The problem that claimed the attention of the new administration in Sicily must be present in Italy, and the surrender has not saved the Allies the responsibility for imposing peace by economics though the primary responsibility is that of Italy's de facto Government. Perhaps the chief task is the expulsion of the Germans. To expect that agriculture and industry would go on under the shadow of a war for Naples and for Genoa is impossible. The expulsion may create problems like the peremptory transfer of the Dalmation coast to the Croat Government. The Vatican may surrender its demand for payments under the Lateran treaty but Italy's obligations at home may demand depreciation of the currency. The Allies have guarded against undue depreciation by fixing the exchange rate and refraining from purcsases of Italian products. The loss of Albania to the Germans is to be listed among the consequences of the surrender but it is too early to say if the armistice will save Italy from paying compensation to the Greek, Yugoslav and other Governments.

Between the Allies there is no place for war debts and the exaction of occupation costs is ruled out by pledges. Unconditional surrender perhaps will help Italy to share in the promises of the Atlantic charter. The Charter offered equal access to raw materials and outlined conditions as to lower tariff and freer trade. These conditions entail the abandonment of the policy of self-sufficiency pursued by Italy since the sanctions period. Whether Italy will be enabled to trade with Egypt or the lost empire, whether the armistice ends the blockade and the Government could get back from Franco's Spain the loan made during the Civil War are questions that cannot be answered at present. But it will certainly be argued that the corporative system is at an end and Italy's need of assistance is acute.

To expect ordinary trade and exchange to revive swiftly is futile, since Italy's complicated controls must stand in the way and the only thing to expect is a revival of State trading. Shorn of responsibility for the deficit empire Italy may be able to revive, once the quantum of Allied assistance is indicated. But the career of aggression will not be forgiven and the treatment accorded to French Africa may be unobtainable. The State Department has not outlined its intentions and it is desirable to wait for Mr. Churchill's explanation to Parliament. The Allies may have no direct interest in the restoration of either Capitalism or Socialism in Italy as there are no undertakings but Italy is, in one way, better off as profit-making has long been restrained; and the uneconomic demands of reconstruction may be accepted without demur. In having given special importance to the peasant producer under special discipline, Fascism indeed anticipated the demands of the period after the armistice. The maintenance of rationing etc. is implied on the basis of Vichy's record and underconsumption in Italy may, hough a factor in unemployment, be viewed as the fortune of war. The approach towards equality of sacrifice rather than opportunity under Fascism has to a certain extent simplified the task of the Allies in regard to their post-war programme. But Italy, cut off from the war, may not have the same eagerness to work for non-utilitarian ends. The decline of the artificial wool, synthetic rubber and oil distillation industries is one predictable result of the armistice.

It has been clear that economic handicaps do not affect the survival value of either individuals or nations. Italy's moral collapse, illustrated by the armistice, is perhaps not the result of shattered factories and broken enterprises. But the long road back has to be travelled, not because Italy's few native raw materials—silk, sulphur and mercury—are essential to the Allies but because an illustration of the truth that a free economy is essential for a constitutional monarchy has to be provided. Before the war the limited results obtained by autarky compelled the Allies to consider whether Italy would not do, well to go to the specialised division of labour common among the nations. The consideration may come to the forefront after the armistice because Fascist organisation, for organisation's sake is at an end, and Italy, as a market cut off from Germany, must be cultivated. A boomlet in coal shares in London is not without its value. Few neutrals can offer the goods Italy needs and the decay of the Belgian textile industry owing to lack of materials creates for instance unusual opportunities for Lancashire. There is, aside from the possibility of silk or shipping rectifying acute shortage, the consideration that the Allies have to produce an effect on the Occupied countries. The reappearance of Italy as a consumer of coffee and other Indian products may have no specific effects on India's export trade, but the armistice certainly makes for the modification of control under which coffee prices (in spite of the express desire of the authorities) have risen very high. The prospect of Italian re-entry into the market has been definitely encouraging to the groundnut market in India, apart from the assurance that the Mediterranean route may be opened very soon.

The Allied declaration of peace aims may not be explicit, but it is still possible to relate Italy's recent experience to the Prime Minister's assurance that a separate peace after the rejection of Fascism would produce valuable results for Italy. The broadcast in December, 1940 was to the same effect and Italy's future may be reckoned more promising than presumed, in which case Indian export trade may revive (on the basis of a new exchange rate) and the shortage of artificial silk yarn etc. in India may pass before the war with Japan ends. The fact deserves prompt recognition, but it would be absurd to expect a large-scale recurrence of woollen textile imports from Italy because wool supplies are subject to control and undesirable competition may not be fostered. These possibilities have to be outlined here since the initial market reaction in Bombay and Calcutta to the news of surrender is not very encouraging. But a revival in jute shares has been noted, and this again may be due to the estimate of export possibilities for raw jute as well as hessian while the continued boom in sugar shares is indicative of the market belief that the sulphur problem is solved. What the Allies might do for Italy after surrender may not be deliberately examined but the market view has been rather sharply formulated. Though there is no certainty of Italian goods coming into African or Asiatic markets, it will certainly be agreed that the local shortages of electrical equipment, instruments etc., may not persist long after the surrender. The current advice to postpone buying and invest in the interval receives justification from any survey of the consequences of surrender.

Co-operative Revival

The co-operative movement in Bengal has been furnished with opportunities to revive itself. According to Mr. A. F. M. Abdur Rahman, the movement in Bengal is in a position to make good the losses and stagnation of the past or at least secure the means of rehabilitation. Last year war orders for textiles were placed with co-operative societies and the weaving societies, relieved of worries as to raw materials or capital, were enabled to work on lines of standardised production. The multi-purpose society has been created by the existing societies undertaking sale of controlled commodities. Central banks were induced to extend activity and help members of co-operative societies. They could reinforce their income and prevent societies from languishing while acting as a check on profiteering. The Department's efforts to secure advantages for local co-operative societies must be reckoned important as indicating that co-operation even without the specific development of consumers' societies on the Rochdale model can help the public to overcome the twin evils of profiteering and hoarding. In the seed distribution scheme adopted by Government for grow food schemes, the societies played a part especially after the cyclone. Official recognition of the societies in the scheme for distribution of standard cloth on certain conditions is taken as a further proof and encouragement. Many banks and agencies have been chosen as agents by the Civil Supplies Department. Up to the end of May twenty-six banks had decided on adopting new lines of business. Capital invested was Rs. 475,414 and profit earned was Rs. 79,685. Additional capital available for developing agency functions is put at Rs. 664,276 and the Provincial Bank is prepared to advance up to Rs. 2 lakhs for banks selling standard cloth.

The Central and Provincial Governments have recognised the value of co-operative agencies in the scheme for distribution of foodstuffs at controlled prices and the success of the Parbatipur Sale and Supply Society in selling 30,000 maunds of rice to an evacuees camp has been one of many instances. In plans for rationing co-operative societies also figure and Mr. Rahman has offered suggestions as to the ways of encouraging societies to buy and sell foodstuffs. Credit for 30 days should, if necessary, be allowed in order to help banks engaged in wholesale trade. By appointing selected societies to conduct retail trade they could draw the funds for repayment. Remunerative employment of funds will be one way of attracting deposits. Purchases of grain

AUDITOR'S REPORT.

I have audited the Balance-Sheet as on 30th June, 1943 and Profit and Loss account for the half-year ending 30th June, 1943 of the Comilla Banking Corporation Ltd., as above set-forth with books and accounts as kept at the Head Office, with which are incorporated the branch balance-sheets as on 30th June, 1943 and Profit and Loss Account for the half-year ending 30th June, 1943 as certified by the branches and I have obtained all the infoomation and explanations, I have required.

In my opinion, the balance-sheet and Profit and Loss Account as referred to in the report are drawn up in conformity with the law and such balance-sheet exhibits a true and correct view of the state of the bank's affairs according to the best of my information and explanations given to me and as shows by the books and accounts as kept by the bank is required in the section 130 of the Indian Companies Act VII of 1913.

Dated, the 26th August, 1943.
98-4, Clive Street, Calcutta. Camp: Comilla.

through co-operative societies is recommended. In regard to the distribution of rations cooperative societies may fill the place of the proposed government shops. In Darjeeling, the sale and supply society, entrusted with the work of distribution, has justified its selection. Co-operative agencies are required to support the grow-more-food drive. In the crisis is seen an opportunity to revivify the movement by giving preference to central banks which will put primary societies on their feet. The grant of special favours to cooperative stores and societies on the same basis as new shops set up in Calcutta and the suburbs is also desired. On the basis of a new Central Supply Society in direct relation with the Civil Supplies Department the requisite capital can be easily raised. Apart from deflicting criticism and creating confidence co-operative societies with premises of their own and enjoying official supervision are not likely to deviate from the principles laid down for distribution. The memorandum of the Parliamentary Secretary is concerned as much with improvement of the machinery for the distribution of food as the growth of the movement to the point of independence.

Gingelly Crop in 1943

The wide variations between the first and final figures relating to the gingelly crop make it difficult to ascribe great importance to the increase in the acreage under gingelly in India though it may be said to neutralise the fall in the area under groundnut. The increase of 5 per cent in the reporting areas which constitute about 86 per cent of the cultivating areas is of less importance than the growing weather. The prohibition of futures trading is not of great importance as compared with the increase in the cropped area in Bombay, Bengal and Hyderabad. The increase must be attributed to the high level of prices from 1942 and the scarcity of copra. The crop in Bengal is expected to yield 31,000 tons against 22,000 tons though damage caused by drought has been reported. The major producer of gingelly seed is the U. P. where the rains were sufficient for the crop sown in time. In the forecast issued last week the U. P. acreage is not given. The crop in Madras is said to have suffered, but the satisfactory condition of the Hyderabad crop is obviously the chief consideration for the Bombay trade.

The war period has witnessed a small but steady increase in the area under sesame in India. The explanation is to be found in the absence of exports on a large scale. The area under gingelly in India in the last ten years has been constant about four million acres and the chief producing areas outside the U. P. and Madras are the States of Kotah, Bhopal and Baroda which alone reports an increase in cultivation. The Bombay quotation for gingelly of Rs. 21 per cwt. has not been affected by the forecast as the lack of rain in the Hyderabad State and Bombay may have a greater effect on supplies than presumed. Firmness of groundnut prices sustained by the buying of the Ministry of Food may also support the prive level. Since the end of June, the price of groundnut oil has gone down and recovered and the same may be said of coconut oil. For that reason alone it is possible to predict greater firmness in the gingelly oil market, and the high prices paid by crushers for linseed and castorseed may also influence the course of prices in this case.

Continuous Retreat

The German retreat towards the Dnieper has excited little surprise so far since the capture of Kharkov made the evacuation of the Donetz Basin inevitable as proved by the swift fall of Stalino last week. The latest reports speak of the Germans leaving the grain of the North Ukraine to the Soviet army now advancing towards Kiev. The Soviet's gain is not only in coal, iron and manganese but in the interposition of the large block of territory from Orel to Rostov regained this year between the Central front and the Crimea. After the fall of Taganrog and the capture of Mariupol there is little chance of Crimean troops being taken off to help the southern army in its retreat. General von Manstein's retreat began before the news of Italy's surrender appeared and was meant to save the Kiev-Poltava line for the next stage of the retreat. But up north there is danger to Briansk and thence to Smolensk. The Eastern-occupied territories or a part having already been lost, the food problem in Germany this winter must be severe. Goering cannot give general assurances as to the starvation of other people while Germans were somehow fed. The Nazis were engaged in a siege on the Volga last year; now they are going back to the Dnieper and the intervening territory has been recaptured. The Germans have repeatedly admitted the Russians' superior numbers and the retreat of the air force within Germany has given the Russians the chance to use their own flying artillery.

The retreat from the Ukraine may also give the Soviet navy the chance to act against the Crimea before the winter and landings near Novorosisk clearly had the object of reaching the isthmus of Perekop after the fighting on the Mius river front had ended. They recovery of the Ukraine after the surrender of Italy and the belated effort to build up German strength in the

alkans may alter the attitude of Turkey the use of the Straits. British tankers lay be able to go to Batoum and Allied ght naval units may be used against ulgarian ports. Russian exports of ores om the Donbas may revive sooner than xpected and this should help the Allies ough Iran's declaration of war last week as made the question of communications nimportant. For Russia the recovery of ie Ukraine with its 40 million people may ave large effects on manpower and food esources before the winter. No question eed be asked about German capacity to ecover and Russian capacity to surmount ie losses of two years, the Russian prolem may really be that of keeping White ussia with its mixed population within ach of its own flying columns. Celebraons in Moscow ordered by M. Stalin rove that recovery is deemed permanent nd the Soviet is going to take in hand the ork of rehabilitating the occupied proinces of its own accord.

hipping for South Africa

The United Party's victory in the eneral election of July confers added nportance on the project to develop a outh African merchant marine after the ar. Mr. Sturrock announced the reation of a merchant marine and the xpansion of civil aviation with the interland of Africa as important post-war rojects of the Union Government. He aid that the naval force was only a beinning. The Government hoped to introuce a Merchant Shipping Act to enable outh Africa to train her own seamen nd officers, have her own shipping regisr and Board of Trade rules, and provide er own transport to neighbouring counries. The Government hoped also to xtend civil aviation in order to assist in roviding a network up to the Belgian ongo and to co-operate with other ations in Africa. Mr. Sturrock mentiond that the Union was taking part in the iscussions with the United Nations as to ost-war air transport; and added, that part from developing services within the nion the Government would do its best o establish services in the Pan-African phere as far North as the Belgian Congo. he Minister referred also to a Pan-African sphere for which the Union would be the workshop. As engineering ranks already as the second largest industry in the Union at present, prospects for shipbuilders are to be regarded as bright. The local drive for rationalisation is expected to level up competitive capacity and the Rand Daily Mail looking at industrial progress in Latin America, India and China expects a larger demand for Union exports and a greater market in Africa too for Union manufactures. A Durban M. P. describing the shipbuilding scheme mentioned that Durban before long would become the centre of South Africa's new shipbuilding industry. He added that hundreds of thousands would get work on the project. But the Cape Argus in a survey of prospects said that the big question was whether shipping should be privately owned or State-owned.

Post-War Aims

Chicago where the Republicans held a meeting to consider post-war issues was the city chosen for Mr. Wallace's denunciation of monopoly and isolationism. Mr. Wallace's speech followed that of Mr. Churchill at Harvard and was more than a harking back to his speech of December 28 last year. It followed Mr. Thomas Dewey's declaration in favour of an Anglo-American alliance, but it dealt with the domestic issue of monopoly rather than the creation of a world police force or any other object dear to the other side as well as the Administration. Mr. Wallace as a likely candidate for the 1944 election advanced views which certainly point to the grip of the New Deal. Setbacks suffered in recent months through Congress' refusal to accept proposals from the Administration have not affected Mr. Wallace's view of freedom and social security. The old phrase, Freedom from Want, has been amplified and explained by the Vice-President to show that old age pensions, health insurance etc. come into the framework of security associated with industrial peace and freedom of enterprise in spite of Government controls and cartels. Republicans, angered by the attack on monopoly, may find in the last condition something to help them. Stabilisation of prices and stocks of commodities is promised by an assurance as to freedom from fear of bankruptcy by overproduction. The ever normal granary is to appear as a cure for slumps. The offer of freedom carries with it an assurance of price stability and high taxation. The post-war tax burden, apart from the increase in federal debt, is to be higher as the social security plans outlined will entail expenditure. But Mr. Wallace did not speak of revenue plans but only of the objectionable features of monopoly. Unscrambling the trusts is not easy at the best of times and the U.S.A. having been told by the Department of Justice of the lease of the Elk Hills Reserve may have no horror of the malevolence of big business or of the foresight of Departments. The only specific demand voiced by Mr. Wallace was against international monopolists coming to the peace conference. This is a caution against the revival of cartel agreements but the cartels within the United Nations may object to a general prohibition in advance. There may not be cause to consult Germans as to the future of synthetic rubber or synthetic oil but German processes and patents must become the subject of bargaining after the war and the negotiation must be conducted by non-government

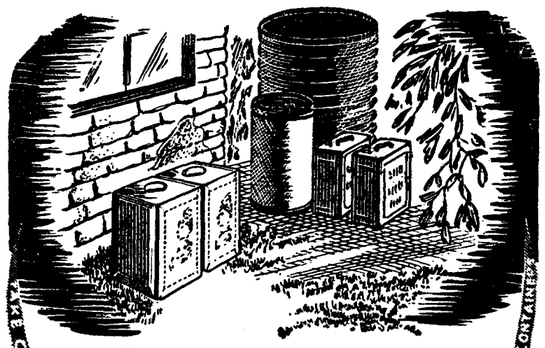
agency for obvious reasons. That monopolies are conservative by nature may seem reprehensible to the Vice-President who liked the attack on Isolationism with that on monopoly and gave instances of monopolistic malpractice. The periodical revelations may not lack a foundation but investors apart from the fetters due to war news may be disheartened by repeated allusions to misdeeds on the part of great enterprises. For the working-class the offer of social security in a far more precise form than has been indicated by the promise of freedom from want is of unusual interest. The new promise may take another shape before the U.S. election and post-war expenditure may influence trade policy. If agricultural exports are to be kept up, it must be only on the basis of education of backward nations for full production and planning of enterprise abroad. The Vice-President looks to investment on a large scale for beneficient purposes. That is an assurance of some value to India.



Canadian Crop Plans

Changes experienced by Canadian agriculture between 1939 and 1943 are revealed by the Canadian Bank of Commerce in a special note describing the increase aimed at in agricultural and dairy output this year. Most significant change, however, is the anticipated fall in the principal crop. The area under wheat is to be reduced by 18 per cent from 21,586,000 acres to 17,701,000 acres this year while the area under rye is to be lowered by 31 per cent to 924,000 acres. The area is to be distributed among other field crops. The area under oats, barley and hay as well as lucerne production is to increase. The changes are related to shortage of manpower and implements as well as the shifts of demand at home for more feed and less food. The change is one decisively connected with the projected increase in the Dominion's meat production. This season a further increase in the number of hogs, sheep and cattle is desired. In the war period the swine population has increased to 7.75 millions (December 1, 1942) and is expected to increase still further. The commercial production of meat has increased over the average of 1936-40 by 50 per cent, of eggs by 20 and of milk by 10 per cent. These increases are explained by the loss of European supplies for the British market.

Handicapped by lack of capital and machinery at the outbreak of war, Canadian agriculture has swung over to dairy products and poultry and eggs. Though the number of workers on farms was reduced to three-quarters of the normal force at the end of 1942, the response to war demand was striking as volunteers including young students took up farm work. New crops which have made headway are flax, sugar, beet and soyabean. Even more remarkable than Ontario's eagerness to grow fruit, etc., was the readiness of the Prairee Provinces to turn to livestock and dairy farming. Cheese production is to be maintained at 202 million lbs. and powdered milk production is to be raised by 41 per cent in 1943 to 16 million lbs. while butter output is fixed for the year at 323 million lbs. so as to obtain an increase of 14 per cent on the last year while farmers will have difficulties as before in replacing machinery parts, or attracting workers there is the increased demand at home apart from exports and the heavier rations required for soldiers and war workers at home. The main advantages of the farmers lies in the rise in farm purchasing power in spite of the advance in costs to a point very near the 1926 level. Though labour may be short, farmers should be willing to buy implements and parts. Stock losses in the winter have been small as feed was more or less abundant, and current agricultural prospects in Canada give rise to satisfaction. The increase in fodder crops and mixed grains is certain, as the area under wheat and rye is to be reduced this year. The moisture precipitation in the Prairee Provinces is higher than in 1942 and farmers have been promised that essential workers will not be allowed to leave the land while a reserve of 100,000 workers from young students and others is to be detailed for farm work in addition to men unfit for military service and enemy internees. Agriculture is to be directed to maximum production even if labour has to be taken off from factories and mills to help farmers.

Striking Progress

A small inset table in the balance-sheet of the Comilla Banking Corporation suggests that exceptional prosperity is not confined to one or two banks but is a generic characteristic of Bengal's banks to-day. Perhaps the feature to which greater interest attaches to-day is the increase in capital. An offer of shares to shareholders last year led to a useful addition to capital, and the further accretion to paid-up capital, before and after the promulgation of Rule 94A is the surest index of progres in this case. Issue at a premium was unexceptionable, and calls in arrear should raise the paid-up capital to nearly Rs. 30 lakhs at the end of 1943 though no ratio between capital and deposits is desirable the proclaimed intention to issue new shares, so as to augment resources from within, receives its justification from the proposals approved by the Reserve Bank Board this year. The principal feature is not the growth of deposits but the further increase in capital since the former is the consequence of monetary

Rust spells Ruin...

When the inside of a petroleum container starts to rust, that container is soon useless. External rust too can ruin it. Packages should be scrupulously protected against moisture, and should never be left without an efficient closure. When possible they should be stored in a dry room and when this is not possible they should be protected from exposure.

Today, oil containers of various kinds form one of the lifelines of the industrial war effort, because without them it is not possible to distribute oil. Most of the steel which in peace time was used to make containers is now required for the manufacture of ships, tanks, guns, and other war material.

Containers are scarce

BSCR 88 ★ A BURMAH-SHELL ANNOUNCEMENT

policy as much as the bank's improving position. The increase in Reserves during the limited period is, however, of special significance as proving that reserves received even more attention than the issue of new capital, and the half-year's profit has since led to a further addition. The increase of over Rs. 1.34 crores in total deposits is accompanied by other changes in the balance-sheet. It is not surprising that cash and bankers' balances constitute the principal asset when the demand for money has been moderate. The cash ratio is over 42 per cent in this case, and the proportion of advances and acceptances to total funds is as low as 25 per cent, suggesting that liquidity is the outstanding feature of the balance-sheet published to-day. Investments totalling

Tatas now make Basic Chemicals FOR INDUSTRIES

To enumerate the multitudinous ways in which chemistry of today is serving mankind would be well-nigh impossible. From the clothes we wear to the foods we grow and eat, the houses in which we live, the plants that grace our gardens, chemistry aids us in making these and thousands of other things better.

In the above chart are listed some of the important industrial uses of chemicals. For the supply of these basic chemicals, up to now, India has been mainly dependent upon other countries.

In conformity with their plan for starting key industries in India, Tatas have now set up a most extensive and up-to-date chemical works for the manufacture of basic chemicals.

No longer will Indian industries and agriculture have to depend upon foreign sources for their requirements in heavy chemicals. Tatas' enterprise reduces the imports of heavy chemicals and ensures an ample supply for India's industrial and other requirements.

Tata Chemicals maintain a staff of highly-trained experts whose business it is to study the application of these chemicals to industry.

Interest in post-war economic problems has been quickened by the recent developments in the war. With Italy knocked *out* of the war and the second front effectively opened, with Russian advance exceeding expectations and General MacArthur succeeding in his new strategy in the Far East, expectations of a speedy end to the present war are widely felt, though, for obvious reasons, responsible quarters are anxious to discourage such optimism. Strictly speaking, there is no very close relation between the duration of the war and interest in post-war problems. For the latter is due to the recognition that public opinion and *governments* alike in the Allied Nations should be well prepared by the requisite forethought and prior understanding to meet the problems of *peace* when they come on the table of international conferences. The date of the cessation of hostilities is impossible to predict; and forecasts are as likely to put off the date too far as to bring it too near. Enquiry into post-war problems *is best* conducted without undue concern for the duration of the war. Though this is, no doubt, true, expectations of early peace *do make a large difference* in the spirit in which the problems are taken up for examination. So long as the issue seems to hang in the balance, the problems seem to have a forbiddingly hypothetical character; and one gets the feeling of trying to jump much ahead of the stile. Close and serious application to problems which are remote in time and which, for that reason, are difficult to appraise, is *not* easy. Ideas and proposals acquire an inevitably nebulous character; and discussions over their merits either have the character of schoolboy debates or create premature ill-will.

* * * *

The latter was indeed, to some extent, *the fate* of the American and British proposals for the regulation of post-war international finance. The gulf between the two sets of proposals were far too wide. The controversy was, indeed, acrimonious. In fact, discussions on these proposals in the earlier stages remind one of the negotiations between the Congress and the Muslim League about their differences on *the future* constitution of India, when the British Government makes it clear that even agreement between the two will not lead to the establishment of a cabinet during the war period. A remote problem is an unreal problem; and it is no spur to dissentients to close up their differences. With the improvement in the outlook of the war, one may well expect a different spirit to be evinced by the parties concerned. News of post-war economic policies is still meagre. But it is sufficient to show that those whose special responsibility is the formulation of post-war economic policies *do not want to* be caught napping.

* * * *

It is now said that Lord Keynes has left for Washington to take charge of the negotiations with the U.S. Treasury about post-war currency plans. The "Financial News," which is responsible for this report, infers from this that the negotiations *hitherto conducted* by Sir David Waley have passed the preliminary stage. This inference, it would seem, is at variance with the nature of the revised proposals which Mr. Henry Morgenthau released to the public some time ago and which were commented on in a leading article in "Indian Finance" of last week. A revised scheme, which has been very responsive to *Canadian criticism of the earlier measures* and which meets British criticism only by worsening the features criticised by British opinion, can hardly be regarded as progress in the preliminary negotiations between Sir David Waley and the U.S. Treasury. One can only suppose that the revised proposals belong to the period in which post-war problems seemed to be very remote and that the progress referred to by the "Financial News" was made after the improvement in the outlook of the war. The exact chronology of war events *may not be helpful* in proving my point. But a time lag between the developments in the war theatres and the change in the attitude to post-war problems can explain whatever may otherwise be puzzling in this. For my part, I have no difficulty in believing that, if the present rate of progress in the war is kept up, we shall hear more and in greater detail of the measures of international economic regulation for the post-war period.

* * * *

It is, indeed, a great pity that little or nothing is being done in India by way of study of our post-war economic problems. The Federation of Indian Chambers is believed to have interested itself in the British and American proposals for the regulation of international finance. Though their importance cannot be denied, it is well to bear in mind that our paramount problems lie in the sphere of agricultural reconstruction and industrial development, rather than financial or economic relations with the rest of the world. Besides, international finance is the sphere in which Indian public opinion is least likely to make itself felt. Whatever the nature of the scheme that may be adopted, and whatever the constitution that may be adopted for the governance of international finance, it is, to say the least of it, extremely unlikely that Indian representation will be of a very weighty kind. In the nature of things, India cannot be of much consequence in any scheme for the regulation of international finance. Our interest in it must for some time be confined to ensuring that our foreign balances are not spirited away or are tied up unduly. The habit of looking at any international proposals from the point of view of Indian prestige can hardly be unhelpful. On the other hand, our agricultural reconstruction and our industrial development are matters of considerable interest to the Powers that will dominate the post-war international conferences. It is up to us to show the world what we can do for ourselves and for world economy, if the industrial nations will only shake off the old habits of thought and stop asking for freedom of trade regardless of its consequences on the majority of countries in the world. So far, India has only expressed its fearful reactions to proposals of *international economic regulation.* And while on our side, these reactions may be justifiable, we should not overlook the fact that, to foreigners, they will not be far different from the usual expressions of economic nationalism. There is need to-day to set up non-official committees of economic enquiry or rather set up committees of serious-minded students to draw up more or less definite schemes of economic development which can be hopefully put into execution in the post-war years. While there should be attempts at un-*official planning*, care should also be taken to define India's position regarding the

principles of international economic co-operation as they may be stated from time to time by experts or officials in Britain and the U.S.A.

* * * *

For the present, it is well to understand that the stage of quasi-academic discussions about post-war economic problems is being fast left behind. Not only will Lord Keynes do his best to bring about an agreed plan for regulation of international finance, the adoption of the basic principle of a clearing union will enable the two nations to proceed to attack the post-war problems in other spheres of international economic life.

According to the *News Chronicle* the British and U. S. Treasury authorities have jointly prepared a scheme which may soon be published, for another part of international reconstruction mechanism, namely a world capital bank to regulate the flow of international capital and provide long-term finance for projects that would not appeal to private investors.

A U. S. Treasury memorandum on this scheme argues that private capital will be unable to meet all demands of post-war reconstruction. It is, therefore, proposed to establish an international bank called "The Bank for Reconstruction of the United Nations and Associates," which will do on an international scale the business of reconstruction of war-devastated areas possibly starting with the industrialization of China.

The capital of the bank would be provided by agencies of the participating Governments and the bank would have wide borrowing powers. Actually it would have to borrow from the Governments of those countries ready to provide capital goods for overseas development. Since the bank would control huge capital transfers, it would have to co-ordinate with whatever international agency (clearing union or stabilization fund) which may be created for clearing international payments and maintaining exchange stability.

A World Capital Bank, doubtless, raises many intricate issues as to constitution, functions and operation. One must await details of the proposals for making any worthwhile comment. But it seems to me, as a matter of first impression, that the main idea is to create a special international agency for reconstruction and to generate a new set of international transactions which, because they are the result of the operations and activities of an international agency, will belong as of right to the International Stabilisation Fund or the Clearing Union, whichever may ultimately be adopted. It seems to me that, while India may affect indifference to the Stabilisation Fund or Clearing Union, if it should stand by itself, she will have to secure a large say in the conduct of the World Capital Bank. Though India may lack capital in the sense of ability to manufacture capital goods, she is still rich in her holdings of monetary and non-monetary gold. India must contribute to the capital of such a Bank in gold, recovered, if necessary, from ornaments and private hoards, rather than allow herself to figure as a supplicant for advances and accommodation from the Bank. Schemes of international economic regulation are both a threat to our economic security and an aid in certain conditions to undeveloped countries in the achievement of their economic progress. We in India are too prone to emphasise the first to recognise the second and take advantage of it. The time is come when we should be able to say to ourselves that we will not only ward off the danger but turn the danger into an advantage.

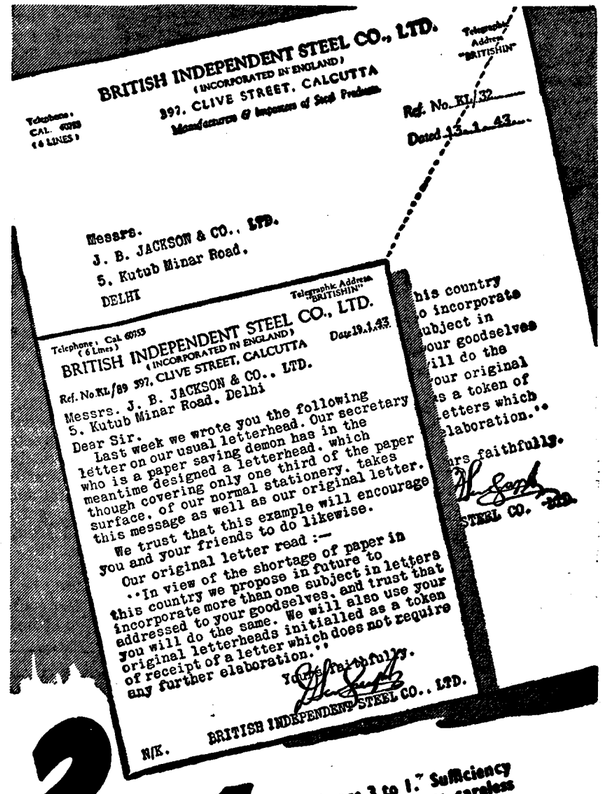
Factories in Hyderabad



The administration of the Factories Act in Hyderabad has led to marked improvement in working conditions. The 650 factories in the State employ about 50,000 workers. Under the Hyderabad Act of 1930 modelled on the British Indian Act, the maximum for working hours per week was fixed at 60. In seasonal factories the working day was limited to 10 hours per day and the grant of a weekly holiday became compulsory. The Act in force from Fasli 1340 provided for the improved sanitation and provision of industrial safety. Children below 12 cannot be employed in factories, and children below 15 are not permitted to work more than six hours a day or more than five hours continuously. Women and children are not allowed to work after 7-30 p.m. Certain dangerous or hazardous occupations are forbidden to women and children completely. The Factories Act covers all establishments using power and employing more than 20 persons which rice mills and ginning presses employing ten or more persons are also covered by the Act. Even where no power is used but 20 or more persons are employed the Factories Act can be applied by notification. Bidi manufacturing concerns and small metal factories employing a large number of children are declared to be factories for purposes of regulation of labour conditions. Persons above 15 are treated as adults and allowed to work for 60 hours. Hyderabad has adopted the Workmen's Compensation, the Payment of Wages Acts etc., and introduced a new order to deal with trade disputes in the State. The variations in labour standards as compared with British India are few. The housing provided by employers for workpeople is largely due to the State's interest in industrial welfare. Even in a few seasonal factories accommodation for the staff and a part of the workers is provided at present. Employers have started welfare work on their own and credit societies, recreational factories etc., are provided for workers. Dispensaries and schools have made their appearance owing to the stronger interest shown in labour welfare. A Labour Office sees to the enforcement of legislation already enacted and looks after the interests of workers. The Hyderabad bulletin does not refer to mines but the Mines Act must be in force in the State, and the miners in the coalfields must be in enjoyment of the amenities available for other workers while the Maternity Benefits Act, the Payment of Wages Act etc. should apply to them.

3 TO 1

The odds are 3 to 1. Sufficiency of paper has made us careless in the use of this precious commodity, and today we waste more than 3 times the paper surface actually needed. Examine all the stationery you use, letterheads, bill forms and other stationery. You can save 2/3 of the paper surface you are using.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :—

- Use the smallest sheet of paper for any purpose that will do the job.
- Write, type and print on both sides of the paper.
- For short letters, bills and accounts reduce the size of the paper.
- Do not make copies except where absolutely necessary.
- Always type single spacing.
- In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.
- Reduce the size of the labels on manufactured goods.
- Use the back of the letters received for the carbon copy of your replies.

Save paper

ISSUED BY THE TITAGHUR PAPER MILLS CO., LTD.

Airway Port

(From Our Correspondent)

Karachi, Sept. 9, 1943.

"If the Barrage provides what is expected, Karachi may have to handle in 1960 a very large portion of the produce as also the produce from 429,800 acres of Dubrari cropped land. Within seven years of the completion of Barrage, the following areas were under cultivation—1,014,104 acres under wheat; 822.191 acres under cotton and 580,631 acres under rice." So ran a local account when the shadow of war had not descended on Europe. In contrast with other provinces, Sind presents a picture of prosperity beyond expectations. Despite troubles such as the Hur menace, the recent floods and the locust invasions the Barrage has literally transformed the desert into a paradise of plenty. This spell of prosperity enabled the Allah Baksh Ministry to make quicker payments to the tune of four crores to the Centre towards the reduction of Barrage debt, which would otherwise have stood at 25 crores. This has effected a saving of 8 to 10 lakhs in interest. If the Barrage debt is completely extinguished, the resources of the province would be greater. At present, Sind receives from the Central Government an annual subvention of about 105 lakhs of rupees which would be reduced from 85 lakhs in 1945-1946 to nothing within 30 years. Towards the interest on the Barrage debt of 21 crores at 4 per cent the subvention received is the contribution. But by capitalising the debt Sind may be enabled to pay four or five crores of rupees in lump sums in the next two or three years after which there would be no debt, no payment of interest, and no subvention.

Thanks to the prosperity engendered by the war, Sind Government is in a position to pay four or five crores within the next three or four years. The recent enhancement of land revenue will also add about two crores to the provincial exchequer. If the Central Government are prepared to capitalise debt even at 4 per cent, Sind should be in a position to save 85 lakhs per year by way of interest on 21 crores. Hence a move to reopen discussions with the Centre in this direction, as a fear is expressed in political circles that it will be rather difficult for the Central Government to continue the subvention to Sind.

A resolution urging an early decision by the Government to permit resumption of futures was passed at a meeting of the Board of Directors of the Karachi Cotton Association recently. This synchronised with a similar resolution at Bombay. The Board viewed the situation with great concern if futures trading were not allowed within the coming few months as the sudden impact of new crops was bound to affect the interests of the cotton-growers. Local opinion is that the futures may be allowed by the 29th of this month as the Central Cotton Committee is making a determined move.

Though the harvesting of new crop has been advanced in this province by a few days owing to rains in cotton-growing areas, the outlook is distinctly better. Both N. T. Sind and 289 F. Punjab show up well. Business is being done rapidly for November and December delivery. In accordance with the decision of the Government of India, Sind Government has stopped forward trading in cotton-seeds the only commodity not affected till now. The Karachi piece-goods market has improved. Current prices are 10 per cent higher than the prices fixed by the Government and there is a rapid depletion of stock, owing to local demand as well as up-country requirements and Baluchistan demand.

The Government of Sind has recently despatched to Bombay about 6,000 tons of rice through the Grains Export Syndicate. It is explained that the Government has raised the price of rice in order to fix it in parity with the prices prevailing in the Punjab.

The Sind Export Syndicate, the newly started concern to handle the export of food grains excepting wheat on behalf of the Government of Sind has now been registered and an agreement between the Syndicate and the Government of Sind has been signed. The Syndicate has been registered with a capital of Rs. 90 lakhs of which Rs. 36 lakhs have been paid up. Among other things the agreement provides that the Syndicate is to finance the purchasing of food grains for export to the tune of its paid-up capital and if more funds are required it is to get advances from the Government and from banks, the interest being paid by the Government.

The Government of Sind, in order to contribute their share to the country-wide campaign to grow more food has decided upon the details of a scheme costing half a crore of rupees, involving the extensive cultivation of wheat, rice and millets. It is stated that the Government will get improved variety of seeds from the Punjab to increase the output per acre. Two hundred depots will be spread throughout the province to ensure equitable distribution of seeds.

Reports that Calcutta mills will work as usual had a bearish effect on the gunny bag market and September declined to Rs. 69-12. I gather from local circles that three steamers which had taken food grains to Calcutta will come back with cargo of bardana and tea.

Sept. 15 (By Wire).

The Karachi Branch of the United Commercial Bank, Limited was opened on Monday. Over thousand guests including the Premier of Sind and other Ministers and the elite of the city were present. The guests were received by Mr. B. T. Thakur, the General Manager of the Bank, and other Members of the local Advisory Board. An 'At Home' was arranged to celebrate the opening ceremony and the guests after light refreshments went around the Bank's up-to-date premises situated in the heart of the city. As soon as the Bank was declared open a regular stream of deposits began to pour in. When the Bank closed for the day, total deposits were well over Rs. 70 lakhs. The local Manager of the bank is Mr. T. T. Thakur, brother of Mr. B. T. Thakur, and the majority of the employees are local men with previous banking experience. Local businessmen predict a great future for the Bank.

WEAL WIRED

News of loved ones revives memories of home, renewing hope of future happiness; this precious news is an essential to the well-being of those who spend their days waiting behind barbed wire in enemy lands.

The Indian Red Cross announce that during the month of June, an average of five messages a day were despatched from India to relatives in enemy occupied territory, including Austria, Denmark, Germany, Greece, Holland, Hungary, Italy, Norway, Rumania, and Thailand.

We are in constant need of money to continue this work of mercy.

Please send a regular contribution to the Hony. Treasurer, Indian Red Cross Appeal, C/o Imperial Bank of India, Strand Road, Calcutta.

(From Our Correspondent)

Bombay, Sept. 6.

The Textile Commissioner's warning as to the rise in cloth and yarn prices going up was superfluous as prices in August rose after the decision as to the disposal of unsold stocks to the Government at a discount has been promised and this may explain the decline in the quotations for mill shares rather than the limitation of dealings in the share market. Mr. Thackersey has outlined his view of cloth dealers' responsibilities under the Control Order. He has declared that contracts must be made at ceiling prices and mills cannot arrange to take more for any reason while retail prices too must be only 20 per cent above the maxima fixed. He has also stated that the wholesaler cannot appropriate the entire margin to the disadvantage of the retailer and ultimately of the consumer, but should leave at least 7 per cent to the retailer. Mr. Thackersey explaining the reasons for ceilings and margins imposed drew attention to the fact that prices charged for war orders this year have been raised by 75 to 90 per cent over those charged in the February-April, 1942 period for war contracts in order to allow for increases in costs. The ceiling prices fixed are 80 to 92 per cent above those ruling in the market during February to April last year and in the case of leopard cloth the increase is about 91 per cent as compared with prices fifteen months ago while the permissible increase is 100 per cent. Reference was made to two other facts. 50 per cent of mills' capacity is given over to standard cloth manufacture at more or less cost price basis and 10 per cent to producing fabrics for Defence Services at a very low margin of profit. The benefit of ceiling prices, therefore, extends to production of 40 per cent. The explanation of costs and profits may modify optimism as to the future of mills' earnings but it must be noted that raw cotton prices are likely to ease in the face of the adverse statistical position. There is a large carry-over of short staple cotton and the surplus will hang over the market when investment buying is absent.

Last Thursday there was a discussion on rationing and Dr. Aykroyd spoke on the remoter effects of food shortage. Rations, he complained, are too low compared with the normal intake of food. Public health, particularly, in certain areas is bound to suffer through the food shortage. The Central Advisory Board on Health has been asked to consider the problem and he urged that children's requirements should receive consideration. He declared that children's rations under existing schemes was not liberal and food in schools to supplement the diet at home must be provided by getting a special quota for school-feeding schemes. After reviewing circumstances he urged that 1 lb. of cereal per head constituted a suitable quantity. This assumes a normal age distribution, aims at carrying the population through the shortage without too serious a lowering of dietary standards, and assumes also that pulses, oil, sugar etc., would be available in addition to cereals. As the present scheme is to end next month, the cards issued thereafter might provide for adjustment of rations In the case of sugar the special claims of children were admitted rather late but in the case of cereals the Kharif crop might lead to the adjustment in the manner prescribed by Dr. Aykroyd. In the Deccan the crops have been saved by luncy rains.

After the failure of resolutions introduced to unsettle the decision as to the Haj this year, there has been a report that overland journey through Iran may be undertaken by the more daring. To restrain ardour there has been a press communique dealing with the difficulties. The three land routes to Arabia run through Iraq, Kuwait and Bahrein, an Iran. Improved political conditions in the countries mentioned are not described, but reference is made to the fact that a voyage up the Gulf is demanded, and this presents dangers like the direct voyage to Jeddeh. Motor transport is not available at Baghdad for the journey to Mecca nor is it available at Kuwait. Pilgrims, unless they carried food, would not be welcomed in Iraq and food difficulties like transport difficulties persist in Iran. Those ready to ship cars out of India have to get export licenses and contend against difficulties on the journey. The most important factor, however, is the opinion of the Saudi Arabian Government. In the journey across Arabia pilgrims cannot expect assistance and the Indian Government in order to prevent fruitless expenditure and unnecessary disappointment has reviewed the difficulties.

General Hutton went to Poona to discuss measures for employment and setlement of demobilised soldiers after the war. A report in the press describe his visits to the U. P. to exchange views with the Collectors' Conference and his forthcoming visit to Mount Abu. General Hutton in a press interview said that the future of Indian soldiers was only one of the objects of the reconstruction programme. Government was concerned also to increase the general tempo of industrial activity after the war. Settlement of soldiers on the land was possible only in the Punjab and the U. P.; there was hardly any scope in Bombay or South India but development of villages in recruiting acreas was to be undertaken so that the villages as well as the ex-soldiers benefited. Schemes for the special benefit of ex-soldiers would receive help from the Military Reconstruction Fund now being built up on the basis of a fixed rate per month per head. It was possible that ex-soldiers would return to the villages with capital in the form of undrawn and deferred pay though the amount depended on family circumstances. Government would retain interest in soldiers when they reverted to civil life through the Soldiers' Welfare Institutions. The Reconstruction Committee is dealing also with the problem of labour in the war factories which will be demobilised after the war. The Central Government has recently decided that 70 per cent of administrative appointments should be filled up by candidates with war service and 30 per cent by candidates who have held temporary posts during the war period. The previous order provided for a fifty-fifty distribution of appointments under Government.

The Rockefeller Institute and Harvard want to put Basic English over in Latin America. The information given by Mr. Churchill as to Mr. Roosevelt's interest in Basic has certainly led to a fresh review of what has been done by the Orthological Institute to speard the idea here. Mr. Amery is on the new cabinet committee like Col. Stanley and Mr. R. A. Butler and the Cabinet may take up Basic in earnest. The difference between Basic and Esperanto and other artificial languages is its main recommendation. Basic has been recommended by Mr. Myers and the Times of India to teachers anxious to provide a sound grounding in the essential second language for Indian children. The New Testament in Basic English made good the claims of Messrs. Ogden and Richards, indicating that Greek could be turned into Basic as into Twentieth Century English. Since the alliance with China furthers the spread of English, the need for encouraging Basic in all parts of Asia will be understood. Claims in favour of Basic or Bazar Hindustani have appeared in a recent pamphlet so that the claims of Basic have been mentioned formally as Basic English can provide a linguistic meeting place for different language groups in this country to quote the Times of India's leader.

South India

(From Our Correspondent)

Madras, Sept. 14, 1943.

The Government policy of fixing the ceiling price for paddy came in for criticism at a conference of mirasdars held at Tanjore. Agriculturists are generally accused of stocking paddy, screwing up prices and making undue advantage of national shortage of foodstuffs. Very few, certainly not the Government, stop to examine their numerous difficulties and listen to what they say. The Tanjore conference reiterated the assurance given at the Kumbakonam conference held sometimes ago that the mirasdars are willing to discharge their duties as trustees of the peoples' food provided certain glaring injustices done against them are rectified. The price fixed for the Kuruvai crops is too low to be remunerative. Since it is costlier now to raise Kuruvai crops the price of this variety should be raised to that fixed for Sambai crop. The cost of cultivation has gone high and the cost of living also is becoming heavier. Under these circumstances the Government should put up the ceiling prices with a view to helping the rural population and also as an effective means of encouraging the stocks to be quickly released. It was suggested that in fixing the price for paddy the Government may take the basic price in normal times for commutation and then gear up the price index to that of commodities that enter the cost of living of the ryots. It has been pointed out that the ceiling prices fixed for the Samba crop should not be allowed to vary from district to district and adequate allowance must be made for dryage, westage etc. Ready co-operation is offered to Government for building up adequate store of food grains by collections land revenue in kind. Far from expressing unwillingness in parting with surplus stocks the mirasdars have stated that Government may take their surplus paddy forthwith. The demand that the agriculturists should not be asked to deliver the stocks far away from the places of production is but legitimate since they cannot be called upon to do the work done by middlemen till now. Storage facilities must be provided for conserving food grains and ensuring satisfactory distribution. It is hoped that the Adviser would give his earnest attention to the reasonable demands of the mirasdars and take steps to enlist their active co-operation.

As victory draws near some think of the future of India but many are obsessed with the present. Sir A. Ramaswami Mudaliar declared at a reception held in his honour that the Government of India have drawn up detailed plans for the post-war reconstruction of India and assured that the British people are really anxious to see India independent. The post-war industrial policy of the Government, according to him, is to protect the industries started during the war at the instance of the Government provided they keep up their efficiency. Bright future for India with the co-operation of the British is the picture drawn up by Sir Ramaswami while the Dewan of Travancore who spent busy days delivering speeches at different places on topics ranging from insurance to international co-operation, advocated a new economics for India whereby no man should be allowed to accumulate so much money as to be a source of danger to body politic. But Mr. T. T. Krishnamachari believes that the future of India is to be shaped here and now, not by a lead from the Churchillean group but by a settlement between the Congress and Mr. Jinnah. Speaking at the Presidency College he drew attention to the political inertia which has set in as a result of censorship and banning of public meetings etc. Constructive move for ensuring India's future does not seem to come from the Muslim league and therefore, according to him, the only hope lies in Government's failure.

Mr. Venkajee, expert on hand-made paper, explained to the press at Bezwada the Government scheme for production of hand-made paper. At present there are about forty private plants in the Madras Presidency engaged in making paper. Four big paper-making centres have been sanctioned by the Madras Government recently and the first one at Bezwada will begin to work in the course of a few days. Rs. 15,000 for setting up the necessary plant and Rs. 48,000 towards annual recurring expenditure has been sanctioned. The Bezwada plant can consume about 1½ tons of hay every day and the daily output of hand-made paper is estimated at half a ton. The paper expert believes that hand-made paper would continue to be a paying proposition even in the post-war period but every attempt should be made to produce special quality paper. He hopes to introduce a hand-made paper making section in the local high schools.

With the object of increasing the production of food crops in the estates a new Bill temporarily amending the Madras Estates Land Act, 1908, has been published. At present if a person is given possession of a ryoti land he acquires a right of permanent occupancy also. The Government who scheme to assign temporarily certain waste lands for cultivation of food crops desire to amend the existing law to speed up their grow-more-drive. The Bill protects the legitimate rights of landholders and hence there is a good measure of support for it. If seeds, manures, irrigational facilities are also given, the landholders may be enthusiastic in extending cultivation of food grains.

Two important additions to the scheme of agricultural development in the Nizam-

Young Men of Steel

"In the lexicon of youth, which fate reserves for a bright manhood, there is no such word as –'fail'"

(Macaulay)

Youth, ambition and opportunity will bring their own reward to "Men of Steel".

Fortunate, indeed, the young man who is secure of his future in the industrial development of India, at the threshold of his life.

TATA STEEL

ISSUED BY THE TATA IRON & STEEL CO. LTD. HEAD SALES OFFICE:—102A, CLIVE STREET, CALCUTTA.

sagar area sanctioned last year are announced. A Plant Pathological Section to survey the plant diseases and to conduct experiments for controlling them is the fulfilment of a long felt want. The Tobacco Research Section will shortly carry out experiments in the cultivation of high class of Virginia tobacco. Hyderabad is abundant in oilseeds like castor, groundnut, linseed and safflower and her oil-crushing industry is progressing fast. The problem of utilising oilcakes has therefore been taken up and at three selected places the use of groundnut and castor cake will be studied in comparison with other farm yard manures. At Warangal and Raichur researches on Hyderabad's important pulses—grain, tuar and kulthi—are to be undertaken Necessary sanction has also been made for carrying out cultural, manurial and varietal trials with potatoes at Bidar.

The Madras Government are now considering the desirability of collecting land revenue in the shape of paddy. Mr. S. V. Ramamurthi, Adviser to H. E. the Governor, is now touring South Arcot, Tanjore, Trichinopoly, Madura and Tunnevelly district with a view to holding conferences with non-officials on the question. Already in some places the agriculturists have openly expressed their satisfaction at this move. But collection of revenue in the form of grains and purchasing of surplus Kuruvai crop depend upon the price fixed for the produce. How the new system would affect the small holders has to be thoroughly examined. Government will have to arrange for storage and transport of paddy if the scheme is to work successfully.

(*Continued from page* 565)

Rs. 1.55 crores are virtually limited to trustee securities as may be expected and conventional estimates of the total under cash and investments to deposits are hardly required. The Comilla Banking Corporation is not as old as joint-stock banks go but it has long looked beyond East Bengal, and the benefits of careful and enterprising direction have been vouchsafed as may be inferred from the fairly large holding of bills shown in the balance-sheet. The Bank's position must be influenced by the increase in incomes and thrift observable during the war period and the expansion of profits to correspond to the increase in resources appears inevitable, so as to justify in another way the successful placing of the Bank's new shares.

(*Continued from page* 571)

The loan notification was well received in Bombay. The decision to pay off debt is approved and the terms have been viewed as satisfactory. Repayment in 1956 when no loan matures is good from every point of view. The Bombay loan at part is sure to be oversubscribed as the total debt is to hardy more than an year's revenue. The new practice of a sinking fund of 1½ per cent per annum is kept up so that a quotation at a discount is hardly likely. By taking off Rs. 7¾ crores of new money, the loans will have helped in the Save-Lend campaign well in advance. The permission given to leave up to Rs. 1,500 in Postal Savings Bank has not been taken advantage of but war news and thrift will combine to increase the total savings in the countryside, while caution may drive big investors to take advantage of new savings certificates giving almost 4 per cent.

There has been a protest from the Indian Merchants Chamber as regards the proposal to select shipping agents to arrange for the transport of Government cargoes by country craft. The creation of a monopoly, supported by the Railways, would affect waterborne transport and hamper development of country craft traffic. The selection of agents for booking freight space invites disapproval also for the reason that freight rates may be adjusted to the detriment of independent owners of sailing vessels and brokers, shipping agents etc. The existing commercial rates cover insurance charges etc. which are not required in the case of the Government and military cargoes, and if freight rates are scaled upward, the traffic will suffer or be diverted to the authorised agents who quoted olwer rates. Anyway, independent shipowners are liable to suffer if the proposals are not given up. If the joint shipping adviser is not entrusted with the task of selecting agents a small advisory board to help an outside agent may give satisfaction in the matter of selecting vessels and routes and fixing freight rates according to the representation submitted.

Charcoal shortage has led to an examination of means to stimulate imports. Charcoal has become an industrial fuel and the forests do not seem to attract burners as before. High prices reported from all Provinces points to the real scarcity, and if transport space is to be saved by the conversion of wood into charcoal, more will have to be done than the issue of resolutions. As local forests do not seem to yield enough charcoal, the Government looks to the C. P. for supplies at present. Charcoal prices have gone up though the Labour Gazette does not indicate the variations in cost of fuel for the working class. Assurances that sales at Rs. 1-6 per quarter would be made through an approved Co.-op. Society have appeared, but the price would be thus Rs. 4 per maund or eight times the prewar price. The rationing system cannot be made to cover a bulky and dirty article and the chances of using the less valuable trees in the forest have to be re-examined though the problem of transport will certainly survive the new measures to use drywood.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, Sept. 15, 1943.

We expressed some doubt last week as to what exent the reduction in stocks of manufactured goods in Mill godowns recorded at the end of August was to be attributed to shortage in production due to intermittent working through lack of adequate coal supplies. Mill production figures for last month, now issued, show the full effects of this deplorable situation. Production of all descriptions of goods is returned at no more than 46,088 tons as compared with 76,619 tons in July when the coal shortage began to be felt, and as compared with 104,700 tons in June, the last normal month in respect of coal supplies. That the position has become progressively and rapidly worse is amply demonstrated by these figures which show August production to be over 30,000 tons worse than July and over 58,000 tons worse than June. The shortage amounts to 40 per cent compared with July and to no less than 56 per cent compared with June. Considering that Mill overhead costs not only go on just the same, but that the Mills are paying their labour and feeding them during the idle weeks, the effects of this short production on Mill finances does not need to be stressed. Most of the Companies have built up large reserves in the profitable past and can stand the strain, but it would not be surprising if some of the younger and weaker brethren were soon to protest against indefinite continuation of this enforced altruism. It is understood that the Chairman of the I. J. M. A. has returned from Delhi full of optimism that the near future will show a marked improvement in coal supplies. To the casual onlooker, it would appear that Delhi is lavish with promises but falls far short of expectations when it comes to fulfilling them. Under the scheme which was founded on recent promises of coal supplies, this has been the second week of a series of three weeks during which mills were to work continuously. Most, but not all, of the coal consuming Mills worked last week, the first of the series. This week, scarcely a coal consuming Mill is running, coal stocks being again reduced to the minimum required for safety and maintenance purposes. And at the rate coal is arriving, the prospects of any large proportion of the steam mills running next week are far from bright. Mills drawing their power from public electric supplies are naturally in a much better position and have been able to keep going according to schedule. But this again cannot fail to arouse some heart-burning amongst their neighbours who are not so fortunately situated by reason of the fortuitous circumstance of their type of motive power. And it is by no means a question of the electric mills being more modern and up-to-date and therefore more economic units. Some of the coal-consuming mills generate their own electric power and are every bit as economical as those units which draw their power from public supplies. But by reason of the fact that they generate their own power, they are no whit better off with their up-to-date plant than the most conservative stickler for the old-fashioned reciprocating steam engine. So that the argument that the more modern and up-to-date plant is justifiably entitled to an advantage, does not hold good in all cases.

To return to a more detailed examination of the production figures, total Hessian production in August showed a decline of 4½ crores yards or 12,165 tons. Total Sacking production declined by 4¼ crores yards or 17,807 tons. Of the total production of 46,088 tons, Military requirements accounted for 7,512 tons or 16.3 per cent as compared with 15½ per cent in the previous month.

As stocks of goods in Mill godowns at the end of August showed a drop of just over 25,000 tons, this figure taken with the months production, shows that despatches of goods by Mills during August must have amounted to not much over 71,000 tons, a disappointing total of shipments. These in fact have shown a steady tendency to decline for the past few months, July totalled 84,000 tons despatches and June well over 95,000 tons while a few months ago they were topping the 100,000 mark.

The panel which was appointed to fix maximum prices for non-standard jute fabrics and bags has now reported, and their findings have been accepted by the I.J.M.A. Committee and recommended by them for the guidance of members. Light and Heavy nine and eleven porters conform to the standard tonnage rates for 7½ and 10 oz. and for 8 and 10½ oz. respectively. The usual premia for wide Hessians is sanctioned, that is Re. 1 per hundred yards over the basis price for widths from 51 inches to 64 inches, and Rs. 2 per hundred yards for widths over 64 inches. Standard Hessian bags are to be calculated at the cloth price plus eight annas per hundred bags for standard sewing. The usual premia are sanctioned for special types of sewing. The more common types of so-called non-standard Sacking bags are priced on the basis of tonnages between Rs. 685 and Rs. 704 per ton. "E" bags at Rs. 53-8, 2 lb. "B" Twills at Rs. 61-8, 6 by 8 Sugars at Rs. 77, 3¼ lb. Grains at Rs. 101 and Salts bags at Rs. 55. Australian Woolpacks are priced at Rs. 3-6. Twist is fixed at Rs. 32-8 for Hessian and Rs. 25 for Sacking.

Owing to a shortage of imports into the Bazar, the price of near delivery pucca bales has hardened sharply, there being a considerable quantity due for delivery to Mills this month. Recently New Crop Lightnings were reported at Rs. 72 for September shipment but in the last few days inter-baler covering transactions have been put through at from Rs. 76 to Rs. 78. Firsts also show a sharp rise, covering sales having been recorded at Rs. 83 and Rs. 84 with Sellers showing reserve. No fresh business with Mills has been reported and the shipment side for Export is also neglected, except for small sales of Dundee Daisee at Rs. 73-4 Oct./Nov. and at Rs. 73 Nov./Dec.

The position in the Loose Jute market remains at a stalemate, Mills generally are not putting enough jute into consumption to justify any fresh purchases and in not a few cases finding themselves becoming embarrassed for storing accommodation by the steady arrival of previous purchases at a greater rate than they are using up the jute. Many mills of course have had to give up a large proportion of their godown accommodation to the military authorities, who if all one hears is true, do not always utilise it to the best advantage. Then the fabrication of tents and such like takes up a great area of floor space, for which godowns, which would otherwise be accommodating jute, have had to be allotted. So in not a few cases, mills would rather see shipment deferred. On the other hand, owing to the recent scarcity of fresh orders, deferred shipment does not suit the Sellers' book. The high prices at which early sales were made means the tying up of a lot of finance until they are shipped and liquidated, and also sellers do not want to run the risk of shipments not being made to time. About the only business reported during the week was Indian District Tossa marks at Rs. 15 for Middles and at Rs. 12 for Bottoms. Balers bought selected District Tossa marks at one rupee over these rates.

JUTE

Calcutta, Sept. 15.

Quiet conditions have continued to prevail in the raw jute market and business has again been confined to small quantities. Reports regarding the difficulty of mills in respect of coal supplies and the poor showing of production figures for the month of July have been mainly responsible for the easier tone of the markets. Owing to the smallness of imports, however, there is quite a good demand for new jute crop and a considerable premium is demanded for earlier deliveries. That is the reason why new crop Firsts and Lightnings have appreciated by as much as Rs. 5 per bale in the course of a few days in spite of the small interest shown by mills. The difficulty in regard to adequate supplies of coal to mills is still the question of providing proper transport facilities. In this connection it is reported that the breaches on the railways will be repaired completely shortly and that, before the end of this month, it will be possible to expedite further supplies. The outlook for jute is as uncertain as ever but it is felt that with the possibility of larger exports prices will be maintained at the present levels. During the week, however, not much of business for export has been done; only, there is every possibility of some substantial business being done in the next few weeks.

Business in the loose jute section as pointed out above, has been done in small quantities, mills not being eager buyers. Indian District Tossa Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund with Indian Jat Middles and Bottoms 8 annas higher.

In the pucca bales section, not much of business has been done for export but quotations are higher with Dundee Daisee 2/3 at Rs. 80 per bale. Mills are reported to have purchased new crop Firsts and Lightnings at Rs. 83 and Rs. 77 per bale for September delivery. Balers are rather reserved and are prepared to buy up any quantities of loose jute in new crop. Owing to the lack of imports they are unable to make their deliveries.

JUTE MANUFACTURES

Calcutta, Sept. 15.

The jute manufactures market has been uninteresting and business has again been mainly on account of interbazar operators. The publication of the production figures for the month of July of slightly over 46,000 tons has had a stimulating effect on the market. It is pointed out that with the loss of production by nearly 60,000 tons, the pressure on bazar stocks would increase and that dealers could market their holdings at higher rates. Reports regarding the continued difficulty of mills in respect of coal supplies also had an encouraging effect. Closing quotations are slightly below the highest levels for the week. 9 porters were quoting Rs. 20-15 for all positions while 11 porters September were Rs. 28, October Rs. 28-1 and October/December Rs. 28-3.

In the Heavy Goods section, steady conditions were noticeable but prices remained unchanged in the absence of any important business. B. twills for September delivery sold on the basis of Rs. 65-12, Liverpool twills Rs. 74 and Cornsacks Rs. 67-12.

GOLD

Calcutta, Sept. 15.

There was not much of activity in the bullion market in the earlier days of the week and prices for gold in the Bombay market were fluctuating in narrow limits. In Monday's session, however, there was a sudden rise in prices on considerable speculative buying and the closing quotations are at the highest levels for some time. The improvement in the quotation by nearly four points is due to the announcement by the Government of India prohibiting *Budla* business in stock markets in India. It is felt that as a result of the ban on forward transactions in stock exchange securities, there will be a diversion of attention to the bullion markets. Also, the feeling that the Allies might meet with difficult opposition from Germany before ultimate victory is won has resulted in a hardening in rates. Gold closed at Rs. 72-15 and 72-12 for ready and forward after being higher at Rs. 74-5 and 74. The quotations were Rs. 70-8 and Rs. 70-5 at the end of last week. It will be noticed that there has been an increase in the premium over ready for forward. Sovereigns quoted Rs. 51-12 against Rs. 50-12 at the end of last week.

SILVER

Calcutta, Sept. 15.

The rise in prices in the silver market is not quite so pronounced. There has been some buying and silver ready closed at Rs. 117-6 and forward at Rs. 116-4 after being higher at Rs. 117-14 and Rs. 117-1 respectively. In the Calcutta market, the quotation was higher by two points at Rs. 115-8.

There has been no change in the quotation in the London market and business passing has been very small, quotations for both spot and forward being unchanged at 23½d.

PIECEGOODS

Calcutta, Sept. 15.

In the piecegoods market firm conditions have continued to prevail and Puja buying has been on a larger scale. With the Puja festivities two or three weeks off there has naturally been a tendency to finish purchases. The expectations regarding the speeding up of arrivals have not materialised so far and, with priority in regard to food supplies, it has not been possible to bring in any large quantities of piecegoods. Prices have been ruling at rather high levels in the Calcutta market. It is however reported that quietly steady conditions were noticeable in the Western Presidency and that there is not much difficulty in getting one's requirements.

Stock Markets to-day and to-morrow

MARKETS AND NEW DEFENCE RULE

EVENTS in the war situation are moving so rapidly that operators and investors seem to be finding it difficult to take any definite view. The unconditional surrender of Italy last week gave rise to the hopes of an early termination of the war in the West. The unconditional surrender of the Italian navy also confirmed this view. But Mossolini's escape and the bitter fighting around the Naples area have given rise to the feeling that the Allies will not have any easy walk-over and that the war would be protracted. Thursday morning's news points out to the possibility of further big surprise developments in the war situation and these developments might perhaps revive early peace prospects. That is the reason why stock markets in Calcutta and Bombay have been uninteresting in the past few days and prices in the Calcutta market have been fluctuating in narrow limits. There is a tendency to await further developments.

The weakness of the Bombay market earlier in the week was, however, due to the issue of a press *communique* by the Government of India saying that a new rule has been issued prohibiting, with effect from September 24, all stock exchanges from affording facilities for *budla* transactions or making any contract other than ready delivery contracts. The promulgation of the new rule is, it is said, due to the increase in speculative activity on certain stock exchanges in India, due mainly to the facilities afforded to speculators to carry forward commitments through the medium of *budla*.

Forward business on the Bombay market has been banned long ago and as such, this order cannot be said to be aimed at the Bombay market. But objection has been taken to the method of adjusting business on a fortnightly basis through the "clearing house" as it is said that the system of clearing in effect amounts to the carry-over of business for an indefinite period though accounts have to be settled every fortnight. It will be remembered that the Government of Bombay wanted some modification of this system and that the President of the Native Stock and Shareholders Association said that it was not possible to cope with the increasing volume of business by any other methods and that no action could be taken as directed by the Government of Bombay. Following the refusal by the Bombay stock exchange authorities there were rumours that the Government of India might attempt at some control affecting all the stock exchanges in India. How exactly the Bombay market will be affected cannot be said but the immediate reaction to the new rule was rather bearish and there was some selling.

The Calcutta market cannot in any way be affected, theoritically. Business has always been done on a cash basis and at the present moment deliveries are to be effected within three days from the date of contract. Complaints regarding deliveries are being attended to more promptly. Speculative activity has, therefore, been discouraged to a considerable extent.

The initial reaction to the announcement, regarding the prohibition of *budla* business in the stock exchanges, in the Bombay market was only due to the feeling that speculative activity would be considerably discouraged and that in the absence of any appreciable support to the market the trend of values in future would be rather irregular. The immediate effect, however, should be bullish from the market's point of view as with the need to correct the technical position, there should be some covering by the bears and if, as it is said, there is a heavily oversold position prices should be marked higher with that reserve of holders. That is perhaps the reason why a slightly better tendency has been noticeable in the Bombay market in the last two days and in Thursday's session in the Calcutta market there was a sharp rise in prices for popular counters. Indian Irons have recovered to Rs. 35-7 from Rs. 34-10.

The Committee of the Calcutta Stock Exchange is examining the position as the new rule affects its members. It is said that after the 24th instant, no business can be transacted unless it is definitely assured that deliveries can be effected within the prestribed time. Mofussil dealers have to send in their scrips before effecting any sales in order to ensure deliveries while at the time of the closing of transfer books of such big companies like Indian Irons and Steel Corporations, there might be a technical squeeze as large parcels of scrips might be held up with the companies awaiting transfer. Business between stock exchanges also will be affected. Deliveries through banks are as a rule delayed. Owing to the risks involved it is feared that business will be affected to a great extent. Having regard to the large volume of inter-market transactions and business in sterling securities genuine business would be affected adversely if no facilities are afforded for the purpose. The members of the Committee of the Calcutta Stock Exchange will be representing the matter to the Finance Member and, if necessary, even a deputation may wait on him.

* * * *

The difficulties of engineering companies in regard to adequate supplies of raw materials have been mainly responsible for the lower level of profits for the latest accounting periods in spite of the increased tempo of the war effort and the large volume of orders on hand. The decline in the profits of *Britannia Engineering Company, Limited* for the year ended December, 1942, is to be accounted for only by these difficulties. The net profit, before providing for taxation and depreciation, is Rs. 5,27,489 against Rs. 5,79,655 for the previous twelve months. The amount set aside to depreciation is slightly higher at Rs. 67,801 against Rs. 62,392 while the transfer to the reserve fund is also higher at Rs. 1 lakh (Rs. 90,000). After maintaining the dividend at 12 annas per share the amount carried forward to the next account is lower at Rs. 53,176 against Rs. 69,362 brought in. The company has made good progress in recent years. With the improved efficiency of the plant and the better financial position of the company the shares have scope for appreciation.

* * * * *

The results of the *Alexandra Jute Mills Company, Limited* for the half-year ended June, 1942, make better showing. The net profit, before providing for taxation and depreciation, is Rs. 5,22,033 against Rs. 4,08,588 for the previous six months. The improvement in earnings, however, has been more than offset by the increased provision for taxation which is Rs. 3,66,178 on the present occasion against Rs. 2,47,239 formerly, Provision for depreciation is lower at Rs. 25,000 (Rs. 50,000) while the transfer to reserve for furlough payments is Rs. 6,500 against the transfer to Renewals and improvements Reserve of Rs. 16,113 on the last occasion. The General Reserve receives the same

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Sept. 16.

QUIETLY steady conditions have been noticeable on the Calcutta Stock Exchange in the past few days and business passing has been on a smaller scale. The easier tone of the Bombay market and the anxiety to await further developments in the war situation have been mainly responsible for the slightly easier tendency in the several sections on the Stock Exchange during the past few days. The undertone, however, continues steady and it is generally expected that with the continuance of present conditions, prices will be maintained at high levels. The feature of the week is the strength of the tea section. There has been some good buying of the low-priced issues and a moderate rise in values has been recorded.

Steady conditions have been noticeable in the giltedged section and business has been on a fairly large scale. In spite of the larger amount of money taken by the Government, there has been no change in the conditions in the money market and quotations are in places slightly higher. Among non-terminable loans, 3 per cent Paper was done at Rs. 83-10 and 3½ per cent Paper at Rs. 97-1. Small lots were done as high as Rs. 97-6. Among dated loans 3 per cent 1951-54 were Rs. 103, 4 per cent 1960-70 Rs. 110-14, 3 per cent 1963-65 Rs. 97-5 and 5 per cent 1945-55 Rs. 106-2. No transactions have been recorded in provincial loans. As pointed out above, easy conditions have been noticeable in the money market and there has been a further decline in the treasury bills rate to 13 annas and 4 pies per cent per annum from 13 annas and 9 pies per cent per annum last week.

Among bank shares, *Imperial Bank* fully paids were Rs. 1,835 and *Reserve Bank* Rs. 120. *United Commercial Bank* were slightly lower at Rs. 14-8 premium.

In Cotton shares, *Bengal-Nagpur* were higher at Rs. 34-2 on expectation of a higher dividend for the half-year ended June, 1943. *Cawnpore Textiles* were fluctuating around Rs. 12-4, while *Elgin* after being lower at Rs. 78, were inclined to be firm towards the close at Rs. 80. *Kesoram* and *New Victoria* were unchanged at Rs. 15-8 and Rs. 8-8 respectively.

In the Coal section, firm conditions have been noticeable and there has been a further slight rise in the quotation for the popular counters. *Bokaro* and *Ramgur* were again the feature of the week with an improvement in the quotation to Rs. 25, *Amalgamated* were Rs. 40-12 and *Bengal* Rs. 486. *Equitable* were firmer at Rs. 40-14 and *Burrakur* at Rs. 18-12. *Central Kurkend* were Rs. 17-9 and *New Beerbhoom* Rs. 23-2. *Pench Valley* were crossed at Rs. 43-12 and *Raneegunge* at Rs. 28-12. *Samla* changed hands at Rs. 4-4 and *Satpukuria* and *Asansol* at Rs. 3-7. *Union* were in good request at Rs. 39.

In the Jute section there was a slight decline in prices earlier in the week. But the losses have been more than regained and quotations are in places higher than the levels at the end of last week. It was reported earlier in the week that mills might experience difficulties in regard to their coal supplies and production would be affected but the latest reports are to the effect that repairs to the breaches on the railways would soon be completed and that it would be possible to expedite coal supplies. *Adamjee* were Rs. 32-8, *Anglo-India* Rs. 396, *Alliance* Rs. 415 and *Belvedere* Rs. 510. *Barnagore* were very firm at Rs. 162, *Champdany* were dealt in at Rs. 215, *Gourepore* at Rs. 795 and *Howrah* at Rs. 61-14. *Hukumchand* were Rs. 26-10, *Kamarhatty* Rs. 546, *National* Rs. 28 and *Nuddea* Rs. 101-8.

In the Engineering section nothing of importance has been recorded and the quotation for Indian Irons and Steel Corporations are more or less unchanged at Rs. 35-2 and Rs. 27 respectively. *Kumardhubi Engineering* were Rs. 7-14, *Marshalls* Rs. 3-11 and *Saran Engineering* Rs. 7-12.

Sugar shares continue to be in favour with *Darbhanga* nearly one point higher at Rs. 28-2. *Balrampore* were Rs. 16-4, *Belsund* Rs. 11-10 and *Carew & Co.* Rs. 21-6. *Champarun* were Rs. 40-8 and *Ramnugger Cane & Sugar* Rs. 11-4. *Samastipore* were crossed at Rs. 18-12; *U. P. Sugar* were steady at Rs. 28-4.

A firmer tone at the auctions for tea for consumption in India in recent weeks has been responsible for the renewal of investment buying in the tea section. Sellers are adopting a reserved attitude and some useful rise in prices has been recorded. *Banarhat* were Rs. 810 with *Baradighi* nearly one and a half points higher at Rs. 61-4. *Central Cachar* were Rs. 93-8 and *Hasimara* Rs. 64-2. *Huldibari* were nearly two points higher at Rs. 36-10 while *Loobah* were Rs. 13-6. *Rajabhat* were Rs. 21-12 and *Teesta Valley* Rs. 38-10.

In the miscellaneous section, *Burma Corporation* and *Indian Copper* were unchanged at Rs. 4-1 and Rs. 2-8 respectively. *B. I. Corporation* were easier at Rs. 5-15, with *Calcutta Trams* at Rs. 25-12. *Dunlop Rubber* were Rs. 55 and *Indian National Airways*, ordinaries, Rs. 18-4. *Publicity Society* were crossed at Rs. 12-14 with *Rohtas Industries* steady at Rs. 29-12. *Assam Saw* changed hands again around Rs. 4-13 as also *India General Navigation* at Rs. 116. *Midnapore Zemindary* were Rs. 91-8 and *Indo-Burma Petroleum* Rs. 68-8. Among paper shares, *India Paper* were Rs. 188, *Orient* Rs. 27-2 ex-dividend, *Star Paper* were put through at Rs. 21-4 and *Titaghur Paper* Rs. 25-4. There has been a sharp rise in the quotation for *Karanpura Development* to Rs. 15.

Business in preference shares is again restricted owing to scarcity of sellers. *Budge-Budge* were Rs. 182, *Hastings* Rs. 151 and *Lansdowne* Rs. 158. Among other sections, *Bowreah* (B) preference were Rs. 189 and *New Victoria* Rs. 10-12. *Purtabpore* preference were Rs. 21-4 and *Dalmia Cement* Rs. 144.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Sept. 14.

The Government ban on 'Budla' transactions did not have any lasting influence on the local stock exchange; for the speculators by entering the bullion market as the only other alternative open to them have sent the prices up in that market the firmness of which has more than offset the effect produced by the ban. Though popular belief is that the war is almost won, responsible quarters have lost no time in reminding the people that the surrender of Italy is only the beginning and many a battle has to be fought before victory can be definitely achieved. This is proved by the desperate German resistance in Italy and their reported determination to contest every inch in that country. Signs are not wanting to conclude that the stock exchange also has taken a similar view. A survey of the piecegoods market also shows that in spite of the many handicaps the trade is not at all doing bad and the hope is expressed that the immediate future for textiles is as bright as ever.

Though the transactions in mill shares disclose a rather irregular tendency, the undertone is firm. The Government ban on forward transactions at first scared away some weak operators, there was no tendency on the part of genuine investors to fight shy of the order, as it was a measure calculated to curb unhealthy speculation. Even towards the close of transactions on Monday fresh support was forthcoming and the prices steadied up. The strength of the bullion market was another helping factor. *Bombay Dyeing* were Rs. 1,945; *Century* Rs. 853; *Kohinoor* Rs. 592; *Simplex* Rs. 273-8 and *Swadeshi* Rs. 528.

Rather easy conditions prevail in the steel section of the market owing to the ban on 'budli' transactions; for it is felt that the order will affect this section more than anything else. Tata Deferreds have gone down by nearly 30 points at Rs. 1,840 while Tata ordinary are nearly 5 points lower at Rs. 372. Indian Iron are 5 annas lower at Rs. 34-11.

The miscellaneous section was also slightly easier with prices marked lower in many cases.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 9th Sept., to 14th Sept., 1943 both days inclusive)

GOVERNMENT SECURITIES:

3 per cent Loan (1951-54):—(11th) 100, 100-1 s.ls.; (14th) 100-4 s.l.

2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. To consider, and if thought fit, to adopt the following amendments to the bye-laws:

(i) Add at the end of bye-law No. 2.

Note.—"The provision of clause 2 (d) will not affect the branches already opened by the Bank in other areas."

(ii) Add as new clause (r) under bye-law No. 72.

"To make rules for the formation, the appointment, the dissolution and the conduct of the affairs of Branch Committees which now have been or which may hereafter be appointed by the Board and to approve, to alter or to abrogate rules framed by them."

By order of the board,
VAIKUNTH L. MEHTA,
Managing Director.

Bombay, 28th August, 1943.

The Transfer Books of the Bank will be closed from 27th September to 9th October, 1943 both days inclusive.

THE GHUSICK & MUSLIA COLLIERIES, LIMITED.

NOTICE

NOTICE is hereby given that the Seventy-second Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 28th day of September, 1943, at 3 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st March, 1943, declaring the Dividend recommended by the Directors and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 21st to the 28th September, 1943, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 13th Septr., 1943.

During the period under review the working of the mill has been very satisfactory. The production has recorded a fair excess over the previous figures, by the help of Government scheme of reducing varieties and fixing certain standard substances of paper best suited for each particular machine in order to get the maximum output. The supplies of raw materials, chemical and stores have been fully maintained but the Company had been experiencing great difficulties in obtaining its full requirement of coal owing to acute shortage of wagons. In the months of March and May last the mills had to be even shut down for want of coal, for about a fortnight in each month. During this period the prices of Raw materials, chemical and stores further went up and the wages also increased considerably due to War Dear Food Allowances and Bonuses paid to the mills' employees. All these extra expenses further increased the cost of production.

The transport difficulties greatly hampered the despatches of paper which has resulted in accumulation of a heavy stock of paper, at the mill, a major portion of which is meant for export on Government account.

Managing Agents.—Messrs. Bajoria & Co.

Authorised Capital—Rs. 40,00,000. *Issued and Subscribed*—Rs. 30,00,000 in 10,000 *Preference shares of Rs. 100 each and* 2,00,000 *Ordinary shares of Rs.* 10 *each, fully paid up. Less calls in arrears*—Rs. 250.

(Annual General Meeting held on 26th August, 1943.)

Audited Statement of Accounts for the year ended 31st December, 1942 :—

The results for the year show a profit on Trading Account amounting to Rs. 6,67,039-2-2 compared with Rs. 7,04,719-7-0 for the preceding twelve months.

The Agency Department shows a profit of Rs. 20,730-15-2 against Rs. 24,451-14-4 for 1941.

Profit and Loss Account.—After charging Interest and Debenture Interest and providing for Taxation Reserve, Commissions and Depreciation and taking into account the carry forward for 1941, there remains at the credit of Profit and Loss Account a balance of Rs. 2,09,426-7-10, which sum, the directors recommend, should be dealt with as follows:—

	Rs.	A.	P.
Pay a Dividend on the Rs. 7,50,000 Ordinary Shares at 7½ per cent per annum or As. 12 per share for the year	56,250	0	0
Transfer to Reserve	1,00,000	0	0
Carried forward to Profit and Loss Account ..	53,176	7	10
Total ..	2,09,426	7	10

Stocks of stores and raw materials have, as usual, been taken at cost, which is not over current market rates.

Additions to Block Account during the year included the purchase of land adjoining and to the South of the Works, the construction of a lean-to extension to the Foundry to accommodate the Pattern Store, and the installation of a new 30 h.p./A.C. Motor to drive the Foundry Blower.

Managing Agents.—Messrs. McLeod & Co., Ltd.

ASSAM BENGAL CEMENT COMPANY, LIMITED

Audited Accounts for the year ending 31*st March,* 1943 *:—*

A sum of Rs. 15,212-8-11 has been carried to the balance sheet as profit for the year ending 31st March, 1943, after providing Depreciation, Debenture interest, Government Royalty, Protection Fee, War Risk Insurance and all other expenses. The Directors regret to report that although the Company have made a small net profit, the amount is far below expectation, due to causes beyond their control. As previously reported, the Government of India, under Defence Rules, have taken over the entire production of the factory at cost-plus basis. This did not take into account the continued increase in prices of stores, foodstuffs, coal and other materials required for operation of the factory.

Factory.—The Government of India still require a large quantity of cement and the Defence Rule order continues. It is, however expected that in fixing future prices of cement the Government will take a generous view of the increasing cost of production. The Directors regret to inform that the factory had to be closed down occasionally for want of raw materials such as coal, gypsum etc., owing to transport difficulties.

Quarries and Ropeway.—Although a portion of the Ropeway was completed during last year, the rest of the Ropeway was not completed during the period, but now the Directors are pleased to inform that the erection of the Ropeway may be regarded as practically complete and full test and trial run will be made as soon as some of the remaining parts are supplied. The Quarries are at present in full operation.

Collieries.—The development of the Collieries has had a setback due to acute labour shortage.

Managing Agents.—Messrs. Eastern Corporation Ltd.

Authorised Capital—Rs. 50,00,000. *Issued*—Rs. 35,00,000. *Subscribed*—Rs. 32,67,983 *in* 2,86,867 *ordinary shares of Rs.* 10 *each and* 4,11,113 *deferred shares of* Re. 1 *each paid up, less calls in arrears*—Rs. 11,800.

Synopsis of the Balance Sheet as at 31st March, 1943:—

(a) Carry preferential claim to dividend of 7 per cent. Rank equally with "A" share for further distribution. (c) Carry no perferential claim to repayment of capital (d) Carrying right to fixed cumulative preferential dividend of 5 per cent per annum and to a non-cumulativedividend of 3 per cent per annum. After dividend of 5 per cent on ordinary shares also participate in a further dividend 2 per cent per annum ratably with the ordinary shares. (e) Holders have option to exchange holding to fully paid ordinary shares at par on six months' notice expiring at the end of any half-years. (g) Redeemable at par between 1955—1966. (h) Redeemable from 1st January, 1943 by 13 annual instalments. (i) Repayable at par by 13 annual instalments from 1st January, 1944. with the option to redeem on six months notice after 1st January 1939.

STAR PAPER MILLS, LIMITED

Accounts for the half-year ended 31st March, 1943, which, after allowing for Debenture Interest, Commissions, etc., show a credit balance of Rs. 5,32,783-2-11. After writing off the sum of Rs. 1,14,492-3-0 for Depreciation, providing the sum of Rs. 2,00,000 for Taxation and transferring the sum of Rs. 50,000 to Reserve for Renewals and Extensions, the balance, together with the sum of Rs. 8,405-4-2 brought down from last half-year is Rs. 1,76,696-4-1, which the Directors recommend be disposed of as follows:—

	Rs.	A.	P.
In paying a Dividend on the Preference shares of the Company at 5% per annum (free of Income Tax)	25,000	0	0
In paying a Dividend on the Ordinary Shares of the Company at Annas Eight per share (free of Income Tax)	1,00,000	0	0
In paying a special bonus of four annas per share (free of Income Tax) on the Ordinary shares of the Company	50,000	0	0
	1,75,000	0	0
In carrying forward	1,696	4	1
Total ..	1,76,696	4	1

During the period under review the working of the mill has been very satisfactory. The production has recorded a fair excess over the previous figures, by the help of Government scheme of reducing varieties and fixing certain standard substances of paper best suited for each particular machine in order to get the maximum output. The supplies of raw materials, chemical and stores have been fully maintained but the Company had been experiencing great difficulties in obtaining its full requirement of coal owing to acute shortage of wagons. In the months of March and May last the mills had to be even shut down for want of coal, for about a fortnight in each month. During this period the prices of Raw materials, chemical and stores further went up and the wages also increased considerably due to War Dear Food Allowances and Bonuses paid to the mills' employees. All these extra expenses further increased the cost of production.

The transport difficulties greatly hampered the despatches of paper which has resulted in accumulation of a heavy stock of paper, at the mill, a major portion of which is meant for export on Government account.

Managing Agents.—Messrs. Bajoria & Co.

Authorised Capital—*Rs.* 40,00,000. *Issued and Subscribed*—*Rs.* 30,00,000 *in* 10,000 *Preference shares of Rs.* 100 *each and* 2,00,000 *Ordinary shares of Rs.* 10 *each, fully paid up. Less calls in arrears*—Rs. 250.

(Annual General Meeting held on 26th August, 1943.)

Audited Statement of Accounts for the year ended 31st December, 1942:—

The results for the year show a profit on Trading Account amounting to Rs. 6,67,039-2-2 compared with Rs. 7,04,719-7-0 for the preceding twelve months.

The Agency Department shows a profit of Rs. 20,730-15-2 against Rs. 24,451-14-4 for 1941.

Profit and Loss Account.—After charging Interest and Debenture Interest and providing for Taxation Reserve, Commissions and Depreciation and taking into account the carry forward for 1941, there remains at the credit of Profit and Loss Account a balance of Rs. 2,09,426-7-10, which sum, the directors recommend, should be dealt with as follows:—

	Rs.	A.	P.
Pay a Dividend on the Rs. 7,50,000 Ordinary Shares at 7½ per cent per annum or As. 12 per share for the year	56,250	0	0
Transfer to Reserve	1,00,000	0	0
Carried forward to Profit and Loss Account ..	53,176	7	10
Total ..	2,09,426	7	10

Stocks of stores and raw materials have, as usual, been taken at cost, which is not over current market rates.

Additions to Block Account during the year included the purchase of land adjoining and to the South of the Works, the construction of a lean-to extension to the Foundry to accommodate the Pattern Store, and the installation of a new 30 h.p./A.C. Motor to drive the Foundry Blower.

ASSAM BENGAL CEMENT COMPANY, LIMITED

Audited Accounts for the year ending 31st March, 1943:—

A sum of Rs. 15,212-8-11 has been carried to the balance sheet as profit for the year ending 31st March, 1943, after providing Depreciation, Debenture interest, Government Royalty, Protection Fee, War Risk Insurance and all other expenses. The Directors regret to report that although the Company have made a small net profit, the amount is far below expectation, due to causes beyond their control. As previously reported, the Government of India, under Defence Rules, have taken over the entire production of the factory at cost-plus basis. This did not take into account the continued increase in prices of stores, foodstuffs, coal and other materials required for operation of the factory.

Factory.—The Government of India still require a large quantity of cement and the Defence Rule order continues. It is, however expected that in fixing future prices of cement the Government will take a generous view of the increasing cost of production. The Directors regret to inform that the factory had to be closed down occasionally for want of raw materials such as coal, gypsum etc., owing to transport difficulties.

Quarries and Ropeway.—Although a portion of the Ropeway was completed during last year, the rest of the Ropeway was not completed during the period, but now the Directors are pleased to inform that the erection of the Ropeway may be regarded as practically complete and full test and trial run will be made as soon as some of the remaining parts are supplied. The Quarries are at present in full operation.

Collieries.—The development of the Collieries has had a setback due to acute labour shortage.

Managing Agents.—Messrs. Eastern Corporation Ltd.

Authorised Capital—*Rs.* 50,00,000. *Issued*—*Rs.* 35,00,000. *Subscribed*—*Rs.* 32,67,983 *in* 2,86,867 *ordinary shares of Rs.* 10 *each and* 4,11,113 *deferred shares of Re.* 1 *each paid up, less calls in arrears*—*Rs.* 11,800.

NOTICE

The Twelfth Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Thursday, the 30th day of September, 1943, at 3 p.m. for the following purposes:—

(1) To pass the Directors' Report and the Audited Accounts for the year ended 31st March, 1943.
(2) To declare a dividend.
(3) To elect a Director in place of the retiring Director.
(4) To elect Auditors for the ensuing year, and to fix their remuneration.
(5) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 20th September, 1943, to 30th September, 1943, both days inclusive.

By Order of the Board,
OCTAVIUS STEEL & CO. LTD.
Managing Agents.

Calcutta, 10th September, 1943.

Note.—In accordance with a Government of India Notification No. 1564—OR/42 dated 7th September, 1942, Directors' Report and the Accounts will not be published.

The Directors have recommended payment of a dividend at the rate of 5% free of income-tax for the year ended 31st March, 1943.

THIS WEEKLY IS PRINTED BY
DORCHESTER PRINTING WORKS
116, LOWER CIRCULAR ROAD,
CALCUTTA.

(Continued from page 577)

amount of Rs. 50,000. The dividend on the ordinary shares has been increased to Rs. 7-8 per share from Rs. 5 per share previously. The amount carried forward is slightly lower at Rs. 31,578 against Rs. 33,722 brought in.

* * * *

The decrease in the amount of despatches and the increase in the cost of production have been mainly responsible for the sharp decline in the earnings of the *Ghusick and Muslia Collieries, Limited* for the half-year ended March 31, 1943. The net profit, before providing for taxation and depreciation, is Rs. 35,774 against Rs. 79,745 for the previous six months. Provision for depreciation is unchanged at Rs. 7,500, but there is to be no transfer to the Reserve for contingency of Rs. 10,000 and Taxation Reserve of 12,000 as on the former occasion. Even with the smaller allocations to reserves, it has not been possible to maintain the dividend on the shares which is lower at 3½ annas per share against 4 annas per share. The amount carried forward is more or less unchanged at Rs. 61,105. The raisings during the half-year were 46,051 tons against 54,208 tons in the previous half-year while despatches were 40,162 tons against 50,948 tons.

* * * *

Peria Karamalai Tea and Produce Company, Limited has made very good progress in the last four years, thanks to the improved conditions in the industry and the larger output. The net profit has improved substantially. The results for the year ended March, 1943 make very satisfactory showing, the net profit, before providing for taxation and depreciation, being Rs. 4,63,030 against Rs. 2,55,522 for 1941-42. Provision in respect of taxation for the two years is Rs. 1,65,000 and Rs. 58,300 respectively. After transferring Rs. 10,000 to staff pension fund, the final dividend of 20 per cent with the interim dividends of 10 and 5 per cent, already paid, makes 35 per cent for the whole year against 20 per cent for the previous twelve months. The amount carried forward is the substantial amount of Rs. 1,70,463 against Rs. 1,52,645 brought in.

* * * *

The crop of 14,94,209 lbs. was harvested at a cost of 5.86 annas per lb. f. o. b. and realised an average net price (after adding income from quota sales) of 12.88 annas per lb. as compared with 10.28 annas per lb. in the previous year.

* * * *

Kodala Limited has made a net profit of Rs. 1,13,452 for the year ended 1942 against Rs. 86,889 for the previous 12 months. After transferring Rs. 25,000 to General Reserve and Rs. 25,000 to Improvement Fund against a total of Rs. 40,000 on the last occasion, the final dividend of 25 per cent, with the interim dividend of 10 per cent already paid, makes 35 per cent for the whole year against 30 per cent for 1941. The amount carried forward is Rs. 9,869 against Rs. 8,340 brought in.

The crop outturned was 308,693 lbs. against 274,115 lbs. while the average price realised was annas 12.388 lbs. against annas 11.110 per lb.

* * * *

Oodaleah Limited is paying a dividend after the lapse of many years. Thanks to the improved conditions in the tea industry it has been possible to wipe off the debit balance in full and resume payment of dividends on the ordinary shares. The net profit, before providing for taxation and depreciation, is Rs. 90,397 against Rs. 41,611 for 1941. After providing Rs. 2,329 for Retiring Allowance Fund and Rs. 11,587 for income-tax, a dividend on ordinary shares of 2½ per cent is to be paid. The Improvement Fund gets Rs. 50,000. The credit balance carried forward is Rs. 6,045 against the debit balance of Rs. 14,234 brought in.

The crop raised in the Company's estates was 248,000 lbs. against 196,522 lbs. while the average price realised was annas 12.956 per lb. against annas 11.067 per lb.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is nothing of special interest in the money market, short credits being in abundant supply and exchange maintaining a steady trend. Interbank call money is nominally quoted ½ per cent in Calcutta and ¼ per cent in Bombay. Applications on the weekly treasury bill tender day came to Rs. 15.84 crores as against Rs. 14.91 crores on September 14. In spite of the larger applications, the average discount rate registers an increase of 1 pie to 13 annas and pies 5 per cent per annum. The offer of tender bills for the next week remains unchanged at Rs. 8 crores. Thanks to the excess of treasury bill maturities over sales in recent weeks, the total of treasury bills outstanding has come down to Rs. 108.73 crores. It is quite likely that, in due course, the total of floating debt will be around Rs. 100 crores. This reduction in the floating debt is on the lines forecast in these columns; and one of the principal factors contributing to this development, must be the substantial revenue receipts on account of Excess Profits Tax advance payments.

We have to review in this number the returns of the Reserve Bank for two weeks. In the week ended September 10, there was expansion of currency for Rs. 8 crores against sterling securities. Rupee coin registered a fall of Rs. 73 lakhs. Active note circulation rose by Rs. 5.06 crores. In the banking department, foreign balances were higher by Rs. 7.14 crores. As sterling securities in the issue department have gone up by Rs. 8 crores, we may assume that the Government of India should have received, during this week, anything like Rs. 15 crores from the Allied Governments in respect of war orders and war commitments. As a result, the deposits of the Central Government with the Reserve Bank are higher by Rs. 14.63 crores. On the other hand, the deposits of Provincial Governments are lower by Rs. 4.39 crores. Bank deposits have gone down by Rs. 6.01 crores from the previous week's peak level of Rs. 77.54 crores.

During the week ended September 17, there was further addition by Rs. 9.97 crores to the holdings of sterling securities in the issue department. This has not, however, resulted in any currency expansion as a corresponding amount of rupee securities has been withdrawn from the issue department. This brings the rupee securities in the issue department down to Rs. 73.39 crores. Compared to January 1, 1943, rupee securities in the issue department are lower by nearly Rs. 50 crores. There is, in this development, gratifying evidence of the currency situation getting under some manner of control. It is true that, in the course of 1943, active note circulation has gone up by Rs. 174 crores. But this increase would have been very much more except for the consistently pursued policy of utilising every possible occasion to withdraw ad hoc treasury bills from the issue department. This kind of withdrawal has been accelerated since the middle of July. As much as Rs. 45 crores of ad hoc treasury bills have been cancelled between July 16 and September 17, 1943. As a result, the contraction of rupee securities offset the expansion in sterling securities. Active note circulation during the week ended September 17, shows actually a contraction of Rs. 1.59 crores. The Central Government's deposits have shrunk by Rs. 2.85 crores, while those of the Provincial Governments have been strengthened to the extent of Rs. 1.52 crores. There is a further decline in the deposits of member banks by Rs. 3.51 crores. Foreign balances in the banking department are down by Rs. 3.53 crores. As nearly Rs. 10 crores have been transferred to the issue department, it may be inferred that the amount of sterling payments received during the week under review is approximately Rs. 6½ crores.

There are definite indications that profit-taking in the case of 3½ per cent Rupee Paper has now exhausted itself. The tap rate at which the Reserve Bank sells the stock still remains at Rs. 97. While, in the earlier days there were sellers especially from Bombay, roundabout Rs. 96-14, we understand that the market had to go to the Reserve Bank towards the close for purchases of 3½ per cent Paper at Rs. 97. The technical position of the market may now be said to be strong and conducive to the next raising of the tap rate. From our personal enquiries, we have reason to think that, of those who recently took up 3½ per cent Paper in its upward march from Rs. 94, only a small proportion consisted of speculators who are mainly concerned with the profit accruing from the rise. Most of the purchases represent bonafide investment, especially on the part of some of the new banks whose resources have expanded vastly in recent months. In the case of these institutions, a portion of the purchases may be sold with a view to provide a better showing of profit. But the bulk of the purchases must be reckoned long-term investment. For, if the holdings of 3½ per cent Paper are sold how are the banks in question to reinvest the proceeds?

The exchange market has been steady with rates unchanged.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D. A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

Owing to the holidays the next issue of "Indian Finance" will appear on September 30, 1943.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, September 21. Total amount offered was Rs. 15,84,25,000. Tenders at Rs. 99-12-9% and above were accepted in full and those at Rs. 99-12-6% were allotted approximately 32%. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-13-5% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, September 28, in Bombay up to 11 a.m. (standard time) and up to the close of business on Monday, September 27, at other centres. Successful tenderers should make payment on Friday, October 1, or on Thursday, September 30 where Friday is a holiday. Other conditions are as usual.

During the week ended September 17, Government of India Treasury Bills for Rs. 3,48,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

U.P. TREASURY BILLS

Tenders for Rs. 1,00,00,000=(Rupees one crore) of three months' United Provinces Government Treasury Bills were opened on Wednesday the 22nd September, 1943. Total amount offered was Rs. 2,28,00,000/=(Rupees two crores and twenty-eight lakhs). Tenders at Rs. 99-12-3 per cent and above were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 16 per cent. Total amount accepted was Rs. 1,00,00,000/= (Rupees one crore), the average rate of accepted tenders being Re. 0-14-8 (annas fourteen and pies eight per cent per annum).

Finance Abroad

Thursday Evening.

EXCEPT for the President's message to Congress, and Mr. Churchill's review, there are few outstanding facts to record. The President told the 78th Congress that the U.S.A. is spending $250 millions a day, building five ships a day and still striving to produce more bombers. Total war costs up to September 1st are put at $128.13 billions. This means that the Federal debt has doubled within a year. No early end of the war is in sight, and the war loan drive for $15 billions this month deserves special notice. Congress which compromised on the pay-as you-go plan for income-tax has been insistently reminded of the Republic's obligations and enterprises. The Administration has no intention of giving up its foreign policy or its domestic policy. Mr. Roosevelt has said flatly that responsibility must be accepted. The new session may, therefore, be no repetition of the last. There are difficulties as regards manpower, taxation and the law against strikes but the Administration has its own ideas and interference for one reason or another is not desired.

Wall Street's reaction to the mildly controversial Message has been very good. The market leaders have gone up suddenly. The war news has not depressed leading industrials. Nor does the fear of higher taxes deter U.S. investors from taking a hand. The opening on Saturday and the following days has been quietly firm as prices have tended upwards. The promise of collaboration with other nations in peace follows the Republican leaders' outline of post-war aims. Isolationism is ended. A treaty with Britain looks good. In the Message to Congress the President spoke of the people's good sense. In two years he claimed that war production has made immense progress. The U.S.A. has armed its own forces—10 millions is the President's figure—helped the Allies with supplies. Mistakes are overshadowed by the achievements and the U.S. markets have noted the President's warning against sheer individual pessimism. Share prices have gone up, though the Congress clearly has not made up its mind. A Republican leader objected only last week to the conscription of fathers, quoted the Canadian example and asked why the U.S.A. took off men with dependants. The rationing plan is not quite what it should be since subsidies have been refused but domestic quarrels are not going to affect the policy to be pursued. The President reckons on events having their own influence on opinion. The pre-Election quarrels must recede when it comes to carrying out the programme for victory.

The warning against slackening came after the reference to the slipback occasioned by the coal strike. Production is still the main object of U.S. domestic policy. That is bound to help industries and investors, and something more than the Fall upswing has materialised this time. Cheerful markets make for the success of the third war bonds drive. There is no simple slogan like "Win the war with wheat" this time. In 1943 the third year of war, war production has shown remarkable increase. That is enough for the U.S.A. and the new tax bill (due to appear soon) has to be judged only on the basis of proved results. The financial consequences for 1943 were explained in July in the review of the U.S. Budget. The President then made no bones about the rise in public expenditure, the need for austerity at home, and the fresh demands on the thrifty. The U.S.A. has been prepared for the further increase in expenditure to $106 billions in a year. The average daily bill mentioned on Saturday is higher. But the national income must be still rising and the additional taxation promised will entail no great sacrifice as the luck of the expenditure is met by borrowing. As the Federal Government is going to look after the ex-soldiers, the States have no special post-war liabilities. The President has indicated that much. The President has also made it plain that he remains a New Dealer through and through. Even to-day orthodox measures do not impress him and inflationary possibilities are evidently considered imperative from the market angle. If revaluation of the dollar is shelved, pending an international agreement as regards foreign exchange, the Americas' solidarity may grow rather than diminish. Mr. Roosevelt spoke of liabilities and referred only to General Marshall's report. He did not cite British or German example. He asked for support without drawing attention to what is done elsewhere better or worse. The table of comparative sacrifices did not figure at all. He described the war and the victories, asked only for steady support. Republicans may be divided; the Southern split may be at an end. It is not possible to guess out the full effects of the Message on the cotton, wheat and other markets in America.

A brief message outlining the possibilities of Argentina giving up her neutrality followed a denial that the Ramirez regime was menaced by the likelihood of a military revolt or that refusal of Lend-Lease aid had effects at home beyond the Foreign Minister's resignation. The consequences of any departure from neutrality should be considerable apart from proving finally that U.S. foreign policy has been a success before and during the war. Argentina's import trade should revive; industries would develop further and the efflux of foreign funds after the war may not be large or sudden. The blocked sterling balances, too, may be disposed off satisfactorily. Before the Castillo regime fell the Central Bank's report described Argentine experience of inflation and the official efforts to stabilise prices of her exports. It referred also to the blocked balances, in this case protected to some extent by a gold clause. A lapse from rigid neutrality would make Britain amenable to suggestions for buying out foreign investors. The old Pinedo plan did not go through and nationalisation of the railways was not complete. The enormous credits held abroad have not been employed to advantage. Buying out may help the British disinvestment programme in which case, British investors would help the Treasury to borrow more. Dr. Santamarina, the Finance Minister, is a banker who has developed views as to the use of foreign balances already.

The death of Sir Henry Kingsley Wood makes no difference to the borrowing programme. Very recently, it was said that short-term borrowing as in the first year of war would increase. The weekly offer of Treasury bills would be raised to £100 millions in order to let the market have a fair quota against the Public Departments. Overseas balances were not mentioned two weeks ago, but the benefit offered to clearing banks by larger takings of Treasury deposits is likely to be extended to short-term creditors. There is proof of slacker money conditions in the increased demand (£75 millions last week) from the Treasury for bankers' deposits. Though much has been accomplished by thrift, strikes, etc., may have a bad effect on the market though competition is altogether absent in London to-day and the Government is likely to use for some time the larger liquid resources of the market which decision is, of course, without effect on bank credit generally. The bank returns in August pointed to increased funds and limited demand; there has been no important change since then. Directions to holders from the Bank of England recently to forward interest on Government securities straight to banks must have helped the banks to increase their deposits so that the gilt-edged market must have derived some advantage. There has been no movement in British Funds for some time. But report speaks of Home Rails having improved though rises have not been held. The Prime Minister's war survey has helped some Home Industrials. The effects on the Indian markets have been identical. But bullion prices have not yielded and there is talk of the Bombay market being dominated by professional speculators at present.

The Allied advance up Italy has raised the price of leading oil shares. The capture of islands in the Eastern Mediterranean makes for security in the Near East. The slight fall in Anglo-Iranian Oil, which strengthened after Persia's entry into the war, may be ignored. Profit-taking may explain the changes in planting shares but the jump in Burma Corporation and Burma Oil shares will not be ignored as it follows Japanese press conjecture as to the reconquest of Burma. The Prime Minister's explanation of the scope and nature of the East Asia Command is certainly a decisive factor.

LLOYDS BANK
LIMITED
(Incorporated in England.)
1677
Strength
Lloyds Bank has attained to the position of being one of the largest and strongest banking institutions in the world by its reputation for efficiency, thoroughness and financial stability.

The Company has been formed for the purpose of carrying on the business of refining oils and of acquiring the Refinery known as Dehri Oil Refinery and with the objects more fully set out in the Memorandum of Association, a copy of which is attached herewith and forms part of the Prospectus.

Negotiations for the purchase of a fully equipped oil refinery at Dehri-on-Sone comprising valuable factory land measuring 56 bighas, buildings, and complete unit of machinery plant and tools have been completed with Messrs. H. Datta & Sons, Ltd., 15, Clive Street, Calcutta, who have entered into an agreement to transfer to the Company all the rights and privileges in the said land, buildings, machinery, plant and tools without taking any profit or brokerage, the consideration being Rs. 45,000 for land and buildings which they paid to Mr. John White who held the property for over 30 years and Rs. 42,000 for machinery and other capital assets.

The Company is fortunate in securing a fully equipped factory which is centrally situated and which is in a position to commence production immediately without the necessity of waiting for construction or initial experiments and development. Orders for additional machinery which will increase the production to 1½ tons a day have been placed and they are well on the way.

Productions which will be immediately commenced are:—

(a) Lubricating oils of all descriptions, specially for high speed and heavy bearings, (b) Lubricating greases, (c) Cutting Compound, (d) Greased Yarn for extra heavy bearings, (e) Hair Oil and (f) Cold-pressed medicinal Castor Oil.

The necessity of oil in all spheres of mechanised activity whether in peace or in war cannot be too strongly emphasised and India's deficiency in this respect has been painfully driven home in the present War. The supply of oil has had to be severely controlled and restricted by the Government; and, as a result, only such factories as are engaged in essential war work has now the facility of Government support while others who are not so happily placed but whose continuous activity is no less important for the supply of the necessaries of civilian population have been greatly handicapped.

India was more or less entirely dependent on imports from abroad for lubricating oils and lubricants of all types. Among the natural mineral resources that are necessary for present-day civilisation, oil holds a high place. And, in regard to this essential requirement, India occupies a low place. So far, oil deposits have been discovered and exploited only in two places in India namely, Digboi in Assam and Attock in the Punjab.

India is, however, the largest oil-seed growing country in the world; and her exports of oil-seeds were one of the largest items in her list of exports before the War. The western nations used to import these seeds, extract oil from the seeds and refine the oil to obtain the highest grades of lubricants. In fact, in the opinion of many authoritative oil technologists, properly manufactured oils from vegetable base are definitely superior to mineral base oils for lubricating high speed bearings such as those of modern electric motors, aeroplane engines, etc.; and this explains why, when the famous firm of Messrs. C. C. Wakefield & Co., Ltd., commenced operations, they named their brand "CASTROL". It is is also a well-known fact that many of the speed record-breaking aeroplanes and motor cars used the "CASTROL" Brand for lubricating their engines.

The Refinery proposde to be purchased by the Company is situated in the heart of castor-growing area of Bihar and has the best possible means of communication with the rest of the country in so far as it is situated at Dehri-on-Sone on the Grand Chord line of the E.I.R. at a distance of 345 miles from Calcutta. The Grand Chord is the main line of communication between Calcutta and Bombay, Delhi, Lahore, Karachi, Cawnpore, Lucknow, Jubbulpore and all important cities. The Factory is only 300 yards from the Railway station.

The Refinery has been very fortunate in being able to procure the services of Mr. John White, who is a British Oil Chemist with 30 years' experience with particular reference to vegetable oil lubricants. He has been able to manufacture some of the finest lubricants that have ever been placed on the market.

The minimum net profit per pound of oil or grease is six annas. Thus, on its present capacity, the net profit of the Factory is expected to amount to Rs. 420 per day, that is, to Rs. 1,53,300 in a year. With the increased capacity expected to be effected by the end of December and without allowing for reduction of overhead costs, this profit will amount to Rs. 4,59,900. It should be noted, however, that the profit of six annas per lb. is applicable only in the case of the very coarse Greases; and, in the case of finer products such as high speed lubricants, medicinal castor oil, hair oil, etc., the margin of profit is considerably more.

The capital that is now being asked for is for the purpose of (a) paying for the purchaes of the land, buildings and machinery; (b) erecting more buildings, viz., (i) extension to main factory, (ii) Seed godown, (iii) Warehouse for finished products; (c) Machinery, such as (i) Filter press, (ii) a Steam Engine or an Electric Generating Set, (iii) a further complement of oil expelling machinery, etc.; and (d) storing of sufficient quantity of oil seeds during the season so that no difficulty may be experienced for raw materials.

The possibilities of marketing the output of the Factory even when normal conditions of life return and mineral lubricants are available from other nations are no less bright. It may be stated that when the science of vegetable oil-refining develops to the extent that has been possible in the case of mineral oils, vegetable lubricants will prove to be a formidable competitor of mineral lubricants both in respect of quality and price. Even to-day, when raw material prices have gone up by 200 to 300 per cent, some of this greases are being sold at cheaper prices than mineral greases were sold before the war broke out; and these prices are yielding satisfactory margins. It can, therefore, be said with some confidence that it will be possible for the Company to sell its products in the post-war period a cheaper prices than mineral lubricants; and that such prices will yield larger profit than at present. Above all, it may be emphasised that lubricants from vegetable base are preferred for high speed bearings.

The amount payable to the vendors is Rs. 87,000 for the transfer of the equipped Factory and further machines and capital assets and they have agreed to accept payment in the form of shares. This is a measure of their confidence in the future of the enterprise.

It may be stressed that the present offer of shares to the public is being made at a stage when immediate production is assured.

MINIMUM SUBSCRIPTION

The minimum subscription upon which the Directors will proceed to allotment and which in the opinion of the Directors must be raised out of the proceeds of this issue in order to provide for the matters referred to in Section 101 of the Indian Companies Act, including the working capital, is shares of the nominal value of Rs. 3,00,000 (Ordinary and/or Preference).

COMMISSION AND BROKERAGE

The Articles of Association provide for the payment of commission not exceeding 2½ per cent of the nominal value of the shares. In addition, to the above, the Company may also pay usual brokerage to approved brokers.

The Directors have decided to pay brokerage at the rate of one rupee per Preference Share and four annas per Ordinary Share to recognised brokers or bankers on allotment made in respect of applications bearing the stamp of such brokers or bankers.

PRELIMINARY EXPENSES

It is estimated that the preliminary expenses will not exceed in the aggregate Rs. 20,000.

PROMOTION

No promotion money is being paid by the Company nor is any business being taken over.

MATERIAL CONTRACTS

(1) An agreement shall be entered into between the Company and the Managing Agents and shall be open for inspection as soon as executed at the Company's office during usual office hours. The principal terms of the proposed agreement have been set forth in one of the following paragraphs.

(2) Another agreement has been entered vendors, Messrs. H. Datta & Sons, Ltd., by virtue of which the vendors have bound themsleves to transfer the property to the Company for a consideration of Rs. 87,000 to be paid in 8,700 Ordinary Shares of Rs. 10 each.

(3) An agreement between Messrs. H. Datta & Sons, Ltd., and Mr. John White by virtue of which Mr. White will supervise manufacturing until such time as suitable technicians are trained up.

DIRECTORS' QUALIFICATION & REMUNERATION

The number of Directors shall not (other than an Ex-officio Director) be less than two and not more than seven. The qualification of a Director shall be the holding in his name or jointly with others of Ordinary Shares in the Company of the nominal value of Rs. 5,000. Every Director shall be paid a fee not exceeding Rs. 50 for each meeting attended by him. Directors residing out of Calcutta shall also be entitled to be paid their reasonable travelling and hotel and other expenses, if any, incurred in consequence of their attending at Board meetings and otherwise in the execution of their duty as Directors. If any Director, being willing, shall be called upon to perform extra services the Company shall remunerate such Director either by a fixed sum or by a percentage of profits.

The Directors shall also receive a commission of 2½ per cent on the net yearly profits of the Company after deducting interest on debentures or other moneys bororwed and such sum as may be placed to depreciation, but before placing anything to reserve or other special account and before deducting the commission payable to the Managing Agents. The commission mentioned above shall be divided among the Directors equally. Such Directors as are also members of the Managing Agency firm shall not participate in the commission.

MANAGING AGENTS

The Articles of Association provide for the appointment of Messrs. H. Datta & Sons, Ltd., as Managing Agents of the Comapny from the date of the incorporation of the Company for a period of twenty years on the following remuneration:—

(1) An office allowance of Rs. 1,000 per month; and

(2) a commission of 10 per cent on the net annual profit of the Company as defined in Section 87C (3) of the Act before setting aside for taxes, this commission to be increased to 15 per cent if the dividend on ordinary shares is or exceeds 10 per cent tax-free.

The aforesaid commission on profits shall not be payable in those years in which the Company does not declare a dividend of at least 5 per cent tax-free on Ordinary Shares.

VOTING AND RESTRICTIONS

On a show of hands, every member present in person shall have one vote and upon a poll every member present in person or by proxy or by attorney shall have one vote for every share held by him.

The Company shall have a first and paramount lien upon the shares other than fully paid-up shares registered in the name of each member, whether solely or jointly with others, and upon the proceeds of sale thereof, for his debts, liabilities and obligations solely or jointly with any other person to or with the Company.

The Directors may decline to register any transfer of shares on which the Company has a lien. The Directors may refuse to register the transfer of partly paid-up shares without assigning any reason therefor.

INTEREST OF DIRECTORS

Mr. H. Datta and Mr. R. Datta, Directors of this Company, are interested as Directors of Messrs. H. Datta & Sons, Ltd., who are the Managing Agents as well as vendors.

Rai Bahadur K. N. Khandelwal, a Director of this Company, is a partner of Messrs. Narayandass Khandelwal & Co., who are brokers of this Company, and is interested accordingly.

Mr. N. C. Chunder is a partner of Messrs. G. C. Chunder & Co., who are solicitors of this Company and is interested accordingly.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying this Prospectus which may be obtained at the Registered Office of the Company or from the Brokers of the Company or at all the offices of the Company's Bankers, and sent in accordance with the directions contained therein with a remittance of the amount payable on application.

Where no allotment is made the deposit will be returned and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. Failure to pay any amounts due on shares allotted when due will render previous payments liable to forfeiture.

INSPECTION OF DOCUMENTS

Copies of the Memorandum and Articles of Association and the agreements referred to in the aforesaid paragraphs may be inspected at the Registered Office of the Company during the usual hours of business.

Editorial Comments

Trends & Needs of Provincial Finance

The proposal of the Bengal Ministry to levy an agricultural income-tax and to increase the rate of sales tax is a sharp reminder to the public that Finance Ministers and financial advisers cannot be content to mark time during the present war period. In the case of Bengal, the need to levy new taxation has been rendered inescapable by the speedy increase in public expenditure following the food crisis and the prevalent famine conditions; and though the revenue from these additional sources may be a drop in the ocean of the threatened deficit for the year, its value as an evidence of sincere effort to improve the finances cannot be despised. The current year's deficit in Bengal taken together with the general proneness of the Government of Bengal in the past to postpone measures of additional taxation has brought about fresh taxation in this province, while the other provinces seem to rest on their oars. But, strictly speaking, the factors and forces that affect provincial finances are common to all the provinces and the difference of local conditions, political and other, can only hasten certain features in some province while delaying them in others. Mistakes of official policy, as in the case of the Meston Award, the effects of which are doubtless exaggerated by those who fare badly as a result of them, only mitigate the essential uniformity of the trends of our provincial finance. This uniformity springs from the nature of the allocation to the Provinces of sources of revenue which are inelastic and which impart their rigidity to the budgets of the Provinces. The apparent differences in financial, position which followed the Meston award, like the compensating changes decreed by Niemeyer, are but slight ripples of change which disappear in a short time from the plain surface of our provincial finances. Here, in Bengal, the additions to revenue from her share of the jute export duty are lost in the routine budgetting of a few years, without making an appreciable change in the position of the nation-building departments or in her capacity to stand up to the strain of a crisis like the present. The provinces, like the peasants on whom they ultimately rely, live a poor and frugal life up to the limit of their income, unable either to strive for their progress or meet special calls when they occur.

The question of reconstructing our provincial finances is really too closely mixed up with the larger political and constitutional problem to admit of being treated as a financial problem. But within the limits of the political and constitutional set-up, attempts have been made to find new sources of provincial revenue. The Congress Ministries gave the lead in their efforts to make up for their voluntary sacrifice of revenue from excise. And Mr. Rajagopalachari will go down in our financial history as the author of the sales tax which in one form or another has become a feature of the finances of the majority of Indian provinces. If it is remembered that Bengal had little of excise revenue to sacrifice, even if she had the inclination to,—it is only now that drink revenue has gone up owing to the influx of people from other provinces—new taxation in Bengal may be viewed only as a belated occurrence of what had taken place earlier in the other provinces. When the Congress Ministries resigned, they handed to their official successors a system of finance which, with the abandonment of prohibition, could be relied on to meet the expenditure of the war period. The budgets of the Advisers as a rule show a degree of contentment with the financial framework of their predecessors which is, in a way, a tribute to their political opponents.

But it is idle to think that the war makes no demands on provincial finances or that the larger figures that one now sees in the provincial budgets are an assurance of a more or less comfortable position in the post-war period. In the first place, it must be noted that the general trend of provincial finances has been significantly unfavourable. While in 1941-42, all the provinces, excepting Bengal and the C. P., realised considerable surpluses, in the revised estimates for 1942-43, only Punjab and Bombay have a surplus to speak of. In the case of Madras revenue and expenditure are expected to balance; and the smaller provinces may well fail to realise the small surpluses they anticipated in March last. As for the current year, Bengal is threatened with a deficit equal to nearly half the revenue of peace time. Bombay has on paper balanced her budget. Madras, characteristically, plans for a small surplus of Rs. 10 lakhs. Only the Punjab and Bihar have an appreciable budgetted surplus. The unfavourable trend is thus unmistakable. In the second place, the war has not failed to make a larger draft on provincial finances. As against the total provincial expenditure of about Rs. 103 crores in 1941-42, the budgets for the current year, taken together with the recent Bengal Budget may be put at over Rs. 120 crores. The revenue has gone up from about Rs. 103 crores to Rs. 117 crores. The increase in revenue is to be attributed in the main to the increase in the divisible pool of incometax, which has gone up from Rs. 283 lakhs in 1939-40 to Rs. 446 lakhs in 1941-42 and to Rs. 12,10 lakhs for the current year. That this increase is largely dependent on railway earnings, which are so inflated by the conditions of the war period, should be sufficient to induce and keep alive a most uncomfortable feeling of insecurity of provincial finances during the post-war period.

Thus the war has, through its attendant economic and financial phenomena, provided for the additional expenditure which it created for the Provinces. In that sense, it has so far been possible for those in charge of provincial finances to mark time during the period of the war, without attempting to alter in any way the contours of the financial system entrusted to their care. But it is time that the provinces gave thought to the financial problems of the post-war period. The probable decline in expenditure after peace will be signed, may be easily exaggerated. And even apart from the changes that peace may bring about, the basic problem of our provincial finance, namely the quest for elastic and expanding sources of revenue, has been left shirked far too long. The war is, doubtless, adequate as a pretext for not embarking on new innovations; and the absence of popular governments is far more than a pretext for Advisers refusing to alter things radically. It is, indeed, unfortunate that a most crucial and, in many ways, formative period of our national life should find the country without a popular party at the helm. But, if public opinion could be canvassed in advance for a set of new financial measures, it would, doubtless, be a great advantage.

So far as the Centre is concerned, it may be said to have derived tangible and abiding good from the exigencies of the war period. Biggish additions to the unproductive debt must be treated as unavoidable during a war. What must be considered striking is the additions to the list of central excises and, what is more important, the solution of the administrative problems in connection with their levy. In direct taxation too, the growing familiarity with higher levels of incometax must help their stabilisation at well over the pre-war rates. Similar changes are more or less wholly absent in provincial finances. The sales tax is, indeed, a useful invention and, in conditions of genuine economic development, may prove the kind of tax the provincial governments have been looking for. But the yield of the sales tax is nothing compared to the outlay the nation will have to make on its nation-building departments.

Doubtless, a large part of this outlay will have to come from the Centre whether as fiat money, as "Eavesdropper" suggested some time ago, or as loans or out of new central taxation. But even then, the need for additional revenue will be such as to necessitate new taxation on an appreciably large scale.

If we leave the sales tax aside, as it has been fully incorporated into the existing tax system, we have only the agricultural income tax left among those now under contemplation. The agricultural income tax, however, is generally thought of less as a form of taxation than as a means of equitable redistribution of the national income. In regard to the latter, it is too often the case that social wrongs begin to be resented only when they have more or less ceased to be. Agricultural incomes are much iniquitous less today than when they were meekly accepted as part of a just dispensation. Probably, if the exemptions are not carefully provided for, the tax may well prove more iniquitous than what it seeks to redress. The question of apportioning the fruits of the soil should be approached, with a view to make the cultivator a contented, efficient and progressive worker, rather than from a misconceived horror of unearned incomes. To the taxation of agricultural incomes, there are certain indispensable conditions precedent. The standard of living of the cultivators should not be jeopardised or even threatened indirectly. And those middle classes, who have been living a low standard of life on income from land, should have avenues of work which will enable them to maintain themselves and make their customary contribution to the social life. A tax which endangers a sociably progressive middle class may well impoverish the national life more than it can even enrich the Exchequer. The social consequences of a new tax must not be lost sight of in unreflective zeal for social justice.

In this respect, agricultural income-tax has something in common with the other readily available source of new revenue, viz. death duties. The justice of death duties would seem to be even more obvious than that of the agricultural income-tax. Here, again, death duties may well prevent the evolution of a stable aristocracy of wealth and learning such as Britain has had for centuries. The efflux of social leadership in India, its inefficiency, its inability to look after its own interest or to sympathise with the interests of the masses, is attributable largely to the way the institution of property has functioned in India. Death duties may be deemed inopportune in that they will come in just when we are evolving a class which will be fitted by wealth and by aptitudes for the neglected tasks of social leadership. But these grounds can hardly avail against the appropriateness of these two taxes for our future needs. War profits have prepared a rich harvest for the Finance Ministers of the future who will have the courage to levy death duties. And public opinion will feel little compunction in supporting taxes which are, generally speaking, just and which may well meet the immediate requirements of the post-war years.

PROSPECTS IN BURMA

The several distinct references to the Allied plans for the reconquest of Burma excite attention in places far removed from the stock exchange where Burma shares have been active and firm. As to the Indian investor's losses last year, and since, there has been no special estimate or assurance. The success of evacuation has been described but no concern has been manifested in respect of war damage contribution. No indication has been given as to the scope or kind of compensation. Burma has been a theatre of war after the British withdrawal; though the destruction of enemy property has been the chief purpose Burman and Indian property must have suffered. No purpose is served by the mention of the raid on Lashio or on oil refineries and docks etc, except to indicate that Burma is vulnerable despite the rapid occupation.

A census of evacuees may have various objects; but it will not encourage the investor to look on the reconstruction of Burma as offering special possibilities. Administrative failures may be rectified by careful examination, but the investor is not concerned with what happened in Burma either to the Allied army in Central Burma or the Burma Independence Army in the south. The only fact that interests us is the impoverishment of Burma after the Japanese conquest. Stories of oppression cannot be ignored as biased propaganda, as Burmans have described the plundering cruelty of the conqueror. There is, however, less concern over the Reconstruction Department's intentions than about the previous promise (discreetly vague) of reforms for Burma. The fact of Separation is not glossed over, but the curious calculations as to the cost of joint war measures in Burma, and India's share thereof, will direct public anxiety into well-cut channels. The war of 1942 rendered the separation complete. The escape of the Government from Rangoon has merely led to the creation of a native puppet regime. What is, however, of direct interest today is the lack of concern for past undertakings. The trade and immigration agreements are duly abrogated by the enemy's success. But there is little or no desire to restore the status quo ante bellum.

Indian opinion should not be shocked because Burman ambitions antedate the reforms of 1937. Burman opinion was in favour of Separation at the time of Mr. Montagu's visit to India in 1917. But the reconstruction programme drawn up by a branch of the Burma Government deals so largely in generalities that Indians well may know little about what is to be their position in Burma after liberation. The programme so far as one can say today is based on the slogan of Burma for the Burmans and rightly so. Immigrants, Indian or Chinese, can claim no special consideration, and the only question is how reconstruction will bear on Burma's indigenous minorities. In the account given by U Tin Tut early this month of the plans drawn up against reconquest, there was reference to land alienation in Lower Burma and the duty to serve the peasantry. It was urged that non-agriculturists have no business to keep land. Indian interests or their advocates will not fail to note the adverse implications of the agrarian programme which may follow the autonomy period's precedents but will excite great concern. The recovery title or possession is likely to be made difficult by the proclamation of set purpose. If lands in Lower Burma must belong to the cultivating proprietors, who would not require the help of the money-lender and would be protected by modification of tenure the outlook must be called back. Indian interests must be prepared for the continuance of unsatisfactory conditions. There is, of course, the question of previous sanction but we can expect little in the light of experience.

An agricultural country, developed to the point of supporting an efficient and progressive administration, is desired by the Burma department. The need is an educated electorate but the standard of literacy in Burma, buth male and female was flattering and the modifications desired may be only to give education in Burma a new, purposeful twist. Since India looks upon Burma as a field for investment and enterprise, we may leave administrative reorganisation out of account, and ask whether the official definition of attitude to immigrant capital in Burma will satisfy others than Burmans. Burmans were backward in commerce and industry; hence unrest was seldom dormant. To change that reform is essential. No assurances have been given to Burma separately by the Allies. Reconstruction of railways, roads and industries is required in the specialist view; but where and how Burma will obtain the capital is not known. Obviously, India must be the first choice but the concession-hunter of the future will fare badly. Burma's nationals have expressed very definite views as to the profits drawn by alien capitalists. Burmans quite properly want to run their own industries and trade. U Tin Tut referred to the difficult problem of reconciling Burman aspirations with the interests of foreign enterprise. The press summary is enough to show that Burma has ceased to be a field of exploitation. The reconstruction department is against it and Burma also wants to develop local industry. A cotton-growing country can have her own mills. She can dispense with sugar imports, grow more oilseeds, and import less manufactured goods. Burma's trade after the war will probably be independent of mineral oil, rice and timber. The more shrewd may suspect that the Government imports will be unusually large and private imports subject to restrictions. No pressure can be exercised by India on account of the old debt or new obligations, and for the present the idea that Burma should be mistress in her own house should go down well. Since political India may make light of old Indian grievances or new Indian problems, we may expect little in the way of disapproval, which is one reason why comment has been sparse.

Burma's fiscal autonomy and preference arrangements may not be restored intact but the need for a large influx of capital goods will be greater. Imports for some time will be larger than in the East Indies or Malaya. Dependence on rice imports has been modified while the Indian cotton industry looks to the Middle East, not to Burma. In the course of a year Burma has ceased to count as a market for Indian exports and trade advantages held in the past may have little or no effect on the Indian view of Burma as a field of investment.

The present desire to increase employment, raise standards of living and limit alien infiltration after the war, receives its justification from experience. Had these changes been duly effected earlier, the people would have resisted and there would have been no evacuation. The disaster then conditions the basic attitude to foreign capital. The reconquest of Burma entails no threat to Indian industries. More jute, coal or tea will not be forthcoming because Burma is regained and the supply of minerals for Indian industries may be enlarged rapidly. But the consequences of reconquest for India are different from those promised to Burma. Officially, the intention, even now, is not to go back to the old regime. And the offer of a fair field and no favour has its points. Without being exposed at any time to the danger of large-scale Indian immigration Burma may develop a new attitude to alien capital. In a sense, the danger to British capital is much greater; and the restraint of moneylending in the future will be based on the example set by the Congress ministries.

THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

(A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Jaipur, and a copy duly certified under Section 277A of the Indian Companies Act has been filed with the Registrar of Companies, Bombay.)

(Consent of the Central Government has been obtained to this issue under the Defence of India Rule, 94A. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statement made or opinions expressed with regard thereto.)

The Subscription list will open on 16th September, 1943, and will be closed on the 25th September, 1943, or earlier at the discretion of the Directors.

PROSPECTUS

OF

THE JAIPUR METAL INDUSTRIES, LIMITED

(Incorporated under the Jaipur Companies Act on the 30th day of August, 1943, in Jaipur.)

(The liability of the Members is limited)

AUTHORISED CAPITAL - - - - Rs. 50,00,000 (Fifty Lakhs)

divided into

(i) 25,000 Ordinary Shares of Rs. 100 each,
(ii) 50.000 Deferred Shares of Rs. 10 each, and
(iii) 20,000 Preference Shares of Rs.100 each

ISSUED CAPITAL - - - - - Rs. 20,00,000 (Twenty Lakhs)

divided as follows:—

(1) Rs. 10,00,000 in 10,000 Ordinary Shares of Rs. 100 each,
(2) Rs. 2,00,000 in 20,000 Deferred Shares of Rs. 10 each and
(3) Rs. 8,00,000 in 8,000 6 per cent. Cumulative Preference Shares of Rs. 100 each.

Of the above issue, the Managing Agents, Directors and their friends have agreed to take Ordinary Share of Rs. 5 lakhs, Deferred Shares of Rs. 1 lakh and Preference Shares of Rs. 4 lakhs, including the shares to be allotted to the Vendors or to such persons as the Vendors may decide, for the plant, machinery, stores, etc., and for the goodwill. The remaining shares. i.e.

(1) 5,000 Ordinary Shares of Rs. 100 each,
(2) 10,000 Deferred Shares of Rs. 10 each, and
(3) 4,000 Preference Shares of Rs. 100

are offered to the public payable as follows:—

Rs. 25 per each Ordinary and Preference Share and Rs. 5 per each Deferred Share are to be paid with the application and Rs. 50 for each Ordinary and Preference Share and Rs. 5 per each Deferred Share will be payable on allotment within fifteen days from the date of allotment. The balance of Rs. 25 per each Ordinary and Preference Share will be payable on allotment within fifteen days from the date of allotment or any time thereafter, as may be decided by the Directors.

DIRECTORS:

1. RAJRATNA RAMJI HANSRAJ KAMANI, Merchant & Industrialist, Director, W. Leslie & Company (Punjab) Ltd., Lahore, Kamani Enamel Industries, Ltd., Bombay, Narbheram & Co., Ltd., Jamshedpur, W. Leslie & Company (Bombay) Ltd., Bombay, New Colony, Jaipur, CHAIRMAN.
2. HIMCHAND KAPURCHAND SHAH, ESQ., Merchant & Industrialist, Managing Director, Jeewanlal (1929), Ltd., Calcutta, Director, Aluminium Production Co. of India, Ltd., Partner, The Mysore Premier Metal Factory, Madras, 9A, Justice Chandra Madhab Road, Calcutta.
3. NARBHERAM HANSRAJ KAMANI, ESQ., Merchant & Industrialist, Managing Director, Narbheram & Co., Ltd., Jamshedpur, Director, W. Leslie & Co. (Punjab), Ltd., Lahore, W. Leslie & Co. (Bombay), Ltd., Bombay, Kamani Enamel Industries Ltd., Bombay, Maheswari Mansion, Nepean Sea Road, Bombay.

THE BANK OF INDIA, LTD.

OBJECTS OF THE COMPANY.

The Company has been formed with the objects set out in the Memorandum of Association and in particular to acquire the factory of Jaipur Metal Industries, Jaipur, and to engage in the business of refining of non-ferrous metals and alloys, such as copper, brass, bronze, etc., the manufacture of rods, wires, sheets, etc., of non-ferrous metals of all kinds.

RIGHTS OF PREFERENCE, ORDINARY AND DEFERRED SHARES.

The Preference Shares shall have the right to a preferential cumulative dividend at 6 per cent. per annum on the capital paid thereon for the time being and shall further confer a right in a winding up, to the payment of the capital paid thereon and arrears of dividend at the fixed rate. whether declared or not, up to the commencement of the winding up, in priority to the Ordinary and Deferred Shares; but shall not confer any further right to participate in profits or assets. The Ordinary Shares shall confer the right to a non-cumulative dividend up to 8 per cent per annum on the capital paid-up, out of the profits in each year in which it shall be determined to distribute a dividend and shall rank next after the Preference Shares for dividend. The Deferred Shares shall confer a right to a non-cumulative dividend up to 15 per cent. per annum on the paid-up capital out of the profits, if any remaining, after providing a dividend of per cent. to Ordinary Shareholders. Any profits remaining after providing 8 per cent. dividend on Ordinary Shares and 15 per cent. dividend on Deferred Shares which it may be determined to distribute amongst the members in that year, shall be divided in the proportion of half and half between the Ordinary Shares and the Deferred Shares by way of additional dividend. In a winding up of the Company, any surplus assets, after paying off the capital paid-up on the Ordinary and Deferred Shares rateably, shall be divided in the proportion of half and half between Ordinary Shares and Deferred Shares.

PROSPECTS.

India has been almost entirely dependent on foreign imports for its requirements of various non-ferrous metals, and imports of all kinds of non-ferrous metals, alloys and manufactures worth several crores of rupees were coming into the country before the War.

There is, therefore, a very great scope for the expansion and development of non-ferrous metal industry in India. Before the present war, India was exporting the scrap of non-ferrous metals which can be refined and converted into finished products in the country itself. Moreover India is rich in mineral ores of non-ferrous metals and the refining and manufacture of non-ferrous metals from ores can also be developed. Rajputana is rich in such minerals and the factory at Jaipur is favourably situated for utilising such ores in future.

THE PRESENT MANUFACTURING ACTIVITIES.

The Promoters of the Company, who had a long previous experience in the non-ferrous metal industry, have worked for more than 2 years to develop the factory at Jaipur to its present position. The manufacturing operations of the factory can be grouped under four important sections as follows:—

(1) Smelting and Refining of various non-ferrous metals and alloys including High Tensile Brass, Arsenical Copper, Phosphor Bronze and all kinds of Anti-friction Bearing Metals, etc.
(2) Manufacturing Rods of non-ferrous metals (Squares, Rounds, Flats and Hexagonals) including High Tensile Brass, Arsenical Copper, Phosphor Bronze, etc.
(3) Sheet Rolling of Copper, Lead, Zinc, Phosphor Bronze, etc.
(4) Wire Drawing section is under erection and Electrical Wires, such as Double Cotton and Double Silk covered Copper Wire, Radio Aerial Wires, etc., are being manufactured on an experimental scale.

The factory is probably the biggest unit and one of the well-equipped factories in non-ferrous metals in India. It has a fully qualified and experienced technical staff and is equipped with an up-to-date laboratory. The factory had commenced production at Jaipur on a commercial scale in October, 1942, and during the 11 months ending August, 1943, it has manufactured and supplied goods worth about Rs. 50 lakhs. The Company is acquiring the factory in full working order and it is, therefore, in a position to make very good profits. The Directors hope that the factory will be well established and developed to enable it to make good profits also after war.

CONCESSIONS AND FACILITIES GRANTED BY THE JAIPUR STATE.

The Jaipur State has been pleased to grant important facilities and concessions for the development and establishment of this industry and the same will be transferred to the Company.

AGREEMENTS.

(1) *Managing Agency Agreement.*—Pursuant to clause 4 (1) of the Articles of Association, Messrs. Poonamchand & Bros. Ltd., Jaipur, have been appointed Managing Agents of the Company by the Managing Agency Agreement, dated 30th August, 1943, with the following terms and conditions among others:—

(a) Messrs. Poonamchand & Bros. Ltd. are appointed as Managing Agents of the Company for a period of 20 years from the date of incorporation of the Company.
(b) That the Company agrees to pay each year to the agents a commission at 10 per cent. on the nett annual profits and also a monthly allowance of Rs. 1,500. The term net profits in this connection means the profits of the Company as defined by Section 87 (c) of the Jaipur Companies Act.
(c) The Managing Agents are entitled to nominate two *ex-officio* Directors. Such Directors shall not exceed one-third the total number of the Directors.

The Company has entered into an agreement with Jaipur Metal Industries, Jaipur, for the purchase of all the plant, machinery, furnaces, building constructions, stores, etc., belonging to them at a value to be fixed by an independent valuer to be appointed by the Directors and also for the purchase of the goodwill of the concern at Rs. 1 lakh. The value of plant, machinery, building constructions and furnaces and the amount for goodwill, will be payable by the issue and allotment of fully-paid-up shares of the Company and the value of stores, raw materials, etc., will be payable either in cash or by the issue of shares at the option of the Vendors. The Directors have appointed Messrs. Mackenzie Lyall & Co., of Calcutta, as Valuer for this purpose.

A copy of both these agreements may be inspected at any time during office hours at the Registered Office of the Company or with Mr. Tanubhai D. Desai of Messrs. Motichand and Devidas, Solicitors, 31, Nanabhai Lane, Fort, Bombay.

DIRECTORS' QUALIFICATION.

Under the Articles of Association of the Company, Directors must hold shares worth Rs. 5,000 as qualification.

DIRECTORS' REMUNERATION.

The remuneration of a Director shall be such amount not exceeding Rs. 100 as the Directors may from time to time fix, for every meeting of the Board attended by him

The Direcors may allow and pay to any Director for the purpose of attending a meeting, such allowance as the Directors may consider fair for his travelling and other incidental expenses in addition to his fee for attending such meeting as above specified.

If any Directors shall be called upon to go or reside out of his usual place of residence on the Company's business or otherwise perform extra services (which expression shall include the work done by a Director in signing certificates of shares or debentures issued by the Company, or work done by him as a member of any committee appointed by the Directors in terms of these articles) the Directors may arrange with such Director for such special remuneration for such services, either by way of salary, or commission or by a percentage of profits or the payment of a fixed sum of money as may be determined by the Directors, and such remuneration may be either in addition to or in substitution of his remuneration above provided. The Directors shall also be entitled to be paid any travelling or other expenses incurred in connection with the business of the Company.

MINIMUM SUBSCRIPTION.

The Directors shall not make any allotment of shares unless shares to the nominal value of Rs. 5 lakhs at least shall have been subscribed for on a cash footing.

BROKERAGE.

Brokerage at 1 per cent. will be paid by the Company on the present issue on allotment made in respect of applications bearing the stamp of any recognised firm of Brokers or Bankers.

PRELIMINARY EXPENSES.

Preliminary expenses, exclusive of commission and brokerage, are not estimated to exceed Rs. 15,000.

Messrs. Poonamchand Ramji Kamani and Ramji Hansraj Kamani as partners of the Jaipur Metal Industries are interested as the Vendors of the said business in the said sale to the Company of their factory and business, etc. Messrs. Poonamchand Ramji Kamani and Prataprai Girdharlal Mehta are interested as the Directors of Poonamchand & Bros, Ltd., which is appointed as the Managing Agents of the Company. Mr. Tanubhai D. Desai is a Partner of Messrs. Motichand and Devidas, who are the legal advisers of the Company.

VOTING RIGHTS.

On a show of hands, every member present in person shall have one vote, and upon a poll every member present in person or by proxy shall have one vote for every share, whether Preference, Ordinary or Deferred, held by him.

RESTRICTIONS REGARDING RIGHTS TO ATTEND OR VOTE.

No member shall be entitled to be present, or to vote, on any question, either personally or by proxy, or as proxy for another member, at any general meeting, or upon a poll, or be reckoned in quorum, whilst any call or other sum in respect of any of the shares of such member either solely or jointly with any other person, shall be due and payable to the Company.

TRANSFER OF SHARES.

The Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason decline to register any proposed transfer of shares, other than fuly-paid-up shares, whether the transferee is a member of the Company or not.

ESTABLISHMENT OF PLACE OF BUSINESS IN BRITISH INDIA.

The Company has not established any place of business in British India.

INSPECTION.

Copies of the Agreements above referred to and prints of the Memorandum and Articles of Association of the Company and the Jaipur Companies Act may be inspected at the Registered Office of the Company or at the office of Mr. Tanubhai D. Desai of Messrs. Motichand & Devidas, Solicitors, 31, Nanabhai Lane, Fort, Bombay.

APPLICATION FOR SHARES.

Application for shares may be made upon the form accompaning the Prospectus or a similar form and application money may be paid either in cash or by cheque at the Registered Office of the Company in Jaipur or at the Bank of Jaipur, Ltd., Bombay and Jaipur and the Bank of India, Ltd., Bombay, Ahmedabad and Calcutta or at Jhamb Bros. & Co., B-3, Clive Building, 8. Clive Street, Calcutta. Cash or cheque on any place in India will be accepted without any banking charges. In case no shares are allotted, the whole deposit will be returned and if the number of shares allotted is less than the number applied for, the surplus, if any, will be utilized for the payment of the monies payable on allotment.

Prospectus and forms of application for shares can be obtained at the Registered Office of the Company and from the Bank of Jaipur Ltd., Jaipur and Bombay (Cook's Building, Hornby Road), and the Bank of India, Ltd., Ahmedabad, Bombay and Calcutta.

Dated this 30th day of August, 1943.

APPLICATION FORM.

Serial No.....

To

The Directors,
THE JAIPUR METAL INDUSTRIES, LTD.

Gentlemen,

I/We request you to allot to me/us the following shares upon the terms and conditions of the Company's Memorandum and Articles of Association and Prospectus.

.....Ordinary Shares of Rs. 100 each
.....Deferred Shares of Rs. 10 each
.....6 per cent. Cumulative Preference Shares of Rs. 100 each.

I/We send to you/your Bankers by cash/cheque the necessary deposit amount of Rs.....at Rs. 25 per each Ordinary Share and Preference Share, and Rs. 5 per each Deferred Share to be sent with the application and I/We agree to accept the same or any less number that you may allot to me/us and to pay the amount due on allotment and subsequent calls as and when made. I/We authorise you to register me/us as the holder/s of the said shares.

Name in full (in block letters).....
Address in full.....
.....
Date.....
Signature.....

Serial No.....

The Jaipur Metal Industries, Ltd., Jaipur.

RECEIPT OF APPLICATION MONEY.

Received this.....day of.....1943, from .....the sum of Rs..... being deposit of:

Rs.....per share for.....Ordinary Shares
Rs.....per share for.....Deferred Shares
Rs.....per share for.....Preference Shares of the abovenamed Company.

For and on behalf of
THE JAIPUR METAL INDUSTRIES, LTD.

This receipt when returned to the applicant must be preserved, and, if accompanied by receipt for the amount due on allotment, will be exchanged in due course for the certificates of shares allotted.

The form should be sent in to the Registered Office of the company or Company's Bankers together with cash or crossed cheque or draft in favour of the Company for the amount of the deposit.

Food And Treasure

The Food Grains Policy Committee's report has been anticipated by press notes dealing with exports, Defence Services' takings and the Viceroy's speech describing the need to check inflation by the offer of goods required by the agriculturist. The summary issued this week contains no striking points, except one in favour of imports of treasure and sale to the agriculturist. The recommendation is not one of financial experts but of a committee over which Sir T. E Gregory presided in the absence of Mr. Vigor. Treasure at least, if food cannot be imported—runs the new argument. The recommendation is in its way a late condemnation of the sales of Indian silver in London last year, of the failure to secure silver under lease-lend and of the policy of displacing standard silver coins by a new half and half alloy that indicated too plainly the reduced purchasing power of the rupee. The recommendation supports the views propounded by Sir Tracy Gavin Jones early this year on the need to give the agriculturist something he could regard as his savings in wartime. It strengthens the case for bullion imports presented by Sir C. B. Mehta more than once, and reinforces the conclusions of certain Indian industrialists as to the ways and means of adding to supplies and reducing the price of food. The successful implementation of the proposal for price control (favoured by the majority) depends largely on getting supplies equal to the demand. The demand may vary from time to time or place to place but its inelastic nature makes the import of treasure more than ever important.

The pressure on U.S. silver supplies when Mexican sales have been suspended is, however, a factor to consider. The offer of 3 milion ounces of silver to Britain is not a guarantee of similiar assistance to India. The U.S. Treasury is in reality the judge of the feasibility of the Committee's recommendation since the conversion of any part of sterling balances is dependent on the U.S. Treasury's view of the wisdom and practicability of recommendations. The Treasury must have plenty of silver as it has bought home-mined silver at a high price from 1934. It may be willing to sell at the Indian price (which is obviously not the New York price) and demonstrate that in spite of all that has been said, the Democrats in standing up for silver (in a way different from Bryan) backed the right horse. Since the U.S. Treasury will get back silver from the defence plants after the war, the net reduction in stocks will be small but as observed, it is really a question at present of the Treasury being willing to take sterling for its silver exports and ultimately of utilisation of India's sterling balances during (not after) the war. There is , of course, the plan to use the sterling assets for import of capital goods and the Finance Member may negative the suggestion at this end for that or any other reason.

Lac in India

Price control and restraint of futures trading are a consequence of the enlarged demand for shellac and the stoppage of imports. The marketing report on lac indicates that Indian production before the war was growing; so were imports from Siam and Malaya. But production appears to have fallen away after the outbreak of war and this year's lac crop is known to be subnormal. The course of shellac prices in the war period is of little importance as compared with the loss of markets and variations in demand. The increased use of lac at home makes up to some extent for the fall in exports. It is estimated that India can produce 48,000 tons of shellac per annum and established outlets are the paint and bangle industries. But estimated home consumption before the war was only a small part of the total demand for lac which was mainly an item in export trade. As fluctuations in prices have been reduced by the fixing of maximum prices last year, the demand for lac should have improved; but seaborne trade figures give no indication and it is possible that the fall in Indian exports to the U.S.A. last year had an effect on both lac supplies and prices. The Joint Conference of 1938 considered proposals for the control of prices, and the Bihar legislature then discussed a bill for improving marketing and securing a fair return to the primary producer. The trade in lac provides opportunities for many middlemen but the trade centres in Calcutta. Exporters do not get a very big profit, to judge by the estimates of costs and prices provided in the report, and the price-spreads are, in the main, due to the middlemen in the producing areas. The plea for regulated markets and co-operative organisations receives some support from the account of the trade in Bihar. The export trade is closely linked with trade organisations abroad and is as much interested in standards of purity and colour. The recommendations cover the improvement of crop which is the concern of the Lac Cess Committee which has sent out demonstrators for instructing the growers. The only possibility of encouraging the use of lac is in the dye industry where the scarcity of synthetic dyes may be held to be an advantage. The decline in India's lac dye exports after 1870 was accompanied by an increase in shellac exports so that the net loss to India was small. Problems of admixture do not arise after the loss of Burma and the minor question of futures trading has been disposed of before the appearance of the report. The increased use of shellac for moulding and other purposes is the result of the work carried out by the Namkum Institute. A suggestion as to air-conditioned godowns is of some interest to those who urge that weather-making is of special importance in India. In the list of hosts of the lac insect are found the names of the jujube, fig and the custard apple; but the jujube alone is ranked with the major hosts. As to the need for stable and moderate prices. the main argument is the existence of synthetic resins. But the major outlet is the gramophone record industry in the U.S.A. while the biggest consumer of shellac in India is the paint and varnish industry where the challenge of synthetic resins is hardly acute.

Neutral's Disabilities

The German occupation of Genoa raised questions as to the future of Swiss trade and politics. Nearly two weeks ago the Federal Council asked troops to stand to and the preparations were based on the fact that Italy's capitulation made German intervention certain. Pressure on Switzerland in order to secure transit facilities has been mentioned lately. Indeed the occupation of the Italian frontier by German troops means that Switzerland is an island in Europe cut off from the United States as well as neutrals. Neutrality has been accepted as a liability and Germany proclaimed a blockade last week. A Swiss broadcast last week drew attention to the exposed position of Switzerland at present. Italy like France is occupied by the Nazis and Austria is part of Germany. It is easy to make good the threat of starving the little country, but Switzerland has adopted defensive precautions all the same. The peculiar circumstances of the country explain the adoption of rationing in the country, the restrictions on production, and the increase in defence expenditure right through the war period. Cheap money has made borrowing easy, but national service and higher taxation have reduced output and trade. From 1941 the Swiss have been denied access to ports and the differences between Switzerland and Portugal have been made plain though Portugal does not enjoy the amenities available to Switzerland. The Allies have interfered with normal development of Swiss trade, but increased dependence on Germany was not a hindrance to the expression of doubts as to the success of the Germans. The blockade announced this month means not only the end of tourist traffic but the application of severe pressure on Swiss exporters whose blocked balances may go the way of the standstill credits.

The broadcast to America explained the difficulties of the Power charged with negotiations between the belligerents and made it clear that events had made no difference to the Federal Government which stood by neutrality. The conquest of Italy by the Allies will probably result in a modification of the U.S. attitude to Switzerland, and the Govt.'s declaration was meant to show that Switzerland's circumstances require special consideration. The industries of Switzerland have been deprived of oversea markets after the commercial treaty with Germany which is obviously the chief means of exercising pressure. The Swiss press has refused to accept German directions as to comment and indicated this year that Switzerland prized freedom. The German blockade is in reality a counter-blocade, but Switzerland is passive, and the explanation in advance of difficulties is reassuring to some extent. The decline in India's trade with Switzerland in recent years must be attributed to exchage control and import restrictions. The new, extended blockade must lead to a depreciation of the Swiss franc since Zurich will not hereafter attract foreign funds and the usual surplus of exports cannot be maintained. There is also the danger to foreign assets—repatriation of Swiss funds from the U.S.A. was not accomplished without difficulty. One result might be a sudden cheapening of francs in terms of sterling and dollars in Zurich while the price of gold goes up. The immediate results thus must be reckoned unfavourable and the situation might well keep up the cost of such Swiss goods including watches as are kept in stock. For India today replacement is out of the question and the prospect of a weaker position in international affairs may have effects on the market for all Swiss manufactures.

Argentine Supplies

Supplementing information as to the reduction in maize production, the increase in potato cultivation and the drop in linseed supplies owing to the contraction in Argentina's foreign trade is a note on the grain in April. Since Argentina is in the southern hemisphere, the crop seasons are different, but there is no question as to the increase in wheat. A moderate increase in shipments during April as compared with March did not have much effect on the carryover which was over 4.3 million metric tons. The 1942-43 crop exceeds 6.4 million tons, and the increase in Argentine supplies over last year is about 1.3 million tons. The exportable surplus is placed at 8 million tons (more than the Canadian crop for this year). The increase in exportable supplies accounts for the bag famine, mentioned as a result of the fall in imports of jute manufactures. Exports for four months totalled only 541.390 tons and the balance left was over 7.45 million tons according to a correspondent of the Imperial Economic Committee who noted prices in Argentina were raised to 7.7 peso per quintal or 9.20 pesos for grain in bags. The current crop being of higher quality is likely to fetch higher prices, especially, as local millers were eager to use it for mixing with the 1941-42 crop. In spite of the belief that larger Argentine supplies would increase linseed exports to the U.K. there was a decline in April. Linseed oil is being crushed in greater quantity for the use of oil as a substitute fuel. In spite of a fall in estimated production by 110,000 metric tons, total supplies show the effects of a huge carry-over. But domestic requirements in 1943 are higher and the exportable balance was put at a substantially lower figure than last year's. Though trade estimates are higher, it is clear that the moderate increase in U.S. demand and the small increase in Canadian supplies this year will have no large effects on the statistical position in Argentina though prices are influenced by the high prices of Indian seed. The crop policy of the new government is not likely to be that of the former and the main hope for wheat lies in the Brazilian market. But Brazil produces some wheat of her own and is anxious to increase home production so that exports from the Argentine (below 1 million tons in 1941) are not likely to have a big market. The preference for hard wheat in Argentina may be the effect of the changes noted in Canada and Australia in regard to agriculture before the war. Hard types resist drought and rust, stabilise prices and keep farmers in little doubt as their future.

Germany's Losses

As the threat to Kiev increases and the fate of Smolensk is in the balance, it is possible to look for the expulsion of the Germans from the Ukraine. Though the Pripet Marshes may cover a retreat in winter towards the Lublin Line the southern offensives have made the ties between the Ukraine and Crimea weaker. From Orel to Novorosisk the Soviet roll of victories is complete and battles on the Desna may decide the fate of three strongholds, Smolensk, Kiev and Dnepepetrovsk. The recapture of the Donbas represents a strengthening of mineral rather than agricultural resources. The map suggests that Kharkov is not the only centre of industry captured. The recapture of Nikopol—a centre of manganese mining—is inevitable and the Soviet advance up from the Kuban may make a great difference to Allied manganese supplies. As the harvest may not be gathered before the Ukraine is taken the autumn is critical for the Germans. While it is too early to speak of additions to Soviet resources at present it is proper to assess the German losses. The U-boat campaign failed; replacement of lost submarines and crews is regarded as desperately difficult. The Ukraine which with the U-boats was the linchpin of German strategy is on the point of being lost. Before and after 1941 Germany expected to beat the blockade by exploiting the Ukraine. The scorched earth policy made that difficult while conquest gave the guerillas a chance. By the taking of the Ukraine Russia has regained manpower even more than agricultural resources. A population increase of 12½ millions is an advantage in war. Inhabited localities captured after the fall of Kharkov should bring in recruits. The Donetz basin producting 90 million tons of coal before the war may have been written off by the Nazis, but all the people could not have been destroyed. The MEW calculates that Germany got only a limited quantity of cotton and vegetable oils from he Ukraine from which the livestock was driven out during the invasion. Indifferent success in the exploitation of the eastern occupied territories implies also the failure to make Ukrainian nationalism a district asset. The Germans got little iron or coal, much less manganese than presumed and could not run them without equipment brought in with difficulty.

The other explanation apart from Soviet interference is ready. The Ukraine could not be developed because the damage done by the R.A.F. at home claimed the energies of the Germans. Dr. Rosenberg as Governor-General could claim less success than the situation warranted. The Ukrainians sent off to work in Germany were found to be inefficient. Soviet citizens made poor slaves. It is known that damage done in the Ruhr cannot be made good in the near future by booty from the Ukraine while contracts made with West German industrialists by Rosenberg for exploitation of the Ukraine must have been cancelled by acts of the Reich's enemies.

Tobruk To Sicily

The Prime Minister's survey of twelve months of war, from Tobruk to Sicily, put events and effects in the right sequence, outlined possibilities and encouraged hopes. Africa, in the Premier's view, is not a substitute for invasion, and the direct attack on France or the Low Countries is foreshadowed though careful disclaimers by Sir Walter Citrine as to the nature of the Second Front may suggest that it is a long way off. The interaction of Russian and African victories has been explained for the first time. And the results of R.A.F. activity on the U-boat campaign have also been indicated. One aim of Allied strategy has been accomplished in August. Italy has capitulated and Italians now are indistinguishable from the French, at least in Corsica. The magnitude of the enemy's losses in Africa and Sicily has been again indicated, and this alone makes it possible to ignore the action round Naples as an episode in the Nazis' career of defeats and retreats. A strong national revival in Italy is possible only with the capture of Rome, but the Premier's remarks on the armistice should nourish faith in the future of Italy. The escape of Mussoini has made an alliance with Badaglio inescapable. The Allies have given no pledge of restoration, to judge from Mr. Churchill's speech which dealt with merchant shipping. The air attacks of the R.A.F. and the U.S.A.A.F. for a year and the consequences of the East Asia Command.

The Battle of the Atlantic has been won but only after the Tunisian campaign ended. The shipping losses need not be published as they have tapered down to nothing. Canadian tonnage added to British and U. S. construction puts the losses of the past into the shade. The U.S.A. alone is going to provide 20 million tons in a year. The contrast drawn by the Prime Minister in regard to the reduction in Japanese shipping is suggestive. For the U.S.A. has expanded both shipping and aircraft and Pearl Harbour is now for a base for an offensive. The U.S.A. as may be inferred from indiscreet press surmise in Japan, is preparing to attack Japanese in their homeland while the Allies move forward into Burma. The Central Pacific Command may be the result of the success in the Aleutians and the Solomons and may be an earnest of maritime assistance to China as well as a guarantee of emancipation to the Filipinos.

The Chinese Government has approved of the arrangements mentioned by Mr. Churchill on Tuesday but the Prime Minister made on direct reference to the last Japanese peace offer and the rejection by China of a dishourable treaty that would put the Republic on a par with Wang Ching-Wei's new regime, he exact nature of the new Allied command (outside the Indian Command) has been explained but the Prime Minister did not mention either the conditions in the springboard for attack or the obligations of his country. The Prime Minister excluded India from the review because India is not a theatre of war—has never figured at Quebec in discussions in spite of imaginative inferences drawn by excitable politicians.

Prices Still Rising

Price changes in the months following June must neutralise official optimism as to the success of two Ordinances issued in May and bans on futures transactions. The Calcutta index for wholesale prices has shown more than mere recovery in July-August and the general index is known to have risen from 325 in May to 345 in August—the setback in June being temporary. The general trend then is more subject to monetary influences than is expected, and the increase of 245 percent in the index (base=August 1939) supports non-official inferences as to scarcity, inflation and much else. It is, however, necessary to relate all the changes to the local distress and powerful support in respect of arguments as to the failure of civil supplies policy in Bengal is provided. The wholesale index for cereals went up from 498 in July to 572 and that for pulses rose from 393 to 447. The exception to the general upward trend was tea and sales averages since August have moved decisively against the buyer. The only other change in a downward direction is sugar.

The fall in jute prices can be explained by a reference to the mills' holiday while the slight recovery in hessian is related to the same development. Stability in hides and skins for three months may be due to the export ban or other factors. It is noteworthy that prices of all articles of general consumption have risen abruptly, while raw materials figuring in the export trade eg. jute have moved up only to a limited extent. General complaints as to mustard oil find support in the increase in the index from 107 to 239 in August—a change which offsets the theory of guaranteed supply at the control price and the change is also supported by the advance in the index number for oilseeds from 284 to 323 in a month. Higher prices for building materials have been the rule since December 1941 though building activity has been limited. The index for metals has declined after May, showing that control has been successful in one sphere. If the wide swings have favoured the holder of stocks rather than the seller the conclusions drawn two months ago as to the drop in prices must be drastically revised. Prices are going up through the reasons are not obvious. The cereals index as late as December 1942 stood at 250 so that the rise in July to 498 in Calcutta implies a rise of 100 percent in six months followed by a further rise. The general wholesale price index has risen from 238 in December to 345—a true indicator of the present famine. The only fall in prices recorded is in the case of tea where the organised strength of the producers rather than the bulk purchase plans has helped to lower prices. The index for wool and silk textiles has declined after June, perhaps on account of the fall in the prices of cotton manufactures though in the case alone the index since March 1942 is not published. The effects on the cost of living must be taken into account. Wholesale prices in Bombay have gone up; so has the cost of living. The working class index for Calcutta does not exist at present but in view of changes recorded from Lahore to Madras, it is manifest that the working class in Calcutta, handicapped by short time and half wages last month has experienced as severe changes as the working class elsewhere.

Egypt's Advantages

A cabled extract from the Financial Times referred to the Egyptian Government's plan to repariate debt. The rise of the Egyptian Unified 4 per cent loan to over par was a feature of the foreign bond market in London, and the Financial Times, in expressing approval of the decision, dwelt on war prosperity. Iraq is known to have paid off part of the 1937 loan floated by special sanction in London and intends to repay more. But precedents are unimportant as compared with the question of capacity. Egypt is wholly secure after the defeat of the Axis in Africa, and the real problem has long been one of imports. Egypt wants Indian goods and cannot get them because of the controls in force, and the boom on the Bourse indicated that war prosperity was having its usual effects. Agriculture has suffered a great change as cotton is displaced by food crops in the Nile Valley. Since the Bank of Egypt is a national institution subject to the Ministry (its last Governor, Sir Edward Cook came back to India) the Bank is perhaps going to carry out the job of making the external debt an internal debt. The issue of a loan by the Wafd is likely to go down very well though the breach between Makram Ebeid (the financial expert of the Wafd) and the Prime Minister may be regarded as a handicap by some.

The Egyptian pound has been stronger in the exchanges after the foreign assets increased in the war period and repayment of sterling debt makes no difference as imports are subject to control and tariffs generally are higher. The political issue having been settled satisfactorily in August 1936, the Ministry had every reason to get the debt repatriated and convert hoarders into rentiers. The fellaheen may not be prosperous, but the domiciled English merchants of Alexandria must be in a position to help in the operation. Repayment is necessarily beneficial to the British Treasury which has no special war savings drive to help on fresh investment at present. Egypt's decision may be partly due to a desire to reduce overseas assets while keeping the currency in the sterling

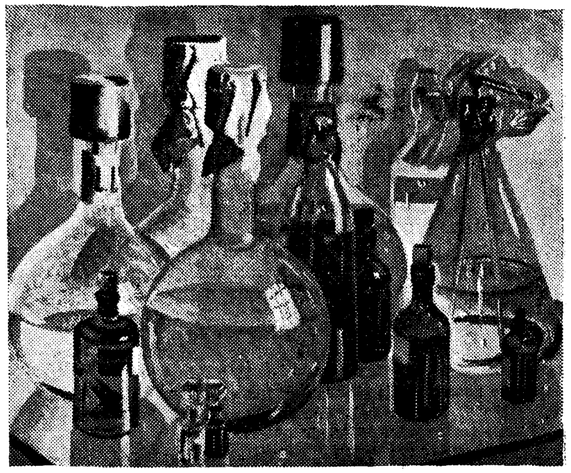
area. The decision follows rather than precedes the capitulation of Italy and is a result of important changes in the Mediterranean for Col. Lawrence remarked that Egypt belongs to Europe, not Africa. The failure of the Arab Union plans may underlie the decision to pay back the debt. The escape from debt may lead to claims for a greater share in the control of the Suez Canal before the Convention expires. The Paris office having been shifted to Egypt, the Company is one of local domicile. This fact will not escape the attention of some who may argue that the British, French or Italian shares may be made available to Egypt as a reward for having stood firm in the troubled period from August, 1940 to October, 1942. Egypt may still cherish visions of what Mahemet-ali and Ibrahim Pasha achieved. She may discern in the general elections in Syria, the Persian declaration of war-events that may lead to a claim for adjustments in the Near East.

Jaipur Metal Industries



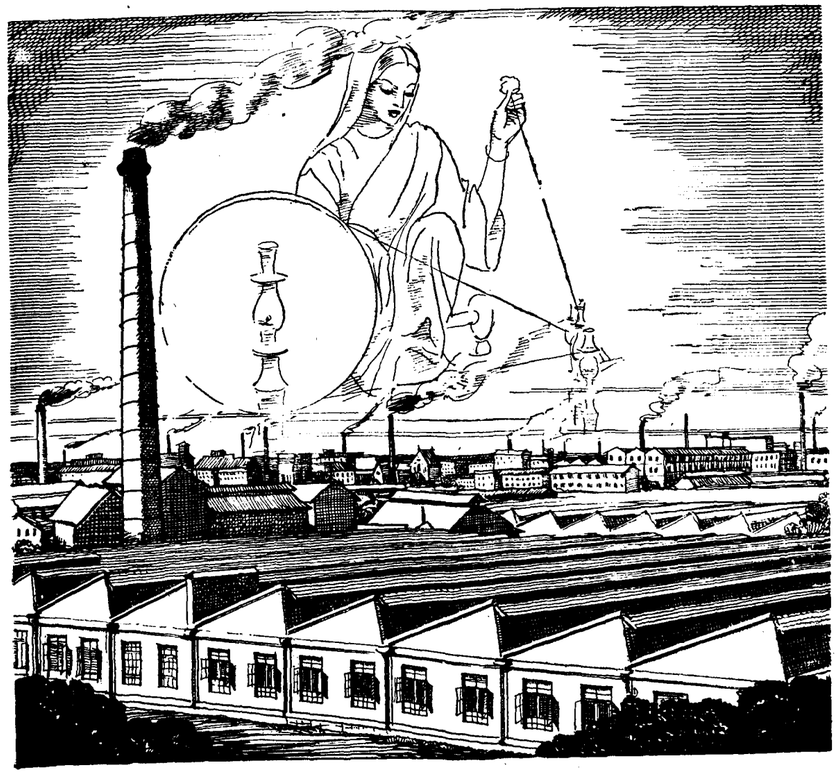
Shares of three classes in Jaipur Metal Industries, Ltd., are offered for sale in order that a company incorporated in Jaipur may take over the well-established non-ferrous metal industry described in the prospectus. Value of production in 11 months is estimated at about Rs. 50 lakhs and the profit-earning capacity is demonstrated. Goodwill represents only a fraction of the capital in this case, and vendors' consideration is payable in the form of shares after the valuation by Messrs. Mackenzialyall of Calcutta. Since the lead and zinc ores of Rajputana await decelopment the prospects for the Jaipur enterprise must improve along with the increased demand in war and the acute shortage of all metal imports. The concessions secured from the Jaipur State will pass to the new Company. As investors are aware industrial enterprises in Indian States have certain real advantages and the manufacture of non-ferrous metal sheets, rods and works will be usually remunerative. Only half the proposed issue is available for public subscription.

Further development of the industry is the chief object of the present issue of shares. Apart from refining available scrap the company with the chances offered by Rajputana's unexploited resources will probably be immune from restrictions existing elsewhere. This too represents an important advantage, and the investor should note in this connection that two years of work preceded the flotation in the present form. The main advantage of investment in an established concern is the certainty of return in the first year itself. As to the factory the prospectus mentions the present range of production, the staff and laboratory to show that the foundations have been well and truly laid by the promoters. The present offer of shares indicates that it is not a local enterprise, for the Directorate includes representatives of the metal trades in Calcutta and Bombay. The distribution of voting rights may enhance the value of the deferred shares and one may point out that in metal industries generally deferred shares possess attractions of undeniable value for the future.

To-day's Prospectus

Of the new industries which have acquired decisive importance to-day is the manufacture of vegetable oil lubricants and greases. That is one reason for drawing attention to the Dehri Oil Refinery Ltd., whose prospectus appears to-day. A pioneer enterprise naturally deserves special attention on the part of investors. Mineral lubricants are scarce and dear; adequate substitutes have received special encouragement for good reason. Mr. White with 30 years' experience has produced some of the finest lubricants ever placed on the market. Vegetable oils have long been familiar as blending agents but purely vegetable lubricants have been produced only recently, though their quality has received approval far earlier. Special efforts have been made through research schemes to develop in India vegetable lubricants. The market is assured and the prospectus gives calculated profit estimates. Since the Company hopes to produce greases, hair oils and medicinal castor oil the margin should be larger than 6 annas per lb. What is more important from the investor's view-point is that factory and equipment are ready, additional plant has been ordered and an increase in the daily output to 1½ tons is ensured so that profits and dividends will be dynamic. The managing agents take shares in lieu of the purchase price. Dehri-on-Sone is a new, industrial centre well served by rail and river, commanding castorseed supplies and well out of the vulnerable zone. These are admittedly points to consider in assessing prospects, but more interest attaches to the fact that the ex-Commerce Member is Chairman of the company. The association of Dr. Law too with the new venture of H. Datta & Sons is a measure of previous success of tested, proved production of the refinery which is the foundation for a greater industrial edifice. The managing agents have agreed to forgo commission on profit if the dividend is not 5 per cent free of tax. The arrangement should impress shareholders as a mark of confidence and goodwill. Investment rating of the ordinary shares on the present estimate of profits is easy. None will deny that the offer at par is an exceptional opportunity. Post-war prospects are indicated with a large measure of confidence in the prospectus which is as illuminating as to the objects as to the future of the concern that is to be developed into an important enterprise advancing the interests of all Indian industries.

Aspect of an Industry No. 19.



THE DISPENSARY

THE part played by the British chemical industry in the discovery and preparation of healing drugs and specifics is fundamental. It is not perhaps as obvious. That is, people do not readily associate the soda bicarbonate they buy, or the sulphanilamides that the doctor prescribes, with the limestone, salt and coal which are the raw materials of the great chemical factories. The apothecaries of old—and in some parts of the world even today—made their extracts, decoctions and elixirs chiefly from vegetable substances. These were given to patients without any precise knowledge of what their effects would be. About a hundred and fifty years ago the science of pharmacology began to be developed. The pioneers tried out their discoveries on animals and even on themselves. This method of trial and error sometimes had painful results, and one of the fathers of the science, a Scotsman, William Alexander of Edinburgh, nearly killed himself. Nowadays the research chemist, the pharmacologist and the medical practitioner work together to perfect new drugs with new effects and special properties. The great majority of these are organic compounds, many of them the result of research in the dyestuffs industry. Suramin, to give one example, a specific for African sleeping sickness, was discovered as a result of the biological examination of dyes related to Congo Red—one of the earliest synthetic dyes, which is still used for the bright garments of the East. Modern drugs are largely synthesised from coal tar, from which substances like benzene, toluene and naphthalene are first obtained. These are next modified and combined with other chemicals by the research chemist. There are few industrial chemicals produced today which are not used at some stage in the preparation of drugs. The chemical industry is the basis on which the British research chemist is building up a constantly increasing supply of new and better drugs for the benefit of the Indian as much as the British community of peoples.

Imperial Chemical Industries (India) Ltd.

THE WEAVING OF INDIA'S DESTINY

Towards the middle of the last century, India began to realise that her age-old economy was no longer adequate to the needs of a world dominated by the Machine. The products of her hand-looms, "the most beautiful that human art has anywhere produced," had been pushed out of existence in the course of time, and the needs of her multitudes were being largely met by cloth manufactured abroad.

The establishment of the Textile Industry in India was the result of this awakening. Tatas have been associated with the industry almost since its inception. Their mills became the foundation on which the whole of their own industrial structure was reared.

The Textile Industry proved a beacon light illumining the path of Indian capital and enterprise. Today, industrialization has become a national cause, which calls to its service every true son of India. Tatas are proud to be in the ranks of those who are thus serving India.

Tata interests include:

Iron and Steel . Textiles . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Vegetable Oils . Industrial Investment . Hotels . Cement . Engineering . Scientific Research.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

To the average Briton, till very recently, famine in India would have seemed as unlikely as an outbreak of plague in London. Both would seem to belong to a remote time in the past, when man was powerless before the ravages of Nature. Over both, progress of scientific knowledge and administrative efficiency had facilitated significant triumphs. Such, indeed, was the confidence over the question of food in India. Confidence has now been shown up as mere complacency; and what is more, Nature has no share of the blame for the scarcity of food and all its dread consequences. Scientific knowledge and administrative skill have alike been found to be far short of requirements; and a Government, which prided itself on having built up an ideal civil service, the best in the world for efficiency and probity, is floundering and all its vaunted virtues are being questioned. For record, it has only a pile of orders, as unwise as they have been ineffective, as fruitful of new troubles as they have been powerless to redress old ones. The responsibility for finding food for the people, which could have been shirked on the ground of the not too defunct principle of laissez faire, was taken on with an alacrity which, in the light of the subsequent record, can only be called levity, if not something even worse.

* * * *

No part of the Government or the governance of the country has had the prudence to stand aloof from this mess. The Central Government with its unrestricted ultimate powers, both de facto and de jure, the provincial Governments with their gift for preventing the evolution of an all India food policy, if even some one in authority had wanted to formulate one, the Government of Bengal with the new species of autonomy evolved in recent times, the political parties with an infinite variety of cross purposes, officialdom, petty and big, with its share of the autonomy given to the provinces—all have made their contribution to the infernal brew that is now the lot of Bengal. People dying in the streets, corpses piled up in the burning ghats in an advanced state of decomposition, a city that is fast becoming a vast latrine, owing to the presence of a huge vagrant population, a municipal administration that is breaking down under the strain of a terribly overpopulated city—Calcutta, both literally and metaphorically, stinks in our nostrils. And the mofussil, we are told, is even worse. Surely, all this was not seeded in the food situation of a few months or a year ago, when statistics revealed a comparatively small shortage of rice which could have been met either by a cut in consumption or by import of food grains. To have produced so serious a crisis out of so small a shortage, and with little or no help from Nature, is an achievement for which no one body of men can have exclusive credit. And the appalling scenes which we witness today have been provided a kind of background music in the recrimination between the parties concerned and the nonchalant statements of Mr. Amery in the House of Commons about the responsibility for allowing this state of affairs.

* * * *

Even in ordinary times, human lives never counted for much. And against the background of a world war, loss of life in Bengal may be viewed either with Stoic indifference or in realistic appreciation of modern man's effective sense of values. But men do not wither and die like plants in a drought, leaving nothing but dead matter to become part of the soil from which they sprang. Sociology is a science yet unborn. But even in its embryonic state, it ought to teach us that unmerited human suffering on a large scale must have more than an episodic significance. What the consequences will be in the long run no one can foretell. But it is clear that as a nation, India is undergoing the strangest experiences. Our fortunes are probably being made in the most inscrutable ways. Meanwhile, the suffering is intolerable; and to suffering are added the most humiliating feelings of helplessness. Those in authority will and must be called to account.

* * * *

Let me begin from the top of the hierarchy of Governmental authorities in India. The British Parliament, the repository of legal sovereignty in all matters connected with India, has cared to inquire about the food situation in India only during the last few days; and even now is content with the laconic replies of Mr. Amery. It clings to the preamble of the Government of India Act which gave us the Montford Reforms. It is serious in its claim that the responsibility for the welfare of the masses rests with itself and cannot be lightly surrendered to the Indian parties. But on this food question, as on that of our political problem, it has well nigh abdicated its responsibilities in favour of the Cabinet. As for the Cabinet itself, who can pretend that British Ministers of State could neither anticipate the loss of Burma, nor appraise its effects on the food situation in India? Who can pretend that when rice was exported from Rangoon to Britain immediately before the fall of Burma, the British Cabinet mis-

took Indians for wheat-eaters? The course of the war and its impact on India could never defy anticipations of the British Cabinet. And yet the position in India has been allowed to develop into the major crisis of today!

* * * *

But the farther we go away from ourselves, the lighter must be the blame for our present position. The Government of India has been severely condemned by the closest of its friends, from the European group in the Assembly to the Statesman in Calcutta. The record of the Central Government in the matter of food is only too well known. It is a matter of simple arithmetic for the Government to judge the adequacy or otherwise of food stocks in the conditions which followed the loss of Burma. But neither the stoppage of Burmese rice, nor the exports, nor the increase in the army requirements would deter the Government from taking up a complacent attitude. On the one side, they continued the policy of inflation, helping the general rise in the price level. On the other, they were encouraging the policy of price control, which with the administrative inefficiency that obtained could only drive rice out of the market, out of the channels of their flow from rural areas and create nests of corruption in and about Government circles. The grow-more-food campaign was conducted more as part of a plan of humouring the press than as a means of increasing food production. Little or nothing was done either to induce or enable the cultivator to bring more land under the plough or raise more from the land under cultivation. It was not till a late stage that the campaign was recognised to be unfruitful of results. And even today the report of the Food Policy committee is a document of no promise and some portent.

controversy. And even acrimonious controversy has drawn into light all that is felt and some times darkly hinted at in press comment. The Government's record has to be considered in two parts, one referring to the principles and policies and the other to the application and execution. The soundness of the first cannot make up for the unsoundness of the second. And few people have claimed soundness for the principles and policies or efficiency and absolute probity for their application. Today the Government have declared that as from September 25 the wholesale price of rice should be Rs. 20 and that sales or purchases above that figure will be penalised. If today after the problem has assumed such gravity, the price can be maintained at Rs. 20, what reason is there for allowing the price to go up to Rs. 40, as it did in the past? While there is so much talk of what is being done for relief work and what will be done in the future, there is hardly a reference to the dark hints of an unfair deal to the public at large. The Punjab Ministers have been quite outspoken about the wide margin of Bengal's buying price of wheat in the Punjab and the price at which it is made available to consumers in this province. And there is also the indisputable fact that the Government of Bengal have had to carry on large scale trading in rice. The public has had the feeling that not the least of the forces making for an outrageously uneconomic increase in the price of rice is the opportunity afforded by this policy of the Government for acquisition and holding of large stocks of rice. The matter has surely to be cleared up. All we have heard so far about this matter, beside the infructuous speeches in the Assembly is the news report that the Government of India will be enquiring into the Punjab Ministers' allegations of profiteering. What will come of this, I do not presume to know. But whatever the findings of such an enquiry, if and when it should take place, the moral of this is that the present food crisis found every part of our social machinery unequal to its tasks.

* * * *

The "Statesman", in its attempt to explain the development of the crisis has distributed blame far and wide. While it cannot be doubted that the provincial and Central Governments must have a large share, the charge that the Indian public has no traditions of public service must sound unfair at least in the present context. Equally unfair is the charge against the Huq Ministry, though the data for final judgment are lacking. If it is true that "many of Bengal's evils" spring from its "misdeeds" why should the Governor appoint a new Ministry to face the music instead of allowing Mr. Huq's misdeeds to come home to roost? Apparently, the food crisis was vastly accelerated during the last few months; and if the present Ministry is not guilty of sins of commission, its sins of omission must loom even larger.

* * * *

But the position is gone far past the stage of fault-finding. While corruption, should it be found to have existed, should certainly take its just penalties, errors of judgment call only for precaution against their reappearance in high places. It is a sign as much of the severity of distress as of the general lack of confidence in the Ministry that suggestions of a Governor's Government in Bengal are so freely made and discussed in the press and outside. I like to think that this is a counsel of unreasonable despair, though when you think of the difficulty of getting sugar and coal and what not—I understand that the allotment of sugar for Bengal is more liberal than for other provinces—the suggestion is not unreasonable. From the standpoint of political sentiment, I cannot pretend that it is more galling than most of our other political experiences. And when I hear that rationing is working smoothly in Madras, I confess to a longing that our households, too, may be enabled to work with less joltings on account of shortage of this commodity or that. But, as I said, the advent of an Adviser's regime on the ground of inefficiency in the face of the food crisis would be too serious a blot on the Ministry. It is up to them to show that it is unmerited, too.

(From Our Correspondent)

New Delhi, September 21.

Political questions are again in the forefront—partly because of the seriousness of the food situation which has made even the authorities in Whitehall sit up and think, and partly because of the natural expectation that the new Viceroy, Lord Wavell, may have some plan to secure a better political atmosphere in the country. As in the last speech of Lord Wavell there was a significant reference to the political deadlock, it has given rise to interesting speculations. There is, first of all, the Phillips plan which he is reported to have discussed with Mr. Churchill. Though messages from the United States have taken the precaution to mention that the London assignment of Mr. Phillips has no connection with the Indian political issue, there are many in New Delhi who think that Mr. Phillips who still officially continues to be President Roosevelt's Personal Representative in India, is pursuing his efforts and will, during his stay in London, continue to do so. Those who know Mr. Phillips confidently assert that he is not the man who will accept defeat. There is also the Ramaswami Mudaliar plan which is connected with the Pacific Relations Conference discussions. Both these plans, though there are many surmises, are being kept strictly confidential, but if as many believe, there is also a Wavell plan, it will probably be a mixture of these two plans with the usual official embellishments. The next few weeks may see interesting developments—to what extent they will succeed in resolving the deadlock is, however, a different matter.

* * * * *

It is a matter of some importance that the Governor of Burma has proceeded to London for important discussions. There is every reason to think that the Indian question, with which is connected the Burma problem also, is being discussed at the moment from the purely military point of view. As has already been indicated in "Indian Finance", the current financial year will see a fullfledged offensive, both by land and sea, for the retaking of Burma and the opening-up of the road to China. Very soon the Indian Ocean is expected to have large naval forces, both British and American. Before the attack on Burma begins, it is likely that a declaration will be made to assure the Burmese people of their post-war status—a more definite and encouraging statement to remove all possible apprehensions in the public mind. When the offensive begins, the opportunity will arrive for the Burmese people to rise against Japanese forces and help the Allied offensive in every way that is possible for the civil population. According to New Delhi reports, the London visit of Governor of Burma is for the purpose of discussing these and other important problems. If any such declaration is to be made for Burma and other occupied countries, there is no reason why the opportunity should not be utilised for making a declaration to India. That may well prove a starting point for political negotiations on the basis of any plan which the new Viceroy, Lord Wavell, may have. In order to improve the political atmosphere in the country, the policy of gradually releasing political prisoners is already being followed. Within a month—ie. before Lord Wavell assumes charge of the Viceroyalty —more than 75 percent of Congressmen detained since August last will probably be out including a number of Congress members of the Legislatures. It has evidently been left to Lord Wavell to decide whether he should release Mahatma Gandhi and other Congress leaders who are in detention without trial and give them a chance to revise their policy. One fear appears to be that if Congress leaders are released, they may try to exploit the food crisis for political purposes against the Government and make the solution of the food problem more difficult. On the other hand, it has also been suggested that if Congress leaders are released, they would play a great part in organising relief work and help in the difficult task of food supply and distribution in order to save the people from starvation and distress.

* * * * *

According to reports received both from Britain and America, there is considerable uneasiness at the administrative failure of the Government of India in dealing with the food situation. One reason—in fact, the most important reason—advanced at the time of the Cripps negotiations against experimenting with big constitutional changes at the Centre and elsewhere was that in the midst of war no risk should be taken in the matter of administrative efficiency. But so great is the economic dislocation caused by the weak and inefficient handling of the food question that the question has naturally arisen—is everything all right with our Governmental machinery? In some quarters there is desire for drastic reorganisation both at the Centre and in the provinces in order to eliminate inefficiency and make the working of a vigorous policy possible. The fact that in Bengal which is to be the main base for land operations in the coming Allied ocensive, the food situation has deteriorated so badly that people are dying of starvation has made the problem particularly urgent. This is undoubtedly one of the first questions which the new Viceroy will have to take up—how to secure efficient administration with popular backing in the coming months which are undoubtedly the most difficult period of the war. Even from the purely military point of view it is necessary to take a comprehensive view of the whole problem and guard against the possibility of economic confusion.

* * * * *

Today the report of the Foodgrains Policy Committee's conclusions and recommendations was released to the Press. As they have been a matter of common knowledge, these recommendations have not come as a surprise, but what will be of interest to know is the action which the Government propose to take to give effect to the recommendations—particularly in the matter of getting wheat imports and building up a food reserve. There is little doubt that the proposed reorganisation of the Food Department will be immediately carried out. The question which is bound to lead to a good deal of controversy in the coming Food Conference relates to certain controversial aspects of rationing, but it is hoped that with the help of Mr. Kirby an agreed solution will be found in the end. In his minute of dissent Sir Purushottamdas Thakurdas has given the warning: "There is a serious danger that in a country which has been economically living on the border lines of subsistence rationing calculations may not only go astray but may actually have the effect of rendering the rural areas destitute and utterly helpless and driving the rural population to the towns as has been recently happening in Calcutta."

* * * *

The arrival of Lord Mountbatten in New Delhi will give to the Imperial city very great importance—in fact it will make New Delhi the main military centre in the whole of Asia. But certain other changes in connection with the Government of India itself are believed to be impending. More and more it will be necessary for the Viceroy also to attend to military questions and help Lord Mountbatten in his difficult task. In order to relieve him of some of his responsibilities, two proposals are under consideration. One is the appointment of a Deputy Viceroy—a British statesman from England. The name suggested is that of Sir Roger Lumley, formerly Governor of Bombay. Another suggestion is that the Viceroy should free himself from the responsibility of presiding over Cabinct meetings and entrust this duty to the senior Indian Member, Sir Ramaswami Mudaliar. I understand that there is also possibility of one or two more appointments to the Viceroy's Council.

Bombay, Sept. 21.

THE control of bobbins and all textile appliances has been regarded as beneficial to the mill industry. The healds and reeds industry did not get the protection it asked for, but the war has made a difference in regard to prospects of makers of all mill stores and supplies in India. Conditions in the bobbin industry demand reorganisation. Mr. M. T. Shukla in a recent lecture stated that bobbin manufacture started in India as a haphazard effort to meet the mill industry's requirements requires reorganisation. The explanation has been given often. Lack of imports assisted manufacturers, but quality has fallen off and some manufacturers handicapped by want of finance and systematic planning offer goods of low standard. Government has been asked to help bobbin makers. The difficulties demand the offer of assistance by the millowners association but integration to the point at which the making of bobbins is a sideline of the mills may not be decried. Western India industrialists who look on printing and dye works as an independent complement to mill production, may not think of bobbin manufacture as an industry requiring large capital and special skill but price control means that competition will work havoc to the small units and employment may suffer.

Rationing announcements are getting common. Next month the family card will disappear, the individual will emerge as the unit of rationing from October 17. The Bombay experiment started in May takes a new turn, and the prevention of fraud will be a reality. Three days are needed to get the new cards out but to keep people indoors for three days, ward by ward, sounds rather ridiculous and the only reasonable method appears to be distribution through police stations or post offices. Queues could be regulated but the regular work might suffer so the municipality which settled the rationing preliminaries seems the logical choice. The issue of cards started on Friday and the time taken will determine the procedure adopted to settle the exact way of issuing cards. Issue street by street after the usual notification to residents in advance appears desirable so that employers don't lose through a superfluous holiday. The new cards will help to check the correctness of the family card system at the same time as the absentees are excluded. In the case of death surrenders of cards must be made a condition of registration.

The Governor on tour visited Satâra. The District Committees received congratulations for war effort and recruiting figures were cited to prove that the heart of Maharashtra is sound. Sir John Colville duly reviewed war developments, subscribed to the creed of total victory and asked Satara to keep it up. Satara alone has provided 11,156 men for the Indian Army and one village with 250 men of suitable age has sent 105 men to the Army. It got back in pensions ten times more than the land revenue paid and the Maratha peasantry has found the profession of arms indispensable for preserving rural economy. Sir John Colville inspected the local Civic Guards who have been trained in fire fighting. The post-war future of Civic Guards is apparently settled; they form the cadre for Fire Brigades if pumps and vehicles required are made available by the Army Disposals Board. It is strange that nobody draws up a scheme for the expansion of municipal services to cover fire protection and insurance companies will certainly feel happy to make some contribution. Sir John Colville shirked round the food crisis. He told Satara that the district was well off and can count on a satisfactory harvest. He said that rationing had yielded good results and Bombay was better off than other Provinces. Officers who took the course in rationing methods have apparently reached no opinions as yet.

The Bombay Bench disposed of the petitions in which Mr. Horniman was the central figure. As usual, he argued his own case and got the High Court to take his view that the Commissioner of Police can't act as a Presidency Magistrate when the charge is contempt. The Allahabad High Court may have no jurisdiction at all for contempt is a peculiar offence as the *Hindustan Times* case showed. Judicial valour has suffered a new setback but Mr. Horniman has not met the charge which really springs from a paragraph in the evening newspaper. Conviction, grant of bail and appeal was the familiar cycle of experience for one Editor. The High Court has cancelled the order but the Allahabad Court may start fresh proceedings locally. The flow in the first order perhaps will not operate as estoppel.

The address of Mr. N. M. Chinoy at the annual meeting of the Provincial Co-operative Land Mortgage Bank dealt with changes in money conditions, the level of interest rates, etc. Finance for agricultural improvement remains an unquestioned necessity so long-term loans have a function to fulfil. Redemption of old debts must have been assisted by the rise in prices. Moreover, creditors have ceased to trouble over repayment. A good return is assured and agricultural debts now appear even better than debentures. That is why applications to the mortgage bank have fallen away. Land is being sold off to get rid of debt and war prosperity is a new factor as repayments exceed the new loans made by the Bank. This means a fall in profits and the outlook for shareholders is bleak. The Government has been asked to help banks over the boom period. Joint-stock banks are well placed but the special claim advanced on behalf of land mortgage banks is due to their ability to give takkavi loans on a big scale. Modernised agriculture, improve methods—that is the advice given to cultivators. Long-term finance will be essential though high prices and hoarding make working capital unnecessary. Ex-Service men willing to settle on the land will need funds and land mortgage banks ask for encouragement. Mr. Chinoy looks for bigger production on the basis of improved agriculture and wants the Government to get its plans out for higher yield and more varied cropping.

From Hyderabad comes the report that the crop outlook is better. The castorseed market and the groundnut shippers have taken note of the improvement following a dry spell in the State. Water supply in the two cities is better. The shortage of coal is disturbing. Electricity is rationed from this month. The co-operative movement has made a real advance in the war period. Resources exceed Rs. 3 crores and membership has risen. The State does not report a stagnant movement and deposits are rising. Marketing is receiving attention and standard weights and measures are coming into use. Hyderabad industries, especially sugar, and paper have made an impressive beginning. Investors here are fond of mill shares, soon the Sirpur paper shares will command attention. The sugar company must do better in the future as irrigation extends the area under cane. The Hyderabad investor can have few doubts as to the success of local enterprise after the first dry period for which compensation has been provided in proper manner by the paper mill referred to. The mill is not exposed to the paper control order and the State is a big market in which rivals are without advantages.

(From Our Correspondent)

Madras, Sept. 21,

SINCE the idea of rationing took shape in this province the agriculturists have learnt the value of organising themselves, holding conferences, sending deputations and memoranda to the Government. The need to speak out their grievances and wants has indeed become urgent. Commandeering of stocks of paddy is a necessary corollary of the gradual introduction of rationing but the problem of fair price remains to be settled to the satisfaction of the mirasdars. Thanks to the necessity of proving the case for higher prices the mirasdars are, for the first time, keen on collecting figures and calculating the extent of increase in the cost or cultivation since the declaration of war. The news that the Government have ordered private and confidential enquiries to be made about the cost of production of agriculturists has been resented by the suspicious. An open enquiry with the co-operation of the ryots would have pleased the landowners and yielded better results. Since the cost of production for a big landlord differs very much from that of the petty landowners the fear is expressed in certain quarters that the Government enquiry would result in an unfair price for paddy not suited to marginal cultivators. Partly impelled by such fears as this mirasdars have voiced forth all their difficulties in the recent years and pray for immediate enhancement of the price of their produce. The cost of fodder like bran, oilcake, cotton seeds, horse gram, etc., have increased to 400 per cent of the pre-war level, the cart hire is exorbitant and gunny bags difficult to obtain. The prices of Agricultural implements have gone high and almost all the consumers' goods have risen. While the interested mirasdars claim that the cost of cultivation has increased three to four times the pre-war figure Mr. S. V. Ramamurthi remains unconvinced. According to him the cost of cultivation has increased from Rs. 58 pre-war to the present Rs. 82-10. He has, however, agreed to raise the price of Kuruvai paddy by four annas per kalam and the Samba variety by 5 annas per kalam.

The policy of directing cultivators to supply paddy to the Government has left much to be desired. While the petty village officials are given wide powers the cultivators suffer in consequence. The proportion of paddy to be delivered to Government has not yet been fixed officially. The seed requirements of the coming season and the system of paying farm servants in paddy—prevalent in several parts of the province—have not been fully appreciated by the revenue officials. Suggestions are also put forward that District Food councils with representatives of leading mirasdars should be formed and that the advice of these councils in the matter of prices, cost of cultivation, collection of particulars regarding paddy stocks, etc., should be considered by the Government. The mirasdars of the Cauvery Delta have submitted a memorandum to the Adviser urging him to make arrangements for taking delivery of the produce at the village and lift the ban on inter-district movements of rice which encourages hoarding, smuggling and black-markets. Regarding Government's proposal to collect kist in kind it is pointed out that 80 per cent of the mirasdars of the Deltaic area hold less than 10 acres and contribute nearly 60 per cent of the revenue collected and therefore this class should be exempt from any scheme of compulsory payment of revenue in paddy. The Adviser has promised to examine the demands of agriculture and offer a fair deal to all classes of mirasdars.

The Government have won the gratitude of the Bellary ryots by writing off Rs. 13.31 lakhs given as loans to ryots paying an assessment less than Rs. 40. The Ceded Districts have often been the scene of virulent famines and unfavourable seasonal conditions have reduced the staying power of the ryots to low levels. Under the Land Improvement Loans and Agriculturists' Loans Act the ryots received loans from the Government but could not repay them. The Government have now generously cancelled their debts and this gave security to their agricultural activities.

Cultivation under dry farming conditions has been a subject of research in Hyderabad. Investigations carried out at Raichur are contained in the latest issue of the "Hyderabad Information". In 1932 the Imperial Council of Agricultural Research decided upon an All-India Co-ordinated Dry Farming Research scheme and investigations began at Raichur, one of the chosen centres, by the end of 1933. Field experiments relating to manures, soil moisture and improved methods of cultivation have been carried out. It has been found that an imported variety of jowar suited the Raichur soil better than the local variety. On an average the imported jowar yielded 35 per cent more than the Hyderabad variety. During years of deficiency in rainfall the bunding of fields contributed a good deal in increasing the crop yields and it is found that annual ploughing of the dry soils, instead of helping cultivation, actually decreased the yield. Fallow land is peculiarly important in the dry zones since it yields a good crop in years of low rainfall. If the ryots of the dry areas are advised to keep part of their lands fallow they will realise its value during famine years. Improved methods of dry farming can be adopted only if the economic aspect of these improvements are examined in detail. In order to carry out the economic investigations the Hyderabad Government and the Imperial Council of Agricultural Research have extended the Dry Farming Research Scheme for three more years and shortly economic enquiries in 10 representative villages in the scarcity tract will be instituted.

Orissa seems to be very much worried about her stocks of sugar and salt. Madras having raised a ban on the exports of salt, the position has caused great anxiety in Orissa. The Maharaja of Parlakemidi, Prime Minister of Orissa, met the Additional Secretary, Mr. R. M. Sundaram, discussed the matter and urged that salt and sugar should be released for Orissa at an early date. It was explained to him that the cyclone in Tanjore and other coastal areas resulted in a heavy fall in salt production and hence Madras had to protect her interests by imposing a ban on exports. But if the position improves the Government of Madras would consider the advisability of supplying salt to Orissa. With regard to sugar Madras is nowhere near self-sufficiency and the Maharaja may do well to look to the northern provinces of British India. It appears that when the rice position in Madras and Orissa came in for discussion Mr. Sundaram urged that Orissa should increase her rice supplies to Vizagapatam and that the quota of 2,000 tons at present allowed under the basic plan was utterly inadequate and should be raised.

It is indeed difficult to do without potatoes and, when the imports from Burma, Kenya, and Italy have stopped, Sind promptly decided to increase her production of this much-valued article. Madras Government is ready to co-operate in any attempt at extending the cultivation of potato crops, and they have now agreed to supply 16,000 maunds of potato seeds costing Rs. 2 lakhs to the Government of Sind and thus aid their drive for more vegetables.

Resume of Commodity Markets

The feature of the week in the commodity markets is perhaps the strength of the bullion markets. There is no special reason for the sharp improvement in the prices for both the yellow and white metals except perhaps the indecision on the part of the authorities. The jute and jute manufactures markets have not been interesting though it should be said that a slightly firmer tone has been noticeable in the raw jute market on reports of the larger number of mills working and the scarcity of imports into mofussil centres. The jute manufactures market has been absolutely uninteresting and prices have been fluctuating in narrow limits. Business has been very poor and most of the business transacted is on account of inter-bazar operators. The piecegoods market has been steady.

* * * *

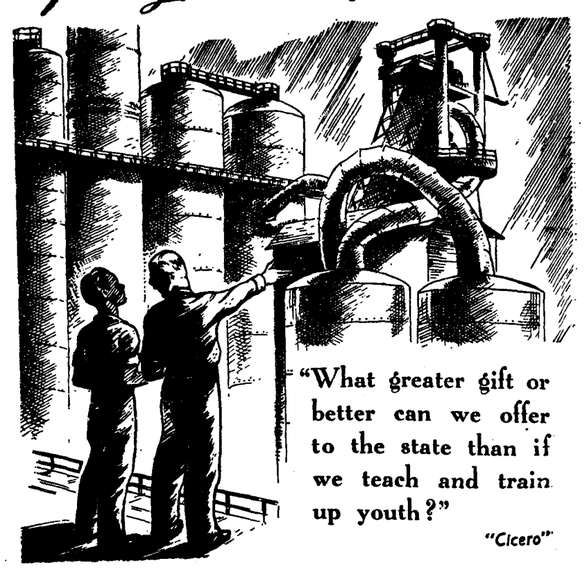
Though a steadier tone is noticeable in the raw jute market, there has not been much of activity and it should be said that a trial of strength between the holders and mills is at present going on. Under the present circumstances, the case of the mills is perhaps stronger as with the priority given to certain exports and the difficulties experienced by Bengal mills, there is no great buying. The strength of the jute market is thus mainly due to the technical position and the difficulties experienced by dealers in effecting their deliveries against earlier orders. When this technical position gets rectified prices might be marked lower if mill buying is not on a larger scale; it is also to be seen whether overseas buyers will be prepared to pay the higher rates.

* * * *

In the jute manufactures market idle conditions have prevailed. With the serious loss of production in the last two months there would have been, ordinarily, a sharp rise in prices. But the action taken by the I.J.M.A. and the saturated state of markets within the country, have not resulted in an appreciable increase in the volume of business and there is no pressure of buying on bazar stocks.

* * * * *

It was expected that with the resumption of selling of gold by the Reserve Bank, prices for the yellow metal would be controlled and that there would not be any speculative rise in prices. The selling by the Reserve Bank in recent weeks, however, has not been of avail to the market and prices have remained at high levels. In the earlier stages the Reserve Bank was not a seller below Rs. 70 whereas in this week they have kept their selling price at a much higher level. This has naturally given rise to the feeling that the Reserve Bank has not got enough gold stocks and that in the absence of any aggressive selling, it will not be possible to keep down prices. There seems to be considerable investment buying though it would appear that most of the demand is confined to urban investors. As has been pointed out in these columns on earlier occasions, black money is seeking refuge in the precious metals. The lack of scope for speculative activity in other markets may also be taken as one of the factors for the increased investment buying in recent weeks. It will be remembered that silver prices were relatively higher when the sharp decline in gold prices was recorded. This was surprising to some as it was felt that silver was considerably over-valued and that the scope for depreciation in the post-war period was much greater. There is, however, an acute scarcity of stocks and with the inability of the Government of India to do anything in the matter, holders have had their own way. It is not surprising, therefore, that with the strength of the gold market there has been a rise in prices in the silver market also.



* * * *

At the auctions of tea for consumption in India held this week, 13,000 packages of tea were offered. A slightly irregular tendency was noticeable and prices fetched were lower by 3 to 6 pies. The commoner kinds were neglected while leaf grades and brokens experienced some demand. Green teas were, as usual, in good request and all the offerings were taken up.

* * * *

The problem in Bengal is difficult as ever. In spite of the arrivals into the province there has not been any improvement in the situation. The Government of Bengal have announced that maximum prices in accordance with their earlier announcement have been fixed, as from September 25, 1943, at Rs. 10 per maund for paddy and Rs. 20 per maund for rice. This progressive reduction in the prices of rice and paddy, however, has not led to any de-hoarding though it is reported that there has been greater cooperation from dealers. There is still considerable difficulty in regard to supplies of rice and the black market trade continues. Rationing is to be introduced shortly and it is hoped that it will be possible to bring the situation under control with rigorous administration. Hopes have been deferred for a long time and there is no prospect of an early solution to the difficulties confronting the province.

Young Men of Steel

"What greater gift or better can we offer to the state than if we teach and train up youth?"

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 23rd September.

The Coal position so far as Jute Mills are concerned has shown some improvement during the past week. Arrivals of wagons, while still short of the promised schedule, have been on a more generous scale and most of the steam mills have been running during this, the third of the three weeks continuous operating planned under the recent scheme. The trouble at the moment is reported to be, distribution of the coal from the dumps. Some of the boats employed have had to supply mills far down the river and their return for fresh loads has been delayed. Anyway the situation is more hopeful, and with the prospect of the reopening of main railway line in the not too distant future, Mills may look forward with greater confidence to more regular working. For the two coming weeks the mills will be officially closed under the scheme, but those who have lost time during the period when they were authorised to work, will be permitted to make up such time—provided they have the coal to keep going.

Meantime it is credibly reported that the Military authorities are negotiating for the taking over, lock, stock and barrel of two or more mills, as they have done in the case of one unit already. If these arrangements mature, calculations regarding the annual requirements of jute and so on may have to be revised. It is possible of course that arrangements may be made for working double shift in another unit of a group to make up for the idle unit, and it would certainly be advantageous for the labour concerned if this could be done. Otherwise it seems inevitable that the labour force of a unit taken over by Government would be largely thrown out of employment. For it is not to be presumed that the terms of the taking over contemplate any provision for the compensation of displaced labour. Whereas if double shift working could be arranged, the contracts of the idle unit could be kept in force and the labour force kept in employment, even if the hours were not altogether to their liking.

A few months ago it looked as if scarcity of jute might be a major problem with jute mills before this season came to an end. The intermittent working as a result of the coal scarcity has altered the position somewhat to the mills' advantage, inasmuch as it is improbable that all the time lost will ever be made up. So the situation as regards supplies of raw material should be more favourable from the mills' point of view. But the general aspect of the position as viewed at the moment is rather anomalous. For more than a month past all the factors of a strong bear position have been present so far as the Calcutta market is concerned. Mills have been doing almost no buying at a period of the season when they are normally most active in the market. Up to a point this was reflected in a fall in the price of raw jute, but after a discount of two rupees from the maximum agreed rates had been recorded, the fall abruptly stopped despite the almost entire absence of demand. Upcountry seemed to dig in its toes and refused to budge further. In fact imports merely tended to dry up at the lower levels and recently almost all mofussil markets have registered a sharp rise. This is a period of the season, just before the Puja holidays, when normally there is a flood of imports to the upcountry markets. But there has been nothing of the kind this year—rather the reverse. There are various explanations pu forward for this phenomenon. One is that the beparies and furriahs have made large sums of money in dealings in rice, and that they are now disposed to invest their gains in jute, which relatively is at a moderate price. Another possible reason is that the cultivator himself is holding back his jute and probably he is in a position to do so. For the first maund which he marketed, he probably got as much this year as he got for three maunds in the early part of last season. Being also a producer of paddy, he is not affected by the high price of that commodity, and his modest requirements of other goods may be covered for some time to come from his early remunerative jute sales. So he is in no hurry to market the balance of his crop and is holding on to it in the hopes of still better prices. Whatever the cause, there is no denying the shortage of imports at a time when these should be in ample supply.

The Final Forecast figures of the Jute Crop are in process of issue but, as is usual nowadays, cause not a ripple on the stagnant pool to which the Jute market may be aptly likened at present. Of the figures published so far, which include such large districts as Mymensing and Dacca, all without exception in Bengal show considerable decreases as compared with last year, the short-fall amounting to around 24 per cent. The Province of Bihar records an increase of some 70,000 bales from an area smaller by 30,000 acres than last year when the yield was calculated to be scarcely one and a half bales per acre. Roughly speaking, the figures seem to indicate an estimated crop of from 68 to 70 lakhs of bales, a quantity which, if at one time it would have been considered insufficient for trade requirements, may, under the altered conditions now obtaining, prove to be ample to keep the industry comfortably covered with raw material. Another semi-bear factor which, with its usual contrariness, the trade will probably ignore.

Meanwhile arrivals of jute into Calcutta for the first half of September show a sharp falling off as compared with last year, the comparative figures being, 1943, 2,09,000 B/s, 1942, 3,04,000 B/s, almost one third less. From the beginning of the season, the figures are still ahead of last year, due to heavy shipments in July and August, the estimated totals from 1st July to mid-September amounting to 13,56,000 B/s this year as compared with last years total of 10,31,000 B/s. Actually Mills are not, for the most part, concerned at the tardy arrivals, as owing to the small amount going into consumption, most are more comfortably stocked with jute than at the end of June.

U.S.A. Hessian Stock and Consumption figures for the month of August make disappointing reading. Consumption has dropped back to 310 lakhs yards which is 40 lakhs below the average of the first six months of the year and almost the lowest recorded since February. It is small comfort that August last year only recorded 160 lakhs yards consumption, for that was when the burlap freeze-out was getting well under way, and last month's figure is a disappointing drop from the 460 lakhs recorded in June and the 480 lakhs in April. Nor do Stock figures hold out much hope for improvement. Spot and Afloat together only amount to 810 lakhs yards of which Afloat shows the almost incredibly low total of only 30 lakhs yards. The corresponding Stock figures a year ago were 1070 lakhs yards, though the total dropped to 860 lakhs and 740 lakhs in the two following months.

W. G. GROUNDWATER, General Manager

JUTE

Calcutta, Sept. 23.

The raw jute market has been steady during the past week though not much business has been passing. The reports regarding the larger number of mills working and the improvement in the position in regard to coal supplies have been mainly responsible for the slight rise in prices. Mills, however, did not take any great interest in the market and were inclined to buy only in small quantities. Balers were, on the other hand, very active and keen buyers of whatever Tossa qualities of jute that were offering. Imports into mofussil centres are still on the small side and harvesting has not progressed very satisfactorily. It is also felt that with the delay in regard to deliveries by balers to mills, sellers will continue to adopt a reserved attitude. The improvement in the export outlook has not been of any great advantage to the market as overseas buyers are not willing to pay the advance in prices asked for by sellers. Shippers are not keen to book overseas business as they are not able to buy the requisite quantities of jute against orders. As there is the possibility of a further improvement in the shipping position overseas buyers cannot be kept out of the market for long. If the position in regard to local mills also improves they will be forced to pay the higher rates asked for. Earlier in the week, as a matter of fact, some small business was done in Dundee Daisee 2/3 and Short Group Daisee at Rs. 77 and Rs. 84 per bale respectively but at the higher levels buyers withdrew. The undertone, however, continues steady. Mills are reported to have purchased Firsts at Rs. 82 per bale new crop and old crop Firsts at Rs. 75 per bale. Lightnings and Hearts were done at Rs. 79 and Rs. 71 per bale for shipment to the Plate.

JUTE MANUFACTURES

Calcutta, Sept. 23.

The jute manufactures market has been particularly uninteresting and business has been mostly on account of inter-bazar operators. The reports that a larger number of mills have resumed working and that coal supplies have considerably improved imparted a slightly easier tone to the market. The publication of the American stock and consumption figures for the month of August had a slightly discouraging effect on the market. The sharp decline in stocks afloat to 3 million yards was quite unexpected. Consumption was also lower at 3.1 crore yards. Stocks spot were lower at 78 million yards owing to the poor rate of shipments. The figures are given below:—

GOLD

Calcutta, Sept. 23.

The bullion markets have been very active during the past week and a considerable rise in prices has been recorded. In spite of the official selling, though at slightly higher levels, bulls had the upper hand and the highest levels for the week were touched on Wednesday when gold ready was quoted Rs. 77-3 and forward Rs. 76-14. The quotations at the end of last week were only Rs. 73-4 and Rs. 73 respectively. Towards the close on Wednesday there was some selling and a decline in prices was recorded, Gold ready being Rs. 75-8 and forward Rs. 75-4. Even with the loss of some gains it will be noted that the closing prices are substantially higher on balance. The recent sales of the Reserve Bank have thus been of no advantage to the market and investment buying is so great that all available supplies are rapidly absorbed. The increase in the selling rate of the Reserve Bank is a recognition of their difficulty to continue to supply the market enough supplies of gold at previous rates.

SILVER

Calcutta, Sept. 23.

The silver market also has been very firm and quotations have improved by nearly six points over last week's levels. As in the gold market there was some selling at the higher levels. The closing quotations were lower than the best levels for the week. Silver ready closed at Rs. 120-4 and forward at Rs. 119-12. The highest levels touched were Rs. 121-12 and Rs. 121-4 respectively. In the Calcutta market also, firmer conditions were noticeable and the quotation was higher at Rs. 119-8.

There has been no change in the conditions in the silver market in London and the quotation for both Spot and Forward was unchanged at 23½d.

Calcutta, Sept. 23.

Steady conditions have been noticeable in the piecegoods market and Puja buying has been rather brisk. Considerable difficulty is still being experienced in regard to supplies of cloth and yarn from the Western centres owing to the lack of transport facilities and it is reported that small parcels even are being received by the prominent dealers by post. The Government of India is devising ways and means as to how best to control prices of cloth and yarn. It is reported that many dealers are selling at levels higher than the ceilings fixed recently. It was only a few days back that it was announced that the offer for buying up unopened bales from dealers could not be kept open indefinitely and that all offers for sale from dealers to the Government of India should be notified before September 24, 1943. Some other important announcements also are awaited.

GOVERNMENT OF INDIA, DEPARTMENT OF SUPPLY

MANUFACTURE OF MACHINE TOOLS IN INDIA

In order to improve the standard of machine tool manufacture in India and to ensure that the capacity of machine tool manufacturing firms is utilised to the best advantage and for purposes essential for the prosecution of the war, a scheme for the rationalisation of machine tool manufacture has been introduced from 1st July, 1943, the main features of which are as follows:

(a) (i) Stoppage of open licences in future and the issue of restricted licences in their place to cover the actual needs of India.

(ii) Encouragement of mass production methods by ordering on any one manufacturer as few types of machines as possible.

(iii) Prohibiting the acceptance by a manufacturer of any orders other than those placed on him by or through the Machine Tool Controller.

Note.—In the case of trade orders placed through the Machine Tool Controller, selling price will be fixed by the Machine Tool Controller under the powers vested in him by Clause (a) of Notification No. 643 dated the 5th November, 1941, published at page 1,645 of Part I of the Gazette of India of November 8, 1941.

(b) Placing of bulk orders by Government on major firms to cover forward requirements and placing of a restricted number of trade orders through the Machine Tool Controller on minor firms.

Note.—Bulk orders covering three months' requirements at a time will be placed by the Machine Tool Controller with selected manufacturers with due regard to their capabilities and the plant and equipment at their disposal. Small demands unsuitable for bulking will be dealt with by placing separate orders.

(c) Grading of machine tools into three classes.

Note.—Machine tools manufactured in India will be divided into three classes in accordance with the standards of accuracy laid down by the Machine Tool Controller and the broad definitions given below.

Class I.

Machines which are comparable with standard imported machines and are to First Class tolerances.

Class II.

Machines with intermediate limits of accuracy in which the tolerances are not greater than 1-½ times the tolerances for Class I machines.

Class III.

Machines suitable for rough work only in which the tolerances are not greater than 2.½ times the tolerances laid down for Class I machines.

Except in very special circumstances, no manufacturer receiving Government orders will be allowed to manufacture machines of a class lower than that which he is licensed to produce.

If a manufacturer produces for inspection a machine which is below the class of accuracy mentioned in his order and licence, it will not be accepted, and it will be the responsibility of the manufacturer to rectify and re-submit the machine for inspection without extra cost. In no circumstnces whatever will rejected machines be allowed to be sold in the open market, nor will any relaxation of this rule be permitted.

2. To implement the scheme of rationalisation a careful survey of the machine tool manufacturing capacity in this country has recently been made by experts from England and a resgister of major and minor firms has been prepared and is maintained by the Machine Tool Controller. It will be open to any firm to approach the Machine Tool Controller and adduce proof of its capacity to manufacture machine tools to the standards required by him with a view to being taken on to this register: but it must be understood that the governing consideration for the placing of orders will be the supply and demand position at any moment.

3. In order to assist firms to reach the standards required, the Government of India have appointed Machine Tool Engineering Advisers and Tecnicians, whose services will be available to manufacturers. The Machine Tool Controller will also give such help as is possible in in the matter of supply of materials for the manufacture of machine tools.

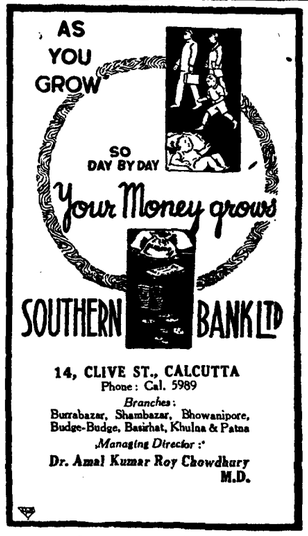
(S. A. Venkataraman,)
Joint Secretary to the
Government of India.

GOVERNMENT OF INDIA, DEPARTMENT OF SUPPLY, CALCUTTA.

Subject:—Appointment of Importing and Distributing Agents for Non-Ferrous Semi-Manufactures.

The Non-Ferrous Metals Controller, Esplanade Mansions, 15/16, Government Place East, Calcutta invites applications from firms regularly engaged in the import of Non-Ferrous Semi-Manufactures for appointment as Importing and Distributing Agents acting as the representatives of essential consumers in the areas in which they are situated.

All industrial demands for imported Non-Ferrous semi-manufactured articles and certain Non-Ferrous alloys will, in future, be canalized through these Importing Agents, who will sell such materials to the approved consumers at prices approved by the Controller of Non-Ferrous Metals on an undertaking furnished by the consumers that the materials will not be re-sold. The Importing Agents will be required to collect orders from essential consumers in their respective areas and to submit a consolidated statement, in an approved form, every quarter to the Non-Ferrous Metals Controller, who will, after investigation, forward his recommendation to the Secretary of State for India, London. The Importing Agents will then undertake all arrangements regarding the placing of orders, shipment and distribution on arrival of the goods.



The Non-Ferrous Semi-Manufactures to be dealt with will include:

Rolled and extruded shapes;
Rods and bars;
Plates, sheets, strips and foil;
Pipe and tubing;
and Rivets of copper and brass, aluminium, alloys, nickel alloys including monel, inconel, nichrome, zinc and zinc alloys, phosphor copper cupro manganese, arsenical copper, etc.

Of all Non-ferrous metals such as those covered by the Non-Ferrous Metals Control Order, manganese, phosphor bronze and similar alloys.

2. Firms applying for appointment as Importing and Distributing Agents should submit the following particulars with their applications to the Non-Ferrous Metals Controller not later than 15th October, 1943.

(a) the share capital of the company;
(b) the amount of business (i) in tons and (ii) in rupees transacted by the Company in 1937, 1938 and 1939;
(c) the types and classes of Non-Ferrous materials in which the company deals;
(d) the volume of business transacted with Government Departments in non-ferrous metals, giving names of Departments concerned;
(e) the area of the godown space available with the company;
(f) the company's bankers;
(g) the form of security deposit which could be arranged if the material is received under Lease/Lend.

Stock Markets to-day and to-morrow

INDIAN IRON DIVIDEND : STEEL CORPORATION ACCOUNTS

Stock markets both in Calcutta and Bombay have been rather active during the past week and a satisfactory rise in prices has been recorded in almost all the sections. The strength of the Bombay market was due to the announcement by the President of the Native Stock and Sharebrokers' Association to the effect that all outstanding business should be evened up before Sept. 24. There was some covering; the encouraging news from the war situation also helped the market to a certain extent. In the Calcutta market, earlier in the week there was some buying as operators were anxious to cover their positions but when it was made known that on the representations made by the Committee of the Calcutta Stock Exchange to the Government of India, that, pending the consideration of the proposals put forward, the Committee had been asked to use its discretion in regard to particular transactions, there was some slowing down in business. At this stage, the announcement regarding the final dividend of the Indian Iron and Steel Company for the year ended March, 1943 was made. The dividend proved to be higher than market expectations. There was some rush for buying and the quotation rose by 2 points from Rs. 35-10 to over Rs. 38.

The improvement in the quotation for Indian Irons was reflected in the other sections also. In Friday's session a slightly easier tendency is noticeable and a holiday feeling has set in. In spite of the latitude afforded to the Committee of the Calcutta Stock Exchange, it is felt that with the rigorous control regarding deliveries, speculative activity would be completely checked and prices would not fluctuate widely. Members of the Stock Exchange have been already notified to the effect that deliveries will have to be completed within 7 days, and that in the case of inability to deliver in time both buyers and sellers are required to report to the Committee.

With the promulgation of the new Ordinance banning *budla* business, trading on the Bombay Stock Exchange will be conducted on the basis of weekly settlement without any facilities for carry-over with effect from September 27. Brokers and investors were, therefore, given an opportunity to square up their outstanding business before Thursday. In order to provide the necessary facilities the fortnightly settlement of account which should have been normally done on Friday was put through on September 24. New rules will shortly be devised for facilitating trading on the basis of weekly settlement. Transactions put through in a particular week will thus have to be completed by giving or taking delivery on the first day of the following week. Representations have been made to the Government of India for a reconsideration of the terms of the Ordinance and markets were closed for some days early in the week to consider the technical and legal difficulties created by the new Ordinance. In view of the representations made by the prominent stock exchanges in India and the reports that the Finance Department is considering the proposals put forward by them, it can be expected that there will be some amendment to the terms of the Ordinance and that, as a result of the consultations between the authorities in the stock exchanges and the representatives of the Government of India a satisfactory solution would be found.

* * * * *

The important development of the week is the announcement of the final dividend by the *Indian Iron & Steel Company Limited* for the year ended March, 1943. Following the declaration of an interim dividend of 8 annas per share for 1942-43 as against 12 annas per share for the previous year, it was generally expected that the Managing Agents might decide on the payment of a lower final dividend for the last accounting period. On these expectations the quotation for the shares fluctuated around Rs. 35-8. The final dividend of Rs. 1-8 per share is the same as for 1941-42 and makes, with the interim dividend of 8 annas per share already paid, a total of 20 per cent for the whole year against 22½ per cent. As the dividend amount proved to be higher than market expectations and as there was some oversold position, there was a sharp rise in prices and a quotation as high as Rs. 38-4 was touched. With some selling at the higher levels and the approach of the Puja holidays, the quotation has receded to Rs. 37-6 but the undertone is steady. The accounts for the year 1942-43 will not be available for some time yet but one can be sure that they will make satisfactory showing. With the extremely strong position of the Company, the yield on the shares should be considered rather generous being over 5.6 per cent tax-free with the quotation around Rs. 37-8 cum-dividend.

* * * *

The accounts of the *Steel Corporation of Bengal Limited* for the year ended December, 1942 are now available. As the final dividend in respect for the year has been paid, they do not have any significance from the market point of view. But it is very interesting to record here the satisfactory progress made by the Corporation in the last year. As the Chairman has pointed out, sales of the Corporation's products improved considerably and might have increased even further had it been possible to overcome certain transport difficulties. The improvement in the net profit, however, has not been of any advantage to the shareholders as a considerably larger sum had to be provided towards taxation. The working in regard to 1942 makes the Company liable for payment of Excess Profit Tax. The provision in this regard would have been very much higher but for the deficiencies carried over from the years 1940 and 1941. The net profit, before providing for taxation and depreciation, and after paying the share of the profit to the Indian Iron and Steel Company Limited and making due provision for repairs and renewals, is Rs. 1,06,86,691 against Rs. 1,00,89,740 for the previous year. The provision for depreciation is unchanged at Rs. 35 lakhs while that for taxation is considerably higher at Rs. 39.5 lakhs (Rs. 23 lakhs). In the last year, the sum of Rs. 3,61,112 was paid towards arrears of interest on preference shares and a sum of Rs. 4,51,347 was written off expenditure incurred in lighting up furnaces. After payment of the interim dividends the amount carried forward is lower at Rs. 2,53,228 against Rs. 4,29,477 brought in. The share of profit payable to Indian Iron & Steel Company Limited is Rs. 16,24,399 against Rs. 13,40,405 while the provision for Repairs and Renewals is also higher at Rs. 38,97,368 against Rs. 34,97,371. The earnings for the year would have been further higher if it were not necessary to pay Rs. 8,25,147 on account of War Risk (Factories) Insurance.

* * * * *

With the attention paid by the Managing Agents to the improvement in the efficiency of the plant and the reduction in costs it can certainly be expected that earnings would continue to improve but a note of warning has been sounded by the Chairman regarding the need for additional provision for taxation in future years if the representations made by the Corporation to the Government of India in respect of the revision of the basis

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 24.

A sharp rise in prices has been recorded in the several sections on the Calcutta Stock Exchange during the past week. The general improvment in the war situation, the encouraging speech made by the British Premier and the announcement of a satisfactory final dividend by the Indian Iron and Steel Company Limited for the year ended March, 1943 have been mainly responsible for the firm tone of the markets. Business passing has been on a larger scale but again outside support has been lacking. The general sentiment is inclined to be optimistic. The recent ordinance prohibiting 'budla' transactions has not had any appreciable effect on the market. It is now understood that on the representations made by the Committee of the Calcutta Stock Exchange the Government of India have replied to the effect that the Committee can exercise its discretion in respect of deliveries pending the consideration of the proposals put forward by them.

There has been no change in the gilt-edged securities section and prices have remained unchanged. 3½ per cent Paper has remained steady at Rs. 97. Among terminable loans, 3 per cent 1951-54 were Rs. 99-14, 3 per cent 1963-65 Rs. 97 and 3 per cent 1946 Rs. 102-10. 3 per cent 1949-52 were Rs. 100-8 and 4 per cent 1960-70 Rs. 111-2. No business has been recorded in provincial loans. Conditions in the money market have remained unchanged though the average discount rate is slightly higher at thirteen annas and five pies per cent per annum against thirteen annas and four pies per cent per annum.

No transactions have been recorded in public bodies debentures with the exception of 3¼ per cent. Howrah Bridge debentures at Rs. 98-8.

No transactions have been completed in industrial debentures. Among preference shares, first-class tax-free issue continue to be in good request and 7 per cent jute mill preferences are quoting around Rs. 182. *Belvedere* were done at Rs. 181, *Cheviot* at Rs. 177, *Chitavalsah* at Rs. 164, *Dalhousie* at Rs. 182 and *Reliance* at Rs. 182. *Hastings* 6 per cent preference were Rs. 152 while *Lawrence* were put through at Rs. 162 and *Northbrook* at Rs. 157.

In the Engineering section, *Kumardhubi* were further higher at Rs. 308 on the announcement of the reorganisation proposals. *Steel Corporation* were Rs. 126 and *Titaghur* 2nd preferences Rs. 116.

Cotton shares were not very active and quotations have been fluctuating around the previous levels. *Cawnpore Textiles* were Rs. 12-5, *Bengal-Nagpur* were a shade easier at Rs. 33-6, *Elgin* were Rs. 78-6 and *Kesoram* Rs. 15-2 ex-dividend. *Basanti* were Rs. 13 ex-dividend ex-rights. It is understood that the recent issue made by the Company and offered in the first instance to shareholders has been fully subscribed. *New Victoria* were Rs. 8-8 and *Pravati Textiles* Rs. 11. It is learnt that this Company also may be shortly coming into the market for fresh capital and the new ordinary shares might be issued at a small premium.

The Coal section has been the feature of the week and quite a substantial rise in prices has been recorded for the popular counters. The improved export outlook and the allotment of a greater number of wagons have been mainly responsible for the larger buying of coal shares. *Amalgamated* were done up to Rs. 43-4, and at the time of writing are quoting Rs. 42-12. *Bokaro & Ramgur* have recorded a rise of nearly 3 points in the course of a few days on reports that the Managing Agents have been able to conclude satisfactory contracts. *Burrakur* were done at Rs. 20-2, and *Central Kurkend* at Rs. 18. *Dhemo Main* were Rs. 16 and *Equitable* Rs. 42-12. *Katras Jherriah* were firm at Rs. 44, and *New Bheerboom* at Rs. 25-2. Among smaller denomination shares, *Nazira* were Rs. 4-10; *North Damuda* Rs. 7-12; *Samla* were a few annas higher at Rs. 4-13 with *Satpukuria & Asansol* at Rs. 3-6. *Standard* improved by a few points to Rs. 26 while *West Jamuria* were not very much higher at Rs. 36 and *Talcher* at Rs. 4-6.

The reports that it was possible to continue working mills on the basis of the restricted plan, have been responsible for the slightly improved tone of the Jute section. *Anglo-India* were not very much higher at Rs. 399 but *Barnagore* have improved by a further 5 points to Rs. 169. *Belvedere* were Rs. 500 ex-dividend, *Champdany* Rs. 214, *Chitavalsah* Rs. 25-6 and *Delta* Rs. 528. *Howrah* were active and nearly a point higher at Rs, 63-12 on Thursday but at the time of writing the quotation is Rs. 63-2. *Hukumchand* were Rs. 26-7, *Kanknarrah* Rs. 457, *Kinnison* Rs. 383, *Megna* Rs. 81-4 and *Nuddea* Rs. 102-12. *Presidency* were not very much changed at Rs. 6-7 with *Reliance* at Rs. 62-8. Waverley were crossed at Rs. 5-11.

The announcement of the final dividend by the Indian Iron and Steel Company for the year ended March, 1943, after the close of business on Wednesday, there was a sudden rise in the quotation from Rs. 35-8 to Rs. 38-4 but on some selling at the higher levels the price came down to Rs. 37-6. *Burn & Co.* were steady at Rs. 382, *Britannia Engineering* were easier at Rs. 14-8. *Indian Malleable Castings*, ordinary, were a shade better at Rs. 9-1 with *Jessop & Co.*, at Rs. 20-10. *Kumardhubi Engineering* reacted to Rs. 6-11 on the announcement of the reorganisation proposals but there has been since a recovery to Rs. 8. *Marshalls* were Rs. 3-12 and *National Iron and Steel* Rs. 13-4. *Steel Corporation* were higher in sympathy with Indian Iron and were quoted Rs. 27-9.

The Sugar section has not been very interesting and quotations have been fluctuating around the last levels. *Cawnpore* were Rs. 40, *Carew & Co.*, Rs. 21-12 and *Champdany* Rs. 40-12. *Darbhanga* were well held at Rs. 28-4 on the declaration of an interim dividend of Re. 1 per share while *Purtabpore* were steady at Rs. 19 and *Samastipore Central* at Rs. 18-9. *U. P. Sugar* continued to be in demand and the quotation was further higher at Rs. 29.

In the Tea section, business has not been on a large scale but there has been good buying enquiry for lower-priced issues and most of the popular counters have recorded some useful rises. *Tezpore* are nearly 1½ points higher at Rs. 16-12 while *Tukvar* were Rs. 17-5. *Namburnadi* were dealt in at Rs. 12-6 and *Loobah* at Rs. 13-8. *Dessai & Parbuttia* were Rs. 317, *Hasimara* Rs. 65, *Bishnauth* Rs. 40-4 and *Hantapara* Rs. 707.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper* were unchanged at Rs. 3-15 and Rs. 2-7 respectively. *B. I. Corporation* were sticky at Rs. 6 while *Aluminium Corporation* were higher at Rs. 19-6. *Balmer Lawrie* were crossed at Rs. 40 while there was some frequent buying of *British Ceylon Corporation* around Rs. 18. *Britannia Biscuit* were Rs. 17-14 and *Calcutta Trams* Rs. 26-4. *National Insulated Cables* were Rs. 14-10 and *Plywood Industries* Rs. 21. *Publicity Society* were sharply higher on expectation of a good final dividend for the year ended July, 1943. *Spencer & Co.* were put through at Rs. 10-10 and *Walford Transport* at Rs. 2-9. Paper shares have been firm with *Shree Gopal* at Rs. 23 and *Star Paper* at Rs. 22-1. *Titaghur Paper* A & B shares, in particular, are nearly 2 points higher at Rs. 27-8. *Midnapore Zemindary* were Rs. 90-4 and *Northern India Oil Industries* Rs. 19-2.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, September 23.

Bear covering and bulls' unloading marked the transactions on the local stock exchange during the short period the market was open. The Government ban on 'budla' transactions was subjected to severe criticism by the stock exchanges and while legal clarification is awaited share brokers have advised their clients to keep all the relative documents ready in case they wanted to sell. It seems that the ban on 'budlas' has brought about curious results. The measure was promulgated in the hope that speculation will come to a desirable end but judging from the actual state of affairs obtaining on the stock exchange it seems that it has given a fillip to speculation. This sudden spurt in prices may be due to the activity of the shorts and hence only temporary. But it seems that the explanation is not so easy as that, for many believe that the present prices of the scrips are not so high as to be termed speculative. It is argued that unlike the commodity markets, the stock market does not allow of any conceivable rule by which to "ceil" prices. Until the market settles down to the new conditions nothing definite can be said of the tendency of the market. But we may hazard a guess on the basis of the prevailing conditions. The new measure has not affected the transactions adversely though the volume of business is inevitably small. The undertone is firm while prices show no definite trend.

Though bulls' unloading and the intervention of profit-taking at higher levels caused a setback now and then, Textiles have gained on balance. Sudden spurts which were not always explicable were observed and at the time of writing unusual liveliness prevails in this section. *Bombay Dyeing* have again gone beyond the 2,000 mark to close at Rs. 2,025. *Central India* were Rs. 439; *Century* Rs. 889; *Gokak* Rs. 349; *Kohinoor* Rs. 617. *Svadeshi* were a strong feature at Rs. 578 and one explanation of this exceptional firmness may be found in the announcement regarding the impending cash payment on redemption of the debentures of Tata Mills.

Steels: The feature of the week was Indian Iron. Soon after the announcement of an interim dividend of Rs. 1-8 prices went up by more than one point and soon reached the present level of Rs. 37-8. A further rise though anticipated has not materialised. Other counters have also shown improvement. *Tata Deferreds* are quoting around Rs. 1,880-8; and *Tata Ordinary* Rs. 397-8.

The Miscellaneous section remained largely steady throughout the period under review. *Bombay Burma* (olds) were firm at Rs. 390. *Bombay Steam* were better at Rs. 535. *A. C. C.* were Rs. 217-8; *Premier Construction* Rs. 177; *Burma Corporation* Rs. 3-15 and *Shivrajpur* Rs. 62.

INDIA NUT COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1942 :—

Profit and Loss Account.—One outstanding business which is worthy of mention in the year under report is the sale of a parcel of 850 tons of African Nuts which we had purchased at Bombay at advantageous prices. The whole parcel was sold as raw nuts themselves, since on the reckoning of things then, the sale admitted of a better profit than by getting down the nuts to the factory at Quilon, manufacturing them into kernels and await for any possibilities for export to America. The net result of the trading on the whole even with this profit, was a small loss of Rs. 111-7-0, since full provision had been made for depreciation amounting to Rs. 7,853-7-10. Besides this, a sum of Rs. 6,523-12-9 out of Rs. 7,038-1-7 considered doubtful in the last year's account had definitely become bad and this sum was written off during the year from profits.

Messrs. A. V. Thomas & Co., Ltd., are submitting a proposal for the re-constitution of the Capital and the business of Directors for the re-constitution of the capital and the business of the Company. Their recommendations are, fictitious assets now standing in the balance sheet and the loss be all written down so that on a re-valuation of the assets, the capital is fully and correctly represented by the assets. If this is at all done, there will be a reduction of capital, and with a reorganised working, fairly reasonable profits and dividends in the normal course be available on the reduced capital. It is anticipated that if the extra-ordinary general meeting contemplated is agreed upon, the Managing Agents may reconstitute the Company this year itself, with the result that when the final accounts for 1943 is made, the Company would have been in a postion to pay its maiden dividend.

Another feature which has been engaging the attention of the Company was the extraction of cashew shell oil from the raw nuts. One plant was installed as an experiment at a very nominal cost but not with much success. Another plant which is reported to admit definite success is being installed which will be complete for commission within a month or two. The benefits of the extraction of cashew shell oil and the certification thereof to admit of its export, are mainly enjoyed by Messrs. Peirce Leslie & Co., Ltd., and with our successful erection of the plant, it is anticipated that we will be able to undertake a processing of over 150 bags of nuts per day either of our own or on account of interested parties. With the possibilities and potentialities of cashew shell oil for various industrial purposes both during war and thereafter, this may enable the Company to adopt that as the main line of business.

Managing Agents.—Messrs. A. V. Thomas & Co., Ltd.

Authorised Capital—*Rs.* 20,00,000. *Issued, Subscribed and Paid-up*—*Rs.* 7,72,150 *in* 77,215 *shares of Rs.* 10, *fully paid up.*

MOHINI MILLS, LIMITED

Audited accounts for the year ending 31st December, 1942:—

During the year under report there has been a gross profit of Rs. 35,62,578-15-7 to which is added the sum of Rs. 16,900-10-9 being the amount brought forward from last year's account making a total of Rs. 35,79,479-10-4. After deducting Rs. 5,77,512 for depreciation there remains a balance of Rs. 30,01,967-10-4 which the board recommends for appropriation as under—

	Rs.	A.	P.
(1) To declare a dividend at the rate of 25% on the paid up capital (free of income-tax, super-tax and excess profit-tax) ..	3,49,996	4	0
(2) Provision for taxes	19,00,000	0	0
(3) To transfer to Dividend Equalisation Account	98,000	0	0
(4) To transfer to General Reserve Account ..	6,00,000	0	0
(5) To carry forward to next year's account ..	53,971	6	4
Total ..	30,01,967	10	4

In keeping with the satisfactory conditions in the cotton mill industry, Company's working results for the year under review, reveal a marked increase over those for the preceding years. It is gratifying to note that inspite of the set back in the production of Mill No. 2 at Belgharia owing to the exodus of the operatives for enemy air raids and the sharp increase in the wages and the cost of raw materials, stores, coal, and other commodities essential for the working of the mills, the Company has been able to report impressive results. It will be seen from the provision for taxation that the major portion of the earnings of the Company has been absorbed by way of Excess Profit Tax and the higher rates of Income-tax and Super-tax. The opportunity occasioned by the present situation has however been utilised to an appreciable extent by setting apart a substantial amount to General Reserve Account in order to strengthen the financial position of the Company and to withstand the difficulties of post-war adjustments. The cotton mill industry is, no doubt, at present passing through a period of prosperity, but the post-war slump which is inevitable, has also to be considered. It is, therefore, essential to look ahead and make suitable provisions for the future period of depression.

The dividend level has however been raised from 15 per cent to 25 per cent which, we believe, will be considered very satisfactory.

As is the case with almost all the cotton mills in India a large percentage of the company's plants is being devoted to the production of Government war orders and Standard cloth to be supplied at greatly reduced prices.

(Continued from page 629)

of assessment for excess tax do not prove to be successful.

As our readers are aware, the Corporation was floated only in May, 1937 and production was commenced only late in 1940. There were, therefore, no pre-war trading years and the standard profits are computed by reference to the statutory percentage on the average capital employed during each chargeable accounting period. This statutory basis of calculation of standard profits places the Corporation in a much less favourable position than those of other smaller business who are fortunate enough to have been established in pre-war years.

The balance-sheet shows a much better position and the cash position has improved considerably during the year.

With the need for heavy expenditure in regard to capital extensions and improvement and the large liability for taxation, it may not be possible to increase the distribution on ordinary shares appreciably but if it is borne in mind that the net profit is over 20 per cent on the ordinary capital, before providing for taxation, but after depreciation and preference dividend, it would be admitted that the shares are good for investment. In post-war years it might be possible to increase the dividend substantially with the smaller charge on account of taxation.

* * * * *

Mention was made in the accounts of the *Kumardhubi Engineering Works Limited* for the year ended November, 1942 that the directors had under consideration a scheme for the reorganisation of the capital structure. With the considerable improvement in the financial position of the Company and the need for heavy capital expenditure in post-war years to replace obsolete and worn-out machinery it is necessary to set right the balance-sheet position. The capital reorganisation proposals have now been announced to the shareholders. Before framing the proposals the views of some of the largest preference and ordinary shareholders were ascertained. According to these proposals, now circularised to shareholders, the ordinary shares of Rs. 10 each are to be written down in value to Rs. 3 per share. Preference shareholders have to forgo all claims to arrears of dividend up to and including the year ending November 30, 1943 and the rate of dividend on the preference shares with effect from December 1, 1943 is to be reduced to 5 per cent per annum tax-free. The new ordinary capital that will thus be created in satisfaction of the arrears of dividend is Rs. 10.8 lakhs or Rs. 30,000 more than the gain in writing down the value of ordinary shares from Rs. 10 to Rs. 3. The excess of Rs. 30,000 will be found from the reserves of the Company. It is expected that the profit for the current year will be sufficient to eliminate the debit balance on the profit and loss account of Rs. 27,985 and make adequate provision for depreciation and create a small reserve fund.

There was a decline in the quotation for ordinary shares from Rs. 7-12 to Rs. 6-11 on the announcement of these proposals. It was at first felt that the proposals were drastic for the ordinary shareholder. With the prospect of a dividend only in respect of the working for 1943-44, the premium over the proposed written down value of the shares was not considered justifiable. On second thoughts, however, there has been some buying of both ordinary and preference shares and the quotations are at the highest levels for some time, the ordinaries quoting Rs. 8 and the preferences Rs. 308.

Preference shareholders are entitled for the payment of dividends for 23 years and this alone works out to Rs. 161 per share. In satisfaction of the surrender of the right to the payment of arrears of dividends amounting to Rs. 161 per share, and the consent to reduce as from December 1, 1943, interest payable on the shares to 5 per cent from 7 per cent, the preference shareholders get only 30 new ordinary shares of Rs. 3 each. If the market value for the ordinary shares were taken into consideration, no loss is sustained by the preference shareholders. With the market value as at present there is a total income of Rs. 240 so far as the preference shareholder is concerned. It is not surprising, therefore, that the preference shares have improved to a great extent in recent weeks.

For the ordinary shareholders, with a smaller prior charge on account of preference shares and the elimination of the huge contingent liability in respect of arrears of dividend, there is prospect of an early payment of dividends. Though the par value of the shares has been written down from Rs. 10 to Rs. 3 per share, the market value has not been affected. In fact, with the possibility of dividends from next year, the shares might be quoting above their original value and the genuine investor may not prove to be the loser in the end.

"WATCH DOG."

(Continued from page 630)

MADRAS STOCK EXCHANGE

Madras, September 20.

The prospects of an early victory for the Allies have been mainly responsible for the disappearance of many a buyer on the local stock exchange, while the popular sentiment that the war may not last long is strengthened by news of fresh victories for the Allies on all fronts, more and more buyers are withdrawing from the market. The promulgation of the ban on 'budla' transaction has further darkened the outlook. A definitely weaker market is the result.

Though the new Madras loan has not been quite a success, there was considerable business in 3½% Government Paper and other securities. 3½% Government Paper were Rs. 97. State loans remained firm with 3%, Mysore loan at Rs. 111-12.

THE STEEL CORPORATION OF BENGAL, LIMITED.

NOTICE

The Sixth Ordinary General Meeting of the Shareholders of The Steel Corporation of Bengal Limited, will be held on Tuesday, 26th October, 1943, at 11 a.m., at the Registered Office, 12, Mission Row, Calcutta, to transact the following business :—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1942.

(2) To elect Directors.

(3) To appoint Auditors for the current year and to fix their remuneration.

The Tranfer Books of the Corporation will be closed from 20th to 26th October, 1943, both days inclusive.

By Order of the Board,
BURN & CO.,
Managing Agents.

Calcutta,
The 24th September, 1943.

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE IS HEREBY GIVEN that the FIFTIETH ORDINARY GENERAL MEETING of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on WEDNESDAY, the 13th October 1943 at 2-30 P.M. (N.S.T.), (1) To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 28th February 1943, (2) To declare a dividend and bonus, (3) To elect Directors in place of those who retire by rotation but who are eligible for re-election and (4) To appoint Auditors for the current year and to fix their remuneration.

The TRANSFER BOOKS of the Company will be CLOSED from 27th September 1943 to 14th October 1943, both days inclusive.

By Order of the Board,
N. SIRUR & CO., LTD.,
Managing Agents.

V. N. CHANDAVARKAR,
Managing Director.

Bombay, 14th September 1943.

N.B.—The Dividend and Bonus when declared will be made payable at the **Central Bank of India, Limited, Bangalore City**, on and after MONDAY, the 25th October 1943, to those Shareholders whose names stand on the Register of Members on the 25th September 1943. Shareholders are requested to intimate change of address if any.

This Notice is addressed more particularly to :—

Gen. C. J. Merriman,
Mr. Richard Holdsworth.

THE INDIAN IRON & STEEL CO., LTD.

NOTICE

In view of the uncertainty of mails from and to the United Kingdom the publication of the Directors' Report and the Accounts of the Indian Iron and Steel Company, Limited, for the year ended 31st March, 1943, which are to be published simultaneously in India and England, will be delayed. All possible steps are, however, being taken to have matters expedited. In order to enable shareholders to obtain payment of their dividends as soon as possible, however, the Directors have sanctioned the payment by way of an adinterim dividend of Rs. 1-8-0 per share on the Ordinary shares of the Company ranking for dividend for the year ended 31st March, 1943, which, shareholders must understand, will be the final dividend for the year. The Transfer Books of the Company will be closed from 16th to 30th October, 1943, both days inclusive. Payment will be made on and after 8th November, 1943, to those members or their mandatees whose names appear in the registers on the 15th October, 1943.

By Order of the Board,
BURN & CO.,
Managing Agents.

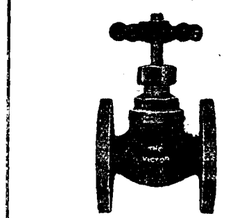
Editorial Comments

Food Policy

The report of the Foodgrains Policy Committee will be felt all over the country as a keen and painful disappointment. While for detailed comments, the full report has necessarily to be awaited, the press reports leave no room for doubt that the emergent character of the problem and the urgency of immediate measures to relieve the situation with only the minimum of deference to other considerations, have alike been lost on the majority of the Committee. When, according to the press reports, the Committee says that "If the minimum standard of one pound per day per adult cannot be guaranteed out of home supplies, then imports must be arranged for," one cannot help feeling that the crux of the food problem is still being dealt with on a provoking hypothetical, instead of an indubitably factual basis. The public will need a lot of persuasion that there are any "ifs" about the food situation in India. "Famine's toll" is an ugly feature of the front page of Calcutta's dailies. And while in other provinces some complacency is being felt at the success of rationing measures of limited scope, it is by no means impossible that the mistakes of an administration, which is neither experienced nor advantageously placed, will create crises that will grow in scope and intensity. Neither the Committee's appraisement of the position nor the remedies it has suggested will allay the deep unrest that is widely felt all over the country. Its vision would appear to have been fatally limited to the contentions and standpoint of the official world. It has a pathetic faith in coaxing more out of the producer's stocks to swell the central reserves. In a land, in which nearly a majority of the population could not have a square meal in the best of times, it believes in reducing the severity of the present crisis by imposing austerity on the higher classes. And while people are dying in thousands and foodgrains cannot be got as a matter of course either from the shops or under a system of rationing, it regards the need for imports as at best problematical.



The relieving feature of the report is the dissenting minute of Sir Purshotamdas Thakurdas, who has swept aside all the cobwebs of controversy and draws his conclusions from the inescapable facts of the present situation. He condemns the tendency to fasten the blame on imaginary hoarders and make a scapegoat of them. "The one clear and undisputed factor" he observes, "is the enormous rise of food prices and the scarcity of foodstuffs even at such prices." An irrepressible temptation to shirk this basic fact is probably behind the quest for scapegoats and the anxiety to provide a cumbrous machinery of administrative control in the place of the obvious remedy of enhancement of supplies by imports from abroad. And enquiry into the question of domestic stocks or the feasibility of control and rationing only reveals the difficulties that we are up against, difficulties which we shall not be the better for overcoming. The Foodgrains Committee is quite candid in admitting the fact that in this country there is little or no scope for tightening the belt, that there is no great chance of the urban population supplementing its rationed cereals by intake of other foodstuffs on any significant scale. It recognises that rationing cannot be adopted for the vast rural areas; and must be restricted even among towns to those with a population of one lakh and over. It agrees that requisitioning of producer's stocks is not desirable for various reasons. It is difficult to understand how, with these admissions the Committee failed to press for an immediate import of wheat on a large scale and the use of such imports, rather than clumsy administrative devices of a local character for the regulation of the distributive system in the country.

With these admissions before us, it is difficult to follow the reasoning which suggests that "the most important practical aspect of the distributive problem at the present stage is the rationing of the larger cities of India." We have said before in these columns, and we must repeat it now, that we fail to understand what aspect of the food problem rationing is expected to solve. The conditions in which rationing is resorted to in other countries are easily understood. Both Britain and Germany started rationing from the day of the outbreak of war; for both had, in the first place, carried out the necessary administrative spadework well ahead of the declaration of war. Both had accumulated stocks of food; and both had to provide against the contingency of supplies being cut off at one stage or another by some untoward development. Administrative preparation for bringing the whole country within the orbit of the scheme, supplies more than sufficient for providing food on a reasonably adequate scale to the whole population, and rationing being desirable not because of immediate insufficiency but in consideration of future contingencies, these are the conditions precedent to the adoption and successful working of a rationing system. But here in India, present stocks are admittedly inadequate even for maintaining a low standard of consumption; the standard that will have to be adopted will, in many cases, be higher than what obtained in the past. The administrative machinery is in the dilatory process of creation. The whole population cannot be brought within the scope of the scheme. And last but not least, India should have no need to look at her food supplies in the way Britain or Germany is obliged to do.

The severity of the food crisis and the prevalence of a war have together stampeded many into accepting an indefinite increase in the obligations of the Government in respect of food. It is not realised that, if the Government's responsibility is not limited to removing the critical features of the present situation, it will be impossible to draw the line anywhere thereafter. Control of stocks leads you to countrywide requisitioning, while rationing saddles you with the responsibility for ensuring nutritional, that is, qualitative, if not quantitative, adequacy. The critical features of the present situation arise from the shortage of supplies and the adverse consequences of official attempt to make up for it. If the authorities will recognise that a considerable addition to supplies will remove these two features, they will accept that immediate imports are not the best, but the only, and a very satisfactory, way out. But the impulse to create administrative controls and flounder in them is irrepressible. Control and rationing are accepted with a lot of imperfections and inconsistencies. It is no wonder that the Foodgrains Committee flirts with the idea of nutritional adequacy. The press report of the Committee's findings says: "In view of the food crisis, the (food) department is asked to investigate the possibility of individual rationing of sugar and milk—the last food having, of course, a peculiar bearing upon the health of women and children. As regards rural areas, where there may also be serious malnutrition and shortage, the report recognises that general rationing is impossible, but it points out that in famine or semi-famine areas distribution cannot be left to the normal channels of trade and Government action is absolutely imperative." It is somewhat amusing to find that the Committee can think of individual rationing of milk or of tackling malnutrition in the rural areas. The attention given to provinces like Bengal can be no more fruitful of results. The call to the Government of Bengal to tighten up its procurement machinery can mean nothing, so far as augmentation of its supplies is concerned.

We trust that the Committee has had some weighty recommendations to make on the question of the long-term food

"VICTOR" VALVES
FOR HIGH PRESSURE & TEMPERATURES

Bell's Asbestos & ENGINEERING (India) LTD
CLIVE STREET, CALCUTTA

policy of this country. There is no doubt that, quite apart from the resumption of imports from Burma and such other questions, domestic food production must be considerably increased, if the country is not to run the risk of a similar crisis at a future date. The growth of population and the improbability of India employing large favourable balances such as she has today, together make it necessary that the opportunity afforded by the present crisis for increasing food production should not be wasted. The distribution of improved seed on a large scale has, we are told, found favour with the Committee. But other and more basic factors of progressive agriculture should, we believe, have been touched on by the Committee.

But, as we have observed more than once in these columns, the severity of the food crisis today has disabled us for utilising the present situation as an opportunity for strengthening our agriculture. On the other hand, we are driven to urge imports of wheat from Australia on a large scale and their sale all over India at even less than the cost price. Sir Purshotamdas in his dissenting minute has carefully related this policy to the question of its effects on the growers of foodgrains. But, considering that our troubles originate in, and are, in a sense, even confined to, the shortage of supplie, he argues:

> If Government had fixed a maximum rate for foodgrains as soon as scarcity for some made itself felt and if the prices fixed for such foodgrains were sufficiently tempting to persuade the grower to grow more, hoards by growers would have been avoided and there could have been no temptation to the middlemen to hoard grain. But this ideal to be achieved would have necessitated a sufficiently broad policy by the Government to compensate the grower of foodgrains approximately adequately, by fixing a price in keeping with the prices for other articles of consumption as prevailing. Further it would have necessitated an efficient machinery to (1) enforce the maximum prices fixed and (2) assure reasonable distribution. But in the admitted absence of such a machinery, the only way open to Government would appear to be to import more foodgrains from abroad, and, to almost dump it on the Indian market at such price as the Government thought would ensure reasonable return to the grower, without unduly inflating the economic structure.

It must be realised that the majority of the Committee, too, have recommended, though apparently in lukewarm terms, procurement through imports from Australia. It has been declared by Mr. Scully that Australia can supply all the wheat needed by starving India, provided the U. K. could provide ships. Lord Wavell himself has acknowledged that India strained herself to provide transport for Imperial needs; and India should know what conclusions to draw if Britain should fail to provide shipping for the wheat which is waiting to be transported to India. To market that wheat in a way that the price of all foodgrains will be brought down to economic levels, is the only way out of the sorry mess in which the country has been landed.

CRUMBLING BALKAN CRUST

The departure of King Peter of Yugoslovia for the Middle East suggests that the Occupied countries, or at least one of them have been given a direct or definite share in the war. The alliances of 1941 still have to bear fruit though Greece is showing some impatience of a Germanophile ruling house whose Danish origin has been obscured by its own ambiguous part under a dictatorship. If the new civil war in Italy has made it clear that the Allies through the new Commission at Algiers expect to control the Balkans, the Germans have certainly moved into Bulgaria, taken over Salonica and part of the Aegean islands in addition to Greece and Crete. The Italian armistice has probably forced Germany to consider active defence of the south-east as being important like the protection of the gates of Austria. Reports as to Hungarian lukewarmness and Roumanian uneasiness have been certainly supported by reports from Ankara, but open rejection of German authority is remote. Events in Italy have forced on Germany the problem of defending the Balkans. In June the Nazis assumed that the south-east would defend itself: that they would only have to give moral support. In September the problem is vastly different as the only friendly element are the Croats. Albania and Slovenia are at war with the Nazis and Italian forces are ranged against the Germans. The economic consequences must be reckoned important. If the Board of Economic Warfare indicated in April the range and intensity of German economic penetration the new alliance between the Partisans and Mihalovitch has made the future uncertain for a Germany, dependent on Yugoslov minerals and acutely desirous of Albania's oil. The Allied advance up the Adriatic to Foggia has now made it clear that the Germans for the first time are in danger of an attack from the south-east.

Though it has been repeatedly suggested that Germany's main interest lies in the oilfields of Roumania (put out of action by the U. S. bombers from Cairo) the more important centre for resistance in the future is Trieste. Barely a week ago it was known that Yugoslavs advancing from Gorizia were ready to take the old Austrian seaport and actually assist the Allies in the operations in the Adriatic. The key to Austria where German industries have been transferred is the port that must be taken by the Slovenes for the Allies. Such spontaneous action long before the Allies have reached the North of Italy can also have the effect of weakening the Pavelitch regime. Obviously in the present phase of the war Yugoslav unity acquires special significance. The prewar compromise on Croat autonomy must be re-erected into a working principle. It is not enough to look on the Duke of Spoleto's abdication as a victory for King Peter. The Prince Regent Paul may have to play a part in settling affairs promptly. The Yugoslavs have been assigned a far more important part as the Allies march up from Taranto. The Yugoslav Government in London has known a cabinet crisis or two. It has only the young King at its head. It has not waged political warfare even while the Serbs have been extremely active. The ten or more German divisions in the Balkans may be an inconsiderable force if Italian, Greek and Yugoslav forces combine. From Britain's diplomatic failure to fuse the Balkans into one before Italy sued for armistice some have drawn restraining conclusions. But the two years of German rule cannot have made Albanians or Greeks tender forward the Germans and the refusal to recognise Italian authority outside the peninsula like the favours shown to Sicilian autonomists must encourage the hope that Free Albania will be created. Early this year Mr. Eden indicated that Albania was to be released from Italian rule (he promised support to a new Free Albanian movement) and King Zog advanced his own claims after the Italian surrender in the expectation that the Allies would nullify the invasion of April, 1939.

The economic consequences for the south-east, should war spread, may be important. Greece may be the theatre of another campaign, if the Germans are pushed out from the Piraeus and the U.N.R.R.A. will be then called upon to carry out even more important work. The Allies of course will have for the future the more difficult task of displacing Germany as the principal trader. The ties of eight years have to be broken, even as in Italy, and the formal approach to the problem of putting others in the place of Germany has not been undertaken. Questions of compensation to foreign interests apart, there is the plain duty to secure from Bulgaria and Hungary some kind of restitution. But both these satellites have to be worked upon to shake themselves free from the German yoke, though fresh problems would arise from the opportunities presented.

The main hope still lies in naval supremacy in the Eastern Mediterranean with the help of the Italian fleet. The Russian victories may be due to the concentration of German defence in Bulgaria, as much to secure Rumania as to keep Greece safe. But the Russian victories well may induce the Allies to get nearer the Black Sea and start the war in Crimea independently when the Soviet Army enters Poland. The most cautious estimates of the future in the Balkans emphasise the need to inter- the Allied programme is more or less inchoate. Not for the first time has the soldier been in advance of the politician, and the political results been shelved even when the operations have been pursued resolutely. Old guarantees to kings and peoples may require modification in the same way as those given to General de Gaulle were adjusted at Algiers.

There have been no denials as to what the Croats should expect if the Serbs regain independence. The events in Italy leading to a split between the Fascists and the King have modified calculations as to the future of Yugoslavia. The Serbs have a real reason to look for greater assistance from the Soviet as there may be no charges against the guerrillas, much less against their leader. Bulgaria is ruled by an infant. The pro-Nazi premier is gone and the German protectorate is so obvious as to excite displeasure. The Allies have a large area to work upon and a free hand is not the less likely because of Greek or Yugoslav ambitions. The Germans have made territorial changes this year to the advantage of Bulgaria, encouraged Macedonian autonomy and ejected the Italian partner. The Allies have said nothing about it nor have they promised retribution, even after the declaration that Budapest is an open city, a statement which may be regarded as affirming that Central and Southern Europe is within the range of Allied bombers.

The neutrality of Turkey may be no disadvantage though her entry on the Allied side would make for the speedy surrender of Bulgaria. The mistakes of Roumania have not yet been made plain. To capitalise the confusion produced by the unrest from Denmark to Slovenia is not difficult. The Allies of course have to make the promises of the Atlantic Charter obvious and intelligible, to prove also that the New Order is shattered and employ the most diverse elements from Finnish defeatists to Greek republicans because it is now largely a question of reducing the area of the Greater Reich after the attack on Corsica which brings France nearer. It is not unlikely the French National Committee might have set views on the future of the Balkans. The Turkish interest is not less obvious at present, and how the Allies should bring Turkey nearer the French is a problem for the Co-ordinator of Muslim affairs in North Africa as much as the Foreign Office.

THE

FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

No Agreement

Mr. Amery's survey of the famine has only indicated that responsibilities must be shared by the authorities in India. Expressions of sympathy already alternate with critical remarks on the handling of the problem and there is a danger the next food conference may yield no large results. News agency messages have confirmed the forecast that the Punjab wants that food policy should run in the old groove. Lord Linlithgow's interest may evaporate rapidly as the Punjab Ministry's demand is for a reserve based partly on imports. Imports are virtually impossible at present as the Secretary of State pointed out last week and the Punjab has entered in advance objections to both price control and rationing. The objections may be based on the fear that exports will yield less money while there is no guarantee of goods or treasure in return for food exports from the surplus province. The Punjab Ministry has indicated that price control is impossible; likewise rationing. The latter is a device meant for deficit areas and to proclaim a deficit in the Punjab is to fly in the face of facts. The Punjab has no desire to control prices, engage in trade by holding reserves or commandeering stocks.

The original assumption that N. W. India has no food problem has to be retained in order to show that the coalition has done better than the other Ministries in India. Imposition of rationing may entail large demands for wheat above the originally agreed quota of one million tons and the last offer of wheat for a Central reserve is wholly conditional. The Central Government in order to obtain Punjab grain must procure seaborne imports. If this is not done, all the proposals in favour of control, rationing and requisitioning must fail. The U.S.A. looks on food shortage as a British problem, so that the Inter-Allied relief agency may ignore the situation. Imports have to be secured independently, and calculations as to Australian shipments to India this year must be of less interest than the question of building up a reserve for the Centre. Provincial contributions can only be fixed if wheat supplies from abroad are fixed up. The world has a surplus of wheat but India's ability to draw on it seems more than ever doubtful. Supplies from the Persian Gulf may not be large, as the Middle East obviously has prior claims on Iraq's surplus, and whatever benefits have been offered by India in the past have been offset by enlarged oil supplies from the Middle East. The fact that Iran is at war alongside of Iraq must limit future demands on the Middle East for surplus grain though the suggestion that India having shipped some rice to Arabia this year is entitled to benefits, has received immediate approval. Before the final food conference meets to record disagreement it must be made known that imports are ruled out so that the deficit provinces may know what will be their share of the Punjab surplus and make it clear that local effort must be more keen and sustained. The Mayor of Calcutta has been informed from Washington that sea borne imports are unlikely. There has been no amplification of the original answer as to the shipping position. The Indian food problem appears to be unknown outside the India office.

Canadian Gift

Canada's national income placed at $8.5 billions a year has to stand a total expenditure of $4.9 billion nearly on the war this year. Increase in public expenditure exceeds $1,000 millions. The main changes in the budget are the increased grants for the armed forces. Increased production of ships and aircraft is indicated in the defence estimates of 1943—$1764 millions for the Army, $489 millions for the Navy and $1129 millions for the Air force. Allocation for defence plant construction and extensions is lower than in 1942-43. Tax revenue, including provincial and local, for 1943-44 is placed at $3000 million leaving the public with $5,500 million to spend. Purchasing power in Canada will be equal to that available in 1942. Since the supply of goods is lower at present savings must be larger, and the estimated surplus of $2,000 millions is the target for Victory loans this year. Canada has raised the rates of income-tax and moved forward to the pay-as-you-go plan. Dominion revenue at $2,752 million is over 50 per cent of the year's total spending; but clearly not equal to the total outlay of $5,500 millions. The budget deficit showing an increase of over $1,000 millions has to be met by borrowing, but after allowing for $2,000 millions realisable through current savings, the Dominion will rely on the use of accumulated savings for investment in war loans. The Chartered Bank of Canada has absorbed steadily more securities; in March alone the statement showed a rise of $300 millions. The increase in public debt explains the rise in annual interest charges to $198.5 million in 1943-44. The new rules as to income-tax accounts for the increase in subsidies and compensation to Provinces. Most important feature is the provision for $1,000 millions to the U. K. under the Mutual Aid Act. In 1942-43 Canada made a war gift of $1,000 and has repeated it as was made known in April when the Canadian contribution was jumped with the British Exchequer's receipts. Last year Canada's debt rose by $1994.2 millions, so that half the annual increase is due to the gift to Britain. The British Government's grants for Canadian defence plants etc., had been discharged in 1942 so that the gift provided for the U. K. is the sequel to repatriation and dis-investment. Canada relied, to a considerable extent, on deposit certificates and banks invested $790 millions in deposit certificates. The total suggests that Canada has raised as much through her banks in a year as Britain: at any rate short-term debt has grown more rapidly.

Critic of Taxation

The new President of the Bengal National Chamber criticised the recent Bengal Budget, not merely because it showed a deficit of Rs. 7.36 crores, but because the food crisis is not one to be tackled by Bengal alone. Mr. D. Gladding in the Budget discussion entered a plea for liberal assistance from the Centre aspart from the loans made or to be made. Famine relief, said Mr. J. K. Mitter on Saturday is not a Provincial fatter. Extraordinary circumstances which have brought about the deficit should call for extraordinary measures in the shape of loans and subventions from the Government of India. Being in the war zone, Bengal has naturally to shoulder financial responsibilities which other Provinces, more fortunately placed have not. Mr. Mitter also urged that measures taken are part of the general Defence measures and must appropriately fall on the Central Government. If part of the expenditure falls on the Bengal Government, borrowing from the India Government or the open market is recommended. This suggestion was coupled with objections to the proposed agricultural income-tax. Two public meetings preceded the Assembly discussion on the motion for a select committee. The arguments against the Bill were put forth mainly by landlords. The Bengal National Chamber endorses the landlords' arguments; and so Mr. Mitter objected to the taxation proposed by the Ministry. He said that the idea of meeting part of the Provincial deficit by taxation was unjustified. He declared the question whether agricultural income is a suitable source of taxation is admittedly controversial. He referred to the inadvisability of rushing through a controversial Bill, and argued that persons likely to be affected by new taxation are those hit hardest by the food crisis who will find it absolutely impossible to bear a fresh burden in the nature of a tax on their agricultural income. The other argument employed was that the proceeds of the new tax would be merged in general revenues and would not be available for the nation-building departments Mr. Mitter deprecated also the proposal to enhance the sales tax. He expressed a hope that the income-tax Bill would be abandoned. The European Group approved the Finance Minister's proposal to tax agricultural income and one member explained how sterling tea companies would not benefit and any refund in Britain by the treasury could not be regarded as discrimination in their favour as they would pay 2½ annas in the rupee like Indian companies, though their total tax liability would remain the same. Indian tea companies in the Dooars or Darjeeling would have to pay the tax for the first time, and their net profit might be lower in the future. The quasi-private tea companies which are exempt as to a large part of their income cannot claim special privileges. It is, however, clear in the light of Assam experience that a new tax has no material effect on earnings or dividends, and the tea industry's ability to bear a new tax has not been seriously doubted by the opponents of the new tax bill.

Sugar Statistics

A note on the last sugar season is of limited interest today but it is clear that the drive for maximum production in 1942-43 fell short of expectations. There were 150 factories treating cane directly, but the crushing began late in the U. P. and Bihar. Only 11 factories were at work in October and only 4 factories worked beyond May 26. Cane shortage was the chief reason for the shorter season of 1942-43 though total quantity crushed amounted to over 10.4 million tons. Only after the Government sanctioned an increase of Rs. 2-5 per maund in the price of sugar, and the price of cane was raised from 8 annas to 10 annas per maund was the average factory able to count on normal supplies. But the working season for mills in Bihar and U. P. was larger than that of 1941-42 while the season was shorter in other Provinces. Sugar is a seasonal industry as indicated in employment statistics and only 2 mills had a working season of over 180 days whereas 6 mills had a long season in 1941-42. U. P. factories had a bigger crush in 1942-43 and the All-India average was 69,500 tons against 53,500 tons in 1941-42. The maximum crushed by any factory in a day was 1,920 tons in the U. P. where the average was 760 tons. The increase in sugar production to 1.07 million tons in 1942-43 has been described and explained often. The recovery in U. P. sugar output led to a jump of 50 per cent in output. In Bengal, the 8 factories produced 16,500 tons against 23,700 tons in 1941-42 produced by a factories at work. Recovery percentage was higher in India in 1942-43 at 10.28 per cent as Bihar reported a rise. Over 24 factories reported recovery of 11 per cent in 1942-43. Mr. Srivastava contradicts the familiar official doctrine of adequacy. His note states however that regulation of supplies satisfies essential requirements. This season must witness a further rise in output as indications are hopeful. As the area under cane is larger and essential supplies are promised to mills which may find the gur control order an advantage, the outlook is called hopeful, and the stock exchange's prescience in putting up quotations for all sugar shares this year seems remarkable. Rating of dividends on the basis of higher profits is not unjustified.

Tax in Grain

Collection of land revenue in the form of grain is contemplated in Madras but even earlier a Punjab Minister mentioned the possibility to a meeting of his constituents. The Lyallpur system of assessment may warrant a modification of procedure but in Madras even where the average outturn is pre-determined, any departure from the system of land revenue may lead to abuses. The Adviser may approve, but the taxpayer's consent is more important, and the proposed discussions will only indicate the hostility of landlords to any system opposed to the rates fixed by temporary settlement. There is little doubt that collection in kind without a statutory basis will be rejected by the majority of landlords and cultivators. On any view it would be essential to collect revenue in kind from the permanently settled districts as well, and zemindars having faced enough tenancy legislation might jib at a measure enhancing taxation. If the revenue from land is to be increased, the agricultural income-tax is the only innocuous means of taxation. Large-scale stocks, purchases and sales of grain may offer temptation to a bureaucracy not known for its ability to resist it. It is essential that such temptations should not be present even though an ordinance to deal with corruption has been promulgated. Formal argument as to farming costs and the price-level is hardly necessary and the example of China is not applicable. The Chinese Government collects the land tax in kind and expects to get 78 million piculs of paddy and wheat this year. But the provincial governments decided earlier on getting the revenue in kind to feed the armies. The Chinese Government accepts cotton from this year as land tax but the Indian Government is not likely to do so as it knows that prices an sugging. The Chinese system was in effect the consequence of uncontrolled inflation and administrative breakdown. To copy it would be to proclaim the lack of official faith in the rupee. Since the intention is to start a big save-lend campaign to take off the agriculturists' superfluous purchasing power. the danger-

ous novelty of collecting tax in grain will seem disastrous.

The Madras Government has suspended remissions and modified the assessment of double-cropped lands. The means of raising the water rate undoubtedly exists: so revenue may be augmented. The depression produced a demand for collection of tax in kind which was negatived. The opportunity was missed years ago and it is clearly objectionable to try out new ways of raising land revenue. While it is indisputable that price control can be worked out easily, it is noteworthy that in Bengal and Assam the Governments, backed by the people, have not attempted to get revenue in the form of grain. The civil supplies department in Bengal did not force the pace by trying to commandeer part of the aus crop. The Madras Government which has no special agencies, and presumably no finance for the purpose of taking and keeping grain, is obviously taking a leap in the dark in commending the proposal of land revenue in kind to the public. The theory that land revenue ceases to be a part of the net produce available to the State as the landlord may have its points at present, but the exhibitions of profiteering by Government monopoly concerns in other Provinces makes it difficult to say anything in favour of the proposal submitted. On a point like this, a referendum is the only way of deciding the practicability, but the political deadlock is likely to hamper submission, either to the legislature or electorate, of the proposal to convert the assessee into a sharecropper.

Earnings and Traffic

The total earnings of State Railways from April 1 to August 20, amounted to Rs. 65.92 crores showing an increase of Rs. 7.92 crores on the earnings for the same period of 1942-43. It is significant that the largest percentage increase in earnings is shown under the B. & A. Railway. Food transport has made a contribution to State railway earnings this year and the railways serving Bengal show a marked improvement in revenue as against the lines in South India which report an inconsiderable increase in earnings. The increase in revenue must be related directly to the increase in wagon loadings though the improvement in August as compared with August, 1942 may be ignored. The increase in wagons loaded since April 1 is not confined to the metre gauge as an increase of 1.47 per cent under the broad gauge is noted. The increase is attributed to the increase in coal and coke traffic, grains and pulses and the larger tonnage of carried by rail.

It is noteworthy that traffic in oilseeds etc., has suffered for the reason that foodgrains have been given preference. The increase in wagon loadings under grains and pulses is as much as 10.3 per cent and the total for coal wagons in spite of current fears show an increase of 3.61 per cent. A larger increase under miscellaneous full wagons must be clearly due to the war. The increase in goods traffic explains the abolition of several passenger trains on the railways and the increase in tonnage lifted must have continued after August 20. From April 1 to August 20 the quantity lifted on the broad gauge was 26.96 million tons against 26.5 million tons in the previous year showing a rise of 1.7 per cent. Tonnage lifted on the metre guage at 5.85 million tons nearly was in excess of the tonnage of 1942 by 4.19 per cent. The increase in goods earnings must, therefore, support the railways. To look for a rapid increase in coal and coke traffic is not wholly unwarranted at present since the April-August figures point to a fall on the metre gauge lines only and the carriage of coal on home lines for use of railways. Improved distribution and raising may bring about a welcome change.

Sea And Air Services

Some months ago, leave was sought from the Board of Trade by six British steamship companies to amend their Articles of Association so as to permit them to run air services. The remarks of Lord Essenden at the Furness Withy meeting suggested that shipowners were in earnest and a recent message stated that Cunard, Clan, P &O, Silver and Stanhope lines have acquired power to run air services. Attention may be drawn to the Union Steamship Company's air services in New Zealand and the C.P.R. (as much a shipping line as a railway) control of air lines. It is known that Grace Lines have interests in air services in Latin America and the British shipping companies, anxious to make the most of post-war opportunities, have set about it. The confusion produced in regard to control of British Overseas Airways this year favoured the attempts of independent enterprise, represented by the shipping companies, to advance claims for a share in air transport.

The air lines of the future may link ocean transport and carry goods as well as mails. Shipping companies enjoying mail subsidies are thus likely to command special attention if they are able to offer all-up carriage of mails as an alternative to ocean mail services. It is noteworthy that aircraft manufacturers show no eagerness to run air services though Short Bros, under Government control, conceivably can start flying boat services across the Atlantic after the war with less difficulty than the shipping companies. The 'Saro' flying boats fit for new passenger services after conversion to civilian use, have been mentioned as a departure in British aircraft production. The most interesting departure is the entry of the cargo-carrying companies like the Clan Line and the Bank Line into the field of air transport like the passenger-carrying mail ships. It may be due to the greater financial strength of a company like the Clan Line rather than to any specific advantages.

The biggest advantage in the future will be the grant of reciprocal facilities under treaties of air navigation, P & O obviously can girdle half the world with services from Plymouth to Shanghai, Tilbury to Sydney. British shipping interests deprecated the monopoly of civil aviation and found a supporter in the Society of Aircraft Constructors who put efficiency first and argued against subsidised monopoly. The Cadman enquiry led to changes and the later secret report may lead to others but, meanwhile, shipping companies have made it clear that their own air services are eligible for subsidies and there can be no question of their organisation being inadequate for air commerce. A small Indian company has been lately acquired by Scindia Steam for obvious reasons while the persistent rise in I.N.A. shares serves to show how bright the future is for aviation. But British shipping may offer a challenge to infant local enterprise, and it is doubtful if present connections in any case and prospects will survice the end of the war. The more important consideration is that before the Dutch or other air services, India should have the air lines with Burma and Malaya ready and have a really adequate service to the Gulf long before the Post Office can organise anything equal to what will be provided by the steamship companies. Apart from the acute need for air mail services, there is no question as to the value of new air services with Free China run mostly by American planes. Empire shipping companies are anxious to keep the Empire air routes for themselves, a legitimate ambition.

NOTICE
PUJA HOLIDAYS

The usual concession in fares during the Durga Puja Holidays will not be available this year owing to War conditions.

The public are also reminded that train services have been cut down to a considerable extent. During the Puja Holidays no extra trains will be run or additional accommodation be provided for holiday travel.

IN YOUR OWN INTERESTS DON'T TRAVEL DURING THE PUJA HOLIDAYS UNLESS YOU MUST

Commercial Traffic Manager.

Egyptian Demand

In the first quarter of 1943 Egypt's imports from India showed a fall in spite of the improvement in the war situation and the trade activity in Egypt. Large takings of piecegoods have been mentioned in the Trade Commissioner's report for February-March. Not being covered by import licenses, they were requisitioned and handed over to co-operative societies for sale. There has been recently mention of the Middle East's need for Indian textiles and a cotton mission from India has met with a degree of success owing to the demand for Indian piecegoods in Egypt. The main interest of the report lies in the mention of prospects for Indian tobacco. Before the war, Egypt did not know much about Indian tobacco. Supplies were drawn from the Balkans, U.S.A., Turkey and Japan. But Indian tobacco has entered the market, and importers have placed orders. Official eucouragement has not been wanting in Egypt. Indian exporters are asked to take a long view and create a good name for Indian tobacco so that the impression now made is of a lasting character. Egypt's present requirements of manufactured goods include stationery and gramophone records. Egypt also wants pepper, cinnamon and other spices as East Indian supplies have disappeared. Old newspapers are also required by traders who lodged enquiries in Alexandria. Woollen and silk goods, handkerchiefs are wanted; so cotton yarns and goods are not the only textiles in demand. Vegetable oils, shellac, crockery, lamps etc., are wanted from India along with medicines, gunnies and glassware. As in East Africa the growing demand in Egypt is largely for manufactured goods.

Economics of Partition

New York correspondents have spread themselves over a geologist's assessment of Pakistan. The U. S. quarterly could not have added much to the general knowledge of the economic implications of Pakistan but the American testimony is more important than it seems, after the Cripps offer conceded Pakistan in principle, and only objected to the conditions for a plebiscite. Pakistan will be small, deficient in minerals, and would probably have a single seaport. All this is commonplace like the arguments regarding the division of public debt, the running of railways etc. More important still is the consideration that Pakistan would be divided into two parts and one part would be cut off from the other. A very important point to consider is that new territorial arrangements must lead to the creation of free ports. The customs zone must not begin at the ports. Military expenditure in the future might not be less for Pakistan which would have to guard the north-east as well as the north-west frontiers. Economic potentialities may define power for defence, but the undeveloped resources of Pakistan would be fairly large, if Kashmir is in the orbit. The essential advantage in regard to oilfields would, however, be with Pakistan, and the jute industry in the east would be a self-contained monopoly which would make Pakistan self-sufficient in respect of all textiles. Internal trade barriers would force up prices and conceivably stimulate industrial progress in parts of Hindustan e.g. the C. P. and parts of the Pakistan e.g. the Delhi area. The American professor argued that the rate of industrial development turns largely on the maintenance of unity. If the Pakistan plan were forced through at once it would perhaps cut off Bengal from the Provinces with a surplus of food and complicate the problems of transport. But Pakistan's economic weakness would make the rest of India vulnerable against the external foe, and present dependence on subventions in the case of one or more Provinces may not affect the solvency of Pakistan which would have monopolies like tea and jute in the field of exports and would be able to make agriculture go a long way towards redressing the inequality of trade and industry. Obviously Pakistan would have cotton of a better type than the rest of India and cut Indian short-staple cotton out. It would have a chemical industry too as Rajputana and Baluchistan would be economically subordinate to the authority in control of Karachi. In regard to air and maritime transport, Pakistan would obviously not be a landlocked pocket of the territory up north, and a Muslim State in the East might find in Malaya and Java opportunities similar to that found by traders from the Hadhramaut for a long time.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

The Pujas today are without precedent for the background of suffering and distress against which Bengal has to observe the major festival of the year. The best plans and the most herculean efforts will not avail to restore normal conditions in the life of the people whom hunger has driven out of their homestead to live the life of vagrants in the towns and cities. They must, perforce, observe the Pujas in their present state of nomadic destitution. Even the well-to-do cannot avoid the most poignant feelings as the Pujas draw near. A festival of light, love and jollity has to be conducted with rationed goods, in the gloom of blackouts and in a vague, but fierce resentment, against unknown authors of famines and scarcities. Never had the Pujas a more uncongenial setting than today; and it is force of habit and deference to convention that impels one to write of the Puja season and offer the greetings of the season to one and all. A sheepish look is inescapable when one realises that in the conditions of today, the greetings are too conventional to be seemly.

* * * *

As I was nearly groping my way down the gloomy streets a few days ago, I was telling a war time immigrant into Calcutta of the festive look which in the good old days Calcutta used to wear months ahead of the Pujas. From the beginning of September, one found the main roads of Calcutta more brilliantly lit by shopmen's display of their wares. Women used to start their Puja purchases at least a month before the beginning of the ceremony. And the streets of Calcutta had an inescapable festive air for a period of more than two months. What a contrast between then and now! Not only the war, but other factors have gradually undermined the cheer and gaiety of the Pujas. Even in the early 'thirties, there was a noticeable ebb of Puja feeling. The Depression had affected all classes, particularly the landed gentry who were really the backbone of the Puja celebrations. The spirit of abandon in purchases and gifts gave place to a spirit of calculation, more or less wholly out of tune with the traditions of Bengal's upper classes. The requirements of religious ritual were, no doubt, met ungrudgingly and on the same old scale. The idols and the decorations were as grand. But thanks to the inexorable economic factors, the spirit suffered an erosion. The shop windows reflected the smaller appropriations of the domestic budgets. And when the Depression reached its nadir, the shopping crowds in the streets of Calcutta were the thinnest.

* * * * *

But even those times look like palmy days by the side of the present; of lighting, there should be even less now than during last year. We are supposed to be nearing the resumption of air raids on this city. Lighting restrictions are bound to be tightened, and though the young enthusiastics may maintain the candle power within the halls and the *pandals*, the roving crowds must move about in utter darkness and suffer the inevitable depression of spirit. Of clothing, the people shall have no more than what the mills choose to give as rewards of patience in waiting in the queues. The upper classes, especially those of them which count large families, can hardly contemplate purchases of the same quality, or on the same scale. The high prices effect a reduction of consumption which the most rigorous rationing cannot achieve. In the matter of food in general, and sweets in particular, the screw is even tighter. One often wonders what has happened to India's production of sugar. But it is not perhaps becoming to talk of sweets when there are large numbers of people who have to go without foodgrains. Nevertheless, it would be heartening to hear of special measures for making sugar available to the people in this season of festivals.

* * * * *

The troubles of the Depression are nothing compared to the hardships of the present. The former, it is often said, was a time of poverty amidst plenty. But looking upon that period, one wonders whether it was not rather a case of plenty which was tantalisingly kept at a distance by poverty. Now it is the other way about. Money incomes, generally speaking, have gone up a great deal. The average man, who found the language of money market reports utterly incomprehensible, is now enabled to realise that large sums of money can lie about without any immediate function to perform. Many people are, compared to their former state, really rich. But there is a Midas touch about money to-day that makes the poverty of the present particularly poignant. Between Tantalus and Midas, we have moved like a shuttlecock. It is difficult to imagine the feelings of the masses at this time of the Pujas. Perhaps, religion is too strong a force to let the mass mind deflect from the paths of implicit devotion. The embitterment, which the sophisticated classes might feel at the present position, is not, perhaps, felt by the large number of destitutes who fill the streets in urban areas. To them, the Pujas might be just a reminder that Durga has her terrific aspects, even as she has her aspects of benevolence. They might well reflect that it is the terrific aspect that she has chosen to manifest on this occasion and that before long the Goddess will smile again on this hapless land.

* * * *

The Hindu religion is helpful to confirming the pathetic fatalism of the masses. That fatalism is no doubt a balm in intense personal suffering. But of its deleterious effects on a social organism, there can be no doubt. It is hardly helpful to emphasise that the genuine core of Hinduism has nothing in it that can encourage such a fatalistic attitude to life. But to society at large, it is not the philosophic content of a religion that matters. After all, though it is common to distinguish between the spiritual and the secular and to regard religion as a matter of the spirit, religion as a social institution has a biological significance. To the followers of every religion, their religion has an unquestionable biological value. But it is a hard fact that, so far as Hinduism is concerned, religion has ceased to have biological value. On the other hand, it has tended to impose on its followers, to whatever class or caste they may be-

long, a number of recognisable handicaps in the race of life.

* * * *

This is not the time or the place to discuss the biological value of religion as a social institution. But the Hindus as a rule, tend to overlook it altogether; and not all the difficulties which the religion has created in the way of our social and political solidarity and progress have sufficed to direct attention to this aspect of our religious life. Neither the religious organisations of the mutts nor the secular organisation of the Mahasabha has cared to inquire how a re-vitalising force may be provided for the Hindu community. I hope I shall not be misunderstood as evincing a communalistic attitude. It is not the strength of the Hindu community vis-a-vis some other community that I am now thinking of. I am thinking rather of the social fibre that binds a large majority of the population into one recognisable unit. Since the days of Sankara and Ramanuja, Hinduism has not witnessed a revivalist movement of countrywide scope. But theirs was more philosophical and theological than religious and social. The revivalist movements of the last century were in the first place confined to a few provinces. They were in origin and to some extent, even in their essence, but weak reactions to the criticism of foreigners who had no more than a partial understanding of Hindu life and religion. They left the bulk of Hindu society untouched and to some extent contributed to the strength of a counter-revolution. The revival of untouchability which Mahatma Gandhi pleaded for and succeeded in achieving is a lopsided growth which has done harm alike to the caste Hindus and the Harijans, to politics and religion. The Mahasabha, as I have said already, looks on itself as a political party out for seats in the legislature rather than as a mirror of the better mind of Hinduism. It is, indeed, strange that a religion so old, so rich in experience of every kind should have been so barren of development for centuries. Hinduism lacks neither the abuses which a free thinking protestanism will feel called upon to rebel against nor the catholicity of outlook to which our effective appeal can be made. I have often thought that a genuine Hindu revivalism is a necessary preliminary to any further progress in any sphere of life.

NORTH WESTERN RAILWAY

Break of journey on single and return tickets.

Holders of single and return tickets for more than 100 miles are at present allowed to break journey at the rate of one day for every 100 miles or part thereof. From 1st October, 1943 passengers holding single and return tickets for more than 250 miles only will be permitted to break journey at one or more stations whose distance apart are in excess of 250 miles at the rate of one day for every 250 miles or part thereof in addition to the time occupied on the journey. Further details may be had from Station Masters, General Manager, Lahore.

War conditions have interfered with the supply of Andrews Liver Salt. Stocks are now low, and, in some areas, completely exhausted. Supplies will be renewed at the earliest practicable moment so that once again you can enjoy your regular glass of Andrews — for Inner Cleanliness, for Health.

5% DIVIDEND FOR THE YEAR 1941-42.

Mr. K. N. DALAL, Director-in-Charge.

I may appear to have strayed far from the question of Pujas and religious festivals. But the truth is that with the defects of organisation and ideology which I have pointed to in Hinduism, Hindu religious festivals tend to lose their social importance in conditions like the present. So long as material prosperity enables the observance of religious ceremonies, it is easy to keep religious devotions, social goodwill and a sense of personal enjoyment at a high level. But in adverse conditions, jollity evaporates with incredible ease and leaves in its place feelings of embitterment that are not a help either in this world or the next. I imagine it is far otherwise with other religions. Christmas is a like affair both for devout Christians and for the tepid followers of Christ to whom Christmas is only an occasion for merry-making. The vicissitudes of the individual or of society do not affect the spirit of Christmas, since the sense of social solidarity make up for the troubles of a lean period. In the case of the Muslims, the intrinsically democratic nature of the religion and the sense of social compactness are brought forth in an impressive manner in all congregational prayers of the Muslim community. Hinduism has in the variety and graded character of its religious and philosophic beliefs a compensation for the sense of equality which, however exalting, is in the last resort unreal. This variety, which the ancient Hindus provided as a compensation for the inescapable inequalities of life, is not only bearable, but seems even picturesque when the material conditions of life do not pinch too hard. But the foundation of all social life lies in economic conditions. Hinduism itself is based on a frank acceptance alike of the inexorable importance of economic factors and of social inequalities in conditions of backward productive technique. The Hindu social structure has withstood the onslaught of time only because of the sense of realism displayed by the ancients. But, doubtless, the time has come after more than two thousand years when the basic assumptions have been invalidated by social developments. Hindu society is again face to face with the need to revise those assumptions and bring them into greater accord with the facts of life so that the content of the religious faith and the social structure of the Hindu community will be more closely adapted to the needs of the times.

* * * *

The body of religious doctrine and faith that lies behind the Pujas certainly lends itself to a new interpretation that will facilitate the task of curing the masses of their supine fatalism and of energising the people so as to achieve great ends. Durga, is most of all, Sakti, dynamic energy, that never flinches from the destruction of evil, which is the necessary preliminary to the building up of the positive good. The Durga cult, more than any branch of Hindu religious faith, is helpful to the resuscitation of the dynamic of our social life. Other faiths have been emasculated by the misinterpretation of Buddistic Ahimsa or the exaggerated emotionalism of the Sakti cult. Now that Bengal the home of Durga worship is in the grip of unprecedented suffering, it may not be a vain hope that this time, more than any other, the true meaning of the Pujas will be understood and the social will will be strengthened alike in good feeling to all fellow beings and in the resolve to achieve a new and better order.

Madras, Sept. 25.

SEVERAL suggestions for the improvement of the working of the Standard Cloth Scheme were offered at a special meeting of the Managing Committee of the Mysore Chamber of Commerce held last week at Bangalore to meet Mr. M. K. Vellodi, Textile Commissioner, Government of India. Mr. Chellaram, the President, urged the necessity of putting on the market adequate supplies of cloth specially suited to the tastes of the different localities in India. At present the varieties of cloth offered to the Provinces and States are not exactly those used by their people. If the provinces and States are given the choice of purchasing only such types of cloth and in such dimensions as would suit them, then the poorer sections would feel satisfied and even the general level of prices would go down. This would no doubt involve some variations in the standard specifications adopted at present. But it is better to adjust to the demands of the public than to produce qualities which may not be sold but would merely accumulate in warehouses, mills and shops. It was suggested that the present list of products for which ceiling prices had been fixed should be expanded and the varieties specially favoured in provinces and States should be included. The requirements of the mills manufacturing special types of cloth should be sympathetically considered by the Textile Control Board. Mr. Vellodi pointed out that 109 varieties of standard cloth are manufactured to-day to satisfy the widely differing tastes and requirements. Regarding the expansion of the lists of textile products he said that the question was taken up with the Textile Control Board and that the mills might send full particulars regarding the quantities they were manufacturing, the complete specifications of their products, etc., so as to help in the expansion of the lists to be drawn up in October. Referring to the difficulties of transport the Commissioner stated that a zonal system has been devised allowing the mills in particular areas to despatch their products only to particular areas by rail. During his visit to Calicut he sounded a warning that Provincial Governments and States should be vigilant and keep down the prices to reasonable levels. Complaints regarding careless manufacture of standard cloth, the unsuitability of the dhoties supplied to Malabar, and control of the handloom weaving and its products were heard and the Commissioner promised to do the needful in the near future.

There have been protests against the indiscriminate slaughter of cattle from different parts of India and the rapid rise in the price of cattle has caused great anxiety in urban and rural areas. The Madras Provincial Livestock Improvement Board met at an emergent meeting and considered the situation. The general public apprehend that large number of cattle are slaughtered or sold to the military resulting in serious shortage of bulls and cows for civilian purposes. The meeting of the Board discussed the position and arrived at the conclusion that the Grow More Campaign and the need for increased bullock transport had caused the upward trend in the prices of cattle. The number of cattle used for supplying beef to the civilian and military needs is stated to be under control, and further steps to ease the situation will be taken up shortly.

At the first anniversary celebrations of the National War Front held in Bangalore, Sir C. V. Raman paid a glowing tribute to the scientists who have contributed a great deal towards the gigantic war effort of the Allied Nations. The British scientists devised counter-measures to Germany's deadly weapons, minimised the menace of the submarines at sea and invented the radio locator which helped the R.A.F. to inflict crushing blows on the Luftwaffe during the fateful days of the Blitz. The Russian scientists played a leading role in the reorganisation of national life and paid great attention to technical inventions and food supply. The stupendous armament programme of the U.S.A. is made possible only by the admirable team work and efficiency of an army of American scientists. In our own country war has extended new opportunities for scientists and to-day many young scientists are working in the Meteorological Department. Sir C. V. Raman pointed out that the fundamental defect in our national economy is the low productivity of our agriculture and that scientists should devote their energies towards raising Indian agriculture to higher levels of efficiency and profitability.

South India, and particularly Bangalore, is proud of Prof. H. J. Bhabha, F.R.S., of the Institute of Science, Bangalore, who has been awarded the Adams Prize for 1941-42 for his book on "The Theory of the Fundamental particles of Nature and their Interactions". Prof. Bhabha has now won worldwide distinction and will be classed with Maxwell, Sir J. J. Thomson, Sir James Jeans and other luminaries in the scientific world.

The question of a separate province for the Andhras has again come to the forefront. The twenty-third session of the Andhra Mahasabha will meet at Bellary on the 23rd and 24th October, The people of Rayalaseema have not been in full agreement with the other areas of the Andhradesa and the separatist tendency has been a source of friction, controversy and boycotts in the past. The old forces have appeared again and there is a move to boycott the Bellary conference. Sir Vijaya, Maharajkumar of Vizianagram, has denied the reports that he has promised to His Excellency the Governor that he would obtain Rayalassema's consent for an Andhra Province. At a reception given in his honour, Sir Vijaya assured that demand for an Andhra Province was not a separatist move but an earnest attempt at developing the Andhra culture and unity. For a perfect synthesis of the different cultural areas in India the component parts must be fully developed and the formation of an Andhra Province will help in the process. Sir Vijaya also warned the zamindars that they should move with the masses as otherwise they would be blotted out of existence under the rising tide of democracy. He expressed his hope that Tamilians and Andhras would work in mutual co-operation and goodwill.

The famine conditions prevailing in Orissa have not received due publicity. The Provincial Food Conference held at Cuttack emphasised the plight of the hungry in North Balasore and Ganjam and demanded the immediate stoppage of exports of rice from Orissa. Restrictions on newspapers regarding the publication of facts relating to starvation and death has caused deep resentment. The Secretary of the People's Food Committee demanded a national government to control the food situation and punish the profiteers and hoarders.

Hyderabad is moving fast towards rationing. A Department of Food and Civil Supplies has been created and a Food Council consisting of non-officials is under consideration. A Rationing Preparatory Act has already been passed and further regulations will follow preparing the ground for a system of rationing as adopted in Bombay. Kerosene is rationed in Hyderabad city with effect from the 21st instant and it is expected that shortly the food situation in the State would be brought under effective control.

JUTE

Calcutta, Sept. 28.

In the short period under review slightly easier conditions have been noticeable in the raw jute market. There has been some selling pressure in order to find money for the Puja festivities. With mills not showing any keen interest in the market, prices have naturally been marked lower. It is not surprising that mills have kept out of the market as even with the improved rate of coal supplies, the close down of mills for a fortnight as from Monday this week, does not necessitate any fresh purchases of jute on a large scale. There is a tendency to await further developments. Some advantage has been taken, therefore, of the anxiety of ryots to dispose of their holdings. The decline in prices, however, has not been appreciable and it is generally expected that, if the same conditions continue to prevail after the holidays, prices will be maintained around the last levels.

In the loose jute section business passing has been on a small scale. Balers were good buyers for Tossa qualities of jute earlier in the week. Towards the close, however, they have shown some reserve as the immediate pressure on deliveries seems to be over, at least for the time being. Indian District Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund respectively.

In the pucca bales section shippers have not been very active though some buying in Dundee Daisee 2/3 at Rs. 77 per bale was reported earlier in the week. Mills bought Firsts and Lightnings at the lower rates of Rs. 82 and Rs. 77 per bale respectively.

JUTE MANUFACTURES

Calcutta, Sept. 28.

With the reports regarding the increase in production, the jute manufactures market was inclined to be easier in the earlier days of the week. With the holiday feeling also interbazar operators were inclined to liquidate their holdings. In Tuesday's session, however, a steadier feeling was noticeable with the reports regarding the satisfactory shipments to South America. Mills are not sellers for forward positions, and business at the present moment is confined entirely interbazar operators. 9 porters ready are quoting Rs. 21 for all positions while 11 porters are Rs. 28-1 for September, Rs. 28-2 for October and Rs. 28-4 for October/December.

The Heavy Goods section has remained firm though no business of importance is reported. Sellers are rather reserved. B. twills for September delivery sold on the basis of Rs. 66-8, Liverpool twills Rs. 74-12 and Cornsacks Rs. 67-12.

GOLD

Calcutta, Sept. 28.

The Bombay gold market continued firm early in the week with good speculative buying in a market short of supplies. Gold ready was quoted at the highest levels for some time at Rs. 77-6. There was some profit-taking at the higher levels but it was fully absorbed. The announcement by the Government of India that the period of delivery has been reduced to two days from the date of contract against the four days allowed previously has checked activity and there has been a slight reduction in prices. Gold ready closed at Rs. 77-8 and forward at Rs. 76-4. It will be noted that the premium for spot has widened with the rush for covering. Until the oversold position in the market is rectified, it cannot be expected that prices will come down at an early date.

THIS WEEKLY IS PRINTED BY

DORCHESTER PRINTING WORKS

116, LOWER CIRCULAR ROAD, CALCUTTA.

SILVER

Calcutta, Sept. 28.

In the silver market also similar conditions have been noticeable. After being higher at Rs. 123-8 silver ready closed at Rs. 122-4. There has been no widening in the premium for ready over forward as in the case of the gold market. At the close silver ready and forward were quoting Rs. 123-4 and Rs. 122-12 respectively. In the Calcutta market, the quotation was around Rs. 120-8.

There has been no change in the London market. Business passing has been on a small scale with the quotation for both Spot and Forward at 23½d.

PIECEGOODS

Calcutta, Sept. 28.

In the piecegoods market there has been good buying on account of both the *Id* and *Puja* festivities. In spite of the announcement by the Textile Commissioner that maximum prices will be announced for other varieties also and that steps will be taken to prevent profiteering there has been no reaction in prices. The difficulty is still in regard to getting adequate supplies from the Western Presidency and consumers are prepared to pay the prices asked for at the moment.

Stock Markets to-day and to-morrow

FURTHER RISE IN COAL SHARES

A PRE-HOLIDAY feeling is in evidence in the Calcutta market. But, as is usual, there has been no selling and business passing has been on a smaller scale only with the reserve adopted by buyers. The Bombay market has been very active and the need for transacting business on a cash basis does not seem to have had a restrictive influence on the market. Quotations for the popular counters are around the highest levels that were recently touched. The general outlook is considered quite satisfactory and the improvement in the war situation will, it is believed, result in a substantial rise in prices.

The giltedged securities section has been definitely firmer during the past two days. After being around Rs. 97 for several weeks, 3½ per cent Paper has improved to Rs. 97-7 from Rs. 97-1 and business in small lots has been done up to Rs. 97-12. There has been a further increase in the selling rate by the Reserve Bank of India to Rs. 97-8. At the end of last week, there was a definite shortage of scrips and investment buying was not quite satisfied. It was, therefore, pointed out that the stage had been set for a further increase in the tap rate of the Reserve Bank.

* * * *

The accounts of the *Indian Standard Wagon Company, Limited* for the year ended March, 1943 make satisfactory showing. While supplies of certain raw materials showed an improvement over the last year, the position was still not very satisfactory. The company's works were engaged on war orders. It is interesting to note that recently they have been engaged on entirely new type of work and that this important work is now proceeding smoothly, though difficulties and delays were experienced in the earlier stage. The net profit, before providing for taxation and depreciation, for the year is Rs. 3,80,593 against Rs. 3,46,381 for 1941-42. Sales are substantially higher, and the earnings would have made better showing but for the increase in the costs of production. That the company is full of orders is evident from the further increase in stocks and works-in-progress as at the end of the accounting period to Rs. 44.58 lakhs from Rs. 36.96 lakhs. The amount set aside to depreciation is Rs. 60,674 against Rs. 58,787. The provision for taxation is lower at Rs. 45,000 (Rs. 70,000). The dividend on the ordinary shares has been maintained at 12½ per cent. As on the former occasion there has been no transfer from the Dividend Adjustment Account. The amount carried forward is slightly lower at Rs. 15,446 against Rs. 17,496 brought in. On the publication of the accounts there has been a rise in the quotation for the shares to Rs. 72. The directors are optimistic regarding the prospects for the current year if no great difficulties are experienced regarding raw material and other supplies.

* * * *

In spite of an increase in the total of sales, the net profit of the *Bridge and Roof Company, Limited* is lower at Rs. 1,90,100 against Rs. 2,12,420 for the previous half-year, before providing for taxation and depreciation. The charge on account of depreciation is Rs. 26,916 against Rs. 30,429 while the provision for taxation is Rs. 1,16,278 against Rs. 1,24,030. The transfer to reserve is the same at Rs. 25,000. The dividend has been maintained at 5 per cent. The amount carried forward is lower at Rs. 46,669 against Rs. 54,756 brought in. The works continue to be fully occupied on war contracts.

* * * *

Shahdara (Delhi) Saharanpur Light Railway Company, Limited has been able to report a higher level of earnings for the half-year ended March, 1943. The net profit after providing for taxation and depreciation is Rs. 2,65,768 against Rs. 1,91,696 for the corresponding period of 1941-42. Provision for Excess Profits Tax is Rs. 1,70,000 against the transfer to reserve of Rs. 80,000. After providing for the Government's share of surplus profits of Rs. 31,756 (Rs. 52,626) the dividend has been maintained at 5 per cent.

* * * *

Mohini Mills Limited has done very well in 1942 and the prosperous conditions in the cotton textile industry have been fully reflected in the higher level of earnings for the year. The increase in the profit over 1941 would have been more pronounced but for the setback in the production of the mill at Belghuria towards the close of the year. The net profit, before providing for taxation and depreciation, is Rs. 35,62,579 against Rs. 11,57,268 for the previous twelve months. The provision for depreciation is naturally higher at Rs. 5,77,512 against Rs. 2,70,202 as also the provision for taxation at Rs. 19 lakhs (Rs. 5,15,000). The transfer to General Reserve is the substantial sum of Rs. 6 lakhs; the Dividend Equalisation Fund receives Rs. 98,000. The total allocation to funds out of the profits for 1941 is Rs. 1,56,154. Even after these substantial allocations to funds the dividend on ordinary shares has been increased to 25 per cent from 15 per cent. The amount carried forward is considerably higher at Rs. 53,971 against Rs. 26,900 brought in.

* * * *

Assam Match Company, Limited is issuing bonus shares to shareholders. It is proposed to capitalise the sum of Rs. 2 lakhs standing at the credit of the Reserve Fund and create 20,000 ordinary shares of Rs. 10 each fully paid up. The shareholders registered on October 15, 1943 will be eligible for two new shares free for every five old shares held by them. There has naturally been an increase in the quotation for the shares to Rs. 31, but even at the present level the shares are good for investment. On the basis of the last dividend the yield is nearly 5 per cent tax-free. As the company has made very satisfactory progress in the last three years, and as the dividends have been very well earned there may not be a proportionate reduction in the dividend for the current year. As the average price, on the basis of the new issue, will come down to Rs. 22, it has to be admitted that there is scope for further appreciation.

* * * *

Co-operative urban banking finds its most notable exponent in the Saraswat Bank, 25 years old, whose jubilee excited more than local attention in Bombay. The Saraswat Bank has a higher capital, larger deposits, lower administrative expenditure, very limited overdues and lends money at lower rates while attracting money at lower rates than any co-operative bank. This must be deemed altogether exceptional, but is certainly the effect of competent and devoted management to which Mr. V. P. Varde has made his own contribution. Deposits in 1943 total 23½ lakhs and working capital exceeds Rs. 26.15 lakhs. Membership, though limited to a compact and advanced community, has increased continuously since 1936 and the many features to which Sir J. A. Madan invited attention on the festive occasion need to be related to the stability of dividends and the extremely conservative policy pursued. New vistas are opened up by the Bank's proposal to include members of other communities; and the inevitable transition to joint-stock banking will doubtless be approved. The souvenir prepared by Mr. G. M. Laud indicates that the Saraswat Bank has made such

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 28.

DURING the short period markets have remained open, prices have continued firm though business passing has been on a smaller scale with a holiday feeling in evidence. The continued strength of the Bombay market has been a favourable factor. With the possibility of a further improvement in the war situation it is felt that the reopening after the holidays might be active. Markets will remain closed from Friday October 1, 1943 to October 14, 1943, both days inclusive. The feature of the week is the strength of the Coal section. A further rise in prices has been recorded and nearly all the popular counters are quoting higher. The Jute section has been slightly steadier while the Engineering section has remained firm.

The giltedged securities section has remained steady throughout the week and business passing has been on the usual scale. 3½ per cent Paper has been quoted around Rs. 97-8 and there has been rise in terminable loans. 3½ per cent 1963-65 was higher at Rs. 97-8 with 3½ per cent 1947-50 at Rs. 103-7, 3 per cent Defence Loan 1949-52 were quoted at Rs. 100-7 and 4 per cent 1960-70 at Rs. 110-12. 5 per cent 1945-55 were unchanged at Rs. 110-12. There has been no change in the conditions in the money market. Money is in plentiful supply as is evident from the increase in the amount of applications at the treasury bills auctions held this week though the average discount of thirteen annas and six pies per cent per annum might suggest that there has been a slight hardening in interest rates.

Among public debentures, there has been no business. The only transaction recorded in industrial debentures has been in 5 per cent *Chowringhee Properties* debentures at Rs. 102.

Business in preference shares has been restricted, *Auckland* being done at Rs. 158-8 and *Bally* at Rs. 176-8. Among other sections, *Indo-Burma Petroleum* were Rs. 108-8 and *Steel Corporation* Rs. 126. *New Victoria* preferences were Rs. 10-11.

In the Bank section, *Imperial Bank* contributories were unchanged at Rs. 445 and *Reserve Bank* at Rs. 119. *United Commercial Bank* were quoted at a premium of Rs. 14-12 per share.

Cotton shares have been neglected and quotations have been fluctuating round last levels. *Basanti* were Rs. 13 ex-rights, ex-dividend while *Bengal-Nagpur* were dealt in at Rs. 33-6. *Benares* changed hands at Rs. 13-10 and *Dunbar* at Rs. 270. *Elgin* were Rs. 78 in the earlier days of the period under review, but towards the close they were higher at Rs. 82-8. *New Victoria* were Rs. 8-10.

As remarked above, Coal shares have been active and a further rise in prices has been recorded. *Amalgamated* did not reveal any important change at Rs. 42-8, but *Burrakur* were higher at Rs. 21-12 against Rs. 20-12 at the end of last week. *Bengal* were quoting above Rs. 500. *Bokaro and Ramgur* were firm at Rs. 28-4 with *Central Kurkend* at Rs. 18-6. *Dhemo Main* were Rs. 16. *East India* were dealt in around Rs. 27-12 and *Equitable* at Rs. 43. *Ghusick and Muslia* were nearly a point higher at Rs. 11-2 cum-dividend. *Hurriladih* were Rs. 20 against Rs. 19-2. *Nazira* have risen sharply to Rs. 12-13 and are quoting at the highest level for some years. *New Beerbhoom* were Rs. 25-6, *North Damuda* Rs. 8-5 and *Pench Valley* Rs. 44-14. *Samla* were Rs. 4-12, *South Karanpura* Rs. 6-13 and *Talcher* Rs. 4-6.

Nothing of interest is to be recorded in the Jute section though prices are a shade higher. *Anglo-India* were Rs. 398, *Champdany* Rs. 216 and *Chitavalsah* Rs. 25-4. *Clive* were Rs. 28-4 and *Empire* Rs. 31-4. *Gourepore* were Rs. 800 and *Kanknarrah* Rs. 456. *Nellimarla* were better at Rs. 26-2 cum-dividend. *Nuddea* were in good favour at Rs. 105 and *Waverley* at Rs. 3-14.

In the Engineering section firm conditions have continued to prevail. *Indian Iron* and *Steel Corporation* were quoted around the highest levels touched last week, *Indian Iron* being Rs. 37-6 and *Steel Corporation* Rs. 27-7. The publication of the accounts of the Steel Corporation of Bengal Ltd., for the year ended December 1942 has not had any effect on the market as the Chairman's observations regarding the liability of the company for payment of excess profits tax have chilled the hopes of an early increase in the dividend on the ordinary shares. *British India Electric Construction* were Rs. 15-8, *Indian Steel and Wire Products* deferreds Rs. 34-8, *Marshalls* Rs. 3-12 and *National Iron and Steel* Rs. 13-4.

In the Sugar section, here has been a sudden rise in prices in the last two days and a further substantial improvement in the quotation is to be noticeable for the popular counters. *Carew & Co.* were prominent with a rise in the quotation to Rs. 23 from Rs. 21-12 at the end of last week. *Cawnpore* were 1½ points higher at Rs. 41-12 as also *Champarun* at Rs. 42-12. The results of these companies for the last accounting period are due to be published shortly and it is expected that there will be some satisfactory showing. *Darbhanga* quoted Rs. 29-12 and *New Savan* Rs. 19-12. *Purtabpore* were a few annas higher at Rs. 19-2 with *Ramnugger Cane and Sugar* at Rs. 11-9. *U. P. Sugar* were Rs. 29-4.

Firm conditions continued to prevail in the Tea section. *Banarhat* were 10 points higher at Rs. 826, *Jutlibari* at Rs. 19-4, *New Terai* at Rs. 27-12 and *Namburnadi* at Rs. 12-6. *Patrakola* were crossed at Rs. 1,105 with *Teliapara* at Rs. 565 and *Teesta Valley* Rs. 40-8.

In the Miscellaneous section, *Burma Corporation* were marked again at Rs. 4-2, *Indian Copper* were unchanged at Rs. 2-8 with *Consolidated Tin* at the same level. *B. I. Corporation* were sticky at Rs. 6; *Calcutta Ice* were in favour at Rs. 14-12, *Indian Cables* Rs. 29-4 and *Indian Wood Products* Rs. 21-4. *New India Investment* were Rs. 73-8 and *Publicity Society* Rs. 14. *British Burma Petroleum* were unchanged at Rs. 3-3. Paper shares were steady at last levels *Titaghur Paper* preferred ordinary were Rs. 5-10 and 'A' and 'B' ordinaries Rs. 27-10. *Midnapore Zemindary* were Rs. 92 and *Assam Match* Rs. 31-2 with *Calcutta Tram* at Rs. 26-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, September 28.

Firm conditions prevailed on the local Stock Exchange during the short period this report covers. The Government ban on *budla* resulted in restricted volume of business as transactions are conducted only on cash basis. The so-called speculative counters are as busy as possible under the new conditions: This lends support to the general belief that the present prices of the majority of the scrips are not unduly inflated but are fully justified under existing circumstances. At the time of writing the leading counters are exceptionally cheerful and it may be safely predicted that no far-reaching movement either way seems probable in the weeks to come. While the bigger operators find no room for pessimism, the majority of the operators and investors prefer to wait for some time so that they can enter the market in more settled conditions.

The giltedged market showed some important after change four or five weeks of steady conditions. 3½ per cent Government Paper were done up to Rs. 97-6-6. 3 per cent (1963-65) were Rs. 96-15; 3½ per cent (1947-50) were Rs. 103 and 4 per cent (1960-70) were Rs. 111-4.

Mill shares continued to be firm in spite of the ban on *budla*. The fact that business was carried on a strictly cash basis brought about a slight decrease in prices but to-day a change for the better was noticed. Though the turn over is necessarily small prices have not suffered to any appreciable extent *Bombay Dyeing* after going down to Rs. 2,005 has improved since to quote at Rs. 2,017-8. On announcement of an *ad interim* dividend of Rs. 8 per share, *Gokak* were done up to Rs. 354. *Century* were Rs. 920; *Kohinoor* Rs. 622; *Phoenix* Rs. 632-8 and *Svadeshi* Rs. 587.

Among Steel shares, *Tata* deferreds were slightly better at Rs. 1,900. *Tata* ordinary were Rs. 380 and *Indian Iron* Rs. 37-2.

Among Miscellaneous shares, *Bombay Burma* (olds) and *Burma Corporations* made striking improvement with the former quoting around Rs. 442-8 and the latter around Rs. 4-2. *Shivarajpur* were Rs. 61; *Scindia Steam* were better at Rs. 34-2. *Premier Construction* were Rs. 177 and *A. C. C.* Rs. 217.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 23rd Sept., to 27th Sept., 1943 both days inclusive)

GOVERNMENT SECURITIES:

3 per cent Loan (1951-54):—(23rd) 100-3; (27th) 100-6 s. lot.
3 per cent Loan (1963-65):—(24th) 97-4, 97-5; (25th) 97-8; (27th) 97-12 s. lot., 97-7.

CHAIRMAN'S SPEECH

SARASWAT BANK'S JUBILEE

MILESTONE IN CO-OPERATIVE BANKING

EXTENSION OF ACTIVITY WANTED

"The co-operative movement is bound to play an increasingly important part in the development of the resources of the country. And more than that, taken in a wider sense, it is co-operation that we have to look up to in solving not only the economic but also the political ills that our country has been suffering from in recent years."

Thus observed Sir Janardan Madan, presiding over a largely attended meeting held to celebrate the silver jubilee of the Saraswat Co-operative Bank, Bombay, on Tuesday. He added, "Unless we rid ourselves of the dross in our instincts, we cannot produce the gold that is our character. And what has hampered us all along individually, communally and nationally is this drawback in us. The truth about co-operation and the key to its full fruition in the well-being and prosperity of all lies in that one word character. Your co-operative endeavour along business lines needs as much that as any other activity that will help us onward."

Society's Souvenir.—"The story of the Saraswat Co-operative Bank and its development, briefly chronicled in the silver jubilee souvenir, is impressive and reflects credit on those who have been responsible for the conduct of its affairs in the quarter of a century that has elapsed. It is on account of the work of gentlemen like Mr. Varde, who has held office for no less than 23 years, that your bank has made its contribution to the development of the urban credit movement in this province."

"You know as well as I do," he concluded, "how hard is the struggle. Habits of a generation do not change in a day. And safty is more alluring than what is apt to be considered as a leap in the dark. But sometimes and somewhere a beginning has to be made to lift ourselves out of the old ruts, so that we may, as a reward of perseverance and persistence, take our proper place in the rank of those communities with whom business, trade and industry, and an independent, self-reliant line of work have become almost a tradition."

Welfare Work Too.—Welcoming the president, Mr. V. P. Varde, chairman of the bank, observed that the problem before the bank was one of devising ways and means to extend the scope of its activities and usefulness. He wanted Government to remove unhealthy restrictions imposed on urban banks, such as restrictions on deposits, and also urged upon members to take full advantage of the facilities which the bank was in a position to offer.

Mr. Varde felt that the time had arrived for the members of the bank to take to industrial and business pursuits and pleaded for a change in the community's outlook. He was of the view that genuine co-operation must transcend all barriers of caste and creed. In that connection, he suggested that a communal bank might be permitted to admit members of other communities to restricted membership and provision made in the Co-operative Societies Act for the automatic conversion of co-operative banks into joint stock banks on the lines of facilities given by the Industrial Provident Societies Act in England.

Mr. R. G. Saraiya wanted the bank to continue to follow the principle of diversification of loans and suggested that the bank might take up welfare activities also. He hoped that the Saraswat community would provide workers and leaders for the co-operative movement in general.

Prof. V. G. Kale dwelt on the usefulness of co-operative institutions and commended the system followed by the bank, of meeting once in a quarter to exchange views on social and economic problems confronting the members and the community.

Diwan Bahadur H. L. Kaji suggested that the bank might guide the depositors in the matter of investment by starting an investment trust and insurance business.

Mr. S. V. Rajadhyaksha, vice-chairman, thanked the guests.

Congratulatory messages were received from Mr. C. D. Deshmukh, Governor of the Reserve Bank, Mr. G. F. S. Collins, Adviser to the Governor of Bombay, and several non-official workers in the co-operative movement and from co-operative societies in the province.

(*Continued from page 669*)

progress that conventional legal restrictions are inappropriate. Reference may be made to the need to give facilities available to Industrial and Friendly Societies in the U.K. Mr. Varde in his speech has shown that the co-operative banks, not governed by the Companies Act should have special legislative sanction to travel outside the field of co-operative banking. Sir Janardan mentioned the possibility of home savings deposits as a means of encouraging small savings. What has been promised by 25 years of continuous harmonious growth may be an advantage. The financial agency appropriate to self-governing industrial units may be found in co-operative banks if the rule relating to capital and deposits are modified The Saraswat Bank already renders the full banking service available from any other bank, and its conversion into a commercial jointstock bank will be a mark of official approval for which the Bank's record alone is enough.

"WATCH DOG".

COMPANY REPORTS

STEEL CORPORATION OF BENGAL LIMITED

Audited accounts for the year ended 31st December, 1942:—

The net profit for the year amounted to Rs. 26,36,921 to which has to be added Rs. 4,29,477 brought in from last year, making a total available for distribution of Rs. 30,66,398. The net profit is arrived at after providing for all charges including Rs. 35 lacs for depreciation, Rs. 39½ lacs for taxation and Rs. 16,24,393 being the share of profit payable to the Indian Iron and Steel Co., Ltd., under the supply agreement. Provision has also been made in the accounts for payment of Debenture Interest and Preference Share Dividend.

	Rs.	A.	P.
From the amount available to the Ordinary Shareholders of	30,66,398	0	0
There has to be deducted the amount of the Interim Dividend of Six Annas per share declared on the 28th January, 1943 ..	10,54,939	0	0
	20,11,459	0	0
And as already advised, your Directors have declared a further Interim Dividend of Ten Annas per share amounting to ..	17,58,231	0	0
Leaving a Balance of	2,53,228	0	0

which amount your Directors recommend to be carried forward.

Due to the Report and the Accounts having to be published simultaneously in India and England, and the impossibility of arranging for the early holding of the Annual General Meeting to declare a Final Dividend, it was decided, to enable Shareholders to obtain their Dividends as early as possible, to follow last year's practice and distribute what would have been the Directors' recommendation of a Final Dividend in the form of the above Interim Dividend of Ten Annas per share payable on and after the 5th July, 1943.

During the year holders of £7,300 Guaranteed Convertible Mortgage Debentures exercised their option to convert into Ordinary Shares. This increased the Ordinary Share Capital by 5,840 Shares making a total of 28,13,290 Ordinary Shares subscribed, and reduced the Guaranteed Convertible Mortgage Debentures to £607,750.

Shareholders are aware that statutory restrictions prohibit the publication of production figures, but it is satisfactory to record that continued progress is being maintained by all Departments. Improvements and additional units have increased production and all Buildings, Plant and Machinery have been maintained in good condition.

The section Mills have been fully engaged on double shifts, and in the case of the Sheet Mills treble shifts have been worked most of the year. Repairs were dealt with expeditiously and there was little loss of production on account of mechanical breakdowns.

The sales of the Corporation's products continue to be effected under the Iron and Steel (Control of Distribution) Order 1941. Transport difficulties were experienced during the year and this explains in part the increase in the value of manufactured stocks at the end of the year in comparison with previous figures.

The General Health of the Station remained good.

During the first three months of the year some inconvenience was suffered through Labour absconding as a result of the near war situation, but otherwise Labour has continued to give satisfactory service. To meet the heavy increase in the price of foodgrains the Corporation increased the Dearness Allowance to Labour, and, subsequently introduced a rationing scheme whereby foodstuffs were issued to Labour at prices prevailing in 1940, the difference between purchase and issue price being borne by the Corporation.

Audited accounts for the half-year ended 31st March, 1943:—

Gross Earnings for the half-year were Rs. 2,32,014 which is Rs. 17,762 less than the earnings of the corresponding period ended 31st March, 1942. There is a decrease of Rs. 3,611 or 2.23 per cent under Coaching and Rs. 12,189 or 14.32 per cent under Goods. The decrease in Coaching is due to 1,43,504 less passengers travelling, and in Goods to carriage of smaller quantities of District Board Ballast.

The Working Expenses for the half-year were Rs. 1,54,750 *plus* Rs. 25,000 set aside to Renewal Reserve, making a total of Rs. 1,79,750 which is Rs. 11,227 more than the figure for the corresponding period ended 31st March, 1942.

The Nett Earnings for the half-year were Rs. 52,264 a decrease on the figure for the corresponding period ended 31st March, 1942 of Rs. 28,989.

A sum of Rs. 10,000 has been transferred in these accounts and the balance of the Reserve now stands at Rs. 2,10,000.

The balance available for distribution is:—

	Rs.
Nett Profit for the half-year	41,473
Balance brought forward	20,945
	62,418
Less—Transferred to Development Reserve Account	10,000
	52,418

The Directors recommend that the available balance be disposed of as follows:—

Payment of a dividend for the half-year ended 31st March, 1943 at the rate of 4 per cent per annum, less Income-tax costing	32,088
Balance to be carried forward	20,330

Audited accounts for the half-year ended 31st March, 1943:—

The Gross Earnings during the half-year were Rs. 1,48,225. During the corresponding period in 1942, they were Rs. 1,25,390.

The Working Expenses are 50 per cent of the Gross Earnings.

The Net Earnings were therefore Rs. 74,112 against Rs. 62,695 in 1942, exclusive of interest on loans.

The balance available for distribution including the amount brought forward is Rs. 55,483.

As in previous years the guaranteed profits of the Company are reduced by the amount of Super-tax paid and thus do not permit of payment in full of a dividend at the rate of 3½ per cent per annum.

The Directors recommend that the available balance be disposed of as follows:—

	Rs.	Rs.
Payment of a net dividend of Rs. 36,449 as under:—		
3½ per cent on Share Capital Rs. 31,00,000 for the half-year		54,250
Less—Company Super-tax ..	5,086	
Company Income-tax ..	12,715	17,801
Net Amount for distribution		36,449
Balance to be carried forward		19,034
Total ..		55,483

Managing Agents.—Messrs. Martin & Co.

Authorised Capital—Rs. 33,00,000. *Issued and Subscribed—Rs.* 31,00,000 *in* 31,000 *shares of Rs.* 100 *each, fully paid up.*

Synopsis of the balance sheet as at 31st March, 1943.

Less taxes, the dividend payable on receipt of the deficit from the guarantor.

Audited accounts for the half-year ended 31st March, 1943:—

Gross Earnings for the half-year were Rs. 55,659 which is Rs. 4,734 less than the earnings of the corresponding period ended 31st March, 1942. There is a decrease of Rs. 3,052 or 16.75 per cent under Coaching and an increase of Rs. 3,028 or 26.48 per cent under Goods.

The Working Expenses for the half-year were Rs. 86,330 which is Rs. 32,671 more than the figure for the corresponding period ended 31st March, 1942. The large increase is due primarily to the cost of the new Diesel Locomotive and modification of coaching stock charged to Revenue under the instructions of the Railway Board.

The Net Earnings for the half-year were minus Rs. 30,671.

The balance available for distribution including the amount brought forward is Rs. 20,311.

As in previous half-years the guaranteed profits of the Company are reduced by the amount of Super-tax paid and thus do not permit of payment in full of a dividend at the rate of 3½% per annum.

The Directors recommend that the available balance be disposed of as follows:—

	Rs.	Rs.
Payment of a net dividend of Rs. 13,518 as under:—		
3½% on Share Capital Rs. 11,49,700 for the half-year		20,120
Less—Company Super-Tax ..	1,886	
Company Income-Tax ..	4,716	6,602
Net amount for distribution		13,518
Balance to be carried forward		6,793
Total ..		20,311

Editorial Comments

Industry's Hopes and Fears

The pre-occupation of industrialists with the level of profits, the burden of taxation and employment in India may be due largely to a consciousness of difficulties to be encountered after the war. Apart from the Centre's need for revenue even when direct taxation has been enlarged by stages there is really nothing to procure automatic renewal of tariff protection for industries like sugar, steel or cotton. If Central requirements justified it, there may even be extensive resort to excises or export duties which would be as much a tax on production as on consumption abroad. What would then be the competitive ability of Indian industries in the after-war period when the Middle East and African colonies would be exposed to the export drives of one or more countries. There is, of course, the current argument that higher living standards in India would release enterprise from all anxiety as to post-war competition at home. But steel-makers in India who have been told frequently that Australia can export steel after the war as she produces steel at a lower cost than Britain would certainly be hampered by retention of an excise duty on ingots.

A complete inquiry into the tax system is desired by those who look on the State as a shareholder which gets about 2/5ths or more of normal profits earned by industry. The retention or enhancement of efficiency of production is thus a major consideration for the Government but the Government, which finds the managing agent installed as an open sharer, may also conceivably demand changes in company law which would not merely have the effect of limiting the return on capital but go far towards the reduction of overhead costs. Tariff Board inquiries in the past accepted the outside view as to costs and fair selling prices if the three conditions laid down by the Fiscal Commission were duly satisfied. That procedure may be inadequate for the future since international stabilisation may in the long run produce uniformity of costs and prices and broaden the base and scope of exchange. In that event the incentive to internal economy alone can function as the means of redressing inequality of costs. Costs will settle the fate of shipping and shipbuilding alike, having regard to other factors. The wartime missions to pronounce on the adequacy of resources and equipment may have noted functional and organisational weaknesses. We are however not prepared as yet with a Yellow Book on Indian industry. The additional capital required for reorganisation may be provided by E. P. T. refund but the general reduction of fixed capital or annual interest charges appears even more important than the creation of an institution to deal with short-term advances to industry. The expansion of banking may naturally assist industry to draw more and more capital from banks which obtain their resources from the pubic, but the dependence on the managing agent for capital, even where the usual agreement is in force, must be modified radically. It is arguable whether the new industries of wartime—chemical or metallurgical—can stand up to post-war competition without subsidies but the conditions for the grant of assistance must be precise and rigorous and some part of the state's special service to industry must be paid for.

High costs were the rule in Indian industries except where natural advantages combined with cheap labour conferred a superior position as in the case of jute. But jute is exceptional in being an industry immune from control and independent of tariff benefits. The majority of Indian industries will require to be investigated on the basis of wartime performance. It is frequently urged that cloth ceiling prices were fixed in August with reference to the demands of the marginal producer and no demands as to rationalisation were presented. Anyway high-cost producers cannot become prosperous pioneers.

The collections from war risks and factory insurance are obviously out of the reach of industry after the war. If refunds have to go to shareholders as dividend or bonus the working capital at the disposal of industry may not be great. Finance for industry must come mainly from banks or insurance companies or alternatively, interest-free deposits made by public authorities. The two agencies may have to break new ground in regard to short-term advances but term deposits may be withdrawn from banks and the Government's regular short-term borrowing may conceivably suffer, but not if tax pre-payment is encouraged after the war.

Whatever may be obtained as new equipment through Government will doubtless have to be paid for like lease-lend goods made available at present. Adjustment in respect of E. P. T. refund may possibly help some concerns but questions as to location, freight advantages and taxation will remain. Industries in the States should possibly be independent of difficulties experienced in British India. The more obvious requirements in regard to raw materials etc., predicate the continuance of control in some form or other since a relapse to competitive disorder may produce difficulties from which the old may suffer as much as the new. The retention of export control in the interest of industrial consumers will also be advocated for the same reason. The beginning made after the bifurcation of the Commerce Department this year may be deemed satisfactory but the surveys of capacity attempted previously must have lost their importance.

Since reconstruction needs at home will be limited in relation to the demands for development the problem when it emerges may be more manageable than presumed. As for new capital wanted for new enterprise a levy on war wealth including corporate reserves may seem tempting. Because of its immediate deflationary effect it should be avoided. Control orders as to dismantlement of industrial plant may save more than scrap but the major problem facing industry, as many will readily suspect, is the increase of output. Statistics have made it clear that 1942-43 witnessed a fall in output in most industries and recovery is hampered by labour unrest, higher costs, extra taxation and other difficulties which may not disappear with the advent of peace. The legacy that will be retained by industry will not be unique but the right remedy in the form of plans through controllers may not be altogether available in India. The value of the existing liaison system can be demonstrated only in peace when the efficiency of industry can be judged by comparisons. But there should be no cause for pessimism because the future may find Japan as well as Russia out of all Eastern markets and Indian trade might retain its advantages in Colonial markets on the basis of reciprocal preference. But that would be no guarantee of efficiency and trade missions sent to ascertain the secret the high wages and low costs appear necessary.

One line of reform may be concentration as practised in Germany and Britain but that may not be adapted to the younger secondary industries. Industrial welfare may entail no large liabilities in the war period but any levelling up of labour conditions will assuredly influence both prices and profits. Given the old arguments as to inefficiency and absenteeism, it may be plausibly urged that education and vocational training will make all the difference as to costs and increasing returns in the future. But labour is not associated with management and even the older departures like Whitley Councils are unknown to India. How far Indian employers will move towards acceptance of labour's claims to a share in

THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

control will perhaps determine something more than the course of industrial relations. Private blueprints for industrial development now and after the war are familiar enough but indications of the official attitude have not been vouchsafed. Whether India chooses the middle way or clings to the capitalist system, the future will demand a measure of planning that calls for the association of leaders of industry with such efforts as may begin.

Perhaps the most hopeful line of advance may be found in and through joint effort. Swedish example in the direction of producing substitutes or securing indigenous materials is of high importance. Co-operation well may extend beyond financing research and the formulation of marketing organisations on the export side. The rerolling industry has been called upon to unite and speak as one, and experience of control may impel many other industries to act as one. The idea of maintaining rates and prices over a wide field is not confined to one industry at present—jute is the most recent example. That industry has made sacrifices in the interest of Control Orders is understood but the major issue is one of bearing higher taxation at the same time as meeting outside competition. The special advantages enjoyed by affiliates of foreign concerns will not be available to the majority of India's industrial concerns and the problem of organising federations enabled to keep step with foreign cartels will not be the least of the questions that will follow peace.

A faulty piece of steel subjected to extraordinary stress may have dire consequence for any structure or machinery of which it is an integral part.

It is for this reason that cross-sections of special steels produced at Jamshedpur are constantly examined microscopically and submitted to the most probing tests by "The Brains of Steel".

Thursday Evening.

Of the direct results of the U.S. deficit the biggest is the new tax bill. The Bill appears in October instead of September some days after Congress met. The third war loan campaign yielded 15 billions as planned and the Treasury put out its programme after netting more private savings for war bonds. Mr. Morgenthau has prepared a bill to bring 10½ billion more to the Treasury in 1943-44.

Chief feature of the tax plan is the increase in income-tax after the compromise on the pay-as-you-go plan. The income-tax increases evidently are part of compulsory saving. The post-war refund provision is incorporated in the bill and out of 6½ billion as much as 2 to 3½ billions would be paid back. Mention is made of benefits to assessees under the broadened social security system. So it may be argued that the war is not the only cause for tax increases. The U.S.A. wants to write in a federal insurance plan in its new tax bill. The increase in revenue aimed at means a rise of 40 to 50 per cent in tax revenue during 1943-44. The Treasury wanted to take out 12 billions (the 'Gap' was put at 18 billions by the President in July) and decided on 10½ billions. Since 6½ billions is to come through the increase in the tax rates and by lowering the exemption limit for married men to 1,100 dollars per year the greater part of the new taxation will naturally fall on wage-earners. Like Britain the U.S.A. is keen on cutting off surplus purchasing power, and additional taxes on tobacco, liquor and chewing gum are meant obviously to reduce consumption. As a shortage of cigarettes is envisaged at present in the U.S.A. the tobacco tax may be justified. As for Britain imports of U.S. tobacco may be lower than planned in the future. There has already been a direction from the Treasury to curtail the purchase of U.S. tobacco. The offtake of Empire tobacco in the near future should increase and the gains may be distributed between South Rhodesia and India. The recent grant for special research on tobacco should help Indian exports of tobacco. Increased preference for Balkan tobacco should also be possible and imports from Turkey may increase for the reason that the U.S.A. is short of cigarettes and is drawing on her tobacco reserves. A more remote result of the shortage may be larger takings of tobacco from Cuba. The U.S.A. with total federal expenditure of 106 billions in 1943-44 cannot altogether escape new taxes and the committee chairman's opposition seems surprising. It may be due to Mr. Doughton's views on the call-ups, late departures in foreign policy or any other issue that divides Congress from the Administration. The proposed increase in taxation is peculiarly meant to fight inflation to a standstill. But Mr. Doughton has spoken of the tax-payer being unable to bear the increase proposed. The Bill is not going to have a smooth passage; it may meet with more opposition than that of 1937 or 1941. The reaction of Wall Street to the tax bill is not discouraging. The leading shares have certainly held up but turnover in recent weeks (272,000 on one day) has suggested a very dull market. The attitude of Congress to the U.S. Treasury's tax proposals may determine many things besides the addition to revenue. It has been reported the A.F.L. repudiates isolation but in Chicago Col. McCormick is nourishing the hardy plant by new plans directed against Rhodes Scholars. The President may gain much through the Senate's secret session. The Senators having seen the theatres of war demands more aid to China at once. Success with the tax bill may help the U.S.A. to send more lease-lend supplies to her allies. There are new applicants for help recently qualified such as the French National Committee which is promised the same assistance after the visit of Giraud to the States.

After the Jewish new year there has been a smart rise in gold mining shares and Kolar gold shares certainly have firmed up and Nundydrog (10 sh.) has gone as high as 31/3—a level not known in the war period but not surprising in view of the premium on gold.

The daily cabled reports have spoken of Argentine Rails having moved up on account of bond repatriation. The 4½ per cent conversion loan already over par was perhaps the issue chosen for repatriation. How and why Rails move up when export trade is not brisk and the last trade agreement with Britain relates to eggs (not wheat or linseed) cannot be readily understood unless it be that repatriation is going to wipe the blocked balances out of existence and leave the Argentine free to increase her exports. This seems unlikely as Argentina sticks to neutrality and does not show much interest in what is happening abroad in things like the grant by Brazil of Santos, a port on the Atlantic, to Bolivia, giving the latter access to the Plate by way of the Paraguay River and has removed all cause of jealousy on the part of Bolivia being a land-locked State at present. Except for Cordoba debentures Argentine rails as a group are a depressed speculative group and the end of the war alone may bring about a genuine recovery.

The mention made of increased takings of oil for the war from the Persian Gulf must be related to the improvement in Anglo-Iranian after the last rise. The promise of compensation to U.S. oil companies by Mexico has been without effect on Mexican Eagle which is a Dutch Company with its capital in Pesos. It is rather strange that the Mexican alliance produced only unacceptable terms in connection with the foreign debt and has not helped the British oil companies in any way. The steady rise in Royal Dutch shares may be due to outside factors or reflect the faith in the strength of the Dutch currency before and after the war.

Motor shares have risen to popularity but Britain's newest and biggest industry is aircraft. It gives employment to 2 million men, the total in this case showing an increase of 4,000 per cent in 5 years. Its demobilisation problems will be big and only part of it can gain anything from the post-war civil aviation plans. The Brabazon Committee picked four or five firms only to make civil types Bristol, Handley Page, A. V. Roe and Short and Saunders-Roe jointly. The last two are to produce a big flying-boat with a range of 4,000 miles and able to carry 200 passengers on short trips. Most aircraft firms have no time for civil work on experiments, but investors will have noted that the new small companies are not benefiting compared with the long-established firms like Bristol Aeroplane. Air transport means more business for the four or five firms, one of which is connected with Hawker while De Havilland is also to produce a civil type. But nothing is going to be placed in the way of the young, small companies which got little out of rearmament and have tasted confusion and fusion. The S.E. frowned in the past on the new small concerns for cogent reasons and it has been proved right again.

AUDITOR'S REPORTS

I hereby certify that I have audited the above Balance Sheet of THE COMILLA UNION BANK LIMITED, as at 31st Chaitra, 1349, B.S. and the Profit and Loss Account for the year ended 31st Chaitra, 1349, B.S. with the Books and Accounts as kept at the Comilla Office, in which are incorporated the audited returns of all the branches duly certified. I have verified securities of the Comilla Office and I have to report that I have obtained all the information and explanations I have required, and in my opinion, the above Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information and the explanations given to me and as shown by the Books of the Bank. In my opinion the Books of Accounts have been kept by the Bank as required by the law.

Roads and Carts

At the Indian Roads Congress at Gwalior on Monday, Sir K. G. Mitchell spoke of Gwalior's road system linking the State with the road from Bombay to Delhi and the road from Calcutta to Delhi. But the main interest of the speech lies in its endorsement of the usual plea for village roads. Rural transport has become again important, but the decentralisation of road control (with Union Boards generally neglecting roads) appears a danger to speedy improvement. Vehicles can be improved only if roads are better and the way to improve traffic on India's roads has been outlined again. The rubber-tyred cart acquires special significance like the mechanical appliance for lifting water. Since India makes tyres of her own rubber, the problem is simple. The number of carts required for efficient marketing has to be calculated. Roads must be saved from wear and tear and professional carriers with carts are wanted. The resulting economy of time and cattle must be considered important. The technical problems are less important than the improvement of the vehicle used by the villager. The main argument, however, relates to Provincial control of roads. The local authorities are apathetic and regular Highway Departments are demanded. This depends on the assumption that road traffic will keep growing. Road transport, however, will develop on different lines. Bicycles will have a special surface while droves of sheep will have a separate surface for their use. The use of wider roads for faster traffic is expected only when the road development scheme gets going. The Road Fund is expected to provide more and more money for its objects and the petrol excise and M. V. Tax are expected to provide all the money wanted. The road engineer here has only the problem of making better roads to consider. It is for the Government to provide the funds wanted. No facts as to wartime strain on the road system of India were furnished in the address. But road transport, especially, where administration is relatively advanced as in Madras, looks on petrol rationing, tyre rationing and spare parts rationing, as the major issue. Sir Kenneth forbore to mention the effect of one or all on the roads nor did he offer suggestions as to the special borrowing advocated by enthusiastic road-planners. The road plan is one to be drawn up by Provinces with Reconstruction Funds of their own. Those which have none will perhaps lag behind the others, and uniform progress will be denied not because of climatic variations, but on account of financial difficulties. Borrowing will not help; but all Provinces may be tempted to take the sale of motor spirit for the sake of road improvement. A small surcharge on bus and taxi fares may also be regarded as helpful, if the money is earmarked for road improvement exclusively.

Survey of Destitutes

Bengal famine has already become international news but, if a proper policy is to be evolved to mitigate the evils and prevent the recurrence of the tragedy, correct figures must be gathered and the phenomenon must be studied in all its varied aspects. Famines have always disturbed rural economy most drastically. A close study of Indian famines of the 19th century shows that famines have caused severe depopulation, exodus to urban areas, migrations, and emigrations to foreign plantations. Village habitations have often been permanently deserted and the rural industries, particularly weaving, have been the worst hit. The grip of the money lenders got tightened and the process of expropriation of land speeded up. Rural credit was severely affected and violence against money-lenders became common. Landless labours increased in number and absentee landlords created economic bondage of the cultivating classes. Improvements in the mode of cultivation were arrested. The destruction of cattle and the persistent scarcity of fodder have affected not only the milk supply for the population but have made the cost of cultivation unbearably high. The finances of the Government were strained and the tax burden increased as a result of relief works. The vicious circles of famines necessitating higher taxation and increased tax burden exposing agricultural population to famines continued. The famine of to-day is not essentially different from those of the 19th century. A proper statistical study of its effects on population, agriculture, urban life, local and provincial finances etc. should be useful for concerting adequate relief measures and evolving suitable economic policy.

The Anthropological Department of the Calcutta University have done well in conducting a sample survey of destitutes in the Calcutta area. The preliminary report dealing with 504 families consisting of 1,566 persons reveals that agricultural labourers have borne the brunt of the calamity. 47.7% of the destitutes studied belonged to this class and cultivators—owners as well as tenants—formed 25%. Petty traders account for 7%, beggars 6.6%, fishermen 2.4% and the rest 10.7%. Analysed from the point of view of religion, it is found that the scheduled castes have suffered worst and number 52.7%. Muhamadans number 30.9%, Caste Hindus 15.4% and Indian Christians only 1%. Viewed from the point of view of districts, the 24-Parganas have suffered the most because 79.1% of the destitutes studied have come from that district. The disintegration of the rural families has been pathetic. The report states, "How far the present distress has affected the economic basis of, and socio-economic psychological relations within the family may be gauged from the fact that no less than 24.4 per cent of the families have disintegrated." At present famine conditions are prevailing in Bengal, Orissa, Ceded Districts, Malabar and Rajputana. A proper study of the magnitude, nature and effects of destitution is essential for the success of relief works, for formulating suitable legislative measures and correct economical policies. It is vain to expect the Government to study the problem in all details and publish particulars at the

right time. Dearth of statistics, particularly about Indian agriculture, has already led to wrong measures and dangerous ignorance. It is upto the Universities and non-official bodies to institute economic studies and surveys of the different aspects of famine in India. They would surely reveal the perilous state into which our villages were plunged even before 1939 and the price people had to pay for official mismanagement can be calculated. Such sample surveys would also help the public in understanding the effects of Government wartime controls and regulations. The taxable capacity of the ryots, the burden on municipal and provincial governments as a result of this famine will be clearly brought out. Apart from offering an opportunity for research scholars to conduct surveys and enquiries, the figures collected would be valuable for the administration of to-day and for posterity to profit.

Soil and Sugar

Sugarcane development in the U. P. turns largely on the adoption of Coimbatore canes and the management of the soil. The soil experts urge that the latter is as important as the other, and point to the spread of red-rot disease in Gorakhpur. That is one reason for the selective use of fertilisers and better seed in the three Ranges of the U. P. Soil survey in sugarcane tracts has revealed that wide variations in fertility exist even in the cane-growing districts. Acidic soils, neutral and alkaline soils were met with according to the two U. P. agricultural department experts deputed for the survey. Acidic soils should not be treated with pressmud from sulphitation plants or sulphate of ammonia. Alkaline soils must not be treated with nitrate of soda or pressmud from carbonation factories. The major conclusion is that U. P. soils lack nitrogen except in parts of the western range. The eastern range is better off in respect of nitrogen though land near the river banks is deficient in nitrogen. Districts which are cooler have evidently an advantage in regard to nitrogen. Many districts lack phosphate but certain soils are fairly rich in phosphoric acid. Only in the districts near the hills has the potash content been noted as inadequate. The U. P. soils are not deficient in potash and the survey establishes that a better yield or quality is dependent really on the correct application of fertilisers. The U. P. cane development department's intentions have been outlined before the the preliminary survey which indicates that expert advice must be made available to cane-growers every year. But the survey establishes that cane-growing requires special knowledge which must be made available in time to help in the larger production of sugarcane and sugar this year.

War for Burma

The air war over Burma after the monsoon extends from the Delta to Upper Burma. The sweep covers Moulmein as well as Mandalay, the chief target being the enemy's communications. The Daily communiques use the word trackage describing damage done (a word that will excite some apprehension though its relation with wreckage is obvious). The most obvious reason for activity against Upper Burma may be found in the report of a road from India's eastern frontier to Lashio to link the Assam Road with the old Burma Road to China. Clashes in the Naga Hills have ceased to count. Road-making under U. S. direction for the descent on Burma has begun. But the land campaign from Assam is not what India has been taught to expect since June. A bold sweep up the Burma coast from Akyab to Tavoy, a pincers movement from Assam, a rush down Arakan in order to cut Upper Burma off is not part of arm-chair theorising but a regular vision of what a real large-scale offensive entails. The vision is less frequent though fears of air reprisals are not common. The Allies' task in Burma is essentially one of restoration—the air war affects chances of speedy reconstruction. The ejectment of the enemy is not easy because of the quisling regime which has been set up last month. The air raids have not prevented Japanese effort to stimulate the independence movement. The local defence plans may have taken shape and the stories of forced labour may not affect the Burman view of invasion.

There has so far been no hint of political warfare in Burma. The air raids do not seem to stimulate sabotage or other expressions of patriotic feeling and one may be perturbed by the humbing effect of the air raids. The contrast with Denmark or any occupied country is obvious. What happened in 1942 suggests that Burman may be passive again or view the liberator as a dangerous meddler. Something more than of an official plans to develop agriculture and to check land alienation seems necessary. Tojo's political strategy has been obvious since the Southern Shan States were partitioned. Appeasement and cajolery have been tried with a promise of success and those on this side of the frontier may well wonder why there has been delay in laying down plans for detaching local supporters from the Japanese. The Japanese may lose fuel dumps and rivercraft but the garrison is not menaced by discontent. To create the discontent and use it before actual invasion seems more important in the Indian view than the maintenance of air activity which does not seem to prejudice the reconstruction of air-fields or the reinforcement of fighters. Cautions against optimism force many to ask questions about what is coming and when. Having kindled fierce expectation by the essay in Arakan, the Allies have kept up a running fight against the supply lines. Since Japan's naval resources have fallen off abruptly the

Passengers' Luggage

The maximum weight of luggage that may be carried by a passenger is subject to the following limits according to the class of ticket held:—

1st class	.. ..	6 maunds
2nd „	.. ..	4 „
Inter „	.. ..	3 „
3rd „	.. ..	2½ „

The maximum weight is inclusive of the authorised free allowance and also of the following articles allowed to be carried free:—

(i) 1st and 2nd Class passengers.—Bedding, Tiffin-baskets (including small ice boxes), small hand-bags or attache cases (not suit-cases), walking sticks and umbrellas.

(ii) Inter and 3rd Class passengers.—Bedding, walking sticks and umbrellas and such articles of food as may be required on the journey.

2. Weighment of luggage will, therefore, be done in two stages, viz.:—

1st Stage.—All articles, including those allowed to be carried free, as above, will be weighed for purposes of seeing that the total weight does not exceed the maximum limits prescribed.

2nd Stage.—The articles which are allowed to be carried free will then be removed and all other articles will be weighed for purposes of ascertaining the freight to be charged, after deducting the usual free allowance.

3. The attention of the public is also drawn to the following rule:—

"A passenger may take into a carriage only such articles of personal luggage as are required for his own use on the journey and which can be placed in the carriage without inconvenience to other passengers or reducing the available accommodation in the carriage. Any passenger who commits a greach of this rule will render himself liable to prosecution."

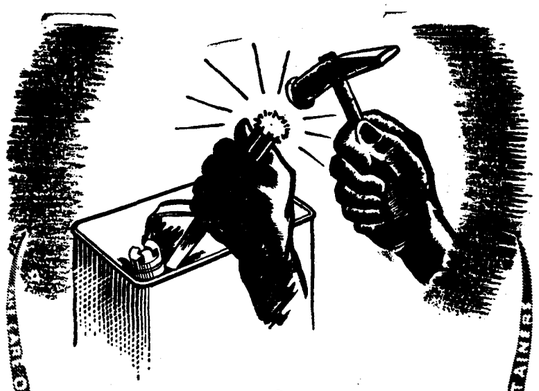
Forced to Defend

East of a line drawn from Leningrad to Odessa the Soviet army is more or less dominant over the invaders. The short offensive failed, the long counter-offensive succeeded. The main bases Orel to Smolensk have been given up and the Germans are apparently ready to give up the Ukraine. The Dnieper has been crossed and re-crossed but the Soviet has not moved up against Odessa which commands the Black Sea and the Rumanian flank. East of the Dnieper the Germans retain Crimea but their position appears precarious. Strength in the Balkans has to be built up only at the expense of the defence of the East and guesses at the German High Command's intentions are common after the new thurst at the railway junction of Zaporozhe. If formal evacuation of Kiev has not been reported yet it is clear that the chief base is untenable. The opportunities for winter warfare are not opened up merely by the advance into the Ukraine. They are really dependent on the second line said to run through Lublin in Poland. They are also dependent on the home front's behaviour. The last air raid on Hanover acquires unusual importance. If the Russians can retain superiority in men and materials a headlong advance is possible, but it is necessary to remember that it is possible only, if German forces are engaged in Italy on an active defence and are menaced by the Yugoslav revolt.



Since the Quebec Conference shed little or no light on Soviet strategy in coming months, there is general desire to restrain hope. There has been no clear estimate of German strength after the loss of the Ukraine. The extent of Soviet superiority has not been indicated either but the Allies who have appointed a Commander for Europe evidently count on superiority in an offensive from the West. The familiar dilemma of a two-front War has every chance of emerging. The Nazis will have to choose between France and Poland. The main result of the Soviet advance has been that the Nazis will at long last have to think of defence alone, give up hope of keeping the invader out by the legend of a wall, even if it be the Siegfried line which has not played any part in the war since September 1939. To have regained the initiative to the point at which an advance up to the Western German defences becomes probable is the true measure of Allied achievements. The occupied countries represent, in the main, a German liability. How fast Germany will retreat is the question left to the future. The Italian civil war is not helping them to prevent revolt in Yugoslavia and Hitler's generals will be constrained to give up all hope of rationalising conquest in order to work out air defence. Before the war the German air defences were reckoned very good, but a two-front, two-time war may be a new, unforeseen possibility. Much more depends on air power, especially, of the reduced fighter force than seemed likely in the light of an expert U. S. estimate advising the world that Germany is not finished.

Death CAUSED BY A BLUNT INSTRUMENT

The return of your containers in good condition is a matter of the greatest importance. Containers whose caps, or other closures, have been forced open by chisel and hammer are often damaged beyond further use.

A little patience and care in removing an obstinate closure is of direct assistance to the war effort. Containers are vital to the distribution of petroleum products, which in their turn are as vital to the successful prosecution of the war as they are to the industrial life of the country.

Containers are scarce

More Taxes In Madras

In order to avoid a huge a deficit in the next budget Madras Government have enhanced some of the existing taxes. Betting Tax has been raised from 4% to 6% and the Stamp Duty on commercial documents has been increased in some cases by 50% and in others by 100%. Since the revenue from these two measures can yield only Rs. 33 lakhs the General Sales Tax has also been enhanced. With effect from 1st October the rate for flat rate assessees (i.e. those with a turnover of Rs. 10,000 to Rs. 20,000) is increased from Rs. 4 to Rs. 5 a month and the rate for other assessees (having a turnover exceeding Rs. 20,000 in a year) is raised from ¼% to 1%. The Government expect to raise Rs. 179 lakhs in the current year from the new taxes and about Rs. 340 lakhs in a full year. The three main reasons for the enhancement of the above taxes are stated to be famine relief, anti-inflationary drive and post-war reconstruction fund. The Government is spending at the rate of Rs. 1 lakh per day for the famine relief in Rayslaseema. Dearness allowance to Government servants and measures connected with rationing are also expected to cost much. While the need for more revenues can be appreciated it is surprising that financial authorities could not foresee and calculate the cost of relief operations much earlier. In recent years revenues have been increasing so as to keep pace with the growing expenditure and the provincial share of the Income-Tax receipts have gone up from Rs. 283 lakhs pre-war to Rs. 1,210 lakhs at present. The Government have no schemes for the extension of nation-building services, during or after the war. Under these circumstances the case for enhancing the taxes must be built on more solid grounds. Strong criticism will be levelled against the increase in the General Sales Tax because it would affect the general consumer who is already hard hit by soaring prices. Any enhancement of this Tax would tend to raise prices, create inflationary tendency and reduce the purchasing power of the poorer sections. It may be recalled that the tax was introduced originally by the Congress Ministry to make up for the loss of revenue arising out of prohibition. Since the present Government refused to extennd prohibition they should have abolished it altogether instead of reducing it to half and then increase it to new heights. The present tax measures of the Madras Government are not likely to win the support of the public.

Comilla Union Bank Limited

In this issue appears the balancesheet which records the changes in resources and revenue in the 20th year of working of the Comilla Union Bank Limited. The increase in its paid-up capital from Rs. 14 lakhs to Rs. 24.98 lakhs will naturally claim attention as a further step in the direction of bringing capital into line with deposits. The Directors note that the authorised capital is now Rs. 1 crore and the future should witness successive increases in the issue of B shares of Rs. 25 which qualify for a dividend of 10 per cent less income-tax and surcharge. The issue of shares at a premium has resulted in an important addition to Reserves which have risen to Rs. 12 lakhs as against Rs. 7.91 lakhs on April 1942. The main movement, however, occurs under Deposits which have improved from Rs. [illegible] crores to Rs. 4.2 crores. The Directors record complete satisfaction with the growth of capital and working funds to a total of over Rs. 5 crores—the highest claimed by any Bengalee-managed Bank. The substantial addition to resources explains the increase in the net profit from Rs. 1.23 lakhs to Rs. 2.03 lakhs in a year. The opening of two new branches in 1942-43 marks the continuity of policy which has led to 24 branches in addition to the Central Office in Calcutta.

The cash balances totalling Rs. 124.2 lakhs are equal to a ratio of 27 per cent nearly. The Bank (not for the first time) shows its holding of Treasury bills separately in the balancesheet and it is apparent that a part of its investments totalling Rs. 1.72 crores nearly is invested with a greater degree of liquidity. Investments have not risen moderately as compared with cash balances. Significant of the slacker demand for money is the rise in Advances from Rs. 1.5 crores to Rs. 1.59 crores. A year ago investments totalled Rs. 63.92 lakhs so that the recent increase in deposits is divided between cash and investments. The increase in bills accepted is however suggestive of fuller use of bank facilities by clients but the increase in interest and dividend receipts is moderate while interest paid on Deposits is actually lower. The Comilla Union Bank's position this year has naturally been strengthened by the growth of confidence in the banking system but the major achievement, as remarked more than once, is the Bank's success in attracting deposits on a larger scale. There is reason to emphasise the fact that current accounts do not represent more than Rs. 1.84 crores out of the total deposits of Rs. 4.2 crores in the case of the Comilla Union. The growth of thrift concurrently with an increase in national income has been of direct consequence to the younger banks. The three years preceding 1943 were marked by a steady increase in deposits as well as capital in the case of the Comilla Union Bank but the rate of increase was much greater in 1942-43 as described in the 20th annual report.

Hindusthan's Affiliate

An All-India board for an all-India enterprise is the first and most distinctive mark of the new company launched by Hindusthan Insurance. The announcement appearing today is the latest, and certainly, the greatest effort to win for Indian interests a due share in general insurance. It should be certainly noted that reinsurance (accepting and ceding) will also be undertaken by Hindusthan General. Started with adequate capital with its reserve in uncalled capital, the subsidiary will have its own career, not only as a subsidiary of Hindusthan. Mr. Sarker is chosen Chairman and more than one banker is associated as Director with the new Company which is naturally bound to get its full share of fire, marine and other insurance. The familiar facts

In the making . . .

Whatever the job—a khaki shirt, a packingcase or a battleship—you can't make it all in one piece. And joints mean thread, nails, screws, nuts, bolts or rivets.

The Durzi knows that if he uses poor thread the seams will soon come apart. We know that if poor quality nuts, bolts and rivets are used in steel structures there will be danger lurking in every joint—danger to human life in most cases. That is why Indian Steel & Wire Products are specified where reliability is needed.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

Three months of acute famine have not only decimated the poor destitutes but have also demoralised the province in every way.

The food situation as such is more chaotic. There is less reliable knowledge than ever of its important facts.

The trek to Calcutta has continued unchecked. Men, women and children continue to pour in thousands into the city straining alike their starved frames and the resources, material, personal and even emotional, of the regular inhabitants of the city. The daily deathroll maintains its menacingly upward curve.

Doubtless the position is far worse in the muffusil than in the city. If reports are to be believed farms that should keep a family or two well fed for generations have changed hands for less than a week's stock of food.

While the present loses something of its horrors by reason of its being known, the future is frightful even to contemplate. There are full three months between now and the next harvest; and during this period the province as a whole will be hard put to it to keep the wolf from its door.

But, as has been said already, three months of famine have thoroughly demoralised the province as a whole. There is hardly any section of opinion in the province which is prepared to credit the Government with the will to food problem. And the Government too might well feel less equal to it than ever before.

They have just now suffered the most unkindest cut from the British Press which fastens the blame for famine more or less exclusively on Bengal's autonomous Ministry. Truth to tell, the Government were never in a position to obtain that degree of mastery it is necessary for purposive regulation. Measures which were either half-hearted or hasty or were only in obedience to expediency have added to the confusion. The Government never had the courage to admit the more disheartening aspects of the situation. They did not have the guts to declare where, and to what extent, extraneous authorities were interfering with, or otherwise rendering difficult, their control of the situation. Political pusillanimity, a singular incapacity to see that an immense problem is laid up while timely action is either delayed or rendered ineffective, these, with or without a touch of favouritism in orders, have created a situation in which the Government have to face the condemnation of the British Press and the not quite unsympathetic censure of the people.

Politicians outside the ranks of the Government are in no better position to stop the rot and bring the situation under control. Time was when Bengal had leaders, parties and youth organisations which never let the call of similar situations go unheeded. Indeed, social relief work on a vast scale and on appropriate lines may be said to have belonged to Bengal more than to any other Province. Leaders, with the older tradition, might perhaps have battled against the peculiar difficulties of the present and succeeded in forming a united front against hunger and starvation. If C. R. Das were alive, one cannot help feeling we should have been spared the utter supineness, the humiliation of which is more painful than even the actual suffering. But it must be said in fairness that Bengal's leaders today have to contend against difficulties which were more or less unknown to their predecessors. The vivisection of popular leadership on communal lines and yet again on pro-Government and anti-Government lines has left Bengal even more ill-fitted to face a common threat like this.

Whatever the true explanation may be—and, here, there must be room for controversy, it is indisputable that what we have in prospect is just drift, drift into the abyss which yawns before us. The long-winded debate in the assembly was singularly unfruitful. The opposition was full of accusation; the Government as full of assurances. Both alike were lacking in proofs. The Government had nothing with which to disarm the popular distrust of their record and their abilities, though less than their intentions.

All that the Government can promise is that they will supply rice for relief organisations and introduce the system of rationing for Calcutta city. This rationing has lately been changed from a family to an individual basis. Much time will doubtlessly be lost in introducing a new system particularly, as the old one was never fully in operation.

But what the public will want to know is the extent of the Government's resources, not in money—for that is more or less easily commanded—but in the vital materials required. What is the total amount of food grains that the Government have got under their control? How much do they expect to come by during the next two or three months? What are the requirements of the Province as a whole?

The Government have not laid their cards on the table.

Yet it should be clear to the meanest understanding that, when so vital a need as food is in shortage over a particular period, the task in hand is to make the available supply go as far as all the strata of the population and go as long as the next harvest time. It is a matter of simple arithmetic to determine how many chattaks of rice each individual can be allowed to consume without causing injustice to other members of society. If the position is such that rationing of grains, however drastically curtailed, may not enable us to stretch our limited stock as wide in area and as long in time, then is it not equally necessary, prudent and socially just, to adopt on as wide a scale as feasible, a system of providing food rather than food grains?

Such a proposal might well meet with initial derision, in a province like Bengal so famous for the fastidiousness of its palate? However, the proposal is to be viewed from the point of view of the state of emergency which is undoubtedly in existence today. There can be no doubt that a system of rationing, however conceived, leaves biggest loopholes for favouritism. After all, any system of rationing will only have to be superimposed, and at best can supersede only gradually the present vogue of Government, public bodies and big industrial and business corporations supplying foodstuffs to their staffs on scales so obviously unjust to other sections of the population. And how can such a system ensure that the food reaches those who even this very minute are in their last or penultimate gasp for want of it?

The fact that the food problem concerns a concrete primary need of the people has not prevented it from having the most irrelevant and mystifying accretions. In Britain today Bengal's famine is the occasion for the most cowardly attack on the good name of autonomous ministers. In the Assembly it is rightly or wrongly the source of endless mutual recrimination. Out in the country, it is the stark despair of the people.

Shorn of its complexities, the ugly contours of the food problem today are easily seen. In the first place, the Government have got to get a monkey-grip on all the available stocks of food. Any system of rationing that may be adopted must be hermetically sealed against favouritism; and arrangements must be made for taking food, instead of food grains, to as large a section as possible.

That is as far as the future is concerned. Then there are the sins of the past to be wiped out. The majority of Bengal's millions are today suffering from the effects of malnutrition and continued starvation. Among the starving are men, women and children of all ages. The ravages of starvation are not similar on all age groups. And relief is meaningless, if it does not include repair of these ravages.

So far as these unfortunates who have found their way to Calcutta are concerned, arrangements must be made without the loss of a minute to throw open all corporation schools and public places, so that the destitutes may be not only fed, but tended back to health and strength. Feeding on the streets, which is excusable because it was so imperative when the problem broke in on us with such suddenness must no longer be countenanced. It is time that the self-respect of these sections of the

destitutes, who were still recently well-to-do, were respected. Such people must be enabled, as soon as their material and physical conditions permit, to return home and resume their normal life with as much relief from the Government as necessary furnished to them in their original home.

As for the professional beggars and especially those stricken with infectious diseases, the present system of relief must be treated as a golden opportunity for segregating them and for providing a permanent solution to the problem posed by them. It is by no means ambitious to suggest that the system of relief now proposed should be made the beginning of a poor law administration for the city of Calcutta. Calcutta's citizens, who have long been discussing the problem of the beggar nuisance, will be only too glad to pay a special cess for the relief of the poor, levied as an extra anna or half anna on the monthly tram or bus ticket or suburban railway tickets. Too long has the second city of the Empire borne ignominy of open professional begging in the streets. But it is only an incidental advantage of the measures that must now be adopted.

The real problem is (1) to put a stop without a day's delay to the doling of free food on the streets (2) to house the destitutes in corporation schools and public places, (3) to effect as complete and as fully informative a census as possible of these unfortunates and (4) to shape the relief measures according to the needs and circumstances of each group.

Enough has been said to show that repatriation of a large number of the immigrants from the muffusil before long is contemplated, but only on the basis that the relief they need will be provided in their own homes, thus blunting the incentive to the trek to the city. A far-flung system of provision of food, instead of foodgrains, is the obvious prerequisite of the system of relief now proposed. We are in a position to state that five indigenous banking institutions with branches and responsible personnel spread all over the province will be only too glad to take on themselves the task of stocking the Government supplies of foodstuffs, keeping the most meticulous account of them and furnishing ready-made food to the people of Bengal according to set principles and regulations. Such reputed commercial organisations, we think may well step in where for various reasons Government and politicians seem to have been rendered unfit.

The alternative to this is the continuation of the stark picture of unabated starvation, against the background of mutual recrimination and well-intentioned, but pitifully ineffective, and even misguided measures of individual relief. A system such as the one proposed may help Bengal to tide over the trying times on the eve of the harvest. The alternative is a rising deathroll and a future generation crippled physically and mentally for the great tasks that yet remain for this gifted people alike in their own fair province and in the common life of greater India.

* * * *

I append below the notes meant for me by Mr. K. Santanam who has made a special study of the present food scarcity in India and who shows how and why, while there is even greater scarcity in some parts of South India than in Bengal, there is no destitution. Mr. Santanam writes:—

"I have just come to Calcutta after a tour in Travancore, Cochin and Malabar. By all the available statistics, these areas should be facing a food crisis far greater than Bengal. Travancore and Cochin are like Bengal, rice eating areas but even in normal times, they depend on imports from outside for two-thirds of their rice. After the loss of Burma, their only hope was from Madras. Even this disappeared when the authorities in Madras prohibited the export of paddy and rice to conserve supplies for their own districts. I may

point out that Madras as a whole is a deficit province and was taking annually nearly one million tons of rice from Burma, a figure many times the quantity Bengal was taking. Also Madras contains many districts like Bellary, Kurnool and Anantapur which are subject to chronic and periodical famines and the Madras Government have geen conducting gigantic famine relief operations in these districts for nearly a year at a cost of nearly one lakh of rupees per day. When Madras shut its doors on Travancore and Cochin, they applied to the Government of India. The latter made many brave promises but fulfilled them only to a small extent. Yet in these areas, I have seen nothing so appalling as I have seen in Calcutta these two days.

I am here for study and I have no desire to indulge in premature theories. I have also no immediate interest in the political cross currents of this Province which must have their repercussions on every problem. But I am simply horror-stricken at the sight of the thousands of destitutes lying on the pavements of this greatest city of India and I am astounded to hear that for over ten weeks this misery and suffering has been witnessed by every inhabitant of Calcutta. I am repeatedly told that what I have seen in Calcutta is nothing to what I shall see in the rural areas. It is difficult to imagine how Bengal can come to this state but the main thing now is to end it by some supreme effort. In order to help those who wish to make this effort, I may jot down my conclusions as to how they have been saved this plight in Travancore, Cochin and Malabar.

First of all the authorities in these areas have been acutely aware of their precarious position and taken all possible precautions to detect any signs of distress. After a vain attempt to control prices by executive order, they established control of all trade in foodgrains from the stage of purchasing from the producer to that of distribution to the consumer, using ordinary trade channels as far as they can under control and creating new machinery whenever necessary. They established rationing in towns and something like rationing in rural areas. In Cochin statutory rationing on an equal basis has been established for all areas and maintained successfully in spite of inadequate stocks and Travancore is rapidly following suit. The result is that the quota of rice which every family in these States is getting is small compared to their needs but there is no destitution or starvation and the peasants have every inducement to stay on in their villages and grow food substitutes like tapioca. I have also noticed that the Governments in Travancore and Cochin are realising that even the most perfect official machinery will not run without active help of the people and their natural leaders and are trying to seek their co-operation. Complete control and accounting of all food stocks in all stages, systematic requisitioning of local surplus produce without hardship to the actual cultivators, rationing on a systematic and equitable basis, and popular co-operation seem to be the four pillars on which a realistic and effective famine proof structure can be built."

The Company has been formed and registered with the object of doing all classes of Insurance business such as Fire, Marine, Accident, Life Workmen's Compensation, Re-Insurance (Accepting and Ceding), Counter-Insurance and all kinds of Guarantee and Indemnity business and Miscellaneous Insurance business.

Though Life Assurance business in recent times has made rapid strides and Indian Companies have been able to secure a very large portion of this business representing as much as 80 per cent to 85 per cent of the total Indian business, leaving only a small fraction in the hands of foreign Companies, the same cannot be said in regard to Fire and other General Insurance business in this country. The position is almost the reverse in regard to the latter. Non-Indian Companies under foreign control are still dominant in respect of Fire and General Insurance. This position is however bound to improve as Indians obtain an increasingly larger control in the political and economic spheres. Moreover Indian Industries have been making rapid progress in recent years, and it would be only reasonable to expect that there would be a speedier industrialization in the country in the future. Just as the need for life assurance is being increasingly appreciated now and the demand for it has grown by leaps and bounds, similarly it is to be expected that the need for insurance cover of all kinds against property would also come to be more and more appreciated in the coming years and the demand for this class of insurance would also show a very notable increase in the near future. There is, therefore, a good scope for expansion of well-conducted Indian Companies with good capital structure, efficient management and influential connections. The Hindusthan Co-operative Insurance Society, Limited, which holds a high rank among Indian Insurance Companies doing Life business, has undertaken the promotion of this Company and will help and further its interests through its country-wide organisation. This help would be of undoubted advantage to the Company and would contribute materially to its economic management. It may, however, be mentioned that the Hindusthan Co-operative Insurance Society Limited will not derive any special benefit from this General Insurance Co. except as holders of shares of the new concern. It is also to be noted that some of the important banks of Bengal are associated with the promotion of this enterprise. By its connection with these institutions a substantial volume of business is assured to this new General Insurance concern. The Company will thus be in a position to hold its own against established Companies from the very start.

When you bury the "TALENT" you only allow it to rust and lose its value. Same is the case with your money. So do not let your money remain idle. Keep your money in a safe custody where it will multiply.

Gateway of India

(From Our Correspondent)

Bombay, Oct. 5.

BOMBAY bade farewell to Sir John Beaumont last week. He was Chief Justice from 1930 till Thursday last and his term of office was reviewed in the "Times of India" which spoke of his impartiality and firmness. His outside interests were many and permanent, and the City's good causes found a ready friend in both Sir John and Lady Beaumont. The interest of Sir John in sport marked him out even among the younger men. Lady Beaumont was a J.P. and Honorary Magistrate and Chairman of the National Indian Association for 12 years. A bed in the Cama Hospital commemorates her long connection with the City hospitals of which she was a regular visitor. Keen as a worker for the Red Cross she took up war work. Sir John's successor is Sir Leonard Stone who practised at the Chancery Bar with Sir Patrick Spens before coming out to India. Sir Leonard Stone is only 47 and is the youngest Chief Justice since Sir Lawrence Jenkins. The new Chief Justice was a Bencher of Gray's Inn. The High Court here does not have so many judges as other Courts and work for some judges has been certainly increased by exercises in delegated legislation. Sir John Beaumont dealt with Talpade's case on four several occasions and secured his release.

The arrival of U.S. locomotives has been reported. The austerity engines are meant for goods trains mostly and 40 heavy broad gauge locomotives of the Eagle class are to be in commission soon. On the metre gauge the MacArthur *nee* Mikado type has been adopted. Sir Edward Benthall's promise of 80 engines has been made good in 6 months. The metre gauge engines are already in use but the broad gauge XE type locomotives are due to arrive. After the Bihta inquiry of 1939 there was no great liking here for U.S. made engines but the war must have removed it. Imports have been made possible by the Anglo-American alliance rather than the ability to pay and the country should not be allowed to forget it.

Hyderabad's proposal to raise Rs. 1 crore at 2½ per cent is proof of the superior credit status of some of the Indian States. Cochin raised a loan lately at 3 per cent to retire the 5 per cent loan and now Hyderabad plans to place at the lowest rate known an issue at par. The Provinces tied to the Reserve Bank were called upon to issue at a discount but Hyderabad places the new loan at par. The lists will be open from October 9 to 22. There is to be a sinking fund for amortisation. The departmentalisation of finances and the new E.P.T. should make interest payment easy. Hyderabad's loan may not be a short-term issue nor would it require the sanction of the Examiner of Capital Issues. British Indian subscribers assured of exchange stability would not hesitate to subscribe and the success of the issue is a foregone conclusion, especially, as giltedged is firmer on war news. The loan is bigger news than an inquiry into the Municipality's shortcomings which has been ordered by the Nizam's Executive Council.

The Indian Merchants Chamber presented the insurance companies' case again to the Commerce Member. The claim for relief from taxation was supported by reference to interest rates. Mr. Haridas Madhavdas asked the Commerce Member to remember that premium tables were based on the rate of interest earned on the funds. He asked for amendment of Section 27 dealing with investment of Life Funds and the fixing of a limit to income-tax. Every company meeting has been made aware of the burden thrown by increases. If an emergency budget is introduced there must be exemption. General insurance companies have also asked for exemption of additional reserves to meet outstanding risks on the ground that the routine allocation is a business expense. The old grievances as to discrimination by exchange banks were aired before the new Superintendent of Insurance while the Commerce Member was told of the many liabilities created by war risks insurance. Many asked for a reduction of premium after the rate was reduced to 2 annas per cent. Factories insurance is to run for 6 months more and the revision of the rate of premium has therefore been deferred.

Mr. F. I. Rahimtoola is known to have supported Sir P. Thakurdas' views as to imports of foodstuffs. In the opinion of the latter imports must be made to bring down prices of wheat and hence of all grains. Mr. Rahimtoola demands State purchase of grain in all Provinces at harvest time. Bombay is preparing to buy up the Kharif crop for distribution over a period. It is not known if the local food purchase plan will claim crores or lakhs. Anyway rationing will not hang in midair as supplies will be under the Government's thumb. Early purchase may raise quality for experience has revealed that the State as ultimate buyer has been treated as fair game by its own middlemen. Allegations as to condemned wheat being used were common in municipal debates and rationing got a black mark for that reason alone.

South India

(From Our Correspondent)

Madras, Oct. 5.

THE food policy of the Government of Madras has on the whole been a success and particularly when other provinces are compared it becomes clear that the foresight and timely action taken by the authorities here have saved a crisis. The people of this province owe a deep debt of gratitude to Mr. Hood and to Mr. S. V. Ramamurthi who were in charge of controlling the rice situation. Presiding at a National War Front meeting last week Mr. Ramamurthi expressed his satisfaction at the present food situation and attributed the success to the control introduced at an early date. Madras could even come to the aid of neighbouring regions because of the timely control of rice. Last year 100,000 tons of rice were supplied to Ceylon and Travancore and Cochin received 100,000 tons. Substantial quantities were also despatched to Mysore, Hyderabad and Bombay. However, at the close of 1942 the province could not continue the help as a serious deficit was feared. It is clear now that the extent of deficit is small and the position would definitely improve if cultivators give full co-operation. Referring to the sugar scarcity he said that with the establishment of two more factories the needs of the people could be satisfactorily met. The difficulties arising out of scarcity of quinine will be solved with the extension of pyrethrum cultivation on the Nilgiris. This plant has been found to be as good as the Kent product in fighting malaria and by next June the hill slopes near Ooty would be full of this valuable plant promising supplies not only to this province but to the whole of India.

The first meeting of the Provincial Food Council was held recently to discuss some food problems. The Fourth Adviser to the Governor who presided outlined schemes for the distribution and multiplication of seeds covering 9 districts. The question of opening a depot in every Firka for distributing seeds of paddy, cholam and ragi is under consideration. Several tanks have been badly damaged owing to the recent cyclones in the coastal districts and the task of repairing them before the next monsoon has been entrusted to the Public Works Department and Minor Irrigation staffs. A zonal scheme for distribution of groundnut cake manure and another scheme for purchasing, subsidising and transporting manure from surplus to deficit areas have also been drawn up. With a view to speeding up the movement of foodgrains the Government have appointed Movement Officers attached to Grain Purchase Officers.

A satisfactory solution of the food crisis in the country can be arrived at only if a national economic policy is evolved. Speaking on the food problem in India, Mr. K. P. Viswanatha Iyer of "The Hindu" rightly pointed out that the profiteer in foodstuffs is not a formidable problem and that even if he were eliminated the country would suffer from food shortage. Criticising the Gregory report he said that the actual food requirements of India should not be calculated on the basis of net imports plus local production. The Government of India should import large quantities of food grains from abroad and counteract "the mischief of indiscriminate purchase by the Army and their policy in regard to exports". Rao Bahadur K. V. Rangaswami Iyengar, who presided on the occasion, said that the Government of India had two motives, "on the one hand to wipe the eyes of a tearful people and create a sense of reassurance in a wider public than the public of India", and on the other, to try to safeguard the vested interests and imperialism when the war is over. He expressed satisfaction at the food situation in Madras and paid a tribute to Mr. S. V. Ramamurthi.

Inaugurating the first meeting of the directors of Travancore Fertilisers and Chemicals, Ltd., Sir C. P. Ramaswami Iyer, Dewan of Travancore, outlined the industrial policy of Travancore and said every effort would be done "to repair the past neglect of industrial development throughout India as a whole and this State in particular to take advantage of our abundant natural resources and intelligence of the people" so as to bring about a happy co-ordination between agriculture, industry and commerce. The production of sulphuric acid has offered great prospects for industrialising Travancore and the plantation industries of the State are not luxuries during war time but vital for the successful prosecuting of war and winning of peace. The Dewan explained the circumstances under which outside capital was invited to start the sulphuric acid industry and remarked that the indigenous capital is very shy. Since the progress achieved in the State was not quite satisfactory the help for outside capital could not be dispensed with.

Mr. T. Asirvadam led a deputation of the representatives of evacuee Indian merchants from Burma to Mr. G. S. Bozman, Secretary to the Government of India, Overseas Department. He urged that at least a portion of the claims in respect of losses sustained when Burma was lost must be settled at an early date. When Burma is reconquered and reconstructed the interests of Indian merchants must be adequately safeguarded. He also suggested that the subsistence allowance granted to evacuees must be continued at least for the duration of the war. Representatives of the Southern India Chamber of Commerce discussed some vital problems connected with Indians overseas and Mr. Bozman assured them that the census of Indian evacuees from Burma and Malaya would be complete by January next. He also disclosed that the Government of Burma had promised to consult the Government of India and non-official opinion in the matter of safeguarding Indian interests in post-war reconstruction schemes. The census of Indian evacuees from Burma and Malaya would be complete by January next. He also disclosed that the Government of Burma had promised to consult the Govt. of India and non-official opinion in the matter of safeguarding Indian interests in post-war reconstruction schemes.

Referring to the question of enforcing minimum wages scheme in Ceylon, Mr. Bozman assured that attempts are made to settle matters with the Ceylon Government in an amicable manner. The Government have no intention of taking trade or immigration agreement till the war is over. Questions regarding the discriminatory treatment of Indian merchants in Sierra Leone and 'reciprocity measures' against South Africa are still in the correspondence stage.

Stock Market to-day and to-morrow:

CHEERFUL MARKETS

THE Calcutta Stock Exchange has remained closed since last Thursday and will not reopen before Friday next week on account of the Puja holidays. As such there is no official record of transactions to be commented on. It is reported, however, that business, unofficially, has been on a fairly large scale and that a further rise in prices has been recorded for all the popular counters. The improvement in quotations for Sugar shares especially has been very pronounced. *U. P. Sugar* are quoting as high as Rs. 33 and *Carew* Rs. 23-12. It is pointed out that the dividend announcements by important companies, due to be made shortly, will prove to be very encouraging for the market and that with the encouraging prospects for the next season there is scope for a further substantial rise. Coal shares also have been firmer with the announcement of the State Railway tender rates though business reported has not been quite on a large scale.

The general tone of the markets is quite firm and there is the general feeling that, given the continuance of the present conditions, the reopening after the Puja holidays would be very active.

* * * * *

The Bombay market was inclined to be very firm in the early days of this week but towards the close there has been some selling and closing quotations are below the highest levels for the week. The easier tone of the markets on Wednesday was due to the announcement by the Textile Control Board that it has been decided to resume trading in cotton futures and that ceiling prices would be fixed for a greater number of varieties of cloth and yarn. Also, it was feared that the zonal distribution of cloth and yarn might affect adversely earnings of companies in the surplus areas. These fears are not quite justified and the late reaction in prices has to be ascribed only to profit-taking and tax-selling. There may not be any appreciable rise in prices before the *Moorat*.

The giltedged market has been very strong and there has been a significant rise in the quotation for 3 per cent 1963/65 loan. The reports that the Government of India might make a re-issue of this loan shortly have perhaps been responsible for the rise in the quotation. It is said that there is a shortage of scrips. This sudden accession of strength to the market might be surprising to some especially with the recent failure of the provincial loans. Money continues to be in plentiful supply. With the extremely strong ways and means position of the Central Government big institutions will perhaps be glad to take up any loans floated by the Government. The re-issue of the 3 per cent 1963/65 loan for Rs. 100 crores might be in furtherance of the anti-inflationary drive and the 'Save and Lend' campaign.

* * * *

As the latest balance-sheet of the *Khatau Makanji Spinning and Weaving Company, Limited* for the year ended June, 1943 covers a period of prosperous conditions in the cotton textile industry it is not surprising that the net profit, before providing for taxation and depreciation, for this accounting period shows a sharp increase over the figures for the year 1941-42, the figures being Rs. 65,79,008 and Rs. 24,56,790 respectively for the two years. As in the case of other companies, the provision for taxation takes away the bulk of the earnings though it has to be pointed out that the amount of Rs. 72 lakhs set aside for taxation is in respect of provision for two years. The sum of Rs. 85,000 (Rs. 80,000) is transferred to the Building Depreciation Fund and Rs. 2.75 lakhs (Rs. 3.12 lakhs) to the Machinery Fund. No amount has been transferred to the Fire Insurance Fund against Rs. 2 lakhs on the former occasion. The final dividend of Rs. 19 per share, with the interim dividend of Rs. 8 per share already paid, makes Rs. 27 per share for the whole year against Rs. 17 per share for 1941-42. The amount carried forward is Rs. 4,65,468. The amount of Rs. 16,48,587 brought in from the previous accounts included provision for taxation.

* * *

The accounts of the *Mysore Spinning and Manufacturing Company, Limited* do not relate fully to the period of prosperous conditions in the industry and as such the improvement in earnings is less pronounced. The net profit for the year ended February, 1943, before providing for taxation and depreciation, is Rs. 26,20,882 against Rs. 11,61,469 for 1941-42. The provision for depreciation is Rs. 3 lakhs (Rs. 2.3 lakhs) while the transfer to the Reserve Fund is considerably higher at Rs. 7 lakhs (Rs. 2 lakhs). The Investment Reserve Fund received Rs. 70,000 on the last occasion. Earlier in the year an interim dividend of Rs. 2 per share and a bonus of a like amount were paid. The final dividend now recommended is Rs. 4 per share plus a bonus of Rs. 4 per share and a special Golden Jubilee Bonus of Rs. 6 per share. The total distribution to the shareholders is Rs. 18 per share against Rs. 8 per share. The amount carried forward to the next accounts is Rs. 13,29,608 and includes provision for taxation in respect of 1941-42 and 1942-43.

The earnings for the year 1942-43 would have made better showing if the working of the mills were not affected by labour troubles which culminated in a strike lasting for more than a month.

* * * *

The recommendation of a final dividend of two annas per share by the directors of the *Publicity Society of India, Limited* for the year ended July, 1943 might have come as a disappointment to some investors as it was generally expected that the distribution for 1942-43 would be maintained at least at the level of the previous year. But the compulsory deposit with the Government of India, as a result of the amendment to the Excess Profits Tax, has made it difficult for the distribution to be maintained at the same level. Also, earnings for the year are slightly lower. The net profit, before providing for taxation and depreciation, is Rs. 1,16,801 against Rs. 1,26,502 for 1941-42. The amount set aside to depreciation is Rs. 4,103 (Rs. 3,974). No transfer has been made to the Reserve Fund against Rs. 2,868 on the former occasion. The final dividend of two annas per share with the interim dividend of one rupee per share, already paid, makes one rupee and two annas per share for the whole year against Re. 1-8 per share for 1941-42. The amount carried forward is Rs. 1,110 against Rs. 1,778 brought in.

Even on the basis of the distribution for 1941-42 the yield on the present quotation of around Rs. 14 is nearly 9 per cent tax-free.

* * * *

Kalasa Tea and Produce Company, Limited has made good progress in the last three years and the profit for the last accounting year is the highest for some years. The net profit, before providing for taxation and after depreciation, is Rs. 97,156 against Rs. 78,240 for 1941-42. The provision for taxation is lower at Rs. 18,000 (Rs. 46,845). Prudently enough, the directors have decided to strengthen the financial position of the Company. A sum of Rs. 50,000 is to be transferred to General Reserve. After paying the higher dividend of 7½ per cent (6 per cent) the amount carried forward is higher at Rs. 83,797 against Rs. 81,641 brought in.

A dividend of 5%, free of Income Tax, for the year ended 31st March 1943 has been declared payable at once.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 30th September, 1943.

Reserve Bank Returns:

For the third week in succession there has has been no currency expansion and the Government of India have taken advantage of their comfortable ways and means position to cancel further *ad hoc* securities in the issue department. In the week ended October 1, 1943, however, notes in circulation show an increase from Rs. 759.68 crores at the end of the previous week to Rs. 763.80 crores. Notes in the Banking department, as a result, are lower at Rs. 10.67 crores against Rs. 14.78 crores. Sterling securities are higher by Rs. 4.9 crores at Rs. 646.77 crores. Rupee securities are lower by a like amount. Rupee coin are not very much changed at Rs. 14.89 crores.

In the Banking department, Government balances show an increase of Rs. 3.86 crores to Rs. 22.47 crores. Other government accounts are lower at Rs. 12.42 crores against Rs. 14.51 crores. Bank balances with the Reserve Bank are Rs. 60 lakhs higher at Rs. 73.94 crores. Balances held abroad are Rs. 4 lakhs higher at Rs. 108.24 crores even with the transfer to the issue department of Rs. 4.9 crores. There has thus been a net receipt of Rs. 5.3 crores during the week. Ways and means advances are Rs. 28 lakhs against nil.

(*Continued from page* 689)

of the Indian Insurance Year Book need not be cited to prove that Indian companies need, and deserve, a larger share of general insurance business, especially, as additional opportunities are opening up during the war. The Company has got its capital before the announcement and its organisation expenses must be in proportion to the competence and range of its connexions, principally the Hindusthan Life Insurance Society. The average Indian insurance company is linked with one or more Managing Agents while in this case the composite board and the substantial extra-provincial interests should help the new company to make a supremely successful beginning.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

CALL money is quoting ½ per cent in Calcutta and ¼ per cent in Bombay. There is a plethora of funds in the market with no borrowers and many lenders. At the auctions of treasury bills held in the last two weeks the Central Government was able to get its requirements at the rather cheap rate of 12 annas per cent per annum. There was keen bidding and it is interesting to note that the decline in the average discount rate has been achieved in the face of lower applications. With the announcement of the terms of the new loan it is suggested that the Government of India was anxious to prepare the market for the reception of the new loan and the decline in the average discount rate was mainly due to bidding from special quarters. At the latest auctions the amount of applications was Rs. 12.28 crores against Rs. 15.87 crores in the last week and Rs. 20.1 crore two weeks earlier. There has been a sudden decline from annas 13 and pies 6 per cent per annum to annas 12 per cent per annum in the last two weeks. Till the first week of October, maturities were in excess of sales and maturing bills in the last three weeks seem to have been mainly on account of the Imperial Bank, total investments of the Bank on October 1, 1943 being Rs. 125.69 crores against Rs. 136.44 crores on September 10, 1943. The keener bidding on the last two occasions might therefore have been by the Imperial Bank of India. From now on maturities will equal sales if the offer is maintained at Rs. 8 crores per week. Any subscriptions to the defence loans and sales of rupee counterparts will therefore amount to a net withdrawal of funds from the market.

The Finance Member should be congratulated on the planning of the New Loan, the terms of which have just been announced. For some time, there have been reports that there may be a re-issue of 1963-65 loan with a higher issue price. But the New Loan that has just been announced is a 3 per cent Funding Loan having a maturity date in 1966-68. The issue price is Rs. 98 per cent. It is not suprising, therefore, that there has been keen buying of 3 per cent 1963-65 in recent weeks and the quotation was over Rs. 97-12 sometime back. With the New Loan having a later maturity date and with subscriptions limited to Rs. 25 crores approximately, it should be said that the quotation for 3 per cent 1963-65 will improve yet further. As for the success of the New Loan there can be no doubt as subscriptions are invited only for Rs. 25 crores approximately and there is a large volume of funds seeking investment. It was only recently that the authorities made a re-issue of the 3 per cent 1963-65 loan at Rs. 95-8 for Rs. 15 crores. Even at that time, we remarked that the Government of India had fixed the issue price very low, and that, having regard to the cheap conditions in the money market, the authorities could have fixed the issue price very much higher and been succesful in the floatation of the loan. The higher issue price for the New Loan carrying the same rate of interest and a later maturity date, has been due only to the bold policy adopted by the Reserve Bank of India in recent weeks and the large sales of rupee counterparts at increasing rates to the market. At the time of the last re-issue of 3 per cent 1963-65, the quotation for 3½ per cent Paper was around Rs. 94. The quotation for the non-terminable loan has since improved to Rs. 97-8 and there are not many sellers in the market. It need not therefore be emphasised that the direct result of the New Loan will be a definite strengthening of the giltedged market. There was a slight recession in prices on the reports regarding the bombing of Madras but the giltedged market has become shock-proof and the small decline in prices that has taken place should thus be said to provide an opportunity to those investors who have not bought earlier.

The Dewan Manikchand Wards' Estate Loan for Rs. 12½ lakhs affords a very useful form of investment to banks and insurance companies. The amount of loan is very small, being only Rs. 12½ lakhs. The loan carries interest at 4 per cent per annum and is repayable in 1958-63. The issue price is at par. The interest and principal is guaranteed by the Government of Assam and the loan is recognised as Trustee Security. Having regard to the fact that the quotation for the 4 per cent 1960-70 is over Rs. 111-4 there should be great competition for taking up the loan.

The returns of the Reserve Bank for the two weeks ending October 1, 1943 show that there has been no expansion in currency and the slight variation in the amount of notes issued is due to the changes in the figure of rupee coin. The returns for the week ended September 17, and 24, 1943 show a decline in the notes in circulation but in the week ended October 1, there is a sharp increase to Rs. 763.8 crores from Rs. 759.68 crores. Notes in the banking department are lower at Rs. 10.67 crores against Rs. 14.78 crores. Sterling securities are higher by Rs. 4.99 crores in the week ended October 1 at Rs. 646.77 crores. Rupee securities for a like amount have been cancelled. Rupee securities in the issue department were thus Rs. 68.39 crores against Rs. 73.38 crores on September 24, 1943.

In the banking department, Central Government deposits were higher by Rs. 3.86 crores at Rs. 22.47 crores even with the cancellation of *ad hoc* securities to the extent of Rs. 5 crores. Provincial Government accounts show a decline of Rs. 2.1 crores to Rs. 12.43 crores while bank deposits with the Reserve Bank are higher by Rs. 61 lakhs at Rs. 63.94 crores. Balances held abroad are Rs. 4 lakhs higher at Rs. 108.24 crores. If the transfer to the issue department is taken into consideration there has been a net receipt of Rs. 5.3 crores during the week.

The exchange market has been steady with few exports bills offering.

GOVERNMENT OF INDIA

3% FUNDING LOAN, 1966-68

Thursday Evening.

THE exchanges of opinion between the 5 Senators who went to the theatres of war and the U.S President may have an effect on Congressional view of tax proposals. Recent messages suggest that the Secretary's proposals will not gain acceptance since the Republicans as a party don't like the idea of heavy increase of taxation. Wall Street has been quiet and dull in the last week and the Washington kettle is being carefully watched. The Happy Senator (A. B. Chandler) has brought into the open grievances over post-war collaboration etc., and the third draft of the White plan is not likely to find immediate acceptance. Legislators are duly suspicious of plans to put U.S. money to altruistic purposes and the chilly reception given to the tax plan may have further effects on the plans for international co-operation.

Mr. Roosevelt has made no sign of yielding now to Senatorial criticism. He wants to leave out Russian arrangements and get on with the war. The Senators are criticised for making a fuss on the eve of the Moscow talks, but the relations between President and Congress have been far from happy this year. There are difficulties over the call-up; over shipping and over post-war aviation plans. The Republicans, in spite of Mr. Willkie, are not keen on abolishing the Party line. The Five Senators ask for full parity. U.S. naval supremacy is a point in their favour and the U.S.A. asks for an 'Open Door' everywhere in regard to civil aviation. The Association of British Chambers of Commerce is apparently of the same view in deprecating monopoly for one company and where India stands may be inferred from the cautious support given to the pre-war set up in the memorandum issued this week. The President will have to get rid of Senatorial opposition before the U. S. A. can prepare plans for trade and exchange agreements. Anything like co-operation for international reconstruction is unpalatable to a section of U.S. opinion and the interest rapidly whipped up in the April-September plans seems premature and illusory. The U.S.A. has no single view of what is wanted and thinks of the East Asia command as a British concern which puts the S.-W. Pacific operations into the second place.

There is so far no determinate market reaction to the confusing development in Washington but Home Industrials in London have been irregular this week. Small losses have been recorded and tea shares alone appear to be firmer. Eastern oil shares have lost ground in view of reports that the U.S. Government is acquiring interest in U.S. oil companies by reorganisation. Emir Feisal's visit to the U.S.A. is obviously related to Standard ambitions in Saudi Arabia. The Pan-Arab talks in Cairo may be of limited significance as compared with the U.S. plan to take more oil from the Persian Gulf for war purposes. Development work is to be stimulated and the flying Senators have perhaps succeeded in showing that the U.S.A. should not give away too much oil either in war or peace. There is a possibility of British sources of oil being taken over under reciprocity arrangements and the U.S. Government's entry into Saudi Arabia will be far more determined than the attempt made to get a market for Bahrein oil. The less said about oil politics after the last war the better, but rivalry in Iraq was not at any time limited to the French. The U.S.A. did not get much in Iraq and turned to Arabia where the pro-British dynasty was out. With the British planted in Palestine the U.S.A. has not been unsympathetic to Jews, but Arabs anyway have not been ignored. The U.S.A. Government having got conpensation of some sort in Mexico may persuade California's Standard and Texas to give a share in the Arabian oil-wells. The refinery at Hasa on the Gulf is known to have a capacity in excess of such supplies as may be had and vigorous development work may be undertaken by Standard in Venezuela because the British have gone ahead there.

Fears of opposition have not prevented the U.S. Government from preparing its plan for a World Bank. Mr. White got other experts to look over the scheme to set up a bank with a capital of 10 billion dollars. The new bank is to lend money to Governments for reconstruction, if the supply of private capital is not adequate to the demand after the war. Payment of contributions to capital in gold is not a condition and the plan outlined last week is not for stabilisation but for long-term advances to approved parties on certain conditions only. Mr. White expected that the U.S. Treasury would provide a substantial part of the proposed bank's capital, assigned exclusively for reconstruction. The U.N.R.R.A. is to deal with the more pressing tasks.

There may be agreement over the Azores and promise of more goods to Portugal but the escudo appears to be a rapidly hardening currency British interests in Portugal complained in April about difficulties created by the Government as regards transfer. There was trouble over Indian money orders to Goa last year and the refusal of the Portugese colony to look upon British Indian currency was not overlooked. Though foreign exchange regulations issued by the Reserve Bank may be liberal (Goanese can buy and sell shares; remit funds or take out notes) the rupee's value in Goa appears hypothetical. According to a letter published in the "Times of India" currency notes from India are not accepted by shroffs or traders who say that they are barred from taking commission and therefore will not change British Indian notes into local money. Money orders are paid in notes after delay, and the recipient has to worry over exchange. The correspondent added 'one cannot understand how the P.O. will pay British Indian money in notes while they do not accept even half a rupee for sale of stamps.' The letter noted that paddy in Goa is given to ration card holders alone and those with Portugese money could get food, while those with British Indian money will have no means to buy anything. This may be a local grievance or the sign of unprecedented depreciation of the rupee in the nearest foreign territory. But exchange of rupees for Portugese postal orders may simplify the problem which is entirely one for the Reserve Bank, a resolute copyist of British Defence (Finance) regulations.

Higher prices for bullion coincide with the month of holidays. The selling of gold by the Bank has no visible effect on prices and lucky speculators are putting away bullion quietly. The higher level of silver prices is rather difficult to explain in view of the passage of the Green Act, knocking out the silver purchase programmes. The U.S.A. is ready to use Treasury stocks for defence purposes and is not tied to buying from the nearest neighbour which is free to supply Britain. Should Britain take Mexican silver and not ask for silver under lease-lend the same country can be asked to sell silver to India.

The big increase in Britain's short-term debt goes on. Treasury deposit call is fixed at £100 millions. The note issue rises; bank deposits go up; and the State borrows more. The cycle is unbroken, and banks are eager lenders as shown by the rise in the applications last Friday to £200 millions. Increase in the weekly tender to £100 millions had led to no change in the average rate, and oversea balances, as they grow, are assured of constant employment. The mild revival in the Funds follows the increase in borrowing, but it may be due to repatriation schemes. Egypt has paid off her sterling debt and there is new money in the market. The autumn revival is limited to giltedged, but clearing banks may find real advantages in the addition to regular borrowing which some may regard as a pointer to an increase in the cost of war.

Italy as a cobelligerent is a likely claimant for lease-lend aid. It is clear that Badoglio looks for considerable assistance from the Allies now in return for the help given in Corsica. The Allies have to carry a weak supporter for some time, though there is no mention of financial arrangements so far. The Papacy has not defined its attitude as yet to the cobelligerent for the general presumption is that Badoglio will get all the help wanted. There is of course a real difference between the two French Generals and Badoglio. The Mediterranean Inter-allied commission may however settle his position and assign Sicily and Calabria to a Government at Bari. What revenue it will command and what resources it will draw upon, and for what purposes must remain a subject of conjecture when the new alliance itself is not welcome to the Yugoslav and other Allies. The Italian fleet could be had on terms and the old Marshal may do a deal on that account. Sale of the merchant fleet is another possibility and the Allies could perhaps settle the terms quite promptly. The sale of the Dodecanese to Turkey might possibly help Badoglio to get funds. Such a sale would only correspond to many familiar transactions in the past. The U.S.A. bought a part of her possessions from France, Spain and Russia and took the Virgin Islands off Denmark's hands for 15 million dollars in 1915.

DEWAN MANIKCHAND WARDS' ESTATE LOAN

GUARANTEED AS TO PRINCIPAL AND INTEREST BY THE GOVERNMENT OF ASSAM

(Recognised as Trustee Securities)

4 PER CENT LOAN 1958-63

AMOUNT OF LOAN Rs. 12½ LAKHS
IN BONDS OF Rs. 1,000 AND MULTIPLES THEREOF

ISSUE PRICE Rs. 100/-%

Open for ONE DAY, *Viz*, WEDNESDAY, 20th October from 11 a.m. and shall be closed as soon as the subscriptions approximate to the amount of Rs. 12½ Lakhs.

Dewan Manikchand Wards' Estate, one of the oldest and biggest Estates in the district of Sylhet (Comprising vast Zemindery, several Tea Estates, Forests, Fisheries, Town Properties and Mineral Resources, such as Oil, Petroleum etc. etc.) is the hereditory domain of the Late Raja Girish Chandra Roy Bahadur of Sylhet, founder of Murari Chand College, Raja G. C. High School etc. etc. at Sylhet and also renowned for many other philanthropic deeds and at present managed by the Court of Wards. The Estate has been empowered by the Government of Assam under their communication No. R.W. 20/42/232 dated 21st September, 1943 to raise a Loan for Rs. 12½ (Rupees Twelve and half) Lakhs for liquidation of certain liabilities of the Estate and improvement of its properties.

The Loan is secured on the entire Rents, Royalty, Assets and Properties of the Estate and provision has been made for punctual payment of interest and repayment of the Loan out of the income and assets of the said Estate. This is guaranteed by the Government of Assam. **The Official Trustee of the Government of Assam will act as the Trustee for the Debenture Holders.**

The Loan shall have a life for 20 years certain with the option to borrowers of repaying it after 15 years and it bears interest at 4 per cent per annum. Interest is payable half-yearly and shall run from **the 21st October, 1943.** Subscriptions will be in the form of cash/cheque. Applications will be received at the offices of the Imperial Bank of India, Calcutta. Copies of the Prospectus and application forms can be obtained at the receiving office and at the office of Messrs. Narayandas Khandelwal & Co., Stock & Share Brokers, 25, Swallow Lane, Calcutta and also at the office of the undersigned.

Application will be made to the Committee of the Calcutta Stock Exchange Association, Ltd., for official quotation.

Sharing The Cost

The proper concern manifested in the apportionment of war expenditure before the arrival of the new Commander of S.E. Asia has led to no release of information except in the form of a paragraph in a news agency message which runs: 'It is taken that as the base of future operations India will contribute in material and other resources in addition to supplies and other services provided by Britain and America, and that, in the final financial settlement India's contribution will be taken into account'. This comfortingly vague statement is obviously no answer to the non-official demand that no part of the cost of reconquering Burma should fall on the Indian taxpayer for which purpose the Federation of Indian Chambers, acting as the custodian of the taxpayer's interests, addressed a communication to Government which considered the request a little premature in view of the general task of the new Command not having been settled. There is, however, a fear that a radical unsettlement of the financial settlement may be forced on India. A war gift as a cure for currency expansion finds favour with the financial press in London and latterly, with some ex-officials in India. The war gift as a means for disposing of sterling balances is not openly recommended but there is a definite suspicion that the phrase 'joint war measures' and the 50-50 formula, accepted with a due measure of reserve today would be interpreted in the future in a way different from the interpretation in force for over two years. The failure in Arakan this year caused no dismay because Sir Kingsley Wood said that operations in Burma, as in Tunisia, were paid for by the British Government. The arrangements in force since the Chatfield Committee advised an increase in India's own Defence expenditure are plainly in line with the demand that Indian liability should be distinguished from Imperial liability. The Simon Commisssion recognised rather frankly that the Army is not India's exclusive concern. The Chatfield Committee in 1939 asking for expansion and improvement at once gilded the pill by an offer of assistance. The financial framework was, therefore, settled before the war, and the formula under which Defence charges are viewed as a fixed amount and the increase in expenditure in war years recoverable from the British Government was the product of discussion and negotiations. Last year's visit to Britain by the Finance Member was concerned mainly with the allocation of war costs. The new settlement certainly did not take cognisance of the British Government's claim that the cost of reconquering Burma and the defence of Persia and Iraq should be debited to the Indian Treasury. The last claim is now difficult to advance since Iraq and Persia have become belligerents ranged with the United Nations who are perhaps prepared to foot their own bill for offensive operations before or after the 10th Army moved out to new tasks after the separation from the Indian Command.

The Budget session of the Central Assembly was marked by frequent references to the scope and purpose of the Indo-British financial agreement. The proper share in joint war measures is defined as half and half and the majority of war measures in India is covered by the formula which also means that the reduction in Defence expenditure envisaged early this year would be offset by the growth of coparcenary liability. Reference to India's eligibility for lease-lend assistance, the principle of reciprocal aid, the procedure adopted by Canada or Australia will be certainly deemed superfluous. It has been said frequently that direct taxation and indirect taxation have been raised by the Centre to the point that the burden of taxation is now double that before the war. The growth of India's taxable capacity is hardly measurable in terms of either industrial output or even corporate profits. As for the individual taxpayer in India the successive increases in the cost of living appears the decisive factor against the modification of the formula limiting the responsibility of India. Any comparison between India's defence expenditure and that of the chief belligerent nations like any comparison between the addition to public debt here and in other countries must naturally take account of the difference in circumstances and policy.

India's big business, less alarmed by control than the confusion of aims, emphasises the popular view that the not-so-old Chatfield settlement must be maintained intact and the Indian Government must not mix up the post-war plan for the utilisation of sterling balances with the contraction of new liabilities which would have the effect of leaving India unable to buy out British investment. The regular gift of the Canadian Government to British followed the expansion of Canadian exports to an inordinate degree and Canada's own dollar liability is met by borrowing or by the measures carried out under the Ogdensburg agreement. It might be possible for India to adopt a generous attitude to a third unrelated party (other than Britain) for the principle of joint defence and joint expenditure adopted by the U.S.A. and Canada since 1940 corresponds to the Indo-British arrangements, and additional benefits are hardly permissible when an all-in arrangement is in force.

Every monthly statement of receipts and expenditure issued from Delhi underlines the fact that heavy borrowing and summary tax assessment are the logical result of the sharing of expenditure when control of defence is wholly denied to the Indian legislature. The lack of understanding and goodwill may not be a bar to an imposed settlement but financial proposals must run the gauntlet of the Assembly at some time. If there is general recognition of the relation between the Save-Lend campaign and the forthcoming increase in Government disbursements, enough would be secured from the Government's point of view since inflation prevents a greater danger to the war effort than the demands for explanations noted in March.

What is perhaps less obvious is the effect of the famine on production and resources alike. The natural disaster will take over Rs. 7 crores in Bengal alone and a famine gift is pressed for. The demands made on the Provinces for the repayment of debt to the Centre may be independent of the need for increased spending but circumstances are materially in favour of a plea of total incapacity. Whether it will be seriously and strenuously advanced is another question, but it may occur to many that famine in Bengal is a more proper object of Central expenditure than a contribution for the reconquest of Burma.

There is perhaps less point than ever in the doctrine that Aden and Singapore are essential outposts for Indian security. Singapore and Rangoon have been lost, and presumably India's security is not less inpaired than when the Middle East was menaced by Rashid Ali's rebellion. The finite consideration for the Legislature is always the view taken of the offensive, essential only from the Chinese viewpoint. Since aid to China is an inescapable liability of global strategy, the Allies, of course, have to pay for operations in Burma and beyond but India, having paid for the indefensible Opium Wars may properly be excused for the refusal to share the cost. The obvious advantages to be derived by Britain and the U.S.A. from the expulsion of Japan from East Asia are not likely to be extended to India, and such gains as may accrue from the reconquest of Burma are distinctly problematical. From an investment angle acceptance of liability for any part of expenditure would be inappropriate. Such openings as the Chinese market may offer after the war are likely to be snapped by the existing creditors for very cogent reasons,

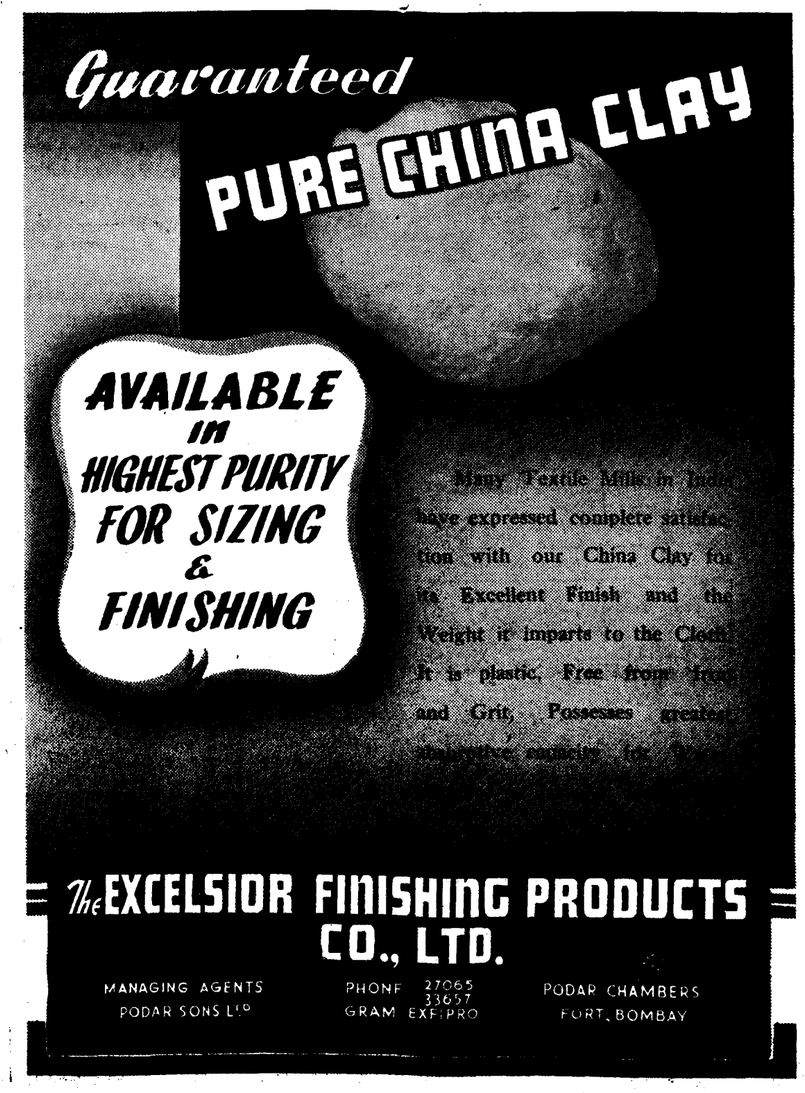
and sentiment can have no place when India has as much need of capital for post-war reconstruction as China, which has according to recent reports, received gold from the U.S.A. to stiffen the backing of her currency. There is perhaps no reason to emphasise the fact that British aid to China antedates the alliance involving India contracted in December 1941 and Britain, even more than America, was bent upon defending her Far Eastern interests by resistance punctuated by compromise. If resistance has failed and a new stage in the war against Japan is to begin, it must be exclusively a British concern since Indian detachment from Pacific problems has been more or less complete notwithstanding the despatch of a non-representative mission to attend a special conference in Canada. It is debatable whether India in the future would have as much concern with the Pacific as Canada which has a Pacific coastline and acquired trade and shipping connections with the Orient long before the war. The peremptory standstill in the political sphere entails the acceptance of the last argument as of the others outlined. India is clearly entitled to some advantages in return for dependence.

THE HYDERABAD BUDGET

The success of a Finance Member lies in providing for the present exigencies of the State and making careful preparations for the future. The conflict between the needs of the present and the requirements of the future has ever been a worry to statesmen who often fail by sacrificing the one to the other. This difficulty is particularly acute during war time which makes it impossible to calculate the developments even of the immediate future. In the welter of war crisis finance members have the delicate task of mobilising for war effort, foreseeing the developments which must affect the fortunes of the state and preparing the ground for a new post-war world. Public finance is a powerful instrument of progress; only he who strikes an optimum distribution of resources can be deemed a successful financier. Those who are in charge of the fortunes of Indian states have an additional problem of falling in line with British Indian policies at a time suited to the interests of the States concerned. India is one economic unit and even though the States enjoy powers of autonomy the policies initiated in British India and Indian India interact and necesssitate suitable measures for speedy development of their peoples. The advisability of falling in line with British India has been underlined by the war and in matters like war effort, food problem, price control, cloth control, transport etc. the States have co-operated with British India for mutual benefit. The budget of H. E. H. The Nizam's Government for 1943-44 presented by Mr. Ghulam Mohammed can be deemed a success as it tackles the special problems of Hyderabad war finance satisfactorily.

The budget for the year 1943-44 envisages a revenue of 1302.09 lakhs and an expenditure of Rs. 12.93 lakhs leaving a surplus of 8.78 lakhs. The estimated revenue for the year promises an increase of Rs. 367.96 lakhs over the budget estimates of last year. This is the result of high prices and general prosperity of the agricultural classes in Hyderabad. Receipts under Customs, Excise, Land Revenue and Railway earnings account for the swelling up of the receipts. The introduction of E.P.T. is expected to yield 50 lakhs while the proposed excise duty on manufacturers of tobacco and vegetable ghee would yield about Rs. 45 lakhs. Expenditure has risen from Rs. 1187.34 lakhs last year to Rs. 1293.31 lakhs for the current, recording an increase of 105.97 lakhs, mostly accounted for by the increased expenditure under the items Army, A.R.P. and dearness allowance to low-paid Government employees. Expenses due to war including A.R.P. and dearness allowance account for 98.47 lakhs and a sum of 47 lakhs is allocated for education. Provision has been made for the benefit of the Technological Laboratory (oils and ceramics) attached to the Osmania University. Medical and Public health receives 15 lakhs, buildings, and communications 7 lakhs and irrigation 2 lakhs. A noteworthy feature of the budget is that as high as 34.9% of the expenditure has been set apart for nation-building departments like Education, Medical and Public health, Rural Development and Agriculture. In this respect Hyderabad compares very favourably with other enlightened states like Mysore, Travancore and Baroda. The budget estimates for the year also provide for a capital expenditure of Rs. 90.37 lakhs as against 64.79 last year. The main items under capital expenditure are the Golconda Infantry Barracks at a cost of Rs. 10 lakhs; civil works in connection with the Hyderabad Electric scheme at Nizamsagar costing 8.5 lakhs; the construction of a Security Press (for printing Hyderabad currency notes) estimated to cost Rs. 25 lakhs. Some years ago Hyderabad had planned a big programme for roads and communications at a cost of 1¼ crores but it could not be put into effect owing to war conditions. But the necessity for roads has become imminent and any more delay in opening up rural roads and extensive communications has been considered as wrong policy. The present programme for roads would not require substantial quantities of cement and iron and steel and, if carried out at an early date, would help the agriculturists and traders besides laying the foundation for the post-war industrial development of Hyderabad State.

The currency position has been quite satisfactory, thanks to the vigorous drive against hoarding, the withdrawal of old silver rupees and the introduction of 300 lakhs of Q. Silver rupees. Notes and coins to the value of Rs. 2736 are in circulation. During the past year money conditions have been easy. Owing to increased agricultural and industrial production in the State there has been an increase in the active circulation of currency. The Budget Note points out that this is "due to increase in the price of commodities brought about by the war and inflation in British India and not the result of inflation of the currency of the State". The strength of Government finances can be inferred from the fact that the assets and investments are more than double the financial obligations.



Hyderabad's contribution to war effort has been considerable. The total expenditure incurred directly or indirectly, in connection with the war is reckoned at Rs. 304.74 lakhs. The State has further subscribed Rs. 51.9 lakhs by way of grants including 1 lakh for Indian Red Cross Society; Rs. 20 lakhs to Air Ministry for the Hyderabad Squadron; Rs. 20 lakhs to the Admiralty for purchasing a corvette; and Rs. 2 lakhs for Viceroy's War Fund. About Rs. 2 crores have also been invested in the Government of India war loans while investments in Government of India paper are expected to reach Rs. 20 crores in the near future. There is no doubt that Hyderabad's financial contribution to war effort is greater than the contributions of several states added together.

Mr. Ghulam Mohammed has introduced several innovations with a view to preparing Hyderabad for the coming constitutional Reforms. For the first time the budget is framed on an annual basis instead of on a triennial basis introduced 20 years ago. The previous system of triennial contracts with Departments has served its purpose and in order to avoid certain abuses and improve the efficient control of the Finance Department the annual budget scheme has been adopted. The work of preparing annual audit and appropriation reports has also been taken up. These changes would enable the Executive Council to examine important financial irregulaties and facilitate intelligent criticism in the Legislature to be established under the Hyderabad Reforms.

In order to regularise the financial system of the State and to strengthen it against the uncertain developments of the post-war period three important reserves are constituted, viz., (1) Budget Stabilisation Reserve (2) Post-war Development Reserve, (3) Securities Adjustment Reserve. The Budget Stabilisation Reserve will be formed out of the savings and accumulated balances of the Departments and will be utilised "(1) to meet additional expenditure due to war which could not be met out of the ordinary revenues of the year; (2) to meet deficits in the budget and (3) to cope with the situation which may arise due to the apprehended fall in revenue after the termination of the war when it may not be possible to adjust expenditure at a short notice to the reduced level of revenues." The progress of a state is to be measured by the extent of social services enjoyed by its citizens and Hyderabad prepares for the great pressure for development schemes expected in the post-war period. A Post-war Department Reserve with a balance of 3 crores has been proposed for this purpose. The Securities Adjustment Reserve is formed to meet the loss which may result from changes in the value of Government Securities. These three reserves clearly demonstrate the far-sightedness of the Finance Member who has constructed suitable devices to make Hyderabad proof to the unsettlement of post-war conditions. The proposal to establish a stock exchange for Hyderabad and the inclusion of non-official members in the Retrenchment Committee will enable the people of Hyderabad to play an active part in the commercial and parliamentary life of the State.

In the matter of fiscal policy the States have shown, particularly in recent months, a tendency to follow the lead of British India. In Hyderabad, as in Cochin and Baroda, the E.P.T. has been adopted though at a lower level. 60% of the profits exceeding Rs. 24,000 will be taken away by the State but 20% will be held as deposit repayable at any time within 3 years of the cessation of war at 2% simple interest. The States generally are not in dire need of revenues as British India is and so provision has been made for the return to industry of part of the receipts under E.P.T. Hyderabad proposes to utilise two thirds of the E.P.T. for relieving the poorer sections of the population and for low-paid Government servants. To this extent it is not proposed to be made an instrument of anti-inflationary drive. The budget note also criticises the restrictions imposed in British India on the purchase by British Indians of the shares of companies floated in Indian States and suggests that in view of the cooperation given by the State to fight inflation a joint machinery may be set up to examine the applications for new floatations in British India and Indian States.

Hyderabad's finances are indubitably strong and sound. Under the financial stewardship of Sir Akbar Hydari, the state has been rapidly progressing politically and materially. To come after Sir Hydari and yet keep up the high standard of budgetary sagacity and skill is a record of which Mr. Ghulam Mohammed can be proud The budget presented by him for the year 1943-44 clearly demonstrates his ability to satisfy the pressing needs of today with prudent provisions for the tomorrow. It is based on a full recognition that India is one economic unit. The financial structure of the State has been reformed and preliminary requisites for a full blown modern state are also provided. We are sure that Hyderabad state will emerge after the war as a powerful and prosperous Indian State contributing towards the rapid progress of India.

Imports of Motor Vehicle Spare Parts and Accessories from the United States, Canada and the United Kingdom.

In future, imports of motor vehicle parts and accessories from the United States, Canada and the United Kingdom will be Governed by the following principles:—

(i) in the case of imports from the United States, on the basis of a fixed value of parts and accessories per vehicle in essential use in India at present;

(ii) in the case of Canada, up to a proportion of the value of actual exports from that country in the year 1941; and

(iii) in the case of the United Kingdom, up to a definite value.

2. Parts and accessories for each make of vehicle in use in this country will be obtained only from the country from which such makes were originally obtained.

3. Arrangements have already been made to obtain factory and other parts for General Motors and Ford vehicles and factory parts for all the United Kingdom makes through the existing main vehicle importers. A certain portion of the total quota for the import of parts from he United States is being offered to the firms who have imported vehicles of makes other than General Motors and Fords from the United States in the past. The balance quota available from the several countries is proposed to be utilised for the import of miscellaneous, electrical and replacement parts as follows:—

(i) from the United States—parts, other than factory parts, for all makes accept those of General Motors;

(ii) from Canada—parts not exceeding 70 per cent in value of those actually exported from Canada to India during 1941, the imports to be made only by the same firms to whom exports were made from Canada in 1941, the value referred to being the factory value; and

(iii) from the United Kingdom—all parts, excluding factory parts and batteries.

The proposed imports under clauses (i), (ii) and (iii) above will be on a commercial basis and the importers will have to establish the necessary credits with the exporters in the countries concerned. The Government of India will, however, assist with these imports in consultation with the foreign Government concerned.

4. Applications together with information in the form below should be made **not later than 30th November, 1943** by firms desiring to import parts and accessories under the conditions indicated above—

(a) if from the U.S.A. and/or Canada, to the Assistant Controller of Road Transport (Provision), Department of War Transport, New Delhi, and

(b) if from the N. K., to the Secretary, U. K. Motor Vehicle Spare Parts Advisory Panel, 71, Park Street, Calcutta.

Country of origin..... Name of suppliers.....

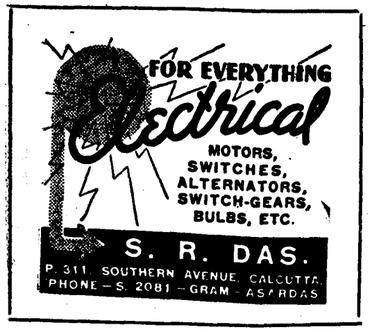
Name and address.....

Separate forms should be used for U.S.A., U.K. and Canada. Information in respect of U.S.A. and U.K. is required for 1938, 1939 and 1940 and in respect of Canada for 1941 only. Detailed indents should accompany the application.



On receipt of applications and indents, definite quotas by value for parts to be imported from each source will be allocated and the necessary import licences will be granted by the Chief Controller of Imports. This Government of India reserve the right to allocate individual quotas, issue import licences and certify indents, only for such parts as they consider to be essential.

War's Economic Consequences

As a guide to current discussions Dr. V.K.R.V. Rao's examination of the economic consequences of the war leaves little to be desired. The study of War & Indian Economy published lately by Kitabistan, Allahabad, Rs. 3-12 brings together facts relating to scarcity and inflation, the diversion of foreign trade and the changing content of India's export trade. The greater part of the study is devoted to proving that full spontaneous war effort has not been secured because of the deadlock which is certainly an economic factor to reckon with. The scarcity theory is illustrated by reference to fall in imports and the increased demands made on India by the Allies in the third and fourth year of the war. In examining the effects on agriculture in India Dr. Rao concludes that the surplus available for dealing with shortages outside the exporting provinces is smaller than presumed. The bigger farmers have benefited from high prices but the incentive to sell is absent. Instead of recommending official sales of gold and silver Dr. Rao advocates the liquidation of agricultural debt by every available means so that erstwhile creditors would be impelled to invest in defence loans. The theory behind the new Save-Lend campaign thus receives an unexpected measure of support. Economically India was not equipped for war in 1939 and the handicaps listed are not limited to a shortage of technical personnel. There were no basic industries to assist rapid industrial development of the country, exposed to shortage of both indigenous and imported goods owing to the exigent buying of Government agencies. Reference is made to a boom in agricultural land and the reactions on the cost of living of larger incomes and additional employment. War production has been made possible by currency expansion and the weight of academic displeasure is again added to the protests of commercial bodies. The intensity and volume of distress arising from belated and half-hearted control measures is described as the principal result of the war effort which fact goes far to explain the rather disingenuous argument that India's sterling balances are built up from the misery of the masses. Dr. Rao makes it clear that the Reserve Bank has to take sterling and give out rupees at a fixed rate. He therefore inclines to the view that the ratio is at fault. Banking expansion has not checked the increase in note circulation and cheque clearance figures for 1942-43 point to no decline in the free use of money held on current account by private persons. Taxation has been doubled by the war and borrowing has increased substantially.

The financial burden of the war is not illusory though taxation is still recommended as the remedy for inflation, though how much of the rise in prices is due to non-monetary factors cannot be indicated readily. That India has not yet experienced inflation on the scale experienced by some European countries after the last war is the view advanced by Dr. Rao who declines to accept Professor Vakil's theory of deficit-induced fiat-money inflation which is not warranted by circumstances. Unhampered by prejudice, he urges that exports should be reduced and imports increased, hoarding habits conquered and the supply of goods increased. The Gregory Committee has endorsed recently his view, more or less in entirety, and the latest review of the Government's financial policy is not unrelated to the food crisis. A Department of Production distinct from Supply is demanded, import of fertilisers, extension of irrigation facilities and other means of agricultural saving is advocated and E.P.T. at 100 percent does not meet with disapproval. Payment for goods in war loans, limitation of dividends and sale of gold and silver certificates as also raising of the rate of interest payable on savings bank and other deposits; are measures directed towards the spreading of the costs of war, viewed as a whole. But the prime condition is the restoration of public confidence by constitutional advance which means that the key to the financial as to any other problem is in London. The problems of the transition require as much consideration as those of the urgent present and if those familiar with the war's effects on industry and trade hark back to the Cripps offer it is not without significance.

Plantation Labour

Since plantation labour is a subject of official investigation and extension of welfare is desired great interest attaches to the report of the Controller of Emigrant Labour. Only the statements for the year ended September 1942 are available, and those go to show that immigration with the Assam and Surma Valleys fall off in 1941-42. Disturbed conditions on the east of India explain this decline. The employment figures show that average for two months March and September was higher than the daily working strength on estates in the Assam and Surma Valleys while the number of adult males was exceeded by the number of women and children employed in both cases. The total monthly cash earnings of workers on an average was higher in the Assam Valley than in the Surma Valley especially in the case of women and children. The total wages excluding diet, rations and subsistence allowance paid was over Rs. 40 lakhs per month while the number of workers including children employed in the Assam and Surma Valleys totalled over 587,000. The employment figures certainly suggest that tea is far more important as a provider of

employment than any other industry. Variations in wages from district to district in the case of men, women and children are common but the average of 0-6-6 for men, 0-5-5 for women and 0-3-6 for chidren shows that settled labourers on estates have certain advantages as compared with industrial workers. The total for employment must be higher than the total of 587,000 as the faltu or basti labourers numbering on the basis of average daily working strength over 53,000 must also be considered. Wages in the case of basti labourers were lower in all districts for men, women and children; but the average earnings for all tea estates given in the report is 0-5-8 for males, 0-4-4 for women and 0-3-3 for children. The average monthly earnings (published in the Indian Labour Gazette) were exclusive of diet, rations and subsistence allowance. The average earnings per month for men was Rs. 5-13-5 and Rs. 5-6-3 for women revealing an approach to equality that deserves notice. Settled labourers earned more than basti labourers and in both cases small holdings must have added to real income. The monthly cash earnings for both classes amounting to about Rs. 45 lakhs must have gone as before into remittances and the P.O. statistics giving details of labourers' remittances to relatives in old homes will, perhaps, throw more light on the prosperity of plantation labour in 1941-42.

Cotton In The Empire

In the last annual report of the Empire Cotton growing Association cursory reference is made to the increase in the supply of long-staple cotton in India during 1942-43 and the many results of the crop restriction programme. The report is important, however, for its references to the proposed research station near Kampala in Uganda after the amalgamation of Tanganyika stations. The Colonial department of agriculture is interested in furthering the Corporation's plan and the Corporation has selected the first director. Of special interest to India is the news that Queensland is trying to grow more cotton. Seed was distributed in order to increase the area under cotton, but the actual increase in area last year was only 25 percent. Drought affected the crop but where farmers irrigated the crop, the return was excellent. The research station made experiments on grassland—cotton breeding. In another dry part of the Empire, cotton in 1941-42 but lack of rain spoilt the crop which was smaller than usual, and the price, too, was lower. This has affected planting in the next year but the Union found use for its cotton last year instead of exporting. In the Swaziland protectorate, cotton is being developed as a commercial crop. The crop in 1941-42 was below normal and no recovery has taken place as there is a greater liking for cereals and groundnuts. Southern Rhodesia has started to grow cotton owing to the encouragement given by the Gatooma station. But as in other African colonies maize claims more attention and tobacco is helped by Empire preference. The Department of Native Affairs however intends to encourage cotton-growing. Very high yield on a very small acreage has been reported from Northern Rhodesia. A fall in cotton cultivation is disclosed by Nyasalann also. The E.C.G.A. is interested most in the Sudan which produces both Egyptian and American types. The crop of 1941-42 was smaller than usual and no increase was

forecast in December 1942. In parts of the Sudan e.g. Kordofan food crops have displaced cotton. Since there has been comment in India as to export restrictions on East African cotton and licensing at this end, attention may be drawn to the statement in the report that the Uganda crop is likely to be little more than half that of 1941-42 which itself was smaller than any for the past ten years. In January 1943, it was announced that arrangements had been made whereby the East African Governments would purchase the whole of their cotton crops on the basis of a fixed price to the growers which will remain unchanged throughout the season. The purchase is made through an exporters' group, and if any cotton remains on their hands, it was to be bought at reserve prices by the Ministry of Supply. The guarantee is for the duration of the war and applies also to the crop of which sale by the grower has not begun when hostilities cease. Price stabilisation is not meant to limit Indian takings. Nigeria's larger crops may not set into export but may find a market. A boom in the shipping and weaving industries reduced the colony's cotton exports in 1941-42 and the shortage of imported piecegoods may reduce exports of cotton according to the Corporation which expected an increase in cotton cultivation in 1942-43 only in Nigeria but not in the West Indies or anv other part of its Empire.

Advance In Output

Increases in war production are not confined to the U.S.A. and Canada but it is only in North America that increase is large and continuous. In the case of Canada, the general index of production stood at 255 in March 1943 as compared with 197 in March 1942. According to the League of Nations statistical bulletin the rise was primarily due to the progress of manufacturing industries. Declines in production are reported by the pulp and paper industries as well as the textile industry of the Dominion. In the case of minerals the increase has been continuous as may be expected. Up to April, the U.S.A. also reported continuous expansion of mineral production. Like the manufacturing index, the mineral index continued to advance throughout 1942. In the case of non-durable goods progress was slight, but production of durable goods in the states rose by nearly 20 percent in a year. The most important feature however is the expansion of machines output. The first quarter of 1943 witnessed a further increase. The U.S. industries in which output has increased least are textiles and food owing to restraint of consumption in the case of one and claims of war production in the case of textiles though there is no decrease as has been reported from Canada. The most arresting feature is the sharp jump in transport activity. Since October last, a further advance has been reported, indicating that transport is equal to the demand of war industries generally. The figures relating to Mexican production show a decline in the case of crude and refined petroleum but a rise in the output of gold and silver. Base metals output has fluctuated last year as in the case of Chile. But there has been recently an assurance as to adequacy of Allied supplies of copper so that Chilean output must have risen strongly after January 1943 in which month Chile broke with the Axis. Production in satellite and Occupied countries has been stagnant, to judge by the figures for Bulgaria and Denmark. Only moderate recovery was noted in the case Sweden though 1942 was marked by a striking improvement in the paper industry. Available production figures point to a remarkable decrease in Colombia's oil output while Argentine oil output continued to grow. Until March 1943 the coal output in the U.S.A. topped the monthly average of 48,380,000 metric tons recorded in 1942. There has not been similar progress in Great Britain where coal is industry's biggest problem, and the recent strikes occasioned real anxiety. Canadian coal output has fluctuated around one million metric tons per month. The only neutral to report a fall in coal output is Turkey. The closure of China has apparently stimulated tungsten production in both Portugal and Spain. The latter has raised output substantially and it is safe to guess that Axis takings account for the increase." The varying degrees of industrial progress are duly reflected in the figures relating to electricity production. The U.S.A. in this case has a big lead and reports continuous increases like Canada in the war years but the progress of Palestine's secondary industries can be inferred from the increase recorded last year.

Rise In Exports

The June trade returns showing a small recovery in imports and a jump in exports are much like those of former months. The bigger balance of trade in India's favour is not an arresting feature. Exports for April-June amounted in value to Rs. 51.3 crores and the average of exports

in value double the value of imports has been preserved. The only imports to show any increase in June as compared with last year are mineral oils and raw cotton. Food imports have shrunk and tobacco imports are lower as also the imports of liquor which might be reason for concessions being offered by way of space for whisky as well as razor blades. The decline in imports of chemicals, drugs and medicines is a pointer to shortages rather than development of local sources of supply. Industrial development receives no support from machinery and mill work imports which are again lower. India's chief exports are jute manufactures and tea which figure prominently in the June returns. The larger production is reflected in higher exports, essential from the customers view. Cotton yarn and goods appear to be still shipped in quantity and the recent efforts to discourage exports appear justified in the light of complaints of cloth famine. Increased import of raw wool indicates an increase in textile production under control, and it may be that higher prices stimulate Indian production. Higher value of exports in June may not be independent of the rise in prices, but the increase in production accounts for the rise noted under tea and jute manufactures. Larger imports of cotton from East Africa are recorded likewise of copra from Ceylon. Iran comes after the U. K. in respect of imports which have fallen away owing to the war. Australia holds a high position as an exporter to India and may rise higher if wheat shipments are encouraged. The U.S.A. comes after Britain, India's biggest customer, but trade with Nigeria and other African territories appears to grow. The increase in customs revenue this year is the result of a small increase in imports from May to June. The fall in re-exports is a result of the reduction in retained imports as well as the desire to conserve stocks. Changes in the volume of imports are due to the strain on suppliers as much as shipping shortage though the problem of shipping does not appear as acute as last year. The fall in exports of food and raw materials from India like the maintenance of the trade in manufactures exports and a general reduction in foreign manufactures, for instance paper, suggests that the main trends are the same as those noted last year. Since Government purchases do not come into the seaborne trade accounts only a partial view is afforded. The excess of imports noted in 1941 disappeared long ago and the export surplus leads to frequent argument as to the need to check exports and encourage imports that could be exchanged for foodstuffs by the Government which finds that in the grain trade large capital is less necessary than goodwill and the ability to offer the goods desired in return for the surplus grain.

Co-operative Recovery

The co-operative movement in India is equipped with larger resources and co-operative banks gain additional deposits during the war. The demand for loans falls away and the rate of interest tends to fall. Bombay reports the same changes as Bengal though the problem of vitalising the movement is absent there. In the review of the affairs of the Bombay Provincial Co-operative Bank, Mr. Saraiya dealt with the rise in deposits leading to larger invesments and greater liquidity as well as the fall in loans due. Recovery of advances from agricultural societies in the past year has been materially assisted by the rise in prices of groundnuts, cotton and rice. The result of the better prices realised by agriculturists is the reduction of overdue interest and of unauthorised arrears while the percentage of bad debts has also been reduced. Lands held by societies in liquidation have been easy to sell and the war's effects on agriculture have been beneficial to the recovery of debt. Between 1941 and 1943 arrears of interest and debt have fallen and the farmer is better off. The Provincial Cooperative Bank's advances against produce have increased. Groundnuts and gur stocks were taken as security for loans made through co-operative agency in 1942-43. This is a hopeful development and the new Defence rule regarding bank advances may not check it. Banks certainly like to keep the money in the movement and more societies turn to the Bank for advances. Cotton seed distribution received some support and oilcake for manure was handled by societies. The Bombay co-operative societies have been given war orders for blankets and textiles. They have been also allowed to run fair price shops. The main feature of the war period is the reduction of debt and the increase in savings. This may be no complete or comforting assurance in the light of famine in four districts. But co-operative banks are getting official recognition. Two approved banks are eligible for special advances from the Reserve Bank at a specifically reduced rate of half percent below the Bank rate. One bank took an advance for 90 days and repaid it. This development may be related to the Provincial Co-operative Bank's desire to link the co-operative central banks with the money market though it is possible that a jointstock bank may make a similar advance at a lower rate in selected cases, largely because the rate for term deposits is so low as to admit the making of advances at a rate of 2½ per cent or less. That the benefit of cheap money is passing through the co-operative movement to the agriculturist is not generally realised, though the main reduction in rates was effected by debt relief legislation. The new opportunities are, of course, limited to sale and purchase societies but the central banks are obviously in a position to attract more deposits if their methods of working approximate to those of commercial jointstock banks. To encourage depositors to become shareholders and to bring in self-liquidating debts would be more easy if the resources of co-operative banks continue to increase. They can never be embarrassed by the weight of deposits alone.

Money And Banking

The world's monetary statistics are seldom complete but a rough picture can always be conjectured up. Certain unquestioned facts as to currency expansion in many countries have been accepted readily and the May bulletin of statistics issued by the League of Nations shows what has been happening from Argentina to New Zealand. Bank deposits grow rapidly when currency expansion is the rule and all banks gain more in current accounts than in total deposits though the rate of growth varies. In India as is accepted the demand liabilities of banks have risen more rapidly but in Brazil the opposite has been noted in 1942. The country where variations are least is the republic of Colombia. The bank deposits figures point to a very sharp decline in Iraq towards the middle of 1941. It would not be strange if Rashed Ali had forced on his country a banking crisis reflected in a sustained fall in savings deposits in 1941 followed by a striking recovery in 1942 which is more than a concomitant of inflation. Note circulation figures for Japan suggest that inflation has been checked and banking expansion has been aided by the new Development Bank. A very important development is the increase in bank resources in neutral states like Portugal and Switzerland. A certain amount of foreign money must be present and the 400 percent in Deposits as compared with 1939 may not wholly due to Portugal's prosperity indicated by the fall in the Bank rate last year. The experience of Occupied countries is shown in the absence of any increase during 1942 in Dutch banks' deposits though currency expansion was self-evident. France and Belgium shared the experience of Holland in this respect. German currency figures show a fairly large increase in the note issue in 1942 followed by a flattening out of the former upward curve since but more alarming indications were present in Bulgaria and Hungary as bank deposits bore a moderate relation to the expansion in the note issue, conditioned by the increase in blocked balances, since it is known that the index for general industrial production declined in Bulgaria last year just as it declined in India. The growth of bank deposits in the U.S.A. after the end of 1942 is not limited to commercial banks. Increases have been noted under P.O. savings deposits, saving bonds and other deposits showing that the support for the third war bond drive for 15 billion dollars was available when the banks and agencies of thrift held over 60 billion dollars at the end of March 1943.

Calcutta Commercial Bank Ltd.

Executes LETTERS OF GUARANTEE on behalf of contractors, suppliers and clearing agents, in lieu of cash deposit, acceptable by the Indian Custom and Tatas.

Furnishes INDEMNITY BONDS for issue of duplicates for lost share scrips, insurance policies, etc.

Undertakes CLEARING and FORWARDING work at Ports.

Collects Bills, Cheques and Hundies, Insurance Premia, etc., at competitive charges through sixty branches in India; specially reduced rate on exclusive arrangement.

Supplies regularly silver and coins to Collieries, Tea Gardens, Mills, etc., on nominal commissions.

Discounts approved Bills, makes investments against approved collaterals, Tea Quotas, Insurance Policies, etc.

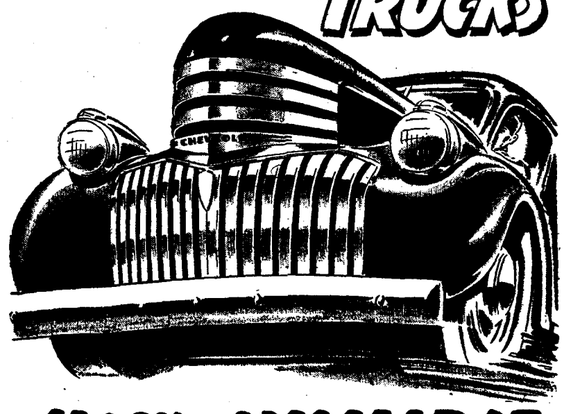
Australia's Post-War Plans



Australia's Labour Government looks to the development of local industry after the war. A new Industrial Commission is proposed in order to help in research and replacement. Mr. Beasley announced that technical officers would be provided. He stated that the Government planned to preserve the many advantages now held by the woollen textile industry. Wool production demanded not only equipment for the fighting forces, but for the home-front. The conversion of looms to civilian output was as the manufacture of Air Force blue and khaki while it kept the industry up to date against a sudden switch over to civilian production. As taxation has reached a limit providing 40 per cent of the Budget, the Commonwealth is ready to borrow. Only this week Mr. Chifley's plan for a bigger Victory loan appeared. The latest Australian Newsletter has said that £250 millions are to be raised in 1943-44 so that the total borrowing would be 50 millions more than in 1942-43. Factories sprang up in the country and the Prime Minister said that decentralisation of munitions-making was accepted 35 regionally planned areas were chosen so as to absorb the labour of the country centres and give the advantage of strategic locations. New clothing factories which produce military clothing are to provide civilian clothing after the war. This too is a part of the decentralisation scheme. New industries are subject to licensing from October 1942 to prevent waste of manpower and a year's working has resulted in the sanction of 230 undertakings and rejection of 70 applications.

Production achievements listed include the stepping up of factory output by 2½ million boots and shoes annually. From the time war broke out up to June 1943, Australia produced 10 million pairs of boots and shoes, a total which must, however, be lower than India's. Factory employment apart from the call-up of women for war work, has steadily risen in the war period by 35 per cent. Workers in the industries in May 1943 numbered 1,885,000 while the number of male workers has fallen by 22,000 compared with the total on July 1939. Building activity has fallen and rural industrial employment, especially, for women has risen. The post-war plans cover the weeding out of inefficient new industries. The theory of full employment is subject to qualifications. The Reconstruction Director said that in Australia an organisation to kill off unsuitable or declining industries is to be set up after the war. The example should not be lost on India where temporary advantages are not distinguished from permanent intrinsic advantages with the result that in the fourth year of war India's industrial production has shown few signs of even normal expansion.

Afghan Exports

To supplement the Indian Trade Agent's reports on Indian trade with Afghanistan there appeared recently a note on the

progress of trade and industry in the nearest kingdom. Afghanistan is interested in manufactures and exports some handloom fabrics and carpets. But the principal items are lambskins which find their main market in New York. West Africa is the principal rival but the Russians also export pelts. Afghan lambskins being of higher quality are now handled by trade agencies subordinate to the Afghan National Bank. The kingdom has large karakul flocks but the number of skins exported has fallen from 1,881,269 in 1940-41 to 271,000 in 1941-42. So the war has affected Afghan export trade even more than import trade. The Afghan demand for sugar, petrol, electrical goods etc., from India has been frequently described. But Afghanistan's effects to build up some industries at home have not been indely known. Cotton spinning and weaving mills have sprung up as northern Afghanistan supplies cotton, and experiments with Egyptian and American seed have been launched. Some cotton is exported to India but exports last year fell away owing to lack of transport. India is more dependent on wool imports from Afghanistan which has begun to use the home clip in local mills. Sheep-rearing has certainly received an impetus but merino wool production is small. The entire clip is bought by exporters and the dislocation of export trade has not affected sheep-farming. In 1942-43 Afghan wool exports fell sharply and more wool entered into the carpet manufacture that is one of the main industries. The export of carpets and rugs in 1942-43 held up as compared with the preceding years. Sheepskin jackets and cloaks are made for export as well as the home market but the exports last year were below normal. As a pastoral country Afghanistan sells her hides and skins and the decline in exports in this case in the war years is pronounced. Afghan export monopolies handle most of the items including guts and casings. The culture of the opium poppy in Iran is well-known but the world knows little about the progress of narcotics in Afghanistan. According to an official account opium is grown in Badakshan, Herat and the Eastern Province. That from Badakshan contains most morphine. That produced in Herat comes second. Foreign demand has grown and customers for Afghan opium included Germany and Japan. In 1942-43 opium was certainly exceptional in showing a substantial increase in exports. The scarcity of fresh dry fruit in India is attributable to the fall in exports from Afghanistan resulting from transport difficulties. The fall is not confined to grapes and melons but extends to dried fruits like raisins and apricots.

This is not a Prospectus but only an Announcement. Copies of the Memorandum and Articles of Association can be inspected at the Registered Office of the Company at Hindusthan Buildings, Calcutta.

The Company has been formed and registered with the object of doing all classes of Insurance business such as Fire, Marine, Accident, Life Workmen's Compensation, Re-Insurance (Accepting and Ceding), Counter-Insurance and all kinds of Guarantee and Indemnity business and Miscellaneous Insurance business.

Though Life Assurance business in recent times has made rapid strides and Indian Companies have been able to secure a very large portion of this business representing as much as 80 per cent to 85 per cent of the total Indian business, leaving only a small fraction in the hands of foreign Companies, the same cannot be said in regard to Fire and other General Insurance business in this country. The position is almost the reverse in regard to the latter. Non-Indian Companies under foreign control are still dominant in respect of Fire and General Insurance. This position is however bound to improve as Indians obtain an increasingly larger control in the political and economic spheres. Moreover Indian Industries have been making rapid progress in recent years, and it would be only reasonable to expect that there would be a speedier industrialization in the country in the future. Just as the need for life assurance is being increasingly appreciated now and the demand for it has grown by leaps and bounds, similarly it is to be expected that the need for insurance cover of all kinds against property would also come to be more and more appreciated in the coming years and the demand for this class of insurance would also show a very notable increase in the near future. There is, therefore, a good scope for expansion of well-conducted Indian Companies with good capital structure, efficient management and influential connections. The Hindusthan Co-operative Insurance Society, Limited, which holds a high rank among Indian Insurance Companies doing Life business, has undertaken the promotion of this Company and will help and further its interests through its country-wide organisation. This help would be of undoubted advantage to the Company and would contribute materially to its economic management. It may, however, be mentioned that the Hindusthan Co-operative Insurance Society Limited will not derive any special benefit from this General Insurance Co. except as holders of shares of the new concern. It is also to be noted that some of the important banks of Bengal are associated with the promotion of this enterprise. By its connection with these institutions a substantial volume of business is assured to this new General Insurance concern. The Company will thus be in a position to hold its own against established Companies from the very start.

Essential Islands

Of the names in the news Cos is certainly one, and the German airborne invasion has indicated that the Nazis want to keep bases in the Eastern Mediterranean while preparing to relinquish Crete. The Allies have a base in Cyprus and have taken Leros and Samos last month though most of the islands are held by the Germans who clearly hope to counter the naval mastery of the fleet from Alexandria. The Dodecanese acquired by Italy from Turkey have been the object of German as well as Greek ambition. The Cairo messages dealing with raids on Rhodes and Crete indicate how the Allies are preparing to eject the Germans from the islands surrounding Greece. The mountainous islands were acquired mainly for strategical reasons by Italy which started to fortify Leros before undertaking the fortification of Pantellaria. The Germans holding the Balkans precariously are naturally anxious to keep the islands which are, in a way, an obstacle to Turkish intervention in the war in addition to being a check on Allied naval supremacy. Of the islands Castelorizo has been taken by the Allies but the Germans keep Rhodes—the largest of the islands off the Turkish coast. The last Italian Governor-General resigned and the post-Fascist interlude in the islands has been more confused as the war creeps nearer the Balkans. Italian colonisation sought openly to build up for Fascist Italy a position similar to that of Venice. Cultivation is more or less limited to Rhodes and Cos where wheat, barley and various vegetables are grown. On the hill slopes, vineyards are common and oranges, figs etc., are grown in the Mediterranean climate. Minerals are few and scanty. The islands depended on Italy's empire building ardour for their prosperity. The first decade of the Italian occupation witnessed large, grandiose experiments, but the Greeks showed no enthusiasm and the thirteen islands were possibly as intolerant of alien rule as Cyprus where the desire for unison with Greece has been as obvious as in Crete in the closing years of the last century. Allied air attack from Egypt has been directed mainly against Rhodes more than any island because of its important airfields. The Greeks have long desired the islands taken by Italy from Turkey and the Allies in the last war agreed to give them to Greece in return for support, and Italy in a subsequent post-war arrangement agreed to give the islands in return for a coaling station and recognition of Italian authority over Albania.

Beyond New Guinea

Another beseiged garrison has been made to quit but Allied progress in New Guinea may cause a nodding of heads owing to the pace. After one crippling blow, the New Guinea base of Wewak should have been lost to the Japanese but many air raids have followed and the drive up the Markham peninsula from the south has brought only three towns. But the campaign has proved that the Japanese navy, which has vacated lately one more island in the Solomons, cannot keep up its effort. Island-hopping becomes logical in the light of shipping shortage and naval losses this year. The gain of the three bases outside the Solomons certainly threatened the Japs in New Britain and it must shake their hold on Dutch New Guinea. The climate and terrain will have present fewer difficulties and the S.-W. Pacific campaign may yield large results before the campaign in S.E. Asia is begun. To contain the Japanese navy before and during the reconquest of Burma must be the chief purpose of any plan in the Pacific and questions of precedence or the political aspirations of General MacArthur sink into insignificance.

The three naval actions in the Solomons settled the issue of Jap naval strength for offence after the Bismarck Sea battle. The plainest results of losses are found in the preparations to tighten up A.R.P. in Japan. China's rejection of the last peace offer made it clear that the Allies would use the China coast for blows at the industrial targets like Osaka, Nagoya and Kobe. The S.W. Pacific battles may not bring Japan's home fleet near to U. S. bombers, but the fewer the bases, the less chance there is of taking out oil, cotton or rubber to Japan.

The original assumption that Australia is the only real base against Japan is not shaken by the success in New Guinea reported again. New Guinea may offer copra and gold but there is little hope of using the island for an attack on the East Indies before the Japs leave the Straits of Malacca. The Japanese retain New Britain and the larger and more pressing task for the Allies will probably be the recapture of the island lost even before Malaya was lost. The Australian interest really centres in New Britain, not in Timor or Borneo, largely because the next stage in the Solomons must be determined by the capture of Rabaul. The Prime Minister's assurance that last stands will not be attempted is supported by the events in New Guinea. The sacrificial ardour is absent because air superiority disappeared long ago and the Japanese garrison lost hope of reinforcements.

Adequate Resources in South Africa

Bank deposits in every country tend to increase as consumption falls off and incomes rise. The experience of South Africa points to the fall of Bank advances, and the rise in deposits is reflected in larger overseas assets and bankers' balances that is already familiar to India. The note circulation in the Union continued to rise in summer and investment opportunities were limited while traders were keener on conserving supplies than satisfying customers. South Africa's experience of rising deposits and slacker money conditions was described at the Reserve Bank meeting on July 23. The Governor, in drawing attention to the rise in reserve balances and free balances of commercial banks mentioned that the trend of figures indicated better than anything else that the Union's balance of payments was still very favourable, the only known factor being the extent to which the depletion of trading stocks was responsible for the increased balances of the commercial banks. In his remarks the Governor referred to the strength and liquidity of the Reserve Banks position and argued that the Union for a very long time to come would have more capital at its disposal than its present needs demanded, even after allowing for heavy demands on the commercial banks for re-stocking and re-equipment purposes. The Governor went on to say that formerly competition was among borrowers but that today competition was among lenders and he not only repeated his request, made two years ago, that the leaders of mining houses contemplating development and extension might explore the possibilities of the local market instead of waiting for the London market to reopen but added today 'I even feel justified in extending the request to all concerns which can put before the public new undertakings which are economically justified and sound financially. I am sure the Treasury will raise no objection to sound flotation of capital, knowing as it does that its requirements under all circumstances, will be easily met.' The relaxation of restrictions on capital issues is available to India; but the self-sufficiency claimed for South Africa in regard to capital is denied to India partly because the favourable balance of payments is the result of a fall in real income. But the South African statement points not only to emancipation from London but to industrial growth. No figures as to British dis-investment have been given so far, but the Union must have got on to unscrambling the holding companies in which U. S., British and South African interests are mixed up. New issues in the Union may lead to keener buying of Far Western mining shares whose property has to be developed; but the ultimate factor is the availability of equipment when many big mining companies are doing part-time munitions work and are reconciled to a reduction in gold output this year.

News reports regarding the Food problem continue to feed the overfed columns of the daily press, while the people continue to perish. According to Mr. Amery, deaths in Bengal number a thousand a week and the Secretary of State for India adds significantly that it may be more. At every step in the highly stratified governmental authority of this country, there is discussion, and, of course, statements and notes. District officials, we are told, have been instructed to put aside all other work and to give the food problem a high priority in their agenda of work. Provincial and State representatives have met again for the nth time—I confess, I have lost count of these food conferences—at Delhi. Sir Jwala Srivastava has referred to the inescapable problem—the Government have every warrant for calling it so, the attempts to escape it were strenuous and sincere—and added another statement in lieu of the foodgrains that are wanted. Questions are asked in the House of Commons and, as a mark of respect for the gravity of the problem, written, and not offhand and verbal, answers are being given by Mr. Amery. A Commons Debate is called for; and Mr. Churchill, while he does not induce hopes, does not dispose of it summarily.

But what is the upshot of it all? Before assessing the progress (!) made, let us note that the enemy has not been idle. Famine, like the Axis as in the earlier years of the war, has had its blitzkrieg, its pincer movements, and its technique of quick consolidations of the ground it wins. Like the Democracies, our governments had their record of unpreparedness. It is strange how close is the parallel between the war in Europe in earlier years and the advance of famine conditions in India! The refugees from occupied territories are a great stumbling-block to recovery. The tens of thousands who have fled from the villages to the towns not only call for special attention themselves, but represent a very serious complication in any counter-offensive that may be planned against famine and destitution. The problem would perhaps be simpler if what we have to contend against were real famine and not a kind and degree of scarcity which sets up special forces of its own and makes the situation immeasurably more complicated. In all the statements that emanate from high quarters, one looks in vain for a recognition of this aspect of the situation. Perhaps, one has to be in Bengal and have visual experience of the growing suffering to be able to realise that, while the powers that be are discussing and deliberating, the evil powers that have cast misery on this fair land are tightening their grip and increasing the odds against recovery.

But even considered apart from that, the upshot of the discussions seems so pitifully inadequate. I suppose what Sir Jwala Prasad Srivastava has to say should be considered to be the operative part of the conclusions and decisions arrived at. For the speeches of others have a plenary and inconclusive character. From Mr. Amery on high, we can have only reminders of provincial autonomy, assurances of everyone here having a chance to solve the problem and all the rest of it. Sir Jwala Prasad, however, has to tell the country in concrete terms what it can expect of him. It must be said that, considering the complexities of the problem and the requirements of a high official position, Sir Jwala Prasad has been as definite as he can be. What he has to say is, of course, swathed in official verbiage, in all those appeals for public co-operation, which everyone knows have lost all meaning, but which nevertheless have to be made. What matters is whether or not we shall have more of foodgrains than will ordinarily be available to us. And here, we are not told that more of foodgrains have been imported. All that the Food Member tells us is that more shipping has been allotted by the British Government for which act of kindness Sir Jwala Prasad and the people of India must be duly beholden to the British Government. It is to be hoped that there is no time-lag between the allotment of shipping and its utilisation for the import of foodgrains into this country.

Assuming that more foodgrains will before long be imported, it will still be a question how near we are towards putting right the food muddle. I have often expressed that view that in a crisis like this, it is easy to allow one's self to be stampeded into acceptance of the most unrestricted government powers and obligations. This attitude is partly the result of a violent reaction to the grave conditions that are now prevailing in Bengal and partly to the arguments that are heedlessly, almost mischievously, trotted out in the controversy on the responsibility for the present situation. There is a disposition to regard the food crisis as an opportunity firstly for ingratiating oneself to the people through violent attacks on the government and secondly, for incriminating some party or some group of persons with whom one has not been in favour. With some papers and individuals the old Huq Ministry is a handy scapegoat. With Sir Alfred Watson and the British press, it is provincial autonomy. With some others it is the surplus Provinces so-called. Each such feeling leads to an exaggerated sense of the value of one step as a solution of the food problem. Some look to Section 93, others look to complete Central control of foodstuffs. The Food Member would seem to have subscribed to the latter view. He has assured the country that the Centre will assume all the powers that may be necessary.

But the question is, whether the surplus Provinces are really as recalcitrant or as culpable as they are made out to be,

whether the food situation really hinges, to that extent, on the attitude of the surplus provinces and whether, if it were so, the remedy lies in going all out for a system of control which will be at once complete and detailed. The habit of looking at large problems from the viewpoint of power is so ingrained in people in India, that the cry for complete powers is always raised and never fails to meet with general support, that is, where there are no considerations of nationalist sentiment to argue against it. Few people stop to think that, a complete control involves the obligation of introducing the widest system of rationing. Are we prepared for bringing into effect such a system of rationing? Is there need, is there justification for such a system?

I maintain there is no need, and there will be no justification, for the introduction of any widespread system of rationing or complete control of foodstuffs in this country. It is no use quoting the instance of Britain. In Britain, they have the most thoroughgoing system of food supply. They are in a position to meet the needs of the whole population. It has been aptly said that today Britain neither eats to live nor lives to eat, but eats to fight. The nutritional needs of the whole population are taken into account, provided for and met by the most far-seeing measures that the mind of a sagacious and conscientious ministry can devise. They provide milk for children and expectant mothers. They provide additional fats for workers in heavy industries. They give choice where choice can be afforded. But in all cases, nutritional adequacy is ensured. What shall we have to give as compensation for the producers, from which the Government will take away their grains at fixed prices? It is no wonder that the representatives of the Punjab demurred to the proposal for complete control. The Punjab Ministers can hardly feel called upon to co-operate in a scheme of forced purchases of wheat from the Punjab cultivators for the supposed benefit of the deficit Provinces.

I say "supposed", because there is nothing to induce confidence in the efficiency of the rationing system that will be introduced. Complaints against the control shops are so common, though hardly as loud, that they must have reached the ears of the highest in the land. I have heard more than one person complain that the rice obtainable in some of the shops is of the poorest quality imaginable. I sometimes wonder whether, behind all the food control measures that are now in operation, there is some one who wants to discredit finally and decisively, all forms of State intervention in the economic life. If there is, that one gives points to Dr. Goebbels. But that is by the way. What I want to emphasise is that rationing involves the risk of serious deterioration in the quality of the things rationed. While we talk of complete control of foodstuffs, we shall be rationing only foodgrains, with the possible addition of sugar. Vegetables, milk and fats and other items will remain outside the scope of rationing, though the Food Policy Committee toyed with the idea of rationing milk and milk products. It must be possible to see rationing of foodgrains in its proper setting. Geographically, it will only be the bigger towns that are to have any system of rationing. And of all the foodstuffs, it is only wheat and rice and a few other things that will be brought within the scope of all-India control and rationing to individuals. The price that we shall pay for this will be a great deal of inter-provincial illwill, consumer discontent and an unsettlement of living conditions with rather unpredictable consequences.

If this system will not be justified in the result, can we at least plead necessity for originating it? As I said, the crux of the foodgrains problem lies in a kind of marginal shortage, which, together with the ill-conceived measures for overcoming it, have brought about a position of unprecedented complexity. It were different if anyone were to contend that the scarcity should be met by giving a proportionately reduced ration to one and all. Nobody does. It is agreed on all hands that the shortage should be overcome by imports. If then, imports are inescapably necessary, can we not use the imports to improve the general market conditions? Imported foodgrains, if they are sold at carefully determined prices, can do a number of things to a number of different groups of people. They can assure the average consumer of regular supplies and dissuade him from hoarding. They can warn the hoarder for profit that the days of the black markets are gone and that he had better unload his stocks. They can assure the cultivator that the level of prices government aims at is such as to leave him a very fair margin of profit and provide him every incentive to expand domestic production. All these, regulated sales of imported foodgrains can do. They can save the Government from the irksome obligation of country-wide rationing, save them from the risk of ill-will and opposition from the cultivators and help them to restore normality. It is not to be supposed that sales of wheat cannot affect the conditions of the rice market. In so far as wheat can be substituted for rice, the latter is bound to be affected and a certain amount of dietetic reform could also be achieved as an incidental advantage. If there is a mess over the food problems, the way out of it is away from it, and not deeper into it.

'EAVESDROPPER'

The beginning to an end

A child's first lesson is an important milestone on the road of life. Fond hopes for the future of his child are cherished by the father on the important day that marks the beginning of the youngster's education.

But hopes are not enough. A practical beginning must be made in order to ensure a successful end to a child's education.

Have you guaranteed that the necessary money will be available to your child for the completion of his education even if you do not survive to see it through?

New India's Educational Annuity Policy can do this for you. It guarantees the full benefit of the assured sum to your son even if your demise occurs after paying the first premium only.

What New India's Educational Annuity Policy affords

- Enables the parent to provide a definite sum for a definite purpose in an easy way.
- Guarantees the assured money for the child's education whether the parent survives or not.
- In the event of the child's death before coming of age, the policy may be continued if desired on another child.

ANDREWS
LIVER SALT
gives you
Inner Cleanliness

"Due to war conditions, it is regretted that Andrews Liver Salt is not now available. It will be on sale again as soon as the international situation permits."

SECOND Childhood

Hard to believe, that this middle-aged executive has resuscitated his childhood friend—the slate!

Instead of simple sums, it now carries notes of telephone conversations, figures, and appointments. It saves daily paper of ten times its own surface.

Follow this lead back to second childhood—help to save paper—for essential uses only.

Revise all your stationery, forms and statements. You can save over 25% of the paper surface you are now using.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :—

- Use the smallest sheet of paper for any purpose that will do the job.
- Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.
- Do not make copies except where absolutely necessary.
- Always type single spacing.
- In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.
- Reduce the size of labels on manufactured goods.
- Use the back of the letters received for the carbon copy of your replies.

CARELESS TALK COSTS LIVES

(From Our Correspondent)

New Delhi, Oct. 11.

New Delhi is just now having its biggest military conference of the war to review and replan Far East strategy. Lord Louis Mountbatten, the new Commander of the South-East Asia Command, who arrived here last Thursday was followed the next day by General Stilwell, Commander of the U. S. forces in Burma, China and India and General Somervell, Commander of the U. S. Army Supply Forces. Dr. T. V. Soong, the Chinese Foreign Minister, who also happens to be in New Delhi on his way back from London to Chungking will naturally take advantage of the presence of so many Allied Commanders here to confer with them on the present situation in this war theatre. The Viceroy, who surprisingly enough was not here at the time of Lord Mountbatten's arrival, has also returned to the winter capital to confer with the Allied military leaders. Lord Mountbatten is expected to leave for Chungking soon after the conference to convey the decisions to Generalissimo Chiang Kai-shek. While the Allied strategic plans are thus about to take final shape, it is becoming increasingly obvious that the offensive may not be forthcoming as early as it was expected some weeks back. Informed circles point out that the perfection of Allied plans will take some time. Even Lord Mountbatten's headquarters organization has not been completed yet. Moreover a lot will depend on the decisions of the Moscow conference and Allied plans to a second front in the west for the amount of shipping available for an offensive against Japan. On the other hand the necessity of reopening of China's main supply line (the Burma Road) is every day becoming more urgent. The war of attrition that has now been going on in China for some time, has already strained China's resources to the utmost, particularly as the air supplies are hardly able to meet even the minimum demands. The new land supply route that is being built up from Assam to link up with the old Burma Road in territory still under Chinese control will take a long time to complete. The next few weeks will show whether the Allies are prepared to meet the Japanese in Burma this winter.

* * * * *

The belated realization of the seriousness of the famine situation in Bengal has after all had some effect in London and a substantial amount of shipping, it is claimed, has been released to bring food supplies from Australia to India. Beyond mentioning that the 'arrivals in India' are expected shortly and the 'major portion of the programme will be completed by the end of the year', the official Press note does not give any details as to the shipping space allotted for the purpose, the quantities of cereals expected and as to how far the imports will meet the present shortage. At a time when confidence in the capacity of the Government to bring the situation under control has been so rudely shaken, it will be advisable for the authorities to keep the public fully informed about their relief plans. The recent revelations by the Central Government about the huge profits made by the Bengal Government on wheat imports from the Punjab throw a lurid light on the indifference of the authorities to the people's sufferings. Though the revised rates will wipe out the profits made by the Provincial Government, it remains unexplained why food was sold to the peoples at an unjustifiably high rate while the province was passing through one of its worst periods of distress.

Sir Ziauddin Ahmad has given notice of a bill to be introduced in the Central Assembly to put a stop to hoarding of foodgrains. The bill lays down that no person including a producer shall hoard foodgrains over the normal requirements of his family and dependents for a month without a licence from the District Magistrate or special officer appointed for the purpose. The maximum penalty will be a fine of Rs. 50,000 and three months' imprisonment.

The Central Health Survey and Development Committee, I understand, will be meeting before the end of this month. The personnel of the Committee which will consist of about 20 members has been practically settled. Sir Joseph Bhore, as announced already, will be the President while the members are expected to include Mr. N. M. Joshi, Mr. B. Shiva Rao, Mr. L. K. Maitra of the Central Assembly, Mr. P. N. Sapru of the Council of State, Mrs. Tyabji, Miss Lazarus and Dr. A. Lakshmanaswami Mudaliar. Dr. K. C. K. E. Raja, Deputy Public Health Commissioner, is expected to act as Secretary while Dr. Aykroyd will be one of the official members. Important decisions were reached at the recent meeting of the Central Advisory Board of Health regarding measures to check adulteration of food. Resentment was expressed at the meeting that the Provincial Governments have been slow to act on several recommendations of the Board on vital matters. Regarding adulteration of food, the Board observed: "While the provision of adequate legal powers is essential for a continuous improvement in the community's food supply, it will be equally necessary to supplement legal measures by administrative action designed to increase the production of essential foodstuffs which will be satisfactory in quality and quantity. The promotion of co-operative effort for the larger production of essential foodstuffs and for reducing the cost of their distribution to the public is a matter for serious consideration by Provincial and State Governments." Dr. Aykroyd who attended the Hot Springs Food Conference on behalf of India presented his report to the Board on nutritional problems. The report suggested the shaping of the agricultural policy on the basis of a scientific assessment of the local requirement of the population. For this purpose a close collaboration is suggested between health, nutrition and agriculture authorities.

* * * *

Great resentment is felt here at the complete exclusion of non-official representation from the Empire Air Conference now meeting in London under the Presidency of Lord Beaverbrook, now Lord Privy Seal. The conference will consider tentative proposals regarding post-war civil aviation. It is pointed out that in such a vast country as India where there is a tremendous scope for expansion of internal air lines, civil aviation is likely to assume great importance in the post-war years. While most of the Empire and foreign countries are planning ahead, it is essential that India should not start with an initial disadvantage. Plans should be undertaken to start aircraft construction industry in the country immediately. Moreover no rights regarding use of landing grounds here should be granted to any country unless India is able to obtain reciprocal privileges in the countries concerned.

* * * * *

The production of fertilisers, particularly ammonium sulphate, will receive a fillip as a result of the decision of the two-day conference held last week. The conference proceed on the basis of the Foodgrains Policy Committee's recommendations according to which at least 350,000 tons of this basic fertiliser were needed to bring rice production to the required level. This means that the present production of about 30,000 tons has to be increased at least ten times to meet the country's requirements. It is hoped that the Government will find it possible to arrange for the import of the necessary plant to achieve this production goal.

The recent Government institution of control over shipping on the India register again blatantly demonstrates the discriminatory nature of the Government's policy where the interests of national shipping are involved. The Government has hardly any case to introduce this control after their admission of the Indian Shipping Companies' whole-hearted co-operation in the carriage of priority cargoes. The injustice of the Government's case is obvious when it is realised that while Indian ships are hardly getting their quota of the coastal trade, the British Ministry of War Transport has put ships on the British Register at the disposal of their companies to carry their quota of coastal trade. The Government instead of fostering the growth of this basic national industry are doing everything to hinder its development.

Bombay, October 12.

Tubewell irrigation is to be given a trial in the Konkan. The Rural Development Board has sanctioned emergency irrigation projects which will cost Rs. 15 lakhs. Minor irrigation works are to be improved within a year under the schemes which are part of the agricultural expansion plans. Pumping schemes in the Konkan are meant to provide a use for the tail water of the hydroelectric works. In the Konkan to-day the crops are almost entirely rain fed and irrigation will be a departure justified by the dependence of Bombay on imported food grains. Double-cropping is not general and the well irrigation practised in the Bombay Deccan appears inadequate. State control is required to deepen and cleanse wells. Bijapur is to receive special attention. There are many unutilised sources of water supply. Sir William Stempe in his tour examined the possibilities of extending irrigation immediately and advised the use of a hullah near Nagpur. This single source will raise the rice supply by 17,000 tons in a year. In the Konkan tubewells each capable of irrigating 500 acres are to be provided. Hydroelectric power for pumping is available as in the U. P. though equipment may be hard to get at present. The U. P. aims to add 500 more wells. The Bombay plan does not fix any figure but the Irrigation Adviser's view is going to prevail, and agriculturists with capital will find a useful investment ready while contributing to the solution of the food problem. Extension of canals and tank restoration plans are covered by the Bombay plan which is meant to avoid famine.

The Indian Merchants Chamber made a representation against the introduction of monopoly in the use of country craft. In a letter to the press the arguments against the proposals have been set forth by one who speaks for the owners of small sailing vessels. The masters rely on local brokers to secure cargo and they have latterly evolved an association which would put coastal traffic in country craft in a regular footing so that the brokers would not take their cut. Their association framed a scheme so as to book cargoes directly and help to provide more space for Government cargoes so as to reduce the strain on Railways. The new control plan interferes with the scheme because five selected agents will fix freights and allot cargoes and the actual carrier will have no voice. Registration and licensing involve new hardships for owners and seamen alike and the withdrawal of the control plan is desired.

The Commercial and Industrial intelligence section of Industries Department in 4 months of working dealt with hundreds of inquiries. It is a clearing-house of information and the 5 divisions into which the new branch is divided aim to collect and collate facts and figures about Bombay industries. Production figures are not left out and industrial survey is to continue when the demand springs up. The Statistics Act of 1942 has been implemented by the new branch's effort to get data as to factory output. Existing publications leave out many things and Provincial Departments have to make a beginning. Dr. Dlume having Geneva experience in addition to experience in London has organised the machinery in a way that promises success. The preliminary census of production will throw light on employment though it may throw no light on the trend of earnings or wage rates. Peace-time planning may be advanced through the new agency which is helpful to all Governments which look for local supplies and substitute materials.

Information reaching here shows that scarcity is common to the States. Hyderabad has no real anxiety as price control began early in consultation with traders. Maxima were fixed for grains and movements were subject to direction and wagon priority was secured for food supplies. Hoarding and profiteering were not absent in spite of the official measures and it was noted that control was incomplete without State purchase mainly for keeping strategic stocks. Retail sale of grain bought by the commercial corporation was the final link in the chain of control but prices have stayed up. Orders for declaration of stocks and information as to buying and selling have not led to any reduction in prices. A Director-General of Food has been appointed and hoarders who are able to tap agriculturists' own stocks by prompt advances may be dealt with in one or more new ways.

The Chairman of the Textile Control Board advanced the view that cotton prices must be fixed in accordance with the mill industry's desire. Cheap cloth is wanted. So cotton must be cheap, well below the limits fixed in May. Hedge contracts therefore appear superfluous in spite of the many arguments heard. The E. I. C. A. cannot control the trade if futures are restored, and controversy again rages as to what is needed. The dangers of a speculative revival are foremost in people's minds. Government cannot buy and store cotton, if a forced advance of prices follows. The market, with its nose for profits only, cannot be allowed to come back into being and the end of futures appears more than ever desirable. It is urged that officials cannot put in safeguards. The cotton-grower will have to take his chance under control, and from what is done in the Colonies where cotton plantations are run as a business, the bulk purchase and fixed price arrangements seem to work well. Communal trouble in Ahmedabad has restricted trade in local piecegoods. Dasara was marked by rioting which made the festival less than joyous in Ahmedabad though mills worked as usual. Trains ran late and most shops were closed. not been infructuous. Unity moves have the arrests on a large scale checked the spread of local disturbances, leading to five deaths and 28 hospital cases on Friday last.

The High Court was asked to upset an old will for which probate was granted. The appeal of a Parsi petitioner for revocation of probate granted 72 years ago for his grandfather's will was dismissed. The will was dated 5-5-1870 and probate was granted on 13-6-1871. The Chief Justice and Kania J. declined to take the view that probate was irregular. The petitioner also urged that the will was a forgery; its terms were unnatural and that citations were not issued to the next of kin. In his judgment the Chief Justice said that notice to interested parties was not

compulsory in the light of practice obtaining in 1870. The Court made no mistake in granting probate. Revocation of the registered will admitted in 1871 was hence impossible. Evidently no provision of the Limitation Act applies for probate in respect of a will. So the point merely relates to the High Court's own procedure in 1870 described as adequate. The other grounds of appeal were not pressed, and those who got the probate and the property are now protected.

The Bombay Government's plan to buy up the Kharif crop was approved by the Rural Development Board. Payment in cash by the revenue staff not by trade agents is considered desirable for grain purchases. Government intends to popularise bajra not only by press advertising. It wants to buy 10 per cent of the millet and 25 per cent of the rice for its food reserve. There was no agreement as to prices payable. It was argued that as goods were scarce and dear the Government should pay generous prices. About 70 persons attended the meeting held under the auspices of Government to review the results of the Bombay food drive. Food reserve for famine relief and rationing alike appears unexceptionable, but rice control and requisitioning are not easy to put into effect at once. Departments and committees may find it hard to get grain out of large farmers who have no debt, and perhaps no incentive to sell to Government officials.

THE

FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

South India

(From Our Correspondent)

Madras, Oct. 10, 1943.

THE journalists of South India have often expressed their resentment at the attitude of the Government of India and the various Provincial Governments towards the press. The recent order of the Bihar Government on the Editor of "The Hitavada" to disclose the name and address of the person who supplied the information regarding the resignation of Mr. Blair has evoked another strong protest. At an urgent meeting of the Madras Provincial Press Executive Committee held here a resolution was passed upholding Mr. Mani, Editor of "The Hitavada" in declining to comply with the order. Compliance with the order would involve a breach of conference on the part of the Editor. Further, the matter cannot be considered so urgent or grave as to invite the powers under the Defence of India Rules. It is one thing for the editor to take full responsibility for the news item published but it is quite a different to surrender particulars about the correspondent especially when it is felt that the news under consideration can by no means jeopardise public security. The Press has always extended the greatest co-operation to the Government in all matters concerning public peace and war effort and still the Government have not found it advisable to change their attitude towards the journalistic world. The habit of serving orders in the nature of ultimatums can only create a gulf between the newspapers and the administration of the country. There are certainly more effective methods of enlisting the co-operation of editors than injuring their moral responsibility to corresdonpents through an order served under the all embracing Defence Rules.

Talks of post-war reconstruction are often heard but the public have not yet been told as to what would be the future of the labourers of India. Their disabilities are many, resources very little and real wellwishers are only a few. It was therefore quite refreshing to hear Mr. R. S. Nimbkar, Labour Adviser to the Government of India, speak at length on the steps taken by the Government of India to ameliorate the conditions of labouring population in India. Addressing the Wimco and Ajax Workers' Labour Union at Tiruvottiyur he referred to the proposal of the Central Government to conduct an enquiry into the conditions of plantation labourers and mine workers with a view to fixing minimum wages. Questions regarding sickness insurance, holidays with pay, Minimum Wage Boards etc., are engaging the attention of the authorities. Employers may not easily agree to a provident fund system to benefit the low paid workers but it is the responsibility of the Government to persuade the employers to make the fund a success. Among the immediate needs of the industrial workers of to-day housing holds an important place. In this respect some headway has been made in Northern India but the problem has not yet been adequately tackled on an all-India basis. Mr. Nimbkar assured that the Government would do their best to solve the problem of labourers thrown out of work after the war. He also emphasised the need for labourers to organise themselves into Trade Unions and to save as much as possible for the rainy day. It was his conviction that the Central Government should guide the Provincial Governments in evolving a suitable labour policy.

Certain sections of the commercial community have been feeling that the resources of South India have not been fully availed of by the War Supply Department and definite dissatisfaction is expressed in a memorandum submitted by the Muslim Chamber of Commerce (South India) to Mr. R. W. Targett, Director-General of Supply, Government of India. Mr. Abdul Hameed Khan who submitted the memorandum suggested that more orders should be placed with the handloom trade. Most of the manufacturers of beedies are in Madras and hence a plea is entered for the diversion of army beedi orders to this province. Further, the percentage of orders placed with Madras for leather manufacturers and other supplies is not commensurate with the resources of tanned hides and skins in the province. The Muslim Chamber also invited attention to the cloth position in the province and urged that the cloth manufactured in the province should be completely retained here. The absence of security of tenure of services for labourers in Ordnance and Clothing Factories has also been mentioned as a situation to be rectified by the Government. Greater representation for Muslims in the Madras War Supply Board has also been demanded. Mr. Targett promised to take suitable steps and referred to the Work Reconstruction Committee to be shortly instituted by the Government of India for the purpose of stabilising industry and commerce after the war.

The recent move for organising a session of the Andhra Mahasabha at Bellary has given rise to opposition in more than one quarter. That certain sections of the people in the Ceded Districts are not fully in favour of a separate Andhra Province is well known. But the attitude of the Kanarese people, whose interests would also be involved directly or indirectly, has not yet been fully expressed. The Kannada Sahitya Parishad seems to have taken up the question now. At a recent public meeting held in Bangalore under the presidency of Mr. B. M. Srikantia, a resolution was adopted condemning the inclusion of the whole of the Ceded Districts, including the Kannada areas of Bellary and Ananthapur, into the proposed Andhra Province. It is not the political aspect of the Andhra province idea that engages the attention of the Kannada people so much as the literary, cultural and educational implications of the scheme. The sponsors as well as the supporters of the Andhra Province idea would do well to consider the views of the Kannada people and try to allay their fears and enlist their co-operation during the coming session at Bellary.

It is agreed on all hands that if the "Grow More Campaign" is to be a success maximum facilities must be afforded for the production and transport of manures. Madras is fortunate in having large quantities of groundnut oil cakes to make up for the gap created by the stoppage of imported fertilisers. It is stated that on an average an oil mill produces 15 to 20 wagon-loads of oil cakes per month. But

Airway Port

(From Our Correspondent)

Karachi, Sept. 23.

AN austerity drive, the harbinger of rationing, is proceeding apace in Sind. People have been asked to eschew luxuries with a view to conserve the existing stock of essentials. Government's axe has fallen even on the manufacture of halwa and other sweets. It had been found that some passengers in railway trains had been taking small quantities of sugar from Karachi with a view to sell them in places where sugar was scarce and this too has been prohibited.

The enumeration of families as a measure preliminary to rationing is almost complete by now. Rationing will commence here by the beginning of December. It will be confined to Karachi and Hyderabad to begin with. Karachi has a population of 435,000, according to the latest census figures. 308,000 of the city's residents are adults and it is proposed to issue 93,400 ration cards to satisfy their requirements. This means that every month about 12 million pounds of food grains would have to be handled by the rationing department in Karachi alone. Though the rationing committee have not made any clear-cut plans, it has decided to allow 24 ounces to labourers and 16 ounces per day for other adults.

Actually Sind does not need rationing as it is a surplus province. But the province has to fall in with the rest of India. An index to our prosperity will be found from the following figures of the export of food grains from Sind to various parts of India. Five lakh maunds of wheat to Bombay, 10,00,000 maunds of wheat to Bengal and other places, 200,000 maunds of rice to Bengal and several lakh maunds of gram dall, bajri sent out. These food grains were exported between May and August this year.

The Government of Sind have sent a telegram to the Government of India urging them to expedite their decision on the schemes prepared by the Food Production Commissioner for increasing the yield of food grains so far as these schemes relate to Sind. The Sind Government have pointed out that if the schemes are to be put into effect for the coming season, the Government should take a decision immediately as the sowing season for the next crop is drawing nearer. The schemes which are estimated to cost 60 lakhs for purchase of six lakhs of improved seeds for cultivation of various food grains in the province have been prepared in detail and forwarded to the Central Government.

Sind has a great industrial future before it. The tragedy of this province has been that capital has been shy. This is due to the fact that some of the industrial concerns started in the past have been failures and had to be wound up. The Shikarpuris who are very rich and have an undoubted flair for business have confined themselves mainly to moneylending and their ramifications extend to various parts of India, particularly South India. The success of the Dalmia Cement factory which was started before the war at Karachi and the prosperity of the Radio Lamp Works have been eye openers and Sind capitalists who succeeded in getting back to India before the war in the Far East have been sparring for lucrative openings. Our chief handicap is the absence of oil to work factories and it is expected that after the war, we will be in a position to get crude oil from the Persian Gulf side. We also suffer from lack of technicians. The need for opening a full-fledged technical school was stressed the other day by our Director of Industries, Mr. V. Iswaran, who has been trying to pump new blood into the pallid arteries of Sind's industry. A number of industries that existed in Sind are at present languishing. We were good at potteries, fishing, chemicals, cloth painting, carpet-manufacturing, etc. These enterprises could be improved and revitalised. Due to paucity of funds no proper investigation of the potentialities of Sind industries had been undertaken. Mr. Iswaran has appealed to the Sindwork Merchants' Association to open an Information Bureau and maintain a library of its own.

The province of Sind has accepted a target of three crores of rupees within this year in connection with the "spend less and save more" campaign drive to be launched in the country. Out of the Sind target, it is proposed to take Rs. 1,25,00,000 out of the land revenue of the province and Rs. 1,35,00,000 would be subscribed by the public in the eight districts in the province, in the form of Defence Savings certificates, Defence bonds and Defence loans. A sum of Rs. 30,00,000 will be secured from Karachi city alone under the Defence Loans Committee. A campaign to popularise the slogan of "spend less and save more" will be inaugurated throughout the province shortly.

The Sind Agricultural Department is concentrating on the question of expansion of wheat cultivation in Sind and has succeeded in bringing more and more land under cultivation. Wheat is the major rabi crop in Sind and in pre-Barrage days, it occupied an area of 4,69,000 acres, two-thirds of which was unirrigated. During the year 1941-42, the acreage under wheat was 11,89,684.

The extremely sound financial position of the Karachi Corporation was again testified when the 36-lakh loan recently promoted for financing the Indus Water works scheme was over-subscribed. Tenders for 24 lakhs out of this sum were opened on September 16. The total amount offered was Rs. 58,29,000. Tenders above Rs. 106 per cent were accepted in full and those at Rs. 106 per cent were allotted approximately 32 per cent. The remaining tenders were rejected. The average rate of the accepted tenders works out at Rs. 106-12 as. per cent. Individual tenders below Rs. 16,000 at Rs. 106 were accepted in full for the benefit of the small investors. Tenders were received from all parts of India. This is the third time during the last four years that the Karachi Municipal Corporation loans have been taken up at premiums.

The Government of India are trying to make more use of country craft for coastal traffic. The Karachi Port Trust is framing a new set of rules for loading and unloading cargo with a view to clear the port and prevent congestion. They have also amended the rules for demurrage and wharfage. The draft rules were recently discussed by the Indian Merchants' Association. The Chairman of the Karachi Port Trust called two conferences with a view to ascertain local commercial opinion. Most of the modified rules have been accepted and an Advisory Board has been set up to go into the question of breaches of rules.

Bengal relief is still in the news and more money is coming every day. We have so far exported 500 tons of rice through the Ramkrishna Mission. It is proposed to send 1,500 tons more and the Scindias have promised to take them freight-free. More than two lakh of rupees have been collected from Sind.

Branches of the United Commercial Bank have been opened at Karachi and Hyderabad and the deposits in these two branches exceed one crore of rupees. Mr. B. T. Thakur, General Manager of the Bank who had come down to Sind in connection with the opening ceremonies has returned to Calcutta.

JUTE

Calcutta, October 14.

The jute market has been absolutely uninteresting during the fortnight under review. As mills are experiencing considerable difficulty in regard to coal supplies and there has been some anxiety on the part of holders to dispose of their jute prices have been marked lower. Mills have been buying in very small quantities and with the stoppage in production for a fortnight there was a tendency to await further developments.

The outlook for jute is confused. The recent reports regarding the bombing of Madras are taken as a bearish factor for the market as it is felt that there might be interference with shipping and that exports might decline. This view is not correct though with the launching of the offensive against Burma by sea there might be temporary dislocation. But the difficulties of the industry are to be traced nearer home. Even with the restricted level of production the coal position has not in any way improved. If there is no possibility of an increase in production even in the new year the outlook for jute is discouraging indeed.

In the loose jute section, mills have not been taking any interest in the market. Sellers have been eager to do business and quotations have been marked down by eight to twelve annas a maund.

In the pucca bales section shippers have not been active. Small business was done in Dundee Daisee 2/3 for export at Rs. 76 per bale. Mills bought Firsts and Lightnings at Rs. 82 and Rs. 77 per bale.

JUTE MANUFACTURES

Calcutta, October 14.

The jute manufactures market was declined to be firmer earlier in the period on expectations of a sharp decline in stock figures and the reports that there was an increase in shipments to the Plate. The local stock figures for the month of September, however, are disappointing. There was a rise in the quotations to the maxima fixed by the Association. Closing prices are lower than the highest levels touched. 9 Porters were quoting Rs. 21-6 for all positions. 11 Porters ready were Rs. 28-3, October Rs. 28-3 and October-December Rs. 28-5.

In the heavy goods section, sellers were reserved and not prepared to enter into forward commitments. B. Twills for October delivery were Rs. 67-12, Liverpool Twills Rs. 75 and Cornsacks Rs. 67-12.

The local stock figures for the month of September show that there has been a decline in hessian stocks, cloth and bags, on civil account, from 25.93 crores yards at the end of August to 23.8 crores yards and on military account from 30.57 crores yards to 29.99 crores yards. The decline in production during the month, it should be said, was considerably more than the decline in stocks. Sacking stocks, cloth and bags, are lower at 21.46 yards (on civil account) against 22.25 crores yards and on military account at 21.46 crores yards against 22.25 crores yards.

GOLD

Calcutta, October 14.

There has been a spectacular rise in prices during the last two weeks in the gold market. In spite of the continued sale of gold by the Reserve Bank investment buying is unsatisfied. The bombing of Madras by a Jap plane has resulted in a sudden rise in prices in the last two days. There is an acute shortage of supplies and in spite of the shortening in the period of delivery there has been no diminution in activity. Gold ready closed at Rs. 83-5 and forward at Rs. 83-1 against Rs. 78-4 and Rs. 78-2 at the time of last writing. Sovereigns are two rupees higher at Rs. 56-4.

SILVER

Calcutta, October 14.

The rise in the silver market is not quite pronounced in spite of the fact that the supplies available in the market are very small. Quotations have been marked higher in sympathy and there has not been much buying. Silver ready closed at Rs. 128-14 and forward at Rs. 128-2 after being higher at Rs. 129-12 and Rs. 129-10 respectively.

PIECEGOODS

Calcutta, October 13.

The announcement by the Textile Control Board that there would be a downward revision of ceiling prices on December 1, 1943 and that ceiling prices would be fixed on that date for every piece of cloth and bundle of yarn has naturally had a discouraging effect on the market. But the report there would be resumption of futures trading in cotton has prevented a substantial decline in prices as it was pointed out that it would not be possible to bring about a decline in costs of production if speculative activity in cotton was encouraged. Also, there is no tendency to discount prices in view of the nearness of *Diwali.*

(*Continued from page* 725)

the transport bottleneck remains and nothing effective has been done to relieve the situation. Owing to control of transport enormous delay has to be suffered before oil cakes are finally despatched to destinations. It is hoped that since the rains have fallen and the land is ready for cultivation the urgency of transporting manures would be realised by the authorities. Immediate steps should be taken as the time factor is as important in agricultural operations as in other walks of life.

It appears that Mysore can no longer postpone commandeering of stocks to ease the food situation. Mr. M. A. Srinivasan, Minister for Supplies, Government of Mysore, declared at the session of the Mysore Assembly on the 7th instant that in spite of the high prices offered to the stockists the response from them has been quite disappointing. Only 6 lakhs of pallas of paddy worth a crore could be collected. The harvest is nowhere near and the refusal by the Central Government to send further supplies has increased the urgency of controlling sufficient stocks of paddy in the interests of the public.

Death FROM UNNATURAL CAUSES

Every petroleum container is precious for the duration. It is therefore regrettable that many containers are returned to us in a state which makes them unfit for further use.

For example a barrel which has held molasses is thereafter useless for the storage of oil. Lubricating oil kept in a petrol can will make it useless for the further storage of petrol.

It is always difficult and often impossible to clean barrels, drums or cans which have held products other than those for which they are intended. It is therefore of great importance that containers should only be used to store the correct grade of oil.

Containers are scarce — TREAT THEM WITH CARE

TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS

Vol. XXXII. No. 16 SATURDAY, ~~SEPTEMBER~~ October 16, 1943 Price Re. 1

Stock Market to-day and to-morrow:

QUIET OPENING AFTER HOLIDAYS

THE reopening on the Calcutta Stock Exchange after the long Puja holidays has not been so active as was at first expected. The obvious reason for the tame reopening, after being closed for such a long time, has, of course, been the recent bombing of Madras. There is a general tendency to await further developments. Indian Irons were reported as high as Rs. 37-10 during the holidays. There was a decline to Rs. 36-2 after the bombing of Madras but the quotation has since recovered to Rs. 36-12. Sugar and Coal shares continue to be firm.

Not much of significance is attached to the recent enemy activity over Madras though, it might be said, that the incident afforded a check to speculative activity in the stock markets. Air raids on the present scale cannot damage industrial property and affect company's earnings. The outlook in the immediate future should, therefore, be considered as bright as ever.

The Bombay market was inclined to be rather weak in the early days of the period under report but during the last two days, there has been some recovery and most of the losses have been regained.

* * * *

The feature of the week is the announcement of the terms of the New Loan by the Government of India. There is to be a 3 per cent 1966-68 loan for Rs. 25 crores approximately and the issue price is at a discount of 2 per cent. The terms are more favourable to the borrower but in view of the extremely easy conditions in the money market it is expected that the issue will be considerably oversubscribed.

* * * *

The recent offer of capital by the Dehri Oil Refinery Limited has met with enthusiastic response and it has been announced that the list had to be closed on October 12 owing to oversubscription. The issued capital was Rs. 7.25 lakhs in 2,250 5 per cent tax free Cumulative Preference shares of Rs. 100 each and 50,000 ordinary shares of Rs. 10 each. It was remarked at the time of issue that the Cumulative Preference shares were a very good proposition for the small investor and that with the possibility of an early payment of dividend there was scope for appreciation. Before long, the market quotations for both preference and ordinary shares may be considerably higher than the issue prices.

* * * *

But for the confused outlook for the jute industry the results of the *Alliance Jute Mills Company, Limited* for the half-year ended July, 1943 would have had an encouraging effect on the market. The large increase in the amount of sales has been responsible for the substantial improvement in earnings over the previous six months. The net profit before providing for taxation and depreciation is Rs. 18,31,476 against Rs. 10,03,455 for the half-year ending January, 1943. The amount set aside to depreciation is Rs. 1.25 lakhs (Rs. 1 lakh) while the transfer to reserve is substantially higher at Rs. 1,48,080 (Rs. 50,000). Reserve for Furlough payment gets Rs. 14,000. Provision for taxation is considerably higher at Rs. 13.2 lakhs (Rs. 6,85,703). Even after the substantial allocations it has been possible to increase the dividend on the ordinary snares to Rs. 12-8 from Rs. 7-8. The amount carried forward is Rs. 23,259 against Rs. 36,363 brought in.

* * * *

Kothari Textiles Limited has made very good progress in the year ended June, 1943. The net profit, after providing for taxation but before depreciation, is Rs. 7,93,034 against Rs. 2,75,468 for 1941-42. Provision for depreciation is higher at Rs. 1,18,279 against Rs. 1,04,438. The transfer to Reserve Fund is as much as Rs. 5,48,380 (Rs. 1 lakh). The dividend on ordinary shares has been increased to Rs. 1-8 from Rs. 1 per share on the former occasion. The amount carried forward is substantially higher at Rs. 37,036 against Rs. 3,661 brought in. The increase in the dividend has been possible after the provision for taxation of Rs. 17,21,500 and the transfer to reserve of nearly Rs. 5½ lakhs. While the substantial improvement in earnings over the previous year has been due to the prosperous conditions in the industry it has to be noted that the level of earnings, even after providing for taxation and depreciation, is considerably in excess of the ordinary capital. The financial position of the Company is sound.

* * * * *

In spite of an increase in sales in the last two years it has not been possible for the *Indian Steel and Wire Products Limited*, to report a higher level of earnings. As a matter of fact, with the increase in costs of production there has been a decline in the net profit for two years in succession. There was a reduction in the distribution on both the ordinary and deferred shares last year. The decline in earnings for the year ended March, 1943, however, has not in any way affected the distribution to shareholders. The net profit, before providing for taxation and depreciation, is Rs. 40,79,253 against Rs. 46,54,011 for 1941-42. It has been possible to maintain the dividends on the ordinary and deferred shares owing to the smaller provision for taxation and depreciation. The amount set aside to depreciation is Rs. 5,98,281 against Rs. 7,62,388 on the former occasion.

The Week in the Exchanges

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Oct. 15.

Quite firm conditions were noticeable on the Bombay Stock Exchange earlier in the fortnight under review. With the increase in investment demand there was an all-round rise in prices, Textiles and Steels especially being in favour. *Bombay Dyeing* were over Rs. 2,040 and *Tata* deferreds nearly Rs. 2,050. The announcement by the Textile Control Board regarding their intention to revise ceiling prices on December 1, 1943 and also fix maximum prices for all varieties had a temporary chilling effect. It was felt that the reduction in the ceiling prices by 30 per cent would affect companies earnings but on later considerations it was argued that the cancellation of standard cloth orders and the decline in the costs of production would more than offset the losses on account of the proposed downward revision in ceiling prices. The upward trend was resumed and but for the nervousness on the reports regarding the bombing of Madras, closing prices should have been at the highest levels for the period under review.

In Wednesday's session there was some selling and Tata deferreds especially were marked down by 100 points. There has been a slight recovery towards the close and closing prices are higher than the lowest levels for the week.

Textile issues were, as pointed out above, in good request early in the fortnight under review. *Bombay Dyeing* were as high as Rs. 2,027-8, *Central India* Rs.490 and *Century* Rs. 949. There was a drop in the quotations to Rs. 1,991, Rs. 476 and Rs. 930 respectively. *Bombay Dyeing* were still lower at the close at Rs. 1,986-4 and *Century* at Rs. 927 but *Central India* were higher at Rs. 480. *Simplex* were Rs. 285, *Kohinoor* Rs. 661 and *Gokak* Rs. 356.

Steel shares were very active with *Tata* deferreds and ordinaries at Rs. 2,040 and Rs. 411 respectively. With nervous liquidation in Wednesday's session, there was a drop in the quotations to Rs. 1,925 and Rs. 392 but the close was higher at Rs. 1,937-8 and Rs. 393-8. *Premier Construction* were Rs. 189 and *Indian Iron* Rs. 36-10.

In the miscellaneous section, *Shivrajpur Syndicate* were very firm with a rise in the quotation to Rs. 74-8 from Rs. 66 at the time of last writing. After being lower at Rs. 71-8 the close was steady at Rs. 73-8. *Scindia Steam* improved to Rs. 39 though the close was rather quiet at Rs. 37-5. *Belapur Sugar* were very firm at Rs. 250 after being higher at Rs. 254-8. *Associated Cement* were very well held at Rs. 222. B.E.S.T. were Rs. 160-8 and *Bombay Steam* Rs. 620.

(Continued from previous page)

The provision for taxation is Rs. 22.25 lakhs against Rs. 24.75 lakhs. The General Reserve receives Rs 2 lakhs against Rs. 2.5 lakhs. The ordinary dividend, as pointed out above, has been maintained at Rs. 3-8 per share and the deferred dividend at Rs. 2-8 per share. The amount carried forward is lower at Rs. 59,211 against Rs. 1,07,542 brought in.

The earnings for the year would have made better showing but for the difficulty in getting sufficient motive power from the Tata Iron and Steel Company Limited due to strike in their works. The directors are optimistic regarding the prospects for the current year. The Company is still fully engaged on war orders but it is pointed out that the decline in earnings in the last year was due to the fixed rates on war orders without any compensation for the increase in costs of production. Negotiations are at present going on with the Government authorities for an increase in the rates on war orders and there is every possibility of the Government agreeing to an increase in the rates.

* * * *

Thanks to the higher level of raisings and despatches the *Burrakur Coal Company Limited* has been able to report a higher level of earnings for the half-year ended June, 1943. It would have been possible to report a greater increase in earnings but for the rise in raising costs on account of the supply of cheap food to labour. Raisings also could not be increased appreciably owing to the difficulty in regard to labour. Coal prices showed an improvement during the half-year. If it were possible to take advantage of the higher level of prices the increase in costs of production would have been compensated to a certain extent. The conclusion of contracts at lower prices for forward deliveries, however, prevented the Company from taking advantage of the higher market prices. All future forward sales will be subject to a clause protecting the parties against fluctuations in the cost of supplying foodstuffs to labour.

The net profit, before providing for taxation and depreciation for the half-year ended June, 1943 is Rs. 7,01,552 against Rs. 4,42,942 for the previous six months. The net profit for the latest half-year includes Rs. 1,71,428 being excess provision for E.P.T. Provision for taxation is higher at Rs. 2,74,000 (Rs. 1.75 lakhs) while the amount set aside to depreciation is Rs. 1,30,931 (Rs. 1,32,355). After transferring Rs. 2,353 to General Reserve, Rs. 40,000 to Dividend Equalisation Reserve and Rs. 40,000 to Stock Adjustment Reserve the dividend on the ordinary shares has been increased to 3 1/8 per cent from 1¼ per cent.

* * * *

It would appear from the accounts of the *Calcutta Ice Association Limited* for the half-year ended June, 1943 that the recent rise in the quotation for the shares of the Company is fully justified. There has been a sharp increase in sales and the profit for the half-year is the highest for several years. The net profit, before providing for taxation and depreciation, is Rs. 1,43,495 against Rs. 68,577 for the previous six months. The sum of Rs. 50,169 (nil) has been provided for taxation while the amount set aside to depreciation is Rs. 30,000 (Rs. 29,474). The sum of Rs. 11,976 (nil) has been transferred to General Reserve. Even after these substantial allocations the dividend has been increased to 6¼ per cent from 5 per cent. The amount carried forward is higher at Rs. 49,284 against Rs. 41,434 brought in.

* After transferring Rs. 35,000 from Reserves.

(Annual General Meeting held on 28th September, 1943.)

Audited accounts for the year ended 31st March, 1943:—

	Rs.	A.	P.	Rs.	A.	P.
After providing for Income-Tax and Super-Tax and Rs. 60,674 for Depreciation, the Profit on the year's Trading amounted to	2,54,122	12	6			
To which has to be added the balance carried forward from last year of	20,796	4	2			
Resulting in a Balance at credit of Profit and Loss Account of				2,74,919	0	8
The Directors recommend that this sum be disposed of as follows:—						
Payment of Interest at 7% per annum on Preference Shares for the year ended 31st March, 1943, amounting to ..	1,37,655	0	0			
Payment of a Dividend of 12½% on the Ordinary Shares for the year ended 31st March, 1943, amounting to	1,21,828	2	0			
Balance Profit to be Carried Forward	15,435	14	8			
				2,74,919	0	8

Whilst the supply of certain raw material showed an improvement over last year, the position was still not very satisfactory.

The works was engaged on war orders similar to those handled last year and has now been entrusted with an entirely new type of work. This important work is now proceeding smoothly, although difficulties and delays were experienced in the early stages.

Provided raw material and other supplies are obtained as required, the current year's prospect will not be unfavourable.

Labour conditions continued satisfactory. The increased cost of living has been met as in the previous year by supplying labour with certain foodstuff at reduced rates.

(Annual General Meeting on 15th October, 1943, at 3-5 p.m.)

Audited accounts for the year ended 31st December, 1942.

The year's working resulted in a profit of Rs. 1,25,950-1-10 after providing for depreciation. After making sundry adjustments, providing for taxation and transferring Rs. 25,000 to General Reserve and Rs. 15,000 to Special Reserve, there remains a balance of Rs. 73,212-13-3 at credit of Profit and Loss Account. From this the Directors recommend the payment of a dividend of Rs. 2-8-0 per share absorbing Rs. 50,000 leaving a balance of Rs. 23,212-13-3 to be carried forward.

A total crop of 3,828 maunds was secured of which 2,016 maunds have been sold for Export at an average price of As. 12-9 per lb. and 1,354 maunds have been sold for Internal Consumption at an average price of As. 14-6 per lb. The area under Tea Cultivation remains at 323.72 acres.

Rainfall for the year amounted to 96.72 inches compared with 90.17 inches for the previous seven years.

Estimates for the current season have been framed for a crop of 4,000 maunds to cost Rs. 1,47,157.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is no change to report in the conditions in the short loan market. Interbank call money continues to be quoted ½ per cent in Calcutta and ¼ per cent in Bombay. With October drawing to a close, we are at the threshhold of what we used to call the busy season. With the recent Central banking technique playing an important part in checking and keeping under control wild oscillations in money market trends and conditions, and with the creation and maintenance of control since the war began, in most sections of the money market, the old distinctions and attributes of the slack season and of the busy season are now mostly things of the past. On many occasions in the last few years, we have had to point out that the so-called busy season had hardly any of the old distinctive features. Thus, though, from the point of view of the time of the year, we will be shortly ringing in the busy season, there is no reason to suppose that the coming months will reveal much change in regard to trade activity or monetary sentiment. Considering the enormous increase in active note circulation as well as in the circulation of rupee coin, and considering that, particularly on the part of the tax evaders, much hoarding of coin and notes has taken place, the approaching busy season may witness no monetary stringency whatsoever. Nor can there be much of export trade or of bills rising from export business. For, the entire foreign trade is rigidly and drastically controlled. Nevertheless, as November comes into view, we are in duty bound, to extend welcome to the assured nip in the air and, we hope, zest in the markets.

On October 19, against Rs. 8 crores of Central treasury bills on offer, applications amounted to Rs. 14.57 crores, showing an increase of over Rs. 2½ crores over the last week. In spite of such outward evidence of a greater bidding there has evidently not been much competition. For, the average rate of accepted tenders actually records a rise of 1 pie to 12 annas 1 pie per cent per annum. We may, we think, draw the inference that, for the time being, official policy will be directed towards maintaining the average discount rate roundabout 12 annas percent per annum. The offer of tender bills for next week remains unchanged at Rs. 8 crores.

The weekly returns of the Reserve Bank for the week ended October 15, reveals substantial changes. Compared to October 8, sterling securities held in the issue department showed an increase of 18 crores; and compared with October 1, the increase in sterling securities is Rs. 28 crores. In the week ended October 15, sterling securities in the issue department are up by Rs. 18 crores, rupee securities are down by Rs. 10 crores. In the result, there has been a net expansion of currency for Rs. 8 crores. Active note circulation has expanded by Rs. 3 crores, the balance of the currency expansion being reflected in the decrease in the notes held in the banking department. Rupee coin continues its downward trend. It will thus be seen that the monetary authorities are, to the extent possible under the present scheme for Britain's sterling payments, doing their best to keep currency expansion under control. Whenever the Central Government's cash balances allow it, a good part of the expansion against sterling securities is being offset by contraction against rupee securities. This process is markedly evident particularly in the current half-year. In the quarter, July to September, sterling securities held in the issue department rose by Rs. 79 crores to Rs. 146.77 crores. While expansion in sterling securities was thus Rs. 79 crores, rupee securities were contracted by Rs. 50 crores to Rs. 68.38 crores. Thus the net currency expansion was only Rs. 29 crores. Active note circulation in this period rose only by Rs. 30 crores to Rs. 763.80 crores. In the first fortnight of October, sterling securities in the issue department have expanded by Rs. 28 crores, against which rupee securities have contracted by Rs. 10 crores. Active note circulation has gone up by Rs. 13 crores. We readily admit that, within the limitations of the present plans, the Finance Member and the Reserve Bank authorities between them are pursuing as scientific a policy as possible. But the continued piling up of sterling assets makes it imperative for an immediate reconsideration of the scheme now in operation. The time has certainly arrived for the Government to examine the possibilities of the British Government figuring directly as a borrower in the Indian market both of short-term bills and medium-dated loans. The Government of India have announced the new Funding Loan for Rs. 25 crores. We have every reason to believe that the response will be satisfactory. The cash balances of the Central Government are comfortable. Tax collections are satisfactory. The New Loan will further strengthen the ways and means position. The rupee securities in the issue department have been brought down by rapid stages. Taking all these factors into account, the Government of India would be able to reduce considerably their demands on the loan market, both for short-term and long-term. This is the ideal setting for the British Government to step in.

In the banking department, Government deposits are down by Rs. 6.62 crores while deposits maintained by member banks have risen by Rs. 3½ crores. Foreign balances held in the banking department are lower by Rs. 8.21 crores thanks to the substantial transfer of sterling securities to the issue department.

The returns of the Imperial Bank for the week ended October 15, shows the liquida-

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on October 19, 1943. Total amount offered was Rs. 14,57,00,000. Tenders at Rs. 99-13 per cent and above were accepted in full and those at Rs. 99-12-9 per cent were allotted approximately 18 per cent. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-12-1 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received at all centres on October 25, 1943, up to 11 a.m. Successful tenderers should make payment on October 27, 1943. Other conditions are as usual.

During the week ended October 15, 1943, Government of India Treasury Bills for Rs. 5,40,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Evening.

The Moscow talks appear to encourage Wall Street even more than London, but the Fall revival may be more connected with the Republican candidate's prospects for next year's election than the conciliatory move of Mr. J L. Lewis. The rise in gold-mining shares in London may well be connected with Mr. Morgenthau's air tour. The secretary is reported to be interested in stimulating purchase of war bonds by Officers and Other Ranks in the U.S. Army though some might think that he is concerned over the financial agreement under negotiation. The five Senators are giving their impressions and explain-away one or other criticism of Presidential measures. The Senators are not malcontents and their anti-British sentiment is far less than presumed. Of course, the senators were critics of three things—lease-lend working, shipping and oil. They asked for a big share for the U.S.A. and Admiral Vickery's recent outline of shipbuilding achievements may encourage them to define U.S ambitions in sharp detail. Now building is put at 20 million tons, and if Japan has lost heavily, the U.S.A. has first claim. That may be of little interest to builders or carriers compared with the way in which tankers are allotted. The Senators have asked questions and facts have to be given about one or all the matters raised.

Senatorial curiosity has a distinct effect on markets. The hint of differences at home implies the prolongation of war but there is now something else to go upon. Sir John Anderson is disposed to regard all criticism of lease-lend as perverse or prejudiced but the senators are probably intent on getting on with their job especially as the Senate has promised qualified support in foreign affairs to the President. The Russian claim for reparations also may provoke the Senate to define U.S. requirements in the event of recovery of money from Finland. The Soviet Union wants money for reconstruction from Germany. So the U.S. politician may argue that there is no place for U.S. assistance. Soviet views published before the Moscow talks cut across the theory that present aid had made it necessary for Russia to take the Anglo-American view of frontier and other questions. Since the conference is wrapped in secrecy the speculators are likely to get busy. More than local air raids, the uncertainty over the conference lifts up Indian bullion prices. The President has trouble over the subsidy plan. Congress does not pay heed to Labour's resolve to get over the Little Steel formula limiting wage increases to 15 percent. The anti-inflation programme is struck because the House Banking Committee refused grants to CCC. The revenue bill is in midair; the President is making no progress with Congress. The Moscow decisions may help the president to put across his proposals but the Second Front earlier in 1944 means a big rise in U.S. expenditure. It is known that war expenditure rose in September just as prices rose and the problem is where it was. There is, however, the chance of imposing a limit on relief expenditure. Sweden is ready to put up money for relief after the war in order to help Norway, Denmark and Finland. Regional considerations explain the decision. Sweden wants to get back to the Oslo pact arrangements, not being overeager for the vague aspirations of the Atlantic Charter. The next stage in Swedish foreign policy may be neither anti-German nor pro-Allied because Sweden's main concern is with her neighbours, not with the Anglo-Saxon powers. This decision too may have financial implications. Denmark may not return to the sterling area. There is perhaps enough repatriated capital in Sweden to permit an altruistic policy. If these countries are off the list the United Nations will have to spend less for the sake of others. That may cheer up the U.S. President's opponents who have regarded his food policy as a failure.

Of ultimate importance to the financial world is Dr. Dalton's curt assurance as to Empire trade policy. The Dominions are expected to support Britain. There is no going back on Ottawa, and the conclusions which may be drawn by believers in India's fiscal autonomy may be guessed. The Tory view of Empire economic unity does not meet with disapproval from the President of the B.O.T. Dr. Dalton expects the Dominions to follow Britain in trade agreements which means in a way that the Empire balance of payments will be one and it would consequently strengthen sterling. There is already a belief that sterling would quote between 4 to 5 dollars after the war ends. No large change is envisaged by those who reckon up future liabilities and reduced investments.

If takings of cotton and tobacco are curtailed in the light of wartime experience, the demand for dollars would be less. Of course India's export trade would not diminish on that account if the U.S. demand for jute, shellac, mica and manganese keeps up. The U.S.A. may have no set views as to the consequences of Imperial solidarity because it would be a British concern like the Indian famine today.

The British currency in circulation is over £1000 millions. The emergency issue has been expanding, and Parliament when it reviews wartime currency arrangements will examine how reserves stand. With a fiduciary issue of £1000 millions and gold valued at £1.88 millions in the Bank return (apart from that in E.E.A. at present) it is easy to say that the paper pound of 1931- is inconvertible. The public earns more and spends less. More money goes into the banks. Total deposits are more than three times the note issue. There may be a danger of a boom after the war when there is so much idle money but the damming up of business is expected to be fairly easy when taxation is kept up though the latter might be a handicap to the export trades.

Larger savings for the war would help to keep the danger in check and if one goes by bank totals alone it is safe to say this has been done. No increase in deposits has taken place after December 1942 while banks have put in about £100 millions more in loans and £300 millions more in Treasury deposits to go by the end July figures. A large reduction in advances compared with 1942 totals is a pointer to the slacker conditions obtaining in London. The ascent of share values this year may explain the retardation of the increase in bank deposits this year.

A higher dividend paid by E.M.I. for the last year shows how radio is still among the up-and coming Home industries. Oil shares have fallen back but Home rails in the last week have developed something like firmness. The market is invariably called quiet when it is not dull but quotations for the Funds are higher and Dominion issues have hardened according to reports. There has been a rise in tea shares similar to that noted in the case of gold shares. Reports as to full production in Trinidad for the war may force up interest in certain oil shares, but the threat of one more oil war in which Russia may take a hand overhangs the market.

(*Continued from page* 735)

tion of the large parcel of treasury bills which were rediscounted a few days ago. In the circumstances, the cash balance has shown a substantial increase. The Imperial Bank has also taken further interest in treasury bills.

There have been three important developments about giltedged. The first is the intimation that the Reserve Bank, after the continuance of the tap rate for 3½ percent Rupee Paper at Rs. 97-8 for some time has stopped the sale of this stock through the tap. Readers of *Indian Finance* will recall that suggestions made in these columns were to the same effect, that is, that, after 3½ per cent Rupee Paper had been taken up in successive stages to a suitable level, the sale must be stopped. The usual procedure is to take up prices of a particular stock by open market purchases. In this case, the price of 3½ per cent Rupee Paper has been taken up by open market sales. It is the policy about the tap rate for sale that has, on the one hand, levered up the price in quick upward moves and, on the other, enabled the Reserve Bank to effect more sales of Rupee Paper than in the previous period of a static tap rate. That the prices have risen consistently inspite of consistent sales, is the final and conclusive testimony to the intrinsic vitality of the giltedged market.

The second important point is the announcement of a new Funding Loan for Rs. 25 crores in the form of an issue which must be definitely considered a long-term issue.

LLOYDS BANK
LIMITED

The Defence Loan plans so far of the Indian Government have been short-term—only recently medium-term. The devising of the 1966-68 Loan at an issue price of Rs. 98 is a convincing measure of the self-confidence of the Government. This has already had the effect of causing the 3 percent 1963-65 Loan to improve by over 4 annas. This disposes of the forecast made in some quarters of a new loan which was to be merely a re-issue of 3 percent 1963-65. Sir Jeremy Raisman has vastly improved on the forecast. He has devised a long-term loan and has put it forward in circumstances which spell success.

The third development to which we should like to draw attention is the repercussions caused by the bombing of Madras and recently of Chittagong. All that we need say is that markets all over the world have, time and again, in the last four years of war fully demonstrated how shock-proof they are to any the most adverse political developments. It may, therefore, be confidently inferred, thanks to the strong giltedged policy of the Government and thanks to a now-established immunity of markets to political shocks, the future of giltedged is brighter than ever before. We have no doubt that 3½ percent Paper is headed for a substantial rise. Which is another way of saying that the process of lower yield and stronger giltedged is assured of permanent validity.

The exchange market has been dull and featureless but steady.

THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

A Noble Task.

Changes of personnel in high places are often of epochal significance. Though the Viceroyalty of India has for long been a conspicuous exception, it is hard to believe that the assumption of that office by Lord Wavell will make no difference in vital questions of policy. Neither the man at the helm, judging the New Viceroy by the meagre, but illuminating, data available, nor the broad objective situation suggests a mere humdrum continuance of old policies and methods. Between Lord Wavell and Lord Linlithgow, there would seem to be little in common. Fate had designed in the latter a singularly efficient instrument of India's woes. It had contrived for him a long period of preparation for his tasks, one in which he was equipped with detailed knowledge of the two things that matter most to this country, politics and agriculture. Whatever his intentions and whatever the defence of his actions, and in action the fact is there for all to see, Lord Linlithgow leaves India famished in mind and body, in dire want of the necessaries of life and utterly lacking in every force or factor that makes for healthy national development. He may well look on the encomiums of one section of the British Press as sufficiently glorious laurels to adorn his brows. But the plaudits of partisans rarely coincide with the judgment of history. Of Lord Wavell, it may be said, that he is avowedly a stranger to India's problems; and he is too much of a scholar to look upon the "open mind" as an empty cliche of Anglo-Indian politics. If the saying is true, that the style is the man, then the Viceroy's House has never before housed one like him. What this newness may mean to India is a futile speculation. Not to ride in state on the entry into the capital or to hold a press conference in the Rooseveltian manner may as well be a matter of personal taste as a foretaste of revolutionary changes to come. But they bespeak a fresh mind; and it is the right and duty of the press to enable such to appraise the situation in the country.

India has no knowledge either of the criteria by which Viceroys are chosen or of the spirit in which they are instructed to take up their functions. But there can be doubt about the calibre that is required; and it is impossible that men of such calibre are expected to act as glorified civil servants. In the case of Lord Wavell, the British Prsss is almost unanimous that his appointment was inspired by the desire to bring an altogether new type of mind to bear on the Indian problem. This phrase, "the Indian problem," has for long been a serious barrier to the understanding of what it connotes or is implied by it. It is the creation of a section of British politicians who find in it the best means of combining a disingeneous solicitude for India's welfare with a selfish stranglehold on this vast country. It enables them at once to present themselves before the world in the role of the Good, though unsuccessful, Samaritan, and to render India's problems, as distinct from the "Indian problem", which they have in their mind, more and more insoluble. But the truth is that there is no unitary Indian problem, so far as Britain is concerned; and only in a fatally narrow view can India's problems be regarded as India's sole concern. Whether we view them from the standpoint of winning the war or winning the peace thereafter, India's problems will be seen to lose their clear outlines against the background of the world's problems. The International Food Conference came to the disheartening conclusion that the world will have to more than double its food production, if the promise of freedom from want for all peoples is to be redeemed. The position is only worse considering India by itself. Its other conclusion that sufficiency of food production must be complemented by wide distribution of purchasing power, has likewise its application to India, where the essence of economic progress lies in increasing the productivity of the soil and the employment of man in industry. Today famine stalks the land. The necessaries of life are sadly in want. Conditions are worst in the Province which is the base for the allied offensive against Japan. Fighting the enemy, personal and impersonal, in the present and in the future, when the victories of today will have to be buttressed by fresh triumphs over vital problems, requires morals. And for morale, we have only a people, who are victims of a cruel disillusionment, rendered cynical by the relentless march of adverse developments, dazed by world forces which take so little account of them, the willing prey of a fatalism, which seems a necessary balm to our incurable maladies.

To help such a people on their feet, if only because they are such a large part of the human race with not a little of valid title to being civilised is worthy of the noblest and the most valiant endeavour. It has a vital place in the building of a new world order. It is at once an antiseptic to the evils of the past and the seed for the growth of new values. It will be as much a help to complete victory in this war as a safeguard against the recurrence of another. One has only to view India as part of the world that is, and the world that can be, to be persuaded that India's problems are no more exclusively India's than this war is Britain's; that India's problems can not be simplified into the terms of current partisan politics any more than international problems can be segregated behind an economic or political or ideological pale.

The outstanding fact about India, today more than at any previous period, is that the body politic is paralysed and creative social forces are either absent or rendered wholly nugatory. The causes may be traced far back into the history of this ancient land. But there can be doubt that the immediate cause is the extraordinary measure of success in foiling the nationalist movement in the country. That success has, on the one hand, deprived the people of the advantage of native leadership and, on the other, induced in the Government a mood of exultation over petty political gains. Together, these two charges have worked to the detriment of both India and Britain; and the result is to be seen clearly in the more or less complete helplessness of Government and people in the face of the present food problem. What is true of the food problem cannot but prove true of other problems as they become more pressing. The illusive and transient value of triumphs over a singularly unpractical and ill-advised Congress is already apparent to alert minds in both countries. But the brain tracks of politicians in India and Britain do not permit of thinking out of the ruts of the "Indian problem."

So far, the only gain in the political situation seems to be a fairly widespread realisation in Britain that separatism in India has been encouraged to attain dangerous proportions. But as a starting point for changing obstructionism into helpfulness, it should be invaluable. Few in India will doubt that, if the British Government choose to draw the line with a firm hand at the point of dividing the country and put the emphasis on tangible tasks ranging from the immediate war effort to the attainment of the four freedoms in the immediate post-war period, it would become a miraculously easy task to rally the whole country round the new policy. In such a frame of mind, the stalemate is easily resolved by putting the pieces back where they were at the time of the Cripps proposals and inviting the Congress to a different key move. The League will do likewise and the advent of a National, but genuinely allied, Government in India will lighten the tasks alike of war and peace. It is immensely important to a world order, economic as well as political, that this country should be a healthy, and not a diseased, part of it.

It is not, of course, to be overlooked that the solution of the Indian problem is deemed in Britain to create another for herself. Politically, this war, in so far as it will have disposed of for ever, by all suitable means, the eternally aggressive German and his opposite number in Asia, will bring the world nearer to stable peace than it could ever have dreamt of. And economically, the crux of world economy in the future will lie, not in competitive international trade, but in adequate development of the world's economic resources. The popular view that Britain needs a spirit of self-sacrifice and self-effacement to be able to help India on to her feet is a relic of obsolete notions of international politics and international trade. All that is needed is the courage necessary for embarking on change, the readiness to reject the ludicrously narrow view that the whole world fights a war, the second of its kind, not to change the basis and contours of its common life, but to confirm a few in their possessions. All over the world there is a new idealism burning bright in the hearts of all, and particularly in those who are on the field of battle. The role of the leader, of every one in a position of power and authority, is not to belittle or under-rate it, but to make the most of it in the march towards a better world.

WORLD BANK PLAN

Two weeks have passed since the world heard of the U.S. Treasury plans for a world bank based on the U.S. Treasury plan. Mr. White's explanation of its objects has been overshadowed by Congressional criticism of the entire scheme. Hostility to the creation of a $10 billion bank is not confined to the orthodox U.S. financier who thinks first and last of future liability rather than remote benefits. The only international bank with a composite board, neutral headquarters, and its accounts in neither dollar nor sterling has not fulfilled anticipations. Experience undoubtedly makes for reserve, and whatever may have been the past pronouncements of the Vice-President, the U.S. is harshly sceptical of the plan to set up any bank to make advances for reconstruction, for a bank of that type may be regarded purely as a blind to get over the Johnson Act prohibiting loans to defaulted debtors. There is, in the orthodox U.S. bankers' view, a multiplicity of federal agencies and in the prolonged discussion over clearing and/or stabilisation the problem of indebtedness has been threshed out.

It is not surprising that opposition comes from Wall Street as well as Main Street in this case, and not many overlook the fact that the promises of the Atlantic Charter are not ratified by a proper Senate resolution. Is there reason to expect a surplus of saving for overseas investment after the war? On the assumption that social security expenditure cancels out any probable rise in national income, there is some justification for the view that lending by a body over which U.S. control would not be exclusive, carries risks to the body economic. The functions of guarantor to be assumed by a new world bank in the case of private loans to various banks elsewhere may not be approved. The normal consortium procedure adopted in the case of international loans in the past may be regarded as appropriate but over and above is the question of default. Not many can afford to forget that Occupied countries like Greece have a discreditable record as borrowers, and the only country that did well under the League of Nations in regard to the fulfilment of obligations was forgotten Austria. The world bank plan, as was indicated in the report made by Mr. White to Washington committees is meant really to provide a buffer pool of funds. Loans to national corporations for their development schemes after the war not direct investment is the object. How many countries are actually equipped for this kind of borrowing? Not many, it will be argued and co-belligerency may create complications of its own. From the Russian claim for reparations one may deduce that the Soviet need of capital for reconstruction is acute, but Russia is a big question mark and U.S. Congressional opinion, with its ear to the ground, has few illusions about what may come from a period of further planning.

Guarantees are probably essential in the case of a Power reluctant to play the diplomatic game according to accepted rules and neutral effort, typified in the recent Swedish proposal to assist Norway and Denmark besides Finland, must restrict the field of Allied endeavour. Since the framework of collective security has not been prepared, U.S. political opinion which looks also to councils for one continent or another has no cause to be enthusiastic on the issue of a world bank. As regards capital wanted the U.S. contribution was put at $3½ billions; that of Britain at $1 billion. The ratio might cause a surprise and the actual contribution in gold of nations, from Russia to Iran, may be less than the share readily fixed for the U.S.A. If the rule as to unanimity obtained, the board of a world bank might accomplish little. That a world bank to deal with long-term credit needs actually fits in with the plans to adjust short-term indebtedness is understandable but the State of U.S. opinion suggests that success will not attend the Treasury's proposal.

The benefits it may secure for U.S. exporters of capital goods must appear hypothetical. An ordinary export credit scheme might appear advantageous, and if it is a question of post-war industrialisation or public works construction abroad it is obvious that it is really a choice between the U.S.A. and Britain, both of which aspire to be the world's biggest workshop after the war. To ignore the potential trade rivalry after the angular definitions of the five Senators before the secret session of the Senate would be worse than useless. Consultations in London between Mr. Eric A. Johnston and the leaders of British trade and industry illustrate the pace at which rivalry increases. A world bank to make long-term advances might, however, suit Britain's book. If another authority intervenes and the problem of blocked balances are disposed of in the form of loans under guarantee the gain will be definite and it is this consideration which may be behind Congressional disapproval.

Mr. Morgenthau got his plan out after the tax bill which had a frigid reception to judge from Mr. Doughton's prompt assertion that the U.S. taxpayer cannot stand an inordinate increase in taxation, however admirable be the object. That was, in the average view, a tactical error. The proposals described by Mr. White to the last examining committee went beyond long-term investment. The world bank is expected to reinforce the Stabilisation Fund's operations. Evidently, the world bank is to be for B class members of the group which takes the stabilisation plan. There would be no guarantee of U.S. preponderance in voting power; that, for the moment, is a very convincing objection. Congress would be perhaps intolerant of helping Britain beyond the lease-lend programme, for the British Empire's capital requirements would be the prime concern of the World Bank and there are real, undeniable differences over colonial policy in the light of assurances offered, from Mr. Churchill's speech last year to the more diplomatic survey of Imperial responsibility by Colonel Stanley. U.S. capital requirements for the liberated Philippines may probably be large, but the notion of a small pool of the capital interchangeable as regards volume or composition at all times in which the U.S. contribution would be absolutely large, may not find much favour when there are issues like Middle Eastern oil. The pace of British oversea disinvestment rather than the acute need of Free China or freed Ethopia is the main consideration. Problems of management for the World Bank in peace may not be great. It might perhaps regulate remittance or transfers without difficulty, but the World Bank would leave out both the defeated enemy and the resolute neutral, and confer no authority over the Colonial borrower. While the declared purpose to keep down rates of interest might be wholly proper, the actual assistance that a $10 billion credit can produce, should real depression overtake the post-war world, may be very small. The U.S. politician critical of the Treasury, may well argue that no problem of the transition has been grappled with, and the place of the World Bank is unintelligible. The British Empire holds its own post-war civil aviation conference and makes light of U.S. claims as to predominance of either on the high seas or in the air. The U.S. politicians' view may be conditioned by the reflection that Mr. Dewey may be President on March 4, 1945 and the proper authority to write in the plans to be worked out after peace is not the present President or the present Congress.

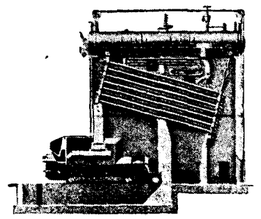
While some continuity as to lease-lend may be expected as also in regard to trade pacts the feelings of the weary Titan may not be absent in the U.S.A. Domestic problems including inflation and manpower are not to be ignored when the plans for putting others on their feet are appearing, one after another. To accept the heavier responsibility in advance might appear quixotic to the hardboiled who may urge that a world that sticks to managed currency instead of buying gold to put in may require no loans. A bank of issue may run into dangers but the opposition may not come on that score but on the politicians' rating of the necessity for new international agencies to control commodity pools, distribute food and stabilise prices. If all the agencies are to come in one sweep the World Bank would be superfluous but that point has not been yet made. But the Clearing Union's advocates dwelt on the banking analogy that if of some cossequence when unitary control may be advocated for one reason or another.

IN THE SERVICE OF THE NATION

Towards the close of the last century, the economy of India underwent a radical transformation. Capital and enterprise were drawn towards the vast resources which had lain untapped, and the country was set on the road to industrialization.

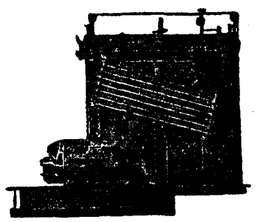
In this development, Jamshedji Tata played a most notable part. He saw the material advance of Western nations, and he set to work to surmount the difficulties which lay in the path of his country's progress.

Foremost in his thoughts was the foundation of a Steel Industry. Seven years after his death, his dream was realized when, from a jungle in Chhota Nagpur, arose the gigantic Iron and Steel Works of Jamshedpur, to this day the largest Iron and Steel Works in the British Empire.



Around the Works has grown a town housing a hundred and fifty thousand men, women and children, and new industries, fashioning from iron and steel a hundred and one requirements of daily life, dot the landscape. In Jamshedpur, Indian capacity and enterprise have reared for themselves an outstanding monument.

The work of the Founder goes on. Tata interests today cover:



Iron and Steel . Textiles . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Soaps and Glycerine . Industrial Investments . Hotels . Cement . Engineering . Scientific Research.

New Savings Certificates

The changes in Government borrowing this month include the issue of National Savings Certificates from October 1. The Twelve-year cash certificates sold through the Post Office appear as a part of the save-lend plan decided upon in August and are issued so as to give about 4 percent to small investors. The tax-free certificates were sold from June 1940 when the wartime borrowing began with an appeal to the small investor as well as the money market. The new savings certificates too are issued in multiples of Rs. 10 and the higher rate of interest offered is not the only feature. Legends outside the Post Offices conducting savings bank business describe merely the displacement of Defence Certificates. The new certificates do not permit holders to encash certificates for the first three years because a higher return is vounchsafed. Certificates are issued upto Rs. 1,000 but a maximum is fixed for a holding namely Rs. 5,000 though local authorities can invest upto Rs. 20,000. A firm or a company having a bonafide scheme for making advances to its employees for the purchase of savings certificates may, on special recommendation, be authorised to purchase upto a limit of Rs. 15,000. The value of the ten-rupee certificate after 12 years is fixed at Rs. 15 and the value of the higher denomination is in proportion. It may be noted that a life policy of 12 years' currency, on which all premiums are paid, may not offer as much even with bonus additions, and if investors look on a certificate as a single premium payment, the advantages presumably will lie with the savings certificate. Encashment after 12 years is to take place at the Post Office at which registration has taken place. Encashment as stated in terms of issue is allowed only after three years but in case of the death of the holder, discharge could be permitted by a post-master. In the case of encashment after three years the holder can surrender a certificate in return for Rs. 10 plus 8 annas for the first three completed years from the date of issue and for every completed year thereafter. The terms have been explained by the National War Front in its recommendation of Savings Certificates in the national interest but the choice of title—National Savings Certificates—may tend to a little confusion as the savings movement and savings certificate in Britain have a prescriptive claim to the adjective prefixed in this case, apart from the fact that the epithet runs counter to the Two-Nation theory holds the field from April 1940.

Jute Supplies

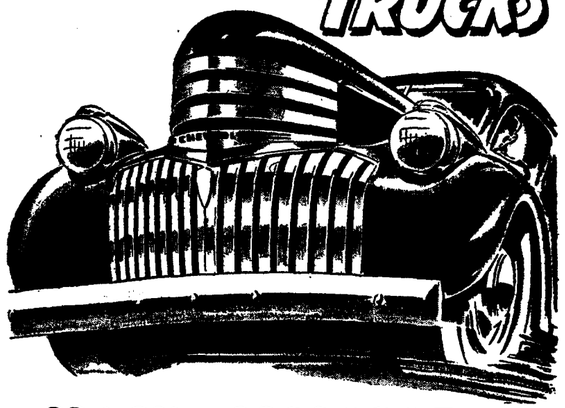
In the September bulletin of the Indian Central Jute Committee is found an estimate of the statistical position of jute which derives its interest primarily from the adverse price trend noticed since August. The statistics of 1942-43 (July-June) point to a crop of 91 lakhs of bales and a carry over of 39.3 lakhs of bales bringing the total of supply last season to 130 lakhs of bales. Consumption including extra-factory consumption and exports of raw jute accounts for 90 lakhs of bales and there is a carry over of 40 lakhs or 44 lakhs of bales if the Agriculture Department's estimate is taken as more reliable. In line with the previous decision an eight of the area crop was decided upon before the unofficial price decision. The estimated supply is 85 lakhs of bales and the carry over of 44.31 lakhs will raise the total supplies to 129.3 lakhs of bales. Supply in 1942 was 129.9 lakhs of bales and 132.6 lakhs of bales in 1941. Official policy, therefore, has succeeded in regularising supply after the crop control decision of 1940 in defeating the burden of the carry-over every year. But this year's carry over exceeds that of last year and consumption prospects, which appeared very good in June, have undoubtedly worsened.

The trade will probably question the judgment 'that the total supply of jute in 1943 is expected to be more or less on a level with that of the previous year and the demand may be expected to rise in view of the recent tendencies of the war. Thus the statistical position of jute (reference to a slight deterioration in 1942-43 is made) will probably be strengthened in the current season.' The fall in raw jute exports in 1942-43 is perhaps the most important factor. Exports fell to a third of the pre-war level and the mills stopped buying jute on a large scale after November 1942. Last September, there were very audible claims for relief; these may not be heard at present, because the general food shortage overshadows sectional distress. The U.S. hessian order has ceased to be a market factor and the Indian Jute Mills Association schedule of Rs. 19 for Tops and Rs. 17 for Middles and Rs. 14 for Bottoms with prices lower by 8 annas per maund in the case of District is already a mere memory. The basic factor is not the 54-hour week or the coal shortage during the monsoon or even the rise in mill stocks during 1942-43. It is an excess of supply. The anti-hoarding and profiteering ordinance may push down prices of all agricultural produce and jute mills may be impelled to seek compensation for the holidays by a cut in the cost of raw material. The course of war may exert a greater effect on exports of both jute and jute manufactures, and the immediate market reaction to the final crop forecast cannot be overlooked. The familiar reasoning as to the proper relation between jute and rice prices has ceased to interest those who may treat the cancellation of war orders and the taking over of certain mills as the proximate factors in regard to consumption.

Indian Insurance In 1941

The experience of Indian insurance companies is reviewed in the latest edition of the Indian Insurance Year Book. Of 302 companies transacting business in India 209 are Indian. Bombay has 77 as against 49 for Bengal and 32 for Madras. Of the 209 Indian companies 160 carry on life and general business. Of the non-Indian companies, 75 carry on general insurance and only 3 carry on life business only and 11 combine life business with other business. Of the latest composite class 11 belong to the U.K., 4 to the Dominions and 1 to Switzerland. The non-Indian offices' share of life business in 1941 was Rs. 5.37 crores against Rs. 34.14 crores for the Indian offices. Of 200,000 life policies issued in 1941 the Indian companies' share was 189,000. The average value was, of course, much higher in the case of policies issued by non-Indian offices. Of the total life business in force at the end of 1941 the Indian companies' share was Rs. 237.24 crores out of a total of Rs. 291.65 crores. Indian life offices obtained Rs 2.54 crores' worth of business abroad to raise their total business to Rs. 34.68 crores. Their total premium revenue for the year was Rs. 15.69 crores. The Indian companies added Rs. 6.55 crores to their life assurance funds in a year. The total at the end of 1941 was Rs. 68.78 crores. The average return on the funds was 4.17 percent as against 4.37 percent in 1940. The Indian companies reported a reduction in the expense ratio to 27.4 percent. The average expense ratio excluding half a dozen major insurers is 34.3 percent but the reduction in the five years ended 1941 certainly stands out.

The fall in interest rates raises the question of the valuation basis and the new Superintendent of Insurance has examined the problem at some length. Those who need full information are referred to pp. 5 to 8 of the Year Book. The view taken by the Superintendent of the obligation laid on Insurers by Section 27 of the Act which came into full effect on last July 1943 is supported by reference to tendencies in operation. It is noteworthy that the view adopted again is that insurance funds have merely displaced private funds in the field of approved securities, driving them probably towards industrial securities. The larger share of non-Indian concerns in general insurance is so well-known as to require no explanation. The U.K. had the major share of the total business of Rs. 265 lakhs. The assets of Indian insurance companies at the end of 1941 totalled Rs. 84.37 crores. Government securities held by Indian insurers totalled Rs. 46.17 crores. Other trustee securities totalled Rs. 7.09 crores. The investments in shares of Indian joint-stock companies totalled Rs. 7.21 crores while loans to policyholders stood at Rs 7.62 crores. The Year Book will indicate that the majority of Indian insurance companies do not pay dividends to shareholders. Hardly a score out of 209 companies declared dividends in 1941 and the point certainly deserves notice when new insurance concerns are launched in order to obtain business at the expense of established foreign concerns. There may be real advantages for Indian companies, and a real need for more Indian concerns all at once but the shareholders who can instructively rate the future as promising will certainly do well to note that insurance is an industry in which the average rate on invested capital cannot be determined precisely as is possible for those venturing into the cotton mill industry or any other industry.



Indian Shipping Under Control

Details of shipping control were given in a recent communique. The fear that blue water shipping is given up to another Dept is idle. The Commerce Department assumes control over vessels on the Indian register while vessels on the British register are subject to the control of the Ministry of War Transport. The appointment of the Controller of Indian shipping, according to the recent communique, is meant to bring sea transport into close relation with railway transport and the priority procedure is to apply to cargoes in Indian vessels. Pooling of shipping is promised under the new arrangements which covers countrycraft. The coastal shipping committee is to settle the allocation of space for private cargoes and the most obvious result would be that the Government would be served first and private traders would have to take what is given by the authorities. The arrangements must affect shipowners little as compared with consigners but one further effect may be to divert more traffic to coastal vessels leaving the railways free to carry more grains and military goods. In recent months the gross tonnage lifted has grown and new imported engines may increase the tonnage lifted on the Indian railways. Previous arrangements in regard to despatch from ports may have been desired by the Grady Mission which asked that ports and foreign trade should be reorganised. Shipping control as a means of developing countrycraft must not be ignored and the Maritime States are likely to gain therefrom as much as the Government. Control of freights and shipping is general in wartime and Indian commercial organisations have again received an explanation as to the kind and degree of control imposed, only after the selection of an Indian shipping company's employee for the post of Joint Shipping Controller last month. There was the usual protest and some publicity that has been met by an explanation. In regard to the control no figures as to vessels and tonnage involved have been cited, but it would be far below the numbers involved in the U.S.A. where shipbuilding and shipping alike are wholly are under Federal control and foreign trade is under OPA, WPB. etc.

Sugar And Sugarcane

In asking for fixation of cane prices in line with prices of other crops the President of the Indian Sugar Mills Association indicated that the 8 annas or 10 annas formula must not be readily adhered to in the future. Sugar control hinges on adequate production and there is no guarantee that in the next year cane supplies would be adequate as the Federation of Chambers indicated clearly. The warning made no mention of gur control or of provincial price policy. But it serves to show that the happy experience of 1942-43 or the next season can only be retained by adjustment. In the words of Mr. Krishna Deva the question of cane prices for the coming season is of vital importance to the sugar industry so far as the season 1944-45 is concerned if the industry is to have an optimum crush. It is obvious that cane prices must be fixed in parity with prices of other competitive crops now prevailing, and not on the level which the Government hope to achieve at some time. The canegrower is not going to make his calculations on any future prices, but on existing market prices, and accordingy decide as to whether it would be profitable for him now to sow cane or other crops. He urged that in order to maximise sugar production during the 1943-44 season, it is essential that cane prices should be sufficiently attractive to the grower so as to discourage him from diverting his cane to other channels.

The argument in favour of higher prices for cane comes before the season begins. It supports other pleas for a rate of 14 As. per maund. It is one based on the difficulties noted last year which led to a very short working season in two provinces. It may be difficult to hoard cane or profiteer when cooperative cane societies

are increasing and the zone system is at work but sugar mills today are more concerned with full production than cheapening the raw materials for themselves. Some may suggest that sugar mills adopt a view far removed from that adopted by either cotton mills or jute mills, largely because there is no export markets for cane, and the sugar manufacturer looks only to a higher percentage of recovery as in the last season. The demand for maximum production is based on the consideration that scarcity endures in spite of controls including rationing. Sugar producers found in the last season that price control hampered operations and the memory of difficulties up to January justifies the view now advanced along with a plea to set up a sugar producers' panel to work the system of control. The correct level of cane prices can only be fixed in relation to the cost of production and former enquiries may not be of direct value. Stability of sugar production undoubtedly depends on the stability of cane prices and the industry according to Mr. Krishna Deva wants to avoid both overproduction and underproduction. Though the accepted principle is to link cane prices with sugar prices, the Sugar Mills Association's president is against it. The view propounded may be surprising as the fixed price system has spread beyond Bihar and the U.P. But the major consideration today is full production. Production still falls short of the estimated capacity of Indian mills, and whatever may be trend of world production the Indian sugar mills are eager to produce more sugar so as to increase supplies and lower prices. As to excise the Government's interest is well-defined. There is no real conflict between civil supplies and the sugar mills' case partly because the mills ask for cane development work from the Excise grant and the Cess proceeds.

From War To Peace

In the June bulletin of statistics published by the League of Nations is found a summary of the report on transition from war to peace economy. The delegation on Economic depression produced the report which defines objectives and and policy in the way expected after the promises made in the Atlantic Charter. The programme of social insurance, of equal access to raw materials, and the development of backward countries can be readily related to the Charter. But the promise of full employment and an international minimum belongs to the future rather than the transition period. Industrial countries have a direct interest in maintaining full employment for their own sake, but they are also trustees, being large buyers of raw materials from others. The avoidance of unemployment becomes a pillar of post-war security. The spreading of work may demand a check on monopolistic practices as the report recognises. Cartels cannot claim to cut production in order to keep up prices, since a net reduction in employment may be truly disadvantageous.

The recovery programme is not drawn up with an eye on the reconstruction of world economy but with making the change to peace-time conditions tolerable. The danger of a boom following the peace is not ignored; so that the case for the maintenance of controls is stated afresh. But the controls must be adjusted to a rapid change-over to production of consumer goods. The U.S.A. has its own programme drawn up from public works to

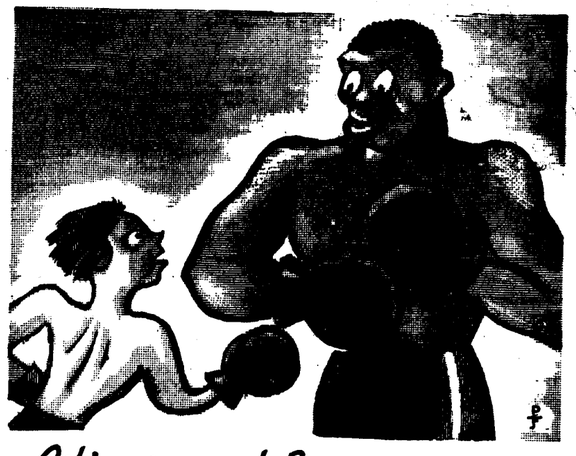
social security. The keynote there, too, is full employment and international agreement for one purpose or another takes a back seat. But public works should follow the schemes of reconstruction drawn up by private enterprise and the deferred programme finds favour with the delegation. In view of conferences and agreements this year on immigration, relief and food there may be no place for further advice as to what is really wanted after the war. The experts agree as to the desirability of a clearing union or stabilisation fund. The problem of inflation is to be mastered by the distribution of materials to countries starved of goods. The post-war lending plan, it is argued, should be on an equity basis. A fixed burden of interest in periods of depression becomes unbearable. Interest rates on international loans should be as low as possible, and the suspension of payment in bad times should be provided for by prior agreements. Two conditions are contemplated as regards loans. Capital expenditure for production purposes by the borrower should be favoured and the import of luxury goods by the borrowers controlled. Adequate labour standards in the borrowing countries should be required. Since India is not going to be a borrower in the future the conditions may not be applicable to her whereas the dicta on commercial policy compressed in the statement 'the war is producing profound changes in the structure of international clauses and indebtedness which could best be met by such changes in commercial policy as will permit a substantial increase in the purchase of foreign goods by those countries whose creditor position has been strengthened may require protected examination in view of reservations demanded by Indian interests as to fiscal policy.

Exchange Rates Steady



A fair and complete guide to changes in external value of many currencies in the war period is still lacking but the monthly averages referred to in the table appearing in the statistical bulletin indicate that Latin American currencies quoted in New York have hardened since 1941. Quotations for the sterling show no alteration since 1941. The South African pound is equal to $3.98 in New York; the Australian pound is equal to $3.288 while the New Zealand pound is equal to $3.244. The Canadian dollar, to judge by the movement in the free rate, has appreciated slightly. In June the Canadian dollar was worth 90.13 cents against the official rate of 90.91 cents. The ascent of the Cuban peso to full parity with the U.S. dollar was the feature of the New York exchange market in 1942. This was due to the increased demand for Cuban sugar rather than anything else. The change in Brazil's currency last year has led to a very slight improvement in the value of the currency along with the improvement noted in the case of the Mexican peso. The currencies which show measurable improvement are the Uruguayan peso and the Venezuelan bolivar. The bolivar has appreciated since 1942 and the interest now evinced in the Republic's oil development may lead to a further rise in the exchange rate.

It is noteworthy that the pound sterling is the only European currency quoted in New York at present. It is difficult to say whether the dollar has depreciated in terms of Swiss francs or Swedish kroner though passages in the B.I.S. report for 1941-42 indicated that the dollar had weakened like sterling in spite of there being no change either in the price of gold in New York or the dollar-stering rate. Middle Eastern currencies are mostly unchanged but reference must be made to the rise last year in the value of the riyal (after the drop noted in the value of Iran's currency in 1941). The Egyptian pound has a higher value than the pound sterling in New York being quoted at $4.138. The increase in foreign assets after 1941 is duly reflected in the value in terms of dollars whereas the increase in India's sterling balances has been without effect on the value of the rupee in New York which in 1942 was worth 30.12 cents as against the average value of 30.14 cents in 1941. There is, however, no reason to argue that substantial changes have occurred in the value of the neutral currencies. The Argentine peso (considering only the free rate) has appreciated very slightly, and the changes reported this year in London as a result of blocking of balances and remittance difficulties do not seem to have affected the quotation in New York which stood at 29.77 cents, making the peso worth a little over a shilling.

Rayon Supplies And Imports

The exports of rayon yarn and tissues from Britain increased to some extent in 1942, but the industry whose prosperity can be measured by the very substantial appreciation in share prices, has not disguised its opinion that more export markets are required. The recently formed Rayon Federation was invited by Mr. Samuel Courtauld to take note of various problems and address itself to the task of framing a properly co-ordinated export policy. The Central Rayon Office covers one field; so the industry will have to send out expert market investigators under the authority of the Federation. In this connection he drew attention to the possibilities of both Russia and China. As to the home market, the main hope, in his opinion, lies in raising quality. Courtaulds adopted quality control' some years ago, but he argued that it should stand on a basis not narrower than that of the whole industry and it must have some sort of official guarantee behind it. He noted that a guarantee of quality given by the Rayon Federation might become a hallmark of inestimable value to the trade abroad and he asked the Rayon Federation to take up this question with high standards and definite rules in its mind.

Rayon exports are expected to improve substantially when restrictions are relaxed. Since July 1942 export allocations have been made for many markets but there have been none for Eire, India, Egypt or the Anglo-Egyptian Sudan. The admission has a bearing on the inordinate prices of rayon yarn and goods which is a handicap to the silk mills as well as the handloom weaver in India. Provided supplies can be arranged, there is a very strong case for larger imports, more as the Indian customs revenue stands to benefit. Allocations for the Argentine and Uruguayan market continue to be made but the

Asking too much ?

Not necessarily. In all the giant steel structures that we see around us, the "little chaps" are holding their own. We're talking about the nuts, bolts and rivets that link the girders—and take their full share of the strain, too: little heroes in their way! They've got to be accurate and immensely strong. Sounds a tall order? But that's our job.

general argument as to scarcity of consumer goods must drive government to the conclusion that rayon goods must be imported in quantity. Exports from Britain to West African markets have increased because the African native demands goods in return for his production. The Rayon Federation realises that the acute shortage of silk creates unusual opportunities for rayon in both N.E. Africa and Asia. There is no doubt as to the many difficulties created for artificial silk mills after Japan entered the war and an assurance of tariff concessions after the war may lead to a considerable increase in the raw material supply for this branch of Indian industry. Bombay is not likely to overlook Mr. Courtauld's plea which certainly implies no threat to a potential rayon industry in India because any enterprise in the future cannot be independent of external aid and direction. Exports of rayon goods from Britain to certain Dominions and Colonies this year have increased and in the absence of any specific reference to shortage of shipping, it may be urged that since India is grievously short of textiles, owing to a generous export policy in the past, she has very special claims.

Company Law Reform

Little interest has been manifested here in the news that an inter-departmental committee is to report on the working of the Companies Act of 1929 in Britain and suggest changes if necessary. But legislative reform is attuned to the needs of postwar planning and the restraint of private investment for wider purposes is postulated by the acceptance of the demand for reform. The Greene Committee of 1925-26 examined the law and produced the consolidating statute. Since then jointstock companies and investors have experienced many changes and the law remains the same. The Board of Trade, called upon to protect the investor who has found publicity an imperfect remedy, has ordered a review of the Act. The appearance of malpractices, as also the facts of growth and change, demand an enquiry. Secondary reforms are to come after the war but the committee set up in June is required to go into the requirements of prospectuses and the conditions for the formation of companies. As the distinction between private and public companies has worn thin today the committee might ask for full publicity as to the finances and working of the private company. The dealings of Directors in shares of their own companies is held to be a proper subject for investigation. Some or all the evils are manifest in India but the holding company with its intricate mixture of finances and an uninformative balance-sheet is peculiar to Britain and South Africa. Some argue that the major purpose of company law reform is to check agreements in restraint of trade, and Mr. Herbert Morrison's arguments as to the limits of enterprise condition the legal reforms contemplated. Effective use of savings through investment is not possible except under conditions of full publicity. Beating the trade cycle by regulation of investment in the future may not be possible but uneconomic investment may be demanded under certain circumstances. Apart from shareholders, the State as a coparcener in all profits, has a genuine interest in full and proper use of corporate resources. The complaints against misuse of patents etc., heard in the U.S.A. are in

DEPARTMENT OF SUPPLY

DIRECTORATE-GENERAL OF MUNITIONS PRODUCTION, CALCUTTA

Supply of Metal Cutting Tools and Precision Instruments.

PANEL IMPORTERS.

All civil consumers of tools controlled by the Cutting Tool Control, Civil Armaments Production (Tools) Directorate, D.G.M.P., Calcutta, are hereby informed that the following firms normally import tools under the Panel Scheme and are in agreement with Government to supply stores imported by them under release orders from the C.A.P. (T) Directorate at prices not exceeding landed cost *plus* an approved percentage as profit:—

Bombay:—(1) Batliboy & Co., Ltd., (2) William Jacks & Co., Ltd., (3) Samuel Osborn (India), Ltd., (4) J. D. Brothers, (5) Turner Hoare & Co., Ltd., (6) Alcock Ashdown & Co., Ltd., (7) Machine Tools (India), Ltd., (8) Richardson & Cruddas.

Calcutta and Howrah:—(1) Alfred Herbert (India), Ltd., (2) W. Evans & Co., Ltd., (3) Jessop & Co., Ltd., (4) T. E. Thomson & Co., Ltd. (5) William Jacks & Co., Ltd., (6) Samuel Osborn (India), Ltd., (7) Shaw Wallace & Co., (8) P. C. Coomar & Sons, (9) Vickers (India), Ltd., (10) Associated British Machine Tools Manufacturers Ltd., (11) Machine Tools (India), Ltd., (12) McGregor & Balfour Ltd., (13) C. H. Lee, (14) Guest Keen Williams, Ltd., (15) Angus Keith & Co., Ltd., (16) Asbestos & Belting Co., Ltd., (17) D. K. Das & Co., Ltd., Howrah, (18) Burn & Co., Ltd., Howrah.

Karachi:—(1) William Jacks & Co., Ltd.

Lahore:—(1) William Jacks & Co., Ltd., (2) Kaycee & Co., Ltd.

Madras:—(1) William Jacks & Co., Ltd., (2) A. M. Goolamally & Co., (3) Crompton Engineering Co. (Madras), Ltd.

STOCKISTS.

Arrangements have also been made with the following firms to stock and distribute tools owned by Government:—

Bombay:—(1) Samuel Osborn (India), Ltd., (2) Richardson & Cruddas, (3) Alfred Herbert (India), Ltd., (4) William Jacks & Co., Ltd

Calcutta:—(1) Jessop & Co., Ltd., (2) Samuel Osborn (India), Ltd., (3) Shaw Wallace & Co., (4) Alfred Herbert (India), Ltd., (5) Burn & Co., Ltd.

Madras:—(1) Crompton Engineering Co. (Madras), Ltd.

Lahore:—(1) William Jacks & Co., Ltd., (2) Kaycee & Co., Ltd.

Karachi:—(1) William Jacks & Co., Ltd.

PROCEDURE.

Government Departments and other bodies entitled to indent on the D.G.M.P. may obtain their requirements of tools by indenting in the usual manner. Non-Government consumers must place orders either on a Panel importer or on a Government stockist for their requirements of tools, preferably with a recommendation from the appropriate Planning Officer of the Supply Department, and not apply to the Cutting Tool Control in the D.G.M.P. In case the importers or stockists are unable to satisfy their demands within a reasonable period, they may appeal to the Cutting Tool Control through the planning officer concerned.

Details of tools and instruments covered by this Notification may be obtained on application to Cutting Tool Control, Civil Armaments Production (Tools), D.G.M.P., 6, Esplanade East, Calcutta, quoting reference No. CTC/PO/10.

the background, but when unusual advantages are derived by private profit makers the affairs of companies become the concern of the State. In the committee the profession of accountancy is well represented, for a review of safeguards available to investors is the prime object of the new enquiry.

Preparing for 1944

Compared with the Five Senators Mr. Willkie has been less vocal about foreign policy but he is a bigger figure on the political horizon. Mr. Willkie entered U. S. politics as a candidate for the Presidency and he remains a candidate. The Philadelphia convention picked a dark horse in 1940 but he is now distinctly the Republican favourite. The Republican campaign has begun well in advance of August, 1944 and the party that put Mr. Spengler in as a Chairman recognised that Mr. Willkie was the logical choice. Mr. Willkie is said to be a fatalist and Destiny may sweep him into the White House. Congress is probably against a Fourth Term for Mr. Roosevelt though Mr. Roosevelt backs himself. That Mr. Willkie is going to write his own platform is perhaps the only argument in favour of Mr. Dewey who is the successful Governor of a Key State. There has been criticism of spending and domestic policy on the part of the Republicans candidate. It is curious that no shadow cabinet exists in the U.S.A. and Mr. Willkie has to assemble his cabinet after winning the election. Republicans who enjoyed three terms of power after Wilson fell would look perhaps to the party cycle only but the President has shown that he can subdue the Democratic party machine. And it may really be a battle of the machines next year because in foreign affairs the division between Mr. Willkie and Mr. Roosevelt has been blurred. It was only in May, 1940 that Mr. Willkie had a trial as a likely candidate but his political education has been very rapid as he is very well read, even better than Wilson according to Janet Flanner. Mr. Willkie for three years has ceased to be a corporation lawyer; he is not President of the 20th century Fox today and is primarily a politician hardly turned fifty. His advantage is that the isolationist patch in the Middle West is shrinking and Mr. Willkie has only to get out an acceptable domestic programme. The death of the New Deal is his opportunity, but Labour is moving towards Mr. Roosevelt and the end of war might have a big effect on the college of electors in November, 1944. The Dewey programme is perhaps as vague as it was which is perhaps a good reason for the party choice falling on Mr. Willkie. The candidate has little to fear from Mr. Hoover or Mr. Landon. Senator Taft is out of the running, and the Republicans after the moderate victory in the elections of 1942 have a restricted field. Mr. Willkie has no commitments according to his old claim but the party has, and the kind of compromise he negotiates will determine the future of both party and candidate.

Organised Charity

Organised charity has its own economics. Budgetting problems are always present to the executives and actual administration raises difficult questions of priorities and allocations. The only branch of charity regularly receiving publicity in India has been the Red Cross whose official associations are obvious enough in wartime. The non-official private agency that runs it close by concentrating wholly its energies and resources at home is the Marwari Relief Society whose first bulletin confirms expectation as to what it has been doing in the Bengal famine. The first issue describes operations from Ajmer to Midnapore against the common enemy—and large scale distribution of food, clothing, medicines and utensils indicates how relief is organised by a united community. The sale of food at special prices is a part of the relief work attempted by the new Bengal section. Work in the districts near Calcutta has begun and the opening of Government shops was anticipated by the establishment of shops in seven wards to sell foodstuffs. A more ambitious scheme appears still-born. It is stated that 28,000 persons or 4,000 persons in each ward have benefited by the special distribution scheme. The opening of four dispensaries for vagrants in the city is a departure independent of existing arrangements for the treatment of starvation in two hospitals run by the Government. Two more are to be set up in the city at a cost of Rs. 200 per month. The field of operations is to extend at least in the Midnapore and Burdwan districts and the largest number of persons to be fed are in the Contai Subdivision, described as the most necessitous area at present. The large-scale feeding of the poor in the City entails a loss but the manufacture of paratas at 9 pies (for sale at half anna in twelve shops and a few more to be set up) is a beginning in communal feeding that is as much a consequence of food shortage as the local scarcity of fuel.

The existing production of 100,000 cakes for sale at ¼ anna each involves a loss of 3 pies on each. More than 30,000 persons benefit from the sale at 12 places in the city while 2,500 persons obtain food at 3 centres in the southern part of the city. The bulletin is important not for the work it describes (which began in August) but in showing its supporters who are not confined to one community or region that the Society's monthly loss on relief operations put at Rs. 149,300 must be covered by donations which are formally acknowledged in the bulletin.

Asian Assurance

Consistent expansion of business and revenue is reported by the Asian Assurance Co., Ltd. The results for 1942 (announced in June) point to a rate of growth greater than that noted in 1941 and the most striking feature naturally is the fall in the expense ratio to 23.94 per cent last year. In 1942 the Company received 3,273 proposals resulting in the issue of 3,002 policies assuring in the aggregate Rs. 84.4 lakhs as against Rs. 70.29 lakhs in the previous year. Premium revenue improved from Rs. 22.54 lakhs to Rs. 23.8 lakhs nearly and investment receipts for the year were higher at Rs. 4.74 lakhs nearly. The income for the year 1941 was Rs. 26.56 lakhs; for 1942 it was Rs. 28.12 lakhs nearly. After meeting expenses, commissions etc., the year's surplus is added to the Life Fund, raised from Rs. 96.89 lakhs to Rs. 111.17 lakhs at the end of 1942. The increase of Rs. 14.27 lakhs explains the rise in the Company's total assets to

CALCUTTA COMMERCIAL BANK LTD.

Solicitors:

G. C. CHUNDER & CO.,
6, Old Post Office Street, Calcutta.

Brokers:

NARAYANDASS KHANDELWAL & CO.,
25, Swallow Lane, Calcutta

Managing Agents:

H. DATTA & SONS, LTD.,
15, Clive Street, Calcutta.

Auditors:

G. BASU & CO., R.A.,
Incorporated Accountants.
6, Hastings Street, Calcutta.

Registered Office:

15, CLIVE STREET, CALCUTTA.

OBJECTS:

The Company has been formed for the purpose of carrying on the business of manufacturing and selling plastics in all its branches and with the objects more fully set out in the Memorandum of Association which forms part of the Prospectus.

PROSPECTS:

(1) The Company proposes to take up in hand immediately the manufacture of (*a*) waxes, (b) resins, (c) moulding powder, (*d*) buttons, (*e*) electric insulators of different types, (*f*) household requisites like cups, saucers, dishes, ash-trays, etc, and (*g*) Radio parts, Telephone and Telegraph parts and Boot polish, etc.

The profit estimate as based on pre-war rates is given below:—

Cost of finished material Re. 0-6-0 per lb.
Selling price of the above Re. 1-2-0 per lb.

The Factory will have a capacity of turning out approximately a ton of finished material per day. Therefore, the annual profits are expected to be Rs. 5.04.000 based on 300 working days in the year, as against a paid-up capital of Rs. 15.00.000. This gives a return of approximately 30 per cent.

This may be said to be the first company which offers investors in India an opportunity to participate in the increasing activities that now centre round plastics. Especially since the beginning of the war, the field of plastics has expanded vastly; and the infinite variety of goods that can be made from plastics has so captured the imagination of the public and so stimulated research work that this decade may well be described as the decade of plastics. Though new, the plastic industry is a worldwide industry; and this company places India in the world map.

Plastic to-day is replacing many metallic articles due to its synthetic derivation colouring possibilities, non-conductivity of heat and electricity and lightness of weight. What artificial dye did to natural dye, plastics may do to a wide range of metals. Plastics are man-made chemical combinations of Nature's raw materials. They are solid at ordinary temperature, but when heated become soft and pliable. When moulded under pressure they take any desired shape and retain it.

While there are a number of other plastic materials available in the market, Dr. Goswami's patented plastics have an advantage over those in this that the raw maerials necessary for these are all available in plenty in this country. Secondly, in actual test this plastic has been found to be much less brittle, a better non-conductor of heat than the others, while in the case of electricity, it is a total non-coductor.

The Plastic industry as is now being carried out in India cannot in the least be called self-contained inasmuch as the moulding powder is imported from abroad and it is the powder that is shaped to designs locally. The advent of the War has, therefore, almost completely paralysed the plastic pressing industry except in such cases where the finished material is required for war purposes where the Government gives facilities for importing the moulding powder. If, therefore, the country were in a position to manufacture the moulding powder as is proposed to be done in the present instance, an important gap in war requirements would be made up. The increased use of plastics will be evident from the following table which gives the total world output of synthetic plastics from 1921 to 1935. It, of course, goes without saying that since 1935 plastics have come into greater use:—

Year.	Production in cwts.
1921	60,000
1925	1,20,000
1928	2,00,000
1931	3,40,000
1933	4,40,000
1935	12,00,000

Of the above India's share of import in 1935 is given below:—

Description.	Value in Rupees.
Toys	40,00,000
Insulators	44,00,000
Synthetic resins and waxes	50,00,000

The purchase of Dr. M. N. Goswami's Patent which was owned by the Joint Patentees, namely, the University of Calcutta and Dr. M. N. Goswami has been completed between the Joint Patentees and Messrs. H. Datta & Sons, Ltd., of 15, Clive Street, Calcutta, who have entered into an agreement to transfer to the Company the rights and privileges without taking any profit or boker-age, the consideration being Rs. 27,000 which they are liable to pay to the joint patentees on an insalment basis. The Joint Patentees held the Patent for 16 years, with first option for renewal. The Company is fortunate in securing so valuable a patent at what must be deemed a nominal cost. Arrangements are on hand to start manufacture at an early date.

The process of manufacturing these plastics was invented and developed by Dr. M. N. Goswami, M.A., Dr.-EN-Chimia (Paris), after years of careful and patient research and has now been perfected. It is worthy of note that at the early stage of the research when Dr. Goswami was satisfied that the manufacture of plastics from oil base was commercially possible the University of Calcutta became interested in the full development of the process and the rest of the the research was done under the auspices of the Calcutta University. The process has now been completed and perfected and an international patent has been taken out which covers almost all the countries allied to British India and the Native States. The successful commercial exploitation of the patent is, therefore, completely assured.

MINIMUM SUBSCRIPTION

The minimum subscription upon which the Directors will proceed to allotment and which in the opinion of the Directors must be raised out of the proceeds of this issue in order to provide for the matters referred to in Section 101 of the Indian Companies Act, including the working capital, is shares of the nominal value of Rs. 5,00,000 (Ordinary and/or Preference).

COMMISSION AND BROKERAGE

The Articles of Association provide for the payment of commission not exceeding 2½ per cent of the nominal value of the shares. In addition, to the above, the Company may also pay usual brokerage to approved brokers.

The entire issue of Preference Shares has been underwritten by the Calcutta Commercial Bank Ltd., the underwritting commission being 2½ per cent on the Preference Capital of Rs. 5,00,000. The Directors are satisfied that the resources of the underwriters are sufficient for the fulfilment of the commitment.

The Directors have decided to pay brokerage at the rate of Re. 1-8-0 per share on Preference shares and As. 4 per share on Ordinary shares to recognised brokers or bankers on allotment made in respect of applications bearing the stamp of such brokers or bankers.

PRELIMINARY EXPENSES

It is estimated that the preliminary expenses will not exceed in the aggregate Rs. 25,000.

PROMOTION

No promotion money is being paid by the Company nor is any business being taken over.

MATERIAL CONTRACTS

(1) The agreement between the Company and the Managing Agents shall be open for inspection at the Company's office during usual office hours. The principal terms of the agreement have been set out in one of the following paragraphs.

(2) The Deed of Assignment by which the Patent has been assigned by the Joint Patentees to Messrs. H. Datta & Sons, Ltd., shall be available for inspection at the Company's office during usual office hours.

(3) The agreement by which Messrs. H. Datta & Sons, Ltd., have agreed to re-assign the Patent to the Company shall be open for inspection at the Company's office during usual office hours.

(4) The underwriting agreement between the Company and the Calcutta Commercial Bank Ltd., is open for inspection at the Company's office during usual office hours.

DIRECTORS' QUALIFICATION & REMUNERATION

The number of Directors shall not (other than the ex-officio Directors) be less than two and not more than seven. The qualification of a Director shall be the holding in his own name or jointly with others of Ordinary Shares in the Company of the nominal value of Rs. 5,000. Every Director shall be paid a fee not exceeding Rs. 50 for each meeting attended by him. Directors residing out of Calcutta shall also be entitled to be paid their reasonable travelling and hotel and other expenses, if any, incurred in consequence of their attending at Board meetings and otherwise in the execution of their duty as Directors. If any Director, being willing, shall be called upon to perform extra services the Company shall remunerate such Director either by a fixed sum or by a percentage of profits.

A sum equal to 2½ per cent net of the annual profits of the Company shall be divided amongst the Directors before setting aside for taxes or reserve fund. This shall not, however, be payable in such years in which the Company does not declare a tax-free dividend of 5 per cent on the Ordinary shares.

MANAGING AGENTS

The Articles of Association provide for the appointment of Messrs. H. Datta & Sons, Ltd. as Managing Agents of the Company for a period of twenty years on the following remuneration:—

(*a*) An office allowance of Rs. 1,500 per month; and

(b) A commission of 10 per cent on the nett annual profits of the Company as defined in Section 87C(3) of the Act, this commission is to be increased to 15 per cent if the dividend is or exceeds 10 per cent provided that such commission shall not be payab'e in respect of any year for which dividend on Ordinary shares is less than 5 per cent tax-free.

(c) The Managing Agents shall be at liberty to appoint one-third of the whole number of Directors for the time being.

VOTING AND RESTRICTIONS

On a show of hands, every member present in person shall have one vote and upon a poll every member present in person or by proxy or by attorney shall have one vote for every share held by him.

The Company shall have a first and paramount lien upon the shares other than fully paid-up shares registered in the name of each member, whether solely or jointly with others, and upon the proceeds of sale thereof, for his debts, liabilities and obligations solely or jointly with any other person to or with the Company.

The Directors may decline to register any transfer of shares on which the Company has a lien. The Directors may refuse to register the transfer of partly paid-up shares without assigning any reason therefor.

INTEREST OF DIRECTORS

Mr. H. Datta and Mr. R. Datta, Directors of this Company, are interested as Directors of Messrs. H. Datta & Sons, Ltd., who are the Managing Agents as well as vendors.

Mr. H. Datta, Director of this Company, is Managing Director of the Calcutta Commercial Bank Ltd., underwriters of the Preference Shares and is interested accordingly.

Rai Bahadur K. N. Khandelwal, a Director of this Company, is a partner of Messrs. Narayandass Khandelwal & Co., who are brokers of this Company, and is interested accordingly.

Mr. N. C. Chunder is a partner of Messrs. G. C. Chunder & Co., who are solicitors of this Company and is interested accordingly.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying this Prospectus which may be obtained at the Registered Office of the Company or from Messrs. H. Datta & Sons (Agencies), Ltd., Regal Building, New Delhi or from the Brokers of the Company or at all the offices of the Company's Bankers, and sent in accordance with the directions contained therein with a remittance of the amount payable on application.

Where no allotment is made the deposit will be returned and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned. Failure to pay any amounts due on shares allotted when due will render previous payments liable to forfeiture.

INSPECTION OF DOCUMENTS

Copies of the Memorandum and Articles Association and the agreements referred to in the aforesaid paragraphs may be inspected at the Registered Office of the Company during the usual hours of business.

THIS FORM SHOULD BE FILLED UP (ALONG WITH TWO SPECIMEN SIGNATURES AS REQUIRED) AND FORWARDED ENTIRE WITH CHEQUE OR BANKER'S DRAFT OR CASH TO THE COMPANY'S REGISTERED OFFICE OR TO ANY OFFICE OF THE COMPANY'S BANKERS OR THE COMPANY'S BROKERS.

INDIA OIL PLASTICS LIMITED.

Rs. 127.38 lakhs. The decision of the Asian to enter the field of general insurance is recorded in the report which states that the Company was registered in the early part of 1943 and has commenced business. It has been admitted to membership of various associations controlling insurance business. The Company has the essential advantages of branches and agencies; and shareholders getting 6 per cent on their shares may note that uncalled capital is a distinct gain.

In the revenue account renewal premiums constitute the principal item, but appreciation of investments to the extent of Rs. 1.86 lakhs is also included. The balancesheet as in December 31, shows that the paid-up capital of Rs. 5 lakhs is supported by reserves totalling nearly Rs. 4.8 lakhs. Of the assets the stock exchange securities valued Rs. 75.7 lakhs account for over half. The Company's holding of Government securities continues to increase. The classified summary shows that the value of trustee securities belonging to the Company exceeds Rs. 48 lakhs. The judicious mixing of prior charges with giltedged is a feature of the investments described in the report and accounts. Policy loans at Rs. 16.87 lakhs constitute the next largest item. Mortgages and loans amounting to Rs. 13.8 lakhs figure among the remunerative assets. Outstanding liabilities are covered by premiums and interest due to the Company and the cash balances totalling Rs. 2.67 lakhs exceed sundry creditors and premiums paid in advance. The last three years have undoubtedly put Asian Assurance ahead of junior life offices in India and the balancesheet shows how far the new Board's policy has helped to promote the growth of income and assets in the past year. The Asian accounts require little by way of comment, as new business remains wholly satisfactory while the extension of activity into general insurance proves how far Indian offices are anticipating new flotations and using opportunities created by the war.

Today's Prospectus

Another Datta enterprise which is meant to build up a new industry from the foundations well and truly laid by scientific investigation is India Oil Plastics—the prospectus appears in this issue. Plastics made of indigenous raw material have been evolved, and Dr. Goswami's patents have been acquired in advance. What is important is the opportunity created by the war. Moulding powder is no longer available, and the gap is to be filled by home production. The prospectus points out that this is the first public issue in connection with plastics. What plastics can achieve in the place of metals has not been fully revealed so that unlimited possibilities exist. The estimate of costs and of profits in a year of normal working assures a return of 30 per cent on capital.

One third of the capital is in the form of 5 per cent tax free cumulative preference shares and the holder of the equity may therefore count on a generous yield. The Company's future must be evaluated in the terms of electrical progress and the shortage of many metals. Both appear impressive advantages from the inception. The patent has been acquired on exceptionally moderate terms, and the international protection conferred by the patent makes the new industry non-competitive. A rival cannot appear, and India Oil Plastics Ltd., will command the monopoly net revenue that will ensure handsome dividends to shareholders. The figures relating to world production years ago must convince the investor that an industry like plastics must succeed. The Company's objects are definite and its manufactures must win a big market at home especially as quality has been ascertained.

Since Mr. Sarker and Dr. S. C. Law are on the Directorate public confidence in the enterprise should be great. The whole authorised capital is being issued so that the factory can start on the basis of full production. The terms of the managing agency agreement provide for the usual allowance and the usual percentage subject to the condition that 5 per cent free of tax must be paid to the holder of ordinary shares. This is a guarantee of confidence as to earning power, and investors should also note that promoters have provided in advance a part of the capital required by the new Company. The subscription lists will be open for 10 days only and may be closed earlier at the discretion of the Directors.

Aspects of an Industry No. 20

VULCAN'S FORGE

VULCAN, or Hephæstos, of ancient Greek mythology, was no common blacksmith. He was a worker in metal, in the non-ferrous metals copper, brass and bronze, who built the thrones and decorated the shining palaces on Olympus. He was also the armourer of the Gods and forged the thunderbolts for his father Zeus. Today the non-ferrous metals are essentials in peace and war. The development of the manifold industries which are linked to electricity, the steam locomotive, the turbine or the internal combustion engine depend on non-ferrous metals in new forms and greater purity. The electrical industries with their extensive ramifications need huge supplies of the purest copper. Copper is also needed for locomotives, breweries, sugar refineries, calico printing and paint manufacturing—to name but a few. Not only is there need for more and purer metals, but for all kinds of alloys. The British chemist has helped the British aircraft industry to achieve its superiority in many ways, but not least by developing new and stronger alloys without which it would not be possible to build aircraft capable of flying across the world. Nor is the chemist satisfied merely to improve the metals known to Vulcan, or even to find special alloys to meet fresh needs. Without his aid, for example, nickel—"Old Nick's" metal—could not have been produced on the scale it is at present nor find uses in so wide a range of industries. Manganese, chromium, vanadium and tungsten, at one time metallurgical curiosities, are now used in a diversity of trades from stainless steel for cutlery to high speed tools for industrial production, and armour-plate for tanks, battleships and "tin-hats." Radium is man's ally in the fight against malignant disease. These are the achievements of the laboratory. Without the continuous assistance of the chemist and the chemical industry, the manufacturing processes which use non-ferrous metals would speedily fall behind in the race for efficiency, and mankind lose the valuable services which these metals can render.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

It is a few months since I turned away from my fads, the new economics and its application to Indian needs and conditions, to the consideration of more topical questions. But the publication of Mr. Sargent's report on educational reconstruction in post-war India beckons me back to my pet theme. Mr. Sargent's report in its broad features seems to me a confirmation of the views I expressed in these columns about the need to attack all our problems of national reconstruction with the up-to-date weapons of the new economics rather than with the rusty armoury of the old. For, the merit of Mr. Sargent's report lies in a careful appraisal of the task before us in the educational sphere, without allowing the ends to be disturbed by unhelpful deference to supposedly inadequate means. With a refreshing sense of the limits of his task, Mr. Sargent declares that "finances are really not his concern. It is for the Government to arrange. He has been asked by the Reconstruction Committee to prepare a scheme and he has produced one which he believes will help to place India on a basis of equality with other advanced countries in the post-war world."

* * * * * *

The trouble in India in most cases is to interpose means or ends as a devastating irrelevance, instead of considering the two separately and then to bring each other into some helpful correlation. I hope the new Committee on public health, which was recently announced, will take the same view of its task as Mr. Sargent of his and leave the question of means for others to tackle. To cut the coat according to the cloth is wise enough when you have some cloth to be tailored. But national education and public health in India being so largely a matter of wishing, as things are, it is far better to know how much there is to be done than that there should be needless lowering of aims. It is a commonplace of discussions on India's problems that in regard to almost every one of them, we find ourselves imprisoned in a vicious circle. Economic conditions depend on education and public health; and these in turn cannot be improved till the nation is in a position to increase its outlay of public expenditure on these objects. Instances like these could be easily multiplied. Responsible men, in official and non-officiai circles, have been so impressed by this fact that they cannot envisage anything but a snail's pace of progress. For my part, I have always held that the only way to undo the Gordian Cnot is to cut it. The principles of the new economics, which I have been able to formulate with some clarity of theoretical outline and not without the necessary degree of empiricism, enabled me to suggest that the only way out of these vicious circles is to be ready to spend fiat money on these objects of national reconstruction with of course sufficient precautions and safeguards to deprive it of its inflationary sting. It is only when Government and public make up their minds to break this deadlock of poverty and social backwardness by spending fiat money on the nation building departments, that we can make any progress. It is only then that we can free ourselves of the spectre of shortage of funds and face up to the requirements of every social problem. The publication of Mr. Sargent's memorandum, and his courageous indication of over Rs. 300 crores as the sum ultimately needed for national education is to me a reinforcement of my views, which is, I claim, far from being a surprise, really an expectation proved true. In my gossip in the issue of August 21, last I said :

I wish to emphasise that neither the scale of expenditure nor the agency for it should be determined by lay ministers or mere officials. The first step is to instruct the experts to put together the results of work already done, to fill up such gaps as there may be in it by carrying out the necessary new enquiries and then formulate a five-year programme of energetic development.

The total amount to be spent every year should be determined not by preconceived notions of prudent expenditure, but by the schemes which those in charge of respective branches of nation-building are able to put up. The technical ability necessary for a careful survey of the problems on hand and the resources other than pecuniary that we have for their solution has to a large extent been gathered and garnered in the country.

On education in particular, I observed :

Education, is, however, an intrinsically more difficult, and, in the conditions of the country, a definitely more ticklish question. We have the difficulties of language; we have a great deal of loose thinking done in the past on the question of vocational instruction; there are probably millions in India who insist that a bundle of prejudices and antipathies should be handed to the pupils in the name of religion; and last but not least, we have the Pandora's box handed to us by Mr. Ramsay Macdonald in the shape of the communal award. All these notwithstanding, we need not despair of forming a programme of national education in all its branches and for all classes. In Mr. Sargent, India has an Educational Commissioner who has both sympathy for every section of opinion in the country and loyalty to lofty ideals of education. Various plans have already been made for various purposes but with the spectre of shortage of funds always haunting its authors. But given the assurance that there will be no shortage of funds, Mr. Sargent should be able to place a definite programme before the Government.

* * * * *

That Mr. Sargent has accomplished his task in the same manner and in the same spirit as I indicated is to me a matter of almost personal gratification. And, as I have said already, in other spheres of nation-building, too, similar plans and projects must be prepared before we enter the post-war period, if we are to regard post-war reconstruction as a truly creative endeavour, and not a matter of mere liquidation of the Supply Department and

the war effort. If I permit myself to indulge in a necessarily fitful mood of optimism, I would go as far as to say that it is fortunate that India and the rest of the world will have the opportunity of dovetailing nation-building in this country into the post-war reconstruction of the world. Given a proper attitude, India and the world can both free themselves from the narrow outlook of the past and design everything with an eye on the larger good of the human race as a whole. Economically and politically, in education as in public health, a great deal of accordance between the Indian and the world plans could be ensured. But who can speak for the world at large? For our part, it is our duty to shake off the incubus of festina lente and go ahead in the full faith that the pace of progress is set, not by the budget estimates of the dead past but by the passion of the living present for progress in the unborn future. My heart leaps up when I read that, according to Mr. Sargent, his scheme will cost, when it is fully established, Rs. 313 crores annually, of which Rs. 277 crores will have to come out of public funds. A system of universal primary education is estimated to cost Rs. 200 crores. 1.8 million teachers will be needed to instruct pupils who will number 52 millions. A national system of high schools will call for a university system with 240,000 seats or double the present capacity of India's universities. India will require ultimately 2 million non-graduate teachers and 180,000 graduate teachers for high schools. There is daring and imagination behind these estimates, qualities for the lack of which the people have perished all along.

* * * *

The value of these estimates lies in its affording us, for the first time correct, quantitative ideas about what we have to attempt and accomplish if our pretensions to being a civilised people have to develop into more or less valid claims. Indeed, I may even venture the view that educational reconstruction provides a sound starting-point for national reconstruction as a whole. For, Education is one of the few questions, which easily impress the average man with the importance of the future. What is done at school or colleges is no end in itself. Though the pupils value the results of each term, the dullest of them know that the proof of the educational pudding is in the eating of it, years after, in adult life. And, if satisfactory employment is so large a part of this ultimate test, it has to be remembered that nothing that the teachers and the taught can do at school can by itself ensure the pupils congenial and remunerative employment of their faculties in life. The old idea that education fits the young for life, either by imparting a capacity for stoic suffering or by equipping them with qualities appropriate for any imaginable situation in the struggle for life is patently nonsensical. It is true, education should not be pulled down to the level of training for a mechanic's place earmarked before hand in a meticulously planned economic system. Who will deny its value to the individual as the means of light and culture, a source of the unbought graces of life, a counter to the deadweight of life's sordid demands? But education as a factor in the ordering and development of social life is very much more than these. It is the means of ensuring that every individual will be capable of exercising his rights and discharging his duties. Economically

too, there has to be a similar give-and-take between the individual and the community. And there can be no such give-and-take unless, the educational system in its vocational phase is closely correlated to planned economic development. India has had the experience of turning out more lawyers against a decline in the volume of litigation, and training more engineers without any thought of the potentialities of the engineering industry. The idea that engineers, unlike lawyers or arts graduates, will automatically find or create for themselves employment has no basis in fact. If technical and vocational education is a large part of a national system of education, then its success is dependent on the relation it bears to the demands which the economic development of the future will set up for different kinds of abilities. In this view, the educational system on the technical side must be a blue print of the industrial and economic system of a decade or two later.

* * * * *

Though such close correspondence between education and economic development may be somewhat chimerical, the folly of planning the one without reference to the other is obvious. In the case of India, since nearly every part of the larger national life has to be planned beforehand and deliberately developed by state action, it should not be in vain to ask for correlation. Taking the educational plan, it is now possible to say that more than two million teachers will be needed, to teach 52 millions of school-going children. It is also estimated that India's school-going population will need 7,500 school medical officers and 15,000 nurses to run an efficient school medical service. When the committee on public health works out its programme it can very well correlate its scheme for public health in rural areas to the scheme that has been outlined for medical service in rural schools. An enquiry into our needs and potentialities of electrical development, or of heavy industries, would tell us of the electricians and other technicians of various grades which we shall need in the future. Step by step, the whole picture of national needs will be filled in every detail; and the readjustment of estimates and the tying-up of loose ends in the whole plan could be carried out. The people will then know how much and what kind of work has to be carried out in each sphere. Practical plans, duly pruned to accord with means, properly conceived and appraised, could then give the country a good and sound start on the road to progress.

* * * *

I have not at the moment the full text of Mr. Sargent's memorandum; and basing my comments on the press reports, I must confine myself to the significance of the report to the larger national life. But I have no doubt in my mind that the report has dealt adequately with all aspects of the educational problem in India. Even the meagre press report affords the assurance that Mr. Sargent has not laboured under any narrow conception of education. The emphasis laid on equipment for recreation and for the youth movement shows that the educational problem embraces the task of keeping the mind and body of every citizen in a healthy state. The reference to the nutritional requirements of children and the need to provide the midday meal for pupils in the school encourages in me the hope that before long expert opinion will veer round my favourite idea, that every village school should attempt to combine lettered education with training pupils in the practice of their hereditary calling. Such a combination will enable the school to be productive of economic values for the benefit of the pupils and the material relief of the parents. A rural school, run on these lines, with an equipment of real property instead of annual grants in aid, will be a powerful instrument for teaching the masses to improve their methods of cultivation and production. It will help to check the heedless rush of working class children into those paths of higher education for which they are not fitted and save higher education from the dangerous dilution which it is now undergoing. For, the quality and high aims of higher education are as important to the national educational system as the spread, soundness and stability of primary education. Unfortunately, the democratic zeal of some Congressmen was directed to the belittling of the value of university education. In Mr. Sargent's hands, the interests of higher education are safe.

(From Our Correspondent)

New Delhi, October 20.

The Central Government after months of procrastination and indecision drastically revised their food policy last week. Their decisions—introduction of statutory price control throughout the country, rationing in urban areas and provincial and state responsibility for procurement—were announced at the concluding session of the Food Conference which had started its deliberations a few days earlier. The Conference as usual witnessed the same old bickerings between surplus and deficit provinces which had earlier spoiled all prospects of any agreed solution to which all provinces and States will be voluntary parties. The Central Government, however, were determined this time not to allow administrations with pronounced parochial outlooks to veto all chances of a coordinated policy for the whole of the country, at a time when two whole provinces and large areas elsewhere were in the mortal grip of a chronic famine. The Central Government took their bold stand on two considerations—the substantial imports of wheat expected from Australia (two ship loads having already arrived) to offset the activities of profiteers and racketeers and the new Ordinance preventing hoarding and controlling prices of all other common consumer goods so that the agriculturist alone did not suffer diminution of income without a corresponding decrease in the cost of living. The Government plan is to enforce the new policy only with caution. There is no desire to institute price control for all foodgrains immediately but to build up an effective control machinery first on a provincial, then on regional basis and strengthen it as distribution arrangements are perfected, supported by imports from abroad. The opposition to the Central Government's measures was led by the Punjab whose representatives at the conference went so far as to threaten the Ministry's resignation, if the price control, rationing and requisitioning measures were forced down the throat of their province. The Punjab Government's case was convincing to a large extent—at least in so far as the province had far exceeded its quota of exports and kept a reasonably low level of food prices while some other provinces including Bengal had reaped enormous profits without any Central interference. Anyway the new Ordinance promising cheaper consumer goods to the cultivators should go a long way to remove the province's objection to statutory price control. The success of the new measures, in any case, will depend as before on the degree of cooperation forthcoming from the provinces which have adopted a rather recalcitrant attitude so far. This factor will become of less importance only if enough shipping is released to bring adequate supplies of food from outside.

* * * * *

It is expected that under the new ordinance to prevent hoarding and profiteering, the Central Government will soon fix prices for a wide range of articles of common use. Such articles in the first instance will include leather goods, especially footwear, woolens including blankets, electric bulbs, bicycles, stationery and soaps. Any general price control, it is realised, is virtually impossible without standardisation of manufactured goods which in turn cannot be effected without a complete regimentation of industry. The Government have at present neither the intention or machinery nor enough public support to enforce such totalitarian control. What the Government hope to do is to select standard varieties of certain goods (such as grey flannels as regards woollens), fix their prices and reasonably expect other varieties to keep the same distance from the leader. Moreover price control to be effective must be linked with production and the Government have to take measures to put the leading varieties into the market in sufficient quantities to adequately influence the price level of all the others. The Government also realise that the cooperation of consumers is adsolutely essential to the success of their scheme. Such cooperation of course would have been facilitated if there had been popular governments in the provinces and at the centre instead of the present regimes, utterly unresponsive to public demands. The Government plan seems to be to set up consumers' councils in provinces and States. It is argued that it is in the hands of consumers to extract the most out of the Ordinance and they can be left to look after their interests. The Government on their part will mention close and constant touch with "recognized" commercial associations and chambers of commerce to ensure that price control powers are exercised in relation to actualities. As regards provisions of anti-hoarding on the part of private persons, their enforcement would require careful handling. It is regretted that these provisions were not made more precise to prevent their abuse by local authorities. Mr. C. C. Desai has been appointed the Controller-General of Civil Supplies and will administer the ordinance with the aid of three Deputy Controllers and an adequate number of inspectors. The Controller-General's office which, it is expected, will be located in Bombay, will act as a coordinating centre and a clearing house for information on all doubtful points. The inspector's functions will cover a wide field. They will be expected to act as a liaison with the local machinery (in provinces or States) to enforce the Ordinance. They will report to the Controller-General all cases of abuse of power by local authorities and act as price intelligence officers in respect of common consumer goods. They have also to be on the track of influential hoarding and profiteering elements. Much will depend on the kind of persons selected for this job. As much a comprehensive price control measure has never been tried in this country before, the early stage of its enforcement is bound to present some difficulties; in any case it would be too much to hope that the Ordinance would at once succeed in bringing down the prices of common consumer goods to within 20 per cent above the costs of production—the goal envisaged by the Government.

* * * *

The Central Board of Directors of the Reserve Bank met on Saturday and again to-day to consider tentatively the postwar currency proposals. The discussion was based on a report by Sir Theodore Gregory who together with Sir Ramaswami Mudaliar had attended the Currency Conference in London on behalf of India. The Board is understood to have been agreeable to India's joining the proposed International Clearing Union provided her interests were adequately protected. The crucial question in this connection is that asked by the Federation of Chambers of Commerce and Industry in their recent representation on the currency proposals: "Whether there is any provision in those currency proposals for making India's sterling balances freely convertible, or for using them to wipe out the country's indebtedness or a provision to prevent these balances from being exploited to push foreign goods in the country irrespective of their value, utility and source". Great concern is being felt at the new principle that is being advanced by which it becomes an obligation of the creditor country in the post-war period to see that its accumulated credit balances are either allowed to be used for the benefit and at the dictation of the debtor country or that it is the obligation of the restricted use of such credit balances. All these questions have got to be settled to India's satisfaction before she can be a party to the international clearing union proposed by Britain or the international stabilisation fund suggested in the United States plan.

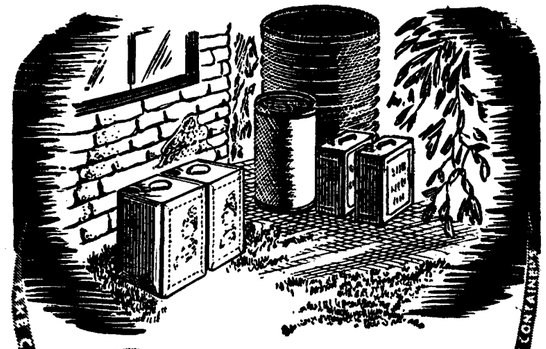
(From Our Correspondent)

Bombay, October 19.

A telephone directory minus advertisements has appeared here. It is just 200 pages long without an index this time, and apart from abbreviated addresses in plenty, the Ahmedabad numbers are out. It is good because less paper is used, and better than expected, because the advertisements are out. Since the Government has taken over the telephone companies in India it was necessary to set a good example by limiting advertising to two pages only. It has always been a surprise to see the Government publications tout for advertisements and not showing any discrimination in acceptance of dubious advertisements. The blank spaces marked 'to let' in certain publications have been the proof of the kind of competition engineered. The press in India as an independent industry has seldom taken a strong line because Government here is one advertiser and one must keep on the right side. There is however room for the plea that complete abandonment of private advertisements must be rule for all official publications, even Railway guides, and publicity must have no commercial flavour. The other directories too may adopt the severe form of the Bombay directory and give the presses a chance to get on with other work.

A partial brown-out has been ordered in place of the black-out here. The Commissioner of Police this week has relaxed the order except on the sea front between midnight and morning. The order of March last increased the rigour of the black-out in certain areas and the city duly experienced extension after June last. The approach of Divali has its effect on market sentiment but more is expected in view of a statement forecasting lower prices for cloth after December 1st. Fancy goods are certainly keeping up but outside markets are not helping to any great extent.



The terms of the new funding loan issued this week created no surprise. Repayment after 1st October 1966 puts the issue in the position of the longest dated stock now listed. As the holder has to pay tax the terms are not very attractive but there is a lot of money knocking about and the reduction of sterling obligations mentioned again is an unmixed advantage. The subscriber has to pay 98-2-0 in order to allow for three week's interest. Registered stock (if asked for) or promissory notes are offered to lenders in this case. The securities market was firm when the news reached the market on Friday. The issue is not large and the war news is good.

The Governor on tour saw distress in Bijapur, inspected relief works and made a promise to reduce the district's economic vulnerability. In one year's relief operations one crore has been spent. That means 5 years' revenue is already gone. As the monsoon is good and crop prospects improving there is no need to speak again of famine of the dry farming practice. But protective works, mostly wells as rainfall is scanty—costing Rs. 75 lakhs are planned now in order to prevent another disaster. The districts own collections presented to the Governor are to go into a charitable fund. The Bombay Government too is preparing to release political prisoners. That may mean much or little of the 1300 persons duly convicted. A general gaol delivery to make Congress consultations possible is not likely until the new Viceroy outlines his policy but over 2,000 detenus have been set at liberty. The Districts have fewer detenus than Bombay city but the liberation of men taken into custody abruptly is perhaps due to the Federal Court's remarks on Rule 26. The Courts have made remarks which cannot be ignored and Ministerial pressure is not necessary to get at facts as to a prisoner's standing.

The work of reconstruction committees, their spending plans etc., receive little notice. But Rs. 5 crores held for soldiers to prepare them for civil life is a useful beginning. Agriculture is not the only outlet for ex-soldiers. Irrigation and electricity are subjects for Development Committees at work and private enterprise is asked to plan ahead so as to make sure of imported equipment after the war. Social services are to be investigated and women are to advise Road Development plans and aviation figure in the agenda of committees en rapport with provincial committees. The link between private capital and Government schemes is not obvious and Government may claim priority for its projects after the war but the inquiry into public health should reveal how far India is equipped for strenuous competition with others. Women here organised a flag day to help Bengal and Malabar but other special areas are not to be overlooked. Nearly 5 lakhs has been raised for the Bengal Relief Fund. There will be a useful addition to what has been collected. Bengalis utilised the Pujas to raise money for relief and trustees are fairly liberal in taking out money for grants.

Holders of rubber shares are not unmoved by a report that control has resulted in providing 35,000 tons of rubber to the Allies from India. India makes rubber manufactures and aero tyres, fire engine hose are among goods made. So more new rubber will be wanted and control will

(Continued on page 759).

Rust spells Ruin...

When the inside of a petroleum container starts to rust, that container is soon useless. External rust too can ruin it. Packages should be scrupulously protected against moisture, and should never be left without an efficient closure. When possible they should be stored in a dry room and when this is not possible they should be protected from exposure.

Today, oil containers of various kinds form one of the lifelines of the industrial war effort, because without them it is not possible to distribute oil. Most of the steel which in peace time was used to make containers is now required for the manufacture of ships, tanks, guns, and other war material.

Containers are scarce

BSCR 88 ★ A BURMAH-SHELL ANNOUNCEMENT

South India

(From Our Correspondent)

Madras, Oct. 19, 1943.

Unprecedented torrential rains flooded the city last week bringing distress to over 75,000 people. The havoc caused is so sudden and extensive that the Government have ordered immediate investigation into the causes of the breaches of the bigger tanks in the affected areas. The military authorities promptly permitted their personnel and vehicles for the rescue of people and property. They earned the gratitude of the people when they provided adequate transport for carrying stocks of rice from Tambaram to the heart of the city. The damage caused by the floods has not in any way interfered with the smooth working of rationing but the prices of vegetables, firewood gingelly oil, eggs, meat etc. have shot up. Owing to considerable loss of cattle in some areas the problem of procuring milk faces the city restaurants. Mr. C. Tadulingam, Mayor of Madras, has issued a statement calling for urgent relief measures. The workers have been the most hit in the calamity and the slum areas have been completely wiped out. The Mayor stated that while all measures must be taken up for the immediate relief of the unfortunate people the damage must be made the starting point of the reconstruction of the city. He urged that the City Improvement Trust must be brought into existence and this Trust should begin by planning the city slums. Many Corporation schools are used as temporary shelters for the homeless and the Corporation has undertaken the task of feeding the conservancy coolies and other employers rendered homeless. With the help of the A.R.P. personnel private organisations are feeding thousands of persons all over the city. The General Secretary of the Madras Provincial Trade Union Congress stated that workers should be compensated for the days they are compelled to be without work. This is an occasion for the employees to show their consideration for the welfare of labourers and liberal advances and other help extended to the needy workers would cement the relations between capital and Labour in South India. The city labour Organisations have met and appealed to all the unions in the presidency to organise relief without delay. Conditions are slowly becoming normal.

A Silk Control Order has been issued by the Government of Madras providing that no person shall carry on the business of purchase or sale of raw silk or thrown silk except under a license granted by the Controller. The silk production by charka establishments and filatures in notified areas shall have to be sold only to the Government. A committee consisting of representatives of silk merchants, reelers and the Government Sericultural Expert is formed to determine the quality of silk delivered by the owners. The Silk Control Order has already been made applicable to two taluks but it may be extended to any part of the Province on further notification.

Handloom weaving industry has many problems to solve and the need for increasing exports of handloom piecegoods to Ceylon has been taken up by the exporters in a memorandum they submitted to the Government of India. Before the war handloom piecegoods were exported to all countries adjacent to India but the loss of Burma, Malaya and the Dutch East Indies has drastically reduced the scope for exports. Since certain types of handloom products were mainly produced for foreign tastes the weavers who have been specialising in these goods are now hard hit. There seem to be practical difficulties of their switching off to other lines of production. The Government of India have fixed a quarterly quota of 6.4 million yards to be exported to Ceylon. The weavers as well as the exporters have represented that in view of the difficulties of weavers and the sudden curtailment of exports the quota should be raised to 30 million yards. It is hoped that the Government would examine the question of increasing the quota with particular reference to the advisability of exporting piecegoods at a time when our people are badly in need of more cloth. Handloom weaving industry maintains thousands of families in this province and greatest consideration should be given in protecting this industry from the adverse effects of this war.

The working of the Madras Potato Control Order has left many things to be desired. The Government have restricted the export of potatoes and appointed an officer at Mettupalayam to issue the necessary permits to the merchants. These merchants, it is complained, dictate their own terms with the result that the growers had to sustain severe loss. Several growers who stored the vegetable in the hope of obtaining better prices afterwards were utterly disappointed and large quantities of the stocks became rotten and useless. It is suggested that Government should withdraw all restrictions on the export of potatoes and if they wanted to utilise them for the military fair prices must be offered to he cultivator and arrangements must be made for transporting them in military lorries. The Grow More campaign initiated by the Government induced the cultivators to grow more potatoes and hence the responsibility on the part of the Government in coming to the rescue of the growers is indeed heavy. The advisability of abolishing the permit system at an early date and introducing suitable methods of quick disposal of potato crops should be examined in the interests of producers and consumers alike.

Mr. Ghulam Mohammed has an interesting idea on the utilisation of Sterling Balances to the best interests of India. In the course of an Extension Lecture held under the auspices of the Osmania University he said that "India should see to it that her sterling balances accumulated in Great Britain are not used for purposes other than those of India's post-war development and industrial expansion." While this suggestion is indeed valuable it is highly doubtful how far the Government of India would be able to dictate to Whitehall as to how and when the sterling balances should be utilised for Indian industrialisation. Already commercial opinion is fearing that the balances may be mostly blocked or wiped out in several ways not controllable by the people of India. India has her own post-war reconstruction committes to draw up detailed schemes of reconstruction and industrial expansion. But Mr. Ghulam Mohammed suggests a machinery to take care of the sterling balances. According to him "it should be possible to set up right now a committee in England, with a branch in the United States of America, consisting of representatives of the Government of India, the important States and Indian business interests to secure priority for the manufacture and shipment of the plant and machinery that India would need." He administered a warning to British businessmen that their future in India depended on the trust and goodwill of the Indian. He expressed his belief that the average voter in Britain did not desire to keep India in economic or political bondage. Post-war years can be prosperous for India if suspicion of British intentions gives place to goodwill and confidence.

His Highness Kerala Varma, Maharaja of Cochin, has passed away. His death is mourned by all his subjects and particularly by the agricultural classes of whom he was a staunch champion throughout his life. It is well known that the late Maharaja took a keen interest in the prosperity of Cochin ryots and played an important part in ensuring fixity of tenure for Verumpattomdars. He was a well-known scholar in Sanskrit and his silent services for the cause of Hindu culture and religion are many. In the field of medicine he won popular recognition as an expert in poison-cure, and took an active part in the reorganisation of the Ayurvedic hospitals and dispensaries in the State. In his loss Cochin has been deprived of a saintly man and a scholar.

Famine conditions in Rayalaseema continued in all intensity during the month of September. According to a Press Note issued by the Madras Government a sum of Rs. 52,01,619 was sanctioned for the relief works in September besides the payment of a portion of the wages in kind in Bellary and Kurnool districts. Thirty-one famine relief works in Bellary district, thirtythree works in Ananthapur and nine works in Kurnool gave employment to unskilled labourers. On the whole 4,30,307 persons, workers and their dependents included, have received famine relief.

(*Continued from page* 757).

stay the official reserve is small and more rubber is wanted. South Indian planters urge that better prices will stimulate rubber production. Slaughter tapping is to be offset by a bonus for fresh planting and the bigger yield of rubber forecast by nearly everyone must compensate for higher costs on the estates. That is good news not only tyre-makers advising economy but also investors who went into rubber shares on the recommendation that Indian rubber had more than the usual prospects.

(From Our Correspondent)

Karachi, Oct. 17.

Sind's support to the principle of rationing provides a striking contrast to opposition in the Punjab although both happen to be surplus provinces as far as food grains are concerned. Although food rations have been increased, there is still considerable opposition in commercial circles to the Government measures. In the course of a statement to the Press, Dr. Chellaram Shewram, President of the Karachi Indian Merchants' Association, says that rationing in Sind is not called for and its disadvantages far outweigh its advantages and as such it should be dropped. In the alternative, he suggests the present distributive machinery should be allowed to remain undisturbed. All retailers may be licensed and the consumers may be issued coupons. They should be free to obtain their supplies from any dealer they choose against these coupons. This method will to some extent mitigate the hardship consequent on the working of rationing.

Dr. Chellaram further observes: "Evidently the Government of Sind are anxious to export as much of food grains as possible at a large margin of profit, but let not their zeal to make money at the cost of starving millions in other provinces lead them to create conditions in this province similar to those which have aroused indignation and pity elsewhere".

Enquiries in commercial circles go to show that two crores worth of textile goods would have to be taken over by the Government in Karachi alone when the control order asking dealers to dispose of their stocks by October 31 and providing for taking over the unsold goods at the end of the fixed period is enforced. It is gathered that unsold goods in bales still unopened were declared to be nearly 4,000 bales. Sales of the bales opened have not been brisk on account of uncertainty of textile prices and merchants feel that not more than 15 to 20 per cent of the pre-August stocks lying in their shelves is likely to be disposed on or before October 31, 1943. Merchants are stated to be prepared to hand over their stocks to the Government on or after October 31, at prices fixed by the Government themselves and the value of such stocks which will have to be taken over by the authorities is believed to be two crores.

In the meantime, the clarification of the textile position vis-a-vis the consumers by Mr. Krishnaray Tnackersey, Chairman of the Textile Control Board at Bombay, has created a good impression here.

The Sind Government have promulgated the Sind Cotton Cloth and Yarn Control Order (regulation of seizure) which will be extended to the whole of the province and will come into force at once. The order empowers any competent officer to inspect accounts and other documents and conduct searches and seize cotton cloth or cotton yarn in case it is found that the order is contravened. Any such officer may lock up or otherwise close and seal any godown or premises in such cases.

Much confusion has been caused in mercantile circles over the Hoarding and Profiteering Prevention Ordinance issued by the Government of India prohibiting the producer and the dealer from possessing stocks in excess of certain limits and the individual in excess of quantity reasonably required for the normal use of himself and his family. The ordinance provides that nothing is to be sold at a price exceeding twenty per cent above its landed cost or its cost of production, subject to what is allowed by normal trade practice. It is argued that merchants in the recent months have actually paid four times the pre-war price for certain categories of goods and the twenty percent margin will land them in heavy financial loss. Unless the full details of the order are known and ambiguous clauses further clarified, there is bound to be suspense and chaos in the market. It is hoped that drug will also come into the provisions of the ordinance where profiteering is stated to be unprecedented and black markets have been created. It is suggested in spite of these evils, there is not enough supply of drug in the country and efforts must now on be made by the Government of India to import drugs along with food. In view of the preparations for the offensive against the Japanese in Burma with India as the main base, it is urged that the Government should make certain of adequate medical and food needs.

Relief for famished Bengal continues to impel popular sympathy here and it is stated that already nearly four lakhs either in cash or food grains have been sent to Bengal. In the course of an interview, Mr. Jamshed N. R. Mehta said that he had remitted to-day a sum of Rs. 15,000 collected in Karachi specially to help children in Bengal, to Mrs. Vijaylakshmi Pandit, President of the All-India Women's Conference, which has started six children's homes in Bengal. He further says that appeals for aid have been received from Malabar and some other places in South India where there is acute starvation and help must be rushed. He concludes: "If more money is received, I propose to send one-third to Malabar and South India and two-thirds to Bengal." The Congress Distress Relief Fund Committee which has already contributed to the extent of Rs. 50,000 for Bengal flood and famine relief, continues its efforts to send more help.

Resume of Commodity Markets

Commodity markets have not been very interesting during the week. The raw jute market has continued to decline with the uncertain immediate future prospects while the jute manufactures market has been fluctuating in narrow limits. The Bullion market has been very firm with the recent large gains consolidated. The piecegoods market has been uninteresting. A rather quiet tendency has been noticeable following the announcement by the Chairman of the Textile Control Board regarding further measures to be adopted to bring down prices. With the Diwali coming in a few days there is a tendency to make best of the position. The decline in prices might perhaps be more pronounced after the seasonal buying is over.

* * * *

The raw jute market has been on the downtrend during the last three weeks. It is unfortunate that a substantial decline in prices for the important raw material of the province of Bengal has taken place at a time when conditions of living are bad and any increase in the income on the part of the ryot will not be sufficient to meet his requirements. With the supplies of jute barely sufficient for the consumption of Indian mills and exports, it was never at any time expected that the outlook for jute would be so gloomy. The problem of coal supplies has upset all calculations and the loss in production during the last three months is nearly six weeks' production or about 8 lakhs bales of jute. There is no prospect of an early resumption of working by mills of fifty four hours a week for the full month. As only a small portion of jute manufactures is needed for the war effort, there is no worry on the part of the authorities to keep up production. As a matter of fact, there is talk at the present moment of rationalising production and concentrating on the more efficient units as in Dundee. Some solution must be found for all the difficulties of the industry.

* * * *

The jute manufactures market has not been in any way affected by the paucity of business and the weakness of the jute market. The difficulties of mills have encouraged the bazar to hold on to their stocks. Prices, as such, have been fluctuating in narrow limits.

* * * *

Several important decisions were taken at the recent meeting of the Textile Control Board. It will be remembered earlier there were reports that the question of extending price fixation for all varieties was under consideration and that a warning was given to dealers not to sell above ceiling prices. It has since been announced that, as from December 1, ceiling prices will be fixed for all varieties of cloth and yarn and that the ex-mill and retail prices will be stamped on every piece of cloth and bundle of yarn. It was indicated by the Chairman of the Textile Control Board that the revised maximum prices will be about 30 percent lower and announced in the middle of November. The ceiling prices will be subject to revision every three months after December 1, in the light of available data.

The prospect of a definite reduction in the ceiling prices in the immediate future and the reports of large hoarded stocks have naturally given rise to a nervous feeling and prices recently have shown a downward trend. But dealers are anxious to take advantage of the buying in connection with Diwali and are not prepared to mark down prices substantially.

Artificial conditions prevailed in the Calcutta market owing to the considerable difficulty in bringing in supplies. Dealers were not forced to liquidate their stocks. The decision of the Textile Control Board and the announcement regarding the promulgation of an order for the control of yarn and cloth sold in the province, however, have had a depressing effect.

The press note issued in this connection says that the Order will provide for licensing of dealers in cotton cloth and yarn. Licensing will be done in the Calcutta area by the Provincial Textile Controller (who is the Director of Industries) and outside the area by the subdivisional officers. Maximum prices at which yarn and cloth may be sold will be fixed under this Order and sales regulated so as to prevent hoarding. Applications for licenses by dealers are required to be made and licenses obtained within one month of the promulgation of the Order.

* * * *

The Conference held in New Delhi by tea interests was important for the industry. With the difficulty experienced by the British Ministry of Food in securing its quota, it was generally believed that the output might be raised. It was too late in the season, however, for such a decision to be taken.

The British Ministry of Food is the sole buyer of the entire exportable surplus of Indian tea. The export quota was fixed at 421 millions and it was expected that a crop of 110 percent of standard cutput would yield an exportable surplus of 421½ million lbs., just the quantity needed by the British Ministry of Food. The offers forthcoming from the tea estate, however, were 32 million lbs. short of the export allotment. Arrangements had to be made for acquiring export quota rights not yet covered by the contract. It was decided that to enable teagrowers and small growers in particular to sell their quota rights at reasonable prices, the Tea Controller, as sole exporter, will purchase according to requirements 'pro rata' direct from all estates wishing to sell their allotted quota rights at a fixed price of two annas six pies per lb. Before acquiring rights, the Tea Controller will call for a supplementary tender from all tea estates in respect of the amount of short fall making it clear that the control prices payable will be that reduced by the price of export quota rights which will be provided by the Tea Controller.

* * * *

According to the figures given by the Sugar Controller for India it can now be estimated that the total production for the 1942-43 season was 1,073,437 tons. Of this quantity 855,424 tons have been despatched to consuming centres. New season sugar will be available in large quantities only after December. The physical stocks of 218,463 tons at September and will, therefore, be barely sufficient.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, October 22.

THE coal position varies from day to day. but still remains one of the major problems of the jute industry. One day this week the total arrivals were two waggons! Two days later there were 90. But the average still runs far below what is required for regular working, and far below what was promised by the authorities. The main trouble is that, faced with such spasmodic supplies, mills cannot formulate any policy either of buying or selling, the only possible course in the circumstances begin to work on a hand to mouth basis and hope for the best. After the fortnight off during the Pujas, all mills were able to work last week and most have been able to keep going this week. But the coming week is still in the lap of the gods. With a line clear between the industrial districts and the coal fields, and an assurance that there is sufficient waggon supply to cover both coal and food-stuffs supplies, it is difficult to attribute the irregular supplies to anything but inefficient management. One excuse put forward is that the coal is not available at the collieries owing to raisings having fallen off and owing to general increased demand from war industries. This excuse will also doubtless be tendered for the supply of much coal of very inferior quality, of which bitter complaints are heard. It is surely false economy, at a time of transport shortage, to give freight space to anything but the best quality available. And that good quality is not available is denied by responsible coal interests. It is understood that the Chairman of the Mills Association is paying one of his periodical visits to Delhi this week-end, and there is little doubt that coal will be a prominent feature still on his agenda.

The effects of intermittent working is again shown up prominently in the production returns of mills for September. The total tonnage produced was 55,544 a slight improvement over August certainly, when the total was only 46,088 tons, but little more than half what normal working ought to have produced. For the first six months of this year, mills produced 612,000 tons of goods, an average of 102,000 tons per month. For the 3 months of the third quarter, July, August and September, the total has only been 178,251 tons, or an average of 59,417 tons per month, a loss of 42 per cent in outturn. This shows the full measure of the results of the coal famine and it has to be remembered that the cost of this lower production is, by virtue of the arrangements made to keep the labour force contented, just as heavy as if the mills were turning out goods at their maximum capacity. Certainly a costly piece of philanthropy for which they have received scant credit.

Analysis of the production figures shows that Civil Hessian production represented 17,096 tons or 615 lakhs yards, while Civil Sacking production accounted for 27,984 tons or 668 lakhs yards. Government Hessians accounted for 6,298 tons or 243½ lakhs yards and Government Sacking production for 1,708 tons or 40 lakhs yards. The total production on Military account was 8,006 tons and represented 14.4 per cent of the grand total as compared with 16.3 per cent in August mill stocks of manufactured goods at the end of September having shown a reduction of 12,489 tons, it follows that despatches of goods from mills during September must have amounted to 68,033 tons, rather a disappointing total considering that shipping space has been reported to be in adequate supply. Had production been normal, mill stocks would have been reaching embarrassing proportions as a result of the reduced overseas offtake during the past few months.

In connection with shipments abroad, the figures published purporting to show the U.S.A. Hessian Stock and Consumption position for September offer a problem which takes some explaining. Consumption is returned as 270 lakhs which is a decline of 40 lakhs from the previous month and 70 lakhs less than the average for the first 9 months of the year. With this figure we are not in a position to quarrel. But when the return asks us to believe that at the end of September, only 10 lakhs yards of Hessians were afloat for the U.S.A. we flatly decline to credit it. The return for the end of August, given as 30 lakhs, was bad enough. In present circumstances it cannot take a ship less than 2 months to reach the States from Calcutta, so the stocks afloat should represent roughly two months shipments. We take leave to doubt if the total shipments to America from Calcutta in any two months during the past century has ever been as low as 10 lakhs of yards. These returns may have to be interpreted by some special formula which is not generally known here, but certainly they obviously cannot be taken at their face value. Combined Spot and Afloat stocks at the end of August were returned as 810 lakhs yards and at the end of September as 620 lakhs while 270 lakhs yards had been taken into consumption. These are the published returns but we confess we cannot attempt to explain them.

Owing to various causes arising out of War conditions, it has been impossible for mills of late to pack goods as near to dead weight standard as in normal times and complaints and claims for excess measurements by shippers have had a tendency to increase. There has in fact never been a hard and fast rule laid down with regard to relative weight and measurement of bales of goods, though the generally accepted standard of packing was 10 per cent over dead weight for Hessian and 7½ per cent for Sacking. A Sub-committee of the Mills Association has recently been studying this question and has now issued certain recommendations as regards measurements of bales, which have been endorsed by the general committee. The schedule issued shows that the matter has been considered very carefully and provision has been made for almost all possible widths and weights of goods, as also for special circumstances such as prolonged storage before shipment, carriage by lorry to Docks etc. The schedule is not only for the guidance if mills but will have to be taken into the calculations of shippers when assessing the allowance for freight in their quotations. This is another instance of old fashioned empirical methods which necessities imposed by the War have thrown overboard and replaced by something more up-to-date and practical.

Little interest has been shown in the Export Jute market during the past week, almos the only transactions reported being in Dundee Daisee 2/3 at Rs. 67 for shipment. A small business was also reported with mills who bought Firsts at Rs. 72, Lightnings at Rs. 67 to Rs. 66, Dundee Daisee 2/3 at Rs. 69 to Rs. 68 and Dundee Tossa 4s at Rs. 70. N.C. Cuttings were also reported at Rs. 32.

A small flicker of interest emerged one day to relieve the monotony of the Loose Jute market, but the interest was not sustained and the position was left with Sellers still keen for business. European Jat Bottoms sold at Rs. 12 and business was also done in European assortment at Rs. 15 and Rs. 12 for Middles and Bottoms. So little fresh business has been placed of late that Sellers in most cases are running into stocks at their up-country agencies, and though some are Bullish in their ideas and are convinced that prices will rise later in the year, for the moment they would mostly prefer to keep urning over stocks. The above transactions represent a drop of four annas on previous sales, but it is difficult to secure any reduction in mofussil prices. Imports are very limited for the time of year and quality in many cases shows a falling off, whether by reason of better quality being held back, it is difficult to say. Tossa prices have been marked up to one rupee over the rates for white jute, due probably to recent purchases by Balers when Rs. 15-12 to Rs. 16-8 was paid for Jat Tossa Middles according to marks, and Rs. 15-4 to Rs. 15-8 for District Middles. In some of the principal shipping stations in the mofussil the position has been reached when more freight is offering than goods to fill it. Arrivals of jute into Calcutta for the first half of October again show a falling off as compared with last year, estimates being 2.35,000 bales as against 3,01,000 bales. The heavy shipments earlier in the season, however, have served to keep the arrival figures ahead of last year up to date, the total estimated to the middle of October this year being 18,73,000 bales against 16,03,000 bales for the same period last year. We regret to hear rumours of the starting up of a Fatka market in Loose Jute. If this shows any sign of developing, the connected Associations should take very firm steps to have it suppressed. Experience over recent months shows that the trade can get on very well, in fact very much better, without the adventitious aid of Fatkas in any shape or form.

There is little to comment on in the Fabrics section. Mills are to all intents precluded from selling by the uncertainly of the coal position and trading is confined to the Bazar where there are nominal rates of Rs. 21-7 for 9 porters and Rs. 28-6 to Rs. 28-7 for elevens. There is said to be a Black Market for certain types of Heavy Goods at over agreed maximum rates and certainly holders of goods are unwilling sellers and very firm in their ideas.

Dependable HENLEY CABLES Durable

JUTE

Calcutta, October 21.

DEFINITELY quiet conditions have been noticeable in the raw jute market during the past week and business passing has been on a very small scale. The reported difficulties regarding the supply of coal to the jute mills and the restricted rate of production have been mainly responsible for the easier tendency of the markets. Arrivals have been on a larger scale during the past three months than in the corresponding months of last year and there is some pressure from sellers. Substantial discount is offered for ready business. Export demand also has been very poor as with the uncertainty regarding the future of production, consumers are not prepared to pay any large increases in prices. With the easier loose jute section and the absence of mill-buying, there has naturally been a sharp decline in prices.

In the loose jute section business has been very poor and in a market predominated by sellers, buyers have struck bargains. Some business has been reported in European Jat Bottoms at Rs. 12 per md. Earlier in the week, balers bought Tossa qualities Jat and District Middles at Rs. 15-12 and Rs. 15-4 per maund respectively.

In the pucca bales section shippers have been rather quiet and quotations for Dundee Daisee 2/3 for export have gone down from Rs. 71-8 earlier in the week to Rs. 67 per baie towards the close. Mills are reported to have purchased Hearts, Lightnings and Tossa 4's at Rs. 72, Rs. 66 and Rs. 70 per bale.

JUTE MANUFACTURES

Calcutta, October 21.

But for the reports regarding the difficulty of mills in respect of coal supplies the jute manufactures market also should have registered a downward trend. No business of importance has been reported and the maintenance of prices at high levels has been mainly due to the unwillingness of bazar operators to part with their stocks and the technical strength of the market. Earlier in the week quotations were around the maximum levels fixed by the Indian Jute Mills Association. After the publication of the American stock and consumption figures for the month of September a slightly easier feeling is noticeable. 9 porters quoted Rs. 21-6 for all positions while 11 porters were Rs. 28-5 for ready, Rs. 28-5 for October and Rs. 23-7 for October/December.

Heavy goods section has been firm with no sellers around maximum prices. Quotations are nominally around Rs. 67-12 for B. Twills, October delivery, Rs. 75 for Liverpool Twills and Rs. 76-12 for Cornsacks.

The American stock and consumption figures for the month of September show that there has been a further decline in consumption to 2.7 crore yards from 3.1 crore yards in August 1943 and 2.9 crore yards in the corresponding month in 1942. Stocks afloat are further lower at 10 lakhs yards against 30 lakhs yards in August. Stocks Spot show a decrease of 1.7 crore yards to 6.1 crore yards. The figure of 10 lakhs yards given for stocks afloat in September is ridiculously low. It is, however, suggested that the figures represent the quantity on private account and that the figures on Government account are not available. This is quite possible as recently a large order for hessians was received from the U. S. Government direct and it was agreed by the Indian Jute Mills Association that exports will be made according to the former's directions. From the offtake from Calcutta in the last two months there is every indication that exports have not been at such a low level. It would be better if some explanation were given in this regard when the figures are issued every month in future. Figures are given below:

	7,07,85,471	29,692
Other Manufactures—		
Civil		2,458
Grand Total ..		55,544

The return of Maheswari Devi has not been received and is excluded.

Production figures for the month of September are also available. There is an increase in total production from 46,088 tons in August to 55,544 tons in September. Production on account of hessian for civilian purposes shows an improvement of nearly 3,000 tons to 17,096 tons. On military account also it has gone up by 1,000 tons to 6,298 tons. Sacking production, on civilian account, shows a satisfactory increase to 27,984 tons while on military account there is a small decline to 1,708 tons from 2,247 tions. Stock figures for the month of September showed a total decline of 12,489 tons. Taking into account the production of 55,544 tons in September, the total offtake thus amounted to 68,033 tons against 71,120 tons for August. Production figures are given below.

GOLD

Calcutta, Oct. 21.

BULLION markets have been very active. The sharp improvement in prices for gold in the Bombay market at the end of last week following the reports of the bombing of Madras by an enemy plane has been fully maintained. There was a slight recession in prices earlier in the week on some speculative selling and profit taking but the reappearance of buyers and ineffective selling by the Reserve Bank have resulted in a further improvement in prices. Closing quotations are at the highest levels for some time. There is a great scarcity of supplies and it is generally felt that with the proposals for the utilisation of gold in many ways in the post-war period there might not be any appreciable decline in prices. Gold ready closed at Rs. 86-4 and forward at the same level. Sovereigns were Rs. 57-12 against Rs. 55-12 last week.

SILVER

Calcutta, Oct. 21.

THE silver market was inclined to be rather quiet earlier in the period under review. But in sympathy with the strength of the gold market and some strong buying there has been an improvement in prices though not quite proportionately. Silver ready closed at Rs. 129-8 and forward at Rs. 128-12. In the Calcutta market silver ready closed at Rs. 125-12. There has been no change in the conditions in the London market and the quotation for both Spot and Forward remains unchanged at 23½d.

PIECEGOODS

Thursday, Oct. 21.

THE piecegoods market has been easier on the announcement that the Bengal Government are taking early steps to control prices and prevent hoarding. It is stated that in the earlier stages there will be no control of standard cloth. This announcement has naturally had a slightly discouraging effect on the Calcutta market and there is a tendency on the part of dealers to await further developments. With the *Id* and *Puja* festivities over there is not much of activity in the Calcutta market though purchases in connection with the Diwali festivities might result in a slight rise in prices. Last week it was announced by the Textile Control Board that ceiling prices for all varieties would be fixed as from December 1, 1943 and that existing ceiling prices would also be revised. It is indicated that the revision might result in a decline in prices by as much as 30 percent.

Stock Market to-day and to-morrow:

FLARE-UP IN COAL SHARES

THE feature of the Calcutta Stock Exchange during the past week is the strength of Coal and Sugar shares, Coal especially. The reports of a 'coal famine' have obviously been responsible for the large-scale buying of the popular counters. It is felt that the recent increase in prices for coal will more than offset the rise in the costs of production and that, with the efforts to effect higher raisings, the earnings in the coming months will be substantially higher. The higher prices for coal and sugar shares has not been reflected in other markets and there is nothing of interest to be recorded in the Engineering, Jute and Cotton groups. The general undertone, however, is very steady and the tendency is for an upward movement in prices.

The announcement of the New Loan, which has been favourably received by the market, is a great bullish factor for shares as, with the lower yield on giltedged and the possibility of a further improvement in giltedged prices, the scope for increase in quotations for equities is greater.

The Bombay market has been rather quiet in the past few days. In the absence of any great activity in textile issues, prices have been fluctuating rather irregularly. The warning administered by the President of the Native Stock & Share Brokers Association to the effect that operators dealing in budla business will be penalised has had a slight depressing effect.

* * * *

The accounts of the *Bengal Paper Mills Company, Limited,* for the half-year ended June, 1943 make very satisfactory showing. There has been a sharp improvement in earnings for the half-year. Inspite of the difficulties experienced by the mill in regard to the requirements of primary raw materials the outturn was very satisfactory. The net profit, before providing for taxation and depreciation, is Rs. 27,68,498 against Rs. 16,94,760 for the previous six months. The amount set aside to depreciation is higher at Rs. 2,64,099 (Rs. 2,18,032) while the provision for taxation is very much higher at Rs. 19,74,302 (Rs. 9,87,346). The transfer to the Debenture Redemption Fund is Rs. 58,335 (nil) while the Indian Workers Pension and Gratuity Reserve receives Rs. 40,000 (Rs. 61,400). As it is considered the sum of Rs. 5 lakhs for Raw materials and Stores Reserve is sufficient, the amount of Rs. 1.5 lakhs has been allocated to the newly created War Contingencies Reserve. On the last occasion, the General Reserve received Rs. 1 lakh. The provision for taxation of Rs. 19.74 lakhs obviously includes the compulsory deposit under E.P.T. to the Government of India. The dividend has been maintained at 12½ percent and the bonus at 10 percent. The amount carried forward is very much higher at Rs. 1,86,035 against Rs. 1,27,777 brought in.

There has naturally been a rise in the quotation in the shares to Rs. 214 cum dividend. Even at the higher levels the yield should be considered very satisfactory being 5.5 percent taxfree.

* * *

Another jute mill belonging to the Begg Dunlop group *the Alliance Jute Mills Company, Limited* has been able to report a higher level of earnings for the half-year ended January, 1943. The net profit, before providing for taxation and depreciation, is Rs. 18,31,476 against Rs. 10,03,455 for the previous six months. The amount set aside to depreciation is higher at Rs. 1.25 lakhs (Rs. 1 lakh) while the provision for taxation is the substantial sum of Rs. 13.2 lakhs (Rs. 6,85,703). The transfer to reserve is very much higher at Rs. 1,48,080 (Rs. 50,000). The Reserve for Furlough Payments gets Rs. 14,000 (nil). Even after the increased allocations to reserves, the dividend on the ordinary shares is higher at Rs. 12-8 per share against Rs. 7-8 per share. The amount carried forward is Rs. 28,259 against Rs. 36,363 brought in.

With the great demand for sugar shares at the present moment, the favourable showing made by the *New Savan Sugar & Gur Refining Company, Limited* is an encouraging factor for the market. Thanks to the larger production of sugar in the company's factories amounting to 158,892 maunds in the year ended May, 1943 against 86,638 maunds in 1941-42. The net profit, before providing for taxation and depreciation, is nearly Rs. 3 lakhs higher at Rs. 4,74,259 against Rs. 1,72,817. But the increase in earnings has, as in other cases, been taken up by the larger provision for taxation, which is Rs. 2.1 lakhs (Rs. 50,000). The amount set aside to depreciation is higher at Rs. 75,000 (Rs. 43,976). The amount of Rs. 25,000 (nil) has been placed to Special Reserve. The dividend on ordinary shares has been increased to 12½ per cent from 7½ percent.

There has naturally been a rise in the quotation for the shares on the publication of the accounts from Rs. 19-8 per share to Rs. 21-8. It is pointed out that there might be a further rise in prices.

As regards the prospects for the current season the directors, however, do not seem

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Calcutta, October 22.

THE reopening on the Calcutta Stock Exchange after the long Puja holidays was not so active as was expected and a slightly easier feeling was noticeable on reports regarding the bombing of Madras by an enemy plane. The inability of the enemy to repeat the attacks, however, has had an encouraging effect and prices have again been on the upward trend. The volume of business also is showing signs of expansion.

The feature of the week is the announcement of the terms of the New Loan by the Government of India on more favourable terms to the borrower. As the issue price of the New Loan proved to be higher than the market quotation for analogous loans it had a stimulating effect on the giltedged market. Among other sections, Coal and Sugar shares have provided the features of the week with Bokaro and Ramgur and Carew and Company in good request. Jute shares were rather quiet while Cotton shares were neglected. In the Engineering section there is nothing of interest to be recorded. The general sentiment is satisfactory and it is felt that the upward trend will be maintained.

The giltedged securities section has been firmer with the announcement of the terms of the New Loan. 3½ per cent Paper has been done up to Rs. 97-10, 3 per cent 1963-65 at Rs. 98-6, 3 per cent Defence Loan 1946 at Rs. 102-6, 3 per cent 1951-54 at Rs. 101-2, 5 per cent 1945-55 at Rs. 106-4 and 3 per cent 1953-55 at par. Cheap conditions have continued to prevail in the money market. The treasury bills average discount rate was 12 annas and 1 pie per cent per annum and the hardening in the rate is to be attributed to the announcement of the terms of the New Loan. As our readers are already aware, the New Loan is a 3 per cent 1966-68 loan issued at a discount of 2 per cent and subscriptions will be received for cash for Rs. 25 crores approximately.

Bank shares have been firm with *Reserve Bank* quoting Rs. 121, *Imperial Bank* fully paids Rs. 1,842 and contributories Rs. 427. *United Commercial Bank* were in great request and recorded a rise of two points to Rs. 22-10 premium.

With the announcement by the Textile Control Board to the effect that as from December 1, 1943, ceiling prices will be revised, a slightly easier tendency is noticeable in the Cotton section and quotations are irregularly downward. There has been no appreciable decline in prices, however. *Benares Cotton* changed hands around Rs. 13-11 and *Cawnpore Textiles* Rs. 12-4. *Kesoram* were quiet a Rs. 14-12 and *New Victoria* at Rs. 8-9. *Bengal-Nagpur* were Rs. 33 and Elgin Rs. 18. *Muir Mills* were dealt in around Rs. 449. *Sri Radheyshyam* were frequently dealt in around Rs. 15.

As pointed out above, Coal shares were very active with *Bokaro and Ramgur* in the limelight. There has been a jump in the quotation from Rs. 28 to Rs. 34 and at the time of writing the price is only slightly lower at Rs. 33. Such a big rise in the quotation during the past few weeks has been due to the reports of the successful conclusion of a satisfactory contract with an important steel company. On the publication of a satisfactory report, *Burrakur* have improved to Rs. 23-8. *Bengal* were not very much higher at Rs. 510. *Amalgamated* were firm at Rs. 43-4. There was good enquiry for *Equitable* during the last two days and the quotation is around Rs. 43-8. *Central Kurkend* were Rs. 19-2, *Dhemo Main* Rs. 15-6, *East India* Rs. 27-1 and *Katras Jherriah* Rs. 45-8. *New Beerbhoom* were not very much changed at Rs. 25-8 and *South Karanpura* Rs. 6-12. *Samla* were Rs. 4-13 and *Satpukuria and Asansol* Rs. 3-2.

There has been no activity in the Jute section on the reports regarding the continued difficulties in respect of coal supplies. Actually, there has been some selling of popular counters in the last two days. *Howrah* were Rs. 63-4, *Chitavalsah* Rs. 24-14, *Gourepore* Rs. 792, *Anglo-India* Rs. 390 and *Bally* Rs. 353. *Kamarhatty* were Rs. 550, *National* Rs. 28, *Nuddea* Rs. 106-8, *Soorah* Rs. 13 and *Presidency* Rs. 6-7.

In the Engineering section, there is nothing of importance to be recorded except for a late rise in the price of *Jessop & Co.*, to Rs. 21-14. *Indian Iron* have been fluctuating for the most part around Rs. 37 with *Steel Corporation* at Rs. 27. *Braithwaite* were Rs. 9 and *Arthur Butler* Rs. 15-4. *Indian Malleable Castings ordinary* were Rs. 8-12 and *National Iron and Steel* Rs. 13. *Kumardhubi Engineering* were Rs. 7-12 and *Marshalls* Rs. 3-10. *Burn & Co.* were Rs. 383-8. There has been considerable delay in the publication of the accounts for the year ended April, 1943 and the results for that year are eagerly awaited.

Sugar shares have been very firm with a sensational rise in the quotation for *Carew & Co.* to Rs. 28. There has been considerable buying for these shares for sometime on expectations of a good dividend for the year ended June, 1943. The accounts are expected to make exceptionally good showing. There has been only a slight reaction in the quotation after the hectic buying in the last few days and the quotation at the time of writing is around Rs. 27. *New Savan Gur and Sugar* have also been marked higher on the publication of an encouraging report for the year ended May, 1943. *Balrampore* have met with some buying in the last few days and have improved to Rs. 17-8. *Belsund* were done up to Rs. 13-6 while *Cawnpore* were Rs. 31-8, *Champarun* Rs. 43-8 and *Murree Brewery* Rs. 24-8. *Ramnugger Cane and Sugar* were firm at Rs. 12-2 and *Samastipore Central* at Rs. 20-8. *U. P. Sugar* were quiet at Rs. 32-14.

In the Tea section, business has been restricted with the reserve of sellers but quotations are higher, *Bishnauth* being Rs. 39-8, *Banarhat* Rs. 846, *Hasimara* Rs. 69-8, *New Dooars* Rs. 1,330 and *Tezpore* Rs. 17-8.

In the Miscellaneous section, *B. I. Corporation* have been uninteresting around Rs. 6, *Burma Corporation* were quoted at Rs. 3-15 and *Indian Copper* at Rs. 2-7. *Alkali and Chemical* are a shade better at Rs. 33 awaiting the accounts. *Calcutta Ice* have improved further to Rs. 18-4 on the declaration of a higher dividend while *National Insulated Cables* were Rs. 15 cum-right and *Spencer & Co.*, Rs. 12-1. *Tide Water Oil* were slightly higher by two points to Rs. 21-10, *Bengal Paper* were Rs. 2-14, and *India Paper Pulp* Rs. 2-10. *Titaghur Paper* were Rs. 27-8 and *Mysore* Rs. 27-12. *Indian National Airways* deferreds were Rs. 6 and *Midnapore Zemindary* Rs. 91-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, October 21.

AFTER earlier firmness the local stock market tended to be rather weak. The announcement of a new funding loan by the Government of India was well received by the market and the giltedged section was firmer. The strength of the giltedged market was reflected in other sections also. But before long a downward tendency set in and prices began to decline appreciably. Even though there is a ban on *budla* transactions it appears that there are still some people who indulge in such transactions privately. So much so the President of the local Stock Exchange has found it necessary to issue a warning that any one found guilty of engaging himself in such transactions will be severely dealt with. This warning resulted in a considerably reduced volume of business. Even otherwise, sellers predominated over buyers.

Mill shares were rather dull for the most part of the week under review. There was, however, some improvement in Wednesday's session, but again to-day's transactions resulted in prices recording a substantial fall. *Bombay Dyeing* which were declining steadily since last week-end recorded a sudden rise of nearly 20 points on Wednesday only to lose the ground thus gained the following day. Closing price is Rs. 1,954-12; *Central India* were Rs. 469; *Century* Rs. 902; *Colaba Land* Rs. 240-8; *Gokak* Rs. 351; *Kohinoor* Rs. 648; and *Svadeshi* Rs. 581.

Steel shares were rather easy and prices have recorded substantial losses. *Tata* deferreds were lower at Rs. 1,890; *Tata* ordinary Rs. 389 and *Indian Iron* Rs. 36-10.

Among miscellaneous shares, *Bombay Steam* have done well. As a matter of fact, it is the only scrip that has kept up its upward course. The latest quotation is Rs. 635 against Rs. 620 last week. *Bombay Burma Old* were Rs. 425; *Scindia Steam* Rs. 36-10; *Shivrajpur* Rs. 70; *Premier Construction* Rs. 180; and *A. C. C.* Rs. 214-4.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 15th Oct., to 20th Oct., 1943 both days inclusive)

GOVERNMENT SECURITIES:

2¾ per cent Loan (1948-52):—(18th) 99-12.

Carry forward ..	59,211	1,07,542	1,42,101	63,782
Dividend per cent Ordy.	35	35	45	40
Dividend per cent Def.	100	100	135	117.38

(Meeting, 26th October, 1943 at 3-30 p.m.)

Audited accounts for the year ended 31st March, 1943:—

	Rs.	A.	P.
The net profit of the Company, after providing for taxes and setting aside a sum of Rs. 5,98,280-10-0 on account of depreciation, amounts to	12,55,972	2	7
Add—Amount brought forward from last year's account	1,07,541	9	7
The amount available is, therefore ..	13,63,513	12	2

Out of this total of Rs. 13,63,513-12-2 the Directors have transferred Rs. 2,00,000 to Reserve Fund, leaving a balance of Rs. 11,63,513-12-2.

Out of this sum of Rs. 11,63,513-12-2 the Directors have proposed to declare dividend as follows:—

	Rs.	A.	P.
(1) Dividend at the rate of Rs. 3-8 per share, free of income-tax on 1,70,000 fully paid-up Ordinary Shares of Rs. 10 each, and at the rate of As. 5.6 per share on 26,580 Ordinary Shares Rs. 10 each paid up Re. 1 per share, absorbing	6,04,303	0	0
(2) Dividend at the rate of Rs. 2-8 per share, free of income-tax on 2,00,000 Deferred Shares of Rs. 2-8 each fully paid up, absorbing	5,00,000	0	0
	11,04,303	0	0
And to carry forward to the next year's account	59,210	12	2
	11,63,513	12	2

It will be observed that there is a further deterioration both in the gross and net profits. Wages and the prices of raw materials and stores continued to rise during the year, whereas the contract price for supply of materials to the Government remained the same. The negligible increase in the commercial prices were not commensurate with the actual increase in the cost of manufacture of products. Negotiations are at present going on with the Government for increase in war contract rates.

During the year under review, the plant worked quite efficiently and it was able to cope with increased requirements of the Government, though production was slightly affected on account of closing down the factory for a fortnight as sufficient motive power was not available from the Tata Iron and Steel Co., Ltd., due to strike in their Works. The directors are exploring new avenues of work and are quite successful in supplying to some extent the Government's requirements of Ammunition Boxes and Spring Steel Wire. They are also carrying out various experiments to manufacture new types and better qualities of wire required by the Government.

The factory, plant and stores are adequately insured under the provisions of the War Risk Factories and Goods Insurance Ordinances and from time to time supplementary, policies of insurances have been taken to cover the increased cost of machineries and stores. The directors have further provided Rs. 1,00,000 for war injuries to their employees under the voluntary scheme as compensation in case of injuries sustained by them as a result of enemy action or air raids.

Managing Agents.—Messrs. Indra Singh & Sons, Ld.

(Half-yearly General Meeting on 27th October, 1943 at 11-25 a.m.)

Audited accounts for the half-year ended 30th June, 1943:—

Accounts.—The Profit and Loss Account, after providing Rs. 1,30,930-15-6 for Depreciation and Rs. 2,74,000 for Taxation, transferring Rs. 2,353-3-4 to General Reserve and Rs. 40,000 to Dividend Equalisation Reserve and including Rs. 16,079-2-10 brought forward from last half-year, shows an available balance of Rs. 2,30,347-0-5 which the directors propose to dispose of as follows:—

	Rs.	A.	P.
In paying a dividend on the Preference shares of 7 per cent per annum, without any deduction for income-tax paid by the Company	80,493	0	0
In paying a dividend on the Ordinary shares at the rate of 6¼ per cent per annum, without any deduction for income-tax paid by the Company	1,42,070	0	0
In carrying forward	7,784	0	5
Total	2,30,347	0	5

Loyabad Coke Plant.—During the half-year 30,900 tons of coke were manufactured and 19,087 tons despatched as against 32,328 ton smanufactured and 39,648 tons despatched during the previous half-year.

Transport for the supply of coke to various districts was inadequate and at the end of June stocks had reached such high proportions that there was no alternative but to reduce production.

The shortage of basic chemicals mentioned in the last report continues, but it is hoped that these difficulties may soon be overcome.

Taxation.—The appeal by the Company in respect of the standard profit for the purposes of excess profits tax assessment has now been heard and the decision has resulted in a certain measure of relief.

Managing Agents.—Messrs. Bird & Co.

Synapsis of the balance sheet as at 30th June, 1943.

*After providing for taxation.

(Half-yearly General Meeting on 30th October, 1943 at 11 a.m.)

Audited accounts for the half-year ended 30th June, 1943:—

	Rs.	A.	P.
The Profit for the half-year after providing for Depreciation and Taxation was	45,350	1	2
To which is added the balance brought forward of	41,433	11	6
Total	86,783	12	8

The Directors recommend that the balance of Rs. 86,783-12-8, available for distribution, be dealt with as follows:—

	Rs.	A.	P.
Dividend at the rate of 12½ per cent per annum	37,500	0	0
Balance carried forward	49,283	12	8
Total	86,783	12	8

There was no slackening in the demand for Ice throughout the period and a very satisfactory turnover was achieved.

The Company also secured an increased income from the Cold Store.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ld.

(Half-yearly General Meeting on 27th October, 1943 at 10-35 a.m.)

†Includes a sum of Rs. 34,004 written back from taxation reserve.

*Includes a sum of Rs. 59,000 written back from taxation reserve.

Audited accounts for the half-year ended 30th June, 1943:—

Colliery.—The heating which was mentioned in the last report was dealt with successfully though raisings have been seriously affected during the period under review. The torrential rain in mid-July which inundated a large part of the country resulted in the temporary flooding of a portion of the colliery. The recovery is now well in hand and no great damage has been done but raisings will continue to be low until the area has been completely restored.

Accounts.—The Profit and Loss Account, after providing Rs. 11,691-14-3 for Depreciation, writing back Rs. 34,004 Taxation Reserve in excess of requirements and including the sum of Rs. 5,978-9-0 brought forward from last half-year, shows a debit balance of Rs. 13,579-5-4 to be carried forward.

Managing Agents.—Messrs. F. W. Heilgers & Co.,

(*Continued from page* 765)

to take an optimistic view, the difficulty again being in regard to sufficient supplies of cane to work to full capacity.

* * * * * *

The decisions taken at the conference of representatives and tea estates held in New Delhi recently may prove to be advantageous from the market point of view. It appears that the authorities are experiencing some difficulty in regard to their export quota allotment of 421 million lbs. of black tea. With 110 percent of the standard output, it was expected that it would be possible to get an export surplus of 421½ million lbs. It was actually found out, however, that the authorities were able to get offers for only 389 million lbs. and there was a balance of 32 million lbs. to be secured. It was decided at the conference that the Government should ask the small producers to sell their export quota rights at the fixed price of 2½ annas per lb. and that supplementary offers made by other estates would be paid a price less than the amount of 2½ annas incurred in the purchase of export quota rights.

Our readers are perhaps aware that there is no restriction in regard to the production of tea for internal consumption. As there is every possibility of supplementary offers for 32 million lbs. of tea cutting into the amount available for internal consumption production in the estates will be increased. The tendency at the auctions of tea held for consumption in India also might be firmer. The prospects for tea companies should, therefore, be considered quite satisfactory. Even during the last few days there has been good buying enquiry and a small advance in prices has been recorded.

* * * * *

It was reported in these columns last week that the lists of *Dehri Oil Refinery Limited* had to be closed on October 12, 1943 owing to over-subscription. It has now been announced that applications up to Rs. 2,500 will be allotted in full while those above will be allotted approximately 60 percent with a minimum of Rs. 2,500. The issued capital is Rs. 7.25 lakhs, Rs. 2.25 lakhs being in preference shares of Rs. 100 each and Rs. 5 lakhs in ordinary shares of Rs. 10 each. The preference shares carry the right to a fixed cumulative taxfree dividend of 5 per cent per annum. As it is expected that there will be no long period of waiting for the payment of dividends the shares have good scope for appreciation.

WATCH-DOG.

BOKARO & RAMGUR, LD.

NOTICE is hereby given that the Seventy-second Ordinary General Meeting of the Shareholders of Bokaro & Ramgur Limited, will be held at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, on Wednesday, the 3rd November, 1943, at 3 p.m., to transact the following business:—

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There has been no appreciable change in the conditions in the money market and call money rates have remained unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. There has been slightly more demand for money both on Government and trade accounts. That is the reason why at the auctions of treasury bills held this week applications showed a decline from Rs. 14.57 crores to Rs. 12.89 crores and the average discount rate was higher by 8 pies at 12 annas and 9 pies per cent per annum. The increase in demand for funds, as indicated by the statement of scheduled banks for the week ended October 15 was perhaps due to the rediscounting of treasury bills by the Imperial Bank and the slightly more demand for funds for jute. The demand for rediscounting of treasury bills can be only temporary. The Government are apparently sure of getting their requirements of treasury bills on cheap terms and there has been no reduction in the amount offered for next week which remains at Rs. 8 crores. The lists for the new loan which opened on October 22 closed on October 26. No official communique has been so far issued but it is generally expected that the Government were able to obtain their requirements of Rs. 25 crores.

The returns of the Reserve Bank for the week ended October 22, show that there has been no expansion of currency after the increase in note issue by nearly Rs. 16.5 crores in the two previous weeks. Total notes issued at Rs. 791.34 crores are only Rs. 53 lakhs higher than the figure at the end of the previous week while notes in circulation are lower at Rs. 776.42 crores against Rs. 776.52 crores. Notes in the banking department are Rs. 63 lakhs higher at Rs. 14.92 crores. Sterling securities show only a small rise to Rs. 674.84 crores. There is a slight reduction in the amount of rupee securities from Rs. 58.41 crores to Rs. 58.33 crores; rupee coin are higher by Rs. 53 lakhs at Rs. 13.76 crores. In the banking department, Government deposits show a big increase to Rs. 38.67 crores from Rs. 29.67 crores. In the absence of any expansion of currency and tap sales of 3½ per cent paper this increase is to be ascribed to fresh subscriptions to the defence loan and tax payments. Other Government accounts also are higher at Rs. 11.56 crores against Rs. 9.61 crores. There is a significant increase in Burma Government balances from Rs. 26.75 lakhs to Rs. 1.3 crores. Bank deposits are Rs. 43 lakhs higher at Rs. 68.46 crores in spite of the increase in Government balances and trade demand. Balances held abroad are Rs. 10.64 crores higher at Rs. 119.2 crores. It will thus be seen that the receipt of sterling during the three weeks ended October 22, 1943 was on a greater scale, being as much as Rs. 39.02 crores against Rs. 19.95 crores in the three weeks ending October 1, 1943. Expansion of currency against the amount of sterling received in the three weeks ending October 22, 1943 has been for only Rs. 18 crores. Rs. 10 crores were utilised for the cancellation of securities and the balance is still left at the disposal of the authorities. From the developments in the past few weeks it appears that the authorities have in mind a fresh scheme of sterling repatriation.

The return of the Imperial Bank for the week ended October 22, shows a further increase in deposits to Rs. 197.58 crores from Rs. 195.48 crores. Investments are lower at Rs. 128.82 crores against Rs. 132.11 crores, presumably due to maturing treasury bills, while advances have improved from Rs. 35.74 crores to Rs. 37.07 crores. The increase is again due to bills discounted and purchased. With the increase in deposits and decrease in investments, cash balances are higher by over Rs. 4 crores at Rs. 41.68 crores.

The statement of the scheduled banks for October 15, shows that there has been a further increase in deposits. Demand liabilities are higher by Rs. 3.8 crores at Rs. 466.34 crores. Time liabilities also show an increase of Rs. 1.13 crores to Rs. 136.62 crores. Cash balances are higher by Rs. 50 lakhs while deposits with the Reserve Bank show a decrease of Rs. 2.3 crores. For the second week in succession, advances have improved, the increase this time being Rs. 3.32 crores to Rs. 132.21 crores. Bills discounted also are higher at Rs. 4.03 crores against Rs. 3.93 crores.

The exchange market has been quiet but steady with not much business passing.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D. A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

TEST OF TIME

The Pyramids, standing through the centuries in spite of natural disintegration, are enduring monuments to the superlative workmanship of the ancient Egyptians.

Our lives should be built up with the same pride of accomplishment—built to withstand the ravages of time and adversity. Such permanency can only rise on a foundation of financial solidity.

Finance Abroad

Thursday Evening.

Moscow which has no interest in high finance has a great influence on markets. The claim for reparations points to nothing less than a strong desire to get a point of the £4,500 millions' worth of money taken from the Occupied countries by the Nazis. It a nest-egg can be had from the Nazis for the latter's wrong-doing the Soviet will run its currency in its own way without reference to rates, quotas and agreements. The 3-Power Conference is making some progress as the Funds are moving up in London while Industrials are subdued and latterly irregular. The U. S. Theasury Secretary is optimistic about agreement. This remarks in Cairo as to parity of sterling and dollar rates for the Egyptian pound certainly indicate that the control is going to be worked so as to hold the rates from going up Mr. Morgenthau mentioned the imitation to Russia but did not say that Russia was going to help. Parts of Russia, namely the Baltic States, were closely connected with the sterling group and the Russian desire to exclude consideration of frontiers makes it clear that the Allies will soon have to give up hope of putting a part of Europe in their plans. According to a recent Reuter message, Luxemburg, Belgium and Holland have concluded an agreement as to the swift restoration of old rates after the war. The agreement will suggest that the old gold bloc in one form or another will emerge, and the efforts made by Britain and America to create conditions suitable for the maintenance of old rates must go on for one reason. Mr. Morgenthau is credited with an intention to visit all places where U. S. troops are serving. He may come to India so as to secure the benefit of a stable exchange for U. S. troops who may be puzzled by the difficulty in getting their goods for the right equivalent in local currency. The Amgot paper currency arrangements are to be modified. There was mention in TRUTH of a mistake on the part of the Bank of England in regard to the difference in rates fixed for lire in Sicily. It was contended that arbitrageurs could buy and exchange their lire for sterling and reconvert into lire again so as to take a profit but Mr. Morgenthau said that the matter would be reviewed by an Allied Commission meeting in Italy. The difference between the Tripoli and Palermo rates may disappear or has disappeared already. The U. S. Secretary has said little either about the third White plan or about the proper place of gold. But the bullion market here will find his tour a sustaining factor as the Secretary's critics, notably Dr. B. M. Anderson formerly Adviser of the Chase National Bank, favours the making of long-term loans by the U.S.A. in gold for certain purposes. This implies necessarily that postwar demand for gold will be independent of the U.S. Treasury's buying price and if the old exchange rates are reverted to in Europe this prmium on gold in evidence from 1931 would remain. What looks like a stalemate in Italy holds up the rise in oil and textile share noted in London. Wall Street has turned busier as the Senate is rapidly developing a reasonable attitude in regard to foreign affairs. Senator Connally has got his resolution but Senator Johnson has given a late warning which may have little effect in view of Mr. Willkie's St. Louis speech and the prompt attention paid to his 'hands off home politics' oration. Last week the U. S. market looked beyond the war to the 1944 election. The President instead of getting 16 billions is not likely to get even 10½ billions in new taxation. Three war bond drives have gone off well but individuals have put up less money than expected. Savings banks and insurance companies subscribed more, just to put their money to some work while the rise in the cost of living and the new pay-as-you-go tax plan of Mr. Beardsley Ruml have checked private response to appeals. Nothing has been said as to bigger Federal sales taxes in place of the increase in income taxes. Congress has decided to wait and let the experts argue it out. Obviously the battle again isolation will influence the battle against inflation but the President's ability to win both at once seems a little doubtful at present.

In the light of Azores agreement questions have been asked about livingsten. The loss of Burma and Malaya meant a fall in world supplies. The New World has plenty but Europe is short of both tin and Wolfram and a questioner in the Commons drew the answer that Portugal sold a good deal of Wolfram after 1940 to Germany. Trade returns certainly suggested that much earlier but an enterprise like the old-established Beralt Tin and Wolfram would have provided little. Mineral development favours Spanish coal and Portuguese tin and wolfram suppliers and what with lorry traffic through France to Switzerland there may be supplies of more than one war material to Germany. But Portugal is not going to change commercial policy on account of a promise to increase the supply of British goods in return for bases.

Something may be deduced from Mr. Eden's consultations with the Persian and other envoys in Moscow. It may be assumed that minor States would endorse the discussions at Moscow so as to let the U.S.A., appreciate the acceptance by small nations of what the U.S.S.R. aims at. The five U.S. Senators want perhaps nothing more than the right to reserve judgment on the President's acts in wartime. If that is offered, the Moscow conference may be the last of the wartime conferences and the markets would derive great srength at once from the removal of all outstanding issues. Doubts as to the wisdom of present association will disappear while the U.S., view of Empire economic unity might change. The increase in U.S. debt and taxation may well affect the competitive ability of U.S. export industries after the war. New capital may be scarce and European rivals e.g., Belgium starting from scratch may put steel producers in difficulties. But much investment in Lalin America for purely productive purposes and 2,000 million put in during the war may have a great effect on U. S. trade after the war. Industrial development in Mexico interests U.S. bankers who are taking local partners in and new affiliates with no mark of Gringo capital are expected to alter the balance of payments after the war. The outlook for other enterprise in Latin America must be improved by growing trade connections with the U.S.A. and it is not merely a quesion of the Pan-American highway bringing good business. If he U.S.A. buys more raw materials the level of World prices should stay up and changes in U.P. agriculture leading to less wheat, less maize, and less tobacco may have important results for the Anglo-American exchange. If the British import surplus is smaller, the point may be that estimates in August as to the proper level for sterling were not wide of the mark. The rate after the war will be between 4 and 5 dollars so that rupee would be unchanged, it would not have fallen at all in terms of the leading foreign currencies and the bulk investment in London will keep exchange steady when imports revive. The proper view as to tariffs would emerge then because capital equipment imported for the benefit to Private enterprise need not pay a big tax in advance if future revenue is to be considered. Relief expenditure by the U.S.A. abroad may stimulate Europe's exports to markets like India and a Scandinavian bloc with Norway's ships at call may have a big say in all markets. The U. S. A. may ignore possible rivals but the obvious need to relate Indian policy to British policy remains. It is readily realised that India has to get back foreign currency held abroad gradually in the form of goods and if creditor status is not compatible with high tariffs (revenue duties are so high and the surcharge so stiff that the difference between a creditor like the U.S.A. and India will lie perhaps only in industrial efficiency) her fiscal policy must be altered to let foreigners have a chance in regard to goods and services that they can provide.

New Jute Press

Investors will doubtless be interested in the announcement relating to a new jute press appearing today. The Bhagwati Pressing Company Ltd. offers debentures as well as shares. The preference shares are of the participating cumulative type and being tax-free are likely to command much attention in view of the acute scarcity of suitable prior charges. Messrs. Place, Siddons, Gough are associated with the new company, and they are to be addressed by intending subscribers. There are not many public companies running jute presses but the connection between a large well-established jute mill and the new company should not be ignored by the investor. The application for listing of the shares as of a public company is mentioned in the announcement. The majority of jute presses have a fairly consistent earnings record and the new company's prospects should be judged with reference to that as to any other factor.

Control of Cotton Goods

The recent change in the cotton cloth control order extending the period of sale of unstamped cloth to the of the current year is another unwelcome reminder of the difficulties of controlling important consumer's goods in a vast country like India. When the cotton cloth control was first instituted, we, for our part, did not permit its possible benefits to induce in us any undue optimism about its success. Cotton cloth control sets practical problems of a range and magnitude not quite familiar to public administration. The control of cotton cloth implies similar control of the raw material; and to-day not only has the new regime of cloth with stamped prices been deferred by another three months, but futures trade in cotton has also been permitted to be resumed. Together they represent a readiness to haul down the flag of control which the consumer might view with some misgivings. There will, doubtless, be some satisfaction that the cotton grower is not threatened to the same extent as before with a control that is not likely to work to his advantage. But the average consumer, who is still waiting for an equitable distribution of foodstuffs at controlled prices, might think that there is comparatively little to cheer him up in the working of the cotton cloth control. For, apart from the promise of progressively lower ceiling prices consequent on their quarterly revision, there is the fact that the chief occasion in the year for large scale consumption of cotton cloth, viz. the Puja-Dewali season, has come and gone without prices having to respond to the obligatory sales of unstamped cloth before October 31, 1943. Likewise, the scheme for the production and sale of standard cloth which raised high expectations of a reduction of hardships for the lower classes of the country's population is now seen to have worked far less efficiently and smoothly than was expected.

It is necessary to examine the reasons for the disappointments of the past before assessing the promises for the future. So far as the standard cloth scheme is concerned, it would appear that there has been no difficulty in respect of production. On the other hand, the full percentage of productive capacity earmarked for the production of standard cloth has not been utilised. Nor has all the cloth produced been moved into consumption. Mills would appear to be waiting for instructions in this regard. This delay in moving goods has not been explained adequately or with sufficient authority. It is said that standard cloth has not met with a uniform reception in all the Provinces of India. The production programme apparently has not taken consumer's taste into full account. While this accounts in part for the standard cloth scheme failing to yield its full results, transport, too, has contributed to the disappointments in this head.

As for the goods of general civilian consumption, difficulties have been encountered in what may be considered to be the preliminary stage of disposing of the goods manufactured prior to August 1, 1943. Since the whole scheme of controlled prices rested so largely on the stamping of prices and dates on the goods manufactured after the date, efforts were made to clear the market of the goods manufactured before that date. It may be recalled here that, when the cotton cloth control scheme was first announced the provisions in this particular regard met with severe criticism from the trade and a revision and relaxation of the rules in some respects were immediately made in response to such criticism. But it is now seen that more difficulties are involved. The total stocks of unstamped cloth are now estimated to amount to 2.700 million yards of cloth and 215 million lbs. of cotton yarn. As this represents nearly 8 months' production, any attempt to force their sales in a short period of a month or two must be attended by almost incalculably grave risks. The period of their sale has, therefore, been extended, as already mentioned, to the end of the current year. Some doubt may still be expressed as to whether three months will suffice for their sales. But, considering that the difference between current production and total consumption in the country is being made up in large part by the unsold goods now estimated to be equal to 8 months' production, delay in their sales is not a matter to be deplored.

It is to prices, then, rather than the pace of sales, that the consumer must pin his hopes of relief. Here, it must be noted that even with the fixation of ceiling prices for twelve varieties of cloth and yarn, it was found that cases of maldistribution in stocks led to the demand for prices higher than the maximum fixed by the Textile Control Board in certain centres. There was confusion as to the maximum prices for qualities other than those specifically mentioned by the Textile Control Board. At the conference held in early October it was decided that maximum prices should be fixed for all varieties of cloth and yarn and that efforts should be made also to dispose of hoarded stocks. It was at first announced that maximum prices would be effective from December 1, and every piece of cloth and bundle of yarn would be marked with ex-mill prices and retail prices in a way that all consumers could see. An annuncement in regard to the new range of prices is expected to be made by the middle of November. In pursuance of the policy of deflation of cloth and prices, which is the purpose of the Cloth and Yarn Order, the Chairman of the Textile Control Order, after the meeting which was held recently, pointed out that the new ceiling prices will be 30 percent lower than the present ones and that there will be revision of such ceiling prices for every three months after December 1 in the light of available data. It is pointed out the decline of 40 percent in wholesale prices, in the first instance, from the peak levels of the year after the institution of control and 30 percent after is indicative of the success of the control measures that were instituted by the Government in consultation with the industry. The promise of a reduction of 30 percent in the new ceiling price has been followed up by the resumption of futures trading in the cotton market with the statutory maximum prices at Rs. 550 per candy.

The resumption of futures trading should meet the grievances of the cotton trade. But the general complaint that cotton cloth prices have not paid full regard to consumer's interests still remains and has to be considered. It is still true that prices for cloth and yarn are very much higher than the prewar levels; but having regard to the service rendered by the industry, the needs of the post-war period, and the higher prices paid to agriculturists, the new ceiling prices cannot be deemed to leave any unconscionably big margin of profit. In the present circumstances, the interests of the ordinary consumer lie in the Government seeing to it that production of the industry is fully utilised and that steps are taken immediately to improve production further.

Considering the complexity and magnitude of the problem of controlling cotton manufactures in India, the present position may be said, with all its disappointments, to represent a not inconsiderable achievement. While the food problem and the food situation are far worse than when control was first attempted in the sphere of cotton goods, there is an appreciable relief in prices of cotton goods which the consumer should feel grateful for. Cotton control, it must not be forgotten has to take account of the possibility of unfairness to the cotton grower at one end and the consumer of cotton manufactures at the other. That we have got back to the position in which the cotton grower can have the benefits of futures trading and the consumer can look forward to lower prices is a matter for gratification. The cotton industry may well congratulate itself on having divested the control of its harsher features, dodged drastic cuts in prices in the Puja-Diwali season and served the country as well as it can in the present circumstances.

HEALTH AND ECONOMICS

Between the specific programme to meet India's grievous needs and the plan chalked out in advance for the Public Health Commission which held its first meeting this week, there may be little in common. In the message duly given by the Viceroy to the Commission, there is mention only of the slum in the city. Indeed, little has been said of the rural slum in writings. Every foreigner seeing India for the first time, hardly sees the rural slum in the background. The escape to the urban slum represents no great change. Today the impact of the famine in the slum is ordinarily undistinguishable from the effects on the rural slum. The Viceroy has spoken of the housing problem. But he has not defined either municipal or capitalist obligations. Nor has he examined the ultimate economic benefits of public health policy though he has sketched the financial implications of rehousing. To many the problem of public health is essentially an administrative problem. Given the statutory backing and the modifications of local autonomy required for efficiency, the problem becomes manageable but rural reconstruction grants for water supply etc. are not the proper or the adequate beginning. The problem today is not one of manufacturing local authorities or of creating an adequate profession. It is really one of taxing the country to secure the finance for improvement. The contrast between Central and Provincial Finance, of the ability to enhance the tax burden or to create the resources, was explained in a review of the happenings and problems. Even in the light of famine today, we may expect no large change in vital statistics. The growth of population is a problem for the Government rather than the people, though the people must be provided with the ability to face large demands in the future for the development of public health. Static conditions in public health (outside the Army, of course) explain the enquiry to be undertaken but we may be certain that it is not a single problem of health or disease, of poverty or welfare that is raised by an enquiry conducted in any place into the living conditions of any class or group.

It is time that the plans mentioned by the Education Member are drawn up because the undertaking of large-scale experiments in reconstruction should not be made to wait on victory. The release of men and equipment from the forces for the task of reconstruction may be a contingency for which preparation must be advanced. But the raising of standards absolutely is not for public opinion alone. The modern health administration is less concerned with the treatment of disease than the conditions of well-being. In its discussion of Hot Springs the Central Advisory Board of Health developed differences of opinion as to nutritional requirements, though the environment is admittedly less important than the average intake of food or its quality. The real connection between economic insecurity and the state of public health in India cannot be missed. Except for a small and favoured minority, the people live under the shadow of want, even more than of disease. What part a Health Centre can play in redressing inequality as regards medical relief has to be determined because of the orginal assumption as to the link between deficiency diseases and child mortality. An enquiry into the causes of ill-health may be too large and too vague. The outcrop of epidemic disease is always recognisable, and India is peculiarly the home of epidemic disease. Whether rural housing is ultimately a question of building materials, corporate ownership or the minimum agricultural wage, subject to control, cannot be determined without reference to the findings of the Commission.

Seasonal variations apart, the measurable effects of work on public health must be ascertained. It is perhaps time to say that too little work or too much work can have effects on health and industrial health research in India has hardly made a beginning. Whether social insurance on a large-scale can provide a rural panel system is primarily a question for the Government since the medical profession in India may not show the same jealousy of State insurance schemes as the British Medical Association. But the final cause of ill-health is nearly always poverty, and a cure for Indian poverty under British rule cannot be found by conscious enquiry. It is not necessary to argue that the progress of industry, producing a higher standard of living, will create conditions favouring a solution. Besides questions regarding wage rates in town and country alike the determination of the poverty line must be raised during the enquiry. The terms of reference outlined in August were known to be sufficiently large to excite the feeling that the war is not going to hold up essential investigation. Whether a fitness for all movement is postulated by the enquiry may be questioned but there is no room to doubt the value of recreation divorced from work. The laying down of minimal requirements is not merely a question of ordering the use of leisure. It is a task for the reformers of education. The absolute deficiency as regards hospitals, nurses, etc. has been indicated in advance by Dr. J. B. Grant whose notable pamphlet raised the question of control of health services in the future in addition to the main problem of raising the quality of treatment or advice.

In the light of enquiry many suggestions may emanate but Provincial Directors of Health, concerned with the prevention of disease, may have to lay down requirements ahead in respect of finance. What dividends may be had from good health is not merely a problem for the employer or for the tax-gatherer. Essentially, health is a consequence of economic organisation, and the distribution of wealth is linked with the movements of vital statistics. The warning given in 1937 by Colonel Russell as to the net annual increment to India's population seemed harshly vague, but the major task is to cut pity out and look on deisease as the result of poverty not accident. And health policy must be closely related to economic improvement. Few of the blueprints of today for rapid advance along the road of industrialisation dwell on the optimum physical standards of the efficient worker. The increase in wages must be an issue before the physical condition can be improved. We should be truly enlightened if the chain of causation in the case of disease is revealed since it is not only industrial disease that matters. The prompt provision of social services may not be a Central concern but the redirection of public expenditure in the light of disastrous economy is but one of the inescapable results of the enquiry. As was indicated earlier here, it is a question of keeping aside savings for post-war development in the direction of housing—a subject of interest to the builder as well as the doctor. The administrative task is primarily one for doctors but a responsible Ministry has a real interest in public health as was proved in Madras where male nurses were tried and a consolidated Health Act defined the obligations of Local Boards. It is not merely a question of making autonomy fruitful in every field, but of raising production, both agricultural and industrial, in the future while fullness or perfection may be out of reach the avoidable evils must vanish. Advice as to their removal will come a long way after the advice offered as to famine, irrigation and agricultural progress by various Commissions. The earlier Commissions did not more than indicate the line of advance, but a Health Commission is different, since the opportunity it has for framing recommendations in the imperative mood is removed from the conjuncture that retards constitutional progress. It is important to examine the wealth of knowledge relating to nutrition in India to express dissatisfaction with the disparity of benefits within reach of soldier and civilian as regards quinine or vitamin tablets. The Educational Commissioner having outlined the demands for school children, the Health Commission has to define the needs of towns and villages, to prescribe quantities for home growers of food. Expert advice is required where Civil Servants have too often offered misleading estimates as to stocks and supplies and the very first infusion of professional experts into famine administration may make a real difference. The institution of the enquiry is an admission of abnormal conditions beyond the power of the administration. As a restrained confession of failure on the part of official agency it has abiding significance and the Commission may through subordinate committees of enquiry ascertain facts as to the evacuation and famine that have been obscured by vain propaganda. That public health in Britain actually improved during the war period and the birth rate has undergone a permanent change illustrates the essential difference between the two countries, one of which is handicapped only to a limited extent either by war or by dependence on food imports.

The Calcutta Money Market

With two markets and no close connection except in recent years India suffers from peculiarities which compel notice. The features that distinguished Indian finance, seasonal demand and wide fluctuations, may not persist but Mr. Bimal Ghosh in his study of the Indian money market with particular reference to Calcutta (Oxford University Press, Rs. 7-8) recognises the lack of coherence and the main possibility of improvement. The pioneer study has perhaps little bearing on the future but due attention must be paid to certain suggestions for reform or co-ordination thrown out by Mr. Ghosh. He is at one with INDIAN FINANCE in asking for a bill market, entirely in Treasury Bills if necessary, and a genuine lowering of interest rates so that the benefit of cheap money may be permanent. The study throws into relief the functions of the Reserve Bank and the organic connection between the lender and the supply of short-term funds. It also describes the meritorious record of Indian banking and outlines the next stage of development. Since readers write in for explanation of comments it may well be said that the reader of the financial press will derive even more benefit than those actually engaged in the money market. The exposition of factors and agencies is complete, and the processes are clearly described. It is not surprising that the first study had to wait on the creation of the Reserve Bank. The figures cited may not be as up-to-date as one may wish but the general effects of the war on the Central Bank and commercial banks are assessed satisfactorily. That Calcutta is the more important market, with larger resources and more control over regional and seasonal differences, is implicit in the examination of the market's working. The indigenous banker occupies a very small place but the bill discounting activity of the Multani bankers who are able to enforce uniform rates and limit competition appears to have increased in recent years. This is not the only development that is reviewed in the work, which does not miss the connection between the bazaar and the banks in India. In a study complete with index the sense of proportion is so much in evidence that the many references to what could be done by Bengalee banks or for Bengalee banks do not seem irrelevant. The account of the exchange banks does not take note of the effects of the Freezing Order of July 25, 1941. British predominance is ensured by the war and the ability to gain deposits at the same pace as the Indian banks has been demonstrated in the war years. An excellent account of the clearing house contains only a minor error in regard to the status of the Calcutta Commercial Bank as a sub-clearing bank. The more recent institution set up by smaller banks receives adequate recognition as an improvement on what obtains in Bombay. The estimate of funds available suggests that Calcutta with Rs. 126 crores is very well placed for the post-war trade revival. The absolute preponderance of the Imperial Bank is indicated. Since the study contains more than one reference to one bank now in liquidation it may be said that the book which ignores also the period of unusual strain December, 1941—January, 1942 was prepared considerably earlier than January, 1943. The organisation of joint stock companies and their ultimate requirements of money find more than adequate recognition but Mr. Ghosh adheres to the view that the private investor is more important than presumed. The Calcutta market is said to invest Rs. 23 crores in a year but only Rs. 7 crores go into industries which is perhaps a reason for withdrawal of restrictions on capital issues. In the bibliography the Handbook of Commercial Information published in 1924 finds a place. There is no mention of the revised, enlarged edition prepared by Mr. R. R. Saksena in 1938 for the Government of India.

Textile Exports

Post-war trade prospects in textiles were appraised by Mr. P. M. Shah in the Indian Textile Journal last month. India took the place of Japan as an exporter last year, and the sharp rise in exports created problems of its own. Until the middle of last year, cotton textile exports continued to increase though the increase in mill production was moderate. There was an increase in both value and volume during 1941-42 when the demand for all textiles improved and the loss of the Burma market too was neutralised by the increase in demand from other places. Bombay held in 1940-41 as much as 78 per cent of the Indian exports—the increase in the year being most pronounced in the case of coloured piecegoods. Among the countries which took Indian exports in the war period are Burma, Ceylon and the Straits Settlements. The total takings in the 38 months ended November 30, 1942 are placed at 1925 4 million yards. Of the colonial markets East Africa took most but the U. K. also bought Indian textiles. Of the Dominions, Australia was the biggest market. Exports in the war period went to Palestine, Egypt and all Middle Eastern countries but no European country is listed in the trade returns. Since British exporters concentrate on Latin American markets and certain African colonies, the chances are in favour of Indian trade with the Middle East. In order to improve the prospects there Mr. Shah repeats the usual suggestion in favour of trade missions and an organisation parallel to the U.K.C.C. It is urged that India may not be able to keep her position in foreign markets after the war. If Empire trade policy is unitary, there may be tariff concessions after the period of import restrictions and monopoly agencies. When shipping shortage disappears, there is bound to be competition. A trade mission reporting after a tour in 1927-28 spoke of Indian mills being able to sell in a year on an average 100 million yards. The Indian Central Cotton Committee has recommended an export organisation and Sir Sorabji Saklatwalla put up a scheme for an export corporation in which mills would be shareholders. Since the danger of alien monopoly had not receded, the Indian mills are required to set up an organisation dealing with markets goods and joint advertising or agency arrangements. Mr. Shah has not mentioned the credit guarantee needed for an export trade, but mills might usefully employ

their own reserves outside the gilt-edged market for the purpose of extending export trade with the African colonies in which Lancashire appears to be digging itself in. More important than may seem is the effect on concentration on Lancashire's output. Japan, the chief exporter is out, and so is Lancashire. Europe is not likely to be a formidable rival as the raw material problem does not appear to be solved and Indian mills if they can get more staple cotton are in a position to keep new markets. In the light of war demand and export possibilities the case for cheaper cotton is proved but mills have a fuel problem and this year fears of coal rationing combine to depress production as well as exports.

The Trade in Skins

In the latest marketing report India's place as an exporter with 18.8 per cent of the world trade in sheepskins and goatskins or 22.2 per cent if exports alone are reckoned is described. The U. P. produces more skins particularly goat than any one. More skins are produced in winter when more meat is consumed. Most encouraging from the exporters' view is the increase in goatskins. The villages in Upper India have a regular small-scale industry and preparation for the market offers much scope for improvement. For musical instruments alone raw skins are desired for the bulk of the demand always is for tanned skins. The U.S.A. is the principal buyer but Italy was a big buyer of sheepskins before the war, taking 39 per cent against 20.4 per cent bought by Germany. Home demand is large in Madras, but Bengal also is a big consumer. The unit of sale is always 100 pieces but for export the bale of 500 pieces is favoured. The premium paid for heavy weights is based on cure and quality. Freedom from defective flaying is also important. Seasonal variations in prices point to higher prices in the cold weather when more skins and better skins come in. The ultimate seller derives however little benefit from the variations in prices as stocks, prices and state of demand are not known to producers. Since more than 44 million skins come on the market every year, there is a network of middlemen from the slaughterer who handles 85 per cent of supplies to the shipper. The war has apparently caused a fall in sheepskin exports, not in goat, as the U.S.A. is the main market for Indian goatskins. There are no auctions and sales are for orders, not on a consignment basis. Curing is more important than grading and the percentage of rejection depends on the shipper. Storage before sale is sought to be avoided and salt plays a very important part in the preparation for the market. As to the importance of grading, essential for keeping a hold over foreign markets, the report is emphatic. If skin inspectors are appointed for trade zones, the scheme of improvement, based on better flaying by trained men and adequate salting and hanging on dry frames instead of sun drying of skins, may yield considerable results. To extend the market for goat in the U.K. which comes after the U.S.A. as a buyer must be a staple aim of the export trade after the war. The report makes it plain that the trade in hides and skins is essentially dependent on the U.K. in all years. The share of Burma in skin production was inconsiderable but the trade in fancy skins must have died a natural death since 1942. The directory of the trade indicates how widespread is the wing of the Indian livestock industry, while Calcutta's predominant position illustrated by the fact that about 20 per cent of the total trade in raw skins by rail and river converges on Calcutta.

Reconstruction Requirements

The new Viceroy's part in reconstruction has not been defined and the multiplicity of committees, set up in advance of a settlement of the political issue, does not seem an advantage. The appointment of a Member without Portfolio may be justified on certain grounds, but the main issue still is whether planning or replanning can go on in a political vacuum. There has lately been an attempt to examine the basis of post-war fiscal policy without regard to the effects on revenue as well as production and trade. The educational requirements have been indicated the health requirements are to be defined by the new Health Commission appointed in August. The question of keeping the money intact and drawing on it instead of buying machinery etc. from abroad has not been decided in advance, to judge by the request for information as to private requirements. The two years of official consultations have produced less than originally presumed not only on account of the deadlock but on account of accumulating administrative problems. The cardinal point is not the assimilation of Indian to British practice because the investigations of Commissions on the use of land, regional distribution of industry etc. in Britain, have led to little. But the political parties have programmes and the Tories are as definite today about what is wanted as the Labourites. Here the major parties are unable to make any contribution and such non-officials as are associated with the departmental committees can hardly lay down rules as to reorganisation or development of industries like coal mining. For the Army there construction plans are obviously demobilisation plans for civilian industry it is a question primarily of contingent expansion. As for agriculture the problem is more related to the famine than to anything else and price stabilisation, crop-planning etc., fall into the second place as compared with irrigation and the manufacture of fertilisers. A unitary department and if need be discussions of its plans by the legislature instead of by an assortment of committees appears more appropriate in the light of India's changing needs. What was dominant in 1941 was the war supply problem; today it is the change-over to peace and the major consideration may not be the adjustment to international requirements but one of creating the conditions of progress at home. The essential condition may not be agreement as to means but as to objectives and the readiness to accept the British lead in such matters as civil aviation or shipping may excite profound suspicion of the policy pursued. The Provinces are building up funds ahead of reconstruction demands, but a strong Resources Committee for the whole of India to lay down the tax programme may be as necessary as an outline of the requirements of industry and trade. What is to be the post-war burden on industry and why must it be settled before the growth of investment will favour the development of enterprise.

The Village Ghani

The oilseeds resources of India are great. As agricultural products, as export staples, as raw materials for a wide variety of manufactures, and as articles of food for men and cattle the position of oilseeds in Indian economy is indeed unique. While the problem of proper utilisation of oilseeds may be viewed from the point of view of the capitalist or the exporter the real need to evolve a scheme of conserving oilseeds for a rural development has not received the attention it deserves. This is an age of mills, and mass production; and while price factor and the dividends attract the attention of the entrepreneurs the national and social aspect economic enterprises are often neglected. While it can be easily conceded that no one can possibly arrest the sweep of industrialisation with all its paraphernalia of factories, mass production and labour saving devices there is no reason why a systematic attempt should not be made to resuscitate the small industries and village handicrafts, if they are found efficient in production and specially suited to local needs which cannot be met by large-scale factory production. In his book on "Oil Extraction" (A.I.V.I.A. Wardha. Third Edition. Rs. 1-8) Mr. Jhaverbhai Patel presents a convincing case for Government aid to the lakhs of village ghanis. He has studied the technical. economic and social aspects of this village oil pressing industry in all details in several parts of India and demonstrates that the village industries generally, and oil crushing in particular, have been languishing not because they are not efficient compared to the mills but because they lack systematic research, direction and organisation. He calculates the crushing cost per ton of oil (groundnut, gingelly, linseed and castor) in the ghani and the mill and shows that the mill is not far superior in the matter of price. If greater productivity is the strong point of the mill the absence of expense on transport, commission, advertisement, etc. go a long way in adding to the competitive power of the village oil crusher.

On close examination it is seen that the general opinion that the village industries cannot be saved in their competition against the mills is based on erroneous presumptions. The handicaps of the ghani industry are (1) lack of capital for stocking oilseeds, (2) difficulty in disposal of oilcake, (3) inefficiency of the present ghanis, (4) lack of side industries and (5) loss of oilman's prestige for genuine oil. All of these are avoidable. Mr. Patel has given full particulars regarding the construction of ghanis in the different provinces, points out the merits and defects of each type and suggests improvement. The use of vegetable oil for illumination is now engaging the attention of many who are denied free supply of Kerosene. The construction of "Magan Dipa," a lamp which burns on vegetable oil, is detailed in this book and the author claims that if vegetable oils are properly utilised for illumination India can save crores of Rupees now spent over imported mineral oils, give employment to 1,00,000 ghanis, families and bullocks. The establishment of an Association of Oilmen of India is recommended as co-ordinating agency to tackle the problems of village ghanis. For those who are interested in further investigation into the requirements of oilcrushing industry an exhaustive questionnaire has been appended. The book presents useful information for the Provincial Governments who may take up the work of organising the village oil-crushing industry. The Co-operative Department whose aim is to eliminate profit motive in society may do well to give attention to the immediate requirements of this vital rural industry. War has afforded a golden opportunity. Prices are favourable, imports absent and the demand insistent. The scarcity of Kerosene, fertilisers, fodder for cattle and foodgrains for population emphasise the need for maximum utilisation of oilseeds and their products. The dying village industry is not economically inefficient and should be restored to its proper place. It only requires some initial help in the matter of organisation. Mr. Patel pleads for dispelling prejudice against the ghani and presents a valuable guide for rural reconstruction.

Changes in Argentina

The revolution of June 5 caused little excitement in Buenos Aires. The trade correspondent of the Indian Central Jute Committee in his account of the drastic change in politics said there was little disturbance. Troops took the capital, and the Administration buildings were occupied. Finding himself almost without support. President Castillo resigned his office; an action automatically carrying with it the resignation of his eight Secretaries of State. A provisional government of ten military and naval officers assumed office and carried on the administration. According to Mr. Jackman national and provincial bonds on the Bolsa de Comercio were unaffected. Argentina's trade relations should have been unchanged. The surplus of exports this year has been larger, while imports have shrunk. Anxiety as to essential imports was in evidence as receipts of rubber, fuels and lubricants are running from 5 to 20 per cent of the pre-war volume. Complaints of shortage were increasing everyday. Local industries have prospered for various reasons. Industrial production in 1935 was valued 3000 million pesos. The value of production in 1942 amounted to 7000 million pesos. Employment had expanded and in 1942 was 24 per cent higher than in 1937. The crop position at the end of the season showed a reduction under maize and linseed. The revised estimates showed no change as to wheat or barley but supplies of oats were smaller, while the potato crop was slightly larger. The current crops were said to be promising. The main change was an increase in wool stocks.

The Argentine problem is not one of surpluses but of shipping and imports. Argentina's main demand is not for markets but for materials. The export crop maize, wheat and linseed are lower compared with 1942 and the effect of the reduction may be limited to railway earnings. The country's financial position strengthened before the revolution but the evidence of inflation was not lacking. The freight shortage was acute up to the summer, and Argentina's bag famine was forcing her to investigate possibilities of bringing jute manufactures directly from Calcutta. No reference has been made to the result of the trade mission since the Foreign Minister resigned. Representations led to the promise of 45,000 tons of jute canvas for Argentine requirements, but the fulfilment of the programme would not lead to adequacy of bags. Argentine ships are not available for the carriage of hessian from Calcutta and investigations (said the June report) were continuing. It is noteworthy that food shortage in India has not been mentioned; though Argentina is a party to the international wheat agreement which is intended to apportion supplies and keep up world prices. The deterioration in U.S. crop prospects for 1943 may provide a market nearer than India for Argentine wheat. The larger Canadian crop may, however, have first claim on the U.S. market and Argentina, still pledged to neutrality, under the Ramirez Government has little chance of obtaining favours in respect of trade. That explains the fact of Plate linseed remaining much cheaper than East Indian linseed at present. Until the policy is modified the Argentine may get no assurance of large supplies. But the increased intake of jute and jute manufactures in 1942 suggests that India has a very definite prospect of Argentine trade revival helping the shipment of jute and hessian.

THE
FOURTH DEFENCE LOAN
1953-1955
3%
now available
The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.
Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

—(As You Like it.)

The Moscow Conference, despite widespread scepticism about its success, bids fair to achieve its main purposes. News reports of crucial diplomatic conferences cannot, as a rule, be taken at their face value—no international conference fails till the moment of its dispersal. But in the case of the Moscow Conference, the very fact that it has met is in itself an assurance of its success. For, the Three-Power Conference had been almost impossible in the first four years of the war. When Anglo-American statesmen and experts met at Quebec, the position of Russia vis-a-vis the Quebec Conference was the subject of serious all-round misconception. Since the absence of M. Stalin was felt to be something calling for explanation, all manner of unconvincing reasons were trotted out, till it was realised that Russo-Japanese relations did not permit of M. Stalin's attendance except at the risk of disturbing them. But the confusion, which existed before the explanation was offered, is an index of the nervousness felt towards questions of consultation with Russia. Indeed, one cannot help recalling that progress towards this conference was not only slow, but hesitant. But it is a mistake to think that the hesitancy is an index of the spirit in which the representatives of the Three Powers go to the conference table. The principal difficulty in the way of the conference is not the reluctance to collaborate, but the complications that still exist in the alignment of the Powers in this world war. Germany has done a great deal to bring all her enemies together. In fact, one may go so far as to say that, if and when world peace is finally established, the future will owe it more to Germany than to any one of the other nations. She has steam-rollered all the small nations and nationalities. She has, to a large extent ironed out the ideological differences among her opponents. She has overpowered the forces of American isolationism and, through her connection with Japan, made the war truly global in range and proportions. But by herself, she cannot complete the solidarity of her enemies. While Japan's neutrality would have detracted from the global character of the present war, her participation in it is such as to stand in the way of the complete unification of the Allied forces. That the Moscow Conference has to be content with the solidarity of the Three Powers as against Germany is a limitation of the strategy of the present war and, as a result, of the developments in world politics which the ultimate victory over the Axis should render possible.

The major fact about the Moscow Conference then is the limitation of its objective to the complete defeat of Germany as early as possible. Unless Russia can be induced to see the advantage to Allied strategy of her declaration of war on Japan, the Moscow Conference will have to work on the basis of peace between the two Asiatic Powers. Efforts are, perhaps, made to bring about such a change in Russian policy. To the lay mind there appears an obvious and attractive simplicity about Russia ranging herself on the side of Britain and the United States against Japan, as much as against Germany. The talk of bases in Russia for air attacks on Japan, which is freely indulged in in America, even induces the belief that the Russo-Japanese war, too, might come about, even like the Russo-German war, in good time. Is Russia only biding her time to strike at Japan as she played for time when she concluded her Pact with Germany on the eve of the present war? It is tempting to think so. But there is hardly any parallelism between the two. Russo-Japanese animosities are nearly as old as the Russo-German. Nevertheless, Russia must have assigned a different place to Japan in her foreign policy. It cannot be forgotten that Matsuoka was almost the only Foreign Minister whom Stalin honoured by seeing him off at the station. Stalin, who had been watching the European conflict for nearly two years, thanks to his pact with Ribbentrop, must have been impressed with the need to insure himself against an attack in the rear such as brought France to her knees. It stands to reason that Russia and Japan must have come to an understanding, the former making provision against her war with Germany and the latter against her war with the U.S.A. and Britain.

* * * *

What exactly was the give-and-take between the two parties, it is difficult to guess. It is difficult to put one's finger to where Russian and Japanese interests converge. Only in the setting of the war, as it has been till now, can it be said that one stood to gain by the other not entering the war against herself. But that setting is rapidly changing. While Japan may still be prepared to give anything to deny the U.S.A. and Britain land bases from which to raid her cities, Russia will soon be in a position, both by reason of

Mr. J. C. CHAKRABORTY

the expulsion of the Germans from her soil and by the increase in the scale of Allied operations in the West, to turn her attention to the other ancient enemy in the East. Some experts have been insisting all along that Russia has not allowed her worst reverses on the western front to tamper with her Far Eastern Army, which she has maintained throughout the war as a totally different unit both as to personnel and as to arsenal and equipment. Russia cannot have ruled out the possibility of a Russo-Japanese war any more than she could have ruled out the war with Germany.

* * * * *

But it goes without saying that it is as part of Russian foreign policy that Stalin would be prepared to consider it. Russia has shown a decided aversion to bringing it, or for the matter of that, any question other than the purely military ones, on to the table of the Three-Power Conference. The crux of the position lies in the fact that the basis of co-operation between Russia on the one hand, and Britain and the U.S.A. on the other, has not been widened beyond co-belligerency against Germany. While in the Far East there are peaceable relations with Japan, in Europe the eternal question of Russia's frontiers and those of the smaller nationalities are still there to disturb the relations between the three Powers. One of the messages on the Moscow Conference made reference to the numerous files taken with him by Mr. Eden, files which are labelled by the names of the countries whose affairs they refer to. But the Russian press made it clear that Russia's frontiers can no more be the subject of discussion than those of either of the other two Powers participating in the Conference. Britain herself has laid the ban on undertakings with European governments which are not on the soil of the countries they purport to govern. But with the small nationalities naturally anxious about their future and with the background of democratic antipathy to the communist State, it has been extremely difficult to strengthen or widen the basis of co-operation among the three great Allied Powers. The Moscow Conference itself was probably rendered possible by prior agreement on the restriction of its scope.

* * * * *

But it is by no means unlikely that actual discussion has facilitated mutual understanding and a wider basis of co-operation. If discussions in America are a clue to the eagerness of Britain and America to secure Russia's assistance in the war against Japan, then the discussions are bound to lead to the three Foreign Ministers' roaming over a wider field than was at first contemplated. It is well known that on Russia's side, her major interest is the opening of a second front. Presumably, the war in Italy does not rank in Russia's eyes as a Second Front. It is said that Russia is inclined to define the Second Front as a series of operations on French soil sufficiently big to necessitate the withdrawal of 80 or so divisions from the Russian front. That the Allies are now differently placed in relation to a second front, there can be no question. Resources in men and material are more than adequate. The revival of the submarine menace in a more formidable form than in the past is the only adverse circumstance calling for serious consideration. But the certainty of its being overcome before long entitles Russia, no less than Britain and the U.S.A. to ignore it.

* * * * *

America's need for air bases against Japan and Russia's need for a second front—do they represent the possibility of a deal of momentous importance both to the war and the post-war periods? It is not correct to present the question in these terms. For the second front against Germany in the west is not a matter for bargaining. The Allies owe it to themselves as much as to Russia to open the second front as soon, and on as large a scale as possible. But the practical aspects of the second front are facilitated if America is enabled to bring heavier air attacks to bear on Japan. While Russia is, no doubt, at peace with Japan, the Anglo-Saxon powers cannot afford to bifurcate the present war. The Axis is one in their eyes. The tempo of the war in Europe cannot be accelerated without regard to the war in Asia. The war may be said, to that extent, to hinge on Russia's relations with Japan. To simplify the alignment of the Powers in the present war is to simplify its strategy and to ensure its speedier end. And what is even more important, it will mean closer collaboration between the three great Powers not only in the conduct tof the war, but also in the reconstruction of the world order after the peace.

* * * * *

Obviously, the two are closely linked together. Russia will have to have some idea of the latter to be able to accept the former. Russian friendship with Japan, doubtless, a military expedient for Russia in the first two years of her war with Germany, when her own resources and the effectiveness of British and American help could not be relied on, is motivated by considerations of future balance of power. It stands to commonsense that Russia cannot contemplate the Pacific as an American lake in the same way she can accept Anglo-American supremacy in the Atlantic. Her relations with the English-speaking peoples before the war do not warrant an attitude of indifference to the Asiatic power that lies between America and her Pacific sea-board. While in the west, the disappearance of Germany as a first rate military power can only increase her security, the same cannot be said of Japan, though a great weakening of the island Empire in the East is for Russia something to be thankful for. For Russia to have the same attitude to Japan as to Germany, she will need to know more of the post-war settlement and the principles and methods of post-war reconstruction in the Pacific and in Asia as a whole. She will need to be assured that the embers of capitalist antipathy to the Communist State have died out altogether and will not be fanned again, when conditions are propitious for an attack on Russia. These possibilities cannot be eradicated from the Russian mind, unless the three powers can have very close and definite understanding on the nature of the world order in the post-war period. In the matter of crushing Nazism in Europe, Russia had no choice. She had to do it, the only alternative lay in being crushed by it. Russia is very near to having accomplished that task. She is at the point at which she can single-handed, achieve the security of her territory from German attack. Indeed, it has been said that the scale of the attack in recent times and the amount and quality of material thrown in have been such, that the tanks and other equipment sent to Russia by the U.S.A. and Britain look like coals taken to Newcastle.

* * * *

It is in this position that the three Powers must attempt to come closer together. Though the purpose of the Moscow conference is limited to military objectives, no opportunity should be missed for widening its scope or enhancing its influence on the course of history in the future. The ghost of ideological differences, long dead, should be exercised. Territorial ambitions, obsession with balance of power, a sneaking fondness for supremacy, political or economic, instead of a passion for a genuine world order, all the old modes of thought that made the last war a purposeless massacre instead of the crusade it could have been and even now threaten this war with a similar fate, should be abandoned when complete victory over the evil powers is only waiting to be grasped by hands, at once, clean and eager. Will the Moscow Conference be the harbinger of world peace or just a glorified general staff, so far as the war against Germany is concerned? One has still to be content with asking the question.

THE GOVERNMENT OF INDIA, DEPARTMENT OF SUPPLY

(Munitions Production Branch)

The Combined Raw Mterials Board of the United Nations decided last year that no allocations of alloys would be made to a country if its existing stocks of alloys, public or private, exceeded a year's requirements. In view of this decision and of the fact that essential consumers experienced difficulties in obtaining supplies of ferro-alloys, it became necessary for the Government of India to devise means to ensure that such stocks of ferro-alloys as exist in the country are used to the best advantage. Accordingly, the Government of India decided that a statutory control over the ferro-alloys was called for in order to ensure supplies to essential consumers. They have accordingly issued the Ferro-Alloys Control Order, 1943, which has been published in Part I of the Gazette of India dated October 9th, 1943. According to Clauses 3 & 4 of this Order the substances mentioned below cannot, except with the written authority of the Controller, be used, disposed of, or acquired by any person:—.

Ferro-silicon.
Silico-manganese.
Ferro-manganese.
Ferro-chrome.
Ferro-molybdenum.
Ferro-tungsten.
Ferro-vanadium.
Ferro-phosphorus.
Ferro-titanum.
Calcium-silicide.
Cobalt.
Nickel, including all forms of nickel such as non-ferrous scrap, clippings, foil, shot, pellets, anodes and electrolytic slabs and all alloys of nickel in which nickel is the major constituent by weight.

Ferrous Scrap containing more than—

0.50% Nickel, or
0.20% Molybdenum or
1.00% Tungsten or
0.20% Vanadium or
1.00% Cobalt.

2. It will be noted that Nickel which is included in the Non-Ferrous Metals Control Order, 1942, has now been brought under the above Order. A notification has been issued deleting all references to Nickel from the Non-Ferrous Metals Control Order, 1942.

3. The Director General of Munitions Production has authorised the Chief Metallurgist, Directorate General, Munitions Production, Esplanade Mansions, Calcutta, to perform the duties assigned by that Order to the Controller.

S. A. VENKATARAMAN,
Jt. Secretary to the Govt. of India.

Capital for China

The Kuomintang Congress last month at the 11th plenary session held in Chungking was told by Marshal Chiang that the economic crisis was over and the outlook called for optimism. Marshal Chiang referred to the bounteous harvest in Free China. According to the President, there is no fear of shortage. Production of Western cotton has increased. Foreign aid has mitigated anxiety over inflation. The U.S.A. gave $200 million as a loan to check inflation. Marshal Chiang's remarks on post-war planning, in line with Dr. Sun's programme demanding foreign investment and technical assistance, influenced the adoption of a resolution abolishing restrictions on foreign investments. The party Congress which is also China's national legislature accepted a resolution which declared that the industrial programme of the Founder must be carried out. It recalled that international co-operation is postulated and provision for the realisation of the programme should not be delayed, now that victory is in sight. The resolution offered Chinese co-operation. It also prescribed that all restrictions applying to Chinese-Foreign joint enterprise shall be revised. According to the resolution (published in the China information bulletin) no fixed restriction shall hereafter be placed on the ratio of foreign capital invested in joint enterprise. In the organisation of a joint enterprise except for the Chairman of the Board the general manager need not necessarily be a Chinese. The foregoing terms of co-operation shall become effective after an agreement by the parties concerned has been reached and the approval of the Government secured. At the same time, aliens in accordance with the provisions of Chinese laws and regulations and having received the sanction of the Chinese Government, may finance their own enterprises in China. The party congress went on record as to lending and loans. Negotiations for foreign loans for State enterprise shall be centralised. Private individuals may negotiate foreign loans for their enterprise, and such loan agreements shall become effective following the approval of the Government. The Government shall determine at an early date which categories of State enterprise may accept foreign investment and which categories may seek foreign loans.

The Chungking conference's decision may well suggest that Chinese enterprise may seek access to one or more markets abroad in the immediate future for capital but all markets are subject to restrictions and the invitation to foreign capital may call for notice only on the part of the allied governments which have not reached any agreement as to international reconstruction or the appropriate financial agreements. It is certainly not surprising to

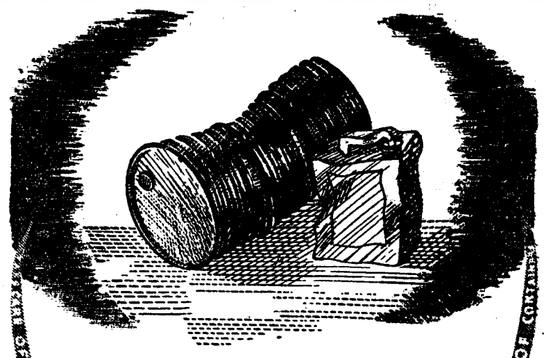
YODHRAJ, *General Manager.*

South India

(From Our Correspondent)

Madras, Oct. 25, 1943.



The success of the food control policy adopted in Madras has been recognised in North India. Though a deficit province the price of rice in this province is as low as anywhere else in India and at the same time the claims of landowners have been fully satisfied. Mr. S. V. Ramamurthi in the course of a talk with the representatives of the press gave an account of the All-India Food Conference held at New Delhi and said that the Government of India had agreed to the continuance of the present arrangements working in this province. Methods of requisitioning, rationing and price control applied in Madras were explained by him at the Delhi Conference. Requisitioning has been applied here in three ways-in surplus districts, rice has been purchased for exports at ceiling prices; in moderately deficit districts the local prices of rice have been kept at the same level as the export prices in the surplus districts and in those district where deficit is very severe a policy of spreading the stocks evenly has been adopted. Requisitioning should be resorted to only to the minimum extent possible and any extention of the system should be based on systematic planning. In order to enlist the full co-operation of the landowners slightly higher prices than those paid for requisitioned stocks are allowed for voluntary sales of rice. Rationing is working well in Madras and is intended to assure for the citizens adequate quantity and uniform quality. In this matter of price control the Adviser has told the Government of India that the system of ceiling prices adopted here is working to the satisfaction of producers and consumers alike and that it should not be replaced by any new device the utility of which has not yet been experimented upon and proved. Madras liked to retain status quo in this vital aspect of food policy and the Government of India have agreed to allow Madras, C. P. and U. P. to continue the ceiling price system.

Transport of oilseeds (groundnut, gingelly, castor, cotton, coconut and any other that may be specified) from this province has been prohibited except under permits issued by the Commissioner of Civil Supplies. Orders have also been passed prohibiting the export of groundnut cake from South Arcot district and bananas or yams from British Cochin. Permission has been sought by some landowners for transporting rice to relieve the Bengal destitutes but the Government refused to allow export of rice on the ground that there are famine areas even in Madras and that since largescale consignments of foodgrains are being sent to Bengal from the Punjab and other North Indian provinces the best way of giving charity is in the form of money.

The indiscriminate slaughter of cattle has been the subject of criticism all over India and the commercial bodies have even addressed the Government on the injurious effects of cattle slaughter on village economy. Cattle form the chief capital of the cultivator and agricultural operations in this country depend for their success the breeding of strong and healthy cattle. For any extension of cultivation, so loudly urged by the Grow More champions, and for proper and adequate distribution of milk to the underfed millions in this country, the right course should be, not indiscriminate slaughter of cattle, but a well planned scheme of conserving the cattle wealth of rural areas. The presence of large armies in India at present has encouraged cattle slaughter at the expense of the real interests of the villager. Authorities have not yet come forward to allay the public fears as to the extent of cattle slaughter going on in India now. It is refreshing to see that the Government of Mysore have quickly realised the importance of the issue. They have decided to issue orders 'prohibiting slaughter and purchase, sale or transport for purposes of slaughter, of healthy bullocks below the age of 10 years, and of heifers, cows in milk, pregnant cows and of cows of calf-bearing age.' Mr. N. Madhava Rao, Dewan of Mysore, who has the interests of Mysore agriculture in his heart, has done well in passing orders for stopping indiscriminate slaughter and deserves the gratitude of the Mysorean cultivators. He has set an example for the other States and Indian Provinces to follow.

Orissa is passing through an acute food crisis. Though a deficit province Orissa is made to export foodstuffs to other areas ravaged by famines. At the recent Ganjam District Food Conference held under the presidency of the Raja of Kallikote, Leader of the Opposition in the Orissa Assembly, resolutions were passed condemning the Government's policy of allowing exports while the people of Orissa died for want of foodgrains. Opinion was expressed that the Premier's assurances in connection with the export of 4 lakhs maunds of rice were totally unsatisfactory and that since the present Ministry failed to discharge its duties to the people of Orissa the Governor must assume responsibility and make immediate arrangements for the satisfactory solution of the food problem. The Raja of Kallikote said that 'sympathy that does not extent to ones own home is not sympathy but vanity' and declared his conviction that Orissa is as much in need of help as

(*Continued on page 806*)

Death

BY CARELESSNESS ...

In peace time, containers for petroleum products could be replaced as the necessity arose. The steel required for their manufacture was readily obtainable. Today steel is required for so very many vital weapons of war that containers cannot be readily replaced and it is therefore of the greatest importance that they should be handled with care.

Many containers are returned to us in very bad condition: they are badly dented or show obvious signs of very rough handling. Many of these barrels, drums or cans are so badly damaged that they cannot be used again. Much of such damage is avoidable, and that it should be avoided is today an urgent war necessity.

Containers are scarce

BCCB 50

A BURMAH-SHELL ANNOUNCEMENT

Resume of Commodity Markets

The big increase in the area under rice, according to the first All-India Rice Forecast, the extension of the time limit to dispose of unstamped piecegoods till the end of the year and the decision to fix no quota for jute acreage next season are some of the important developments of the week.

As for markets, the jute market has been listless and prices have continued to move downward. Owing to the scarcity of imports into the mofussil centres and the lesser pressure for selling from holders, mills are reported to have purchased small quantities of loose jute. As was pointed out last week, the future outlook is as confused as ever. It is not possible to estimate mill consumption for the whole season with the uncertainty regarding hours of working. As far as it is possible to make a rough estimate mill consumption may not exceed 40 to 45 lakhs bales and exports 10 lakhs bales. There will thus be a heavy surplus of the current season's crop and it should be ensured that the anticipation regarding a larger carryover from the current season does not have an undue depressing effect on prices. Even at the time the maximum prices for jute were fixed, there was considerable objection on the ground that no minimum prices had been fixed and that the maximum prices fixed were not in relation to the maximum prices for jute manufactures.

* * * *

At the meeting of the Provincial Committee of Agriculture held this week naturally no decision could be taken regarding the size of the crop for the next season. With conditions as they are it would perhaps prove to be of the greatest advantage if efforts were made to increase the area under foodgrains as far as possible.

* * * *

The East India Cotton Association has been successful in its representation to the Government of India that the suspension of futures trading in cotton was not in the interests of the cottongrowers and that with the difficulties in marketing the crop and the short time at the disposal of the ryot, the maximum benefit could not be derived. It will be remembered that two resolutions were passed by the Indian Cotton Central Committee at its recent meetings urging the resumption of futures trading in cotton. It has now been announced that futures trading will be resumed in the East India Cotton Association only and that the statutory maximum price for Jharilla cotton has been fixed at Rs. 550 per candy. The minimum price is Rs. 400. Fluctuations will thus be confined to these limits. It is pointed out that the resumption of future trading has been decided upon as an experimental measure and that business in futures will be subject to certain restrictions.

* * * *

The announcement by the Government of India regarding the disposal of stocks manufactured prior to August 1, that retail sale of unstamped cloth could be completed before the end of the year, had to be made before the end of October as it had been at first announced that all stocks had to be cleared by the end of this month. The extension of the time limit has perhaps been advantageous to many, for, on the eve of Diwali there was no need for forced selling and holders were in a position to ask for maximum prices. Even though in the Calcutta market, owing to the special circumstances of the case, it was expected that there would be an extension of the time limit, the general extension has had a stimulating effect on prices.

It is pointed out that the general extension of the time limit had to be granted in order to prevent the coming into being of black markets. Large hoarded stocks have been found, 2,700 million yards of cloth and 215 million lbs. of yarn, representing eight months' mill production. If this large stock had to be marketed in the short space of three months most of the quantity would be driven underground. It is also said that the reasons which existed before and which induced people so inclined to hoard cloth and yarn no longer obtain.

Effective steps have been taken to increase the production of cloth, the prices of cloth have been definitely brought under control and their movement will tend to be downwards and not upwards. The production and distribution of large quantities of standard cloth have already had a salutory effect on the general price levels of cloth, keeping these well below the ceilings fixed by the Government; its continued production is calculated to have the further effect of increasing substantially the total output of cloth.

* * * *

According to the All-India Forecast, the area under rice cultivation in 1942-43 has increased from 67,555,000 acres to 71,774,000 acres. Thus, 4,220,000 more acres of land are under cultivation forming a six per cent increase. The condition of the crop is reported to be good on the whole.

* * * *

The Second Sugarcane Forecast also indicates an increase in acreage in 1943-44 of 7 per cent over that for 1942-43. The 1943-44 acreage is estimated at 3,938,000 against 3,676,000 in the previous year. The condition of the crop is reported to be good on the whole.

Young Men of Steel

"In the lexicon of youth, which fate reserves for a bright manhood, there is no such word as *'fail'* "

(Macaulay)

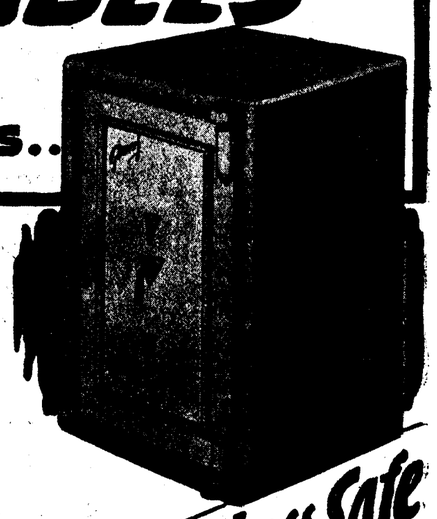
Youth, ambition and opportunity will bring their own reward to "Men of Steel".

Fortunate, indeed, the young man who is secure of his future in the industrial development of India, at the threshold of his life.

TATA STEEL

ISSUED BY THE TATA IRON & STEEL CO., LTD. HEAD SALES OFFICE—108A, CLIVE STREET, CALCUTTA

(Continued from page 801)



find the open invitation to foreign capital within one year after the abolition of extra-territoriality by agreement in advance of the usual trade treaty proposed. China's foreign obligations in recent months have not increased, but to attract outside capital may not be easy when lease-lend by itself is expected to remove all difficulties for the recipient of assistance. The resolution is interesting as affording an indication of the death of all anti-foreign feeling in China. Over fifteen years ago the Kuomintang in its campaign for unity made no bones about its ill-will to foreign capital in China. It has beaten a long and complete retreat, to judge by the resolution adopted last month.

Hyderabad's Land Revenue

In the time of Sir Salar Jung, the land revenue system of Hyderabad took a shape similar to that adopted in the Bombay Deccan. In Fasli 1263 Sir Salar Jung introduced the survey and settlement procedure but the final decision was reached in Fasli 1285 when the ryotwari system of direct assessment graduated according to fertility was adopted. The report of Goldsmid, Wingate and Davidson became the ground-work of the State's land revenue system. Tax-farming was done away with, light assessments and no innovations were the rule. The Hyderabad system provides for other tenures beside ryotwari but the estates are few and big landlords are not many. The contract is not with the cultivator, since the State owns the land, but the cultivator is more than a tenant as the State's claim is limited to land revenue. The survey and settlement is the prerequisite of collection and Hyderabad has taken over the British Indian system in its entirety. The Survey Department has regularised revenue administration and assessment is based on the outturn and other factors. The Settlement Department duly classifies and measures each field. All land is surveyed and climate, irrigation and other factors taken into consideration. The original settlement has been followed by a revision. The majority of Taluqs have undergone revised settlements as the system now is more than 30 years old. New assessment follows revision which is meant to keep track of economic changes.

PROTECT YOUR VALUABLES against fire, burglary, riots..

FOR adequate protection to your valuables you need a Safe skilfully designed and strongly constructed with efficient modern methods. Poorly designed, crudely manufactured safes by small, ill-equipped work-shops, depending on hand tools, give no protection at all. Hundreds of such safes are ripped open by hooligans during riots, or their contents reduced to ashes by fire.

For safety and security use Godrej Safes only. Godrej have almost *half a century's unique record* in providing protection against Fire and Burglars.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 27th October, 1943.

COAL, or rather the lack of it, continues to dominate the situation. Arrivals have perhaps been a trifle better in quantity, though not always in quality, but the total still falls far short of what is required to keep mills employed up to the schedule laid down to meet the restricted transport position. And the irregularity of arrivals, varying from perhaps 90 wagons per day to nothing at all, renders it quite impossible for mills to anticipate with any confidence for how long they can keep their machinery moving. The position as regards transport ought to be improving, but it is reported that the problem of raisings in the coalfields is complicating matters. Much colliery labour it is believed has been attracted away to other Government construction work, resulting in a shortage of labour in the mines, and while this may be expected to adjust itself as the construction work referred to is completed, the total solution of the coal shortage is not even then in sight. It has been noted in the public press that a shortage of 10 million tons of coal is anticipated in U.S.A. production this year, while it is also well known that the U.K. is on short rations as a result of production being under war requirements. Apparently the Allies are now looking to India and South Africa to take their part in supplying the Mediterranean zone, and it is believed that the Indian Government has already been called upon to make shipments in that direction. Italy has been drawing all her coal supplies from Germany during the war and of course these supplies are now cut off so far as that part of the country occupied by the Allies is concerned. Presumably it is considered necessary to import coal for essential services, if not for industries which it may be desired to keep going, and it is towards such supplies that India is expected to contribute. The problem is not therefore altogether a local one. Of course in normal times India was a considerable exporter of coal, but with increased demand for essential war industries as well as disturbing factors on the production side, this renewed demand for export may result in the internal supply situation continuing acute even after other conditions may appear to have reverted to normal.

Doubtless the Jute Mills' point of view will have again been strongly pressed by the Chairman of the Association, who has been on one of his periodical visits to Delhi.

Another point which it is hoped the Chairman may have pressed upon the authorities of the Central Government is the desirability of promptly scotching the attempted reopening of Fatka markets in Calcutta. The Central Government has laid down the law in no uncertain fashion with regard to Cotton Futures transactions, Stock Exchange and Bullion forward contracts and so on, in a laudible endeavour to restrain speculation. So it will be surprising if they do not take similar steps when the attempted reintroduction of Fatka markets in Jute is brought to their notice. The menace which these markets threaten is even more serious than in the past. Then the transactions were confined to Pucca Bales. Now there is an embryo Loose Jute Fatka operating. This perhaps has brought joy to the heart of the Special Officer, Jute, attached to the Bengal Government, for it is well known that he considers Loose Jute the ideal medium for a Futures market in the trade, and covered many reams of paper some years ago in support of his advocacy. If such a market were established under proper control and supervision, there may, in theory, be something to be said in its favour. But the present organisation appears to have been floated under the same aegis as used to run the Pucca Bale Fatka, but without any Board of Control to exercise even a semblance of supervision over it. It is notorious that the old Pucca Bale Fatka was closed down in circumstances which reflected very little credit on any of those concerned. It may be contended that its operations got out of hand due to the departure of most, if not all, of the Directors to safer climes when Calcutta was getting uncomfortably close to the danger zone. However that may be, there is no shadow of doubt that the elimination of Fatka from the immediate scheme of things was hailed with undisguised relief by all responsible sections of the Jute industry. Since its inglorious demise, the industry has passed through many vicissitudes which would undoubtedly have been rendered much more acute had Fatka been in existence and functioning. The opinion almost universally held is that it has been an undisguised blessing that no Fatka has been in existence during the past 18 months or so. Nor is there any desire amongst such responsible sections that Fatka should be resuscitated in any shape or form. Recent experience has proved that the trade can get on very much better without any such extraneous disturbing factor. For that it was a disturbing factor there can be no gainsaying. Market movements which, when confined to genuine trading interests were comparatively smooth and non-upsetting, were invariably hugely exaggerated by the violent fluctuations which they set up in the volatile and irresponsible Fatka circles, the vast majority of whom were speculators pure and simple, with no substantial stake in the trade whatever. An additional danger at the present time is that, with a damper put on speculation in all other markets, if the Jute Fatkas are permitted to function, they will immediately attract the gambling elements from other parts of India. For a time Bombay took no inconsiderable interest in the Calcutta Jute Fatka. We can visualise a repetition of this in intensified form under present conditions, with strict limitations placed upon their operations in their home markets. The Jute Fatka would very likely and very rapidly become the cockpit of the whole of India, with nothing but disastrous results to the genuine responsible trading elements here. So far the evil has not reached important dimensions but it is a fungoid growth which may easily get out of hand if not promptly tackled. So it is hoped that decisive steps will be taken to scotch it at its inception, and all responsible interests in the trade should be on the alert to see that this is done, and without delay.

It will be remembered that it was decided at the beginning of the jute season that no transactions in "X" mark should be permitted until such time as they were sanctioned by the Jute Mills Association. Genuine "X", consisting of tangled jute produced in the process of assortment, should at any time only represent a very small percentage of a dealers turn-over. And the guarantee placed on the "Bottom" grade is sufficiently low to cover practically all low quality jute with the exception of habi-jabi. The season being now 4 months old, the Standards Sub-committee have decided that dealers should now be given the opportunity of getting rid of any accumulation of "throw-out" from Bottoms. Trade interests have been circulated with their suggestions, which are to the effect that "X" mark should not be sold alone as a separate mark, but that sellers should be permitted to tender against contracts for Bottoms entered into after 15th November, 7% per cent of "X", either tangled or straight, at the same price

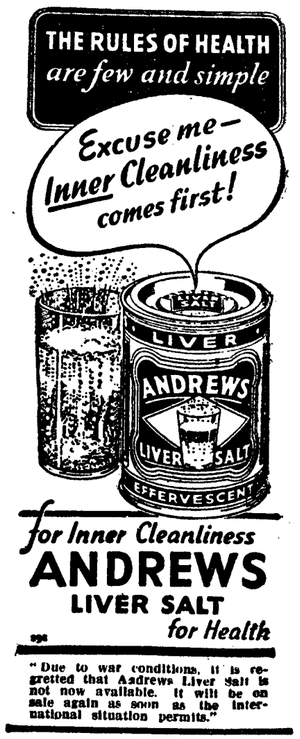
as the Bottoms. Whether these proposals will meet with universal approval (few proposals, particularly in the Jute trade, ever do) remains to be seen, as the question is still in circulation. The suggestions would seem to favour Sellers rather than Buyers, but presumably there is some reluctance to sanction the introduction of anything which might bear the semblance of a lower mark at a lower price in circumstances which might render it a political club with which to beat the European exploiter of the unfortunate cultivator!

The Jute Export market has not been active, though the tone shows some firmness. Sales have been confined to Dundee Daisee at Rs. 67 and Rs. 67-8 and Dundee Tossa 4s at Rs. 69 and Rs. 70. During September, 76,198 bales were exported as against 95,718 B/s last September. Total exports for the season, July to September, show a sharp falling off at 1,89,524 B/s this year compared with 2,99,932 B/s in 1942 and 3,42,294 B/s in 1941. Mills have bought a moderate quantity of pucca bales, Firsts at Rs. 71-8 and Rs. 72, Lightnings at Rs. 66 and Rs. 65-8, Daisee at Rs. 67-8, Tossa 4s at Rs. 70, N.C. at Rs. 30-8 and M.C. at Rs. 29-8.



In Loose Jute the turnover has been light and the interest shown has been by no means general. Mills have bought European assortment at Rs. 15 and Rs. 12 for Mids and Bots, while for Indian Jat Rs. 11-8 basis Bots was paid and subsequently business was done at four annas less. At the close sellers are less inclined to trade owing to upcountry markets showing signs of firming up. Balers have shown a steady interest in Tossa qualities at Rs. 15 to Rs. 15-4 for Indian District and at Rs. 15-12 to Rs. 16 for Jat.

The Fabrics section is at a dealock. There is quite good enquiry from abroad but Mills are unable to meet it on account of the uncertainty of the coal position. This confines business to the Bazar where all descriptions have already reached maximum prices, and while some Hessian may be purchasable from the Bazar at these rates, they are not parting with their holdings of Heavy Goods even at the ceiling prices. The position is anomalous, as Mills are more or less beholden to supply the market requirements at the maximum rates but are definitely not in a position to do so in present circumstances. About the only genuine Mill sale reported is of Woolpacks at Rs. 3-6 for various shipment dates between January and September. Other quotations are nominal at ceiling rates.

(*Continued from page* 802)

Bengal. The food problem in Orissa threatens to have political repercussions as there is a move to prevail upon the M.L.A.'s to withdraw support to the present ministry.

The sathgudi (sweet orange) industry has been rapidly growing in several parts of South India in the past two years and the progress is particularly noteworthy in the Cuddapah District. There are 4,000 acres under sathgudi in this district alone. The unplanned hurry in the extension of sathgudi cultivation seems to have depressed the price and created additional difficulties in marketing. The need for extending markets, arranging regular flow of fruits to selected market centres and creating an agency to grade the fruits to satisfy the consumping public has been keenly felt. Orange grading machines were introduced to grade the fruits according to size. In an article on 'Grading of sathgudi oranges" in the May issue of "Indian Farming," Mr. K. C. Naik and Mr. S. Sugurappa have suggested new grading standards based on data collected from experiments carried on with different size samples. The importance of grading fruits according to size, quality etc., cannot be overestimated. In the post-war years the competition of citrus fruits is bound to be severe and unless the quality is related to the price quotation the consumers would be reluctant to purchase. Those who are interested in bringing South Indian's orange industry into line with those of western countries would do well to organise the grading and marketing of oranges before the war is over.

JUTE

Wednesday, Oct. 27.

QUIET conditions have continued to prevail in the raw jute market in the past few days but in the latter half of the period under review a larger volume of business has been passing though no improvement in prices is to be recorded. The resumption of buying by mills is perhaps due to the feeling that a sizeable decline in prices has been recorded in the last few weeks and that it would not be advisable to allow prices to go down further if Government intervention is to be avoided. Reports also have been received to the effect that larger supplies of coal would be forthcoming in the next week and that mill production might not be badly affected. The general outlook, however, is as confused as ever and there is no tendency to enter into large forward commitments though even at the present moment sellers are not prepared to enter into contracts for forward deliveries except at a slight premium.

In the loose jute section, business passing has been on a fairly large scale. In the last three days balers have been interested in Tossa varieties only. There has not been much buying of white jute. Mills are reported to have bought Indian Jat Middles and Bottoms at Rs. 14-4 and Rs. 11-4 per md.

In the pucca bales section, shippers were rather uninterested in the earlier days of the period under review but later some business has been done. Dundee Daisee 2/3 were done at Rs. 67-8 per bale and Dundee Tossa 4's at Rs. 70-4 per bale with buyers over. A premium of Rs. 2 per bale was demanded for December delivery for Dundee Daisee 2/3. Earlier in the week, mills bought First ready 2/3 at Rs. 71-8 ber bale.

JUTE MANUFACTURES

Wednesday, October 27.

The jute manufactures market has been absolutely uninteresting and only a small amount of business has been reported between interbazar dealers. Outside business has not been very large and operators seem to be awaiting further developments. There appears to be some shortage of 9 porters stock and the quotation is higher than the maxima fixed by the Indian Jute Mills Association, 9 porters for all positions being quoted Rs. 21-10. 11 porters were Rs. 28-8 for all positions. It is pointed out that the recent decrease in exports has been due to the poorer production. Exports will again be on a large scale when the position improves. As with the present conditions it is not possible to make up lost production there is every chance of bazar stocks being marketed at higher levels. Sellers are, therefore, reserved.

In the Heavy Goods section, holders are very reserved and are not prepared to part with their goods except at a premium. Mills are not sellers and quotations are nominally around maximum rates. B. twills sold on the basis of Rs. 67-12 for October delivery. Liverpool twills Rs. 75 and Cornsacks Rs. 67-12.

GOLD

Calcutta, October 27.

THE bullion market was active in the early part of the week and a quotation as high as Rs. 84-12 was touched in the Bombay gold market. On reports that the Reserve Bank was a seller for larger quantities of gold a decline in the quotation to Rs. 81-14 was recorded with speculative selling and profit-taking. But the discontinuance of sales on a large scale has resulted in an improvement in prices. The closing quotations are higher than the lowest levels for the week. Gold ready closed at Rs. 82-8 and forward at Rs. 82-7. Sovereigns are quoted Rs. 55-12 against Rs. 57-12.

SILVER

Calcutta, October 27.

SIMILAR conditions have been noticeable in the silver market. From a quotation of Rs. 129-12 earlier in the week there was a decline to Rs. 126-8. The close is again higher at Rs. 127-8. The Spot position is tight. In spite of the decline in prices that has been recorded in the week there has been an appreciation in the premium for ready delivery over forward from annas 12 to Rs. 1-2 per 100 tolas.

In the Calcutta market, silver quoted Rs. 125-8.

There has been no change in the conditions in the London market, the quotation for both Spot and Forward remaining unchanged at 23½d.

PIECEGOODS

Wednesday Ocober 27.

FOLLOWING the representations made by the Bengal Piecegoods Dealers' Association and other prominent associations in India, it has been announced that unmarked piecegoods can be disposed of before December 31, 1943 instead of October-end. The extension of the time limit has been afforded as it was found that it was in the interest of the industry and trade to prevent distress sales. As a sizeable decline in prices has been effected, it would be advisable to dispose of unmarked goods through the trade itself. This position has naturally had an encouraging effect on the market and on the eve of the Diwali holidays there has been a good rise in prices. It is only to be hoped that the authorities will take the necessary measures under the Cloth and Yarn Control Order and the Bengal Order that was passed recently and penalise sales above ceiling prices.

The advent of the cold weather has brought good enquiry for winter styles but with the dwindling volume of stocks and the disproportionate demand, fancy prices are being asked for.

TEA

Calcutta, October 27.

AT the auctions of tea held for consumption in India the market was irregular for broken teas though no important change in prices has been recorded. Leaf teas were dearer while Fannings were the favourites with an advance in prices by 6 pies per lb. The limited offering of Green tea encountered good demand. Clean common broken pekoe Souchong were quoted at 7 annas 3 pies per lb.

Stock Markets to-day and to-morrow:

GENERAL RISE IN PRICES

THE Calcutta Stock Exchange experienced a bright spell of activity and in the first four days of the week quite an appreciable rise in prices has been recorded in the Coal, Cotton and Sugar sections. Reports regarding the possibility of an increase in coal exports from this country and the extension of the time limit for the disposal of unstamped goods till the end of the year have been mainly responsible for the spurt in prices this week. Except for the liberal mood of operators, these developments by themselves cannot be held responsible for the substantial improvement in values that have been recorded this week. The prospect of an improvement in coal exports cannot be regarded as an additional bullish factor for the coal industry while the extention of the time limit for the disposal of unstamped goods cannot in any way improve the position of textile mills. The behaviour of the Bombay market during the past few days affords perhaps a more reliable guide. No appreciable rise in prices has been recorded in textile issues in that centre following the amendment to the Cotton Cloth and Yarn Control Order.

* * *

Most of the business passing was mainly on professional account and the long week-end holidays did not produce any selling. The general tone is inclined to be optimistic and further favourable developments may possibly result in higher prices. There is need, however, for the average investor to take into consideration all factors before effecting fresh purchases.

In the Coal section, *Bengal Coal* improved by 30 points to Rs. 530, *Burrakur* by 3 points to Rs. 25-12, *Central Kurkend* two points to Rs. 28-12 and *New Beerbhoom* 2½ points to Rs. 27-8. It will thus be seen that the rise has been fairly well-spread and the strong buying was due to the publication of the report earlier in the week that Indian coal might be needed for the Mediterranean area if raisings could be increased. There is an acute shortage in the U.K. at present and the U.S.A. will have to supply the greater part of the coal needed in the Mediterranean area unless this demand can be met by India and S. Africa. The trouble at the moment is that of producing enough and only recently a conference was held in New Delhi to devise ways and means to increase raisings from the coal mines. There is considerable shortage of labour and internal demand is at such a high level that it would be enough if the industry were able to satisfy Indian consumption. No further bullish factors are needed for the Coal section and the ability of the coal mines to increase their output can be guessed only from the earnings for the next few months.

* * * * *

As for the Cotton section the extension of the time limit for the disposal of unstamped goods to the end of the year cannot constitute in any way a bullish factor as mills have sold their output long ago and it is the bazar that stands to derive the advantage of being able to market the hoarded stocks over a longer period. This extension might probably prove to be a favourable factor to the cotton textile industry in the sense that future deliveries would be effected smoothly and payments therefor assured.

* * *

What is probably a bullish factor for the sugar industry is the increase in the acreage under the sugarcane crop for 1943-44 season. It is estimated that there might be an increase of 7 per cent in the total acreage under the sugarcane crop. It was generally believed that the higher prices for foodgrains might have a detrimental effect on cane cultivation and that mills would experience acute shortage in respect of their supplies of sugarcane. With the easier position in regard to chemical supplies and the prospects of more cane supplies, the sugar industry must certainly do well in the coming season. The Gur Control Order also might help mills in their effort.

* * * *

The accounts of the *Bally Jute Company Limited* for the half-year ended September, 1943 show a substantial decline in the net profit before providing for taxation and depreciation, the figure being Rs. 9,31,591 against Rs. 13,33,040 for the previous six months. The sum set aside to funds is nil against Rs. 25,000 previously while the sum on account of depreciation is Rs. 50,000 (Rs. 1 lakh). Provision for taxation is Rs. 6.6 lakhs (Rs. 9 lakhs). The ordinary dividend is lower at Rs. 8 per share against Rs. 12 per share. The carry forward shows a small decrease to Rs. 71,929 from Rs. 80,337.

The accounts of *Smith Stanistreet & Company Limited* for the year ended June, 1943 make excellent showing there being a jump in earnings from Rs. 1,90,888 for 1941-42 to Rs. 5,51,133 for 1942-43. The Company has recently expanded its activities and has been very successful in marketing its production. Owing to the poor level of earnings for the standard period, however, the bulk of the increase in earnings has been taken up by the larger provision for taxation. The amount set aside to depreciation is Rs. 31,176 against Rs. 33,295 but provision for taxation is as much as Rs. 3,64,628 (Rs. 84,100). The transfer to funds is only Rs. 5,000 (Rs. 15,000). After maintaining the ordinary dividend at 4 annas per share the amount carried forward is higher at Rs. 75,829 against Rs. 41,635 brought in.

* * * * *

The recent improvement in prices for coal has enabled the *Rewa Coalfields Limited* to report a higher level of earnings for the half-year ended June, 1943. In spite of a lower level of raisings and despatches the net profit, before providing for taxation and depreciation, is higher at Rs. 2,45,868 against Rs. 2,28,197 for the previous six months. The amount set aside to depreciation is Rs. 45,310 (Rs. 48,340) while the provision for taxation is substantially higher at Rs. 1,30,000 (Rs. 85,000). The dividend on ordinary shares could be only maintained at 8¾ per cent.

Raisings amounted to 148,688 tons during the half-year against 153,514 tons for the previous six months while despatches were 148,391 tons against 152,247 tons. The proceeds of coal sold, on the other hand, showed an increase from Rs. 7,18,916 to Rs. 7,98,929.

* * * *

The accounts of *North Damuda Coal Company Limited* for the half-year ended July 31, 1943 make satisfactory showing. With an increase in both raisings and despatches it has been possible to pay a higher ordinary dividend, 6¼ per cent for the half-year against 5 per cent on the former occasion.

The net profit before providing for depreciation and taxation for the half-year is Rs. 78,550. After setting aside Rs. 16,999 for depreciation and Rs. 48,784 for taxation the higher dividend of 6¼ per cent on the ordinary shares is to be paid.

Raisings were 58,872 tons against 44,741 tons and despatches 62,453 tons against 48,288 tons.

WATCH DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Oct. 29.

Quite active conditions were noticeable on the Calcutta Stock Exchange during the short period under review; markets remaining closed from Thursday this week to Monday next week on account of *Kali Puja*. The Jute, Cotton and Engineering sections have recorded a substantial rise in prices but there has been no broadening of interest and the improvement in business has been only on account of interbazar operators. The general improved tone of the market is due to the hopes of a large improvement in coal exports and the extension of the time limit for the disposal of unmarked piecegoods. The increase in the area under sugarcane cultivation also was interpreted as a bullish factor for the market. Jute and Engineering shares improved in sympathy with Coal, Cotton and Sugar shares. There was a noticeable reduction in the volume of business on Wednesday with the long week-end but the undertone was steady. It is felt that, with the continuance of the present conditions, the re-opening after the holidays may prove to be active.

Giltedged Securities section has continued firm with the suspension of tap sales by the Reserve Bank. 3½ per cent Paper has been firmer and the quotation was even as high as Rs. 97-12 on occasions. Business in terminable loans has been restricted on account of the scarcity of scrips offering, 3 per cent 1951-54 being Rs. 100-2, 3 per cent Defence Loan 1949-52 Rs. 100-10, 3½ per cent 1947-50 Rs. 103-4, 4 per cent 1960-70 Rs. 111-4 and 5 per cent 1945-55 Rs. 106-4.

There has been a slight hardening in the conditions in the money market and the Treasury Bills rate has improved from annas 12 and pie 1 to annas 12 and pies 9 per cent per annum. No business has been recorded in Provincial Loans. The only transaction in Public Bodies Debentures is in 5 per cent *Calcutta Port Trust* at Rs. 118-12.

Among Preference shares, jute mill preferences continue in good request with not many sellers offering. *Cheviot* were crossed at Rs. 178 while *Hastings* were Rs. 149-8. *Lansdowne* changed hands at Rs. 160 and *Lawrence* at 161. *Dalmia Cement* preference were Rs. 144 ex-dividend. *B. I. Corpn.* were Rs. 208 and *National Insulated Cables* Rs. 108 cum-rights. *Steel Corporation* were higher at Rs. 129-8 and *New Victoria* Rs. 11.

Bank shares were quite steady with *Reserve Bank* further higher at Rs. 123 and *United Commercial Bank* done up to Rs. 29 premium. *Calcutta National Bank* were Rs. 13-10, *Imperial Bank* fully paid Rs. 1,842 and Contributories Rs. 460.

Coal shares show a further rise in prices for the popular counters on the reports that Indian coal might be needed in the Middle East. The Government authorities might provide the necessary shipping space. *Amalgamated* were Rs. 44 while *Bengal* were 30 points higher at Rs. 530. *Bhalgora* were Rs. 11-12 and *Bokaro & Ramgur* Rs. 33-4. *Burrakur* were noted at Rs. 25-4, the quotation at the end of last week being only Rs. 23-12. *Central Kurkend* also met with some buying and were one point higher at Rs. 21. *Equitable* were higher at Rs. 46 cum-dividend and are now quoting Rs. 45 ex-dividend. *New Beerbhoom* improved from Rs. 25-8 to Rs. 28, *Hurriladih* from Rs. 20-4 to Rs. 21-10 and *Pench Valley* to Rs. 46-8. *Raneegunge* were two points higher at Rs. 33-6. *South Karanpura* sharply improved at Rs. 8-9 and *Talcher* to Rs. 5-5. *West Jamuria* were not very much changed at Rs. 37-8.

In the Cotton section there was some buying from Cawnpore, on the announcement that dealers were allowed some more time to dispose of unstamped goods. There was a sudden rise in *Cawnpore Textiles* from Rs. 12-4 to Rs. 15-4 and *Elgin* from Rs. 80 to Rs. 85-4. *Kesoram* were higher by two points at Rs. 16-12 and *New Victoria* by a point at Rs. 9-8. At the higher levels, however, there was some selling and *Cawnpore Textiles* closed at Rs. 14-8, *Elgin* Rs. 84-8, *Kesoram* at Rs. 16-4 and *New Victoria* at Rs. 9-6. *Benares Cotton* were steady at Rs. 15-4.

Jute shares were steadier in sympathy with the other sections. It is pointed out that the Government of Bengal might intervene and make arrangements for the speedy despatch of coal supplies to the industry. *Howrah* were two points higher at Rs. 65-4. Higher priced shares registered a rise of 10 to 20 points. *Anglo-India* were Rs. 400, *Bally* Rs. 360 and *Gourepore* Rs. 804. *Kanknarrah* and *Kamarhatty* were Rs. 471 and Rs. 556 respectively with *India* at Rs. 574. *National* were Rs. 28-8 *Nellimarla* Rs. 25-8 and *Soorah* Rs. 14.

In the Engineering section, *Indian Iron and Steel Corporation* were Rs. 38-10 and Rs. 28-10 respectively. With some selling at the higher levels there has been a recession in the prices to Rs. 38 and Rs. 27-6. *Arthur Butler* were frequently dealt in and there has been a rise in the quotation from Rs. 15-4 to Rs. 17-14. *Bhartia Electric* did not show any important change at Rs. 15-4 while *Indian Galvanising* were a shade better at Rs. 42-4. *Jessop & Co.*, were steady at Rs. 22-5 with *Kumardhubi* a shade better at Rs. 8-2. *National Iron & Steel* were Rs. 30-2 and *Saran Engineering* Rs. 9-15.

Among Sugar shares, *Balrampore* were a point higher at Rs. 18-2, while *Belsund* were well enquired for around Rs. 13-8. There was some selling towards the close and the quotation was lower at Rs. 13. *Buland* were Rs. 43-2, *Carew* Rs. 27 and *Cawnpore* Rs. 42-12. *Murree Brewery* were higher at Rs. 27-8 with *New Savan* around Rs. 23-12. *Ramnugger Cane & Sugar* met with some buying and were marked up to Rs. 12-8, *Samastipore Central* were prominent at Rs. 22-12 while *South Behar* were quiet at Rs. 26-12. *U. P. Sugar* were uninteresting at Rs. 22-14.

The rise in Tea shares noticeable last week has continued during the past few days also and *Bishnauth* were Rs. 39-12, *Hasimara* Rs. 71-8 and *Hattikhira* Rs. 30-8. *Dimakusi* were Rs. 49-6, *Namburnadi* Rs. 12-12 and *Sapoi* Rs. 20-12. *Tezpur* were unchanged at Rs. 17-8.

Corpn.* were 6 annas higher at Rs. 6-5. *Calcutta Trams* were unchanged at Rs. 26-6, *Humayan Properties* ordinary improved from Rs. 12 to Rs. 14-2 and deferreds from Rs. 3-4 to Rs. 3-10. *Indian Cable* were quoting Rs. 32-8 against Rs. 29-6 earlier in the week while *Tide Water Oil* were Rs. 23-12 against Rs. 21-8. *Rohtas Industries* were Rs. 32 against Rs. 31-4; *Spencer & Co.*, were steady at Rs. 12. *Midnapore Zemindary* were Rs. 94 and *Port Shipping* Rs. 27-8.

Among Paper shares, *India Paper Pulp* quoted Rs. 210, *Bengal Paper* Rs. 214, *Shree Gopal* Rs. 23-14 and *Titaghur Paper* Rs. 27-3.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Oct. 28.

Activity on the local stock exchange was limited and colourless during the period under review. In the absence of any important developments and in view of the holidays operators and investors alike seem to have taken the view that nothing would be lost by postponing purchases or sales by a few days. While the local market is hesitant, Calcutta is unusually active. Whatever may be the reason for this the local market was also influenced by the higher advices from the Eastern capital. But this enthusiasm proved to be temporary and it did not produce any lasting effect on prices here. Soon there was relapse and today's session ended by bringing down prices further.

Though Mill shares made some headway in the early part of the week they declined towards the close of the period under review. Profit-taking intervened the moment some gain was recorded and the net result is that latest prices are considerably lower. *Bombay Dyeing* were Rs. 1,971-4; *Century* Rs. 918; *Gokak* Rs. 350; *Kohinoor* Rs. 647; and *Swadeshi* Rs. 593-8.

Steels were moderately active in the early part of the week with prices recording some advance. But towards the close there was a setback. *Tata Steel* deferreds were Rs. 1,905; *Tata* Ordinary Rs. 394-8 and *Indian Iron* Rs. 37-12.

The Miscellaneous section was also moderately active with selected shares making useful gains. *Premier Construction* were Rs. 192; *Bombay Steam* Rs. 677-8; *Scindia Steam* Rs. 38; *Shivrajpur* Rs. 73; *A. C. C.* Rs. 215-8.

(Half-yearly Meeting, held on 27th October, 1943)

Audited accounts for the half-year ended 30th June, 1943:—

The Profit and Loss Account, after making provision for Excess Profits Tax, Income Tax and Super Tax, amounting to Rs. 1,07,428, providing Rs. 12,235 for Depreciation, transferring Rs. 10,000 to Reserve Account, and bringing forward Rs. 14,344-10-5 from last half-year, shows an available balance of Rs. 54,552-10-3, which the directors propose to dispose of as follows:—

	Rs.	A.	P.
In paying a dividend on the Preference Shares at the rate of 6½ per cent per annum without any deduction for Income Tax paid by the Company	13,000	0	0
In paying a dividend on the Ordinary Shares at the rate of 10 per cent per annum without any deduction for Income Tax paid by the Company	25,000	0	0
In carrying forward	16,552	10	3
Total ..	54,552	10	3

Taxation.—The appeal by the Company in respect of the standard profit for the purposes of excess profits tax assessment has now been heard and the decision has resulted in a certain measure of relief.

Despite that relief, however, the majority of the increased profits arising from the improved trading results are absorbed by taxation.

Managing Agents.—Messrs. F. W. Heilgers & Co.

Authorised, Issued and Subscribed Capital—*Rs. 9,00,000 in 50,000 Ordy. shares of Rs. 10 each and 4,000, 6½ per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.*

(Half-yearly General Meeting, held on 27th October, 1943).

Audited accounts for the half-year ended 30th June, 1943:—

The Profit and Loss Account, after providing Rs. 11,000 for Depreciation including the sum of Rs. 5,941-7-4 brought forward from last half-year, shows an available balance of Rs. 6,662-7-2, which the directors propose to carry forward.

Colliery.—During the half-year under review negotiations were opened for the sale of the New Ondal Colliery. A favourable offer was received and at a Meeting held for the purpose on 7th September, the Shareholders' approval was obtained. The property will be transferred as soon as certain legal formalities have been completed.

Managing Agents.—The Managing Agents have again foregone their allowance and commission.

Managing Agents.—Messrs. F. W. Heilgers & Co.

Authorised Capital—*Rs. 6,50,000. Issued and Subscribed*—*Rs. 4,50,000 in 25,000 Ordy. of Rs. 10 and 2,000, 6½ per cent Cum. Pref. of Rs. 100, both shares fully paid up.*

*After taxation.

(Half-yearly General Meeting, 2nd November, 1943, at noon).

Audited accounts for the half-year ended 30th June, 1943:—

The balance available for appropriation after the inclusion of the ammount brought forward from the previous half-year is ..		11,865	8 9
Out of which the Directors recommend the payment of the following Dividends free of Income Tax:—			
On the Preference Shares at the rate of 8 per cent per annum, absorbing	7,720 0 0		
And on the Ordinary Shares at the rate of 5 per cent per annum, absorbing ..	3,460 0 0	11,180	0 0
Leaving to be carried forward		685	8 9

Sales.—Labour continued to be in short supply throughout the half-year, and adversely affected output.

In spite of the reduced raisings and a full Order Book, the half year closed with heavy stocks on hand, due to the poor supply of wagons available on the branch line, which serves the Colliery.

Managing Agents.—Messrs. Shaw Wallace & Co.

Authorised Capital—*Rs. 7,50,000. Issued and Subscribed*—*Rs. 3,31,400 in 13,840 Ordy. shares and 19,300, 8 per cent Cum. Pref. both of Rs. 10 each, fully paid up.*

(Half-yearly General Meeting, held on 27th October, 1943).

Audited accounts for the half-year ended 30th June, 1943:—

Accounts.—The Profit and Loss Account including the credit balance of Rs. 6,059-13-4 brought forward from last half-year shows a debit balance of Rs. 8,058-6-8 which is being carried forward.

The two suits, one instituted by the Company and the other by the Raja of Ramgarh, have now been concluded in the Hazaribagh Court. The Company's case has been decreed in full and in the Raja's case all the main issues with the exception of one have been decided in favour of the Company.

The Raja has preferred appeals in both the suits against the decision of the Hazaribagh Court and the Company will file its Cross-objections after the Notices of the appeals have been served.

Prospecting.—Prospecting has been continued during the half-year.

Managing Agents.—Messrs. Bird & Co.

Synopsis of the balance sheet as at 30th June, 1943.

Liabilities.	Rs.	*Assets.*	Rs.

KOTHARI TEXTILES, LIMITED

Audited accounts for the year ended 30th June, 1943:—

	Rs.	A.	P.
The result of the Company's working for the period under review, after allowing Depreciation of Rs. 1,18,279-6-2, is a profit of	23,96,255	2	2
Add amount brought forward from last year's account	3,660	10	3
Total ..	23,99,915	12	5
Less amount appropriated for Provision for Taxes	17,21,500	0	0
Leaving a balance of	6,78,415	12	5
Less amount appropriated for Reserve Fund ..	5,48,380	0	0
Leaving a balance of	1,30,035	12	5
The Directors recommend to appropriate the same in the following manner:—			
To Dividend at the rate of 6 per cent per annum (free of tax) on the Preference Shares for the year ended 30th June, 1943	18,000	0	0
To Dividend at Rs. 1-8-0 (free of tax) on Ordinary Shares for the year ended 30th June, 1943	75,000	0	0
To Balance to be carried forward to next year	37,035	12	5
	1,30,035	12	5

As yet, the Company's Tax liability for the year ended 30th June, 1942, is not settled. The Directors expect the same to be settled at the earliest.

Formerly, Provision for Taxes and Reserve Fund did not appear in the Balance Sheet until the following year of appropriation. This year they have debited the provision both for Depreciation and Reserve Fund and the net balance is carried to the Balance Sheet. They propose to follow this procedure in future years.

The very large increase under Insurance is due to premia paid under the Government War Risk Insurance Scheme covering Buildings, Machinery and Stocks.

During the period under review about 2.19 acres of land has been bought just adjoining the Mill premises both for godowns as well as for quarters of the Officials and Labour. A small godown was built during the course of the year to house the Cotton Waste.

Managing Agents.—Messrs. Kothari & Sons.

Synopsis of the balance sheet as at 30th June, 1943.

WORLD OF INDIAN FINANCE

Calcutta, November 4.

THE slight hardening in the conditions in the money market noticeable this week is due to the increased demand for funds from some jute mills and the locking up of a considerable sum of money in wheat stocks in the Punjab following the freezing order by the Punjab Government. Government's borrowings in recent weeks have also resulted in a net in-take of money from the market. But these factors have not had any effect on money rates as such and call money is still quoting ½ per cent in Calcutta and ¼ per cent in Bombay. Only the Central Government has had to pay slightly higher rates on treasury bills. At the auctions held this week bidding was not keen and the amount of applications was considerably lower at Rs. 10.71 crores against Rs. 12.89 crores in the previous week. The average rate of accepted tenders was higher at 13 annas 8 pies against 12 annas 9 pies per cent per annum. In order to relieve the pressure on the market and prevent an undue rise in the average discount rate, the offer for next week has been reduced to Rs. 6 crores from Rs. 8 crores. Ordinarily, the Government would not have been able to reduce the treasury bills offer, with the high level of current expenditure, but the large tax payments and the subscriptions to the new loan have considerably improved the ways and means position and the deposits of the Central Government at the present moment are at the highest levels for some time. It will be remembered that it was anticipated sometime back that, with the extremely comfortable ways and means position of the Government, due to the large proceeds from the sale of rupee counterparts, it would be necessary to reduce treasury bills borrowing on a considerable scale. If with the reduced offer of Rs. 6 crores, it is not possible to keep down the average discount rate on treasury bills the authorities might possibly decide to reduce the offer further to Rs. 4 crores.

The *communique* issued by the Reserve Bank of India says that applications for Rs. 20 crores were received for the 3 per cent 1966-68 Funding Loan up to October 26, 1943 and were allotted in full. The balance of Rs. 5 crores was taken up by the Government on investment account and is now available for sale through the Reserve Bank of India as usual at a price to be ascertained from the Bank. The fact that the Government have been able to get as much as Rs. 20 crores in spite of the stiff terms offered to investors reflects the credit of the Indian Government. It is also a pointer to the easy conditions that exist in the money market. The short fall of Rs. 5 crores has been taken by some as a bearish factor for the giltedged market and 3½ per cent paper has dropped from Rs. 97-12 to Rs. 97-5, but there has been no give in prices for terminable loans and it is expected that before long the upward trend will be again resumed.

The returns of the Reserve Bank for the week ended October 29, show that there has been no expansion in currency. Notes issued are Rs. 30 lakhs lower at Rs. 791.05 crores while notes in circulation are sharply higher by Rs. 5.67 crores at Rs. 776.42 crores. There is a decline in notes held in the banking department by Rs. 5.96 crores to Rs. 8.96 crores. On the assets side, sterling and rupee securities do not show any change, while rupee coin are Rs. 30 lakhs higher at Rs. 13.47 crores.

In the banking department, Government balances show a sharp rise by Rs. 8.04 crores to Rs. 46.72 crores. The increase in the figure is to be attributed to the subscriptions to the new 3 per cent 1966-68 Funding Loan. With the decrease in bank advances and the further increase in funds with banks, deposits of scheduled banks with the Reserve Bank are actually higher by Rs. 3.34 crores at Rs. 71.8 crores.

That there is no stringency in money conditions will, therefore, be apparent from the high level of funds still available for investment with banks.

Balance held abroad are sharply higher by Rs. 21.69 crores at Rs. 140.39 crores. Sterling receipts during the past few weeks have been on a larger scale than ever before. The receipt of Rs. 20 crores during the week is, perhaps, in connection with the funds placed at the disposal of the S.-E. Asia Command.

The authorities have to be congratulated on their effort to keep down expansion of currency as far as possible by the cancellation of *ad hoc* securities on a large scale in recent weeks. It remains to be seen, however, whether further expansion of currency can be avoided. On more than one occasion it has been pointed out that the British Government should come into the market openly as a borrower if fresh additions to currency have to be avoided. Otherwise, the Central Government will have to go on borrowing on a large scale and even forced to concede advantageous terms to the lender. The process of cancellation of *ad hoc* securities cannot be carried on for any length of time as the total in the issue department at the present moment is only Rs. 58 crores and in the four months up to October 22, 1943, *ad hoc* securities to the extent of Rs. 60 crores were cancelled. There is need for putting into operation the next stage of repatriation of sterling obligations and providing finance for the requirements of the United Nations.

As we go to press the statement of the Imperial Bank for the week ended October 29, 1943, is not to hand. The return of Schedule Banks for October 22, 1943 show

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Nov. 2, 1943. Total amount offered was Rs. 10,70,50,000. Tenders at Rs. 99-12-9% and above were accepted in full and those at Rs. 99-12-6% were allotted approximately 66%. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-13-8% per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Nov. 9, 1943, in Bombay up to 11 a.m. and up to the close of business on Nov. 8, 1943, at other centres. Successful tenderers should make payment on Nov. 12, 1943. Other conditions are as usual.

During the week ended October 29, Government of India Treasury Bills for Rs. 3,19,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Evening.

The new Chancellor of the Exchequer who asked the Commons for a bigger vote of credit, this time for £1,250 millions had apparently prepared the London market by the increased borrowing through treasury bills and deposits. The weekly offer had been raised to £100 millions (lowered since to £90 millions) and the response as usual has been good, partly because banks like bills which mature early in January when depositors want cash for payment of income-tax. The House of Commons will, doubtless, refrain from discussing the White Paper as votes of credit are now routine affairs and the means of raising money is always settled in advance.

The plan to incorporate the pay-as-you-earn plan indicates the increase in working class assessees in Britain. The deduction at source is carried a step farther and the plan mooted in September followed, in the main, the scheme framed by the U. S. banker Mr. Beardsley Ruml who increased revenue by forgiving some taxpayers their debts to the Federal Government. Next year's budget is to put in the plan. The effects on short-term borrowing may be large as the Exchequer returns would bulge every week. The Banks would have more money to lend to the public and easier credit conditions would be stabilised before the turn of the year. A recent cable spoke of increases in Bank deposits. It is only possible to conjecture from the increase in Public Deposits that the Bank is ready to take up more securities because the State keeps more money; also, that the clearing banks have sold securities for cash and the Bank has as usual cushioned the effects. But banker have larger reserves to draw upon and may buy ever bills. The rise in circulation from week to week remains moderate and the increased Government spending, foreshadowed by the vote of credit, should have no effect on the Funds. Hints of a giltedged revival are not lacking at present though the market was quiet last week. Small rises in the long-dated Funding Loan and War Loan this week show that the supply of money as much as Moscow news imparts strength to the giltedged market. The market has been steady and the steadiness now extends to Home Rails. The effects of tension between the Argentine and the U.S.A. on the stock exchange can only be guessed. There may be a drop in Smithfield and Argentine Meat or a drop in linseed prices, a fall in Argentine Conversion Loan or the foreign railway market. A recent report reinforces the story about blocking. The U.S.A. is credited with an intention of freezing certain bank balances. A guess that President Ramirez may resign has been ventured but the old story that June witnessed only a palace revolution and the Conservatives remained in command finds support not only in anti-Semitic decrees but in the fact that the Argentine remains as far as possible outside the Pan-American union. The breach foreshadowed may affect trade relations little as Britain sticks to he same policy and may find in Argentina (the survivor of the ABC front) a better market than in the Empire. Obviously a Republican revival in the U.S.A. may not help Britain to get the series of agreements wanted, and Argentina would be a proper hedge against any U.S. plan to run South America as a favoured field of expansion. Partial release of blocked assets may facilitate disinvestment.

The London Stock Exchange has not been active but Wall Street shaped well. The market leaders have moved up and Mr. Spengler's rising star encourages the bulls to look for big results when the New Deal is finished. There is no setback on account of the coal strike and Mr. Roosevelt's call to C.I.O. has made no difference to the stock market which finds in a flood of Republican electoral success an assurance of prosperity, if not normally after the war. Tips as to peace in 1944 affect Wall Street in the same way.

The Moscow conference reached an agreement in twelve meetings and the surprises in the communique are the resurrection of Austria and the omission of Poland. U.S. opinion may make little or much of the omission but holders of the Riga loan or Lena Goldfields may make light of the belief that the Soviet Union is to be drawn into the international financial agreement. Berlin comment has treated the conference with unbecoming levity but the Soviet Union's help to the European Commission is made available, only at a price. The scope for joint effort is small, and only the assurance that Russia can deal efficiently with the German invader impels optimism as to the early conclusion of the war. The bullion market in India puts much the same construction on the news received, and the break in prices promotes reflection. The scarcity of gold or silver is not having much effect as compared with the waning belief that Mr. Morgenthau after his tour will produce a formula for stabilisation. If blocking is got out of the way the U.K. will perhaps be allowed to retain large balances belonging to other countries and get thereby a bigger chance in export trade. On the assumption that the dollar-sterling rate after the war will be the same, Empire tariff policy should have a bigger effect on the sterling area than believed, Dr. Dalton has given an assurance as to what is expected at present by Britain, and it is only in neutral markets like South America that the trade war will be acute.

The marked depreciation of the Vichy franc in relation to the belga, the growth of smuggling and the acute scarcity of tobacco in France are stories that have been supplied by men who have seen and left Occupied France. The position of Vichy has been undermined by the occupation and the French Committee of Liberation, associated with the Allies can reckon on a debacle. The French lost many metals besides gold for the Germans took the occupation costs in the form of a levy of base metals last year. France enjoyed all the controls applied to Belgium or other Occupied Countries.

The Turkish President's view of the neutrals obligations sheds no light on the view Turkey as to the Balkan entente. The Germans want a federation and the Soviet dislikes it. The territorial changes are left to investigation in the future, but a ground plan for economic unity may be prepared in advance. The Moscow conference has left many issues open and the split among the Greeks will suggest that the small nations have too many quarrels at home. Reports of a weaker Germany find support in the news of defeatism which contradicts Goebbel's estimate of moral resources in the face of the war in the air.

Dr. Koo recently outlined China's hopes of blending old and new of reconciling socialism with capitalism. Capital goods are to be imported after the war to assist local industry and the foreign trade is to be different in nature and proportions. Obviously British textile exports will be hit more than U.S. oil exports. But China hopes to have a higher standard of living. Monetary policy in China from 1937 has been consistent and Samuel Chao describing the Central Bank's achievements described the departure from silver in 1935 as Dr. Kung's major contribution. Savings deposits in all banks are now guaranteed by the 100 million bank which makes advances to Government for the latter's industrial ventures. It manages the currency and from July 1942 has acquired the sole right of note issue when other banks surrendered both notes and reserves.

The slump in prices for gold and silver this week provide a warning to those who still think of investing their surplus funds in the precious metals. The rise in prices to over Rs. 80 for gold ready came about when Madras was bombed by a lone Jap plane. The enemy has not repeated his attempt. This factor and the success of the Moscow Conference brought about selling and prices have been marked down sharply.

LLOYDS BANK
LIMITED
(Incorporated in England.)

Trials of Jute

The conditions, in which the Jute Industry has to function today, are such as to confront the various factors concerned with numerous and complicated problems. The industry has not only to put on a cheerful face over falling profits, but is finding it extremely difficult to conduct its day-to-day working, to form or stick to its production schedule and keep its stocks and commitments in conformity with the requirements of prudence. The Central Government has to apprehend the rise of black markets where they had been formerly rooted out and come forward with threats of requisitioning. The ryot looks on at drooping prices of the raw material, though with less trepidation than fromerly, and has to face the usual uncertainty about sowing and about future prices. And last but not least, there is the Government of Bengal with its interest in the strength and well-being of the premier industry of the Province and its obligations to the jute-growers. The complexity of the situation, one need hardly add, is not relieved by the revival of the futka market after a break of eighteen months.

It is indeed noteworthy, though not strange in the conditions of a period of war, that so complex a situation is only the cumulative result of a number of different forces. The exigencies of war and the expedients adopted by a number of different departments in consideration of the imperative problems that each has on its hand have their powerful impact on an industry like the jute mills in Bengal. The inescapable need of the military authorities for storage space results in the virtual denial of lebensraum to the jute mills in Calcutta. A few units are reported to have been taken wholesale. Many have had to part with a great deal of their godown space with a consequent reduction of their capacity to stock the raw material or the finished product on the same old scale as before. Transport facilities are on a highly restricted scale. What with the strain on transport and the dislocation caused by storms and floods, the jute industry has to face not only attenuated arrivals of raw jute from upcountry, but also supplies of coal which are inadequate alike in quality and in quantity. As for shipping, the need is sometimes for restriction of space; sometimes it is a case of lacking shipping to where it is needed and having it to where it is not.

To all this variegated pressure of adverse circumstances, the jute industry has been adjusting itself, cheerfully and efficiently. It would appear now that three such powerful forces as shortage of coal, inadequate arrivals of jute and difficulties about taking on and meeting commitments have made the position very difficult. The first threatens production; the second affects the industry and the jute-grower alike, while the third is apt to give rise to misgivings about the very future of Bengal's jute.

We may now examine the raw jute position. Arrivals to the end of October are estimated at 21 lakhs bales of which the old crop supplies might be put around 5 lakhs bales. Upcountry purchases on behalf of mills might total 10 lakhs bales, so that out of the estimated crop for the current season of 70 lakhs bales, there is still a balance of 44 lakhs bales to be accounted for. Exports to the end of September have been disappointing, total for three months being only just about 2 lakhs bales. This low figure might, perhaps, be due to the absence of any buying by U.K. and America in pursuance of the agreement concluded with the Indian Jute Mills Association. It will be remembered that at the time when the large American order for hessian was placed, it was agreed that buying of jute should be regulated, and that America and the U.K. should not come into the market until after the requirements of the Indian mills in respect of the American order are met in full. As prices for jute have gone down considerably, there has been some American buying in recent weeks and it may very well be that the exports figures make better showing in the next few weeks. In any case, total exports of jute cannot be higher than 10 lakhs bales in the current season which means that 36 lakhs bales will be left to be marketed by middlemen and ryots. If the figures of production for the last three months are any guide, the minimum consumption in respect of mills in Bengal can be put at 25 lakhs bales for the rest of the season, whereas total consumption, on the most optimistic estimates cannot exceed 30 lakhs bales. The surplus left over will therefore be of the order of 10 to 15 lakhs bales. This is by no means a heavy surplus, if it is ensured that the next crop is not more than 60 lakhs bales or at any rate is not appreciably more than the estimated mill consumption and probable exports.

The outlook of jute in wartime is no deterrent to restriction of acreage, while the present position of foodstuffs in the country is a positive encouragement to it. Considerations like these are not probably absent from the minds of cultivators. But whatever that may be, the jute market has so far shown great resiliency. In spite of the discouraging factors of the last few weeks there has been no distress selling and attempts to force down rates have been met by a drying up of arrivals in the mofussil centres.

So far as the industry is concerned, the fear in the earlier part of the season was of a squeeze in supplies if mills continued to buy throughout the season on the basis of a 60-hour week. The difficulty then was generally in regard to transport of jute to mills in the Bengal area; and for many months producers had to eat into their old stocks. The difficulties in regard to coal supplies, which have become very serious now and are seen to be deep-rooted, were not even apprehended at that time. The position has changed; and the stage has been reached when not only is it impossible to make up production lost previously but it will not be possible to make up loss on account of poor arrivals either. In these circumstances, a balance between production and existing stocks has to be struck. At the same time necessary arrangements for transport of raw materials have to be made. The ryot, too, has to be assured of a fair price for his crop. There is certainly an unwillingness on the part of holders to part with their crop at the present level of prices but this unwillingness is to be attributed rather to the ryots' ability to wait and to his expectation of early improvement in the situation.

These are circumstances in which one is more conscious of the difficulties than able to suggest remedies. As we have observed already, the present position is the cumulative result of a number of adverse forces; and it is natural to hope for, if not exactly expect, relief from one source or another. But neither the position of coal nor the position of transport, inland and overseas, to mention only the more important, seems to hold out any such promise. And the Governments, Central and Provincial, cannot take refuge in the policy so called of wait and see. The Government of India have thought it fit to provide relief so far as the black markets are concerned. The rise of market prices over the max mum agreed on between the Government and the mills is an evil that must be combatted without delay. Likewise, the mills are entitled to relief in respect of quality, if not quantity, of coal they require. The provision of shipping must be brought into accord with the requirements of the export trade; and greater circumspection in requisitioning may not be without some value to the industry. The Central Government has its obligations to the war effort and to the jute mill industry as part of it. But it is for the Provincial Government to watch not only the interests of the jute-grower but also the security of the future for Bengal's jute. War is famous for its incentive to the growth of substitutes; and jute, if it is exactly sitting on the mouth of a volcano as some love to make out, cannot afford to be too complacent about its future. In a position like the present, it is not the volume or value of jute exports that are important so much as their significance to the invention or growth of substitutes. It is the duty of the Government of Bengal to watch the volume and direction of our jute exports so as to ward off any possible danger to the future of this export staple. There is also the duty to the cultivator of jute, which, politically and economically, is too obviously an obligation of the Government of Bengal to need any special stress. The data necessary for the formulation of concrete remedies are still lacking. But where Government policies are important, the readiness to act regardless of vested interests and staid principles of the past is far more important, especially as the situation still seems to hold new developments in its womb. There is no reason to think however that recently accepted principles like fixing of minimum prices, regulation of acreage and advances, if necessary, for the holding of stocks will not avail to tide over any situation that may develop in the future.

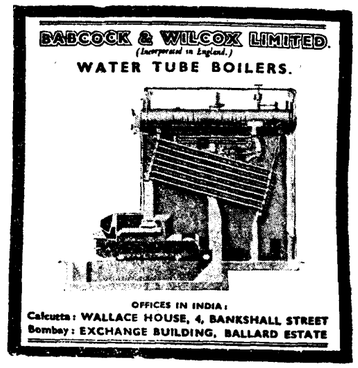
POPULATION AND POVERTY

The British Press' discovery of India and the fact of famine today goes beyond the insight of Sir A. Watson into the limitations of Provincial Autonomy. Disquisitions on the population problem in its bearing on food supply have evidently been prepared in order to make it clear that structural defects in Indian economy rather than administrative failure account for catastrophic happenings in more than one Province. Dr. Anstey (according to a brief Reuter message of November 1) dwelt on rural under-employment while conceding that with existing knowledge and methods a smaller population could have produced a larger output per capita. The raising of the standard of living depends on raising total productivity which should outstrip the growth of population. In her analysis fundamental and rapid reconstruction of economic life occupies the first place. It is admitted that investment in material and equipment, and training in the interest of efficiency are required to secure readjustment.

Not for the first time are India's millions the object of anxious enquiry. The Hot Springs Conference had to take note of deficiency as well as surplus and the problem of numbers in relation to the soil was again before the Advisory Board of Health. The human factor is assessed unfavourably in India. Quantity is without effect on quality and actuarial conclusions advanced in the light of the census of 1931 have acquired menacing significance. It was urged that infanticide had not been replaced by any other methods of keeping the size of the families small. An examination of the social conditions suggests that the people are not living as well as they might; famines are not uncommon, and are never far off. The symptoms point to overpopulation, of which the cause would seem to be the failure to replace the custom of infanticide by some other method of regulation. It was also urged in this connection that "no greater proof is required of the fact that what primarily ails India is overpopulation rather than the miserably low standard of living of the masses". This view is, however, modified by Dr. Anstey's view of the handicaps arising from static or imperfect economic organisation. Whether a population policy as distinct from economic planning is called for may be questioned by those who may argue that the original cause of the famine is Man rather than the inadequacy of resources, human or material. But the original conclusion that economic progress by itself would lower the birth rate is based as much on experience as the conspectus of handicaps for which Dr. Anstey propounded social reforms and even modification of land systems. That peasant proprietorship results in hoarding may be a recent discovery of the Secretary of the State who linked it with the failure of imports from Burma rather than the supply at home. But a long-term policy, when Indian agriculture has notably failed to respond to stimulus and opportunities alike, may be difficult to frame. The more radical remedy involved in the control of numbers may be forced on India. The cruder arguments are latterly buttressed by reference to the possibility that benefits of large-scale production may be neutralised by the unchecked growth of numbers. It may be unnecessary to review the familiar controversy as to the optimum population for India. To plan for the population (be it 400 millions or 388 millions) is still defined as the main remedy and Dr. Anstey knowing the development of the situation has made out a case for economic change and social reform. Both sterling balances and advances by a World Bank are to be duly applied towards the raising of output and efficiency.

If adverse experience illuminates the conclusion, comforting only in its conditions of fulfilment, it must be noted that the net area sown is less than half the total area though foodgrains take up more than 80 per cent of the cultivated area. The more disquieting conclusion (to which attention was drawn here more than once) was that the percentage of area under food crops between the two great wars showed no increase. This may be a factor in the under-employment pictured as the cause and effect of a backward agriculture. It may be more difficult to formulate a population policy than to sketch out programmes of land development. In the Bombay Presidency efforts are made to conserve the top soil by building and irrigation development in the direction of the use of tubewells is repeatedly advocated. Sulphate of ammonia production is to be expanded in the light of recent discussions in favour of subsidies for fertiliser production in India. There is, however, some reason for thinking that where irrigation secures the farmer against the risks of the monsoon, the expansion of agriculture may be limited only by demand for food. Attention may be drawn to the progress of two tropical crops, rice and sugarcane in the Punjab. Both have gained greater ground as shown in recent crop forecasts and the 6 per cent increase under rice this year recognises that. Sind's agriculture has been reoriented so that the usual figures relating to the Barrage, the revenue therefrom and Sind's position as a deficit province are rendered inaccurate. The familiar argument as to obstacles to intensive cultivation may also be countered by the rise in prices, the reduction of the original burden of debt and the limited incidence of land revenue or rent. The guarantee of stable prices over a period has been offered in this connection and the future may produce the effects of higher prices in a large home market committed to self-sufficiency. The forward planning of industry may increase the demand for fibres and oilseeds, even of vegetables and fruits to some extent, but the main hope lies for agriculture in the continuance of normal growth of population unless it be that the war transforms standards of consumption to the point that a smaller population can take more food, assuming that the formula for the future is 'no exports and practicable imports' in respect of food. But economic reorganisation would be a torso without the head of social reform. It is in this respect that an alien bureaucracy develops pessimism though not many can forget that Mr. Porter in his review of the Bengal census of 1931 declined to take a pessimistic view as regards the growth of numbers in Bengal and expressed the courageous hope that agricultural progress would offset the further increase. But the major cause for the high birth rate, as many apprehend, is the economic condition of India. A poor, backward country suffers from the pressure that is modified in certain cases by birth control. It is this which inspires the hope that India may secure a reduction in the birth rate through the considerable measures assisting economic progress. But the economist conversant with India does not refrain from advocating fundamental reorganisation. Purposeful planning is indicated, though social reform may by itself force up the birth rate and improved public health may retard the reduction of secular, natural increase.

That major economic disharmonies in India are thrown into sharp relief by the famine may not be accidental but the cumulative effect of one or more handicaps (a chronic deficiency of food even in the perspective of grow more food plans, sustained by the cotton restriction programme of two years is one) forms the starting point of reconstruction cognisant of the bearing of poverty on efficiency. The emergence of new handicaps, the reduction of working cattle or milch cows, may not be ignored at the peril of the failure of any economic programme which hinges on a smaller population and a larger output per head. Large remedies for established ills postulate many radical departures in policy. That would not be possible until the scope of post-war reconstruction policy is settled and the entire report of the Foodgrains Policy Committee taken into consideration. If the explanation of commonplaces to the British electorate, unquestioned wielders of vast responsibility, comes late, it is well to ponder over the consequences of such constant factors as the slow progress of industry, the damming up of outlets for emigration, and the low level of efficiency, due as much to environment as anything else. The advocacy of fundamental organic change is the more unexpected in a British economist who endorses the general conclusion as to the immediate and pronounced effects of a slight deficiency on births, diseases and deaths in India.



THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Editorial Notes

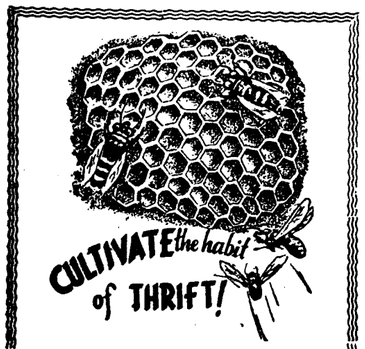
Machinery for Sugar

Sugar factories in India dependent on imported machinery are now differently placed. In an article of Mr. Sherl appearing in the "Indian Sugar" reference is made to the opportunities and difficulties created by the war. Mr. Sherl argues that a big milling station, high pressure boilers or high-speed centrifugals cannot be manufactured locally. It is not the lack of incentive on the part of Indian firms but the specific war conditions, the difficulties of obtaining materials and equipment, the unreasonable terms and deliveries. But as far as the rest of the machines are concerned, there is nothing in the way of successful Indian competition to the formerly exclusive foreign trade. Moreover, it would be natural for millowners to prefer home-made plant. Savings in time and import duties should also be considered. The author notes that reluctance to order Indian made machinery is manifest though to-day, the advantages of encouraging local manufacture are obvious. The policy is mistaken. In his view investment in machinery is one of the soundest which can be made. New machines cannot be had for many months after the war stops. The strain on the existing machinery is tremendous. Not only the pressure for higher production is forcing every mill to work to its utmost capacity but a shortage of good keymen is rather serious. The essential accessories such as lubricants, insulation and certain spares are scarce. The proper upkeep of plant and machinery is therefore of the utmost importance. Replacement of a worn-out part can save a big expense and prevent serious loss arising from a general breakdown. Mr. Sherl argues that certain parts can and should be made in India. The essential part is the cane conveyor. An extension or even replacement can be undertaken in this case as gears shafting etc. can be manufactured in accordance with the existing sample. Extraction machinery has to stand up to heavy work and cane knives can be made out of local materials on special designs to improve operation. Spare bearings could be made; so also knife holders. Juice strainers in whole or in parts can also be made locally, in the opinion of Mr. Sherl who says that lining and sulptulation tanks also can be made. Indian industry can supply a complete station. Juice heaters can be made and steel tubes can be adapted to use. In regard to evaporators, it is urged that proper design by the machinery maker is deemed essential for extension. In regard to vacuum pans many Indian-made pans are available and their effect will not probably be behind any average foreign-made pan. Many Indian crystallisers are already running satisfactorily. Centrifugals are difficult but local manufacturing of spares and accessories is reckoned possible. Special design of sugar-dryers is required in order to raise quality of the final product. In regard to boiler-house equipment India is not self-sufficient; so existing boilers must be kept in perfect condition. Water softeners made in India are expected to help. High prices paid for plant are regarded as strengthening the Indian manufacturers' position after the war. Sugar' technologists have been duly made acquainted with possibilities and the machinery-makers and engineers' prospects can be evaluated.

Fibres for the U.S.A.

In the Indian Central Jute Committee's bulletin for October is found an extract from a U.S. official publication describing industrial fibres in which the War Production Board is interested to-day. According to the report Manila hemp taking its name from the now-captive Philippine City, is the best of all rope materials—very strong and very light in weight. It does not swell with moisture (sailors cannot untie knots in swollen ropes). But Manila fibre has never been raised successfully outside the Philippine islands. Manila rope and Manila paper made from rope scrap now serve the enemy. Sisal is second only to Manila hemp in strength and is its best substitute. With the supply from the Netherlands Indies now cut off, the U.S.A. must import all it can from Central America, Mexico and British East Africa. Demands for this valuable fibre are enormous but the Navy's heavy ropes comes first. Hemp is not as strong as Manila fibre and sisal not as abrasion-resistant but it is still a valuable fibre suited to the lighter ratline uses. A sizeable hemp-raising programme in Wisconsin and Kentucky is expected to compensate in part for the loss of Italian and Hungarian fibre. But the W.P.B. says the U.S.A. will do well "to grow enough ropes" for war needs. There will be only small quantities of hemp for essential industry, none for such luxuries as the linen-like ecru table-cloth once imported from Italy. Jute, the coarsest and cheapest member of the hemp family is not only suited to some rope uses it is the world's burlap fibre. Shipping sacks of Indian jute are needed in abnormally large quantities in wartime. The U.S.A. now can import only part of its bagging requirements and has to fill in with domestic cotton with insufficient jute for vital shipping bags, there will be little, if any, for carpet bags, furniture, spring supports and kitchen twine. Flax is capable of the greatest requirements and runs the gamut of versatality. Its strong fibres, almost invisible or relatively thick, are made into fragile laces and tough tarpaulins, exquisite textiles fine hose, fishlines and shoes. There will be no more fishlines for sportsmen. The Army needs all the linen thread to stitch shoes because it best resists mud and mileage. Although the U.S.A. raises great quantities of seed flax for linseed oil. fibre flax (the same plant, but cultivated differently) is not a large American crop. For many years, Oregon has grown considerable flax suited to twine and shoe threat but extremely fine flax for luxury fabrics has remained a foreign product. Not linen, but cotton is the American textile. The U.S.A. it is noted, has not the labour or the equipment required for linen manufacture. The W.P.B. admitted that ramie, least known and least developed of the hemp family, but the toughest and strongest may have great success. Though difficult to process, it makes excellent rope. Like flax, it can be turned into beautiful fabrics. Although cultivated to some extent in Cuba and Florida ramie is an Asiatic plant and no immediate solution of war shortage appeared. The W.P.B. distinguished cordage fibres for their length 8 to 10 feet as opposed to the one inch staple of long cotton. Rope fibre is not meant for spinning but for twisting though the retting applied to hard fibres is applied to jute.

Landlord as Breeder



The cattle farm of the Pattagar of Palayakottai, the largest land-owner in the Coimbatore District is described in Indian Farming which has described other estates including Sir Daniel Hamilton's experiment at Gosaba. In the dry Dharapuram taluk strong bullocks are needed, and the farmer there is greatly helped by the breeding development carried out by three generations of landlords. The cattle bred by the tenants find pasture on 5000 acres allotted for grazing on an estate of 15,000 acres. The fields are fenced off and various types of grass are grown. Wells are provided in the grazing area, so that watering is no problem. White babul trees grow in plenty and the pods are gathered to supplement the usual concentrated food. The coat and milk yield alike are said to improve by the use of the babul pods. The veterinary surgeon states that the babul tree grows wild and provides timber as well as fuel. Manure is not collected and the cattle remain in the open. The animals get hardy and used,

to sun and wind. Horses and sheep are also bred by the Pattagar who keeps 30 mares and 2,000 sheep. Wool growing has begun with the provision of one Bikaner ram to serve a herd of 30 ewes. The Kangayam breed favoured by the Pattagar in his home tract is celebrated for its value for draught purposes.

The foundation for the breed, is provided by a herd of 300 cows, each of which drops as many as 12 or even 17 calves. Any cow which does not breed regularly is sold to a tenant who uses her for work, though the notion of putting a cow to work may seem strange. There is no attempt to run a dairy on the estate, but a moderate quantity of milk is obtained. The calves get the bulk of the milk that is left until they are weaned, after which they are fed on grass and concentrates. While the landlord sells bulls as also bullocks, the heifers are nearly always retained in the herd. The value of a heifer is from Rs. 200 to Rs. 400 while the bulls range in prices from Rs. 250 to Rs. 500. The bullocks are good for water lifting and on an average the working animal is good for 9 to 10 years. A pair of good bullocks sell from Rs. 300 to Rs. 1,000. The breeding is helped by the growing of fodder crops, sometimes irrigated, but in times of draught, fodder has been procured from Tanjore and Salem. The training of animals for work receives special attention as the breeding is conducted on semi-ranch conditions. The Pattagar's work for the local breed was praised by the Agricultural Commission. In the last century there was praise for the careful breeding. Prizes taken at many shows support the claim that Palayakkotai's landlords have done much for South Indian cattle.

Kumarappa on Inflation

The problem of inflation remains with us. The controversy regarding the origin of the soaring prices in India may look futile and merely academic but that everybody is anxious to know all about it and end the malady as early as possible is evident. As on many other economic issues in India the Government's attitude and explanation regarding the inflationary spiral differs from the considered opinion of commercial bodies and learned professors. The search for the original cause of rising prices would help to lay the blame on the right quarter but in a country where the Government is not responsive to public opinion or responsible to the people the value of controversies is limited. Yet scholars must continue to examine contemporary problems in their own way, dispassionately and with thorough analysis. They have a right to educate the public even if they are powerless to shape official policies. Sometime ago twenty economists jointly subscribed to the view that India is now suffering from a "deficit induced fiat money inflation." Mr. G. D. Birla believes that scarcity has played a great part in pushing up the prices. That the evil of inflationary spiral is principally money induced is the considered opinion of many who follow the line of the arguments put forward by Prof. V. K. R. V. Rao. There are some who insist that hoarding and profiteering, instead of being the results of inflation, are the powerful factors causing inflationary flight of prices. In a pamphlet on "Currency Inflation—its cause and cure" (All-India Village Industries Association, Maganwadi, Wardha, Annas eight) Mr. J. C. Kumarappa refers to the damages usually done by unbridled inflation and states that "The malady in India is clearly due to flooding the country with currency notes without adequate backing on the one hand and withdrawing of commodities out of the country on the other without a compensating increase in production within the country, failing to add to the country's stocks by imports from abroad." The U.K.C.C. has played not an inconsiderable part in draining India's resources on behalf of the Mideast. It might have saved Persia from famine but

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications are invited from candidates for appointment as Journeymen (Electrical) on N. W. Railway. There is one temporary vacancy, reserved for a Muslim, but in addition names of 8 suitable candidates (5 Muslims, 1 Anglo-Indian or Domiciled European, 1 Sikh, Indian-Christian or Parsee & 1 Unreserved) will be borne on a waiting list for a period of one year. *Applications must be made on the prescribed form* available at a cost of Re. 1/- from large stations on N. W. Rly. Pay:—Rs. 65-5/2-85 plus dearness allowance admissible under the rules. Qualifications:—Candidates must have qualified from recognized technical institutes or colleges and in addition should have undergone practical training in regular workshops for at least 3 years. Men who have acquired sufficient technical knowledge from correspondence courses etc. are also eligible. All candidates summoned by the Commission will be required to qualify at a written technical examination before being admitted to an interview. Age:—Between 21 & 28 years, relaxable upto 35 years in the case of men already in service. Last date for receipt of applications together with attested copies of testimonials:—13-12-1943. *Full details should be obtained on sending a stamped and addressed envelope to the Chairman.*

that the underfed Indian should be chosen for the purpose seems to be a neglect of India's interests. The enormous withdrawal of commodities from India itself operated as an inflationary force. Referring to the advisability of having the sterling security as backing for rupee notes he says that "in so far as they represent sterling securities based on the falling credit of Great Britain they have little value but as far as they represent gold bullion they are worth one anna in the rupee . . . ." Coming to remedies he recommends the establishment of the gold bullion standard, unlinking the rupee from sterling, settling India's balance of trade in gold and making gold available to the public. If the Government fails to tackle the problem by withdrawing sufficient purchasing power, by restricting consumption and by increasing production the best course for the masses to follow at present, according to Mr. Kumarappa, is to adopt a system of barter. He advises the villager to retain such portion of his produce as is needed for his family consumption and barter the surplus for his other necessaries like oilseeds, ghee, gur, cloth, kerosene, etc. and to the invest any further surplus, if he has, in bullion.

Agreement and Obstacles

The reports from Moscow encourage the hope of an ultimate agreement between Russia and the Anglo-Saxon Powers but it is only fair to recognise that no definite news has been given by the Foreign Ministers attending the conference after Field-Marshal Smuts' estimate of Allied opportunity and responsibility as regards a second front. The question of Spain's neutrality has been disposed of, more or less, but Spanish Fascists are fighting against Russia and the Allies have to take note of outside intervention in the Russo-German war. The spread of war from Serbia to the Dalmatian coast, and the new hope given to Pan-Slav supporters by the late promise of a free and independent Poland may not be easy to reconcile with the unpromising indications given before the conference that Eastern Europe's frontiers were outside the scope of discussion. The danger of two blocs among the United Nations has appeared more than once but a part of the U.S. press has recognised that the Russians have experienced certain rigours of war spared the others, and they are rightly clamant about conditions.

Britain is bound by Article 5 of the Treaty of May, 1942, which lays down the need for close and friendly collaboration after the peace for the organisation of security and economic prosperity in Europe. Both Russia and Britain have agreed to take into account the interests of the United Nations in their objects and they will act in accordance with the two principles of not seeking territorial aggrandisement for themselves and of non-interference in the internal affairs of other States. The treaty may suggest that the Baltic States may not be revived but there is one other country with well defined historical interests. Since Sweden is in favour of a regional pact independent of the arrangements contemplated by the Allies there is the issue of non-Russian interests in States which are still in German occupation. Before the war the Baltic States had minority problems and absorption in Russia may be no solution, particularly, as the religions and linguistic differences are profound. The problem of post-war frontiers has evidently been ignored in the effort to get the military issue, the Second Front, settled in the light of the latest Soviet successes. But the U.S.A. delegate has to go by Senatorial caution as expressed in

the tepid resolution that was adopted last week against interventionist amendments and the U.S.A. has only to go by the British Government's own view as to arrangements between Russia and minor allies like Poland and Czechoslovakia The Senate's view as to U. S. obligation must prevail until Russia lays down broadly satisfactory principles acceptable to nations which have derived so far no advantage from the alliance between Russia and the Anglo-American entente.

Aid to Russia

Soviet takings of war material have risen consistently. In the period from June 22, 1941 to March 1943, the U.K. delivered materials worth £170 millions. The Chancellor of the Exchequer mentioned in April that Russia's pre-war imports were valued £6½ millions while exports in the war period are worth over £200 millions. The Allies' help explains the offensive mounted by the Soviet Union from the summer. British material as much as U.S. material has been despatched and the problem is not one of transport only. The two routes are, the northern to Russia's Arctic ports and the Mediterranean route leading to the Persian Gulf. In 1941 the first route was preferred as Iran's railways were not sufficiently developed. Moreover, the Mediterranean was unusable and the lonb voyage round the Cape was hardly preferable when the Army in the Middle East had first claim. Railway equipment was despatched to Iran from after September 1941 the consideration of Russia's requirements. Skilled men were sent along with engines, and wagons too were sent. From the autumn of 1942 the Mediterranean route was more important. Towards the end of 1942 the northern convoys became the rule and some warships were lost. But before the end of 1942 British convoys arriving at Murmansk had made a difference to Soviet defence. In the autumn of 1942 no fewer than 75 British warships were used as escort vessels. The convoys in the first year of war took planes, tanks and vehicles besides machine tools, medical supplies and aviation spirit. By the end of 1942 both Britain and America had sent many thousands of tanks and planes to Russia. Britain was able and willing to send rubber in addition to boots and small arms and ammunition. The work of tramps standing off Archangel and pouring materials into a frozen estuary has been praised more than once by many, but it is not generally known that Britain before 1942 was out gave enough goods to equip 20 armed divisions. Supplies this year follow the sea route by way of Gibraltar. The double tracking of Iran's railways system has made it easy to cope with the demand for materials. Since the African victories opened the Mediterranean punctual despatch and safe arrival alike were ensured. Soviet successes can be readily related to Allied victory in the Mediterranean. Allied supply there has to be reckoned the major factor though not in recent successes. The Soviet Union has derived more advantages since U.S. troops have not been sent to Russia as to Britain, and material has been exclusively assigned to the use of Russia's own troops.

THE PROOF OF THE PARCEL

To our fighting men who languish in distant Prisoner of War camps. a regular parcel. containing everyday necessities and small comforts. such as razor blades soap. cigarettes. and warm clothing. is a constant proof that their own people are doing all they can to make life bearable for them.

The Indian Red Cross announce, that each week 14.500 parcels of food. clothing and other comforts are being despatched to Prisoners of War in German and Italian hands.

We cannot continue sending these parcels, which mean so much to the recipients without your regular help.

Please send your donation now, to the Hony. Treasurer, Indian Red Cross Appeal, C/o Imperial Bank of India, Strand Road, Calcutta.

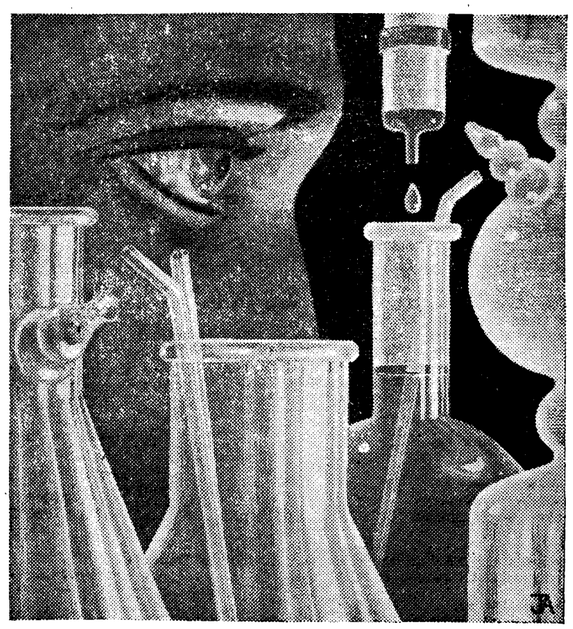
Combined Operations



An artillery colonel coined the word, commando, for a new Service meant for new operations—more than tip and run raids if one goes over the record from Spitzbergen to Syria. Brigadier Laycock, the new Chief of the Combined Operations Command, organised the Lofoten raid of which the backbone was 5 Tribal class destroyers. The raiding force brought back eight (or rather seven) ladies for the Norwegian Red Cross and ten quislings taken prisoners. The episodes described in the official account of exploits from 1940 to 1942 include the attempt to take Rommel alive. General Laycock's desert encounter is described in detail and his escape from blindness caused by wild garlic picked up to flavour a thin stew at least shows that his luck has always held. The new phase in war proves that the Germans have not been in uninterrupted possession of the Channel Islands. The Commandos have been up and at them. Lord Louis Mountbatten's own show was at Vaagso where British fighters took a hand in setting fire to oilfields and the enemy airfields. Attacks on the Atlantic Coast last year have a wider significance in connection with the Second Front and the St. Nazaire expedition was meant to deprive the Germans of a naval base. It was really the job of H. M. S. Campbeltown which forced the dock gates and let the raiders in. The Dieppe raid excited general misapprehension—the record, however, puts facts in order. A reconnaissance in force to test the hostile defences followed the previous raids. Dieppe was a legitimate objective, apart from being a port for German coastal convoys. Canadian and Fighting French were participants but boldness did not meet with its reward in August 1942. But the 28 tanks got out and the town had then its chance to see the Marines' courage, courage terrible to see. General Mark Clark had the chance of seeing the Commandos in action on 12 October last, when contact was established with the French in North Africa. Experience has since accomplished much but in the Ministry of Information's book bits and pieces of skimpy newsreels seen for a minute or two take on a vast meaning. The Red Indian raids, belittled by the Truthful Doctor, led after October last to large expeditions attended by large results. The Commandos may soon come East and many may hear of airborne assault in Burma and beyond. The scope and scale can then be conjectured from a reading of a book which gives the full definition of the common bulldozer. The verb bulldoze meaning threaten (U.S.) is familiar through the dictionary but the bulldozer, a small tracked vehicle with a movable steel shovel in front of it and tremendous pushing power, of which reports from New Guinea speak with admiring awe is a chariot of iron unknown to existing dictionaries.

Higher Wages or Bonus

Wage policy in wartime is a difficult question and such rules as have been laid down in the adjudication proceedings in Bombay in connection with the claims of workers in three ship-repairing concerns there are of special interest. The award of Mr. A. Latifi appears in the Bombay Labour Gazette for June. It denies the claim to a flat increase of 25 per cent in wages, merely because average efficiency has been raised by continuous service or the employer makes abnormal profits. When profits justify, the grant of a bonus is approved. The wage cut belongs to the past, and the increase in the total wage-bill between August 1939 and November 1942 in the case of the Mazagaon Dock is very large; while the average wages of monthly rated employees rose Rs. 45 to Rs. 75 per head.

(*Continued on page* 848)

AT YOUR SERVICE

IMPROVEMENTS in our daily life follow one another so swiftly that we tend to accept them as a matter of course. We note advances in the colour, finish and texture of our dress materials or the fabrics which go to furnish our houses. We even use without surprise entirely new types of textiles and other materials. We read with only a passing wonder of the strides being made in the prevention and cure of disease among men and animals, and for our protection, in the detection of crime. We have ceased to be astonished at the developments which make our daily round and common task, in kitchen, work-room and garden, simpler or more enjoyable. We accept without comment the progressive advance in quality of such entertainments as the cinema and radio. Even in a world at war we seldom pause to inquire how it is that we are still able to enjoy efficient substitutes for the articles which are temporarily no longer obtainable. Or how it comes about that the evils of undernourishment and the scourge of epidemic disease have been kept so firmly in control. We shall do better to remind ourselves occasionally that none of these things come of their own accord. In each one of them we shall, if we trouble to inquire, find the hand of the research chemist and of the chemical industry—and not least of the British chemical industry. The record of history shows that British chemists have always been in the van of invention and discovery. It is not the least of Britain's justifications for the regard of other nations that, even stretched on the rack of war though she is, her sons and daughters, fleets and armies scattered all over the globe, her chemists have stood to their task. Today, as in peacetime, British laboratories and chemical factories are working with undiminished resource and energy to see that the benefits of science are increasingly applied in our daily life.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

The Moscow Conference has come and gone. By all tokens, it has gone through a big and weighty agenda; and though Soviet spokesmen speak little, there is every reason to believe that all the three Powers in the Conference, to say nothing of China, are satisfied with the results. It is true that disappointment and dissatisfaction with diplomatic conferences are not expressed with promptitude. Just as no conference fails till the moment of its disposal, every conference which is not a patent failure is a glorious success, for some time after its conclusion. But the Moscow Conference had advantages usually denied to such meetings. It met in conditions which are the greatest encouragement to its immediate objects. It had prior understanding about what it should discuss and what it should not. It had a lively appreciation of what it may aim at as the general setting of the war and of world affairs change more and more to their liking. And what is most important of all. the Conference met when the undue dependence of one on either of the other two had been more or less lived down and all the three parties could meet together on a footing of equality. Conditions were. then, very favourable for the success of the conference. Neither the progress of its deliberations nor the subsequent comments on its published terms reveal any sign of dissatisfaction in any of the parties. On the other hand, there is a feeling, not unreasonable by any means, that the Conference may be enabled in good time to achieve more than it felt called upon to attempt in a direct manner.

* * * *

It can be guessed from this that the Moscow Conference does not lend itself to being judged by any simple test of success or failure. For its objectives, explicit as well as otherwise, have a wide range. The most important of its immediate results, namely, the permanent Committee for Europe, must be judged by its doings in the future. For the immediate object of the Conference, namely the military operations against Germany, the Moscow Conference and its doings seem to matter less than when the Conference was first planned. For one thing, Russia is very near the completion of her task of driving the hated invader from her soil. The Germans are reported to be running away from the Crimea to avoid a Stalingrad of bigger proportions. The army in the Dnieper bend is pressing on. The offensive in the North, may be facilitated by Finland following Italy's example. The internal situation in Germany has assumed a favourable turn, riots being reported to have broken out in Berlin and 40 other cities necessitating the declaration of a state of emergency. Likewise, the campaigns in Italy are pressing forward. In these circumstances, it is no wonder that priorities in the matter of war fronts failed to distract the foreign ministers or cause a rift in the Conference. It is said that no party asked for any change in the plans of the others. The need was rather to co-ordinate the plans so that the pressure on the enemy could be increased.

* * * *

It is fortunate that at one point at least the needs of post-war settlement were found, in the unanimous opinion of all the three parties, to be in agreement with the requirements of the military plan. Questions of post-war settlement, it is understandable, were not exactly in favour at the conference table. Russia had a decided and decisive aversion for such problems. But on the question of Austria, there seems to have been such close agreement that its reconstitution comes in for mention as an honourable and important exception. There is an element of poetic justice in Austria being the first among the victims of Nazi aggression to be liberated by the Allied nations and to be the first to take Germany's doom near to her door. When you think of it, this war has never been lacking in it. When it broke out, its first effect was to wipe out all the small nations, which, ignorant of their doom, had assisted Germany to wipe out Czecho-Slovakia. Italy, which stabbed France in the back, has now to have her fate settled by the French Committee of Liberation along with the United Nations. The authors of aerial bombing and blitzkrieg are now having their fatal sip of the potion which they devised for others. It is in keeping with this aspect of the war that Austria should be offered the prospect of speedy reconstitution and that she should respond to it by hastening the doom of Nazi Germany. It has been suggested that it is in Austria that the British and American forces fighting in Italy and the Red Army pressing on from the East may expect to join hands. The special mention of Austria together with a general shelving of post-war problems imparts this suggestion with a high degree of plausibility.

* * * *

But all other questions of post-war settlement in Europe have been referred to the European Commission which is to be a permanent body. As Mr. Cordell Hull has said, this is a great step forward in international affairs. There is machinery, as there never was before, which will be continuously applying itself to problems which formerly were the subject of international consultation only when they reached a more or less critical stage. The Mediterranean Commission has now been superseded by one of far wider scope. And its purview extends to the whole of post-war Europe, and the recognition of the independence of Austria and the voice given to the French in the matter of settling with Italy are the only

limitations. One does not know what to think of Finland, which is not generally part of the European tangle, and which may now be deemed to call for special consideration by reason of its anxiety for peace and for the possibility of its doing to Russia in the North what Italy has done to Britain and America in the South. America's soft corner for Finland is well known. And it was not long ago that Russia evinced a readiness to make up with Finland, on the basis of her peace in her last war with that little country. It seems extremely unlikely that there were no consultations between Mr. Hull and M. Molotov as to the possibilities of a peace and alliance with Finland, such as could facilitate a powerful drive from the North. But this question is dangerously near to Russian interests in the Baltic and may well open up embarrassing points of disagreement. Silence on this point is quite understandable, though it does not rule out possibilities of important developments in the near future.

* * * *

It may be said therefore that, so far as the war in Europe is concerned, the Moscow Conference brushed aside the only potential source of disagreement, viz., the second front in the customary sense of the term, and made good progress towards close understanding among the three Powers. Since the pressure on the Russian Army had been transferred to the German, and increased in the bargain, the task of the Conference was to map out the possibilities of the immediate future and establish understanding as to what each should do as and when the expectations prove true. The war with Japan is however a different matter. Here, it would seem, there was equally close and sympathetic understanding. For an imaginative, as distinct from an informed, understanding of the position, one has to, look to other sources. I made an attempt last week to analyse and explain as far as I can the position as regards Russo-Japanese relations. Laymen often make the mistake of thinking that nations are as quick to obey the call of old hatreds, or utilise every opportunity of indulging it, as individuals. It is true that national hatreds are more inveterate than those of individuals. But more considerations have to be taken into account by a nation going to war against another. In the case of Russia and Japan, there is the obvious fact that, while the two have not gone to war for two years in spite of circumstances impelling them to do so, they have also kept their armies almost facing each other in their common frontiers. The most natural explanation of this position is that both have to take account of serious disadvantages in coming to open hostilities in the present setting of the war. So far as Russia is concerned, the advantage of avoiding a two-front war is not only obvious, but should have been decisive, so long as the threat of German conquest was both real and near. As for the future, while one line of thought may suggest the desirability of a less powerful, but not totally ineffective, Japan as buffer between Russia and Powers who are yet indubitably friendly to her, it stands to reason that Russia may put as much reliance on Britain and the U.S.A. for crushing Japan as these two nations put on her for breaking the backbone of the German military power. There is no doubt now that both Mr. Churchill and Mr. Roosevelt showed extraordinary

judgment in concluding, as they seem to have done, that Russia would be able, given the marginal help that she needed in material, to beat back the German armies, without making it necessary for the democracies to take the grave and incalculable risks of a second front. If I remember right, Mr. Churchill suggested in one of his speeches a year ago that M. Stalin's bitter remarks on the absence of a second front were a blind to cover the preparations for the grand African campaign. The talk about second front had more in it than meets the eye. But that is by the way. I referred to this only to indicate that Stalin may well be disposed to leave the war against Japan to the democracies, without being suspect in the eyes of their Governments, of any sympathy for the Asiatic partner of the Axis. Such an attitude on the part of Russia may well explain the curious phrasing of the terms of the communiques published on the subject. The three Powers have not fought shy of using the term "Axis," though Japan is a partner therein and Russia, one of the United Nations, is not at war with her. But they talk of "fighting their respective enemies," a term which takes account of the neutrality between Russia and Japan. One can only conclude from this that there is no lack of moral support from Russia for the war against Japan and that the feeling that the surrender of Germany will make the war against Japan almost a minor affair is shared by all. Whatever the actual achievement of the Moscow Conference—and that is necessarily a matter for surmise or speculation—there is no doubt that it has inflicted a defeat on Goebbels, leaving Goering not far behind. The Berlin Radio's attempt to discredit the Conference is pathetically unconvincing. And the military strategy agreed on at the Conference has been strengthened immeasurably by the outbreak of internal disorder in Germany.

* * * *

Only the question of post-war settlement seems to have been shelved in large part. But here, too, Mr. Cordell Hull has pointed out that Russia's participation in the future conferences for the regulation of post-war international finance has been secured. The permanent commission for Europe can be depended on to do a lot of spade-work before the questions come up before the Powers with a practical urgency. And Russia will have ample time to get her view of it appreciated by the Anglo-Saxon powers. The importance of China in the Allied counsels will ensure a wider outlook in these matters than what the two English-speaking nations by themselves can assure us of.

The protector of a kingdom

To you your family is your kingdom. Your wife and children, the members of this family, look to you - the head of the family - as their protector. Their well-being and their future are your responsibility.

Life may not be too kind to you; the fatal hand of destiny may suddenly remove you from the kingdom of your dear ones. Have you thought of who will then give your wife and children the financial protection they are now enjoying from you, and who will provide funds for the livelihood of your family and the education of your children?

New India's Family Income Policy will assure your family of a regular income in the event of your premature demise until the period of your policy matures. And then in addition to this, the entire assured sum will be paid to them. If you survive, the full sum assured will be at your disposal.

TOTAL FUNDS - NEARLY RS.5 CRORES
TOTAL ASSETS - NEARLY RS.6 CRORES
TOTAL CLAIMS PAID EXCEED RS. 10 CRORES

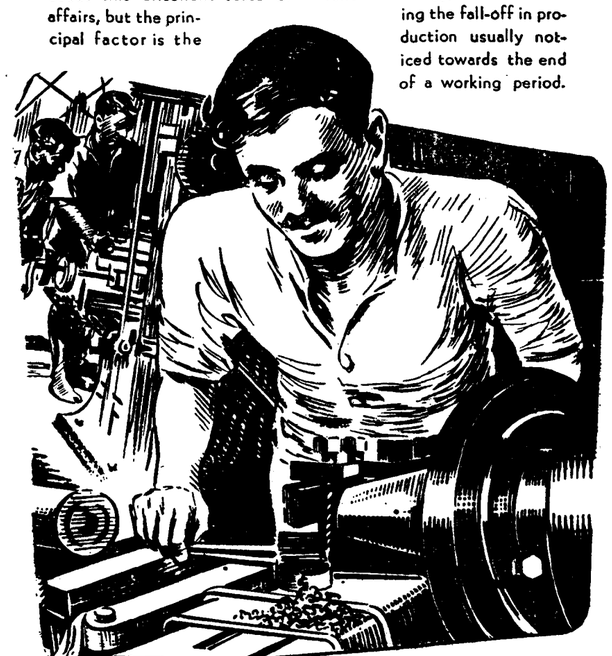
(*Continued from page* 843)



The result of the dispute was the adoption of a provident fund scheme for the workers approved of by the adjudicator who stated that the company was going to make provision for widows and dependant of operatives who do not benefit by electing the pension (in place of the fund scheme) under the scheme but die in service, thus in line with the plan for interim gratuities drawn up. Claims for modification of the system adopted for overtime work (with double wages for work on Sundays) were over-ruled. Leave regulations as defined in an earlier award were adopted and 13 days' leave with pay for every 300 days worked was offered to men with names on the muster rolls for three years. The company's right to keep contract labour for special intermittent jobs was also recognised and the claim of ten men to be reinstated in their jobs was negatived. The adjudication under Defence Rule 81 followed a dispute which affected two other concerns. The trade dispute was investigated as one affecting all three belonging to the ship repairs panel and the hearings concluded in March. The workers attained their main demand for a minimum dearness allowance of Rs. 10-8 per month or at the rate paid by the companies whichever is higher. The adjustment of grievance was easy as the majority of Union demand was withdrawn. The state of employment and wages in Bombay engineering industry (wages being highest in the case of Mazagaon Dock) may be conjectured from the award which observes that profits are not abnormal and the benefit of prosperity should be passed on to workers by the grant of a bonus. The award meant to be in force for the duration of the war was notified in the Gazette, though leave is given to the employer or labour to determine the award by notice.

Bharat Bank's Flying Start

Described as a national enterprise in the nation's service. the Bharat Bank today has more branches than any Indian bank with the exception of the Imperial Bank of India. That is not the sole factor contributing to the phenomenal progress compressed within nine months of working in the case of a bank whose interests range from Jammu Tawi to Trichinopoly. The first published balancesheet throws light on the operations of what in some ways is the biggest bank incorporated in India. The Directors express more than conventional appreciation of the shareholders' part in the success of a venture which has enabled many Indian States to obtain the benefit of a modern banking service. The preliminary expenses are more than covered by the profit of Rs. 22.62 lakhs for the period ended September 30. Progress in the current half-year ending 31st March, 1944 will permit the usual comparisons to be made but it must be noted that a bank (not a merger) which has been able get over Rs. 11 crores within a year is sui generis. The proportion of calls in arrear to paid-up capital of Rs. 201.2 lakhs certainly will claim notice like the vast contingent liability which is not likely to trouble shareholders. The ordinary shares still stand at a very modest premium and the first report and accounts may well direct investors' attention in the inherent possibilities of shares in a major bank. Since policy is more or less orthodox, to judge by the distribution of assets at present, it may well be inferred that very striking progress will be made when the implications of the sprouting of seed cast from Delhi are understood. Total Deposits in the balancesheet stand at over Rs. 8.26 crores and the bills item appears formidable in proportion to the total assets. This alone will rivet attention to the fortunes of a bank which must have exceptional contacts with indigenous bankers; and the organic function of discounting in the case of the new bank (so well discharged in the first year) should be related to the cash ratio (of 30 per cent nearly) shown in the balancesheet. If investment policy is a little more elastic than usual, the justification is admittedly not wanting in India. Investments certainly exceed Advances and a point that will not escape notice is that the Board or associates are not indebted to the Bank. There are no bad or doubtful debts, and unsecured debts constitute a small fraction of the total under Advances. The advantages of an impressive beginning on the basis of large resources certainly find expression in the balancesheet total of Rs. 11.79 crores nearly.

Output greatly in excess of what was formerly considered possible — this is the report from industrial concerns all over the country. Good management & careful maintenance of plant play important parts in bringing about this excellent state of affairs, but the principal factor is the ability of the labour force to maintain continuously a high level of output. It is here that Indian Tea has helped in many hundreds of factories; tea served to the worker on the job is giving extra concentration and renewed energy, thus eliminating the fall-off in production usually noticed towards the end of a working period.

INDIAN Tea Relieves the Strain of War-Level Output

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD IR 200

Gateway of India

(From Our Correspondent)

Bombay, Nov. 1.

ENCOURAGED by remarks in official reports anti-prohibitionists ask for the abolition outright of Dry experiments in order to secure the abolition of the Property Tax. The tax has been called discriminatory, a check on essential building enterprise, and it has been urged in indignant letters to the Press that investors in house property including trustees of charities have been penalised because a few cannot make proper use of the liberty to take beverages. Prohibition has been termed a failure here too. Observers conclude that drunkenness has increased and the Government has only sacrificed revenue. Prohibition in Bombay surrounded by Wet districts seems farcial. The Indian States have set their face against expensive experiments and the fallacious paradox is that foreign liquor is available. It has been pointed out that the U.P., Bihar and Orissa have given up prohibition and Bombay lags behind. The juridical basis of the Act has not been assailed but few can afford to forget that the Courts made hay of the 'noble experiment'.

The Oriental Assurance Company's actuary has been selected as Mr. Thomas' successor. In June Mr. J. H. Thomas went back to the Government Actuary's office in London and the search for a permanent appointee began. Mr. L. S. Vaidyanathan is expected to take up his post by the middle of the month. Many recall that he took up work on the table of the Census in 1931 and engaged in a little research into vital statistics based on Oriental's experience. The Insitute of Actuaries recognised the importance of the investigation by awarding a prize. The new Superintendent of Insurance commenced life as a Professor in the Baroda College and went to England as a Government scholar. He joined the Oriental Assurance Co. in 1925 and became its Actuary in 1934. His visits to Europe and America enabled him to adopt Oriental practice to the methods he had studied abroad.

The Bombay Medical Union asked for an all-in scheme of health insurance. Various benefits were claimed and Governments sickness insurance plan for workers was described as too narrow, being limited to major industries. A contributory scheme was regarded as appropriate and representation for the medical profession on any board administering the scheme was demanded. Full-time doctors for running health centres would be required. The Union has also asked for more medical colleges to train more doctors in order to make the insurance plan a success.

The E.I.C.A. is back in business after five months of enforced quiescence. Diwali night saw the market get back into its stride but the business is resumed, subject to conditions as to prices and deliveries, and the Board's responsibilities are defined in the amended byelaws. Speculation will be strictly regulated, and the trade in futures will hold little appeal to the outside 'investor' hereafter. It may serve as a corrective to sudden swings. The mention of speculation leads to the mention of a Hyderabad ordinance fixing maximum prices for securities. The Bombay market has consistently forced up the prices of shares for certain mills in the State and the ordinance is meant to curb unhealthy interest in the shares. Secretaries are forbidden to register transfers if consideration exceeds the maximum value. The third condition is that no purchase or sale shall be effected against delivery of a blank transfer signed by a seller and without registration of each transaction within a period not exceeding 7 days. This ought to improve stamp revenue and limit inter-bazar business. The companies have also to furnish details of transfers to the Finance Department. This may be a further check on tax avoidance, and Hyderabad's prompt adoption of measures in force from September 24 against speculation in shares, has been interpreted as proof of a desire to help Mulki investors and local enterprises.

In the light of postponement of the demand for a return of stocks of cycles, fountain pens etc. the critics of the anti-profiteering ordinance have succeeded. The profit margin is not ruthlessly being limited to 20 percent in all cases. Where conditions justify, the usual trade margin will be allowed. Sanction for the prosecution is required and the interference with normal trade would be limited. Obviously, European houses with heavy overheads cannot be forced to take 20 percent. The Indian Merchants Chamber argued that the Ordinance is unworkable, the Government has not the knowledge needed for the enforcement and the 20 percent margin ignores dates and terms of acquisition while the cost of replacement is always the material factor.

Rationing is to be extended to four towns including Ahmedabad. Poona is conversant with rationing and hill stations, too, will soon be covered by the scheme. The dependent towns are made to consume according to prearranged plans but the villages are also to know rationing of kerosene in view of a plan under consideration. Rice mills have passed by stages under control. Licensing is meant to keep a tab on millers' methods. This is meant to prevent polishing and an increase in the outturn in relation to paddy husked. The Government has gone ahead with rationing and the kharif crop is to be bought up. Maximum prices have been fixed already. Agricultural development is not overlooked and Rao Bahadur S. S. Salimath has been placed on special duty. Parity prices have been fixed for millet as well and the Adviser's regime seems bent on having its own way. The Advisers will be fewer as Mr. Kripalini is appointed Prime Minister of Bikaner from December, Mr. Taunton will take his place.

The cloth market did not have its usual take on Diwali night. Merchants in the mofussil expecting lower prices after December 1 developed sales resistance. Prices being fixed dealings were not lively and yarn was actually lower than the price fixed under the order. The turnover on Diwali is put at 50,000 bales. Bullion dealers discouraged by war news developed caution and the stock exchange was moderately active. Giltedged was firm and bank shares were higher. It is noteworthy that Eastern Bank shares are well over par but Indian jointstock bank shares are still moving up.

Rent control has forced the consideration of the problem of subletting. In the light of

EAST INDIAN RAILWAY

ANNUAL CONTRACT ITEM OVER Rs. 8000

Class I Contract

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta on 15/11/1943 at 12 O'clock noon.

Tender No. Gb4/464/C for conversion of 252 tons of Scrap C. & W. white metal into an equivalent quantity of new white metal.

Tender forms with full particulars can be had from the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores direct by Money Order. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into Tender box, outside the Dy. General Manager's (Works) room by the Tenderer or his representatives.

R. E. MARRIOTT,
General Manager.

a change in law under discussion, tenants cannot sublet unless authorised by landlords who found that the tenants spoilt the market. Those who sublet can be ejected in accordance with the recent amendment of the Control order but this excited criticism on the score that connivance would lead to higher rents and control would be frustrated. Those tenants who had let previously are duly protected, but the subtenant has no real protection, and permission to sublet may be treated as a vendible right, leading to a rise in rents for a new reason. Landlords can, of course, point to charges for repairs or renewals. Timber prices are known to be fantastic. The Supply Department gets what it wants of the Forest Department but the free market is starved with the result that scarcity impels contractors to bid extravagantly. Fuel prices are not uninfluenced by timber prices, but the anti-profiteering ordinance may be applied to timber like anything else. Prosperity in the timber trade is not measurable like the prosperity of engineering concerns. In 1942 they flourished like any other organised industry. Large-scale enterprises increase by 100 and the members engaged increased by 40,000 nearly. War work kept most factories busy and textiles again furnished the outstanding example of activity promoted by the war.

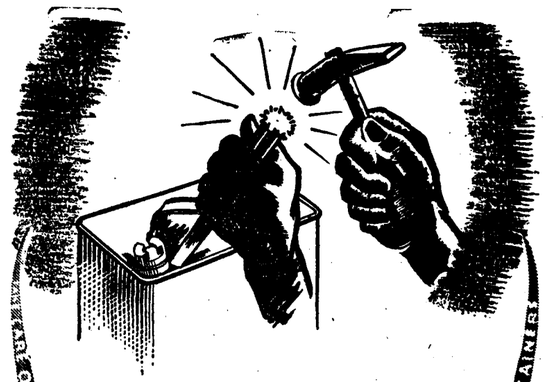
A National Enterprise in Nation's Service

South India



(From Our Correspondent)

Madras, November 1, 1943.

Nobody ever doubted that Advisers' regimes can never be a substitute for, popular ministries but it passes one's understanding why these regimes should actually put the clock back and slowly sponge off the effects of far reaching reforms introduced by the Congress Ministry. Prohibition is a reform which was achieved after years of propaganda, picketing, and jail-going by thousands of nationalists. That the people have been welcoming the abolition of alchoholic drinks was known to everyone who cared to go to the countryside and study the feelings of the labouring classes. Religion and social opinion have ever backed up the prohibition movement but the Government's policy of foisting the drinking habit on the masses had established a source of revenue for the state and sowed the seeds of vested interests committed to the popularisation of the evil. The Congress was best fitted to take up the issue and with the cooperation of all political parties in Madras prohibition was introduced in four districts. The social and economic advantages of prohibition have been clearly pointed out by non-officials and University research scholars who studied the working of prohibition at first hand. The success achieved was so great that people actually looked forward for an early extension of this reform to other districts as well. Now Madras Government proposes to discontinue prohibition altogether on the flimsy ground that illicit distillation has increased in some areas. If crimes have increased the lesson to be learnt is that there is room for improving the efficiency of the police. But to take it as an argument for dropping what has been the achievement of years of struggle by the nationalist opinion is both unfair and unwarranted. Further, it is always very difficult to enforce prohibition in a particular area surrounded by 'wet' regions and the hint that the Advisers' regime is not interested in extending prohibition has itself encouraged law breakers and bootleggers in the 'dry' areas. If the Government are not interested in prohibition why then did they fail to abolish the Sales Tax which was levied solely for the introduction of prohibition in this Province? If the Government succeed in abolishing prohibition it is one more indication that the absence of a National Government is proving too costly indeed. Sooner or later nationalist forces will dominate the administration and temporary setbacks in the matter of prohibition are not going to arrest the extension of this much needed reform. But it is nowever prudent for the Advisers' regime to seek to show their activity in other productive and profitable channels than reviving the influence of toddy and arrack.

The people of Rayalseema are today enduring severe famine and stress but a close study of the economic potentialities of the Ceded Districts reveals that given active help from an enlightened administration the resources of the area can be quickly harnessed for prosperity and plenty. The First Rayalaseema Economic Conference held at Bellary last week outlined the immediate requirements of the famine stricken area. It is well known that vast resources of iron ore are available here to meet the demands not only of India but of several other countries as well. The mineral wealth of the region is so promising that the Government should without further delay take active measures in exploiting them for the people's welfare. The execution of the Tungabadra, Kumudavati, Ghandikota, Velugodu and Badvelu projects should be speeded up even during the war so that the agricultural production of the Ceded Districts can be increased. The conference urged upon the Government to evolve a five-year industrial plan of the Ceded Districts' Economic Development and demanded the publication of the report ment Board. The need to exploit the resources of the Nallamalla Forests for starting paper mills was stressed and import of cheap electrical power from Mysore recommended. Attention was also drawn to the vast scope for developing slate industry in Markapur. The Conference has expressed its satisfaction at the assurances given by Mr. S. V. Ramamurthi that early action would be taken to implement some of the major recommendations of the Ceded Districts Economic Development Committee. The agitation for an Andhra Province would no doubt give the necessary popular support for speeding up the economic development of Rayalaseema.

The Madras Government have issued a press communique answering the complaint that indiscriminate slaughter of cattle has been allowed to go on unchecked and the increased price of cattle was due to the enormous purchases by the military contractors. It is pointed out that the military contractors are paid only 4 annas for a pound of beef supplied by them and on that basis it would not pay them to purchase an animal at a price higher than Rs. 60, while even an ordinary pair of working bullocks costs Rs. 200. The rise in the price of cattle it is stated, is in part due to the general rise in prices, the higher cost of maintenance and the increased demand arising out of transportation difficulties. The public are told that, on the basis of the census of cattle taken in 1940, 18,28,710 cattle should be considered useless for agricultural or draught purposes and while half of this figure can be available for

The revised Aluminium Control Order 1943 published at page 1167 of the Gazette of India, Part I, dated the 23rd October, 1943, contains three main changes. Firstly, manufacturers are now required to obtain permission to acquire aluminium for manufacturing purposes and to state the exact purposes for which it is needed. Secondly, the new Order requires manufacturers to obtain permits if they wish to sell any scrap. Thirdly, all permits issued under the old Order will become invalid two months after the new Order comes into effect. Dealers and manufacturers must within the period of 2 months take out permits under the new Order.

slaughter the civilian and military needs could hardly exceed 300,000 animals. The Government of India have prohibited the slaughter of working bullocks in good state of health, below the age of ten years, cows in milk and pregnant cows. The military authorities, it appears, do not purchase cattle for more than Rs. 30 per animal while the Government of India have recommended the maximum price of Rs. 60. The Madras Government have accepted the recommendation of the Provincial Livestock Improvement Board that the slaughter, whether for civilian consumption or for the army, of dry cows and heifers fit for breeding and young bulls fit for work should be prohibited.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

(*Continued from page* 847)

For my part, it is difficult for me to believe that the post-war world will be purely the plaything of two or more of the great Powers. This war is one of the great cosmic forces operating in obedience to laws of far wider scope than the laws of democratic legislatures or the edicts of dictators. I hope someday to be able to say something concrete on this subject. For the present I must be content with saying that Germany's unparalleled bid for world domination can be understood only in the light of that geopolitics which suggests that he, who is master of the great heartland of Asia and Europe, is the master of the world. But against this has to be set what for sheer expressiveness may be termed "hydropolitics," of which I consider Mahan to be the chief exponent. The suggestion of this "hydropolitics" is that the two kindred nations, who control the high seas of the world, shall be masters of the world. But put the two together, substitute Russia in place of Germany, we have a glimpse of the shape of things to come.

Resume of Commodity Markets

The important feature of the week is the slump in prices in the gold and silver markets. The decline in prices in both these markets came all of a sudden on reports of the possibility of an early peace and with some selling by the Reserve Bank. The decline in prices, however, has not been continuous and there has been some support at the lower levels. The jute market has been firmer while the jute manufactures market has been easier. Trading in futures was resumed in cotton towards the close of last week and quite a large amount of business has been reported done by mills. There has been a sharp rise in prices for groundnuts and the British Ministry of Food has stopped purchases owing to the high prices demanded by holders.

* * * *

The jute market is showing amazing resiliency. In spite of the discouraging factors in the last few weeks, there has been no distress selling on the part of ryots and any attempt to force down rates has been followed by a drying up of arrivals in the mofussil centres. The position in regard to jute is indeed difficult and does not admit of any easy solution as it is impossible to reach any conclusion on the basis of the data available at the present moment. Earlier in the season it was feared that there would be a squeeze for supplies if mills continued to purchase on the basis of 60 hours per week throughout the season. The difficulty then was in regard to transport of jute to mills in the Bengal area and for many months producers had to eat into their old stocks. It was never at any time expected that the difficulties in regard to coal supplies would seriously interfere with production. It is now feared that it will not be possible to make up lost production. If there is any slowing down in the rate of arrivals, it will not be possible to make up loss of arrivals either. Under the circumstances, a balance between production and existing stocks with the necessary arrangements for transport of raw materials has to be struck and it is to be ensured that the ryot gets a fair price for his crop. There is certainly an unwillingness on the part of holders to part with their crop at the present level of prices but this unwillingness is only due to the expectations of an early improvement in the situation and the ability to market their production at a later date. This question is discussed at length elsewhere in this issue.

* * * *

Futures trading was resumed in the Bombay cotton market last week and both speculators and mills have been busy. It is interesting to note, however, that the fluctuations in prices have been confined to narrow limits and there is a genuine effort on the part of both sellers and buyers to keep down fluctuations in prices as far as possible.

It would be interesting here to give the reasons and the safeguards that the Government of India had and have taken for allowing futures trading in cotton:

(1) Forward trading shall be permitted only in the official market which at present exists in Bombay only, i.e., in the East India Cotton Association and such trading in any other market shall be a penal offence.

(2) Trading in options shall remain a penal offence.

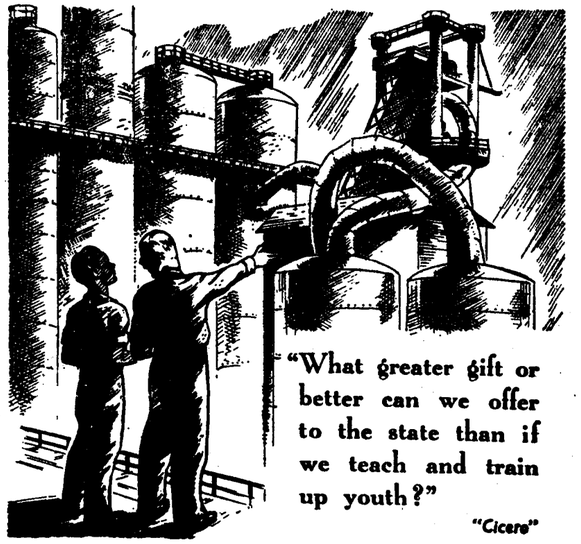
(3) Forward trading shall be subject to the maximum and minimum prices announced.

(4) Every member firm shall deposit with the Association, which shall in its turn deposit with the Imperial Bank of India, a sum (not carrying interest) which shall not be less than Rs. 25 per bale on net open futures position of each such member regardless of the price level.

(5) The Association shall undertake to enforce rigidly in various disciplinary by-laws, e.g., any infringement of the limitation of trading hours shall be dealt with immediately by expulsion, etc.

(6) The Association must take power to call upon any of its members at any time to declare his open position and the accounts on which it is held. If the Association is unwilling to take such power and to exercise it as and when necessary. Government will themselves exercise this power.

(7) When cotton prices are at the ceiling rates Government shall retain the right of requisitioning cotton for the use of mills at prices, say, 3 to 5 per cent. below the ceiling rates.



According to the Second All-India Forecast published recently, the decline in the acreage for 1943-44 is only 8 per cent over the corresponding figure for 1942-43.

* * * * *

The groundnuts market has been very active during the past few days and the rise in prices has been so sharp that the British Ministry of Food has suspended its buying. The Madras Government also has passed an order prohibiting exports of groundnuts and other oilseeds to outside the province except those exports relating to the purchases by the British Ministry of Food. The forecast figures are eagerly awaited.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, November 3.

THE Coal supply situation continues anything but satisfactory. Some mills which were able to work last week have had to close down this week. Others, by standing idle last week were able to accumulate enough coal to work this week. But the arrivals of coal average is little, if anything, over half what is required for regular working according to schedule. Again there are bitter complaints of the quality of much of the coal being supplied. Instances have been numerous of units having to shut down because of sheer inability to keep up sufficient steam pressure with their normal boiler plant to keep the machinery working. With the "dump" system it is, of course, impossible for mills to pick and choose. They simply have to take what is given them, and it very much looks as if advantage were being taken of this fact by suppliers loading up any sort of rubbish available with the assurance that they will get away with it.

There are persistent reports of intended further requisitioning of Jute Mill buildings by the military authorities for storage space. One mill was entirely taken over some considerable time ago. Meanwhile a large proportion of the available mill godown space has also been taken over by the military, to the no small inconvenience of the mills concerned. These requirements, however, have been cheerfully met as an additional contribution to the war effort. Another complete unit has now been taken over and the machinery is in process of dismantling to clear the area for storage space. And it is credibly reported that negotiations are in progress for the requisitioning of three further complete mills, two of them at least units of large capacity. In certain cases it may be possible to arrange for the productive capacity so lost being made up by working multiple shifts in other units adjacent to the mills taken over. But in other cases the difficulties of removing a whole labour force to a new area may be found insuperable. In any case the requisitions now being considered are bound to cause considerable unsettlement in the areas concerned, with possible unpredictable consequences to the industry. It is suggested that the authorities are after one million square feet of storage space, and while the Supply Department has represented the desirability that production of jute goods should not be unduly interfered with, the reply merely is that military requirements must receive prior consideration.

It is satisfactory to note that Government has issued a warning that drastic steps will, if necessary, be taken to counter any attempts to establish a "black market" in jute goods. Actually there is little doubt that such a market already exists in respect of certain types of Heavy Goods. The warning had a temporary dampening effect on the market and there was some unloading in consequence, but dealers seem to have recovered confidence rapidly and rates are again touching ceiling prices, which is obviously a danger zone. Unfortunately, with the coal supply position as it is, mills can do little or nothing to alleviate the situation by making fresh sales.

It would be reassuring if Government would also issue a warning with regard to the recrudescence of Fatka markets. The old East India Jute Association has come out into the open, announcing the reopening of a Fatka market in Loose Jute since the 21st October. The basis is supposed to be Indian Jat Jute, 50/50 Middles and Bottoms. We indicated last week some of the dangers inherent in the reopening of Jute Fatka when speculative transactions had been severely curbed in other markets both here and in other centres in India. We would suggest further that, if the Bengal Government is really so concerned with the welfare of the jute cultivator as it professes to be, it ought to take very prompt steps towards the suppression of Fatka, which in present circumstances is liable o be anything but beneficial to the jute-grower. So far this season probably not much more than one-third of the crop has yet been marketed. Demand from mills is likely to lag seriously for an indefinite time to come, owing to the uncertainty of their capacity to consume the jute. Even with the relatively small arrivals of jute into Calcutta in the first four months of the season, mill stocks must be standing to-day at least 4 lakhs of bales higher than they did at the end of June. In these circumstances dealers have no free outlet for selling. Practically all dealers are just now running into stocks to a greater or less extent. There will consequently be a temptation to sell into Fatka if there is no free selling market to mills. Any such movement would tend to have a depressing effect on the Fatka price with almost inevitable reactions on the mofussil markets. At the moment, the Fatka price stands at considerably over the open market quotation, Rs. 13-12 as compared with Rs. 13. This premium is an added inducement to any dealer who wishes to square a long position, to sell into Fatka. It may be argued that by so doing, the dealer would clear his hands to go on making further purchases in the mofussil. But this is a specious argument, for not only would that start a "snow-ball" movement with dangerous potentialities when such comes to be liquidated, but in actual fact it would not increase to any great extent the dealer's capacity for buying, which at present price levels is limited by finance, and at the best of times is almost invariably limited by storage capacity. The existence of a Fatka market therefore is unlikely to assist the cultivator in marketing his crop and is more than likely greatly to exaggerate any sentiment which might affect the open market, to the detriment of the price level which the cultivator might secure for the balance of his crop.

It would appear, as a matter of fact, that the Bengal Government is already showing some concern at the slow pace at which the crop is being marketed and is considering whether, and what, steps should be taken to assist the cultivator. At the moment there is no indication that the cultivator requires any assistance. There is no apparent pressure to sell upcountry and at any attempt to reduce prices, imports simply dry up. Everything in fact points to the fact that the cultivator is in a position to hold on to the balance of his crop and is in no hurry to sell. Provided he has hold on to his necessary requirements of paddy to see him into the next crop, which in the vast majority of instances we think he has, the cultivator class is, at the moment, the best situated of any in Bengal, and can well be left to look after himself. It is the wage-earning classes who are the sufferers in the present emergency.

There has been a very sharp advance in the price of Pucca bales since our last report was written. Probably pucca bales had recently been somewhat undervalued, owing to lack of interest both from abroad and from local mills. But when demand came along, even though it was not extensive, prices rapidly recovered. Up to Rs. 75-8 has been paid for Firsts with sellers now asking more. Lightnings were dealt in up to Rs. 69-8 and Dundee Daisee up to Rs. 72-8, all of which show gains of four to five rupees per bale. At the close demand appears to be satisfied but sellers remain firm in their ideas.

Loose jute has not reacted to the same extent though the tone is steadier mainly owing to firm upcountry markets. Mill demand has been very limited and business has again been done in European packing at Rs. 15 and Rs. 12 Middles and Bottoms. Indian Jat Bottoms sold at Rs. 11-8 and Indian District Tossa Bottoms at Rs. 12. Balers have been steady buyers of Tossa, paying up to Rs. 16-4 and Rs. 13-4 for good Indian Jat marks. Estimated arrivals of jute into Calcutta during October reflect the slackness in demand, totalling only 4,69,000 bales against 7,71,000 in October, 1942. This brings the total arrivals since the beginning of the season almost in line with last year, 21,07,000 Bales for 1943 against 20,73,000 bales for 1942.

The situation in the Fabrics market shows little change. There is good enquiry from overseas, particularly for Heavy goods, which mills are not in a position to meet with their production potentialities as uncertain as they are. We remarked above on the temporary uneasiness amongst holders of goods, at the "black market" warning issued by Government. As a result, eleven porters were marked back to Rs. 28-2 and some "B" Twills were unloaded at the ceiling rate of Rs. 67-12. The effect was evanescent, however, and confidence seems to have been restored and eleven porters have again registered Rs. 28-8, while other descriptions, both Hessians and Heavy Goods are quoted at maximum rates. Possibly the recovery in Hessians may be partly due to the report that a steamer for the Plate has been fixed, but it is believed that there are contracts made in 1941 still to be shipped to that market.

JUTE

Calcutta, Nov. 3.

STEADIER conditions have been noticeable in the jute market during the short period under review, markets being closed earlier in the period for two days on account of *Kali Puja.* The improvement in rates recorded during the past week has been due to the larger buying by mills and the hopes that efforts will be made to increase consumption as far as possible. It is also rumoured that the Government of Bengal have under consideration the question of supporting jute prices, if need be. Ryots are not free sellers and imports into mofussil centres have been rather restricted. There is a general tendency to await further developments. It cannot be definitely said that the outlook for jute has improved as in the absence of complete arrangements for the regular supplies of coal, mills cannot be expected to keep up production at 54 hours per week even on the basis of the restricted plan of working.

In the loose jute section, as pointed out above, mills have been buying in larger quantities and sellers have been rather reserved. Indian Jat Tossa Bottoms were done at Rs. 12 per md. Towards the close Indian Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 per md. but there are not many sellers at that level. Balers are still interested in Tossa qualities.

In the pucca bales section, there has been some shipper business and balers have asked for a substantial increase in rates. Dundee Daisee 2/3 have improved from Rs .69-8 at the end of last week to Rs. 72-8 at the time of writing. Mills are reported to have purchased Firsts and Lightnings at Rs. 75 and Rs. 69-8 respectively. Firsts were only Rs. 71-8 few days back.

JUTE MANUFACTURES

Calcutta, Nov. 3.

THE jute manufactures market has been easier in spite of the fact that mills have kept out of the market. It is generally felt that with the efforts to increase the consumption of jute the scarcity of stocks in the bazar may not be so acute and that it would not be possible to take up prices to levels very much higher than the maxima fixed by the Indian Jute Mills Association. A fairly large amount of business has been reported around maximum rates in the "Diwali" session. Towards the close quotations are definitely lower. 9 porters are quoting Rs. 21-7 for all positions while 11 porters are appreciably lower at Rs. 28-4 for all positions.

In the Heavy Goods section, easier conditions have been noticeable although mills are not sellers and some business has been reported from second-hand sellers in B. Twills at Rs. 67-12. Quotations are nominal around maximum rates for November delivery. B. twills quoted Rs. 37-12. Liverpool twills Rs. 75 and Cornsacks Rs. 67-12.

COTTON

Calcutta, Nov. 3.

FORWARD trading was resumed in the Bombay cotton market last Thursday and the opening was rather brisk. Prior to the resumption of forward trading there was considerable activity in the ready market and purchases by mills on quite a large scale were reported. Sellers for new crop were more reserved and even without actual business being done, quotations were marked higher. Jharilla January opened at Rs. 472. There was some selling at the higher levels and quotations receded by a few points but at the lower levels mills were keen buyers. Prices have been fluctuating in narrow limits in the last two days. It is generally felt that, with the large consumption, mills would try to lay-in stocks as far as possible. Jharilla January closed at Rs. 450-8, March at Rs. 453-8 and May at Rs. 458-8.

The publication of the Second All-India Cotton Forecast figures indicate a fall of 8 percent in the area under cotton. The area under cotton is given as 14,017,000 acres. On the average of the last decade the area reported under this forecast represents 84.5 percent of the total area covered by the final forecast. The table shows the present estimates of area classified according to the recognised trade descriptions of cotton:—

Trade Description	Area in Acres
Bengals	1,647,000
Americans	3,190,000
Oomrahs	4,257,000
Broach	627,000
Surti	493,000
Dholleras	1,288,000
Others	3,199,000
Total	14,701,000

GOLD

Calcutta, Nov. 3.

THE bullion market has been very quiet and a sharp decline in prices was recorded in Monday's session. The sudden drop in prices for both gold and silver is attributed to the poor demand for ready gold and the nervous selling following the success of the Moscow Conference. The Reserve Bank has continued to sell gold. The closing prices are slightly higher than the lowest levels for the week but the undertone continues quiet. Gold Ready closed at Rs. 75-12 and forward at the same level against Rs. 82-7 and Rs. 82-6 respectively at the end of last week. Sovereigns were Rs. 52-12 against Rs. 55-12.

In the Calcutta market the decline in prices has not been so pronounced, Gold ready being Rs. 77-4 and sovereigns Rs. 54-8.

SILVER

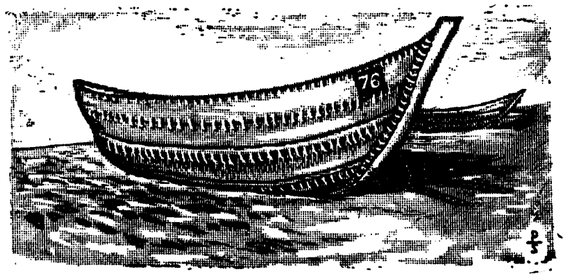
Calcutta, Nov. 3.

THE silver market has been lower in sympathy with the gold market. It is feared that as part of the anti-inflationery drive the authorities might import silver on a large scale and sell in the open market Silver ready closed at Rs. 120-2 and forward at Rs. 119-2 against Rs. 127-8 and Rs. 126-2 respectively. It will be noticed that there has been a considerable narrowing in the premium for ready over forward.

There has been no change in the conditions in the London market and the quotation for both Spot and Forward remains unchanged at 23½d.

In Calcutta, silver ready quoted Rs. 117-4 against Rs. 123.

PIECEGOODS



Calcutta, Nov. 3.

THERE has been no important change in the conditions in the piecegoods market. Business passing has been on a moderate scale. With the extension of the time limit for disposing of unmarked goods and the efforts to increase production further, it is felt that there will be a gradual decline in prices. Sellers are therefore keen on taking advantage of any demand that is forthcoming. Buyers on their part are purchasing only their immediate requirements.

TEA

Calcutta, Nov. 3.

AT the auctions of tea for consumption in India an irregular tendency was again noticeable. Broken teas were firm while there was a strong dmand for twisted black leaf grades. Common types also encountered fair demand but stockiest ttypes were difficult to dispose of. Green teas were irregular and prices were lower.

Masula boats are stitched . . .

Battleships are rivetted . . . . No matter how you do it, it's the seam that counts. Rivets in a battleship, nuts and bolts in a bridge, screws in a door-hinge or nails in a packingcase . . . . vibration, strain and pressure form a severe test which only the best can withstand.

For well over 20 years it has been our job to manufacture Wire Products of a high standard and quality which can be relied on.

Stock Markets to-day and to-morrow:

JUTE INDUSTRY PROSPECTS

After the hectic buying of the last few weeks trading on the Calcutta Stock Exchange this week has been rather quiet and there is a tendency on the part of operators to await further developments. Events in the war situation point to an early termination of hostilities. As such, there has been renewed discussion of peace prospects effecting companies' earnings and the course of prices for stock exchange securities. The Bombay market was inclined to be definitely easier while in the Calcutta market no appreciable decline in prices is to be recorded though some surprise might be expressed at the complete lack of support for Coal shares. There are one or two exceptions, however, to the general trend of the market. Elgins have been sharply marked higher on reports of the possibility of a bonus issue. The accounts for the half-year ended September 1943 are due to be published in a short time. As bonus shares were issued to the shareholders of Cawnpore Textiles sometime back it is felt that the shareholders of Elgin Mills also might be benefited in a similar way. So far no confirmation has been received in this regard. There has been some good buying of B.I. Corpn. also on reports of a bonus issue. It is unlikely, however, that in regard to B. I. Corpn. the directors will make any decision to issue bonus shares.

* * * *

While the Bombay market has been showing a rather irregular trend recently, the technical position so far as the Calcutta market is concerned seems to be quite healthy. The volume of business has expanded so much that considerable difficulty is being encountered in effecting deliveries in time. With the promulgation of the Ordinance, making it obligatory for deliveries to be completed within a week the authorities of the stock exchange have naturally been anxious to conform to the regulations of the new Ordinance as far as possible, even though discretion has been accorded to them to permit delayed deliveries in genuine cases. At a special meeting held on Tuesday this week, it was decided that brokers should devote their whole attention for three days namely, Thursday, Friday and Saturday, towards squaring up outstanding deliveries in respect of transactions prior to September 25. 1943. No business was transacted on Thursday and only deliveries were permitted. Even though Friday and Saturday happen to be stock exchange holidays, members have been required to do *patans* only, both direct and indirect, and the hall will be kept open on these days for that purpose. No business will be allowed to be transacted. Members have been required to report undelivered cases positively by Monday next for all transactions not completed by that date. If such undelivered cases be not received by that date, the Committee will not adjudicate thereafter.

* * * * *

The difficult conditions in the jute industry are reflected in the results of jute companies under the management of Messrs. Kettlewell Bullen & Company Limited for the half-year ended September, 1943. Owing to the decrease in the number of working hours during the six months ended September, 1943, the average being only 40 hours per week, and the increase in the cost of production due to the weekly compensation payment during stoppages to all workers plus the usual amenity allowance, the net profit, before providing for taxation and depreciation of the *Fort Gloster Jute Company, Limited* is considerably lower at Rs. 8,55,909 against Rs. 18,18,054 for the previous six months. The amount set aside to depreciation is lower at Rs. 1 lakh (Rs. 2.5 lakhs) while the reserve for taxation and provision in respect of deposits under Section 10(1) of Finance Act 1942 is only Rs. 5 lakhs (Rs. 13.25 lakhs). The dividend on ordinary shares has been reduced to Rs. 12-8 per share from Rs. 15 per shafe. The amount carried forward is higher at Rs. 85,769 against Rs. 53,859 brought in. With the position as it exists in the industry today, it is not possible to make any forecast regarding the earnings for the current half-year but this much can be said that if there is no improvement in the conditions in the near future, the decrease in earnings might be even more pronounced.

The net profit of *Fort William Jute Company Limited*, for the same half-year is also lower at Rs. 2,82,204 against Rs. 6,57,597. The amount set aside to depreciation is only Rs. 50,000 (Rs. 1 lakh) while the reserve for taxation and depreciation in respect of deposits under Section 10(1) of Finance Act 1942 is Rs. 1,20,000 (Rs. 2.65 lakhs). The ordinary shares receive a dividend of only Rs. 4 per share against Rs. 5 per share previously. The amount carried forward is Rs. 77,943 against Rs. 56,738 brought in.

* * * * *

The accounts of the Macneill Group of coal companies for the half-year ended June, 1943 should be considered rather satisfactory in view of the increase in the costs of production and the difficulties experienced by the coal trade. The earnings of the *Equitable Coal Company Limited*, for the half-year make satisfactory showing. Thanks to the higher level of raisings the net profit, before providing for taxation and depreciation, is better at Rs. 6,77,277 against Rs. 5,54,408 for the previous six months. The increase in earnings, however, has not been of any advantage to shareholders as the ordinary dividend has been maintained only at 5 per cent. The amount set aside to taxation and depreciation is Rs. 1,63,562 (Rs. 1,61,438) while the transfer to General Development Reserve is higher at Rs. 1.5 lakhs (Rs. 1 lakh). Provision for taxation and cesses is the large sum of Rs. 2 lakhs (Rs. 1.6 lakhs). The amount carried forward is Rs. 1,71,212 against Rs. 1,67,275 brought in. The sum of Rs. 9 lakhs has been transferred for the reduction of block. Development operations have proceeded satisfactorily. Surface and underground arrangements for stowing were completed at Bejdih and Methani collieries. Bhanora colliery is now in operation while satisfactory progress is being made in sinking new shafts in Bhutgoria colliery. Raisings during the half-year were 648,704 tons compared with 535,736 tons during the previous six months while despatches were 665,337 tons against 599,538 tons. It would thus appear that the increase in raisings has been more than the increase in despatches. Regarding the prospects for the current year, the directors point out that "the large and increasing demand for Indian coal which undoubtedly exists might be conceived as a happy augury for the future; but if advantage of it is to be taken there will have to be some drastic steps by Government to make available more men, material and above all, *transport*". (Italics ours). As has been pointed out earlier, any exaggerated hopes of a large increase in earnings of coal companies cannot, therefore, be entertained.

* * * *

West Jamuria Coal Company Limited has been able to report a good increase in net profit, before providing for taxation and depreciation, for the same half-year, the figure being Rs. 3,00,650 against Rs. 2,06,008 for the previous six months. As in the case of the Equitable Coal Company, the directors have decided to maintain the dividend at 7½ per cent. The amount set aside to depreciation is Rs. 13,156 (Rs. 12,156) while the provision for taxation and cesses is higher at Rs. 1,90,000 (Rs. 1,30,000), General Reserve receives Rs. 50,000 (nil). The amount carried forward is Rs. 27,572 against Rs. 28,572 brought in.

WATCH DOG

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Nov. 4.

MARKETS have remained open for only three days in the week under review. During the short period under report rather quiet conditions have been noticeable and business passing has been on a considerably smaller scale. The reopening after the holidays on Monday this week was not quite active. With the report regarding the complete success of the Moscow Conference, operators are inclined to the view that the end of the war is in sight and that it cannot be expected that earnings of war industries would continue at a high level for a long time. There was no actual selling, however, and quotations towards the close are not very much lower on balance. The tendency is generally quiet. The Calcutta Stock Exchange is open today but no business can be transacted as the Committee has decided that deliveries in respect of transactions prior to September 25, 1943 have to be completed and that the attention of brokers should be solely devoted for this purpose in the next three days.

The giltedged securities section has been easier and the volume of business has been on a restricted scale. 3½ percent Paper met with some selling and the quotation has come down from Rs. 97-12 to Rs. 97-5 at the time of writing. The publication of the *communique* by the Reserve Bank saying that only Rs. 20 crores to the New Loan was subscribed has perhaps had a discouraging effect on the market. 3 percent Defence Bonds 1946 quoted Rs. 102-4 and 3 percent Defence Loan 1949-52 Rs. 100-2. 3 percent 1951-54 were Rs. 104 and 3 per cent 1963-65 Rs. 98-5. 4 percent 1960-70 changed hands at Rs. 111-14 and 5 percent 1945-55 at Rs. 106-2. Among Provincial loans, 3 percent U. P. 1952 were Rs. 99-12 while a small lot of Madras loan was dealt in at Rs. 99. There has been no change in the conditions in the money market but the treasury bills rate has improved sharply to 13 annas and 8 pies percent per annum from 12 annas 9 pies last week. The offer for next week has been reduced to Rs. 6 crores from Rs. 8 crores.

Steady conditions have been noticeable in the Bank section with *Imperial Bank* Contributories being done at Rs. 462-8 and *Reserve Bank* at Rs. 123-4. *United Commercial Bank* were easier at Rs. 25 premium.

In the Cotton section no important change in prices is to be recorded but there has been a sharp improvement in the quotation for *Elgin* on reports of the possibility of a bonus issue. From Rs. 85-4 there has been a rise to Rs. 92-4 and the quotation has been marked further higher. *Cawnpore Textiles* were Rs. 14-4, *Bengal-Nagpur* Rs. 35-12. *Elgin* Rs. 92, Kesoram Rs. 15-13 and *New Victoria* Rs. 9-4. There has been a further rise in the quotation for *Radheshyam* to Rs. 18-14, *Muir Mills* were noted at Rs. 460 and *Mahalaxmi* at Rs. 43.

The Coal section has been rather quiet after the hectic buying in the last three weeks. The sudden evaporation of interest cannot be satisfactorily explained. *Amalgamated* were Rs. 43-2, *Bhalgora* Rs. 10-15 and *Bengal* Rs. 521. *Burrakur* were Rs. 24-3, *Central Kurkend* Rs. 19-6 cum-dividend. *Equitable* Rs. 44-5 and *Dhemo Main* Rs. 18. *Katras Jherriah* were crossed at Rs. 48 while *New Manbhoom* were Rs. 47-8. *North Damuda* were steady at Rs. 8-15, *Samla* at Rs. 5, *Talcher* at Rs. 5-2 and *South Karanpura* at Rs. 8-8.

The Jute section has been uninteresting and quotations are a shade easier all round. *Agarpara* were Rs. 24-14, *Alliance* Rs. 408, *Barnagore* Rs. 160-8, *Bengal* Rs. 23, *Champdany* Rs. 214, *Empire* Rs. 32, *Hooghly* Rs. 85-14, *Howrah* Rs. 64-12, *Hukumchand* Rs. 27, *Kamarhatty* Rs. 540 and *India* Rs. 568. *National* were not very much changed at Rs. 27-14, *Nuddea* at Rs. 106-8 and *Presidency* at Rs. 6-11.

In the Engineering section, *Burn & Co.,* were firm at Rs. 403 while *Indian Iron* and *Steel Corporation* were done at Rs. 36 ex-dividend and Rs. 27-4 respectively. *Jessop & Co.,* were Rs. 27, *Indian Malleable Castings,* ordinary, Rs. 8-4 and *Britannia Engineering* Rs. 14-4. *Kumardhubi Engineering* were Rs. 8-3, *Marshalls* Rs. 4-4 and *National Iron and Steel* Rs. 13-2.

The feature in the Sugar section is the rise in *Cawnpore* and *Champarun* on expectations of higher dividends. *Cawnpore* have improved to Rs. 47 from Rs. 44-3 and *Champarun* from Rs. 44-10 to Rs. 46-8. *New Savan* were Rs. 21-10 while *Murree Brewery* were steady at Rs. 26-8. *Ramnugger Cane and Sugar* were Rs. 12-6, *U. P. Sugar* Rs. 32 and *Raza* Rs. 43-10. *Belsund* were quiet at Rs. 12-14 and *Balrampore* at Rs. 17-10. *Carew & Co.,* were steady at Rs. 27-8.

In the Tea section, there has been some selective buying though some counters have recorded losses. *Bishnauth* were Rs. 38-12, and *Tezpore* Rs. 17. *Hasimara* were firm at Rs. 71-10 and *Hattikhira* at Rs. 31-2. *Balrampore* were Rs. 360 cum-dividend and *Paharagoomiah* Rs. 475. *Sapoi* were unchanged at Rs. 20-8 and *Sonai River* Rs. 25.

In the miscellaneous section, *Burma Corporation* were quiet at Rs. 3-2 while *Indian Copper Corporation* were steady at Rs. 2-9, *Karanpura Development* were Rs. 16-12. There has been some buying of *B. I. Corporation* which have been done upto Rs. 6-12, *Bararee Coke* were Rs. 13-13 and *Calcutta Ice Association* Rs. 16-12 cum-rights. *Dunlop Rubber* were Rs. 55 and *National Insulated Cables* Rs. 16-4 cum-dividend. *Spencer & Co.,* were in demand at Rs. 12-5.

Among Shipping shares, *India General Navigation* improved from Rs. 118 to Rs. 127. *Humayan Properties* ordinary were Rs. 13-14 and *Midnapore Zemindary* Rs. 93. *Assam Saw* were steady at Rs. 5. Among Paper shares, *India Paper Pulp* were Rs. 211 and *Titaghur Paper* Rs. 27-4.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, November 3.

It was in a mood of hesitancy and caution that the local stock exchange opened early in the week though the undertone was fairly steady. Soon a change for the better was noticed but it was by no means pronounced.. The news of the agreement reached at Moscow brought about a good deal of nervous selling. It is generally believed that the end of war is insight, if not imminent, and operators and investors alike are not very anxious to bid higher. Whenever a slight headway was made operators lost no time in collecting their gains. The fact that profit-taking figures largely in the transactions for the past two or three weeks is proof positive that uncertainty still dogs the steps of operators who would otherwise force prices up.

Mill shares though opened weak tended to be brighter later. Speculative buying rather than investment buying was on the increase as was proved by the profit-taking indulged in the moment scrips made some sizeable headway. In spite of this unhealthy behaviour shares retained a considerable portion of the ground gained.

*Including Bonus.
†In respect of previous years.
§Includes provision for taxation for years 1942 and 1943.

(*Meeting held on 13th October, 1943 at Bombay. Dividend payable from* 25-10-43).

Audited accounts for the year ended 28th February, 1943:—

	Rs.	A.	P.
The result of the Company's operations during the year shows a profit of Rs. 26,40,883-5-9, which with Rs. 4,45,719-14-2 (inclusive of provision for taxation) brought forward from the previous year's account makes a total of ..	30,86,603	3	11
Less—Amount paid towards taxation in respect of previous years	2,00,558	15	0
Leaving a balance of	28,86,044	4	11
From this sum the Directors have declared an *ad-interim* Dividend of Rs. 2 per share and Bonus of Rs. 2 per share on 29,802 shares ..	1,19,208	0	0
and have allocated to:—			
Depreciation on Buildings ..	60,000	0	0
Depreciation on Machinery ..	2,40,000	0	0
Reserve Fund	7,00,000	0	0
	11,19,208	0	0
Leaving a balance of	17,66,836	4	11

And the Directors propose to dispose of same as under:—

Final dividend of Rs. 4 per share, a Bonus of Rs. 4 per share and a special Golden Jubilee Bonus of Rs. 6 per share for the year on 29,802 shares of Rs. 50 each (making a total of Rs. 18 per share for the year or 36 per cent per annum) ..	4,17,228	0	0
Bonus to Company's Staff	20,000	0	0
To carry to next year's account including provision for taxation for the years ended 28th February, 1942 and 28th February, 1943 ..	13,29,608	4	11
Total ..	17,66,836	4	11

2. During the year under report, the working of the Mills was affected by labour troubles which culminated in a strike lasting for more than a month.

Chairman.—Mr. V. N. Chandavarkar.

Synopsis of the balance sheet as at 28th February, 1943.

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	14,85,000	Block (net) ..	14,02,567

Carry forward ..	13,29,608*	Stock-in-Trade ..	25,70,899
		Outstandings ..	3,68,070
		Investments ..	25,02,000
		Cash balances ..	25,98,421
Total ..	99,24,580	Total ..	99,24,580
		Total Liquid Assets ..	85,22,013

*Including provision for taxation for the years ended 28th February, 1942 and 1943.

DARJEELING HIMALAYAN RLY. CO. LTD.

Audited accounts for the year ended 31st March, 1943:—

	Rs.	A.	P.
The result of the year's working has been a net profit of	3,41,534	0	0
Credit Balance brought forward from the previous year	1,43,028	0	0
Total	4,84,562	0	0
Deduct.—Interim Dividend on Preference Shares for the half-year ended 30th September, 1942	1,09,375	0	0
Total	3,75,187	0	0

The Directors recommend that the amount at credit of the Net Revenue Account be disposed of as follows:—

Final Dividend of 2½ per cent on Preference shares (subject to deduction of income-tax)	1,09,375	0	0
Dividend of 4 per cent on Ordinary shares (without any deduction in respect of income-tax payable by the Company)	70,000	0	0
Contingencies Reserve	50,000	0	0
Carry forward	1,45,812	0	0
Total	3,75,187	0	0

The Gross Earnings at Rs. 17,72,874 constitute a record and show an increase of Rs. 4,53,518 over the previous year. Expenditure increased by Rs. 1,59,346. The large increase in net Earnings of Rs. 2,93,822 was very satisfactory, but its effect has been largely destroyed by increases in the amount of surplus profits due to Government and Mutual Improvement Fund of Rs. 81,105 and the amount charged for taxation Rs. 2,18,392. Since the close of the year the 2nd Debenture Issue of Rs. 5 lacs has been paid off and the item for interest in this connection will therefore disappear in future. The increase in the expenditure is due to heavily increased dearness allowances and higher prices of materials.

Agents.—Messrs. Gillanders, Arbuthnot & Co.

Authorised, Issued and Subscribed Capital—Rs. 61,25,000 *in* 17,500 *Ordy. shares of Rs.* 100 *and* 43,750, 5 *per cent Cum. Pref. shares of Rs.* 100, *both shares fully paid up.*

Synopsis of the balance sheet as at 31st March, 1943.

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up	61,25,000	Fixed Capital Expenditure	47,63,406
Debentures	22,25,000	Stores	3,10,918
Reserve & other funds including taxation	8,28,251	Outstandings	7,71,104
Current debts	17,13,204	Investments	47,25,000
Carry forward	1,45,812	Cash balances	4,66,839
Total	1,10,37,267	Total	1,10,37,267
		Total Liquid Assets	62,73,831

KALPETTA ESTATES, LTD.

Audited accounts for the year ended 30th April, 1943:—

The nett profit for the year after providing for:—

	Rs.	A.	P.
Depreciation	13,412	0	0
Income-tax	23,500	0	0
Managing Agent's Commission	28,606	8	0

is Rs. 2,33,960-9-11, which is very satisfactory. This together with the balance carried forward from the previous year of Rs. 19,451-7-1 amounted to Rs. 2,53,412-1-0. An Interim Dividend of 15 per cent for the year absorbing Rs. 40,500 was paid in December, 1942, which leaves a balance of Rs. 2,12,912-1-0. A sum of Rs. 8,222-5-0 was spent towards conveyance and stamp fees on account of the purchase of new properties, which, together with brokerage on the new issue of 13,000 Shares Rs. 3,710-0-8, making in all Rs. 11,932-5-8 has been set off, from the profits, leaving a final balance of Rs. 2,00,979-11-4. This sum, the Directors recommend, be apportioned as under:—

	Rs.	A.	P.
Final Dividend of 25 per cent (making in all 40 per cent for the year)	1,00,000	0	0
Transfer to Development Reserve (bringing the total of this account to Rs. 2,50,000)	60,000	0	0
Transfer to Staff Pension and Gratuity Fund	10,000	0	0
Carry forward	30,979	11	4
Total	2,00,979	11	4

Crop.—Rubber-secured 280,061 lbs. against an estimate of 3,31,000 lbs. which compares favourably with the last year's crop of 2,80,880 lbs.

Tea Secured 385,362 lbs. against an estimate of 365,000 lbs,

Estimates 1943-44.—Tea—5,30,000 lbs. at an F. O. B. cost of 49.16 cts.

Estimates 1943-44.—Rubber—3,15,500 lbs. at an F. O. B. cost of 36.06 cts.

It should be mentioned that these estimated costs include sufficient provision for an intensive manuring in tea like last year, also young rubber areas.

Chairman.—Mr. A. V. Thomas.

Authorised Capital—Rs. 10,00,000. *Issued and Subscribed—Rs.* 4,00,000 *in* 40,000 *shares of Rs.* 10 *each, fully paid up.*

Synopsis of the balance sheet as at 30th April, 1943.

Liabilities.	Rs.	*Assets.*	Rs.
