again bombed.

"Les Miserables"

A German film star visited Hollywood. She met a famous director. "Do you know," she said, "that we have just produced a film in Germany with a cast of 30,000?"

"That's nothing," declared the American. "We often make films with 50,000 people in the cast." The film star was silent, but on her return to the Reich she told Hitler about it—and annoyed the Fuehrer very much.

"Why didn't you answer the fellow?" he cried. "You should have told him that in Germany we are making *Les Miserables* with a cast of 80,000,000."

The Royal Air Force raided the Magwe aerodrome in Burma.

General Wavell, in a message to the fighting forces, said: "The War has now entered a new phase!"

27th Dec.—Sir Sikander Hyat Khan, Premier of the Punjab, died of heart disease.

29th Dec.—Calcutta was again raided. A Japanese bomber was shot down.

United States planes raided Bangkok.

31st Dec.—The United States aircraft raided Rangoon.

1st Jan. 1943.—General Wavell, Commander-in-Chief of India, was made Field Marshal.

4th Jan.—The Royal Air Force attacked the Magwe aerodrome in Burma.

21st Dec.—Allied troops advanced in Tripolitania. Targets at Buerat were bombed.

22nd Dec.—Rommel's retreat continued. The Allied troops reached Sultan.

23rd Dec.—Rommel's retreating forces reached Misurata.

24th Dec.—Allied troops were near Buerat. Two enemy vessels were sunk in the Mediterranean.

Admiral Darlan was assassinated by a Frenchman.

25th Dec.—Rommel's forces were pushed beyond Misurata. French forces beat back Germans in Tunisia. Allied bombers raided Lampedusa.

British advanced units reached Buerat.

CYPRUS VOLUNTARY FORCE.—The Indian Drum and Pipe Band playing in Nicosia, Cyprus.

7th Jan.—The Royal Air Force bombed the Mandalay railway junction.

ITALY, AFRICA AND THE MEDITERRANEAN

17th Dec.—Rommel was in full retreat in Tripolitania.

18th Dec.—Battle was joined with Rommel's retreating forces 50 miles west of El Agheila. German panzer division was encircled. Allied aircraft hammered Axis troops.

In an exclusive press interview, Admiral Darlan stated that the French Fleet units at Dakar, Alexandria and North African ports would join the British and United States fleet and fight the Axis.

19th Dec.—Rommel's trapped forces were able to break out after suffering heavy losses.

Britain reached a working agreement with Darlan.

20th Dec.—Axis forces evacuated Nofilia. Bizerta was heavily bombed.

26th Dec.—Darlan's assassin was executed by the orders of a French court martial.

British troops occupied Sirte. Allied troops were within 12 miles of Tunis.

28th Dec.—General Giraud succeeded Darlan as French Commander-in-Chief in North Africa.

29th Dec.—Rommel's forces were contacted beyond Sirte.

30th Dec.—French Somaliland joined the Allies.

31st Dec.—Allied aircraft bombed Tunis and Sousse.

1st Jan. 1943.—Twelve persons were arrested in Algiers on a charge of attempting to assassinate high officials, including General Giraud.

Mr. Harold MacMillan was appointed Minister Resident at Allied Headquarters in North-west Africa.

2nd Jan.—The Royal Air Force raided Gabes and Sousse.

3rd Jan.—Casablanca was bombed.

4th Jan.—The Royal Air Force attacked Crete and Palermo in Sicily.

5th Jan.—The Germans attacked the French troops at Pichon. Nineteen Axis planes were shot down over La Goulette.

7th Jan.—General Montgomery prepared for the final attack. Buerat fell into Allied hands.

RUSSIA AND FINLAND

17th Dec.—The Red Army captured a key point in the Caucasus.

18th Dec.—Nazi attempts to cut through the Soviet ring at Verkhue Kumsky failed.

19th Dec.—German thrust south-west of Stalingrad was shattered.

21st Dec.—German defences were pierced on the Don front. There was fierce fighting in Voronezh area.

22nd Dec.—The Red Army entered Velikie Lukie. The German position was "grave" on the Don front.

23rd Dec.—The Germans fell back on Voroshilovgrad. Soviet troops advanced on Millerovo.

24th Dec.—The Red Army captured Kamensk.

26th Dec.—The Russians assumed offensive in the Caucasus. Nazis were pressed back at Nalchik.

28th Dec.—The Russians retook Katsynskaya.

29th Dec.—The Russians by-passed Millerovo and pushed to Rostov.

30th Dec.—Kotelnikovo was captured by the Russians.

1st Jan. 1943.—The Red Army crossed the Terek river and advanced on a 130-mile front.

2nd Jan.—The Russians advanced on Rostov. Velikie Lukie was captured and the German garrison wiped out.

3rd Jan.—Russians drove deeper into Hitler's crumbling winter defence, exploiting their victories at Velikie Lukie and Elistér.

4th Jan.—The Russians captured Mozdok. They were 20 miles from Nalchik.

5th Jan.—The Red Army captured Chernishkovskaya and Mozdok.

6th Jan.—The Russians took Nalchik.

7th Jan.—The Germans withdrew to Rostov and Crimea.

NEUTRAL COUNTRIES

21st Dec.—An Iberian bloc was formed by Spain and Portugal.

30th Dec.—Many Turkish families living in Bulgaria near the Turkish border moved inland.

SHIPPING

18th Dec.—The British submarine *Unbeaten* was lost.

2nd Jan. 1943.—The British destroyer *Blean* was lost.

THE FAR EAST

17th Dec.—The Japanese landed reinforcements on Mambare and Kumusi between Lae and Buna.

18th Dec.—Buna was "busted" by American troops.

19th Dec.—General MacArthur's forces closed in on the last Japanese positions near Buna and North Guinea.

United States bombers devastated the Gialam aerodrome.

20th Dec.—Seven Japanese ships were sunk in the Pacific by submarines.

21st Dec.—Cape Endaiadere was captured.

22nd Dec.—Allied forces launched a general attack in the Buna Mission area.

24th Dec.—Japanese installations in Timor were raided.

25th Dec.—Japanese fortifications were breached in several places in Buna.

28th Dec.—General Tojo, Japanese Prime Minister, said: "Real War has only started now."

29th Dec.—The Japanese bombarded Buna.

1st Jan. 1943.—Two Japanese ships were sunk at Rabaul.

2nd Jan.—United States aircraft raided Wake Island and Kiska.

The Japanese base at Lae was bombed and 21 planes were destroyed.

3rd Jan.—Japanese invasion units were thrown back on China coast.

4th Jan.—Lae and Salamua were raided. Allied troops captured Buna Government Station.

Seven Japanese ships were sunk by U.S. submarines.

5th Jan.—Japanese position in Buna area was described as "hopeless." A Japanese destroyer was damaged off Guadalcanar.

Admiral Halsey (United States) predicted that Admiral Yamamoto would be present in White House for an American dictated peace.

7th Jan.—Nine Japanese ships were destroyed in Rabaul harbour.

No. 18

WE SHALL REPAY THE GERMANS.

GENERAL SIKORSKI.

THE time is drawing near when we shall repay the Germans by blitzkrieg methods which they will no longer be able to counter

IN his clash with Russian armies which, under the leadership of M. Stalin, are showing such magnificent determination, Hitler can no longer treacherously attack and separately destroy one carefully chosen opponent after another. The character of the war is now changing completely, both in Africa and Europe

MASSSED hatred of the oppressed peoples, which will be released at the right moment through an invasion of Europe, will give to the final blow dealt by the United Nations an impetus so great that it will bring about the inevitable defeat of Hitler

GENERAL SIKORSKI, the Polish Prime Minister,
in a speech in New York on January 9

Running Commentary

Axis Leaders' Speeches : Then and Now

In a broadcast from Rome on Saturday (January 9), the Italian Radio Commentator, Mario Appellius, said, "At some points here and there, on various sectors of the front, Russians have broken through the Axis lines. They have succeeded in occupying some advanced positions—we might even add, some important positions. The Russian soldier has fought well and his leaders are good." He further said that the Axis Powers had a very hard year in front of them and that they had steeled themselves for the worst. It is interesting to compare this summing-up of the Axis position with the utterances of the Axis leaders some time ago. Last year, in his New Year message to the troops, Hitler said "The year 1942 shall, so we pray the Lord, bring a victorious decision for our people and for the nations allied with us." Referring to Russia, he said, "The enemy's attempt during the winter of 1941 to turn their fate to attack must, and will, fail." In January, last year, speaking at the Berlin Sportspalast, Hitler paid a tribute to the "superhuman feats" of the German infantry and said, "It is not the Russians who imposed the defensive upon us but temperatures of 35 and 45 degrees centigrade below zero." He told the German people, "The hardest lies behind us. The winter was the greatest hope for this opponent in the East, but it is a hope that will fail him. . . . There will come a year when the ground is hard and firm, and then the German musketeer will attack, and then we shall beat the foe again. The soldier at the front has the feeling of immense superiority to the

Russians." Boasting of his great strength and superiority, Hitler said: "How this year will end, I do not know. But one thing I do know. Wherever the enemy appears we will beat him again this year. It will again be a year of great victories. To-day we have the strongest army in the world and the strongest air force. There remains to us no other way but the way of battle, and the way of success."

But what has he to say this year? The old boasting and bluster are not much in evidence. In his message to the troops, he recalls only his moments of past agony. He says, "In anxious nights, I lay awake and my thoughts were with you." He is no longer in a position to offer them easy victory. He tells his "brave musketeers" this: "How heavy this struggle is, and may be in the future, and however often the balance of success may tip in favour of the enemy—at the end there will be a German victory." But there is the haunting spectre of the second land front in Europe. He says, "From Norway to the Spanish frontier German divisions are awaiting the attack of our enemy." Hitler said last year that the *Luftwaffe* was the best in the world, but he now describes it modestly as "achieving the utmost possible." His "best army" has been reduced "to the armed S.S. who are immediately and personally placed under me and are now as before the backbone of the formidable struggle."

The concluding portion of Hitler's speech ends in a peroration which shows an unaccustomed fear and modesty. He said: "The year 1943 may perhaps be

difficult, but certainly not more difficult than the past years. If God gave us the strength to overcome the winter 1941-42, then we shall certainly get over this winter and the coming year."

* * * * *

Boastful Goering Pleads for Toughness and Endurance!

Hitler's lieutenant, Goering, also indulged in boasts of Germany's strength last year. In October 1942, he said, "This winter will be in no comparison with the winter of last year. This time we are

And what has the same Goering said in his New Year message a few days ago? "In the spirit of our dead heroes," he says, "we pledge ourselves to fight for Germany to the last breath." He thanked his comrades for all that they did during the difficult days of the past year. The usual prophecies and predictions as to the future are conspicuous by their absence. "In this hour", says Goering, "we do know what the future holds in store." He wants unquestioning loyalty to the Fuehrer, for "without toughness, endurance and discipline no battle was ever won."

BURMA ROAD OF THE AIR.—This picture was taken at a United States Air Base in India, which is one of the many supply depots for war material sent to China. The material is flown to its destination over the new 'Burma Road of the Air.' Photo shows supplies being loaded into a giant transport plane prior to flight.

prepared, this time we know what the Russian winter is like and we will bear it more easily. The enemy have suffered losses during the last winter by continuous attacks to an extent which we cannot imagine. Where, I ask you, did the Russians win even once a success of modest tactical significance?" He wound up his speech with a deliberate falsehood. He said, "The decisive factor is that the Russian is beaten at the centre of gravity and this is fixed by us and not by the Russians. This has always been the case."

Russian Campaign and German Propaganda Perplexities

What about Dr. Goebbels, the Propaganda Minister of Hitler? In December 1941 in *Das Reich* and in his closely supervised radio commentaries, he referred to "the increasing difficulties of civil life" and said, "The field post is overtaxed and consignments to the front are only possible to a limited extent." But on January 18, 1942, Goebbels was in his usual element.

(Continued on page 6.)

General Sikorski's Warning

IN a speech in New York on Saturday, General Sikorski, the Polish Prime Minister, declared that the time was drawing near when the Germans would be repaid by blitzkrieg methods which they would no longer be able to counter. He said that the massed hatred of the oppressed peoples would be released at the right moment through an invasion of Europe and this would give to the final blow dealt by the United Nations an impetus so great that it would bring about the inevitable defeat of Hitler. General Sikorski is in a peculiar position to speak with first-hand knowledge of the Nazi oppression in Europe and the hatred of people of the occupied countries against Hitlerian tyranny, for it was his country, Poland, which suffered most under the Nazi heel.

IT may be recalled that ever since the Germans over-powered Poland in October 1939, they were subjecting the Polish people, particularly the Jews, to all possible indignities and atrocities. The Polish population was first deprived of its leaders, big landowners, doctors, lawyers, teachers, priests and businessmen. During the first few months of the occupation, thousands of them were executed and tens of thousands were deported to the *General-Gouvernement*, one of the bisected parts of Poland which was supposed to constitute, according to the decree of October 12, 1939, "the future settlements of the Polish nation." Later the deportation was extended to the working classes. Whole villages were cleared of the Polish population, and Jews everywhere were treated with the greatest cruelty. The extent of the cruelty can be imagined when it is stated that Himmler and the Gestapo were in charge of the evacuation. They did all that was humanly possible to crush Polish self-respect and dignity and bring about misery and suffering.

THE University of Cracow, established in 1364, one of the oldest universities in the world, was the object of the special wrath of the Nazis. All the professors were arrested and deported to the concentration camps in Germany. The Universities of Warsaw, Lublin and Poznan also came under the destructive hands of the Nazis. Some of the University buildings were destroyed; scientific installations and instruments were dismantled and transported to the Reich, and a number of professors were imprisoned and allowed to die. The Germans aimed at a complete annihilation of Polish intellectual life and scientific institutions. A good deal was done to paralyse the economic life of the people. Workers were removed in large numbers to Germany to work in factories and farms. Thousands of Polish skilled metal workers, engineers, agricultural labourers and domestic servants were taken away to Germany.

Wholesale Executions

RECENT reports received by the Polish Government in London from a reliable source in Poland show that the orgy of destruction and exploitation continues unabated. During the last few months, it seems the German Government have deliberately adopted a policy of wiping out the Jewish race in Poland and, as far as possible, in other occupied countries. Wholesale executions of Jews began in the eastern Polish provinces soon after the Germans pushed back the Russians. In the city of Wilno, 60,000 Jews were murdered; at Rowne 14,000 Jews were killed and at Kowel the number was 10,000. Half of the Jewish population of Lwow was wiped out. Similar massacres have taken place in other towns in East Galicia. In March and April last year, mass murders began in Lublin, Central Poland. In Lublin town itself, only 2,500 Jews were left out of 30,000.

IN July the German terror moved to Warsaw, soon after the visit of Himmler. According to official statements in the Berlin press, there were 480,000 Jews crowded into the Warsaw ghetto. It may be remembered that, according to a German decree issued on October 17th, 1940, Warsaw was divided into three residential areas, one

for the Germans, one for the Poles, and one for the Jews. The best parts of the city, that is, the whole of the south-east quarter, with its parks and avenues, its promenade along the Vistula, its large modern houses and the many palaces of the Polish nobles built at the end of the eighteenth and the beginning of the nineteenth centuries, were all occupied by the Germans.

THE worst part was given to the Jews; this was in the north-west between the main railway station, the Sazon Garden and the Danzig station. This ghetto has an enclosing wall with only a few gates. On July 20, the work of "liquidating" the ghetto was begun by placing a dense cordon of armed Germans around the ghetto boundary walls. Next morning the Germans entered the houses in the ghetto, singled out members of the Jewish intellectual class and shot them. The day after, all members of the Jewish Council who were not arrested, were compelled to put their signatures to a proclamation which began as follows:—"By order of the German authorities, all Jews living in Warsaw, without regard of age or sex, are to be deported to the east."

THE next day, July 23, the President of the Jewish Council, after a further interview with the German authorities, committed suicide. It seems the Germans ordered him to supply 10,000 persons, instead of 6,000 previously fixed, for evacuation the very next day.

SUBSEQUENTLY, deportation of the Jews was going on every day without a break. By September 1, about 250,000 Jews were sent out of Warsaw. For the month of September 120,000 ration cards were printed, for October only 40,000! From this we have some idea of the rate of expulsion of the Jews for that month.

Expulsion: *Modus Operandi*

THE "procedure" of expulsion is something like this. A cordon of armed Germans is formed around blocks of houses in the ghetto. Then the Germans enter the courtyards. They fire a few shots as a warning to the inhabitants to come out. Those who do not or those who try to hide are immediately shot. Cripples and old people who are not able to move are also disposed of in the same way. The rest are sent to the station for entrainment, and they are again sorted. The elderly and the useless are taken to the cemetery and shot. Those remaining are put into goods trucks, 120 persons in a truck large enough to hold only 40. The floors of the trucks are spread with quicklime! The train starts after the trucks are closed and sealed. The Jews are taken to one or other of the three execution camps at Treblinka, Sobibor or Belzec. The train is unloaded there and the condemned are stripped naked and then killed. To bury the bodies a great "bulldozer" is installed at Treblinka. It is stated that the machine works without stopping and that the stench of decomposed bodies is so unbearable to all peasants for three miles around that they have fled away from their places. The horrors inflicted on the Jews are so great that in Warsaw, victims implore the Germans to shoot them there itself. A regular fee for this merciful act is said to be 100 zlotys!

NOT only from Poland, but all over enslaved Europe, from France, Holland, Norway and the Balkan countries, train-loads of Jewish deportees are being sent east. The conditions of "appalling horror and brutality" under which the Jews of all occupied countries are being transported has been referred to in a joint declaration of the United Nations which was read out in the House of Commons on December 17 by Mr. Anthony Eden, Secretary of State for Foreign Affairs. The declaration concluded with a re-affirmation of the solemn resolution of the signatories "to ensure that those responsible for these crimes shall not escape retribution and to press on with necessary practical measures to this end."

GENERAL Sikorski has said that the time for repayment is drawing near. Sir Stafford Cripps, Britain's Minister of Aircraft Production, has, in a speech on Saturday, given an indication of the nature of this repayment. Germany and Italy will henceforwards be subjected to still heavier bombing. They will get, not a taste of their own medicine, but the whole lot of it, and more. And they will have to drink it to the dregs!

RUNNING COMMENTARY

(Continued from page 3.)

He said, "Never have our chances been so favourable as now and never therefore has it been so worth while as now to throw in the stakes." The next month, he said, "On the field of battle we Germans are always very great." On January 1, 1943, however, the supreme confidence in strength and victory is not so much in evidence. The Propaganda Minister prescribes "a hard determination" for "a victorious end." Considerable perplexity was shown by the German Propaganda Ministry over the Russian campaign. In a German commentary in English Dr. Goebbels and his men said, "The only real breakthrough by the enemy was in the middle Don." They had to agree that the "Soviet armies have not lost their striking power." They were compelled to admit that "when Rommel halted, the British and also the Americans sent every spare ship around the Cape to establish a tremendous preponderance in armour in the desert with a view to dealing Rommel a smashing blow."

A year ago Hitler and Goebbels went into ecstasies over the German transport system, which they said was a marvel. But now Goebbels says, "The German Command abstains from offensive fighting on a large scale because of the wear and tear of men and material involved. But the Russians attack not because they are strong but because they are weak. They attack because they know they are getting weaker day by day and the combined forces arrayed against them are getting stronger." Goebbels observes, "We can lose the war only through our own mistake. Our national strength is being sapped by the length of the war. . . . Everything is at stake." And what is the hope he holds out for the New Year? "It may be a hard and bitter struggle," he says, "Fighting and Work are the slogans of the New Year."

* * * *

**Tojo's
Shattered
Hopes and
Fulfilled
Fears**

Let us look at the hopes held out by Hitler's counterpart in the Far East in 1942 and 1943. Addressing the 79th session of the Japanese Diet, a year ago, Tojo gave expression to his hopes and fears. Most

of his hopes have been shattered, while a considerable percentage of his fears were fulfilled. Tojo gloried in his success but advised his followers to consolidate them quickly, for he said, "The U.S. and Great Britain boast of wealth, the greatest in the world. They will stiffen their resistance." Paying a tribute to his Fascist partners, he said, "We are profoundly gratified that our Allies, especially Germany and Italy, are steadily winning victories along with Japan for the establishment of a new world order." In the New Year message this year, Tojo cites China, Manchuria and Siam as his Allies whose "manpower and resources" he hopes will deal a final blow to the "enemies." It is surprising that Tojo should regard China as his ally. The Japanese have been driven out of Chekiang and Kiangsi and are facing resolute opposition in Hupeh. Siam seems to be the only ally, because Tojo is not sure of the Philippines, is uncertain of the Indies and the Japanese have actually been driven out of Papua. As regards Siam herself, she has been mourning her hard lot through the Bangkok radio right through last year. An apt commentary on Tojo's New Year message is the Bangkok Radio broadcast of December 26 which said, "My dear Thai troops, it is better for us to die than let the nation die."

Premier Tojo is always afraid of a protracted war. But his worst fears have come true. The "Axis victories" on which Tojo banked to capitalize his iniquitous gains have failed to materialise. In his latest Diet speech, Tojo said, "A real war is starting from now. The Allies will soon bomb Tokyo. A.R.P. efforts must continue without relaxation."

But it must be definitely understood that there are no signs as yet of a cracking of either German or Japanese morale which had been built up after years of propaganda and preparation. It will crack only when prolonged and bitter fighting smashes their powerful war machines. The recent speeches of the Axis leaders are not yet cries of despair. But their tone reveals the fact that the aggressor powers have passed from the offensive to the defensive—a tough defensive from Guadalcanar to Tunis. The Axis view 1943 with anxiety and concern, while the Allies regard it with optimism and hope.

FROM THE SOLOMONS

Marines leap ashore in the Solomons. Most had never been under fire before, but thorough training and innate toughness gave them all the dash and solidity of veterans.

This is a Japanese camp, wrecked by the U.S. Marine assault. Jap tents in the background are deserted. Food was still on the table when the Marines came through. The Japs lacked time even to destroy military stores.

A United States Marine lines up a group of Japanese captives on Guadalcanar in the Solomon

Burma : End of Defensive Warfare

THE *National Herald* (Chungking) says: "The commencement of the Allied offensive in Burma furnishes proof of the fact that as far as the United Nations are concerned, the period of defensive warfare is over and the initiative is being wrested from the enemy practically on every war front."

The paper adds that the British troops in Burma have recovered a large area of territory and that the Chinese troops have intercepted a Japanese column. The initial successes merely mark the beginning of a large scale campaign which will result in complete victory over the enemy.

"In staging a counter-attack on the Asiatic mainland the first blows should certainly have struck against the Japanese in Burma. As both the Chinese and western military observers pointed out there are many advantages in attacking the Japanese in Burma.

"First, it will remove the Japanese threat to the security of India; secondly, it will eventually result in the re-opening of the Burma Road which will in turn make possible the launching of a general counter-offensive on the Chinese front after the Chinese forces have received adequate war supplies from abroad, and thirdly, the recovery of Burma will pave the way for dislodging the enemy from French Indo-China and Thailand."

JAPAN LOST THE INITIATIVE

"It is for these reasons that both the British and the American leaders have again and again openly stressed the necessity for recovering Burma. The fact that the Allied forces have at last started an offensive shows that adequate preparations must have been made. The most convincing proof of Japan's lack of striking power is her failure to invade either Australia or India following her initial successes in the Pacific. Now that the Allies have begun an offensive in Burma, the Japanese will find it extremely difficult to regain initiative."

The *Hin Hua Jih Pao* points out that the Japanese strategy at the present stage of the war is to preserve their strength and to await a suitable opportunity for action. It was not unlikely that the Japanese may mass a part of their forces for an attack on Yunnan. The present Japanese offensive against western Yunnan was only exploratory in nature. If the Japanese discover possibilities of this exploratory offensive, it is probable that they would concentrate considerable forces for a large-scale attack on western Yunnan.

SIGNIFICANT OFFENSIVE

"We must attack so as to crush the intrigues of the enemy and act in concert with our Allies in western Burma. Field Marshal Wavell's offensive at this time is highly significant inasmuch as it has assisted the Chinese

forces in waging a defensive warfare in Yunnan by diverting the enemy forces from the Yunnan front. It is a tentative attempt for the re-occupation of Burma and it is yet too soon to say that the recovery of Burma will be brought about by the present offensive. More careful military arrangements will have to be made."

The *Shih Shih Pao* says: "British forces are now advancing in western Burma. We hope that instead of being satisfied with the occupation of important ports and aerodromes, they will intensify the offensive against the Japanese in Burma."

PRIVILEGES FOR INDIAN SOLDIERS

An Ordinance just promulgated confers important additional privileges on Indian soldiers in the matter of civil and revenue litigation.

Till now it was only when the Indian soldier was himself a party and unable to attend because of active service that the courts could postpone proceedings. The Ordinance provides that even if the soldier is materially concerned in the outcome of the proceedings, although not a party, and his interests are likely to be prejudiced by his inability to attend, the court may suspend proceedings.

"Under the existing Act only the soldier had the right to apply to a court within a specified time to set aside a decree or order passed against him while he was on active service. If he happened to die in action the position of his legal heirs in respect of this right was none too satisfactory. The Ordinance now makes it possible for the soldier's legal representatives to exercise the same right automatically.

Another important provision of the Ordinance modifies and extends the period of limitation in suits, appeals and applications to which the Indian soldier or his legal representative is a party. Besides the period during which the soldier has been on active service, which was always excluded, the Ordinance provides for the exclusion of the period from the date of soldier's death, while so serving, to the date on which official intimation is sent to his next of kin by the authorities in India.

Australia's All-in War Effort

By WARWICK FAIRFAX

A year ago in Australia we were achieving just a good war effort. Now it is not far short of an all-in war effort.

It might deflate the Japanese morale a little for them to know that at one time nothing stood between them and the conquest of Australia but a number of imperfectly trained Militia Divisions equipped with Lewis and Vickers guns and 18-pounders of the last war pattern.

There was not a tank and scarcely a decent bombing plane in Australia. Four divisions of air, everything that was any use, had gone overseas. Now there is a well trained fully equipped army, including armoured units, whose numbers in proportion to the population are probably unsurpassed in any country except Germany.

The use of conscripted militia for service outside Australian territories is now virtually assured. The delay in bringing this about is due largely to a peculiar twist in the

Australian character whereby it has happened that a nation which has produced some of the finest troops in two world wars has never maintained a standing army of professional soldiers in peace time.

During this last year, the life of the ordinary citizen who is not engaged on war work has fallen more closely into line with that of his counterpart in England. Many of his necessities such as clothes, tea and sugar are similarly rationed, while luxuries such as bottled beer, spirits, tobacco and cigarettes are hard to get.

The public held its breath during the recent Solomons campaign knowing well enough that Australia was still not out of danger and is duly grateful for what America has done. But the Australians, none the less, are determined that a good share of the work be done, as we go northward, and shall be done for our own satisfaction by Australians.

BRITANSKY TANKOGRAD

"British-built tanks have been successfully used by the Russians on the central front. This statement was made to press representatives in 'Britansky Tankograd'."

Somewhere in the Russian forests,
Somewhere in the Zone of battle,
Stands an Anglo-Soviet Stronghold,
Bristling bastions of metal.
Lanes of giant Panzer-breakers,
Massed divisions, armour-clad,
Forged and built by British makers,
That's Britansky Tankograd.

Whippets, Valentines, Matildas, through the eastern pinewoods roll,
Tanks from Cradiffstrovsk, Leeds, Glasgow, Bristopol.

Forward to the Central Sector
Pours the mighty flood from Tankograd to rumple into action
With the tanks of Timoshenko.
Over versts of plain and ocean
Moving up without a hitch,
Thanks to Commissar Churchillov,
Thanks to Beaverbrookovitch.

Tanks from Rotherhamsk and Jarrovsk, England's pride and Soviet's Joy,
Tanks from Liverpoolsk and Derbyev, Brumgorod and Coventroi.

—SAGITTARIUS in *Soviet Union News*.

Four Far-reaching Decisions

DR. Wang Shih-chieh, Minister of Information, declared at a press conference in Chungking recently, that four far-reaching and significant decisions were reached at the recent Tenth Plenary Session of the Kuomintang Fifth Central Executive Committee, namely, the fixing of commodity prices, the building of solid foundations for a democratic state, and further heightening of national solidarity and the immediate formulation of broader lines of post-war policies. Dr. Wang's statement reads:

"The Central Executive Committee of the Kuomintang has just concluded its meeting after a continuous session of more than two weeks. To-day I wish to state some of the most important problems raised and decided upon in the session so as to give you an idea of the dominant thoughts in the minds of the leading members of the Party.

FIXING COMMODITY PRICES

"Firstly, the question of fixing of commodity prices according to costs of production occupied a larger portion of time than any other problem. The adoption of such a measure will naturally encounter many difficulties, especially in view of the fact that our local governmental machinery is inadequate and that our people have been for ages accustomed to laissez-faire traditions in their economic life. All kinds of popular scepticism against the advisability of strict price control were brought up for discussion in the session. But the unanimous opinion of the Party is that we shall overcome them if the central and local governments act with one policy and with one and same degree of determination. Besides, the Party regards the measure both as an end in itself, namely, to stabilize national economic life during the war, and as a means for the intensification of political training, since the application of this measure would naturally elevate the organizing power as well as administrative efficiency of the government.

NATIONAL RECONSTRUCTION

"Secondly, the Party was confronted with the much-mooted question: Should the task of national reconstruction be undertaken parallel with the prosecution of the war, or rather be deferred till after the war? The consensus of opinion is that the building of solid foundations for a democratic stage must be given an equal importance as the prosecution of the war. And in order to build such foundations, the Party puts primary emphasis on the early completion of local self-government. Strict and concrete measures were adopted to meet the enlarged budgetary requirements of the district government and to amplify its personnel during the coming year.

"Thirdly, the Party considers that for China satisfactorily to fulfil her external and internal responsibilities both during and after the war demands further heightening of

national solidarity. Disunion of any kind or degree saps the nation of its vigour. The Party, by adopting a very liberal attitude towards any individuals or groups outside the Kuomintang who, whatever their past record, would henceforth loyally observe Dr. Sun Yat-sen's Three People's Principles, creates an unprecedented opportunity for them to rally under one and the same banner with the Kuomintang.

EXTERNAL POLICY

"Lastly, China's external policy received a very careful and thorough examination in the session. The question was raised as to whether we should discuss and formulate post-war policies in the midst of the war. The session came to the practically unanimous conclusion that not only must we discuss and formulate the broader lines of post-war policies right now, but the Government must exert its utmost to seek the immediate setting up of a world organization among the United Nations."

200 CABBAGES A MINUTE

One thousand machines which plant young cabbages at the astonishing rate of 200 a minute are now helping the farmers of Britain to speed up food production.

Hitched to a tractor, the robot planter has a travelling chain of iron fingers to which the plants are fed. A broad furrow is opened up in the soil into which the plants are suspended by these grippers, and, at the same time as the plant is released, two wheels firmly press down the soil around it. A water tank holding 40 gallons can also be fitted to the machine, and an adjustable quantity of water automatically poured into the furrow at the roots of the plants.

From one to four operators can feed the machine with plants at an average of 3,000 each person per hour, thus making an immense saving in time and labour. The spacing in the row of plants is mechanically accurate and can be controlled and adjusted to the distance required; the depth at which the seedlings are planted is also adjustable.

The robot can also plant potatoes by a simple arrangement of special cups attached to the grippers. It can be used too for lettuce, onions, leeks, swedes, sugarbeet, strawberries and tomatoes. Its iron fingers have a rubber covering which enables them to handle the most delicate plants quite gently while placing them firmly and evenly in the furrows.

The machine, which is a British invention, is now being produced at the rate of more than a thousand a year. It is electrically welded and made with great precision. The Ministry of Agriculture have bought a large number for Britain's War Agricultural Committees set up in the different counties.

Malta : Convoys Get Through Unmolested

Admiral Sir Henry Harwood, Commander-in-Chief in the Mediterranean, has revealed that during the past few weeks sufficient supplies have been carried to Malta to last the island for several months to come.

"Some of them", he stated, "got through entirely unmolested in strange contrast to the days when a Malta convoy was one of the most hazardous naval operations involving several days of almost continuous air attack. The army in winning back the Libyan bases, the Royal Air Force in providing fighter protection for our warships in the Central Mediterranean, and the Royal Navy in escorting supply ships have contributed equally towards relieving the island."

Discussing the changes in the naval situation resulting from the capture of Cyrenaica, Admiral Harwood said:

"The Eighth Army's advance has given the Navy freedom to go into the Central Mediterranean and we have taken advantage of it to get convoys to Malta. After our victory early in November, the Royal Air Force established fighter bases as far forward as they could, and we got the first convoy through with full air protection. Since then it has become progressively easier to supply the island as the enemy was forced further west, and we have pushed quite a considerable number of convoys into Malta. By the time this is published, I hope another convoy will have got through."

ROMMEL'S SHIPS SUNK

The next problem, he added, was to stop Rommel's supply line to Tripoli. A single enemy convoy which has so far attempted to come east of Malta had turned back on seeing our forces, but Rommel is using a lot of shallow draught landing-craft which he is moving close to the Tunisian coast. Our aircraft were bombing them and the ports from which they came and went; surface craft were also trying to intercept them. Though there were difficulties, we are getting a good sprinkling of these lighters.

Paying a tribute to "the very grand work done by submarines," Admiral Harwood said that they had accounted for a large number of Rommel's ships, and there was no doubt that the Eighth Army was very greatly assisted by the damaging and sinking of Rommel's supply ships both by air and by British submarines.

EIGHTH ARMY'S SUPPLIES

Another important point in the Navy's programme was the question of the Eighth Army's supplies. The problem was to get

everything ready in order to get the recaptured ports working as soon as possible. The moment we looked like capturing a port, the Navy sent an advance party forward to enter with land troops. Their job was to survey the port, assess damage and locate mines, etc. Then minesweepers cleared the approach channel. This was a combined operation by the three Services, since minesweepers could not operate until anti-air guns and fighter protection was established.

Minesweepers have done a grand job clearing Sollum, Mersa Matruh, Bardia, Tobruk and Benghazi. Admiral Harwood added: "The first cargoes were unloaded at Tobruk four or five days after it was occupied. The breach in the wall at Benghazi Harbour has been filled and work was going ahead at great speed. We are unloading cargoes faster than we had anticipated."

BRINGING BACK THE SHEEP AND COWS

Britain has begun the Empire's first large-scale experiments in artificial insemination, the revolutionary breeding process which after the war will do everything to bring the world's flocks and herds back to normal.

Britain's experiments in artificial insemination, already successfully practised in Soviet Russia, are being conducted by the Cambridge School of Agriculture and the National Institute for Research in Dairying. They show that in one year a single bull or ram can fertilize fifteen hundred cows or ewes, bringing the best blood in the world to the humblest keeper of livestock from thousands of miles away. It is the small farmer, unable to purchase a good bull, who will benefit most.

There has been some doubt about the reaction to the new departure of pedigree breeders with a vested interest in the sale of bulls but serious opposition from them is not expected although artificial insemination will certainly lower the prices of second-grade bulls.

Apart from Russia, Denmark, the Netherlands and Italy had all taken up artificial insemination before the war. The dairy breed societies in England have now recognized it and framed regulations for registering the animals so bred. Breed societies in the United States have actually sponsored the artificial insemination societies; and, with the present experiments in England, the outlook for building up the world's livestock population is definitely hopeful.

Fifth Column Activity in Tangier

THERE is a man in North Africa to-day who needs most careful watching. But, because his position is safeguarded by an international agreement which we—if not others—still respect, he may stay there and cause us the greatest inconvenience. He is Dr. Kurt Rieth, German Minister Plenipotentiary and Consul-General in the technically neutral international zone of Tangier, writes the *Daily Herald's* foreign editor. Before the present campaigns in North Africa are finished, we shall probably hear much more both of the hostile personality of Rieth and the neutral territory of Tangier.

Rieth is an expert in the organization of fifth column activities and espionage. He made his reputation among the Nazis when, as German Minister in Vienna, he instigated the murder of Chancellor Dollfuss. Austrian police quickly established quite definitely his connection with that outrage—apart from his personal intervention that the murderers should have safe passage to Germany. Then suddenly Hitler disowned the Austrian Nazi rebels and recalled Rieth, and the plotter diplomat disappeared into temporary obscurity.

A "COMMERCIAL AGENT"

He reappeared last year as a "commercial agent" in the United States. He went there from Mexico, and, from the moment he crossed the frontier, he was watched by G-men of the Federal Bureau of Investigation. Within two months he was arrested and deported. He had been organising a pro-German group whose aim was to hinder the operation of the Lease-Lend Act.

Six months ago Hitler sent him to Tangier where he was received with due honours by the Spanish authorities then in control there.

That Spanish control is another product of this war, for, by the international agreement of 1923-28 Tangier was established as a neutral zone carved out of Spanish Morocco with an international committee of control. Spain, however, was given the policing of the zone. General Franco took advantage of that when France collapsed in June, 1940, to pour in Spanish troops well over the number required. Within a few months the Spanish garrison mounted from 1,000 to nearly 20,000. Franco then proclaimed that Spain had taken over full control of the zone. The International Control Committee was dissolved, and Tangier is now administered by the Spanish High Commissioner for Morocco. Britain protested against this action, and an interim agreement was negotiated under which it was promised that British rights in Tangier would be respected. An assurance was given that there would be no fortification of the Tangier zone, but there is reason to believe that the assurance has not been respected.

British subjects have had to suffer insults in Tangier, and Axis-inspired rioters have damaged British commercial properties. Axis envoys, the most dangerous of whom is Rieth, enjoy all privileges and are pampered by the Spanish authorities. Rieth and his colleagues have turned Tangier into a nest of espionage and intrigue and the inhabitants of Spanish Morocco provide them with a fertile field on which to work. Tangier gives them also a wonderful observation post from which to watch and report on Allied military activities in North Africa.

Turning Steel into Jewels

MILD steel which has been treated to perform the function of rare and expensive jewels, circular saws manufactured from old motor-car clutch-plates—these are only two of the daily wonders created by the Arsenal Brains Trust.

This is the name given to a little group of engineers and scientists who put their heads together at an Indian Army Arsenal. Their job is to devise substitutes for materials and machines now unobtainable.

Compass pivot bearings, ordinarily consisting of jewels, presented a serious problem, but this was overcome by the production of a metal bearing, manufactured by treating ordinary mild steel.

This achievement was the result of a great deal of research and experiment, but the result has cut the cost of the bearings down to a fraction of the expenditure on jewels.

Watchmakers' lathes, which demand the highest accuracy in manufacture, were required urgently. These high precision instruments were available only in Switzerland before the war. Now they are being produced in our own arsenals, with an accuracy limit of less than one-five thousandths of an inch.

More accurate, too, than the original German-made articles are the circular dividing machines now being turned out by Indian Army Workshops.

Perhaps the knottiest problem of all arose when fine-splitting saws, required for urgent precision work, became unobtainable.

Then the "Brains Trust" had its brainiest notion. Somebody thought of adapting worn-out clutch-plates from condemned motor vehicles. To-day these have been transformed into saws sufficiently slim to split a hair.

FROM THE WESTERN DESERT

GENERAL ALEXANDER, Commander-in-Chief, Middle East, visited Benghazi, and is seen here driving his own Jeep

ABANDONED ENEMY EQUIPMENT.—More and more evidence comes to light of the completeness of the Axis defeat in the Western Desert. No army retreating in an orderly fashion leaves guns, tanks and other war material in good working order. Rommel was forced to do so. Photo shows Italian tanks left intact by the enemy in his hurried flight westwards.

JUST A FEW PRISONERS.—The New Zealanders have been raiding with their armoured cars. These are just a few of the prisoners they have rounded up.

Hitler's Himalayan Blunder

HITLER'S New Year messages to the German Army and people reveal a much chastened Fuehrer. Gone are the dazzling prospects; gone, too, is his overweening arrogance.

Clearly, the old year has been sobering. That Hitler should have come to a mood of "to be or not to be" is eloquent of the change of fortunes. Such points deserve to be noted, but ought not to overshadow the serious content of his messages.

When Hitler impresses on his armed forces that more and better weapons are being forged for the spring, he confirms the miscalculations which the Germans made. It is not the first time that he has talked about new weapons. In one of his rare speeches in 1942 he boasted that German inventive spirit had not been idle and that his enemies had better look out.

References to new weapons probably mean no more than that existing types are being improved and are being turned out on an abundant scale. Yet it may be reasonably doubted whether performance will or can come up to Hitler's promise.

HEAVY STRAIN

For a year all Germany has been under a strain such as she had not known before. How limiting—and, indeed crippling—such a diversion can be is seen in the immense improvisation to which the Russian winter of 1941-42 drove the German war machine. The heavy tax upon fighting spirit and the high human cost which persistent Russian assaults inexorably required of the fighting front were aggravated by a totally unforeseen burden which was felt in every home and every factory of the distant Reich. Transport, supply, hospital and many other services were suddenly called upon to succour, save and secure an army chilled, wasting, marooned in bleak, frozen country. It is cold comfort for the German people and armed forces to be assured by Hitler that this winter will at any rate not be worse than the last.

This vast diversion of effort backed by relentless Russian pressure had certain clear military consequences. One was that the German offensive of 1942 did not open until July. Another was that, when it did open, it embraced—surprisingly—no more than a section of the front south of Voronezh. Hitler's own excuse—that the aim of his summer offensive was no higher than the interruption of traffic up the Volga—is a palpable and revealing falsehood.

THE RUSSIAN WAR

The Russian war was in truth Hitler's Himalayan blunder. Instead of the clean, quick triumph with unlimited prestige and loot

which it was meant to bring, it has yielded—and is yielding—losses almost past reckoning and certainly past recovery. It presented Germany with a new and fundamental problem. Provisioning and maintenance of the fighting front alone called for a major effort. One estimate is that in the winter of 1941-42 Russian snows killed or incapacitated as many Germans as did Russian bullets, bombs, bayonets and shells. Earlier practice had been for the army to release skilled men in winter for work in war factories. Instead of men being released from the front for factories, men from factories have had to make good the gaps at the front. Yet the need for munitions remains—and more pressingly than ever.

Therefore Europe has been scoured for materials, its workers dragooned by press gangs, and its factories brought into the service of the German war machine. The measure of success must not be underrated. The army of foreign labour now in the Reich is nearer 6,000,000 than 5,000,000. In the Reich itself the whole industrial system has been geared to greater production.

NOTHING ACHIEVED

What has the enemy achieved by all his exertions, shifts and stratagems? His all-important transport system is working, but only just; the destruction wrought by the Royal Air Force on his railways and locomotives is already much, and will be more; the strain of the eastern campaign and the opening of the Mediterranean front is growing apace. Food supply is assured, thanks to the not too bad harvest, enriched by the filching of others' produce. The grim and grievous application of Goering's assurance that no matter who goes short, the Germans will not, is shown by independent evidence of starvation and semi-starvation in such countries as Greece and Belgium.

There is every reason to believe that concentrated industry and ingenuity are going into the swelling construction of U-boats—a fact which can be neglected only to the dire peril of the whole Allied plan.

For the United Nations the picture is formidable but neither discouraging nor surprising. Vast resources of the German Command inside and outside the Reich are waning at a time when Allied resources are waxing. Little wonder that Hitler and his henchmen harp more than ever nowadays on 1918. The memory of the soundly beaten German army of 1918 is not one to sustain the spirit of the Germans fighting in Russia and elsewhere, but the Allies may draw from these efforts the assurance that what was done in that momentous year by skilled, pertinacious and valiant battling can and will be done again in this.—*The Times*.

Mighty Onrush of Russian Armies

THE enemy seems still unable to stem the mighty onrush of the Red Army into the Donetz basin, writes *The Times*. War exacts a terrible penalty for failure and a too ambitious plan. When the German Commander divided his force, sending one army to the east to the assault of Stalingrad and the other south to attempt a passage of the Caucasus, the attainment of tolerable winter quarters for either depended on complete success in carrying its objectives.

The foiling of both plans reduced the enemy to a dangerous pass that the Soviet forces are now exploiting. The army arrested half in and half out of the ruins of Stalingrad and now effectively isolated, becomes every day less of a striking force and more a target; its perilous predicament imposes upon the main body of the German army the necessity for exhausting attempts at its relief at a time when there is no strength to spare from the task of meeting all other multiplying threats.

The full value of the successful denial of oil fields will be felt in the long term rather than short. There are, however already signs suggesting that lack of fuel is hampering German operations on the South Russian front itself. This is one thesis of the curious immobility of Hoth's beleaguered army and its apparent sluggishness in seconding the efforts to relieve it from outside notwithstanding the great stores of munitions known to be within the ring.

A REMARKABLE EXPLOIT

Another is the very remarkable exploit announced by the Russians in the capture of 300 German aircraft on the airfield at Tatsinskaya. It would be rash to underestimate the tactical resources that the enemy still commands for defence. But strategically the failure of the summer campaign leaves the German army with a bleak outlook. The

great number of prisoners taken by our Allies in proportion to the number of other casualties they claim to have inflicted tells its own tale.

In some places leading formations of great offensive have now advanced more than 100 miles from their starting points. Most of the Don bend is again in Russian hands and there has been considerable penetration in the Ukraine. It has surely been a spur to the ardour of the assault that it coincides in time with the 25th anniversary of the foundation of the Ukrainian Socialist Soviet Republic.

There is every prospect of the speedy arrival of the Red Army on the Donetz river itself. Some of the ground regained in the past few days is of exceptional strategic value. Perhaps the most important is the storming of Tatsinskaya. To hold this situation is to cut the line of supply leading towards Stalingrad from a network of railways in the industrial area of the Donetz basin.

ANOTHER COUNTER-OFFENSIVE REPULSED

South-west of Stalingrad yet another German counter-offensive for the relief of Hoth has been repulsed. The enemy has little choice but to persist with these attacks, yet when they fail, he risks the creation of fresh weak points and the call for yet other rescue expeditions. Meanwhile, the uneasiness resulting from defeats elsewhere has communicated itself to the German army in the Caucasus. The situation in that region must now be one of rapidly increasing anxiety. The corridor through which run the enemy's landward supplies have been greatly narrowed by the Russian advance in the Don bend and the whole of the system of communications for the Caucasus army hinges on the possession of Rostov which can no longer be reckoned to be immune from attack. The thrust from the Don has now reached within 80 miles of the town—a lesser distance than that already traversed. There is as yet no indication where it can be halted.

More Fifth Columnists!

(“A LIE HAS ONLY TO BE BIG ENOUGH TO BE BELIEVED”—HITLER)

It was notified in the press a few days ago that a number of fair price grain shops had been opened at different localities in the city, where rice would be sold at 2½ measures per rupee. The employees of some workshops are afraid to patronize these shops, because they have heard a rumour that the public have been warned by Police tom-toming that it is unsafe to purchase rice at these shops as it contains Cholera germs. The rumour is ridiculous and completely incorrect. It has obviously been started by Fifth Columnists or profiteers.

Russia : Allied Aid Through Persian Gulf

WAR supplies are pouring into Russia by road and rail from the Persian Gulf ports to back up the Red Army's triumphant forward sweep, cables the *Daily Telegraph* Baghdad correspondent.

Tanks, aircraft, heavy engineering stores, ammunition, jute and many other essentials, brought from Britain, America and India are flowing across deserts and mountains to the frozen tracts where the battles are raging. The speeding of the Allied aid to Russia is now the chief concern of the Persian-Irak force, under the command of General Sir Maitland Wilson, which is composed of British and Indian troops of our Tenth Army plus a large Polish Army and a number of Americans. It was originally formed to relieve General Alexander of any anxieties in this direction and to safeguard the oilfields and to protect and strengthen vital supply lines.

Now the Allied victories in Russia and North Africa allow it to concentrate its efforts on the material support of the Red Army. Meanwhile the British and the Indian sappers have performed prodigies in widening rough roads, surfacing them with shingle and bitumen and easing the gradients and curves.

This is sappers war and when its history is written one of their outstanding feats will appear as this long labour on Persia's highways. Now trucks are landed at the gulf ports and are driven thousands of miles to the points where they are handed over to the Russians.

The fighting rôle of the Persian-Irak Force is not forgotten while this most important supply work goes on.

A realistic four-day exercise has just concluded among the hills of northern Persia already covered by winter snows.

The defending force occupied a valley between hills 4,000 feet high, the position being thoroughly wired and mined. The attacking army had to clear a way through wire and minefields, forming bridgeheads supported by live artillery and mortar fire.

SAID IN 1830

"National animosity is a peculiar thing. In the lowest degrees of civilisation it is always strongest and most violent."

—GOETHE.

All the lessons learned in Russia and in the Western Desert are being applied and the troops are being trained in ski-warfare. The force is still being strongly reinforced but its future employment depends on the Russian events in the first months of 1943.

Indian Military Police

INDIA'S Army will soon have its own "Red caps", as military police are called. A school for the training of Indian Military Police, the first of its kind, has been opened in the Persia and Iraq Command.

Main aim of the training is not merely that the men should police but that they should help the Indian soldier. In fact, this is such an important part of the training that extra pay will be given to all Indian Military Policemen who prove by example that they are there to assist the soldier and not condemn him.

The standard of physical and mental fitness required of a good Military Policeman is naturally high, and only the best man can hope to enter the school and emerge proudly wearing the black and red armlet!

The period of training is short but strenuous. For six weeks the candidates work under expert instructors who are all Indian (with the exception of the Chief Instructor). Among the subjects taught are unarmed combat, traffic control, military law, general duties and discipline, motor-cycle riding and maintenance, security, map-reading, accident reporting, road reconnaissance and first aid.

At the passing out examination the questions range from dress regulations and behaviour of troops to fifth column activity and sabotage.

It is little realized what an important part Military Police play in the field of battle. There his duties include the marshalling of convoys, regulating and dispersing traffic, guarding prisoners, rounding up stragglers and generally acting as an "Information Bureau."

"The Red Army is Coming"

TWO broadcasters, Ilya Ehrenburg (Russian) and Hans Fritzsche (German) spoke of the War on December 29. Here is what they said:

Ilya Ehrenburg: In September 1942, Germany believed that victory was at her doorstep. At her doorstep was chasm. On September 30, Hitler believed he had Stalingrad in his pocket. Stalingrad became his grave. No longer do gretchens expect their swains at the front to send them gifts of caviare from the Volga. Those swains are now whining somewhere between the Volga and the Don.

"British bombs have had a salutary effect on Italian psychology. The jackal no longer brags about the great Roman Empire but is busy advising townspeople to pack up their chattels and live in the fields. Of Rommel they used to say in Germany that he kept advancing even when he slept. Rommel is now retreating even in his sleep—at the rate of 60 miles per day. He has proved a better adept at this game than the Italians. The judgment is nigh. The Red Army is coming—sword in hand. We remember everything. We remember our slaughtered women, the massacres at Kerch, the ruins of Kiev, the gallows at Volokolamsk. The verdict is being written with the bayonets of our men."

Hans Fritzsche: "The Red Army is like a hydra which grows a new head the moment another has been cut off. When we look back, we realize once again all the difficulties which confronted both our soldiers at the front and our people at home. We recall the sufferings of our soldiers during the last winter when they dug into frozen ground and had to withstand onslaught after onslaught from the enemy. We remember our surprise at the ample war material, and the seemingly inexhaustible reserves of manpower which the enemy was able to throw in, in his spring offensive. We also remember the bitterness of the fighting in Africa, Rommel's brilliant action first in holding and then in driving back the enemy, vastly superior in numbers—the enemy who has now succeeded in winning back what Rommel had taken in his lightning advance. Of course, we realize that the fortunes of war are bound to change from time to time. But

we are fortunate that the ups and downs are taking place far from our frontiers so that the result of one day's or one month's fighting can in no way decide whether we are to be or not to be."

Ballad of the German Bride

And what did he send you, my bonny lass,
From the old, old town of Prague?
From Prague he sent me the ribboned shoes,
For my dancing toes, the ribboned shoes,
From the old, old town of Prague.

And what did he send you, my bonny lass,
From Oslo over the sea?
From Oslo he sent me a fur-lined hood,
So soft and so good, my fur-lined hood,
From Oslo over the sea.

And what did he send you, my bonny lass,
From the riches of Amsterdam?
From Amsterdam he sent me a bonnet,
With gold thread upon it, a fine starched bonnet,
From the riches of Amsterdam.

And what did he send you, my bonny lass,
From Brussels in Flanders so red?
From Brussels he sent me the shimmering lace,
To set off my face, the shimmering lace,
From Brussels in Flanders so red.

And what did he send you, my bonny lass,
From Paris, the city of light?
From Paris he sent me a silken dress,
A dreaming caress, ah! silken dress!
From Paris, the city of light.

And what did he send you, my bonny lass,
From the deep, deep Russian snow?
From Russia he sent me my widow's weeds,
For the funeral feast, my widow's weeds,
From the deep, deep Russian snow,
My widow's weeds, from the deep, deep Russian snow.

—From a B.B.C. English programme

Nazi Children's Marching Song

Though the whole world be ruined around us after the day of war,
What the devil do we care?—We don't give a hoot any more.
We will go marching forward, though everything fall away,
For the world will be ours to-morrow, as Germany is to-day!

Grit and Courage

By V. NAKRASOV

"COME, I want to introduce you to our heroine," said the squadron commander as we walked up the stairs to the pilots' quarters.

We entered a small but surprisingly cosy room with four beds covered with snowwhite spreads. It was obvious that this was a girl's room. Neat dainty window curtains, mirrors, perfume and powder boxes were abundant evidence of this.

Coming to meet us from the table, which bore a neat stack of books, was a slender girl about 25 years' old in khaki, green, tunic and blue skirt. On her tunic were two brand-new decorations for valour in action.

"Meet Marusia Chikhireva, the pride of the whole squadron," the commander said.

The girl lowered her blue eyes. A tinge of red appeared on her cheeks and she looked embarrassed. "Why so much publicity, comrade commander," she said quietly.

CHOSE THE FRONT

But very soon no trace of her embarrassment remained. We began a friendly talk and she told me of her life and work in aviation.

There are thousands of girls like Marusia Chikhireva in the Soviet Union. Marusia was a polisher at the Moscow Cutglass Plant, and several years ago took up flying in her spare time. Later she entered a regular aviation school and graduated as a radio operator.

When the hour of peril struck she refused to stand aloof in the struggle against the Hitlerite invaders. She was still a cub radio operator and was given the choice of either remaining with her unit which was about to leave for the front or being transferred to some other unit. Marusia did not hesitate a single minute. "My place is at the front," she told the commander. She was in action for the first time on the third day of the war.

CRACK RADIO OPERATOR

Marusia Chikhireva is justly considered the unit's crack radio operator. Her courage and coolness never abandon her, however trying and apparently hopeless the circumstances may be. Under enemy anti-aircraft fire and in numberless combats with Nazi fighters Marusia has never failed to maintain constant radio communication with the home field.

For quite some period Marusia's squadron paid regular visits to a town besieged by the Germans and kept its defenders supplied with food and ammunition, returning with wounded men or evacuated women and children.

One day owing to bad weather conditions Marusia's plane made a forced landing before it could reach its destination. A group of enemy planes sighted our aircraft just as it was landing.

Marusia remained cool. If anything, she was tingling with the feeling that comes at the beginning of a dangerous battle. "Keep an eye on the passengers, Marusia," her pilot said, "and see that there is no panic. Meanwhile . . ."

But Lieutenant Skrylnikov did not finish the sentence. He dashed for the machine-gun and opened fire on three Messerschmitts flying across the grey-clouded sky.

TENDS THE WOUNDED

Marusia removed her earphones and went over to the passengers. The women were frightened, some of them ready to jump out of the plane. Marusia soothed them and set them at rest as best she could. She felt that all these women and children were watching her every movement and that much depended on her behaviour.

The first bomb explosion could be heard nearby, then a second and a third. Soon everything was drowned in one ear-racking pandemonium of exploding bombs. One of them dropped quite near the plane and the heavy machine rocked from wing to wing. Marusia was thrown out of her seat and she lost consciousness. When she came to she saw that several of the passengers had been wounded.

There was no time to think of her own injured head and shoulder. She had to attend to the wounded and Marusia set about this piece of work with customary energy.

Skrylnikov came out of the machine-gunner's cockpit. "How are things," he inquired. "Three wounded," replied Marusia.

"How's the old bus?"

"Everything seems O.K. except for two holes in the fuselage."

A few minutes later the plane took to the air and Marusia was back at the radio apparatus. She was still weak. Her head was whirling and her left arm hung limp. Every movement was sheer torture, but she stuck to her job, soon made contact with the home field and tapped off the plane's message.

This Soviet girl carries out every assignment with the greatest devotion and bravery.

"BLOCK-BUSTER" IN ACTION

Destruction below! A one-ton American bomb is pictured in this remarkable picture an instant after it was released from a U.S. plane.

Detonating with an earth-shaking crash, it sends smoke, flame and earth 2,000 feet skyward. This photograph was taken with a telescopic lens from a point one mile from the blast.

John Citizen Goes to War

THREE years of war. Three years of struggle. Three years in which the Navy, the Army and the Air Force, the factories, the farms and the dockyards have all played their part in strengthening Britain's power.

They have been doing big things, things that hit the headlines. But meanwhile the ordinary little man, with no uniform and no medals, has been doing his small bit. Grumbling at the price of beer, fishing for a sixpence for a savings stamp, getting his wife to turn his frayed shirt cuffs; trying to cut down smoking, walking where he used to ride, digging up his backyard, doing without his extra cup of tea; and cursing (and paying) the income-tax.

No wonder he doesn't hit the headlines. But multiply him by nearly 50,000,000 (giving the shirkers the benefit of the doubt) and he, too, has done big things in these three years of war.

WHERE THE MONEY GOES

In 1942-43, it is estimated, the British inland revenue will net in taxes nearly treble what it did in 1938-39—£1,522,000,000 as against £520,000,000.

In 1941, it is estimated, about 40 per cent of the British national income went in taxes, including compulsory contributions for social insurance, war risks or damage, etc.

Over and above all taxes and restrictions the British are voluntarily saving or giving nearly every penny they can. In the first quarter of 1942 British small savings amounted to more than eight times what they were in the first quarter of 1939—£209,000,000 against £25,000,000. The National Exchequer has received nearly £20,000,000 in free gifts and nearly £50,000,000 in loans free of interest.

WHERE THE TIME GOES

Between 13,000,000 and 14,000,000 part-time jobs—the majority of them voluntary—are being done by the people of Great Britain. Every adult is thus doing a job and a half.

Voluntary labour helps to keep the war wheels turning; 1,050,000 women are members of the W.V.S.; 500,000 housewives have received evacuees; 120,000 men and women work as volunteers in canteens; 500,000 men and women work as volunteers in the National Savings Movement; and 7,000 voluntary workers help to run the Citizens' Advice Bureaux.

COUNTLESS OTHER THINGS

Food rationing has released half the ships which formerly brought food to this country for transport of troops and supplies. Pooling of retail store deliveries alone has released one 10,000-ton tanker for a year.

Allotments are growing between £10,000,000 and £15,000,000 worth of vegetables a year. Clothes rationing has produced an economy of 300,000 tons of imported raw materials and freed 750,000 workers for war industries.

But all the figures here—£, tons, men and women—add up to 2,368,237,000. The little things matter quite a lot.

Too-old-to-Fight Pilots who Defy the Enemy

"**BUSINESS** as usual", despite every Axis effort to make them close shop—this is the proud boast of British Airways, which are rendering the Indian Army valuable service in this war.

The Red Ensign of the Skies, the great flying boats and land planes which daily dare perils of weather and war to maintain Allied communications, are the aerial prototype of the Merchant Navy.

They were never built for war, but now war has come, they go on, doggedly, determinedly, doing a wartime job, and playing a vital part in the war effort.

In a hundred and one ways they make a contribution to our fighting strength—transporting high military personages to battle zones, rushing important equipment and stores to areas where it is urgently required, carrying vital despatches, succouring the sick and wounded.

These are some of the more spectacular moments in the war-time lives of British Airways pilots. Not every day are they called upon to carry a General, speedily and safely, through the skies. But when the work is of a more routine character, the danger is still there.

One of the least spectacular, but most important, functions of British Airways is the carriage of troops' mails. Nothing is more important for the morale of soldiers serving in distant lands than a regular flow of mail from home.

Throughout this war of fluctuating fortunes, the air route to the United Kingdom has been kept continuously open, almost with the regularity of a peace-time, and carrying hundreds of tons of letters, postcards and airgraphs.

Nearly all the men who pilot the great merchant aircraft on the perilous routes are "too old for active service." They are veterans—but they are helping us along the way to victory!

Europe's Fighters in Exile

By GEORGE ROBOZ

FOR the first time in history, the recognized Governments of eight Allied countries—Poland, Norway, Holland, Belgium, Czechoslovakia, Luxembourg, Yugoslavia and Greece have established their headquarters in England.

One of the brightest chapters of the war, and one which has been lost in the flurry of headlines, is the story of these Governments-in-exile which have gone on fighting even after their countries had been overrun. Their contributions to the united war effort have been so great that their importance will probably not be fully determined until the war is over.

Militarily, the eight Governments-in-exile have put an army of 300,000 men in the field. The Poles, though theirs was the first country overrun in the war, have the fifth largest army among the United Nations—150,000 men in Russia, Iran, Egypt and England.

FIGHTING ARMIES

Recruits escaping from conquered Europe at night in small boats are also swelling the ranks of the Greek, Belgian, Dutch, Norwegian and Yugoslav armies in exile. Fighting French Units—though General de Gaulle's movement is not recognized as a Government-in-exile—have fought in the Middle East. In the Ethiopian campaign, French Spahis, Foreign Legionnaires and colonial troops marched 1,000 miles through the heart of Africa to help break up Mussolini's East African empire.

In the air, 10,000 Poles, 1,000 Czechs and 800 Greeks are flying with the Royal Air Force. The Polish Kosciuszko squadron before it was switched to night-fighter duty bagged many Nazis like the other famous squadrons in the Royal Air Force, was famous for taking more chances "than the buses in Piccadilly during the rush hour." Polish, Czech, and other "exiled" airmen helped form the umbrella of air power over the Channel that made the Ranger-Commando raid on Dieppe possible.

The Norwegian and French navies, 110 ships including one battleship, light cruisers, destroyers, corvettes and mine-sweepers, are also fighting, as is the bulk of the Dutch fleet, which escaped from the East Indies, and several Polish destroyers.

The colonial empires of the Governments-in-exile are contributing sizeably to the United Nations' war effort.

POST-WAR PLANS

Politically, despite the fact that they rule no more on the continent of Europe than the hearts of the people they represent, the Governments-in-exile have prevented the Axis from consolidating its territorial gains, have

kept it from setting up Nazi-controlled governments in Poland, Greece, Yugoslavia, Holland and elsewhere which could claim to represent the people. Even in Norway, where the Nazis succeeded in setting up the Quisling Government, the Norwegians owe allegiance to King Haakon, and take every opportunity to show it.

The Governments-in-exile are also taking an active role in planning for post-war Europe.

(Condensed from New York Daily Mirror)

India's First Line of Defence

ALL our bombs fell in the target area. Another Japanese barracks, or goods yard, or harbour installation has been blasted by the Royal Air Force. Another blow has been struck in the defence of India.

Have you ever wondered how it is done, this bombing by our airmen?

The chief responsibility—and credit—falls to the navigator, who is also the bomb-aimer. But it is only by the closest co-operation between him and the pilot that good results can be achieved. Upon their work during the few seconds they are over the target depends the success, or failure, of the whole flight.

As the approach run is made, anti-aircraft fire will almost certainly be met. The pilot will be taking avoiding action, but in such a way that the bomb-aimer, who is gradually getting the target into his sights, does not lose it.

IGNORING OPPOSITION

Nearer still, and the pilot flies a steadier course, following the instructions of the aimer. "Left, left. Steady." Then, a more urgent "Left, left." Too much, and the pilot hears a long drawn out "Right". At last comes "Steady", and finally "Steady, bombing."

The pilot must now keep on a straight, level course, regardless of anti-aircraft fire, or even fighter opposition, until he hears "Bombs gone," usually the signal for him to take immediate further evasive action.

The navigator calmly returns to his charts and continues his work—calculating, plotting, dead reckoning, giving bearings to the pilot. He is it who finds the target, drops the bombs and guides the aircraft safely back to its base.

He is the one man in the crew who never has a minute's rest, from take-off to touch-down.

Polish Boy Refugee in India

"YOU must see Henzel. He owns the Hospital to day." These were the words that greeted the visitor going round a military hospital in India on Christmas Day.

Henzel is a Polish efuges, aged 8, an orphan as far as known. His pale face, blond hair, blue eyes and cheerful smile is all that one sees peering out of a big white bundle in the surgical ward. He is a spinal case, who lies on his chest in a barrel of plaster and bandages. His ward-mates are all British ranks, some wounded on service in India or overseas, some injured by car or air crashes, some just local surgical cases. His patience and cheerfulness has won all their hearts. They too have won his . . .

He can usually be seen holding his court, talking, having his English lesson and playing with three or four of them. They have—under the guise of "occupational therapy"—built him a table, just the right height for him to look down on and reach with his hands. They have also made him a "tray", an ingenious Heath Robinson contraption, part-bed, part-table, part-stretcher, where he can lie cocked up at a convenient angle and be carried out into the veranda, or to visit other bed-ridden cases.

His Christmas presents from the rest of the ward are his great pride. All chosen wisely to help in his recovery. A miniature piano, on which he can already tinkle "The Blue Bells of Scotland", to work his fingers. A real wrist watch. Picture books with the alphabet, and a suit of English clothes, a present from his R.A.M.C. orderly to wear when he gets up. He has other friends too, as two United States airmen have come in ten miles to see him and bring him their Christmas present.

On Christmas afternoon the Royal Air Force Band came to play to the hospital. Henzel was carried out and his "tray" adjusted so that he could see the band and spectators.

The General, who was visiting, went up and greeted Henzel, who held his hand and kept on holding it, while he got off with pride and delight all the English he knew and all that his ward-mates had taught him to say.

It seemed that he was going to join both the United States and British Air Forces as well as half the regiments in the Army List when he got well.

He was then carried back to the ward, tired and triumphant, with two British and two American friends at each corner of his "tray".

It was a scene which, if shown in the cinema, would be criticised as "impossible bathos" or "sentimental slush". In fact, however, it was a very real and moving one, as the fact that Henzel is going to get well is due to the innate kindness of the British and American soldiers.

Return of Empties Requested

THERE is a serious shortage of metal containers and of the steel from which they are made. After discussion with the principal business interests concerned, the Government of India appeal—

(i) to all suppliers of goods in metal containers to make every effort to secure the return of the containers by their customers;

(ii) to all purchasers of goods in metal containers to co-operate with the suppliers by taking every possible care of the containers and returning them to the suppliers.

Requests by suppliers for the return of containers have the full support of the Government of India, and purchasers can render a very real service to the war effort by complying with them.

In connexion specifically with 40 and 5 gallon drums used for oils and greases, Government have devised a scheme to be operated by the oil companies under the general supervision of Government. The general idea of the scheme is that drums must be returned before replenishments of oil can be obtained but in the case of up-country consumers, provision is made to enable replenishments to be despatched before the empty drums actually reach the suppliers.

It is emphasized that as the usual life of a container depends to a great extent on the treatment that it receives, all users are asked to take every possible care of them while in their possession and in particular to see that skids are always used when unloading drums from wagons or transport.

Diary of the War

ENGLAND AND GERMANY

8th Jan.—Dr. Newmann, Germany's Secretary of State and the head of the Four-Year Plan, was dismissed from service.

9th Jan.—The Royal Air Force attacked the Ruhr.

10th Jan.—Sir Stafford Cripps, Minister of Aircraft Production, said: "Once again we should start on more extended delivery of bombs over Germany and Italy."

11th Jan.—The Royal Air Force bombed the Ruhr again. Targets in Essen were attacked.

A treaty was signed between Britain and China for the abolition of extra-territorial rights in China.

UNITED STATES OF AMERICA AND THE ATLANTIC

8th Jan.—President Roosevelt delivered a message to the Congress. He uttered a warning to Japan: "War will be taken to the enemy's country in 1943." After the war, he said, Germany, Italy and Japan must be disarmed and kept disarmed.

11th Jan.—A treaty was signed between the United States and China for the abolition of extra-territorial rights in China.

12th Jan.—Writing in the *Christian Science Monitor*, Mrs. Roosevelt said: "First of all we want a world which is disarmed. There will have to be an international police force."

INDIA, BURMA AND CEYLON

8th Jan.—Mr. Philipps, President Roosevelt's representative in India, arrived.

The Royal Air Force destroyed a Japanese gun-post near Akyab.

10th Jan.—Allied troops contacted the Japanese near Rathedaung.

12th Jan.—Isolated parties of Japanese held out in the Mayu Peninsula. Fighting continued on either side of the Mayu river in the Arakan district.

ITALY, AFRICA AND THE MEDITERRANEAN

8th Jan.—Allied troops were dislodged from the summit of Dazzag.

It was reported that General Giraud had agreed to a meeting with General de Gaulle on French soil.

A LIMERICK FROM AMERICA

Not long ago news about Gandhi
Was daily most everywhere handhi,
But since his seclusion,
There's none for perusion,
Which truthfully seems rather dandhi.

—*Christian Science Monitor.*

A LIFELINE OF THE UNITED NATIONS.—Through swamps and marshes, around mile-high mountains, through bleak Canadian wilderness, the new Alaska Highway pushes to the North—a lifeline to the United Nations.

THEME SONG

Pilot: "Have you learned the theme song of the parachute corps?"

Cadet: "Theme song? What is it?"

Pilot: "It don't mean a thing if you don't pull the string."

An enemy troop transport and a supply ship were destroyed by British submarines in the Mediterranean.

The Fighting French forces captured an important Axis port 60 miles east of Murzuk.

10th Jan.—German troops were thrown back in Tunisia. The enemy was routed at Fezzan.

All French ships in Marseilles were manned by the Germans.

11th Jan.—Castel Benito was bombed.

General Giraud, addressing the French officers, said: "I give you my word that we shall drive the Germans out of Tunisia."

12th Jan.—Enemy attack near Sfax was repulsed. Axis transport was bombed in Tripolitania. The German headquarters in Kairouan were completely demolished.

RUSSIA AND FINLAND

8th Jan.—Russian troops were within 75 miles of Rostov.

9th Jan.—The German radio admitted the "incredible Russian success."

10th Jan.—The Red Army occupied a vital rail head 60 miles from Rostov. Nazis retreated in the Caucasus.

11th Jan.—The Russians advanced on Salsk. Nazi troops faced encirclement.

12th Jan.—The Red Army took Georgievsk, an important railway junction. Mineralnye Vody was recaptured.

Substantial Advance in 1943

"I do not prophesy when this war will end, but I do believe this year of 1943 will give to the United Nations a very substantial advance along the roads that lead to Berlin, Rome and Tokyo."

—PRESIDENT ROOSEVELT
in a Message to the U.S. Congress
on January 7.

NEUTRAL COUNTRIES

10th Jan.—The Turkish press delegation left for India.

SHIPPING

9th Jan.—A small United States merchantman was torpedoed and sunk by a submarine in the Indian Ocean.

THE FAR EAST

8th Jan.—The Japanese captured Lihuang, the capital of Anhwei province.

9th Jan.—The United States bombers attacked Kiska.

A Japanese convoy was attacked at Rabaul and two big transports were sunk.

10th Jan.—Two Japanese liners were sunk off Woosung, 25 miles from Shanghai.

Twenty Japanese fighters were destroyed in South Pacific.

11th Jan.—General Tojo, the Japanese Prime Minister, said: "Japan has secured her basic strategical positions. We are in a position to fight."

The Japanese sustained heavy losses in south-west Pacific. An enemy convoy was bombed off New Guinea.

12th Jan.—Allied planes raided Lae. An American War Department spokesman said in Washington that at least 353 Japanese aircraft, 19 warships and 85 merchantmen were destroyed in General MacArthur's New Guinea Campaign.

Coolies captured from the Japanese at Buna revealed that the Japanese flogged them with whips.

The Chinese retook Shancheng.

American troops advanced in Guadalcanar.

CONTINUANCE OF HELP TO EVACUEES

The Government of India have authorized the continuance of their scheme of financial assistance to evacuees and dependants of Indians stranded in enemy-occupied territories for a further period of six months from January 1, 1943.

REGISTERED No. M 4345

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV FRIDAY, JANUARY 22, 1943 No. 19

GENERAL NURI SAID

WE
REJOICE
TO HAVE
YOU AT
OUR SIDE

WHEN His Majesty's Government first accepted responsibility for guiding the future of the new kingdom of Iraq, they made her complete and early independence their goal. The goal was reached ten years ago, and since then, the enemies of our two countries have spared no efforts to disturb our friendly relations. They have been lavish with falsehoods and have even resorted to force, but they could achieve no lasting success. The Iraqi Parliament, by a free and independent exercise of its constitutional powers, has now, on its own initiative, decided to show the world Iraq's adherence to the aims and ideals of the United Nations and her fundamental opposition to the dark forces which seek to enslave humanity.

The struggle will be hard but the end is sure, and we rejoice to have you at our side.

MR. CHURCHILL, in a message to General Nuri Said, Premier of Iraq

Running Commentary

President Roosevelt's Warning and the Bombing of Berlin.

President Roosevelt, in his message to the Congress on 7th January, said, "I do believe this year of 1943 will give to the United Nations a very substantial advance along the roads that lead to Berlin, Rome and Tokyo." A week after, a strong force of heavy bombers of the Royal Air Force attacked Berlin. According to the Berlin correspondent of the *Svenska Dagbladet*, Berlin's anti-aircraft barrage was the heaviest yet heard. It is reported that a great weight of high explosive and incendiary bombs were dropped and many large fires were seen. This is the R.A.F.'s 54th attack on Berlin. The R.A.F. again bombed Berlin on January 17. What was described as the greatest R.A.F. offensive against Berlin was carried out 14 months ago, that is, on the night of December 7, 1941. The Soviet Air Force had also bombed Berlin a number of times. Moscow announced in September last year that Berlin had been raided 12 times by Soviet bombers during the preceding 12 months.

All these show the growing air power of the United Nations. President Roosevelt has laid special stress on this in his message to the Congress and drawn attention to the importance of air power in all theatres of war. He said he could not tell when or where the United Nations were going to strike next in Europe, but they were going to strike, and strike hard. "I can tell you," he said, "that no matter where and when we strike by land, we and the British and the Russians will hit them from the air daily and relentlessly. Day in, and day out, we shall heap tons upon tons of high explosives on their war factories, utilities and sea ports." He pointed out that the advantage of superior air power enjoyed by the Nazis when they bombed Warsaw and Rotterdam, London and Coventry, had gone for ever. As regards production of aeroplanes and tanks in 1942 he said it was something of which they had reason to be proud. In Africa they were shooting two enemy planes to each one they lost, and in the South-west Pacific they were shooting them down four to one.

U. S. STEEL PRODUCTION

The United States steel production for 1943 will approach twice the combined output of the Axis powers. Mr. Donald Nelson, Chairman of the War Production Board, says that the total production of Germany, Italy and Japan is estimated at 50,000,000 to 55,000,000 ingot tons annually. The United States steel capacity has already been increased to more than 89,000,000 tons. On completion of the expansion programme in the middle of 1943, the production capacity will be about 97,000,000 tons.

It may be pointed out that the kind of bombing which is going on in the Pacific does not nearly approach the scale of the R.A.F. raids on Germany. In the American raid on Wake Island on December 24, which is said to be largest raid so far by the U.S. Army Air Arm in the Pacific, 36 tons of bombs were dropped, which is 9 tons less than even the first big R.A.F. raid of the war in May 1940 on Sylt. Since then, bomb loads have been many times multiplied.

air power of the United States shows that when the bombing begins it will be with as much force as possible.

Roosevelt's Ambitious Production Plan and its Remarkable Results.

It is of interest to refer to some of the American war production figures. A year ago, President Roosevelt set up certain goals for American production in the coming year. Those figures were so high that

THE NORTH AFRICA OPERATIONS: SCENES AT ALGIERS AND SURCOUF.—Allied forces landed in North Africa from the greatest fleet of transports ever used in a single military operation and after slight opposition, landings were effected at a number of points along the coast. The fleet was conveyed by the British and American navies and powerful aerial protection was provided by carrier-based aircraft. Photo shows guns being man-handled off the beach by American troops after they had landed from landing craft.

But it may be remembered that in the Pacific the range problems of bombers are enormous, and every step, whether at Guadalcanar, or at Buna, or elsewhere, is a step towards a fresh air base, and each step means sea action and land action, neither of which can take place without air action. The Coral Sea and the Midway victories in the Pacific were due to air strength. Now gradually Americans are acquiring stepping stones for the return journey to Japan, which the President has promised. No one can say exactly when Tokyo will be bombed in 1943. But the mounting

many people thought they were intended as mere propaganda with which to frighten the Axis. On January 7, 1942, President Roosevelt set the following goals for American war production for that year:—

Aircraft	60,000
Tanks	45,000
Merchant shipping	8 million dead-weight tons.

This was a highly ambitious plan. For, the whole American economy had to be transferred to a war-time footing

before the programme could be implemented. It was no easy task that faced the American factories. Skilled labour had to be augmented and mobilised, claims of competing industries had to be adjusted, priorities had to be allocated, and raw materials needed for war production had to be diverted from civilian consumption. All these had to be done before the actual goods could be turned out of the factories. And the most remarkable thing was the amazing speed and efficiency with which the American nation which, only twelve months ago, was primarily occupied in satisfying peace-time needs, was able to put itself on a war-time footing.

A glance at the following figures for 1941 and 1942 give an idea of this amazing change :—

	1941.	1942.
Aircraft ..	19,000	49,000
Tanks ..	16,000	32,000
Merchant shipping.	1,100,000 dead-weight tons.	8,200,000 dead-weight tons.

It will be seen that in only one of the three categories of war production was the President's goal reached, viz., merchant shipping. It became clear, soon after Pearl Harbour, that the greatest demand on American production would be in regard to merchant shipping. The war had become global, allied lines of communication had lengthened, and reinforcements had to be sent not only

to Britain and the Middle East, but also to the South-west Pacific. Therefore, merchant shipping was given priority above all other branches of war production, because without ships other war materials could not be made effective. So greater concentration was made on building more and more ships, and this was the reason why the production of air-craft and tanks could not attain the goal which the President set before the nation. But still the air power of America and the United Nations is mounting up and up, and the bombing of Berlin is just a preliminary indication of the real march on the road to the Axis capitals referred to by the President.

Extra-Territorial Rights in China.

One of the most outstanding events in international relationship, almost revolutionised by the events of the war and the terms of the Atlantic Charter, is the conclusion of the treaties just signed between China on the one hand and Great Britain and America on the other, relinquishing for ever the latter's extra-territorial rights in China. These treaties are significant of the deep desire of Britain and America to remove the last vestige of territorial aggression in international relations and to establish, and at the same time enforce recognition by others, the ultimate and supreme sovereignty of China as a nation. So far as Britain and America are concerned, and particularly

Initiative with the Allies

We can view the successes of 1942 with sober satisfaction and look forward to 1943 with justifiable confidence. Everywhere the initiative has passed into the hands of the United Nations . . . The Russian advance continues sweeping down towards Rostov, rolling up the German right flank in the Caucasus while at Leningrad, Veliki Luki and Voronezh renewed blows are being delivered. This great feat during the winter will surely take its place in history as an outstanding achievement . . . In North Africa Rommel's record retreat has begun again . . . In Burma, the initiative has changed hands . . . The Government is resolved during 1943 in the closest co-operation with all our Allies to strike at the enemy by land, sea and air everywhere with the utmost vigour and determination.

—MAJOR CLEMENT ATTLEE, Deputy Prime Minister,
in the House of Commons, on January 19.

Britain, this selfless gesture of goodwill is only the culmination of a consistent policy of helping China to reorganize herself on modern lines as a first rate political power. Even during the middle of the nineteenth century, the Chinese, says Sir John Pratt, had no conception of the new international world in which China was being enveloped or of the new forces, material and spiritual, that western science had called into the arena. "In their eyes China was the whole civilized world, the Middle Kingdom surrounded by humble and admiring barbarians." It was, from the very commencement of her relationship with China in 1715, the desire of Great Britain, with a commanding lead in commerce, finance, shipping and industry, to see China prosperous, and though in seeking to further this desire, she had two occasions to come in clash with the Imperial Majesty of the Middle Kingdom, she did not give up her policy of helping China, whenever possible, to establish a strong central government which alone could hold together the vast and scattered areas of the Empire.

Nine-Power Treaty : Credit due to Britain. It is needless to recount the development of this policy ; but it is enough to note that the Washington Conference of 1921

which Britain and America so much tried to bring about ended in the famous Nine-Power Treaty by which the "Powers agreed to co-operate in maintaining the principle of the open door and equal opportunity and in promoting the economic and political rehabilitation of China." Great credit is due to Britain for having organized the conclusion of this treaty, because she, of all others, was the object of a deep misunderstanding by Nationalist China who had in 1911 expelled the Imperial dynasty of the Manchus and established a republic with Nanking as the Capital. On September 18, 1931 Japan, however, defied the terms of this treaty and attacked China in Manchuria. Britain still adhered to her policy of sympathetic alliance, helped China in her financial reorganization through the Leith Ross Commission, and made the last effort in 1935 to restore the balance of power in the Far East by proposals for international collaboration when Japan was persisting in her aggression in Manchuria. All this time America was more or less only a silent spectator of events on account of her isolationist

policy ; but this policy had to be given up after the attack on Pearl Harbour in preference to an active policy of establishing American supremacy in the Pacific. Now Britain and America are determined to see China free and independent and the present act of selflessness is only a gesture of goodwill in which America has led the way. Britain retains hereafter only her rights in Weihaiwei which she originally got with a view to counteract the Russian occupation of Port Arthur, and her rights over Kowloon, a strip of territory on the mainland opposite Hongkong which is entirely on a different footing from the spheres of influence and interest. Kowloon is on a lease from the Chinese Government and has no political complexion for its retention. It need not frighten any one, because Britain has given up rights which are more valuable and more serious than one based on a lease contract.

Iraq Joins United Nations

Iraq has declared war against Germany, Italy and Japan and joined the ranks of the United Nations. This is the first time in history that an independent Arab State declared war on the enemies of Great Britain as Great Britain's ally. Iraq's entry into the world war is welcomed by Britain. It may be recalled that Britain was closely associated with Iraq both during and after the last great war. Diplomatic relations with Germany were broken off by Iraq in this war in September 1939, with Italy in June 1941, and with Japan and Vichy in November 1941. Last year the Germans tried their best to disturb the cordiality of Anglo-Iraqi

POST-WAR ECONOMIC CO-OPERATION

"The Government's intention is to prepare a common programme of post-war economic co-operation in consultation with the Governments of the United States and the Soviet Union and other Governments of the United Nations, and considerable progress has been made by our Government in the preparatory work required for their part in the formulation of such a programme."

—Mr. ANTHONY EDEN,
in a statement in the Commons on
January 20.

relations. In April 1941 the Germans stage-managed a *coup d'état* in Iraq through Rashid Ali. This plan failed and Rashid Ali was forced to flee the country.

Latterly the Axis powers have been persisting in their hostile attitude towards Iraq. They have been broadcasting comments from their wireless stations against Iraq and her interests and have been trying to promote differences and disunity among the people of Iraq by disseminating rumours and false news with a view to endangering public order and security. Axis radio stations have also been making statements disrespectful of the Royal family of Iraq, which were calculated to undermine the loyalty of the people. Further, they also encouraged certain outlaws who wanted to subvert the established Government by force of arms. All these factors forced the Iraqi Government to declare war against the Axis powers. A statement issued by the Iraqi Government adds that "it is in the interest of Iraq in particular and the Arabs in general to adhere to the declaration of the United Nations." This declaration has been welcomed by Mr. Churchill in a telegram to the Iraqi Prime Minister. Mr. Churchill draws attention to the fact that the Iraqi Parliament has, on its own initiative, by a free and independent exercise of its constitutional powers, declared war on the Axis. He adds, "The struggle will be hard, but the end is sure and we rejoice to have you on our side." Iraq, which Britain helped to create during the first world war has now thrown herself fully on the side of the 26 Nations and signified its adherence to the United Nations' declaration.

* * *

On the Russian Front : German Defeat According to Russian Plan

The situation of German armies in Russia has well been summed up by Paul Winterton, the *News Chronicle* Correspondent. In a cable to the B.B.C., he says: "Though the Germans put up a stiff resistance here and there, they are short of manpower. It is not retreat according to plan, but defeat according to plan—the Russian plan. From the air, it is perfectly obvious that the Nazis have abandoned immense quantities of materials some of which are in good condition." Russian forces are progressing rapidly in their smashing three-pronged offensive.

In the North Caucasus, they are threatening Armavir, the key railway junction on the Rostov-Trans-Caucasian Railway. Soviet strategy here is governed by the fact that there is a north-south railway running from Rostov to Grozny and a east-west railway running from Stalingrad to Novorossisk. Some hundred miles below Rostov is Tikhoretsk, at the junction of these two railways, and seventy-five miles north-east of this town is Salsk. If the Russians can take Salsk and Tikhoretsk, they will jeopardize, to a serious extent, the German forces which are falling back on to Rostov.

In the Don region Russian forces are approaching the Donetz on a wide front and are within a few miles of its confluence with the Don. Furious fighting is going on in the Middle Don and the Russian columns converging on Rostov are making steady progress.

In the Central Front, there are heavy German counter-attacks in the Velikie Luki section, which is not a matter for surprise. For it was here that the German High Command concentrated shock troops. They have now conceded the fall of Velikie Luki into Russian hands, but were denying it previously, because they thought that without considering the cost the German troops could break through to the Don and retake it. But their plans were forestalled by the Soviet Command. By incessant blows they have weakened the German forces and made it impossible for them to recapture Velikie Luki, which since January 1st is in Soviet hands.

The most welcome news is, of course, the raising of the siege of Leningrad. After 16 months, Russia's second great city, has been relieved, and the Nazi hordes have been driven back.

On the side of Britain

Iraq stands on the side of her ally Britain, both out of loyalty to obligations and dictates of her own interest. Iraq wants wholeheartedly to bind her destiny to that of the United Nations and to support them in their fight.

—“AL-SHIBAB,” a Baghdad journal.

The Commander-in-Chief, Southern Army

LIEUT.-GENERAL SIR NOEL BERESFORD-PEIRSE who recently visited Madras and met the press representatives at a Conference.

LIEUT.-GENERAL SIR NOEL BERESFORD-PEIRSE, K.B.E., C.B., D.S.O., popularly known as "B.P." He is 53 and is G.O.C.-in-C., Southern Army, which is defending the entire Bombay and Madras Presidencies.

He was first commissioned in the Royal Artillery in 1907. He served in the South African War, and later in the Great War of 1914-18. He commanded a battery in Mesopotamia and Egypt and was awarded a D.S.O. after the capture of Baghdad, and became Brigade Major in France in 1918.

After the war, he attended a course at the Staff College at Camberley and went to the War Office in 1929.

In 1936 he came to India in command of an artillery regiment and in 1940 went overseas as C.R.A. of the 4th Indian Division. Shortly afterwards he became B.R.A. at the G.H.Q., Middle East. In August 1940 he got command of the famous 4th Indian Division. His brilliant capture of Sidi Barrani earned him a K.B.E. He commanded the 4th Indian Division when it captured Agordat and Koren.

Later in 1941 he commanded the Western Desert Force and became G.O.C., Sudan.

He then came to India and commanded a Corps in the Eastern Army. Now he is the G.O.C.-in-C., Southern Army.

His motto is "Not a seat, but a springboard."

The Futility of Fear

By THE HON. MR. JUSTICE S. WADSWORTH, I.C.S.

WE have been talking a good deal about events in Calcutta during the last week or two and there has been quite a lot of speculation as to the chance of similar raids on Madras. My own opinion, which is probably worthless, is that serious air-raids on Madras are not very likely in present conditions; but none can say that they are impossible. And so long as raids are possible we shall have to go on preparing for them.

But I am inclined to think that we attach too much importance to air-raids. I don't mean to underrate the effect of large-scale attacks, such as were made on London, though even these did not stop London from working. I refer to the tip-and-run raids by small numbers of aircraft, such as Calcutta has been experiencing. No doubt they are very disturbing to sleep and they involve an infinitesimal proportion of the population in acute personal danger. But if we can only see these inconveniences and dangers in their proper proportions, we shall realise that there is nothing to run away from.

After all, there is no such thing as absolute safety. Apart from the natural perils of storm, flood and earthquake and the ever-present danger of epidemics, we live in an age when civilization itself has added to the dangers of life. Consider the disastrous figures of motor-car accidents in any large town. Yet people don't run away to the country for fear of being knocked down by a lorry in the streets of the city. They take this risk as one of the incidental disadvantages of town life and by keeping their eyes open and taking reasonable precautions, they hope to avoid coming into sudden contact with an onrushing car. They know quite well that if they live in the country to avoid the danger of city traffic, they may quite well perish in an epidemic caused by the lack of city sanitation. I wish we could get into the habit of regarding this air-raid danger as something akin to the traffic danger. In point of figures, the traffic danger is probably the worse by far of the two—always excepting the results of concentrated attacks by large forces of heavy bombers, such as the Japs do not seem to possess. It is also evident from the official reports that casualties in these raids, just like traffic casualties, are to a very large extent due to the carelessness of the victim.

DANGER CAN BE AVOIDED

The great majority of bombs, particularly bombs of small calibre, kill nobody at all. The newspaper accounts seem to show that the Japanese are using mainly what are

known as "anti-personnel" bombs, which are very dangerous to people standing about in the open, but not very likely to demolish buildings or to injure people who have taken shelter. That is to say, they present a danger which to a large extent can be avoided by taking care.

Should Madras be attacked from the air, the safety of the individual would be much greater than in a city less generously endowed with open spaces. No doubt there are parts of Madras which are much congested; but the city covers an enormous area, much of which is occupied by parks, compounds, wide roads and playing fields. Bombs dropped at random are likely to achieve a very small proportion of direct hits.

Presumably the Japs know this as well as we do. Probably also they know that anything in the way of daylight bombing would be extremely expensive. Why then, should they try and bomb Madras? Well, I don't pretend to be able to read the minds of the Japanese general staff, but presuming that they are intelligent men, as they undoubtedly are, the most obvious reason for them to try and bomb the cities of India would be to try and cause panic and interfere with communications and the ordinary life of the country. Anything which obstructs the working of railways, which prevents the flow of supplies, which interferes with the processes of manufacture, is worth doing, if it can be done without serious loss. Our business therefore is obviously to prevent them from achieving these objects.

WHAT A STORY!

A Staff Officer in the Western Desert, tired of office life, asked permission to go out on a camel with a tommy-gun, as a kind of one-man Commando. After much argument permission was granted.

For a long time nothing was heard of him. There was great excitement therefore when one day a message was received from him: "Rommel captured; returning to-day."

What a capture! What a story! All waited breathlessly for the hero's return with his distinguished prisoner.

Hopes were dashed, however, by a second message. It read: "For 'Rommel captured' read 'Camel ruptured.' Am returning to-day."

PANIC PARALYSES DEFENCE

How can we do this? Clearly, the better our defences, the more expensive their raids will be. But you and I are not responsible for defence, which is in the excellent hands of Field Marshal Sir Archibald Wavell, who is the right man for the job. But what you and I can do is to see that casual air raids do not cause panic out of all proportion to their real danger. Panic paralyses defence. Military operations depend to a large extent on the smooth working of the life of the country. The railways, the harbours, the post office and telephones, the lighting and water-supply, the shops and restaurants, the

than we can endure and the danger is no greater than an ordinarily resolute man or woman can meet with fortitude and cheerfulness.

Remember that the good name of the city of Madras lies in our hands. We are or ought to be proud of this beautiful and historic city of ours. Do we wish it to be said that we are a city of cravens, unable to stand a very small dose of the medicine which has been the daily diet of others less fortunately situated?

Think of Malta where the air raids are counted not in tens but in thousands. The people of that brave little island do not enjoy

THE START OF AN AIR-LAND EXPEDITION.—Men of the Army's Airborne Command rush to enter the huge transport planes, while guns and machines are quickly placed aboard. The various ships will carry the following: One mortar, 1 machine-gun, 15 men, one 75-inch howitzer, 1 jeep, 8 men, 10 riflemen and ammunition; 16 parachutists, 2 anti-tank guns, ammunition, 11 men, 16 to 20 riflemen and equipment; 4 motor cycles, 4 bicycles, 12 men.

medical and sanitary services—all these are essential to the defence of the country. And it is our business to see that the ordinary workers stay at their posts and do not flock into the country if a stick of bombs is dropped in the neighbourhood. Even if no damage or casualties are caused, an attack would be deemed successful if it upset the life of this city at a time when important military movements were afoot.

We can therefore do much to thwart the object of air raids, by spreading the idea that they are nothing to get into a panic about. Of course they are always unpleasant and they are undoubtedly attended by a certain amount of danger. But the unpleasantness is no more

air raids. But they do not let their dislike of the danger prevent them from performing their daily duties. They have won for their native city a name which will ring down through the centuries. The lovely old buildings of Valetta may be shattered, but the work goes on and when victory is won, there will be no community in the world which will deserve the credit for it more than the gallant Maltese.

CHUNGKING'S ENDURANCE

Think of Chungking, which was battered to bits by bombs against which they had no effective defence. Thank God, they have now got the American Air Force to protect them and are no longer the helpless prey of the

Japanese. But before those defenders came to their help, when the bombers rained down death and destruction without any real hindrance, they endured it all with unflinching courage and set an example which we may well copy.

"The other day I heard some foolish and thoughtless people say that it was a mistake to attack Burma, because this only brought reprisals on Calcutta. Just think for a moment what this means. It means that in order to save Calcutta from casualties such as may on any day be done by a few recklessly driven lorries or motor-cars, we should betray the Chinese by allowing the Burma road to remain in Japanese hands. It means that in order to escape for the moment a very considerable danger, we should allow a deadly enemy of India and of the whole civilized world to establish himself on our very doorstep, where he can watch for a favourable opportunity to complete our destruction.

For the safety of India, it is essential that the Japanese should be driven out of Burma. For the safety of China, it is essential that the Burma road should be re-opened. For the safety of the world it is essential that the forces of aggression shall be curbed.

LIVE DANGEROUSLY

Some years ago a great traveller advised all young men to live dangerously. His idea was that all the best things of life are won by taking risks, that the misery of fear is greater by far than the actual danger warrants and that we should enure ourselves to danger just as we get ourselves inoculated against typhoid. Well in this brave new world in which we live, we have all got to live dangerously, whether we want to or not. We no longer have any option in the matter. The question is no longer whether we are going to undergo risks, but whether we are going to regard those risks in a sensible way or not. Very few people are really fearless. But there is a great difference between those who feel fear but vanquish it, and those who are a prey to their fears. Some people make their lives a perfect misery by giving way to fears, often conjured up by their own imagination. Not only do they make themselves miserable but they poison the air around them. There is nothing more infectious than fear. It spreads like a forest fire and is just as difficult to check. But we can do much to prevent panic from starting. One obvious way is to avoid all sorts of panicky talk. We should not join in defeatist conversation nor give any encouragement to those who love to dwell on the possibilities of disaster. If we have fears, let us keep them to ourselves and present a smiling face to the world whatever happens. If the unexpected happens and bombs fall amidst us, let us take cover till the raid is over and then go about our daily tasks, determined that no shortcomings

of ours shall help the enemy to achieve his object. Let us remember that the enemy does not really want to kill us, but to frighten us; and if we refuse to be frightened, we defeat the main object of his raid. If others show signs of panic, let us reassure them by our courage. Let us above all make up our minds that whatever happens, the work of this city shall go on.

—A Broadcast talk on January 18th.

General le Clerc

THE daring and resourceful General le Clerc is to-day in the forefront of those battling to uphold the honour of France, writes W. M. Towler, in the *Daily Herald*.

His motorised cavalry, with some air support, has moved more than 1,000 miles from its base at Fort Lamy in the heart of Africa. Now they are battering at Rommel's side door on the borders of Tripolitania. If General le Clerc can make a flank attack on Rommel's forces round Tripoli, he will have accomplished one of the war's most spectacular feats.

His own career is just as spectacular. When the French armies collapsed in June 1940, he was an unknown cavalry captain. He was wounded and captured by the Germans but escaped by cycling into Vichy territory. Eventually, he reached London. De Gaulle promoted him Major and sent him to Africa to attempt to rally the French equatorial territory to the Allied cause. Le Clerc succeeded.

De Gaulle appointed him Lieutenant-Colonel and gave him command of the military forces in Chad territory. From there he organized an expedition into southern Libya which coincided with General Wavell's first offensive. Le Clerc captured the oasis of Kufra and won the first Fighting French victory over Axis forces. He was awarded the newly created French order of "Liberation" and the British D.S.O.

Vichy passed a sentence of death on him and De Gaulle retorted by giving him the rank of Colonel. Le Clerc returned to Chad after our setback in Libya last summer—but only to prepare for his present more powerful drive. Now with the rank of General—he is still under 40—he has led his men across hundreds of miles of waterless desert—to the battle zone of Fezzan in southern Libya. There they have dislodged and put to flight one Italian garrison after another. By organization and determination, le Clerc has triumphed over staggering difficulties.

Contrast between China and Japan

[The contrast between China and Japan is emphasized in a lengthy article in the *British Catholic periodical "Month"* for November-December 1942, by Peter Johnson, who makes the following points.]

CHINESE history is a record of expanding culture rather than of a conquering empire. The civilization which grew up in the Yellow River basin has been extended through colonization and peaceful reception by non-Chinese people and not—with a few exceptions—by armed force.

This expansion has gone on for 3,000 years at varying speeds. The process of absorption has sometimes been slow, but always complete and final. No territory once subjected to Chinese civilization has ever been lost, and no territory incorporated in a Chinese area has

THE JAPANESE WAY

It is difficult to imagine a greater contrast to this civilized outlook which produced the wise and benevolent regime of China than that which was found in China's near neighbour, Japan. There was no ethical basis for government in Japan. The Emperor was Emperor by hereditary divine right, not by divine appointment, and because he was worthy to rule. Whereas the Chinese revered their Emperor as a benevolent father and as a pattern of goodness, the Japanese worshipped their Emperor as God on earth. The

SMASHED RAIDERS.—A number of Japanese planes have been destroyed over Assam and Bengal. Some of them have been put on view so that the civil population can see what our defences do to uninvited guests. Photo shows a small section of the crowd that came to see the wreckage.

ever withstood the penetration of Chinese culture. The prestige of a nation which had originated Far Eastern culture, the easy tolerance of Chinese administration and the pervasive influence of Chinese literature combined to maintain Chinese rule over alien communities.

FLEXIBLE GOVERNMENT

The Chinese had established a system of government flexible and tolerant enough to allow subject peoples to fit into it. No attempt was made to suppress national dress or speech, and religious persecution was unknown. The army was recruited locally, and after the Ming conquest in 1368 there were no alien armies of occupation in China. The Chinese Government conceived its duties as keeping peace, raising taxes (which fell equally on Chinese and non-Chinese) and undertaking necessary public works such as irrigation.

Chinese conception of government by example allowed for and sanctified a revolution when the ruler had ceased to fulfil his functions of leadership. Benevolent absolutism was limited within bounds of utility, and when a dynasty had failed to fulfil its purpose, it was usually deposed and replaced by another.

There was—and could be—no question, however, of deposing the Japanese God-Emperor, though in practice all effective power was usurped by the Shogun or office of generalissimo invested for many generations in the house of Tokugawa. A revival of Shinto in the late 18th century brought about a rebellion against these upstart mayors of the palace, but the identification of the Emperor with the Government, which followed, was a danger in itself. If the Emperor is a living God—and the Japanese really believe him to be such—his right to rule all peoples who can be

brought under Japanese sway can scarcely be questioned and any revolt against his authority becomes a sacrilege. And the Japanese, regarding themselves as descendants of the sun goddess, aim at nothing less than world domination: "haakko ichiu" or "all the world under one (and that Japanese) roof."

The difference between a civilized and an uncivilized race is nowhere more clearly seen than in the Chinese and Japanese approaches to other peoples and racial groups. The Chinese were content to leave others to assimilate their culture without coercing it upon them. They were conscious of the splendour and antiquity of their own civilization and they assumed that other peoples would be glad to emulate them—a message sent by the Manchu Emperor, Thien Lung, illustrates this attitude—but they seldom if ever tried to extend this civilization by aggrandisement and war.

MEN OF PEACE

Their character has not essentially changed. They have proved themselves willing and able to fight and win victories in defence of their country, but they are primarily interested in reconstructing their country for peace and in building up a new agricultural, educational and industrial system. Before the outbreak of the present war they did not concentrate, like the Japanese and Germans, on piling up stores of armaments, but learnt from the scientific and medical and educational experience of Western nations how to improve conditions of life among their own people.

The Japanese on the other hand have proclaimed their intention of coercing the whole of East Asia into accepting their version of the "New Order." They have imposed the "blessings of imperial rule" upon one race after another that has been too weak to resist them. Resistance to their divine mission is in their eyes a crime. Peoples who have been compelled to join their "Co-Prosperity Sphere" find that they have nothing to hope from their conquerors but oppression "worse than a tiger's" and exploitation.

The Arab's Faith

Any Arab, with zeal for his honour and believing in his right to a free life and in the justice of his cause, cannot but declare his support to the United Nations. Thus we declare our point of view to all the world and will remain faithful to it for ever.

—“AL-AKHBAR,” a Baghdad journal.

China's “Full Stature”

THE *Daily Herald* in an editorial says that from the beginning of China's national revolution, the abolition of "unequal treaties" was one of its cardinal aims. That aim is now achieved. In the Generalissimo's phrase, China to-day "assumes the full stature of an independent democratic nation."

This, let it be clear (continues the *Daily Herald*), is no part of the Far Eastern settlement that will have to be made when peace comes. Then there will have to be territorial changes ending past injustices. There will be security arrangements and economic provisions. It will be a formidable task for peace-makers.

All that is for the future, for friendly negotiation among the United Nations. What has been achieved now is the ending of all legal foreign interference in China's internal affairs. China to-day has in law—and will, when the invader is expelled, have in fact—full and untrammelled sovereignty over her own territory.

"Servitudes" are ended. Britain and America, in gladly surrendering old privileges, welcome a gallant ally to the society of free nationhood.

"TRULY WON HONOUR"

If heroic and unconquerable patriotism is a title to national greatness, the Chinese people have well and truly won that honour, writes the *Daily Telegraph*. The new treaties between China and Britain and China and the United States register what is an accomplished fact—that China holds her place among the United Nations in complete equality of comradeship.

Help for China, as Field Marshal Smuts has said, is "one of the Allies' most important objects." Without the establishment of Chinese security and independence, the war will not be won. The magnificent resistance of the Chinese is a momentous factor in all strategy of the Far East.

That co-operation and goodwill which finds its machinery in the representation of the Chinese Government on the Pacific Council requires that China should exercise beyond doubt the full equality of a nation whom, in the Prime Minister's phrase, we are proud to acclaim as "fellow architects of victory." In the freedom after the peace the co-operation of China will be needed by America, Russia and Britain and the whole of mankind.

HITLER:—"And do you think I'm happy in here?"

MUSSOLINI:—"Genoa. I'm worried!"

A Crucial Year for China

THE *National Herald* (organ of the Chinese Foreign Office) says: "Militarily, the year 1942 has witnessed very little change in the respective positions of the Chinese and Japanese armies. The year has been marked by the absence of large-scale fighting. However, while the Japanese failed to make any substantial gains during the year, China's power of resistance has been on the up-grade notwithstanding the severance of the Burma Road and the attempt at tightening the blockade of Free China by the enemy. One of the most significant developments during the year as far as the Chinese war theatre is concerned is the wresting of the mastery of the air from the Japanese by Sino-American air forces. With the year 1942 drawing to a close, the Chinese people are eagerly anticipating that success in the Burma campaign will radically alter the Chinese position and will make possible an earlier realization of the eagerly awaited counter-offensive on the Asiatic mainland."

"The year 1943 is a crucial year for China. However, if given the necessary aid by her allies she certainly can weather the storm and leap the last hurdle on the road to victory."

YEAR OF VITAL CHANGE

The *Shih Shih Sin Pao* writes: "This year has witnessed a vital change in the world situation. The Axis tide has been ebbing on the various fronts and the Allies have been gradually wresting mastery from the enemy in the sea and air and on land. On the Chinese war front there have been no fresh successes gained by the enemy and the Japanese are still being held by Chinese troops on all fronts. Owing to the gallantry of the American air forces, the Japanese air forces have been forced on the defensive."

"In the South-West Pacific, the Allies gained the initiative by launching an offensive and the enemy is being reduced to extremity. Reviewing the whole world situation, we are gratified to note that the Allies have gained the initiative on every front. The year 1942 ends with tendencies of war continuing in favour of the Allies. The dark days are over. We are facing the new year with the brightest prospect."

TWENTY-NINE ALLIES

The *Ta Kung Pao* (Independent) says: "The year 1942 has seen the outbreak of the Pacific war and by the outbreak of the war China has gained 29 allies. But the year 1942 has proved the worst time for China since the commencement of her war of resistance. Viewing the situation as a whole, we believe that the Allies will be able to start a big offensive before the end of next year. Victory is determined by the use of the offensive. With an offensive launched by the Allies next year there is not the slightest doubt that the Allies will be able to gain final victory."

Pacific: Just the Overture!

THE *Ta Kung Pao* (Independent), referring to Japanese views of the world war situation published recently in Japanese magazines and papers, says: "Japanese writers are unanimous in bragging about their war achievements in the Pacific, but they all agree that the real battle in the Pacific has not yet been fought. In brief, the Japanese have realized that the Pacific war in its present stage is just the overture. Japan's fate is uncertain. We can find no real comfort of natural optimism for the Japanese from the articles in Japanese periodicals."

The *Chung Yang-Sao Tang Jih Pao* (Central Kuomintang and Government organ) writes: "President Roosevelt issued an important statement on the first anniversary of the alliance of the United Nations. The statement coincides with traditional beliefs of Chinese people. They will do their part to the best of their ability under the leadership of the Generalissimo."

The *Hsin Min Pao* (Business) writes: "We hope our Allies will pay attention to President Roosevelt's New Year message and work out a plan for post-war reconstruction without undue delay."

LIKE SHOVELLING SAND!

Fighting the Chinese is like shovelling sand. No sooner have the Japanese occupied and cleared out an area than gradually the Chinese begin to reappear. Conquering China, even if it could be done, would probably require a larger garrison force than the Japanese can afford."

GENERAL STILWELL, in an interview to "New York Times."

Story of the Siege of Malta

By GENERAL SIR WILLIAM DOBBIE, G.C.M.G., K.C.B., D.S.O.

[General Sir William Dobbie was born in Madras in 1879. He was a classical scholar at Charterhouse and then went to the Royal Academy at Woolwich. He served throughout the last war and was mentioned in despatches seven times. From 1928-32 he was Brigade Commander in Egypt and from 1935-39 General Officer Commanding in Malaya. He served in Malta as Governor and Commander-in-Chief from 1940 until May 1942.]

THE story of the siege of Malta is not yet complete. Other glorious pages still remain to be written. But even so, it is permissible to examine the story so far as it goes, and draw lessons from it which may help us in the days of siege which still lie ahead. Wars and battles are not won only by material means, important as these things are. In the end it is, under God, the man and the spirit of man which count. The story

be brought in from outside. Thus the sea plays a decisive part in the well-being of Malta. For this reason Malta has always had a specially intimate connection with the Royal Navy, and Maltese men are to be found serving in most of His Majesty's ships and in many merchant vessels. Malta well understands the significance of the phrase 'command of the sea.'

This picture taken at an advanced air field in Algeria shows Air Marshal Sir William Welsh, Air Officer Commanding, North Africa, and other officers.

of Malta is a notable example of this truth. It is a story of human endurance and determination triumphing often over a lack of material resources. It is in this that its value lies.

A word first about the people and the place. Malta is the most densely populated country in the world; with a population of well over a quarter of a million, it carries 2,700 persons for each square mile. The country therefore obviously cannot support itself in essential foodstuffs, although every square yard of suitable ground is cultivated. Most of its food and all its manufactured goods have to

Malta is some sixty miles from Sicily and about a thousand miles from the nearest British territory. It is, in fact, the most exposed part of the British Empire. For this reason many persons, especially among our enemies, thought that Malta could not be held. The Italians openly boasted that it would be overrun and captured by them within the first few days of war. At that time, June 1940, when the resources of the British Empire were strained almost to breaking-point, the defensive strength of Malta was far less powerful than it is to-day. The Italians might surely have seized what

must have seemed to them a favourable opportunity to implement their boasts. But though they talked big, they acted small, and could never screw themselves up to taking the plunge and testing the defences of the island, which has remained in our hands and has been a veritable thorn in their side.

"HE IS ONLY ITALIAN"

Malta was the first place in the British Empire to experience serious aerial bombing. The people therefore had to face the unknown, which always has peculiar terrors of its own. In spite of the instructions and advice—largely based on theory—issued by the Government, Malta, like other places had to win its knowledge of how best to cope with these new perils in the hard school of experience. In this Malta had to lead the way, and right well did she face the issue. They say that familiarity breeds contempt, and a tendency soon showed itself—which persists to the present day—to treat the enemy with real contempt, especially if he was Italian. Men and women, and even children, were frequently heard to say of a raider: 'He is only Italian,' while they went on with their business. This tendency, of course, has to be checked, since even an Italian bomb can hurt if it hits one. Malta is blessed with a rock which is soft enough to work, but hard enough to stand up to the severest blows. This has meant much to the island, since it has enabled shelters to be built which really do give first-rate protection. If it were not for this the casualty list would have been infinitely higher. But though it might protect the people it could not protect their houses, and they would often emerge from their shelters only to find their homes a heap of ruins. It was a pathetic sight to see these people probing the debris, trying to extricate some of their furniture and household treasures. But I was immensely struck by the courage of these very people and their grim determination to see this thing through. More than once I have met such women by their ruined homes and they have said to me: 'We have lost all, but it does not matter so long as we win this war.'

One often wondered what would be the effect on children of the continuous alerts and raids. Generally speaking, they seemed to stand the strain remarkably well. The small boys, especially, appeared to derive actual enjoyment from the raids, a feeling which was not always shared by their elders and betters. They took the liveliest interest in what was happening. Their unbelievably keen eyes would spot the Messerschmitts or Junkers or the Italian Cants at distances beyond the powers of ordinary mortals, and follow the happenings in detail when our Spitfires came on the scene. When peace comes I am afraid they will find life rather dull. The education of these youngsters presented a difficult problem, but it had to be

faced—to give these citizens of tomorrow as good a start in life as possible. Many of the schools were destroyed by bombs, others had to be used for hospitals, but by the exercise of ingenuity and by distributing classes in different buildings, a good degree of education has been maintained.

DESIRE TO HELP

Malta's isolation from the outside world, of course, deprived many persons of their livelihood. Importers, exporters, and businesses of all kinds were affected, as were also retail shops which could not adequately replenish their stocks. Thus many persons had to seek other means of livelihood, and many were absorbed in the Armed Forces of the various Government departments. The conscription of man-power for essential services reduced unemployment to a minimum. All these upheavals were generally accepted with good humour and a fine realism. And the people tried to help each other and the community. I remember once getting a letter from the boys of a village offering their services. Could they not make themselves useful in some way: carrying messages, roof-spotting, as guides, or in any other way? They would like to wear some uniform, but if that were not possible it didn't matter so long as they could be useful. It was the right spirit, and I believe the motive was not only a boyish love of adventure but a genuine desire to help.

A MIRACLE

The people of Malta are proud, and rightly so, of their buildings, many of which are of great historic interest and architectural beauty. Many of these have, alas, been destroyed, and many more seriously damaged, much to the distress of the people. Some buildings have had remarkable escapes. I remember watching a raid one afternoon and

PRIORITY

Accompanied by a Negro driver, an American major in a motor vehicle was stopped by the sentry on guard at a cross-roads.

"Who goes there?"

"One American major, a one-ton truck of fertilizer, and one buck private."

They were allowed to proceed, but at every cross-roads they went through the same formula.

After a time the driver asked if they were likely to be stopped again.

"I guess so," replied the major.

"Well, major," said the private, "the next time we are stopped would you mind giving me priority over the fertilizer?"

I saw a bomb hit the dome of a church in a neighbouring village. The dome was a remarkably large one and the church was thought much of by the people of the village who had built it. I immediately went to the village, expecting to see a scene of great desolation. I entered the church and to my relief I found that the bomb, which was a very large one, had bored a neat hole in the dome but had not damaged the crypt underneath, in which a large number of people were sheltering. The people regarded the episode as a miracle, as indeed it was.

I have said very little about the garrison, but the fighting Services have of course played a great part in this epic struggle. Their co-operation with each other and with

nothing they have until recently always been fighting against odds, and sometimes very heavy odds. Between them and the guns a remarkable toll has been levied on the Axis air forces which has caused a continual drain on resources they can ill afford.

THE KING'S GRACIOUS ACTION

Life in Malta has been and still is serious and strenuous, and many of the amenities of life have had to be discarded. But while all concerned have kept up their courage and their spirits, they are glad when they see that their efforts and their contribution to the common cause are appreciated and understood. It was therefore with the greatest pleasure that they learnt of the delightful

MOBILE WORKSHOP.—Photo taken at a workshop behind the lines in the desert where damaged trucks, carriers, guns and even tanks are repaired and returned to the battle zone. The storeman issues stores.

the civil population has been first-rate, and has contributed largely to the successful defence of the island. We used to say that Malta stood squarely on four legs—the Navy, the Army, the Air Force and the civil population. The importance of a good understanding and mutual confidence between these four cannot be overestimated. The anti-aircraft guns of Malta have gained a world-wide reputation. These are manned by both British and Maltese personnel. In certain periods, when we were short of fighter aircraft, they largely bore the burden of defence—and well did they respond. The amount of practice they have had should have made them good, and they certainly are good. I remember in one month the guns alone destroyed over a hundred enemy aircraft for certain. The work of the fighter aircraft was also magnificent. Starting from

gesture of His Majesty the King, when he conferred the George Cross on the island. This delight was all the greater because the King's action was unexpected and without precedent. The appreciation of the people was enormous, and it gave them great encouragement. I venture to think that no honour has been better earned by any community. The most pleasant task which fell to my lot during my two years as Governor was to tell the people of the King's most gracious action.

One word more. I have purposely left to the last the point that really overshadows all others in importance. During these two years of the siege, I was very conscious of the good hand of God upon us, and I am sure that the continued safety of Malta was ultimately due to His Divine protection.

Russia's Master Plan : Resemblance to 1918 Strategy

WHAT is the master plan behind the daily news of the Russian blows in half a dozen different sectors of the enormous eastern front?

For on the eve of 1943 there is a master plan for Hitler's ultimate Russian discomfiture—make no mistake about it. I believe that the plan closely resembles the strategy of the Allies at the Western Front in 1918 and that in its usual rather indefinite way, history is repeating itself.

In the spring of this year just as in 1918 the German High Command had local superiority of force on the main battlefield which was unlikely to last more than a few months and it had decided how best to use its superiority to break down the enemy's resistance as quickly as possible and induce him to accept terms of peace. The Allied resources, like those of the Allies in 1918, were growing and if the critical period of temporary inferiority could be survived, the balance would then turn, more and more, in Russia's favour. The German aim was in each case to strike a swift and annihilating blow; that of their enemy was to gain time to hold out and be ready to pass to the offensive as soon as the German superiority disappeared.

The German strategy, both in 1942 and 1918, was to put the whole weight behind one heavy punch at a time and exploit it to the full in an endeavour to obtain a decision by smashing up hostile resistance. If they could rupture the hostile line and shatter it to fragments they might win this victory even at the eleventh hour; even though the time left while they still had the necessary superiority was short and fleeting.

THE TURNING POINT

We know the result in each case. In 1918, first on the Somme and then on the Aisne and the Marne, the Germans were within a reasonable distance of full success. The turning point came when the Germans had frittered away their superiority in a series of spectacular but abortive efforts and the Allies had accumulated enough reserves to pass to the offensive in their turn.

The same thing is repeating itself now in Russia. Both at Stalingrad and in the Caucasus, the Germans rushed forward with such vigour, speed and fury that it seemed they could not fail to rupture the Russian line and score a really decisive success. But they failed. In the end, worn-out with the chase of the phantom, they came to the end of their strength and had to halt. Now assured of

increasing superiority over the enemy, our Allies are delivering a series of separate and inter-connected blows, each one aimed at one of the enemy's weak spots on his long and sinuous front.

MARSHAL FOCH'S PLAN

Marshal Foch in 1918 devised this plan of a series of short-range and quickly delivered punches aimed at one hostile weak point after another and broken off as soon as resistance stiffened in the front of each one so as to make further effort there uneconomical. As soon as this happened, another punch would follow in another sector which, if successful, would have the effect of creating another enemy pocket from where he would have to withdraw unless he was to risk having the troops holding it cut off and lost. The Russian High Command is using the same methods today.

It is the strategy of the side whose forces are growing in contrast to those of the enemy. So 1918 may thus serve as a forecast of 1943. And the ultimate issue of the contest between these rival strategists bids fair to be the same now as it was then.

—The Daily Herald.

JAP JAZZ

"Jazz numbers are highly inappropriate to the present times," states a Japanese broadcast, announcing the banning of English and American dance tunes and popular songs. To anyone acquainted with Japanese Western style dance bands there is a good deal of unconscious humour in this announcement. Though Jazz is perhaps the most universally performed of Western music, and in many Eastern countries has a high standard of execution, the Japanese have undoubtedly been the least successful with it. Like many of their Western imitations, Japanese-performed Jazz has a machine-like and nondescript character—and usually at least one instrument out of time!

TOUGH TACTICS SCHOOL

Indians are taken from all Indian army units in the Middle East to go through a Tough Tactics School. Indian troops negotiate a sand-bagged wall at the double.

They have to negotiate many difficult obstacles, and as seen in the picture, rough stones are no deterrent.

Troops are here seen negotiating a difficult series of obstacles known as the fishnet.

Forced German Withdrawal Contrast with Russian Planned Retreat

By LIEUT.-GEN. SIR DOUGLAS BROWNRIGG

THE opening of New Year shows Germany everywhere on the defensive and in many places in retreat. The remarkable offensive in the south brought the Russians great success and a measure of this can best be gauged by the number of prisoners taken and booty captured rather than by any assessment of territorial reconquest.

It is in respect of the human material captured that we can see the great differences between the Russian retreat of the last summer and the German retreat of the present time. When Von Bock was advancing east with great rapidity, the Germans never laid claim to any large number of prisoners in the Don elbow but contented themselves with advertising the amount of Russian soil they had occupied. The Russians now advancing over the same terrain in the opposite direction are capturing German prisoners by tens of thousands and immense quantities of warlike stores. This gives the clue to the real difference between the two retreats.

TACTICS OF 1812

The Russians withdrew deliberately sacrificing territory in order to save the army. It was the tactics of 1812 all over again. It was because the withdrawal was well-planned and deliberately executed that the Germans were in the main only opposed by rearguards in the Don elbow. This accounted for the comparatively small number of prisoners—because only a small number of the Russian Army had been actively engaged.

The return journey has been a very different affair. The Germans never intended to give ground; they have been forced back by better tactics and superior generalship. If more proof were wanted to show that this is indeed so, we have only to ponder on the large dumps of food that have been captured. The German is not the man to lay in stocks and provisions for the benefit of the enemy. Most emphatically, the Germans had no intention of coming out of the Don elbow; they have been compelled to do so—not only by force of arms but to a certain extent for want of cover.

Further north, we see the beginnings of what may prove to be another big victory—for in the Leningrad region the Germans have less depth behind them than further south. The loss of Velikie Luki may well be the first step to great successes.

The Russian winter counter-offensive has been so remarkably successful that we must guard against expecting the pace of their

advance to be kept up indefinitely. Further west they progress, the easier railway communications become for the Germans.

A glance at the railway map of Russia is most enlightening. It shows how much denser are the lines of rail west of the general line from Leningrad-Moscow-Voronezh-Krasnodar than east of it. This has been the result of the intensive development in the Donetz basin as an industrial area. But no matter what the cause, it gives the opponent facing east far better lines of communication behind.

SEVERITY OF RUSSIAN WINTER

The increasing severity of the Russian winter is of course another factor which favours the defenders who necessarily have lesser need to undertake large troop movements.

The lesson we should learn from the Russian counter-offensive is that our Allies have made remarkable use of the time which has been at their disposal but we cannot expect the present rate of progress to be kept up much longer.

In North Africa the very speed of the opening moves has made some people restless because the pace has slackened. Let us take a warning from this to anticipate the same development in Russia.

Communications are the key to military movements—and in developed countries railways are still the basic means of communication.

ALLIES ON THE WAY TO VICTORY

“When Hitler collapses he will become desperate. We are on our way to victory. I cannot say how long it will take but no one should overlook the possibility of a long rough road. 1943 may well see the prelude to the victory that is coming—if, so far from relaxing, we should increase our efforts.”

—LORD HALIFAX, the British Ambassador to U.S., in a speech in New York on January 18.

New Chapter in Russian Winter Offensive

THE storming in five days of the ancient town of Velikie Luki, which fell to the Russians on New Year day, is not only a model for all such operations, says the *Daily Telegraph* Moscow correspondent. It opens a new chapter in the winter offensive along the front between Moscow and Leningrad. Within 24 hours of the storming of Velikie Luki the Russian Railway Corps got the trains working.

There was one outstanding fact during the hellish hand-to-hand fighting for the town. Everywhere shrivelled women and pale children

on right under the gun holes of the enemy strong points, while the fierce Usbek and Kazak soldiers from Central Asia had with tank support got a grip on the town's suburbs. Light artillery went right ahead with the infantry blasting the enemy gun-nests at point blank range. Altogether 130 German strong points were counted on these suburban fronts which were subjected to direct assault.

The huge Vyazma-Rzhev-Velikie Luki triangle has long been a threat to Moscow. The Russian assault on the triangle has been the Cinderella of their winter campaign. The

MacARTHUR VISITS HIS TROOPS.—General MacArthur, Allied Commander-in-Chief, is seen addressing a group of officers while on tour of inspection at the headquarters of an American division, somewhere in Australia.

crawled out of the cellars under fire and led the Russian troops to the hidden German key-points. Among other guerillas was a 20-year old girl, Amara Proshago, who led the first wave of the assault showing the Russian troops the best ways into her town.

The German 83rd Division which was wiped out at Velikie Luki refused to surrender because it knew that the Panzer Division, with 70 extra tanks and artillery support, were still trying to break through to its relief. The final Russian assault was launched without a hitch.

It began on a surprise position after half an hour's artillery preparations. Within two hours the Russian guardsmen with their special mortar companies and sappers were crawling

German bastion at Rzhev remains on the direct line to Moscow. But the loop lines, northwards of this town, are being used to speed up the new and wider thrusts. The Velikie Luki region is marshy and studded with lakes and ponds. All are now frozen but they still impede transport. Most of the roads are poor.

After encircling or smashing 60 enemy Divisions in the first six weeks of their offensive, the Russians are determined to destroy even greater forces in the next 12 weeks—before the spring thaw. Russia wants to finish her war this year. Her armies intend to exploit their supreme winter mobility to the limit so that Hitler will not be able to attempt any further spring offensive here.

Germans' Second Winter in Russia

THE Soviet Army's current campaign bears many resemblances to the winter campaign of 1941-42, but some differences are already discernible, writes Hanson Baldwin.

First, and most important, in this second winter war of attrition is the physical and moral effect on both sides—but particularly the moral effect on the Germans—which is cumulative. Second, the Nazis have assumed the defensive and have relinquished—or were forced to give up—the strategic initiative somewhat earlier in the season than they did last year. The Russian counter-attacks have thus mounted earlier and driven more rapidly into German-held territory than they did initially a year ago.

Giving the reasons for this, Hanson Baldwin quotes Ralph Parker, who wrote in the *New York Times* from Moscow that greater mobility, better co-ordination and improvement in command had enabled the Red Army to take more rapid advantage of its opportunities.

Proceeding, Hanson Baldwin declares that this third winter, according to reports from Russia, is not comparable in severity with last winter, which was one of the worst in Europe's history, and hence more manoeuvrability on both sides is possible.

It is the second winter of the Russian war; German divisions that otherwise might be resting and recouping their strength are locked in death grapples, the Nazis are on the defensive, and in certain sectors they are probably in retreat.

HAVING A HARD TIME

German spokesmen are now dwelling on the heavy demands made on German troops who are fighting the Red Army in the present

weather while harassed in the rear by partisans, writes *The Times* military correspondent. Berlin correspondents of Swiss newspapers have recently made the following points, manifestly from official inspiration: That early exhaustion of Russian offensive power is not to be assumed; that Russian tanks are of good quality and difficult to knock out; and that Russian tactics, though of a type "unknown to the west," are effective in this theatre and thoroughly understood by Red troops.

President Roosevelt's Sons

All four sons of the Roosevelts are now with the armed forces outside of continental United States. Marine Corps Major James Roosevelt is in the Solomons. The two youngest sons are Lieutenants aboard destroyers—John as a supply officer for four destroyers in the Pacific, Franklin Jr. as a gunnery officer on a destroyer in the Atlantic. Lieutenant-Colonel Elliott Roosevelt is with the Army Aviation Command in England.

BASIS OF PEACE

"All of us know that a mere military victory, important and essential as that clearly is, will not of itself bring us lasting peace. It is not a question what kind of peace victors would like to impose upon the vanquished, but, in the cold light of experience, how we can build a peace which is likely to prove enduring and which rests upon Christian fundamentals.

"The only way to make the peace secure, is to set up an international organisation for keeping that peace. This does not mean creating an overnight world government with sweeping general power to invade the domestic affairs of sovereign States.

"Presumably, these powers would include among others, power to prevent by concerted action territorial aggression, to regulate and control heavy armament building in every country of the world, power to administer and supervise the Government of certain backward and colonial areas and power by concerted action to attack certain discriminatory anti-social practices in the field of international trade and finance."

—MR. FRANCIS B. SAYRE, *Special Assistant to Mr. Cordell Hull, U.S. Secretary of State, and former High Commissioner to the Philippines, in New York, on January 16.*

Diary of the War

ENGLAND AND GERMANY

14th Jan.—The Royal Air Force raided Ruhr. Industrial plants in Lille were also attacked.

15th Jan.—General Sikorski, Polish Premier, arrived in Britain from United States.

Bombs were dropped in a few places in south-east England.

16th Jan.—The Royal Air Force bombed Berlin.

UNITED STATES OF AMERICA AND THE ATLANTIC

17th Jan.—Col. C. S. Booth, the Assistant Deputy Adjutant-General to the Canadian Military Headquarters in Britain, in an interview in Winnipeg, said he expected that the Allied forces would invade German-occupied Europe early in summer.

The United States War Production Board announced that the Government's war expenditure in 1942 totalled 52,406 million dollars or 169,100,100 dollars daily compared to 13,895 million in 1941.

19th Jan.—Lord Halifax (British Ambassador to United States) said: "When Hitler

Their guns held high to keep them dry, steel-helmeted United States paratroopers advance through a stream toward the air field. They must pack their full equipment of course, even in such an emergency as this, for once on the ground, every man must eventually be "on his own."

18th Jan.—Berlin was bombed again by the Royal Air Force. Large fires were started.

German aircraft raided London. Ten enemy planes were brought down.

20th Jan.—It was revealed in the Commons by Sir James Grigg, War Secretary, that British prisoners in Germany were still shackled.

Mr. Attlee, Deputy Prime Minister, said in the Commons: "Everywhere the initiative has passed into the hands of the United Nations."

21st Jan.—The Royal Air Force attacked targets in Northern France.

collapses, he will become desperate and have a crack at England. We are on our way to victory."

21st Jan.—Chilean Senate voted for break with Axis.

INDIA, BURMA AND CEYLON

14th Jan.—There was heavy fighting in Burma for Kathedang. Indian troops captured Temple Hill. The Royal Air Force raided Shwebo district.

15th Jan.—The Royal Air Force attacked four Japanese-occupied villages in the Akyab area.

16th Jan.—The Royal Air Force shot down three enemy aircraft over Calcutta in four minutes.

17th Jan.—Japanese attacks near Rathedaung were repulsed.

18th Jan.—A Japanese convoy was attacked south of Rangoon by American aircraft. One cargoship was sunk and another damaged.

Japanese aircraft attacked Feni aerodrome in Chittagong area. One raider was shot down.

19th Jan.—The Royal Air Force attacked Taungoo aerodrome.

20th Jan.—Calcutta was again raided. One enemy plane was damaged.

A place near Rathedaung was captured by British troops.

ITALY, AFRICA AND THE MEDITERRANEAN

14th Jan.—Allied aircraft raided Tripoli.

15th Jan.—The Allies launched a new offensive. Allied aircraft raided the enemy landing ground at Mismata.

The Pretender to the French Throne, the Comte de Paris returned to Tangier.

16th Jan.—Iraq declared war on the Axis.

17th Jan.—There were air battles in Tunisia. Twenty-three Axis planes were shot down. Tripoli was bombed by Allied aircraft.

18th Jan.—Axis troops retreated in Tripolitania. The Allies were 130 miles from the capital.

19th Jan.—The Eighth Army advanced 80 miles from Buerat. Forty miles were covered in a day.

Two Axis supply ships were sunk in the Mediterranean.

20th Jan.—The Nazis launched an attack in Tunisia. The Fighting French captured more places in Tripolitania. The Eighth Army was 30 miles from Tripoli.

21st Jan.—Thirteen Axis vessels were sunk in the Mediterranean.

RUSSIA AND FINLAND

14th Jan.—Nazi troops retreated in disorder in North Caucasus. The Soviet Caucasus and Kalmuk armies linked. The Russian army began mopping up Hitler's 22 trapped divisions in Stalingrad.

15th Jan.—Russian troops reached the east bank of the Donetz.

16th Jan.—The Red Army was within 60 miles of Rostov.

17th Jan.—The Russians were within two miles of Donetz. German lines near Voronezh were pierced and 17,000 prisoners were taken.

18th Jan.—The Russians captured Millerovo.

19th Jan.—The siege of Leningrad was lifted.

The Russians crossed the Donetz and recaptured the Voronezh-Kamensk line.

20th Jan.—The Russians won a major victory at Leningrad and Kamensk.

SHIPPING

14th Jan.—The British corvette Marigold was lost.

16th Jan.—Two or three Nazi merchantships were bombed and hit by aircraft of the Coastal Command.

VICHY AND OCCUPIED COUNTRIES

16th Jan.—Hitler, fearing an Allied invasion through Germany's "back door," gave orders to speed up fortifications in the Balkans.

18th Jan.—A regime, resembling a state of siege, was proclaimed in Lyons. Vichy and Nazi officers were attacked.

THE FAR EAST

14th Jan.—American reinforcements were landed in Guadalcanar. Allied troops advanced in Sanananda.

15th Jan.—An American torpedo boat scored hits on two Japanese destroyers in the Solomons.

16th Jan.—General MacArthur opened a new front in New Guinea.

17th Jan.—The Chinese recaptured Loshan. Three Japanese destroyers were damaged in south-west Pacific. Allied troops broke through at Sanananda.

18th Jan.—Japanese resistance collapsed in Papua.

19th Jan.—Five Japanese ships were hit in Rabaul.

20th Jan.—Allied troops captured Cape Killerton and Wye Point.

A PAL EXPLAINS

A member of a Scots regiment was being decorated for gallantry.

"This soldier", said the officer presenting the medal, "stood his ground in the face of overwhelming numbers. Armed with a tommy-gun, he stood up to the enemy and refused to retreat an inch."

"Must have had his foot on that six pence I lost", muttered one of the hero's pals.

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV

FRIDAY, JANUARY 29, 1943

No. 20

Overwhelmingly OUR SHOW

SIR JAMES GRIGG

To-day we have news of the fall of Tripoli. To all intents and purposes this completes the destruction of the Italian Empire in Africa. Both Russian and British armies have had their dark days and their retreats. For both we believe that the tide has now firmly turned. We believe that both will bear their due share in the annihilation of the 'blatant beast' of the Axis.

For months past we have been filled with admiration and gratitude for the stupendous exploits of the Red Army. To-day we have special cause to extend to our own army that admiration and

gratitude. For the destruction of the Italian Empire in Africa is overwhelmingly our show, ours and India's, and Australia's, and New Zealand's, and South Africa's, and of the inhabitants of British East Africa and British West Africa. Of course, we have had ungrudging help from American supplies and from American air forces in the latest stage, but nevertheless it has been overwhelmingly our show.

SIR JAMES GRIGG, Secretary of State for War, in a broadcast from London on January 23

THE CASABLANCA CONFERENCE

"For ten days the Combined Staffs have been in constant session, meeting two or three times a day and recording progress at intervals to the President and the Prime Minister. The entire field of war was surveyed, theatre by theatre throughout the world, and all resources were marshalled for a more intense prosecution of the war by sea, land and air.

"Nothing like this prolonged discussion between the two Allies has ever taken place before. Complete agreement was reached between the leaders of the two countries and their respective staffs upon war plans and the enterprises to be undertaken during the campaign in 1943 against Germany, Italy and Japan, with a view to drawing the utmost advantage from the markedly favourable turn of events at the close of 1942."

—A Communiqué on the Churchill-Roosevelt Conference,
published on January 27.

Liberation of France

"We have met, we have talked. We have registered our entire agreement on the end to be achieved, which is the liberation of France and the triumph of human liberties by the total defeat of the enemy.

"This end will be attained by the union in war of all Frenchmen fighting side by side with all their Allies."

—A Joint Statement of General Giraud and
General de Gaulle, issued at Casablanca.

To the Troops!

You want to be amused?

You want some light music?

Well, tune in to *All-India Radio, Madras*,

Running Commentary

Turkish Delegation's Visit to India: The Turkish Press Delegation, which is in India, has been visiting a number of important centres. At Nowshera a welcome address was presented to the delegation. In replying to it M. Sadek, one of its members, said that he was happy to find Muslims playing a prominent part in the war effort as faithful members of the British Empire, and emphasised the fact that Turkey was a firm ally of Great Britain. This gives us an opportunity to pay a tribute to a remarkable nation which

has remained a staunch neutral bulwark in the midst of warring nations. It may be said that Turkey is peculiarly fitted to be a bridge between east and west.

It was on October 29, 1923, that Turkey was proclaimed a republic and Mustafa Kemal popularly known as Kemal Ataturk ("father of the Turks") was elected by the Grand National Assembly to be its first president. He was the man who symbolised the spirit of new Turkey. He saw clearly the need

(Continued on page 6.)

"A Resounding Victory"

M. STALIN

FROM Russia continues to come news of great successes. The Red Army is moving forward, and the Nazi forces are withdrawing. In an Order of the Day, issued on Monday, to the Russian troops on the South-western, Southern, Don, Northern Caucasus, Voronezh, Kalinin, Volkhov and Leningrad Fronts, Premier Stalin, the Supreme Commander of the Red Army, says: "As the result of two months of offensive operations, the Red Army has broken through the defences of the German Fascist troops on a wide front, routed 102 enemy divisions, and captured over 200,000 prisoners and 13,000 guns. During this period, Soviet troops have advanced about 250 miles. Our troops have won a resounding victory. The offensive of our troops continues." M. Stalin has congratulated the Russian Commanders and troops on routing Hitler's armies. The immensity of the victory on the Russian front is likely to be blurred by the series of successes secured by the United Nations in North Africa. It is, therefore, of interest to examine the importance of the Red Army's great offensive along the 600-mile front, between Voronezh to the Kuban steppes.

BEFORE doing so, a reference to the raising of the siege of Leningrad is necessary. After 16 months of grim starvation, the heroic defenders of the great City were relieved, and only on January 19 they received their first normal ration of food. It was by the capture of the fortress of Schlusselfburg

on the southern shores of Lake Ladoga that the last obstacle across the rail communication between Leningrad and Russian territory to the east, was cleared. To the south-east of the City a part of the main Leningrad-Moscow Railway is still being held by the Germans, and this short stretch will have to be cleared by the Russians before joining up with the forces along the Lovat Valley, which are thrusting upwards in the direction of Staraya Rusa and the southern shores of Lake Ilmen.

After Leningrad—German Plan

IT may be expected, now that Leningrad has been relieved, that the Germans will hold on to Nevel and Novosokolniki which are the main Russian objectives in the central sector, because the German line of communication between Leningrad and the Ukraine runs through Nevel and because the direct railway line between Moscow and German-occupied territory to the west passes through Novosokolniki. If these two important railway junctions are captured, the easy movement of German troops towards Leningrad on the one hand, and towards the strong points east of Velikie Luki on the other, could be seriously hampered.

Threat to Rostov

COMING to the southern sector stretching from Voronezh in the north to the Northern and Central Caucasus in the south, we find that the resounding victory referred to by M. Stalin carries the Red Army nearer to its main objective, Rostov, which is the gateway to the Caucasus and the Ukraine. Rostov is now threatened from three sides—north, south and west. In the Caucasus sector, Armavir and Salsk, the objectives of the two Soviet forces in this area, have been recaptured. The threat to Rostov has greatly increased as the other vital railway junctions like Voroshilovsk and Voronezh have also been occupied by the Russians. On the lower Don front, the southward thrust from Kamensk is being reinforced by the westward thrust from Tsymlyanskaya. In the Middle Don area, the capture of Millerovo, Rossosh and Veliki gives further strength to the southward drive for Rostov.

Russian Strategy

THE strategy of the Soviet High Command seems to be directed towards cutting the Voronezh-Kursk railway. This will enable them to sever the southern German armies from the armies of the centre and encircle the enemy forces facing Voronezh. The threat to Kharkov, which is to the northwest of Rostov, is taking shape. The question is: Can the main body of the German troops in the Caucasus reach Rostov before the Russians close the bottle-neck? Already Hitler's southern front bases of Kursk and Kharkov are threatened from the new Russian positions to the southwest of Voronezh. The German High Command is very much concerned about its line of communications much further back on account of the threat to Kharkov, through which the main arterial line of communications from Germany now passes. Where are the Germans to concentrate their strength? If they do it too far forward, they risk another Stalingrad. If they do it too far back, their forward positions may be overwhelmed. They are in a dilemma.

M. Stalin's Exhortation

THE present tempo of the great Soviet offensive is such that the Germans cannot wholly retrieve themselves from their present plight. In his Order of the Day, M. Stalin has exhorted the Red Army forces to go "Forward—to rout the German invaders, and to drive them out beyond the limits of our country." Everything indicates that the exhortation of the Soviet leader will be carried out in a large degree by the Red Army.

RUNNING COMMENTARY

(Continued from page 3.)

for shaping Turkey into an independent national State. He abolished, in 1924, the Khalifate, the office of spiritual leadership over all Islam, which the Ottoman Sultan combined with his secular powers. The Kemalist revolution brought about great changes in Turkey's economic life. In 1933 Turkey launched its first five-year plan and in 1935 Etatism or State Socialism was officially adopted as a plank in the Government's programme. After Mustafa Kemal, the present President, Esmet Inonu, is successfully guiding Turkey in a policy of peace and growing strength.

During the last three years, Turkey has been observing a policy of neutrality with remarkable consistency. This policy rests on two foundations. First, Turkey mobilized her army when war broke out in 1939. Government increased the armaments and efficiency of the army. Turkey is the only neutral state in Europe, which has a large, highly-trained army numbering more than 1,000,000 men, which is powerful enough to sway the balance at any moment. Secondly, in spite of intense Nazi pressure, Turkey has managed to follow a foreign policy which is not unacceptable to any of the belligerents. But Turkey will fight when it is forced to. "We shall strive to keep out of the War," declared President Inonu on March 18, 1942, "but if that shall prove impossible we will fulfil our duty to our country with dignity." In spite of their best efforts, the Nazis have failed to divert Turkey from the path of neutrality.

Turkey and the United Nations : A Neutral Bastion of Defence. Though Turkey is following this policy, her stand for peace has brought her into ideological friendship with the Democratic Powers. In October 1939, Turkey signed a treaty for reciprocal aid with Britain and France in the event of the extension of war to the Balkans and the Eastern Mediterranean. After the defeat of France, she retained her alliance with Britain. M. Sarajoglu, Prime Minister of Turkey, declared on August 5, 1942: "Our friendship with Britain is the fundamental factor in our political system."

As a neutral bastion of defence, Turkey has been of great value to the United Nations by holding back the disaster of war from the Middle East. Her neutrality helped the Allies to defeat easily

Nazi designs in Syria, Iraq and Iran and gave them invaluable time to build up their defences in lines of supply. The Allies have to a large extent saved Turkey by their policy of economic collaboration from the disastrous consequences of the inevitable war-time economic disintegration.

Fall of Tripoli : Referring to the capture of Tripoli by the Eighth Army on Saturday morning (January 23), Mr. Churchill's Two-year old Pledge Cordell Hull, U.S. Secretary of State, declared that "the fall of Tripoli

to the British constituted one of the most overwhelming, outstanding and important victories of the War." Sir James Grigg, Britain's Secretary of State for War, described it in a broadcast as "an unparalleled feat of military organization that has flung so great a force at such speed so far across an inhospitable desert." This victory is a fulfilment of the pledge given by Mr. Churchill two years ago. The British Premier promised the Duce at Christmas in 1940: "We will tear your African Empire to shreds and tatters." The fall of Tripolitania's capital has taken place almost exactly three months since Rommel's forces stood at El Alamein hoping to drive on to the Suez Canal. General Montgomery launched his great attack on October 23, and for 90 days he continued the harsh and unrelenting pursuit of Rommel's forces. Tripoli marks the triumphant conclusion of the Eighth Army's 1,400-mile desert trek.

The fresh attack which General Montgomery launched at dawn on January 15 is likely to carry the war beyond Tripolitania into Tunisia. It was expected that the depleted Axis forces, the remnants of Rommel's original "invasion of Egypt" army, would seek some position in front of Tripoli to make a definite stand. But it didn't happen. It may be Rommel's plan to save what he can of his battered forces and take them to Tunisia so that he can link up with General Von Arnim's forces there.

The next stand of the Axis may be made inside Tunisia along what is known the Mareth Line, the artificial fortifications prepared by the French for the protection of Tunisia. Rommel will have to depend for supplies on Tunisia's two ports, Bizerta and Tunis, which have been receiving the special attention of Allied bombers. The final battle for ridding Africa of the Axis forces will be fought in Tunisia, and its progress will be followed with the closest interest.

BIGGEST ALLIED CONVOY FIGHTS THROUGH TO RUSSIA.—The biggest Allied convoy to Russia fought through a four-day attack by enemy torpedo planes and U-boats to deliver her cargoes at an Arctic port. The Commodore of this convoy was Rear-Admiral E. K. Boddam-Whetham D.S.O., and the escorting forces were under the command of Rear-Admiral R. L. Burnett, O.B.E., flying the flag in the cruiser H.M.S. SCYLLA (Cap. I. A. P. MacIntyre, C.B.E., R.N.). Photo shows a general view of the convoy showing a near miss on an aircraft carrier.

Food Problem : H.E. Sir Arthur Hope's Speech.

In the course of his address inaugurating the First Conference of the 91st Rotary District comprising Madras Presidency and Ceylon, His Excellency Sir Arthur Hope, Governor of Madras, referred to the food position which had been engrossing the attention of most people and of members of the Government to the exclusion of almost everything else. His Excellency expressed the hope that the situation would get better and better and appealed to the public to do everything that they possibly could to discourage profiteering, hoarding and black-marketing—evils practised in wartime on a large scale. Let us briefly examine here how other countries have tackled this problem and what we in India should do to relieve the situation.

In his budget address to the American Congress, President Roosevelt said: "There is no easy, pleasant way to restrict living habits—eating, clothing, heating, travelling and working habits—of 130,000,000 people. There is no easy, pleasant way to wage a total war." In peace-time, the Americans as a class were generally better fed, clothed and housed than others, but war has changed their life and living conditions considerably. America has tackled the problem by enlarged controls, increased taxation, and intensified regulation of production and distribution. As regards Britain, she is the heaviest-taxed country in the whole world and has adopted a comprehensive rationing system, so that the price of victory may be fully and equitably paid. Russia and China, who have their enemies right on their own soil, are facing and surviving enormous difficulties.

Two Aspects of the Problem in India.

So far as India is concerned, she has a population thrice as large as America, very much more varied and more firmly attached to traditional habits, and the problem is not therefore easier. India has to face two alternatives. Either her social conscience has to assert itself in the matter of hoarding and private speculation, or entrenchments on the liberties of the individual by the Government must be accepted in a genuine spirit of co-operation. Our readers are aware that there has been some criticism of Government policy and an insistent demand for "better control." It may be pointed out that condemnation of the "bureaucracy" for not being able to meet such a situation amounts to nothing more than a practical plea for dictatorship. The situation in dictator-ridden countries is far worse and the remedies they have adopted are gruesome in the extreme. To relieve Germany of its food problem, Himmler, it is stated, has suggested the massacre of all Jews in Poland and elsewhere. Goering, it may be recalled, pompously declared, "Whoever starves in Europe, it will not be the Germans." On the other hand, the United Nations are dealing with the food problem in a humane manner: they are building up food stocks for the relief of the general famine which will otherwise be the consequence of the "New Order."

Food Shortage : Three Causes and a Two-fold Solution. Let us examine the causes of food shortage in India. Mischief-mongers suggest that the presence of a million armed men—who after all are defending India from the enemy

who is at the root of all the trouble—has by itself seriously jeopardised the living conditions of 380 million civilians. This is absurd. Equally absurd is the statement that exports to the still more hard-hit Middle Eastern countries, which have now been very much reduced, is the main cause for the present situation. What then are the real causes? Firstly, India is not at all getting her former supply of foodstuffs from outside because of Japan's occupation of certain countries. Secondly, all shipping space is urgently needed for war-tasks of every kind and it is difficult to get shipping facilities for import of foodstuffs from other countries. Every ship diverted to take extra food to India means one less to feed Britain and supply Russian and other fronts. The third and most important factor which is responsible for the present situation is the unreasoning panic which has followed upon military dangers of last year. It is this unreasoning panic which is responsible for all the hoarding, profiteering and black marketing.

In a recent speech in Calcutta, Mr. Nalini Ranjan Sarkar, Commerce Member of the Government of India, has referred to two aspects of the solution to the present problem. The first is, more food crops should be grown and the maximum quantity of supply from various producing centres should be obtained. Secondly, the available supply should be distributed equitably. So far as the first is concerned, some appreciable progress has been made, to which reference was made by Sir Jogendra Singh, Member for Education, Health and Lands, Government of India, at a press conference in New Delhi about two weeks ago. He said that the last season's goal of an increase of 7.6 million acres under rice and millet had probably been achieved.

Fighting the Hoarder and the Profiteer.

As regards the second aspect of distribution, this depends on the proper utilization of restricted physical means of distribution. It is gratifying to note that the important step of granting priority to food wagons has been taken. A perhaps more important factor is the co-operation of all sections of the public concerned in the marketing of grain and on the steadiness and good sense of the consumers. In fact both aspects of the solution to the problem involve public co-operation. Without such co-operation, no Government in the world can defeat the hoarder and the profiteer. What is required is a return to confidence

and to reasonable ways of buying and selling and a readiness to accept, where necessary, changes in diet such as Britain and America have willingly undergone. These are essential for the successful working of any scheme initiated by the Government. Mr. Amery's statement in the House of Commons on the food situation in India indicates that His Majesty's Government and the public of Great Britain, a country which throughout the war has accepted increasing shortages and changes of diet as the necessary price of victory, have genuinely realized India's difficulties. Government will shortly take important steps to deal with the situation, and the public should effectively co-operate with them.

The Calcutta Raid and the Berlin Canard. Japanese planes raided Calcutta on the night of January 15. This was the first attack of this year. But it is not surprising that Berlin should have ante-dated this raid by 11 days. In a Hindustani broadcast on January 6, Berlin said:

"On the night of January 4, Japanese planes intensively raided the port of Calcutta, including the harbour installations and military objectives. Heavy damage was caused. The Howrah factory (*sic*) was completely destroyed, while huge fires were started in oil depots. The Howrah Station and military barracks were also bombed. Several British navigation premises were severely damaged. One vessel was sunk while a gun-boat was left ablaze in Diamond Harbour."

In its home broadcasts and in English, Berlin described this raid as 'the heaviest of all' and gave further details of damage and disaster. It said fourteen British aircraft were shot down for the loss of four Japanese planes. From start to finish, this broadcast was a complete fabrication. As every one knows, there was no air raid by Japanese planes on Calcutta either on January 4, or on any other date between December 27 and January 15.

As regards the raid on January 15 itself, it was on a small scale and it could not do anything serious as against Calcutta's strong defences. The raiders were forced to drop their bombs almost harmlessly outside the target-area. A single R.A.F. night-fighter brought down three of the Japanese planes in four minutes. This gives an idea of the strength of Calcutta's defences.

An Interview with M. Sarajoglu

M. SARAJOGLU

I was received by the Turkish Prime Minister, M. Sarajoglu, who saw me in his private study in the building of the National Assembly, cables the *Daily Telegraph* Ankara correspondent.

Despite his heavy burdens I had an opportunity of a long talk in which he discussed latest political and economic developments as they affect Turkey.

The following are the impressions which emerge from this conversation. It can now be definitely stated that Turkey's strategic position has improved. To achieve this, the army has been kept mobilized even though it has imposed great strain.

It is now clear why the Government was compelled to apply drastic measures such as the recent heavy profits tax to put the finances of the country in order. But great help has been received from Britain within the framework of signed agreements.

Turkey has received materials from Britain continuously in amounts varying according to Britain's own requirements. Imports have, especially in the last two months, increased considerably and reached a steady flow. Until recently, supplies from the United States came through Britain which, before America entered the war, had undertaken guarantees for Turkey.

Now without any solicitation the United States Government has offered materials directly through the medium of Lease-Lend. This development is highly gratifying to Turkey.

As regards the food situation, Turkey will still need help though in decreasing measure during 1943 until the harvest is gathered.

Shipping is a difficult problem. Turkey can send occasional ships to the Suez but no further. The Government has tried to obtain neutral ships but this has proved impossible. It now hopes that the United States will provide the necessary tonnage.

While relations with Britain and America thus continue to be highly cordial those with Russia are not less satisfactory. At the same time Turkey desires to continue her policy of co-operation with the Middle-East States. She believes that this policy runs parallel with that of Britain.

It is difficult to formulate judgment while the war goes on but Turkey would welcome any suggestions for a renewal of co-operation among the Balkan States.

Anglo-Turkish Alliance

By F. R. ATAY

[Mr. Atay is the leader of the delegation of Turkish Journalists now visiting India.]

THE third anniversary of the signing of the Anglo-Turkish Treaty of Alliance gave occasion to cordial demonstrations in the Turkish and British Press and Radios. When one looks back on the three-year old history of this alliance, its basic quality cannot escape the eye: the British and the Turks have used this alliance not as an instrument to spread and to intensify the tragedy of war, but as a means of saving further peoples and countries from suffering and destruction. We are certain that there no longer is a single

Englishman or Turk endowed with enough commonsense who still discusses whether it would be better for Turkey to enter or to remain outside the war.

When the British and the Turks signed this Treaty of Alliance, the directing principle of their foreign policy was the preservation of peace. The two Presidents whom Turkey has had at her head since the Treaty of Lausanne have each in turn repeatedly emphasized in every speech that the Turkish people have no other aim than to further the cause of their

independence and of their industrial and economic rehabilitation and prosperity. From the foundation the New Turkey to September 1939; our desire to safeguard peace and to avert war by reciprocal agreements and treaties has dominated both our national and international policy. Nor have the British Government ever clandestinely or overtly approached us with a view to making us their accomplices in any war of aggression.

MILITARY POLITICAL PRECAUTIONS

The desire for defence does not confer immunity from aggression. It is necessary also to take military and political measures of protection, and to exchange guarantees with neighbouring and other concerned countries within the bound of common danger and interests. We neither desired the outbreak of the Second World War, nor had we anything to gain by it. We neither wish to intervene in it, nor do we perceive any gain for ourself, in such an intervention. Those who believed that her alliance with Britain would drag Turkey into the war were those who doubted the sincerity of Turkey's claim that she had no territorial desires or demands, and who were under the delusion that once Turkey became involved in the war Britain would be pleased to see the immediate spreading of the war to the British spheres of security in the Near and Middle East.

The relations between the British Empire and the Ottoman Sultanate passed through contrasting phases. In some cases, the British Empire fought side by side with the Ottoman armies because the territorial integrity of the Sultanate was of vital importance for Britain. In other cases, exactly the opposite happened. But ever since the British Empire saw no need to fear a free, national and strong Turkey which had established herself on the 100 per cent Turkish territories of Thrace and Anatolia, no cause remained to disturb or cloud the friendship and faith between the two countries. Furthermore, it is impossible that Turkey should have but friendship for those who consider a free and independent Turkey necessary for world order and who have no designs on her rights.

We are a people frank of speech and soul. We have a very old history, full of honourable memories, and a traditional nobility of ethics. Those who have faith in us will never have cause to regret it. Nor does Turkey doubt the sincerity of the word given by those countries which, relying on Turkish uprightness and gentlemanliness, have extended to us their hands.

It is our hope that the Anglo-Turkish alliance now entering upon its fourth year will continue to be as beneficial as before—*Ulus*.

Turkey's Foreign Policy

ONE of the prophecies which have been made at about this time every year since the beginning of the war is the prediction that Turkey will be involved in the war by the next spring, cables *The Times* Ankara correspondent.

The reasons advanced in support of this belief change from one year to another which must be very baffling to those who are unfamiliar with the intricacies of Turkish policy. Yet the diversity and the complexity of the cause which might eventually place this country in such a position as to leave to it no alternative to drawing the sword and fighting are no more than a direct and almost logical consequence of her geographical position which dominates and dictates the requisites of her foreign policy.

A survey of the problems facing Turkey, arising out of the various aspects of her position in regard to other countries, is enough to explain the reasons which in the past have very nearly brought her to the verge of war and may crop up in the future.

AN EXTENSIVE COASTLINE

Thus, one, as a Balkan country and member of the Balkan entente Turkey was and is directly interested in what happens in

that peninsula; two, she is a member of the Eastern (Saadabad) Pact—which was recently prolonged for five years—and therefore she is concerned directly with everything which affects Persia, Iraq, Afghanistan and indirectly with the fate of the Arab countries; three, she possesses an extensive coastline in the Mediterranean and consequently, the safety and mastery of the eastern part of that sea cannot leave her indifferent; four, the same applies to her as regards the Black Sea; five, Turkey is entrusted with the guardianship of the Straits under the Montreux Convention and she is committed to maintain the freedom and security of that great waterway; six, Turkish territory lies on the historic route which was followed by all those—whether the more recently by the Ottoman Sultans who Phalanxes of Alexander the Great, the Roman Legions or the Crusader Knights—who came from Europe for conquest in Asia; and, seven, in the other direction that same routes has been trodden by the Asiatic warriors who invaded Europe like the Xerxes and his Persians in the classical times and might inspire imitators in our times.

This enumeration shows clearly how at some time or the other during the last three years German military or political actions

Sikhs and Sappers and Miners enjoy a cup of tea from the waggon presented by the Tea Marketing Board to the Southern Army.

very nearly involved Turkey in the war. Those who believe that even now Turkey may be implicated in the war base their belief alternatively on the fifth or the seventh of the abovementioned contingencies—namely, that she may be attacked by Germany in order to prevent, either, passage through the Straits of Allied supply ships going to Russia or the use of Turkish territory by the Allies for an invasion of the Balkans or both.

TURKEY UNMOVED

Echoes from Berlin indicate that both those possibilities are in the minds of Germans and a recent article in the *Völkischer Beobachter*, which addressed a stern warning to those countries who might be willing to serve as a spring-board for the Allies, was obviously meant for Turkish ears.

All this speculation about her future prospects, however, leaves Turkey unmoved. Through her most authoritative statesmen she has never ceased to reiterate her firm determination to continue to remain neutral, and in order to prove her sincerity and good faith towards the belligerents on both sides, she has been striving to keep a fair balance between them by trading with both and by signing various, if somewhat involved, economic agreements. Turkish political circles are of the opinion that they have thus furnished enough evidence of their peaceful intentions to allay any apprehensions that this country might let herself be dragged in the war. Moreover, those same circles think that Germany possesses at present neither the freedom of initiative nor the resources necessary for a war against Turkey which would result in adding at least one million first rate soldiers to the forces of her enemies.

Rostov "Key to the Caucasus"

By MAJOR PHILIP GRIBBLE

ROSTOV, the "key to the Caucasus" was occupied by the Germans on November 23, 1941.

By November 29, Timoshenko's armies had moved southwards from the Donetz and reoccupied the city. On the previous day, Don Cossacks entered the suburbs of Rostov from the south. Von Kleist's army was pursued to Taganrog and expelled from the Donetz basin.

2-A

By July 24, 1942, Rostov was again in German possession.

At first sight it appears remarkable that this key centre should have changed hands three times with no more than two or three days' local resistance. Has Rostov become the Russian Benghazi?

In November, 1941, the Germans took Rostov with relatively light forces, which were forced to withdraw under threat of subsequent

encirclement. Last July it had been expected that Russian resistance in the Donetz basin covering the approaches to Rostov could be successfully maintained. But, as with the Germans in the previous autumn, the Russians, now under threat of encirclement owing to the enemy's rapid advance down the Moscow-Rostov railway south of Rossosh through Kantemirovka, Millerovo and Kamensk, in their turn withdrew.

Now the Russian threat to Rostov comes from the direction of the previous German threat down the railway through and around Kamensk, supplemented by a second thrust seven miles north of the confluence of the Donetz and the Don, where the Russians are striking westwards at Kransi Sulin, 35 miles north of Rostov on the Moscow-Rostov railway and 15 miles south of the last east-to-west railway.

If this point is reached, the only rail communication with Rostov remaining to the

Germans would be from the west through Taganrog.

South of Rostov the situation of the Germans in the North Caucasus largely reproduces conditions under which the Russians were forced to withdraw from the Donetz-basin last summer.

Rostov is a well-protected bottleneck unassailable by the Russians except from the north and south. The Don delta protects it from the west. In the east on both sides of the Don as far as the junction of the Sal, marshlands stretch in two strips four to eight miles wide. There is no road parallel to the Don to the south of the river. The railway from Salsk and Tikhoretsk outlines the southern approaches.

It seems probable that Timoshenko's successful offensive in November 1941, may soon be imitated—*News Chronicle*.

Medical Supplies for Russia

Over £2,000,000 collected in Britain

By HENRY ROVICH

THE growing aid rendered by the public abroad to the Soviet Union in its struggle against Hitlerite aggression is particularly expressed by the increase registered in shipments of medical supplies received here. Beginning with August 1941, when the first ship with medical supplies sailed for the Soviet Union, aid in this field has been steadily on the upgrade. Many of the parcels received contain canned goods, chocolate, egg, powder and other foods.

In the store-room of one war hospital in the rear I visited recently I saw piles of warm woollen sweaters and gloves from England; warm underwear from the United States; woollen socks and scarves from Canada; enamelled hardware from the American Red Cross; soft, fluffy woollen blankets from the Argentine and many other useful articles.

HIGH QUALITY

Army Doctor of the First Rank, Professor Rafael Colonzko, chief of the hospital, had high praise for the quality of the medical instruments received.

"Portable X-ray apparatus from England," said the professor, "used for examining the wounded without shifting them from the wards are of great help to our surgeons."

To gain some idea of the general scope of the medical aid rendered the Soviet Union by

foreign countries, I interviewed P. K. Divakov, Vice-Chairman of the Executive Committee of the Red Cross and Red Crescent Society.

VALUABLE ARTICLES

"For obvious reasons," said Divakov in answer to my questions, "it is not expedient to publish summary figures on this point. I am at liberty, however, to say that the medical supplies and instruments we receive total 220 items, and include sulphamide preparations, caffeine, X-ray apparatus and other extremely valuable articles."

Returning to the scope of international medical aid to Russia, Divakov said that the number of organizations conducting this work at present is quite large. He mentioned the British Red Cross, the Committee of Aid to the U.S.S.R. headed by Mrs. Churchill, the Trade Union Committee, the British Miners' Federation, the Anglo-Soviet Medical Committee headed by Dr. A. V. Johnson, and many others in Great Britain.

"I am informed," he said, "that these organizations have collected more than £2,000,000 for medical aid to the U.S.S.R."

In the United States this work is being done by a host of public organizations which collect funds, purchase supplies, hospital equipment, etc., and ship them to Russia.

"Judging by information at my disposal," Divakov added, "many public organizations in Australia, Argentina, Uruguay and China are doing the same."—Condensed from *Moscow News*.

FROM THE WESTERN DESERT

Col. L. E. Hobbs, left, Major-General L. H. Brereton, commanding United States Middle East Air Forces, and General Strickland, who commands the fighters of the United States Air Forces, rest in the shade of a building at Gambut after they had entered Libya.

Photo shows men of a Home Counties Regiment with men of the Highland Division. The Home Counties men are machine gunners, and have been covering the Jocks in recent actions.

The Red Army Man

By WALTER GRAEBNER

LIKE the Russian people as a whole, the Red Army man is good-natured, unsophisticated and intelligent. He makes friends easily and, if he likes a person, he will give him his last piece of bread or his last pair of socks.

He is slow to anger but once he gets mad there is no stopping him. Now the full flood of his fury is loosened against Nazis. However, he has no wish to destroy German culture or take reprisals, when the chance comes, for atrocities committed against Russians.

The Red Army men maintain that all they demand is the destruction of Fascism and its leader; but if German people, as distinguished from Nazis, try to obstruct Russians in their war on Fascism then they too will have to suffer.

The Red Army soldier is on an average about 5 feet 8 inches in height and weighs about 11 stones six pounds. Many of them shave their heads. They have good appetites but when necessary—it often is they can fight like tigers on black bread and water. In camp, before going into battle, they sing endless songs to the music of balalaikas. Nearly all soldiers carry something to read, often cheap paper editions of war thrillers, sometimes classics like "War and Peace" or volumes of Puschkin. Though they do not talk a great deal about politics, they are avid readers of *Pravda*, the official mouthpiece of the Communist Party.

WELL-EQUIPPED

The Red Army man is as well equipped as any soldier in the world. His uniform is made of pure wool, his heavy leather boots would last a civilian a lifetime. In winter, every man is given a greenish felt valenki to replace his boots, quilted pants and vest and a heavy woollen overcoat and plenty of warm blankets.

In 18 months of war, the Russians have learned a lot about fighting. Their greatest strides were probably made in developing individual initiative and self-reliance. The Red Army's plan from the very beginning of the war was to fight delaying actions which would be more costly to the enemy than to itself and then, after the punch had gone out of the German fist, to turn its full offensive power on the Reichswehr.

For her winter offensive, Russia undoubtedly has millions of trained troops which have been in field reserve east of the Volga. In the

northern half of Russia, the Red Army is far stronger than it was last spring because the Germans attacked nowhere along the whole front and the Soviets moved practically nothing to the south to support Marshal Timoshenko at Stalingrad.

Recognising long ago the possibility that Baku might be taken or the Volga cut, the Soviets laid in several years of oil supply for the armies in the north. Industrially, Russia is not as strong as she was at the start of the war because of the disastrous losses of plant and sources of raw materials like iron and coal in the Don basin and other areas and because of their tremendous loss of manpower. Nevertheless, Russia is probably stronger now in relation to Germany than she was a year and a half ago. Almost every day the Soviet Press announces the opening of a new factory at some place in the Urals or Siberia, and trains are jammed with workers and technicians moving east.

SCIENTIFIC PLANNING

Though Russia's agricultural position is desperate and will get worse, it would be hopeless this winter had not her Government introduced science and the machinery of planning under collectivised and State farm systems. Farm output of the Soviet Union has increased between 50 and 100 per cent since Government control went into effect. The increase, of course, has been more than offset by the German thrust into the Ukraine and Kuban.

Without strength behind it, even the toughest and the bravest army would fold up. The big reason why Russia has been able to bear nearly the full weight of the Wehrmacht for 18 months is that almost her whole economy has been utilized for military rather than civilian requirements.

Russia's war effort is almost incredible. A large proportion of shops have been closed and those still functioning are practically devoid of goods. The best stocked and busiest of all stores are bookshops, but they deal mostly in old volumes. Probably fewer than 10 out of 1,000 civilians have been able to purchase a new item of clothing for a year. All over Russia, men, women and children are wearing shoes that in England or America would long since have passed from the master to the servant and to the junk heap. Probably over 95 per cent of all food consumed in the Soviet cities is rationed but a small percentage is sold in the open market.

The Northern Caucasus. German soldiers surrendering to Red Army men.

WOMEN AND THE WAR EFFORT

Women do everything that men do, no matter how strenuous the task may be. Their replacement of men in factories, on farms and in other industries is far more complete than in Great Britain which has made a concerted drive in that direction. Russian women drive street cars and locomotives, dig defence lines, lay railroad tracks, build highways and bridges, sweep streets, cut timber, make munitions and machine-tools, operate tractors, harvest grain, and serve in hundreds of different capacities in the army, naval and airforce. Hard work has made them tough and brawny.

Unlike the American and British women in industry, the Russian women look as if they belonged there. The Russian women also have

time to bear babies. Moscow's streets are full of mothers with infants.

Food supplies for a large part of the general public have dropped below the irreducible minimum necessary to maintain the health of the nation. Undoubtedly the position will become worst this winter and by next spring many believe that it will be grave for those Russians not engaged in war work. Most of the available means of transportation are needed to haul supplies to the various fronts. Food for civilians comes second in Russia to imports from America and Britain. Food also takes second place to munitions. It is known that owing to a shortage of ships, Stalin had to make a choice between wheat and weapons. He chose weapons—*The Daily Mail*.

Rumania's War Weariness

INFORMATION from reliable sources indicates that Rumania has some 30 Divisions fighting in Russia and that her losses there now amount to between 350,000 and 400,000 men.

With a bare four Divisions at home, the country has reached a point at which it is humanly impossible to supply further manpower for the fighting line and it can be regarded as fairly certain that this was one of the pleas put forward on her behalf at the recent conference at Hitler's headquarters, cables *The Times* correspondent on the German frontier.

Very heavy losses have been suffered by the Rumanians in the Stalingrad area; for instance, five whole Divisions were lost in the fighting north-west of the town during the week after the opening of the offensive there

on November 22. The losses included General Lascar, General Masarini and General Sion; the first was killed and the fate of the other two is unknown. Rumania's financial and economic experts who attended the conference had a similar tale to tell. Rumania must no longer be regarded as a potential source of supplies except in the case of petroleum production which in 1942 was possibly slightly higher than in 1941. The big draw in the Rumanian manpower has, however, affected the agriculture of the country to such a degree that there has been a serious deterioration in the food situation during the last few months.

The mission, probably, has pointed out again that Rumania's sacrifices are proportionately far more than her Balkan neighbours.

Preparing for "Blitz" on Germany

By GORDON YOUNG

THE return to London, as Vice Chief of the Air Staff, of Air Chief Marshal Sir Arthur Tedder, Air Officer Commanding, Middle East, may have vital effect on our air force policy in 1943. This has been made clear not only by the talk he gave to war correspondents when he said farewell on January 9 but also by a remarkable authoritative statement on air force policy issued in the Middle East.

Sir Arthur described air war as a "separate war though linked to those on land and sea." He added: "It is only by the realization of this fundamental fact that we will stop the war going on for far longer than it need."

This declaration which re-opens one of the war's greatest controversies is amplified by the statement issued in the Middle East.

This emphasizes that "Command of the air determines what happens on land and on sea whereas armies and navies cannot affect command of the air. Air supremacy will win the war."

The statement argues that the Empire air forces have now grown equal in status with the land and sea forces and are commanded "by men who have specialized in air work for over a quarter of a century" unlike the Axis air forces which are ruled by soldiers.

It urges that its importance as a service should be related to the fact that the war will be won by air supremacy. "The air striking force in the Middle East has pointed the way to the future of the Royal Air Force. The desert squadrons have not blazed but blasted the path to ultimate determination of what the air force can and must do"

A SEPARATE OFFENSIVE ENTITY

"The essential lesson learned in the Middle East is that an air force is a separate offensive entity, striking at the enemy in co-operation with the army. Today, because of that lesson Britain alone of the embattled nations; can look to a striking force in the air unshackled and untrammelled by parochialism and preconceived ideas and free from glib phrases like 'air support' and 'fighter assistance'—an air force which commands the air."

"From being a puny shrunken limb, the air arm has grown in the Middle East to a vigorous strong flail smashing at the enemy with determination and untiring effort. Clearing the skies of opposition, it has gone on to administer punishment on the Axis ground forces where such attacks would most benefit the army, not by chance or luck but by planning. . . . The enemy has been driven back in a series of well-timed blows from the two forces until Tripoli is threatened.

"The cobwebs have not been shaken away from the old ideas of air support—they have been blown away, shattered by the guns and bombs of the air striking force."

Many commentators point to the fact that Sir Arthur Tedder is on his way to London with this statement in mind at a time when an improvement in Europe's weather may open up the way to mass air force activities. Sir Arthur Tedder had a plan for the Middle East. They are saying that he now has one for Europe too.

Sir Arthur Tedder has always been looked on as the man primarily responsible for the remarkably close co-operation between the Middle East air forces and the Eighth Army. Thanks to that co-operation, military commanders were able to get close air support on demand within minutes instead of hours—as was the case in previous campaigns. The Royal Air Force is the only separate air force among the principal belligerents. United States aviation is divided between the army and the navy as is the Russian; Germany's three services—the Wehrmacht—are welded together under one supreme command.

It has been rumoured that Sir Arthur is returning home to take charge of that part of our air force—fighters and light bombers—which would be used to support the Anglo-American army invading Europe.—*Sunday Express*.

AIR-SEA RESCUE SERVICE —REWARDS

[G.O. No. 4127, Public (War), dated
30th December 1942.]

The Governor-General in Council is pleased to sanction, as a war-time measure, the grant of a reward to private individuals and/or bodies for the rescue of Air Force flying personnel, force landed or shot down into the sea.

2. The reward will be paid through the local civil authorities on the following scale:—

	Amount of reward. Rs.
For each person rescued alive.	100
For each dead body recovered.	50

"MIRACLES" IN U.S.A.

★
HENRY J. KAISER, U.S. Builder, did these "impossible" jobs:—He built Boulder Dam 18 months ahead of schedule. He built a giant cement plant for Shasta dam in six months. He turned ship-builder, produced Victory ships in 10 days, and recently under 5 days for a world's record. To-day, Kaiser is starting on his biggest job; producing giant seven-engined cargo planes. Photo shows Henry J. Kaiser, holder of the U.S. Maritime Commission records for ships per yard, ships per way and average time per ship, telling members of the U.S. Senate about his plans for giant cargo-carrying flying boats.

★
In his new West Coast shipyards, attacking a brand new job, Henry J. Kaiser set out to beat the estimated construction-time of 105 days per ship. The man who had never even seen a ship launched before 1940, was soon building freighters in sixty days, then thirty, finally less than five days—a world's record. This photo shows a ship under construction by the new assembly method, in one of the Kaiser yards.

★
The highest dam ever built by man, Boulder Dam, saves the turbulent waters of the Colorado river for irrigating thousands of acres of desert land and for turning electric generators to supply power for the U.S. war effort. As President of the Six Companies that built Boulder Dam, Henry J. Kaiser got his start as a mass-production and engineering expert, began his climb to fame by accomplishing the seemingly impossible feat of completing the dam 18 months ahead of schedule.

Bombing of Berlin: Then and Now

THEY came back from Berlin—back from the volcano of flak and waves of M.Es.—with the job well done. I saw them coming in at the bomber station. They were content.

Flight Sergeant Eddy, a bomber wireless operator—it was his 62nd trip. He had seen Berlin before in November 1940.

"That time, we went over in old Hampdens," he told me. "Altogether we dropped thirty tons of bombs before we left and we saw a few scattered fires. Last night it was different—a whole lot different. They shot a volcano at us but we dropped hell on them. Before we left, Berlin was ablaze. No scattered fires this time but a sheet of flame."

Flight Sergeant Lou of Ottawa, Canada, pilot of "H. for Harry" told his story. "The 8,000 lb. 'cookies' we gave Berlin are like nothing else in the Bomber's belly. They hit like lightning and branch out like flying mushrooms. I should not have liked to be underneath them," he said.

Flight Lieutenant Eddy, Captain of another Lancaster, said: "We did not take the Germans unawares last night. That did not keep us from dropping our load. Flak was thick and fighters thicker. But we went through on schedule."

New Status of China

BY the new treaties with China, Great Britain and the United States formally and finally relinquish their extraterritorial rights. The abolition of these rights is no more than a stage which China would in any event have reached sooner or later, writes *The Times*.

The policy followed by Great Britain and the United States and other countries for some years had as its aim the freeing of China from unequal treaties. The war has consummated the policy. But so long as China is not in physical possession of the whole of her national territories, including the treaty ports in which the discarded rights were exercised, the recognition of her inalienable sovereignty inevitably lacks full substance. Victory, then, is the immediate task.

The fighting spirit of the Chinese, which has been so steady under major setbacks and grievous sacrifices, will be reinforced and refreshed now that her full and untrammelled rights of nationhood have been acknowledged by Great Britain and the United States. In a larger sense still, China is now offered a guarantee that with victory she will take her part as a great power in undisputed and

The Lancaster was enthusiastically praised by the crews. Pilot Officer Albert, Captain of one of the Lancasters, said: "It is a great machine—and can do almost everything except sing. I don't think there is a bomber to equal it anywhere."

Many of the crews who took part in the week-end raids have recently been over Italy. "A great load of bombs"—official description—was dropped by a strong force for the second night in succession. Our losses (22) were heavy compared with Saturday night but in contrast to the calm, cloudy conditions which prevailed then, our bombers on Sunday flew most of the way to Berlin in bright moonlight.

The pilot of one Lancaster who had dropped an 8,000 lb. bomb on Berlin was attacked on the way home by a Junkers-88. His rear and mid-upper gunners returned the enemy's fire and the fighter turned on its back and went down.

Another Lancaster was attacked twice, first, by a FW.-190 and then by a JU.-88. Both were driven off. The Captain of a Halifax said: "What made things rather baffling was that the whole landscape looked different because the ground was covered by snow."—*News Chronicle*.

unconditional enjoyment of her just rights in shaping and sustaining the coming New Order in Asia.

A RESPLENDENT DESTINY

A resplendent destiny is opening for her, based on a firm reality and born of her manifold sufferings. It has long been foreseen and is now explicitly recognized in the new treaties that in the resettlement of Asia, China must have a pre-eminent place. Her record in war, no less than her national culture, requires it.

From the fastness of Chungking, Generalissimo Chiang Kai-shek maintains the fight with means that are woefully inadequate but with a faith that is superb. Neither blandishments nor bludgeonings have brought the acceptance of that illusory structure which the Japanese call "co-prosperity." The Chinese who have long and bitter experience of Japanese methods know well the extent of social and economic ruin which the Japanese "co-prosperity" brings to those within its clutches. In place of this ruthless and self-seeking conception, the United Nations have the duty to base future settlements in the Pacific on broader and more honourable lines.

His Highness the Jam Saheb of Nawanagar recently visited the "Baroda" Squadron at an R.A.F. Fighter Station in Great Britain. Here he is seen inspecting the guard of honour. His Highness arrived in India on Sunday, January 24.

Reconquest of Burma

WHILE all goes well with our land and air attack on Japanese forces in Burma, the recent warning by General Irwin, Commander of India's Eastern Army, against expectation of swift or major results from the advance of his columns upon Akyab sets in its true proportions the supreme value to all Allies of recovery of the whole of Burmese territory, observes the *Daily Telegraph*. The unbroken success of our advance upon Akyab has been, and will probably continue to be slow because British and Indian troops are fighting through some of the most difficult country in the world—steep mountains covered by dense tropical jungle intersected by creeks and swamps.

When Akyab is captured, its occupation will not, so far as can be judged, open the way to further advance. Its possession is, however, an indispensable preliminary to decisive operations. At Akyab the Japanese have a useful port and a good air base only 350 miles from Calcutta. So long as they are there, the Allies lack, in spite of the good work of Admiral Somerville's forces, that command of the Indian Ocean which, as Field Marshal Smuts has remarked, dominates the war in the Far East. Until General Irwin's forces have a firm hold on Akyab and the Arakan coast, the way is not open to Rangoon, and Rangoon—we have proved in the past and the Japanese confirmed last year—is the door to the whole of Burma.

GOOD REASON FOR CONFIDENCE

General Irwin looked forward at Christmas to the day when the great armies of India

would be provided with all the means to set them in motion. Urgent demands of other fronts last year delayed their complete equipment, but since the movement on Akyab began, there has been an intensification of air attack on Japanese positions and vital communications which promises well. Enemy air forces apparently lack the strength to react effectively. However much we may discount reports that Tokyo has found it necessary to diminish the drafts of troops sent to Burma, there is good reason for confidence that heavy losses of aircraft over Guadalcanar and Papua have limited the number of planes which the Japanese can put in the air over Burma.

Japan's land forces in Burma, however, show as desperate a determination as at Buna. The topography of Burma, in its natural obstacles and in its lack of roads and railways, offers great advantages to stubborn defence. It is therefore to be expected that reconquest will be a hard task. This has long been realized in the councils of the Allies, but they are not less well aware of the fact that the possession of Burma is the key to victory in the East. When the Japanese have been driven out, a wide breach will open in their line of conquests. British, Indian and American forces and supplies can pour into China and bring the threat of attack near to Japan herself. The task of reconquest may be long, but the time is now at hand when the Allies can unite upon it adequate forces in all three elements—air, land and sea. The result of a campaign of such combined strength is not doubtful.

British Commonwealth : A Worldwide Society

MR. HERBERT MORRISON, Home Secretary, speaking at Newcastle recently answered critics of British colonial policy and outlined likely future developments. The following is *The Times* editorial comment :—

Mr. Morrison's speech was marked by the same balance and breadth of view, by the same mixture of idealism and practical common sense and by the same absence of political dogmatism as his speech at Swindon three weeks ago. At Swindon he was discussing economic and social development in this country after the war. But he recognized, as everyone must do, that prosperity and security in one country depend on the achievement of prosperity and security in the rest of the world.

In his Newcastle speech, he was concerned with the contribution which the British Commonwealth of Nations can make to that end and especially with positive aspects of colonial policy—the development of those great territories which have not yet attained complete self-government and assistance which must be afforded to enable them to stand upon their own feet and play a part in the world corresponding to their resources and capacities.

Again, as three weeks ago, he gave to public opinion the kind of lead for which the country has been waiting. He crystallized many ideas upon which discussion of these matters has led to a general, if vague, agreement and indicated the lines upon which opinion in many different camps is converging to shape a definite policy to-day. More than ever the British Commonwealth has something to give to the world which the world urgently requires. Without it, as Mr. Morrison said, the world would lose a great factor of stability and progress just when these things will be most needed.

STATUS OF COLONIES

He was at pains to clear up the misconception, widespread abroad, that hard and fast barriers had been set between the status of self-governing Dominions and the status of Colonies. The Dominions constitute a family of adult nations, each with its own environment, problems and interests and freely acting together in matters of life and death importance. But each achieved full self-government by practical working out of democratic principles expressed in the demand and capacity for self-government and the willingness of the mother country to grant it fully and freely. This principle of growth is still active; and the trend is always towards freedom.

Mr. Morrison is not one of those who are inclined to apologize for the Empire or belittle its glories. On the other hand, he does not pretend that our colonial record has been without blemish.

On the whole, however, we have set an example of humanity, decency and fairmindedness which the enlightened world has been glad to follow. What, however, is still more significant is the general recognition that more is needed in the future. Debates in both Houses of Parliament, especially in the House of Lords, have shown a practically unanimous consensus of opinion that not nearly enough has been done to develop the economic side of the Colonies and to raise the economic and social standards of the population. The fault has not been so much in the local administrations which have been hampered by lack of means and lack of interest at home.

POSITIVE POLICY OF ADMINISTRATION

There has been, at any rate, a beginning of improvement in this respect during the last few years. But, as Mr. Morrison contends, a fuller understanding and keener realization are needed almost everywhere of the conditions implied in the positive policy of administering the Colonies for the benefit of their own people. Colonial partnership is, however, a conception which cannot attain full fruition within the framework of the British Commonwealth alone.

To the development, economic and political, of her dependencies Great Britain has responsibilities of her own which she cannot shirk. She must frame her own policy to discharge them to her own satisfaction and to the benefit of all. But—and this was the point which Mr. Morrison rightly emphasized—the British Commonwealth is a worldwide society: and international co-operation on a world scale is a condition of its survival. No limited or restrictive system can be adequate for its need. The door is wide open for what Mr. Morrison called "some wider pooling of the tasks and responsibilities with others" who may be ready in their turn to share the burdens as well as benefits. For the peoples of the Commonwealth, as for the people of this country, any policy of securing exclusive advantages for themselves would defeat its own ends. It is the strength of the Commonwealth that its long-term interests are the long-term interests of the whole world. Care for those interests as well as for those principles of progressive growth towards the wider freedom on which the Commonwealth rests, lead inescapably to thinking in terms of still broader partnerships.

A photograph of Madras Sappers and Miners taken on the occasion of a recent visit of H.H. the Maharaja of Mysore.

Who Should Rule the Pacific After the War?

By SIR FREDERICK WHYTE, K.C.S.I.

['Freedom Forum,' the Saturday-night discussion in the BBC's North American Service, is six months old. The Forum, headed by Sir Frederick Whyte—first President of the Legislative Assembly of India and at one time Political Adviser to the National Government of China—has mainly concerned itself with Anglo-American and European problems. But now it has turned its attention to the Pacific.]

SOME six months ago Freedom Forum held its first discussion at the microphone of the BBC. It was designed to give listeners in lands overseas the chance of hearing a group of men in London thinking aloud on the problems of our time. And so it ranged freely and widely over the face of the globe, but paying most attention to post-war questions in their British aspect. Now it is six months old; and as I am in some sense its parent I can tell you that it is going strong. I know that it has made many friends and hope it will make more.

So to-day is our twenty-sixth meeting. Here round the table are Harold Laski, one of the Forum's original members, learned, lively, stimulating, provoking; next, Tahu Hole, from New Zealand, well-known 'down under' as a political journalist; next to him Mr. Boissevain, Netherlands Consul-General

in Shanghai, straight from Japanese internment in that great metropolis of Far Eastern trade; next again, Arthur Mann, the London voice of the Mutual Broadcasting System of the United States, bringing the fresh incisive tones of America to this microphone miscellany; and finally myself as ringmaster of the circus of debate.

FAR EAST AND NEAR NORTH

And now come down with me to that secure cellar where Freedom Forum is now assembling to discuss the future in the Pacific. After a try-out of each voice, to make sure that it is tuned to proper microphone pitch, I open the session with the question: 'Who is to rule the Pacific in future?' Answer: not Japan anyway; nor, indeed, any other Power by itself; for this great ocean is too wide, too full of many interests to be the playground of any one Power.' And just as I am about to

show that it includes everything from Vladivostok to Singapore and from Chungking to the Pacific. Laski chips in to declare that the Pacific and the Far East are not apart from the rest of the world, but that we are all part of 'a single civilization.' And Hole puts in a pertinent reminder for Australia and New Zealand that the place we call the Far East is to them the Near North, coming very near to them in these days, bringing a new association between these Dominions of the South Seas and America.

Thus the discussion opens in a free give and take; and Arthur Mann, taking up the word 'association,' wants to know how we are going to organize the post-war association of all the peoples concerned. What can we learn from the way the Washington Treaties of 1922 worked or didn't work? 'Up to you, Boissevain,' says the Chairman; whereupon our friend from the Netherlands recalls that his country signed the Washington Treaties and declares that the war has emphatically shown the mutual interdependence of all the regions of the Far East. 'For us, in the Netherlands East Indies, our growth and our comfort depend on peaceful relations and in trade co-operation with all. We want organized co-operation.' Whyte: 'Well, we had it in the Washington Treaties: perfectly good in themselves but why did they break down?' Laski: 'Why? Of course, because they were just pious principles, without sanctions; Russia wasn't in; and Japan felt frustrated; and America Whyte: 'That's up to you, Mann.' Mann: 'Yes, America's got to be in on that. And I don't want to start with naval ratios this time. Nor do I want the new arrangement to be just a big bluff.' Hole: 'Big bluff or not, the new scheme must be one in which the small Powers must have an equal voice with the big ones.' 'Sure,' says Boissevain. 'We Netherlands are with you Australians on that.'

ALL OR NONE!

Here Laski interrupts (*Freedom Forum* lives by free interruption all round the table): 'Say, Hole, haven't we got the right germ of the new thing in the present Pacific Council? Re-shaped a bit for work in peace?' Hole: 'Admirable idea: we in the Dominions aren't going to let that Council go after the war.' Whyte: 'So what we make for war is going to serve us in peace. You agree, Boissevain?' Boissevain: 'I do indeed! And I guess that means that we've answered our own question: "Who is to rule the Pacific?"' Whyte: 'Yes, it's all or none! So far so good. But, let's go a step further, and rough out the lines of policy in things like trade, tariffs, emigration and the rest. And here I pass the buck to you, Boissevain, for the Netherlands have a pretty clean record in that.' Boissevain: 'Thank you for that! The Netherlands have always tried to keep trade free from restrictions, and we would say

that the more freedom of this kind the better for our new system. Control? Yes, but intelligent international control.'

Mann: 'Can I butt in, please? We used to talk about the Open Door in China; but that door only opened one way. We want it open both ways; and the Chinese will ask how we are going to open our door to them.' Whyte: 'Racial equality, you mean. Agreed in principle; but the open door should cover other things too. There has been new industrial growth all over the East which will affect the historic policies of the older countries.' Hole: 'You've hit the nail on the head, Whyte; and the new war industries of Australia will seek their outlet when peace returns: they will be new competitors in the international field.' Mann: 'Ho, ho! That's going to give our high-tariff boys back home in the United States something to think about.' Whyte: 'High tariffs? Are we going back to that?' Mann: 'Well, protection's not dead yet.' Whyte: 'No: the old Adam dies hard.' Laski: 'And this old Adam has a long pedigree. Alexander Hamilton began the tariff business and sold the idea to Friedrich Liszt, the German economist, who sold it to Bismarck, who paved the way for Hitler.' Whyte: 'Hamilton seems to have been a very prolific ancestor. I bet he never thought that when he married Betsy Schuyler Laski: 'No; but he wasn't faithful to her, and Hitler is the result.' Whyte: 'Hear the words of Laski writing *Tariff History Through the Looking Glass*!'

A CHANGE OF OUTLOOK

At this point *Freedom Forum* lost the thread for the moment in laughter and cross-table chaff; but as the pleasant uproar subsided, the voice of the Chairman was heard saying: ' . . . it all means a change of outlook. But we've got to give scope to new productive capacity.' Laski: 'Well, Whyte, I'm not in the least abashed by being called Alice in Wonderland. And I'm going to suggest that we can find the new openings for new productive capacity by a development policy for backward countries—China, India, Africa—raising their standard of life and purchasing power by capital investment.' Whyte: 'Back to our old friend the Economic Hinterland, in fact.' Laski: 'Precisely.' Boissevain: 'And the whole policy following the Atlantic Charter and the spirit of Lease-Lend. I would welcome that.' Mann: 'Looks to me as if we'd need a World Economic Conference in permanent session.' Laski: ' . . . a very useful thing in the post-war world.' Boissevain: 'Yes; and if we don't find new outlets in Laski's Economic Hinterland we shall just be digging our own industrial graves if we go on encouraging new industrialization all over the world.' Mann: 'I guess Russia's not a bad illustration. This Five Year Plan business was making the Soviet Union an expanding market for British and American industry even before

the war.' Boissevain and Laski (in chorus): 'In fact, no country was ever harmed by the expanding prosperity of any other.' Whyte: 'And the key to the whole problem is just what you call expanding prosperity, promoted by a general plan and pursued by the ordered energies of nations united in peace as they have been in war. . . . But I see the clock is pointing its warning finger at me; and that means time's up, gentlemen!'

We've ranged far and wide, though we began in the Pacific and the Far East. Significant, isn't it, that wherever and however we begin, we have to take everything, back to its true setting in the world picture. Laski was right when he said that there is neither East nor West now, but one civilization. And so we see that we've reached a stage in the story of mankind when war is really civil war which seeks to break up our unity of purpose and to turn us back from our true goal.'

SUPER-HIGHWAY AT U.S. BOMBER FACTORY.—Lined up on the tri-level super-highway inside the Willow Run bomber factory, crowds watch Under Secretary of War, Mr. Robert Patterson, dedicate the highway network. The high-speed roads connect units of Henry Ford's bomber plant in Central United States.

Diary of the War

ENGLAND AND GERMANY

23rd Jan.—The Royal Air Force carried out a large offensive sweep over France and northern Belgium.

A German-Japanese economic agreement was signed.

24th Jan.—The Royal Air Force attacked the Ruhr. Commandos raided Laerвик on the Norwegian coast.

25th Jan.—The submarine base at Lorient was attacked by the R.A.F.

26th Jan.—The Royal Air Force bombed the docks at Flushing.

27th Jan.—Sir Kingsley Wood, Chancellor of the Exchequer announced in the Commons that the war cost Great Britain about 14 million sterling daily.

28th Jan.—American aircraft raided Wilhelmshaven.

UNITED STATES OF AMERICA AND THE ATLANTIC

22nd Jan.—Admiral Sir Percy Noble, Chief of the Admiralty Delegation in Washington, said that the submarine menace was "most grave" and must be beaten before the war was won.

25th Jan.—Vice-Admiral Percy W. Nelles, Chief of Naval Staff, Canada, said: "We have reason to believe that German submarine strength is increasing." The secret of killing the U-boat, he said, was more escort vessels, closely co-operating with more aircraft.

26th Jan.—Mr. J. G. Winant, the United States Ambassador to Great Britain, in a speech at Baltimore before the Council of the State Governments, said: "I believe that Great Britain is more efficiently and effectively organized, armed and equipped both on the military front and on the civil front than at any time since the war began."

INDIA, BURMA AND CEYLON

22nd Jan.—Chittagong was again attacked. Two enemy planes were destroyed.

23rd Jan.—Donbaik in Arakan was bombed by the Royal Air Force.

24th Jan.—The Royal Air Force attacked Heho aerodrome in Burma.

24th Jan.—The Royal Air Force raided Rangoon.

27th Jan.—A Royal Indian Navy ship on patrol in the Mayu river area in Burma rammed and sank an enemy coastal craft.

ITALY, AFRICA AND THE MEDITERRANEAN

22nd Jan.—The fall of Tripoli was imminent. Homs and Tarhuna were occupied by Allied forces.

23rd Jan.—Tripoli fell into the hands of the Allies. Rommel withdrew into Tunisia.

24th Jan.—U. S. bombers raided Bizerta.

25th Jan.—Zuara was violently bombarded by British naval and air forces.

Two Axis ships were sunk between Tunisia and Sicily.

26th Jan.—U.S. troops raided Maknassi and Bizerta. Zuara harbour was bombed.

27th Jan.—Zuara was occupied by Allied troops. Rommel crossed into Tunisia.

28th Jan.—Mr. Churchill and President Roosevelt completed a 10-day meeting in Casablanca. They reached complete agreement regarding the offensive programme of 1943.

General Giraud and General de Gaulle also met at Casablanca and announced an agreement.

Allied troops regained positions in Ousseltra Valley.

RUSSIA AND FINLAND

22nd Jan.—The Russians captured Voroshilovsk.

23rd Jan.—The Russians captured Salsk.

24th Jan.—The Russians took Armavir.

25th Jan.—In an Order of the Day issued by Stalin, he said: "Forward—to rout the

German invaders and to drive them out beyond the limits of our country." The Order added: "The Red Army has broken through the defences of the German Fascist troops on a wide front, routed 102 enemy divisions and captured over 200,000 prisoners and 13,000 guns."

26th Jan.—The Russians reoccupied Voronezh. It was revealed 70,000 Germans were captured in the Caucasus in 11 days.

28th Jan.—The Russians opened a new offensive in Rzhev.

VICHY AND OCCUPIED COUNTRIES

25th Jan.—The Vichy French police arrested 6,000 people in Marseilles "to safeguard order in the city."

26th Jan.—A state of siege was proclaimed at Marseilles.

THE FAR EAST

22nd Jan.—United States planes bombed Japanese positions at Munda on New Georgia Island.

Maj. General Alexander Patch of the United States Army assumed command of the United States forces stationed in Guadalcanar.

23rd Jan.—United States aircraft raided Ambon. A Japanese cruiser was set on fire.

24th Jan.—Four Japanese ships were sunk in Rabaul.

25th Jan.—Fighting ended in Papua.

26th Jan.—Japanese bases in New Guinea were bombed.

27th Jan.—Japanese bases in Hupeh were attacked by the Chinese.

The Japanese base was destroyed in the Kolombangara Island in the New Georgia group.

Allied aircraft attacked shipping in Rabaul harbour.

28th Jan.—A Japanese ship was set on fire in Rabaul.

A Japanese airfield in Ballale Island was bombed. American aircraft raided Wake Island.

HIT THE OCTOPUS ON THE HEAD

"I cannot feel happy about the idea that Japan is to be defeated island by island, tentacle by tentacle. The tentacles will wither when the Octopus is hit on the head, and if he is to be hit on the head, my belief is that Burma must be captured, the gateway to China re-opened, and Japan attacked on a grand scale developed from as near as possible to the Sino-Japanese frontier. Secondly, Japan must ultimately be attacked at her centre from China by air and from the Pacific by air and by sea."

—MR. MENZIES, former Australian Prime Minister, in a broadcast on January 22 from Sydney.

The advantage is all ours

COLONEL FRANK KNOX

I THINK there are darned good prospects of an air attack on Tokyo, but when or how it will be hit, I will not say. But they had better get ready. Our submarines are doing a magnificent job and operations against Japanese lines of communication are going on at a good rate . . .

IN my judgment—it may be a fallacious one—but my opinion is the Japanese have abandoned any idea of reinforcement of their troops and within the next thirty days all organized resistance in Guadalcanar will disappear.

WE are giving the Japanese lots to worry about in the Pacific. In a war of attrition the advantage is all ours. In our vastly greater power of building, and in that type of warfare—I am not saying this is the only type—ultimate victory is certain.

COLONEL FRANK KNOX, United States Secretary for the Navy in an interview in New York on January 31, after a tour of inspection in the Pacific

POTATOES DO GROW IN MADRAS!

THE Madras Agri-Horticultural Society has just published an invaluable booklet called "Grow More Vegetables." It would be even more invaluable if it included a paragraph on potatoes. Oh! but potatoes cannot be grown in Madras, you say. Well, here is an extract from a conversation on February 1st with Mrs. Dorothy Clarke of Band Master's Quarters, Civil Orphan Asylum, Madras:

"I dug a trench about 18" deep, towards the end of November, and manured it with last year's manure. I bought potatoes from the bazaar in lot and finding that some of them began to sprout in storage, cut out the 'eyes' and planted one yard apart in my trench, 'eyes' upwards, about a foot below the surface. The trench was filled in and watered twice a day until the rains came. Within three weeks plants were showing above the ground, and are now about 2 feet high.

Today, two months after I planted the 'eyes', I bring you a basket of a couple of pounds of perfect new potatoes—a hundred per cent germination outturn—and about 5 potatoes on each plant."

With our mouths watering we print this as a recommendation to Madras citizens to get down to a very valuable aspect of Government's "Grow More Food" Campaign.

MONUMENTAL ACHIEVEMENTS

BEFORE our eyes one of the greatest marches of history has been performed by the Eighth Army in Africa, declares the *Daily Express*. No Allenby marching to Jerusalem, no Alexander crossing the country from Greece to India, no Xenophon bringing his 10,000 through Asia Minor to the sea can ever eclipse the story of the British route and German rout from Alamein to Tripoli. Marlborough's lightning dashes through Europe to the Danube are small affairs compared with the glory that is our General Alexander's and the monumental achievements that are Montgomery's. Bearing solemnly in mind all the difficulties that come in winning this war—the troubles that are and the trials that will be—let us uplift our hearts and rejoice at the triumph of our soldiery.

To the Troops!

You want to be amused?

You want some light music?

Well, tune in to *All-India Radio, Madras*,
211 or 60.98 metres,

Every Wednesday at 10 p.m.

Soviet advance towards Rostov : Alternatives before Germans. The Russian advance towards Rostov is continuing. They have captured the large railway junction of Kastornaya, where the Voronezh-Kursk and the Veluki-

Yelets railway cross, Kropotkin, the vital railway junction on the main Rostov-Caucasus railway, Maikop and Tikhoretsk. The capture of the last two important positions means that the fate of the German divisions in this area is now sealed, as they are completely cut off from retreat northwards. The spearheads of the new Soviet pincers pointed westwards from Tikhoretsk and Maikop, and brought in all the German armies in the Caucasus into yet another Stalingrad trap and encompassed their annihilation. The capture of Maikop tightens the ring around the German forces in the Kuban and narrows their room for manoeuvre. Maikop, in addition to its being of immediate tactical value, will be of considerable help in regard to oil. It is stated that special detachments of Soviet engineers followed closely behind their victorious troops and are busy restoring the damage in the Maikop oil fields wrought by the Red Army during its summer retreat. It is of special interest to note that Russian strategy in the Caucasus aimed at disorganizing the German communication lines by capturing important railway positions, and this has been done exceedingly well. Now Russians have taken the railway junctions of Kupyansk, Kuschevskaya, Zolotukhino and Vozy.

When the Russians started their offensive in the Caucasus, they attempted to cut the two main railway systems which fed the German armies in that

region. The German thrusts closely followed the Soviet railway lines. Their move towards the Grozny oil wells took the path of the Rostov-Baku railway, while their drive to Stalingrad followed the Krasnodar-Stalingrad railway. An important stage in the Russian offensive was reached when Armavir and Salsk were captured from the Germans. After smashing up the German salient which pointed out dangerously towards the Grozny oil wells, the Russian forces advanced along both sides of the main Rostov-Caucasus railway and captured Armavir, which is the junction of the branch railway to the Maikop oil fields. From Armavir they struck westwards and captured Maikop. The next Soviet threat is to the Black Sea port of Tuapse.

Another Russian force which was operating along the Stalingrad-Krasnodar railway captured Salsk, the junction of the branch railway to Rostov. The next stage was the capture of Tikhoretsk, the junction of the Rostov-Baku and Stalingrad-Krasnodar railways. The importance of the Soviet capture of Tikhoretsk lies in the fact that though it has not cut off the German line of retreat to Rostov, it robs them of the most convenient way of cutting back.

What are the alternatives now before German forces? Will they fall back to Rostov or hold on in the western Caucasus and suffer the same fate as the German forces trapped before Stalingrad? Whatever it be, one thing is certain: the Soviet offensive in the Caucasus was mainly an attack on vital German communications, and the Red Army has succeeded in jeopardizing the enemy's communications with Rostov, their vital base.

(Continued on page 6.)

The Casablanca Conference

AT a press conference in Washington on Tuesday, President Roosevelt explained the objects and achievements of the Casablanca Conference held in French Morocco for 10 days from January 14. He said it was a conference to win and make plans for winning, so far as it was possible to plan ahead, for the year 1943. He emphasised what he had recently told the U.S. Congress, that he could not prophesy when and where the United Nations were going to strike next in Europe, but they were going to strike, and strike hard. He could not tell where they were going to hit them, but he declared that no matter where they struck by land, they would hit the enemy from the air heavily and relentlessly. The object of the Conference was, he said, in fulfilment of that statement, and it had reached a unanimous agreement as regards the "offensive campaigns of 1943." The Conference formally re-emphasised the agreement that the Allies would make no compromise with any of the aggressors. There would be no kind of negotiated armistice for obvious reasons, and the only way by which the war could be ended was by an unconditional surrender of the Axis powers. This was the central idea of the Casablanca Conference which, Mr. Churchill told newspapermen, was "the most important war conference" he had known.

Two Objectives

TWO primary objectives were kept before the Conference, namely, the principle of pooling the Allied resources on a worldwide basis and that of maintaining the initiative of the Allied powers in every part of the world. As a result of the discussions on these objectives, four points emerge, says *Reuter's* Military Correspondent, which are of deep significance. First, offensives against Europe will take place this year; secondly, the plans are completed as to who is to commence these operations and how they are to be co-ordinated; thirdly, they envisage a complete victory of the Allies and an unconditional surrender of the enemy; and fourthly, both Soviet Russia and Chinese Governments have been consulted about, and informed of, the Allied plans. These four points, adds the correspondent, will give the German High Command cause for grave anxiety at a moment when troubles are gathering thick about their heads.

Anxiety and Fear of Axis Leaders

THIS anxiety, which is rapidly developing into fear of the fate in store for the Axis, is revealed in declarations of Nazi leaders made last Saturday (January 30), when the 10th anniversary of Hitler's accession to power was celebrated in Germany. There

was, of course, the usual spate of speeches, but Hitler spoke *in absentia*—his proclamation was read by Goebbels; Goering addressed the German Armed Forces, but his speech was delayed by an hour by the first daylight-raid on Berlin by the R.A.F.,—the perfect timing of the raid has evoked admiration—and Goebbels spoke at a meeting of the Nazi party in the Berlin Sports Palast.

HITLER who, according to Goebbels, was "detained at his Headquarters in the east by the hard necessities of war," conjured up a vision of fear in his proclamation. He told the German people: "Such individual blows of fate as may fall on us in this struggle are nothing compared with what we would suffer if the barbaric force from the East rolled across our continent." He emphasised his point stressed last year that "any weakling can take victories—only strong men can take the blows of fate."

Fate takes a Hand!

GOERING admitted in his speech that Providence which had hitherto smiled on German arms, had now left them to look after themselves. He said, "The German armies went from victory to victory until fate took a hand." He announced that Hitler had ordered the mobilization of all German men and women, because the fight had reached its peak and everyone at home and at the Front must regard himself as a fighter. Even in the speech of the Reich Minister of Propaganda, the note of anxiety and fear could not be suppressed. Goebbels said: "It is fitting that the 10th anniversary of our coming to power should be celebrated at a time of hardship and military and political stress. We are fighting a gigantic second winter war in the east. We must fight with almost superhuman efforts."

WHAT a contrast to their previous trumpet blasts and boasts of easy and certain victory!

THE note of fear and desperation has become still greater at the prospect of the future outcome of the Casablanca Conference. A Nazi broadcaster said: "We are aware, and presume, that the conference at Casablanca discussed plans for an attack on Europe. We know, however, that Europe is unassailable. Germany is marshalling her forces as they have never been mobilised before. She is determined to use her trump cards to marshal the forces of the whole of Europe and to use U-boats with ever increasing energy against Allied shipping."

FESTUNG EUROPA will be defended and the U-boat warfare will be intensified—that is the reply of the Nazis to the Casablanca Conference. This is a further admission by the enemy that he has lost the initiative and that it has definitely passed into Allied hands. The recent speeches of the Nazi leaders and their radio propaganda make it further clear that in Europe the Axis is relegated to a position of defence and an attitude of desperation. The Nazis may mobilise German manpower and material power to the fullest extent. They may, a Swiss report says, recruit all boys of 15 and over for work of secondary importance so as to release more men for the Front. They may shorten their fighting line in Russia and their retreating line in North Africa. They may even put out peace-feelers—Goering said, "An arrangement might be possible with gentlemen, but not possible with the Bolsheviks," a hint for Britain and America!—But nothing will happen—nothing except the "total elimination of German and Japanese power, and this means "unconditional surrender by Germany, Italy and Japan," to use the words of President Roosevelt.

Demand for Unconditional Surrender

THE Casablanca Conference has demanded unconditional surrender and decided upon all-out effort and strategy which would bring about that surrender. Mr. Churchill felt sure that "the most excellent results would be forthcoming." Everything points to the fact that the Premier's optimism would be justified before the year is out.

RUNNING COMMENTARY

(Continued from page 3.)

"Guerilla Warfare" in China : Success in a large measure.

In the course of a comment on the Casablanca Conference The China Times refers to the tremendous successes achieved by the Soviet Union against Hitler and the heavy defeats sustained by him in North Africa, and says, "It is only in the South-west Pacific and in the China theatre that we and our enemy are still struggling for the initiative. China has held the enemy in check from any significant offensive." China has been holding up the enemy's advance against great odds for quite a considerable time. One of the ways in which she has been able to achieve this is by Guerilla warfare.

The name "Guerilla" came from Spain, which is historically the home of this type of warfare: It was because of the Spaniards' fierce hatred of the invader that Spain became an "ulcer" to Napoleon. Guerilla warfare must have two factors for success, viz., the co-operation of the civil population and the existence of a "National Army," which can offer some threat to the invading enemy. Guerilla warfare in South Africa was a failure, in spite of the great courage and resistance of the Boers, because there was no national army. In Manchuria, Guerilla warfare is ineffective, because of this same reason. The Chinese people in Manchuria intensely hate Japanese conquerors, but there is no national army to give the popular hatred the stiffening it requires. It is only in North China that Guerilla activity has achieved the greatest successes, in spite of the fact that the Japanese are active in harassing operations which have laid waste large stretches of the countryside. The successes of the Chinese Guerillas in the north was mostly due to the fact that they are the remains of the old "Communist" Eighth Route Army, which is operating from the mountainous country along the Hopei-Shansi border. The Guerillas are not bandits, but a uniformed and properly organized body led by General Nieh Jung-Chieng. In Central China there is a Guerilla army under the leadership of General Yuan. It is fighting the enemy under very difficult conditions, because the Japanese reign of terror does not give the civil population any chance for active co-operation with

the Guerillas. But it may be stated that the Chinese Guerillas have succeeded in a large measure in tying down a very considerable proportion of the half million or more of the Japanese in China.

Great Advance in North Africa : importance of capture of Tripoli.

The Eighth Army is progressing from success to success. It has occupied Zuara and the campaign will very shortly be carried right into Tunisia. It is no longer a question of the defence of Egypt, or the conquest of Libya. A new task is facing General Montgomery's Army. It is to attack the east flank of the German-Italian forces who have been ordered to hold Tunisia, the last Axis stronghold in North Africa, at all costs. The loss of Tripoli has already cast a gloom over Italy. The Fascist Press however, seek to minimize this important victory. They say that Tripoli's fall is neither an Italian defeat nor an English victory. Mussolini's *Popolo d'Italia* states that Tripoli was merely "evacuated" by the Axis forces who now continue their "advance towards the west." However much the enemy may belittle the capture of Tripoli, the fact remains that it is an invaluable base for the Eighth Army working in co-operation with the Anglo-American forces. Between Bizerta and Alexandria it is the best harbour for ocean-going vessels. It kept the Afrika Corps in Libya supplied for two years. Its possession in Allied hands will be of very great help in shortening the long overland haul for supplies from the Nile Delta. It may also be pointed out that Tripoli is only 200 miles from Malta, the "island aircraft-carrier", which was supposed to be doomed by the enemy, when Rommel broke into Tobruk for his short-lived triumph. Within 24 hours of its capture, the Royal Air Force has occupied a chain of first-rate air fields in Tripolitania. Outside Tripoli, the Castel Benito airfield has been captured. This brings about an interlocking of Allied airpower from east and west over North Tunisia. It is obvious that air supremacy over the Tunis-Bizerta front and over the sea-narrows is an essential condition for victory in the coming battle, which is certain to be even more decisive and far-reaching than the Battle of El Alamein. Hitler has realized the importance of this battle and that is why he is willing to sacrifice 50,000 of his best troops.

Reuter's Military Commentator says, "The gigantic Battle of Stalingrad—Stalin's City of Steel—has come to an end after 142 days of the grimmest and bloodiest siege fighting of the whole war." The above photo was taken soon after a Nazi plane was shot down in a street in Stalingrad.

The U-Boat Menace : Allies' Counter-measures.

In a press interview on Sunday (January 31) last, Colonel Frank Knox, the U.S. Secretary for the Navy, referred to an important problem facing the Allies. He said the submarine war situation in the Atlantic is still a tough problem and lots of losses are ahead there for us. It is clear from this statement that this year Hitler will stake everything

on his U-boats and will try to sink Allied ships so fast that the opening date of the European offensive will have to be postponed. If this can be done indefinitely he will be in a position to make the stalemate peace offer, which, of course, would never be accepted. German U-boats, according to Mr. A.V. Alexander, First Lord of the Admiralty, are now operating in "echelons of packs"

which are supplied and repaired on the high seas by "U-tankers", according to the Berlin radio. *Reuter's* Naval Correspondent says that there are 150 U-boats (less than a third of the whole fleet) which are always operating in the Atlantic, the Mediterranean and the North Sea, and they are being built at the rate of 15 to 20 a month. The main U-boat base in France, Lorient, has been subjected to heavy bombing attacks by the R.A.F. recently. The Lorient workshops are large enough to carry out major repairs. Two heavily concreted pens have been built by the Germans to house 40 U-boats, and a third is being constructed which is capable of taking another 10. The overhaul picture of the war, said Mr. Stimson, the U.S. Secretary for War recently, is decidedly bright for the Allies, "with the exception of the sinkings by U-boats." U-boat warfare, it may be stated, is the instrument on which Hitler is banking to avert total defeat.

What are the counter measures that the Allies are taking to avert the U-boat menace? In the British Isles, air patrols have been intensified to a very great extent—to such an extent that Sir Archibald Sinclair, Britain's Air Minister, declared, "No U-boat dares show itself on the surface within three miles." The British Coastal Command Aircraft flew 1,250,000 miles to ensure safe passage of convoys which carried our expeditionary force to French North Africa last November. The success of Allied air patrols has driven the U-boats further afield. Now Britain and America are devoting a large part of the naval construction programmes to building anti-submarine craft—destroyers, corvettes, and sloops.

* * *

Tremendous Output of U.S. Merchant Shipping.

There was a tremendous increase in the output of merchant shipping in America last year. In September 1941 America built nine ships (86,185 deadweight tons); in September 1942 she built 93 ships (1,009,800 deadweight tons). In March 1942 America was building new ships at the rate of one a day; in December 1942 the rate was four a day and, after three months from now, that is, by May 1943, the rate should be five a day—1,825 new ships in a year. There is no doubt that the Allies can outbuild the sinkings of the U-boats.

The importance of shipping as an essential factor for victory cannot be exaggerated. To have enough ships to transport enough supplies within a

strictly limited period is, it may be stated, like holding the key to victory in our hands. This point was clearly brought out by a Japanese broadcaster on July 20, 1942. He said:

"It is not too much to say that the present war is a war of shipping space. The side which loses its power of transportation will eventually lose the war."

An idea of the extent of distances that Allied ships have to cover can be gathered from a few figures, which make it clear that the greater the distance between supply base and battle-front, the larger is the number of ships required to transport an equivalent volume of supplies. The following are roughly the distances between North America and important Allied bases:—

	MILES.
From U.S.A. to London	4,000
Moscow (via Basra)	14,000
Chungking	13,000
Calcutta	12,000
Sydney	7,000
Cairo	12,000

The average distance is 10,300 miles.

From Britain to Moscow (via Arctic) ..	4,000
Chungking	13,000
Calcutta	12,000
Sydney	12,000
Cairo	12,000

The average distance is 10,600 miles.

To cover a distance of 10,000 miles, ships in convoy take about six weeks, and double that time to deliver their freight and return home. For instance, if 100 ships are available to transport 1,000,000 tons of supplies from England to India and each ship can carry 5,000 tons of cargo, the 100 ships will not be able to undertake any other task for at least six months. This means that, if 200 ships are available, this work can be done in half the time. It is all a simple, elementary question of mathematics. But it is this aspect of the war, the time-and-tonnage factor, which is easily overlooked.

* * *

The Linch-Pin of Victory.

Shipping is the linch-pin of victory. An idea of the shipping strength of the United Nations can be had when it is realized that we have sufficient control of the U-boats to continue the aid to Russia and the supplies to North Africa, the Middle East, India, China and Australia. Field Marshal Wavell recently said that the requirements of the North African campaign did not adversely affect the supply of the forces in India. This clearly shows that there is a surplus of shipping strength which is holding the enemy.

Pincer Movement against High Prices

By C. H. MASTERMAN, I.C.S.

MOST of you know Napoleon's dictum 'An Army marches on its stomach' and many of you have heard or read the words of Field Marshal Sir Archibald Wavell "Of the elements which contribute to success in modern warfare the *spirit* of the people is the most important." In other words, in this war the people are part of the army—and a very important part. This is a total war. Everyone is in the fighting line. Let me put the point in the form of what the logicians call a syllogism. The efficiency of the Army depends on its getting a sufficient supply of food. The people is part of the Army in this war. Therefore the people's efficiency to fight our common enemy depends on everyone getting a sufficient supply of food. I need not further labour the point. I will only remind you that the National War Front has, I am sure rightly, now made this question of food supplies one of the main planks in its platform.

It is less obvious why this effort to see that everyone gets sufficient food at a fair price is a *common concern*—the business of *everyone*—a contribution which *everyone* can make to the war effort. People generally imagine that this is purely Government's business. It is Government's business, but I want to show you this evening that it is not *only* Government's responsibility, it is also yours and mine, and I want to explain to you how each one of us can help very materially indeed in this effort to ensure that every man, woman and child in this country gets sufficient to eat at a reasonable price.

Difficulties in the distribution of foodstuffs and other things, scarcity of some articles which we are accustomed to have, and the high price we have to pay for things now are clearly due primarily to the war, which Hitler forced upon an unwilling world in 1939. That is so for several obvious reasons. For example, our enemies are still in occupation of some of the countries which used to send us their products, so that we can't get these things now. Burma for instance used to send us oil, petrol and rice, and Malaya rubber. And again the transport of goods both to this country and within it is difficult, because Hitler has scattered his U-boats over the high seas and because transport of all kinds is wanted for moving troops and war material both to this country for purposes of its defence and inside it. It follows therefore, doesn't it?—that the sooner we drive our enemies out of those countries which he has occupied, a process which as you know has begun in Burma, the sooner we put every

ounce of energy into winning this war, the sooner will our troubles be over and high prices cease.

I do not however mean to imply that Government or anyone else should *during* the war just sit back and do nothing about controlling prices. Far from it, I want to show you that Government should do—and as a matter of fact are doing a good deal to see that there is fair distribution of available food and to control its price and that everyone of us can and ought to do a great deal to help, as part of his contribution to the war effort.

THE POSITION IN A NUTSHELL

Now stated in the simplest terms possible the position in India seems to be something like this:—Owing to large payments by Government for war supplies and for wages to those doing war work, the total amount of money in circulation has enormously increased. At the same time owing mainly to lack of transport to bring things into India other than war material, most commodities are scarce. These two factors—an increase in the amount of money with which to purchase things and a decrease in the amount of goods available for purchase—will obviously lead to a general rise in prices.

How can this state of affairs be remedied? In two ways I think. By an effort to reduce the amount of money available for spending, and by an effort to control prices directly by fixing by law the prices at which things are to be sold and by rationing the quantity of things which people are allowed to buy. Both these lines of attack on high prices are necessary if prices are to be kept down. The one is complementary to the other. In the language of military strategy, with which we are all now familiar, I suggest that there should be a pincer movement against high prices.

How then first can the amount of money in circulation be reduced? The answer is by inducing people to save instead of spending their money on non-essentials or on a larger quantity of essentials than they really need. By saving I do not mean hoarding, because money which is hoarded is merely potential purchasing money which can become effective purchasing money at any moment. By saving I mean putting all the money which we do not need to buy essentials into defence and other war saving schemes. I am sure that many people are still spending in war time much more than is necessary on entertainments, feasts, festivals and the like. That

then is something which a great many of us can do to help keep prices down. If you put all the money you can spare over and above what you really require for the necessities of life into war loans, you will not only be giving Government money with which to carry on the war but you will be doing a social service by diverting some of the surplus money in circulation into channels where it cannot be spent on non-essentials and you will thereby be helping to keep the price of essentials down.

PUT THE SURPLUS IN WAR SAVING SCHEMES

Let me hasten to add that I am not asking the poor to save nor to persuade them that they are paying more for their food, because they have more money in their pockets to pay the enhanced prices. I have every sympathy with the small boy who when asked who Lord Woolton, the Minister for Food in England, was, said "He's the bloke what tells us to eat less of what we aint got none of." My point is that if everyone, who has anything to save, puts the surplus into war saving schemes there would be more for the poor to eat and the price which they have to pay for their food would tend to go down.

Now when I said something like this a few weeks ago, I was told that I was drawing a red herring across the trail. I do not think this matter of saving is by any means a red herring. I think it is a main issue—a very important part of what I have called the pincer movement attack on high prices. If we do not employ this method of attack, we shall be trying to crack a nut—and this high price problem is a very hard nut to crack—with one arm of our nut-cracker missing.

I come now to the other arm of our pincer attack on high prices, the direct control of prices by Government and the rationing of the quantities which consumers are allowed to buy. And you should remember that rationing by itself without controlling the price at which the rationed quantity is to be sold cannot be completely effective in reducing prices. Government have by no means been idle in this matter. As you know many things—Kerosene oil and petrol for instance have been rationed and the prices of other things such as sugar and matches have been fixed. The staple food of the greater part of India, rice, has not been rationed. Short of rationing however Government have done, and are doing, a great deal to see that all parts of the country get adequate supplies of rice and to control its price. I must confine my remarks this evening to Madras City but what is being done here is an example of the sort of measures which are being taken to control prices in other parts of the country. Madras City depends on imports of rice from other districts and Government are now buying stocks for the city in those markets where stocks are largest at the cheapest price possible through their own grain purchasing officers. Government are also by arrangement with the railways

seeing that the rice bought is brought into Madras in adequate quantities. Then when the rice is brought into Madras, steps are being taken to see that it is sold at a reasonable price to the consumer. To this end certain wholesalers have opened 12 depots in various parts of the city and Government themselves have opened 4 similar depots at which rice is sold to the public in small quantities at a fixed price of 2½ measures for the rupee. The Triplicane Urban Co-operative Society is also selling rice at a fixed price at their shops and for those who prefer to buy by the bag, certain shops are selling not more than 2 bags at a time at a fixed price not exceeding Rs. 16-11-0 per bag. All these shops and depots are regularly inspected by Government officers and I think I can safely say that everyone can get rice now in the city, though not necessarily the particular kind they prefer, in reasonable quantities at a reasonable price.

CONTROLLING THE PRICE AT BOTH ENDS.

Many of you are, I expect, wanting to ask me what I mean by a reasonable price. That is a very reasonable question. Obviously 2½ measures of rice for the rupee would not have been a reasonable price in 1938. I would define then a reasonable price as that price to the consumer which has given no-one from the producer to the retail seller more than a fair share of profit. That is exactly what Government are trying to do. They are controlling the price both at the producing end and the consuming end. They are taking steps to see that neither the producer, that is the agriculturist, nor the miller, who converts the paddy into rice, nor the merchant who distributes it, gets more than fair payment for the services which he renders to the community. Primarily the price depends on the amount which is paid to the producer for his paddy and it must be remembered in comparing the price of rice now with the price before the war, firstly that the agriculturist was not getting a very fair deal before the war and is

(Continued on page 12)

BRITAIN AND TURKEY

"Bonds of friendship and mutual good understanding between Turkey and the United Kingdom have been confirmed, and still further strengthened, by the frank conversations which ensued at this meeting."

—A Communique issued after the Churchill-Inonu meeting.

(DEATH TO JAPAN): "I trust you appreciate what he is doing for you."

—Special to Madras War Review.

PINCER MOVEMENT AGAINST HIGH PRICES

(Continued from page 10)

entitled to get some advantage from the general rise in prices and secondly that his costs of production—the cost of agricultural instruments for instance—has risen enormously. That sounds very much like a vicious circle. It costs the agriculturist more to produce his paddy; therefore he has to pay more for it when he consumes it as rice. It is a vicious circle, but that circle has to be broken somewhere and I maintain that if we can ensure that in the case of rice no-one from producer to retail seller makes an undue profit we are helping to keep the price of the staple food of the country down and consequently helping to retard a general rise in price including the prices which the agriculturists have to pay for producing paddy.

RATION YOURSELVES VOLUNTARILY

Briefly those are the measures which Government are taking to control prices.

What can the public—everyone of us—do to help? I have already said that everyone can help by economical spending and wise saving. We can also help by refraining from buying more, even of the necessities of life, than we actually need at the time. Do not buy more than you actually need. In other words ration yourselves voluntarily.

Then finally everyone can discourage profiteering, hoarding and black-marketing by refusing to patronize the black-market and by giving reliable information to the authorities of the existence of these enemies of society. Government are determined to expose and punish with the full rigour of the law, hoarders, profiteers and the like. It is up to you, as part of your war effort, to help to destroy these enemies within our gates as much as it is to help to conquer and destroy the enemy without.

—A talk broadcast from A.I.R., Madras, on Monday, February 1.

Britain and the War

Karig, in "Liberty," replies to "Life"

[Walter Karig, the political commentator of 'Liberty' and well-known correspondent, takes off the gloves properly to detractors of Great Britain.]

"TO hear some people talk—or to read what they write—you would imagine the Atlantic Ocean to be a one-way street so far as war materials are concerned, and the British Isles a bottomless sack held open by helpless people for the output of America's farms and factories. That is because wholly for strategic purposes no publicity has been given to the contributions made by the British to the United States fighting forces. It is a fact that the Americans west coast down to tropical waters is as impregnable to air raids as it can be made because the British rushed anti-aircraft equipment over here almost before the smoke cleared away from Pearl Harbour. It is a fact, however, which cannot be made public in detail because that would let the enemy know what will be waiting for him when he tries to ram his big black-bristled head against our defences.

SECRECY IS NECESSARY

"It is also most widely forbidden to discuss the constant aid which the British have supplied us with for fighting submarines in American waters—to fight them on the sea and over it.

"Unfortunately this necessary secrecy serves to hamper the efficiency of the United Nations because it permits professional Anglophobes, those amateur belittlers of the British and Axis propagandists to spread the mouldy old lies that 'England will fight to the last American,' and 'that the United States is paying for England's war.'

"The time will come when it will be safe to relate in detail how, when the war came to United States the flow of fighting equipment across the Atlantic was suddenly reversed as American export of munitions was halted to arm our own forces.

WHAT BRITISH HAVE DONE

"Meanwhile, without indulging in any British propaganda, let's take a look at the job the English are doing and have done. If they had not done it so superlatively well, Hitler would be in Windsor Castle to-day—he might even be in Ottawa, Canada, heartening his troops invading the United States!

"Remember that for more than two years the concentrated Nazi might and power has been perched only 20 miles from Britain and that the island has been under almost continuous bombardment all that time. Old stuff may be, but remember it anyhow!

"What the British have done and are doing is tremendously important to each and every one of us who are now their partners in this war and in the peace to come. It is also an object lesson in what all-out war means, which we are going to find out ourselves. The time is not far off when the petty inconveniences of sugar, gasoline, and tyre rationing are going to seem like fun. What we are going to do without will be not only silk stockings and trouser cuffs; before this war is very much older we are going to live almost as austere as the British have been doing for a long, long time.

EVERYTHING MOBILISED

"Everything in Britain is mobilized for the winning of the war—everything and everybody. Two out of every three persons—not men alone, but women and children too—who are able-bodied and between the ages of 14 and 65 are working full time in the armed forces, civilian defence or war industries. Every single able-bodied male between 18½ and 51 has been drafted into the armed forces unless irreplaceable in an essential industry. In England you work in a munitions factory or you fight, unless you are bedridden or imbecile."

IMPRESSIVE LISTING

From this point onwards Karig's article categorically listed British industrial and military accomplishments, the damage suffered from the blitz, the civilians killed, and the whole regime of blood, sweat and tears.

He detailed that last year the United States sent Britain only one quarter of the aeroplanes that the British sent out to the battlefronts and to her allies. "They put 15 tanks into action for every one we exported to England."

"A pair of shoes has to last the average wearer in Britain—strictly rationed on clothing—two or three years. But that is because the British have sent four million pairs to Russia."

The article relates: "For every airplane England imports she exports four of her own manufacture to Russia. British railroad shop workers did a year's work in ten weeks for the

trans-Persian line, which American Engineers completed, to carry supplies from the Persian Gulf to the Caucasus."

BRITAIN HELPS HER ALLIES

Walter Karig goes on to explain how Britain is equipping and supporting the military and naval units of the Free French, the Norwegian, the Polish and the Holland exiled Governments, and how much the war is costing the average Englishman in taxes compared with the American ratepayer.

"The Englishman is fundamentally an individualist and isolationist like ourselves. There is no more an average Englishman than there is an average American, but take the two peoples group by group—farmers, insurance men, machinists, lawyers, firemen, and so on—and it is astonishing how much alike we are, even though America is more European in its ancestry than Britain is.

WHY, INDEED?

"Why do we and the English have such cockeyed ideas about each other? Fossilized traditions are to blame in part no doubt, and so is Hollywood, and so are the fiction writers of both countries. At any rate, let's bear this in mind, that the 46 million Englishmen packed into an island not so large as our single State of Arizona have habits, ideas, and ideals pretty much like our own. They are more outraged and outspoken about the stupidities of their leaders than the most anti-British of Americans. Next time you think of an Englishman don't think of a tall drooping bloke with monocle. Think of a man or woman very much like yourself, only working twice as hard and living on less than half as much."

A Portrait of President Roosevelt

[President Roosevelt was 61 on Saturday last (January 30.) "The birthday comes," says the New York Times, "at the close of one of the most brilliant episodes of his career—a journey which brought the breath of his democratic enthusiasm into three continents—a conference which dramatized the fact that, psychologically, this war has passed to the United Nations." In the following article, which appeared in the New York Times magazine of January 24, Mr. Woolf describes an informal chat with President Roosevelt, who was sitting for his birthday portrait.]

ON January 31, Franklin D. Roosevelt will be 61 years old. No man in the world has a harder job. No one is carrying a heavier burden or bearing greater responsibilities. Yet when I asked him the other day if he ever lay awake at night and worried, he smiled, shook his head, and replied: "Never."

As he sits at his large desk carrying on the affairs of a nation at war, he is much the same man whom I first met 18 years ago in the library of his New York home. There is the same indomitable will and unfailing optimism, the same heartiness of manner, the same ability to switch suddenly from one subject to another. And always the Roosevelt smile hovers, ready to break at the slightest provocation.

CHANGES OF EXPRESSION

The suddenness with which his expression changes is a barometer of his mental processes. Over and over again I have seen him turn from one problem to an entirely different one with no apparent effort. While he was posing, he asked me to leave the room for a few minutes while he carried on a long-distance telephone conversation. When it was over I returned, but he paid no attention as I opened the door. It was evident that he was pondering some serious matter and I hesitated to make my presence known.

Suddenly he looked up and laughingly said: "Come on back." He was an entirely different person from the one I saw as I stood in the doorway. The change was startling.

Having this type of mind, the President can interrupt his work, telephone a sick friend, arrange a practical joke on an intimate, then take up the point where he left off. I have the impression that he uses those interruptions for relaxation and, when he feels that his mind is becoming a little tired, turns to something for a few seconds so he can once more look at the problem from a new point of view.

If he is interested in what a visitor is saying, the President is a good listener, encouraging talk with a frequent nod and an interjected "yes" or "grand."

NEVER PERTURBED

In all the times I have drawn him in the White House, I cannot remember one occasion on which he seemed either perturbed or hurried. While I was with him the other day he read fully a hundred typewritten letters, signing each one. He saw three or four visitors, talked on subjects as far apart as Podunk and Shangri-la, and made five telephone calls.

No one who has not seen the President at work can picture the apparent ease with which he performs his duties. The magnitude of the job does not seem to appall him. He makes decisions quickly and with finality. Once made, they are dismissed and another subject taken up.

Nor has the Presidency quenched Mr. Roosevelt's insatiable curiosity about people. In making the drawing, I decided to concentrate on his head and leave out his coat, tie and collar. I jokingly said that I hoped he wouldn't object to this, although I had done the same thing when I drew Mussolini. At the mention of Mussolini's name he turned quickly towards me and asked a number of questions. When I had finished giving him all the details of the sitting, he remarked, "Well, I guess he's an actor after all."

In looking after his health, one thing of which Mr. Roosevelt is careful is the amount of sleep he gets. He said: "One difference between Teddy Roosevelt and me is that he could get along on six hours sleep and I need eight. So I see I get it."

The only way the President can rest now is to go off quietly to Hyde Park. He can no longer use the Presidential yacht for a week-end trip because the Navy feels that it would be unsafe. He says jokingly that he must obey the orders of the Navy. He gets away to Hyde Park about three days a month. He says that is all the rest he needs.

LESS TIME FOR HOBBIES

Perhaps one deprivation he suffers is that he cannot give as much time to his hobbies as he once did. He can no longer sit undisturbed, studying the rigging or lines of an old ship model. Nor can he devote much time to stamps. He once spent at least one night a week with them. This has been cut down to about one night in two weeks. But he told me with a smile: "I always have them about."

He can still find time for general reading. He can skim a book and get the meat out of it. Many authors and publishers send him copies of new publications and he usually takes three or four to bed. He spends about an hour a night running through them and picking out parts for more careful study.

It was almost seven o'clock and the President was ready to leave, but his work for the day had not ended. He had made arrangements with one of his secretaries to take dictation that evening. I had a glance at his calendar for the day and wondered how, having done what he had done, he could do more. I stopped for a minute and asked one more question: "How in the world, Mr. President, can you do all the things you do?"

He looked up in surprise and in the most matter of fact way answered: "By living a perfectly normal life."

NEW ANTI-SUBMARINE WEAPON.—A new kind of American vessel, designed for anti-submarine patrol, is put through tests on the U.S. East Coast. Powered by an Aerial engine, the craft skims along the water's surface at 50 miles an hour, and according to its inventor, Antoine Gazda, it cannot be detected by undersea listening devices. The boat is armed with four depth charges, a light cannon, and a machine-gun. It can be hoisted and carried on any vessel as easily as a lifeboat.

Frontiers of Deliverance within Reach

By WICKHAM STEED

A comprehensive survey of the war as a whole warrants the belief that Allied progress to victory is swifter than developments on any single front may suggest. Of striking episodes there is no lack. But so keen is public interest in these episodes that their cumulative significance is often overlooked.

The sustained and impressive Russian advance captures imagination and tends to monopolize world attention. Yet the heavy defeat of the Japanese convoy off Lae, New Guinea, is hardly less significant in another sphere of operations especially in comparison with the successful passage of a huge Allied convoy to Northern Russia and the failure of

mass attacks by German U-boats to prevent another huge trans-Atlantic convoy from reaching British ports. The Russian armies, as the military spokesman of Hitler's High Command, General Dietmar, now admits, have the upper hand, numerically and strategically, of Hitler's armies on land.

SEA AND AIR SUPERIORITY

On sea and in the air Allied forces have equally the upper hand of the Axis. Nor is there any sign that this double superiority is likely to be lost. Rather the contrary.

General Dietmar has also told German people that the Russian offensive is "more concentrated, more exhausting and more dangerous" than it was last winter, when, as Hitler confessed, it brought Germany to the verge of disaster. Dietmar announces more severe measures for the reinforcement of Hitler's troops. But attempts to obtain fresh divisions from Rumania and Hungary for the Russian front are causing disturbances in those countries, while dwindling faith in German victory is increasing their reluctance to make further sacrifices in support of the Axis.

HITLER'S PROBLEMS

If Germany herself possessed large reserves of men, she would not have compelled millions of disaffected foreign slaves to work in German fields and factories. So the conclusion appears justified that Hitler is confronted with serious problems both of manpower and war production.

On the Allied side manpower and war production are steadily increasing. While British production rolls on in a mighty stream, the totals of United States production are higher than the whole output of the Axis. Hitler knows, as Japan knows, that the Axis will be hit hard and relentlessly this year in every theatre of war. What they do not know is exactly where and how they will be hit or what strength they can muster to withstand Allied blows.

Behind the comparative lull of the North African front, preparations are going on steadily for complete ejection of the Axis from the southern shores of the Mediterranean. Italy will be obliged to choose between surrender and progressive devastation. The Balkans, where strong centres of resistance remain uncrushed, will hail Italian discomfiture with delight. Nor will Hitler find France, the Low Countries, Denmark and Norway easy to control when he is manifestly fighting rearguard actions on every front. Then he may be faced with the most serious problem of all.

FEAR OF INTERNAL REVOLT

This problem is more internal than external. Hitler and Himmler have been building up a strong force of picked Black Guards or "Waffen SS" to defend themselves and the Nazi Party in case the German people or sections of the army should attempt to overthrow the Third Reich.

If these highly trained ruffians, who number 600,000 men, should be used mainly or exclusively to terrorise Germans in Germany and to hold down subjugated nations, lack of manpower in the field might become catastrophic. Should they be used as fighting formations on various fronts, the German home front might be endangered. More than once differences have arisen between Hitler and leading German generals upon the employment of these SS divisions. I see no reason to doubt that such differences will grow more acute in future.

BERLIN, ROME AND TOKYO

President Roosevelt's statement, in his recent address to Congress, that "this year 1943 will give the United Nations very substantial advance along the roads that lead to Berlin, Rome and Tokyo" is, in my view, entirely justified by a comprehensive survey of the war as a whole. The only questions are how swift the advance will be and how far it will go. I believe that it is already swifter than many think who limit their attention to isolated episodes of fighting. Temporarily it may be checked by unforeseen impediments. But, just as Russian commanders have surmounted formidable hedgehog positions and swept on to wider victory, so I feel assured that the cause of the United Nations will flow around stubborn obstacles until it submerges effective resistance in an irresistible tide of triumph.

The present year should bring the frontiers of deliverance within reach and perhaps see them garrisoned by forces of freedom.

CORPORAL HITLER'S BLUNDERS

In Russia the enemy has lost about 800,000 men in killed and prisoners (exclusive of wounded) in rather less than three months. Corporal Hitler's blunders have been as costly as General Ludendorff's.

Vigour of the Russian Offensive

By MAJOR-GENERAL SIR CHARLES GWYNN

IN their hasty withdrawal from the Terek Valley salient in the East Caucasus, the Germans no doubt to some extent fell back on a pre-arranged plan. There are, probably, also plans either to hold the Kuma line or withdraw from it, if circumstances dictated. A competent staff would certainly have to draw up such plans in view of the exposed position of the salient, the length of the front that is entailed and the obvious probability that the Russians would again undertake a winter offensive either on a small or a great scale.

What is not clear is why the decision to withdraw was postponed till winter increased the difficulties. It may have been that the Germans were not willing to relinquish the springboard for a renewed attack on Grozni in the spring and considered it safe to hold on under-estimating Russian offensive potentialities. They may have thought that, even should the withdrawal become necessary, the Russian pursuit would not be rapid and could easily be checked by a rearguard action. Hitler may have been responsible for the belated decision or it may have been taken in order, by shortening the front, to release reserves to meet the serious situation on the Don.

It seems certain that Von List was surprised by the Russian drive across the Kalmuck steppes threatening his line of retreat and by the speed, the vigour and the power of the Russian advance.

HASTY GERMAN WITHDRAWAL

The retreat must have been far more hurried than was ever anticipated involving immense sacrifices in material and very high losses in rearguard action. If it was hoped that the Kuma position might hold long enough to cover further withdrawals, the hope proved short lived and there seems little chance that the Russian pursuit can now be checked short of the Upper Kuban and the Voroshilevsk-Divnoe railway.

The distances to be covered are still very great but the Kamusk forces, possessing large numbers of cavalry as well as armour have developed an astonishing degree of mobility and a considerable striking power.

THE PROBLEM OF RAILWAYS

The Russians advancing along the Baku railway towards Armavir are not likely to have

SOVIET ANTI-TANK UNIT ADVANCES AT STALINGRAD—Moving up to the Stalingrad battlefield, a Soviet mobile anti-tank unit is seen riding in U.S.-made jeeps, light scout cars with four-wheel drive.

supply difficulties. They must in the first instance have captured great quantities of German supplies and they will have good railway communications while the line, which may not have been greatly damaged, is repaired.

It would be interesting to know whether the Germans have altered the gauge of the Caucasian railways or whether they have left them unchanged relying on the captured Russian rolling stock in view of the fact that a connection with the German system can only be maintained through the Rostov bottleneck.

The Caucasian front on account of the rapidity and the importance of the development is at the moment the most interesting

but the Russian drive along the Stalingrad-Gokhoretz line is also making considerable, if a slower, progress.

North of the Don, the German resistance has stiffened as was to be expected since the network of railways, west of the Donetz facilitated the rapid deployment of German reserves and because the Donetz was obviously the position on which the approaches to Rostov could best be defended. The fighting has been very heavy, with the Germans as usual counter-attacking fiercely, though probably more with the object of preventing further Russian advances than initiating a large scale counter-offensive.

FLIGHT OF GERMAN SIXTH ARMY

Moreover, it is obviously important for them to retain the bridgehead across the Donetz in the hope that the German Sixth Army can survive till the spring, for only from the

Donetz front could a relief offensive be contemplated. Whether the Sixth Army can survive the winter must mainly be a question of supplies for it should be strong enough otherwise to stand a prolonged siege. The progress the Russians are making in Stalingrad would, however, seem to indicate that something is undermining the enemy's morale.

On the central front, the Germans are evidently making desperate efforts to recover Velikie Luki. Their concealment of the capture of this town from the German people may be an extra reason for the efforts they are making. The counter-attacks must have entailed a great expenditure of reserves and even should they eventually prove successful, it seems doubtful whether a strong and well-supplied defensive could be re-established.

It may be concluded that on all fronts, whether progress is fast or slow, the vigour of the Russian offensive is not relaxing.

A Very Remarkable Campaign

By "A Student of War"

WHAT is the true inspiration of these massive strokes which fall on the German anvil with a sort of inevitable tattoo of the blacksmith?

The first destruction has fallen upon the unhappy dupes whom Hitler has pressed into his service. About Stalingrad it was the Rumanians who suffered the earliest and the most disastrous attacks, in the middle Don it was the Italians and now in the south of Voronezh it is the Hungarians.

Thus while selecting for attack a sector where Germany was strategically weakest, the Russians at the same time put their fingers on the spot where she is politically the most vulnerable. It is a strategy similar to that which urges Britain and the United States to concentrate their attacks upon Italy.

Yet we must look farther to discern what is driving Russia to an offensive so skilfully conceived and executed and so resolutely pressed. Clearly, the campaign is engaging very great forces and grave losses are being inflicted on the Sixth Army before Stalingrad. In the Caucasus, the position of General List's armies grows graver every day. The Russian thrust across the upper Manich points directly against their line of retreat. Grozny has long disappeared from even a distant prospect and now even Maikop seems precariously held.

The Russian armies which have maintained their hold on Tuapse and kept a footing in the neighbourhood of Novorossisk are said to be on the move again. Their immediate objective is to prevent the enemy from retiring across the Kerch Straits and to threaten their line of retreat through Velsk.

Farther north, the Russians have approached the point at which the Donetz joins the Don. But these are mere territorial gains. The true Russian objective is the destruction of the armies in the field and with every advance the enemy's position on a greater and greater front grows precarious.

Beyond disguise, too, the retreat is under compulsion and in some places far from orderly.

We are the spectators of a very remarkable campaign. Each step appears to increase its interest and the vital nature of its implications. So far the Russians have been able to break through wherever they wish below Voronezh and this suggests what was probable from the beginning, that this vast territory was easier to overrun than organized for defence. So in every direction great developments are afoot, though clearly the end is not yet.

—The Daily Telegraph.

CRACK SNIPER OF U.S. MARINES IN SOLOMONS.—Taking aim through his telescope sights is one of the crack snipers of the U.S. Marines in the Solomon Islands. Camouflaged to blend with jungle foliage, he and his comrades take pot shots at the enemy from front line outposts.

Japan Deprived of Initiative in Far East

By LIEUTENANT-GENERAL SIR DOUGLAS BROWNRIGG

I propose this week to focus attention on the South-West Pacific. A year ago the Japanese were pressing south in the first flush of their early victories. Soon they had progressed so far that they had occupied what I can best describe as an outpost line, 5,000 miles in length, stretching from Burma in the west, by way of Sumatra, Java and New Guinea to the Solomons.

Behind this outpost screen, Japanese leaders commenced consolidation of what they had gained and planned further aggression. Fears were felt for the safety of Australia and India and the line of communication between America and Australia, by way of Pearl Harbour and the southern Pacific, was threatened.

An attitude of passive resistance by the United Nations at that time would have spelt disaster. But no such attitude was adopted. General MacArthur, who was appointed to the supreme command in that theatre, commenced nibbling at the Japanese outpost line.

WEAKNESS OF STRATEGIC POSITION

From the Japanese point of view, it was essential to establish and maintain advanced

air bases right up in their forward positions, not only with a view to future aggression but in order to repel counter-offensive. Here it was that the weakness of the Japanese strategic position became apparent.

Not only was the outpost line from Burma to the Solomons 5,000 miles in length, but it formed the arc of a mighty circle whose centre was at Tokyo, 3,000 miles distant.

Communications from the centre of this circle to any point on the circumference were compelled to traverse the sea and pass through the air. The command of both was, therefore, essential to success. The battles of the Midway island and the Coral Sea were to shew that the command of the sea and the air was still very much in dispute and the recent three-day battle in the north of New Guinea has occasioned such heavy losses to the Japanese air and sea power that leaders of Japan must be beginning to take stock of their resources with a view to deciding whether they can hope to continue to hold so long and so distant an outpost line.

THE WOUND AND THE RATE OF RECOVERY

Already that line has been dented. The Australians, with the aid of American assistance in the air, after months of difficult fighting in tropical jungle, in one of the worst climates in the world, have now almost cleared the Japanese out of Papua and in the Solomons, the Americans have established air base from which they can reach Rabaul which appears to be the advanced base of the Japanese operations in the South-West Pacific.

The number of aircraft lost or ships sunk is of itself not the standard by which to judge a nation's wound. What matters most is the patient's probable rate of recovery. In the recent three-day fighting, north of Papua, the Japanese are reported to have lost 137 aircraft and 24 ships, including transports.

The yardstick of measurement must be how far these losses exceed the probable rate of replacement. This cannot, of course, be accurately estimated but we do know that

replacements must come entirely from Japan's own resources. She has no contact with the arsenal of Germany—incidentally, Germany has no access to the raw materials which Japan now possesses in superfluity except through the voyage of a very occasional blockade runner.

It is safe to say, therefore, that Japan cannot afford losses at sea or in the air on this scale.

INITIATIVE

She must, therefore, either give up the advanced positions which are such a drain on her resources or she must live on her capital. We have a long way to go before Japan can be made to disgorge her conquests but dents made by General MacArthur in her outpost line in the South-West Pacific, combined with the penetration into Burma from India (although only so far on a small scale) are indications that the initiative is, at the moment changing hands in the Far East, as it has already done in the West.

A Gamble that Failed

By LORD STRABOLGI

PRESIDENT Roosevelt in his speech to the 78th Congress of the United States of America described how in 1942 the United Nations had been engaged in stopping the Japanese advance in the Pacific. The President went on to say that in 1943 the United Nations would advance against the Japanese.

It is now only a question of time before the new American construction and continued Japanese losses will tip the balance in favour of the United Nations. In the second week of January this year a new sea-borne expedition of large size and numerical strength was reported as assembling at Rabaul in New Britain, north-east of New Guinea. It was heavily attacked from the air by American and Australian bombing planes. The objective of this new venture might have been a renewed attempt to conquer Papua or to reinforce the strong points at Lae and Salamaua, in New Guinea, or to reoccupy the Guadalcanar and Tulagi islands, in the South Solomons, seized by the Americans.

DEFENSIVE MOVES

These would be defensive moves aimed at denying forward bases to the United Nations. The days for more ambitious projects in the South-West Pacific have passed. The necessary advantage of air supremacy is no longer with Japan. The growing air strength of her opponents robbed her of this asset. The heavy damage to the first convoy from Rabaul to Lae, in New Guinea, indicates that air ascendancy has passed from Japan.

Other attempts will be made; for Japanese commanders cannot yet incur the loss of "face" that a confession of final defeat in the South-West Pacific would cause.

Whether, as their strength waxes, the United Nations will embark on the long and painful process of reconquering the islands one by one up to and including the Philippines, remains to be seen. These territories are in the tropics and most of the larger islands are mountains, covered with thick forest and lacking in roads. Tropical damp climate makes them a green hell in which to fight. Their loss to Japan would not be a mortal injury. The driving of the Japanese armies from the Chinese mainland would be far more damaging. The Chinese armies number 7,000,000 men of proved military value who have defeated the Japanese invaders again and again on occasions when they fought on equal terms. Chiang Kai-shek's troops only need aircraft and modern weapons to drive the Japanese out of the country altogether.

CARGO AEROPLANES

Munitions are being flown from India by cargo aeroplanes. Already more supplies, as President Roosevelt told the Congress, are being flown to Chungking than passed over the Burma Road. Before the Japanese overran Burma, 4,500 trucks carried 17,000 tons of war material a month over this long, twisting, difficult highway. Supplies by air can be greatly increased as large numbers of American transport planes roll off the conveyor belts and come into service. These

JAP TANKS KNOCKED OUT IN NEW GUINEA.—Australian and American soldiers inspect light Japanese tanks stopped by Allied guns during the United Nations drive to oust the Japanese from the South Pacific island of New Guinea. The tanks were found to be lightly armed and very vulnerable.

large new transport planes can carry tanks, motor cars and fighter planes as well as artillery ammunition.

In China are aerodromes from which Japanese cities, dockyards, and arsenals can be bombed. In China are harbours on which can be based an Anglo-American fleet to cut off vital sea-borne supplies for Japan. Thus the war in the Pacific can be taken to the heart of Japan.

The weakness in the strategic situation of Japan in 1943 is an unconquered China. It would have been a sounder policy for Japanese leaders to liquidate the so-called "China Incident" before challenging the American and British democracies. They failed to do so despite 2,000,000 Japanese casualties in five years of warfare. The attack on the United States and Britain was, in these circumstances, a gigantic gamble. This gamble has already failed.

North Africa: British Navy's Magnificent Part

An Interview with Admiral Cunningham

By G. WARD PRICE

THIS North African campaign is a perfect demonstration of sea power.

The landing and the maintenance of Allied armies here has been made possible by the Royal Navy alone.

I have had the privilege of hearing from Admiral Sir Andrew Cunningham, Naval Commander of the expeditionary force, some details of the great task which has been

carried out under his orders during the last three months.

He said: "Our losses at sea have been surprisingly small in proportion to the great scale of the operation. The whole way from the United Kingdom there has been a constant stream of convoys, some of great size. One of 66 vessels arrived recently. Yet out of close on 1,000 ships that have made the double journey out and back, the sinkings have been less than 3 per cent.

NO SHIP LOST

"Outside the Mediterranean, I believe, not a single loaded ship has been lost. Casualties have been mainly of empty vessels homeward bound."

There was no mistaking the satisfaction in Admiral Cunningham's keen blue eyes as he glanced at the maps representing the area of his responsibilities.

They hung all over the walls of his office in the building which houses the Allied Headquarters.

"The safety of sea communications of the Allied armies in North Africa," said the Admiral, "is largely due to the excellent arrangements made by the Admiralty for the escort of convoys and to the co-operation of the R.A.F. in harrying submarines."

"The ships, highly skilled in escort work, belonging to the western approaches of the Command, have given valuable aid. The dangers, facing our maritime communications, were great and concentrated."

"There have been 50 enemy submarines at a time, waiting inside and outside the straits of Gibraltar."

VIGOROUS OFFENSIVE

"These craft have had heavy losses. To Germany the last two months have probably been the most costly, in their whole submarine campaign. But the role of the navy is not confined to defence. We have all the time been carrying on a vigorous offensive against the enemy supply lines across the Sicilian narrows."

"These are harried by our cruisers and destroyers and especially by our submarines. They have also suffered a lot of damage by air attack in which the fleet air arm has taken a big part. Its machines are out every night looking for the enemy ships making a crossing in the dark or trying to slip along the coast."

"There will be heavy fighting here no doubt when the ground dries, but naval and air attack on the enemy's communications, combined with direct assault on his land positions will, I am convinced, drive him out of Tunisia."

"We are sending stores as far east as Bona. The enemy has made strenuous attempts to interfere with this operation. He delivered a heavy air attack on Bona last week but though some damage was done, the service of the port continues as before."

ITALIAN FLEET

I asked Admiral Cunningham, whether the Italian fleet causes him any anxiety. He replied: "Obviously it will not be possible to establish an Allied domination of the whole of the Mediterranean until the Italian fleet is disposed of."

"If the fleet come out, I have a very powerful force at my command, especially allotted to the task of dealing with it and I have no doubt about the issue."

"Yet we now have complete freedom of movement in both the eastern and the western parts of the Mediterranean. I always felt that our position here would be restored. In fact, I believe myself that the war may well be decided in the Mediterranean."

"One great advantage of the position is already secured. Malta is safe. Convoys are reaching the island frequently from Alexandria, protected by the R.A.F. machines, stationed on the coast of Libya."

"The splendid resistance of Malta has thus borne fruit. Now it is not only fully stocked again but equipped to take an active part in the African campaign by attacking enemy communications to Tunisia. This is being done with good effect by the R.A.F. and the fleet air arm, based on Malta."

BIZERTA FOR A START

I put a question to the Admiral whether there was ever a possibility of seizing Bizerta at the very start of these operations instead of making Algiers our main objective. He said: "I believe it would have been possible but the plan was rejected on the ground of its probable cost. We should have had to reckon on the loss of a battleship, several cruisers and very likely 25 per cent of the merchant vessels."

"It would clearly have been a great advantage if Bizerta could have been secured that way by direct attack but on consideration it was decided to take a less hazardous course."

Speaking of the political situation which complicates the Allied military and naval position here, Admiral Cunningham said that the death of Darlan had in no way simplified it. In fact, he declared that Darlan's co-operation had been of great practical value to the Allied forces.

But for his "cease fire" order, we should probably for some time have held no more North Africa than small areas round Casablanca, Oran and Algiers.

We could not carry on the campaign in this country without co-operation from the French.

"Our lines of communication," the Admiral said, "would have been in great danger without the goodwill of the local inhabitants."

"It was Darlan's action in calling off resistance which made it possible to secure the co-operation in the first place and it is now developing automatically."

Diary of the War

ENGLAND AND GERMANY

29th Jan.—Copenhagen was raided by the Royal Air Force.

American aircraft bombed objectives in Germany. Industrial objectives in Rhineland were attacked.

Reports were current that Germany was preparing to launch peace proposals through General Franco.

A large Axis supply ship was sunk by torpedo bombers off Norway.

Objectives in northern France, Holland and Belgium were attacked by the Royal Air Force.

30th Jan.—The Royal Air Force made the first daylight raid on Berlin and delayed Goering's speech for an hour.

In his speech Goering admitted that Germany was deceived by the Finnish war. "Russia's war against Finland was perhaps the cleverest and greatest camouflage in world history."

In his proclamation Hitler said: "To-day there are only two alternatives—victory for Germany and her Allies or the destruction and enslavement of everybody by Bolshevism. We must fight on doggedly."

The German Radio said that reports that Germany was sending a new peace offer to the Allies were "mean invention."

The Royal Air Force raided Berlin a second time before Dr. Goebbels began his speech.

31st Jan.—The Royal Air Force attacked objectives in western Germany and bombed Hamburg. Large fires were started.

UNITED STATES OF AMERICA AND THE ATLANTIC

30th Jan.—Commenting on the anniversary of Hitler's rise to power, the *Herald Tribune* said: "Through ten years of toil, loot and destruction, Hitler has led his people to a point at which the destruction of his regime and all it stood for has become a certainty."

A joint statement issued by President Roosevelt and President Vargas stated that it was the aim of their countries to "make the Atlantic ocean safe for all."

31st Jan.—Col. Knox, Secretary for the Navy, declared: "I think there are darned good prospects of an air attack on Tokyo, but when or how it will be hit, I will not say. But they had better get ready."

2nd Feb.—Madame Wellington Koo, wife of the Chinese Ambassador in Britain, said in Philadelphia that China was on the verge of an economic collapse.

INDIA, BURMA AND CEYLON

29th Jan.—An encounter took place between a party of Chin levies and a Japanese patrol in a village in the Kale area.

30th Jan.—The Royal Air Force bombed objectives in Akyab.

31st Jan.—There was heavy fighting between the Chinese and Japanese troops near Mong Pan on the China-Burma border.

1st Feb.—The Royal Air Force attacked and damaged Japanese water transport on the Mayu river.

2nd Feb.—United States planes raided Rangoon. Damage was caused in the dock area.

ITALY, AFRICA AND THE MEDITERRANEAN

29th Jan.—Bizerta was again bombed.

30th Jan.—A conference of Japanese diplomats was held in Rome.

The harbour and railway yards at Sfax were bombed heavily.

The Royal Air Force attacked objectives in Sicily.

31st Jan.—The Eighth Army's forward elements crossed the Tunisian border.

Seven Axis ships were hit by Allied planes. A position was captured in Kairovan.

1st Feb.—The Royal Air Force raided Akyab.

2nd Feb.—Rommel was put under the orders of Rundstedt, commanding in France.

In Line with R.A.F.

The words "aeroplane" and "aerodrome" are to disappear from the military vocabulary, under an Indian Army Order. "Aircraft" and "airfield" are to take their place.

This will bring the Indian Army into line with the R.A.F. which has always confined itself to the latter titles.

Mr. A. V. Alexander, the First Lord of the Admiralty, recently announced that Britain has made up all her losses in capital ships in the past 2½ years. Thus the two additional battleships of the "King George V" class, the "Anson" and the "Howe," which are sister ships also of the "Duke of York," are now in Commission. They were laid down in 1937. Displacement 35,000 tons, complement 1,500, armed with ten 14-inch and sixteen 5.25-inch and various smaller guns. Speed over 30 knots. Photo shows H.M.S. "Anson" on trials.

Mussolini made a speech to Fascist Youth somewhere in Central Italy when he said: "Our reply to Casablanca—('unconditional surrender of the Axis')—is that, while we have the strength to grasp a weapon, we shall not give in."

The Eighth Army took Zuara, Axis harbour in Tripolitania.

General Giraud informed a press representative that he was raising a French army of 300,000 men whom President Roosevelt would equip for the Battle of Europe.

3rd Feb.—The Eighth Army reached the Mareth Line. Ziltan was occupied. United States troops captured Sened.

RUSSIA AND FINLAND

29th Jan.—Soviet troops made a new advance on the Voronezh front. A wedge was driven in the Nazi lines near Rostov.

30th Jan.—Russian troops occupied Kropotkin in North Caucasus and captured Novo Oskol. Three German Generals fell into the Red Army's hands.

31st Jan.—Tikhoretsk and Maikop were recaptured by the Russians.

1st Feb.—The Red Army reached Ladozhokaya, 50 miles north-east of Krasnodar. The Maikop oil fields were reconditioned.

2nd Feb.—Berlin admitted that the remnants of the German Southern group (Sixth Army) at Stalingrad, after having fired the last round of ammunition, were taken prisoner by the Soviet. Sixteen German Generals were captured. Hundreds of Russian women and children streamed back to Stalingrad. The epic struggle of Stalingrad drew to a close.

The Red Army closed in on Krasnodar. Svatovo was taken.

3rd Feb.—The Red Army was 30 miles from Rostov.

Russian troops entered the Finnish port of Petsamo.

The Russians captured Kupyansk.

The last of the German forces at Stalingrad surrendered.

NEUTRAL COUNTRIES

1st Feb.—It was officially announced that Mr. Churchill visited Turkey as the guest of the Turkish Government.

SHIPPING

1st Feb.—The Admiralty announced the loss of submarine "P-222."

VICHY AND OCCUPIED FRANCE

1st Feb.—New measures for the persecution of Jews were adopted in France.

THE FAR EAST

29th Jan.—Japanese bases were hammered in New Guinea.

30th Jan.—Japanese ships were bombed in South Pacific. American troops launched an offensive in Guadalcanar.

31st Jan.—Lieut.-General Tomitaro Hori, Commander of the Japanese army in Papua, was drowned in the Kumusi river.

1st Feb.—The Japanese were pushed back in New Guinea. An enemy attack in Mubo was repulsed.

The United States submarines sank six Japanese ships.

2nd Feb.—Allied aircraft attacked Rabaul.

3rd Feb.—There were air and sea battles in the Solomons. Both United States and Japan suffered losses.

The Premier of Australia said that the Japanese were concentrating in the outer fringes of the islands around Australia.

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV

FRIDAY, FEBRUARY 12, 1943

No.

MR. CHURCHILL

Altered the Face of THE WAR

YOU have altered the face of the war in a most remarkable way. When I was with the Chief of the Imperial General Staff and the President of the United States at Casablanca, the arrival of the Desert Army in Tripoli was a new factor which influenced the course of our discussions and opened up hopeful vistas for the future.

HARD struggles lie ahead. Rommel, a fugitive from Egypt and Tripolitania in a non-stop race of 1,400 miles, is now trying to present himself as the deliverer of Tunisia.

THE days of your victories are by no means at an end, and with the forces which march from different quarters, we may hope to achieve the final destruction or expulsion from the shores of Africa of every armed German or Italian.

MR. CHURCHILL, in a speech to the Eighth Army in Tripoli, last week

THE DICE ARE IN OUR FAVOUR

"The North African front has now become one big battle-field with Rommel going back to join with his brothers-in-arms in Tunis. He will hold on to the Mareth Line as long as possible—as long as there is no danger of being cut off and losing his forces . . . Our task of driving the Axis right out of the continent is not going to be easy, but the dice are in our favour. The enemy is making every effort to increase his supplies, but he has only a few ports at his disposal."

GENERAL ALEXANDER, the Commander-in-Chief of the Middle East, addressing war correspondents in Cairo on February 10.

RED ARMY VICTORIES

The Red Army victories at Stalingrad and in the Caucasus have been decisive battles of the present war and have definitely settled the defeat of the Nazis and Fascists who fell upon the Soviet Union.

—Dr. BENES in a telegram to M. Stalin, on February 6.

To the Troops!

You want to be amused?

You want some light music?

Every Wednesday at 10 p.m.

The Turkish delegation of journalists inspected tanks somewhere in India during their recent tour of this country.

Running Commentary

**Australia :
Base for
Allied
Counter-
Attack in
South-west
Pacific.**

Commenting on Australia's appeal that more help should be sent as speedily as possible to the South-west Pacific, the London *Times* says, "Among the United Nations, the importance and urgency of the struggle in this area is understood. Every effort will be made to roll back the Japanese and to carry the fight nearer to the vital sources of Japanese strength." The urgency of the need for speedy help was emphasised by Mr. JOHN CURTIN, Prime Minister of the Australian Commonwealth, in a recent statement. "To-day," he said, "this country stands in as great a danger from Japan as it ever did. As a result of her conquests, Japan is in possession of vast resources of war. We live in a fool's paradise if we assume that because of our efforts in the Coral Sea, the Solomons and New Guinea, they will not, at some future time, perhaps this year, succeed in one or more enterprises." To meet the Japanese menace, he pointed out that the Commonwealth Government had, since December 1941, increased the Navy personnel by 28 per cent, the army by 250 per cent, the Air Force by 200 per cent, and the munitions and war industry personnel by 27 per cent. And two

weeks ago, the House of Representatives passed a resolution declaring Australia's unswerving loyalty to the cause of the United Nations and her determination to use all the manpower and material resources of the nation to ensure the maximum war effort necessary to bring victory.

* * *

The importance of Australia in the Allied counter-attack in the South-west Pacific has been generally well recognized both by the Allies and the Axis Powers. In June last year Shiratori, former Japanese Ambassador to Rome, declared, "Without the capture of Australia, it might be impossible to terminate the war." Japan knows only too well that the Australian Commonwealth is the stronghold of the Democracies in the South-west Pacific, and that it can be used as a base from which war can eventually be carried to Japan itself. She realises that she cannot retain her ill-gotten gains unless she somehow gets the control of Australia and India. In March last the Japanese paper *Tariko Shunpo* said, "The conquest of India and Australia is an indispensable condition for the setting up of the New Order in Asia." Japan tried its usual methods of cajolery and threat.

(Continued on page 6.)

Battle of Encirclement in Russia

“THE Germans made no tactical errors—but one big strategic error. That was when they made Hitler the Supreme Commander. Hitler was beaten by M. Stalin who, personally, conducted the offensive operations.” So said General Chuikov, Commander of the 60th Soviet Army which was mainly responsible for the defeat of the German 6th Army led by Field-Marshal von Paulus. A similar tribute to the great Soviet leader’s vision and foresight was paid by Lieut.-General Malinin, Chief of Staff. Referring to the successful Red Army break-out from Stalingrad, he told *Reuter’s* Special Correspondent on Tuesday, “M. Stalin foresaw long ago exactly what the Germans would try to do and provided accordingly. He expected that General von Manstein would try to break through from Kotelnikovo with a large relief force. General Manstein did this and sustained a decisive defeat, thanks to M. Stalin’s foresight. His army never got through.”

Nazi Hopes on Manstein’s Counter-Attack

THE story of this great epic victory can be briefly told. When the two Russian claws suddenly curved out north-west and south-west of Stalingrad and enclosed the German 6th Army between the Don and the Volga, the Nazis were not unduly perturbed, for they thought that the fall of Stalingrad had only been postponed. Even when the Soviet forces rushed southward from Kletskaya on the Middle Don and northward to Kalach, they did not realize the seriousness of the danger to the fullest extent. They knew that the Red Army had created a belt of territory about 50 miles wide between the encircled army and the main Axis forces, but they were feeling confident that a strong counter-attack would set right everything. The counter-attack was duly launched against the left flank of the Russian advance by General Manstein, who had six German divisions in his charge. It made considerable headway at first, but was suddenly brought to a halt by heavy concentrations of Soviet artillery fire. This was the move which was foreseen and provided for by M. Stalin. The Russians then passed from the defensive to the offensive, and pushed General Manstein’s relief forces southward along the railway to Kotelnikovo.

WHAT General Manstein failed to do on the southside of the Don was attempted by the Axis forces in the centre of the Don elbow. The German Command was evidently planning a much more powerful counter-attack here, and this had no doubt given high hopes to the trapped army in front of Stalingrad. But M. Stalin had provided against this contingency also. Russian forces swept across the Central Don southwards on a 50-mile front and captured a long stretch of the Voronezh-Rostov railway.

Abandoned to its Fate!

THERE was only one course open to the Germans, namely, an eastern drive to the Don elbow, but that would be suicide. Therefore the 6th Army was abandoned by Hitler to its inevitable fate. During the 65 days when this army was encircled, its strength was reduced from 200,000 to 12,000. The destruction of the German Sixth Army in the battle for Stalingrad released Soviet troops to other fronts which stretch from Voronezh in the north to the Caucasus in the south.

IN the Caucasus front, when there was a chance of the relief of the Sixth Army, the Germans must have felt that their basic position was safe and sound, for the German line of the Donetz from Kharkov to Rostov was very strongly fortified and there were fortress towns and a network of connecting railways behind this line. In the north-east, Millerovo was strongly held by the Germans and this protected the upper reaches of the Donetz. On the Caucasian side of the Don, the Germans had the line of the River Sal and Manych which, it was considered, was strong enough to hold the Russian forces pushing south along the railway from Kotelnikovo.

Sudden Change in Situation

BUT suddenly the situation for the Germans began to deteriorate in a serious manner. One Russian force pushed on straight towards the Donetz on a 40-mile front north of the Don, but the Soviet army from Kotelnikovo instead of driving straight towards the Sal-Manych line, carried out a wide turning movement pivoting on Orlovka, which was already captured, and pushed down the railway past Zimovniki and captured Salsk. The left wing of this force captured Voroshilovsk which is south-west of Lake Manych.

THE SOUTHERN FRONT.—Red Army men have captured a part of the village and are dislodging the Germans from some houses.

The capture of Armavir and Tikhoretsk enables the Russians to strike at the rear of the retreating German Army in the Eastern Caucasus, the army which once dreamed of capturing the Grozni oil fields.

An Indecisive Retreat

THE German retreat in the Caucasus, it may be said, is an indecisive retreat. It seems to be the result of a wavering on the part of Hitler between a clear stand and a definite withdrawal. It has therefore neither the advantage of the decisive rapidity of Rommel’s retreat in saving as many of the forces as possible, nor that of a deliberate withdrawal which would allow transport and equipment to be saved. If the retreating forces do not receive powerful reinforcements shortly, their end is sure to be disastrous.

DURING the last few days, spectacular successes have been scored by the Red Army in its fresh offensive on a 100-mile front south of Voronezh. Valuiki, an important railway junction near Kharkov, was captured. On Sunday last Kursk, Hitler’s great base on the Voronezh front, was occupied by the Red Army and the German line connecting Kharkov with Orel in the north was broken. The capture of Kursk is also likely to cut another lateral railway between Bryansk and Kharkov. The capture of Bielgorod which is only 50 miles from Hitler’s Ukrainian base of Kharkov was announced on Tuesday.

Fight for Rostov

LOWER down in the south, the battle of encirclement in the Donetz bend seems to be assuming such seriousness for the Germans that it is stated that they may even abandon Rostov without a fight. The fight for Rostov is overshadowed by this new gigantic development of Soviet strategy by which a quarter of a million Germans are facing disaster in the Donetz region. The astonishing feature of the whole situation is that the Russians have been able to undertake various offensive operations with so little railroad assistance. But the recent successes in capturing important railway junctions are bound to add to their own mobility and restrict that of the Germans.

Marvel of Modern Warfare

TAKING the aggressive battle front in the south as a whole, it may be stated that one of the most remarkable and impressive operations of modern warfare is being witnessed in the Voronezh and Caucasus mountains. The co-ordinated movements of envelopment, the perfect timing of blows, the placing of alternating strokes in an effective manner, the co-operation of the supply organization, the remarkable momentum with which the Soviet drives are being maintained—all these evoke unstinted admiration and marvel at M. Stalin’s masterly strategy.

RUNNING COMMENTARY

(Continued from page 3.)

A Japanese spokesman said in the same month, "The Australians have no reason for apprehension seeing that Nippon is waging a sacred war." Three months later, another Japanese spokesman declared, "If Australia dares to fight, Japan is ready to crush her, and if she chooses to make peace and offer co-operation, the Japanese will welcome her as a good neighbour." But Australia has thrown herself fully and wholeheartedly, as other members of the British Commonwealth, on the side of the United Nations, and she is mobilising all her resources and manpower to resist Japan.

* * *
Long Coastline— Australians know that any attack on their country must be launched against the key towns on the vast northern coastline of Australia, namely, **Townsville** and **Cairns** on the east coast; **Thursday Island** which is at the tip of Cape York; **Darwin** which is about 400 miles across the east from Timor, the Dutch Island south-east of Celebes; and **Wyndham** and **Broome** on the north-west coast. The difficulty of defending the area arises from the fact that between Cairns and Broome there are 400,000 square miles which are very sparsely populated. Further, for more than 20 years, the Japanese have explored the coast line between Cairns and Broome—3,000 miles of it—in their pearl-fishing sampans. Therefore, the Australians are keenly aware of the danger that faces them, and their strenuous defence of New Guinea proves it beyond doubt.

* * *
 It is gratifying to note that, on Sunday last, 41 Japanese planes were shot down at Wau in New Guinea. Not a single Allied plane was lost. *Reuter's* Special Correspondent at an advanced Allied base in this battle area describes this as the greatest air battle over New Guinea since a Japanese convoy was battered near Lae a month ago. **GENERAL MACARTHUR'S** communique issued after this air battle says, "In the series of air battles lasting throughout the day, the enemy was completely defeated and swept from the skies."

Before the attack on Pearl Harbour Australians were contributing towards

the Allied victory by sending troops to different theatres of war. It is stated that about 450,000 Australians were serving in the army forces abroad. After the entry of Japan into the war, the situation changed. The danger to Australia was intensified and the Australian troops had to return home. In a statement made on February 3, **Mr. CURTIN**, the Australian Premier, said, "Mr. Churchill showed his breadth of vision and understanding when he informed Australia that no obstacle would be raised to the return of the members of the Australian Imperial Forces to defend their homeland." Knowing that Britain's commitments were very great, Australia sought America's aid, and America readily came to her rescue and sent enormous men and material. **The extent of the help given by America to Australia can be judged from the victories which the Allies gained in the Solomons and the New Guinea area.**

* * *
"Orphan of the Pacific": Japan wants to isolate Australia because, so long as Australia can be used as a colossal springboard, Japan's whole position in the South-west Pacific is threatened. Japan assigned to her last summer the position of "Orphan of the Pacific," and she wanted to cut off all her sea routes, but the Allied victories of the Coral Sea and Midway Islands, the defence of Ceylon and the occupation of Madagascar were all vital counters to the Japanese attempt to isolate Australia. The ring of islands in the hands of the Japanese, which are scattered off the north coast of Australia, has been dented in the Solomons, and the recent Allied victories in New Guinea have upset the Japanese plan for using that large island as a base of attack.

Now Japan is faced with two alternatives: either she must consolidate her conquests or resign herself to a withdrawal. The object of the activities of the Allies in the South-west Pacific is to force the second alternative on Japan. The immediate object of the Japanese seems to be to divert Allied strength, particularly air strength, from the Solomons area, and they hope that an attack on some part of Australia may offer hopes of achieving this end. Such a move will expose fresh quantities of shipping to Allied attack, but Japan may take the risk and Australia is preparing herself for that eventuality.

Implications of Global Strategy : Opinion in China. **SIR STAFFORD CRIPPS**, Britain's Minister of Aircraft Production, addressed an "Aid-to-China" meeting on February 4.

Paying a tribute to the achievements of "this young old country", which, in spite of internal difficulties and ill-equipped, ill-trained and ill-provisioned forces, was the first country in the world to challenge Fascist aggression, he said, "How easy it would have been to have appeased Japan, when much mightier powers were on the road of appeasement. But the Chinese leaders realized fully all that was at stake, and they risked with open eyes years and years of suffering and agony to fight for what was right and decent in the world and preserve unsullied their own freedom." Opinion in China in recent weeks has still further strengthened the determination of the Chinese to preserve their freedom and resist aggression at all costs. And this is due, among others, to Allied victories in North Africa. The importance of the Eighth Army's capture of Tripoli and its repercussions far away on the Chinese theatre of war are well recognized in China. In a comment on the Tripoli victory, *Ta Kung Pao*, a leading Chinese newspaper, says,

"So much the worse for Tojo's influenza. The Allied victory not only seals Hitler's doom, but also deals a heavy blow to Japan."

Hsin Min Pao, another Chinese journal, declares, "The change of situation in the Mediterranean is evidence of the fact that the Axis powers are doomed." The fact that the implications of global strategy are well recognized in China is further brought out in a comment made by another Chinese journal, *Chungyang—Sao Tang Jih Pao*. Writing before the results of the Casablanca Conference were made known, this journal says: "To win final victory, the Allies should have unified strategy and unified plans in regard to transfer of troops, exploitation of natural resources, use of manpower and free use of technical knowledge." Yet another Chinese Journal, *Hsin—Wa Jih Pao*, has welcomed reports of Anglo-American discussions on the creation of a "second front" in Europe, because events in the European theatre of war are bound to have repercussions in the Far East in China's favour.

Trouble in the Balkans : Anti-Nazi activities. According to information received by the Yugoslavia Government in London, the Yugoslavia War Minister and Leader

of the Patriot Forces, General Mihailovitch, has ordered a general civil disobedience campaign throughout the whole of Central and Southern Yugoslavia. It is stated that the campaign had been launched to spread confusion among the occupying Axis troops. Not only in Yugoslavia, but also in other Balkan states, grave disaffection against the Axis is growing in volume and strength.

In Rumania, the news of the very heavy losses of Rumanian troops in the Don campaign has spread like wild fire in spite of Government attempts to keep matters secret. People have come to know that over 50,000 Rumanians have been killed or taken prisoners, that the Rumanian army has collapsed in Russia, and that famous generals have committed suicide. A section of the Iron Guard and the National Peasant Party have demanded the withdrawal of Rumanian soldiers from the Russian Front. A feeling is gaining ground that the Rumanian army should be preserved

DYING SOLDIER'S WISH FULFILLED

An Indian soldier was dying. On the field of battle he had fought for India, and soon now, in a quiet hospital ward, he would die for India, unwimpering, uncomplaining, rich in the knowledge that the gifts he was making his country exceeded all riches.

But, for all his unselfish courage, he was not untroubled. There was disappointment in his eyes, disappointment in the whispers he used for words—disappointment, and great yearning.

At last he confessed his secret, a halting, shy confession, into the ear of an English nurse. He was to have become a havildar, he said, but now death was coming to rob him of his promotion.

The nurse told the hospital M.O., and the M.O. told the appropriate department of the Indian Army. Official routine was accelerated. Formalities which ordinarily would have taken hours were completed in minutes.

for wresting Transylvania from Hungary rather than be employed in securing "Transdnistria"—the Russian territories around the Dniester which were given to Rumania by the Germans. Rumanians have now begun to wonder whether Germany will ever be in a position to guarantee "Transdnistria" to their country.

* * * *

Such feelings are no doubt responsible for a change in the subservient attitude of Marshal Antonescu who seems to have realized, too late, that his policy of conciliation of the Nazis was responsible for the slaughter of thousands of Rumanian soldiers on the Russian Front. This change in attitude seems to have provoked Hitler into letting loose the section of the Iron Guard which fled from Rumania to Germany in March 1941. Hitler does not want a recalcitrant satellite in his camp at this critical juncture. He has, therefore, brought Antonescu's rival, Horea-Sima, from obscurity. It may be recalled that Sima fled with the section of the Iron Guard to Germany two years ago. The recent disturbances in Rumania are due to the activities of Sima and his followers and are intended to be a warning to Antonescu. If Antonescu follows a policy of complete submission to the will of Hitler, the Iron Guards will not be allowed to cause disturbances in future. But if Antonescu proves stubborn, Hitler can instal Sima in power.

* * *

In Hungary, things have not been too quiet. As a result of the destruction of the Hungarian army in Russia, and particularly on the Voronezh front, there have been widespread anti-Nazi activities.

NAZI AIM

"What Nazi Germany is aiming at is not a restoration of the frontiers of 1914, but a total revision; a completely different order, or, in Goebbel's candid phrase, a redistribution of the whole world."

—HERMANN RAUSCHNIG
in *The Revolution of Nihilism*.

People are beginning to doubt the wisdom of the Government's policy as regards Russia, and there is a popular clamour for calling off the war against Russia and settling the old score with Rumania. But Hitler cannot afford to have Hungary and Rumania fight each other at the present time. Therefore, he has revived the Nazi Arrow Cross Party. If the Horthy Regime proves subservient to Nazi wishes, this party will help it; otherwise it will coerce it into submission. A recent report from Ankara states that several Hungarian Army Officers including General Fogarassy, the escaped Commander of the captured forces at Voronezh, were arrested in Budapest for openly declaring that Hungary has nothing to fight for. This is a clear indication that disaffection against the Nazis is rife in Hungary.

* * * *

And what of Bulgaria? The general feeling here is that the Government have backed the wrong horse again. King Boris seems to be feeling that the time has come when he should attempt a decent retreat, whereby he may hope to save his throne and get for Bulgaria comparatively mild conditions at the conclusion of the war. An Istanbul report says that King Boris is searching for a scapegoat on whom he can throw the blame for Bulgaria's past pro-Nazi policy and has found one in M. Gabrovskis, Minister of the Interior, who is entirely devoted to the Axis.

★

No More X-ray Photographs!

A new method for accurate localisation of foreign bodies in wounded persons by means of X-rays has been developed by an Australian and is being used in X-ray machines built in Australia for military hospitals. This method does away with the delay in taking X-ray photographs

WESTERN DESERT CAMPAIGN.—A British Tommy, following up the tanks, stands more than somewhat perplexed by the multiplicity of German and Italian signs at the entrance to Mersa Matruh.

The Mareth Line

EVERYTHING in this war hinges on shipping. The Axis must keep the Sicilian narrows closed to our convoys; that is part—a fundamental part—of Hitler's U-boat campaign. Therefore the Germans will fight—and fight hard—to maintain their hold on Tunis and Bizerta. Passive defence is no part of German military doctrine. Rommel and Von Arnim are surely well aware that to await the marshalling of Allied forces against them would be fatal. Therefore they must hope to strike before concerted action by the Allied converging columns is possible.

Thanks to the short sea and air passage of only 60 miles behind him, Von Arnim has already concentrated in Tunisia a force estimated to include 75,000 German troops, evidently of good quality. To join forces must be the first step in Rommel's and Von Arnim's plans. It is here that we see the importance of the Mareth Line, which covers Gabes, some 180 miles from Tripoli. Clearly Von Arnim should try to hold this line with the necessary minimum of force while Rommel withdraws his sorely harried troops through it and so gains for them a respite to reorganize.

In Tunisia mud indescribable persists till the end of February. For some time yet, therefore, operations there may well be limited

to jockeying for positions. When the mud begins to dry, then will come the crisis of the campaign and much will depend on who gets off to a flying start. The Axis position is so critical that it can be retrieved only by something dramatic. At the same time, Axis commanders will try to profit by certain obvious advantages of their position. Their bombers are based on ample airfields in Sicily and Sardinia, not to mention their advanced bases in Lampedusa and Pantellaria; their fighters are based on permanent French airfields of the Tunisian plain, whereas our air forces must operate largely from landing grounds improvised amidst mud and hills. Moreover Axis lines of communication, however much we may harry them by air and submarine, are so short and are tucked away so snugly under their air umbrella that we cannot intercept them altogether, whereas those of our First and Eighth Armies are long indeed, for we may expect Rommel to have done his best to leave Tripoli harbour unusable for some time to come.

These are factors on which Rommel and Von Arnim may perhaps be counting to give them a flying start. Let us, then, suppose that, given this start, Axis commanders decide to carry on their counter-offensive in the

orthodox manner. Their plan may be something as follows: suddenly and powerfully to reinforce the Luftwaffe on the North African Front from air reserves which have been accumulated for the Axis spring offensive, and thereupon to strike at the First Army and the Americans in the hope of dealing with them while holding off the Eighth Army on the Mareth Line. This plan would not be complete without a subsequent blow at the Eighth Army, so it might perhaps include a paratroop and airborne landing somewhere on the 1,000-mile coast which constitutes the Eighth Army's

lines of communication, accompanied by a sortie by the Italian fleet in a bid for command of the Eastern Mediterranean.

The antidote to any such plan is obvious. It is of course to maintain strong pressure on the enemy. The Eighth Army which broke the Alamein position will not be easily held on the Mareth Line, so it is most unlikely that Rommel and Von Arnim will have that secure back door which is the prerequisite for a concentrated attack on our First Army.

—The Daily Telegraph.

Planning Supplies to the Middle East

An outline of Britain's great responsibility

By T. G. JENKINS

I WANT to tell you why, in the middle of a great war, we have to concern ourselves with, say, the making of jute bags in Egypt, the starting of a points-rationing scheme in Palestine—and an advanced one at that—and the fighting of locusts in the Middle East generally.

For reasons which you know, the Middle East has become an area of great military importance, and by the Middle East I mean the countries in the Eastern Mediterranean, through Syria, Palestine and Egypt southwards to Aden and Abyssinia, and across to Iraq and Persia in the East. These countries in the early part of 1941 found themselves three times as far from their sources of supply as they were in normal times. Why? Europe was cut off by the war and the Mediterranean could no longer be used for ordinary commercial traffic. All goods from Britain and from the United States had to take the long route round the Cape, and that is much the same thing as going halfway round the world. You will, of course, see at once that to carry goods all that way requires many more ships than on a shorter voyage, since the quantity of cargo a ship can deliver depends not only on the size of the ship but on the length of the voyage.

We had then this large area, with practically no shipping resources of its own, situated 12,000 or 13,000 route miles from its sources of supply. Sources of supply—a bit of our jargon, but it just means where people get things from. This great shipping problem then explains why the Ministry of Shipping or, as it now is, the Ministry of War Transport, had to set about planning the job of supplying the Middle East.

MIDDLE EAST SUPPLY CENTRE

Why, you may well ask, should we, the British people, feel obliged to supply this area with all the necessities of life? The answer is that the countries concerned are all helping the Allies and we in turn are helping them. Also, we have armies in the area. The people round them need feeding and supplying and we do that as a matter of course. Our enemies drain their neighbours of everything they possess and reduce them to a state of misery and starvation. That is not our way.

So we set to work to plan supplies for more than a dozen countries with varying needs, varying degrees of self-sufficiency, and varying forms of Government. Much of the planning in the early days had to be done from London, but we soon saw that an organization on the spot was necessary if the work was to be properly done. We therefore created it, and bestowed on the infant the unromantic, uninspiring, but not inappropriate name of Middle East Supply Centre.

Its home is Cairo, and it has two main jobs. First, to make the area as nearly as possible self-sufficient; and second to make sure that when goods have to be imported from outside they are the right goods and only the goods really needed; what's more, to make sure that they are brought from the sources most convenient from the point of view of shipping. You might think that the best source from which to draw supplies from a shipping point of view is the one nearest the point of consumption. This is usually true but not always. Take a simple example: suppose lorries have to be brought from the United States, and steel is also needed from some source or other. Steel is heavy, with little

ROYAL NAVY TAKES WATER TO EIGHTH ARMY.—The Royal Navy is playing a most important part in guarding the shores of Africa, and, even more important, they are carrying fresh-water supplies to the Eighth Army as they advance westwards. Photo shows: Unloading water barrels by the Army, and loading on to lorries by Indian troops for transport towards the advancing Eighth Army.

bulk, and lorries are bulky with little weight. The ship has to bring lorries anyway—so it may as well bring the steel too, even though the steel has to come 12,000 miles from the United States. Some nearer source, even perhaps only 1,000 miles away, would require the use of an extra ship. This is a simple illustration—much more simple, I'm sorry to say, than the problems that confront us in real life—but it shows that we cannot rely on rule of thumb.

AGRICULTURAL POLICY

But I must get back to our first aim; that is, to produce as much as we can within the area. This has meant producing wheat, barley and other foodcrops instead of, for example, cotton. To change the direction of agricultural policy isn't easy in any country, as we ourselves know, and it is particularly difficult in countries whose farmers are mainly peasant cultivators. In Egypt the average farmer cultivates less than an acre of land, and there the cotton acreage has been reduced to one-third of its pre-war size and the country has increased its production of cereals: a great achievement.

But crops have to be protected as well as grown. In that area, as we remember from the Old Testament, the locust is an enemy

which has devastated vast areas and led to the starvation of great populations. Locusts are no respecters of man-made boundaries. They may breed in the summer in North-West India; may move into Persia following the rains; and may spread from there into Arabia, Egypt and East Africa. So plans for their destruction have to be centralized, and the Middle East Supply Centre has, as one of its sections, an Anti-Locust organization which can follow the pests round from country to country, or plan a warm reception for them at their next stopping place—spray them with poison from airplanes or drive them into trenches and burn them, and generally make their life as burdensome and precarious as possible wherever they may be found. Incidentally, Russian, Indian, Persian, Arab and other experts are working with us as part of one team to beat the locusts. This is only one example of the highly developed scientific and technical work of the Centre.

All these activities are aimed at increasing the production of each country, but supply has to be planned for the area as one unit, so exchanges have to be arranged—barley from one country against wheat from another, and so on. This means changing the normal channels of trade, and that is not so easy as it sounds. In some of the more backward places the job of the inspector who arrives to

ask the local farmer what his stocks are is not one to be sought after. He needs not only quickness of mind, but often fleetness of foot if he is to return bearing his information with him. In spite of all the difficulties, however, the Middle East Supply Centre does manage to get a pretty good idea of the needs and of the production of all the countries in its care.

PROGRAMME OF IMPORTS

The Centre when it has totted these up, and has struck the balance which remains to be found from outside the area, has next to produce a comprehensive programme of imports months in advance, because it will be months after the goods are ordered before they arrive. Over the last twelve months, imports into the area have been counted not in hundreds or thousands, but in hundreds of thousands of tons. This is partly because of the serious crop failure in this area in 1941—a failure which threw a great strain on the resources of the Centre and on our shipping. It was not only that we had to find and move great quantities of cereals, we had to contend with the fact that the confidence of the people had been shaken, and this increased the tendency to hoard and to conceal foodstuffs which is always present in unsettled times. One area was short of wheat and could not export its currants: it had to resort to compulsory currant bread—another kind of national loaf.

This reminds me of a still greater problem with which we are all familiar enough—the restriction of consumption of unnecessary goods and the fair distribution of those goods that are necessary. Rationing is possible in Palestine, for example, but that solution cannot be applied to a nomadic population such as the Bedouin Arabs who may be here to-day and a hundred miles away next month. So each case must be dealt with on its merits.

U.S. REPRESENTATIVE

Recently we have been greatly heartened and helped by the action of the United States Government in sending out to join the Centre Mr. Frederick Winant, the brother of the United States Ambassador in Britain. The American Army is also represented by General Maxwell. Many of the supplies to the Middle East come from the United States, and it is therefore appropriate, as well as helpful, that our Allies should be closely associated with us in this great work.

Since its establishment, a War Cabinet Minister has arrived in the Middle East—the Minister of State. First we had Mr. Oliver Lyttleton, now Mr. R. G. Casey. As you can imagine, it makes all the difference to have a Minister on the spot to guide day-to-day policy and to give authoritative advice whenever required.

But I'd almost forgotten to say that the Middle East Supply Centre does not cater exclusively for the civil population: it deals also with some of the supplies for our Army, particularly bulk foodstuffs, and on its staff are soldiers as well as civilians. I have not said, either, that the Centre is a policy-making body and does planning only; it does not buy or sell, store or otherwise handle the goods. These commercial functions are performed by other organizations, the bulk being done by the United Kingdom Commercial Corporation.

VITAL IMPORTANCE OF THE CENTRE

This, then, is a very rapid and incomplete sketch of what has grown to be a great undertaking. On its success hangs the well-being of a vast area and many millions of people: on its efficiency hangs the extent to which we can save ships for use in the direct task of hastening our victory. The countries concerned are all helping the Allies and we in our turn are helping them.

But, left to themselves, these countries would be unable, in a world of shortages, to obtain the wherewithal to live. The Middle East Supply Centre, so to speak, champions their needs and sifts their requirements. It is the instrument through which we do what we regard as our duty to people—eighty millions of them—who, through force of circumstances, have come to need our help. Its success means that our sons and brothers in the Forces can carry on with clear consciences and safe from the hatred and contempt which, because our enemies loot and destroy instead of supplying, follow their armies wherever they may go—Broadcast in the BBC's Home Service.

THE HOPEFUL!

The harassed attache of the American Consulate at Lisbon told this story: A shy little man leaned across his desk and said: "Please, could you tell me if there is any possibility that I could get entrance to your wonderful country?"

The attache, pressed by thousands of such requests and haggard from sleepless nights, roughly replied, "Impossible now. Come back in another ten years!"

The little refugee moved towards the door, stopped, turned and with a wan smile asked, "Would morning or afternoon be better?"

U.S. Rangers practise street-fighting in London

The U.S. Rangers, American counterparts of British Commandos, are undergoing intensive training. On manoeuvre grounds that resemble battlefields, in the bombed areas of London, the Rangers are learning all the skills of street-fighting—advancing under cover, scaling walls, hopping from building to building, and setting off explosives in enemy hideouts.

Rangers learn one of the most effective means of cleaning out enemy pockets of resistance. They plant high explosives in an "enemy" shelter, run for cover, and then return to inspect the damage.

A speedy hoist by two comrades sends a Ranger over a wall. With intense practise, Rangers learn to perform this manoeuvre in a few seconds.

On a narrow plank, a lone Ranger flits from one building to another. He puts down the plank and crosses so speedily that his silhouette presents a target to the enemy only for an instant.

The Adana Conference

By VERNON BARTLETT

THERE has never been any doubt as to Turkey's sympathies, but especially since the fall of France these sympathies have had to be expressed with certain caution, for Turkey was terribly short of modern armaments.

Even if Britain had had arms to spare—and in 1940 she obviously had none—many of them would have been useless, since, in accordance with the Anglo-Franco-Turkish alliance, the Government in Ankara was to look rather to Paris than to London for supplies.

It is for this reason that the Prime Minister was able to assure the Turkish President that the British Government had followed Turkish policy since the war with sympathy and understanding. It would certainly not have been in the Allied interests if Turkey in common with so many other countries had been overrun by Hitler's armies.

CONTROLS THE ENTRANCE

It has been to the Allied interest that Turkey has kept the Germans guessing by emphasising her determination to resist aggression from any quarter while we have recovered our strength.

Throughout January 30 and 31 political and military discussions of great importance have taken place in Adana.

If Stalin was interested in the Casablanca meeting, he was much more interested in the Adana one, since Turkey controls the entrance to the Black Sea.

One satisfactory political development of the last few months has been the improvement in Russo-Turkish relations and the new trend in Turkish policy towards the Axis should add to this improvement—*News Chronicle*.

TURKEY AND THE UNITED NATIONS—GREATER FREEDOM OF ACTION

All sorts of interesting thoughts will arise from the news of the Prime Minister's visit to Turkey, for it must be a big wind to have floated so substantial and unexpected a straw, writes the *Daily Telegraph*.

Far-Reaching Reforms in Turkey

By BRIGADIER-GENERAL SIR WYNDHAM DEEDES

THE position of Turkey in the Middle East to-day, and yet farther afield, whether judged from a military or political point of view, is unique. Turkey remains neutral in

It is hardly speculation to say that the Prime Minister and the military chiefs who accompanied him were at least able to assure Turkey that the promise to help her if she were attacked, contained in the Anglo-Turkish Treaty, was now more than an aspiration. Her difficulties during the past three years have been well understood in this country, not the least the difficulty of obtaining the means of defence elsewhere than from the countries from whom alone attack was to be feared. We have supplied what we could and the amount has not been unsubstantial, but it will now be more and easier to send.

Both in the military and the commercial sense, the victories of the United Nations have given Turkey far greater freedom of action and attitude. We have never doubted her loyalty to the Anglo-Turkish Treaty which survived a very dark period in our fortunes; and we rejoice that its conclusion should now have proved to have been as wise as it seemed at the time but may not have seemed so during the interval.

TURKEY AND RUSSIA

By her help to the starving Greeks, Turkey has already shown both her will and capacity to help in restoring the devastation wrought by the Axis in the Balkans. Again, evil tongues have insinuated occasionally that there might some day be friction between Turkey and Russia. It is perhaps enough to recall that Russia, though then very differently circumstanced, raised no objection when the treaty was made and throughout the war has been considerably helped by being able to rely absolutely upon Turkish neutrality. The results of the present conference will, therefore, certainly be most welcome to Premier Stalin to whom, it is understood, they have been fully imparted.

It would be superfluous to elaborate the advantages to the Allied cause of this reaffirmation that the whole of the Near East is taboo to the Axis intrigues. The Adana Conference is one more proof of how dark are the shadows which have fallen on the fortunes of Germany and of those of Italy which once aspired to be Turkey's rival.

the midst of war. None the less, she has succeeded in the extremely difficult task of maintaining correct relations with both groups of belligerents.

CAPTURED ITALIAN GENERALS.—Photo shows three Italian Generals captured in the Western desert. They are, left to right: Brigadier-General Masina, Commander of the Trento Division; Major-General Brunetti; Brigadier-General Bignani, Second in Command of the Trento Division.

But together with correctly observing the conditions which neutrality imposes, she has not failed to assert her intention to resist with force any attempt to violate it, and the resistance that she would offer would be formidable. Her army, world famous for its fighting qualities under the old regime, has to-day, under the regime of the republic, been carried to a much higher state of efficiency and preparedness.

GREAT CHANGES

It would not be an exaggeration to say that there is no example in history—at all events I know of none—in which a country has carried out such radical reforms in so short a space of time—a bare 20 years—with so little domestic disturbance.

For five years from 1909 to 1914 I served as an official under, as it was then called, the Ottoman Government. First in Tripoli in Africa, organizing a gendarmerie in those regions where Allied troops are now fighting, and later as an Inspector in the Ministry of Interior.

When I returned to Turkey for a short visit two years ago, I could hardly believe my eyes, so great were the changes both on the surface and in the spirit of the administration and its people. No, the old day has gone and the new day has dawned.

Constantinople is no longer the capital. Ankara reigns in its stead. From that most beautiful of cities, with its picturesque

scenery, its mosques and numerous palaces, from that somewhat turgid and cosmopolitan atmosphere; from the sublime port on the Bosphorus, synonymous as it was to Turk and foreigner alike, with corruption, inefficiency and procrastination, the move has been made to a little known upcountry village on the central plateau.

BREAK WITH THE PAST

Here has been erected the modern, well-secured, and well-equipped capital which bids fair, before many years are over, to hold its own with the capital of any other country. The change is symbolic. It indicates a break with the past on the part of those who hold the reins of Government, and the influence of the new capital is now being felt in the remotest area.

Next, the change of dress. Gone is the fez and the sweeping garment. The hat and Western clothes have taken their place. Coupled with this is the adoption by every family of what in English we call a surname. The old difficulty of distinguishing by name one man from another has disappeared. These were changes which, no doubt, Atatürk felt in keeping with the tempo and direction with which and in which he wished to proceed.

EMANCIPATION OF WOMEN

This brings me to a third, and in some ways I am disposed to think the greatest of all its reforms—the emancipation of women. Gone

are the veiled and mysterious figures, peering from latticed windows, about whom Pierre Loti wrote in his novels. Their place has been taken by public-spirited, business-like women, who are playing a foremost part in national life in the home, in the school, in the hospital; the village, and to whom the administration in Turkey is now open. There is a considerably larger number of women members in the Grand National Assembly than in Parliament at Westminster.

Next take the substitution of the Latin for the Arabic script. Think what this means for a foreigner. His difficulty in learning the language is hard, but the Turkish school children also must be saying "Thank you." And think what was involved. Overnight, so to speak, the nation lost its speech, but led by the President who himself went round the villages with chalk and with blackboard, it soon again found its tongue, which has been considerably simplified by the elimination of many non-Turkish words of expression.

ALONG THE ROAD TO DEMOCRACY

The country enjoys a first-class press. What struck me most when in Turkey the other day was the relatively small amount of space devoted to trivialities and personalities, and the high quality of the articles on questions of the day and reports from the battlefield and military appreciations. The Turkish press seeks to educate its public.

The great constitutional change from Sultan or Caliph to the Republic—the introduction of manhood suffrage at the age of 33, the setting-up of the Grand National Assembly, the reform of provincial and municipal government—all are steps along the road to democracy. The machinery of popular government is there, as is also the will to make use of it.

Now a word about the part played in national life by religion. Religion is there, divorced from the State. It is a matter for the individual. The mosques are open, all are free to worship who will. Turkey is still a Muslim country, but the State as such is secular.

The Man with the Big Idea

A man with a big idea but little capital called at the Admiralty one day. Now the Admiralty are mass producing in 44 British shipyards a motor patrol boat of secret design and fire power.

The idea works.

This man, whose identity the Admiralty are guarding as closely as the boat's unusual construction features, evolved a scheme for producing bits and pieces of the boat at a large number of factories and then sending them to the yards for assembly by "the smallest possible quantity of labour." To-day he is controller of an Admiralty-run company at a £5,000-a year salary. He was paid £20,000 down for the goodwill of his business and has since handled £4,000,000 worth of Admiralty orders.

In old days travelling in Turkey was tedious, tiring, and sometimes terrifying. Roads were bad, bridges unsafe and brigands abounded. Railways were few and trains unreliable. To-day, the railway and road system has been greatly improved and extended, and as to brigands, why, they are a thing of the past. In old days, travelling was attended by yet other dangers, from typhus, cholera, smallpox and malaria. The present regime has been waging a war with these depopulating and decimating scourges and is winning all along the line.

INDUSTRIAL EXPANSION

Industries have been started. Turkey aims at producing much that once she imported, and what gave me special pleasure was to see the admirable welfare schemes for workers. Towns are being planned, water is being laid on. Government buildings, hospitals and schools are being built. Great attention is being paid to Turkey's basic industry, for 75 per cent of the population live and work on the land.

How has all this been done, in so short a time? And will it endure?

My answer must be brief. It is in large part the work, or at all events, the conception of one man, a most remarkable man, who combined great energy with deep understanding of his people. Ataturk knew that what had been rotten in Turkey was its regime, but that underneath the superficial rottenness there were people of sterling worth, dogged, industrious and intelligent, who only needed to be released from the shackles of the past to leap forward into the future, and to put to good use all that is best in our modern world.

Lastly, while its reforms were indeed far-reaching and radical, he knew that they were not beyond attainment by his people, and given time they may be capable of realizing them. Are they doing so? My answer is yes, and this is not just a personal opinion, but it is that of persons more competent than I to judge—From a recent B.B.C. talk.

Each of these mass-made patrol boats costs £16,000. The hull costs £4,600 and the engines are made in America. The boats are 110 feet long, though speed and armament are a secret. They are believed to be the deadliest for their size yet put into operation. All wooden parts are made separately, as are other materials and fittings.

Admiralty experts pointed out that had the man with the big idea taken his drawings and designs into the City, he could have got all the finance he needed. He could have formed his company, and even for only 2½ per cent on orders he could have made a huge profit. It is understood that the £4,000,000 mark was passed some time ago and the patrol boats are being turned out more rapidly than ever.—Geoffery Simpson in "The Daily Mail."

THE MOVING HAND HAVING WRITTEN—MOVES ON

— Special to Madras War Review.

Turkey's Place among the Nations

By H. C. YALCIN

THANKS to the Empire they had built, our forbears had established their domination over a great part of three continents, but at that time the whole world was their enemy. To-day the Turkish Republic remains a factor of peace and of equilibrium within its national frontiers, and has conquered the heart of the Old World and the New. That is the impression which I have gathered during a recent voyage, which lasted three months, to Britain and to the United States. In every country you can declare with pride that you are a Turk, and on every side you will find deep affection and admiration.

What is the secret of this popularity? It should be looked for in the greatness of the Turkish revolution, in the straightforwardness of Turkish politics and in the stability of Turkish administration. Turkey has inspired confidence everywhere. The whole world is convinced that a sincere struggle is taking place in Turkey for an elevated human and ethical ideal. No one any longer doubts that the Turks are striving for the highest form of peace and tranquillity. The Turks have finally succeeded in forming a stable Government and in proving to the world that immune to shocks and to confusion they are able to administer their country.

These principles which have assured us success and which have inspired respect and affection for the very name of Turk in all civilised countries should in the future light our political path.

DIFFICULTIES OF WAR

Since the outbreak of the present war every people is going through a great test. Turkey is included among the peoples which have known how to silence all other feelings and to think only of their Fatherland. Officially, we are not at war, but for the past three years our country has lived as if it were at war. This is a point which we have particularly endeavoured to emphasize in our talks with our British and American friends. We also are faced with the difficulties and the sufferings of this war. Those who fail to understand why Turkey should have troubles and difficulties of her own are those who do not grasp this point.

The only aspect of war which Turkey has not known up to now is the shedding of blood, and our present situation is a situation of war. From the very first days our country realised this fact and respected and pinned its faith upon its leaders who prevented the Fatherland from being dragged into the war. We said: "We are ready to endure all privations and sacrifices provided we do not enter the war."

BRITAIN'S AND AMERICA'S SACRIFICES

Both Britain and the United States are in the war and are beset with privations and sacrifices. Britain, which is involved to a greater extent in the war, is bearing its weight earnestly and with dignity. A great part of London is in ruins, but the efforts and the sacrifices of the people have not flagged.

Britain is courageously enduring all privations. The people give up all their earnings to the Government. Prices have not greatly increased in Britain, for no one has surplus money to buy things with. All the money belongs to the Government. The income-tax rate is surprisingly high. In the United States certain industrialists who have been entrusted with duties so that the country should benefit from their experience work without profit and for a token salary of one dollar.

Goods considered luxuries have disappeared in Britain. The servants of the Royal Household have been called up for military service. The richest women sometimes ride from their country houses to London on the steps of buses. Nevertheless, not the slightest murmur of complaint is to be heard either in Britain or in the United States. The people all know that these privations and sacrifices are necessary for success and are proud to endure them.

There are demagogues in every country. But demagogues who wish to serve their own ends and to achieve popularity by exploiting the sufferings of the people are to be met with neither in Britain nor in the United States. When millions are suffering it is very easy to take pity and to parade as the champion of a cause, but nothing more base and disgusting can be imagined in war time.

To those of my friends who ask me for my impressions of our voyage, I shall first of all say: "To retain their place among the Great Powers the Turks must retain their noble qualities and must have the firmness, the endurance, and the patience of these powers. More often than not the enemy is within, not without. Great peoples have in all earnestness and firmness silenced the enemies within the country. They have not countenanced them, they have turned a deaf ear to their deceitful and base words. If we wish to retain the respect, affection, and confidence we have gained, it is necessary that we should do the same thing.

—Yeni Sabah.

BOOKS FOR THE NAVY.—The Royal Navy War Libraries are doing invaluable work in organizing the supply of books for the Navy. Sacks of books of a general nature are sent to sea-going ships, and libraries are organized in naval shore commands. Technical books are issued on loan to men studying special subjects. Photo shows: Men on board a warship enjoying their books during a spell of off duty.

The Persia-Iraq Army

WITH the Eighth Army pressing on to Tripoli and the main attention focussed on the western flank of the Middle East, there has been a tendency to forget that there is also an impressive British army on the eastern side of this widespread theatre of war, cables *The Times* Cairo correspondent.

Under the command of General Sir Henry Maitland Wilson, the Persia and Iraq Command—P.I. Force to be irrelevant—has been gradually built up since its formation in the critical days last August. At that time, Rommel's army was pressing on the Alamein line, threatening Egypt; so it was necessary to denude the Ninth Army in Syria and the Tenth in Palestine of the greater part of their personnel and equipment to reinforce General Auchinleck's army. As at the same time the Germans were driving down through the Caucasus, there was also a grave threat to the important oilfields of southern Persia. To meet this and also to relieve the Commander-in-Chief of the Middle East of the necessity of giving his attention to two widely separate fronts, the P.I. Force came into being as a separate Command.

TWO TASKS

Progress since those days has been immense, according to Major-General Baillon, Chief of the General Staff, P.I. Force. In addition to

the reinforced Tenth Army there is now a large and powerful Polish Army and the complicated administrative problem which the assembly and the maintenance of this force produced has been successfully solved.

The tasks of the P.I. Force fall in two sections: first, to assure the defence of the Persian oilfields from land or air attack; secondly, to develop to the maximum the use of routes for the delivery of aid to Russia.

For some time, while the German threat from the Caucasus remained, priority had to be given to the job of building up the force and the construction with very limited facilities, of necessary lines of communication, and this embraced the construction or the extension of roads, docks, railways, depots and so forth.

The advance of the Germans slowed down and every week that they failed to reach Baku gave General Wilson more time to build up his force until now, with the Germans in retreat, not only is the P.I. Force strong but the ground work has been successfully accomplished and priority is now given to aid to Russia.

LONG-TERM PLAN

"The brilliant Russian successes," said General Baillon, "have put back the enemy's immediate threat by some months and may

have finally dispelled it, but, in any case, the breathing space has enabled a long-term comprehensive plan to be perfected in place of the compromise improvisation which at first appeared necessary.

"There is also wholehearted co-operation from the Iraqis, which has now reached the extent of formal declaration of war against the Axis. A small but efficient Iraqi Army

is training with the P.I. Force and is proving itself well-fitted for operations in the hills and mountains of Iraq.

"We have in the P.I. Force a first-class fighting army," added General Baillon. "It is now required to defend Persia and Iraq and it will be available to fight somewhere else."

Training for Jungle Warfare

MULE TRANSPORTS IN JUNGLE-COVERED BURMA.—Through jungle, rivers and leech-infested swamps, the R.I.A.S.C. with the aid of many tough mule companies do their job. Tracks have to be cut through virgin country; riverbeds are sometimes the only paths; retreating enemy forces lie in wait for stragglers, but our supplies are kept going. Photo shows the mules before the start.

A mule transport company on a river bank preparing to cross.

Jungle warfare will play an important part in future operations in Burma, Malaya and the Pacific Islands. British and Indian troops in India are training for this special type of warfare. It is very tough going, but they know they are preparing for a very tough job.

Blood and Tears

By LAURENCE BINYON

The winds of all the world bring agonies,
Day by day, hour by hour, into our ears;
Not only desolation, blood and tears,
But cloud on cloud of suffocating lies.

The human strives with the inhuman there,
Enduring things beyond belief, and still
Because of one unconquerable will
Confronts, clear-eyed, what it has to bear.

Before the sunrise, under naked trees,
On grass that sparkled in the dew, I paced;
I thought of all the torment, all the waste;
I thought of beauty, justice, mercy, peace.

Beyond the raging of the powers of night
What from of old stood, still was clear, was true.
Far in the East the sky to glory grew,
And slowly Earth rolled onward into light.

Feeding the Guns of the Red Army.

"ONE of the war's most cheering sights" is how the *Daily Telegraph's* correspondent on the Caspian Sea describes the lengthening lines of convoys now on Persian roads carrying British and American supplies to Russia.

Pahlevi, where Russian ships are loaded, is only one terminus for the great fleet of trucks going to the Soviet. Now the fog of war that hangs over Persia is the dust from thousands of truck convoys rolling along the rough stony roads.

Road supplements rail, river and air traffic. Owing to partial closure of the northern route during the winter, the Persian Gulf is now important.

Big truck assembly plants are now working, whence issue processions of grey six-wheelers. On the Tigris and the Euphrates paddle steamers from Indian rivers tow strings of barges past the traditional site of the Garden of Eden, while fast "eureka" invasion craft acting as police cars chase up and down.

BOOM TOWN

The town of Andimeskh, 90 miles north of Ahwaz, consisted only of three mud huts 18 months ago. Now it is a boom town. Hundreds of tents and huts made of packing cases have sprung up, and there is a large cosmopolitan population including—besides Americans, British and Russians—Chinese, Negroes, Indians, Persians and Arabs, all working together to feed the guns of the Red Army.

Trucks follow four main road routes to Russia, but the most important is the one direct from India going approximately over the road by which conquering Alexander invaded.

Diary of the War

ENGLAND AND GERMANY

4th Feb.—The Royal Air Force raided Hamburg. Railway objectives at Abbeville were bombed. American bombers made a second daylight raid on Germany.

5th Feb.—It was reported in Ankara that the Finnish Government threatened Germany that Finland will make separate peace if Germany did not increase food supplies to Finland.

New German decrees stated that all non-essential trade enterprises should close down for a "total mobilization of national strength."

6th Feb.—There was a little Axis air activity over south-east England.

It was announced that between 100,000 and 120,000 shops were to close in Germany to save fuel and labour.

7th Feb.—British torpedo carrying planes attacked a German destroyer off the Norwegian coast.

8th Feb.—The Royal Air Force attacked targets in Rhineland. Hitler addressed Nazi Party leaders.

9th Feb.—The Royal Air Force attacked Lorient. Objectives in the Ruhr were also bombed.

Copenhagen was raided three times.

Mr. Churchill returned to England after his tour of the Middle East.

There was a cross-Channel artillery duel for half-an-hour.

This direct link with India's expanding war industries is now being developed rapidly. The railway from Quetta, in Baluchistan, to Zahedan, 50 miles inside the eastern Persian border, links up with a lorry service to Uskabad, on the railway running through Turkestan from Merv to the Caspian.

ACROSS DUSTY DESERT

The road passes chiefly across dusty desert, with a brief stretch of tortuous mountain road. Vehicles take six days to cover its 750 miles.

Most of the truck drivers are Persian, while Russians drive many trucks from the Persian Gulf themselves. The journey from the Gulf to Tabriz or Pahlevi usually takes eight to ten days.

From Kazvin, 100 miles to the North-west of Teheran, the road climbs over the Elburz range. Constantly on hairpin bends there are tricky negotiations with trucks.

The greatest inconvenience, however, is the blinding dust, which constantly obscures vision. In Pahlevi, where dozens of lorries arrive laden chiefly with rubber strips, steel bars and leather, the Russians closely guard the docks.

UNITED STATES OF AMERICA AND ATLANTIC

5th Feb.—Dr. Hu Shih in a speech in New York said: "Asia's need for an effective offensive to improve the present situation is urgent and necessary. Such an offensive, if begun now, will mean even more than the opening of China's supply lines or preparation for total operations against Japan."

6th Feb.—Lieut.-General Frank Maxwell Andrews took over command of the United States Forces in the European theatre of operations.

10th Feb.—Admiral Emory Land, Chairman of the Maritime Commission, said that the United States naval building programme would reach five ships daily by May.

11th Feb.—Mr. James Byrnes, Economic Director in the United States, said in Washington that the war plans for 1943 contemplated invasion of Europe.

INDIA, BURMA AND CEYLON

4th Feb.—The Royal Air Force raided Rathedaung, United States Army Air Forces attacked Kengtung in Eastern Burma.

5th Feb.—In the Donbaik area two fresh Japanese counter-attacks were repulsed.

9th Feb.—The Royal Air Force dropped nearly 30 tons of heavy bombs on enemy objectives in Rangoon.

ITALY, AFRICA AND THE MEDITERRANEAN

5th Feb.—Nine enemy ships were sunk in the Mediterranean.

U.S. planes attacked Palermo.

6th Feb.—Twenty-six German planes were shot down in Tunisia. Rommel's troops were forced to retire behind the Mareth line.

Turin was heavily bombed.

7th Feb.—It was officially announced that a North Africa Theatre of Operations had been established with General Eisenhower in command.

The Axis troops took Djebel Mansour.

General Giraud was appointed supreme head of the French African Government.

Mussolini dismissed Count Ciano (his son-in-law), the Italian Foreign Minister, and took over the post himself.

8th Feb.—General Montgomery concentrated the bulk of his forces on the Tunisian border for a final thrust on Tunisia.

9th Feb.—The Royal Air Force dropped numerous bombs on Naples.

General Montgomery's army crossed into Tunisia on the coastal sector.

Crown Prince Umberto was appointed Commander-in-Chief of the Italian forces on the Eastern Front.

10th Feb.—The Royal Air Force raided Tunisian ports and Axis ships in Sousse harbour were hit.

11th Feb.—It was revealed that the British troops narrowly missed capturing Rommel in El Alamein by a few minutes.

RUSSIA AND FINLAND

5th Feb.—The German army was split into two by a wedge driven by the Russians at Kushchevskaya. Hitler's Caucasian forces of 300,000 men faced an attempted "Dunkirk" across the Kerch Straits to Crimea.

Forty-nine Hungarian officers who attempted to surrender at Kochetovka were shot by the order of the German commander.

German troops were encircled and mopped up west of Voronezh.

Russian troops landed in Taman Peninsula.

6th Feb.—The Russians took Stary Oskol and Izyum.

Hitler ordered two-days' mourning for the German Sixth Army that perished before Stalingrad.

President Roosevelt congratulated M. Stalin on the "brilliant victory at Stalingrad."

7th Feb.—The Russians captured Bataisk, Lisichansk, Barvenkovo, Yeisk and Balaklya and reached the shores of the Sea of Azov. They also landed a number of tanks on the Taman Peninsula in the rear of the German army in the Caucasus.

9th Feb.—The Red Army retook Kursk, the key town north of Kharkov. The Germans retreated from Rostov to Taganrog.

10th Feb.—The Russians captured Bielgorod, an important railway junction 50 miles from Kharkov.

11th Feb.—The Red Army closed on Orel.

NEUTRAL COUNTRIES

7th Feb.—Ten of the 15 members of the new Persian Cabinet resigned.

10th Feb.—There was an air raid alert at Berne.

VICHY AND OCCUPIED COUNTRIES

7th Feb.—The Yugoslav War Minister, General Mihailovitch ordered a civil disobedience campaign throughout the country.

THE FAR EAST

5th Feb.—Allied bombers attacked Rabaul. United States troops advanced in Guadalcanar.

6th Feb.—Allied aircraft made a three-hour air raid on Buin in Bougainville Island in the Solomons.

It was revealed that since January 16, small groups of Japanese have been surrendering to Americans.

Explaining the "global strategy" as agreed between Mr. Churchill and President Roosevelt, Mr. Curtin, the Australian Prime Minister, said: "Defeat Germany first then deal with Japan."

7th Feb.—Three Japanese merchantmen were destroyed by United States bombers off Ambon.

In air battles over New Guinea, 41 Japanese planes were shot down at Wan by American aircraft.

10th Feb.—The Japanese evacuated Guadalcanar; they also evacuated the Buna area in New Guinea. They retreated in Yunnan.

11th Feb.—A major battle raged on the Yunnan-Burma border.

Japanese Raiders destroyed over Calcutta

FOUGHT ON IN BLAZING PLANE.—Flying Officer Charles Basil Crombie, of Warwick, New Zealand, who, although his own fighter plane was in flames, shot down two Japanese bombers and possibly a third in the Calcutta area on the night of January 19/20. He is being congratulated by Wing Commander J. A. O'Neill, D.F.C., another fighter pilot who destroyed a raider over Calcutta on December 24 last, the first Japanese aircraft to be shot down over the city.

A BOMBER THAT WAS.—Twisted remains of one of the three Japanese bombers shot down by Flight Sergeant Pring over the Calcutta area recently.

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV

FRIDAY, FEBRUARY 19, 1943

No. 23

The Happy Warrior

can always be counted on to see two steps ahead of everybody else. The clerk sometimes knows everything about his own job and a good deal about everybody else's job. Professors and students are a class apart, and a class of absorbing interest. In South India scholarship is of a high standard and the dignity of letters and science is an undisputed fact. In Madras the University is a centre of first-rate importance and has the prestige and the self-contained life of its opposite in an English University town.

CASTE DIFFERENCES

What is caste and where does it enter into the social picture? The great mass of the inhabitants of a South Indian city are Hindus, and Hindu society has for centuries, been divided into four big orders and into innumerable smaller orders. The four big 'castes' ('caste' derived from the Portuguese 'Casta' meaning race or kind) are the priestly caste—the Brahman, the ruling or military caste—the Kshatriya, the trading or artisan class—the Vaisya and the menial class—the Sudras. These four castes have been said to be distinguished by their colour, viz., Brahman, white; Kshatriya, red; Vaisya, yellow or turmeric colour; Sudra, black. Within each of these orders are innumerable castes and sub-castes.

How important is caste in South India to-day? Still quite important enough to justify the existence of Brahman and Non-Brahman political parties and keen animosities in social and political life. A Brahman clerk may be of humble economic status. He

may not earn more than Rs. 50 a month, but if he be orthodox, which he often is, he will 'feel' superior to a Non-Brahman Government official earning Rs. 1,000 a month. Caste is on the decline because of the terrific onslaught of economic change and of modern industrializing forces. But caste in South India will die hard.

LANGUAGE DIFFICULTIES

One more factor of interest and some practical importance to you—the languages of South India. You are fortunate in being with people who, however defective their English, can yet speak it fluently and in some cases read, and write it tolerably well. And this is the more to be admired when you realize that nothing could be further removed from Tamil, Telugu and Malayalam, their mother tongues, than an evenly spoken and unemotional language like English. Both Tamil and Telugu are gesture languages, with a rich idiom and a richer intonation. Spoken with relish, there is little to beat them for expressiveness. They resemble French more closely, perhaps, than any other European language. The mind of the educated Tamilian is as quick as his speech. He is always responsive to new ideas, has quick and skilful turns of phrase, is an able debater and frequently a powerful public speaker. He cannot be judged on his faulty English for his English is often faulty. Give him his head, get to know his language and him, and you will find him as rich in ideas as he is in expression, an intelligent and attractive human being.

SOME SOUTH INDIAN TYPES

A BRAHMAN PANDIT

A VILLAGE HEADMAN (HINDU)

A DEPRESSED CLASS LABOURER

A MUSLIM TRADER

Peacetime Soccer Stars give R.A.F. No Advantage Army Draws 2-2

TEAMS representing an army side of Bangalore area and the Royal Air Force met and drew at two goals each in a New Year's Eve attraction at Bangalore.

Players were—The Army: C. S. M. Higgins; 2/Lt. Devany and Sergt. Tanner; Sergt. Jones, Sergt. Henderson and S/C. Rowe; Cadet Brownley, L/Bdr. Langton, Sergt. Kempson, Sergt. Cunningham and Pte. Johnstone.

R.A.F. A/C. Page, Cpl. Brooks, A/C. Clunie, Cpl. Hobson, A/C. Davies, L.A.C. Jones, A/C. Middleton, A/C. Samuels, Cpl. Chaney, A/C. Surtees, Cpl. Clarke.

The Royal Air Force fielded two stars in Davies, one time of Arsenal, and Surtees, late of Sheffield Wednesday, but the Army turned out a strong all-round side. Nevertheless the game opened in disappointing fashion and succeeded only in being deadly dull during the first half. A hot sun was no doubt responsible for some of the lack of spirit to begin with, and a glassy pitch and dusty goalmouth gave forwards and defence of both sides plenty of trouble. The ball was swung almost idly from end to end, the Royal Air Force doing by far the majority of the pressing, but quite unable to finish off their efforts. Devany and Tanner did the work of four men during the first half hour and Jones, who played consistently well throughout the game was everywhere at once. The Army forwards seemed to be able to do nothing with the ball at all, and Davies had the Royal Air Force defence well organized. The Army penalty

area was the battle ground continuously but the bigger, heavier Army backs managed to hold a fast but small Air Force forward line.

A WIZARD SHOT

Cpl. Clarke, Royal Air Force, outside left opened the second half with a magnificent run down the touch line and a wizard shot that put the airmen one up. The goal brightened up the whole game, the Army forwards discovered the ball, and both sides began to get tough.

The Army equalized in somewhat unexpected fashion following a very long pass from the right half to Johnstone on the left wing who passed to Cunningham at centre forward. The centre made no mistake. The Royal Air Force were back immediately and got a penalty when Higgins picked up outside the penalty area. The penalty kick went over the bar, a fine chance missed. Army improved immensely, and the bulk of North country spectators behind the goal began to take heart.

Army kept on attacking but the nippy little Royal Air Force forwards still managed to make trouble when the ball came their way. They laid another siege to the army goal and gave Tanner and Devany another hard time. Surtees was once actually on the goal line with the ball between his feet, but so awkwardly placed, with Higgins working desperately to retrieve it that he could only pass it back. He did so, and Chaney put in a lovely shot. But the valiant Higgins scrambled to his feet and stopped it.

(Continued on page 10)

PEACETIME SOCCER STARS GIVE R.A.F. NO ADVANTAGE.

(Continued from page 8)

Henderson, Army centre half, put his side ahead in a swoop on the Royal Air Force goal that never looked like developing and suddenly did.

A HOPELESS GAGGLE

No one worked harder in front of goal than Cpl. Clarke, the Royal Air Force outside left,

and he finally got his reward, not long before time, when he ran the Army defence into a hopeless gaggle and scored with a shot that came out of a tangle of arms and legs.

In review it might be as well if both the Army and the Royal Air Force pay some more attention to team work. There was too much individualism, and while the Royal Air Force admittedly need some taller forwards, one felt that both arms of the British forces could have produced something better in the way of a match from the spectators viewpoint. A little more drive is needed.

A Straight (?) Story

IN the crowded dance hall, the band was doing things to "Indian Summer." It had been someone's favourite tune at home, and, having come through India they wanted to hear what it sounded like in the light of experience. Fell thought it sounded pretty awful. He explained it over the wet glass topped table to Hobson and Marjorie.

"Indian Summer, y'see, it's always summer in India, that's the catch, see?"

Nobody saw. The three of them had been working up to a climax, and a poor joke had the wrong effect. Hobson, big, dark, and not good at talking could see nothing but Marge. Marge was thinking of Fell. Fell was drunk, the Lord knew what he saw. "Drink—gets more confessions than a priest—and gives more consolation too," someone had said that, thought Hobson, or may be he had read it somewhere, but it was true enough to-night.

He cared so much for Marge who was stuck on that blasted corporal Fell, a man who would never do anything but one thing for any girl. Not for Marge though, he thought. Even out here, in the sweat and muck you sometimes met 'em like her, Indian Summer, she looked like spring.

Hobson guffawed into his beer at the thought of Spring, with the sweat soaking his collar band. He was not a regular like Fell, though he was a C.S.M. He had worked at a model factory outside a city and he knew what spring looked like. Fell he reckoned, had been East so long he didn't know what anything looked like. But he had the crazy don't-care-a-damn attraction that only a man who had no ties and no sense could afford to have. And did the women go for it? Why, God knew, all they really wanted was the chance of a good home and a steady job.

You couldn't go mad all your life, and any way what was so damned attractive about it? Drink, trouble, getting out of trouble, drink, women, heat, trouble and nothing at the end of it.

But he had, Hobson had. He had a job to go back to. No, he didn't want the war to last for ever. But he wanted it to finish properly, for him, and he didn't want it to finish until everything was proper.

He tried to define to himself what he meant by "proper," and failed.

He smiled and spilt some of his beer as he drank.

Marjorie was an evacuee from somewhere. It sort of depended who she was with—where she was from. If it had been the last war she would have been a Russian princess, or countess, but the racket didn't go any more. Anyway all the titles were in the ranks, and you never got anything out of the ranks,—except Fell.

The two men were for her, and with a peculiar lack of judgment she set down Hobson as drunk, and Fell almost sober. She didn't know Hobson had thoughts. All she knew was that he was stuck on her, and was too quiet, and big, and wouldn't let go easily. If it hadn't been for all "this" she might have liked him.

But Fell, he was always on top of the world. He had a face like that, and his eyes were so blue that you looked at them twice, and then didn't believe it. It would be life with Fell, and he had prospects.

"The Liar" she thought, but she didn't want to think that, and to-night he'd sure to make it definite.

"Let's dance" she told him. She thought that if she danced with him, somehow it might help to clinch matters. She switched on all the personality she could, and Fell steered her into the middle of the floor. They had made a third circuit, and she was congratulating herself when she noticed that Hobson was standing, and talking to a cop. As she watched she saw that he pointed her out to the redcap, then turned and disappeared in the crowd.

The band left "Indian Summer" and went into something South American. In South America apparently all the instruments in a band don't necessarily have to play together. It was easier for the band, but hotter for the dancers.

"Let's sit honey" suggested Fell, and Marjorie let him lead her off the floor. She was uneasy, though at any other time this might have meant an invitation outside. They walked holding hands, Fell steadying himself with a painful pressure on her fingers.

The Redcap was waiting. "You corporal Fell" he accused.

"Yes" said Fell, "so what".

"There's a company sergeant major outside, name of Hobson. He wants you, it's urgent."

Fell was puzzled, was even about to argue, then with a muttered invective changed his mind and pushed through the throng.

He turned to wave to Marge.

"Don't let the red get in your eye" he called.

The cop stayed to look at Marge, and Marge pretended he wasn't. "Be off at

eleven, see you then if the boy friend isn't back" he said, as he moved heavily away.

Hobson was waiting for Fell: "Come on it's a job" he wrenched at Fell's arm "Back to the lines, there's a truck here for us."

"Hi, what's the game, what job—"

"Come on you bloody fool, d'you think I'd pick you if there was any one else, anyway it was the Captain's orders, he said you—come on."

There was enough fear and excitement in Hobson's voice to carry Fell along, and the truck had taken one sickening corner before he thought of Marjorie.

He laughed at that. Didn't he have the luck. What a let off. And a night raid: he'd do well, he was getting somewhere. He began to sing.

The landings went all right. The mortars were the trouble as usual. They had to be carried, there was nothing else for it. Fell led the way, and although he was only supposed to lay the position he did the job thoroughly, and helped with the carry.

Cursing, under machine gun fire which seemed to be aimed right at them and yet couldn't be, the team got the guns in the hollow and Fell laid them. The third bomb hit some sort of a signal box arrangement, a wooden affair, and planks shot into the air. It was the first time that Fell had fired his guns and got such a good view of the show. He watched the advance, switched right and left as he saw the boys were held, and it was marvellous work. The base plates gripped well, and the error was then on training.

An anti-personnel burst somewhere on Fell's left. It turned him clean over, and flung him from his Observation Post into the gun position. His hand hit the hot barrel. One man was out for good and Fell took his place. Now he had to help with the gun, run up the O.P., have a look see, and dodge back. It was hell work and getting hotter. The bastards seemed to have got a bead on them. Naturally they would, hadn't he been giving to them. They were only doing what he would have done himself.

A burst came in enfilade, crossed the dip where they were, and that about finished it.

Fell went down with the rest of them. He knew it was his leg, but there was something else too. He began to cough.

The fire slackened and became intermittent.

It was obvious to the wounded man that his crowd was taking off. He looked over his team. They had been kneeling at the job of course, and the burst had come head high to them, and knee high to him.

That gun must have had a hell of a beaten zone. Funny what you think. The barrel must've been worn. "Yes" Fell told himself

seriously, "the barrel of that M.G. must've been worn like hell, couldn't have hit him else." He felt a sudden rage against the enemy gunner for not looking after his weapon better.

The company was passing them, getting out. Somebody was trying to pick him up, but he screamed with pain.

"Can't do anything with this one," said a platoon corporal to Hobson.

Hobson, blood across his face looked down at Fell. "He'll have to put up with it," he answered, slung him in a fireman's lift, and ran for the beach.

Fell screamed all the way to the landing boat, and Hobson thought that every damn rifle and gun in the place must have come down on them. But nothing happened and he got Fell into the boat.

There was none of that cigarette smoking, and Fell clung to Hobson as they sat on the wet, slippery floor, the floor where not so long ago they had crouched ready for the take off. Fell wanted to talk.

"Never knew him when he didn't," thought Hobson. But Fell was talking about Marjorie.

"It'll be a suck in for Marge," he said. "It would've been anyhow. She was all steamed up for the proposal to-night, but it wasn't coming off. Not me. Marry? I'd had what I wanted off Marge. You want to get stuck on her Hobby." He tried to grin into Hobson's face. "She's one of the worse, and everyone knows how you feel about her. I never meant it that way anyhow."

Hobson held Fell tighter and the wounded man yelled. He yelled so that he forgot about Marge, and how Hobson could have her, even forgot the pity of himself, the pity that he was done for and wouldn't dance again, may be wouldn't do anything again. He just yelled because it hurt, hurt in a tearing agony he didn't know could exist.

So he just opened his mouth and shouted to God Almighty to drown the pain.

Hobson tried to hold the man's arms still. He couldn't.

The blood came out of Fell's wide open mouth like a stream, ran down the front of his shirt, and on to Hobson's arm. Fell gave up shouting.

They did not go straight back. They stayed put and rested a day or two and the intelligence people went through them, though heaven knew it seemed to be little that anyone could tell.

Hobson, being senior, and recommended, went hospital visiting.

He met her in the little park in the hospital gates. Marjorie was going to do her morning war effort. They ray of sunshine for our poor brave boys.

And Fell had had her.

As they neared, Hobson was almost sure she was going to cut him. But she wavered, then faced him. She was in one temper.

"I hadn't meant to speak to you at all," she burst out. "Even if I wanted I couldn't tell you what I think of you. You must think you're clever in some way, and you know Harry and I were going to be engaged that night. You knew."—Hobson thought she was going to spit at him, and tried to imagine what was coming.

"You invented some special duty, I know you did. I suppose you think you can keep him on it for ever."

Hobson saw she was nearly mad, he saw what was the matter now all right.

She just had to have Fell.

Well she couldn't.

"Yes," he said, and didn't recognize his voice. "Yes, Fell will be on that duty for ever."

FIFTH COLUMN MONKEYS IN CEYLON!

Two playful monkeys of Ceylon who followed British signallers as they laid telephone cable, set up great excitement in German intelligence circles.

The monkeys thought the signaller had devised a new game for them, swung on the wire, which snapped.

All the Army in Ceylon enjoyed the signallers' rage, and the Germans heard the story.

Berlin Radio loudly commended the work of the splendid Fifth Column in Ceylon!

Going on Leave (?) Entertainments

ENTERTAINMENT on leave depends very much on the pocket. Those people who always had money any way, and there are not so many about nowadays, will spread themselves, but the majority of us, private soldiers

Y.M.C.A., the Red Shield Canteens, Toc. H. the Womens' Voluntary Service canteens, will all help a soldier to find his feet. If a man will think, organize his day, and use his tongue to ask for what he wants, as he would at home, he will have no difficulty in finding good places where he can eat and drink and have amusing entertainment.

and Non-Commissioned Officers, who have to live on our pay, must think while we spend, and make it go a long way.

With the one exception that a soldier does not actually go home, to find sister earning more money than he is and to be told to wash up the tea things, he can have just as good a time on leave in India as in England, if he gives it a little thought.

MAKE IT NORMAL

Keep down silly ideas. If you are not the kind of person who normally lunches at an expensive restaurant, has an afternoon at the races, and finishes off with dinner at the Ritz and a taxi to a night club, don't expect to do it in India. Try to make your entertainment normal, you will enjoy it far more and it will save a lot of irritation and bad temper.

In any of the towns where you spend leave, cinemas, dances, cafes, restaurants are reasonably cheap, if you pick the right one. The

The following letter is from Lahore from a British Officer

Commanding an Indian Auxiliary Pioneer Battalion :

No. , INDIAN AUXILIARY PIONEER BATTALION,
LAHORE, NORTH INDIA.

DEAR—,

The Chief Recruiting Officer at Bangalore was kind enough to tell us that the name of this unit had been submitted to you, and that your organization would perhaps look after us a little from the Comforts point of view.

We are a new unit, formed so recently as 28th August, and then chiefly on paper.

It is only within the last few weeks that our big numbers have begun to come in. Now we are some 1,400 strong.

Our men are from all parts of the Presidency, and even so far away as the Malabar coast, whence we have had some fine Malayalee young men, exceptionally clean smart, fellows.

We have six or seven languages, and I don't know how many castes, classes and sub-classes, but one thing is common to all, and that is the immense keenness of them all. They try very hard and do really learn and adapt themselves most remarkably quickly.

We should indeed be quite willing to take on the Punjabis in the camp next door, class for class and service for service, at any thing they liked despite their superior airs.

Personally, I have had to do with Cypriots, Libyan Arabs, German Palestinians, Mauritians, Sikhs, Garwalis, P.M's, 'Aliens' as well as British in this war, but the South Indian is new to me. He would seem to be at least as good material as any of the others however and I have no doubt we shall give good service wherever it is we are sent.

FIRST-RATE SOLDIERS FROM MADRAS.

We have been lucky in having a number of first-rate old soldiers, from the Carnatic Infantry, Madras Sappers and Miners, the Madras Infantry and so forth. Many have strings of medal ribbons and years and years of service. They have taken in hand new recruits, shepherded them here and there done police work, and in general been a tower of strength to us in the difficult task of raising this new unit.

Very soon we are expecting to be sent to one or other of the 'Operational Areas'.

Meanwhile, training of the latest batch of recruits goes forward. The air outside resounds to the orders of the squad instructors teaching the new men the elements of drill. A motor car in which learner drivers are practising careers round the parade ground. The sepoy (who are armed) are practising with the Bren gun in a corner, while at the "QM" store, a party of newly arrived sit round while the storeman issues them with their kits.

(At the moment there is a very temporary shortage of 'shorts' so that the latest arrivals have had to go on parade in grey shirts and their own Dhoties. They look a bit odd, but that is doubtless more than they would be wearing at home.)

The weather up here is very cold of a night now, and our men from the warmer climate of South India feel it keenly, so that what they want would be chiefly warm clothing to supplement the official issue.

I have asked my Company Commanders to let me know just what would be most acceptable, and I will enclose the list in this letter.

RECRUITS ON ARRIVAL.

The recruits on arrival are often so poor that they have not even a little bundle of possessions wrapped in a bit of cloth. Until just recently, when I pointed out to the Chief Recruiting Officer the necessity of warm clothing and or blankets for the five-day journey up here, the men were arriving with literally nothing but a dhotie.

COMPANY HAVILDAR-
MAJOR.

As a check on their development after arrival here, we took the measurements of a random-selected batch of 24 recruits.

They must have been living very poorly, for many of them weighed *no more than seven stone*. We are giving one batch of 12, extra rations, and checking their development against men getting no more than the normal good food issued to all.

The experiment is not yet complete, but it is quite evident that, apart from likes and dislikes, the men would benefit very much from some of those sugary sweetmeats that are to be found in every bazaar, or indeed from any kind of extra nourishment.

We are very busy at this time, having received certain orders, but just as luck would have it, I personally as C.O. am more or less laid up with a septic ankle which the Doctor forbids me to walk about on, in consequence of which I am having to devote myself to typing a few letters on my own portable machine.

It seemed to me that you would like to have some sort of explanation as to the kind of people we have in this unit, and to know a little about them, so that in addition to giving you these few details about our men, I am sending a few of my own coloured sketches which your Committee might like to see.

We are lucky in having four officers who speak the languages—or some of them—of South India. I personally do not, being a British Service Officer sent here from the Middle East, but my second in command speaks Tamil and Telugu fluently, being in civil life a Madras Policeman. Another is from Burma and speaks not only Tamil and Telugu, but all the Burmese languages as well. He is a Prison Service Officer and did the retreat out of Burma with the Army, all the way on his feet.

Another is a tea planter from Travancore, while another is a Madras businessman. The others know Hindi but not South Indian languages, one being a Darjeeling Tea planter, another a mill-manager from Bihar.

SOUTH INDIANS, VERY SMART AND INTELLIGENT.

Our Subadar-Major is a distinguished old soldier with, I believe, 36 years service. He is a Dogra, but speaks Tamil.

Our other V.C.Os. are South Indians, and a very smart, intelligent lot, too.

The N.C.Os. are nearly all old soldiers, some with 30 years service grand fellows.

Our job, when we go on service will be to provide men for the less skilled parts of the engineers' jobs, to handle shells, stores, unload ships, make fortifications—in general to be the Army's handymen. Not showy, but very necessary work.

We shall be changing our address very soon, no doubt, but I will see that you are kept informed of it.

Any 'comforts' you should send along for our men will be carefully acknowledged, and I will see to it that you are kept informed about our welfare.

To this letter, when I receive it from the Company Commanders, I will just add the list of the kind of things which would be acceptable to our men.

With thanks,

Yours faithfully,

..... Major,
Commanding No. , Indian Auxiliary Pioneer Battalion.

WHAT THOSE NEW BOOTS
FEEL LIKE!

SEPOY (TYPE).

HOW TO BE HAPPY ON LEAVE

ONAM FESTIVAL

The Feasts of Kerala

KERALA, the land of the coconut palms, is the name given to Travancore, Cochin and British Malabar on the south-west coast of India. It is the home of the Malayalees, Malayalam in the language of the country meaning—'The Land of Hills'.

Generally hot and sticky, Kerala nevertheless has rarely failed to attract lovers of beauty. One is never far from the sea, and one lives among hills. The effect of 'the two voices' on the natives of Kerala is to make them a sort of Indian version of the Welsh, steeped in legendry, with a turn for the eerie and with that wholesome gift of naïveté, doubly wholesome in war-time of flinging themselves heart and soul, into the spirit of their national festivals.

The chief of these are Vishu, Onam and Thiruvathira.

Vishu falls in April, is the first day of the first Malayalam month "Medam." It is the Malayalee Divali, the feast of lights and crackers. On the eve of the feast, rice and fruits, a bell-metal looking-glass, gold ornaments, a gold bordered mundu and flowers of the Konka tree are placed before the picture of Mahalakshmi as Vishu-kani. Lamps are kept burning through the night. Early in the morning the eldest member of the house sees the Kani first. He leads the others in, their eyes tightly shut. Small gifts of money are

made to children and servants. Crackers go off at all hours and the house rings with merriment. Tenants come in with offerings to the master of the house. By midday—the feast is over . . . and Kerala returns to its fields and palms.

HARVEST FESTIVAL

Onam, the harvest festival, occurs in September or sometimes late in August. Legend says that in the golden age of Mahabali, the Gods angered by the worship paid the king by his people, descended upon him and destroyed him. Vishnu, in his incarnation as Vamana, appeared before Mahabali, as a most beautiful boy. Enchanted by his youthful loveliness, Mahabali asked the boy to name his wish, and it would be granted. Vamana is said to have asked for just three feet of earth, a request gladly granted by the King. Then to Mahabali's amazement, Vamana assumed the proportions of a monster and his three feet of earth covered more than the whole extent of the kingdom. The deficiency was made up by the God's placing his foot on Mahabali's head and crushing him down to the nether world. But the story does not end there. Mahabali's people wept for their king, and the Gods in pity or justice, or fear at the clamour of mortals permitted him to return to earth once a year. Mahabali's return is earth's season of prosperity.

On the day of the feast, children go out to gather flowers for the front of the house. Intricate patterns in flour are traced on the floor. Clay figures of Mahabali are made and honoured, and all goes happy as a marriage bell. Bananas, symbol of plenty, appear in profusion. There are games and folk-songs and country dances. The feast is not restricted to the Hindu population. Malayalee Christians and Muslims join in with great glee.

FEAST OF THE INDIAN CUPID

Thiruvathira is celebrated in the month of Dhanu, between December and January, and

is the feast of the common people. According to Malayalee belief, Kamadeva, the Indian Cupid, shrivelled into nothing when the God Siva, disturbed from his 'tapasya', fixed his terrible third eye on the God of Love. On Thiruvathira, Malayalee women mourn the death of Kamadeva. They rise early, go to the tank and bathe. There, they sing the Love God's dirge, and then take their turns at the swing, swinging higher and higher to dizzy heights. The rest of the day is spent in merriment in which, presumably, Kamadeva's death is forgotten with a capriciousness that, perhaps, only he would rightly understand.

AMERICANS SAID—

They fought against overwhelming odds;
They wiped out masses of Japs and Burmans;
They killed until killing sickened them;
They fought through the night, and through the dawn;
They fought till their boots fell off;
They fought with deathless gallantry;
They gave their lives freely, yet exacted a grim price;

—They were the men of the Cameronians, the Duke of Wellingtons, the West Yorks, the Essex Yeomanry, the Gloucesters, the Royal Inskillings.

—Tribute by American Newspaper, *Portland Oregonian*.

"A HUGE ROCK RISES ABRUPTLY FROM THE PLAINS"—Rock Fort, Trichinopoly, centre of several bloody battles between the French and the British.

Places worth a visit

THE old sweat who had spent heaven knows how many years in India, and had absolutely nothing to show for it, was the most pathetic sight in the Regimental depots at home at the beginning of the war. He used to talk about "Rooti" and "Char" and be very mysterious and superior about the wonderful experience he had in India, but when the whole thing was boiled down, all he knew about India, apart from regimental musings was that it was very hot, and that Rasmak was a hell of a place.

India has plenty to show the Britisher, free, plenty of sights to broaden the mind, increase knowledge, and help a man when he gets home, to be something more than just another soldier.

The very sight of some of these almost incredible buildings should start some spark of more than passing interest. The least that one can say about them is that they show where many decorators of the interiors of super cinemas at home got their ideas, but a little serious attention repays itself a hundred-fold.

A HISTORIC TOWN

Trichinopoly is an excellent place for a beginning. There has been very little war in Southern India that has not affected this

historic town, and the fort on that huge rock that rises abruptly from the plain was the centre of several bloody battles between French and British. Clive, Lawrence, Dupleix, Tippu Sultan and Hyder Ali—all organized their armies around it in either attack or defence at one time or another. Great flights of steps lead to the top of the rock where the grim square fort stands below a very lovely temple.

Only 31 miles from Trichinopoly, a bus ride, is Tanjore, the seat of two Hindu dynasties. Tanjore was the centre of an accomplished and flourishing civilization at the time when Elizabeth's licensed pirates were chasing the Spanish Armada up the Channel.

Like the majority of peoples before the twentieth century, the inhabitants of the country put their artistic expression into religious buildings and the carvings on the temples in Tanjore are some of the finest in India, and a vigorous change from anything seen in Europe.

A 12TH-CENTURY MARVEL

The Great Temple, which was built about the time that William the Conqueror was settling down in England, was conceived and constructed as a whole, and not piecemeal, so that it displays purely the design and thought of the Indian of the twelfth century.

"CARVINGS ON THE TEMPLE IN TANJORE ARE SOME OF THE FINEST IN INDIA"—A view of the Great Temple. The stone sculpture of the Sacred Bull can be seen between the main pillars.

"THE GREEKS AND ROMANS KNEW MADURA"—A view of the Temple and tank.

Its tower, which is 216 feet high is crowned with one eighty ton block of granite. To get it there the builders made a sloping road four miles long, and pushed it up! The stone sculpture of the sacred bull is in this temple, and the building is still used for religious ceremonies. The people worship there now, in the same way that they did when it was first built nearly a thousand years ago.

A BEWILDERING PHANTASY

South of Trichinopoly, a little over a hundred miles is Madura. In Madura Indians were attending a celebrated college in the year 200, during the time when the Romans were building their roads in Britain and the local inhabitants favoured a blue dye smeared over the body as the height of fashion for the season. It was more or less the Oxford of Southern India until the eighth century. The Greeks and Romans knew Madura, the details of their connection with the city which was then an Empire's metropolis are lost, but they certainly engaged in trade there, for many of their copper coins have been found. The temples and palaces of Madura are very different in style from Tanjore, even more ornate, and built with great rectangular towers which are covered with a bewildering phantasy of carving. An enthusiastic photographer can

have the time of his life at Madura, and take away proof of the tales he will have to tell.

In Mysore city itself, the capital of one of India's most important states, there is enough interest and amusement to fill a whole leave. Returning to the subject of temples, a subject that should never prove boring in India, Mysore provides the ultimate answer, in the Hoysala temples. Haider Ali Khan and Tippu Sultan are names which dominate modern history of Mysore. Father and son, great villains both of them, but no greater than many in Europe today, they extended the boundaries of the Kingdom in all directions, and there were four Mysore wars with the British, Tippu Sultan playing the leading role.

Before firearms became quite too popular in the war effort the Indian had a far greater range of killing weapons than the European, who usually stuck to the sword, shield, bow and arrow and an odd battle axe. In the palace armoury in Tanjore is a grand collection of curious swords, sticking knives, knives that open like a pair of scissors and inflict a wound which used to make an enemy think twice before he came again. There too are the golden trappings and ornaments that decorated the state elephants of the Raja when he rode abroad.

Making the Best of it

[This is a British soldier's own story of how he spends his time in India, and it displays a common-sense attitude which has been far too absent in the majority of cases. He has been lucky in that he has had two changes of station, and naturally of area but he has no money of his own and yet manages to keep his interest alive wherever he finds himself.]

A few years ago many of us would have welcomed the chance of foreign travel. To-day we find ourselves—not on a conducted pleasure tour—but engaged in a bitter struggle. A few years ago many of us never ventured further than Brighton Pier, at the most we took a day's trip across the Channel. Now we find ourselves many thousands of miles away from our homes, and faced with a stay, not of days and weeks, but of months and years.

How can we make the best of our spare time. Many of us are trying to 'carry on' the routine of our English life; our spare time is being spent in a tramp from barracks to bar and from bar to cinema. Are we making the best of our opportunities?

How much you get out of India depends largely on your outlook. During my two years stay in India I have tried to come to a sympathetic understanding with India and the Indian. I have genuinely tried to treat the Indian as I would his English equivalent. Giving courtesy I have never received discourtesy in return.

A GLORIOUS SAGA

The purchase of an elementary book on Indian History (these can always be purchased cheaply in the bazaar) will unfold a glorious saga stretching over five thousand years. How many realize that over fifty centuries ago a great civilization flourished in the Indus Valley. The book would speak also of the origin of Hinduism, of the rise and fall of Buddhism, of the coming of the Moslems and the foundation of the British Empire in India.

An elementary book on Indian geography should also be purchased. This book would speak of India's great population, what it does, how it is fed, it would speak of the monsoons, of the irrigation systems.

Equipped with a general background I would turn to local history and activity. If I were in Poona I would read something of the Marathas. Poona was the centre of the Maratha power and the Marathas at one time ruled most of India. If I were in Bangalore I would purchase a little book called "Mysore" by Narayan, which would introduce me to a brief local history and outline the

various places of interest in the State of Mysore.

Language will always remain a difficult barrier between us and the Indian. You may have read of the hundreds of Indian languages. Many of these languages are spoken by a very few people. It is estimated that over two-thirds of the Indian people speak a form of Hindustani, although in many cases they speak Hindustani in addition to their local language. In South India, where Hindustani is not so widely used, there are four main languages. Throughout most of Northern, Eastern and Central India it is possible to get along with Hindustani. The best plan is to make an effort to speak at least some simple Hindustani, and as for the other languages learn a little as necessity demands. You will find that the slightest smattering of Hindustani will make a great difference.

HOW TO GET ABOUT

Now we come to the question of how to get about. For small distances the best way is to hire a dependable bicycle or walk. For longer distances the only practical way is to travel by train or by country bus. If you travel by train you can get a soldier's concession ticket. In many places the only way of getting about is by country bus. There is nothing to be afraid of in the country bus (although it is much more pleasant to travel in front, and you can always do this by prior arrangement with the bus company). I have travelled many hundreds of miles in country buses, and cramped as they are, they are an excellent way of seeing Indian life at first hand. Most of the drivers speak Hindustani.

When I was in Poona, I often left the station in the early morning by the Bombay train, and reached Khandala at the summit of the Bhor Ghat. From Khandala I have rambled through miles of the beautiful mountain country of the Western Ghats. Nearby is Lonavla, which is a good jumping off point for a walk to the Karli Caves (Buddhist), some

six miles to the north-east. Six miles due south is the Maratha strong fortress of Lohagad, which was garrisoned by British troops until 1846.

Whilst I have been in Bangalore, I have often gone out to Nandidrug. This fortress lies some forty miles north of Bangalore. The best way to get there, is to leave the Bangalore City Station early in the morning by the Chik Ballapur train, and alight at Nandi. From Nandi you walk and climb to the top of Nandidrug. This fortress was built by Tipptu Sultan, and was very strong in its day. From the walls at the top it is possible to enjoy a beautiful view. Mysore is within easy reach of Bangalore, and from Mysore you can get to Krishnarajasagara Dam, or to the ruins of Seringapatam, where the power of Tipptu Sultan was finally broken. A pleasant day can be spent in Mysore itself, and from the top of Chamundi Hill, south of the city, you can command a complete view of Mysore City.

THE REAL INDIA

I have suggested some ways of seeing something of interest. But the travelling is half the fun. In the train and in the bus it is always possible to learn a great deal by conversation, especially if you know enough about India to hold your own intelligently, and are prepared to learn more. I have always found fellow travellers unreserved and willing to embark on conversation. Passing through the villages you will see the real India, and you will begin to appreciate the patient tilling and weeding, and the irrigation methods.

When I leave India, I hope to do so without recalling lost opportunities of seeing a country which holds a fifth of the world's population, a country which I shall probably never see again. I hope to leave with a deeper understanding of a country which promises to play a more and more important part in the world of to-morrow, for which we are struggling to-day.

Soldiers, Use Your Cameras!

Photographs taken by soldiers on active service may now be published in newspapers, provided they receive the approval of the military censorship.

The use of cameras in theatres of active operations will be under the control of an Officer-in-charge of photography.

Under a similar arrangement men of the Royal Navy have taken pictures which have provided the public with a graphic record of the war at sea.

The new order is provisional, and will remain in force for three months. The number of cameras permitted to be taken into operational areas will be confined to two per unit.

LEGWEAR

The officer who rides and shoots
The Cavalry—in fact—wear boots
Slim cylinders of polished hide
Which hide the spindle shanks inside.

The Gurkhas with their massive calves
Disdain to do the thing by halves
They go the whole Hog, calf, or cow
In either leg a hide allow
Their Dictatorial boots, they tell us,
Make Rome & Berchtesgarden jealous.

The Racin' steeplechasin' chap
When on parade, wears boots to clap
But in his leisure hours he'll hack
In ankle boots of glossy black
And these he'll usually crown
With leggin's (usually known).

The infantier wears leggin's too
(They look the same to me and you)
But to the more discerning eye
A subtle difference seems to lie
(Just as there does twixt guests & waiters)
Between their leggin's & our gaiters.

Sending anything home?

THE DOMINATING AIM

MR. CHURCHILL IN CAIRO

The dominating aim which we set before ourselves in the Conference at Casablanca was to engage the enemy's forces on land, sea, and in the air, on the largest possible scale and at the earliest possible moment . . .

We have to make the enemy burn and bleed in every way physically and reasonably possible, in the same way as he has been burnt and bled along the vast Russian Front from the White Sea to the Black Sea.

We have now a complete plan of action . . . This plan we are going to carry out according to our ability during the next nine months . . .

Everywhere in Egypt, there is the feeling that Britain had kept her word, that we have been a faithful and unfailing Ally, and that we preserved the Nile Valley and its cities, villages, and fertile lands from the horrors of invasion.

MR. CHURCHILL, in his war review in the Commons on February 11.

Running Commentary

Mr. Churchill's War Review—U.S. President on Roads to Tokyo.

In his review of the war situation, in the House of Commons on February 11, MR. CHURCHILL referred to the position in the Far East and the operations in Burma. He said, "For the time being in the war against Japan, the British effort is confined to the India theatre. Our Asiatic war effort is confined to operations particularly in Burma, to open the Burma road to give what aid can be given to the Chinese." The British Government have been in close correspondence with MARSHAL CHIANG KAI-SHEK in regard to this matter, and GENERAL ARNOLD, Head of the United States Air Force, and FIELD MARSHAL SIR JOHN DILL have been conferring with the Chinese Generalissimo regarding plans for the future. PRESIDENT ROOSEVELT has referred to this conference in his nation-wide broadcast address to the American people, on the occasion of the annual dinner of the White House Correspondents' Association on February 12. "Great and decisive actions against the Japanese," he said, "will be taken to drive the invader from the soil of China. Important actions will be taken in the skies over China—and over Japan itself. The discussions at Casablanca have been continued in Chungking with the Generalissimo by GENERAL ARNOLD and have resulted in definite plans for offensive operations. There are many roads which lead right to Tokyo. We shall neglect none of them."

* * * *

The overthrow of Japan was one of the important subjects discussed at the Casablanca Conference. It may be said that the Chungking and Calcutta Conferences were to the Far East what the Casablanca Conference was to Europe. Though they form part of the general global strategic plan, the Casablanca Conference primarily concerned itself with a programme of action for the overthrow of Germany and Italy in Europe, and the Chungking and Calcutta Conferences devoted their attention to war plans in India and the Far East for the overthrow of Japan.

Wavell-Ho Ying-Chin Talks.

The important discussions in which FIELD MARSHAL WAVELL and GENERAL HO YING-CHIN, the Chinese Minister for War, participated should not, however, be taken as an indication that a new big offensive is to be taken from India in the near future to reconquer lost territory. It is even possible that the Conferences might have reached the decision that the time was not yet ripe for a big seaborne offensive against Japan—the only possible way at present of carrying out an effective offensive—before the monsoon. By the middle of next month, the monsoon will already begin to be felt along the Arakan Coast, and high winds and rough seas will make it difficult for landing craft to operate. In case postponement of operations was decided on, it must have been done with the full consent of China. But it is of interest to note that the communiqué issued after the Conferences announced that there will be a conference between GENERAL MACARTHUR and FIELD MARSHAL WAVELL in India to ensure fullest co-operation. This is a clear indication that large plans for striking at the heart of Japan are under consideration.

* * * *

Britain and Burma : Plans for Post-War Reconstruction.

So far as Burma herself is concerned, the British Government have been taking considerable interest in the matter of post-war reconstruction. Replying to a question in Parliament, MR. AMERY, Secretary

SOUTHERN ARMY SPECIAL SUPPLEMENT

With this Number is issued a Southern Army Special Supplement consisting of 24 pages.

The Editor wishes to thank Military authorities who have contributed articles and pictures to this Supplement and hopes it will be of some help in increasing the mutual respect and good fellowship between the Military and the Civil population.

H.E. GENERAL HO YING-CHIN, Chief of the Chinese General Staff and War Minister since 1929, has visited India at the invitation of Field Marshal Wavell. This follows the conferences held at Chungking between Chinese, American and British Chiefs.

H.E. GENERAL HO YING-CHIN arrived at Delhi Air-port with Lieutenant-General Yu Ta Wei, where they were greeted by Field Marshal Wavell. Photo shows General Ho Ying-Chin with Field Marshal Wavell.

of State for India and Burma, indicated the directions in which the British Government are helping the Burma Government at present located in India. They are mainly threefold:—

- (1) To establish an organisation to meet the requirements of the military authorities in the operations for the recovery of the country and afford the fullest co-operation in hastening the defeat of the Japanese;
- (2) To formulate plans for the material reconstruction of Burma and for the re-establishment of normal life of the country after the eviction of the Japanese;
- (3) To study the whole field of administrative problems and make proposals for future policy.

The future of Burma thus involves long-term and short-term plans. The short-term plan is that of clearing the Japanese out of Burma and of bringing some sort of order out of the present chaos. The long-term plan relates to the great work of reconstruction which will build a Burma able to stand on her own feet, defend herself both from armed

attack and from undue commercial competition, and work whatever form of self-government may be found to be most suitable to her.

* * * *

At present, Burma does not enjoy any kind of freedom. As in other occupied countries, the Japanese have dissolved all political parties. They have disillusioned even those Burmans who helped their armies to advance into the country and proved beyond doubt that their object is not to give freedom, but to keep Burma under their iron heel. Britain's policy is to help her to regain the freedom which she had lost and restore the self-government which she was enjoying. There is nothing perhaps which is more easy than to declare Burma independent and to fix a date for her attainment of that goal, as was demonstrated by Japan, but that would not be honest, and it would be doing the greatest disservice to Burmans themselves, for Burma is at present relatively undeveloped and has now been devastated by war and Japanese exploitation. She can only enjoy real independence after a period of reconstruction—reconstruction not as a

(Continued on page 6.)

“ONE thing at a time, and that done well, is a very good rule, as many can tell”—so runs an old saying. But Soviet Russia has proved that many things at a time, and everything done well, is the best rule in dealing with the Nazi hordes. Her policy of bringing simultaneous pressure to bear on widely separated German strongholds along the front has brought success after success. This has forced the Germans to fight on grounds chosen by the Russians and prevented them from switching reserves from one area to another.

THE capture of Rostov, which is one of the greatest successes of the Red Army, is the result of this strategy. From the way in which things were working at first, it seemed that the Russians were driving straight to Rostov, and it was expected that one of the fiercest battles in the Russian campaign would be fought for the capital of the Don Cossack country. But what really happened was that the impact of the Russian drive did not speedily and directly fall on Rostov, but was distributed to widely separated positions. Kursk, Kharkov and Voroshilovgrad, three other German strongholds, were subjected to simultaneous and grave pressure. The Germans had thus to worry not only about Rostov, but also about the other important bases at the same time.

The German Winter Line

THE Germans could not afford to lose any of these bases, for on them rested their real winter line. Their main strong points along their north-south line of communications were Rostov, Voroshilovgrad, Kharkov, Byelgorod, Kursk and Orel, and all of them, except Orel, have been captured by the Red Army. These positions were captured by forces which struck out north, west and south from Russian strongholds like Voronezh, Valuiki, Millerovo, Kupyansk, Salsk and Tikhoretsk. When the Germans lost Tikhoretsk, they had still hopes of defending themselves with their backs to the Sea of Azov and along the arc which stretches from Rostov to Novorossisk, but when they lost Kuschevskaya, that hope also vanished, because Marshal von List's Kuban army was split into two by the capture of this railway junction, through which runs the westerly railway line to Rostov. One part of the army is heading straight to the Kerch Straits and the other is in a small bridgehead south of the Don Estuary.

Changed hands Four Times

THE point that we desire to stress is that the capture of Rostov was rendered easier on account of the simultaneous thrusts on three other German strongholds. This is the fourth time that Rostov has changed hands. It was captured by the Germans on November 23, 1941, but only six days later, it was recaptured by Russian forces

under the leadership of Marshal Timoshenko. Eight months afterwards, that is on July 24, 1942, it again fell into the German hands. And last Sunday, February 14, 1943, six months and three weeks later, it has been recaptured by the Red Army a second time, and it may be stated with a good deal of certainty that it will not change hands again.

THE capture of Rostov is highly important, for it represents the completion of the first stage of the reconquest of the entire Donetz Basin. To the Germans it was the gateway to the Caucasus, and now it has become the gateway to the Ukraine to the Russians. It is one of the most important railway junctions of Southern Russia, and an important port for seagoing ships. Before the German invasion, it was the centre of a very important coal and industrial region, and 50 per cent of the Caucasus oil came through the gigantic pipeline, of which it was the western terminus. But the capture of Rostov by the Germans was not of much economic gain to them, because all factories and machinery were safely carried away to the Urals region much earlier.

Timing and Technique

THE important thing to note in the capture of Rostov is the timing and technique of the Soviet strategical drive. It is stated that the distinctive feature of highly disciplined troops is the capacity to hold their fire in the face of an advancing enemy until the most critical moment, and that the hallmark of good generalship is the exercise of a sort of sixth sense in deciding exactly when and where to strike back. The Russian successes are due to the possession of both these qualities. They launched their attacks neither too soon, nor too late. The counter-offensive which began with the encirclement of the German Sixth Army provides a brilliant demonstration of perfect timing, and the manner in which Rostov was captured by threatening all the German bases on the Voronezh front at the same time reveals the masterly technique of Russian strategy.

After Rostov—Kharkov

THE same technique has brought about the fall of Kharkov, just two days after the capture of Rostov. On February 16, after a determined attack which eventually led to fierce street fighting, the Russian troops captured the City of Kharkov. The liberation of the City from enemy hands and the routing of the Nazi forces were brought about by the Soviet troops commanded by Colonel-General Golikov. A few hours before the official Soviet announcement of the capture of Hitler's greatest base in South Russia, a German military spokesman told a Swedish newspaper correspondent, “We have suffered a defeat unprecedented in this war.” It was an unprecedented defeat no doubt, but it was not unexpected. When Kupyansk, Novo Oskol, and Byelgorod, the key German outpost between Kharkov and Kursk, were captured, it was evident that the threat to Kharkov from Soviet forces operating on the south-east and north-east of the town was of a serious character, and its fall a mere question of time.

“East Wall” Crumbles

ROSTOV, Kursk and Kharkov—the next step is Orel. With the capture of Orel, Germany's “East Wall” will crumble. The hammer strokes Hitler's hordes are receiving in quick succession spell the early doom of the Axis in Russia.

RUNNING COMMENTARY

(Continued from page 3.)

mere supplier of food, raw materials and revenue to Japanese imperialism, but as an autonomous unit in world economy.

* * * *

For the purpose of such a reconstruction, the Governor of Burma has set up a special department to prepare plans to study the economic and social problems and draw up proposals on which the future reconstruction of Burma can be based. MR. AMERY stated that

"the Burmese Premier, the Finance Minister and other Burmans are closely connected with this department which is manned by young officers of proved ability." This is a great task that has been undertaken, for it involves a range over every detail of administration, law and order, communications, education, health, land, industry, commerce and finance, and will cost far more money than the Japanese would ever be prepared to put into Burma, and will be discharged with far more honesty than the Japanese have shown in attempting to make a quick profit out of a ravaged country, all the time dangling the bait of "independence" before the Burmese people.

Diary of the War

ENGLAND AND GERMANY

12th Feb.—Mr. Churchill reviewed the war situation in the House of Commons.

Three German aircraft were destroyed by the Royal Air Force over the south coast of England.

13th Feb.—There was an artillery duel across the Channel.

14th Feb.—The Royal Air Force attacked docks and shipping at Boulogne and Saint Malo and iron and steel works at Ijmuiden.

15th Feb.—L'Orient, Western Germany and Northern France were attacked by the Royal Air Force. Four Axis planes were shot down into the Channel.

Cologne and Milan were also bombed and Dunkirk was twice raided.

16th Feb.—It was reported that Hitler was preparing to give up the supreme command of the German forces to Marshal von Manstein. It was also reported that he was preparing to form a Defence Council.

17th Feb.—The Government decided "to accept in principle the main features of the Beveridge Plan" of social security for all.

The Royal Air Force raided targets in Belgium and Western Germany.

18th Feb.—The Royal Air Force attacked Lorient. German raiders were over South Wales.

UNITED STATES OF AMERICA AND ATLANTIC

12th Feb.—Col. Frank Knox, United States Navy Secretary, in a speech on the anniversary of Lincoln's birth said that isolation—Political military and economic—was no longer possible,

for the American people whose welfare was bound up with the welfare of all peoples.

13th Feb.—President Roosevelt broadcasting from the annual dinner of the White House Correspondents' Association indicated that the United Nations planned to open a second front in Europe after the coming battle in Tunisia.

15th Feb.—The great 35,000-ton French battleship *Richelieu*,—one of the world's greatest surface warships—arrived in New York harbour from Dakar.

18th Feb.—Marshal Timoshenko arrived in Washington.

INDIA, BURMA AND CEYLON

12th Feb.—It was announced that a Lend-Lease Mission from America would be shortly coming out to India.

The Royal Air Force aircraft attacked objectives in enemy-occupied Burma. Stiff fighting continued in Arakan.

Two Chinese Generals, General Ho Yin Chin, Chief of the Chinese General staff and War Minister and Lieut.-General Yu Ta Wei, Master-General of Ordnance, arrived in India on a visit.

13th Feb.—Enemy attacks in the vicinity of Donbaik and Rathedaung were repulsed.

14th Feb.—The Royal Air Force attacked enemy objectives, especially in the Lower Chindwin region.

15th Feb.—The Royal Air Force attacked Kalachaung village on the Mayu Peninsula. Two enemy aircraft were destroyed and several damaged.

17th Feb.—The Royal Air Force attacked the Japanese aerodrome at Magwe.

(Continued on page 8.)

DIARY OF THE WAR

(Continued from page 6)

The Hon. Sir H. P. Mody, the Hon. Mr. N. R. Sarcar and the Hon. Mr. M. S. Aney, Members of the Viceroy's Executive Council, resigned in connexion with the Government's decision not to release Mr. Gandhi unconditionally.

ITALY, AFRICA AND THE MEDITERRANEAN

12th Feb.—General Eisenhower was appointed Allied Commander-in-Chief in North Africa.

Mr. Stimson, United States Secretary of State for War, said that heavy fighting was imminent in Tunisia.

13th Feb.—Several Under Secretaries resigned from Mussolini's Government.

Rommel's troops fell back into Tunisia.

Wholesale evacuations from villages along the coastline of Africa were carried out by the order of the German military authorities.

The Eighth Army released over 2,000 Jews, residents of Tobruk, Derna, Barce and Benghazi.

14th Feb.—Axis thrust in Ousseltia Valley was repelled.

The Government of Albania resigned.

15th Feb.—The Eighth Army units made another forward push in the coastal sector of Tunisia. Bizerta was bombed.

American aircraft bombed Naples; British bombers attacked Calabria and Sicily.

16th Feb.—There was heavy fighting west of Faïd. Allied bombers attacked objectives at Maknassy and Sened.

17th Feb.—Rommel was reported to be seriously ill in Germany.

American troops left Gafsa but the Allies took Ben Gardane. The Germans withdrew in Southern Tunisia.

18th Feb.—Rommel's forces withdrew to Mareth line. United States forces advanced 10 miles.

Six Axis supply ships were sunk in the Mediterranean.

RUSSIA AND FINLAND

12th Feb.—The Russians retook Lozovaya on the main line to Crimea and landed troops on the Black Sea Coast.

13th Feb.—The Red Army retook Krasnodar. Kharkov was partially encircled.

14th Feb.—Rostov was in flames. The Russians captured Novo Cherkassk.

Writing in the *Red Star*, President Kalinin said: "Germany's position to-day, despite her territorial gains, very much resembles that in which she stood in 1918."

15th Feb.—The Russians took Rostov and Voroshilovgrad. The Germans abandoned Kharkov.

16th Feb.—Kharkov defences were breached and the Russian forces advanced on Taganrog. Over 100 German tanks were destroyed and 15 were captured.

17th Feb.—It was reported that Marshal Timoshenko was en route to the United States with four Russian Staff Generals and an Admiral.

The Russians entered Kharkov and closed in on Orel.

18th Feb.—The Russian troops took Slavinsk, Ziev and Roventry. They were 12 miles from Taganrog.

NEUTRAL COUNTRIES

12th Feb.—There were rumours that Mihail Antonescu, Rumanian Foreign Minister, and brother of the Rumanian "Dictator," had fled to Turkey with a request for mediation in a separate peace.

14th Feb.—An air raid alert sounded in Zurich and Basle.

The Prime Minister of Persia resigned.

15th Feb.—Ali Soheily was chosen as the new Premier of Iran by the Shah.

A great number of foreign aircraft flew over Switzerland.

SHIPPING

12th Feb.—The British submarine "P. 48" was lost.

17th Feb.—It was officially announced that the Japanese sank one heavy United States cruiser and one destroyer in the South Pacific.

VICHY AND OCCUPIED COUNTRIES

14th Feb.—The Nazis issued new orders to speed up the extermination of the Jews remaining in Occupied Europe by mass massacres and starvation.

15th Feb.—Two German officers were seriously wounded by terrorists in Paris.

THE FAR EAST

12th Feb.—Mr. Stimson, United States Secretary of State for War, disclosed that 4,000 Japanese were killed and 105 taken prisoner in the Solomons during the last two weeks of January.

The main Japanese force was thrown back at Wau.

13th Feb.—Three Japanese warships were sunk in Guadalcanar. The Japanese were decisively defeated in the Wau area.

14th Feb.—Allied troops continued to push forward in Salamau area. A Japanese transport was bombed off Cape Orford.

15th Feb.—A Japanese patrol was ambushed at Wau. It was revealed that 6,066 Japanese were killed and 127 captured during the victorious battle on the Guadalcanar.

16th Feb.—More than 30 Allied bombers gave Rabaul a terrific pounding.

17th Feb.—American bombers raided Kiska.

MADRAS WAR REVIEW

A WEEKLY BULLETIN OF THE WORLD WAR

VOL. IV FRIDAY, FEBRUARY 26, 1943 No. 25

Tribute to the Red Army

H.M. THE KING-EMPEROR

To-day I and my peoples join with the peoples of the Soviet Union in wholehearted tribute to the heroic qualities and magnificent leadership, whereby the Red Army in its struggle against our common enemies has by its resounding triumphs written new pages of history

It was the unyielding resistance of Stalingrad that turned the tide and heralded the crushing blows which have struck dismay into the foes of civilization and freedom

To mark the profound admiration felt by myself and the peoples of the British Empire, I have given commands for the preparation of the Sword of Honour which it would give me pleasure to present to the City of Stalingrad

My hope would be that this gift might commemorate in happier times to come the inflexible courage with which the warrior city steeled herself against the powerful and persistent onslaughts of her assailants and that it might be a token of admiration, not only of the British peoples, but the whole civilized world

H.M. THE KING-EMPEROR, in a telegram to M. KALININ
President of the Soviet Republic, on February 21

UNDYING HONOUR

"Red Army Day in Russia is a fresh reminder to us all of the spirit, courage and endurance of Soviet troops. Their unflinching steadfastness in adversity and gallant vigour in the triumphant counter-offensive have brought fresh and undying honour to Russian arms. I am proud to have known the Russian soldier in peace and war. On behalf of the forces, under my command, Indian and British, I would ask you to accept our warm congratulations and good wishes."

—FIELD MARSHAL SIR ARCHIBALD WAVELL.

DESTROYED A MYTH

"It should not be forgotten the Red Army was confronted by practically the entire weight of the land and air forces of the German war machine massed on the Russian front. The simple truth is that in these Russian campaigns the Government of the Soviet Union, its leaders, its Red Army and its great Soviet people destroyed the myth of Hitler's invincibility, contributed to world's peace and new strategy of defence against the mechanised lightning attack which threatened the earth, saved the liberties and homes of mother Russia, broke the back of Hitler's offensive, prevented Hitler and his Allies from dominating the three continents and gave to us the priceless gift of time to prepare."

—MR. JOSEPH E. DAVIS.

UNSURPASSED IN ALL HISTORY

"On behalf of the people of the United States, I want to express to the Red Army on its 25th anniversary our profound admiration for its magnificent achievements unsurpassed in all history. For many months, despite tremendous losses in men, supplies, transportation and territory, the Red Army has denied victory to a very powerful enemy. It has checked him at Leningrad, Moscow, Voronezh and in the Caucasus and finally in the immortal battle for Stalingrad, the Red Army not only defeated the enemy but launched a greater offensive which is still moving forward along the whole front from Baltic to the Black Sea."

—PRESIDENT ROOSEVELT, in a message to M. Stalin.

An Army of Avengers

THE Red Army is an army of defence. It has been created not to conquer other people's country, but for the defence of the frontiers of the Soviet land. But in June 1941 Hitlerite Germany treacherously attacked our country. From that moment the Red Army became transformed into an army of avengers. The Red Army is entering upon the 25th anniversary of its existence, at a decisive moment of the patriotic war. Due to the absence of a Second Front in Europe, the Red Army has been bearing alone the whole burden of the war.

IN three months the Red Army has cleared of the enemy, the territory of Voronezh and Stalingrad, regions of Chechenoingush, Northern Osetinian Kabardabalkar, and Kalmuck autonomous republics, of Stavropol and Krasnodar and the areas of Cherkessk, Karachayev, and Adyghev autonomous areas and nearly the whole of Rostov, Kharkov and Kursk regions.

Time Working against the Enemy

MASS expulsion of the enemy from the Soviet country has started. The balance of forces on the Soviet-German front has undergone a change. Time is working against Fascist Germany. Hitler's Germany enjoyed until lately superiority over the Soviet Union in technical equipment and most of all in tanks and aircraft. But times have changed. The Soviet output of tanks, aircraft and guns has increased. The enemy has sustained tremendous losses especially in tanks, aircraft and guns. In the three months of Soviet offensive in the winter of 1942 to 1943 alone, the Germans lost over 7,000 tanks, 4,000 planes and 17,000 guns.

Tactics of Manœuvring

THE Red Army since the beginning of the war has put out of action about nine million German officers and men, of whom not less than four million were killed in action. The Rumanian, Italian and Hungarian armies have been completely routed. In the last three months alone the Red Army smashed 112 Divisions, killed over 700,000 of the enemy and took 300,000 prisoners.

THE German Army came into the war with two years experience, but since then the Red Army has become a regular army getting rid of the stupid and harmful tactics of the line and firmly adopting the tactics of manœuvring. The command of the Red Army has not only the aim of liberating the Soviet land from the enemy, but also not to allow the enemy out of our country alive.

The Pledge of Our Victory

IN the name of the liberation of our country from the hated enemy, I order:

- (1) To improve tirelessly military knowledge and to strengthen discipline, order and organization.
- (2) To strengthen the blows upon enemy troops, to cut off enemy communication lines, to encircle enemy troops and annihilate them if they refuse to lay down their arms.
- (3) To fan the flames of guerilla warfare on enemy's rear.

THEREIN is the Pledge of Our Victory.

M. STALIN.

A quarter of a century has passed since the Red Army was founded, but many centuries will have to pass before its magnificent achievements against Hitler's hordes become a mere memory of a forgotten age. His Majesty the King who has bestowed the unique distinction of a Sword of Honour upon the City of Stalingrad has paid a tribute to "the heroic qualities and magnificent leadership" of the Red Army, and declared that by "its resounding triumphs" against the common enemies of the United Nations, it has "written new pages of history." "Written new pages of history"—perhaps no greater tribute can be paid to the Red Army's achievements than these five simple words. President Roosevelt also emphasised the uniqueness of the Red Army's achievements in his message to M. Stalin on the occasion of the Red Army Day celebrations, when he expressed the American people's "profound admiration for its magnificent achievements, unsurpassed in all history."

ALL over the world, people have lost themselves in admiration at the marvels—or should we say miracles?—wrought by the Red Army. Even in the wails of the Nazi leaders is a note of admiration which they are not able to hide, a note of fear and desperation which they are no longer able to conceal, even from the German people. In a two-hour speech in the Great Hall of the Sports Palast in Berlin last week, Dr. Goebbels spoke of the "gigantic danger" facing Germany.

"The Reich is in peril, we must act and act quickly," he said; "The war of mechanised robots against Germany and against Europe has reached its climax We are facing a giant danger. Our effort must be just as gigantic."

AND what did the German Fuehrer say thirteen months earlier of this "giant danger"? On November 8, 1941, Hitler said:

"Never was a great empire smashed and destroyed in shorter time than was Soviet Russia . . . at the end of this year (1941). We can say this greatest danger (from Russia) already has been averted The destiny of Europe for the next one thousand years has been decided."

The Dream and the Fact

THIS is not a picture of what happened at the end of 1941, but what Hitler wanted should happen. But Hitler reckoned without the Red Army—he knew it was strong and resolute, but he did not know it was so strong—so very strong that his army of marauders and murderers would be forced to repeat Rommel's run, in slow motion, in Southern Russia, and so very resolute that his own Propaganda Minister would be forced to exclaim:

"The onrush of Russia against our venerable continent has broken out this winter with a violence overshadowing all human imagination"!

WELL may the Nazi leaders be surprised, for the Red Army was originally intended only for the protection of the U.S.S.R. This was pointed out by M. Stalin in his Order of the Day issued on the twenty-fifth anniversary of the Red Army. The Supreme Commander of the Soviet Forces said:

"The Red Army is an army of defence. It has been created not to conquer other people's country, but for the defence of the frontiers of the Soviet land."

BUT when Hitlerite Germany treacherously launched an attack on Russia in June 1941, "the Red Army became transformed into an army of avengers." M. Stalin has given some recent details of how the Red Army has avenged the German attack and the atrocities perpetrated by them in occupied Russia. In the three months of the Soviet offensive in the winter of 1942-43 alone, the Red Army took a toll of over 7,000 tanks, 4,000 aircraft, 17,000 guns from the enemy; 112 German divisions were smashed, over 700,000 Germans killed and 300,000 taken prisoners. Since the beginning of the war, about nine million German officers and men were put out of action, of which four million were killed in battle.

Tactics of Manœuvring

HOW was the Red Army able to achieve this? How was it able to rout an army superior in numbers, equipment and actual war experience? How was it able to conquer in three months all the territory wrested from it by the Germans in five months in 1942. M. Stalin gives the answer:

"The Red Army has become a regular army getting rid of the stupid and harmful tactics of the line, and firmly adopting the tactics of manœuvring."

MR. ANTHONY EDEN, Britain's Foreign Secretary, has paid a tribute to "the supreme direction of M. Stalin himself" and to the "masterly strategy" of the Red Army. The strategy is that of tackling a number of enemy strong-points at the same time so as to prevent reserves being rushed from one threatened sector to another. This has kept the Germans in a state of uncertainty as to where they have to switch their reserves, or whether they have to switch their reserves at all! The capture of Tikhoretsk by the Red Army brought about a definite deterioration in the situation of Germans in the Caucasus, for Tikhoretsk is the vital junction at the intersection of the Novorossisk-Stalingrad and Rostov-Grozny railways. This meant that the German Kuban army could no longer hope to fall back along the main Caucasus railway, though it could hope to defend itself with its back to the Sea of Azov and along an arc from Rostov to the Black Sea port of Novorossisk.

THE Red Army's strategy of simultaneous thrusts met with splendid success in the north-west. Kursk fell on February 7, Rostov on February 14, and Kharkov on February 16. With the fall of Kharkov, the entire German winter line crumpled up. We were hoping that the Red Army Day will synchronize with the capture of Orel, the southern rampart of the enemy's Moscow Front, but one of the most bitter battles of the whole war, says *Reuter's* Special Correspondent in Moscow, is now raging in the Orel area.

Exploded A Myth

THE Red Army has, by its great successes, exploded the myth of Hitlerian invincibility. Referring to it, Philip Jordan, Foreign Correspondent of the *News Chronicle*, who was in Russia for sometime, says:

"It is a superb weapon: make no mistake . . . it is a strategic weapon rather than a tactical; and its main task, until the propitious moment arrives, is to avoid rather than to give battle. The fact that it exists is what constitutes its greatest strength; and on a long-term view of the war, it is fair to say that every one of Hitler's spectacular victories in Russia can only prove dead-sea fruit until he can destroy the Red armies in the field. He has not come within sight of achieving this"

ON the other hand, he seems to be in a position of considering himself lucky if his forces are allowed to escape alive. But, says M. Stalin in his Order of the Day,

"The Command of the Red Army has not only the aim of liberating the Soviet land from the enemy, but also not to allow the enemy out of our country alive."

THE Red Army which has steeled its heart to bring about the complete destruction of Nazism and Fascism, has placed the freedom-loving world under an immeasurable debt of gratitude to Soviet Russia till the end of time.

Running Commentary

Germany and the Position in Hungary.

Germany's present situation can be properly assessed by an understanding of the position in the Balkan Peninsula. "The advance of the Red Army," writes the Swiss paper *Berner Tagwacht* "is a greater danger to Hungary, Rumania, Slovakia, Bulgaria and the whole of south-eastern Europe than to any other European country." Reports from various sources show that the Governments of Balkan countries no longer believe in the possibility of German victory. The fact that the Divisions which they sent to fight on the Russian front (20 Rumanian and six Hungarian, together with nine Italian) have been virtually annihilated, is kept from the public, as also the real situation at the Russian front. At a Government party meeting on January 22, the Hungarian Premier, Kallay, reported that Hungarian troops had suffered heavier losses than before, but that "they cannot be exactly ascertained."

The same policy of concealment is being applied to military operations. According to the *Berner Tagwacht*, General Von Miorka, Military Correspondent of *Pester Lloyd*, "gives a false picture of the position on the eastern front, but he is mistaken if he thinks that his readers do not know the real position." In his reports, it is added, he entirely ignores Russian communiques. Swiss and Turkish reports paint a similar picture of the Rumanian Government, as it struggles to allay popular alarm and unrest while facing insistent demands for more and more foodstuffs, raw materials and manpower from its insatiable German masters.

After quoting neutral reports that Rumanian losses amounted to 300,000 men and that two Rumanian Generals had committed suicide, the *St. Gallen Tagblatt* adds:

"The effect of these defeats is shown in the increasing numbers of deserters who are trying to avoid active service by escaping—mostly to Bulgaria. Simultaneously, antiwar propaganda has become more active; an enormous number of leaflets have been distributed calling on Marshal Antonescu to withdraw behind the Dnieper line . . . the Balkans,

including Macedonia and Greece, are in a state of ferment."

The Balkan Governments are realizing that they have backed the wrong horse, and the Balkan peoples are beginning to see that they have been duped.

* * *

Tied to the German Chariot

Since the treaty of Trianon at the end of the last war, the recovery of lost territory (whether inhabited by Magyar elements or not) has been the fundamental aim of the Hungarian regime. After Munich, Hungary saw a chance of recovering something of her old imperial position under the Hapsburgs by playing Germany's game. The first step was to raise a territorial claim against Czechoslovakia, which was compelled by Germany under the first Vienna award to return to Hungary a strip of territory along her northern frontier. In response, Hungary signed the Anti-Comintern Pact in February 1939. Thereafter, she pursued a tricky policy of picking up territorial spoils in Germany's wake without contributing to Germany's military resources. Hungary annexed Ruthenia when Germany invaded Poland. The next step was to try for the return of Transylvania by Rumania. For strategic reasons, Germany wanted to have Hungarian territory extended into the heart of Rumania, and by the second Vienna award of August 1940 she allotted the greater part of Transylvania to Hungary. The Hungarian Government then signed the Tripartite Pact. Hungary had thus gained her prizes without firing a shot. But she had to fight for her spoils, so far as Yugoslavia was concerned. The German army marched in, and Hungarian troops joined them in an attack on Yugoslavia. Hungarian policy passed from opportunism to aggression, and she was securely tied to the German chariot. When Germany secured her Balkan flank by overwhelming Yugoslavia and Greece, she launched the attack on Russia—and the military collaboration of Hungary and Germany was inevitable. Hungary had gone too far, she had aroused bitter enmity in all her neighbours, and so a victorious Germany is her only protection. The present regime is in the grip of the Germans, but as Germany weakens, political changes may take place.

Snipers of the Red Army

By LIEUT.-GEN. G. MOROZOV

SNIPING is an art which every Red infantryman is encouraged to acquire. The Soviet crack shots can be seen at their most brilliant on the Leningrad front, where there are whole platoons in which every man is a master sniper. The old hands impart their skill to the raw recruits. Pchelintsev, one of the best, has been made a Hero of the Soviet Union.

Each man has his little book in which he records his kills. A total of a hundred or more is not at all unusual. One crack shot called Dordzhiev has a score of 181.

Soviet snipers hunt in couples. Each man has a rifle equipped with a telescopic sight. Usually one does the shooting while the other observes. Every 20 minutes or so they change roles, since long intent gazing through field-glasses is very trying on the eyes.

At short range, when there are a large number of targets, particularly when an enemy attack is being repulsed, both partners maintain fire.

The sniper's commonest targets are enemy officers, observers, snipers, gunners, trench-mortarmen, automatic riflemen, aeroplanes on the point of landing and enemy parachutists.

INDEPENDENCE IN ACTION

So that he may give his skill full play, the sniper is allowed considerable independence in action. He uses his own judgment in selecting positions and targets. Often he acts in isolation on the most dangerous sectors, and remains in ambush when necessary to cover the retreat of his unit. He needs not only great skill, but also high courage and contempt for danger.

The Red snipers were particularly active this spring, when the heavy rains and the thaw forced the enemy out of his dugouts and trenches. Never had they enjoyed such a wealth of targets. They picked off every German who dared to venture within range.

Snipers take part in both offensive and defensive fighting. Recently an infantry company under the command of Lieutenant Vlasov was ordered to advance in a certain important sector. Vlasov sent snipers ahead with a vanguard patrol. The first encounter was with two German motor-cyclists. The snipers wounded them both and took them prisoner. Then a party of enemy scouts was detected. Five of these were picked off, and the rest fled.

PRELIMINARY CONFERENCE

Vlasov called the snipers into the preliminary conference before commencing the offensive. They were present while he gave the platoon commanders their orders. The snipers were instructed to keep on the outer flanks of the first and second platoons and to pick off enemy scouts and snipers, automatic riflemen and machine-gunners.

The snipers of the third platoon remained with their group, which advanced in the company's second line, while a party of snipers kept a little ahead of the flank squads. They observed all suspicious features of the terrain, keeping an especially wary eye on a mound beyond which they discerned a hardly noticeable camouflaged earthbank.

CROSS-FIRE FLANKS

When the platoons advanced to the attack, the enemy opened desultory fire from trenches. Machine-guns began to rattle from the mound. The Red infantry fell to the earth. The gunners could not be seen, but puffs of smoke beyond the camouflaged bank revealed their position.

The Soviet snipers then opened oblique fire from both flanks, those on the right aiming at the left side of the mound, and those on the left at the right side. The German machine-guns were silenced. But the snipers continued firing to prevent the machine-guns from coming to life again. Taking advantage of the cessation of fire, the platoons rose and charged. One enemy machine-gun opened fire for a moment, but the snipers silenced it again.

Here is another example—this time of successful co-operation by snipers in defensive fighting. Company commander Senior Lieutenant Stepanov, anticipating a local enemy attack, sent three pairs of snipers to take up positions on the nearest approaches to the Soviet defence lines. One pair, who established themselves near a little bridge across a stream, was instructed to keep a definite zone under observation, paying special attention to the exit from a certain thicket. An automatic rifleman accompanied this pair of snipers.

ANNIHILATING ENEMY SCOUTS

They were instructed that when the enemy's vanguard reached a specified line they should withdraw to the main position. While withdrawing, they were to halt at intermediate points and open fire. Similar precise instructions were given to the second pair, who

advanced to the mouth of a gully, and to the third pair, who took up a position at the bend of the stream.

After some time enemy scouts appeared. Adapting themselves to the terrain, they advanced towards the company's defence line. The snipers waited until the scouts had emerged from a maize field and then opened fire. Most of the scouts, including an officer, fell.

The enemy then brought up machine-guns, which the scouts held in check for half an hour. The Germans apparently decided that the line where the snipers were stationed was the advanced defence line, and opened artillery fire upon it. By then, however, the snipers had withdrawn, and the German guns shelled emptiness.

During the withdrawal the snipers halted at intervals and picked off enemy officers, observers and signallers. Assisted by the auto-riflemen, they also succeeded in shooting some machine-gunners and anti-tank gunners. Besides inflicting losses on the enemy, they retarded his advance for a considerable time.

NIGHT SNIPING

As soon as they reached the main Soviet positions on the advanced defence line, the snipers became part of the general fire system, definite targets being assigned to them. The enemy did not succeed in advancing beyond the stream. The Soviet battalion which later launched a counter-attack, repelled the Germans, who left many dead behind them.

Snipers usually rest at nights. However, the enemy often takes advantage of darkness for reconnaissance, so our snipers have developed a taste for operating at dusk and dawn, and even in the dead of night.

It is hard to aim accurately in the dark with ordinary weapons. The sniper's rifle, however, has a telescopic sight which magnifies the target four times, and enables the sniper to aim accurately at something invisible to the naked eye. Searchlights and flares are sometimes employed to assist accurate aiming.

The ranks of the Red Army are constantly being swelled by new reinforcements of snipers trained behind the lines.

—Soviet War News.

Do not touch a mine

A report has been received of an attempt by villagers to handle a mine washed up on the coast of Eastern India.

It cannot be too strongly emphasized that by such action members of the general public incur the gravest risks. Mines are filled with high explosives, and during the present war the enemy has consistently disregarded the international convention under which mines must automatically become harmless once they start to drift. A mere touch may cause a disastrous explosion, with serious loss of life and damage to property nearby.

The outside of a mine is a metal sphere with a diameter varying from 2 ft. 6 in. to 4 ft. It is usually black, but becomes discoloured in the sea. If of the contact type, it has projections or horns, pressure on which will

lead to an explosion. Members of the general public noticing such an object in the sea or on a beach should not thereafter go within 500 yards of it. They should report its presence to the nearest civil or military authorities, who will have it examined by an expert and, if necessary, rendered harmless before removal. By taking these precautions the public not only ensures its own safety but also enables the authorities to obtain what may be important information.

THE SWORD OF HONOUR

Russia: Before the Spring Thaws

By LORD STRABOLGI

THE whole military situation in the world war is dominated and conditioned by the fighting on the Russian front. The weight and strength of the offensives launched by the Russian army have surprised everyone outside a small inner circle of the High Command in Moscow. For the second time, the German General Staff has been taken by surprise. The first occasion was in the opening stages of the German invasion in the summer of 1941, when the power of manoeuvre, tactical efficiency and weapon strength of the Russian armies were more formidable than German experts had anticipated. This miscalculation was shared by most of the professional experts in other countries, belligerent or neutral.

What has happened, and is happening, is that the Russian counter-offensives this winter have been far more successful than those 12 months earlier and have already had results of the greatest importance. While the losses of 18 months' hard campaigning have weakened the German armies, Russian armies are now stronger and better equipped. Russian generals have solved many of their supply difficulties and have greatly improved their tactical methods. Russian artillery and field mortars have been strengthened and, added to a successful supply of tanks and aeroplanes from United States and Britain, has given the Russian armies the necessary weapon superiority for the first time.

SUBSTANTIAL AIR SUPERIORITY

Perhaps, most important of all, the 6,000 aeroplanes sent to Russia from the United States and Britain, added to the greatly increased output of modern machines in Russian aircraft factories, have given the defenders substantial air superiority along the whole front over their German opponents.

At the beginning of the great Russian winter offensive last November, Axis forces on the Eastern Front numbered approximately 240 divisions, of which about 60 were from Italy, Hungary, Rumania, Slovakia and Finland. With the exception of Finnish divisions, which are known to be tired, all these satellite armies have ceased to exist as serious fighting forces. Rumanians, Hungarians and Italians in particular have been so battered and weakened that the remnants can now be used only on lines of communication.

Of 180 German divisions, 60 at least have been cut off or practically destroyed. In the first two months of the Russian winter offensive, 500,000 Germans have been killed

and 200,000 captured as prisoners. Add to these the wounded—and at least one-third of the German armies on the Russian soil has been put out of action.

SITUATION SIMILAR TO OCTOBER 1918

The material losses have been equally heavy. There have been captured or destroyed 6,000 tanks, 12,000 guns and 1,000 aeroplanes. It is noteworthy that the Russian air, weapon and numerical superiority has enabled a number of heavy attacks to be launched along this whole long battlefield between the Baltic and the Black Sea. We thus have, on a much larger scale, a situation on the Eastern Front similar to that in October 1918, when, on the Western Front, in France and Belgium, Marshal Foch, in supreme command of the British, French and American armies, was able to pursue comparable tactics. Then, in the autumn of 1918, aerial, weapon and numerical superiority enabled the French Marshal to jab or thrust at a number of points simultaneously, thus preventing the German generals from concentrating their reserves to meet successive threats. Marshal Hindenburg had no alternative but to retreat along this whole line with the object of falling back on the Rhine.

Behind the German armies was a good system of roads, railways and canals, and the retreating distance was not too great. Nevertheless, Hindenburg failed to extricate his army, and the German Government was advised by the German General Staff to sue for an armistice on any terms.

Now the difficulties of winter retreat along the whole Russian front would be far greater owing to weather conditions, comparative lack of communications and the far heavier equipment of a modern army which would have to be evacuated or abandoned.

If the pressure of the Russian armies can be maintained, such a retreat may be forced on the German High Command. It has already begun in the Caucasus and, to a certain extent, on the central front. It could well end in a great military disaster. It is known that the Germans are using such reserves of fresh troops as are available to reinforce their hard-pressed armies on the southern sector of the front, but it is doubtful if these are enough to save the situation. Very great events may happen on this Eastern Front before the spring thaws.

Earned Lasting Admiration

"TO-DAY the great successes on the Russian front have led thousands of Americans to throw their hats in the air and proclaim victory is just round the corner. Others among us believe in the age of miracles. They forget there is no Joshua in our midst. We cannot count on great walls crumbling and falling when a trumpet blows and peoples shout. It is not enough that we have faith and that we have hope. Washington himself was the exemplification of the other great need. Would that all of us could live our lives and direct our thoughts and control our tongues as did the father of our country.

"THE enforced retreat of the enemy had cost him heavily in men, supplies and territory and especially in morale. Such achievements can only be accomplished by an army that has skilful leadership, sound organization, adequate training and above all determination to defeat the enemy at no matter what cost and self-sacrifice. At the same time I also wish to pay a tribute to the Russian people from whom the Red Army springs and upon whom it is dependent for its men, women and supplies. They too are giving their full efforts to the war and are making the supreme sacrifice. The Red Army and the Russian people have surely started Hitler's forces on the road to ultimate defeat and have earned the lasting admiration of the people of the United States."

—PRESIDENT ROOSEVELT.

A Major Russian Objective

By MAJOR-GENERAL SIR CHARLES GWYNN

HISTORY can show few if any more complete reversals of an apparently desperate situation than that of Stalingrad. The victory is as important strategically as it is sensational. It has deprived the Germans of a force of a size that no army, however numerous and strong, can afford to sacrifice. Moreover, it was undoubtedly largely composed of their best troops. It releases an equally large or possibly a larger Russian force which may within a short period be available for attack in the current operations or can be withdrawn as a reserve for employment after the spring thaw—that is to say at a time when the troops which have been fighting throughout the winter may need relief for rest and reorganization.

Hitler's sacrifice of the lives of many thousands of his soldiers in order to keep railway communications through Stalingrad closed for a few more days affords proof of the immediate strategic importance of the opening of the lines.

The moral effect and the loss of prestige entailed by the disaster may have incalculable results. That an army of that size should have found itself in a hopeless position must shake the confidence of the German people in the Higher Command; that Field Marshal Paulus and some 90,000 of his men refused to obey Hitler's 'no surrender' order will no doubt be remembered by other Germans called on to fight to the last.

Army of Thinking Men

"It lies to the credit of the Soviet military authorities that they early grasped the need for the education of the rank and file. They created an army not of automatons but of thinking men full of initiative."

—MR. ATTLEE.

ASTONISHING FEATURE

Why Paulus's Sixth Army made no attempt at a sortie to join hands with the relief forces from Kotelnikov still requires explanation. That the Russians without railway communications and by circuitous routes were able to interpose adequate forces between the Sixth Army and the relief forces is not the least astonishing feature of the whole episode.

We have still to see what will be the fate of the German Caucasus army. It may be presumed that a considerable proportion of its original elements has already been extricated through Rostov. Evacuation across the Sea of Azov and the Kerch Straits seems to be the only remaining way of escape and ice conditions will increase its difficulties. Certainly immense quantities of equipment will have to be abandoned. Replacement of the losses they have suffered in material must be a major problem for the Germans for it will throw a desperate strain on the railway communications. What they will not be able to replace are the great numbers of experienced officers and non-commissioned officers, even if they can fill the depleted ranks from one source or another.

* * * *

In this winter campaign the capture or the interruption of railway communications is the main object of a strategic manoeuvre. Lateral railways especially are essential for the movement of reserves of an army, waging as the Germans are a defensive struggle. The importance of the capture of town depends largely on the extent to which they control the railways.

THE PROUD PRIVILEGE

It has been the proud privilege of the Russian army to be the first to demonstrate to the world that this Nazi German army is no better than the army of the Hohenzollerns, that it relies principally upon surprise attack on unprepared populations for its success and that, when it meets a force properly equipped and led, it can be utterly defeated.

—MR. DUFF COOPER.

Brilliant Victories

"I was overwhelmed with joy by the news of the continued successes your army has achieved during the past few weeks. The successful recovery of the big cities and the annihilation of the enemy forces foreshadow the collapse of the Axis gangsters and further facilitate the execution of the United Nations' plan for counter-offensive. These brilliant victories were wholly due to the gallantry of the soldiers and people under your able command.

ON the occasion of the 25th anniversary of Red Army Day, I, herewith, convey to you our heartfelt congratulations and best wishes for your further victory. It is our belief that only through the destruction of the military might of the Axis partners in the East as well as in the West, can a lasting world peace be established. Hence the mission of the United Nations is one and the same, and the victory is indivisible.

I have confidence that your country and my country will co-operate in the spirit of mutual assistance in laying the foundation for a world justice and peace at an early date."

—GENERALISSIMO CHIANG KAI-SHEK, in a message to M. Stalin.

Defender of Stalingrad

A Sketch of Rodimtsev

MAJOR-GENERAL Alexander Rodimtsev, defender of Stalingrad, learned the art of street-fighting side by side with British soldiers. He fought in Madrid during its long siege by the Fascists, for the Government of Spain. His companions—volunteers like himself—were members of the International Brigade which included among its numbers many Britons. Month in and month out, the young Russian, with volunteers of many other nations, held the suburbs of Spain's capital against a numerically superior and far better equipped foe.

Rodimtsev went back to the Red Army with knowledge of tactics in close fighting, which Marshal Timoshenko, his supreme Commander, gave him an opportunity to demonstrate when the German legions swept up to the gates of Stalingrad.

Rodimtsev is a son of the Revolution. He is now 36, and remembers the Czarist days only vaguely. His father was a revolutionary working man who took active part in the 1917 rising. Young Alexander, joining the Red Army—as several boys of his age did—in 1924, attracted attention for his soldierly qualities. He was brought to the notice of Marshal Shaposhnikov, one of Russia's greatest strategists, who was then head of the General Staff Academy. The clever young soldier became a cadet and graduated with high honours.

FOUGHT IN SPAIN AND FINLAND

Five months ago he was a full Colonel in the Red Army, having fought both in Spain and Finland. He was given the Gold Star of a Major-General and put in command of a

Soviet Guards Corps. Guards in the Red Army are given the name as an honour. Any regiment can become a Guards' regiment if it distinguishes itself sufficiently on the battlefield.

Rodimtsev, who shares with great men one valuable gift—he can command sleep whenever he likes and get along with very short hours—held his Guards in readiness at Stalingrad for the German onslaught that Timoshenko knew was on its way. One of his divisions held off two divisions of German infantry and a hundred tanks for ten days, and then counter-attacked. They annihilated their enemy and cleaned up that particular section of the city. He went to the north-west suburbs where he is standing to-day, and was put in charge of the defence of the workers' settlement.

UNORTHODOX TACTICIAN

Rodimtsev is an unorthodox tactician. He operates with small self-sufficient groups of men who have tremendous fire power. Another trick he learned in Madrid has been used devastatingly. He has allowed Germans to occupy whole blocks of buildings. Holding flank forces in reserve, he has then cut them off, having a number of small sieges within a greater siege going on at one time. His troops with their great fire power and his tunnellers with their dynamite have done the rest.

Rodimtsev is an unmarried, squarely built and briefly spoken young man. He has proved that the lines of determination on his clean-shaven face mean something.

Stalingrad: Stay-put Women

ALL through the siege of Stalingrad some of the women stayed behind, cables the *Daily Herald* Moscow correspondent.

One with two little girls, aged three and five, lived in the no-man's-land. She popped up from a hole in the ground while I was touring the desperately contested grounds of the Red October Factory.

"My home was over there," she said, waving her hand towards the pounded streets.

For a time it was not too difficult behind the Soviet lines and she could make herself useful by doing small jobs for the troops like washing. Then the tide of battle swayed over

her head and she was between the German and the Russian positions. She had a little food saved up but it did not last long. At night she had to venture out periodically to carve pieces of flesh from dead horses.

I met another of the stay-put women at the top of a Volga cliff down which a wooden ladder led to her headquarters. She was standing at the entrance to the cave hanging out a line of washing with two children looking on. "I have been here right through the battle," she told me. "I reckoned it was safer to stay than to risk crossing the river under fire. Besides I could do laundry work for the staff."

The Battle of House 21-A

THIS is the story of what happened in a house in a suburb of Stalingrad—No. 21-A. It is in a broad street of large houses with gardens and an avenue of young poplars—a quiet, peaceful scene if it were not for the craters in the road, two burnt-out German tanks up against a broken stone wall, and the barricades.

This is the first line of the front. No. 21-A is a fine four-storey house which would be comfortable enough if it were not for the fact that a corner has been sliced off by a bomb and that the windows and doors have been blasted by explosions. This is a house where for nine days a battle has been raging. Sub-Lieutenant Svetkov with a small group of men is holding it, and the house opposite is held by Germans. The Sub-Lieutenant told a *Pravda* correspondent the following story of the house:—

In mid-September the Germans concentrated on the outskirts of Stalingrad a powerful force, and captured this street. They built defences, but Russian guards attacked by night and cleared the street. In house 21-A they found many German dead and in apartment No. 3 on the second floor they saw the body of an old woman covering an 18-months-old dead child. Before she died she gave her name and told the terrible story of the house. When the Germans attacked the house she, her daughter, and grandson were alone there. When the Russians counter-attacked, a German officer came into the room and shot into the boy's bed. The old woman ran towards him and gripped his hand. The German turned the revolver on her and fired three times. The girl was taken away by soldiers.

A CHILD'S TOY

As he told the story the Sub-Lieutenant jumped excitedly to his feet and took from his pocket a small toy. "This is what I found in the boy's hand," he said: "I am keeping this, and I will never forget that little boy." He said that when the guards captured the house they built defences in all directions and placed machineguns to dominate the cross roads. The next morning the Germans counter-attacked. From the corner windows, in trenches, and behind barricades the guards awaited the attack. Twelve heavy German tanks carrying shock troops came down the street.

A violent battle broke out at the narrow neck of the street. Russian grenadiers coolly waited for the tanks. They fired at them, and five were burnt, but the others advanced. The Russians had no cartridges left for their anti-tank rifles. Moving swiftly from window to window they carefully chose the moment to throw their grenades. Three more tanks stopped, but a fourth continued to come forward. From the ground-floor windows the guards used automatic rifles against German

storm troops. All their anti-tank weapons were exhausted.

Then one tall fellow took an anti-tank mine, held it firmly to his chest, and threw himself under the tank, crying: "You won't get through, I won't let you." The machine came to a standstill and blew up. Three tanks remained, and smashing through the barricade they came straight towards house 21-A. They were met by a rain of petrol bottles. But some storm troops jumped from the tanks and reached the door of the house and fought on the staircase. While other Russians built a barrier of furniture across the first landing one Russian lay flat on the stairs keeping the Germans at bay.

DEFENDERS OUTNUMBERED

The defenders were faced by thrice their numbers. Five men on the first landing, with no munitions save what was in their rifles held their fire till the enemy clambered on to the barricade. Here the Germans were held, but other Germans climbed up the fire escape and attacked from behind. The Russians got to the floor above, placed a wounded man on the balcony, and again faced the Germans who were edging up the stairs throwing grenades before them. As the grenades were lobbed at them a Russian jumped and caught them and roaring with excitement, flung them back.

This was more than the Germans could stand, and at nightfall they retreated to the ground-floor. The next morning they again tried to get control of the whole house. They began by tossing mines through a large staircase window, but when the shock troops again tried to break their way upstairs they were met by carefully chosen shots from behind the barricade.

The Russians' situation had grown desperate. Their cartridges were spent. The guards began to prepare themselves for a hand-to-hand struggle. Suddenly from somewhere above there came excited shouts. Russians from the next block, clambering from roof to roof, had reached 21-A just in time. Using grenades they forced the Germans downstairs, and soon the whole house was again in Russian hands. This attack cost the Germans 52 soldiers and officers.

Lieutenant Svetkov at the end of his story turned to his men and took the toy from his pocket. "I have a little four-year-old daughter," he said, thoughtfully. Then, going to his machinegun, he fired two long bursts at the house opposite. The Germans replied. Mine explosions shook the house. "When I think of the Germans I can't control myself," he said. "I shake; my hands itch, and either I have got to shoot or throw a grenade or use the bayonet."

In such houses the defenders of Stalingrad fought with the same bitter hatred.

The Times.

Dramatic Capture of von Paulus

By WALTER KERR

NOT far from this city of the dead Stalingrad, Field Marshal Friedrich von Paulus, Commander of the destroyed German Sixth Army, is a prisoner in an unpainted, winter-beaten peasant hut.

I saw him when he stooped to pass through the doorway out into the snow-covered yard. His lean, drawn face was as grey as his hair. He is 52 but looks 65, and he is six-foot-four. His thin lips gave him a hungry look. His right eye, part of his right cheek and the right side of his nose twitched, making it apparent that he is suffering from a nervous affliction.

Near the warm little hut, in which he is living with his Chief of Staff, Lieutenant-General Schmidt, and his Adjutant Colonel Adam, were other prison homes guarding some of his Corps and Division Commanders. They were a miserable-looking lot, one with a monocle, some with saber cuts, and all but a few trying to live up to a moving picture conception of the German General.

I talked with Chief Lieutenant Fedor Yelchenko, 21, the Ukrainian boy, who captured von Paulus.

IN A DEPARTMENT STORE

When I saw von Paulus, he was wearing a grey rabbit-fur hat and a long grey overcoat without medals or decorations of any kind except the epaulets of a Colonel-General. He did not want to talk and the only words he said were, first name "Friedrich", and age "52."

Von Paulus was captured in the basement of Stalingrad's big department store, the Univermag, early on January 31. The southern group of the two German forces, who were cut off and surrounded within the city, made their last stand here.

The store is in the centre of the city in the large Square of the Heroes of the Republic. Nearby are the remains of a theater, the Intourist Hotel, a Red Army building and a museum.

The square was surrounded by the Russians of Colonel Ivan Burmakov's brigade. Von Paulus was in the store's cellar, with General Schmidt, Colonel Adam and Major-General Raske, who commanded the Southern group. The Russians knew that they were there for the night before they captured three Majors who disclosed the position.

AN ULTIMATUM

During the night, Colonel Burmakov sent an ultimatum. There was no answer. Now, I will let Lieutenant Yelchenko tell his story.

He is a husky little fellow from Uman near Kiev. He said:

"The Germans kept on shooting so, at seven o'clock, we opened up our artillery and mortar fire. After 15 minutes of this, General Raske sent out his Adjutant and an interpreter. He said his big chief wanted to talk with the Russian big chief. I said, 'I'm the big chief here. Take me to your man.'

"We started towards the gate, but the Germans in the courtyard yelled that the entrance was mined and showed us another way in. I had 15 men, including two other officers. We got into the cellar and saw that it was jammed with soldiers trying to escape our mortar fire.

"We almost had to fight our way through the crowd. The officers showed us the room but said that only one man could go in. I wanted my 15 men to come in too. I thought, 'After all, they are Germans in there. I don't like the idea of going in alone.' I insisted and they let two men come with me.

"Inside I saw Raske and Schmidt. I said, 'Where's von Paulus?' They said they were negotiating in the name of von Paulus."

A MEMORABLE EVENT

"This anniversary cannot fail to be a memorable event to every soldier no matter of what nationality. The Red Army's extraordinary achievements represent in many respects the most magnificent war effort the world has yet seen."

—GENERAL MACARTHUR.

RUSSIA'S SECRET

"What is the secret of Russia's great military effort? Consuming patriotism, unshakeable determination, selfless endurance beyond belief, supreme leadership and masterly organization."

—SIR JOHN ANDERSON.

Stalin's Order

NOT a single enemy soldier must remain on Russian soil after this summer.

This is Stalin's order. And the Russian General Staff, to attain it, is elaborating plans for a gigantic summer offensive which will surpass in size and intensity anything that has been seen before on the Eastern Front, declares the *Sunday Express* Stockholm correspondent.

Three million soldiers equipped with the most modern arms are now being trained in Russia's interior, he says, for the special task of dealing the *coup de grace* to Hitler's exhausted forces.

This terrific army, commanded by experienced officers, consists chiefly of the classes called to the colours during the past 12 months and includes mechanised and armoured units, air force, artillery and paratroops. The men are being trained in the Urals and Siberia. In two or three months they will be ready to move to the front.

According to Russian reports, the present offensive is expected to come to a standstill with the arrival of the thaw, when the country will be turned into a sea of mud making operations by mechanised units impossible. The lull in big-scale operations will start at the end of April on the southern front, and in the middle of May in Central and Northern Russia.

A NEW OFFENSIVE

Four or six weeks later, the writer predicts, a new Russian offensive will be launched before Hitler can marshal his forces to make a last attempt to recapture lost positions.

British and American supplies are expected to play an important role in the offensive. The Russians have already made necessary preparations to assure safe arrival of this war material. During the past months tremendous work has been carried out all over Russia in connection with the new Alaska-Siberia northern supply route, which is much less exposed to enemy air and submarine attacks than the one used last summer. All ports on this top of the world route have been enlarged, 60 meteorological stations have been established and scores of airfields built.

A GREAT ENCOURAGEMENT

"These victories are a great encouragement to the United Nations and inspiration to every man who loves liberty."

—MR. SUMNER WELLES.

Shooting of Russian Children

FROM "PRAVDA"

STEP by step the Red Army is forging ahead. Soviet villages and towns are being liberated. With tears of joy in their eyes the people come out to meet the Red Army men, their own dear liberators. Children, our pride, our joy, our future, warmly embrace them.

After words of ardent thanksgiving, the people begin to tell bitter stories of German crime. Not a single village captured by the Germans is free from their bloody traces. Infuriated by their failures at the front, they wreak their bloody vengeance on the peaceful population. They spare nobody.

Here is a protocol which freezes the blood. In a hamlet called Overensky in the district of Stalingrad, a Hitlerite officer mislaid a packet of cigarettes and the suspicion fell on some children. One of the Germans alleged that he had seen the boys playing with cigarettes. The Germans know that the dearest possessions of every Soviet citizen are his children. They broke into the cottages, rounded up the boys, beat them brutally with sticks and rubber truncheons and kicked them with their heavy boots before the eyes of their parents. Then they dragged them through the streets like chained dogs and pushed them into large open trucks.

ON REVOLUTION DAY

This was on November 4, 1942. For three days they kept the children in trucks and let them go hungry and cold and beat them till blood ran several times daily. On November 7, 1942, when the whole Soviet Union was celebrating the great Socialist Revolution, the German Commandant drove the people of Overensky on to the village square. Through an interpreter, he announced that the shooting of boys would now take place. "The relatives now have permission to weep over them," he

added. Someone shouted. The Commandant declared through the interpreter that if he was not satisfied then all the inhabitants could expect to be executed and the hamlet burned down.

A car approached. German officers from other garrisons were coming to the square. They alighted smiling, rubbing their hands. They had come to watch the execution. They bustled about preparing their cameras. Then a large car containing children drove up to the square. It stopped and the boys were brought out. They could hardly stand. Their faces were covered with bruises and open wounds.

BRUTALLY TORTURED

Read this protocol signed by Captain Khankin Silkin, representative of the Lapichevsky Rural Soviet, Semyonin, father of two boys and other local inhabitants:

"On the day of the 25th anniversary of the October Revolution, they began to bring out children already brutally tortured and tied them together to be shot. They were brought out to the accompaniment of laughter and noise of drunken Germans surrounding them. In this way the following were shot: Vanya Makia (11), Vasya Yegorov (14), Kolva Gorin (12), Alesha Semyonin (12), Artem Semyonin (14), Kolya Yegorov (12), Senya Manzhin (12), Mikofer Nazarkin (12), Kostya Golovlov (14), and Yemelian Safonv (12). During the shooting the boy Kostya Golovlov shouted to the Germans 'All right, shoot us, reptiles. All the same my father and our Red Army will pay you out for us and for everything.'

"This crime against children concerning which the present protocol is drawn up was perpetrated by the German Commandant Lieutenant Friedrich Guck and the interpreter."

The Sword as a Symbol

The sword is the most highly honoured of all weapons, a symbol of military dignity and authority, and it is the instrument with which the monarch confers knightly honours.

There are four swords used at the Coronation of a British Sovereign: (1) the Sword of State properly so-called, (2) the Curtana, the Sword of Mercy, which is pointless, (3) the Sword of Spiritual Justice, & (4) the Sword of Temporal Justice. The Sovereign is girt with the first, while the rest are carried before him.

The great heroes of the world are depicted as the proud possessors of swords, each having a particular name and quality of its own. Arthur's sword was Escalibar, Caesar's Crocea Mors, and Charlemagne's Joyeuse and Flamberge. Mark Antony had his Philippan, Hildebrand his Brinnig, Oliver his Haute-Claire, Orlando his Durindana, Roland his Durandal, Rogero his Balisarda and Siegfried his Balmung.

Masterly Strategy

"NEVER in all its long, proud history has the German army sustained such unmitigated disaster as the Red Army has inflicted upon it in the battle of Stalingrad. Hitler has been outgeneralled, outmanœuvred and outfought. We have had one bit of really good news lately.

"TO-DAY the armies of the Soviet Union have forced him to stand before Germany as the man who is personally responsible for the slaughter of over a quarter of a million of the best of his own troops. In three months the Red Army has conquered all territory wrested from it by the Germans during the summer last year and much more besides, for the Red Army has driven into the minds of the German people the lesson that German troops can be defeated and hurled into the confusion of retreat. We are proud that our own Eighth Army taught Rommel that lesson too. Hitler's grand army like Napoleon's has found that there is deadly risk in a trial of strength against Russian patriotism, against the Russian peoples' capacity to endure the sternest sacrifice and against the great spaces of the Russian motherland.

"ON this anniversary we pay tribute to every department of the Red Army, to the High Command under the supreme direction of M. Stalin himself for their masterly strategy, to the Generals in field for its brilliant execution, to junior officers of every rank for their gallant and skilled leadership of troops, to non-commissioned officers and men for their stubborn endurance in adversity and ardour with which they have swung over to the offensive, to the gallant men of the Red Air Force and to all those responsible for overcoming the appalling difficulties of communications and supply. Not the least I think this country would wish to pay tribute to the deathless courage of the guerilla forces of the Soviet Union.

"IN May last, we signed here in London the Anglo-Soviet treaty of alliance. We are not only agreed to work together for the utter destruction of the Axis in war, we are agreed on the broad principles which will underline our collaboration in peace. To-day we salute the Red Army, the true successors of those who fought against Teuton knights in the days of Alexander Nevesky, against the would-be conqueror Charles XII, against the Grand Army of Napoleon. We salute and mourn their gallant dead. We look forward to the final victory that will be won together."

—MR. ANTHONY EDEN.

Russia's "Land Battleships"

AT a railway siding in Moscow I saw the nearest thing to a land battleship that exists. It was one of the Soviet's newest armoured trains.

The train was standing in snow-covered tracks; it looked a powerful and sinister weapon with machine-guns poking out at its sides and long baralled guns projecting from its turrets.

There was a Russian General to show me the works. He was General Andre Georgievich Chernov, who told me that he had fought in an armoured train during the civil war when the White Guards were besieging Stalingrad, then known as Tsaritsyn. Armoured trains played an important part in the civil war, he said. "There were many of them in the first battle of Stalingrad," he continued, "though they were neither as powerful nor as well-armoured as this one."

He pointed to the armoured plating on the train we were inspecting. I saw that it was in two layers separated by about an inch. The outer layer was about an inch and a half thick and the inner layer was about an inch thick.

"You see, we were protected against almost anything except direct hit from a heavy shell or bomb," said General Chernov. "In the old days many of our armoured trains had only light protection. Most countries considered the armoured train out of date years ago and they were hardly ever mentioned in military journals; but because of our civil war experience the Red Army persisted with them and improved them. In this war we have put them to such good use that the Germans are imitating us and are also building armoured trains." General Chernov explained that because of the great distances to be covered in Russia and the nature of the country, there were special advantages in armoured trains—Godfrey Blunden in *Evening Standard*.

Rostov: Tactical Ascendancy

THE Russian capture of Rostov is a feat of utmost moral as well as material importance, says the *Daily Herald* Military Correspondent.

It shows that the Russians have established so complete a tactical ascendancy that the enemy can no longer count on holding any place however strongly fortified and stubbornly defended against the enveloping movements which the Russians have now employed with unvarying success.

Their prolonged resistance at Rostov was not that of a rearguard fighting for time only, but that of a garrison whose orders were to hold out at all costs.

PARTISAN UPRISINGS

The *Herald* Moscow correspondent cables that as they retreat in South Russia, the Germans have got to cope with partisan uprisings behind the front. These are now sweeping the entire population of many Ukrainian villages into the work of preying on communications.

In one village near Voroshilovgrad when the news came of the Red Army's advance in the neighbourhood, the whole population armed themselves with sporting guns, crow-bars, scythes and every kind of makeshift weapon and fell on a German lorry; their

ambush was so effective that they captured the radio apparatus, 10 lorries of ammunition and quantities of rifles. Armed with these they developed their operations yet more devastatingly.

Madras Thanked

His Excellency Sir Arthur Hope, Governor of Madras, has received from Sir Stafford Cripps the following message:—

"My sincerest thanks for further gift of £7,500 from people of Madras. We in Britain are deeply conscious of India's part in our struggle and we appreciate the very generous assistance which comes from Madras."
—Stafford Cripps."

"STRAIGHT FROM THE HORSE'S MOUTH".—Two V.C.O.'s of Q.V.O. Sappers and Miners, tell a large crowd of Madras workers, how the munitions and supplies they have turned out have been used against the enemy.

Diary of the War

ENGLAND AND GERMANY

19th Feb.—There was slight enemy activity near the south-east coast of England.

Goebbels, speaking in the Berlin Sports Palast, said: "We have got to act and that without delay, quickly and thoroughly. In the east, we are at the moment living through a military trial."

20th Feb.—The Royal Air Force attacked Wilhelmshaven and also railway and canal targets in Belgium and France.

The Gestapo, faced with the danger of invasion from the east, ordered all peasants of full German blood to be armed.

One E-boat was destroyed and another damaged in the North Sea.

According to reports received in Zurich, Germany's total casualties in the war amounted to approximately four million.

21st Feb.—Two German aircraft flew over the coastal districts of north-east Scotland dropping bombs at two points.

The Royal Air Force bombed Wilhelmshaven. It was disclosed that United States aircraft destroyed 24 German aircraft in two days in raids on Dunkirk and Saint Nazaire.

22nd Feb.—The Royal Air Force heavily attacked the Deschimag ship-building yard in Bremen.

The Chinese Military Mission from the United States arrived in Britain.

23rd Feb.—The need for the speedy opening of a second front in Europe was urged in the House of Lords by Lord Beverbrook, former Minister of Aircraft Production.

25th Feb.—A telegram from President Kalinin accepting the King's offer of the Sword of Honour for Stalingrad was received by the King on February 23.

UNITED STATES OF AMERICA AND ATLANTIC

19th Feb.—Madame Chiang-Kai-shek arrived in Washington on February 17. She warned a joint session of the United States Congress of the power of Japan. "The peril of the Japanese juggernaut remains."

Mr. Stimson announced that Lieut.-Gen. Walter Krueger had been relieved of the command of the Third Army and assigned to head the new Sixth American Army. [This Army comprises United States troops in Australia and New Zealand area.]

20th Feb.—Madame Chiang-Kai-Shek said at White House that Americans could help Chinese best by sending more implements of war.

Mr. E. R. Stettinus, United States Lease-Lend Administrator, stated that lease-lend shipments of war supplies to the Soviet in January were 10 per cent greater than in December.

Mr. Donald Nelson, Chairman of the War Production Board, said in a speech at Baltimore: "Before many months, we shall have enough production to smother the Axis."

22nd Feb.—President Roosevelt, in a letter published by the *Post Dispatch*, stated: "We have now turned a corner in the war."

23rd Feb.—Mr. Robert Patterson, United States Under Secretary of War, said at the American Labour Press Association Conference that the war was unlikely to finish in 1943. It was likely to end in 1944 or 1945.

President Roosevelt in a message to M. Stalin on Red Army Day, said: "On behalf of the people of the United States, I want to express to the Red Army our profound admiration for its magnificent achievements unsurpassed in all history."

24th Feb.—The 45,000-ton battleship *Iowa*, the mightiest warship of the United States Navy, was commissioned seven months ahead of schedule.

25th Feb.—To a Gallup poll question, "Is Japan or Germany our Chief enemy?" put to Americans, 52 per cent replied Japan.

INDIA, BURMA AND CEYLON

19th Feb.—The Royal Air Force attacked the enemy-occupied village of Yegvanbyin on Akyab Island. Bombs were dropped on Japanese troop positions at Donbaik. Monywa aerodrome was attacked.

21st Feb.—The Royal Air Force attacked the Japanese aerodrome at Toungoo. Two villages on Akyab island were also attacked. United States aircraft attacked railroad rolling stock at Ywataung in Central Burma.

22nd Feb.—Hundraj M. Parwani, a prominent Congressman of Sind, who returned to India after an adventurous escape from the Japanese in East Asia, said: "Japan's professions of friendliness and goodwill towards India are insincere and false, meant only to deceive India. Conditions in India would, in the event of a Japanese victory, be a hundred times worse than at present."

23rd Feb.—The Royal Air Force bombed Port Dufferin and Myingan in Burma. American aircraft attacked enemy headquarters at Sahmaw. Buildings, barracks, oil tanks and railroad installations were destroyed.

Japanese forces pushing into Yunnan from Burma, failed to cross the Salween river.

24th Feb.—The Royal Air Force attacked enemy objectives at Akyab and Panktawagyi. Bombs were dropped on and near the runways of Mingaldon airfield in Rangoon.

25th Feb.—An attack representing the first Japanese offensive against a United States base was made on an American air-base in Assam on 23rd February.

Both Chinese and Japanese suffered heavy casualties in the fighting that raged for five days on the west bank of the Salween river.

ITALY, AFRICA AND THE MEDITERRANEAN

19th Feb.—Two Axis planes were over Cyprus. United States bombers raided Cagliari and two other places in Sardinia.

Allied forces evacuated Feriana and Sheitfa. Kasierina was occupied by German troops. American forces evacuated three air fields in southern Tunisia.

Advanced elements of the Eighth Army reached Madenine and attacked the southern flank of Rommel's forces.

20th Feb.—The Eighth Army captured a Mareth Line outpost. A major battle was imminent in Southern Tunisia.

21st Feb.—Mr. A. V. Alexander, First Lord of the Admiralty, announced that since the battle of El Alamein, 136 Axis supply ships were sunk in the Mediterranean and 112 damaged.

Allied forward positions in the Ousseltia Valley were withdrawn. General Sir H. Alexander took over his command of all land forces in Tunisia.

Remarkable and Inspiring

"For Stalin's courage, his ceaseless labour, his leadership and his consummate skill, we and the world owe the greatest debt of gratitude. In the dark days of retreat, his leadership of the Soviet Union was as remarkable and inspiring as that of our own Prime Minister in the days of Dunkirk. I can pay no higher tribute to any man than that."

—SIR STAFFORD CRIPPS.

The Secretary of State for India, the Right Honourable L. S. Amery, with the Bevin Boys at their hostel in Letchworth.

General Catroux was appointed permanent Liaison Officer between the Fighting French and General Giraud.

Sgr. Gayda, known as Mussolini's mouth-piece, made a statement in *Giornale D'Italia* that the Axis would continue resistance till a negotiated peace became possible. Mr. Elmer Davis, Director of the American Office of War Information, described it as "the first appeal for peace by a leading Axis statesman."

22nd Feb.—The Allies advanced west of Madenine. The Axis took Kasserine Pass in Southern Tunisia.

23rd Feb.—A strong enemy attack north-west of Kasserine was successfully held. The enemy suffered casualties and tank losses south of Sbiba. The Eighth Army continued its advance towards the Mareth Line.

Two medium-sized enemy supply ships were destroyed, a large tanker probably destroyed and damage inflicted on three other vessels by British submarines in the Mediterranean.

24th Feb.—Rommel's drive from the Kasserine Pass to the key town of Tala in Central Tunisia was blunted.

25th Feb.—The Axis formed a new line three miles from Kasserine.

RUSSIA AND FINLAND

19th Feb.—The Royal Air Force attacked forecast Axis evacuation of the Ukraine.

The Russian troops were within 12 miles of Taganrog. There were furious battles in Don basin. There was street fighting in Novorossisk.

20th Feb.—The Red troops captured the town and railway station of Merafa. The railway line and highway from Kursk to Kharkov was completely cleared of the enemy.

21st Feb.—Krasnograd was taken in the Ukraine. The Russians launched a three-pronged drive on Orel. Lubolin, an important place 25 miles west of Kharkov, was captured. The Red Army broke through two more defence lines—one beyond Kursk and the other west of Krasnodar.

The Chinese people's Foreign Relations Association sent the following message to M. Stalin and the Red Army: "Your victories have laid the foundations of Allied victory."

In a message on the Red Army Day to M. Kalinin, Chairman of the Presidium of the Supreme Council of the Union of Soviet Socialist Republics, His Majesty the King said: "To mark the profound admiration felt by myself and the peoples of the British Empire, I have given commands for the preparation of the Sword of Honour which it would give me pleasure to present to the City of Stalingrad."

22nd Feb.—The Russian army made rapid strides in the drive against Dniepropetrovsk, Poltava and Sumy. Pavlograd was captured. The Russian armies operating from Voroshilovgrad and Rostov joined forces.

23rd Feb.—According to the Stockholm correspondent of *New York Times*, Finland had decided to sue for a separate peace.

The Germans abandoned Dneipropetrovsk. A German transport and a cargo ship were sunk by a Soviet submarine in the Polar Sea. A bitter battle was being fought for Orel.

Yugoslav guerillas put more than 50 German tanks out of action in a few days and killed about 1,500 German and Italian troops.

24th Feb.—The Russians captured Sumy, an important railway junction in Ukraine, and advanced west of Kursk.

In an Order of the Day, Stalin said: "In three months the Red Army has cleared of the enemy the territory of Voronezh and Stalingrad, regions of Chechenoingush and other autonomous republics. . . . Mass expulsion of the enemy from the Soviet country has started."

25th Feb.—The Red Army continued to advance in Ukraine and the Germans threw in huge reserves.

NEUTRAL COUNTRIES

19th Feb.—Sir Henry Maitland Wilson, the new Commander-in-Chief of the Middle East, warned British troops in Iraq and Persia that much hard fighting "will fall to your lot."

21st Feb.—M. Sarajoglu, the Turkish Prime Minister, in a broadcast speech declared that a real alliance had been established between Britain and Turkey.

M. Sarajoglu, the Turkish Prime Minister, announced that Mr. Anthony Eden, British Foreign Secretary, had become an honorary member of the Turkish "Alkerli" (Turkish Cultural Society in foreign countries for Turks living abroad).

22nd Feb.—The new Persian Prime Minister, Ali Soheily, in opening the new Parliament, declared that the new Persian Government would spare no effort to increase the spirit of sincerity and mutual understanding governing Persia's relations with the Allies.

SHIPPING

22nd Feb.—The United States submarine *Argonaut* was lost.

23rd Feb.—Two United States passenger cargo ships were sunk in North Atlantic with heavy loss of life.

VICHY AND OCCUPIED COUNTRIES

20th Feb.—The Vichy Government closed all departments adjoining the Spanish frontier.

21st Feb.—All men, women and children of Turkish minorities living in Bulgaria near the Turkish border were sent to Dobrudja as a precautionary measure.

22nd Feb.—Warnings that total mobilization must be carried out without delay or Germany would otherwise resort to economic and even military sanctions were delivered to the Italian, Rumanian, Hungarian and Slovak Governments.

Some 170 bars and night clubs were closed down in Prague to release labour for the war front.

Five Danish industrial and other establishments working for the Germans were partly or completely destroyed by sabotage.

23rd Feb.—The Germans occupied Croatia.

THE FAR EAST

19th Feb.—United States aircraft attacked Japanese positions in the Shortland Islands. A Japanese airfield at Kahili on the south-east coast of Bougainville Island was also attacked.

There were fierce battles in North, Central and South China. Japanese troops landed on Kwangchowwan, a French Colony, 250 miles west of Hongkong. The Japanese launched extensive offensives in Hupeh, Kiangsi, Kwangtung and Kiangsu provinces.

20th Feb.—Sydney had an air raid alert. One enemy plane that appeared was driven off.

21st Feb.—United States naval forces shelled Japanese positions on Attu Island in the Aleutians.

22nd Feb.—Allied aircraft dropped 23 tons of bombs on Buin and Faisi on Japanese airfields.

Mr. Ralph Seard Bard, United States Assistant Secretary for Navy, declared in a speech at Baltimore that the Japanese would be blasted out of their strongholds and beaten into submission.

Sweden relinquished her territorial rights in China.

23rd Feb.—Lieutenant-Commander George Porter of the United States navy disclosed that undersea boats were within "spitting distance" of the Japanese homeland.

Munda in the Solomons was bombed by United States aircraft.

24th Feb.—An Allied convoy shot down five out of eight attacking Japanese torpedo planes. Japanese positions in Kiska were raided.

Above all Strife and Bitterness

IT is a fine thought that in the midst of this world upheaval where brutality and fear, misery and starvation, follow in the wake of the Axis invaders, the Red Cross stands forth as something above all strife and all bitterness, unassailed and unassailable.

I appeal to you with all earnestness to show your gratitude for all that the Army, the Navy and the Air Force have done, and are doing, day in and day out, often without food, and without sleep, battling their way through virgin jungle, over dangerous seas, through barren desert, and through storms, so that we may be spared the horrors of invasion.

Try and visualize the powers of endurance, the courage and humour which are required to get them through, and let us say to ourselves that anything we can do and any sacrifice that we can make are insignificant in comparison with what they are doing for us.

*H.E. LADY LINLITHGOW, in a broadcast inaugurating
the All-India Red Cross Week*

British Army Week Tributes

"We have other armies all over the world waiting to show that the Eighth Army, for all its achievements, is not unique. These other armies are hoping to emulate, not only their own brothers, but the valiant Red Army as well."

—SIR JAMES GRIGG, *War Secretary*, in a broadcast from London on Feb. 28.

"To-day we face the East. Not defensively, not with any doubt or apprehension, but aggressively, with confidence and determination."

—FIELD-MARSHAL SIR ARCHIBALD WAVELL, in a message to Sir James Grigg.

"The troops in Persia and Iraq are now in fine fettle, eagerly awaiting the moment when they may meet the enemy."

—GENERAL SIR HENRY MAITLAND WILSON, in a message to Sir James Grigg.

No easy way out for Germans

"We have never declared or desired the extermination of the German people, but in the light of the barbarous ferocity with which they are, as a deliberate act of policy, exterminating the Poles and Jews in occupied countries and deliberately wiping out those elements in subjected nations which are the spearpoint of national resistance, there can be no easy way out for the Germans."

—MR. C. R. ATTLEE, *Dominions Secretary*, in a speech in Manchester on Feb. 28.

Running Commentary

Marked Change in Jap Propaganda—Note of Realism.

There has been a marked change in the nature and trend of Japanese radio propaganda recently. There is an air of realism, and there are signs of genuine apprehension at the increasing capacity of the Allied powers to smash the Japanese war machine. No longer do we hear so much the usual boasts of Japanese military strength and power. A Japanese writer, SEIICHI TANAKA, writing in the *Japan Review* in November 1942, said,

"The building of potential strength is more fundamental than the immediate destruction of the opponent."

Similar sentiments were expressed by SIGEYOSI MATSUNAE in *The Kaizo*, another Japanese magazine. The writer points out that Britain's productive power since the Napoleonic Wars had increased enormously.

"Her consumption of cotton," he says, "rose 600 times and the production of iron 500 times in one-and-a-half centuries."

The main theme of Japanese propaganda now is to emphasise the Allied strength and rouse the Japanese to greater effort. "You must make every effort for the fulfilment of your country's aims"—this is the recurring theme. In a radio talk at Palao in the Japanese mandated islands in the south, a post-master, in a talk in Japanese, said,

"Japan is engaged in a war of life or death. In a modern war, especially in the initial stages, there is no difference between a soldier fighting at the front and a man working at home. All the Japanese people who are not actually carrying guns must work with the same determination as if they were on the battle-field."

The sense of realism seems to be so pronounced that the Japanese Government even introduced a Bill "for the guidance of speech, newspapers and overseas propaganda." The Tokyo broadcast says,

"The strictest control was unavoidable. The present war would decide the destiny of Japan. Only one way

ANGLO-AMERICAN ARMY OFFICERS MEET IN DELHI.—After conferences at the Secretariat, New Delhi India, on February 1, 2 and 3, the main conferees line up for their pictures. Left to right: Field Marshal Sir Archibald Wavell; Lieut.-Gen. Joseph W. Stilwell commanding all United States Army troops in China, Burma and India; Lieut.-Gen. H. H. (Hap) Arnold, commanding the entire United States Army Air Forces; Lieut.-Gen. Brehon Somervell, commanding the entire Service of Supply for the United States Army; and Field Marshal Sir John Dill.

is opened for the Japanese people—to win the war. For this reason the Government is taking every precaution to prevent mistakes in speech and information. It is hoped that the people will assist and take every precaution."

It is well-known that strictest regulations are already in force in Japan, and to them have been added some more.

(Continued on page 6.)

THE MARETH LINE

GENERAL SIR H. R. L. G. ALEXANDER

GENERAL BERNARD MONTGOMERY

GOOD news comes from Tunisia : The Eighth Army has pierced the defences of the Mareth Line at several places. Heavy bombers of the Allied air force had been pounding ROMMEL'S positions along the line, with a view to helping GENERAL MONTGOMERY'S forces start the fresh offensive. It is stated that the day-and-night air offensive to which the enemy positions were subjected was reminiscent of the sustained battering at El Alamein before the great break-through, which led to the expulsion of the Axis forces from Egypt. The village of MARETH itself was the principal target area for Allied bombers. *Reuter's* Special Correspondent with the Eighth Army reports that Allied air attacks are on a big scale. He says that the tempo on the Mareth front is increasing with great bomb bursts at night and fierce artillery exchanges during the day. He also points out that the Axis forces are building new positions and greatly increasing their anti-aircraft guns.

Main Defence Zones

THE Mareth Line, it may be stated, was built on the pattern of the Maginot Line. It consists of three main defence zones, which run for thirty miles from the Mediterranean to a 1,600-foot range of hills called MATMATAS. The Mareth village which lies well within the main defences, is regarded as the pivot of the line, the main position of which blocks the twenty-mile gap between the salt marshes which are nearly part of Lake Jerid, and the sea. It is impossible for heavy vehicles to cross the marshes and therefore it is extremely difficult to outflank the line from the west. The sea coast itself is too shallow for landings from sizable ships.

THE Mareth Line itself consists of a string of fortified positions which have been cut into the desert rock and, wherever necessary, reinforced with concrete emplacements. There are concealed guns, underground living quarters, telephones, and underground water-supplies drawn from the Mareth oasis. The protection for the defence positions include barbed wire entanglements, pill-boxes, tank traps, machine-gun nests, and of course the usual mines. It is stated that these defences are some nine to ten miles deep.

Rommel's Plans

WHAT is ROMMEL likely to do ? Will he put up prolonged resistance along his defence positions, or will he abandon the Mareth Line altogether and join VON ARNIM'S forces with the object of concentrating on defence of the tip of Tunisia with all the united strength of the Axis forces in North Africa ? For, so long as Germans can deny the Allies the key-posts of BIZERTA and TUNIS, the North African coast cannot be used as a springboard by the Allies.

BUT it all depends on the progress of events in the central sector. *Reuter's* Special Correspondent with the First Army in Tunisia reports that American engineers have entered Feriana, which is 28 miles south-west of Kasserine. The capture of Kasserine Pass on February 25 is described as a resounding victory of the Allied forces over Rommel's troops. The future developments in the central sector depend on Allied ability to keep the enemy on the move. The object of the Allies is to cut the enemy communications and sever VON ARNIM'S forces in the north completely from those of ROMMEL in the south. The battle in Tunisia itself is thus one of communications.

As regards the northern sector, the situation has not materially changed.

Not an Easy Task

THOUGH the position on the Mareth front shows some signs of deterioration for the Axis, it is as yet too early to expect that there will be a collapse. ROMMEL'S retreat into Tunisia has, to all intents and purposes, brought about the merging of the two Axis armies. In his great retreat westwards across Libya, ROMMEL was able to take with him a number of base garrison troops and also considerable equipment at depots such as Tobruk, Derna, Barce and Benghazi. It is estimated that ROMMEL has some 50,000 men. This, combined with VON ARNIM'S forces which number 75,000, makes the total German troops in Tunisia come to about 120,000 men. It is not an easy task to clear a well-equipped army of 120,000 men from its last stronghold, which is so close to the main base of supplies.

Battle for Tunisia : Prospects

THE Battle for Tunisia is, therefore, likely to be long and hard, though ultimately there can only be one end to it. It is a very important battle, on the speedy outcome of which depends the early launching of a Second Front in Europe. The Axis must be pushed out of Tunis and Bizerta before any attempt can be made by Britain and America to invade the Continent. HITLER knows this only too well, and that is why he has diverted a very substantial part of his dwindling strength for the purpose of defending his positions in North Africa. His object in doing so is to delay the Allied attack on occupied Europe as long as possible. By merely keeping the Allies engaged he will be preventing, to a certain extent, the despatch of troops and supplies to Russia, which at present would be required for the operations in North Africa.

General Alexander's Appointment

THE appointment of General Alexander in immediate charge of the operations, as General Eisenhower's deputy, has been welcomed by *The Times*. He comes on the scene, says the paper, "at a time of disappointment. But he has already turned a defeat into a resounding victory at the other end of the Mediterranean." "A less dramatic reversal of fortune than he achieved at El Alamein", adds *The Times*, "if brought about with the speed of which he is master, may determine the whole course of the war, not in Africa, but in Europe."

ALL eyes are on the Mareth Line, and on Tunis and Bizerta. The unity of Allied command and the firm determination of the Allies will no doubt bring about the utter collapse of the Axis, but time is of the essence of the thing. It is to be hoped that General Alexander and General Montgomery will repeat their successes in the Western Desert in the last outpost of the Axis in Africa.

RUNNING COMMENTARY

(Continued from page 3.)

Production of Planes : Why has Japan decided to drop its boastful tone and regulate its propaganda in such a distinctive manner, both at home and abroad? The reason is apparent. Japan is experiencing considerable difficulty in the production of planes, training of pilots, etc., and this fact cannot be concealed. Replying to a question about training of pilots, TERAGIMA, the Japanese Minister for Communications, said, according to a Tokyo broadcast in Japanese on February 16:

"Every effort was being made to train them. . . . Short-term courses are being considered. Further, in all schools and colleges, preparatory courses on the art of flying will be opened to make youths air-minded."

Another broadcast in Japanese said,

"The Government is also planning to equip all schools and colleges with model planes and practice planes to give special flying education to the students."

Yet another broadcast referring to the production of planes, said,

"The Hodogaya Chemical Industries Company, Ltd., were honoured by the Ministry of War for their valuable services to the Japanese war front. Conquering all difficulties the Company succeeded in producing the quantities of chemicals demanded by the military authorities for aeroplanes."

The word "difficulties" deserves to be noted. To ease her difficulties, which are considerable, Japan is trying to exploit Manchuria further. A Batavia broadcast in English on February 10 reported that a mysterious new alloy had been discovered and that this would help in the solution of aeroplane production problems. It added,

"Nippon is now in a position to obtain a more than adequate supply of aircraft metal from the unlimited supplies in Manchuria."

The President of the Manchuria Industrial Development Corporation stated that Manchuria's aircraft production had increased in the past two years and that she can produce aluminum shells by

cheap and abundant electric power. In other words, the Japanese exploitation of Manchuria is still further increasing in its scope and intensity.

* * * *

Cotton not Sufficient for Japan's Needs. Among other problems facing Japan is that of cotton. According to a Japanese home broadcast on February 15,

KISHI, the Japanese Minister of Commerce and Industry, replying to a question in the House of Representatives, said,

"As the quantity of cotton now available to Japan is insufficient to meet her total demand, the Government will mobilise every possible source to solve the problem. China will be the centre of Japan's cotton producing scheme."

From this it will be clear that the indigenous economy in South-Eastern Asia has been dislocated by Japan's drive for more cotton.

Among other articles which are pre-eminently necessary for the successful prosecution of a modern war are petroleum, iron, cooking coal, manganese, copper, nickel, tungsten, etc. Japan has to import all these articles from outside. Before the war Japan imported 3,200,000 tons of pig iron, 2,224 tons of manganese, 256,000 tons of nickel, 11,300 tons of copper, and so on. These materials used to come from countries, whose markets are now closed to Japan.
