Public opinion in Madras is fast recognising the urgency of a more comprehensive system of rationing and price control. The Madras People's Food committee recently formed under the presidency of Sir N. Gopalaswami Iyengar have submitted a memorandum to the Government bringing out the necessity of immediate introduction of rationing in the city and suggesting the formation of a Provincial Food Council and of Food Boards in the districts to advise and cooperate with the authorities regarding food control. The present grain purchasing system involves delay till the wholesale dealer in the importing district submits his application and deposits the sum needed for the purpose. At present the grain purchasing officer is arranging for purchase and transport in a piecemeal fashion dealing with the traders individually. If the District Collector is charged with the responsibility the flow of food grains to deficit areas would be smooth and quick. It is urged that rationing must first be introduced in the urban areas like Madras city and upon gaining experience of the working of rationing in these areas the non-urban areas may be brought under the system. The stocks required for Madras should be received by the Collector from the collectors of surplus districts and stored in about a dozen godowns in the city issuing supplies to 600 retail shops required for the distribution. In every division of the city there should be at least one retail shop run by Government agency for supplying to the poor at concessional rates.

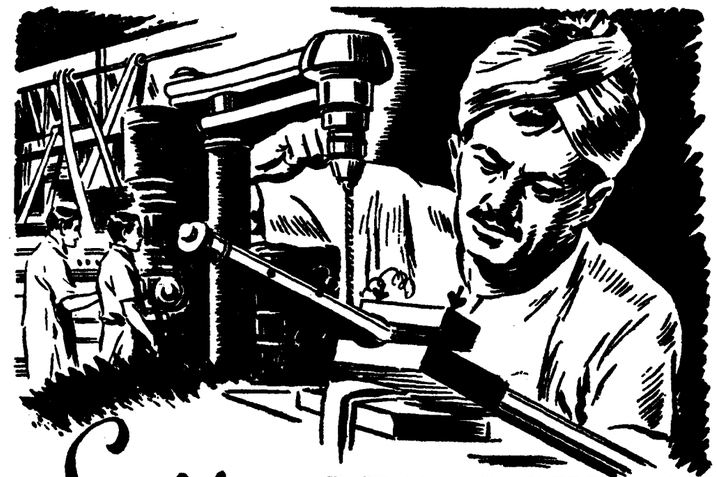
Sir C. P. Ramaswami Iyer, who often thinks of post-war requirements of India, has endowed the Madras University with Rs. 25,000 for giving scholarship for the study of automobile and aeronautical engineering. In the post-war world civil aviation is bound to play a prominent part in national transport systems and Empire countries like Australia are even today paying special attention to aeronautical engineering paving the way for peace time industrial progress. Those who have India's interest at heart know that in post-war years large technicians would be needed.

Resume of Commodity Markets

There is nothing of interest to be recorded in the commodity markets during the past week. The jute market has been rather idle with the fixation of maximum prices by the Indian Jute Mills Association and the inactivity of mills following the decision to close down for another week ending on August 7, 1943. The piecegoods market was very dull and there was no buying activity, in spite of the sharp decline in prices. Developments during the next few weeks are eagerly awaited as, following the controversy between the Government and those interested in the piecegoods trade, it is expected that there might be some new developments. It is also felt that the opening of full bales after the close of this month might result in a further decline in prices for the various qualities. The bullion market was inclined to be rather quiet in the earlier part of the period under report but in the last two days a definitely firmer tone has been noticeable; only the gold market turned slightly easier towards the close.

The raw jute market has been uninteresting and prices are nominally unchanged at the maximum rates. Business is very restricted. There has been some criticism of the action of the Indian Jute Mills Association in regard to the fixation of maximum prices for jute and jute goods. It is pointed out that while maximum prices for jute have remained unchanged, the maximum prices for jute manufactures have been fixed at the levels that prevailed in the middle of June. Prior to the decision by the Indian Jute Mills Association requesting member mills not to purchase jute above agreed maximum rates, market quotations were higher by one or two rupees than the maxima fixed and, therefore, the liberal attitude shown in respect of the fixation of prices for jute goods is not satisfactorily explainable. The defence of the Association appears to be that war orders are accepted on substantially lower terms and that, there is also the prospect of an increase in the costs of production. The Bengal Government, however, do not appear to be satisfied with the explanation put forward by the Association.

Owing to the uncertainty in regard to the future rate of production and the well sold forward position mills are not free sellers and most of the business passing is on account of interbazar operators. But for the narrow free market, the loss of production of over two weeks would normally have resulted in a sharp appreciation in prices. As it is 9 porters and 11 porters have appreciated only by a few annas in the last few days.



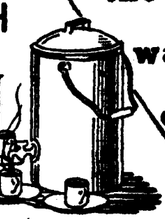
* * * *

At the auctions of tea held for consumption in India this week, the market was lower, brokens declining by as much as one anna per lb. Fannings and most leafy grades were lower by 1 to 1½ annas per lb. while stocky and badly-made descriptions were as much as 2 annas down. Dust teas had no demand and the quotations were in cases lower by as much as 4 annas. After the close of the sale, there was slightly more enquiry and the remaining lots were disposed of on more favourable prices. Business in export quota was done at 9 pies per lb. But demand tapered off towards the close and the tone was quiet.

The Gur Control Order 1943 was passed in the last week of July to assure an adequate supply of cane for the manufacture of sugar and a proper distribution of gur manufacture in the respective areas at satisfactory prices. It will be remembered that in the last season considerable difficuty was experienced by mills in respect of supplies of cane and that in the absence of any restriction in regard to prices and the movement of gur, there was a large demand for cane supplies for the production of gur. Prices for gur were at times as much as 12 annas per seer, nearly double the control price for sugar. Only after the ban on the movement of gur and the prevention of futures trading in Mozuffarpur, it was possible to prevent, to a certain extent, supplies of cane being diverted to gur producers.

Under the Gur control order, the Controller may from time to time fix by notification in the official gazette for any specified area the maximum prices at which Gur may be sold or delivered, and different rates of prices may be so fixed by him for different areas or different types or grades of gur.Every producer or dealer shall comply with such directions regarding the production, sales, delivery, stocks, distribution or prices of Gur as may from time to time be given the Controller. If in the opinion of the Controller the unregulated production of Gur in any area is likely to affect adversely the production of sugar in quantity which in his opinion is required for the needs of the community, he may, by order published in the official Gazette, provide for all or any of the following matters: (a) prohibit or restrict the export of sugarcane to any place outside that area; (b) direct that canegrowers in that area shall deliver sugarcane to a specified sugar factory or factories in accordance

(Continued on page 279)



Soaring PRODUCTION

To keep pace with the increased tempo of wartime industry, factory workers in India have to maintain their energy and power of concentration at a pitch that makes war-level output possible. The strain of industrial work today is so great that it tends to increase fatigue and listlessness. Fortunately they have learnt how to overcome fatigue, and when it sets in, they drink good hot tea and feel refreshed and full of energy again. Tea is a true incentive to sustained work. Help your workers to maintain their output at war level by giving them tea during mid-work fatigue spells.

TEA relieves the strain of war-level output

FIGHT FATIGUE WITH INDIAN Tea

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, August 5.

CHANGING conditions in the outlet for Jute Goods are commented on in the latest issue of the Indian Central Jute Committee's Bulletin. From the U.S.A. comes the report that a new type of paper mesh bag is being substituted for burlap bagging in the packing of wool, and that the result of tests have proved quite satisfactory, the new material being equally good for the purpose and at the same time more economical. It is expected to retain its place under postwar conditions. It is estimated that, for the current season's wool clip only about 300,000 new burlap bags and about 600,000 second-hand bags are available for packing purposes and that these quantities will have to be supplemented by some 600,000 of the new type of bag. The quantities are not large but the switch over gives another indication of which way the wind is blowing. On the raw material side, while it was reported that the U.S.A. Defence Supplies Corporation had shown no interest in any offerings of Indian raw jute, steady purchases had been made by that body from the Belgian Congo for several months past. Moreover it was noted that the Commodities Credit Corporation had announced that 125,000 bales of low grade cotton would be sold at less than market rates for the purpose of the manufacture of binder twine, which commodity used to be very largely made from jute. The ban on the import of Sugar bags from Calcutta is confirmed, and for an indefinite period the Sugar shippers in Cuba, and adjacent sugar producing islands in the West Indies, will have to depend on reconditioned bags, or as an alternative, on paper bags which are being experimented with. In order to encourage the import of bags, other than jute fabric bags, into Cuba, the rate of import duty on various other descriptions of bags has been reduced.

A report from the Indian Trade Commissioner at Alexandria suggests that Indian manufacturers and merchants have not been showing as much keenness in Egypt, though Egyptian traders are anxious to establish contacts with good business films in this country owing to the cessation of trade activities in other directions. This is an interesting commentary on the wails so frequently heard from Indian merchants that the U.K.C.C. is smothering their trade with the Middle East.

An illustrated article in the Bulletin on the "Anatomy of the Jute Stem" by Professor B. C. Kundu of the Calcutta Presidency College, is we fear well beyond the depth of the average "Jutewalla" and even of most readers of the Bulletin, though its findings may be of value to the Research Department's Experts.

A series of experiments which may prove of value in determining the relative values of jute from different areas is to be carried out. Samples of jute from different well-defined areas are to be collected early in each season and subjected to spinning tests, and the results communicated to the trade. It will be extremely interesting to see if the results of these tests confirm the predilections of the Industry for jute from certain areas as against others.

The Coal situation still gives occasion for great anxiety. The quantities arriving scarcely justify the starting up of the mills which have now been idle for a fortnight. Naturally those mills which derive their power from the Supply Corporation are inclined to get restive at the enforced holiday and at the ever mounting costs which that involves. At the same time it is believed that the C.E.S.C. is none too well off for coal and is glad enough to have its load lightened by the mills which draw their power from it being stopped. The Chairman of the I.J.M.A. has been visiting Delhi this week, it is believed to bring the urgency of coal supplies pointedly to the attention of the Central Government, but with what success is not yet known. Meanwhile the prospects of the enforced holiday being still further extended is casting gloom over all markets. Some mills are concerned about the condition of yarn stocks awaiting manufacture. Yarn in process naturally carries considerable moisture which, in weather such as prevails at present may easily result in mildew and consequent waste. The possibility of an early reduction of working hours to 40 per week, once mills do make a start, is also being canvassed.

Another matter which is causing some perturbation in the trade is the rumour that Government is contemplating the appointment of a Controller for the Jute Industry. How such a creation would help matters materially is not easy to discern. It can scarcely be contested that the Jute Industry has not only adapted itself most promptly and whole-heartedly to changing conditions due to the War, but has met every demand made upon it by Government and the Supply Departments, some of which demand have been for fabrics and fabrications which it had never thought of tackling before. The present Chairman of the I.J.M.A. has practically a whole-time job as virtual "Controller" of the Industry on behalf of Government and War supplies and it is, to say the least, extremely doubtful if any appointee from outside the Industry could do the job better, or even as well. We take off our hat to Mr. W. A. M. Walker for the able manner in which he has handled the situations as they have arisen, meeting the War demands with an intimate knowledge of the capacity of the Jute Mills which no outsider could possibly have, and at the same time keeping in view the interests of the Industry and of the immense labour force employed. If Government were to decide to nominate Mr. Walker as the proposed Controller, the appointment would, we are sure, be received with acclaim by the Industry. But as that gentleman is already doing the job in an eminently satisfactory manner as Chairman of the I.J.M.A., why not leave very well alone? There are few, if any, Industries in India as well organised and disciplined as the Jute Industry, and few individuals connected with the Industry (quite apart from any outside it), who are so intimately acquainted with its potentialities as the present Chairman. One of our Elder Statesmen remarked recently in the House of Lords, "the appointment of Controllers in industry should not be considered a sovereign remedy for all its difficulties." *Verb. sap.*

STOP PRESS

It is understood that the Jute Mills Committee have decided that mills which have sufficient coal may start work again from Monday next. Those mills which have not sufficient coal will be allowed to make up the time lost when coal supplies are available.

With mills standing idle and Export demand infinitesimal, the Pucca Bale market has shown no signs of activity. Quotations are purely nominal in the absence of business. For shipment, Dundee Daisee 2/3 may be quoted at Rs. 84, while for mills a general quotation of Rs. 2 below the maximum agreed rates would cover most ordinarily used grades.

(*Continued from page 272*)

necessary changes in economic conditions. It is bound to be held up by clashes of opinion in the ruling classes whoever they may be and by the need to overcome the opposition of vested interests where they are likely to be affected.

* * * *

I may note in passing the orthodox methods of increasing public revenue in this country. The few years of provincial autonomy that we had and the straitened circumstances of the Central Government in the years following the Depression have shown us the meagre possibilities in this direction. The Central Government turned away from customs revenue, which had been dried up as a source of revenue both by the policy of discriminating protection and by the operation of the law of diminishing returns consequent on the Schuster surcharges, to excise duties on iron and steel, matches, sugar and such articles of indigenous manufacture. The lower strata of income were also tapped for income-tax. Articles of general mass consumption like tobacco and vegetable ghee have been brought within the orbit of the taxgatherer. An administrative apparatus, which can in the future extend its activities to other articles whose production and consumption are spread all over the country, has also been built up. In spite of all these efforts, it can hardly be contended that additional revenue has has been found for financing measures of basic economic reconstruction. All that these new taxes may be said to have done is to make up the loss of revenue on a large item like customs revenue. It may he hoped, however, that, when conditions in the post-war period will settle down to normal, the revenue from customs duties will begin to expand and the yield of the new taxes could to some extent at least be regarded as additional revenue. But it is more than doubtful if the large proportion of the yield from the commercial enterprises of the State will continue to be what it is now, the most arresting feature of our Central finances.

"EAVESDROPPER"

(*Continued from page 255*)

by the simple process of the British Government borrowing directly from the Indian market. This will have the result of re-establishing the bonafides of the Indian Government. At the same time, while the present method is inflationary in effect, our proposal will be not only anti-inflationary but will prove a wholesome corrective to inflation altogether.

There is nothing worthy to report in the exchange market, as may be expected this time of the year.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money is unchanged at ½ percent lenders.

JUTE

Calcutta, August 5.

THE raw jute market has been rather quiet and business passing has been on a very small scale. With the decision to close down mills for a further week ending on August 7, 1943, there has been no anxiety to lay in fresh stocks of jute. It is felt that with the uncertainty regarding the coal situation and the fixation of ceilings for jute, there is no need to lay in large stocks of jute. Earlier in the week, the market was inclined to be rather quiet and quotations were slightly lower than the maximum rates, but as the week progressed on the reports regarding the possibility of some damage to the crop and the small arrivals into mofussil centres, with the wet weather, a slightly firmer tone was noticeable and quotations were nominally unchanged.

In the loose jute section, as pointed out above, a very small amount of business has been passing. Mills bought in small quantities Indian Jat Middles and Bottoms at Rs. 17 and Rs. 14 per maund. European District Middles were done at Rs. 16-8 per maund.

In the pucca bales section also quiet conditions were noticeable with shippers accounting for a small amount of business for export. Dundee Daisee 2/3 were sold on the basis of Rs. 84 per bale and Dundee Daisee 4's Rs. 78 per bale. Mills are reported to have bought cuttings M.C. at Rs. 40 per bale.

JUTE MANUFACTURES

Calcutta, August 5.

RATHER easy conditions were noticeable in the jute manufactures market in the early days of the period under review The decision of the Indian Jute Mills Association to close down mills for a further period of one week did not have any effect on market values. In the middle of the week, however, there was some speculative buying and with the reserve of sellers quotations especially for 11 porters were marked higher. The improvement in the premium for forward positions was more pronounced. At the higher levels there has been some selling and the closing quotations for 11 porters are slightly below the best levels for the week. 9 porters are quoting Rs. 20-12 for all positions against Rs. 20-6 at the end of last week. 11 porters ready were Rs. 27-8 after being higher at Rs. 27-12, August Rs. 27-9, September Rs. 27-10 and October-December Rs. 27-12. At the end of last week 11 porters July quoted Rs. 27-2, August-September Rs. 27-4 and October-December Rs. 27-6.

In the Heavy Goods section there has not been much activity but with fewer sellers in evidence quotations have been marked higher in sympathy with the hessian market. "B" twills for August delivery sold on the basis of Rs. 64-12, Liverpool twills for the same position at Rs. 69-4 and Cornsacks at Rs. 65.

GOLD

Calcutta, August 5.

THE prospects of a negotiated peace with Italy had a discouraging effect on the bullion market in the early part of the period under review. There was some bear selling and quotations were marked down as low as Rs. 70-6. There were also rumours regarding the possibility of some Government action to bring down further bullion prices but with the tightness of the spot position, there has been some buying and forced covering. Prices sharply rallied on Wednesday to Rs. 75-10 for ready position. The quotation, for delivery within 8 days, termed as the forward position, was Rs. 72-10. In Wednesday's session, however, there was some selling for the ready position and quotations came down to Rs. 74-12. In the local market, gold ready is quoting Rs. 75 and sovereigns Rs. 53-6. Sovereigns were quoted in Bombay at Rs. 52-4 against Rs. 51-8 at the time of last writing.

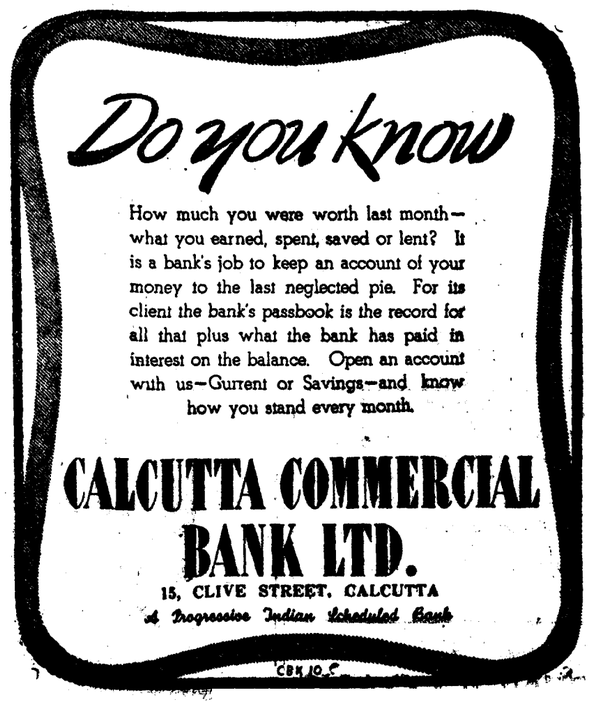
SILVER

Calcutta, August 5.

THE silver market also has been firmer in sympathy with the gold market. Unlike the gold market there has not been any reaction in prices towards the close and it should be said that the closing quotations are at the highest levels for the week. Silver closed at Rs. 109-12 against Rs. 105-12 last week. The quotation for delivery within 8 days is at a discount of 4 points over ready at Rs. 105-12.

PIECEGOODS

Calcutta, August 5.



THERE is confusion in the piecegoods market and it is not known as to what will be the trend of prices in the immediate future. The decision of piecegoods traders in the Bombay market not to take delivery of outstanding contracts from mills, unless extension of time limit was granted to enable them to dispose of their old stocks, is viewed with apprehension. It is, however, reported that the Government will not yield to the pressure from distributors and that all the stocks that were not taken up by the distributors would be purchased by the Government of India at fixed rates. Meanwhile, consumer demand is conspicuous by its absence and there is a general tendency to postpone buying one's requirements. Stockholders are experiencing considerable difficulty in disposing of existing stocks in order to be able to comply with the order.

(*Continued from page 277*)

with such conditions in regard to quantity, price, and time of delivery as may be specified by the Controller; (c) prohibit, or restrict to such quantities or qualities or both as may be specified by the Order, the manufacture of Gur by all or any class of producers in the said area.

* * * * *

It is officially stated that the Government do not intend to fix any price ceilings for food grains or introduce any kind of stationary price control just now. It is belatedly explained that stationary price control is never effective unless a government possesses the stocks with which to work it. At present as the Government has not got enough stocks in hand to exercise adequate control over prices, the imposition of statutory control will simply drive the available stocks into black markets. As regards the present stock position it is confirmed that the Government of India do intend to buy foodgrains to the value of over 100 crores in about a year. The amount of foodgrains to be surrendered by surplus provinces and States and to be received by deficit areas have been already determined, but are not disclosed. The Government, it is however revealed, have purchased 9,97,000 tons of foodgrains up to June 15, 1943, out of which about 140,000 tons had been despatched to Bengal and 6,49,000 tons to other deficit provinces. Nothing has so far been put in the reserve stocks, the balance representing quantities purchased but awaiting despatch and quantities sent to States. As regards the origin of the order of May 18 last introducing free trade in the Eastern zone, it is now officially explained that before that date the Government were working on the plan under which certain certain provinces were to despatch specified quotas of foodgrains to certain deficit provinces. For the working of this plan it was necessary that Provincial Governments should have the power to control movements of foodstuff and their prices. Before this plan could become fully effective in the Eastern region a serious shortage of rice, accompanied by a steep rise in prices, was apparent in Bengal which made it necessary, as an immediate measure, to remove all restrictions on the movement of foodgrains and on prices in order to allow supplies and prices within the region to find a more normal level. It is understood that the Government are intending to import large quantities of wheat from Australia to relieve the present serious shortage in food supplies. It is, however, learnt that these intended supplies are of rather poor quality.

Stock Markets to-day and to-morrow

MARKETS QUIET AND IDLE

Stock markets have been quiet and uninteresting during the past week. Both operators and investors were inclined to wait for the outlook to get clearer. There were reports regarding the possibility of further anti-inflationary measures by the Government. Developments within the country also were not quite helpful to markets. The Bombay Stock Exchange was inclined to be irregular while the Calcutta market was flat with no important fluctuation in prices. Even the decision of the Indian Jute Mills Association, last week, to close down mills for a further week did not have any appreciable effect on prices in the Jute section. It was reported on Thursday that the Indian Jute Mills Association might possibly decide on the stoppage of production for a further period but with the opposition from the members of the industry and the fears regarding a further loss of production affecting unduly companies' earnings and inflating prices in the goods market, it has been decided that mills having enough coal supplies on hand should be allowed to resume working from Monday next week and that such of the mills as still experience shortage of coal supplies, should be allowed to make up lost production at a later date. This decision has had a slightly encouraging effect on values and the tone at the time of writing on Friday is definitely better, though no appreciable improvement in the quotations is to be recorded.

While there are fears that the difficulty in regard to coal supplies might possibly interfere with production and affect companies' earnings, it is generally felt that the ultimate outlook is satisfactory and that with anti-inflationary measures and the smaller scope for speculative activity greater attention would be paid to equities, especially those which have good postwar prospects.

* * * *

It is reported that Government are anxious to tighten the rules regarding the control order, which was published recently, affecting new capital issues.

It is feared that newly issued and subscribed shares of companies in the native states if allowed to be sold to residents in British India would result in the large scale movement of capital to the native states. This method of introduction of shares of companies registered in the States will, it is felt, defeat the purpose of the order. The new regulations will, it is believed, close this loophole.

The accounts of the *Britannia Biscuit Company Limited* for the halfyear ended March 31, 1943 make satisfactory showing in spite of the stoppage of production on several occasions for varying periods owing to the shortage of essential ingredients both in Calcutta and Bombay factories. The net profit, before providing for taxation and depreciation, is considerably higher at Rs. 6,04,875 against Rs. 3,88,091 for the previous half-year. The amount set aside to depreciation is Rs. 56,659 (Rs. 62,641) while the transfer to General Reserve is Rs. 25,000 (Rs. 35,000). The contingency reserve receives Rs. 50,000 (Rs. 20,000) while the allocation to Dividend Equalisation Reserve is Rs. 25,000 (nil). The distribution on ordinary shares has been maintained at 2½ per cent as also the bonus at 1¼ percent. After all these distributions the amount carried forward is considerably higher at Rs. 68,571 against Rs. 54,203 brought in.

Over 95 percent of the company's production is taken up by the Government. Due to the inability to provide sufficient stocks of biscuits for the civil trade the Delhi depot had to be closed at the end of last year. The company has orders on hand for its entire production for the current half-year but, as pointed out above, the only difficulty is in regard to essential ingredients.

* * * *

The accounts of the *Reliance Firebrick and Pottery Company Limited* for the half-year ended February, 1943, show a further improvement in earnings. The net profit, before providing for taxation and depreciation, is Rs. 1,77,785 against Rs. 77,025. The amount set aside to depreciation is Rs. 28,000 (Rs. 25,000) while the provision for taxation is Rs. 95,000 (Rs. 17,000). The transfer to General Reserve is Rs. 18,000 against the transfer to other funds of Rs. 8,000 on the former occasion. The dividend has been maintained at 8 annas per share. The carry forward is slightly higher at Rs. 18,873 against Rs. 12,088 brought in.

Sales during the half-year were the highest in the company's history. It will be noted that in spite of the substantial improvement in the company's earnings it has not been possible to increase the dividend owing to the large provision for taxation.

* * *

Midnapore Zemindary Company Limited has again been able to report a high level of earnings owing to satisfactory rent collections. The net profit, before providing for taxation and depreciation, is Rs. 6,71,048 against Rs. 6,56,359 for the previous year. The provision for taxation is lower at Rs. 95,000 (Rs. 140,000) while the amount set aside for depreciation on machinery is Rs. 2,570 (Rs. 1,758). A sum of Rs. 75,000 (Rs. 50,000) has been transferred to the Reserve Fund. An additional amount of Rs. 25,000 has been provided for bad and doubtful debts. The directors have decided on the payment of a higher dividend on ordinary shares of 5 percent against 4 percent. The amount carried forward is higher at Rs. 1,65,305 against Rs. 1,14,398 brought in.

* * * *

The accounts of the Andrew Yule Group of jute mills for the half-year ended May 1943 have been published and all the companies report a slight decline in earnings over the previous half-year. With the exception of Orient Jute Mills Company ordinary dividends have been maintained in all cases. Lothian is paying a dividend of Rs. 4 per share, Delta Rs. 15 per share, Cheviot Rs. 6 per share and Caledonian Rs. 10 per share. Orient is paying Rs. 5 per share against Rs. 6 per share in the previous half-year.

The net profit before providing for taxation and depreciation of the *Delta Jute Mills Company Limited* is Rs. 7,01,672 against Rs. 7,27,464 for the previous half-year. The amount provided for taxation is higher at Rs. 5,15,000 (Rs. 4,75,000). After the transfer Rs. 40,000 from War Risk Insurance Reserve, the dividend on ordinary shares has been maintained at Rs. 15 per share. No amount has been placed to depreciation against Rs. 25,000. The amount carried forward is not very much changed at Rs. 1,23,186 against Rs. 1,21,513 brought in.

* * * *

In the statement issued to the shareholders of the Eastern Bank, Ltd. by Sir James Leigh-Wood the outstanding feature is the mention made of Iraq's intention to pay off the balance of the 4½ per cent loan issued in London in 1937. Iraq's propriety, tempered by the higher cost of living, is certainly indicated in the intention to pay the sterling debt. In spite of the contraction of trade the Eastern Bank has maintained its profit at the 1941 level and the return of stability

(*Continued on next page*)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 6.

ABSOLUTELY uninteresting conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing has been on a very small scale. The decision of the Indian Jute Mills Association to close down mills for another week ending August 7, 1943 and the difficulty in regard to coal supplies have been responsible for the apathetic tone of the markets. Encouraging news from the several theatres of war has had no effect on market prices, and it should be said that closing quotations are lower on balance in almost all sections. The undertone is quiet. The general tendency of both operators and investors is to await further developments.

The giltedged section has been very steady and quite a fair amount of business has been reported. Quotations, however, are not very much changed, 3½ per cent Paper remaining around Rs. 96-1 for most part of the week. There has been no further increase in the selling rate of the Reserve Bank. Among terminable loans, 3 per cent 1949-52 were Rs. 100-12, 3 per cent 1963-65 Rs. 96-12, and 3 per cent 1951-54 Rs. 100. The 4th Defence Loan was quoted at a discount of 3 annas over the issue price. 4 per cent 1960-70 were dealt in at Rs. 111, and 4½ per cent 1955-60 at Rs. 115-4. There were some sellers of 5 per cent 1945-55 at Rs. 106-13. Among Provincial Loans, 5 per cent U. P. 1944 Loan were quoted at Rs. 103 and 3 per cent 1961-66 Rs. 96-14. Easy conditions have continued to prevail in the money market and there has been a further decline in the discount rate to 15 annas per cent per annum from 15 annas and 7 pies in the previous week.

Among Public Bodies' debentures 3¼ per cent 1956-66 *Howrah Bridge* debentures were crossed at Rs. 98-12 and 3½ per cent 1935-65 *Calcutta Improvement Trust* debentures at Rs. 103. 5½ per cent *Dalmia Cement* debentures changed hands at Rs. 105-8 and 5½ per cent *Carew & Co.* second mortgage debentures at Rs. 102-4.

Among Bank shares, *Imperial Bank* fully paids were Rs. 1,790 and contributories Rs. 453. *Reserve Bank* were slightly higher at Rs. 115 while *United Commercial Bank* were lower with the premium at Rs. 6-8 per share.

Cotton shares have been rather quiet though there is no further decline in prices to be recorded. *Basanti Cotton*, however, were weak at Rs. 10-12. *Bengal-Nagpur* were unchanged at Rs. 28-10, *Cawnpore Textiles* at Rs. 11-5 and *Elgin* Rs. 7-2. *Kesoram* were Rs. 14-4 and *Dhakeswari* Rs. 26. *Muir Mills* were Rs. 402-8 and *New Victoria* Rs. 7-4 ex-rights.

Coal shares have been easier with *Amalgamated* at Rs. 37 and *Bokaro and Ramgur* at Rs. 22-6. Difficulty in regard to labour in the Central Provinces collieries is evident from the decision of the Government to allow women labour below the mines in order to get an increase in the amount of raisings. It is pointed out that in the absence of any large increase in labour, coal despatches from the Central Provinces might be below transport capacity. *Bokaro and Ramgur* were Rs. 22-6, *Burrakur* Rs. 16-8 and *Burra Dhemo* Rs. 6-11. *Central Kurkend* were Rs. 17-1, *Pench Valley* Rs. 40-12 and *West Jamuria* Rs. 34-8. *Samla* were steady at Rs. 4-8 and *South Karanpura* Rs. 5-15. *Union* were steady at Rs. 37-6.

The Jute section was naturally easier with the decision of the Indian Jute Mills Association to close down mills for another week ending August 7. It is also reported that the coal supply position has not materially improved and that it may even be necessary to stop working some mills for a further period. There has not been any great selling but quotations for all counters are lower. *Anglo-India* were Rs. 382 against Rs. 389 at the end of last week, while *Adamjee* were unchanged at Rs. 33. *Bally* were 7 points lower at Rs. 335, *Barnagore* had no buyers at Rs. 148, *Belvedere* shed 10 points to Rs. 484, and *Gourepore* to Rs. 774. *Howrah* were 8 annas lower at Rs. 61, *Hukumchand* at Rs. 26. *India* were Rs. 537, *Kamarhatty* Rs. 557 and *Kanknarrah* Rs. 445. *Nuddea* were Rs. 97-8 and *Soorah* Rs. 15-4. *Presidency* were in request at Rs. 6-8.

In the Engineering section, *Indian Iron* have turned quiet on the rumours regarding the final dividend for the year ended March 1943. For the most part of the week the quotation was around Rs. 34-6, but in Wednesday's session a level as low as Rs. 33-10 was touched. The quotation at the time of writing is quietly steady at Rs. 34. *Steel Corporation* have been fluctuating in narrow limits and the quotation has not changed very much at Rs. 26-7, *Burn & Co.* were rather quiet at Rs. 374. *Britannia Engineering* were steady at Rs. 14-12, while *Jessop & Co.* were flat at Rs. 20 and Indian Standard Wagon were a shade easier at Rs. 69. *Steel Products* were Rs. 7-9. *Marshalls* were firm at Rs. 3-9.

In the Sugar section not many transactions have been recorded. Balrampur were Rs. 13- have been recorded. *Balrampur* were Rs. 13-12, *Buland* Rs. 38-8 and *Champarun* Rs. 36-12. *Carew & Co.* were held at Rs. 19 earlier in the week, but there were some sellrs towards the clos at Rs. 18-10. *Gwalior* were Rs. 199 and *Samastipur* Rs. 16-6 *New Savan* were Rs. 15-6.

Tea shares have been rather quiet and there has been some selling of the popular counters. *Bishnauth* were two points lower at Rs. 37, *Baradighi* were Rs. 61, *Choonabhutti* Rs. 751, *Dhunseri* Rs. 6-8 and *Lackatorah* Rs. 26-10.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper* were Rs. 3-8 and Rs. 2-8 respectively. *B. I. Corporation* were quiet at Rs. 5-12 with *Associated Hotels* at Rs. 13-12. *Calcutta Trams* were Rs. 26-8 and *Rohtas Industries* Rs. 31-6. *Spencer & Co.* were better at Rs. 9-6, *Dalmia Cement* Rs. 17-10, *India Paper Pulp* Rs. 188, *Sri Gopal Paper* Rs. 21-12 and *Titaghur Paper* Rs. 25-4. *Midnapore Zemindary* were better on the publication of the report at Rs. 100. *Humayan Properties* ordinary were Rs. 10-13. Among shipping companies *Bengal Steamship* was Rs. 217, and *Calcutta Steam Navigation* Rs. 245. *India General Navigation* were lower at Rs. 116.

A large amount of business has been reported in preference shares with more sellers offering but there has been no change in the quotations. Among first-class jute mills preference shares, *Alexandra* were Rs. 152, *Birla* Rs. 139, and *Belvedere* Rs. 179. *Clive* 6 per cent preferences were Rs. 146 and *Hastings* Rs. 148. *Hukumchand* were steady at Rs. 165, and *Kamarhatty* at Rs. 158. *National* were Rs. 178. There has been a significant rise in *Kumardhubi Engineering* preferences to Rs. 265, *Steel Corporation* were Rs. 106, *Dunlop Rubber* first preference Rs. 160, *Orient Paper* Rs. 117, *Elgin* Rs. 203 and *Purtabpore* Rs. 21. *Indo-Burma Petroleum* were in good request at Rs. 19-8 and *New Victoria* at Rs. 9 ex-rights.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, August 4.

RATHER irregular conditions prevailed on the local stock exchange during the period under review. With the price control measures recently enacted by the Government already beginning to show their effect on the various commodity markets and with the transport position as far as it affects the supply of fuel to mills remaining where it was, investors and operators alike find no excuse to go on inflating prices any further. The best that can be expected under the prevailing circumstances is that prices would be maintained at present levels. There were no wide fluctuations and whenever there was any it was only in respect of shares of companies whose reports are yet to be published. The giltedged section continued to provide the feature of the week. Other sections have been rather dull with prices moving within narrow limits.

The giltedged section is very steady with 3½ per cent Government Paper quoting at Rs. 96. Even though 4 per cent (1960-70) have not improved any further, they are firm at Rs. 111-2. 3 per cent (1963-65) continued to be in favour and the quotation is around Rs. 96-10. Medium-dated loans have been rather dull. 3 per cent (1949-52) remained unchanged at Rs. 100-12 and 3 per cent (1951-54) at Rs. 100-1.

There has been considerable business in mill shares without any perceptible trend in the price movement. After the level reached last week there has been much profit-taking in *Bombay Dyeing* with the result that the present quotation is around Rs. 1,905. Other shares except *Kohinoor* have remained practically unchanged. *Century* were better at Rs. 754. Both *Svadeshi* and *Indian Bleaching* after being as high Rs. 538 and Rs. 202 are slightly better at Rs. 532 and Rs. 200 on balance.

Profit-taking was encountered at the higher levels and steel shares have suffered on that account. *Tata Deferreds* are slightly lower at Rs. 1,952-8 and *Tata Ordinary* are quoting around Rs. 395-8. *Indian Iron* and *Steel* are still dull at Rs. 34-2.

The transactions in the miscellaneous section during the period under review show a mixed reading. *Premier Construction* were better at Rs. 179 on the announcement of an ad interim dividend. *Burma Corporation* had buyers at Rs. 3-5. *Shivrajpur* were Rs. 63-8. *Bombay Burma* Olds were Rs. 367-8; *Bombay Steam* were Rs. 547-8; *Scindia Steam* Rs. 33; *Andhra Valley* Rs. 1,880; *Tata Power* Rs. 1,802-8, *Tata Hydro* Rs. 197. *A. C. C.* were Rs. 212.

(Continued from previous page)

to the Middle East augurs well for the Bank when deposits rose by £4 millions last year and when investments too rose by £4.8 millions. The increase in the dividend to 5 per cent has kept the Bank's shares well over par as readers will have noted. Sir James Leigh-Wood referred to the death of Sir John Caulcutt (associated with Barclays D.C.O.) and the election of Sir Harold Snagge to the Board. The future is rated as moderately good in view of various controls and the cheapness of money.

WATCH-DOG.

CHAIRMAN'S SPEECH

EASTERN BANK LIMITED

INCREASE IN DIVIDEND

To the Shareholders:

It is with sorrow that I have to record the death of Sir John Caulcutt. This sudden loss following shortly after the resignation of Sir Bertram Hornsby owing to ill health has deprived the Board of the wise counsel of two distinguished bankers. They will be sadly missed by their colleagues on the Board.

We have invited Sir Harold Snagge, K.B.E., to join the Board and his name will be submitted for election at the General Meeting. I am sure his long experience as a merchant and banker will be of great value to the Bank.

Paper restrictions entail further compression in this Statement of our affairs and there is indeed little for me to add to the Accounts as presented.

The *net* profit of £95,580-6-10d. is virtually the same as that shown last year. The total dividend for the year of 5 per cent compared with 4½ per cent for 1941, and £45,000 has been appropriated to Contingencies and Property Account as shown in the Report. All assets in Singapore have been written off other than cash deposited with bankers or with the Government of the Straits Settlements and an investment in the Government 3 per cent Loan of 1940.

Current and Deposit Accounts have continued to increase, being nearly £4,000,000 greater than those shown in last year's Balance Sheet. Bills Payable are slightly down and the further falling off in Acceptances on account of Customers by £33,000 reflects the continued restriction in merchants' Business.

On the other side whilst our Cash and Bill Receivable show little change our investments in short term Government Securities are greater by £4,846,000.

We regret to note a decline of some £680,000 in our Advances to Customers mainly due to abundant money.

With regard to exchange transactions as well as to advances, maritime trade being so much under Government control all we can hope to do is to maintain our share of the dwindling volume requiring Bank finance.

The Government of India has paid off all but a small amount of its public debt held in this country and has accumulated further substantial balances of sterling.

The Kingdom of Iraq has also been prosperous and has given notice to redeem the balance of the 4½ per cent Loan for £1,000,000 issued in London in 1937.

The effect of expanding note currencies in India and Iraq is reflected in greatly increased prices for foodstuffs particularly to the embarrasment of our local clerical staff whom we continue to assist by grants-in-aid.

Since our last report two members of our British Staff serving with the Forces have been killed and one taken prisoner of war; all efforts to obtain further news of our Singapore Staff have been unsuccessful. We extend our sympathy to the relatives of these men in their sorrow and anxieties.

In conclusion on behalf of my colleagues and of the Shareholders at home and in India I wish once again to express appreciation of the services rendered by our Staff of all grades during a year of increasing difficulty.

JAMES LEIGH-WOOD,
Chairman.

2/3, Crosby Square,
London, E.C. 3, 13th May, 1943.

KANKNARRAH COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Twenty-first Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 noon on Friday, 27th August, 1943, for the following purposes:—

*After providing for taxation.

(Annual General Meeting on 20th August, 1943 at 12 noon).

Audited accounts for the year ended 14th April, 1943:—

Rent collections in both Divisions were higher than last year owing to the further rise in the price of paddy.

Miscellaneous collections also showed a marked improvement in both Divisions.

Crops were not good in either Division. In the North, early drought and later floods did harm. In the South a severe insect pest was experienced, which so far as the Company's property is concerned, did more damage than the Cyclone in October, the full effects of which were not felt in the Company's Concerns.

After making sundry adjustments, providing for Taxation and Doubtful Debts, and transferring Rs. 75,000 to Reserve, there remains a balance to the credit of the Profit and Loss Account of Rs. 6,87,876-10-4 which includes Rs. 1,14,398-6-3 brought forward from last year from which the Directors recommend:—

	Rs.	A.	P.
Dividend on Preference Shares at 6 per cent per annum	52,572	0	0
Dividend on Ordinary Shares at 5 per cent per annum	4,70,000	0	0
Balance to be carried forward	1,65,304	10	4

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised Capital—Rs. 1,25,00,000. Issued and Subscribed—Rs. 1,02,76,200 in 94,000 Ordy. shares of Rs. 100 and 8,762, 6 per cent Cum. Pref. shares of Rs. 100 each, fully paid up. The Pref. shares are redeemable at option of Company on giving six months' notice.

Synopsis of the balance sheet as at 14th April, 1943.

‡After transferring Rs. 55,000 from Reserves.
(Annual General Meeting held on 5th August, 1943).

Audited accounts for the year ended 31st December, 1942:—

	Rs.	A.	P.
The Accounts show an amount at credit, after making provision for Taxation and appropriations to Reserves, and after charging certain expenditure on Buildings and Machinery, etc., of	74,369	0	8
Add—Balance brought forward from last account ..	704	1	10
Making a total of	75,073	2	6
Which it is recommended should be disposed of as follows:—			
In payment of a Dividend on the Preference Shares at the rate of 7 per cent per annum (free of income-tax), absorbing ..	5,250	0	0
In payment of an additional pro rata Dividend on the Preference Shares, at the rate of 17.4191 per cent per annum (free of income-tax), absorbing	13,064	5	4
In payment of a Dividend on the Ordinary Shares at the rate of 12½ per cent per annum (free of income-tax), absorbing ..	55,712	8	0
	74,026	13	4
Leaving a balance at credit of	1,046	5	2

to be carried forward to next account.

Tea was again supplied to the British Government both under the original 1942, contract and under the scheme for the block purchase of the season's exportable balance. The contract price received was, as last year, 1s. 0.12d.—*i.e.*, As. 10-9 per lb. This was, however, increased during the Season by 1½d. per lb. in respect of deliveries in excess of 35 per cent of the quantity tendered under the original contract. The balance of the Company's crop was sold on the Calcutta Market, the prices obtained averaging As. 14 per lb. for teas sold with Export Rights and Re. 1-0-7 per lb. for teas sold for consumption in India. The average price realised for the whole crop was As. 12-11 per lb.

Managing Agents.—Messrs. Begg Dunlop & Co., Ld.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits are in superabundant supply with inter-bank call money quoting nominally ½ per cent in Calcutta and ¼ per cent in Bombay. This has not, however, had any marked effect on the treasury bill rate. It will be remembered that the average rate of accepted tenders last week showed a rather sharp decline of 7 pies to 15 annas per cent per annum. The decline in the current week is only 1 pie. At the same time, applications received on August 10, were higher by Rs. 1 crore at Rs. 14.73 crores. Thus, in spite of higher tenders, bidding has been less keen. This is presumably to be accounted for by the generality of banks being content with a policy of just reinvesting their treasury bill maturities. Any important decline in the treasury bill rate appears to be associated with the natural intervention of the Imperial Bank on a large scale. The statement of the Imperial Bank for the week ended August 6, shows a rise of Rs. 7½ crores in investments to a total of Rs. 140.31 crores. Most of this increase in investments must be due to the bank subscribing for treasury bills for a substantial amount. That is to say, the Imperial Bank is today a most dominant factor with regard to treasury bills. And this is as it should be; for, the deposits of the bank are nearing the Rs. 200 crore mark, while advances and loans are only Rs. 36 crores. As a result of this heavy additional investment in treasury bills, the Imperial Banks' cash has declined steeply from Rs. 36.67 crores to Rs. 29.70 crores.

We have, on the present occasion, to review the Reserve Bank's returns for two weeks namely, the week ended July 30 and the week ended August 6. After a long interval, the Reserve Bank's returns were made available to us on Wednesday night. For the past many weeks, there was such delay that, on a few occasions, the returns were available only on Friday and, on some, only on Saturday. The receipt of the Reserve Bank statement in correct time this week coincides with the visit to Calcutta of Mr. C. D. Deshmukh about whose appointment as Governor, we understand the Government notification will be issued this week. We hope this happy event will mark the making available of Reserve Bank returns to the press without any delay.

As compared with July 30, active note circulation records a rise of Rs. 9.38 crores. This is due to a very large-scale transfer of sterling securities to the issue department. Sterling securities in the issue department are higher by Rs. 14.99 crores. On the other hand, rupee securities for Rs. 4.99 crores have been withdrawn. The position of the Central Government is now so comfortable that they are able to utilise this affluence for repeated cancellations of "ad hoc" treasury bills in the issue department. In spite of the utilisation of Rs. 5 crores for such cancellation, the deposits of the Central Treasury with the Reserve Bank have gone up by Rs. 1.96 crores. The deposits of the Burma Government and the Provincial Governments, however, are down by Rs. 56.61 lakhs and Rs. 1.19 crores respectively. The deposits of member banks show a drastic decline of Rs. 9.71 crores, most of which is accounted for by the shrinkage in Imperial Bank's cash to which we have already made reference. While sterling securities in the issue depatrment have gone up by Rs. 14.99 crores, foreign balances in the banking department are down by Rs. 8.49 crores. In the result, the net addition to the sterling assets of the bank for the week is Rs. 6½ crores.

Comparing the Reserve Bank statement of August 6 with those of a fortnight ago, sterling securities in the issue department are up by Rs. 20.18 crores. Rupee securities record a substantial reduction by Rs. 8.18 crores. Active note circulation has expanded by Rs. 10.84 crores. Turning to the banking department, the deposits of the Central Government, with the Reserve Bank are higher at Rs. 3.27 crores while deposits of member banks are lower by Rs. 9.66 crores. The reduction in foreign balances in the banking department in the fortnight is only Rs. 5.02 crores. In other words, the net increase in sterling assets in a fortnight's time is Rs. 15 crores. Thus, while sterling assets have increased by Rs. 15 crores, active note circulation has gone up by Rs. 11 crores. It seems that the development for which the time has certainly arrived is to take corrective measures. The lines on which such corrective measures should be designed was indicated in the last week's issue. If the financing of the allied war commitments in India is not to be the exclusive concern of the Indian Government, this very fact will release quite a few good crores to the credit of the ways and means position. This is another way of saying that treasury bill borrowings of the Central Government can be drastically brought down. This provides an opportunity for the British Government to enter the Indian market as borrowers for three months bills. This arrangement should be put into effect with as little delay as possible, as this indefinite acquisition of sterling assets and limitless expansion of currency are producing an adverse and unfavourable psychological impression on the country. This impression has been produced not only in India, but in knowledgable circles abroad. The "Economist" was obliged to refer to this in a recent issue and went to the length of suggesting that no real solution for inflation can be found so long as the fundamental facts of the Reserve Bank acquiring sterling and more sterling and expanding currency and more currency remained unaltered.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, Aug 10. Total amount offered was Rs. 14,73,25,000. Tenders at Rs. 99-12-6 per cent were accepted in full and those at Rs. 99-12-3 per cent were allotted approximately 67 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-14-11 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, August 17 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, August 16, 1943, at other centres. Successful tenderers should make payment on Friday, August 20. Other conditions are as usual.

During the week ended August 6, Government of India Treasury Bills for Rs. 3,16,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad.

Thursday Morning.

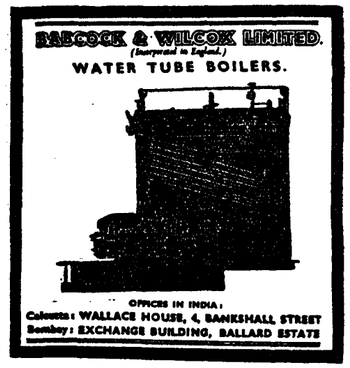
THE foreign exchange rates remain unchanged and war news affects only oil shares. The London money market has plenty of funds as bankers' balances have been high in recent months. There was an increase in the volume of applications for 3 months Treasury Bills last week though the rate was slightly higher. There is to be an increase in Treasury Deposits but that may be due to maturities and may have no influence on the supply of funds. The London stock exchange has been irregular on some days owing to profit-taking but the tendency has been quickly firmer. The drop in gilt-edged prices may be due to large selling by investors eager to turn to oil shares. From industrials to oils through rails may be selective tactics. The most important change is the rise in oil shares. Soviet victories helped improvement in Anglo-Iranian. The Shah and the Premier looked forward to better trade relations with Britain. A higher dividend is expected as Iran's oil output must have risen after the loss of Burma. Though Mexican mining issues are said to have improved, Mexican Eagle has been irregular as usual. Profit-taking has reduced the gains in oil shares but attention may be drawn to the further rise in Royal Dutch. Hopes of an European offensive have assisted the rise.

The prosecution of prominent Fascists including Cparlo Scorza for offences against financial regulations has been reported. Earlier, an enquiry into leading Fascists' fortunes was reported. The investigation should reveal that Fascists were not mindful of regulations drawn up to prevent export of capital. The showing up of greed and graft will help the Socialists to make headway though Badoglio may have a different object. How far Italo-German relations have worsened of late can only be guessed, but Italian troops are being sent out of the Balkans and Germans are moving towards the French frontier. That may upset the bourses and Germans may not hanker after shares in Dutch and Belgian enterprises hereafter.

A rise in French railway bonds may be independent of the official assurance that interest paid on the Nord bonds is blocked. It may be comparable to the rise in all foreign bonds including Chinese loans. Attention may again be drawn to the jump in Rio Tinto. All copper mining shares must be rising along with oil shares. The damage done to Ploesti may injure shareholders in Rumanian oil companies but the report as to Hitler's illness and his intention to retire may have a remarkable effect on European bourses and international stocks.

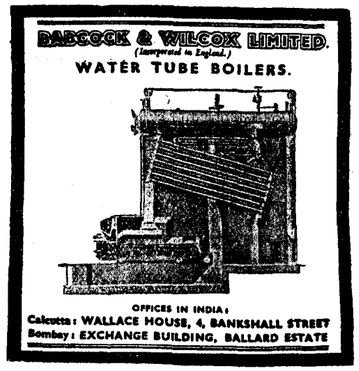
A feature of the week is the sudden hardening of Distillers £1 stock. Export prospects must be better after the Mediterranean victories and the market may also derive encouragement from the report. The slip-back in textile issues is put down to profit-taking but the improving tendency in tea shares is perhaps due to Lord Woolton's statement as to the buying of 700 million lbs. of tea by the Government. The investor will note that the tea outlook has quickly cleared up and the higher yield is a very definite advantage for those eager to mix investments.

Report of the R.A.F. helping a Sicilian farmer to gather his wheat suggests that the Allies may help Italy freely once an armistice is signed. The U.S.A. has taken note of the machine tool requirements required to help Italian industries out and is also mindful of wheat required. Mussolini did not win the battle of the grain and privation bit deep into Italian morale this year. The lira in Occupied Italy is saved from depreciation and the Italians are to be helped with textiles. In view of the air raid damage, it is doubtful if the rayon industry will make a big showing after the war. British rayon producers may have little to fear from Snia Viscosa after the war and the greatly reduced Italian merchant shipping too will have little to show against British shipping. As for Britain's coal exports, the Italian surrender may make a big difference. Italy has no coal or oil though she has other minerals. It is useless to discuss how far Italy will be helped because Italy is not an Occupied country entitled to relief.



Wall Street has been irregular and the turnover shrunk rather suddenly last week. The August drive for war loans may explain the drop in prices and the very limited recovery. Though Col. Knox deprecates optimism it is clear that the war will be shorter. But the threat of fresh taxation and changes in corporate earnings cannot be ignored. U. S. Steel and Anaconda Copper have receded and the stagnation in the commodity markets has affected market sentiment again. The report as to a compromise plan for the postwar period has appeared again. There is to be a conference and the U. S. Treasury has modified its plan. To that extent, available reports agree, but it is doubtful if the agreement could be concluded without the neutrals coming in. Many of them are creditors and less dependent on imports than Britain. They may be less eager for cooperation than Britain. But the Allies today control more of the world's trade and if they agree may compel others to follow the dollar. Europe relied on the dollar more than sterling in recent years, and the dollar-sterling stability in the war period may influence neutrals' attitude for they are interested in postwar recovery. The U. S. Treasury is known to be prepared for loans for currency stabilisation to Italy and Allied dealings with the Axis may reduce lingering scepticism on the part of neutrals.

The U. S. A. has been asked to produce more and get on with the war effort by leaders who are satisfied but expect more out of the people. Mr. Churchill's visit may force Congress to drop its hostile attitude but too much can hardly be expected from the campaign to interest the Middle West in European affairs. A major achievement is however the recognition of the French National Committee. The provisional government is to stay till France is invaded and the French people decide for themselves. This means a big change in the status of the French African currency. The gold in Martinique may be turned over to the new Committee. As Vichy is not represented in Washington, protest is hardly possible. The lease-lend agreement with Ethiopia follows the Negus's declaration of war. The question of Allied installations on Abyssinian territory is to be settled by agreement. What Ethiopia is to receive under lease-lend has to be guessed but reference may be made to the British treaty last year which provided for financial assistance to Ethiopia when she was neutral. America will only copy British policy after Ethiopia entered the war.



The bigger questions raised by the Quebec conference hardly touch Canada so much as Russia. But the latter is not represented at the conference of statesmen and Staff officers, and the only thing to go by is the assurance that supplies from Canada to Russia have increased along with British supplies to Russia. The Aid-to-Britain Act is supplemented by a proposal to give merchant ships to Britain. If the transfer is not temporary like that of 200 U. S. vessels for Britain, the Canadian gift will mean less work for British shipyards after the war and should help other heavy industries. The increase in food supplies for Britain entails an independent addition to mercantile tonnage and Canada's action implies an increase in the Dominion's exports to Britain.

A recent notification called attention to the fact that India is free to trade with all parts of the French Empire except Indo-China. Since China too has broken with Vichy, the exception is justified, but the notification indicated that licenses are required in the case of certain commodities and the leave to trade with the French zone of Morocco, etc., does not mean that an open general license can be had for imports. Martinique and Guadaloupe are grouped with Madagascar and Reunion and no distinction is made between de Gaulle's territory and the territory subordinate to Giraud indicating that the Algiers agreement is bearing fruit. There has been no notification as regards dealings in francs, and it is not known if the Bank of England has accepted the unification of the Algiers and Brazzaville francs. There cannot be exports without imports, and the sooner the franc is restored to its position as a 'soft' currency, it is better for Indian traders. South Africa is known to have developed special interest in Madagascar and Reunion and India might turn to Syria and Lebanon which have proved useful markets.

Editorial Comments

Fiasco in Food

The speeches of Sir Azizul Haque in the Assembly and of Major-General Wood and Sir Jogendra Singh in the Council of State on the food situation will deepen the feeling of consternation in the public mind into one of dark despair. Sir Azizul recounted a tale of vacillation and cross-currents in official circles which threatens the last vestige of faith in the ability of the administration to execute any scheme, even if it should be possible to frame one in the present circumstances. Major General Wood not only wished, but did, make it clear "that not only have the Central Government no instrument or machinery for the day to day execution of food administration, but that it would be improper for the Centre to attempt to build up such an instrument and impossible to do so even were it deemed desirable to do so." That puts the lid on all hopes of a centrally directed scheme of food production! And as if the outgoing Food Member and his Secretary had not sufficiently killed hope, Sir Jogendra Singh summed up the results of the Government preferring coercion to co-operation of traders and businessmen, and observed, "Normal channels of trade have ceased to flow, the confidence of the people has been shaken and traders no more coax commodities from the meagre resources of 650,000 villages and carry the grain where needed as in normal times. It is not only the cultivator that has lost confidence, but the Governments of the Provinces and States have been conserving their own resources, building up reserves in some areas, and thus preventing the free flow of commodities." The three speeches together not only paint the most sombre picture of the conditions prevailing to-day, but serve to strengthen the worst of the fears that people have begun to entertain in their minds. The gravity of the food situation is there in the streets for all to see. Queues in grainshops, rows and rows of beggars sitting on the pavements before the free kitchens, heartrending appeals for alms at every turn from old women, who had been obviously well-to-do not long ago, and occasionally the sight of a man or woman in the last pangs of famished existence—these sights are so familiar today that sensitive minds are sickened and perhaps coarsened too!

If present conditions are painful, the outlook for the future is even more cheerless. Sir Jogendra Singh has confirmed the gloomy prognosis we have given more than once in these columns on previous occasions that improvement in the acreage under rice of 1,350,000 has only led, for various reasons, to a decrease in output of 800,000 tons. According to Sir Azizul Haque the consumption total of food grains is 55 million tons for which the present supply is only 50 or 51 million tons. The shortage, however, is not the most arresting, nor, from the point of view of the practical solution of the food problems, the most important part of the present situation. There is, in the first place, the reluctance of the authorities in the earlier stages to admit the shortage; not to speak of facing up to it. As the shortage became more apparent attempts, at once half-hearted and frantic, were made to bring about a better distribution of available stocks. And this was the beginning of a series of administrative measures, the results of which have been summed up both by Sir Azizul Huq and by Sir Jogendra Singh. The problem of power and means was utterly overlooked while a series of food conferences were called, which examined the food problem with academic aloofness and passed resolutions without any thought for their application or applicability. There can be no more convincing proof of the bungling over the food question than the speed with which drastic measures have been adopted and abandoned. Licensing and no licensing, free trade and no free trade, these inexplicable alternations of official policy coming on top of a regime in which small traders and producers have never been free from the intrusions and intimidations of petty officialdom have created famine conditions out of a manageable shortage of foodstuffs.

The only relieving feature of the present situation is the candour, within limits, of the official spokesmen. It is admitted that there is a shortage. It is admitted, too, that the Food Conferences, which at one time were thought to be quite capable of tackling the problem, were only dallying with it; that the provincial governments have no spirit of co-operation, that small officials have a way of frustrating big policies from above; and that the Central Government has neither got, nor can create, the machinery to execute a comprehensive food policy. In this position, what is the remedy to be adopted? The debate in the Assembly has not reached its end; but it is doubtful if our legislators have any concrete suggestion to offer. So far, they have only expressed the widespread sense of indignation in the country. They have repeated the old grievance of exports from India while India herself is suffering from a shortage. It is not correct to blame the Legislature for crying over spilt milk. In the politics of a free country, the demos does not cry, but gives forth a most menacing roar, over spilt milk, which often drives the Government out of office and puts in men who can produce far more than was spilt. It is not in the hands of the Central Assembly to bring about a similar change of government. But it is well that Sir J. P. Srivastava should take up his new office with a wholesome sense of the blunders of the past and the keenness of the resentment felt all over the country.

What, indeed, can Sir Jwala Prasad do? For our part, we believe that a scrutiny of the past will yield the most valuable lessons for the future. But such scrutiny would be useless, if all the platitudes and shibboleths of the day are taken for gospel truth. Many of the assumptions which underlie the policies and suggestions which now hold the field need to be carefully enquired into. Is it quite correct to say that our troubles are due mostly to shortage? Are the defects of present distribution to be traced solely to the selfishness of the surplus provinces? Have the provincial governments exercised their powers of control in the interests of the consumer generally and the large class of producers? Or have systems of control tended to create varying degrees of cannibalistic monopoly in vital food grains? How far have the pettifogging and tyranny of lower officialdom interfered with the normal flow of food grains from the producing centres? Has the principle of high priority for food in the provision of transport worked effectively in practice? Can free trade in food grains be effective after the removal of official interference or will it be nullified by the shortage of wagons and other difficulties of transport?

On the answers to these questions must depend the scope and nature of our food policy for the period that still remains of the present war. If an enquiry into the food policy and administration in the province should reveal serious defects, if there should be reason to think that the effects of shortage have been accentuated by wrong policies at the top and tyrannous corruption in the lower rungs, then there will be the strongest case for the Central Government making a clean sweep of all systems of control and relying on the sales of imported wheat to make up the shortage and keep prices down to reasonable levels. The record of control and regulation in the past is in itself sufficient argument for the imposition of free trade in food grains all over India. For official controls and excessive interference in ordinary trade transactions tend to create pockets of corruption and to render insoluble the problems they are intended to solve. Control may well have deprived the cultivator of the incentive to increase output, scared away the traders who move the grain in the first instance after harvest, overhaul the personnel of the trade in the cities and left the Government with the nice problem of making two and two five. The time has probably come when the litter of incompetent and vexatious if not corrupt, control should be swept aside and society asked to trust to the forces of the free market.

But whatever policy may be adopted, there can be no getting away from the shortage of food grains at the present moment. To look to rationing as a means of circumventing shortage is not only callous but futile. Placed as India is, financially and strategically, and with her record as an arsenal for democracy, there should be little difficulty—and no objection—in the Government importing a sufficiently large quantity of wheat and selling it, much like an open market operation, in all parts of India. The introduction of such wheat would bring down prices and bring out hoards if they are any; it would teach speculators not to be anti-social and create conditions in which, if need be, the ugly fabric of controls can be dismantled without danger. We trust that the new Food Member will accomplish a measure which will provide not only immediate and urgent relief, but also the conditions in which an overhaul of the food policy can be attempted.

PREPARING FOR CHANGES

So much has been changed by the resignation of Signor Mussolini that air raids on Turin, Genoa and Milan appear unimportant in comparison with the changes to come in Germany. The task set for Hitler may not be attempted because there is talk of his retirement in favour of a triumvirate composed of Keitel, Doenitz and Goering. The defeat on the home front will apparently take place before the final defeat in Russia. Even for the retreat from Russia Hitler is not considered the obvious leader, and the appeals connected with the evacuation of Germany's major cities have been launched by Goebbels. The problem is no longer the next line of defence in Russia but the maintenance of the German war effort in the face of the R.A.F's sustained raids. Orel has been evacuated and Smolensk like Kharkov may have to be given up in the face of the continued Russian attack on the main positions. It is at this stage that Soviet claims for a second front have been revived and Mr. Churchill has gone to Quebec to examine possibilities opened up by Sicily and the Russian victories. The Nazis' railway communications may be disorganised by the capture of Sumy and the impending capture of Briansk. Once the Ukraine is lost the Nazis must inevitably fall back to the Carpathians.

Since Italy is nominally in the war at present political warfare assumes special importance. Marshal Badoglio's position has not been affected by strikes and demonstrations in Italy. Popular support for an armistice forced on Badoglio can hardly be secured by air raids, and the agenda for Quebec must include the armistice before anything else. The armistices of 1940 afford no complete parallel to what may be devised by the Allies who require an adequate Government in Italy at least to enforce the armistice. Franco-German relations after Monotoire talks point to collaboration, more so in the light of changes in France and Spain. Leniency may be justified by results in this case and Italy rather than Sicily is required for an approach to the Balkans. It would be unusual if the Allies choose to attack Germany through a landing off Hamburg when air bases in the Mediterranean are available for preventing German interference in Italy and the safeguarding of the French African Empire which must play the chief part in bringing Vichy round. Should German foreign policy change suddenly, as it might if Japan does not move in the Far East, it would be clearly open to the Allies to get beyond the slogan of Unconditional Surrender. In view of the Turkish and Swiss Governments' replies as to the right of asylum for those charged with war guilt it is clear that the Allied demands formulated at Casablanca have to be radically modified.

An anti-Fascist revolution is unlikely though the Socialists may draw up a programme for Italy. The Russians, after the closing of the third International have little interest in foreign affairs, and Anglo-American policy may, take its own course again for the main Russian interest is always in Eastern Europe. Since Russians may be called upon to undertake a siege of the Crimea into which the Germans in the Ukraine and Kuban may retreat the Allies may have to get beyond the Black Sea. What is more important is that an Allied Expeditionary force may stimulate covert, discontent in many countries to the point of rebellion and the Allies would have to furnish arms as well as food. These are not mere details in the grand plan that may be adopted, but essentials for the war against the Nazis if the party facade is preserved in Germany after Hitler is out of power. The German army's industrial basis has been weakened considerably but the air force is drawn back into Germany and the Army expects to sit down in Poland. It may not be easy to pull it out by regular invasion, for which preparations are reputedly in progress in Britain, but it may be easy to send Allied contingents to Russia to achieve the superiority required before the winter in order to prevent a stop in the German retreat. Since the High command may lack Hitler's dash and originality, and will have to reckon with anti-Nazi elements at home after Hitler is excluded, it should be possible to create the moral effect on the Satellite States before the attack from the East begins.

The inactivity of the Italian fleet both before and after the fall of Catania may not be due to the great Italian instinct, the instinct of self-preservation, but to specific instructions so that the fleet may be used as a bargaining instrument in arranging the truce in which certain neutrals obviously are interested. The main achievement in the Mediterranean cannot be said to end with Sicily, but only with a truce. Mr. Roosevelt and the Secretary of State may outline their plans more readily outside Washington and it is equally certain that the truce will have a great effect like the surrender of Bulgaria in 1918 before the Central Powers sued for terms. It is doubtful if a declaration corresponding to the fourteen points of President Wilson would be drawn up but neither Congress nor Parliament is bound by the Atlantic Charter and an inter-governmental declaration may be demanded by circumstances in Italy, for it is the Allies who must finish Fascism and prove that Bolshevism is not the dread alternative. That is the explanation for the non-representation of Russia at Quebec. The problem for Russia is purely military and what is more important today she is not concerned with the war in the Pacific. Since Japanese intervention is altogether remote it is more important for the Allies to wind up operations in Europe so that assistance to China can substantially increase at the same time as action against Japan begins in the light of requirements in Asia. Peace in Italy is far more important than the acquisition of Sardinia. If Allied occupation of the islands is conceded the air forces may drive the Germans out of Crete and secure the Dodecanese for the Greeks on the basis of self-determination rather than the Treaty of Ouchy or the subsequent instruments.

An Allied army in Europe postulates the termination of warfare in the Mediterranean and the Quebec conference may thus be more concerned with that than with determining the exact site for landings in Europe. Since the Finns have ceased to be warm friends of the Nazis the real direct threat to Russia has disappeared. But the Allies have a real interest in the Soviet recovery of the Ukraine to prevent the grain and minerals going to Nazi Germany, Rumania's oil industry has been practically destroyed in order to prevent the Germans keeping it under their control. The Allies may be impelled to help the Russians recover the Ukraine at least to prevent the Nazis getting the harvest. In a situation like that created by the fall of Orel and Kharkov within a week it is well open to the Allies to deal with Germany and force Italy out by an armistice. The disgrace into which the Fascists have fallen portends no Riom trial but a bland return to the methods of Depretis.

The conference at Quebec is one of principals and advisers not of delegates in a committee. It may react to events more quickly and the recognition appended to acceptance of the Algiers compromise suggests that the conference began work more rapidly than believed. The Canadian Premier has an interest in the Pacific like the U.S. President and C-in-C. It is for that reason he may play a great part in settling the course of strategy. In October last Field-Marshal Smuts visited London before the 8th Army started in its pursuit of Rommel. It will not be surprising if Mr. King, who has watched Quebec's susceptibilities carefully prescribes the Allies' programme. It will certainly be more than a proof of Dominion Status for Canada today looks to the U.S.A. as well as Britain and has a Pan-American as well as Imperial standpoint in most matters.

THE NATIONAL INDIAN LIFE INSURANCE CO., LTD.

(INCORPORATED IN INDIA 1907)

Report by the Directors for the Year from 1st Jan. to 31st Dec. 1942

The Directors have pleasure in submitting herewith the audited accounts of the Company for the year ended 31st December, 1942.

During the year under review 3,434 proposals for Rs. 79,55,000 were received and 3,037 policies for Rs. 66,80,425 were issued of which Rs. 5,93,500 under 49 policies were reassured. The rest were either declined or accepted on modified terms or not proceeded with or are awaiting completion. This shows an increase of Rs. 6,00,475 over the previous year and considering the difficult times through which we had to pass during the year this may be considered satisfactory.

During the year income from all sources came to Rs. 18,27,145-6-2 and shows an increase of Rs. 77,938-4-1 over the previous year. The Life Fund increased by Rs. 4,61,294-12-1 and now stands at Rs. 82,46,554-2-10.

It will be noted that a sum of Rs. 39,566-5-0 has been written off as depreciation on securities but no credit has been taken for appreciation. At the close of the year the/market value of the securities exceeded the book value by Rs. 3,84,038-15-0.

During the year claim arose by death on 160 lives under 172 policies securing the sum of Rs. 2,85,242-8-0 while 266 policies on 225 lives matured by survivance involving the sum of Rs. 3,80,092-7-0. The longest duration at death was 35 years and the shortest one month. The average duration of policies which became claim by death is 9.9 years. Surrenders accounted for Rs. 1,11,792-5-0 as against Rs. 73,733-10-0 in the previous year.

The year had been an eventful one. On the top of internal troubles, enemy air raids had affected new business and it is gratifynig to note that inspite of all these, new business shows an improvement.

The Directors recommend the payment of dividend at the rate of 8% free of income-tax on the paid up Capital of the Company.

The Directors regret that they were deprived of the help and guidance of Sir Nil Ratan Sircar, KT., M.A., M.D., D.C.L. (OXON), through death. Sir Nil Ratan had been a Director of the Company since its inception and for many years its Chief Medical Officer, and the debt of gratitude which the Company owes to him can never be repaid.

The Directors regret to announce that Maharaja Sir P. C. Tagore, KT., K.C.I.E., also died during the year. Like Sir Nil Ratan the Maharaja had been an original Director of the Company and his loss will be keenly felt by all well wishers of the Company.

On the 29th June last a meeting of the Policyholders was held and Messrs. D. N. Mukherji and Suprokash Das were re-elected Directors of the Company.

Mr. D. C. Sethia and Dr. S. N. Ray retire from the Board of Directors but being eligible offer themselves for re-election.

The Auditors Messrs. Lovelock & Lewes also retire but offer themselves for re-election.

The Directors thank the old and new Policyholders for their co-operation and support and place on record their appreciation of the services of the Head Office and Branch Office staff and agents and trust that they will continue their co-operation in the current year.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We beg to report that we have audited the foregoing Balance Sheet of THE NATIONAL INDIAN LIFE INSURANCE CO., LTD., as at 31st December, 1943, and Revenue and Profit and Loss Accounts for the year ended 31st December, 1942, in which have been incorporated the certified returns from Agencies.

We have obtained all the information and explanations we have required, and in our opinion such Balance Sheet and Revenue and Profit and Loss Accounts are drawn up in conformity with the Insurance Act, 1938, and the Balance Sheet exhibits a true and correct view of the State of the affairs of the Company according to the best of our information and the explanations given to us, and as shown by the books of the Company. In our opinion, books of account have been kept by the Company as required by law.

We have verified the cash balances and the whole of the investments by reference to certificates and relative securities.

We have not seen Loan Bonds to the value of Rs. 370 in respect of Loans on the Company's policies.

We certify that no parts of the Assets of the Life Insurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relative to the application and investment of Life Insurance Funds.

Banks And Loans

The new Defence Rule against advances of money by banks has been the target of criticism in various places by commercial bodies and claims for exemption have followed. The Reserve Bank in a recent circular to the Scheduled Banks explained that loans and overdrafts for legitimate trade purposes are not affected by the Rule which is meant to discourage speculation. The Reserve Bank drew the attention of banks to the hoarding movement and the advance in prices. Government can requisition stocks of goods on which loans have been made and the new Rule merely empowers Government to prohibit advances against any commodity or bullion and require repayment of any outstanding advance. Wholesale and bullion dealers can get the usual bank finance but an order under Rule 94B may issue when banks give any advance for speculative purchase. The circular mentioned that forced sale in the event of compulsory repayment may entail loss to the banks or others. The end of the war might produce a fall in prices and banks have been cautioned as to the future in the circular referred to. Voluntary restrictions on lending are desired as part of the anti-inflationary policy adopted by the Government. A sharp fall in bullion last month followed the notification and the fall must have served to influence banks in favour of the restrictions now advised. The rise in Deposits as also the cash balances like the fall under Bills and Advances in the case of scheduled banks supports the general conclusion that banks as much as speculators have shortened sail. The increase in investments indicated in the heavier applications for treasury bills last month was duly reflected in the fall in the rate. The absence of speculation does not produce a fall in prices by itself but dishoarding when the Advances run out may lower prices and carry forward the fall in wholesale prices described as the special feature of June. Calling back of Advances might help banks to maintain a fully liquid position so that India's banks could face the post-war future with confidence. The Rule requires no special machinery to be devised in advance and Banks have no need to refer to outside authority.

Indian Silk Industry

In four districts of Mysore silkworm rearing is an important industry with the natural advantages independent of the revival effected by the import of Japanese silk and an Italian expert. The filature started in 1922 is perhaps the Government's most important contribution, yet progress well beyond the charka stage has been stimulated by war demand. At the beginning of the war, the State had 450 basins and by the end of the year there will be 1,500 basins and the output will exceed 300,000 lbs of reeled silk. In Kashmir the State has a monopoly of sericulture and wartime development there is reflected in the maintenance of 1000 basins to give 150,000 lbs of reeled silk. Before the war expansion scheme went into effect, Kashmir is known to have had four filatures. Progress in British India is not limited to Madras where 150 basins have been increased to 650 by extension of mulberry cultivation. The immediate object is to produce 125,000 lbs. of reeled silk per annum. Bengal also reports real progress in silk production as the estimated output of 1,200 basins is 150,000 lbs of reeled silk. Sericultural progress is to be supplemented by the setting up of two conditioning houses in Kashmir and Mysore, and the rapid revival of Indian silk in the war period will be reflected by the fourfold increase in the number of basins and the increase in output to over 700,000 lbs per annum. It is believed that after the war the Indian silk industry would be on the same footing as that of major silk-producers. The decay of rayon and other rivals should help Indian silk as much as any other factor at present. Among the Allies seriously short of silk owing to the entry of Japan into the war, India occupies a special position, and silk was the first textile to pass under full control while efforts to develop sericulture and silk reeling received special encouragement from all countries threatened with a shortage of a strategic material like silk. The report that silk production is being developed in colonies like Nigeria may not affect the development of the Indian industry, though the future is clearly bound up with the retention of tariff, the problem is by no means simple, and the assumption of control over silk production and exports affords no guarantee as to the lowering of costs and prices in the case of Indian silk.

Calcutta Civic Finances

The ways and means advance of Rs. 1 lakh to the Calcutta Corporation for the supply of foodstuffs to the staff and the division of the expenditure for war risks insurance premium payable by the Corporation are the immediate results of Mr. Gurner's report on the City's finances. The Budget prepared in February drew attention to the lack of new revenue and the increase in expenditure occasioned by the war. Mr. Gurner has recommended that revenue should be realised promptly; arrears should not be allowed to increase. The one positive measure is an increase in the consolidated rate by one per cent. The consolidated rate would then give Rs. 177.5 lakhs and the balance of the deficit of Rs. 15 lakhs should be met by a Government grant of Rs. 7½ lakhs according to the report. The Corporation has been asked to increase the rates and improve collection, while the Government is asked to pay part of the war risks premium and 80 per cent of the new expenditure entailed by dearness concessions. The budget problem is solved by passing on part of the deficit to Government, but the Corporation has been advised to carry out certain measures of retrenchment in the Building Department and the Education Department. The Health Department is said to have got too much under a deficit budget and the Mosquito control unit is deemed superfluous like the Bustee Department. The only other savings are in respect of motor vehicles. As to measures of increasing municipal revenue, the report issued two weeks ago, mentions the adaptation of the license fee on trades and professions. Addition of certain professions and enhancement of fees as also the inclusion of persons in paid employment is favoured. The Corporation's income from markets is less than a fair economic return in the opinion of Mr. Gurner who has also recommended an increase in the building department fees particularly in view of the rise in the value of land. The conversion of municipal debentures is approved. A direct guarantee by the Government would help the Corporation to replace old loans by a new consolidated loan. Since sinking fund accumulations are fairly large, either conversion or repayment might be easy. In 1937 the outstanding loans amounted to about Rs. 8½ crores and the assets of the Corporation exceeded in value the debt liability. The Corporation has been informed of the possibility of raising a loan at current rates of interest for the absorption of outstanding loans.

Agricultural Incometax In Travancore

The effects of war time inflation are indeed far-reaching. The problem of soaring prices, the gap between the nominal and the real wages, the plethora of funds flooding the bank accounts, these have worked abiding changes both in the economic behaviour of the people and the fiscal policies of the governments. Like British India, the Indian States too, are striving hard to combat the evils of inflation and war profits. According to the peculiar requirements of the states, schemes are drawn up to check inflation and maintain balance in the state economies. While Cochin and Hyderabad have chosen the E.P.T. as the handy means of checking inflation, Travancore has come forward with a notable devia-

tion from the accepted ideas of fiscal policy. The Travancore Government's budget for the year commencing August 17, 1943 proposes to levy a tax on agricultural incomes. Academic opinion has not been on the whole favourable to the adoption of agricultural income-tax but Travancore, where so large a part of agriculture consists of plantations producing commercial crops, may be deemed to be on a different footing. The prices of agricultural products have risen very high and, apart from the growers of food crops, those who own timber, tea, rubber, cardamon, and coffee plantations have reaped considerable profits arising out of war time demands. There is no reason why these plantation industries should not be called upon to pay more. E.P.T. would tap only manufacturing industries and the actual administration of the duty is fraught with numerous difficulties. Travancore has therefore decided to tax agricultural incomes "bearing in mind that the prices of agricultural products have risen to a phenomenally high level owing to war conditions and in consonance with the general idea that profits from land should be assimilated with other profits and income, especially where money crops are produced on a large scale." The proposed tax on agricultural incomes being only three fourths of the rates of income-tax (not taking into account super-tax or surcharge) would not be felt heavy since incomes below Rs. 5,000 would be exempt from duty. Another commendable feature of the scheme is that the tax is levied not with a view to swelling the exchequer but for the purpose of building a Post-war Reconstruction Fund for the development of agriculture and relief to the agricultural population. The Dewan Sir Ramaswami Iyer stated "A surplus money of Rs. 80 lakhs this year and Rs. 58 lakhs next year will be utilised for the purpose of making two blades of grass grow where one grew before." Travancore is thus falling in line with two minor provinces of India in the matter of innovations in fiscal policy and in making suitable preparations for stabilising agriculture during the uncertain days of the post-war period.

Report on Citrus Fruits

Strenuous attempts are made of late to educate the public to an appreciation of the need for dietetic reform. The importance of a balanced diet in advancing the physical efficiency of the nation is coming to be very widely recognised. The war time scarcity of foodstuffs has also given a fillip to reforms in nutrition and as part of the Grow More Food Campaign the public are requested to substitute food for non-food crops and obtain maximum calories and proteins from cereals and grains. The necessity of increasing the proportion of citrus fruits in our daily diet has not yet been recognised. The Report on the Marketing of Citrus Fruits presents a very good picture of India's capacity to grow more fruits for the daily consumption of the rich and the poor alike. Annually nearly 14 million maunds of citrus fruits valued at Rs. 3,61 lakhs are consumed in India. Among the chief producers of the citrus fruits India ranks high and yet the per capita consumption in India is only 3.2 lbs. while the figures for Palestine, U.S.A., and U. K. are 222, 54.3 and 27 lbs. respectively. At present the production falls far short of our national requirements and vast stretches of land suitable for citrus cultivation exist for the agriculturist to exploit. The report gives available details regarding the acreage, production, varieties, marketing, prices etc. in connection with the cultivation and sale of citrus fruits in different provinces of India. Lack of statistics makes it impossible to estimate the actual progress in citrus cultivation in recent years and the provincial governments, particularly Madras, C. P. and the Punjab should do well to maintain full and accurate figures to facilitate future production. They should publish facts and figures relating to prices, stock, arrivals, despatches and forecasts of demand in all the principal markets. The need for organised marketing intelligence is rightly stressed and useful information regarding harvesting standardization and marketing of citrus fruits are given. The Imperial Council of Agricultural Research would do well to study the economics of storage of citrus fruits on a commercial scale, and the Railway Board should consider the feasibility of offering refrigerated vans for reducing the loss of fruits in transport. The demand for juices, squashes and cordials is widening and the production of canned oranges, candied peel, citric acid would be highly profitable.

Reopening of Hedge-Contracts in Cotton

Two important resolutions were passed by the Indian Central Cotton Committee at the monsoon meeting held in Bombay recently. The first resolution asks for he reopening of "hedge contracts" in cotton, with suitable modifications while the second urges the need for the fixation of minimum prices for cotton to protect the ryot against undue decline in prices. The resolutions are certainly well-timed considering that the cotton crop has to be disposed of in the next three months. The resolution urges that unless facilities are afforded for forward trading, it will not be possible to "avoid undue risks" to the grower, and that the resumption of forward trading can be made with such modifications regarding the transaction of business as are found necessary by the Government in consultation with the East India Cotton Association.

It will be remembered that forward trading was first banned in the new crop and later on, when it was found that prices were still on the upward trend, all outstanding contracts were compulsorily liquidated and unadjusted contracts were settled at Rs. 550 per candy. The reason for abolishing hedge contracts in cotton was that they encouraged undue speculative activity and that, with the difficulties in regard to deliveries there was a considerable disparity between Bombay and mofussil prices and mofussil traders were encouraged to keep back stocks. Even after the termination of hedge contracts, great difficulty was experienced by mills in getting their requirements at the pegged levels. There was also considerable criticism of the Government action as no effort was made to control prices of cloth and the manufacturers derived the advantage of lower prices for cotton.

There is objection from the interests concerned to the reopening of hedge contracts as it is felt that the resumption of forward trading might interfere with the smooth working of the Cotton Control Order, and a speculative rise in prices might interfere with the decline in prices for piecegoods. But it will be generally recognised that while a reduction in

piecegoods prices is certainly desirable, and even necessary, it is hardly justifiable to sacrifice the interests of the cotton-grower to those of the consumer of cotton goods or of the cotton textile industry. That some relation has to subsist between cotton prices and cotton cloth prices will be readily granted. But it would be indefensible to regard cotton control as a principal means of regulating cloth prices or to adopt methods which may have the effect of bringing about a decline in the price of cotton out of proportion to the possible reduction in cloth prices. The position taken by the Committee will thus evoke general sympathy.

The demand for the fixation of minimum prices is quite understandable. With the easier shipping position, and the greater facilities for bringing in foreign cotton, the ryot should be assured that he would get a minimum price for his crop. That this assurance is of great importance to the grower cannot be over-emphasised. The increased costs of living require that the primary producer should be sure of getting a minimum return for his labour.

Hard to believe, that this middle-aged executive has resuscitated his childhood friend—the slate!

Instead of simple sums, it now carries notes of telephone conversations, figures, and appointments. It saves daily paper of ten times its own surface.

Follow this lead back to second childhood—help to save paper—for essential uses only.

Revise all your stationery, forms and statements. You can save over 25% of the paper surface you are now using.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :—

- Use the smallest sheet of paper for any purpose that will do the job.
- Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.
- Do not make copies except where absolutely necessary.
- Always type single spacing.
- In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.
- Reduce the size of labels on manufactured goods.
- Use the back of the letters received for the carbon copy of your replies.

Save paper

Britain's Coal Problems

Lord Samuel again headed a committee appointed to examine Britain's coal resources and the Parliamentary and Scientific Committee went into the questions of fuel economies and recovery of the export trade. The report issued in May directed attention to all problems in the mining industry and made many far-reaching proposals. It is known that a mild winter helped Britain to meet the cool shortage somewhat successfully. The coal report is of special importance to the transport and other industries. The report stated that only 30 per cent of the energy is extracted from coal. About 70 per cent (equal to 150 million tons of coal per annum) remains to be fully utilised, and research is advocated. It has been urged that Britain, as the pioneer in the chemical field, must regain the lead. Fertilisers, dyestuffs, chemicals, plastics, synthetic rubber, soaps, lubricants and (perhaps most important) liquid fuels and high octane spirit for aviation can, and should be, produced from coal. The increase in the import of oil and the fall in the export of coal between the two wars should force Britain to rely on coal more than any other circumstance; and the scope for research is unlimited. Fuel economy is expected to cut costs and raise the competitive ability of British export industries, apart from helping to sell British machinery using coal as fuel. It is recalled that the U. S. petroleum industry in 1938 employed over 5,000 research workers and spent over £6 millions for research, and the war has extended the field. The Government was asked to find out how much coal can be had and to extend research. Half the grant should be devoted to the preservation of coal's position against oil. It has been calculated that Britain spends £750 millions on coal every year, and very large gains will follow research. Wartime technicians should be assigned for research, and the Samuel report advocated the enlisting of co-operation from the coal, gas and electrical industries for he purpose. The utilisation of coal in India which also is dependent on imported oil should benefit from the acceptance of large-scale research as a necessity. Expenditure for the purpose may well come from a cess on exports or a straight subvention by the Railways. The ambitious scheme outlined to the Cabinet by the Samuel Committee has its lesson for India where fuel economy may become more than ever important owing to temporary shortages of wagons.

Australia's plans

On the eve of the General Election Australia can count on most satisfactory developments in regard to food though the rationing of tea is to stay. The food plans have three objects; to meet the demands of Australian and Allied soldiers, and to permit exports to Great Britain. Out of the plan of development in which the States are co-operating with the Commonwealth an organisation for contribution to the United Nations' relief plans for Europe will arise. U.S. Army exports are helping in the drive for increased food production, particularly, the meat and vegetable canning programme. Other experts will advise on primary production, and assistance will be sought for the import of agricultural and factory equipment. Since 89.4 percent of males aged over 14

are fighting or doing war work, the Australian manpower problem has been solved. Only 10,000 men and women could be transferred to war work instead of 35,000 (said Mr. Curtin) and the reshuffle of manpower has to be undertaken. The steel industry inspected by the Anglo-American mission has impressed others besides the Tariff Board. The Anglo-American mission saw Whyalla and other war plants, and one member declared that Australians were not afraid to tackle anything. The Electrolytic Zinc Company's contribution to war effort is not less important than a departure in asbestos mining in Western Australia. A big plant and a small township are to be set up for the development of the asbestos industry required for munitions making. Of special interest is the intelligence that Tariff Board is preparing for post-war reconstruction by enquiries into the possibility of making in Australia the following articles: Typewriters, sewing machines, floor and walling tiles, carpets, tractors and tractor parts, and electric motors. According to the Austral News, the Tariff Board has emphasised two points in its investigations. Plans must be made for the speedy and effective switch-back of industry from wartime to peace-time level. Manufacturing industries will unquestionably prove the nation's greatest provider of employment. The Premiers in conference at Melbourne agreed about the setting up of a Works Council to draw up a programme of carefully planned public works to provide employment. Of direct importance to the war is the increase in alcohol output. Eleven million gallons are expected and output will rise to 23 million gallons. Mr. Beasley cited the figures to indicate how liquid fuel is used for blending with imported fuel. The £1 million programme for making small diesel engines in munitions factories is to begin when labour has been diverted by the Government for the purpose. The preparation for the tasks of peace is to begin in various fields, and enhanced security is reflected in plans to make locally internal combustion engines, for making machines as well as ships.

Conscription Extended

The Minister of Labour and National Service deals with part-time work as well as full-time work under conscription and orders issued in May made for an addition to French employment in Britain. Part-time workers were called upon to work up to 30 hours a week, and exemptions in the case of women were strictly limited. Many were also drawn into full-time work so as to allow the diversion of workers for other more important jobs. Persons directed into unscheduled work were given the same security as those in protected jobs. The direction to the person affected was to cite the period for which it was in force, normally, six months, though it might be less in certain cases. While the direction is in force, there is a guarantee against discharge by the employer except for serious misconduct, and the worker cannot leave his work unless the National Service Officer withdraws his direction. The adoption of the compulsory principle for part-time work was novel. Over 600,000 women were in part-time jobs and the number was increasing in May when the order was issued. The local advisory panels were expected to help choose the women to whom the order applied, and employers, too, were expected to keep part-time workers in employment for six months. It was, however, noted that appeals to a local board would lie against a directing order. The class of labour affected by the order had certain other advantages. Part-time workers could leave the jobs, if they satisfied the National Service Officer that they have been stood off without any wages for any reason whatever. In these circumstances, the worker would not be tied to the job, unless she was drawing her wages for the agreed hours. The appeal, however, should be lodged within three days. Mr. Bevin introduced compulsion for part-time workers after discussing the order with the T. U. C. and the British Employers Confederation. The Ministry of Labour recognised however that household duties claimed much time and women could not be directed to full time work. Wages and other conditions required under the Essential Work Order had to be provided for part-time workers, and the recent call-up of women aged between 18 and 45 is the sequel to the

Aspect of an Industry No. 19.

VULCAN'S FORGE

VULCAN, or Hephaestos, of ancient Greek mythology, was no common blacksmith. He was a worker in metal, in the non-ferrous metals copper, brass and bronze, who built the thrones and decorated the shining palaces on Olympus. He was also the armourer of the Gods and forged the thunderbolts for his father Zeus. Today the non-ferrous metals are essentials in peace and war. The development of the manifold industries which are linked to electricity, the steam locomotive, the turbine or the internal combustion engine depend on non-ferrous metals in new forms and greater purity. The electrical industries with their extensive ramifications need huge supplies of the purest copper. Copper is also needed for locomotives, breweries, sugar refineries, calico printing and paint manufacturing—to name but a few. Not only is there need for more and purer metals, but for all kinds of alloys. The British chemist has helped the British aircraft industry to achieve its superiority in many ways, but not least by developing new and stronger alloys without which it would not be possible to build aircraft capable of flying across the world. Nor is the chemist satisfied merely to improve the metals known to Vulcan, or even to find special alloys to meet fresh needs. Without his aid, for example, nickel—"Old Nick's" metal—could not have been produced on the scale it is at present nor find uses in so wide a range of industries. Manganese, chromium, vanadium and tungsten, at one time metallurgical curiosities, are now used in a diversity of trades from stainless steel for cutlery to high speed tools for industrial production, and armour-plate for tanks, battleships and "tin-hats." Radium is man's ally in the fight against malignant disease. These are the achievements of the laboratory. Without the continuous assistance of the chemist and the chemical industry, the manufacturing processes which use non-ferrous metals would speedily fall behind in the race for efficiency, and mankind lose the valuable services which these metals can render.

PROSPECTUS.

The Company has been formed generally for the purpose of cultivating Tea and to carry on the business of Tea Planters and to prepare, manufacture and render marketable product either in prepared, manufactured or in raw state and to acquire the tea estate commonly known as LEBONG AND MINERAL SPRING TEA ESTATES, Darjeeling, held under leases granted by the Government and for the other purposes mentioned in the Memorandum of Association of the Company.

Negotiation for purchase of the said LEBONG AND MINERAL SPRING TEA ESTATES with a granted area of 2017.75 acres including valuable Forests tools, plant and machinery, buildings, etc., belonging thereto has been completed with Messrs. James Finlay & Co., Ltd., Agents of the amalgamated Tea Estates Co., Ltd. of Great Britain, the owners of the said Tea Estates and Aryan Planters' Agency, 12, Chowringhee Square, Calcutta, the Managing Agents of the Company. The consideration price for the said property is Rs. 6,65,000 including tea plants, valuable forests, tools, plant and machinery, stores (for the year 1943-44) and other movable and immovable properties as stated below. It should be

AUTHORISED CAPITAL - - Rs. 5,00,000 (Five Lacs)

Divided into 30,000 Ordinary Shares of Rs. 10 each.

2,000 6% Tax Free Redeemable Cumulative Preference Shares (Redeemable at par) of Rs. 100 each.

The Managing Agents, Directors and their friends have promised to subscribe 75 per cent of the Preference Shares and 50 per cent of the Ordinary Shares.

Application has been made to the Committee of the Calcutta Stock Exchange Association for permission to have the shares quoted in the Official List.

For ORDINARY SHARES—Rs. 5 per share is to be paid as deposit with application and the balance of Rs. 5 per share within seven days from the date of allotment.

For PREFERENCE SHARES—Rs. 50 is payable with application and Rs. 50 within seven days from the date of allotment.

An admission fee of Re. 1 only is payable with each application for shares.

The subscription list will be closed on 31st of August, 1943 or earlier at the discretion of the Directors.

mentioned here that Messrs. Aryan Planters' Agency has entered into an agreement to transfer to the Company all the rights and privileges of the said property at the same price without taking any profit or brokerage for it.

The stamp duty, registration fees, solicitors' cost of the conveyance, brokerage and completion of purchase will be paid from the funds of the Company.

The position of the Tea Estate is given below:—

Saw Bench.
Table Telephone.
6,000 ft. Stationary wire rope for conveyance of green leaf.
FORESTS VALUATION: Rs. 1,30,000 as made by Messrs. James Finlay & Co., Ltd.

DIRECTOR'S QUALIFICATION AND REMUNERATION.

The qualification of a Director (other than an ex-officio Director) is the holding of Rs. 1,000 worth of share of any kind either Ordinary or Preference.

The remuneration of a Director is Rs. 25 for attending each meeting besides all travelling and other out of pocket expenses incurred in attending the meeting of the Directors and General Meetings of the Company.

MANAGING AGENTS.

In the Articles of Association it is provided that Messrs. Aryan Planters' Agency, Bankers, Merchants and Tea Planters of Calcutta, are to be the Managing Agents of the Company for 20 years. The Managing Agents shall get a monthly remuneration of Rs. 500 and a commission at the rate of 10 per cent on the net profits of the Company without any deduction.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors may proceed to allotment is 10,000 Ordinary Shares.

PROMOTION.

No promotion money is being paid by the Company.
Mr. S. Chatterji, one of the Directors, is the sole Proprietor of Messrs. Aryan Planters' Agency, the Managing Agents of the Company, as mentioned above and no other director has any interest in the promotion of the Company.

VOTING POWER.

On a show of hands every member present in person or by proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him.

PRELIMINARY EXPENSES.

The preliminary expenses in connection with the incorporation of the Company will be paid by the Company and are estimated to amount to not more than Rs. 5,000.

COMMISSION FOR PLACING SHARES.

Under Articles of Association, the Company is allowed to pay a commission not exceeding 10 per cent of the nominal value of shares.

CONTRACTS.

1. An agreement has been made between the Company and Messrs. Aryan Planters' Agency appointing the latter as Managing Agents of the Company on terms and conditions laid down in the body of the Articles of Association.

2. An Agreement has been made on the 6th of August, 1943, between the Company and Messrs. Aryan Planters' Agency of 12, Chowringhee Square, Calcutta, the vendors for transfer to the Company of all the rights and privileges of the Lebong and Mineral Spring Tea Estates which they have bought of Messrs. James Finlay & Co., Ltd., without taking any remuneration whatsoever.

DOCUMENTS.

The Memorandum and Articles of Association of the Company and the Agreements referred to above can be inspected at any time during the usual business hours at the Registered Office of the Company; copy of the Memorandum and Articles of Association may also be had on payment of Re. 1.

APPLICATION FOR SHARES.

Application for shares should be made on the accompanying form and returned to Messrs. Aryan Planters' Agency, Managing Agents of the Company at 12, Chowringhee Square, Calcutta or to the Company's Brokers or Bankers, e.g. Comilla Union Bank Ltd., Central Bank of India Ltd. and their branches.

If no allotment is made, the deposit accompanying the application for shares will be returned in full. If the number of shares allotted is less than the number applied for, the surplus deposit will be credited in reduction of the amount payable on allotment.

Failure to pay any future instalment on the Shares allotted when due may render all previous payments liable to forfeiture.

Copies of this Prospectus and forms of Application for Shares may be obtained from the Company's Managing Agents, Bankers and Brokers.

A copy of the Company's Memorandum of Association is annexed to the Prospectus and forms a part of it.

AUDITOR'S REPORT

I have audited the above Balance Sheet and Profit and Loss Account with the books of the Head Office, and all the branches in Madras and the certified returns from the other branches and sub-offices, verified the cash and securities at Mayavaram, and the Madras offices, and have obtained all the information and explanations I have required. I beg to report that the above Balance Sheet and Profit and Loss Account, are, in my opinion, drawn up in conformity with the law, and that the Balance Sheet exhibits a true and correct view of the Bank's affairs as on that date, according to the best of my information and the explanations given to me and as shown by the books of the Bank and that in my opinion books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

MADRAS,
19th July, 1943.

P. S. SUBRAMANIA IYER, B.A., G.D.A., R.A.,
Registered Accountant,
Auditor.

order issued in May. It was noted that absenteeism by directed persons would be an offence under the Defence regulations. It is not likely that the Orders were meant to encourage production for export but to increase certain supplies for the home market.

A New Tea Company

The prospectus published today is a permitted issue for the Lebong & Mineral Spring Company, Limited is formed to take over a Darjeeling tea estate. The Aryan Planters Agency concluded negotiations for the purchase of an estate for Rs. 6,65,000 and the Lebong and Mineral Spring divisions with 630 acres under tea are to be sold by the agents, James Finlay & Co. There is the usual estimate as to crops and earnings and a decisive advantage is promised by the machinery acquired along with the estate, the buildings and godowns. The Aryan Planters Agency controls other tea estates and centralised management is a benefit. The present issue for Rs. 5 lakhs in ordinary and redeemable preference shares should yield a handsome return to the investor. Tea company earnings in recent years have shown striking improvement and the acquisition of a part of the sterling company's Indian property corresponds to what has taken place in the South. The present issue may be regarded as an important beginning in respect of the Indianisation of capital and management in the tea industry. The offer of a Darjeeling tea estate's shares at par today should not be overlooked since all Darjeeling shares stand at a premium.

Mercantile Bank Meeting

To those who seek parallels Sir Charles Innes' statement to the Mercantile Bank's shareholders would appear the counterpart of the Finance Member's recent statement on currency policy in India. The increase in incomes is duly reflected in bank deposits. But the ineffectual control of prices and profits in India has its own effect on the cost of living, and a former Commerce Member, knowing India and Burma well, has reminded the world that inflation was under way before steps to check it were contemplated. The decline in the volume of trade enlarges the supply of funds, and apart from limiting the number of bills for discounting, has large social consequences.

But a strong trade recovery after the war is expected and Exchange banks are wholly optimistic, to judge by Sir Charles' reference to after-war opportunities. Sir Charles stated that Mr. E. J. Bunbury is now on the Board in place of Mr. Chalmers and the Bank's position continues to improve as a skilled staff is available to the Bank. It is not without interest to relate Sir Charles' reference to profits and the moderate level of taxation in India to the Ordinances issued afterwards. What is more important is the assurance that post-war development in India will be facilitated by the abundance of capital. The Mercantile Bank is turned fifty but the customary jubilee will not take place owing to the reasons given by the Chairman in May. The reduction in dividend produced by many changes in 1941-42 is kept up as the year's profit as less, though not unsatisfactory, owing to the loss of branches and the increase in expenditure.

Balanced Progress

The National Indian Life Insurance Company had a new Chairman last year but there were no great changes as in 1941. The balance sheet published to-day hardly stands in need of formal comment, but extended reference to the report for 1942 is necessary. There was an increase in new business since 3,037 policies assuring Rs. 66.8 lakhs were issued last year as against Rs. 60.8 lakhs in 1941. The further progress made in regard to business explains the rise in income. Premium revenue showed improvement at Rs. 15.12 lakhs and the fall in investment income is the only direct result of the war though the Directors speak of an eventful year in which internal troubles and enemy air raids had affected new business. The year's revenue account shows that claims took Rs. 6.65 lakhs and surrenders accounted for Rs. 1.12 lakhs. The changes in the value of investments explain the provision of Rs. 39,566-5 against depreciation. Offsetting which is the margin of Rs. 3.84 lakhs between book value and market value, which remains, of course, an internal reserve. The change that interests policyholders most is the annual addition to the Fund which has been raised from Rs. 77.85 lakhs to Rs. 82.47 lakhs. But for the special provision referred to, the increase would have exceed the Rs. 5½ lakhs added in 1941 to the Fund. The maintenance of the dividend at 8 per cent tax-free is in accordance with expectations and the company's paid-up capital of Rs. 1 lakh today requires only a small sum as dividend. In the balance sheet stock exchange investments predominate, and the problem of yield is solved by the retention of debentures and preference shares (Rs. 4.1 lakhs and Rs. 13.9 lakhs). Policy loans are a little higher than before but mortgages, house property etc. are inconspicuous items as compared with giltedged and approved securities totalling over Rs. 35 lakhs. As usual cash balances at year-end exceed claims due and other liabilities, and in the summary of assets too the revenue items appear as moderate as ever. What has been said about previous reports certainly applies to the 1942 report since the familiar features of sound finance remain inseparable from the balance-sheet made available recently.

Indo-Commercial Bank's Progress

With deposits exceeding Rs. 152 lakhs, the balance-sheet of the Indo-Commercial Bank Ltd. affords completely satisfying evidence of the strong recovery noticed in the latter half of 1942. The expansionary movement is fully reflected in regard to Advances, Investments, cash balances and profits too. The return to the dividend list may well be deemed the climax of brilliant progress compressed within the six months ended June. The Directors derive special encouragement from the results, and a point to mention here is the absence of debts due by Directors and Officers. Cash balances at Rs. 68.06 lakhs are suggestive of a very liquid position despite the complete effacement of strain. The balance-sheet total of Rs. 196 lakhs indeed suggests that smaller joint-stock banks have obtained a full share in the prosperity to which all bank reports have borne witness. The increase in profits has not been achieved without a reduction in interest payable on deposits.

A penny for your thoughts

Travelling over miles of railway track do you give a thought to the nuts and bolts in the fishplates? Little things these, but of great importance, for without them safe effectual joints could not be made. The building of ships, tanks, guns, bridges and a thousand and one other things is made possible today by rivets, screws, nails, nuts and bolts. To withstand strain and vibration they must be accurate and immensely strong and it is precisely in this field that our products have made their mark.

CHAMPAGNES, WINES AND SCOTCH WHISKY ALWAYS AVAILABLE

I ended my last week's gossip with the shocking suggestion that in the post-war period, expenditure on the nation building departments should not be limited by mere considerations of taxable capacity and probable yields of revenue but should be found with the aid of the printing press. I observed that it might seem a disgusting **volte face** on my part to put in this plea for inflation, when all these months I have missed no opportunity of opposing the inflation that has so far been effected by the Government of India. My defence lies in the difference between the inflation which I have opposed and the inflation which I now advocate for the post-war period. And to the intelligent and sympathetic reader, that defence will become clear if he recalls the crux of my opposition to the present inflation. I have on a former occasion defined inflation of the indefensible and dangerous kind as additions to the volume of circulation which are not balanced by additions to the volume of goods and services entering into exchange. When they are not so balanced their effect is only to raise the level of the prices, bring in the vicious spiral, and disorganise economic and political society alike through rupture of costs of living and contractual relations and a new, hasty and chaotic restratification of classes. Such inflation has nothing to be said for it, except the convenience of an administration, which ought certainly to be better manned. But every addition to currency is not inflation; and I should perhaps begin by saying that if I have used the word inflation to describe the financial measures which I advocate it is because I can't think of any other. Any other word will carry with it the suggestion of liability to repayment.

* * * *

True, by using the word, "inflation", I raise huge barriers to its general acceptance. But, having made this plea but a part of what I have called the new economics, I could expect the reader to think of inflation, too, as a new model one and approach it rather with the moderner's partiality for the novel than with a load of ready-made prejudice. I would prefer him rather to shake off the tyranny of words, and judge proposals on their merits, instead of reacting to the mental association of words bandied about in current controversies. Now, when is inflation not "inflation"? When it is (1) accompanied by corresponding additions to volume of goods and services (2) when it is made with clear ideas of how the additional currency will flow and irrigate more fields of productive activity (3) when it is made in the confidence that an inflationary rise in prices or income will be avoided by suitable measures. In other words, when the additions to currency are not unproductive expenditure by an impecunious and improvident Government but are in the nature of a provision of credit for society as a whole by Government acting as the supreme social organisation.

* * * *

Having indicated the general idea behind the kind of inflation which I now advocate, I may proceed to point out that inflation must be justified by standards of currency management, principles of sound banking and the criteria of healthy economic development. Of course the real test of the soundness of the measure I advocate lies in the final result. The expenditure must be effective both in the direct object of improvement in education, public health and other factors of general progress and also in the increase in the volume of goods—I leave out "services" advisedly—produced, exchanged and consumed by the people of the country. The process by which these ends will be realised will be indicated later. Here we are concerned with the preliminary justification of the inflationary policy. Standards of currency management are set firstly by the backing behind the increased note issue and secondly by the repercussions of the additions to currency on the external value of the currency. On this score, there is no cause whatsoever for anxiety. The gold bullion in our currency reserves is valued at the old rate; our ratio of gold and foreign securities to total note issue will stand at such a high level even after the end of the war that the most puritanic of financiers cannot object to additions on the score of insufficient backing. In fact, for such increase in note issue as we may require for the purpose there would be no need even to think of a revaluation of the bullion in the reserves. There is, however, the external value of the currency to be considered. Since inflation is expected, with good reason, to lead to an increase in productive activity and, for that reason, to prevent an increase in the price levels, there can be no danger from this source to the external value of the rupee. Even if inflation were slow to produce the expected results, we shall have sufficient foreign currency with which to tide over temporary difficulties. There can be no objection, then, on the strength of principles of currency.

But what about the principles of banking? I maintain that no principle of banking is contravened, because there is no question of the advance being returned. Here borrower and lender are one. If there is no security to offer, there is unimpeachable credit-worthiness since the community will be utilising the advance to produce new values tangible and intangible, of which the tangible values would alone be sufficient return for the advance. If an enterprising businessman can have a clean overdraft on the strength merely of his abilities why should not a national Government be able to spend on vital nation-building without being told either to find the money from current taxation or raise it as a loan and pay interest on it to a small group of investors? There can be no question about the necessity of the expenditure or its urgency. And if taxation is not possible the only alternative lies in borrowing. The old ways of thought suggest that India should raise a large loan and expend it productively, so that all the vital tasks of nation building will be accomplished in the same way as hydro-electric or railway development, that against this expenditure we shall have tangible assets to show and that the service of the debt will be found from the revenue of these projects. In one of his pamphlets on India's economic development Sir M. Visvesvarayya advocated a loan running into geological, if not astronomical, figures. Now the point is, will education and public health and agricultural reconstruction answer to the tests you will prescribe for an hydro-electric or irrigation project? And if they cannot, will you, for that reason, have all these nation-building activities await the slow increase in public revenue, which is the utmost that the most optimistic can expect? The chances are, however, that without a courageous outlay on these projects, even a slow increase will not be realised and that your imprisonment in the vicious circle will be perpetuated.

* * * *

On this outlay which cannot, and should not be made to, yield a direct return to the State, why should interest be paid to private investors, especially as the borrowing of the savings of such investors are needed elsewhere for the promotion of new business activity along the traditional lines? I may perhaps say at this point that the next big offensive in our economic front is best carried out in three sectors. The first should comprise the nation-building expenditure financed by frankly inflationary methods; the second should consist of a number of State enterprises financed on the same lines as the Railways or hydro-electric projects and the third on the lines of private enterprise. The savings of individual investors will be needed for the second and the third sectors, while in the first the utilisation of private capital can have nothing to be said for it. In that sector, the capital that will be employed by the State to improve education and public health, methods of cultivation and

methods of production and marketing in what will for some time to come be in essence cottage industries will be wholly in conformity with the ideas which the new economics forms about capital. It will have nothing to do with savings. Far from reducing current consumption, it will, through the increase in the money income of the people, encourage an increased consumption. The mode of employing this capital will lay stress on the importance of division of labour in the process of creating capital wealth and augmenting it.

The simple health rule of Inner Cleanliness with Andrews will help every woman to keep fit, stay young and feel cheerful. For Andrews is more than a laxative. A glass taken regularly, as often as needed, clears away those poisons that cause skin blemishes, headaches and the little ills of life. See how Andrews purifies the entire system:

FIRST . Andrews refreshes and cleans the mouth and tongue.

NEXT Andrews settles the stomach and corrects acidity.

THEN Andrews tones up the liver and checks biliousness.

FINALLY . To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness be regular with your

But it may be asked how can the expenditure on nation-building departments be made to bring about an increase in production? That, of course, depends on the ways and the channels in which the expenditure is incurred. But it must be remembered that the nation-building departments comprise not only education and public health, but also agriculture and industries. Of these, public health may be deemed in the near view to be the least fruitful. But education, agriculture and industries are on a different footing. When I say education, I am thinking more of the primary and secondary education, which adds to the productive efficiency of the individual worker, than to the higher education, the fruits of which are reaped in spheres other than the economic. During the last few years, our schemes of primary and secondary education have gone far beyond the nuclear idea of imparting literacy to the people. We have learned to invest the system of education we have in our minds with a degree of economic significance. We have plans for running schools, which will not simply foist the mental apparatus of literacy on their pupils when they leave the school, but will also teach them to understand their respective vocations better, to be more responsive to suggestions for improvement of their methods of work, to avail of facilities offered by an enlightened government to improve their lot and their usefulness to the community as a whole. Of the direct value of technical institutions to the improvement of our economic life, little need be said. And of the promotion of higher education in all its branches ranging from scientific research, which permits hopes of ultimate pecuniary gain, to archaeology which has no obvious benefit to economic life, it may be said that not only the additional outlay will be but a small fraction of the total expenditure, but also that there is no warrant in history for the belief which leading Congressmen so strangely entertained, that a progressive country can be indifferent to progress of higher education.

* * * *

It will thus be seen that expenditure on education can, if our system of primary and secondary education in the future will take advantage of all the thought expended on educational questions in recent times, be directly helpful to the growth of productive activity in the country. It can, that way, offset the inflationary effects of the expenditure incurred on itself. But, while it may take a few years to reap the benefit of the spread of education, expenditure on agriculture and industries may well lead to an almost immediate increase in output of consumable goods. I have no desire, if only because of my incompetence, to attempt a complete diagnosis of the ills of Indian agriculture. These ills may range from the age and exhaustion of agricultural land, through social customs and laws of inheritance to the lack of a heavy chemicals industry. But quite apart from these specific problems, which are the sphere for specialists of various kinds, there is a multitude of handicaps for the average cultivator, most of which can be overcome only by free expenditure of Government money in every nook and corner of the country. Repairs of banks and bunds, afforestation of neighbouring hills or other areas, prevention of erosion of lands, improvement of stocks of cattle, improvement of roads and local transport—it is difficult to think out these items. An irrigation or revenue department with a new sense of its duties to the public in each locality and the country as a whole, and with some new, young blood in its ranks, can spot out these weak spots in our economic armoury and strengthen them. Hitherto, these spots have been allowed to grow worse. Between Government servants, who were not over-zealous in the service of the people, and a public, which had forgotten the art of doing such tasks on a collective basis, these weaknesses have been allowed to grow more and more serious, till they far exceeded the capacity of both the authorities and the people. It is such items of expenditure that are the strongest arguments for my plea that to make up for the omissions of the past, we should have the courage to leave the beaten track and try new methods.

* * * *

Industries, the kind that are relevant in this context, are not very differently placed from agriculture. They generally go hand in hand with agriculture, being predominantly a subsidiary occupation for the agriculturist. Industries like handloom weaving are in competition with large-scale industries like cotton textiles and, no doubt, offer special problems. But, to my mind, the problem of the handloom industry arises mainly from the impoverishment of the markets provided by the lower classes of each locality and by the handlooms being forced to sell their goods to the same middle class which the cotton mills cater for. The increase of income in the lowest classes of manual workers will provide the weavers with a market next door. But they must be enabled to produce more, and more cheaply. The same thing may be said of a number of other lines of production. The village artisans, as a rule, cannot work because there is no class in the locality which can provide them regular custom. To increase the money income in each locality suffices by itself, though only up to a point, to increase the productive activity in that area. I have advocated from a long time ago, the inauguration of projects like national housing and road development which are conducive to the creation of purchasing power in all parts

of the country, so that every locality will experience an expansion of productive activity what time assets are being created like houses and roads. If a large part of the expenditure of paper money which I advocate is devoted to road development, I have no doubt in my mind that this one item of expenditure will suffice to bring about the additions to goods necessary to prevent an inflationary rise in prices and provide the justification necessary for such an unorthodox way of financing nation-building.

* * * *

The reader, I trust, will see that this expenditure of paper money is designed to attack the problem of our economic progress from a number of different angles. It will serve in the first place to improve the health of the adults and enable them to work better. It will provide the country with new generations of young men and women equipped with a better attitude to life and a better-stored mind for tackling the problems of their calling. It will spread purchasing power all over the country instead of creating a dangerous surfeit of it in the urban areas, as the present inflation does. It will create durable assets like better roads, better canals and farms and farmsteads. It will provide markets near at hand for village artisans and cottage industries. By increasing the output of our agriculture and industries and at the same time creating additional purchasing power in the rural areas, it will bring about increased production and its smooth flow into consumption. Such work cannot wait for increase in public revenue, because there can be no increase in public revenue without such expenditure. How this will fit into any framework of public finance that we can expect to have in the future, I shall discuss next week.

* * * *

The growth of the Calcutta office of the United Commercial Bank explains the choice of Mr. V. R. Sonalkar for the Managership though it might well be said that Mr. Sonalkar has done the choosing. He is known to be particular, and his sagacity is strengthened by discrimination. It is his exceptional knowledge (a work on Fraued lies to his credit) which brought him to Calcutta, and three years with the Bank of Baroda here showed the city that Mr. Sonalkar had taken his measure of men and things in the business world. His technical equipment and experience was supplemented by unusual savoir faire and a mature yet regulated judgment. His poise has always marked him out as one to go far on his own way and the new setting should provide the right opportunities for the exercise of gifts that should redound to his advantage as to that of his new connexions. It is common knowledge that Mr. Sonalkar had elected to join the U.C.B. right at the start, and his was certainly very fine picking because there really was a number to claim his notice. For the bank which gets his support gets more than a trained banker. He is known as a man of the world and his poise is more than professional aplomb. He proved convincingly that balance goes a very long way. As Mr. Thakur's chief helper he should be able to give the essence of expertise and breadth of mind which have put the banking profession in debt to one who has constantly used his judgment to purpose.

'EAVESDROPPER'

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

In continuation of the notice inviting applications on prescribed form from Nurses up to 5-8-1943, for appointment on N. W. Railway, it is hereby notified that the last date for receipt of applications has been extended up to 31-8-1943. It is repeated for the information of intending applicants that there are 5 temporary vacancies, 2 of which are reserved for Muslims and 3 for Anglo-Indians & Domiciled Europeans. In addition, names of 14 suitable candidates (4 Muslims, 9 Anglo-Indians & Domiciled Europeans and 1 Sikh, Indian Christian or Parsee) will be borne on a waiting list for a period of one year. Qualifications:—A candidate must hold a certificate/diploma of training as a Nurse and must be registered under the Punjab Nurses Registration Act of 1932 as a Nurse in "A" Division. Preference will be given to candidates with A.R.P. training and those who have training in midwifery and special experience of work among women and children. Pay:—Rs. 160/- per mensem fixed plus dearness and other allowances admissible under the Rules. Age:—No limit is prescribed. *Full details and the prescribed form can be had free of cost on sending a stamped and addressed envelope to the Chairman.*

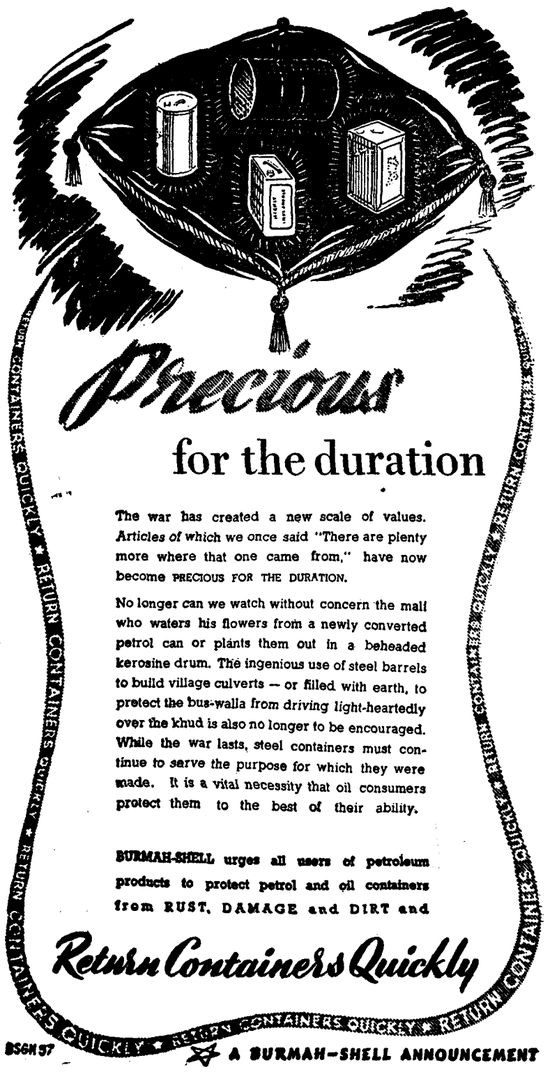
New Delhi, August 9.

THE Assembly session has been beyond expectation due to lengthy debates on the food crisis, the South African issue and the jail conditions and the controversy raised over the Delhi University Bill. The Government, however, are determined to finish the business this week and are even prepared to have a sitting on Sunday, if necessary. At first the Government thought of postponing consideration of the Delhi University Bill in view of the strong opposition to several clauses of the Bill as it stands but it was later decided at a meeting of the Executive Council to proceed with the Bill. The official resolution on India's participation in the United Nations' Post-War Relief and Rehabilitation organisation has however been practically dropped for the present in view of the several non-official amendments and the discussion of various fundamental political issues it would have provoked.

* * * *

Great resentment is felt here at the refusal of the British Government to give an undertaking that the activities of the United Kingdom Commercial Corporation will cease immediately after the war. The argument that the corporation's machinery will be used in "the unpredictable and difficult conditions which may exist in the post-war period" is untenable for there is nothing special about the corporation's machinery. This trading organisation has merely thriven on war-time monopoly and huge export profits. The British Government's attitude is ominous for India's post-war export trade which will be subjected to unequal competition so long as this monopoly organisation is allowed to do business in this country. No statement has been forthcoming regarding the corporation's activities and despite insistent public demand. Meanwhile the Government's assurance that no arrangements have been made to hold any international currency conference and that this country has been merely invited to send experts to discuss the feasibility of post-war international monetary cooperation informally and without commitments is generally welcomed. The Government, it is stated, is at present awaiting public reaction to the British and American currency plans. They will consider further action only on receipt of the Reserve Bank's views.



* * * *

Further information is now available regarding the Government's post-war reconstruction plans. It is realised that the vastness and complexity of the problem require thinking and planning in advance not only by the Government of India but also by the provinces, the States and the industries. What the Government of India can do is to provide a central organisation "for the coordinating and stimulating the activities of these various authorities in order to ensure that the whole field is adequately covered and no gaps remain to be filled in hurriedly, when the time has arrived for putting reconstruction policies into force." To facilitate thorough discussion of particular subjects, it has been decided to form seven policy committees for (1) reemployment and resettlement; (2) disposals, contracts and Government purchases; (3) Transport; (4) Posts, Telegraphs and Air Communications; (5) Public Works and Electric power; (6) Internal and International Trade policy and Industry and (7) Agriculture, Forestry and Fisheries. No final decision has yet been taken regarding the personnel of these Committees but it is understood that besides officials of the Central Government and representatives the Provincial Governments and States the Committees will include members of the public. Members of the Central Legislature will not be chosen as such but only as representing certain special interests and industries or as experts. Preparatory work including collection and coordination of data on which alone any concrete schemes can be based is already being done by official Committees which have been set up on Secretary level corresponding to each policy committee. The Committees are drawing up skeleton post-war schemes regarding irrigation, road development, civil aviation, electric power undertaking, agricultural planning and other subjects more closely connected with the war. It is of course emphasized now that the factors which increase national welfare and improve the standard of living must take a prominent place in any constructive planning of the post-war future, though it remains to be seen how far this ultimate aim is promoted by the post-war schemes finally drawn up. The dates of meeting of the policy committees depend on the completion of the preparatory work. The Consultative Committee of Economists which has already been formed has held two meetings so far. Some memoranda on economic matters prepared by Sir Theodore Gregory will soon be circulated to the members of the Committee.

* * * *

As a result of preliminary discussions, the Reconstruction Committee has arrived at definite conclusions regarding the repayment by government of the share of the Excess Profits Tax and acquisition of capital goods for post-war reconstruction. It is desired that there should be a definite date after the termination of hostilities by which all those refunds would have been made, say, three years. Restrictions regarding the use of refunded money for distribution of dividends and issue of bonus shares are considered im-

Bombay, August 10.

CONDITIONS in the insurance market were described by Mr. J. C. Setalvad last week at the 15th Annual Meeting of the Indian Insurance Companies' Association. Opportunities are increasing and development is rapid so that a prime requisite in India is the reinsurance market. Appeals to Government in regard to taxation, to banks, especially, British banks for impartial treatment, and to agents for limitation of commission found a place in the address. Companies have been asked to respect tariffs and build up reserves. Mr. Setalvad drew attention to the advent of many new companies supported by investors on the basis of improved prospects, and he hoped that Indian enterprise would not suffer through Government interference. Reference was made to a ruling by British bankers in regard to insurance policies leading to the exclusion of Indian companies. This was described as an unusual handicap, and he requested that the Government would prevent unfair discrimination. The Income-tax Act of 1938 does not exempt Reserves from tax. Allocation to additional reserve is liable to tax in spite of an earlier assurance that it would be treated as legitimate expenditure. Up to a limit there must be exemption, runs the insurance company's argument presented last week. The tariff agreement in Calcutta has not been accepted and the Indian companies have been asked to limit working costs. In Bombay economy has followed the reforms of 1939 in the opinion of the independent Chairman and Mr. Setalvad called upon all companies to keep down commissions to the limit imposed by agreement. With 25 members the Indian Insurance Companies Association is a strong representative organisation, which hopes for sound development.

In spite of the downtrend in commodity prices produced by control orders, the cost of living in June was higher in Bombay. The working class index rose by three points because of the increased cost of foodstuffs. A larger increase has been reported from Sholapur. There, too, food was dearer and the cost of living changes in June suggest immediately that textile wages are not likely to come down and cloth prices might be influenced unfavourably. The large increase in food prices then took place in spite of rationing, and the presumption is that meat, fuel etc., were largely responsible for the advance in June. There was a continuous rise in prices from March 1942 and the Ahmedabad Millowners' move to get the dearness allowance cancelled therefore seems difficult to justify. They may be equally concerned over coal but mills all over India face the same problem. Wages can be readjusted only when actual deflation can be discerned.

The yarn market is picking up. Dealers are regaining [illegible] the fall in prices has been arrested in the belief that more time will be given for disposal of stocks. In the mofussil trading has been upset by the control order and handloom products do not find a market. Though export enquiry is better of the late trade is anxious and very moderate improvement in the cloth market occasions anxiety. Priority for piecegoods is not assumed and shippers find buyers reluctant to take goods. The market hopes to see prices fixed for cotton goods so that panic disappears. After the end of July prices have fallen for bread-and-butter lines as well as fancy goods except voiles. Fears of anti-inflationary action influence dealers who hope that the Government will not requisition stocks that have not been cleared by the end of October.

The Central Bank of India reported an increase in profits in the first half of 1943 and the interim dividend has been raised. This promotes satisfaction among shareholders who have seen Central Bank Shares rise from Rs. 40 to Rs. 70 in a year and have cause to look forward to a dividend of 12 percent or 11 percent per annum. They may well hope for capital appreciation. The report and accounts will show how profits have responded to the increase in resources this year. The appreciation of giltedged stocks must all banks and the rule against advances for speculation should not exert much effect on profits. Anyway, the belief is that Central Bank shares are likely to be held tightly in the future.

Three dams in Rajaputana were shattered by the rainfall of 30 inches in a day in Ajmer-Merwara; so the loss of life and property must be very large, and the Central Government will have its own relief problem. The flood will produce a famine and reduce the supply of grain from the U. P. and the Punjab for other Provinces. The letter of A. V. Thakkar in the Bombay papers gave an idea of distress in Bengal and the failure of the food policy adopted there. So it is no longer a question of local famine claiming attention. The distress in Bengal has not been modified by reports as to free kitchens and canteens. The fear that distress might increase in the next few months has forced all to examine the Bengal Relief Committee's appeal and look also into the reports as to flood damage. The market malaise is now regarded as a symptom of distress, and the interest in iron and steel shares is disappearing.

The Mahasabha lays down conditions for coalitions. Dr. Mookerjee was in Bombay and he was in favour of responsive cooperation. Mr. Savarkar was in the chair when the working committee passed its resolution on ministry-making. Discipline is to be maintained and Pakistan opposed by the Sabha, but coalitions are approved though each Province is free to decide for itself. The Sabha favours [illegible] imports from Australia and referred to the famine raging in Malabar, Bengal and Orissa as well as Bijapur and other districts. The Sabha too criticised Mr. Amery's views on famine in India. The Maharaja Scindia is to be invited to preside over the celebrations in connection with the second millenium of the Vikram era by honouring Vikramaditya. Mr. Savarkar's resignation has not been accepted as yet, and the working committee is to decide when it takes effect. The day of remembrance passed off quietly. Private persons took a holiday on August 9 and brokers refused to deal. A few mills were idle and some worked only for a while as the millhands walked out. Many schools were not open and arrests as also processions marked the day on which the Police were kept busy.

The Finance Member's warning to bullion dealers forced the Bombay market to take note of what may come. Short covering and small upcountry buying cannot long sustain the market, and the delivery period has been shortened to 4 days only by a recent notification. Speculation was checked effectively by the new Rule against bank advances and the threat to act even if bank advances were unsecured by any mortgage of stocks will serve to push prices down. Last week business here fell away and the weakness of the cotton market is still a depressing factor. Nobody thinks much of currency circulation or the weekly expansion and idle money may not sink into the bullion market since the war is shortening and investors are duly mindful of gains in industries. The bullion market is settling down to limited offtake and sparser arrivals. Distress may enlarge supplies, and for the present, it looks as if Bombay will have to rely on North Indian buying rather than local demand.

The cloth trade's difficulties were mentioned by Mr. Haridas Madhavdas to the Indian Merchants Chamber. But he was more interested in constitutional reforms at the Centre and on the creation of an Executive able to deal with the food crisis. The Viceroy's speech does not give satisfaction to Indian businessmen here who think that antihoarding measures will not yield very impressive results. Cloth merchants certainly accept the view that consumers as well as merchants must find a place with millowners in the Textile Control Board.

(From Our Correspondent)

Madras, August 11, 1943.

There is a widely held view that Army buying is the chief cause of higher prices of foodstuffs and vegetables, making life in one way difficult for the civilian. The public are not perhaps aware that the stationing of fighting forces in the different districts and the movement of troops help to bring about improvements in agriculture. A press note issued by the Assistant Director of Public Relations, Southern Army, explains how various measures have been taken by the Army in India to minimise the food crisis of today by curtailing Army requirements to the bare minimum possible. Steps have been taken to prevent Messes and Army contractors from appearing in the open market and purchasing livestock, fresh meat, vegetables, and fire wood at a price exceeding the prevailing market prices fixed by the civilian authorities. Army units are furnished with lists of current prices which they should not exceed when they make purchases. Recently military transport has also been used for the movement of food grains for relieving the scarcity in different localities.

Vegetable production has received a stimulus, thanks to the growing demands of the fighting forces. Last year a few Provinces drew up their own schemes for increasing vegetable production on land not already under vegetables so that the requirements of the Army stationed in these Provinces may be successfully met without increasing the strain upon the civilian's supply. At the beginning of this year the Government of India evolved an all-India scheme for the production of vegetables. Madras has already begun three schemes for vegetable cultivation, one in Vizagapatam District, another in the Nilgiris, and a third at the Hosur Cattle Breeding Farm. It is expected that with effect from September production in Vizagapatam would meet the Army requirements of the surrounding area. The Nilgiris would shortly begin supplying 29,000 tons of potatoes to the Army, to the dehydrating firms and also to the armed forces in Ceylon. In the coming year 3,200 acres will be brought under potato cultivation and the yield is expected to be about 12,000 tons. The Hosur Farm would shortly provide a regular supply of 1,000 lbs. of vegetables per day. Thus large areas (and large supply) are brought to use under the stress of Army demands and the production from the three schemes would replace the large quantities of vegetables taken away from the market.

In pursuance of the Grow More Food campaign the Madras Government are taking active measures for providing cheap manures on a large scale for the cultivation of food crops. A scheme has been drawn up for the training of one Assistant Agricultural Chemist for three months and one Health Officer for six months in the Bangalore process of making compost out of town refuse. The scheme would cost Rs. 40,000 and the Imperial Council of Agricultural Research is to contribute Rs. 16,000. After undergoing the necessary training the Agricultural Chemist and Health Officer would train forty Sanitary Inspectors who would start the composting work in forty municipalities and panchayats. This scheme for the manufacture of manures from town refuse would certainly go a long way towards increasing the yield from land and helping several municipalities in disposing of town refuse.

Production of white seed cocoons has been engaging the attention of the Government for some time past and now the proposals of the Director of Industries for the maintenance of a farm in Hosur in the Salem District have been approved. A sum of Rs. 60,000 have been granted for acquiring a compact block of 80 acres of wet and 20 acres of dry lands in the Mathigiri village near Hosur for the proposed farm. Under the Agricultural Loans Act a grant upto a total of Rs. 10,000 has been made for extending loans to ryots at the rate of Rs. 25 per acre of mulberry brought under cultivation. Another facility offered for the production of cocoons is the remission of revenue for three years on the area newly brought under cultivation.

The working of the tyre rationing system in this province has been subjected to strong criticism by the commercial bodies who feel that the Government keen on discouraging road transport, deliberately withheld the supply of tyres with the result that numerous buses lorries and cars have been laid up. The Madras Government have come forward with a press note answering the charges levelled against them. As usual assorted figures are given and facts are claimed to be in their favour. They protest that all possible steps have been taken to conserve existing supplies and claim that additional quotas of giant and car tyres have also been secured. During the quarter ending June 1943, there has been a decrease in the number of cars and buses laid up for want of tyres. It is claimed that the number of buses and

J.K. COTTON MILLS CO. LTD.

CAWNPORE

A J.K. INDUSTRY

Resume of Commodity Markets

Except for the strength shown by the bullion and piecegoods markets, there is nothing of interest to be recorded in the commodity markets during the past week. The jute and jute manufactures markets continued idle though towards the close a slightly firmer tendency was noticeable in the hessian market with the reserve of sellers and the continued absence of mill selling.

At the auctions of tea held this week for consumption in India an easier tendency was again noticeable. Developments in the commodity markets are governed by special factors and in the absence of any improvement in the general situation it is not possible to take any definite view. Transport difficulties, special legislation and relative shortages have all had their share in the fluctuation of prices in several markets.

The jute manufactures market has been very dull and only a very small amount of business has been passing. The stoppage of production for a fortnight and the difficulties of mills in resuming work, due to shortage of coal supplies, have resulted in an appreciable decline in the rate of buying by mills. Production lost in recent weeks can be said to be nearly 3 lakhs bales of jute. The hardship on account of arrivals in recent months can thus be said to have been mitigated though the presumption is that mills continued to receive deliveries of the raw material at the usual rate. There does not seem to be any anxiety regarding adequate supplies of jute as it is felt that with the river transport facilities and the cooperation afforded by the railway authorities, jute mills might not experience any great difficulty in getting their supplies. As was pointed out last week, there is keen anxiety to get as much supplies of coal as possible so that mills might continue to work without interruption. The Chairman went to New Delhi to interview the authorities on this question and is said to have been successful in his mission.

* * * *

The upturn of prices in the piecegoods market during the last few days is perhaps sooner than anticipated for, it was generally felt that with the need for submitting returns before the middle of this month and the disposal of stocks, manufactured prior to August 1943, by October-end, prices would keep on the down grade. The calculations of the small consumer, however, do not appear to have been correct. In spite of the reports that all unsold bales by the end of October would be taken over by the Central Government, it is felt that the delay in deliveries on account of the dislocation in transport facilities would afford some time to the speculator to dispose of his holdings and that with the rush of the individual consumer to buy his requirements, prices would be marked higher again. Already there has been some seasonal buying for the Pujas. If the authorities do not take effective measures to check the rise in prices in time, all the good work would prove to be in vain.

* * * *

The rise in prices in the bullion market earlier in the week was due to the amendment to the Defence of India Rule promulgated recently prohibiting forward contracts and option dealings. Forward contract was defined in Clause C. of the Rule as one for the delivery of all bullion not more than twelve days after the date of contract. Speculators took advantage of this period of twelve days and there were even two quotations one for ready delivery and another for delivery within eight days. The premium for ready over forward delivery was as much as three points at times. By the new amendment to this clause, a forward contract in bullion is meant to include any contract for delivery not more than four days from the date of contract. As it was found that deliveries extending beyond four days were made illegal, there was a rush for covering by bears. There was a shortage of supplies and prices were marked sharply higher. It is expected that with the progress of time the technical position will get corrected and that prices for bullion will be marked lower eventually. The results of the meeting between Mr. Churchill and President Roosevelt might perhaps prove to be bearish for the bullion market. It will be remembered that on reports regarding the possibility of a separate peace with Italy, there was some selling and the quotation for gold ready was at one time as low as Rs. 68-7.

* * * *

At the auctions of tea held for consumption in India about 15,000 packages of dust were offered. Best liquoring sorts and Darjeeling teas were in good demand but quotations for other qualities registered a decline of one to two annas per lb. Owing to the lack of offers a large proportion of the catalogue was withdrawn.

* * * *

Rationing in urban areas is to be resorted to on a wide scale and measures to this effect are to be taken by the Central Government shortly. The Food Expert to the Government of India seems to be of the opinion that rationing of individual consumers in urban areas should be introduced immediately.

Some of the Food Expert's recommendations are:

"A comprehensive, efficient card-rationing scheme should be brought into immediate operation in all the larger cities of the country; (2) the fact that supply conditions are not yet satisfactory in certain areas is no reason for postponing rationing. All precautions should be taken to ensure an equitable distribution and rationing of all essential foodstuffs, and not only those commodities which at present seem to be in short supply; (3) it is desirable to establish food advisory or food control committees throughout the country. For any scheme of rationing to be a success, it is necessary to secure wherever possible the co-operation of experienced wholesale grain merchants who have a very wide knowledge and experience of the grain trade."

(Continued from page 322)

practicable in the long run. On the other hand, priority can be given to those claimants who submit definite reconstruction schemes. It should be clear that these refunds will now be liable to E.P.T. It is also recommended that the "termination of hostilities" should apply to the date when fighting ceases and not to the later date when peace is declared. The Government are expected soon to announce their decision on their recommendations. Six Sub-Committees on Industrial reconstruction have been formed dealing with (1) metallurgical industries; (2) Shipbuilding; (3) Engineering; (4) Textiles; (5) Chemicals and Dyes and (6) Mechanical Engineering Industries.

The Government deny having received any suggestion for a multilateral trade pact with Britain, U.S.A., U.S.S.R., Canada and Australia. The nature of the post-war trade relations between these countries, it is stated, must await international discussion which has not yet been initiated and the Government of India are not now in a position to say what arrangements are likely to be made. It is also stated that the Government of India are not aware of any inter-allied textile conference being convened now or informed that the Combined Production and Resources Board in U.S.A. have been making, in respect of textiles of all kinds, a survey of the production and requirements of he United Nations.

* * * *

It is now learnt that in the current financial year the Government have so far sanctioned Rs. 47.70 lakhs in grants and Rs. 98.97 lakhs in loans to enable the provinces to finance emergency measures to increase food production. A sum of Rs. 14.92 lakhs was given by a grant from the Cotton Fund to enable provinces and States to assist cotton growers in developing lands from short staple cotton to food-grains during the current season. In the year 1942-43 the grant from the Cotton Fund for this purpose amounted to Rs. 18.84 lakhs. These grants were made on the condition that the benefit under these goes to the actual cultivator. Over half a million acres were diverted from cotton to food crops in 1942.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, August 13.

COAL continues to be the acute problem on which the attention of Jute Mills is focussed. As a result of the decision of the I.J.M.A. Committee permitting a resumption of work, some 60 per cent of the looms on the river were restarted on Monday after a fortnight's enforced idleness. About half of these were mills which draw their power from the Electric Supply Company, so the fortnight's holiday had not been sufficient for more than half the coal-consuming mills to accumulate sufficient reserves of coal to ensure their running the full week. Some more mills made a start on Wednesday to run the remaining four days of the week. The arrangement for making up lost time provides that a Mill may only make up time if it has been idle for two full working days in the week. The position of supplies this week shows little improvement and on the assumption that the present permissive arrangements hold, the Electric Supply Mills will start up all right next week but not a great many of the coal-consuming mills will be in a position to do so with any expectation of being able to see the week out. The position with regard to production is becoming most serious and is only slightly relieved by a report that the manufacture of Sandbags may be entirely suspended for an indefinite period.

Repercussions on the attitude of the Labour force to this intermittent working will also have to be carefully watched. For the idle weeks the labour was paid at a flat rate of Rs. 3 per week plus the usual Re. 1-4 amenity allowance, plus of course foodstuffs at concession rates to the value of a further Rs. 4 per week. But it is to the actual cash received, Rs. 4-4, that the worker will look. Now a worker in a mill which has only run for 4 days this week may have earned wages amounting to Rs. 5-4 altogether plus again his food allowance. It may well appear to that it is a gross injustice that he should be compelled to work four days for a remuneration of one rupee! And it will be surprising indeed if we do not hear of troubles.

Stocks of manufactured goods in mill godowns were returned at the end of July as almost 268,000 tons, a net decrease of 7642 tons from the previous month. Considering that all mills were idle during the last week of July, this can hardly be described as altogether satisfactory. But we shall revert to this aspect presently. Commercial Hessians decreased by 119 lakhs and commercial Heavy Goods by 104 lakhs of yards, showing together a tonnage decrease of 10,134. Stocks of Government Sandbags were lower by 1600 tons but all other descriptions of Government holdings were marked up by a total of over 4000 tons. The aggregate figures show that Hessian stocks were down by 70 lakhs yards or 2310 tons and Sacking stocks lower by 79½ lakhs yards or 5332 tons.

Mill Production figures are also now available and show an aggregate for the month of July of only 76,619 tons a drop of 28,000 tons from June when 104.700 tons were produced. This is a reduction of roughly 27 per cent which is greater in proportion than the shorter hours worked which amounted to only about 22½ per cent if the month had been worked in full. Some slight difference in the fabrics accounts for some of the shortage, hessian yardage produced amounting to over 53 per cent in July as compared with 52 per cent in June. But some Mills were already experiencing difficulty in keeping going on account of coal shortage before the general shut-down was ordered, which must mainly account for the short production. The proportion of goods produced on Government account was 15½ per cent as against 12½ per cent in the previous month. On commercial account the production of hessian was 807½ lakhs yards and of Sackings 955½ lakhs of yards.

Taking the Stock and Production figures together, it is apparent that despatches from Mills of manufactured goods in July amounted to only 84,261 tons, a disappointing total compared with some recent months.

There is no further information regarding the possibility of the reduction of working hours in Mills to 40 per week, though the uncertainty of the coal supply position and the unsatisfactory conditions arising from intermittent working would seem likely to force a decision of this description on the Mill Association before long. A pointer in that direction may be found in the report that the Chairman of the I.J.M.A. went out of his way recently to impress on the Bazar that any attempt on the part of speculators to force prices beyond the fixed Maxima, or to establish anything in the nature of a Black Market for Gunnies or Hessians, would be dealt with by the most drastic measures. As this is reported to have occurred after the Chairman's return from his recent visit to Delhi, it is to be presumed that he has the authority of the Central Government or of the Supply Department behind him.

There has been an outcry at the threat of Government to take over still more of the space afforded by Calcutta Presshouses for military storage purposes. It is claimed by the Press House owners who are represented in their Association that their capacity is already limited by requisitioning of space up to date to a total of some 20 lakhs of bales per annum, which is aproximately the quantity they produced last year. On the other it is pointed out that the total quantity of baled jute actually exported last season amounted to only 12,25,000 bales, the balance in jute and Cuttings having presumably been delivered to local Mills. As the great bulk of the exported jute consisted of Daisee and Tossa, on which the cuttings would not amount to more than 10 per cent, it follows that the balance of around 6½ lakhs of bales of cut Jute and Cuttings was delivered to local Mills who could just as easily have taken the equivalent quantity in loose Jute, thus saving considerable handling charges as well as releasing much needed storing space for the military authorities. As Mills are being very considerably incommoded by storage space in their own compounds being taken over by the military, it may occur to them as advantageous if such storage space could be equally well provided outside, if the one could be set off against the other. On the other hand there are mills and groups who use many more Cuttings than they could take off their Loose Jute, while there is also the saving in storage space furnished by hydraulically pressed pucca bales to be taken into consideration.

The Export Jute market has been featureless. A few inter-baler transactions have been reported in Old Crop Dundee Daisee 2/3 at Rs. 84 and 4s. at Rs. 76, while New Crop Dundee Daisee 2/3 has been recorded at Rs. 82-8 and Rs. 82. Shippers appear to be showing no interest, nor are Mills, for whom nominal quotations are Firsts at Rs. 86, Lightnings at Rs. 81 and Hearts at Rs. 75.

In Loose Jute there has only been a very limited business reported, Mills showing little interest in buying when they have been neither manufacturing nor selling goods. Some sales of European packing were reported at full agreed rates with Supervised at four to eight annas less. Some Indian District Tossa was reported in low assortment on the basis of Rs. 16-8 for Middles. There is probably rather more loose jute on offer but little inclination yet to reduce prices as up-country markets remain firm and few of them show a profit at Calcutta parities. River levels have been causing some anxiety, the Brahmaputra having recorded a drop of 12 feet in as many days at Gauhati, though latterly it has started to rise again. The result has been shortage of steeping water in districts served by this river, and also uncut jute being left high and dry which was only a week or so ago standing in water. The result will inevitably be heavy roots if not bukchal in the standing crop and ruination of quality in the cut crop, which is unfortunate. Other districts on the other hand have been complaining of excessive rainfall.

The Fabrics market has ruled dull and inactive with almost no overseas demand and not a great deal of inter-bazar or local business. Nine porter hessians have varied between Rs. 20-10 and Rs. 20-12 but elevens have fluctuated rather more widely between Rs. 27-6 and Rs. 27-13. In Heavy Goods "B" Twills have moved between Rs. 62-12 and Rs. 64, while Liverpools for August were done at Rs. 69-4, Sydney Packs also for August at Rs. 3-5-6 and Cape Packs for September/October at Rs. 3-4. The market closes slightly quieter on the report of the suspension of Sandbag manufacture.

(*Continued from page* 303)

The increase in the Reserve Bank tap rate for the sale of 3½ per cent Rupee Paper, the present rate being Rs. 96-8, had the effect of bringing on the market some of the earlier traders for profit-taking. Thus, while the rate of the Reserve Bank was Rs. 96-8, there was sellers in the market at Rs. 96-4 to Rs. 96-6. These sales, however, were quickly absorbed, the present market rate is one anna or two annas higher than the Reserve Bank rate. The intrinsic position of the giltedged market is thus shown to be one of exceptional strength. The significance of this is that further stepping up in the established rate is imminent.

The exchange market has been steady but eventless.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¾.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money is unchanged at ¼ per cent lenders.

JUTE

Calcutta, August 12.

THE raw jute market has been dull with business passing on a very small scale. Mills have not taken much interest in the market and the higher rates in the hessian market have not been in any way helpful to jute dealers. The difficulties in regard to coal supplies have been mainly responsible for the lack of interest shown by mills. Business passing has been confined to immediate requirements. With the clearing up of the weather in the jute growing districts and the anxiety of sellers to do business there has naturally been a decline in rates. Mills are reported to have taken greater interest in the pucca bales section and a fair amount of business has been done at rates below the agreed maximum prices.

In the loose jute section, European District Middles and Bottoms were done at Rs. 16-8 and Rs. 13-8 respectively per maund. Tops, Middles and Bottoms for 20/80 assortment sold at the same levels. Supervised Jat were 4 annas below maximum rates. Indian district jute were at a discount of 8 annas per maund but there was not much of enquiry.

In the pucca bales section shippers accounted for small business. Dundee Daisee 2/3 and 4's were done at Rs. 84 and Rs. 76 per bale, and Short Group 2/3 at Rs. 89-12 per bale. Mills are reported to have bought combined Firsts and Lightnings at Rs. 86 and Rs. 81 per bale. New crop assortment sold at Rs. 82 per bale.

JUTE MANUFACTURES

Calcutta, August 12.

JUTE MANUFACTURES

THE jute manufactures market was quietly steady in the early days of the week with not much of business passing. Quotations were around last levels. But as the week progressed sellers were inclined to be more reserved. It is reported that only a small number of mills were able to resume working from Monday this week, the difficulty in regard to coal supplies being as great as ever. Mills have kept out of the market as with the uncertainty in regard to working and the well-sold forward positions there is no tendency to enter into further commitments. Closing quotations are at the highest levels for the week, 9 porters Ready being Rs. 20-12, August Rs. 20-12, September Rs. 20-14 and October/December Rs. 20-14. 11 porters Ready are Rs. 27-11, August Rs. 27-12, September Rs. 27-14 and October/December Rs. 27-14.

Steadier conditions have been noticeable in the Heavy Goods section in sympathy with the hessian market. Prices however are not higher on balance. B. twills for August delivery sold on the basis of Rs. 64-4, Liverpool twills Rs. 69-8 and Cornsacks Rs. 65.

Stock figures for the month of July are now available. In view of the interruption to production in the earlier days of the month on account of the scarcity of coal supplies and the complete closure of mills for one week in the latter half of the month, it was expected that there would be an appreciable decline in stocks of both hessian and sacking. The net decline of 7642 tons, however, is considerably below market expectation. Production should certainly have been lower to the extent of 20,000 tons. Deliveries have therefore been far short of the earlier months levels. It might be that the dislocation in railway traffic accounted for the decline in the rate of despatches to the consuming centres in the interior. But whether this factor alone is responsible for the big decline in the rate of despatches cannot be said. Hessian stocks were 60.57 crore yards at the end of July against 61.27 crore yards at the end of the previous month. The decline has been due only to the drop in stocks on civil account from 28.69 crores yards to 27.50 crores yards. Stocks, on military account, actually show an increase from 32.58 crores yards to 33.07 crores yards. Sacking stocks, cloth and bags, are lower at 28.38 crore yards against 29.18 crore yards; Stocks on civil account were 26.38 crore yards against 27.42 crore yards. On military account were higher at 2 crores yards against 1.76 crores yards. Details are given below:

Total reported stocks of manufactured goods exclusive of Government Orders.

Descriptions.	30-6-1943	31-7-1943.
Hessian cloth and bags—		
Yards ..	28,69,20,913	27,50,33,369

N.B.—July stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Raigarh, Kedarnath, Calcutta Jute, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of June.

GOLD

Calcutta, August 12.

THE bullion market has been firmer throughout the past week on reports that the Government of India would enforce deliveries within four days from the date of purchase. There was some rush for covering by bears. Owing to the acute shortage of ready supplies bulls put up prices. At the higher levels there was some selling but it was fully absorbed. Quotations have been fluctuating in narrow limits in the last three days. Gold ready closed at Rs. 75-10 and sovereigns at Rs. 52-8. Quotation for gold ready at the end of last week was Rs. 74-12.

SILVER

Calcutta, August 12.

THE silver market also has been firmer in sympathy with the gold market and the rise in prices has been more pronounced. Silver ready closed at Rs. 112 as against the highest level of Rs. 113-12 earlier in the week.

The Defence of India Rule originally promulgated prohibiting forward contracts in bullion allowed delivery of bullion within twelve days after date of contract in order to provide facilities for sellers in upcountry centres. This provision has now been modified and deliveries have now to be completed within four days from the date of contract.

PIECEGOODS

Calcutta, August 12.

THE piecegoods market has been firmer and some important rise in prices has been recorded for popular styles. It is reported that the slowing down in the rate of deliveries owing to the breaches on the railways and buying for the Puja season have been responsible for the recent rise in prices. There has also been some covering. The statement by the Secretary of the Department of Industries and Supplies to the effect that unsold stocks will be taken over by the Government has thus had no great effect on the market. If a further rise in prices is allowed the advantage of the recent fall in prices will be nullified as there has not been enough time for any adjustment in retail prices to wholesale rates. In the absence of this adjustment there has not been any great buying on the part of individual consumers.

(*Continued from page* 324)

lorries on the road during that period has shown an increase. The taxation reports are cited to show that in spite of petrol and tyre rationing, the number of cars on the road in recent months has remained fairly constant. The Government also refute the charge that replacement permits for tyres have been refused to a considerable number of users and assert that actually the number of giant tyres for which permits were issued during the last quarter was in excess of the quota. The total issues of new tyres, retreads and retreading permits exceeded the total quota. The press note seeks to vindicate the tyre rationing system and questions the validity of criticism. The public probably would feel satisfied with the statement issued by the authorities and feel that there is no "deliberate policy" behind the dearth of tyres.

GOODS

forwarded and cleared to and from railway stations and ports. Deliveries received at Calcutta, on cash payment of customer's purchases and subsequent despatches arranged to suit outstation clientele.

Stock Markets to-day and to-morrow

SMART RISE IN COAL SHARES

AFTER earlier weakness a definitely steadier tendency has been noticeable in the stock markets, both in Calcutta and Bombay, though a general improvement has been noticeable only at the Western centre. The strength of the Bombay market has been due to the satisfactory dividend announcements by some prominent cotton mills and the hopes regarding the possibility of an extension of time limit being granted to traders. The strength of the piecegoods market also was to a certain extent helpful.

The feature on the Calcutta market is the strength of the Coal section on reports that higher prices would be paid for coal supplies to the railways. There has been a one-sided movement in the last three days and quite a large amount of business has been reported in all the popular counters. It is significant, however, that the firmness of the Coal section has not had any effect on the other sections and only in Friday's session a slightly improved tone is noticeable towards the close. There is still a tendency to await further developments.

The sudden rise in prices in coal shares appears to have caught napping some bear operators. With the difficulties in regard to labour and the acute shortage on account of wagons, it was generally expected that it would not be possible for coal companies to report any increase in earnings, though in recent months the higher cost of production has, to a certain extent, been offset by an increase in prices. The reason for the sharp rise in prices this week is to be found in the reports that a substantial increase in rates would be offered to the coal companies for supplies to the state railways. The actual results have not been announced but it is reliably understood that the rates offered by the Railway Board will admit of a fair margin of profit. Quotations for some of the important counters are at the highest levels for some months.

* * * *

The balance-sheets of two jute companies under the management of Messrs. Jardine Skinner & Company have been published this week. In both cases the ordinary dividends have been maintained.

The net profit, before providing for taxation and depreciation, of *Kanknarrah Company Limited*, for the half-year ended June, 1943 is higher at Rs. 15,47,238 against Rs. 13,50,650 for the previous half-year. The amount set aside for taxation is not very much higher at Rs. 8,75,000 (Rs. 8,50,000) but the sum set aside to depreciation is lower at Rs. 50,000 (Rs. 1 lakh). The sum of Rs. 75,000 is placed to Labour Superannuation and Welfare Reserve (nil). After the reserve of Rs. 1.25 lakhs for E.P.T. deposit the dividend on the ordinary shares has been maintained at Rs. 12-8 per share. The amount carried forward is higher at Rs. 1,54,865 against Rs. 1,37,626 brought in.

Kamarhatty Company Limited for the same half-year has not been able to report an increase in earnings the net profit, before providing for taxation and depreciation, being Rs. 13,94,312 against Rs. 14,29,500 for the previous six months. The sum set aside to depreciation is Rs. 50,000 (Rs. 1 lakh) while the amount placed to Labour Superannuation and Welfare Reserve is Rs. 75,000 (nil). The provision for taxation is lower at Rs. 8.25 lakhs against Rs. 9 lakhs. The amount reserved for E.P.T. is Rs. 12 lakhs (nil). The ordinary dividend has been maintained at Rs. 15 per share. The sum carried forward is considerably lower at Rs. 1,26,192 against Rs. 2,09,880 brought in.

* * * *

Vellamalai Tea Company Limited has been making consistent progress in recent years and the net profit has trebled in the course of five years. The improved conditions in the tea industry have been mainly responsible for the higher level of earnings. In spite of a smaller crop in the last season, it has been possible to report a substantially higher level of earnings thanks to the considerably higher average price realised on sales. The net profit for the year ended March 1943, before providing for taxation, is Rs. 2,29,364 against Rs. 1,14,077 for the previous twelve months. The amount set aside for taxation is naturally bigger at Rs. 62,000 (Rs. 26,700) but this has not stood in the way of an increase in the distribution to shareholders from 7½ per cent to 12½ per cent for the whole year. Staff Pension Fund gets Rs. 5,000. The amount carried forward is considerably higher at Rs. 60,894 against Rs. 22,280 brought in.

The higher level of earnings has resulted in a considerable improvement in the financial position of the company. Since 1937-38 debentures to the extent of Rs. 2.25 lakhs have been redeemed and outstanding debentures as on March 31, 1943 were only Rs. 2.29 lakhs. Against this, there is a Debenture Redemption Reserve of Rs. 1 lakh.

The prospects for the current year appear to be satisfactory as the crop for 1943-44 has been estimated at 7.5 lakhs lbs. against the outturn of 6,63,400 lbs. in 1942-43. It cannot be expected, however, that it would be possible to realise the same average selling price as with fears of a large surplus for internal consumption, there has been a sharp decline in prices at the auctions held for consumption of teas in India in recent weeks.

* * *

Hattikhira Tea Company Limited has been able to report a substantial improvement in earnings for the year ended December, 1942. The net profit, before providing for depreciation and taxation, is Rs. 4,92,551 against Rs. 3,20,439 for the previous year. The increase in earnings is due both to the larger crop and the higher average price on sales. The total crop outturned was 18,621 mds. in 1942 against 15,459 mds. in 1941; the average price realised was 12 annas 2 pies per lb. against 11 annas per lb. After providing Rs. 1.5 lakhs (Rs. 75,000) for taxation and Rs. 1.25 lakhs (Rs. 65,000) to reserve the dividend has been increased to 25 percent from 20 per cent for 1941. The final dividend of 17½ percent makes, with the interim dividend of 7½ percent already paid, makes 25 per cent for the whole year. The amount carried forward is lower at Rs. 24,552 against Rs. 32,115 brought in.

* * * *

Muir Mills Company Limited has paid the usual interim dividend on the ordinary shares at Rs. 5 per share and on the preference shares at Rs. 1-8 per share.

* * * *

The Government have not drawn up any definite rules, it was officially admitted in the Assembly, for the guidance of the Examiner of Capital Issues as to the type and nature of joint stock companies for the promotion of which permission is to be granted. It was revealed that 132 new joint stock concerns had been granted permission up to July 24. In 88 out of the 132 cases, consent was given without specific scrutiny as these concerns filled certain basic needs of the country and arrangements had already been carried very far when the control was introduced or the concerns were private companies with petty capital.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Aug. 13.

BUT for the strength shown by the Coal section there is nothing of interest to be recorded on the Calcutta Stock Exchange during the past week which is short of one working day. Business passing has been very restricted. The general tendency is still to await further developments. Cotton shares have been absolutely neglected while Jute shares have been fluctuating in narrow limits. Thre is not much enquiry in other sections in spite of the substantial improvement in prices in the Coal section. The undertone is rather quiet. Pending further favourable developments within the country it cannot be expected that there will be any appreciable improvement in prices. The encouraging news regarding the war situation has not had any effect on values as the success of the Allied forces in every theatre of war is taken for granted for the time being.

In the giltedged securities section business has not been on a large scale but quotations have been fully maintained for terminable loans. With the increase in the selling rate from Rs. 96 to Rs. 96-8, 3½ percent Paper has improved to Rs. 96-9 though in the early days of the week a slightly hesitant feeling was noticeable. Money conditions have remained unchanged and there has been a further decline in the average discount rate to annas 14 and 11 pies percent per annum from 15 annas percent per annum in the previous week. 3½ percent Paper is now quoting Rs. 96-9. Among terminable loans, 3 per cent 1951/54 were Rs. 100-3, 3 per cent 1963/65 Rs. 96-15, 4½ percent 1955/60 Rs. 115, 4 per cent 1960/70 Rs. 111 and 5 percent 1945/55 Rs. 106-10. 3½ percent 1947/50 was slightly lower at Rs. 103-14. There has not been any change in provincial loans for which there has been good enquiry.

Among public bodies debentures business has been difficult on account of the scarcity of sellers. There has been a slight rise in 3¼ percent *Howrah Bridge* debentures to Rs. 99. 3 percent *Calcutta Port Trust* 1943/68 debentures were dealt in at Rs. 97. The only transaction recorded in industrial debentures was in *Belsund Sugar* at Rs. 101-10 ex-rights.

Preference shares also have been in good request, first class jute mill issues especially being in good demand. *Anglo-India* changed hands at Rs. 178-8, *Birla* at Rs. 139, *Cheviot* at Rs. 175-8, *Hastings* at Rs. 148, *Howrah* "A" at Rs. 167, *Kamarhatty* at Rs. 160, and *Reliance* at Rs. 180. *Waverley* were Rs. 74-8. Among other sections, *Dalmia Cement* were Rs. 142, *Lister Antiseptics* Rs. 111, *Kumardhubi Engineering* Rs. 260 and *Steel Corporation* Rs. 126-8. *Associated Hotels* were lower at Rs. 109 while *B. I. Corpn.* were steady at Rs. 201.

Cotton shares have been rather neglected with quotations fluctuating in narrow limits. *Benares Cotton* changed hands at Rs. 12-6 and *Cawnpore Textiles* at Rs. 11-5. Muir *Mills* were Rs. 395, *Dhakeswari* Rs. 26 and *Dunbar* Rs. 265. *New Victoria* were sticky around Rs. 7-5 while *Kesoram* were Rs. 14-6.

There has been a sharp rise in Coal shares on reports that higher prices will be offered to tenderers for the supply of coal to state railway companies in the year 1944-45. The rise in prices is pronounced in the case of shares of companies belonging to Bengal. *Bengal* being Rs. 471, *Bokaro & Ramgur* Rs. 23-8 against Rs. 22, *Burrakur* Rs. 18-12 against Rs. 16-10, *Central Kurkend* Rs. 17-4 against Rs. 17, *Dhemo Main* Rs. 15-6 against Rs. 14-11, *Equitable* Rs. 40-12 against Rs. 37-15, *Hurriladih* Rs. 18-10 against Rs. 17-6 and *Katras Jherriah* Rs. 41-4 against Rs. 39-12. *Pench Valley* also were higher at Rs. 41-12. *North Damuda* were Rs. 7-6, *Rewa* Rs. 36-8 and *South Karanpura* Rs. 6-4. Among the smaller denomination shares, *Samla* were Rs. 4-10, *Searsole* Rs. 5-2 and *Talcher* Rs. 4.

Jute shares have been rather uninteresting, the situation in regard to coal supplies showing no appreciable improvement. Quotations are not very much changed on balance, *Anglo-India* being Rs. 378, *Belvedere* Rs. 480, *Cheviot* Rs. 204, *Howrah* Rs. 60-4, *Hukumchand* Rs. 26-2, *National* Rs. 26-9, *Nuddea* Rs. 97-8 and *Presidency* Rs. 6-8.

In the Engineering section, there has been a complete absence of speculative activity, th popular counters fluctuating around the lowest levels during the last week. *Indian Iron* were Rs. 34-1 and *Steel Corporation* Rs. 26-12. *Jessop & Co.,* were lower by 6 annas at Rs. 20 while *Kumardhubi Engineering* were fluctuating around Rs. 6-14. *Burn & Co.,* were steady at the lower level of Rs. 377. *Bhartia Electric Steel* were noted at Rs. 14-2.

Sugar shares have been quiet with *Balarampur* at Rs. 13-14, *Samastipur* at Rs. 17-6, and *New Savan* at Rs. 15-6. *U. P. sugar* were for a time higher at Rs. 27-4 but towards the close they were lower at Rs. 26-10, *Carew & Co.,* were in demand at Rs. 19-6 and *Belsund* at Rs. 10-6.

In the Tea section, there has been some selling and business passing was on a considerably smaller scale. A further slight decline in prices has been recorded. *Bishnauth* were Rs. 37-4, *Hattikhira* Rs. 29-12, *East India* Rs. 15-3, *Hasimara* Rs. 64, *Lackatoorah* Rs. 26-10 and *Tezpore* Rs. 14-14.

In the Miscellaneous Section, *Burma Corporation* were steady at Rs. 3-10 with *Indian Copper* at Rs. 2-8. *B. I. Corporation* were *unchanged* at Rs. 5-13, *Calcutta Trams* were steady at Rs. 26-10 and *National Insulated Cables* at Rs. 14-14. *Publicity Society* came in for attention at Rs. 12-8, *Aluminium Corporation* ordinaries at Rs. 17-10 and *Bengal Assam Steamship* at Rs. 269. *British-Burma Petroleum* were Rs. 2-11. *British Ceylon* had some enquiry at Rs. 17-12 cum-dividend on the announcement of the second interim dividend for the current year. *Calcutta Landing & Shipping* were Rs. 19-5 and *Calcutta Safe Deposit* Rs. 7-4. Among Paper shares, *Titaghur Paper* were quoted at Rs. 25, *Orient* at Rs. 27-8 & *Star* at Rs. 21-14 cum-dividend. *Sree Gopal* were Rs. 21-13, *Midnapore Zemindary* were steady at the higher level of Rs. 102, *Spencer* were further steadier at Rs. 9-8; *Dalmia Cement* defds. were Rs. 3-12 and ordys. Rs. 17-12. *Reliance Firebrick* were dealt in at Rs. 17-12. In Electric shares, *Cuttack Electric* were Rs. 11-4, *Upper Ganges* Rs. 13-10, *Rawalpindi Electric* Rs. 31-12 and *Upper Jumna* Rs. 13-6.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, August 12.

Steady conditions prevailed on the local stock exchange consequent on the strength of the bullion market. The news of Mr. Churchill's visit to Canada for his sixth wartime conference with President Roosevelt coupled with the uniformly good reports from the several war theatres had an encouraging influence on the market in general. The cotton cloth and yarn control order is more or less accepted as an inevitable measure under existing circumstances though there is still some agitation from the merchants' side. Here in the stock exchange people are getting slowly accustomed to the altered circumstances.

The giltedged market has further firmed up following the raising of the selling price of 3½ per cent Government paper by another 8 annas. 3½ per cent Government paper is quoting at Rs. 96-10. 4 per cent (1960-70) are further higher at Rs. 111-4. 3 per cent (1963-65) have gone up by 5 annas to quote at Rs. 96-15. 3 per cent (1949-52) and (1951-54) are however unchanged at Rs. 100-12 and Rs. 100-1 respectively.

The announcement of an interim dividend sent up the price of Bombay Dyeing by nearly 10 points in one day. Already there was a gain of nearly 20 points in this counter as compared to the closing prices of last Thursday. Business passing was on a considerably larger scale and other counters also rose sympathetically. But profit taking has of late begun to interfere at pretty short intervals and as is inevitable some of the ground gained has been lost in the process. Otherwise rather steady conditions prevail in this section with prices quoting more less around previous levels.

(Continued on page 347)

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 5th Aug., to 11th Aug., 1943 both days inclusive)

GOVERNMENT SECURITIES:

3 per cent Defence Loan (1949-52):—(6th) 100-13; (10th) 100-12.
3 per cent Loan (1963-65):—(5th) 96-14 s.l., 96-11; (6th) 96-13; (10th) 96-14, 96-15; (11th) 97 s.l.
3 per cent Loan (1953-55):—(6th) 99-13.

CHAIRMAN'S SPEECH

MERCANTILE BANK OF INDIA, LIMITED

PROGRESS IN THE 50th YEAR

SIR CHARLES INNES ON CHANGED CONDITIONS

The Fiftieth Annual General Meeting of the Mercantile Bank of India, Limited, was held on 18th May, at Winchester House, Old Broad Street, London, E.C.

The following is the statement by the Chairman, Sir Charles A. Innes, K.C.S.I., C.I.E., on the report of directors and balance-sheet for the year ended 31st December, 1942 which has been circulated to shareholders:—

Following the precedent of the last two years, I am circulating this statement with the accounts. Its brevity and the new form of the accounts are due to the restrictions on the use of paper recently imposed by the Government.

It is with much regret that I report the death in September last of our late colleague, Mr. P. R. Chalmers. He became a director as far back as 1916, and we have lost an old and valued friend. In his place we have elected to the board Mr. E. J. Bunbury. Mr. Bunbury was at one time Chairman of Forbes, Forbes, Campbell & Co., Limited, Bombay, and since his return to England has done much important work in the City of London. He adds greatly to the strength of the board, and at the general meeting you will be asked to confirm his election.

BRANCHES CLOSED

The salient features of the balance-sheet are considerable increases in our cash and Government securities coupled with decreases in bills and loans and advances. These features are partly due to the fact that all our branches in Burma and the Far East are out of action owing to the Japanese invasion, and that the field of our operations is now confined to India, Ceylon and Mauritius. Partly they reflect the changes brought about by war conditions in the trade which before the war the Eastern Exchange Banks used to finance.

The volume of that trade had been greatly diminished by the restrictions on imports and exports which shipping difficulties have necessitated, and the character and machinery of the trade have also changed. Before the war it was merchant trade and it was financed for the most part by bills of exchange. These bills were bought by the Exchange Banks, and in normal times a large proportion of our funds is always on the water that is invested in bills against goods in transit by sea. Now there is little shipping space except for goods required for the war effort, among which must especially be mentioned the great staple exports of India, Ceylon, Mauritius, tea, jute, seeds, hides, rubber and sugar.

INCIDENTS OF WAR

All these are now purchased in bulk by the Supply Departments of His Majesty's Government, and they are paid for in rupees in the country of export. Thus the commercial bill of exchange has become scarce, and moreover in present conditions exporters have less need for advances from the banks to finance the purchase, preparation, and storage of produce for export. I am making these remarks not in any spirit of complaint but purely by way of explanation.

The development I have mentioned is just one of the incidents of the war. But we may at least hope that it is merely a temporary phase. It is not only the Exchange Banks that have been affected. The skill and experience acquired over many generations which are employed in the delicate mechanism of the London discount market as well as in the London produce exchanges are not at present being fully used, and we may well hope that one of the objects of the Government's reconstruction policy will be to restore the City of London to its former position of pre-eminence in the finance of international trade.

INDIAN BANKING EXPANSION

There is also another reason for the increase in our cash and securities. The monthly statistics published by the Reserve Bank of India show that in August, 1939, just before the outbreak of war, current deposits with the Scheduled Banks averaged 123 crores and that the proportion of advances to all deposits was 47 per cent. In August, 1942, current deposits had risen to 295 crores, and the proportion of advances to all deposits had dropped to 21 per cent. By the end of January, 1943, there had been a further increase of current deposits to 351 crores. The fact is that for reasons which must be plain to all who know India the Government of India have not found it possible to exercise the same control over prices and profits as has been applied in this country. (Parenthetically I may remark that the consequent rise in the cost of living has been an embarrassment to all engaged in business in India.)

Large profits are being made and the level of taxation though high is not as high as in this country. Thus savings are accumulating at a rapid rate. The implications of this fact for the future are obvious. Industrial development has made rapid strides in India during the war and, provided that the savings are not now dissipated in unsound ventures, there should be ample capital resources for further advance after the war. In the meantime, for lack of suitable commercial or industrial outlet, the money is placed in current account with the banks.

REDUCED PROFIT

In the light of these remarks it is not a matter for suprise that the profit shown in the profit and loss account, namely, £131,916, is less than in the previous year. Indeed, it is satisfactory that in all the circumstances the decline was not greater, especially as our working expenses in the East have been increased, not only by the allowances we are making to our interned officers, but also by cost of living allowances to the local staff in branches that are still working. The effect of this latter factor will be even more apparent in the accounts of the current year. The figure of profit has been struck after making provision for all bad and doubtful debts other than those relating to branches in territories occupied by the Japanese.

This is the fiftieth annual meeting of this bank. Before the war we had planned to celebrate the anniversary in a manner worthy of the occasion, but you will agree that in present circumstances the policy we are adopting is the wise policy. We are maintaining the reduction of dividend which was first made in the second half of last year, and we are husbanding our resources against the day when we shall reopen our branches in the Far East. I hope and believe that that day is not far distant, and when it comes I am confident that another era of prosperity and useful service will open up for the bank.

CARRYING ON

There is little that I can tell you about the staff of occupied branches. Such reports as we have as to the conditions in which they live are fairly reassuring, and we do know that they are keeping their spirits up and their courage high. But at best it must be an uncomfortable and wearisome time and our sympathies go out both to them and their relatives. Of the officers serving with H.M. Forces, I regret to say that some have been killed and others wounded.

Our staff problems remain both at home and abroad. Our Eastern branches in particular are shorthanded, and most of our officers are beginning to feel the strain. We should be in serious difficulties if any large proportion of them were to break down, and we hope to make arrangements for each officer in turn to get a short spell of local leave. I have nothing but praise for the way they are carrying on, and our Indian assistants are increasingly proving their worth.

TRIBUTE TO OFFICIALS

But the main burden of these difficult days continues to fall on Mr. Crichton, and it is only the directors who know how much we owe to his unremitting care for and devotion to the affairs of the bank. Mr. Paton and Mr. Cruden lend him valuable assistance. Mr. Kennedy continues to run the Enemy Debt Department with great skill, and Mr. Walls, who was for many years our manager in Bombay, is applying his mind to the many problems which will confront us when the time comes for us to reopen our Far Eastern branches. To all these gentlemen we owe our best thanks, as also to our branch managers and to all our staff at home and abroad.

THE HATTIKHIRA TEA COMPANY, LIMITED.

NOTICE

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 24th day of August, 1943, at 3-20 p.m. to receive and pass the Directors' Report and the Audited Accounts for the year ended 31st December 1942, to declare a dividend, to elect Directors in place of the retiring Directors to elect Auditors for the ensuing year and fix their remuneration and to transact any other business that may be brought forward.

The Share Transfer Book of the Company will be closed from 17th August 1943, to 24th August 1943, both days inclusive.

*Does not include a sum of Rs. 28,000 transferred from War Risk Insurance Reserve to General Reserve.

Audited accounts for the half-year ending 31st May, 1943:—

After transferring Rs. 3,801 to Insurance Fund, providing Rs. 50,000 for Depreciation, Rs. 3,65,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 1,21,989-11-11. After bringing forward the balance from the last account there is a balance at the credit of the Profit and Loss Account of Rs. 1,96,388-15-10. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	35,000	0	0
and on Ordinary shares at Rs. 6 per share ..	95,700	0	0
thus absorbing Rs. 1,30,700 leaving a balance of ..	65,688	15	10

to be carried forward.

In accordance with the Indian Jute Mills Association agreement the mills worked 54 hours per week, with 10% of the total looms silent, up to 13th March, 1943, 60 hours per week, with all looms running, up to 15th May, 1943, then 54 hours per week, with 10% of the total looms silent, for the balance of the period under review. As a result of enemy air action, there was a loss in working hours, and in addition, the running of the mill generally was adversely affected.

(*Half-yearly General Meeting on 28th August, 1943 at 12-5 p.m.*)

*Does not include the sum of Rs. 23,000 transferred from War Risk Insurance Reserve to Dividend Equilisation Reserve.

Audited accounts for the half-year ending 31st May, 1943:—

After transferring Rs. 3,629 to Insurance Fund, providing Rs. 50,000 for Depreciation, Rs. 2,25,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 76,309-7-5. After bringing forward the balance from the last account there is a balance at the credit of the Profit and Loss Account of Rs. 1,18,812-7-5. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	35,000	0	0
and on Ordinary shares at Rs. 4 per share ..	40,000	0	0
thus absorbing Rs. 75,000 leaving a balance of ..	43,812	7	5
to be carried forward.			

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

With credits in abundant supply, and with interbank call money quoting ½ percent in Calcutta and ¼ percent in Bombay, the market has maintained the same trends and tendencies as have been prevalent since the onset of the slack season. The treasury bill rate, however, shows only a decrease of 1 pie. This is in fact the third week in which the reduction is proceeding at the pace of 1 pie weekly. It should be certainly possible to accelerate the pace of reduction in the treasury bill discount. The device for this purpose is pretty simple. All that the Reserve Bank has to do is to accept tenders at the higher rate and reject all tenders at the lower rate. If this is done for two or three weeks in succession, the process of bringing down the treasury bill rate to a level, consonant with seasonal conditions, would be completed. The Central Government can very well afford to enforce such a firm treasury bill policy. Their cash position is exceptionally comfortable. The automatic expansion of Government's cash through sterling receipts continues on an accelerated scale. With the stepping-up of the tap rate for 3½ percent paper, sales of government securities have gone up by leaps and bounds. In such circumstances, the ways and means position of the Central Treasury will not be adversely affected if, for two or three weeks, the full quota from treasury bills is not secured. On August 17, against Rs. 8 crores on offer, applications came to Rs. 12.37 crores. The average rate of accepted tenders was annas 14 and pies 10 percent against annas 14 and pies 11 in the previous week. The offer of tender bills for next week remains unchanged at Rs. 8 crores.

The returns of the Reserve Bank for the week ended August 13 have not reached our hands up to the time of writing. We have, therefore, the statement of the Imperial Bank for comment in this number. The deposits of the Imperial Bank have gone down by Rs. 2 crores to Rs. 194.52 crores; loans and advances have gone down also by Rs. 1 crore. In the result, cash is lower by Rs. ½ crore at Rs. 29.13 crores.

The payment of Excess Profits Tax on the basis of a rough and ready assessment has started; but it does not appear to have affected the position of banks to any extent. In the week ended July 30, demand liabilities of the scheduled banks in India rose to Rs. 434.32 crores as compared with Rs. 431.35 crores in the week ended July 23. The statement regarding scheduled banks for August 6 shows a rise of Rs. 30 lakhs in demand liabilities and of nearly Rs. 2 crores in time liabilities. On the other hand, the balances maintained by member banks with the Reserve Bank show a sharp decline of nearly Rs. 10 crores but this shrinkage is surely connected with the substantial investments made by banks in treasury bills. It appears that a good part of the advances demanded for E.P.T. would be met from the hoarded resources of the assessees. There is no reason to apprehend that any squeeze will be felt on banking circles on this account and through this cause. It may also be stated that, with the consequent expansion in the cash balances of the Central Government, it should be possible, and it will be found necessary, to reduce the weekly sales of treasury bills. Thus, the monetary authorities have it perfectly in their power to maintain even conditions in the money market, and we have no doubt in our minds that the policy of the Reserve Bank will be carefully planned and adroitly executed.

The tap rate for 3½ percent Paper has been raised to Rs. 97. A further increase is imminent as market circles are now really talking of Rs. 99 as the ceiling price. This means that purchases at Rs. 97 will be on such a large scale as to necessitate further stepping-up with a larger interval than in the earlier stepping-up. We believe, that in the space of a fortnight to three weeks, the tap rate of 3½ percent could be and would be brought up to Rs. 99. Our suggestion of such a contingency is that further sales of 3½ percent Paper must be stopped. The Reserve Bank should then resume the sale of 3 percent 1963-65 and, through the same process of stepping-up, the tap rate for this loan must be brought up to par. When the 3 percent 1963-65 reaches par level, it should have a salutary effect on the sale of the fourth defence loan, whose sales do not make much impressive showing now. We would also suggest a careful examination of the possibilities of the issue of premium bonds. Quite a considerable amount can be roped in by the offer of ½ percent interest and by a reserve of 1 percent for distribution as prizes. Premium bonds are not viewed with favour in conservative financial circles. But conservatism in finance is an anachronism to-day. The new monetary technique and the new monetary world justify the examination of the possibilities and prospects of premium bonds with an open mind.

The future of gold is discussed in a leading article in this issue. Suffice it to say here that the recent sharp increase in prices has been due to the amendment to the Defence Rule making it compul-

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Aug. 17, 1943. Total amount offered was Rs. 12,36,75,000. Tenders at Rs. 99-12-6% were accepted in full and those at Rs. 99-12-3% were allotted approximately 60%. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-14-10% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Aug. 25, 1943, in Bombay up to 11 a.m. and up to the close of business on Aug. 24, 1943, at other centres. Successful tenderers should make payment on Aug. 27, 1943. Other conditions are as usual.

During the week ended Aug. 13, 1943, Government of India Treasury Bills for Rs. 9,50,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

WHILE much is said about the Quebec conference's possibilities and the next stage in operations, the markets in London show little trace of the weakness arising from reduced support for giltedged. The Treasury was able to raise money in bills and deposits as usual. Money has been a little more abundant in August and the reduction in bullion and public deposits shown in the Bank returns is of less importance than the reduction in bankers' deposits with the Bank of England. The note circulation continues to increase and the Bank has also to add to its holding of securities. The public has more money, and keeps more money, and the same tendency is apparently in operation in the United States where the F.R.B. is adding to its investments in securities and banks are not faced with the problems of excess reserves as in the past. Between the last quarter of 1942 and now there has not even been a very slight hardening of money rates in spite of a small rise in the yield on Government bonds. The treasury bill rate from July last has stood at .37 per cent in spite of increases in borrowing and the call rate has been unchanged at 1 per cent. What is observable in Britain can be noted in the U.S.A. and the improvement in share prices since 1942 has followed the stabilisation of low rates of interest.

Evidence of the progressive increase in note circulation has perhaps no connection with the rise in share values for a slump has been reported more than once in Japan which has experienced a continuous increase in note circulation in 1942. The increase in bank deposit characteristic of the war period was noted in Japan where total deposits rose by over 6,000 million yen in 1942. The most interesting change was an increase in Japan's holdings of foreign assets. It is clear that Manchu yuan, Indo-Chinese piastres and other subordinate valuta in the monetary reserves are of no special value. The clue to the monetary situation is the yield on bonds which in the case of Japan was higher than that obtaining in India. The public debt rose by 13,000 million yen in 1942 to judge by provisional totals, and the floating debt also rose. The external debt did not increase, but every thing else pointed to a lack of balance produced by the rise in war expenditure.

There has been a brief recovery in Indian bullion markets arising from the order as to delivery. The bullion exchange, however, has not missed the threat contained and the Bombay market rising on short covering has relapsed. The prominence given to sales by States as also to absorption by upcountry buyers has little to do with the structure of prices. But the fall on Wednesday in the case of both gold and silver is connected with the news of a slump in Cairo. The Bombay share market fell last month when Cairo slumped. Changes in Alexandria cotton are known promptly to Bombay and the Cairo bourse is a good guide as Greeks and Armenians must be the chief operators. The fall of Sicily has forced down the price of gold. Good war news has much the same effect in India where bullion has weakened after the Russian successes and the capture of Messina. The price of gold has slumped in the Middle East said a Cairo message. The sovereign sold at 570 piastres six weeks before was quoted in Cairo on August 17 at a little over 400 piastres. The rate suggests that a very close connection exists between Bombay and Cairo. 400 piastres may be said to equal £4 (E) assuming that Egypt's pound is roughly equal to a £ and that mans Rs. 53 or so per piece. The Bombay rate was about Rs. 52 and it would not have been worthwhile to ship gold coin to Egypt even if there were not the bother about regulations. Since the Haj is not authorised very little gold is likely to enter the Middle East this year. Saudi Arabia's balance of payments might be disturbed. It is doubtful if the Middle East can maintain gold and silver prices merely because supplies will be limited. The Allied victories should force down prices while war prosperity may fade out.

The demonstrations in Italy engendered by heavy raids on Milan and Turin point to the power of hunger. Baron Pirelli and other Italian magnates must be far poorer men today but their hardships must be small as compared with those of evacuees from Milan. Badogolio's Minister of Finance has made public certain figures relating to debt. The floating debt is said to exceed 160 milliards lire and the note issue has quadrupled since 1940, according to the Minister who proclaimed that inflation is one of the perils facing Italy. The lira is said to be valueless in Italy and businessmen are doing business in terms of the dollar and sterling. Mussolini's regime must have collapsed owing to the debt. The tax revenue could not be kept up after bombing started in October. The armistice may help the government to avert a crash but the people have evidently to act for themselves, before Badogolio will see reason. The middle classes are said to be alarmed.

The report as to Democrats in the five largest States being in favour of a Fourth Term for Mr. Roosevelt is due to a straw vote run by the Gallup Institute. There are no obvious rivals, and the Democrats think of Mr. Roosevelt as their best choice. Hence the Republican move to get in a constitutional amendment against re-election by getting three-fourths of the State legislatures to pass a resolution. The Gallup poll is a reminder of Mr. Roosevelt's ability to overcome all adverse votes. The problem of raising money by new taxes is a simpler one than that of organising before the Party convention. Mr. Roosevelt is clearly a year ahead of likely candidates and this may force Congress to change its views as to the need for keeping prices and wages in check. Labour wants higher pay but the President objects as expenditure is still rising and 1944 will be marked by a big rise in the Federal Debt. The one Senator who has broken with isolationism may help to restore Congressional faith in the President's ability to make rationing work with subsidies. War news from Europe and the S. W. Pacific may play a part. In the last week there was a mild revival in the leading shares and blue chips like A.T.T. and Western Union Telegraph showed recovery towards the close but the improvement has not held. Apparently no one is ready to be a bull in America when new revenue bills are in the making.

In London in spite of Mr. Churchill's absence from Britain the market is brightening up. In the last week oil shares have held the stage and industrials have been firmer. For the investor the big chance is not the small gain in Old Consols, but the rise in Burmah Oil. There is anyway an example for the buying of Indo-Burma Petroleum shares in India despite the fact that only 5 per cent was paid on the ordinary shares for 1941. Gold mining shares have moved narrowly downwards while textile shares have developed strength. The most important gains are again recorded by rayon shares on the revised estimate of postwar prospects. On Friday last British Celanese rose by 3sh. and a further gain is to be noticed this week. When the reconstruction scheme to get the preference arrears was out of the way commentators showed very little enthusiasm. They must have changed their opinion in the light of the striking improvements. Attention may be drawn to the rise in sterling tea shares. The advance follows the assurance as to tea supplies for the Empire, and may well be noted in India where tea shares have been a drug on the market in recent weeks.

The most important change, however, is the deflection of investment interest into new channels. Rubber shares attracted attention for some time and it is now the turn of oils. Selective buying of textiles has been got up as the conquest of Sicily should help British export trade. There is a more hopeful feeling as regards industrial generally. There is also keen buying of speculative counters like Rio Tinto. The European situation accounts for the rise in Royal Dutch rather than the U.S. air force raid on Balik Papan. The problem of production and prices, with wholesale prices standing 62 per cent above prewar level, seems unimportant in Britain as compared with a fresh view of the length of the war. Mr. Churchill has denied that the war will be over by Christmas and Col Knox is against optimism, but the investor in Britain gets more courageous and less cautious. The essential difference between the British and Indian outlook is illustrated in the difference in viewpoints as regards major industrial shares. In the U.S.A. the investor is not concerned with export revival but with taxation fears. The President has pointed to the increase in expenditure in 1943-44 and has asked Congress to vote taxes. Whether direct or indirect all taxation will cut into earnings and that is why Wall Street for months looks at quarterly earnings and never at the setting of war communiques. The shipbuilding and other industries may be busier than ever, but the coal strike must have set many industries back. Wall Street opened quiet and dull on many days while London was getting firmer, and places like the Amsterdam bourse must have been really excited.

Our Gold Problem

The stir in the gold market during the week should serve to revive interest in the gold problem in the special light in which India has always looked at it. The sufficiency of gold in our currency reserves for our present purpose and the closed nature of the Indian bullion market compel us at the moment to regard gold more as a commodity than as a monetary metal. This is, however, in keeping with the age-old habits of the Indian people, habits which changes in our monetary system have tended to strengthen, rather than weaken. Known from the earliest times as a sink for the precious metals, India had enjoyed through the greater part of British Indian history a favourable balance of trade which she converted in part into gold and silver. The poverty of the country, which did not allow the use of gold coins for ordinary currency, and the adoption of the gold exchange standard earlier than in most other countries of the world have together strengthened the habit of hoarding in the precious metals. Even the Great Depression which forced gold out of hoards and led to a large-scale export of gold from this country can hardly be said to have weaned people from the hoarding habit. Many people must surely have been impressed with the way a few jewels in gold can come to the succour of whole families in trouble. But the general trend of events during the last decade has been so decidedly against the import of gold into India and the indulgence of the hoarding habit, that present conditions probably lend themselves to facile dogmatism about the changes in the hoarding propensities of the public.

A slight fall in the price of gold, however, suffices to bring home to us that the attitude of the public to gold has not undergone any fundamental changes. Both on the present occasion and a month ago, when nominal quotations in the Calcutta market fell to Rs. 69-8, a great deal of resistance to the fall in price is indubitably in evidence. There can be no doubt that every fall meets with a disproportionate increase in consumer's demand. Prices do not remain appreciably long at the lower levels; and it may be even ventured that only the pressure of sales by the authorities in accordance with new policies can lead to further lower levels of the price of gold. Speculative forces may be said to have been never weaker in the bullion market in India than now. At any rate, while it may be presumed that consumers' demand falls off the moment prices rise in response to buying pressure, a sustained rise in prices is prevented by the lack of freedom for speculation. The present position is a highly incohate and, in a sense, an anomalous one. While India is barred, despite her heavy favourable balances, from satisfying her normal, legitimate demand for gold, the internal market, too, is bereft alike of speculative forces and of stocks necessary to satisfy the genuine demand of the country.

It is well at this stage to look into the nature of the internal demand for gold. In the first place, India has for more than a decade been literally famished for gold. Not only has there been no import of gold during these years, but India had during the depression exported as much as 400 crores worth of the yellow metal. At the same time, the money incomes of the various classes of the population have gone up a great deal thanks to the expenditure on war account while production of consumers' goods can by no means keep pace with the demand. It may be said, therefore, that never was there more money to spend in India and never was there less goods to spend it on. Such circumstances, coming on top of a depletion of gold stocks in 1930 and the absolute cessation of imports since then, must naturally sharpen the demand for gold; and only the non-availability of the metal and the uncertainties about its future, national and international, can stand in the way of the Indian people increasing their gold hoards.

Another circumstance tending to increase the pressure of demand for gold is the presence of a considerable volume of funds for which gold is almost the only avenue of investment. It is generally believed, and with good reason, that a great part of the profits made during the present war period, are secured in ways which preclude their investment in securities, the main reason being that the profits have been due either to evasions of legitimate taxation or to contraventions of the various control orders to which business in India is generally subjected. Such monies are retained by their owners in the form of cash with its attendant fear of insecurity through possible burglary and the like. For such monies gold offers the only form of investment; and it is believed that it is the pressure of such demand that quickens and accentuates the recovery of the price of gold.

The course of the bullion market since the outbreak of war brings out both the lack of a steady policy on the part of the authorities and the unsettlement on the public mind regarding the future of gold. Even before the outbreak of war, the average Indian was not a little mystified by the fortunes of gold since the beginning of the Great Depression. He thought bitterly of the cruel fate which forced him to sell a part of his gold a little before the abandonment of the gold standard and the consequent rise in the price of the metal. He was mystified by the persistent influx of gold into the U.S.A. He was upset by rumours of a change in the gold value of the dollar. But in all those stages, the average Indian was hardly in a position to buy gold. With the war, expectations of a change began to be entertained. But the intrinsic uncertainties of war, together with the quick succession of untoward developments in the earlier stages, only added to the mystification of the earlier stages.

Up to the fall of France the rise in prices for both gold and silver in India was in proportion to the rise in prices in the London market and for a long time, gold in India quoted to around London parity price, the British Government's buying price for gold having been fixed at 168 sh. per ounce. With the Norwegian campaign, however, there was a sharp speculative demand and quotations were marked further higher. Towards the end of 1940, there was a slight recession in prices with the Middle East campaign but with the fall of Greece and other countries, the upward trend asserted itself. For a long time the quotation was around Rs. 45 per tola in the Bombay market. The Japanese entry into the war marked another phase of the rise in prices, while May 1942 marked a recession. With the inflationary rise in prices and increased costs of living, a slow and steady improvement in quotations set in. Confidence in the future of gold however was not established till the publication of the American and British plans for a post-war international monetary regulation. In a closed market with acute shortage of supplies and heavy buying, prices went up to a record high level to Rs. 103 per tola. It was at this stage that the Government of India promulgated the Defence of India Rule prohibiting forward contracts in bullion. Even earlier, the Bombay Bullion Broker's Association had banned forward transactions until further notice. Under the Defence of India Rule deliveries had to be completed within 12 days from the date of contract. As soon as the order was announced, there was a sharp decline in prices, but it was later on pointed out that the effects of the order were already discounted and that with a 12-day period for deliveries there was still further scope for speculative activity. As a matter of fact, there were two quotations one for ready and another for delivery within 12 days and on occasions the premium for ready over forward was as much as Rs. 3 per tola. To discourage further speculative activity an ordinance was passed empowering the Government of India to prohibit banks from making advances against commodities including bullion. Subsequently the Defence of India Rule prohibiting forward transactions was amended and as a result of the amendment deliveries have now to be made within 4 days from date of contract. This amendment to the Defence of India Rule resulted in large covering by bears who had sold heavily. As bulls had the upper hand, the immediate result of the amendment was an increase in prices. Quotations improved from Rs. 72-12 to Rs. 75. As the technical position got adjusted itself a slight decline in prices was noticeable. There have been reports that Native States and the Reserve Bank also have been active sellers of the yellow metal and quotations came down to Rs. 69-12. But for the buying at low levels by some class of investors who want to hide their surplus cash, there might have been a further decline in prices.

It will be seen from the above that a variety of considerations, motives and forces have been acting on the bullion market in India. The Government have been unwilling to help a flow of gold into the country. They have been opposed to unduly speculative rises in the price. And the assumption of power to protract bank advances, which was conceived as part of the anti-inflationary drive, had the effect of pushing down, though necessarily temporarily, the price of gold. The gyrations of a closed market, in which stocks are by no means equal to probable demand at world parity rates, surely do not suggest a satisfactory state of affairs. Both as monetary metal and as a commodity in public demand, gold is extremely important to India. And there have been no signs that official policy in regard to gold has been definitely formulated, not to say clearly conceived. As monetary metal, gold is by no means in sufficiency. Neither the present reserve ratio nor the valuation of gold in our currency reserves should be allowed to bind us to our needs of the future. At any rate, it can hardly be denied by any impartial person that part of our huge foreign balances should be changed into the form of gold and held in India. Likewise, considering the place of gold in the social life of India and the fact that India has been denied all access to gold in recent years, the satisfaction of the public demand up to a point should also be deemed legitimate. We trust that the Reserve Bank will take up the question in earnest.

GERMANY'S FUTURE

The hope of an early Italian surrender and of considerable changes in Germany, leading to the overthrow of Hitler, raised by developments in July has been scarcely fulfilled.

The Allies have said nothing as to what they intend to do with Germany. A group of Conservative backbenchers outlined their demands in May; so did the Labour Party at its annual conference. They asked that Germany should be weakened and divided at a time when the Germans were trying conciliation tactics in the Baltic States and were making the most of the old fears as to Soviet aggrandisement. The problem of Germany is not one of defence but of survival as an economic unit. Italy's manifest weakness, like the obscure ambitions of Russia, makes it necessary for the Allies to think as much of the future as the rulers condemned to perish. The Allies may have to impose peace but mistakes have to be avoided. The doctrine of living room must be respected after the peace so that Germany remains a large, compact area able to supply the Danubian basin and the Baltic States. To cripple Germany industrially by getting hold of all the machine tools may suit those who have objected vigorously to appeasement but there are certain facts that must be remembered. Germany was and is the greatest industrial country in Europe. She is a giant in regard to production and commerce, and Britain's trade in Europe has been small as compared with Germany's. In the war period German trade with Spain and Portugal despite the blockade has been larger than Britain's and after allowing for war demands it is obvious that the neutrals are interested in seeing Germany survive the war.

While it may be argued that European neutrals can have little influence on the future of Germany the point to consider is whether West Central Europe can be split up without danger. Reunion of Alsace-Lorraine or even the loss of Bohemia may not injure Germany but the permanent removal of East Prussia and the break-up of the federal system may have unintended consequences. The problem of restoring democracy in Germany after the Nazi interlude will remain. But more important will be the problem of reconstruction in Europe. The Occupied countries can revive only with German assistance and the decay of industry in Western Poland like the decline of Danish industry will throw up burdens that the Allies can hardly shoulder. The economic unification attempted by the New Order has obvious value whatever might have been the shortcomings of propaganda. Such countries as Sweden may look after the war to Germany for the sale of iron ore, and Lorraine can only be an adjunct of the Ruhr. If Northern France and the Low Countries have been blasted by the war, it is clearly to France's interest to keep in with Germany. Protests made in advance against a 'soft' peace can hardly weigh with the deeper calculations of the peacemakers. The creation of an independent Austria is ruled out and the Low countries, which escaped from the Spanish yoke in less strenuous times, may find it difficult to stand independently. The facts as to exploitation cannot blind us to the fact that the Occupied countries have an agricultural surplus for which there is no market. And the arrival of U. S. and other supplies will necessarily increase it. More meat and grain will be available in Hungary and Yugoslavia, and if fair trade is restored, the surplus may produce a depression.

The New Order has not worked out according to plan but the conditions of the future will necessarily reveal the inadequacy of a deliberate reversion to pre-war arrangements. The economic subjugation of Bohemia and other Occupied territories makes it impossible to visualise the old territorial divisions. Last October the Nazis suggested a greater federal union allowing Denmark and Holland a place in the greater German region. The concession was related to geopolitics (which is the Nazi science) but it was based also on German food requirements. If the destruction of the Pan-German idea (which antedates the Nazi party's rise in 1920) is the main aim of the Allies to judge by the headway made by Vansittartism, it is clear that connections between the Danubian basin and Germany cannot be destroyed. The abolition of the Austrian empire made Germany look south-east and her trade supremacy receded the Munich pact.

The growing disinclination of U. S. opinion to accept self-determination as a working principle makes it essential to look for the enlargement of the German federal union. Regional planning can be attempted only at the instance of Germany; and Central Europe including the Danubian and Vistula basins must be a single, homogenous unit. The overflow of German enterprise into the Balkans and the Low Countries cannot be regarded as a temporary evil. The distribution of population, the high degree of urbanisation, and the transport system make Germany the centre of Europe and it would be illogical to get rid of the unity enforced by the supremacy of the mark and the multi-clearing system by which the trade balances of neutrals are also adjusted. The promises made in the Atlantic Charter certainly extend to the Occupied countries, but if Germany is to revert to her position as an importer of food, she may require outlets for her industrial products. Since the textile industry of Wuppertal must have suffered as much from the raid in June as the scarcity of materials it is clear that Europe's recovery is more or less dependent on the recovery of Germany rather than the border States like Belgium and Denmark. Whether reparations are exacted or not it would be impossible to go back to prewar confusion with a Vienna looking as much to Hungary as to Czechoslovakia for its supplies. The emergence of various free movements may lead the Allies to devise the means of satisfying national ambitions but what was done at Munich to get the Sudetan issue settled and Slovak autonomy established can hardly be ignored.

The Allies' main problem will, however, be Germany and not the Succession States. Clearly an artificial division of Upper Silesia to satisfy either Czech or Polish claims would cut at the root of the revival of Britain's coal export trade after the war. Silesian coal helped Czech industry in the past yet the customs union of 1940 has made it difficult to force a change, though Poland will undoubtedly present claims after the war.

The cultural unity and the more recent political unity of Germany have to be related to maintaining a government that will be able to make arrangements for post-war recovery. The industrial revolution in Germany came after the revolution in Britain and her dependence on the export trade was even more pronounced.

If the United States and Britain look to Asia and Africa the post-war revival in Europe may be delayed unless Germany is in a position to use her leadership to the advantage of Europe. What is obvious is that she should have no reason to work for self-sufficient; and the problem of raw materials must be solved on the lines described in 1935 as making for stability and contentment. If Germany is not unduly dependent on imported food, producing 80 per cent and more of her requirements, her lack of raw materials is glaring, and this with 67 per cent of the population in towns and dependent on large scale industry. Apart from Germany's needs there is the very important question as to the primary producers' need of the German market. The greater part of Latin America looked to Germany for most supplies and depended on German custom. It has been insisted that between 1913 and 1938 the general character of Germany economy did not change and the explosive forces released by the Nazis were the same as in 1914. Though the Ruhr has been shattered by the R.A.F. the European demand for iron and steel must be met mostly by Germany which dominated the foreign trade of Turkey as well as Italy before the war because she occupies the central position and her export trade was made up to the extent of 70 per cent of manufactured goods. Before the war Holland and Belgium lived largely on German trade while the Baltic States took as much of German imports as the Balkan States where British trade has been negligible.

Since the war has raised the proportion of German trade in Europe to total trade (as shown in the case of Switzerland) it is clear that Europe's requirements will be different from those of Britain, for the Occupied countries will have to get at their balances in the form of German goods. Though it is certain that Antwerp and Rotterdam rather than Hamburg and Bremen will be the ports of the future Germany's trade with the New World might well increase on that account. There is little prospect of Russia being able to regain her position as an exporter of any item except gold and oil. Temporary purchases made by Britain in Turkey will not modify the predominance of Germany in both the export and import trade of Turkey. It is not known if the Nazis, who have carried control to its limit, have embarked on post-war planning, but the Nazis created new administrative regions that modified older territorial arrangements. Regional planning started in February 1936 and the party organisation too was modified. The conquests of 1938-41 led to the addition of more territory from Galicia to Lorraine. These arrangements are calculated to survive defeat in the West and the Zone of political changes is not likely to cover Germany. In the light of history the ultimate grouping of the Danubian Basin with Germany rather than the dissolution of the German federation is to be expected. What is important, after the lurid chapter of history written by the Nazis, is the forging of stronger links between Germany and the neighbouring countries. The eastward expansion resumed in the 20th century is historically justified in view of the large growth of Germany's population in the 19th century when she ceased to be a country of peasant farmers. In the last war she was forced to cede Lorraine and Silesia (the Saar too) and harboured discontent compelling unilateral revision of the Treaty. That is perhaps a remote danger if superior arms are left to the victors in the present war but the core of reason in the One Folk slogan is not affected by the division between Lutheran and Catholic. The problem of employment and food in the reconstruction period will not be eased by the partition of Prussia or other device of revenge. Over and above the demands raised by war damage will remain the problem of rehabilitation for a nation compelled to suffer total mobilisation before the coming of war. The acceptance of the doctrine of two nations, the Prussians and the milder majority, implies the maintenance of what appears to be the trunk of Europe. The periphery in Greeee or Italy requires less attention than presumed and the issue of the struggle is perhaps to be determined by the U. S. electorate's reactions to the summons to take an interest in European affairs after the war. Racial memories may not revive but the essential Middle West may develop the Liberalism for which Senator Norris stood rather than the prejudice typified by Senator Borah.

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

In continuation of the notice inviting applications on prescribed form from Nurses up to 5-8-1943, for appointment on N. W. Railway, it is hereby notified that the last date for receipt of applications has been extended up to 31-8-1943. It is repeated for the information of intending applicants that there are 5 temporary vacancies, 2 of which are reserved for Muslims and 3 for Anglo-Indians & Domiciled Europeans. In addition, names of 14 suitable candidates (4 Muslims, 9 Anglo-Indians & Domiciled Europeans and 1 Sikh, Indian Christian or Parsee) will be borne on a waiting list for a period of one year. Qualifications:—A candidate must hold a certificate/diploma of training as a Nurse and must be registered under the Punjab Nurses Registration Act of 1932 as a Nurse in "A" Division. Preference will be given to candidates with A.R.P. training and those who have training in midwifery and special experience of work among women and children. Pay:—Rs. 160/- per mensem fixed plus dearness and other allowances admissible under the Rules. Age:—No limit is prescribed. *Full details and the prescribed form can be had free of cost on sending a stamped and addressed envelope to the Chairman.*

The Chilli In India

Chilli—the red pepper of commerce—is in India an important garden crop as the fruit both ripe and green, is indispensable in the kitchen. Mr. R. B. Deshpande described in Indian Farming the cultivation of the chilli in India. Since it is fairly easy to cultivate, and is a remunerative crop, the agriculturist is ready to try chillies as a kharif crop, grown during the monsoon, the seed being sown in June or July and transplantation taking place four or five weeks afterwards. In parts of the Punjab and the Frontier however, the crop is grown towards the end of the cold weather and harvesting takes place in September and October in order to avoid the frost danger. If the soil is well-drained the chilli plant does well out in non-irrigated tracts only heavy soil, retentive of moisture, is desirable. Cultivation demands four to five deep ploughings so that a fine tilth can be had. The crop responds well to manure and farmyard manure must be put in before the land is ploughed up. Folding of sheep, as in Guntur, is one way of manuring, as it is believed to produce brighter-coloured fruits. Supplementary manure either fertiliser or oilcake is to be as a top dressing. The seedlings from a well-drained nursery, watered by hand, may require a light dose of fertiliser mixed in water. Plants six to eight inches high go into the field on an evening though a drizzle is helpful when planting. Care is required in putting the plants in rows 20 to 24 inches apart and watering must follow immediately. It takes a week for the seedling to get settled. Hoeing is necessary after irrigation to keep down weeds, and before flowering, it is the practice in Guntur to run a plough through the field though bullock-drawn implements should not be used. The crop is ready in a month or six weeks after transplantation. The harvest comes in from four to six pickings spread over 3 to 4 months. Fruits should be dried carefully and it takes about ten days to get chillies fully ready for the market. The average yield is 4,000 to 5,000 lbs of ripe but undried fruit which is reduced to nearly one-fourth of the weight by drying. Before the war the average return to the grower was Rs. 100 to Rs. 150 per acre. The chilli plant has its own diseases. Fungi are dealt with by spraying, and leafcurl is a more serious danger than rips white ants which can be dealt with by neemcake and castorcake.

Export Possibilities

What the Federation of British Industries is going to do about export revival is less important for the future than the accumulation of credit balances by countries which normally sell more than they buy of Britain. The chief consideration for Britain is that oversea income has been reduced and if shipping and insurance receipts survive, the liquidation of external debt by various countries including Iraq makes it certain that overseas income must be made good by increased merchandise exports. Substantial balances, which must be called frozen for the present, are held in London, and such steps as are being adopted to reduce overseas liabilities, if favourable to the Treasury, are not helpful to British export trade. The former position of a creditor cannot be retained to support the trade revival and a short-term debt of £1,000 millions (to adopt a recent estimate) represents a formidable handicap unless the balances are kept under control by Clearing Union. The chances of new money coming to London for safety are remote and the problem of repayment appears more important as the likelihood of a shorter war increases.

The remarks of Colonel Amery to the Institute of Export offer no certain solution of the problem due to the abnormal increase in sterling balances. Exports must be increased whether of capital goods or capital, and the present physical controls cannot be kept up indefinitely. The maintenance of full employment in the interests of bigger exports is a fresh subject into which Sir William H. Beveridge is enquiring but the demands of reconstruction at home must be squared with those of export industries. The problem will certainly arise for Germany too and her foreign creditors too will inevitably claim payment in goods. Since the U.S.A. builds up a better position in South American trade and has at command the Export-Import Bank's facilities for Britain the main hope obviously lies in the less developed regions. The decay of Japan's trade may be turned into an advantage but the growth of local industries in Palestine and Egypt may limit possibilities in the Near East. What is, however, the major consideration is that Europe will be forced back to agriculture by the war unless it be for exceptionally placed countries like Sweden and the chances still are in favour of Britain reverting to her position in the early part of the 19th century as the old world's workshop. The war must have damaged export industries from Denmark to Italy and the British export drive may be helped also by Russia's inability to supply Asia with goods. If the multi-clearing system works out and the U.S.A. adopts a liberal trade policy as laid down in 1938, Britain may be able to view the increase in debt without undue alarm. But the standard of living might fall, and expansion of social services may be contingent on the export revival though the former is a basic part of Mr. Churchill's Four-Year Plan. How far concentration practised from 1941 may militate against export revival is a problem for the Board of Trade which has not indicated what is to be the future programme though it is in favour of retaining control and preserving the newly-set up organs like the U.K.C.C.

Cotton Order Criticised

Strong criticism of the Cotton Control came from Mr. Haridas Madhavdas, President of the Indian Merchants Chamber. At the last meeting in Bombay it was urged that the cotton trade was not consulted in advance before control was imposed. Mr. Haridas declared that the order of May 18, prohibiting forward contracts in current crops, had no parallel. If the trade had been consulted, it would have been made apparent that such an order could not precede the control of yarn and cloth which were ruling at considerably higher levels than prices based on the then current quotations for Indian cotton. He referred to the injustice done to the trade by the inverse method of controlling cotton and then controlling the yarn and cloth trade. The effect of this Order would be that manufactures would be able to buy cotton at prices over which a ceiling had been indicated, and thus benefit at the expense of traders and growers while no bottom prices are fixed for cotton which the mills would be compelled to take if the Government did not buy cotton in case of prices going down below the ceiling price. The provision as to the adjustment of transactions compulsorily closed out also attracted criticisms as having been an encouragement to bears. The Order was meant to discourage speculation, discourage cotton-growing and stimulate cultivation of food crops. These objects are acceptable to Mr. Haridas who however complained of the procedure adopted. His main argument was that cotton remained at a low ebb for a long time after the war began. In fact, the parity of prices continued to be below that in the U.S.A. and other countries. Con-

trol was described as a direct blow at the grower who was never cared for in so many past depression years. The rise in cotton prices from about Rs. 200 per bale was due to large demand from mills which were preparing to run three shifts.

Mr. Haridas stated that the cotton trade held the view that growers had been let down as no minimum prices has been fixed. It was argued that mills should be compelled to buy cotton at the ceiling price of Rs. 550 per bale for Jarilla fixed in May. Recent price changes may be said to justify the argument for Government intervention on behalf of the cottongrower but Mr. Haridas said nothing as to hedge contracts being revived. The cottongrowers' representatives desired that hedge contracts should come back but the Indian Central Cotton Committee's resolution was not mentioned by Mr. Haridas Madhavdas. The only claim advanced was that growers should get a fair price and mills should not be given a chance to exploit the advantages arising from the absence of a futures market. The problem is essentially one of keeping cotton prices in proper relation to food prices at present. The mills have been assured as to supply by the creation of a panel to secure zonal supplies. Consumption figures point to a fair increase in 1943 but mill production might suger from coal shortage or trade disputes, and as the cottongrower has no export markets to fall back upon, the problem of tiding over a crisis remains. If the buying of cotton for investment is at an end, the drop in prices may persist, and the cottongrower may find that in the next cotton year, the question of restricting acreage will be more important than in 1942.

Bombing Results

After Hamburg there is the threat to Berlin. The bombing war has put heavy industry to flight and shattered faith in Nazi precautions. Concentrated bombing of Ploesti is of the same type, and thorough preparation in the desert in this case gave the U.S. bombers the success expected in the destruction of the chief source of oil for the Axis. The master plan mentioned by Sir Charles Portal in 1940 has certainly gone into effect earlier than expected and the higher tempo of attacks on Germany this year is ascribed to the adoption of saturation bombing. The concentrated attack on German ports and industrial targets has been distinguished by Major Eliot from earlier bombing forays in regard to prevention of scattered damage. Practice and patient effort have characterised it along with the use of larger numbers of bombers. Aircraft also are larger and carry heavier loads. Bombs too have increased in size and destructive power. In two nights in July the R.A.F. dropped on Essen and Hamburg as much as two-thirds of the tonnage dropped on London during the blitz. Hamburg got 2,300 tons at the rate of 46 tons per minute and Essen got 2,000 tons at the rate of 40 tons per minute. In May last 1,500 tons at the rate of 16.7 tons per minute were dropped on Cologne. So progress in 1943 can be readily measured. The loss ratio in bomber expeditions is going down, pointing to the increasing ineffectiveness of ground defence while saturation bombing helps the daylight raiders to do more damage and suffer less loss than may be anticipated. Germany's war chances have been modified more by the precision bombing of the R.A.F. than the blockade and the third, the biggest raid on Ploesti in the war, was successful because it was planned on a big scale. In the week-end three Italian cities were visited by heavy bombers, and the fires lit in Milan were seen on the Swiss frontier. The Luftwaffe is too weak to retaliate, and the evacuation plans, figuring in the agenda of Nazi conferences, are the evidence of the success achieved in breaking the home front, exposed after a strenuous winter, to what the German press has described as terror raids.

Exploiting East Asia

The degree of exploitation in Japan's new empire differs little from that noticed in German Europe. The New Order has been described as a false prospectus and the co-prosperity sphere may be described as equally false. Dr. Einzig having shown up German aims and German practice has dealt with Japan in his book on the Japanese New Order (Pp. 145 Macmillan 10/6). The black record of the Japanese army in China does not concern him as much as the exploitation of Malaya. The agriculture of the East Indies has been disturbed by conquest and Japan cannot feel the position of Holland because she has no goods to sell and no market to offer. The same applies to Indo-China and Siam which have become closed territories linked with the Yen bloc and helpless collaborators with Japan. The problem for Japan is not access to materials but shipping, and trade with the new territory affords little hope of cotton or wool. The military yen and the South Seas Bank have appeared to support the Japanese imitation of the German multilateral clearing system. The expropriation of foreign has not eased the credit position so that inflation is not an obvious evil. As for Japan the inherent economic weakness has not been modified by conquest. If she is independent of foreign trade, she is still short of oil and thinks of extraction from coal, rubber or sugar. She is short of steel as well as cotton and the major industries have gained nothing from the operations in the Pacific while Japan can only maintain the blockade of China. Dr. Einzig however upholds the argument of Mr. Grew as to the danger of leaving Japan in undisturbed possession of the

new territory. The 'Hitler first' formula appears dangerous to Dr. Einzig as well as Australia's leaders. It is noteworthy that little has been indicated as to Burma's experience under a puppet Government. The Japanese feat in raising the Singapore graving dock obviously has no significance for the local population. The concentration of resources of the Zaibatsu makes for vigorous, unified action but there has been no burgeoning of State or private capitalism in the newly-conquered territories. The Indian reader may find little about Burma and Japan's dealings with Indians and their property. Except for the casual reference to the unexportable surplus of rice there is no mention of Burma, and the palpable deficiencies of Japan in the field of foreign trade are of little moment when India too is short of imports and her exports are diverted artificially. The book makes no estimate of either the British or the Indian investor's losses in the Far East. It is concerned with proving that Japan has never been disinterested and her propaganda has always belied performance. Dr. Einzig has a fling or two at appeasement without any direct reference to the closure of the Burma Road in 1940 but he has hardly recognised that economic sanctions did not work very well after July 25, 1941. Japan entered the war without worrying over the consequences because she had stocks of oil.

Disillusionment in Siam

In April 1942 the baht was decreed to be equal to the yen. The devaluation forced on Thailand then was drastic and was meant to stimulate exports to Japan. For four months after war broke out, the baht was equal roughly to 1½ yen and peremptory devaluation was followed by the inclusion of Thailand in the yen bloc by the loan of 200 million yen—to be discharged perhaps by the balances built up by exports. The clearing system was built up on the ruins of an earlier agreement. A payments agreement was signed in May so that a clearing balance in Tokyo thereafter represented the value of goods taken from Thailand. The Japanese are said to charge 3½ percent on all advances to the satellite countries in the same way as Germany collects interest on export credits. Inflation must have followed devaluation by 37 percent in Siam, and the country, deprived of markets for rice, has certainly experienced no economic honeymoon. Rationing was introduced into the country because the Japanese drained the country's food supplies, and forced labour was mentioned last year. The more recent advantages in regard to territory in Burma and Malaya cannot be weighed against the losses suffered by Thailand. There have been heavy raids on Bangkok by U. S. bombers. Before the war Indo-China was compelled by Japanese mediation to cede territory meant to help the Japanese run a railway line to Siam and avoid the sea route to Malaya. The Siamese Government was flattered into surrender but the Colonels' clique has been broken this year by a cabinet crisis. Tojo's visit has been followed by territorial readjustments which give Thailand the illusion of sharing in the conquests of Japan. Rubber and tin that Thailand can give are not wanted. Japan wants oil and steel rather than sugar, rice and rubber that her new conquests can yield, and the shipping problem is such as to limit the offtake of tropical produce. Thailand's minerals are subordinate to Malaya's and the Japanese who wanted to transfer their own factories to Siam struck a blow at local industry. Thailand drifted into an alliance with Japan long after the treaty of 1924 and has found that she was better off as a buffer between British and French territory. The expropriation of British and other interests has not benefited the Thais who are likely to fall to the standards of Indo-China in regard to health and living under the shadow of Japanese authority in East Asia. Burma's rice and Java's sugar surplus are direct consequences of conquest like the shortage of consumer goods in Thailand. The Thais may have no tie with the Axis but they may know something of what has happened to Rumania, and the mines of the south may suffer even before the Dutch Indies are recaptured.

Fall of the Jap Navy

Unavailing resistance in New Georgia does not complete the expulsion of the Japanese from the Solomons. But the airfield has been captured and the garrison has been almost extinguished. Guadalcanal and now Munda have fallen, and something else has been lost by the Japanese forced back to Vila. Three squadrons have been lost by the Japanese Navy. The loss of 4 cruisers and 17 destroyers means that the U.S. route to Australia is more or less open. Except for Rabaul, bombed repeatedly by the superior air force of U.S.A., the Japanese have lost all their bases. If it has taken over 5 weeks to capture one airfield on the road to Rabaul the Allies must be satisfied with the results in New Guinea when the enemy base of Salamaua is within reach of the attackers.

The destruction of outposts like Attu and Munda means more than the regaining of the initiative by the U. S. forces in the Pacific. Long-distance bombing of points in New Guinea and the Dutch Indies has become possible in view of the decline of the only efficient fighter the Japanese had. Air superiority is going to pay big dividends soon. Rabaul is clearly marked out for an assault when the airfield at Munda is reconditioned.

There is more than one hive for the big swarm of U. S. bombers in the S.W. Pacific. That makes for Australia's security, and spells deliverance to the Dutch territory. Only the garrison at Kiska lingers, and the first spell of fine weather means its extinction. The acquisition of Shortland, Bun and Faisi has become simpler for the U. S. forces which have proved that the Japanese Navy today has not got the strength to hold what it obtained in 1942. Unable to move forward and unable to receive reinforcements, especially of aircraft, the Navy is caught between the fire in New Guinea and the Solomons. The Munda chapter revealed more plainly what three battles in the Solomons showed—that the Japanese had no seapower left to resist the Allied offensive. There has been no estimate of the naval strength left in the most exposed territory of the Japanese but it must be smaller than the U. S. task force, reinforced by Dutch and Dominion units. The twofold purpose of beating the Navy and destroying the bases has been carried out since 8th August 1942 when the U. S. Marines crossed the Indispensable Strait to enter Guadalcanal. They opened a new chapter with the capture of Rendova and New Georgia to make good the claim of the U.S.A. to its lost empire in the Philippines. The delay has only shown up the deficiencies of the Japanese in their most distant territory. For India the latest defeat, like the abortive push into Yunnan, means that the Japanese will have greater difficulty in keeping Burma as a wedge between China and India.

Films For Propaganda

The Government of India issued a new Defence Rule making it compulsory for cinemas in India as from September 15th to show 2,000 ft. of film approved by the Government. The decision has been criticised by those sections of the motion picture industry who are hit already by the limit as to length of films. Yet the argument that provision of a raw film quota warrants the application of the rule was supported by reference to the wishes of the ultimate suppliers. The case of the film industry, compelled to limit the length of productions to 11,000 ft. has been evidently overruled, and the Rule as to compulsory exhibition is to be implemented by a new departure in film production. Sir Sultan Ahmed announced recently that Government Film Units have made great progress and the Government studio's capacity for output has developed tremendously though the film industry has not been impressed by F.A.B. or its works in the past. But having arranged for the supply of film, the Government has to make its own films and its only advantage is that mentioned as to the progress in the Film Units. Every cinema has to be provided with 2,000 ft. of film for a weekly change of programme simply because the private producer has no interest in producing films for or on the war effort. The production of feature films of a suitable type is obviously out of the question, so that the Government studio is to concentrate on shorts which have been neglected, according to Sir Sultan Ahmed, by Indian producers. The Government expects that private producers also will turn to shorts now or after the war. The newsreel with a commentary in Indian languages is to be supported. Two years' experience has made it possible to produce newsreels under Government auspices, said Sir Sultan Ahmed recently. But the actual work has been done by 20th Century Fox and the only novelty offered will be a Government newsreel called Indian News Parade. It is not known if the newsreel when shown is to go into the 2,000 ft. quota. Some may believe that a reservation for local propaganda films answers to the quota generally devised for protecting the local film industry but exhibitors and audiences will have to decide about the kind of protection desired. News Parade is to be exchanged for foreign newsreels; so a double dose of propaganda may be carried in. There is however little doubt as to the absolute value of short documentaries. What is doubtful is the ability of Indian studios to turn out something like the March of Time and help audiences to get at facts to support their own conclusions.

Encouraging direct knowledge of India among foreigners is described as one of the objects of the promotion of Indian New Parade. The actual revenue derived may not be important at all as compared with the propaganda effect abroad. Exchange desired may, however, force the foreign renter to ask for the release of blocked balances. Since the newsreels are to be in Hindustani, Bengali, Tamil and Telugu, the foreigner is likely to turn to Fox Movietone and the Information film produced in English. Independent critics may have to see the films before pronouncing on their adequacy. The first samples may come after September 15 and aside from the critics' opinion, the audience reactions will be vital for the owners of cinemas. If the documentaries repel the public, the programme may have to be modified to let the usual interval come after the Short and letting the audience escape the box office blights that may overwhelm them. It is not known if the films will provide any revenue to the Government or whether the Government is to provide them gratis. Compulsion suggests that the latter is likely, but the ultimate judge is the more or less sophisticated urban audience rather than the Department interested.

In the making . . .

Whatever the job—a khaki shirt, a packingcase or a battleship—you can't make it all in one piece. And joints mean thread, nails, screws, nuts, bolts or rivets.

The Durzi knows that if he uses poor thread the seams will soon come apart. We know that if poor quality nuts, bolts and rivets are used in steel structures there will be danger lurking in every joint—danger to human life in most cases. That is why Indian Steel & Wire Products are specified where reliability is needed.

Wartime Budgets

A table in the April statistical bulletin of the League of Nations indicates how public expenditure in the belligerent and neutral states continues to increase. In the case of most the increase in the war bill surpasses the increase in revenue and ordinary expenditure. In the U.S.A. war expenditure alone in 1942-43 rose to 97 billions while total expenditure amounted to 104.22 billion dollars. Canada's war expenditure rose in 1942 by 1,690 millions because of the war gift to Britain totalling 1,000 millions up to December 1942. War expenditure in South Africa rose rather slowly from £60 millions in 1940-41 to £80 millions in 1942-43. Argentina has experienced six continuous deficits and only in 1942-43 did expenditure fall. But that country, too, was called upon to speed up spending for war purposes from 1938 and the footnote states that war expenditure in 1940 amounted to 223 million pesos. Neutral Chile did not escape the increase in expenditure as the budget deficit for1942-43 shows. In the next year the budget has been balanced though it is not known how. The growth of revenue

in Mexico, Cuba and other countries in 1943-44 may not be independent of fresh demands. Venezuela is almost exceptional in reporting a surplus in 1941-42 but in the next year there has been a fall in revenue though expenditure remains at the 1942 total of 320 million bolivars. Figures as to German expenditure are furnished. Revenue in the first quarter of 1942 amounted to 8394 million Rm and expenditure amounted to 21,209 million Rm as against 16,971 Rm. The revenue figures excluded war contributions of local authorities and profits from public enterprises. It is clear that the Railways may yield a large surplus owing to the war but the net deficit would remain very large. Expenditure as compared with the peacetime total of Rm 28,529 millions rose in 1941-42 to Rm 83,930 millions while revenue was raised from Rm 17,691 millions to Rm 35,000 millions in 1942-43. In the Occupied countries revenue has risen indicating that war contributions necessitate additional taxation. In France revenue has risen from 80,000 million to 102,000 million francs but expenditure has likewise risen from 258,000 millions to 311,000 million francs owing to the increase in occupation costs, put at 500 millions a day. The increase in Bulgaria's war expenditure between 1939 and 1942 is a reminder of chronic deficits. War expenditure in Rumania is enormous but is not indicated in the budget totals. In the case of Britain alone the figures are complete. Revenue in the first month of 1943 amounted to £384.7 millions and the war expenditure then took £523.5 millions. Revenue as compared with January 1942 showed an increase of £37.1 millions while war expenditure rose by £200 millions. Compared with peacetime standards Britain's revenue has risen roughly three times and expenditure six times because the war takes about ten-elevenths of total expenditure. Australia's revenue and expenditure shows a greater rate of increase in the war period but the Commonwealth is eclipsed by New Zealand. In neutral Switzerland as in Turkey defence expenditure has recorded a steady rise and in 1942 the defence outlay amounted to 1310 million francs out of the total expenditure of 1819 million francs.

Italy's problem

The bombing of Rome after the decision to declare it an open city was not unexpected in view of the Allies' need to prevent reinforcements reaching Sicily. Earlier raids on Naples had the same object. Though a recent interview of Air Marshal Coningham suggests that aircraft will not be so important as in Africa, the Allied effort in the air in recent weeks has been impressive. Turin, Milan and Genoa are the familiar targets but an attack on Terno was as important as that on Rome's railway yards. The first raid on Rome was directed against the Littorio railway yards modelled on Hamm. In the most recent raids the R.A.F. selected industrial objectives and Milan has been the chief target in view of German efforts to strengthen their hold on North Italy as well as the reports as to the disturbances and demonstrations in favour of peaee. The week-end saw a big raid, fires being visible from the Swiss frontier, and an hour and a half's alert in Milan on Sunday showed that it is the turn of Italy after Germany. The heavy bombers used last Saturday against the Breda works are said to have been on time and the raid itself lasted only 22 minutes. Industrial targets mentioned in recent reports on the Fiat steel works, the Bianchi car and lorry works, the aero-engine plants of Isotta-Fraschini, Innocenti and Alfa-Romeo and the Pirelli war factories of Milan. Raids have not averted strikes, in fact they may make strikes earlier and conscription decrees may make strikes easier, and conscription decrees may become unworkable. The cutting off of the postal and other communications between Switzerland and Italy affords proof of the damage done in Northern Italy. Milan rather than Rome is the centre of Italy's economic gravity and evacuation enforced by the raid of Thursday last may cause a slowing down of defence. The damage to the motor and aircraft industries probably probably will decide the duration of Italian resistance. Since airfields are damaged, successful defence presents its own problems. If an exemption is made in favour of Rome the northern cities are not likely to be left out, and favourable operational weather, if it holds up, means that raids on the West German side may follow after the finish of the race from

Families of Steel

How happy he who crowns in shades like these
A youth of labour
with an age of ease!

The Founder, Jamshedji Tata, was to him an inspiration and a friend, whose foresight ensured for him a carefree retirement after a life well spent.

The proud grandfather of a "Family of Steel", he enjoys today the fruits of his early labours in India's industrial development.

Messina. If Sicily is given up, and the airfields there are reconditioned, the Allied bombing must be a more serious danger to Italy than in the past. The problem is at present not only one for Badoglio but for the German envoys in Rome who have prevented the fall of the Fascists from having its further effects.

Swedish Decision

Sweden's socialist government, fully prepared for surprises, has decided to cancel the arrangement as to transport of German troops from Norway across Sweden. The setback for German diplomacy is not unexpected in view of protests lodged against the mining of Swedish waters. The Swedish Navy lost a submarine in April and a stiff note to Germany followed. Though Sweden's foreign trade is more or less dependent on German goodwill, a part of the shipping is at present assigned for trade with countries other than Germany, and economic warfare may not be resorted to. The cancellation of the transit arrangement suggests that iron ore imports from Lulea may be threatened before the winter. This in a way destroys the value of German contol of the Baltic. The permission originally granted for troop movements from Norway followed Finland's defeat and the Allied failure in Norway. This year Sweden has formally recognised King Haakon's regime as the legitimate government of Norway and ignored German disapproval. Intensified preparations for defence were an admission of Sweden's readiness to see Norway invaded by the Allies. The lapse of the transit facility will make it difficult for the Germans to reinforce the garrison in Norway or take it off for use elsewhere. The Swedish Government has evidently taken note of Finland's quiescence after the election of M. Ryti as President. The Finns are nominal allies of the Nazis and there is no compelling reason for them to move out against Leningrad. The isolation of Norway apart from the lapse of the transit facilities may also be secured by the damage to Hamburg and other German ports. What is more important is that Sweden for the first time has recognised her obligations to Scandinavia as to the Allies. German reverses may not explain the change in attitude, while it is easy to link it with the electorate's approval of M. Hansson's policy this year and proofs of German economic weakness at home and abroad. The independence conferred on Iceland by the Allies may weigh with the Swedish government as much as the latitude given to Finland to get out of the war. What is really important is that another neutral has revised her estimate of Germany's ability to win the war.

Shell's Services

A note on U.S. petroleum in the war must leave out rationing and turn to what peacetime research has accomplished. According to the Burma-Shell Newsletter highspeed war production in America has been helped by Shell there Isooctane from which aviation spirit is made cost $9 per gallon in 1934. But, Shell advised the Army in April 1934 that 100 octane fuel could be made at a reasonable price. Today largely through Shell research the U.S.A. has a very high proportion of the world's 100 octane gasoline and Shell supplies a high percentage of that. Fuel grade and quality account for aircraft performance. When run on 100 octane fuel planes fly 30 percent faster and climb 25 percent quicker than those run on 87 octane gasoline. Shell research led last year to the production of a fuel described as 25 percent more powerful than 100 octane. If the need arises the superior fuel can be produced on a commercial basis. A blending synthetic with exceptional anti-knock quality for supercharged aero-engines has also been produced by Shell scientists. This synthetic has helped to raise the production of 100 octane spirit by about 15 percent.

Petroleum is the source of acetone used for 'greenhouses' in aircraft which house the observers and others in bombers when a full, clear view is wanted. Shell is supplying acetone to the U.S. air force. Acetone is used for cordite and smokeless powder though it is largely used for lacquers in peacetime. Toluene is widely known as a coaltar derivative and the source of T.N.T. But Shell has found out two methods of manufacturing toluene from petroleum. Four U.S. plants of Shell in America produce enough toluene to make millions of lbs of T.N.T. Petroleum by-products coming from Shell Chemical Company are assigned exclusively to war uses. Sulphate of ammonia instead of going into fertilisers has been diverted for munitions. Synthetic rubber from butadiene is not a wartime discovery. Shell scientists examined how it could be made from petroleum and as early as 1939 Shell had a unit producing several tons of butadiene per month. Synthetic rubber is essential for the manufacture of petroleum hosepipes, oil pipe jointing and hydraulic gear. Reference made to the U.S. oil industry's large expenditure in 1938 on research with over 5,000 scientists at its call has to be amplified by mention of what has been achieved by Shell in putting petroleum on active service.

Calcutta National Bank

In the year ended June 30 the Calcutta National Bank reported striking progress as working capital increased by more than Rs. 1 crore. The decision to increase paid-up capital has been attended with remarkable success and in his report for the year Mr. S. M. Bhattacharjee related the expansion in deposits to the growth of capital and reserves. The profits are regarded as satisfactory and a dividend at 5 per cent tax-free is to be paid to shareholders. The Chairman's review of the Bank's affairs may be supplemented by reference to the balancesheet published to-day. Total deposits have risen to Rs. 150.48 lakhs and cash balances have risen to Rs. 47.33 lakhs. The holding of bullion is no departure from convention, for last year's profits on bullion and investments went into the Reserves which stand at Rs. 5.06 lakhs. The investments at Rs. 35.56 lakhs are below the total Advances in this case. In spite of many discouraging indications the Bank has found good use for the increase in Deposits. Progress in 1942-43 is reflected also in the item Lands and Buildings—an item undervalued according to the chairman who referred also to the return obtained from bank premises in Calcutta, Bombay, Patna, Gaya and Chittagong. The Bank's total advances amounting to Rs. 73.86 lakhs are less than the cash and securities held as on June 30. The balancesheet total shows a very large increase in the case of the Calcutta National Bank though 3 of its branches were closed and 4 branches only were opened.

The Bank's position has improved with the issue of new capital. The cash ratio and the proportion of Advances to total funds warrant serene confidence as to the future. There are no debts due from Directors or officers of the Bank and this mark of financial orthodoxy is not without interest. Though circumstances have favoured the expansion described it may be deduced that the rigid observance of conventions has helped in its way to attract deposits. The main feature inviting special notice last year was the increase in the deposits of the younger Bengalee banks notably Calcutta National and the Calcutta National Bank's latest balancesheet also illustrates the further effects of prudent management assisted by the increase in money in circulation. On the longer view the increase of over 100 per cent in deposits is hardly less important than the full, prompt subscription of the new share capital issued. Reserves have been strengthened in the very first year, and earlier anticipations as to healthy progress receive full support from the figures cited.

Recovery Complete

Evidence of further recovery in the half-year ended June 1943 is again provided by the substantial increase in advances reported by the Indian Bank Ltd. whose balancesheet denotes progress in all directions. Assisted by the cheap money conditions, the Bank's total deposits have been raised to Rs. 698½ lakhs. It will be noted that bills form a fairly large proportion of the assets showing that internal trade furnishes opportunities for this old and well-established Madras Bank. The changes in the balancesheet as compared with that presented six months ago are such as may be expected. In regard to lowering of interest rates and pressure of funds, the changes under investments and Advances favour the Bank. It is noteworthy that investments and cash together are surpassed by the total of Rs. 3.94 crores shown as Advances. The problem of increasing resources has been apparently solved with the recovery of pre-eminence in South India. The increase in expenses and taxation is not without its effect on bank profits this year but the interim dividend has been maintained at the former level. The Directors record satisfaction with the results which point to sudden and impressive recovery after the scare of April 1942 combined with the loss of oversea connexions retarded normal growth of funds and influence. Since the balancesheet bears witness to the return of unclouded confidence in the South it may well be that adversity had its uses. Anyway the absence of strain is indicated by large cash balances and the prompt acquisition of new capital. The experience of other banks in this regard is certainly shared by the Indian Bank in view of the measurable improvement in resources during the first half of 1943. The Bank's retrogression (unavoidable in the light of Burma disaster) has been purely temporary and its recovery has been more than rapid after June 1942.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

How can the expenditure of fiat money on nation-building departments fit into any scheme of public finance in a country like India? Whatever may be our political future, our constitution is bound to be of a federal kind. Some or all of the States may come in; or they may all succeed in keeping out of the Federal constitution. But even if a few States join, the Indian federation will consist of States and Provinces differently placed in regard to the vital problems of nation-building. And if the only way we have of achieving nation-building is to get money out of the printing press, we have also to be clear in our minds as to how this money is to be expended. Will the Central or Federal Government assume direct charge of nation-building activities or will it dole out the money to the member States? Both courses of action give rise to certain questions which call for some thought to be bestowed on them.

* * * *

For my part, I an unable to sympathise with the eagerness shown by many to think out these problems on the familiar lines of Federal and State jurisdiction. The anxiety to keep the limits of jurisdiction always clear-cut seems to me a relic of the days when every Governmental function was thought of in terms of power. In fact, it may be traced to an even more remote past, when Goverment was no more than an agency for protection of life and property and the rulers were innocent of discharging any positive functions to the people. But we have moved far from that stage. Even while a world war is raging, no one limits the functions of Government to beating the invader out of the country and seeing the criminals in jail. Government, all the world over, is saddled with a wide range of positive functions; and the political scientist knows no way, since laissezfaire was seen to be dangerously elusive, of setting rational limits to the functions of Government. Government, as the supreme social organisation, can by no means dodge its obligation to meet socially felt wants. But political theory and economic policy have always lagged behind this growing positivity of governmental functions, which, after all, is the test of social progress and homogeneity. The war against autocracy and one man rule which had gone on in every age and clime has only helped a certain degree of decentralisation of Government. And decentralisation has made great progress because of certain adventitious aids which it enjoyed. For one thing, it is the most obvious way of making serious inroads into unduly centralised authority. It appeals to democratic sentiment since it appears as a mere extension of the democratic principle to smaller entities within the State. It panders to feelings of parochialism. And, most of all, where questions of federation are involved, it offers a readily acceptable basis of compromise. Apart from these political grounds, there is the semblance of an economic argument, when decentralisation leads to the shouldering of local responsibilities by the locality concerned.

* * * *

Reasonable as are all these arguments, it is obvious that decentralisation can answer to the needs of only one stage of social evolution. When social homogeneity becomes a paramount need or where disparities in progress are dangerous, the whole case for decentralisation is bound to be undermined. The pressure of urgent social needs is always too strong for contemporary ideas and notions. The idea of local self-government has not been able to check the movement for central direction of education or public health projects in the advanced countries of the world. Universities and historic institutions have, no doubt, chafed against the intrusions of central authority; but the trend is clear; and neither financially nor administratively, can decentralisation be said to have held out in the last two or three decades. The Centre has resumed control, though to respect old prejudices words like "direction", "co-ordination" and "correlation" are freely employed. It is all inevitable; and if there is no use in resisting it, there is even less reason. For this passion for local Government springs not from a love of freedom, but from fear of authority whose centre is far away, fear that one province may have to pay for another and worst of all, the anxiety of local leaders to retain the power and pelf that goes with local expenditure. None of these motives has any title to respect or consideration. Narrow economic outlook and primitive political instincts are the worst obstacles to progress; and no nation which feels the urge to progress hesitates before these obstacles. The essence of human progress may be elusive; but the greater part of its content is secured only by the accomplishment of a number of tasks for society as a whole. And that is why, when Marx thought of the goal of a classless society, he could see in it no place for the Government of men by men —the essence of rational Government lies in the accomplishment of tasks for society as a whole.

* * * *

My proneness to dilate on political theory has taken me far. But I think it is high time that public opinion in India realised the folly of clinging to various insidious forms of parochialism and provincialism in matters affecting nation-building. For many people, the fact that

fiat money is necessarily centrally created would suffice as an argument for the Centre retaining all the power that goes with expending it. But that is not the point. The appeal to power is always best pushed or carefully retained in the background. What is important in this context is that provincial autonomy and local self-government have so far helped us little in the matter of progress in education and public health and the like. Agriculture and Irrigation, which were formerly administered by the Centre, became provincial subjects by a process of devolution. But we are just where we were before these revolutionary changes were carried out. There can be no progress on these lines. On the other hand, there are a good few evils in the present system to be reckoned with. Local self-government is a good and attractive phrase. It is a good electioneering cry, when the other party makes some mistakes. But the reality of it, as it obtains in India, is something very unpleasant. Decentralisation in India has only meant a shifting of responsibilities from the Centre to the Provinces and from the Provinces to the District Boards. Acts are passed in the Provincial legislatures to enable the District Boards to raise the necessary levies. But as the saying goes, when the pot is empty, what can you ladle out? District Boards however manage to get corrupt with the miserable pittance which is all their revenue. The few offices which are under their control are patronage, controlled with airs which party bosses in the land of the almighty dollar cannot emulate. And so, not only is there no progress in education and public health, but the problems are rendered more knotty by the creation of a vicious atmosphere in many places.

* * * *

That, and not the fact of fiat money being centrally created, is the reason why the Centre should retain full powers of control and co-ordination of all activities in respect of the nation-building departments. It is the administrative responsibility alone that can be shifted to local authorities according to the merits of each case. The total amount to be spent every year should be determined not by preconceived notions of prudent expenditure, but by the schemes which those in charge of the respective branches of nation-building are able to put up. The technical ability necessary for a careful survey of the problems on hand and the resources other than pecuniary that we have for their solution has to a large extent been gathered and garnered in the country. For public health, the School of Tropical Medicine and the associated institutions with Dr. Grant at their head and a galaxy of specialists under him have already made intensive and extensive studies; and they should be well able to formulate a comprehensive public health programme, estimate the financial needs and outline the administrative framework. In irrigation, the engineering services in the various provinces have always produced extremely able and efficient men who have been forced, by lack of opportunity, to be content with routine work. I remember one of them speaking to me enthusiastically of a project for utilising flood waters to the last drop for the irrigation of waste lands. He said, it is not a chimerical idea to take the waters of the Ganges down to the littlest rivulet in the South. He was summoned

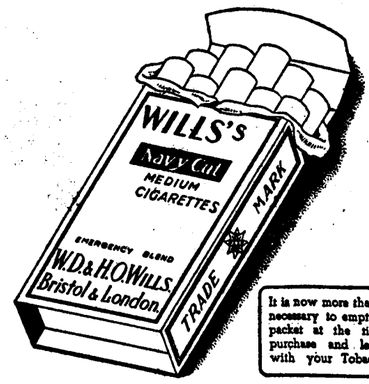
once, he told me, by the Congress Ministry of the time to expound his project before the Cabinet; but as the ministers would give no promise of exerting themselves if they were convinced of the soundness of the scheme, there was no exposition of it. Well, the idea may be, considering all the circumstances, too ambitious. But there, you have a sample of the creative genius that has survived decades of dull routine. I have no doubt in my mind that, if the irrigation engineers are asked to put their heads together, a number of sound projects will be formulated without delay. On road development a great deal of spade work has been done by the Road Association and commercial bodies interested in road development. Education, is, however, an intrinsically more difficult, and, in the conditions of the country, a definitely more ticklish question. We have the difficulties of language; we have a great deal of loose thinking done in the past on the question of vocational instruction; there are probably millions in India who insist that a bundle of prejudices and antipathies should be handed to the pupils in the name of religion; and, last but not least, we have the Pandora's Box handed to us by Mr. Ramsay Macdonald in the shape of the communal award. All these notwithstanding, we need not despair of forming a programme of national education in all its branches and for all classes. In Mr. Sargent, India has an Educational Commissioner who has both sympathy for every section of opinion in the country and loyalty to lofty ideals of education. Various plans have already been made for various purposes, but with the spectre of shortage of funds always haunting its authors. But given the assurance that there will be no shortage of funds, Mr. Sargent should be able to place a definite programme before the Government. In agriculture, the work done by the Imperial Council of Agricultural Research and the experimental farms has not been put to full use. Sir T. S. Venkataraman and Sir T. Vijayaraghavachari among those who have laboured in the past and the present personnel of these organisations certainly have ideas on the question of how best to take the benefits of research to the millions of cultivators in the country.



* * * *

I have mentioned these in some detail, because I wish to emphasise that neither the scale of expenditure nor the agency for it should be determined by lay ministers or mere officials. The first step is to instruct the experts to put together the results of work already done, to fill up such gaps as there may be in it by carrying out the necessary new enquiries and then formulate a five-year programme of energetic development. I have no desire to anticipate the results of such enquiry. But I imagine that, generally speaking, the system, on the financial side, will be one of adequate appropriations in the Centre, part of which will be expended by the Centre directly and part through provincial governments and local bodies. To bring the local bodies into the working of these schemes may well have the effect of improving the general cause of civic responsibility, of disseminating knowledge of our problems and the ways of their solution among people spread over all parts of the country and above all, it may prepare the country for the withdrawal of the necessarily tentative programme of expenditure of fiat money by the Centre, and the devolution of these responsibilities on the localities themselves. It is unnecessary to attempt any quantitative estimates of the appropriations that may have to be made for these purposes in the postwar period. An amount of Rs. 50 crores a year for a period of five years or an annually increasing amount with a smaller start would not be found either too liberal or too niggardly. Since all this will be fiat money, it may mean an addition of Rs. 250 crores to the volume of circulation. A necessary pre-supposition to this plan is that the Indian currency system is rid of the riotous forces of inflation that are now present and that, before the war is over, our note issue will have regained its normal proportions. This is hardly the place to discuss how this change is to be effected. The question has been dealt with in these columns and in other sections of Indian Finance times without number. Our note issue today is enormously swollen; but the application of a few obvious remedies will remove the swelling. Whether it will be done by the present government or whether it will be left to the future government, one cannot say with any certainty. But it is certain that a programme of national development with the aid of fiat money cannot be attempted in conditions of rank inflation.

(From Our Correspondent)

New Delhi, August 17.

The deepening food crisis in the country was debated at length in both the houses of legislature last week. Almost every speaker held the Government responsible for the present plight and bitterly criticised their dilatoriness, hesitations, half-measures and failure to enforce a bold and rational policy even two months after large areas in the country had been experiencing famine. The Assembly debate failed to elicit any concrete assurance from the Government except the vague promise that immediate action will be taken on the recommendations of the long-term Food Policy Committee. The Council of State debate, however, proved slightly more fruitful and the new Food Member, Sir J. P. Srivastava, was able to assure the house that he would "ruthlessly" fight the famine danger and would give his "earnest consideration" to the various suggestions made during the debate. He welcomed Rai Bahadur Ram Saran Das's proposal to appoint a Policy Committee to advise the department on all major matters. "I am all for associating non-officials with this important work", he said, "and I hope to be able to do something in this matter at an early date". He agreed with Mr. Dalal's suggestion to augment food supplies by imports and promised to do his best subject to the existing "bottlenecks of shipping and foreign exchange". As regards non-co-operation by the provincial Governments on which Major-General Wood dilated so much, Sir J. P. Srivastava refused to be deterred by the so-called constitutional difficulties and promised to see to it that the "provinces do not flout our wishes. I am determined that an all-India policy shall be followed by all". It remains to be seen whether Government action will be drastic enough to prevent a major defeat on the home front. Following the Food Grains Policy Committee's interim recommendations the Government of India are expediting their plans to introduce rationing in the main urban areas of the country. Provinces and States have already been asked to send officers for a ten-day course of training in rationing methods at Bombay. Mr. Kirby, Rationing Adviser to the Government of India, and certain officers of the Food Department are expected to conduct this course.

* * * *

The urgent need to stop the inflationary rot was emphasised in the Assembly during the debate on Sir Zia-ud-Din's resolution asking the Government to modify their currency policy to attain stability of prices. The Finance Member was more hopeful than on previous occasions and seemed quite happy over the success of his recent anti-inflationary masures. He took full credit for the recent big fall in cloth prices and claimed to have broken "the greatest racket that ever took place". He promised to extend control of commodities and said he would establish one control after another. He proclaimed himself as the friend of bears in reply to complaints of their having made huge speculation profits and said he stood for "bears savaging bulls". His only reply to those who expressed doubts about the security of sterling balances was that the sterling deserved great confidence than any other currency belonged as it did to a country where prices have been more stable these four years than anywhere else. He, however, failed to reply to suggestions of "other possibilities of raising money for war needs besides augmenting currency" and gave no definite answer to the proposal to buy British investments in this country. Nor did he indicate any methods to deal with free money—the money with people who, as Mr. Krishnamachari said, had no confidence in investments in recognised channels and which was playing such "havoc in the black market".

* * * *

I understand that the Government soon propose to denounce the trade agreement with South Africa. Of course due notice provided in the agreement shall have to be given before this country stops all exports to the Union. The proposed denunciation of the trade pact follows the recent assurances by Dr. N. B. Khare of early retaliatory action over the pegging legislation issue. India is at present exporting rice, textiles, oil seeds and jutes to the Union, the last being the most important item, the Union depending solely on India for this commodity. The stoppage of rice and textile exports will hit our own countrymen in the Union more than the Europeans. As to the retaliatory effect of the stoppage of jute exports the Indian aim will be achieved only if South Africa cannot do without Indian jutes while we can dispense with the tanning bark supplies all of which we are at present getting from South Africa. The results of economic sanctions are not yet wholly clear. What is certain is that a battle of trade reprisals is sure to hit the war economy of both the countries.

(From Our Correspondent)

Bombay, Aug. 18.

The Bombay Millowners' Association has opened its shops for sale of ration cloth this week. A press note issued yesterday stated that grain ration cards will help buyers to get 5 yards for cash only. Only grey goods and bleached goods will be offered as cloth but a buyer can take 50 per cent of the ration in one item alone excluding sheets limited to 15 per cent. Grey dhoties are to be sold at Rs. 6-1-0 per pair and the price of grey dhoties is Rs. 6-7-0 per pair. The price of grey sarees is fixed at Rs. 5-10-0 and of bleached sarees at Rs. 6-8-0 per pair. Bleached drill is to be sold at 15 annas per yard. The ration shops may exert a definite effect on retail prices after some time. In recent weeks, cloth prices have unaccountably firmed up, and cloth dealers' objections to the Control Order have received little support. Wholesale prices have declined, but retail prices have remained high. The fall in cotton prices did not bring about rapid adjustment. The new rule as to licensing of dealers and offer of railway facilities for cloth made for reduction of stocks; but this helps dealers to put up prices which are described as being 300 per cent above the pre-war level. The Industries Department has notified that hawkers and dealers must take out licenses for selling cloth. Private hoards may therefore be liquidated and the black market peril may not raise its head.

There has been correspondence as to pornographic literature. Dr. Roberts came out as a strong critic of the kind of books offered by many shops. This branch of publishing appears to surpass the issue of pamphlets, and the market is obvious. There have been police raids in Karachi where 6,000 objectionable books have been seized. There has been no official admission as to the books or their purveyors. The danger to public morals is obvious, and the Archbishop of Bombay objected to the sale of obscene literature to troops. The trouble must be described as not peculiar to Bombay. But secondhand assurances as to the kind of books, and journals too, printed and sold at present seems unnecessary. The fact is that a new class of unwary and well-to-do reader is available to merchants of printed filth. The police can deal with it most effectively, but a vigilant Government can deny paper and presses to the publishers.

The University is to open its course in military studies. From September the course will begin in Poona. The Army has given a Director of Studies and the student can choose a new profession. The Senate's famous resolution has borne fruit. Every year 20 students will be selected and the diploma in military studies will help young officers who apply for commissions. The University's preliminary course should enlarge the supply of Indian officers; more so as promotion in the war period has been satisfactory and Indians have risen to commandants. The course will be modelled on the plan adopted in Britain. The military schools may find a powerful rival but advocates of Indianisation will be pleased to find that the University is ready to encourage young men to choose an army career. The diploma course is meant for would-be officers only though the first batch of trainees may find that they won't have a chance of active service. The enlargement of the military academy and the expansion of the I.A.F. may help trainees to get a footing in non-civilian occupations. The engineering and other branches of the Army and Navy may also attract university men but they may not have to take the course in military studies.

The Labour leaders here should be satisfied that Dr. Ambedkar's succes with the war injuries compensation bill. The earlier Ordinance is displaced by a measure which compels employers to pay the usual compensation to workmen even if the cause is remote. The European Group criticised the bill as discriminating between workman and citizen. Instead of being an insurance plan, the bill according to its critics, has been passed to further plans for welfare and taxation. The right to search premises to acquire information has been denied by an amendment, but Dr. Ambedkar's success stands out, and it may have its effect on Labour's relations with the State as employer.

The report of good rainfall in Guzerat up to the first week of August, of normal rainfall in Konkan and of scattered showers in the Deccan proves that the monsoon is not so heavy as in the City. The crop and season report up to July 31 described standing crops as in good condition and livestock being normal with fodder sufficient except in parts of the Deccan. Kharif crops were being sown and paddy was being transplanted. In Bijapur there was famine and in four other districts scarcity was acute. Relief works were in progress in five districts and free kitchens had to be kept up in Bijapur and Belgaum. Only in Satara was improvement discernible after rain. Prices were steady and public health was good in that district.

Mr. Talpade has won out as the Government has released him without any conditions, after unusual delay. A petition writer, convicted of offences, vague enough, under Defence Rule 26, got his own back by petitions. The Bombay High Court had to admit that he was illegally detained. Mr. Talpade went up to the Federal Court to get justice, and he had to face a fresh trial here. For four months he was a shuttlecock of the tribunals but Sir John Beaumont dropped a hint that while Governments and Courts wrangled a bad law should not make a hard case. Mr. Talpade may become a memory like Marbury whose fame is kept alive in U.S. constitutional law though there is little chance of the judges winning the fame of Marshall. Mr. Talpade or his counsel may well enter a plea against the Ordinance.

The Maharahtra Chamber's president deprecates the piecemeal adoption of price control. Last Wednesday only he urged that policy upset markets and cloth dealers for instance, did not know what replacement costs were. Mr. Dahanukar advanced the opinion as to civil aviation after the war. He asked for safeguards. The acquisition of air lines by shipping companies suggests a useful departure and it is proper to mention in New Zealand the Union Shipping Company operates an air service so that if Indian shipping strikes out by acquiring all the lines it will only follow the example of the U.S. Grace Line which is interested in South America's air lines.

Lala Yodhraj visited Bombay last week. He was entertained to tea by local merchants. The Punjab National Bank's Chairman deprecated the continuous expansion of currency in India and declared that sterling balances must bring in capital goods after the war. Seth Pranlal Devkaran acknowledged the services of the Punjab National Bank in a tribute to the Chairman from the commercial community. Mr. Tulsi Ram supported the reference to the Bank and its chairman.

A critic of the Agricultural Department has urged that Grow-more-food propaganda has misfired. He has pointed out that the advertisements said nothing about help in regard to seed. It has been asked what happened to seed given last year and the crops grown with the help of seed given by the Government. As regards fallow land many strict measures may be required. The official view has been controverted. It is said that 20 to 30 per cent of arable land in Thana District is uncultivated. In the vicinity of Bombay much land is untilled while owners dug out red soil and sent it to Bombay. Regional self-sufficiency is a clear doctrine accepted already but what every province has to do is not clear. There should be little need for transport if agriculture were made to help in the food plans. Government can get back seed given like any other advance to ryots and with the seed can get other cultivators to farm fallows or cultivable waste. Though the Defence Rules authorise the requisitioning it is doubtful if land will be got for the current season and the food supply increased to any extent.

Airway Port

(From Our Correspondent)

Karachi, Aug. 15.

Sind is at present enjoying a respite from its recurring political crises. The death of Mr. Allah Baksh not only removed an outstanding figure from local public life, but practically widowed the Assembly of a virile opposition bloc. With ten Congress members in jail, and Mr. Allahbaksh's party practically liquidated, the opposition in the Assembly is confined to a microscopic section of Hindus, led by the ex-Minister, Mr. Nihchaldas Vazerani. Among the Hindus of this new province, there is a fear that some of the controversial Bills promoted by the Ministry such as the Sind Land Alienation Bill and the Moneylenders' Bill were calculated to affect their interests and vigorous opposition to the new measures was voiced through the press. Though the Minister concerned has promised to safeguard Hindu interests, radical alterations in the Select Committee stage are being made in regard to the Sind Land Alienation Bill.

Meanwhile, a minor Assembly sensation was caused when the present League Ministry sustained its first defeat as a result of Mir Bundeh Ali Khan's motion for postponement of discussion regarding the new assessment proposals being adopted in the teeth of Ministerial opposition. The zemindars still dominate the Assembly and they do not want to pay any increased assessment if they can help it, though their main argument for postponing consideration was the fact that sufficient time was not given them to consider the new rates of assessment. Some people thought that this would prove a bone of contention between the Ministry and the Governor but the issue has been closed with the Government passing final orders on the new assessment proposals.

The present assessment applies to 57 talukas in the provinces. They provide for a sliding scale applicable to cotton in the non-Barrage areas and wheat and rice crops in both the Barrage and non-Barrage areas except for Karachi land and contain a provision for the introduction, during the currency of the revised settlement, of soil classification. The Governor unable to accept the suggestion of the Ministry in regard to the application of the sliding scale, had to exercise his special responsibility with regard to the Barrage lands. The new assessment proposals are expected to bring in Rs. 150 lakhs more to the Provincial exchequer and a large portion of this amount is expected to be used for nation-building activities.

Karachi's wartime boom has almost come to an end and on the commercial front there is very little activity. Before the introduction of control, enterprising Shikarpuri traders made a lot of money, but now with speculation at a standstill, the only visible activity is the purchase of land and buidings in the city of Karachi as well as the interior of the province. Buildings in the city of Karachi are fetching double their pre-war price.

There is considerable heart-burning at the food policy pursued by the Government of Sind. Taking advantage of the fact that ours is a surplus province, the Government are only trading and have monopolised the export trade into their hands. The prices are arbitarily fixed, so far as the producer is concerned, and sold outside at fabulous margins of profit. The monopoly for the export of food grains is given to a syndicate, who in turn add their own margin of profit before selling it to outside bodies. The Sind Premier admitted on the floor of the Assembly that the Government had made a profit of Rs. 50 lakhs by their trade activities in the course of three months and the profit is likely to run into crores very soon.

Though the Cloth Control Order has had an appreciable effect on the local market, the prices have not come down to the Bombay level. Wholesalers have begun selling cloth by a piece ranging from 20 to 40 yards and half a piece instead of by bales or cases. Wholesalers are keen on disposing of their stocks and have opened many retail shops. Standard Cloth shops are doing brisk business. There is fear among the cloth merchants that after the small present stock is exhausted, there will not be adequate supplies to meet the requirements of civilians after meeting the demands of the military and the export requirements.

After the ban on forward trading, the cotton position here has deteriorated. In the absence of the protection provided by hedge markets merchants are anxious to dispose of their stocks. Moreover, new crops will be coming in about 6 to 8 weeks' time. The prices at which hedge business was closed under Government orders were considered very low, being about Rs. 59 per maund for 4F (Americans) and Rs. 72 per maund for N.T. but after May 31, when the forward market was closed, cotton prices have gone down considerably. At present 4F cotton can be had at Rs. 50 per maund and N.T. at Rs. 59.

Locally the wheat outlook however is bright. There is no scarcity at all. Owing to Government control, merchants do not even consider it worthwhile to stock wheat. There being a surplus in the Province, wheat is always available at Karachi and the interior below the control price. The position hereafter will depend on the quantity that is exported in relation to the civilian and military requirements.

There is an abundance of rice in the province. Sir William Stampe, Irrigation Expert of the Government of India, is here at present and is discussing with local officials, sundry schemes for growing more rice in the province. He has an ambitious plan to bring four lakhs of acres under rice in Sind so as to reduce the deficit of a million tons in the rice stock of the country, caused by the loss of Burma. Sind has at present 14 lakhs of acres under rice cultivation.

The Government of Sind recently passed an order requiring all people including merchants who are already selling under a license, zemindars and others to surrender all stocks beyond 10 maunds of rice and 2 maunds of paddy if they had not obtained special permits. This order has created some hardship. It is considered to be a prelude to rationing for which statistics are being collected in urban areas.

South India

(*From Our Correspondent*)

Madras, August 17.

The problems of South Indian agriculture are very acute and indeed manysided. As the food situation degenerates from bad to worse it is but natural that attempts are made to organise agricultural workers with a view to agitating for reforms. As often pointed out in the recent issues of "Indian Finance", agriculture has been sorely neglected since 1930 and on the eve of this war South Indian agriculture was weighed down with numerous pressing needs. Lack of a co-ordinated agricultural plan, either on an all-India or on a provincial basis, has now caused much anxiety and resentment. A conference of the Tamil Nadu Vivasaya Thozhilalar Sangam and Zamin Ryots' Association was recently held at Mayanoor under the presidency of Mr. K. Santhanam, the well-known champion of the peasants. It was proposed to bring together the existing associations and unions of cultivators who worked for wages or on crop share or lease basis and small cultivators. The Conference believes in trade union methods and would serve as a forum for the study of the urgent problems of the ryots and for the formulation of sound agricultural policies. A manifesto has been issued detailing the demands of agriculture, viz., facilities for reclamation and irrigation of lands, easy rural credit, improved methods of production and marketing, crop and livestock insurance, etc. Agricultural servitude has to be abolished and measures have to be adopted for giving security to the cultivators. Problems of illiteracy, bad housing, under-employment and unemployment of agricultural labour have to be tackled without any more delay. The conference can really do useful work if it takes steps for collecting full and up-to-date facts and figures regarding South Indian agriculture and, instead of thinking merely along political lines, if practical suggestions are placed before the Government, we are sure the cause of ryots would be effectively served. The path of trade unionism is not without its dangers and the leaders who are now working for organising agricultural labour should direct the energies of cultivators more and more along constructive channels.

While agricultural labourers are voicing forth their grievances in Tamilnad the rubber plantations of Malabar are clamouring for early attention to their urgent needs. Mr. J. E. Pitcairn, the chairman of the rubber section of the U.P.A.S.I. referred to the food crisis of the estate labours thus, "Surely there is something peculiarly illogical about the system which calls for every sacrifice to equip the country with the modern armies it requires for defence and yet makes no proper provision for the supply of food for those who produce the rubber upon which these armies rely, and without which their movements would be paralysed." He urged for the resumption of a previous arrangement under which the Government of Madras allotted a monthly quota of 2,145 tons for the Associated Planters of Travancore for distribution to tea and rubber estates in the State and suggested that the Essential Services Ordinance may be made applicable to the rubber estates also.

The production of rubber at present is quite satisfactory since as a result of negotiations the Supply Department is purchasing rubber at fixed prices and payment has also been speeded up. Tapping has been intensified even to the extent of tapping to death 20 per cent of the trees. India is not now conforming to the international rubber agreement and the area of planting has been increased to 76,000 acres. The Rubber Control Act which would come in for renewal by the end of this year will not make any change in this respect. Regarding the prospects of post-war competition from synthetic rubber Mr. Pitcairn said that world demand would expand so much as to absorb as much synthetic rubber and natural rubber as could be produced.

The food situation here is causing great anxiety and Mr. C. R. Srinivasan, Editor, "Swadesamitran", aptly described the position in this province with regard to food grains when he said the other day in the Ranade Hall, that the man-in-the-street was no longer interested in the war situation but was concerned solely with his food. The food crisis has assumed such alarming proportions that everyone is worried only about food and has hardly time to discuss other things. The Adviser in charge of the food department in this province believes that the situation is still under control as far as stocks are concerned and the City Fathers too are apparently satisfied with the assurance given by the Collector in this connection. But these explanations and assurances have not helped the ordinary house-holder in securing his daily requirement of rice. The memorandum, submitted by the People's Food Committee, while agreeing with the Government spokesman that there is enough stock of rice in the Madras province to feed the population till the new crop is available for general consumption, draws attention to the fact that the methods that have been till now adopted for distribution of food grains to the people are fundamentally defective and asks for the immediate introduction of rationing in urban areas coupled with other measures for the proper wholesale distribution of stocks from the surplus to the deficit areas. That the Government have realised the force of the argument is evident from the fact that they have decided upon the formation of non-official committees over and above the 40 existing vigilance committees to deal with many commodities including rice in case they decide upon rationing for the City of Madras. The scheme contemplates the division of the city into seven rationing circles with a committee consisting of representatives of consumers and dealers and the circle rationing officer for each circle to advise the officer-in-charge. Already the special officer for pre-rationing has requested the Mayor to nominate two Councillors for each circle. The Governor has also issued comprehensive regulations under clause 12 of the Madras Rationing Order, 1943, in respect of the City of Madras. The rationing order has not come into force yet but it seems certain that citizens of Madras would be in possession of their ration cards pretty soon. In the mofussil partial or full rationing has been already in operation in some towns like Salem, Bezwada and Kurnool.

The Mysore Government have issued an amendment to the Defence of India Rules as applied to Mysore empowering the Government to call for declaration of food stocks from any person and for requisitioning them. Purchase of food grains by Government is well under way. The aim of the Government appears to be to purchase all available stocks and undertake the direct distribution of food. Whether any kind of price control is contemplated is not yet clear but it seems as if the purpose is to achieve equitable distribution of the available stock. Mr. M. A. Srinivasan, Minister to the Government of Mysore, explained the details of the Mysore food scheme and indicated that depots would be open both in urban and rural areas to facilitate distribution. Rewards are offered to persons furnishing information regarding stocks held in contravention of the Order. A Central Food Council in Bangalore and District Council in the districts are also in contemplation. The Minister revealed that, as a result of the recent Food Conference at Delhi, Mysore had obtained an allotment of 1,000 tons of rice, 5,000 tons of millets, 4,000 tons of bengalgram and 7,000 tons of wheat and wheat products and assured that

measures would be adopted to prevent stocks of grains being taken away from the villagers to urban areas creating scarcity in rural areas.

Hyderabad seems to be very active in gearing up the Grow More campaign. A comprehensive scheme has been launched for accelerating the production of food grains and fodder erquirements. A sum of Rs. 12 lakhs has been spent for restoring 810 tanks capable of irrigating 58,000 acres. Improved varieties of seeds needed to cultivate 150,000 acres of rice, 50,000 acres of wheat and 70,000 acres of gram and 250,000 acres of jawar are being distributed. In order to help the agriculturist to divert cultivation from cotton to food crops a subsidy of Rs. 2 per acre on lands so diverted has been announced. Cultivation of non-food crops in the areas covered by the Dindi project has been prohibited and, for encouraging jawar, a remission of 25 per cent in land revenue and water cess has been promised. A concession of 50 per cent in land revenue is also offered for those who come forward to cultivate waste lands. That the Nizam's Government has been straining every nerve to attain maximum production of foodstuffs is evident from the fact that Rs. 34 lakhs have been sanctioned for distribution of seeds and manure and sinking of wells. The Public Works Department has on hand four new irrigation projects as priority maesures and when they are completed four more districts would be enabled to increase their output of useful food grains.

NOTICE

CONTROL OF CAPITAL ISSUES

DEFENCE OF INDIA RULE 94-A

Applications for consent to the issue of capital by companies should be addressed to the Examiner of Capital Issues, Finance Department, Government of India, New Delhi, and should be made in the form of a letter which should include answers to the questions shown below

NOTE:—The answers should follow the order of these questions and the short title of each question should be quoted against the corresponding answer. The letter (but not enclosures) should be in duplicate.

A.—New businesses: and further issues for cash by existing companies.

1. *Name.*—Name or proposed name of company.

2. *Incorporation.*—Place of registration of company and of head office; and whether public or private.

3. *Previous applications.*—Give particulars of any application previously made to the Government of India in this connection by or on behalf of the same parties since 17th May, 1943

4. *Business.*—(*a*) Proposed business of the company, with particular reference to the issue now proposed.

(*b*) The place where it is to be carried on.

5. *Directors, etc.*—Give names and business addresses of directors (or in the case of new companies, of promoters and proposed directors, and their experience in businesses of a similar character).

6. *Cash issues—amount.*—Exact amount of shares, debentures and any other security which it is desired to issue at this stage for *cash*, distinguishing between ordinary, preference and deferred shares and giving the nominal value and issue price of each.

7. *Cash issues—nature.*—(*a*) Will the above cash issues be public or private, or if both, to what extent of each kind?

(*b*) If public, give proposed terms of the issue, *e.g.*, names of underwriters, amount of commission and how payable, issue of prospectuses or circulars, etc.

(*c*) If private, to whom to be issued.

8. *Cash Expenditure.*—(*a*) *Objects.*—The exact manner in which the proceeds of the cash issues will be expended, showing the amounts to be allocated to the various items.

(*b*) *Controls.*—If any of these items involve the purchase of goods subject to any control, give reasons for anticipating that the goods will be available.

(*c*) *Transport.*—When the objects include the establishment of factories, workshops or other buildings during the war,

(*i*) quantities (weight or wagon-loads) of construction materials and/or machinery and plant estimated to require rail transport and from what sources;

(*ii*) estimated quantities of raw materials, including coal, and of finished goods to be moved by rail in a given period, and from and to what places;

(*iii*) increase or decrease, if any, in rail transport to result from the new enterprise when compared with the present movements of the commodities to be produced and their raw materials.

(*d*) *Foreign purchases.*—State separately the amount (approximately) of the materials or plant to be purchased out of the proceeds of the issue which are to be obtained from sources elsewhere than in India; and if the actual business of the concern will involve the purchase of imports, give particulars.

(*e*) *Purchase of existing concerns.*—If the assets of an existing concern are to be acquired otherwise than as dealt with under head B below, give name of concern, particulars of purchase price of assets and method of valuation adopted.

9. *Issues not for cash.*—(*a*) Give details as against question 6 of any securities which are to be issued for a consideration other than cash.

(*b*) Details of such consideration.

(*c*) Names of parties.

10. *Government contracts.*—If the company has the assurance or anticipation of securing any contracts or sub-contracts for Government departments, a statement should be furnished giving full particulars, including name of department and grounds for expectation.

11. *Other particulars.*—(*a*) Any additional facts which you wish to adduce in support of your application.

(*b*) In case of existing companies, state date of incorporation and amounts of capital already subscribed and already paid up; and forward copy of latest balance sheet (with certified translation in English, if not in that language).

(*c*) In case of new companies, send (draft) Memorandum and Articles of Association and draft Prospectus, if prepared.

B.—New companies—conversion of existing businesses into limited companies, where fresh capital is to be raised.

Questions 1 to 11 (*a*) and 11 (*c*) above, and the following further questions:—

12. *Present owners.*—Names and addresses of present owners of business, and whether a partnership or an individual or family concern.

13. *Taxation.*—(*a*) Date on which the existing concern came into existence.

(*b*) *Pro forma* balance sheet or statement of accounts showing liabilities and assets of the concern;

(*c*) Value at which the assets are to be taken over by the new company, showing separately such assets as good-will, working capital and land.

C.—New companies—conversion of existing business into limited companies, where fresh capital is not to be raised.

Questions 1, 2, 3, 4, 5, 9, 11 (*a*), 11 (*c*), 12 and 13 above and the following further question:—

14. *Small Issues.*—Details (as for question 6) of any small issue of capital to be made, not for the purpose of introducing fresh capital, but for such purposes as those of qualifying directors or of interesting employees.

D.—Existing companies—transactions involving no new money, e.g., capitalization of reserves or profits or issue of shares in exchange for debentures, etc.

Questions 1, 2, 3, 4, 9 (*a*) and (*b*) and 11 (*a*) and (*b*) above; and in the case of capitalization of profits or reserves, the following further information:—

15. *Reserves and Profits.*—(*a*) Exact amount (in figures) at the time of application standing to the credit of—

(*i*) the Reserve Fund,

(*ii*) the Profit and Loss Account.

(*b*) Are these amounts arrived at after making proper provision for all tax liabilities; if not, give estimate of such provision.

(*c*) If any amount for good-will is included as an asset in the balance sheet, and not shown clearly as a separate item, state such amount.

16. *Reasons.*—Reasons for proposed capitalization of reserves or profits.

A. H. LLOYD,
Examiner of Capital Issues.

Note.—Cut this notice out and keep by you. If you mislay it, you will probably be allowed to take a copy from one on the files of the nearest Registrar or Assistant Registrar of Companies.

(*Continued from page* 370)

It was disclosed in the Council of State that the Anglo-American Steel Mission which visited India in June had already urged on the Governments concerned the necessity for expediting the despatch of urgently required railway equipment to this country and to secure for India certain important steel and steel machinery supplies. The Government had already initiated action on the mission's recommendations regarding closer co-ordination of steel production and imports with the fabrication of finished articles and more efficient handling of defence demands for steel.

* * * *

The value of Military Stores of all kinds charged to the British Government has risen steadily from Rs. 8 crores in 1939 to Rs. 225 crores in 1942-43 according to revised estimates. The figures for 1940-41 and 1941-42 were Rs. 45 crores and Rs. 124 crores respectively. British purchases in India have therefore been mainly responsible for the enormous increase in paper currency and thus directly contributed to the unprecedented inflation in prices.

* * * *

The Government have after all responded to the persistent public demand for cheap drugs and medicines. Due to the malaria and cholera epidemics in several parts of the country and the greater incidence of disease on account of the general malnutrition, as a result of food shortage, the supply of cheap medicines has become an urgent necessity for a long time. Mr. M. S. A. Hydari's announcement of a proposed control over the prices of drugs and medicines will come as a great relief. Mr. Hydari has made it clear that his aim is not to cut down the moderate profits of the importers and manufacturers but to eliminate profiteering by unscrupulous middlemen who took unfair advantage of the war time shortage in drug supplies. Mr. Hydari made it clear that the Government were now determined to introduce control over distribution without much delay.

EAST INDIAN RAILWAY
TENDER NOTICE

Annual Contract item over Rs. 8,000
Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta on 22-9-43 at 12 O'clock non.

Tender No. 802/Gb10/357/C for the supply of Brooms Cocoanut with wooden plugs and wire bound.

Tender forms with full particulars can be had from the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores direct by Money Order. No refund is permissible.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into tender box outside the Dy. General Manager's (Works) room by the Tenderer or his representative.

R. E. MARRIOTT,
General Manager.

The Public Health Committee whose appointment Sir Jogendra Singh announced so casually in the Council of State will consist of 25 members, mostly non-officials. The enquiry, I understand, is in connection with the post-war reconstruction schemes regarding agriculture, industries and public health. The members are not expected to undertake long tours but will study and frame their proposals on matters supplied by local authorities.

* * * *

Due to the recent increase in the work of the Food Department there has been a minor redistribution of portfolios among the members of the Executive Council. Sir J. P. Srivastava who has practically no work for some time due to the removal of the air raid danger took charge as Food Member last week. The new Food Member has got a new secretary and a new Director-General. While Mr. R. H. Hutchings will soon replace Major-General Wood as Food Secretary, Mr. B. R. Sen has been appointed as Director-General of Food. Major-General Wood has been appointed Director-General of Munitions. Mr. T. S. Pillai has been appointed as Deputy Director-General of Supplies (Supply Department) while Mr. C. C. Desai is taking charge as Inspector-General of Supplies (Industries Department).

HILL BIRD.

(*Continued from page* 351)

sory for deliveries to be completed in four days. Other transactions in bullion are illegal. The shortening in the period of delivery to four days from twelve days resulted in a sharp rise in prices early last week. There was a rush for covering by bears and the quotation improved by some points to Rs. 75-12. There was a heavily oversold position and actual supplies were very short of the market's requirements. Bears had to carry their positions every four days by paying heavy premiums. There has been some settlement of outstanding transactions but at the lower levels there is genuine investment enquiry. Early this week a sharp decline in prices was recorded with heavy selling by the States. It was also reported that the Reserve Bank was a seller. So far we have not been able to get any confirmation regarding the reports about official selling. The general tendency in the market is bearish and but for the small buying by investors at the lower levels quotations might have been marked down further lower. In the last two days there has been a slight recovery but with the further improvement in the war situation and the complete absence of speculative activity a further decline in prices might be recorded. There has not been much activity in the silver market and quotations have been marked lower only in sympathy.

The exchange market has been dull but steady.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s 6 9/32d., and four months at Rs. 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329⅜.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money is unchanged at ½ percent.

NEW CAPITAL ISSUES
HOW TO SECURE PERMISSION

In order to secure Government of India's consent to the issue of capital by companies, applications, which should be addressed to the Examiner of Capital Issues, Finance Department, Government of India, New Delhi, should give full details regarding nature of business to be transacted, names of promoters or directors and their business experience, nature and amount of capital to be issued, etc.

The exact heads under which details are to be furnished appear as an advertisement elsewhere in this issue. Applications should be in the form of a letter giving answers to the questions contained in the advertisement."

4% Karachi Municipal Corporation Water Works Debenture Loan

(RECOGNISED AS TRUSTEE SECURITIES)

Karachi Municipal Corporation have been empowered by the Sind Government under their Resolution No. 2027-G.A/42 dated the 28th July, 1943 to raise a loan of Rs. 34 lakhs being the second instalment of the loan of Rs. 95 lakhs for the Karachi Water Supply (Indus) Scheme, first instalment of Rs. 40 lakhs having already been raised in December, 1942.

The Scheme is estimated to cost Rs. 1,89 crores and the Municipal contribution has been fixed at Rs. 95 lakhs and the balance is borne by Government of India and Government of Sind.

The loan to be floated is for the period of 40 years bearing interest at 4% per annum payable half yearly.

The loan is recognised as Trustee securities and is secured on the revenue and assets of the Corporation.

The limit of the borrowing powers of the Corporation as per the Municipal Act is Rs. 344 lakhs. The present net loan liability after deducting Sinking Fund accumulations is Rs. 124.36 lakhs only.

Out of this loan of Rs. 34 lakhs, Rs. 10 lakhs are reserved and set apart for issue to and in the name of the municipal Corporation of the City of Karachi under Section 68 of the Municipal Act and the balance of Rs. 24 lakhs is offered to the public at a minimum premium of 5 per cent i. e. Rs. 105/- for every Rs. 100/- loan.

Tenders will be received for minimum sum of Rupees one thousand and multiples thereof.

Brokerage at the rate of 1/8% will be paid to recognised brokers and banks through whom accepted applications are received.

Tenders on printed application forms will be received upto 3-0 p.m. (S.T.) Wednesday the 15th September, 1943 by the Undersigned at the Municipal office, Bunder Road, Karachi.

T. J. BHOJWANI.

Resume of Commodity Markets

The feature of the week is the sharp decline in prices for bullion, gold in particular. With the amendment to the Defence of India Rule deliveries have now to be completed within 4 days from the date of contract. As speculative activity has been restricted, there has been a sharp decline in prices. The piecegoods market has moved further higher on reports that the Distribution Committee of the Textile Board has recommended an extention of time limit for the disposal of stocks that were manufactured prior to August, 1943. The decisions that were taken at the conference that was held early this week to consider afresh the situation are not known.

* * * *

The jute market has been absolutely dull while the jute manufactures market has been firmer on reports that production has been very badly affected by the difficulty of mills in regard to coal supplies. The difficulties of the jute industry at the present moment have given rise to the fears regarding the ability of mills to absorb the whole of the current season's crop. Already the lower level of production has resulted in the reduced consumption of jute by mills to the extent of 3 lakhs bales. With the reports regarding the possibility of a further restriction in working hours for some months, the total requirements in respect of the current season may be considerably below the original estimated figures. With not much of difficulty regarding transport facilities and the anxiety of holders to dispose of their stocks, in order to meet their daily mounting costs of living, there has naturally been a decline in prices during the past few days and quotations are as much as one point below agreed maximum rates. Owing to the uncertainty regarding the future mills are not prepared to enter into fresh commitments and business in new crop, despite the fact that we are at the end of August, has been on a surprisingly small scale. If new crop arrivals continue to pour in by the end of September quotations may well be substantially lower. The complete change in the outlook should have come as a great surprise to the ryot as with the agitation for higher maximum prices, following the decision of the Indian Jute Mills Association to fix maximum prices for goods around levels that existed in the middle of June, it was generally believed that it would be possible to realise a good return from the current season's crop.

* * * *

That the authorities are anxious to relieve the situation as far as possible is evident from the cancellation of orders for unproofed sandbags. The cancellation of orders for sandbags is perhaps due to the feeling that with the improved war situation the demand for bags may not be very great. Mills have so far been meeting their deliveries from existing stocks and they can continue to do so for some time more. But it should not be forgotten that the loss of working hours means a loss not only to mills but to the labourer and ryot as well. In spite of the reports regarding the interruption to working and the shortage of coal supplies the jute manufactures market has not appreciated to any great extent and quotations are still below maximum prices.

* * * *

The rise in the piecegoods market has not been arrested and the position has been further complicated by the reports that a general extension of time limit will be granted to traders for disposing of their stocks. We pointed out last week that there was need for checking the rise in prices and that the initial success would not prove of any use to the general public if the authorities agreed to a general extension of the time limit to traders for the disposal of their stocks. There have been complaints regarding transport facilities in recent weeks. The delay in deliveries so far as Eastern India is concerned is understandable as the programme has been completely upset by the breaches in the railways. Other markets could have been served well.

* * * *

The official review of the year's working of sugar control points out that the control over prices has been very successful and that the range of the retail prices of sugar was not very much higher than the rates fixed by the Government. The success is attributed to the efficient utilisation of transport facilities and the control over movement of sugar from the provinces of U. P. and Bihar. There is no doubt that the Sugar Controller has been able to despatch the necessary quantity of sugar to the various consuming areas in the last few months but in the province of Bengal despite the fact that nearly 83 per cent of the quota of sugar has been delivered black market prices are nearly double the control rates and even at the higher rate it is not possible for the average consumer to get sugar in quantity.

* * * *

At the auctions of tea for consumption in India held this week prices were marked further lower. Bidding was very poor and offers had again to be withdrawn. Teas with tip were neglected while medium and sweet liquoring common were one anna lower. Fannings were 2 annas lower. Leaf grades, inspite of fair demand, were marked down by 2 annas per lb.; other grades were as much as 4 annas lower. There is good demand for green teas and in contrast to the general trend of the market prices were higher by 4 to 8 annas per lb. Business in export quota was done at 9 pies per lb. but there was no interest.

ART *in Industry* EXHIBITION

★ 1944 ★

The fourth all India 'Art in Industry' Exhibition will take place in Calcutta in January 1944. Entries are now invited from all artists—the prospectus giving full specifications of the various sections will be supplied on request at any Burmah-Shell office. The sections are extremely varied and offer very wide scope to artists, industrial designers, commercial photographers, film scenario writers and interior decorators.

Prize money exceeds Rs. 20,000 including two prizes of Rs. 750 and four scholarships of Rs. 1,000 each for students. The prize money, which is the biggest ever offered in India, has been subscribed by Central, Provincial and State Governments, leading industrialists and prominent citizens.

Entries close on 1st December 1943 in Calcutta at

'ART IN INDUSTRY' EXHIBITION
HONGKONG HOUSE, CALCUTTA BSK 112

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 19th August.

THE Coal situation continues to be the all-absorbing issue facing the Jute Mills and until some solution can be found, if such a thing is possible, all business in the connected markets is virtually at a standstill. Little comfort, it is understood, is to be derived from the visit to Calcutta this week of the Member in charge of War Transport. So far as can be learned, the Industry was informed that no improvement in the situation could be looked for before November. This sounds like pretty cavalier treatment for an industry which has done so much to assist the war effort in many ways, not the least of which has been its successful, if expensive, efforts to keep its labour force contented. If the Mills, or a large proportion of them, are to be deprived of their motive power for an indefinite period, they can scarcely be expected to continue paying and feeding their idle labour. And if they were to cease voluntarily incurring this drain on their resources, as they would be perfectly entitled to do, the results might be very embarrassing to both the local and the Central Governments. The voluntary contribution which the Jute Industry has been making to the peace and contentment of the industrial areas around Calcutta works out to something in the region of a crore and a half of rupees per month. It may be argued that this would go in Excess Profits Tax anyway, so the Mills are really no worse off. But what guarantee is there that the Central Government will be content to look on the matter in this complaisant light? Is it not much more likely that, if they see a prospect of losing a substantial slab of Excess Profits in this oblique manner, they will promptly devise some means of recovering it by other methods?

There is some hope that the Mills drawing their Power from the Supply Companies may be permitted, and able, to keep moving. But they after all only constitute under 40 per cent of the total. And some of these Mills are partially Supply Power driven and partially driven by their own coal-produced power, and there are instances where the section driven from the public supply is not independent of the other section, so that without coal supplies the total concern is crippled. In any case there would undoubtedly be much heart-burning if certain Mills were to be allowed an advantage over their neighbours by reason of the fortuitous circumstance of their source of power. The I. J. M. A. Committee has been in prolonged session today, with this situation doubtless the main item on their agenda, but the results have not yet been made known.

As is only natural, the present circumstances have again filled the air with rumours of "rationalisation." Suggestions of running the more efficient units double-shift, reduction in the amount of steam to be used for processing etc., are among the propositions being canvassed. It would appear, if all one hears is true, that there is very considerable variation in the standards of efficiency prevailing. It is stated that the number of looms which one ton of coal may drive varies in different units from 13 to 20. Also the quantity of coal said to be required for processing and maintenance is alleged to vary enormously from unit to unit. These are matters which should be tackled by the Industry itself, and knowledge and experience pooled for the benefit of the weaker brethren, before some outside agency butts in with almost inevitably harsher and more drastic measures than the Industry itself could effectively apply. The situation is so serious that it calls for the prompt exercise of every possible means to keep the Industry functioning, if a complete collapse of this very important factor in Bengal economy is to be avoided. The Jute mills have faced and weathered serious storms before. It is to be hoped that some way out will be discovered this time too.

It must be concluded that the figures now issued for American Stock and Consumption cannot be taken strictly at their face value. The figures just issued for July make curious reading. Consumption for the month is returned as 360 lakhs of yards, a drop of 100 lakhs from the previous month, though better than the deplorable total of 160 lakhs recorded in July last year when the Burlap "freeze-out" was well under way. It is rather the stock figures which are difficult to reconcile with other known factors. Spot stocks are down to 830 lakhs of yards, again a drop of 100 lakhs as compared with the previous month. Afloat stocks are returned at no more than 250 lakhs yards, surely a record low figure and lower by 50 lakhs than the worst figure recorded during the "freeze-out" last year. The total visible stocks were therefore only 1080 lakhs yards as against 1,580 lakhs in the previous month, a reduction of 500 lakhs in stocks as compared with 360 lakhs of consumption. Transfers to the U.S.A. Government Stock-pile may account for the discrepancy, but with shipping space reported to be in good supply and U.S.A. demand so keen, judging by their recent urgent orders, the small quantity of goods afloat seems difficult to account for. There have been reports of shipping tonnage leaving Calcutta empty for lack of freight to fill it. If such is the case, with Mill godowns as full of goods as they are, there must be some lack of co-ordination somewhere which is much to be deplored.

Other published statistics which are difficult to reconcile are those of local Mill stocks of raw jute which have been returned as larger at the end of June, 1943 than they were a year earlier. This is contrary to all expectation and the figure is no inconsiderable one —more than 5 lakhs of bales, whereas arrival figures of jute into Calcutta pointed definitely to Mills stocks being considerably reduced. Jute stored and paid for upcountry may account for part of the disorepancy, but scarcely for the whole of it. Also there is the factor of deliveries of local Daisee Jute over Mill Jetties which does not come under any record. But even taking these into account, it would appear that there must be some flaw in the records or the methods of recording arrivals. Mills return their stocks of Jute at 30th June, 1943 as 26,51,588 bales as against 21,37,622 bales at 30th June, 1942. The total arrivals of Jute into Calcutta and Mill stations, excluding arrivals by road which are no longer recorded but which, in the 5 years 1918-23 averaged only slightly over 3½ lakhs of maunds per annum, were returned for the seasonal year ended 30th June, 1943 as 3,26,48,287 maunds. Of this total it is known that 12¼ lakhs of bales, or roughly 59,50,000 maunds were exported. Ignoring any variation in Bazar and Presshouse stocks, this would leave for Mills arrivals of some 2,67,00,000 maunds. They return their consumption as 3,27,24,305 maunds, nearly a lakh of maunds more than the recorded total arrivals and 60¼ lakhs of maunds more than the apparent quantity available to them out of the total arrivals after deducting the quantity exported, and at the same time Mills claim to have increased their stocks by more than 5 lakhs of bales. On the face of it the loaves and fishes must have been working overtime. If we can discover a reasonable explanation we shall propound it later.

The Export Jute market has been virtually moribund like most of its neighbours during the past week. For shipment nothing has been recorded though there have been occasional inter-baler covering transactions at a sharp decline in rates. Old Crop Dundee Daisee, which stood a week ago at Rs. 84 has been reported as low as Rs. 77, while Old Crop Firsts have been quoted at the same price. There is less inclination however to discount New Crop rates. Mills have shown no interest at the nominal quotations of Rs. 83 and Rs. 78 for New Crop Firsts and Lightnings, but any indication of interest would bring out sellers at considerably under these rates. Exports of Pucca bales in July were recorded as 88,575 bales against 1,30,728 bales in the same month last year.

With Mills putting little or no jute into consumption, they have naturally shown little inclination to increase their holdings, and even indications of lower prices by sellers have produced no reaction. Small purchases by Indian Mills of Indian Jat marks at Rs. 16 and Rs. 13 for Mids and Bots have been reported and European and Supervised marks could be purchased at well under maximum rates though sellers are disinclined to indicate how much under, when no buyers are in prospect. Arrivals of jute for the first half of August are estimated at 2,54,000 bales against 1,96,000 for the same period last year. Much of these arrivals are of course still Old Crop. The total since the beginning of the season now amounts to 8,41,000 bales against 4,51,000 bales last year.

With Mills disinclined to commit themselves in further sales in present circumstances, even for heavy goods of which they might have some surplus, business in the Fabrics section has been very limited. The Bazar has held firm and prices are verging on maximum levels, beyond which they have been warned not to attempt to force them. Sales have been reported in nine porters at Rs. 20-12 for Ready and August and at Rs. 20-14 and Rs. 21 for October. In eleven porters August has advanced from Rs. 27-13 to Rs. 28-3 while Rs. 28-4 and Rs. 28-6 has been done in the Oct./Dec. position. 20 oz. Brans sold at Rs. 56 for Oct./Dec. and Wheatbags have been reported at Rs. 33 August. In Heavy Goods "B" Twills were as usual the most active description, ready sales being recorded at Rs. 64 to Rs. 64-6 and August at Rs. 65-4 to Rs. 66-4. Liverpools sold at Rs. 73-8 and Rs. 74-4 August, Salts at Rs. 55 ready and at Rs. 56 September and Cubans at Rs. 81 for ready and for Sept-/Oct. All orders for unproofed Sandbags have been cancelled by Government. The total amounts nominally to some 5 crores of bags but any that are already manufactured will be accepted by Government, which may reduce the total cancelment considerably. The closing tone is firm, 9 porters quoting Rs. 21-4 and 11s Rs. 28-6 near, Rs. 28-8 forward. "B" Twills Rs. 66-8.

JUTE

Calcutta, August 19.

THE raw jute market has been absolutely uninteresting. Mills have been doing very little business. It is reported that the position in regard to coal has not in any way improved and that most of the mills, that are dependent on coal supplies, are idle at the present moment. There is no prospect of an early resumption of full working and with the difficulties regarding accommodation of jute supplies and the uncertainty about the future of production, there is naturally a tendency on the part of mills to postpone buying as far as possible. It is unfortunate that mills should not be in a position to buy on a large scale at the present moment as it was reported that with easier shipping facilities, the present conditions should be utilised to the fullest advantage so far as the jute industry is concerned. Imports into the mofussil centres are very small for this time of the year and most dealers report a very small turnover. Though the smaller size of imports is due to a certain extent to the drying up of orders from Calcutta it is due also to the delay in harvesting and the tendency of cultivators to pay greater attention to the aus crop. Business in new crop has been on a very small scale and sellers are prepared to discount substantially rates.

In the loose jute section, as reported above, only a very small amount of business has been reported. Indian Jat Middles and Bottoms were sold at rates below the agreed maximum rates at Rs. 16 and Rs. 13 per maund. Supervised Jat Middles were at a discount of 4 to 8 annas below the agreed maximum rates.

In the pucca bales section shippers have accounted for a small amount of business, Dundee Daisee 2/3 being done at Rs. 77 per bale. Old crop Daisee were sold at Rs. 82 per bale against Rs. 84 per bale. Sellers of old crop show a slight reserve. Mills are reported to have purchased new crop Firsts and Lightnings combined at Rs. 83 and Rs. 76 per bale.

JUTE MANUFACTURES

Calcutta, August 19.

Firmer conditions have been noticeable in the jute manufactures market and a larger volume of business was reported between bazar operators. Mills have kept out of the market as they are not in a position to enter into any fresh commitments. The output of hessian for the next several months has been completely sold out. As regards sacking they are not able to take any definite view. It is, however, interesting to note that market quotations are still below the maxima fixed by the Indian Jute Mills Association. The difficulties in regard to internal transport and the well-stocked mofussil markets have been primarily responsible for the absence of any speculative rise in prices. 9 porters ready closed at Rs. 21, August at Rs. 21, September at Rs. 21-2 and October/December at Rs. 21-2; the quotations at the end of last week were Rs. 20-12, Rs. 20-12, Rs. 20-14 and Rs. 20-14 respectively. 11 porters ready were Rs. 28-2 against Rs. 27-11, August Rs. 28-3 against Rs. 27-12, September Rs. 28-4 against Rs. 27-14 and October/December Rs. 28-14 against Rs. 27-14. It is interesting to note that a higher premium is charged for the far forward positions. The production figures for the month of July show a decrease of over 28,000 tons, the actual figure for July being 76,629 tons against 104,700 tons for June, 1943. The decline in total production is higher than market expectations and, as our readers are already aware, is mainly due to difficulties in regard to coal supplies and the complete closure of all mills for one week ending July 31, 1943. The production of hessian on civil account was 22,336 tons against 30,380 tons in July, 1943 and, on military account, 9,266 tons against 11,180 tons. Sacking, on civil account, was 38,484 tons against 56,302 tons and on military account 2,572 tons against 1,823 tons. Other manufactures were 2,966 tons against 5,057 tons. American stock and consumption figures for the month of July are now available. Consumption is lower at 3.6 crores yards against 4.6 crore yards for the previous month. There is a drop in the amount of stocks afloat to 25 million yards. The figures are given below:—

Total Reported Production of Manufactured Goods.*

By the mills in the membership of the Association and also by Gagalbhai Mills.

Description.	Quantity.
1. TWIST AND YARN—	
(a) For sale ..	1,441 Tons
(b) all other, including that used in sewing bags	1,260 „

GOLD

Calcutta, August 19.

Rather weak conditions have been noticeable in the Bombay bullion market during the past week. Following the amendment to the Defence Rule regarding the definition of Forward Contract and the restriction of the period of delivery to 4 days from the date of contract, there was a rush for buying by bears. With the shortage of supplies prices were marked sharply higher. But as the technical position got rectified and the Native States emerged out as sellers, there was a drop in prices and the closing quotations are at the lowest levels for some time. It is reported, however, that at the lower levels there has been some buying for investment and that with a further slight drop in prices all the selling might be absorbed. Gold ready closed at Rs. 69-8 against Rs. 75-10 at the end of last week and sovereigns at Rs. 50 against Rs. 52-8.

SILVER

Calcutta, August 19.

The silver market also has been marked lower in sympathy with the gold market though it should be said that the decline in prices has not been so pronounced. There were no reports of official selling. Silver ready closed at Rs. 109-13 against Rs. 112 last week. In the Calcutta market the quotation was lower at Rs. 108-8. There is no change in the quotation in the London market for silver, Spot and Forward being 23½. Only a small amount of business has been reported.

PIECEGOODS

Calcutta, August 19.

A further rise in prices has been recorded in the piecegoods market. With the continued difficulty in regard to supplies and the consistent buying for the Pujas, dealers have naturally put up prices. Mills are reported to be willing sellers but owing to the uncertainty in regard to the future outlook, no forward contracts on a large scale have been concluded. The strength of the piecegoods market is due to the reports that the Government of India might agree to the extension of time limit regarding the disposal of stocks manufactured prior to August, 1943 on the recommendation of the Distribution Committee to the Government of India. It should be said, however, that conditions in the Calcutta market are not typical of the other markets all over the country, as it is reported that in markets in the Western Presidency easier condition have been noticeable in the last few days.

DIRECTORATE GENERAL OF MUNITIONS PRODUCTION DEPARTMENT OF SUPPLY CALCUTTA

PANEL SCHEME

Group No. 14 VERTICAL BOILERS up to and including 12 N.H.P.

The import of vertical boilers up to and including 12 N.H.P. from the United Kingdom will henceforth be regulated under the Panel Scheme. The importers of this class of goods for stock and re-sale are hereby requested to apply to the Director General, Munitions Production, Licensing Directorate, 7, Ezra Mansions, Calcutta, for particulars regarding the procedure to be followed and for a copy of the Questionnaire in form WSB—Import/Pan which must be completed and returned, in duplicate, within three weeks of the date of appearance of this notice in the Press. In furnishing the particulars called for on the Questionnaire form WSB—Import/Pan, importers must give details of their previous imports in terms of units and net tonnage. C.I.F. values are not required.

Stock Markets to-day and to-morrow

OUTLOOK FOR COTTON SHARES

DEFINITELY steadier conditions were noticeable in the markets, both in Calcutta and Bombay, and business showed signs of expansion. The Bombay market, however, was affected by the weakness of the bullion market. On account of some selling gains were reduced. There is nothing to suggest, however, that there has been a broadening of interest and that investors and operators alike have changed their views. In Friday's session with the announcement that maximum prices have been fixed for certain varieties of cloth and that the Government of India, through the agency of the Textile Control Board, would purchase all unsold stocks at a slight discount on ex-mill rates, an easier feeling has been noticeable. Generally speaking, there is no appreciable improvement in the internal situation and so far as the industrial areas in Eastern India are concerned, a considerable dislocation in working has been experienced on account of the acute shortage of coal supplies. It does not look as if there will be any real improvement in the position for some months. With the anxiety to know the decisions of the Quebec conference and the unsettled piecegoods and bullion markets, there is naturally a tendency to wait for some time.

* * * *

The giltedged securities section has been very steady with a further rise in the quotation for 3½ per cent paper from Rs. 96-8 to Rs. 97. The Reserve Bank has thus been successful in pushing up the quotation for 3½ per cent paper in the short space of six weeks from Rs. 94 to Rs. 97. Having regard to the ease with which the authorities have put up the rate and the large buying it should not be difficult to increase the selling rate further to Rs. 99.

* * * *

The improvement in cotton shares in the early days of the week was due to the strength of the piecegoods market and the hopes that the Government might agree to an extension of the time limit which the Distribution Committee of the Textile Control Board had recommended to the Government of India. The Government, however, have declined to extend the dates for clearance of stocks beyond August 31 but in all cases, where merchants have not been able to clear their unmarked goods by the above date, the Government acting through the Textile Control Board will take over all stocks at a discount ranging from 5 to 7½ per cent on the ex-mill prices.

The Government of India have fixed ceiling prices for 12 standing varieties of grey and bleached cotton cloth and four varieties of cotton yarn. It has been agreed that both cloth and yarn will be sold at the ceiled prices or at corresponding prices for other qualities in retail at a uniform maximum price throughout India which shall not exceed a margin of 15 per cent over the ceiling prices excluding freight and other charges, which will not be above 5 per cent or a total gross margin of 20 per cent. Regarding undelivered goods originally contracted in August 1943 and onwards, prices for all deliveries subsequent to the date of this announcement will be reduced to the ceiling rates. The Textile Control Board has undertaken to ensure that merchants who receive these concessions from the mills will pass them on in full to their buyers.

This announcement has naturally had a discouraging effect on values in both the piecegoods and share markets. There was some selling in Friday's session in the earlier hours but towards the close there has been a slight recovery. The latest order of the Government does not in any way alter the position so far as cotton mills are concerned. With the system of quarterly price fixation it was generally expected that mill earnings would be considerably affected though in respect of the current year the sales effected in the earlier months might bring in a lot of profit and it would be possible to maintain the dividends of important mills.

* * * *

In this connection, the accounts of the Dunbar and Bowreah Cotton Mills for the half-year ended June, 1943 make interesting reading. But for the interruption to working on account of the exodus of labour in the early months of the year, it would have been possible to report a greater increase in earnings.

The net profit of the *Bowreah Cotton Mills Limited*, before providing for taxation and depreciation, for the half-year ended June 1943 is Rs. 14,99,836 against Rs. 10,71,159 for the previous six months. The amount set aside for depreciation has been unchanged at Rs. 1.5 lakhs but the amount provided for taxation is considerably higher at Rs. 10 lakhs (Rs. 6.25 lakhs). The provision in respect of deposits under section 10 of the Finance Act is also unchanged at Rs. 1.5 lakhs. The ordinary dividend has been maintained at Rs. 15 per share. The amount carried forward is higher at Rs. 90,733 against Rs. 50,897 brought in.

Resulting from the deterioration in transport situation it has been exceedingly difficult to obtain coal supplies and the company's mills have had to close down temporarily after the close of the half-year. This factor, coupled with the uncertainty regarding future outlook created by the passing of the cotton cloth and yarn control order, makes it difficult for any estimate of earnings for the current half-year to be made.

* * *

The net profit of the *Dunbar Mills Limited* for the same half-year, before providing for taxation and depreciation, is Rs. 16,00,935 against Rs. 14,36,864. Provision for depreciation is unchanged at Rs. 1 lakh, but that on account of taxation is considerably higher at Rs. 12.5 lakhs (Rs. 9.6 lakhs). Provision for deposits under section 10 of the Finance Act is lower at Rs. 1.5 lakhs (Rs. 2 lakhs). With the higher provision for taxation it has not been possible to maintain the dividend. The same is lower at Rs. 6 per share against Rs. 8 per share. The amount carried forward is lower at Rs. 67,897 against Rs. 80,962 brought in.

The outturn by mills was affected during the earlier part of the half-year owing to the exodus of workers from the Calcutta district but the labour position thereafter became more normal.

* * * *

India Copper Corporation has maintained the dividend for 1942 at 10 per cent less tax, the dividend being payable to shareholders, as on August 31, 1943, on September 28, 1943. The net profit for the year is £61,838 after providing for taxation and depreciation. The total balance at credit of profit and loss account is £105,204 including £39,997 brought in from 1941 and £3,389 profit on sale of investments. The net profit figure is lower than that for 1941, the same being, before providing for depreciation, £126,381. The provision in respect of depreciation was £40,000.

(*Continued on page 384*)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 20.

GENERALLY steadier conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing has been on a considerably larger scale. The successful conclusion of the Sicilian campaign and the expectation of big developments in the near future have been mainly responsible for the firmer tone of the markets. The strength of the piecegoods market also was a helpful factor. The feature of the week, however, is the upturn in prices for Cotton shares and miscellaneous counters. The Coal section has been rather uninteresting and the recent demand appears to have petered out. Quotations have been fluctuating in narrow limits. But for the sharp relapse in prices in the bullion market and the promulgation of the new order by the Government of India to the effect that all unsold stocks at the end of October will be taken over by the Government of India at a slight discount over ex-mill rates, closing prices would have been at the highest levels for the week. These developments, however, should not have any lasting influence on the market and the upward trend should again be resumed.

The giltedged securities section has been steady though no large volume of business has been reported. There were good buyers for the medium and long-dated loans. The quotation for 3½ per cent Paper has improved from Rs. 96-8 to Rs. 97 with the further increase in the selling rate by the Reserve Bank to the latter level. Conditions in the money market continue to be easy. There was a further decline in the average discount rate from annas 14 and pies 11 per cent per annum to annas 14 and pies 10 this week. 3 per cent 1963-65 were higher at Rs. 97-2 while 4 per cent 1960-70 were Rs. 111-2 and 4½ per cent 1955-60 Rs. 115-2. 5 per cent 1945-55 had further sellers at Rs. 106-1 while 2¾ per cent 1948-52 were noted at Rs. 99-10. 3 per cent 1951-54 were Rs. 100-2. There have been no transactions in Provincial loans as sellers are scarce.

Business in public bodies debentures is still difficult of execution owing to the scarcity of sellers and not even a single transaction has been recorded during the past few days. Among Industrial debentures 4½ per cent *Bengal Paper* quoted Rs. 100-8, 5½ per cent *Dalmia* debentures Rs. 100-2 and 6 per cent *Calcutta Jute* Rs. 103-8.

Bank shares have continued firm with *Imperial Bank* fully paids at Rs. 1,805 and *Contributories* at Rs. 437. *Central Bank* quoted Rs. 71-12 while *Reserve Bank* were higher at Rs. 117. *United Commercial Bank* also were steady at Rs. 9 premium.

Preference shares continue to be in good request but not much of business has been possible owing to the paucity of scrips. Among jute mill preferences, *Anglo-India* were Rs. 177, *Birla* Rs. 144, *Cheviot* Rs. 176, *Howrah* Rs. 169-8 and *Lansdowne* Rs. 157. *Kumurdhubi Engineering* were further higher at Rs. 272, while *India General Navigation* were Rs. 134 and *Dalmia Cement* Rs. 142. *Indo-Burma Petroleum* were higher at Rs. 96 with *Lister Antiseptics* at Rs. 112. *Rohtas Industries* were Rs. 180.

The coal section has not been very interesting as buying appears to have been satisfied and it is now felt that without any appreciable improvement in transport facilities it will not be possible to report any appreciable improvement in earnings. Quotations as such are even slightly lower on balance, *Amalgamated* being Rs. 38-2, *Bengal* Rs. 476, *Dhemo Main* Rs. 15, *Mundulpur* Rs. 14-8, *New Bandseopur* Rs. 37-12, *Samla* Rs. 4-7, *Satpukuria and Asansol* Rs. 2-15 and *Talcher* Rs. 3-15. *Bokaro and Ramgur* were Rs. 22-14, *Equitable* Rs. 39-12 and *New Beerbhoom* Rs. 21-12.

The Cotton section was firmer on reports that the Government of India might agree to the extension of time limit to traders for taking deliveries and disposal of stocks. This morning's announcement, however, gives the lie to the earlier reports. There has been no extension of time limit and the Government have undertaken to buy all unsold stocks in full bales at a slight discount below ex-mill rates. The market is again inclined to take a bearish outlook and quotations are below the highest levels for the week. *Cawnpore Textiles* were Rs. 12-5, *Bengal-Nagpur* Rs. 31-4, *Dhakeswari* Rs. 26-4, *Elgin* Rs. 74, *Kesoram* Rs. 14-11 and *Muir Mills* Rs. 410 ex-dividend. *Mahalaxmi* were higher at Rs. 40-11 and *New Victoria* Rs. 8-5.

With the continued difficulties regarding coal supplies, the Jute section has remained quiet and a fewer number of transactions have been reported. *Anglo-India* were Rs. 376, *Birla* Rs. 35-13, *Chitavalsah* Rs. 25-10, *Howrah* Rs. 60-11, *Kamarhatty* Rs. 535 and *Kanknarrah* Rs. 443. *Megna* were Rs. 76 while *Nellimarla* were higher at Rs. 25-5. *Nuddea* were Rs. 97-12 with *Reliance* unchanged at Rs. 60-8.

In the Engineering section, there has been a slight recovery in prices though business has been on a very small scale. *Bhartia Electric Steel* were noted at Rs. 14-1, *Burn & Co.* were slightly better at Rs. 377; *Indian Iron and Steel* were fluctuating in narrow limits and at the time of writing are quoting Rs. 34-4; *Jessop & Co.* were sticky at Rs. 19-14 and *Kumurdhubi Engineering* at Rs. 6-14. *National Iron* were Rs. 13 and *Steel Corporation* Rs. 26-13.

In the Sugar section the feature was again the sharp improvement in the price of *Carew & Co.* to Rs. 21-14, on reports of a good dividend for the last accounting period. There was some selling at the higher levels and the quotation came down to Rs. 20-15. *Belsund* were in good request and were done up to Rs. 11-4. *Buland* were Rs. 38-8; *New Savan* came in for attention around Rs. 19 while *U. P. Sugar* were steady at Rs. 27-10. *Raza* changed hands at Rs. 39-10 and *Purtabpore* at Rs. 17-12.

Tea shares have again been neglected and there was a slight decline in prices. *Hasimara* were Rs. 64, *Hattikhira* Rs. 29-12, *Sapoi* Rs. 19, *Teesta Valley* Rs. 36-8 and *Tezpur* Rs. 14-4.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* changed hands at Rs. 3-10 and Rs. 2-10 respectively. *Alkali & Chemical* were Rs. 32, *Aluminium Corporation* Rs. 18, *Associated Hotels* Rs. 12-4 and *Bararee Coke* Rs. 28. *Dalmia Cement* were lower at Rs. 16-4, *Indian National Airways* ordinaries were frequently dealt in around Rs. 17-4 and the close was higher at Rs. 17-10. The deferreds were Rs. 4-12. *Indian Wood Products* were unchanged at Rs. 31-4 and *Midnapore Zemindary* at Rs. 100. *National Insulated Cables* were Rs. 14-10, *Northern India Oil* Rs. 16-12, *Publicity Society* Rs. 12-8 and *Reliance Firebrick* Rs. 16-12. Paper shares were uninteresting with *Titaghur* 'A' and 'B' at Rs. 24-14 and *Orient* at Rs. 27-12. *Sree Gopal* were Rs. 22-14.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, August 19.

After earlier firmness rather easy conditions have come to be noticed on the local stock exchange in the last 48 hours. The bullish sentiment evident last week-end continued into this week. Prices recorded substantial improvements on renewed buying. But the upward trend suffered a setback when the market opened on Wednesday following the sharp decline in bullion prices.

In the giltedged section 3½ per cent Govt. Paper has further firmed up to Rs. 97. 3 per cent (1963-65) are slightly higher in sympathy at Rs. 97. Other scrips remained unchanged at previous levels.

Mill shares were somewhat active till midweek, most of them showing some improvement. After Bombay Dyeing, Centuries were in good request, the price touching the high level of Rs. 795 at one time. For the past two days, there has been a perceptible fall in the turnover. Bombay Dyeings are quoting at Rs. 1,942-8 after being higher at Rs. 1,955. Century were in good demand around Rs. 795. Bombay Dyeing have declared an ad-interim dividend of Rs. 35 (14 per cent). Kohinoor were quoting at Rs. 575; Gokak at Rs. 328 and Svadeshi at Rs. 526.

Steels like Textiles were rather active in the early part of the week. But for the past two days quiet conditions prevail following the sharp decline in the bullion market. Tata Deferreds were quoting at Rs. 1,843-12 x.d., Tata Ordinaries were Rs. 369-8 x.d. and Indian Iron were a shade better at Rs. 34-2.

Subdued activity with prices moving within narrow limits marked the miscellaneous section. The majority of the shares showed little or no change with respect of price. The volume of business was also on a restricted scale. Premier Construction were sticky round Rs. 178 while Alcock Ashdown are slightly lower at Rs. 530. Bombay Steam and Scindia Steam were Rs. 550 and Rs. 33 respectively. Shivarajpur Syndicate were better at Rs. 65. Andhra Valley were Rs. 1,865; Tata Power at Rs. 1,780, Tata Hydro at Rs. 196. Burma Corporation were steady at Rs. 3-9. A.C.C. were Rs. 210.

CHAIRMAN'S SPEECH

ASSOCIATED BANKING CORPORATION

Rs. 90 LACS IN DEPOSITS

Mr. MUNJEE ON FIRST YEAR'S RESULTS

Speaking at the first General Meeting of the Associated Banking Corporation of India, Ltd., held in Bombay on 9th August, the Chairman, Mr. Cassamally Munjee said: "It is my proud privilege to welcome you at this First Annual General Meeting of the Associated Banking Corporation of India, Ltd. My joy is all the more because the Bank has now become a scheduled bank. The Directors' Report has been in your hands for over a fortnight, and I would request you, as is customary at such meetings, to take the report as read.

"The report has acquainted you with the achievements of the Bank during the year under review. There is little to comment on the Balance Sheet. From the report, you must have found that our deposits stand now at about Rs. 90 lakhs, a clear proof of the confidence reposed in the Bank by the public. On the other hand, the assets of the Bank are highly liquid. You will be glad to find that the cash balances alone give a coverage of over 50 per cent to the total deposits with the Bank. This is but a natural sequence to the war conditions which have been producing an exceptional degree of liquidity in British Banks whose liquid assets now represent nearly half the total deposits in quite contrast with the pre-war traditional 30 per cent.

"The need for such a sound policy cannot be over-emphasised; but I may tell you that such high liquidity will enable the banking institutions to face the great changes that will be brought about in respect of post-war credit demands. Yet, it is not a small achievement for a bank of this size to earn a profit of Rs. 54,414 in the first year of its working. The Shareholders, I hope, will feel gladdened by the recommendation of the directors to declare a dividend of five per cent less tax in the first year though the amount of dividend is not very exciting. During the year, the Bank opened six branches and I am happy to tell you that all of them have been yielding satisfactory results.

"Gentlemen, I would request you to judge the results produced by the Bank in the background of the economic setup of this country. The bulk of the overseas and domestic trade is now handled by Government themselves, and consequently, the role which the banks used to play in the matter of financing the traders has been shifted to the background. The problem before Indian banks today is not one of netting in deposits but of finding remunerative outlets, consistent with safety, for employment of the funds at their disposal. In the absence of suitable avenues, the banks have to put in their funds in Government Securities, the interest from which forms an important source of income. Your Directors, therefore, can be considered to be fortunate in having been able to employ the funds of the Bank mainly in normal channels.

INFLATIONARY TENDENCIES

"The year witnessed intense economic pressure on the resources of the country as the result of great demand on account of the United Nations and our own Defence Services. On the one hand, supplies of consumer goods fell short of the civilian demand and on the other hand, the note circulation began to mount up rapidly and stood at Rs. 732.48 crores on June 30 representing an increase of 62 per cent during the year. Though the deposits of the banks showed a substantial increase, the rise was not commensurate with the increase in note circulation and the bulk of the deposits were demand liabilities. An orgy of speculation in commodities including bullion was the inevitable result of the surplus money with the public and the various measures taken by Governments, both Provincial and Central, failed to meet the situation. The cost of living began to soar very rapidly causing hardship to the masses. While opinions may differ as to whether inflation was at the root of the trouble or not, I trust that all are admitting that the situation was alarming during May last when gold touched the record level of Rs. 96-4 and the white metal was quoted at Rs. 135.

"Ruthless measures to curb the inflationary tendencies was the logical step adopted by Government. The speculator was chased away from all forward markets by banning forward trading in cotton, bullion and even seeds. The Excess Profits Tax Ordinance and the Capital Issues Control Order issued in May last sought to draw a portion of the surplus purchasing power from the public and to prevent the growth of mushroom companies in the country. While these measures can be welcomed on principle because they aim high at preventing the dissipation of rapidly accumulating savings in unsound ventures, their impact on the economy of the country will depend on the way in which they are administered. Pending that final judgment I only hope that these measures will place ample capital resources at the disposal of the country for further industrial advance after the restoration of peace.

"The immediate result has been that we find ourselves working in circumstances in which everything is practically controlled by Government. In the closed capital market, it is but natural that the savings should be diverted into the Defence Loans and the Government Securities. The first visible fruits of this policy have been a rather rapid rise in the gilt-edged market during the past two months.

A TEMPORARY PHASE

"Of outstanding importance to the Bank was the promulgation of an order under the Defence of India Rules under which Government have been empowered to ban or regulate advances against the security of commodities including bullion. The order was so sweeping that it would have far-reaching effects on the Banking structure of the country and the profits of the banks might have been further pruned. It was this apprehension which upset the whole economic structure and depressed even the stock markets. I am, however, happy to find that the advice tendered by the Reserve Bank to the Scheduled Banks on this question does not justify such apprehensions. The objective behind Government assuming powers it appears is to stamp out speculation in foodgrains and bullion and there will be no interference with legitimate business.

"While this clarification is to be welcomed, I cannot understand why it should have been the sole monopoly of scheduled banks to have it. The question is of as much importance to the country as to the scheduled banks and I make bold to say that even now it is not too late to explain the object of the assumption of these powers by the Central Government by issuing a *communique* since its publication will help to achieve Government's own objective, namely, stability of markets.

"Though these imposts have been able to ease the situation created by growing accumulation of sterling balances and the issue of fresh notes every week, I am inclined to think that it is a temporary phase. It is true that the pace of currency expansion has slowed down during the past six weeks; but the time is yet to come to pass the final verdict on the question. At any rate, I would not like to pat the back of the Finance Member until I see the position of note issue after the beginning of offensive against Burma. The problem is deeper than the one which can be tackled by such easy measures. The task before Government is to ensure that the sterling balances are employed for promoting the economic welfare of the country and until that is done, the analogy of King Canute given by the *Economist* is likely to prove correct.

GREAT EXPANSION OF BANKING

"The banking structure of the country adapted itself well to the changes in the economy of the country and the year witnessed great expansion of banking. Nearly 17 banks were added to the list of scheduled banks and the total number of offices rose by 195 to 1600 during the year. While the growth of banking during the year is imposing, there is nothing disquieting about it. In fact, the banking facilities are available only to a fraction of this sub-continent. Barring a few industrial towns, joint stock banking is not known in the interior. The case of Indian States is still worse, despite the fact that they have got vast resources which can be successfully tapped. You are fully aware that our main object is to extend banking facilities to these areas. In pursuance of this object, we have already opened branches at Rajkot, Jetpur, Bhavnagar and Ahmedabad, which is the nerve centre of Gujerat, and are confident of extending our activities in this direction, during the current year.

BANKING LEGISLATION

"Another problem, which has cropped up as the result of a number of banking floatations in the country, relates to their soundness. The public has been apprehensive about the soundness of some of them and you may have learnt from the press reports that the question of regulating the capital structure of banks has been engaging the attention of the authorities. Such piecemeal legislation can do no good to the banking system of the country; but what is required is a comprehensive banking legislation codifying our banking laws. Moreover, the rates fixed by the Reserve Bank in respect of the capital structure of a bank are too rigid and I am afraid that the adoption of that principle is likely to deprive the depositor of the security in the form of uncalled liability of the shareholders. At the same time, the official move for doing away with the vicious system or issuing a part of the share capital of a banking company in the form of deferred shares and entrusting the control of management to a chosen few having an inadequate financial stake in the affairs of the bank will be welcomed by all who have the interest of Indian banking at heart.

POST-WAR PROSPECTS

"The developments during the past four months have brought the defeat of the enemy in sight. It is, therefore, but natural that our eyes should be turned to the post-war prospects. It is beyond doubt that our country will be called upon to play a leading part in the task of post-war reconstruction. Our resources will have to be mobilised in order to build up a new world out of the chaos. In these circumstances, the scope for Indian banking is bound to be tremendous.

"The extent to which our banking system will be able to fulfil its obligations will depend on its ability to mobilise the savings scattered all over the country and to utilise them in productive channels as well as on the economic and financial policy that may be adopted for this country and the plans for international co-operation.

"An attempt is now being made within the country to swing our economy from inflation to deflation. Apart from the effectiveness of these measures, may I humbly point out that what is necessary for this country is stability of economic conditions and both inflation and deflation are to be deprecated on that account. Business cannot extend when the domestic and international conditions are unsettled. That is the lesson of history and I hope that it will not be forgotten by the Government of India.

"We had a very sad experience of the period closely following the last Great War when our resources were contracted by the Reverse Councils and had to undergo severe depression. At the same time, it is true that the task of checking inflation will become more difficult during the post-war period than under the present disciplined conditions. We, bankers, will, therefore, have to be very vigilant during the transitional period between war conditions and complete peace time conditions. I, however, hope that the powers with which the Government of India have armed themselves will be used in such a way that the change will not prove a jolt to our economy and the banking system.

MONETARY PLANS

"The question, which more than any other, affects the banking institutions is the international monetary plans for the post-war world. Two distinguished gentlemen, Lord Keynes and Mr. Morgenthau, have placed their proposals before the world. Though neither of them conceals selfish motives and the interest of their respective nations, the importance of an international agreement cannot be over-emphasised. Any failure to achieve it means formation of monetary blocs with its inherently undesirable effects. It is to be hoped, therefore, that a well-planned agreement will emerge from the talks that have been going on at present.

"The proposals that have been formulated by the United Kingdom and the U.S.A. in this respect will influence the fundamental economic position of every country not excluding our own The maintenance of the cheap money is the basic principle of both the plans. While it is too early to form the view about the future of interest rates, say, in 1950 and thereafter, I have no doubt that cheap money conditions will continue to prevail under the present conditions of closed capital market in which the avenues for investment are few and Government are the only borrowers. In the circumstances, we have every reason to look to the future with confidence.

"Gentlemen, I have now great pleasure in moving the following resolution: 'That the Audited Accounts for the year ended 30th June, 1943, and the report to the Directors be adopted.' I will be very much pleased to give information on any point on which any shareholder may desire to have."

NEW COMPANY REGISTRATIONS

New Damagoria Coal Co., Ltd. (11,468).—(*Director.*—Jatashankar Dossa). *Business*—Business of coal and coal mines, etc. *Capital*—Rs. 2,00,000. *Address*—P.O. Salanpur, Burdwan.

(*Continued from page* 381)

Serving both Gujarat and Kathiwar to-day is that lusty infant, the Associated Banking Corporation. Its progress in the first year found Mr. Casamally Munjee prepared to discuss prospects and possibilities and to canvass reforms including legislative amendments, very nearly on the anvil. For a new bank to start off with a dividend for its first year is a very striking beginning. The Associated Banking Corporation has got going with Rs. 90 lakhs in deposits. The balance-sheet indicates high liquidity and Mr. Munjee found reason for the exceptional increase in the Bank's cash balances. Little harm is expected from the application of new Defence Rules in the banking field. But the generally critical attitude of Indian business to inflation is evident in his remarks. Branch banking in Kathiwar offers great chances for a new institution so well-placed and well-connected. The States are not without interest in banking expansion and ABC offers much to them.

WATCH-DOG.

CALCUTTA STEAM NAVIGATION CO., LIMITED.

NOTICE is hereby given that the One hundred and twenty-second Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company 5, Fairlie Place, Calcutta, on the 2nd September 1943 at 12 noon to transact the following business:—

To receive and pass the Directors' Report.

To pass the Accounts for the half-year ended 30th June, 1943.

To declare a Dividend. (The Directors recommend the payment of a dividend of Rs. 7-8 per share.)

To elect Directors in place of those retiring by rotation.

Notice is further given that the Share Transfer Books of the Company will be closed from the 20th August to the 2nd September, 1943, both days inclusive.

By Order of the Board,
HOARE, MILLER & CO., LTD.,
Managing Agents.

Calcutta:
17th August, 1943.

Note:—The Shareholders of the Company are hereby notified that the Government of India have issued a rule 45B under the Defence of India Act 1939 (XXXV of 1939) prohibiting the publication of the Accounts and Report of this Company—this Company being an Inland Navigation and Water Transport Company—but permitting any Shareholder of this Company who desires to inspect the Accounts and Report to do so, provided he gives 7 days written notice to the Company of his request.

To the Shareholders of the Calcutta Steam Navigation Co., Ltd., and in particular Lt.-General Sir George D. Barrow, Kt., Lt.-Col. H. L. Hole, Lt. A. B. Porter, F. C. Danger, F. W. L. Danger, Messrs. Brought forward from last year after appropriation	206	4	2
Total ..	1,24,803	6	9

This sum the Directors propose to appropriate as follows:

(a) To pay an interim dividend at 6% per annum (free of income-tax) on C Shares ..	29,986	8	6
(b) To pay an interim dividend at 6% per annum (free of income-tax) on A and B Shares ..	26,250	0	0
(c) To place to Investment Reserve ..	5,000	0	0
(d) To provide for Income-tax	30,000	0	0
(e) To carry forward	33,566	14	3
Total ..	1,24,803	6	9

The results of the working during this half-year have justified the directors' anticipations as stated in the last report to the shareholders. The deposits and profits have reached levels higher than ever before. The directors have reason to hope for further progress.

Chairman.—T. R. Venkatarama Sastri.

CALCUTTA NATIONAL BANK, LIMITED

REPORT OF THE CHAIRMAN OF THE BOARD OF DIRECTORS'

To THE SHAREHOLDERS,

GENTLEMEN,

I have great pleasure in presenting to you the audited Balance Sheet and Profit and Loss Account of the Bank for the period of twelve months ending the 30th June, 1943.

The period under review coincides with the major part of the fourth year of the devastating Worldwide War, which is taking its toll of the material wealth of the world, along with human lives, in an unprecedented scale.

In this part of the world, the period under review was comparatively more calm than the previous period of one year. Industrial and trading activities, under the stimulus of the demands of the War, improved to a considerable extent.

But the large increase in the circulation of currency notes and Reserve Bank notes, along with the failure of the available commodities to grow in volume in proportion to the growth of the volume of the available paper currency, and some other factors, have affected the price structure of the country in such a way, that for sometime at least, a large number of thinking people of the country became very much apprehensive about the strength of the financial system of the country. However, recently, the acuteness of the situation has been much relieved, but it is too early to say, whether the present improvement can be maintained. The Government is increasingly intervening in the matters of Finance and Trade by ordinances and similar other promulgations, to check the evils of inflation, which are manifesting themselves in various ways. But it is very doubtful if such governmental measures alone will suffice to meet the situations as they arise, unless the people of the country show their willingness to co-operate with the Government in their attempts to check inflation, in a much more larger measure than they are doing at present.

Distress amongst the poorer sections of the community is acute and it is still growing.

Your directors are quite alive to the situation as it grows from day to day, and will do their best to safeguard your interests and the interests of the country, as much as it lies within their power.

In spite of the unusual circumstances that are prevailing in the country, I am glad to report that our Bank has made substantial progress. The working capital of the Bank has increased by more than a crore of rupees, and it now stands to about one crore and eighty-six lakhs of rupees.

Paid Up Capital:—A prospectus was issued in September last, offering the unsubscribed portion of the authorised capital for public subscription, and by the date on which the subscriptions list was to be closed, the number of shares for which applications were received, exceeded by a large amount the number that was available to your directors for allotment. The paid up Capital of the Bank now stands at Rupees twenty lakhs. The shares were issued at a premium of Rupee one, that is at Rs. 11 per share. The shares are being quoted in the Calcutta Stock Exchange, and the last quotation was Rs. 13-6 as per share.

Reserves:—Your directors are very much alive to the necessity of increasing the Reserves of the Bank. The net appreciation available under the headings "Government Securities," "Bullion" and "Stocks, Shares and Debentures," has been transferred to the Reserves. The sum of Rs. 30,000 has also been transferred to the Reserves, from the profits of the Bank. The total of Reserves now exceeds Rupees five lakhs.

Deposits:—The deposits of the Bank have also been more than doubled during the period under review, and you will find from the Balance Sheet, that the total of deposits exceeded rupees one and a half crores, on the 30th June, last.

Cash Position:—Cash position of the Bank is exceptionally strong. From the Balance Sheet, you will find that more than 31% of the deposits is held in cash, and that the total of cash, Bullion and Government securities alone represent more than 52% of the total deposits.

Land & Buildings:—From the Balance Sheet you will find that a sum which is a little over rupees thirteen lakhs and sixty thousand has been represented to be the asset of the Bank under this heading. But had a valuation of the properties under this heading been made on the date of the Balance Sheet, it would have been found that the value of the assets of the Bank under this heading was much more than rupees thirteen lakhs and sixty thousand.

So, you will note, there is a substantial "Hidden Reserve" under this heading. Besides some plots of lands in some important towns and cities of India, the Bank now possesses beautiful and palacial buildings in Calcutta, Bombay, Patna, Gaya and Chittagong, from which the Bank is earning a steady and good return.

Branches:—During the period under review, the Sylhet, Kishoreganj, and Drug branches of the Bank were closed, and new branches were opened at Delhi, Kalbadevi (Bombay), Aminabad (Lucknow) and Agra.

The number of offices of the Bank, including the Head Office now stands at thirty-one.

Profits:—Although your directors are following a very conservative policy because of the prevailing circumstances, still the result of the working of this period must be considered satisfactory. The Profit and Loss Account shows a net profit of Rs. 1,44,424-14-10, which together with sum of Rs. 17,050-0-7 (carried from the last year's amount), amounts to Rs. 1,61,474-15-5.

Your directors recommend that from this total of Rs. 1,61,474-15-5 the sum of Rs. 30,000/- be transferred to the Reserve Fund, and that divided at the rate of 5% (free of income-tax) be paid to the Shareholders. This dividend distribution will take away the sum of Rs. 1,00,000/- from the profits, leaving a balance of Rs. 31,474-15-5, which sum the directors propose to carry forward.

In conclusion, I beg to put on record my appreciation and the appreciation of the other directors of the ungrudging services that have been rendered to the Bank by the members of the staff of the Bank, during these periods of exceptional strain.

Sd/- S. M. BHATTACHERJEE,
Chairman of the Board of Directors.

The 30th July, 1943.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Conditions remain unchanged in the money market, with plentiful lenders and no borrowers, and with interbank call money quoting ¼ per cent in Calcutta and ¼ per cent in Bombay. On August 25, the amount of tender bills on offer was Rs. 8 crores and applications amounted to Rs. 16.41 crores. Tenders this week exceeded last week's tenders by Rs. 4 crores; in spite of this, the average rate of accepted tenders shows a rise of 1 pie to annas 14 and pies 11 per cent per annum. It is obvious that the Imperial Bank holds an over-poweringly dominant position with regard to treasury bills; and the Bank authorities are, presumably, not willing to see much reduction in the present rate. While the demand for treasury bills from the other banks and from investment institutions is much greater now than it used to be a year or two ago, the requirements of all these institutions put together will be considerably less than the total of treasury bills held by the Imperial Bank. So far as these institutions are concerned, they should be only too glad to sail in the same boat as the Imperial Bank. Because of its compelling position, it sees to it that the treasury bill rate is acceptable from its point of view; banks in general are likewise pleased that the return for them also is satisfactory. It may, therefore, be said that the forces now ruling the treasury bill market are such as to resist any big decline in the discount rate. From this point of view, the plea put forward by "Indian Finance" that the Reserve Bank authorities should so fashion their policy as to bring about a discount rate in accordance with the seasonal trend may appear futile. The simple moral is that, if the Reserve Bank is to succeed in making its policy in this regard effective, it can do so only with the connivance and support of the Imperial Bank. One should think that such support from the Imperial Bank will be readily forthcoming, especially as the Imperial Bank is a quasi-Government agency. The plain fact of the matter is that it is not always easy for the Imperial Bank authorities to clarify its duty as a Government's bank from its duty as a commercial bank which has to pay dividends to its shareholders.

The returns of the Reserve Bank for the week ended August 20 are not to hand; we have, however, to review the statements for the week ended August 13, which did not reach our hands in time for last week's number. In the week ended August 13, there has been currency expansion for Rs. 16 crores against sterling securities, while there has been contraction by Rs. 10 crores against rupee securities. In the result, currency has been expanded to the extent of Rs. 6 crores. Sterling securities in the issue department now stand at Rs. 613.83 crores. Rupee securities have declined to Rs. 93.37 crores which show a shrinkage of Rs. 29 crores as compared with January 1. In other words, not only was the rupee finance provided for the redemption of 3½ per cent India sterling stock being replaced by permanent rupee debt, but it has been possible to reduce treasury bills in the issue department by nearly Rs. 30 crores. This is a measure of the rupee finance which may be said to have been arranged for in advance for the next instalment of the sterling debt repatriation programme. Active note circulation has gone up from Rs. 749.76 crores on August 6 to Rs. 754.61 crores on August 13. In spite of the utilisation of Rs. 10 crores for cancellation of ad hoc treasury bills, the deposits maintained by the Central Government with the Reserve Bank show a substantial rise from Rs. 22.71 crores to Rs. 25.09 crores. This considerable improvement in the ways and means position of the Central Treasury is partly due to payments received in respect of inter-governmental transactions and partly due to satisfactory sales of rupee counterparts. Deposits of provincial governments are down by Rs. 1 crore to Rs. 6.64 crores. The deposits of member banks are slightly higher at Rs. 56 crores. Foreign balances held in the banking department have declined from Rs. 87.01 crores to Rs. 85.41 crores. Considering that sterling securities in the issue department are higher by Rs. 16 crores, we may conclude that the net sterling receipts of the Reserve Bank in the week under review are of the order of Rs. 14½ crores.

While dealing with the Reserve Bank returns for August 13, we should like particularly to point out that these are the first statements signed by Mr. C. D. Deshmukh as Governor.

The return of the Imperial Bank for the week ended August 20 shows a rise in deposits from Rs. 194.52 crores to Rs. 196.48 crores. Investments show a small decline of Rs. 20 lakhs to Rs. 140.10 crores. Loans and advances are down by Rs. 1 crore to Rs. 35.15 crores. Cash at Rs. 29.13 crores shows only a small change.

The U. P. Government are asking for Rs. 1½ crores of three months treasury bills; and tenders are receivable on August 30. It should be possible for the U. P. Government to secure their short-term accommodation at roundabout 1 per cent.

A study of the returns of scheduled banks for the last few weeks will be found to be interesting. Even with the slowing down in the rate of expansion of currency in the early weeks of July, both Demand and Time liabilities continued to increase. Demand liabilities on July 9, 1943 were Rs. 423.73 crores. On July 30, they had increased to Rs. 434.32 crores. In the same period

NARAINGUNGE AND DACCA.
Pay Office: MIRKADIM.

Time liabilities improved from Rs. 133.31 crores to Rs. 134.61 crores. In the two weeks ending August 13, 1943 there was a reversal of the trend in regard to Demand liabilities due perhaps to the large payments in respect of E.P.T. Demand liabilities on August 13, were Rs. 433.8 crores and Time liabilities Rs. 136.32 crores. There is no appreciable change in the amount of cash balances as also deposits with the Reserve Bank over the July figures. But having regard to the increase in total funds, and the decline in advances and bills discounted, by over Rs. 4 crores, cash balances and deposits of the Reserve Bank should have been appreciably higher. The absence of any increase in either of these items only confirms the reports that banks have been large investors in tap loans in several weeks.

The exchange market has been dull with hardly any business passing. The undertone remains steady.

Banks are sellers of T.T. at 1s. 5 31/32d. for London Ready to six months forward.

Banks are buyers of three months D. A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money is unchanged at ½ per cent.

A faulty piece of steel subjected to extraordinary stress may have dire consequence for any structure or machinery of which it is an integral part.

It is for this reason that cross-sections of special steels produced at Jamshedpur are constantly examined microscopically and submitted to the most probing tests by "The Brains of Steel".

Finance Abroad

Thursday Morning.

THE only important development of the week is the modified assurance of stability in the bullion market after reports of large-scale outside intervention. The story of the British Government's sale of gold in Bombay raises questions as to the holding of gold in the E. E. A. and of the Treasury's willingness to give up its gold. It is known that a minor increase in the gold held by the Bank of England can have no material effect on policy. Since the inter-Allied agreement has not been prepared, though Mr. White is said to have a compromise plan entailing a larger subscription to the central fund ready before the conference is arranged, the story seems to lack an adequate basis. Sales of gold by Indian States through the Reserve Bank at the instance of the Government in order to support the anti-inflationary policy may have taken place, but that is more or less to be expected. But the bullion market has taken note of the last official warning and gold for forward delivery is at a discount. The E. E. A. might not have sold gold since it would provoke a demand for conversion of Indian sterling balances. The Bank of England's gold was surrendered on the outbreak of war, and sterling became a paper currency, more than ever managed by the Treasury rather than the Central Bank. It is doubtful if the E. E. A. constantly changing from gold to Treasury Bills, and from Treasury Bills to gold, to assist Government's purchases of dollars retains enough gold to intervene in a free market like Bombay.

The E. E. A. at one time had to borrow the Belgian Government's gold in order to pay for the purchases in the U.S.A. and that loan has been repaid only this year. The transaction mentioned in the London press was taken as a proof of Belgium's loyalty to the Allied cause but the question really involved is that of the British Government's willingness to support the Indian authorities. Quite naturally, it may be urged that revaluation of the gold held by the Reserve Bank or raising of the Bank rate in India must precede external assistance. It has been rightly pointed out that India's sterling balances represent no direct loan to the Treasury, but constitute part of the monetary reserve managed by the Indian authorities. Neutral Eire without a large export surplus has large sterling balances, and the Irish Currency Commission contemplates no departure in policy. Exchange stability is not compromised by the growth of sterling balances and it is highly likely that ratio will be undisturbed, even if the dollar-sterling rate is modified by agreement. What makes revision most unlikely is the substantial depreciation of the dollar in the war period. There can be no claim from India for special assistance when the Empire's gold production is smaller. Last week's slump may be due to the message from Cairo as to the slump in bullion rather than any other determinate cause. Good war news has this effect of pushing down bullion prices and the downward trend may encourage selling of distress gold in India. Investment demand is said to have sprung up recently, and the report of official intervention is perhaps meant to reduce such demand, because it is calculated to limit support to Government's borrowing programme and to promote rapid conversion of savings into free purchasing power after the war when the dangers of a boom will be more acute.

The sale of 20,000 to 30,000 tolas may enlarge local supplies and depress prices for a fairly long period but it will have helped the bears to cover. The course of bullion prices in the war period suggested that a fall was likely after the Quebec talks and the fall in recent weeks was engineered as much by the encouraging news from Quebec as by local factors like the decline in cotton and the revival in the share market. Large-scale imports of gold are ruled out for various reasons, apart from the very high proportion of assets to note circulation. The Empire's gold production is falling. South Africa's output is falling only slightly, but Colonial production is almost at an end. When lease-lend is at work, it must certainly be a point of honour with the Allied Governments to discourage transfers of gold *inter se*. There are prior claims to be satisfied and British insurance companies forced to hypothicate their U. S. assets have obviously a stronger claim to gold convertible into dollars at will than the Indian authorities. It may well be that the Treasury acted in the past to defeat the black market at home (gold sold in London at over $35 per ounce) but that would be normal preventive action whereas using gold once part of the Bank of England's reserve would entail the consent of the Governor, who is likely to regard India as not being in the same position as pre-war France in one of her recurrent financial crises. In the absence of a frank denial from London, it may be assumed that some colour may be lent to a plausible story that may force down bullion prices. But the more important point is not the ability to sell silver and gold and depress prices but the relation between commodity prices and bullion prices. If the Calcutta wholesale price index has risen by over 100 per cent since war began, it is only logical that gold should rise to the same extent apart from the fact that prices of imports have moved up to a greater degree than prices of exports. When the price of rice is fixed at Rs. 30 per maund it is not likely that the price of gold would fall to the point which may be acceptable to the authorities. The discouragement of speculation has nothing to do with the price-level in the bullion market in the long run. The export demand may be absent, but the Provinces with food surpluses to export perhaps look for bullion in the absence of goods. Sales of bullion direct to agriculturists as a means of taking off vagrant spending power have been favoured by Sir Tracy Gavin Jones, and more recently by Sir Padampat Singhania, but the source of supply is hardly located and the sale of the Government's own silver stocks, except for specific purposes as in 1942 will be difficult to justify, when the legend of the falling rupee has been systematically spread.

Reserve Fund £10,000,000
Branches in India:
CALCUTTA, 101-1, Clive Street and 37, Ghowringhee, DARJEELING, BOMBAY, Horsby, Rd. and Princess St., KARACHI, RAWALPINDI, MURREE, AMRITSAR, LAHORE, DELHI, NEW DELHI, SIMLA, PESHAWAR CANTT., PESHAWAR CITY, SRINAGAR, GULMARG.

There is a free market in Reichsmarks in Switzerland and the "Manchester Guardian" in describing its present state mentioned that the rate ruling is Rs. 100 per 10 Swiss francs. This means that Germany's currency has depreciated very heavily, for the Swiss franc is worth roughly 23 cents and 100 marks for 2 1/3 dollars means that the mark has depreciated as heavily as the lira in outside markets. Extra-legal dealings in neutral territory have a decisive significance in the light of the experiences of Berlin this week. The Nazis may have failed to check inflation, and the demand for a neutral currency may really be due to the hunger for goods. It is well-known that Zurich is a great financial centre and a haven for refugee funds. The Nazis looking to the impending collapse of their regime may be exporting their own funds; but financial control is absolute and the "Manchester Guardian" is disposed to ignore adverse indications. The Allies may stabilise the Mark at any date they like and rationing, by itself, can be made to support *ad hoc* stabilisation. There is surely no immediate threat to the Mark when Himmler has been promoted. But the disorder in Germany, to which all reports of anti-Nazi activity point, might have its own effect ahead of invasion from the west.

The reports referred to by the "Manchester Guardian" last week dealt with a collapse at home and its wider effects. Since the gold bullion standard in some form is contemplated by the Allies, the future of European currencies appears obscure. If the White plan is meant to favour the occupied countries in certain ways, it is not likely to put the Mark on its pre-war basis for any reason. The Allies' main task will be military. Whether the operations contemplated will call for a fresh vote of credit of the usual type cannot be predicted when Parliament is not sitting, but it is quite likely that increased borrowing in London may follow, and the short-term debt should increase. At 1 per cent and 1 1/8 per cent the resources of British banks should be available as usual. The depression in giltedged may even stimulate short-term lending and the Treasury's position as the sole borrower must always favour the Government.

The London Stock Exchange has been animated by a feeling of distinct relief. The notable rise in rubber shares is perhaps no guide as to the future of South Indian planting shares but the "News Chronicle" has made the tea outlook brighter. The continued strength of textile shares in London is related to the improvement in export prospects. The strength of Home Industrials still stands out. In New York all leading shares have been weaker owing to the tax fears. U.S. Steel has made a recovery of sorts, but the irregular trend on Wall Street is unmistakable. The President's visit to Canada may help Nickel but almost all leading industrials and railroad shares have tended to be lower in recent weeks because the burden of reconstruction will fall on corporate profits. A shorter war means no cut in taxation and Agencies planning reform,

relief and reconstruction recognise that prices will stay up and debt will pile up. And taxes will not be lowered because control will remain. Until and unless the Republicans win, there is no hope of a business government, which would put American interests first. Financing big corporations for relief and development operations does not imply economy and the change-over to peace is not going to be easy for the investor and taxpayer in the U.S.A. The problem is not one of maintaining employment only, but of preserving profits and keeping up savings.

The results of the August war loan drive are not yet known. It will be difficult to believe that it did not succeed because the stock market has been idle and depressed, and the Treasury has no rivals in the new issue market at present. The investment outlook will get clearer only after the tax proposals are ready. The fear that the war may end only in 1946 haunts the stock market always; but that should serve to restore tone to the Indian stock exchanges which look upon Indian industries' advantages as adventitious and evanescent.

There was last week brief mention of Australian loans turning dull. Mr. Curtin's victory at the polls is not a bull point for British investors in Australian mining corporations though the progress of Allied arms in New Guinea cannot be ignored. The electoral victory may have no effect on the Commonwealth's credit because the New York market is open to Australia as well as Canada. Increased borrowing from the Central Bank alongside of higher taxation and Victory loans may figure in Mr. Chifley's programme.

COCHIN GOVERNMENT LOAN

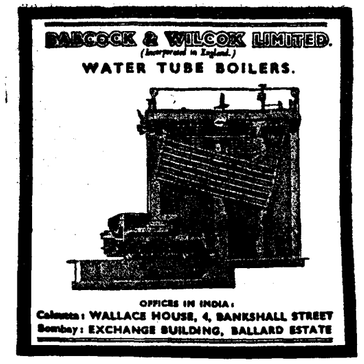
3 PER CENT LOAN 1953-55

Free of Income-Tax in the State

Amount of Loan Rs. 70 Lakhs Issue Price Rs. 99-8

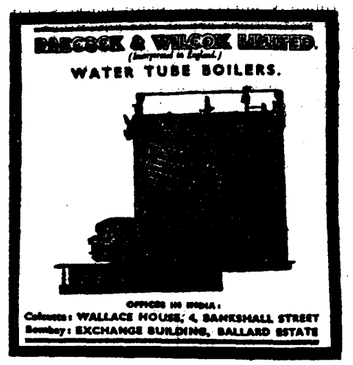
Loan will bear interest from 1-10-1943. Advance interest at 3% per annum from the date of application to 30th September, 1943 inclusive on the amount allotted will be paid at the time of issue of securities.

Open for **one day** only, viz., **Wednesday, the 1st September, 1943,** and will be closed at any time on that day as soon as subscriptions approximate to the amount of Rs. 70 lakhs.



Subscriptions will be in the from cash/cheque. Securities of the of Government of Cochin 5% loan 1943-53 will also be accepted at par towards subscription to the loan and such applicants will be given preference. The difference between the issue price for the new securities and the nominal value of the securities tendered will be refunded at the time of issue of securities. Interest for the whole half-year ending 30th September, 1493 will be paid on such stock and bonds even though they are tendered as subscription some weeks earlier.

Applications will be received at the Offices of the Imperial Bank of India, Madras, Bombay, Calcutta; Central Bank of India, Ltd., Madras, Bombay, Calcutta, Mattancheri, Ernakulam; Indian Bank Ltd., Madras, Bangalore City, Karaikudi, Cochin; and at all State Treasuries from 11 a.m. Standard Time.



Copies of the Prospectus and application forms can be obtained at any Receiving Office and at the Office of the Comptroller of Finance and Accounts, Trichur, Cochin State.

Information Officer,

GOVERNMENT OF COCHIN

Editorial Comments

Savings and the Stock Exchange

The exchanges of opinion between the Bombay Government and the Bombay Stock Exchange on the desirability of eliminating all dealings except for cash delivery revealed fundamental differences in outlook which may well have the effect of depriving the Bombay Government of all inclination to pursue the matter. The revival in the share market there may be expected to continue, until and unless the Central Government is impelled to intervene. The broadening of investment interest in recent months is associated with many distinctive factors. There is, above all, the stimulus to Indian industry arising from the war. In spite of enhanced taxation, and the advance in wages and prices, the earnings position is unimpaired in most cases. Though the textile industry is subject to control, there is a distinct possibility of mill dividends being maintained at the 1942 level. Chairmen's pronouncements invariably cut both ways; but to look beyond the recent slump is justified in view of the fall in cotton prices. The U.S. hessian order has modified prospects for the jute mill industry, and whatever be the effect of temporary stoppage of work, the longterm outlook is improving with the drop in raw jute prices. In another industry, namely, coal, price changes favour the producer as the list of accepted tenders has shown last week. The familiar assertion that concerns are wholly on war work and do not want civilian orders is calculated to make investors turn readily to industrial shares.

Adverse changes in the cost of living enhance outside interest in stocks and shares. The fixed incomes have to be stretched, and the middle class, unable to escape increase in taxation and unable to get goods, procures employment for its money. This change leads to livelier markets and brings charges of overtrading. But forward trading has not survived the mischances of war, and an absolute prohibition of forward trading followed the long crisis of 1940-41. This ban is operative and the share market does not at present know forward business or monthly settlements. The caution given by the Bombay Government in June produced the reply that there is more than one market and regulation would be impossible in Bombay. Delays in delivery concern brokers and clients only, and the volume of business can be scarcely increased by the clearing figures since it is open to a broker to refrain from reporting dealings; and markings by themselves constitute no guide to the enlargement of outside interest to the point at which a crash might come suddenly. In periods of crisis the stock exchange took its precautions independently, and Government was only called upon to protect its own credit by fixing minimum prices for listed securities last year. The protection of the holder of securities was hardly the aim of action enforced by the disasters in the Far East. The normal protection given to the investor by a free market in which dealings for account are absent is considerable. To limit it in any way is not calculated to advance the interests either of Government or of the investor.

The major factor in the increase of investment may now be examined. The low interest rates perforce encourage investment. The incentive to save more and obtain a better return is heightened by the cheapness of money. What favours the Government as a borrower also favours the stockbroker today. Institutional investors get keener on taxfree debentures and preferences and private investors exhibit enthusiasm for ordinary shares for reasons connected with increased spending by Government and the related need for additional income. A rectification of yields is a development wholly welcome today. When bank deposits increase as a consequence of addition to purchasing power it is difficult to canalise investment. To fix ceilings for share prices may be the Nazi way of diverting new investment into government issue exclusively, but it is distasteful to others. The sharp rise in Home Industrials before and after Sicily only receives approval; it does not produce misgivings.

It is currently asserted that prohibition of forward dealings in bullion and commodities has led to a gross expansion of interest in shares, in Bombay particularly. There is no means of testing this statement but it is an inescapable consequence of action taken. The new Rule against Bank advances will also have the same effect, ordinarily speaking, since the poor demand for money and the low return on short-term securities induce most to turn to shares. In the reward obtained there is the usual premium for risks taken, and that cannot excite aversion since the profits at some stage or other are liable to taxation.

The abolition of all forward markets including jute confers buoyancy on the share market though week-to-week movements may contradict the belief. The real function of stock markets is to provide employment for savings. Forward dealings of a new type in rupee securities have helped giltedged to a notable extent and actually facilitated borrowing. To cut the market out would seem inexpedient when borrowing at a low rate is compulsory.

The control of capital issues is a further factor in favour of money going into shares of established concerns. If new outlets are absent money will inevitably turn to the stock exchange. The experience of Occupied countries is a fairly reliable guide in this matter while it may well be said that activity of this type favours dis-investment by foreign interests. Had any sort of control been imposed on dealings, which help British interests to acquire money for investment at home, it is clear that the British Treasury would have regarded it as unfriendly action. The requisitioning of the dollar securities the prohibition of exports of capital and even of most remittances abroad keep a very large amount of money idle. If liquidity preference has been altered radically this year, it is obvious that the stock exchange will flourish. Boom and slump in mill shares are obviously due to outside factors, not to speculation as such. In the years of depression too fluctuations in values were quite common, and the wider acquisition of the technique of investment implies, not the ironing out of fluctuations, but the elimination of temporary, extraneous influences. The extraneous influences injected this year are divorced from abnormal market activity. When a bigger factor like currency expansion is in evidence it is a legitimate precaution to turn to hedges against inflation. Ordinary shares of industrial companies offer perhaps the only suitable hedge since commodity hoards are deprecated and the keeping of standard silver coins is impossible.

The cost of living is hardly influenced by stock exchange activity though the latter may benefit from indications of inflation. If the problem of control is really one arising from currency expansion, the local government's intervention, at any stage, would appear uncalled for. The market view is that action is superfluous for complete control is inexpedient because jobbing of the old type is unknown. The problem

ultimately affects all share markets and it may well be said that restrictions are of less advantage to the investor than presumed. Control may have repercussions in markets beyond Bombay. Inter-provincial trading in shares is a means to the unification of investment and makes for uniformity as against local and seasonal variations in rates of interest peculiar to India. There has been nothing so far to suggest that the exchanges have distorted the flow of investment; and the only and original corrective to hoarding is still provided by the stock exchange. Its capacity to influence the volume or rate of savings may be doubted; but one should not under-rate the advantage of converting superfluous cash into securities that are not exchanged for goods. It is permissible to suggest that debt relief measures have extended the scope of investment in one direction only and the urban middle class has been assimilated partially to the class of rentiers. Doubts cast on the efficacy or value of investment, when the alternative agency of a State Planning Board is absent, hardly require formal rebuttal. The official enquiry into the lists of shareholders in joint-stock enterprises and their receipts or interests should perhaps have an independent effect in restraining the Government from attempting too much.

THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Strikes and Scarcity

Information as to industrial disputes in India finds a place in the Bombay Labour Gazette for May, and in spite of the time-lag, the details are not without interest. In Bengal, there were sweepers' strikes in two suburban municipalities. The motor company replaced strikers by new staff and ended the strike. There was a strike in a silk mill, and for the first time, a light railway was affected. Demanding increment of wages the D. H. Railway workers went on strike on April 1. The railway authorities were able to restore the service of the line. After considering the demands they agreed to give certain concessions in respect of pay and ration allowance. The strikers, however, would not be satisfied unless they got rice at cheap rates, and the dispute continued. Food supply at special rates was the cause of labour trouble in two or more cotton mills and one ended with the assurance of a cheap grain shop. Cut in the ration given to workers led to a strike in a large tannery where 408 workers objected to a cut in the weekly quote from 10 seers to one seer and asked for 5 seers. The Labour Officer's intervention led to an explanation that the reduction was due to want of supply and efforts were being made to procure supplies. Workers were persuaded to return to work and make representations. In two engineering establishments stoppages occurred in consequence of demands for bonus and food supply. Bidi-makers in Calcutta enjoyed a rather short strike after wages were raised; and the food scarcity led to strikes in a pottery and hosiery factories etc. Umbrella-makers also went on strike and employers were called upon to consider the demand for a dearness allowance. Most suggestive is the development of strikes outside organised industries. Umbrella-makers and bidi-makers obviously fall outside the scope of regular establishments but they, too, had occasion to strike in order to get higher pay, dearness allowance etc. Bidi workers in a C. P. factory walked out in order to secure an increase in wages. Four cotton mills in C. P. experienced in April strikes which turned on bonus rates and demand for higher wages but the strike in the Empress Mills failed. It is known that the cost of living in Ahmedabad, Sholapur and Bombay rose in April as in earlier months. If many disputes ended in favour of the employers, while some led to no settlement, the main cause is apparent though wholesale market prices for cereals in Bombay showed a slight fall as compared with March. Strikes were reported in ten unregistered factories in Surat and the textile industry there had to face a large number of stoppages, which fact rather than the Textile Control Order may serve to explain the decision to stop work from this month.

Food Exports

The answer to protests against rice exports from Calcutta to the Persian Gulf has been provided in a recent press note giving figures as to food exports from January to July. Total exports in July consisted of 283 tons of wheat and 2,008 tons of rice. The total at 2,291 tons is the smallest known this year, and the export ban imposed last month points to a further reduction. The exemption made in favour of exports for Indian crews on merchant vessels explained the shipment to South Africa according to an earlier denial, provoked by the Indian Chambers' representations against shipment to South Africa. The purpose was explained two weeks ago and the subsequent protest against shipments from Bengal to the Persian Gulf has brought the explanation as to the control in force. The Food Department issues instructions, and the large decrease between June and July is indicative of its intervention. The U.K.C.C. is said to have shipped no food grains under license during the last 12 months. This means that only the regular shipments to Ceylon, Gulf and African ports and islands with Indian communities have been kept up. The last is rather vague and may cover places as far removed as Mauritius and Madagascar. The exports are probably deemed essential like the shipments of rice for Indian crews.

It is difficult to get import figures from the trade returns but it has been made known that imports of rice into Bengal from January to July amounted to 70,000 tons and the exports were less than 70,000 tons. The source of the imports of 60,000 tons is not known, but it is clear that they are coastwise imports or railborne imports and did not come from countries with a surplus of rice available for export. The licensed exports anyhow mean a reduction in local supplies. Out of 70,972 tons exported the share of Bengal is less than a tenth. Figures as to wheat imports (free of duty) are not available. India's exports must be exceded by imports from Australia and the total for seven months should offset the rice exports and re-exports of wheat, shown as 92,137 tons for seven months. Australia may have shipped this year over 200,000 tons.

The Food Department's statement as to exports must be related to another dealing with the Army's takings. The official quota is 560,000 tons of wheat and 144,000 tons of rice. The wheat quota is less than 5 per cent of the Indian crop and the rice quota is only 1/60th of Bengal's rice production and probably 1/160th of India's rice production. Exports come out of the quota. But it may be suggested that the notion of a quota cannot apply when the Army is still being expanded. It is also not known if the Allied troops serving in India at present have a share in the quota. There has been a demand that foreign troops serving in India should be fed by their countries. The demand may be called impractical and the actual imports that may be drawn for the purpose may be small. Export control in other countries may interfere with such shipments and it may be urged that the Defence Services' quota here must be maintained. Available supplies of rice and wheat may be put at 35 million tons and the Defence Services' quota may be equivalent to less than two per cent; the net reduction in civilian supplies may be small. It is noteworthy that in denying allegations as to exports no reference has been made to import possibilities. Critics of Government argue that only imports on a large scale can alleviate the food situation. Figures are not furnished as regards net imports or probable arrivals in the future. The export ban may even induce other countries to stop exports to India. The Food debate indicated that per capita rations in the Army were higher than those available for the general population on the basis of the estimate of India's supplies of 50 million tons of grains this year. The quota figures indeed suggest that per capita grain ration may be over 800 lbs. per annum. Though the Army may be getting just what is wanted for efficiency the non-agricultural population's requirements must also be considered. If the growers consume a little more or sell less or keep aside larger resources for seed grains the deficit must be acute in the large towns where rationing spells a reduction in consumption, even if uniformity is attained. Loans of grains from the Army's stocks have been reported but they are temporary transactions. What is clear from the official statements is that civilian requirements this year must be subordinate to the essential exports and the Defence quota including despatches overseas. The reticence as to likely imports from overseas after private appeals for Allied assistance is calculated to discourage optimism. When exports are strictly regulated and shipping is light (as frequently explained) imports from Canada or Argentina are unlikely. Further operations in Europe may demand that food should be retained as a weapon by the Allies; and the New World's surpluses may have a distinct function to fulfil apart from relief to occupied countries.

Export Bans

A Commerce Department Notification of July 31 drew attention to the recent changes in export control. No licenses to export are to be given in respect of arms and ammunition as well as many other goods. The purpose of export control is made plain in the list which includes agar agar and many better—known goods. In part A of the schedule published recently for the first time find a place. Apart from many drugs and chemicals, instruments and apparatus, there is the mention of hides, namely, wet salted cowhides (trimmed according to trade custom) from 13 lbs. to 28 lbs. Dry salted cowhides other than those known as Daccas from 9 lbs. upwards. Dry (arsinicated or other) framed hides from 6 lbs. upwards. Wet salted buffalo hides (trimmed according to trade custom) from 25 lbs. upwards. Dry salted or Dry (arsenicated or other buffalo hides) from 12 lbs. upwards and hides cut into pieces of any weight or size other than trimmings (glue pieces) unwrought leather namely vegetable tanned leather produced from buffalo hides weighing in hides weighing in hides 14 lbs. or over or in sides of 7 lbs. and over; all leather produced from cowhides or kips weighing 8 lbs. or over as hides or 4 lbs. and over as sides other than East India kips; all chrome tanned upper leather produced from cow or buffalo hides having a minimum substance of 1.5 mm and for a minimum area of 11 sq. ft. per side or 32 sq. ft. per hide all unwrought leather in pieces or as semi-manufactured goods are included. The inclusion of leather manufactures such as footwear and components, suitcases, bags, case and containers made of cowhide or buffalo hide or leather and parts thereof. The prohibition of manufactured exports implied by the addition of most leather goods follows the assumption of full control over a section of the tanning industry. The conservation of leather supplies is carried a stage further and the home market must benefit from the prohibition. Licenses for exports of belting are to be given by the Supply Department or a Special Officer but no licenses are to be given for heavy hides and leather goods. An increased supply of leather goods, apart from Army boots, is required for the war, and the inclusion of war materials along with leather manufactures makes the control complete. The leather manufacturers may not protest when the ban is complete, and prohibition may help to lower prices in the case of hides and leather.

The Place of Hindi

Unity, according to current opinion, is compromised by the lack of a common language in India. Hence the pleas for Hindi in compulsory or other form. A very large country which has known unified government for intervals only has naturally a very large number of languages as of religions and sects. The linguistic differences are explained by Dr. Suniti Kumar Chatterji in his pamphlet on the Indian languages and the linguistic problems. Some may be surprised that no specific plea is made for Bengali, the tongue of 60 millions in Bengal as well as millions in Assam. Dr. Chatterji plumps for bazar Hindustani already accepted as the interprovincial speech. The most original suggestion is the adoption of the Roman script for Hindi. The Persian and the Nagari scripts alike are likely to lead to disputes and Roman script has obvious merits when English will remain the culture language. As regards English, which has produced unity by itself, Dr. Chatterji has few doubts. Its future is not tied up with the delay in constitutional changes because in the Far East as well as Latin America the position of English is secure. Of 47 million literates in India an influential minority will stick to English, and the indispensable second language, in spite of the Hyderabad experiment, will be English. The talkies have helped to popularise Hindi in one form or other and the next phase may well see instructional films with sub-titles in Roman Hindi. The classical languages have have hardly any claims as compared with Hindi today, and the radio may advance the latter's progress in many ways. Since the script difficulty is settled by Dr. Chatterji, the question of reducing inflexions in grammar is easily disposed of. The link between Hindi and the older languages will be duly retained and Muslim objections to Hindi in Nagari script will also be disposed of by retention of Persian and Arabic words. Dr. Chatterji notes that Turkey has travelled far along the road of linguistic reform without difficulty and Iranian speech is undergoing a purge of sorts. Obviously the 15 major Indian languages with distinctive literatures will survive the adoption of Hindi as the common language—wholly feasible as urbanisation encourages the learning of a new language. Hindi today is valuable for business purposes as for the conquest of Provincial prejudices. Roman script will help adult learners to master the language and encourage writing as well as printing. The major political parties may be tolerant of suggestions in favour of Hindustani in the neutral Roman script as making for an extension of their own influence, while foreigners may find in a ready solution of linguistic difficulty the prelude to wider and stabler agreement in politics.

Forestry In War

The Forest Research Institute at Dehra Dun has done valuable work for charcoal production, the development of wooden containers and paper production too. Its President in a recent lecture described the work of its five sections in the war period. The entomological section is bent on saving wood from insect damage. Wholetime work for the Ordnance preservation is also the concern of the Chemistry branch. Sir Herbert Howard said that the branch looks after all the minor forest products. As a result of its work, 95 percent of the world's trade in Ephedrine has been captured and a factory for its manufacture has been erected in Madras. Plans for the extraction of creosote from pinewood, for creaming rubber latex and sizing material for textile manufacture are organised by the Institute's branch. Outside supplies had entirely ceased owing to the war, and the forests have yielded substitutes. Minor products directly connected with war range from substitutes for rubber to wax for copying paper for typewriters. The utilisation branch has developed the use of wooden containers in place of metal. It solved also the very difficult problem of producing enough boot lasts to supply the enormous Army demand for boots. A last, it was explained has to be cut from timber about 15" long by 5" by 5". To season in the ordinary way, even in a kiln, takes a considerable time. The use of 10 half-inch planks stuck together seemed desirable. An adhesive (not ordinary glue) that would make the planks a solid block was necessary, and the Institute got it from local materials. The adhesive is not only used for the plank needed for a bootlast, but has also passed the test and is used for aircraft and marine plywood. Laminated wood for aircraft propellers has also been provided by the use of an adhesive for binding planks. The Institute has made compregnated wood which is made by taking thin veneers; impregnating them with synthetic resin, then sticking them together and subjecting the whole to heat and pressure. Sir Herbert told his Service audience that the units of the R.A.F. making compregnated wood and laminated propellers worked under technical advice given from the Institute. The Institute has looked to research while the Forest Departments have helped the Army. Timber demands of the Army have been met. The Forest Department has supplied direct to the Defence Department about a million tons of timber a year for such things as hutting timber, bridge timber, piles for jetties, heavy building timber wood for lorry bodies and pontoon boats etc. Sir Herbert said that a million tons of timber placed end to end would easily make a track four feet wide and half an inch thick round the world at the Equator.

Customs Revenue Up

Indian Customs Revenue in July amounted to Rs. 3.62 lakhs as compared with Rs. 3.48 lakhs in June. Central Excises provided Rs. 1.69 lakhs as compared with Rs. 1.78 lakhs in June. Increases as compared with July 1942 are to be noted under both Customs and Excise. Decreases in customs revenue arose from iron and steel, textile manufactures etc. The increased revenue from the excise on tyres and sugar this year is independent of changes in taxation but the statement gives no indication of what has been obtained in four months from tobacco and vanaspati selected for taxation this year. The reduction in the yield of the import duty on tobacco may be cited as a reason for the addition of tobacco to excisable articles. The total of Rs. 19.96 lakhs for four months suggests that indirect revenue may be better than expected while Central Excises may respond to advances in industrial production. The increase in direct taxation provided for in the budget is accompanied by a growth of indirect revenue, despite the contraction of foreign trade. The customs revenue figures point to the higher yield of duties on sugar and betelnuts. The volume and sources of these imports should certainly claim notice while the increase in imports of cinematograph films makes the more recent decisions of Government, limiting Indian film production in the interests of propaganda, rather difficult to explain.

World Trade

Violent changes in the volume and direction of trade are a consequence of the war like the departures in control. The British colonies show very clearly the effects of import control and expanded local production while rejoicings in Accra over the fall of Tripoli have been reported the course of trade 1942 shows the effects of war. Though only monthly values of special trade are shown in the table appearing in the Geneva bulletin of statistics for April it is clear that a marked fall in the first half of 1942 preceded the very strong recovery. Like all colonies, the Gold Coast has a large export surplus which has been increased further by the demand for African minerals like manganese and diamonds. It is noteworthy that

Destroy the FIFTH COLUMN

Have your invoices got two separate 'amount' columns? How often is it essential to use both?

You can save as much as 25% of the paper on your invoice by destroying this fifth column.

Examine all your stationery, eliminate superfluous peace-time "frills" and help to save paper in the present emergency.

Every business concern, whether grocers' store, or industrial giant, needs paper to function smoothly.

Ensure that need now, by saving on existing stock.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper:-

- **Use the smallest sheet of paper for any purpose that will do the job.**
- **Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.**
- **Do not make copies except where absolutely necessary.**
- **Always type single spacing.**
- **In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.**
- **Reduce the size of labels on manufactured goods.**
- **Use the back of the letters received for the carbon copy of your replies.**

Save paper

the Gold Coast has a larger foreign trade than Nigeria but smaller than that of Palestine whose imports during 1942 suggest rapid development of industry in the Mandated Territory in order to meet the demands of the Near and the Middle East. The substantial increase in Iran's imports and exports last year is due to many factors including the activity of the U.K.C.C. Figures relating to the special trade of the U.S.A. indicate a fall followed by recovery and a further fall in the case of exports. What is most important is that the value of exports exceeds that of imports and the U.S.A. continues to have the usual export surplus whereas that of India has been reduced in 1942 by the loss of markets as well as the decline of production.

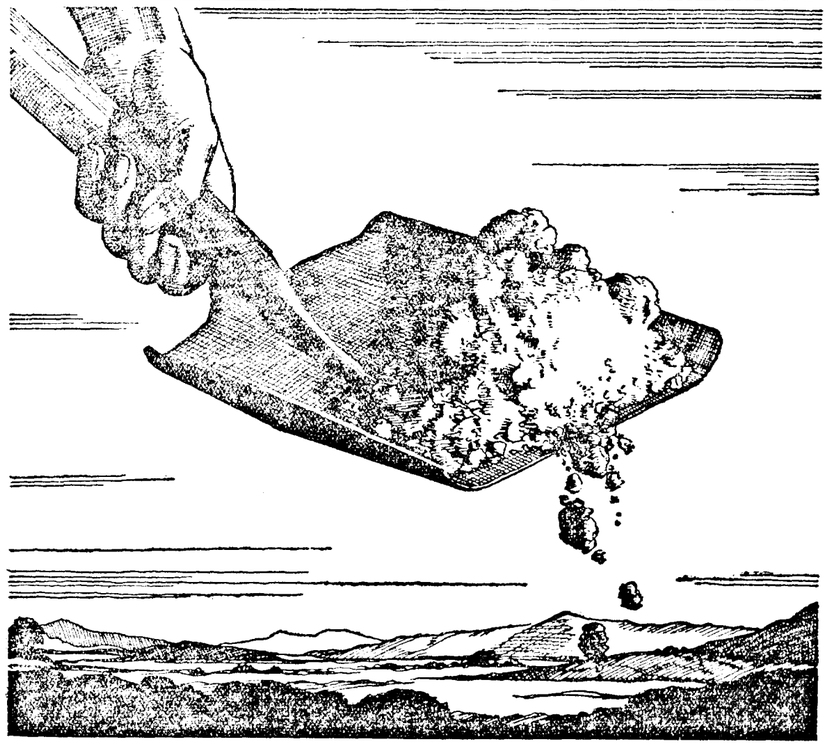
The special trade figures warrant the belief that increase in war production led to the increase in U.S. exports though imports were kept down by control. The U.S.A.'s neighbour has benefited directly as Mexican exports in 1942 showed a striking increase. Larger U.S. takings account for the growth of exports recorded in the case of Brazil and Chile. The increased demand for Cuba's sugar led to an expansion of the favourable balance of trade accounting also for rise to the parity and over of the Cuban peso with the U.S. dollar. The main change in Denmark's foreign trade is a fall in exports. The larger fall noted in respect of Greece is indicative of impoverishment. The large fall noted in the case of Finland points to the strain of war, while the margin between imports and exports has increased in the case of Sweden last year, qualified by the statement that only special trade is reckoned. Adverse balances of trade are to be noted in the case of Spain, Bulgaria and Iceland but not in the case of Portugal. In the case of Dominions, the increase in exports is as pronounced as that shown in the case of the Colonies. New Zealand and Canada experienced a very large increase in 1942 as regards exports. Other considerable changes of 1942 are the fall in Argentine imports and the increase in the exports of Uruguay—an economic dependency of Argentina. The bulletin indicates the large increase in Nigerian exports of groundnuts in 1942 coinciding with a moderate increase in exports of palm kernels. The substantial decrease in Argentine linseed exports was offset by the growth of exports of refrigerated meat. New Zealand's exports of mutton and lamb appear small compared with Argentine meat exports, though Brazil is a near rival like Uruguay so far as Argentina is concerned. The figures relating to oilseeds may suggest that Indian linseed rather than groundnuts hold a stronger position at present but the loss of copra and other products of the Far East must be assigned special importance.

Soviet Recovery

An article of Mr. Edgar Snow in the Sunday Express described Soviet Russia's war production. Despite enormous losses, Russia is making more tanks, planes and munitions than ever before the war. The victory on the industrial front is due to the Russian workers' tireless energy and the Governments direction of the resources of sixteen republics. The earlier spread of industry to the East accounts for the development based, in the main, on the wealth of the Urals-called the iron spine of the military effort. By 1939 the Urals accounted for a third of Russia's production capacity, and since then the percentage has probably doubled. The coal in the Ukraine lost to the Soviet has been replaced by natural gas. Aluminium production has also been developed in the Urals to offset the loss of supplies from the Ukraine and Zaporozhye on the Dnieper. Engineers and builders have been working furiously for the past year to get new wells producing in the Urals where oil deposits are at least as great as those in Trans-Caucasia. Many industries removed from other regions are exceeding their former output.

Development at Magnitogorsk is typical of the wartime progress and construction time has been cut so that a new iron and steel plant has been put up in three months in spite of bitter winter weather. The morale of the workers accounts for these feats, featured in the Soviet press like military success. Competition for a higher output in war industry was launched in 1942. The competitive spirit grew up despite the absorption of men in the armed forces. Since June, 1941 there has probably been a replacement of 90 per cent of the men by women and youths. Unskilled workers and women have been ascertained to be trainable more rapidly than formerly supposed. Women are handling chunks of hot metal in steel mills and in Moscow's famous Vladmir Ilyitch Munitions factory 70 per cent of the workers are girls and women working 66 hours per week in the factory who have increased their productivity ten times within ten months. By October, 1941 as J. Jusetovitch pointed out 45 per cent of Soviet workers were women. There must be present more than 9 million women in trade unions, the figure of enrolment in October, 1941.

Uneasy Satellites



Pings in Hungary like the independent move in Finland in favour of peace show that events like the Ploesti raid have direct results. The Hungarian cabinet crisis has disappeared, but questions are being asked about Rumania's will to fight. An Ankara despatch of Leonard Kirschen referred to General Antonescu's visit to Rome to enquire of Mussolini about the possibility of getting out of the war. Since German control is tight, Rumania like Italy can hardly capitulate at will. The 4½ hours alert in Sofia should have made Bulgarians aware of the Allies' air superiority. Hungary must have changed her opinion after the fall of Sicily and the sufferings of the Italians in Piedmont and Lombardy may also force them to take note of events elsewhere. In view of the Allied plans for invasion, Hungary may be exposed to air attack. A denial by the Hungarian Government did not affect the belief that German arms factories had been shifted to Hungary.

The Nazis settled the Macedonian problem in a rough and ready manner after the battle for Sicily began, but Bulgaria in spite of her gains has been thoroughly alarmed by the Russian victories and the attacks on Italian bases in Greece. Claims have been entered by the Yugoslavs and Albanians for the restoration of national independence. These claims also may excite alarm in the satellite countries which have received bombed-out children from Germany. The fall of Sicily does not mean that the next move is in the Balkans but the report as to the Quebec conference has mentioned the Balkans and an Anglo-American invasion. There is to be an Eastern theatre and Bulgaria may not be able to keep Salonica for long.

The German reverses in the Ukraine may well compel the satellite countries to confer quickly on the need for a negotiated peace. The New Order in the Balkans has been shaken, not only by the fall of Mussolini but by the continuous retreat of the Nazis in Russia. A direct move against Rumania may not be long in coming and Antonescu can no longer look to Italy for either advice or assistance. The Hungarian Government may have consented to provide troops for Russia but the strain in Rumania must be greater after the destruction of the refineries at Ploesti. The loss of Transylvania made the oilfields the only considerable asset, and this has been virtually written off by U. S. heavy bombers. Events in Italy should have a great influence outside Croatia whose ruler has retired, and the Catholics in Hungary may be guided more by the Vatican's proclaimed interest in peace than by the defence preparations in Poland. The neutrals have lost all belief in the Nazis' chances and their view may not be lost on the satellite countries which must be aware that France, Czechoslovakia, and more recently Austria, have been raided frequently by the R.A.F. and their own immunity has disappeared with the addition of many bases to Malta.

Power Production Figures

Progress in the production of electricity in recent years is not limited to South

THE WEALTH OF A NATION

A country's material resources contribute but little to its well-being unless they are adequately exploited by the enterprise of its people. The true wealth of a modern nation is thus largely measured by the extent of its industrial development.

Industry and agriculture in a well-balanced economy act and react upon each other to their mutual advantage. The growth of Indian industry will therefore profoundly affect the fortunes of Indian agriculture.

Over half a century ago, Jamshedji Tata first conceived the idea of pressing into the service of India the resources with which Nature had endowed her. Today, the enterprises planned by him and his successors employ over a lakh of men and women. These enterprises, in their turn, have created many other industries throughout the country.

Industrialisation is the only road to India's economic independence. The House of Tata works in that faith.

Tatas' many-sided interests cover:—

Iron and Steel . Textiles . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Vegetable Oils . Industrial Investment . Hotels . Cement . Engineering . Scientific Research.

TATA SONS, LIMITED

THE BANK OF MYSORE LTD.

Directors' Report for the Half-year Ended 30th June, 1943.

The Directors have pleasure in submitting to the Shareholders an interim Balance Sheet, and Profit and Loss Statement as at 30th June, 1943. The Auditors' Report is also annexed.

The result of the Bank's working for the half-year is a surplus of Rs. 3,24,992-6-8 which, added to the balance brought forward from 31st December, 1942, viz., Rs. 1,48,786-7-9, amounts to Rs. 4,73,778-14-5 as the sum available for distribution and which the Directors have disposed of as follows :—

	Rs.	A.	P.
In payment of an interim Dividend at the rate of 12 per cent. per annum and a Bonus at the rate of 2 per cent. per annum free of income-tax	1,40,000	0	0
Transferred to Depreciation on Bank Property	20,000	0	0
Transferred to Depreciation on Furniture and Fittings	10,000	0	0
Transferred to Reserve for Contingencies	50,000	0	0
Carried forward to next account	2,53,778	14	5
TOTAL Rs. ..	4,73,778	14	5

The Directors hope that the result of the working for the half-year will be considered satisfactory.
The interim Dividend will be payable on and after 16th August, 1943.

THE BANK OF MYSORE, LIMITED,
AVENUE ROAD, BANGALORE CITY,

Africa. A special table compiled for the League of Nations bulletin shows that production of energy by public stations as well as autoproducers in most countries did not fall off during the depression but continued to develop. Consistent increase up to 1941 is recorded in most cases. The world's largest producer and consumer is the U.S.A. where production of energy in 1941 was put at 208 billion kilowatt hours of which 167.85 billion came from public stations, electricity systems and miscellaneous plants generating power. Between 1935 and 1941 production rose by 750 billion kilowatt hours of which the greater part was due to thermal stations. In Canada only a fraction of the power comes from thermal stations but in the U.S.A. where hydroelectric power exceeds Canadian power production, the thermal power stations account for over two-thirds of electric energy produced. In the war period Canadian power production rose substantially and the development of further available resources in Quebec would have raised the total energy produced. In the case of Canada hydroelectric production has increased far more rapidly than that made available from thermal stations. An increase of 20 per cent in power production in the war

We have audited the Balance Sheet of the Bank of Mysore, Limited, as at 30th June, 1943, and the Profit and Loss Account for the half-year ended that date, and have obtained all the information and explanations we have required.

In our opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law, and the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books and accounts as kept at Head Office and at Branches.

We are further of the opinion that the Books of Account have been kept as required by Law.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

The fifth, and, by all tokens, the last year of the present war, will open soon with far brighter prospects for the United Nations than would have been thought possible a year ago. For the first time since Germany's war lords marched their legions across the Polish frontier four years ago and lit up a world conflagration which is without parallel in history and legend, it is possible to feel, with the full strength of objective facts, that victory is round the corner. Confidence was never lacking that in the long run the resources of the United Nations, material and otherwise, must prevail over the careful conservation of hitting power which the Axis had effected over a long period. But the shocks to such confidence have in the past been so powerful and had occurred with such rapidity, that it was no undue pessimism to apprehend that the resources of the Allies might not have a chance to determine the final upshot of the war. Indeed, Axis strategy had been conceived mainly with a view to deal knock-out blows that would remove all chances of recovery. Today, the successes of the Russian Army in their summer offensive, the conquest of Sicily, the recovery of the Aleutians Islands, the muzzling of the submarines and the out-stripping of shipping losses by the shipbuilding programmes, all those afford, no doubt, good ground for the confidence in Allied victory that is now felt all the world over. But till a few months ago, there was little besides the stout Russian resistance to sustain hopes of a speedy victory. The ease and swiftness with which Germany established her stronghold over practically the whole of Continental Europe and converted it into a fortress for herself, the apparent assurances with which she more than rolled back the tide of Russian recovery in winter and the vicissitudes of the war in Africa taken together with the strength of the Japanese entrenchment in the Pacific seemed to raise the question whether Allied recovery would be in time to prevent fresh and more decisive triumphs for the Axis.

* * * *

In war more than in any other aspect of communal life, wishful thinking has to be carefully avoided; and there is no other way of avoiding it than to develop the habit of increasing one's scepticism of conclusions in direct proportion to their desirability. Well, I for one, could never, not even in the dark days of Dunkirk or of the evacuation of Burma, could regard an Axis triumph as a possibility. For it would not fit in with any future order that I could conceive of. But the facts seemed to stare you out of such convictions. Time was when people talking in assured privacy could be heard to speak freely of Germany and Japan planning to join hands somewhere in India, of the Germans breaking through the Caucasus and the Japs through Eastern Asia. There was the scare in Madras, rumours of all kinds and a daily packet of authentic news of fighting abroad which afforded little comfort. The submarines were taking heavy toll on shipping. If the winter saw the Russians regain some ground, the summer left the Germans with net additional gains. The idea that Germany might be starved into surrender, in despite of the triumph of her arms abroad had long ago to be discarded. Such a setting was more than a puzzle to the average Indian who has little knowledge of war.

* * * *

It is somewhat of a miracle that the position has changed in essentials in such a short time. The last few months have witnessed just the developments which can form a pointed answer to the questions perplexing the lay mind. Would the war potential of the Allies have the chance to tell? Would further advances of the Axis powers be stopped? Where would the Allied recovery begin? To all these questions, we have now had clear answers. In the case of Japan it was soon apparent that she had in the first few months bitten more than she could chew and that the strengthening of India's defences was sufficient to hold her in check till the hour of the great offensive should strike. So far as Germany is concerned, the undiminished violence of the fighting in the East was sufficient to prevent her attempting any fresh adventures. It was sufficient that every winter was a time for a major setback; this fact alone tended to make Germany's task in Russia something of the labour of Sisyphus. The simple fact that Kharkhov changed hands thrice before its present capture by the Russians was sufficient to show that Germany would have her hands full with the Russian war and time would thus be afforded for the Allied production programmes to get into stride and confront Germany in time with a far greater superiority than what she overpowered her continental neighbours with. It is well also to realise that the last winter offensive of the Russians had no suggestion in it of a flash in the pan. Careful observers had virtually ruled out the possibility of a successful German counter offensive in the summer. Now that Russian arms have been adding to their triumphs and winter is not far, this may well be regarded as the beginning of Germany's end. The reconquest of Africa and Sicily, the recovery of the Aleutian Islands, the strengthening of the Air forces in India, the ease with which naval strength can be secured in the Eastern waters, the massing of material necessary for invasion of the continent of Europe, these together form the net which will soon strangle the Axis powers.

* * * *

The Quebec conference was held to decide how best to take advantage of this position. Though it is a few days since it arrived at its major decisions, there is still no indication of their nature. Almost every morning we were told that the Allied forces are waiting for the signal to be flashed to them in order to storm the fortress of Europe. Doubtless, preparations have been made on a vast scale for the forthcoming invasion. The gigantic machine, that is the U.S.A., has begun to

realise its potentialities. The submarines have been hunted down more successfully, thanks to the new-fangled idea of sending them in packs. The flow of men and material from the U.S.A. to Britain has proceeded more or less unimpeded. The fact that the Sicilian campaign ended sconer than was hoped for is itself testimony to the smooth working of Allied plans. But all this only means that the Allies are enabled to come to grips with the enemy whom they had till recently evaded in the spirit of living to fight another day. The enemy is neither one nor small. Of the three partners of the Axis, Italy was never much of a factor to reckon with. Recent events only serve to show that her imbecility extends even to making peace with the enemy. Germany, for the purpose of the future campaigns is the whole of Continental Europe. Accounts of disaffection in the occupied countries are at best an assurance of moral support from disarmed peoples. As for Japan, the improvement in the situation is limited to her dispossession of her air bases in the Pacific and to her being brought within the orbit of U.S.A.'s long-range bombers. The offensive for the re-conquest of Burma is still conditioned by the release of naval strength from the Mediterranean. China is yet to be enabled to start an offensive on a scale big enough to disturb Japan's war lords.

* * * *

In these circumstances, one would expect the Quebec conference to afford every assurance that the global strategy which it is meant to plan is global in every respect, global not only in its startegic plans, but global also in the support which it evokes and utilises. From the point of view of the latter, there are only three countries whose attitude, position and requirements are relevant, namely, Russia, China and India. There has been nothing to suggest that these three countries are as solidly behind the Quebec conference as Britain and the United States. On the other hand, except for the presence of Dr. Soong, there is reason to feel restive about the concord between the English speaking nations on the one hand, and the other members of the United Nations on the other. The attempt to keep up the show of complete agreement with Russia has been foiled firstly by the Tass Agency which gave out that M. Stalin was not invited and there was no question of his attending the Conference and secondly the recall of M. Litvinov and M. Maisky from Washington and London. The reports since then that senior American and British Ministers will be proceeding to Moscow only strengthen the public apprehension that there are differences between Russia on the one hand and Britain and the U.S.A. on the other. Comments in the British Press are suggestive of a growing coldness between Russia and the U.S.A. Another source of disagreement is the recognition of the French National Committee of Liberation. "The Times" attaches some gravity to this problem and suggests that British policy is likely to be regarded with suspicion in France. It is difficult at this distance to see the question in its merits; but one suspects that somewhere the temptation is being felt to take advantage of French dissensions. The resignation of Mr. Sumner Welles is another point round which some complexity may conceivably centre. The encouraging feature, however, is that Dr. Soong appears to be heartened by the decisions arrived at in Quebec. The decision to accord a degree of priority to the Sino-Japanese war was communicated to him at the conference. But the practical result is nothing more than that the U. S. Airforce in China would be increased and the bombing of Japan's industrial centres will be taken on hand. To those who believe that the vital spot for China lies in the Burma Road and its re-opening, there is nothing quite new in the Quebec decisions.

But the view may well be taken that the relations of the United nations are of greater importance to the postwar settlement than to the immediate progress of the war. Russia has shown herself well able, even in the absence of a second front, to roll back the tide of Nazi aggression. As matters stand, it is by no means impossible that she will progress as far as Warsaw before the end of the coming winter. The second front, too, may not be postponed any further. The accumulation of men and material and the preliminary operations of softening the coastal lands by intensive bombing from the air have been completed. In the Pacific, the U. S. has won back all her air bases and the bombing of Japan both from the sea and from China may be

No. F.7(74)-F/42. GOVERNMENT OF INDIA, FINANCE DEPARTMENT, NEW DELHI, the 1st *July*, 1943.

NOTIFICATION

In pursuance of Sub-Section (6) of Section 42 of the Reserve Bank of India Act, 1934 (II of 1934) the Central Government is pleased to direct the inclusion in the Second Schedule to the said Act of the following Bank, namely:—

THE EXCHANGE BANK OF INDIA AND AFRICA LIMITED, BOMBAY

B. K. NEHRU.
Deputy Secretary to the Government of India.

started. Britain, too, has constituted a separate command for South Eastern Asia, which presages a great offensive against Japan in this part of the world. Experts are both undecided and reluctant to forecast the end of the war; but as I started by saying, the fifth may well prove the last year of the war. But what of the peace to come? In spite of brave talks about a new world, there is still nothing new in the ideas that inspire international politics.

* * * *

The cold weather will not lack its usual attractions for the Art in Industry Exhibition returns to Calcutta. The prospectus for the Exhibition of January, 1944 reminds one that sufficient support from patrons and pupils is available and Burmah-Shell carries on the good work begun in 1941. With 39 sections and total prizes of Rs. 20,000 offered by the committee the 1944 Exhibition should surpass previous ones as its interests extend and appeal broadens. The addition of industrial design as a new section should serve to focus attention on art in the factory and the home. Amateur designers as well as the common consumer will have a chance to define their ideas as to the shape and size of articles of everyday use. The chance presented may well be turned to advantage, for most arts and crafts in India can only survive by being adopted to modern taste. Though it is clear that a levelling up is required, popular taste as regards containers, footwear and crockery may be essentially sound; and manufacturers, unable to undertake consumer research, may discover through the Exhibition what the consumer really wants. The problem ultimately is one of saving in material and charges for workmanship. If sound design assists mass production, it is clear that manufacturers will gain as much as the buyer. The emphasis on design must be related to export possibilities in the Middle and Near East. If good design is essential at home it is even more important abroad, and Indian goods, welcomed at present, must keep their place in foreign markets after the war.

* * * *

The addition of the competition organised by the Inter-Services Public Relations Directorate may seem unusual, but commercial artists have to help provide the posters wanted for the Services as regards recruitment. The newspaper make-up section perhaps is a trade test for sub-editors alone, and to-day when papers are slimmed to Government requirements even an outside test may hardly put the profession on its mettle. It is perhaps a chance for the press employee to keep his eye in by presenting his own ideas of make-up and display to the journalists who usually do it. The turning of the tables may have its own value and newspaper men may be pleased to get outside ideas since tradition sits heavily on the production of a daily and any experiment independent of Press Advising should be pleasing. Current developments have had their own effect on advertising. The tyremakers are strong on vehicle conservation even for press advertising. The grow food slogans are to appear on match-box slogans (perhaps because there are no goods to be boosted) but a match box does reach the villages and the cultivator is one to read the labels. The real novelty is a demand for scenario for the Defence savings campaign. Studios, reluctant to make Shorts to order, may set their heart on the 'economy' film and the winner may get an addition to his quota; that too would help to show how valuable is the new meeting-place for art and industry provided by the sponsors of the Exhibition.

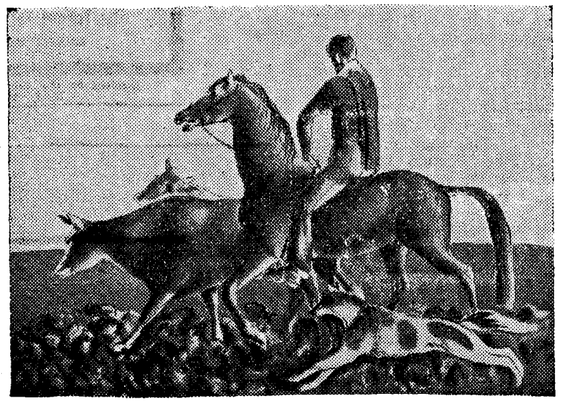
(From Our Correspondent)

New Delhi, August 23.

THE Assembly Session has been further prolonged on account of the obstructive tactics of the Muslim League party over the Delhi University Bill. There has been a regular spate of amendments from League members with an avowed aim to "de-Hinduise" the University as a spokesman of the party put it though the party has failed so far to win on any of its major proposals—it did succeed in getting substantial concessions regarding representation of minorities on all important executive bodies. The proposal to form a Statutory Advisory Board of seven to advise the University on all matters connected with Muslim education may however be rejected by a big majority. So far, the Government have agreed to increase the number of members of the court from 15 to 25 to be nominated by the Chancellor. Eighteen of them will be members of minority communities who otherwise fail to obtain adequate representations on the court. The Government also accepted the proposal to add another five members to the Academic Council to advise this body on matters connected with Islamic education. While so much time is being wasted on communal wrangles, the more vital objective of making this University an all-India centre for agricultural and industrial research activities, with adequate subsidies from the Central Government, is lost sight of. The Council of State session may also have been prolonged on account of the delay in the passage of this bill by the Lower House. The Viceroy is going to Simla for about a fortnight I understand, soon after his return from the South.

* * * *

Planning of an early offensive against the Japanese from both India and China, at the latest by next spring, and greater aid to China despite weather and transport difficulties is foreshadowed by the appointment of General George Stratemeyer, formerly Chief of Staff to General Arnold, Commanding General of the U.S. Army Air Force, as Air Adviser to General Stilwell, Commanding General, China, Burma and India theatre. General Stratemeyer's task will be to see that the increased flow of war supplies and expansion of American Army Air Force activities are accomplished with the greatest efficiency. Big supplies of air and mechanised equipment, I understand, are soon expected in India, a large part of them to be immediately despatched to China. I understand that a school is soon to be started somewhere in India to train officers for the Air Force.



* * * *

Though imports under certain heads show a tendency to rise, most of the categories fail to reach the 1941 level. The customs revenue for July at Rs. 297 lakhs, though far below those for the corresponding period in 1941 are about Rs. 60 lakhs above the 1942 figure. The imports of all textiles continue to fall. The expansion of the defence forces particularly of the Air Force is reflected in the big rise in import duties for motor spirit. The excise revenue receipts show an increase of about 7 per cent over the returns for July last year (Rs. 104 lakhs and Rs. 96 lakhs respectively).

The Foodgrains Policy Committee, I understand, may now submit its report. One immediate result of the committee's recommendation will be to give a fillip to the indigenous fertiliser industry by the import of machinery to manufacture fertilisers. It is also proposed to import large quantities of fertilisers. Companies are already being formed to manufacture fertilisers. The Committee has recommended the import of plant able to manufacture 350,000 tons of ammonium sulphate. The committee proposes the setting up of a standing price committee representative of the Centre, the Provinces, the States and the trade to consider the price position at regular intervals. The Committee also recommends the immediate introduction of rationing in the large cities and its progressive expansion to smaller towns. Rationing, however, is only proposed as a

Aspect of an Industry No. 21

BEASTS OF THE FIELD

THE British are a race of animal lovers. A sick beast is a matter of active concern. War has starkly reminded everyone in Britain of the close connection between the healthy man and the healthy animal. Today the well-being of every man, woman and child rests in part on the health of our livestock. Healthy cattle mean more and better meat, milk and butter; healthy sheep and lambs, more wool and food; fit poultry, more eggs; and horses sound in wind and limb mean more work on the farm. The maintenance of good health and the prevention of disease amongst farm animals are thus vital. Under the spur of necessity British veterinary medicine is playing an essential role in the national economy. Although the subject of veterinary science was studied in some European cavalry schools in the fifteenth century, it was not until 1790 that a veterinar college was established in London. The great advances made in preventive medicine in the nineteenth century were a stimulus to a similar attack on the scourges to which animals are subject. The results are seen today in the way many diseases have been eliminated or brought under effective control. In the British Isles the deadly rabies, so often transmitted to Man by the bite of a mad dog, belongs to the past. Rinderpest, the cattle plague that kills millions of beasts in Europe and Africa, does not now exist. Anthrax is no longer a farmer's nightmare. Destructive diseases of sheep and lambs due to gas gangrene bacilli can be prevented and cured. Foot and mouth disease is better under control than anywhere else in Europe. But these achievements, great in themselves, are no more than a beginning on a small scale. Similar problems on a much vaster scale remain to be tackled in India. Not to mention the need to extend the fight to diseases such as tuberculosis, contagious abortion, mastitis, sterility and ill-health due to parasitic worms—diseases which are estimated to cost £20 millions a year within the small compass of the British Isles alone! How much more do they cost India? In the era of preventive animal medicine, now opening, synthetic organic chemicals will play a decisive part The worker in the biological research laboratory and the chemist in the factory are uniting to help the veterinary profession to control the diseases of animals and thereby sustain the health of the nation.

Bombay, August 24.

THE quieter tone of the bullion market here is attributed less to the drop in cotton prices than to the intervention of the Reserve Bank. A report that the Reserve Bank is selling gold on behalf of the British Government has appeared in order to explain the fall of Rs. 6 per tola in the price of gold within a week. It is doubtful if goods are being bought for gold—the quantity mentioned is only 20,000 to 30,000 tolas—and the main problem of preventing expansion of currency always will remain with us. Since many mills in India are idle it is difficult to look for improvement in the cotton market on the eve of the new cotton year. The idea of fixing minimum prices for cotton after the fixation of ceilings for cloth and yarn (with leopard cloth at Rs. 2-3-0 per lb.) does not find general acceptance, and the only favourable factor is the import difficulty. Egypt's cotton crop is small and East African supplies are badly affected by drought. So cotton may be steadier at the decline than presumed. The statistical position need not claim special attention but the curtailment of cotton supplies in 1944 may have an independent effect in advance. It may be urged that the drop in jute makes for a fall in cotton as the prices must move in the same direction. Millowners are not eager to buy cotton when the general anti-inflationary setting has not been defined.

Interest in fertilisers is apparently not limited to scientists who plead for the development of this branch of the chemical industry. The Government of India has been reminded that more fertilisers are wanted for making India self-sufficient as regards food. A very large increase in ammonium sulphate is demanded, and continuous double-cropping must force rice-growers to rely on inorganic manures. Dr. Richardson may outline suggestions for development. The Hot Springs Conference may not have discussed in detail the local need for fertilisers but it is believed that import of plant is possible to-day only with State assistance. Bombay industrialists contemplate the flotation of a private company to produce ammonium sulphate. The control of capital issues will not stand in the way of a company that looks only for import facilities. It is to be seen if the food drive extends to the promotion of the fertiliser industry. In Britain except for one or two small companies the fertiliser manufacture is a branch of the chemical industry dominated by I. C. J. Since I. C. I.'s interest in research is large and permanent, as made known by Lord Mcgowan only recently, the British industry might have reached the point at which exports after the war will retain some importance. But India's present need of fertilisers must claim precedence over importers' established interests. Moreover, India's present production of 18,000 tons and no imports cannot further progress in the plantation industries in which British capital is interested.

Sir Chimanlal Setalvad apart from recording his admiration of the English language and British culture has attacked a fellow-liberal. The correspondence in the press on the subject of Gandhiji's adequacy as India's representative at the Peace Conference shows that Sir Chimanlal has a supporter in Mr. Russa Mehta. Mr. Mehta goes a little further than Sir Chimanlal in condemning Gandhiji's lack of realism and declaring that Young India will not forgive Gandhiji for his record. Sir Chimanlal merely referred to the minorities distrust of Congress whereas, Mr. Mehta argues that Gandhiji was pro-Japanese. No reference is made to the Punch Cartoon of last August but it is clear that Mr. Mehta is prepared to go as far. The Rt. Hon. Sastri's tribute to Gandhiji followed Sir Chimanlal's reaction to "a fantastic suggestion". There was a mention of Mr. de Valera. If the League of Nations (Mr. de Valera made a very able President in 1938) comes back into the picture. The claims of Eire cannot be denied and Mr. de Valera may find a place at the Conference. But when the Allies talk only of unconditional surrender, the outlook for independent people like Gandhiji is unpromising.

Mr. Hydari's visit produced the impression that control of the trade in drugs and medicines is on the way. From November the Centre will check profiteering and regulate distribution. It is not known if the Government is going to secure a monopoly of imports, in which event, foreign suppliers may refuse to deal with others than their original agents. There was a conference last week and the control plans may take shape this week. Middlemen came in for severe criticism but the threat is likely to modify the partiality of investors for the shares of medicines-making concerns not even half a dozen in number.

The annual meeting of the Imperial Bank of India was held on Monday last week with Sir R. M. Chinoy in the chair. The Chairman referred to the progress of Indianisation and expressed satisfaction. The report was discussed from the chair and the increase of Rs. 59 crores in deposits in a year was attributed to larger spending on the war by the Government, while the rise in Investments by Rs. 54 crores was connected with slacker conditions in trade and industry. The increase in savings or rather in Deposits has favoured the Government most as it has gone into gilt-edged. Describing the increase in taxation in recent years, he stated, that before profits ever struck taxation had to be met. It cost more to-day to cover a dividend of 12 per cent than it did to cover the dividend of 16 per cent in 1929. The P. & L. account has to be viewed in the light of taxability and net profit of Rs. 85¼ lakhs seems satisfactory in view of the increase in the bank's expenditure.

The Corporation passed last week a resolution which threatens the Bombay Tramway Company's monopoly. In view of the Company's failure to cope with traffic, the resolution stated that other transport companies should be allowed to run buses or other vehicles so as to give passengers a chance. The proposal for adjusting office hours seems to have escaped notice though it is known that adjustment of school hours and office hours may give some relief. The entry of other transport agencies may require government sanction but the Police may easily wipe out the B. E. S. T. monopoly by recommending buses run on producer-gas.

The Senate accepted Professor K. T. Shah's resolution on conversion in colleges. The University is said to disapprove the conversion of students. Missionary colleges may register alarm and the Senate's view may force the development of commercial colleges. The Vice-Chancellor said that a proselytising agency if it erred at any time could be dealt with. The University may stand for freedom but freedom to convert is also deemed essential, and the enforcement of a Conscience Clause (which may be the only immediate object) could have been secured in some other way. There may be reluctance to let Hindus into Muslim colleges after this caution against conversion, and the University which objected to the Education Department's attempt to dragoon high schools is hardly charitable to outside agency whose raison d'etre may be said to be conversion though their methods have seldom excited aversion.

Corpses in Calcutta attract police attention. Here the stories of death from starvation; of cholera and famine create doubts as to the success of the food policy. Sir Edward Benthall's assurances as to wagons and food supply do not cover the hordes of beggars. The food brought in is for those who can buy, not for the most deserving claimants without the means to buy. The difficulty is put down to distribution though the distress is not limited at present to Calcutta. The Food Member's intervention is demanded and the extinction of former abuses in the name of the suffering humanity. The Centre has the credit of having limited exports to an utter minimum. Flood and denial cannot have cut down supplies to an impossible point and a bottleneck is located. The Ministry of Civil Supplies in Bengal having prepared price control plans etc. may not know that new prices may not lead to provision of relief but to the persistence of the supply difficulty. The dimensions of distress in Bengal are known in spite of the general reluctance to discuss unpleasant subjects. Here, too, rationing is an official success and consumers hold a different opinion, as supplies are small and quality poor. The Corporation discussed quality and if certain allegations were extreme, the experience in Poona appears forbidding. Rationed supplies have no special merits and the encouragement given to informers by advertisements has made a nasty impression.

South India

(From Our Correspondent)

Madras, Aug. 24.

The food problem of this city is to be tackled shortly. Rationing of rice on the lines already introduced in Bombay will be put into effect after 29th August. The A.R.P. staff have already distributed the ration-cards. There are 188,000 families in the city. Every adult member is allowed 2½ ollocks of rice per day while children between 2 and 12 will be allotted 1¼ ollocks. Manual labours who find their share insufficient are entitled to an extra allowance of 1¼ ollocks per day. Seperate cards are issued to wage-earners. Homeless persons, who are not beggars, would shortly be enumerated, and ration-cards will be issued to them. Besides the T.U.C.S. and its branches in the city, there are 500 retail dealers who would be the agencies for issuing rationed rice to 500 members per day. Institutions like the railways and the mills who have their own grain shops will be treated as licensed dealers. They can register all their employees. Separate shops will be opened on the outskirts of the city to serve the requirements of the residents in the suburban areas. The Fair Price shops already working there will be absorbed into the list of licensed dealers. Persons who own lands outside the city and who are importing rice from surplus areas will be prevented from getting rice from outside. Family hospitality shall have to be suspended during war time and guests staying in a house for less than a week will have to be sent to the nearest hotel, but if they stay for a longer period, supplementary cards would be issued. No extra rations will be allotted for entertainments, marriages, ceremonies or special occasions.

On the shortest view there are certain glaring defects in the scheme of rationing to be introduced in the city. It is common knowledge that the city has been flooded with beggars for the past several months and any system of rationing which does not take them into account exposes itself to strong criticism. Either the government should open an adequate number of free kitchens in the city to feed the unfortunate thousands of beggars or leave a margin for alms when the rations of citizens are fixed. At present, there is no assurance that the Government would look after the beggars and the destitutes as was recently provided in Mysore by a regular home. If rationing is made stringent and beggars left to take care of themselves it will not be surprising if Madras presents a ghastly sight of destitutes dying on the pavements, as has been reported from Calcutta. Till recently the authorities were assuring that there was no shortage of food grains and that the troubles was really due to defective distribution. If it were so, the public fail to understand why the scheme has been made so rigorous as to offer only spartan fare for the average citizen.

The distress in the famine-stricken Districts continues to attract attention. Normal agricultural operations are made impossible owing to the lack of rainfall. During the month thirty relief works in Bellary District, twenty in Anantapur and seven in Kurnool district were in operation. On an average, per day 194852 persons in Bellary 92,275 persons in Anantapur and 35,575 persons in Kurnool received gratuitions relief. Exclusive of the wages paid to the workers on some days the amount spent for relief in July 1943 is Rs. 25,32,301. The Board of Revenue is also empowered to incur an expenditure up to Rs. 50,000 for the provision of clothing to the unfortunate people who crowd the famine camps.

The results of work done in the Madras Presidency during 1942-43 by the staff of the Geological Survey are published in a press note issued recently. It appears that corundum deposits, essential for the manufacture of aluminium, have been found in a belt of country over 40 miles between Donnakuttahalli in the south to Chintalgutta in the Salem District. Since the market price for corundum is very attractive immediate measures should be taken for exploiting the deposits. In the the Sivaganga zamindari a sporatic occurance of muscovite mica has been spotted. A few mica-bearing pegmatites are mapped in the Nellore area. In the Tinnevelly, Ramnad and Tanjore coasts and also on the Chowghat coast in Malabar sands containing ilmenite, magnetite, garnet, monazite, rutile etc. have been discovered. Clay deposits are found at Paluruku and Nandavaram in Banganapalle State and elsewhere in the Ceded Districts. Considerable quantities of red oxide and yellow ochre are found near Gutupalle and the Ceded Districts are known to certain lead ores. Near Ramayyanpatti and elsewhere in Tinnevelly District limestone deposits have been noted.

Irrigation development continues to receive the attention of the Government. A sum of Rs. 5,15,000 have been sanctioned for improving the irrigation and drainage facilities in Kanoor and other villages in the Godavari western delta. The selected schemes will shortly be put into execution.

Groundnut cultivation presents a cheerful picture this year. Owing to the in-

sufficiency of irrigation water for second crop paddy and the encouraging prices for groundnuts the area under the summer crop of groundnuts during January to June 1943 has come up to 66,300 acres. This is an increase of 117.4% over the corresponding figure last year. Though insects have done some havoc in Ramnad and the crop failed in Chingleput the outturn of groundnut is expected to be satisfactory. The outturn is estimated to be in the neighbourhood of 72,300 tons, which is an increase of 108% over the corresponding yield during the last year.

Mysore is going ahead with her drive for extending food crops. A plan for construction of a storage reservoir across the Kabbini, a tributary of the Cauvery river, will shortly be taken up for consideration. A dam to a height of 70 feet above the river-bed having a storage capacity of 15,600 million cubic feet is the essential feature of the plan. If the scheme is completed nearly 20,000 acres would be brought under cultivation in British territory alone. The Kollegal Taluk will be highly benefited. After irrigating the estimated area the water will be released for power purposes at Sivasamudram. The Krishnaraja Sagar reservoir will also be available for power purposes. Later on the water will be utilised for irrigating a further area of 34,000 acres in the Cauvery valley. It is to be hoped that this project will be speeded up in view of the food crisis noted in several parts of this country.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, August 26.

A PALL of gloom continues to hang over the markets and this must be by a long way the worst August on record for business in the history of the Jute Industry. The gloom was but slightly relieved by the report that an allotment of 50 wagons of coal per day had been made to Jute Mills by the Transport Board to keep the wheels of the Industry revolving. The more pessimistic felt that they would like to see the actual coal before starting to shout. Others pointed out that half this quantity was required for maintenance purposes alone, which left little over for actual manufacture. Of course maintenance coal runs to a much heavier figure when mills are idle than when they are running, and it is also considered that no little economy could be effected in the amount of maintenance coal used if particular attention were paid to this point. On the principle, however, that half a loaf is better than no bread, and assuming that this quantity of coal actually comes to hand regularly, the prospects for the industry must be somewhat brighter. And there is always the possibility of further pressure evoking some further concession.

To avoid the dead loss of paying out wages to idle labour, as also to mitigate the demoralising effect idleness must necessarily have upon the labour force, it is understood that the Jute Mills Committee are endeavouring to evolve a scheme that will enable all mills to run at least 3 weeks out of every month. It would inevitably be a shorter week than has been the rule of late, possibly only 40 hours, possibly even less, but it would be economically far sounder, and also much more satisfactory from the point of view of morale, if it could be contrived that Mills could work even 4 days a week of 8 hours for 3 weeks out of every four. The balance would have to be held fairly between the Coal-consuming mills and those which draw their power from Public Supplies, and while there may be some grumbling on this score from the "Supply" mills, the general interests of the industry as a whole would doubtless prevail. In fact, a lightening of the load on the Public Supply might be used as a lever to secure some additional quota of coal and so improve the period of working for the benefit of all. Staggering of the working hours of mills drawing power from public supplies might also effect some economy, if this could be arranged. Altogether it might be said that the prospects are somewhat brighter for more level and regular working, and bearing in mind the well-known propensity of the Jute Mill Industry to rise superior to any and every crisis, undue pessimism is to be deprecated.

A vexed question which keeps cropping up from time to time is that of the Register of Loose Jute Sellers. It was the avowed intention some time ago of the Sub-Committee in charge, to effect some improvement in the current Register by closer scrutiny of all applications for inclusion and by a ruthless cutting out of much of the "deadwood" from the existing publication. Perhaps the efforts of the sub-committee have been hampered by the fact that, for reasons of paper economy, the publication of a fresh Register cannot be undertaken at the moment. However this may be, the results of their efforts to date appear to have left the old Register much as it was and have added not a few sprouts of very doubtful value to the contents. It is a generally held belief in the trade that a ruthless combing of the Register would produce a volume of about one-third the present size, but constituting an authoritative list of genuine, responsible sellers, which is what the trade really requires. It seems doubtful if the present mode of procedure will ever produce this and the problem might usefully be tackled from some other angle. It has been suggested that a small panel of Jute Buyers and Brokers could very quickly produce the nucleus of a really authoritative list of responsible Sellers that might constitute the Authorised Register of all those sellers who really matter in the market. All other sellers would be recognised as such, but not on the Register, and it would be at the option of Buyers whether or not they dealt with such sellers. There would thus be some value and kudos in being on the Register and the Panel might periodically consider the claims of outside sellers to inclusion, in the light of reports on their deliveries or of recommendations of responsible parties. Similarly, any seller on the Register might be liable for expulsion by reason of unsatisfactory deliveries or of any proved default in his dealings. The position would become somewhat similar to the old Actuals and Substitutes, or Short and Long Groups, in the Pucca Bale market. No seller would be precluded from selling if he could find a buyer, even if his name were not on the Register, though he might have to accept a slightly lower price than a Registered Seller. The idea seems worthy of consideration as the existing Register seems to have signally failed to achieve its object and any improvement of it seems to be deferred to the Greek Kalends.

Interest in the Pucca bale market has continued very limited. There appears to be an accumulation of old crop white jute in the Bazar which has caused quite a sharp slump in the price of Firsts and Lightnings as compared with New Crop quotations. Inter-baler business was reported in Lightnings from Rs. 73 down to Rs. 70 while later Mills bought old crop Firsts at Rs. 73, Old Crop Dundee Daisee on the other hand has been commanding a premium over New Crop, Rs. 75-8 having been reported, though later there were sellers at less not finding buyers. On the other hand, New Crop Daisee sold at Rs. 73 to Mills and was offered at Rs. 72 for shipment. Tone at the close easy with sellers ready to discount to secure business.

The Loose Jute market has been moribund and only a very small trade has been recorded in European packing at one rupee below agreed maximum rates while a still further discount would probably be accepted at the close, but buyers are very shy. Shipping facilities at some upcountry stations are going a begging for want of orders or for lack of sufficient imports, which is rather a deplorable state of affairs at this period of the season. Main-line stations on the B. & A. are reported to be pretty well cleared of accumulated old crop, but there is still a lot to move from stations on the metre-gauge. Imports of New Crop are generally being adjusted to demand and though prices have declined, they still lag behind Calcutta parity. Condition however is generally better, though quality shows falling off in a number of places. The annual "Aftercast" or Consolidated Final Review of the 1942 Crop will be published on 1st September. It is questionable whether it will warrant the paper used.

The tendency in the Fabrics market has been slowly downwards. Business as usual has been confined to the more or less Fatka operations of the Bazar as outside interest has been negligible. Small sales of 7½ oz. and 10 oz. for near were reported at Rs. 2 and Rs. 28-6 earlier on, but since then the rate for elevens has declined to around Rs. 2 or below. "B" Twills have declined from Rs. 66-4 to Rs. 65. Salts were done at Rs. 5 September and Rs. 57 October and Sydney Packs at Rs. 3-7 September.

period hardly marks off Canada from British India where electricity generated and sold has shown similar growth. The decline and recovery in Palestine's electric production may be due to the Arab disturbances and recent industrial development.

Bank of Mysore Ltd.

Since deposits in the first half of 1943 have increased from Rs. 4.35 crores to Rs. 5.58 crores it is not surprising that the Bank of Mysore reports exceptional progress. With its large capital and reserves, the Bank of Mysore is long distinguished as a citadel of orthodoxy. The balancesheet supports the reputation, for the cash ratio is large and Advances moderate in proportion to Investments. The payment of a bonus of 2 per cent in addition to the interim dividend of 12 per cent is in tune with precedents and the only point to stress here is that the carry-forward is larger than the amount disposed of. The increase in net profit is ascribable to the rise in Advances from Rs. 1.16 crores to Rs. 1.55 crores in six months. A further addition to Contingencies Reserve raises the total Reserves above the sum of Rs. 28 lakhs shown in the balance sheet. The increase noted under Fixed and Thrift deposits is an unusual but welcome indication of banking progress in Mysore, indicating that not only current accounts but smaller savings continue to increase there. Of the total increase of Rs. 1.23 crores only Rs. 73 lakhs fall under current deposits. The mild improvement under Bills in the first half of the year should also claim attention. Investments have risen by Rs. 26.5 lakhs while Advances have risen by Rs. 70.1 lakhs as compared with the position at the end of 1942. The increase in distribution, after the usual allocations to reserves etc. may suggest that the shareholders despite an increase in taxation are getting a full share in the profits. The Board in recording satisfaction with the results, pointing to a rise of over 1 lakh in the net profit, do not refer t trade conditions or the increase in taxation which takes Rs. 65,000. But the increase in Advances in the period tells the whole story, and the progress reported now finds support in the profit figures of the period. Other banks in the South report the same measure of progress, but none is so comfortably placed, to judge by the percentage of liquid assets to deposit liabilities at present. The balancesheet total of Rs. 6.16 crores is likely to improve further as economic conditions in Mysore should be improving, and the rise in prices and incomes should certainly have its own effect on the resources of the largest bank of the State.

Norwich Union Results

The Norwich Union Life Assurance Society's excellent results need not be described in detail. Indian insurance companies will rightly find in Mr. Ernest Hicks' speech many points to claim their attention. £7.4 million in business and £1¾ million of new investment in British Government securities are telling figures. The provision of £250,000 through savings bonds schemes is a part of the Society's war effort, indicated also in the President's statement that the Society's investments in four years in British Government securities totalled £6.4 millions and the investments in Dominion and Indian securities totalled £2.5 millions. The results described were secured in spite of branches being closed and the staff being reduced. Progress is maintained without a large field force. The Society's reputation and the recommendation of policyholders are adequate substitutes. In India and the Dominions the Society enjoys a strong position and policy holders may derive further encouragement from the fall in the expense ratio to 13.6 per cent in 1942 as compared with the higher prewar percentage. The Society paid out £3.35 million on claims through death and maturity last year. The war deaths at home and abroad were treated like other claims and Mr. Hicks justly described the payment as 'a further direct contribution to the Nation's needs'. The net yield on the funds was over 3 2/5 per cent showing a small rise on 1941. The addition to the Funds last year was £1.67 millions to raise the total to £55 million, a figure well below the market value of securities held.

With a total income of over £6.38 millions and disbursements of £4.7 millions in 1942 the Society reported a fair increase in the Funds. Mr. Hicks' retirement should make no difference, as he has expressed willingness to serve on the Board. The speech indicates that in the fourth year of war Norwich Union's business and revenue have improved while the entire increase in the Funds has gone into War Loans. The fall in surrenders last year shows an absolute revival of confidence in life assurance that makes for further progress.

Prepayment Plan

ANTICIPATORY taxation on a voluntary basis seems acceptable to most and U. S. example may influence, according to recent report, the British Treasury. If inflation producing a rise in incomes can be made to swell revenue by any means while checking inflation incidentally the plan may be tried out particularly as an indefinite increase in the short-term debt is not desired while the lenders too are not over-eager to add indefinitely to holdings. The British Government may take to the idea which will be advantageous as producing more revenue per week instead of its being concentrated in a month like January. If there is no increase in liability to tax the tax-payer can have little objection. Tax reserve certificates are well-established at present but individuals apparently do not go in for it. The U. S. and U. K. system is to be adopted in India and the extension of short-term borrowing announced on August 24 is a variation on the prepayment plan. For the average assessee 2 per cent less income-tax is a fairly tempting return. Conditions as to deposits (the minimum period is 3 months) suggest that an alternative to investment in treasury bills is provided by Government Multiples of 100 are required and provisions as to refund and carrying over of deposits are, in the main, to the assessee's advantage. In the case of corporations with large cash balances the new system of treasury deposits at 2% may present definite advantages for they should have an idea of their liability prior to actual assessment and the return of 2% for the interval may appear reasonable as term deposits are hard to place.

4% Karachi Municipal Corporation Water Works Debenture Loan

(RECOGNISED AS TRUSTEE SECURITIES)

Karachi Municipal Corporation have been empowered by the Sind Government under their Resolution No. 2027-G.A/42 dated the 28th July, 1943 to raise a loan of Rs. 34 lakhs being the second instalment of the loan of Rs. 95 lakhs for the Karachi Water Supply (Indus) Scheme, first instalment of Rs. 40 lakhs having already been raised in December, 1942.

The Scheme is estimated to cost Rs. 1,89 crores and the Municipal contribution has been fixed at Rs. 95 lakhs and the balance is borne by Government of India and Government of Sind.

The loan to be floated is for the period of 40 years bearing interest at 4% per annum payable half yearly.

The loan is recognised as Trustee securities and is secured on the revenue and assets of the Corporation.

The limit of the borrowing powers of the Corporation as per the Municipal Act is Rs. 344 lakhs. The present net loan liability after deducting Sinking Fund accumulations is Rs. 124.36 lakhs only.

Out of this loan of Rs. 34 lakhs, Rs. 10 lakhs are reserved and set apart for issue to and in the name of the municipal Corporation of the City of Karachi under Section 68 of the Municipal Act and the balance of Rs. 24 akhs is offered to the public at a minimum premium of 5 per cent i. e. Rs. 105/- for every Rs. 100/- loan.

Tenders will be received for minimum sum of Rupees one thousand and multiples thereof.

Brokerage at the rate of 1/8% will be paid to recognised brokers and banks through whom accepted applications are received.

Tenders on printed application forms will be received upto 3-0 p.m. (S.T.) Wednesday the 15th September, 1943 by the Undersigned at the Municipal office, Bunder Road, Karachi.

T. J. BHOJWANI.
Chief Officer,
For the City of Karachi.

JUTE

Calcutta, August 26.

The Indian Central Jute Committee is seised of the price situation in the raw jute market. The growers' case has been evidently presented, and the danger of a permanent reduction in jute cultivation has been mentioned at once. The fall in prices this week again has not excited comment, as it was foreseen, and the improvement in a narrow manufactures market hardly provokes comment. Mills, of course, with stocks in hand, or at call, have no interest in jute when coal shortage is an established fact. Shipment business has been sparse and dealings in Daisee 2/3 at Rs. 77 and Lightnings at Rs. 74 in the last week are only indicative of the decline. Eagerness of sellers shows that sentiment has deteriorated. But hessian prices are stabilised, and mills may recover interest in the crop.

Talk of another mill holiday tends to push jute prices down, and the lower grades have weakened along with Jat. Prices are considerably below the agreed maxima and the only intelligence pointing to recovery is that jute-growers with paddy to sell at Rs. 15 per maund are not anxious to press their jute on reluctant buyers. Arrivals in mofussil markets are known to be small, and till the final forecast appears, the raw jute market may only mark time. Mills have transport and storage difficulties; and certain war orders being cancelled, are in no hurry to take jute.

The loose jute market has weakened with pucca bales. At the end of last week the down-trend was accentuated by inactivity. Weakness was manifest in mid-week and European Middles were done at Rs. 16 per maund and Old Crop Firsts and new crop Daisee 2/3 were done up to Rs. 73. The fall, as compared with previous rates reported, shows that an early recovery is highly improbable.

JUTE MANUFACTURES

Calcutta, August 26.

In spite of the reports as to mills' inability to sell goods and a reputed decision to stop working for a week, the hessian market is more or less stagnant. Price ceilings definitely retard a speculative revival and the prices have moved very narrowly. On Saturday 11 porters stood at Rs. 28 the rate on Wednesday was Rs. 27-15. Interbazar business in a quieter market does not make for an improved tone, and the small rise due to rumours have been neutralised. Mills have the coal problem to consider but not all mills are likely to stand idle at a time. Mills' sales figures yield no conclusion as to the stock position of the bazar. Quotations indicate a very small premium for near delivery as against August delivery; but there is nothing to suggest that export prospects have brightened up suddenly. Compared with prices ruling on Saturday rates for Heavy Goods show a small fall, pointing to a reduction of speculative interest in this section. B. Twills have receded to Rs. 65 and Cornsacks to Rs. 65-8. The undertone is weaker though jute shares have steadied up surprisingly on the stock exchange. There is still no real incentive as 9 porters have hardly moved from the Rs. 21 base though the rate on Saturday was higher at Rs. 21-2. The problem of a shorter working week has evidently not ben solved; and arrangement of work as between mills served by the electric supply companies and the mills dependent on steam has not been devised. A share-the-work plan has been propounded but it is not likely that agreement will be reached soon. The bazar may derive little or no encouragement from a shorter working week as compared with a drop in jute.

GOLD

Calcutta, August 26.

The bullion market has turned weaker in the face of rather surprising news as to large sales. On Saturday the market in Bombay was quiet with gold closing at Rs. 72-1. Forward gold was at a discount; which explains Wednesday's closing rate of Rs. 70-4 per tola. In Calcutta the rate has fallen from Rs. 72-7 on Saturday to Rs. 71-3. The price of the sovereign has shaded off to Rs. 51-8 from Rs. 51-12 on Saturday while the Bombay price also shows a drop from Rs. 51 to Rs. 50-12. The offtake at the decline has shown some improvement in Bombay but sentiment is bearish, and no local development is likely to help the market after the spate of good news from the fronts. The price has dropped in Bombay from Rs. 72-12 to Rs. 69-12 per tola within 3 days, and the fall in silver conveys the impression of renewed weakness.

SILVER

Calcutta, August 26.

The silver market has reacted slightly. On Saturday the rate was Rs. 109-9 and on Wednesday the Bombay market closed at Rs. 106-9 per tolas. The forward rate is still below spot and a point to note here is that Calcutta prices of Rs. 108-4 and Rs. 107 on Saturday and Wednesday respectively show a smaller fall while the very small margin between prices in the two cities indicates that the period of widespread and large margins is at an end.

The temporary improvement has not held in either Bombay or Calcutta and this week's decline may well signify that a recession to 1942 levels is more than likely in the case of bullion though not of foodgrains.

The Bombay market has been described as steady though prices have moved downwards this week. London and New York quote 23½*d.* and 44 ¾ cents per ounce as before.

(Continued from page 420)

temporary stopgap to be removed as soon as possible.

Action is also recommended to put a check to the killing for food of plough and transport cattle as far as possible. Though no unanimity was reached regarding statutory price control, the majority favoured its reintroduction. The committee favour the immediate reintroduction of pooled prices for imports. The Committee suggests special "rescue operations" for Bengal where the position is so abnormal. No attempt should be made to co-ordinate prices in adjacent areas to those in Bengal. The Committee does not favour Central subsidies as an aid to control of prices.

The attitude of the Central Government regarding the transport of foodgrains from surplus to the deficit areas continues to be complacent, despite the recent revelation of certain ugly facts. Operational and other reasons have at times imposed a limit upon the number of wagons that can be carried over a particular section of the railways, the War Transport Member quietly admitted in the Assembly last week but claimed that the amount of transport available has at other times frequently exceeded the quantity of foodgrains offered, and does so, at present. Meanwhile Sir Chhotu Ram has come out with his charge-sheet. Though the Punjab Government had purchased 218,654 tons of wheat by the first week of July, the Government of India had been able to remove only 64,000 tons of this huge amount. It is amazing that Sir Edward Benthall could claim efficiency of transport arrangements in the face of these facts. Then there is the other charge of profiteering for which neither the Central nor the Bengal Government can disclaim responsibility. Punjab wheat landing in Calcutta at about Rs. 12½ per maund is being sold to the consumer at Rs. 20 a maund. That is indeed tragic that while hundreds are dying of sheer starvation, the Provincial Government should come out with the plea of building up a stabilisation fund out of the profits made in these wheat deals. Great resentment is being felt here over the disallowance of the President of various censure motions which sought to discuss the food situation in Bengal. A full-dress debate on the unprecedented famine conditions in the Eastern region would have helped the Government to realise the necessity of immediate and drastic action for ending the present state of affairs.

* * * * *

The returns of State Railway earnings during July show that while there was a big increase in passenger traffic, goods traffic decreased in almost all commodities except wheat and rice. Oilseeds and cotton recorded decreases of about 8.3 lakhs and 8 lakhs respectively. The railway earnings continue to increase and the earnings for July at Rs. 13.81 crores being Rs. 91 lakhs more than the actuals for the corresponding period in 1942 and Rs. 321 lakhs than in July 1941. The total earnings from April 1, to July show an increase of over Rs. 7 crores over the earnings for the corresponding period in 1942.

NOTICE

CONTROL OF CAPITAL ISSUES

DEFENCE OF INDIA RULE 94-A

Applications for consent to the issue of capital by companies should be addressed to the Examiner of Capital Issues, Finance Department, Government of India, New Delhi, and should be made in the form of a letter which should include answers to the questions shown below

NOTE:—The answers should follow the order of these questions and the short title of each question should be quoted against the corresponding answer. The letter (but not enclosures) should be in duplicate.

A.—New businesses; and further issues for cash by existing companies.

1. *Name.*—Name or proposed name of company.

2. *Incorporation.*—Place of registration of company and of head office; and whether public or private.

3. *Previous applications.*—Give particulars of any application previously made to the Government of India in this connection by or on behalf of the same parties since 17th May, 1942

4. *Business.*—(*a*) Proposed business of the company, with particular reference to the issue now proposed.

(*b*) The place where it is to be carried on.

5. *Directors, etc.*—Give names and business addresses of directors (or in the case of new companies, of promoters and proposed directors, and their experience in businesses of a similar character).

6. *Cash issues—amount.*—Exact amount of shares, debentures and any other security which it is desired to issue at this stage for *cash*, distinguishing between ordinary, preference and deferred shares and giving the nominal value and issue price of each.

7. *Cash issues—nature.*—(*a*) Will the above cash issues be public or private, or if both, to what extent of each kind?

(*b*) If public, give proposed terms of the issue, *e.g.*, names of underwriters, amount of commission and how payable, issue of prospectuses or circulars, etc.

(*c*) If private, to whom to be issued.

8. *Cash Expenditure.*—(*a*) *Objects.*—The exact manner in which the proceeds of the cash issues will be expended, showing the amounts to be allocated to the various items.

(*b*) *Controls.*—If any of these items involve the purchase of goods subject to any control, give reasons for anticipating that the goods will be available.

(*c*) *Transport.*—When the objects include the establishment of factories, workshops or other buildings during the war,

(*i*) quantities (weight or wagon-loads) of construction materials and/or machinery and plant estimated to require rail transport and from what sources;

(*ii*) estimated quantities of raw materials, including coal, and of finished goods to be moved by rail in a given period, and from and to what places;

(*iii*) increase or decrease, if any, in rail transport to result from the new enterprise when compared with the present movements of the commodities to be produced and their raw materials.

(*d*) *Foreign purchases.*—State separately the amount (approximately) of the materials or plant to be purchased out of the proceeds of the issue which are to be obtained from sources elsewhere than in India; and if the actual business of the concern will involve the purchase of imports, give particulars.

(*e*) *Purchase of existing concerns.*—If the assets of an existing concern are to be acquired otherwise than as dealt with under head B below, give name of concern, particulars of purchase price of assets and method of valuation adopted.

9. *Issues not for cash.*—(*a*) Give details as against question 6 of any securities which are to be issued for a consideration other than cash.

(*b*) Details of such consideration.

(*c*) Names of parties.

10. *Government contracts.*—If the company has the assurance or anticipation of securing any contracts or sub-contracts for Government departments, a statement should be furnished giving full particulars, including name of department and grounds for expectation.

11. *Other particulars.*—(*a*) Any additional facts which you wish to adduce in support of your application.

(*b*) In case of existing companies, state date of incorporation and amounts of capital already subscribed and already paid up; and forward copy of latest balance sheet (with certified translation in English, if not in that language).

(*c*) In case of new companies, send (draft) Memorandum and Articles of Association and draft Prospectus, if prepared.

B.—New companies—conversion of existing businesses into limited companies, where fresh capital is to be raised.

Questions 1 to 11 (*a*) and 11 (*c*) above, and the following further questions:—

12. *Present owners.*—Names and addresses of present owners of business, and whether a partnership or an individual or family concern.

13. *Taxation.*—(*a*) Date on which the existing concern came into existence.

(*b*) *Pro forma* balance sheet or statement of accounts showing liabilities and assets of the concern;

(*c*) Value at which the assets are to be taken over by the new company, showing separately such assets as good-will, working capital and land.

C.—New companies—conversion of existing business into limited companies, where fresh capital is not to be raised.

Questions 1, 2, 3, 4, 5, 9, 11 (*a*), 11 (*c*), 12 and 13 above and the following further question:—

14. *Small Issues.*—Details (as for question 6) of any small issue of capital to be made, not for the purpose of introducing fresh capital, but for such purposes as those of qualifying directors or of interesting employees.

D.—Existing companies—transactions involving no new money, e.g., capitalization of reserves or profits or issue of shares in exchange for debentures, etc.

Questions 1, 2, 3, 4, 9 (*a*) and (*b*) and 11 (*a*) and (*b*) above; and in the case of capitalization of profits or reserves, the following further information:—

15. *Reserves and Profits.*—(*a*) Exact amount (in figures) at the time of application standing to the credit of—

(*i*) the Reserve Fund,

(*ii*) the Profit and Loss Account.

(*b*) Are these amounts arrived at after making proper provision for all tax liabilities; if not, give estimate of such provision.

(*c*) If any amount for good-will is included as an asset in the balance sheet, and not shown clearly as a separate item, state such amount.

16. *Reasons.*—Reasons for proposed capitalization of reserves or profits.

A. H. LLOYD,
Examiner of Capital Issues.

Note.—Cut this notice out and keep by you. If you mislay it, you will probably be allowed to take a copy from one on the files of the nearest Registrar or Assistant Registrar of Companies.

Stock Markets to-day and to-morrow

SHARP RISE IN EARNINGS OF BUCKINGHAM AND CARNATIC

A DEFINITE change is noticeable in the tone of the stock markets both in Bombay and Calcutta. The re-opening after the long week-end holidays was marked by an increase in speculative activity. Cotton and Coal shares especially were marked higher. The Bombay view regarding the future of the cotton textile industry seems to be that the immediate prospects are satisfactory and that, even with the control of the affairs of the industry by the Government, mills can earn a satisfactory level of profits and distribute good dividends. That is the reason why Bombay Dyeings have improved from Rs. 1,940 to Rs. 1,980, Centuries from Rs. 795 to Rs. 846 and Kohinoors from Rs. 575 to Rs. 606. In the Calcutta market, Cawnpore Textiles are higher by nearly a point at Rs. 12-12, Kesoram at Rs. 15-8 and Benares Cotton at Rs. 14-12.

In the Bombay market, however, the improvement has not been confined to Cotton shares only as Tata Steels also have come in for good attention and the closing price for deferreds is nearly 50 points higher at Rs. 1,890.

Having regard to the strength of the Jute section in Friday's session, on reports that arrangements are being made for general working with a shorter number of working hours, it has to be said that there has been a change in the general sentiment and that the 'expected' recovery by the end of August has come about. Readers will perhaps remember that I had remarked in these columns on more than one occasion that there was every possibility of a major recovery movement in the last four months of the year and that, with the considerably improved war situation, investors would do well to wait for better times. The hopes of a major attack on the Japanese with the formation of the South-East Asia Command have also been responsible for the strength of the markets. Developments during the next few weeks should be carefully watched.

* * * *

The accounts of the *Buckingham and Carnatic Company, Limited* for the half-year ended June, 1943, make excellent showing. The net profit for the half-year perhaps constitutes a record in the history of the Company. The net profit, before providing for taxation and depreciation, is Rs. 1,22,29,392 against Rs. 74,15,923 for the previous six months. The amount set aside to depreciation is Rs. 5,10,140 against Rs. 5,11,047 while the allocation to other funds is Rs. 3,03,032 against Rs. 3,35,735. The Reconstruction Reserve, which was newly created last half-year receives an addition of Rs. 15 lakhs. The ordinary dividend has been maintained only at Rs. 6-4 per share.

It will be remembered that the managing agents' in their last report, referred to the need for the creation of a Reconstruction Reserve in view of the heavy strain imposed on the existing machinery with the large demands and the need for large replacements in the postwar period. The object of the Managing Agents was certainly laudable, but it is surprising to note that even with the substantial improvement in earnings, it has not been possible to increase the ordinary dividend to shareholders even to 20 per cent per annum, what time other mills are paying as much as 50 to 75 per cent. I do not certainly advocate an extravagant policy on the part of the directors or managing agents in the matter of distribution of dividends, but in the case of an established company like the Buckingham and Carnatic, whose financial position is very strong and the dividend paid to shareholders is only a very small fraction of the total amount paid to the total amount earned, there is cerainly scope for an increase in the dividend to a decent level.

The block has already been written down to a very low level and the net block is Rs. 49.82 lakhs against the total issued capital of Rs. 110.54 lakhs. Total reserves excluding the latest appropriations amount to over Rs. 60 lakhs. Stock-in-trade valued at nearly Rs. 90 lakhs is taken at cost or under while book debts amount to Rs. 56.55 lakhs and investments are as much as Rs. 78.46 lakhs. Sundry liabilities including taxation are only about Rs. 130 lakhs against total liquid assets of Rs. 283.84 lakhs. There can be no justification, therefore, for the extremely conservative attitude of the directors in the distribution of dividends to ordinary shareholders.

* * * *

Thanks to the prosperous conditions in the cotton textile industry the *Basanti Cotton Mills Company, Limited* has been able to wipe off the debit balances of over Rs. 7 lakhs, carried forward from 1941 and pay off arrears of dividend on the preference shares in full. It is also reported that an *interim* dividend of 6 annas on the ordinary shares will be paid in respect of the current year. There has naturally been a rise in the preference shares to nearly Rs. 15 and the ordinary shares to Rs. 12-12. It is also said that the managing agents are contemplating a scheme under which clothes will be offered to shareholders at concessional rates during the Pujah season. The benefit in this regard might be between 12 annas to Re. 1 per share. Having regard to the improved financial position of the Company and the prospect of a good return on the shares, the ordinaries should be quoting nearer Rs. 15.

* * * *

Highland Produce Company, Limited has made very good progress in the year ended December, 1942. Thanks to the higher average price realised and the larger crop turned out there has been a substantial improvement in earnings. The net profit for the year amounts to Rs. 3,65,182 after providing for income-tax and depreciation. Of this, the sum of Rs. 1 lakh is transferred to the Dividend Equalisation Reserve and Rs. 75,000 to General Reserve. The Staff Pension and Gratuity Fund receives Rs. 10,000. The final dividend of 5 per cent makes, with the first and second interim dividends of 15 and 30 per cent respectively, a total of 50 per cent for the whole year against 27½ per cent for 1941. The amount carried forward is considerably higher at Rs. 24,538 against Rs. 12,356 brought in.

* * * *

Speaking at the general meeting of the shareholders of the *Imperial Bank* held last week, the Chairman had some interesting remarks to make. Some surprise was expressed at the rather low level of profits of the Imperial Bank for the first half of the current year in spite of the substantial increase in working funds. The Chairman revealed that of the increase in deposits on Rs. 59 crores, Rs. 54 crores was utilised in investments. Of the latter figure the bulk of the increase was represented by treasury bills. It is well-known that the Government have been able to conduct their short-term borrowing programme on a very cheap basis. The increase in income from investments, therefore, has not been enough to offset the increase in current working expenses due to the large work involved and the grant of

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 27.

A DEFINITELY steadier feeling has been noticeable on the Calcutta Stock Exchange during the short period markets have remained open, Monday and Tuesday being holidays on account of *Janmastami*. There has been not much increase in the volume of business however. The reserve of sellers has, perhaps, been the main cause for the absence of any appreciable increase in trading.

The feature of the week is the continued strength of Cotton shares. There has been a slight recovery in Coal shares while, contrary to expectations, Jute shares have remained quite steady. Engineering shares have been uninteresting. Following the satisfactory conclusion to the Quebec talks and the announcement of the S.E. Asia command, it is generally expected that the immediate outlook is satisfactory. Developments within the country also have been helpful to a certain extent.

The Giltedged Securities section has not been very interesting though prices have been fully maintained. 3½ per cent Paper was quoting Rs. 97-2. Among terminable loans, 3 per cent 1951-54 were Rs. 100-2, 3 per cent 1963-65 Rs. 97-5, 3 per cent 1949-52 Rs. 100-12 and 3½ per cent 1947-50 Rs. 103-9, 4 per cent 1960-70 Rs. 103-11 and 5 per cent 1945-55 Rs. 106-3. 2¾ per cent 1948-52 changed hands at Rs. 99-9. Among Provincial loans, the only transaction recorded was in 3 per cent 1961-66 at Rs. 97-5. Easy conditions continue to prevail in the money market though the results at this week's auctions of treasury bills seem to suggest that there has been slightly more demand for money, the average discount rate being higher at annas 14 and pies 11 per cent per annum against 14 annas and 10 pies in the previous week in spite of the increase in the amount of applications.

Among Public Bodies' Debentures, two transactions were recorded in 3 per cent *Calcutta Improvement Trust* 1962 at Rs. 96-12 and 3 per cent *Calcutta Improvement Trust* 1966 at the same level. Among Industrial Debentures, 5½ per cent *Dalmia Cement* were Rs. 105-8 and 5½ per cent *Rohtas Industries* Rs. 106.

Preference shares are very well held and business, as usual, has been restricted only by the scarcity of scrips. First-class jute mills preference shares were in good request with *Bally* at Rs. 178, *Birla* at Rs. 141, *Hukumchand* at Rs. 168, *Lawrence* at Rs. 155, *Northbrook* at Rs. 152 and *Standard* at Rs. 155. *New Victoria* were Rs. 10-3, *Steel Corporation* Rs. 126 and *Basanti* Rs. 14. It is reported that the arrears of dividend in respect of the four years in the case of Basanti Cotton Mills will be paid shortly.

Cotton shares have been firm, it being freely pointed out that the control of the affairs of the industry will not affect to any great extent, the level of earnings of important mills as the recent maxima fixed allow of a fair margin of profits. It is also pointed out that the post-war prospects are satisfactory as the important competitor, Japan, will not be in the same position as before. *Benares* were sharply higher at Rs. 14-2, as also *Basanti* at Rs. 12-12. *Cawnpore Textiles* were dealt in at Rs. 12-10 while *Dunbar* were Rs. 274 and *Kesoram* Rs. 15-8. *Mahalaxmi* were Rs. 41-4 and *Muir Mills* Rs. 412. *New Victoria* were Rs. 8-9.

The Coal section has been firmer on reports that bridges in the railways will soon be repaired and that greater efforts will be made to increase the rate of despatches from the collieries. *Bengal* were Rs. 477, *Bokaro* and *Ramgur* Rs. 22-15, *Burrakur* Rs. 18-9, *Central Kurkend* Rs. 16-11, *Equitable* Rs. 40-6, and *North Damuda* Rs. 7-4. *Katras Jherria* had some good buying enquiry at Rs. 42-6 as also *Pench Valley* at Rs. 42. *Raneegunge* were Rs. 27 and *South Karanpura* Rs. 5-14. *West Jamuria* were Rs. 35-10 and *Talcher* Rs. 4.

Jute shares have remained steady and there is no appreciable change in prices to be recorded though one would have expected that, with the troubles of the industry, investors would have chosen to take a pessimistic view. *Howrah* were Rs. 60-11. *Bally* changed hands at Rs. 337, *Champdany* at Rs. 205. *Chitavalsah* at Rs. 24, *India* at Rs. 530, *Naskarpara* at Rs. 23-4, *National* at Rs. 27, *Presidency* at Rs. 6-4 and *Standard* at Rs. 219.

In the Engineering section there is nothing of importance to be recorded. *Indian Iron & Steel Corporation* fluctuated around Rs. 34-4 and Rs. 26-14 respectively. *Jessop* were sticky at Rs. 20. *Burn & Co.* were Rs. 377 and *Kumurdhubi Engineering* Rs. 6-15.

In the Sugar section, *Carew & Co.* continued firm at Rs. 21-13 while *Cawnpore Sugar* were further higher at Rs. 35-12. Demand for *Belsund* seems to have been satisfied, the quotation being lower at Rs. 11-2. *New Savan* were Rs. 18-4 and *U. P. Sugar* Rs. 27-14.

The Tea section was somewhat firmer with *Bishnauth* at Rs. 38-8 and *Duffiaghur* Rs. 21-12. *Hasimara* were Rs. 64, *Rajnagar* Rs. 11-12 and *Teliapara* Rs. 555.

In the Miscellaneous section, *Burma Corporation* were frequently dealt in around Rs. 3-11. *Indian Copper* were unchanged at Rs. 2-9. *Alkali & Chemicals* were Rs. 30-2, *Aluminium Corporation* Rs. 12-6 and *Bengal Aerating Gas* Rs. 114. *Britannia Biscuits* were Rs. 18-2 and *British Ceylon Corporation* Rs. 18-2 ex-dividend. *B. I. Corporation* were higher at Rs. 6-4 and *Calcutta Landing and Shipping* Rs. 16-2. *Indian Cable* were Rs. 27-12, and *Indian National Airways* (Ordy.) Rs. 17-2. *Indian Wood Products* were Rs. 31-4 and *Midnapore Zemindary* Rs. 95 ex-dividend. *Publicity Society* were Rs. 13-2 and *Spencer & Co.* Rs. 10. Among Paper shares, *Titaghur* changed hands at Rs. 24-14. *Orient* were Rs. 27-12 and *Sree Gopal* Rs. 22-2.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, August 26.

FIRMER conditions have prevailed on the local Stock Exchange for the past few days. The Government order fixing prices for twelve standard varieties of grey and unbleached cloth and four varieties of cotton yarn has been well received by the market. So far as mills are concerned, it is believed, the prices fixed by the Government are quite satisfactory and the market has taken a similar view. The immediate effect of this order was reflected in the increased activity on the Stock Exchange and the upward movement in prices of mill shares. Substantial gains were recorded by almost all shares. The steel and other sections moved higher in sympathy. The upward trend in prices was also helped by the news of the Quebec Conference. The forecast that an offensive against Japan, with India as the base, is inevitable in the near future has heightened hopes of an early Allied victory and has encouraged erstwhile hesitant operators and investors to undertake larger commitments.

The giltedged market remained steady throughout the week with 3½ per cent Government Paper quoting at Rs. 97. 3 per cent (1949-52) were unchanged at Rs. 100-12. Other scrips were steady.

The Government order announcing the fixation of prices of cloth and yarn has restored confidence in mill shares and operators and investors vied with each other in buying up scrips. Considerable amount of buying pressure culminated in sending prices to the highest levels for some time past. *Bombay Dyeing* were done upto Rs. 1,995; *Centuries* were Rs. 850. Other shares also showed substantial improvement. Though prices have come down a little due to profit-taking in to-day's session, the prevailing tendency of the market is predominantly optimistic. Closing quotations are: *Bombay Dyeing* Rs. 1,980 (1942-48); *Century* Rs. 846 (Rs. 795); *Gokak* Rs. 344 (Rs. 328); *Kohinoor* Rs. 606 (Rs. 575) and *Svadeshi* Rs. 557 (Rs. 526).

In sympathy with Textiles, Steels have improved considerably. *Tata Steel* deferreds after touching the high level of Rs. 1,910 closed to-day at Rs. 1,890 (1843-12); *Tata* ordinary were Rs. 381-8 (Rs. 369-8) and *Indian Iron* Rs. 34-4 (Rs. 34-2).

Firmer conditions prevailed in the Miscellaneous section in sympathy with Textiles and Steels. *Bombay Steam* have gone up by nearly 17 points to quote Rs. 567-8 (Rs. 550). *Scindia Steam* were slightly better at Rs. 34.

(Continued on page 432).

(*Continued from page 430*)

(Rs. 33). *Shivrajpur Syndicate* were wanted up to Rs. 68 (Rs. 65). The feature of the week in this section was again *Premier Construction* which were done upto Rs. 182 (Rs. 178). *A. C. C.* went up to Rs. 216-8 on Wednesday but at close of transactions today were rather easy at Rs. 212-8. *Andhra Valley, Tata Power* and *Tata Hydro* were Rs. 1,872-8 (Rs. 1,865), Rs. 1,797-8 (Rs. 1,780) and Rs. 196 (Rs. 196) respectively.

(*Continued from page 429*)

allowances. The incidence of taxation also has been heavier. As the Chairman appropriately remarked. "It is, then, primarily against a taxation background that our profit and loss account must be viewed. There have, however, been other factors."

* * * *

A glance at the cumulative statement published in the *Investor's Supplement* last week will show that industries in India are continuing to do very well and that profits are on the upgrade. The increase in total earnings would have been more pronounced but for the drop in the income of the Engineering Group, particularly the Tata Iron and Steel Company. The aggregate profit of 155 companies, which have published their balance-sheets since the beginning of the year, is Rs. 23.49 crores against Rs. 21.54 crores for the same companies which published their accounts in 1942 and Rs. 14.41 crores in 1941. The allocation to reserves and depreciation is slightly lower at Rs. 5.37 crores against Rs. 5.40 crores and Rs. 5.45 crores respectively. Provision for taxation is considerably higher at Rs. 11.57 crores against Rs. 9.96 crores and Rs. 4.95 crores respectively. The increase in the amount of dividends to shareholders is only Rs. 31 lakhs higher at Rs. 6.11 crores. Coming to groups, the Jute and Cotton Textile industries have done very well. The Coal industry has been able to maintain barely profits at the previous levels. The Miscellaneous section also has done very well.

* * * * *

Those who are interested in the stock-markets know the value of publications like Messrs. Kothari & Sons' *Investors Encyclopaedia*. This useful handbook is in its Eighth Edition this year and judging from the get-up, quality of paper and printing, must be deemed a great achievement especially when the entire country is in the grip of a paper famine which renders it impossible for publications of the bulk of *Investors Encyclopaedia* to make a timely appearance. In spite of innumerable handicaps, the publishers have included in this year's Encyclopaedia priced Rs. 11, several new companies which were floated in the Madras Province during 1942-43.

SINGARAN COAL SYNDICATE, LIMITED

Audited Accounts for the half-year ended 31st December, 1942.—

The Profit and Loss Account shows a gross loss of Rs. 12,062-10-2 and after crediting Rs. 806-3-0 on account of Siding Tollage and Sundry Receipts and charging Rs. 382-2-10 on account of interest on loan and providing Rs. 3,599-6-9 for depreciation there stands a balance at debit of Rs. 15,238-0-9. Adding this sum to the amount carried forward from the previous half-year, this account shows a debit of Rs. 17,452-0-5 to be carried forward.

The mines of the Company were under water from August 1942, due to boiler troubles. Up to the date of this Report two of the Lancashire boilers have been under repairs and with one vertical and one Lancashire boilers, which also give constant trouble, the water of the mines cannot be kept under control and it is still on the increase. A new boiler from Messrs. Marshall & Sons is on its way from England, and the boilers under repairs are expected to be in working order very soon.

At present the workings of the mines are confined to one section only and the Directors are negotiating with the landlords for lease of a plot of land, which will help very much for maintaining the raisings at the rate of approximately 100 tons per day, until such time the mines are dewatered.

Comparative figures of raisings and despatches for half-year under review and for the corresponding period of 1941 are set out hereunder:—

	Raisings. Tons.	Despatches. Tons.
July to December 1941	14,503	12,523
July to December 1942	4,023	6,399

The amount of Rs. 28,303-8-10 due from Messrs. Shewkaran & Sons, as mentioned in the Auditors' letter dated 2nd July, 1943, represents only the minimum royalty. Besides the said amount, there has been due by them to the Company a further sum of Rs. 13,399-2-0 on account of excess royalty and interest up to 1942, for which suits have already been filed.

Authorised, Issued and Subscribed Captal—Rs. 1,37,500 *in* 35,000 *Ord. and* 20,000 *"B" Ord. shares of Rs.* 2-8 *each, fully paid up.*

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

INTERBANK call money is easy with the rates quoting nominally ½ per cent in Calcutta and ¼ per cent in Bombay. There was a substantial fall in the treasury bill discount rate during the current week. The amount of tender bills on offer was Rs. 8 crores and applications were nearly Rs. 19 crores. The average discount rate on accepted tenders was annas 14 per cent per annum, comparing with annas 14 and pies 11 per cent per annum last week. The offer for next week is unchanged at Rs. 8 crores. The U. P. Government, which came on the market for Rs. 1½ crores of three months bills on August 30, have been able to secure their accommodation at 1 per cent per annum. Bidding was quite satisfactory, applications received being Rs. 2.40 crores. Next Thursday the Assam Government are asking the market for 1½ crores of three months bills. The Assam Government should be able to secure a more favourable rate than the U. P. Government in view of the decline of 11 pies in the Central Treasury Bill rate, which has taken place this week, and in view of the further prospects of a decline next week in the Central Treasury Bill rate.

The returns of the Reserve Bank for the week ended August 27, have not yet reached our hands at the time of writing, and we have to deal with the statement for the week ended August 20. The assets in the issue department do not show any change worth mention. In the result active note circulation show an increase of only Rs. 50 lakhs. In the banking department, foreign balances are higher by Rs. 8.92 crores. This provides a measure for the payment received from the Allied Governments in respect of war commitments. In spite of such large receipts, balances of the Central Government show a reduction of Rs. 2.15 crores to Rs. 22.95 crores. Even at the reduced level the Government of India's cash balances are extremely comfortable. But it also shows that the average weekly expenditure is now running at a high level. The deposits of member banks with the Reserve Bank have risen by Rs. 6.73 crores to Rs. 62.68 crores. Deposits of Provincial Governments are also higher by Rs. 3 crores to Rs. 9.67 crores.

The statement of the Imperial Bank for the week ended August 27, establishes a new record for deposits of Rs. 197.29 crores. The investments are higher by Rs. 1.90 crores at Rs. 136.96 crores. The Bank's cash has declined from Rs. 33.84 crores to Rs. 32.71 crores.

The statement showing the consolidated position of the scheduled banks records liabilities at the high figure of Rs. 438.80 crores and time liabilities at Rs. 135.53 crores. Since the beginning of the war, demand liabilities of scheduled banks have risen by Rs. 304½ crores while time liabilities have gone up by Rs. 34 crores. Total increase in bank deposits is thus Rs. 338½ crores. Against this, advances made by the banks in India have gone up only by Rs. 42 crores. The cash balance together with the balances with the Reserve Bank have increased by Rs. 50 crores. This means that investments made by banks in treasury bills and Government securities in the four years of war, must amount to anything like Rs. 250 crores.

In this connection, we would like to make the suggestion which, we believe, will have the effect of throwing further light on banking statistics in India. We suggest that in addition to the information now provided in the consolidated statement of scheduled banks this return should also furnish information as regards treasury bill holdings of banks and investments in Government securities. As the consolidated statement now stands, it is difficult to get a complete picture of the banking position. Information pertaining to banks' investments in treasury bills and Government securities is as important an information with regard to trade advances and cash balances. We would also suggest that the Imperial Bank be asked to show treasury bills as distinct from Government securities. Some of the British Banks show treasury bills as a separate heading though a few others lump treasury bills either with bills or with Government securities. A most desirable practice in this regard is the showing of treasury bills as a separate item. If our suggestions are accepted, it may be necessary to effect changes in the Reserve Bank Act and the Imperial Bank Act. On the other hand, it must also be possible for the Reserve Bank to make a request to the institutions concerned who can raise any objection in compliance with the request.

As from September 1, the British Government have withdrawn the 2½ per cent National War Bonds 1951-53(A) series. In its place the Defence Loan that will be on offer is a 2½ per cent 1952-54 loan at par available through the tap. The 3 per cent Savings Bank 1960-70(B) series will continue to be on offer through the tap but will be known as (A) series from September 1. Thus, the British Government's defence loan plan, in its various successive stages, has been very similar to the plan of Sir Jeremy Raisman whose device also has been to step-up the maturity date in each subsequent issue. The main difference between England and India in this matter is that it has been a 2½ per cent war for Britain while it has been a 3 per cent war for India. Considering India's financial and budgetary position, and her relation to this war, the position should have been the other way about. It is India that should have been borrowing at 2½ per cent and Britain at 3 per cent. If, however, the tax-collections on account of E.P.T. and otherwise are as satisfactory as we have reasons to expect, and if something spectacular is done to quicken the pace of subscriptions to the Fourth Defence Loan, the resultant financial position of the Government of India will be such as to make it inevitable for the Indian Government to reduce the type of defence loan to 2½ per cent.

The exchange market has been steady with slightly more business passing.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 6 9/32d. and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on August 31. Total amount offered was Rs. 18,95,75,000. Tenders at Rs. 99-12-9 per cent were accepted in full and those at Rs. 99-12-6 per cent were allotted approximately 89 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-14-0 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on September 7, in Bombay up to 11 a.m. (standard time) and up to the close of business on September 6 at other centres. Successful tenderers should make payment on September 10 or on September 9, where Friday is a holiday. Other conditions are as usual.

During the week ended August 27, Government of India Treasury Bills for Rs. 4,92,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

U. P. TREASURY BILLS

Tenders for Rs. 1,50,00,000 of three months' U. P. Government Treasury Bills were opened on August 30, 1943. Total amount offered was Rs. 2,40,00,000. Tenders at Rs. 99-12-0 per cent were allotted approximately 81 %. Lower tenders were rejected. Total amount accepted was Rs. 1,50,00,000, the average rate of accepted tenders being Re. 1 per cent per annum.

ASSAM TREASURY BILLS

Tenders for Rs. 1,50,00,000 of three months' Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta up to 11 a.m. on September 9, 1943. Successful tenderers will be required to make payment and take up their bills on September 11, 1943. Other conditions are as usual.

Finance Abroad.

Thursday Evening.

THE modified U. S. Treasury plan for a stabilisation agreement is not a market factor though gold mining issues on Wall Street encountered demand last week on the reckoning that the future of gold was assured. The Keynes plan raised the quotations of South African mining shares. The White Plan helped U. S. mining issues. The U.S.A. with 80 per cent or more of the world's gold is more interested in the future of gold than presumed. The point has some bearing on Indian bullion prices. The creditor status of India may not encourage large imports of bullion after the war, for a surplus of exports to Ceylon or Iran ordinarily does not produce treasure imports but only adds to India's sterling balances. Since the current view is that the sterling bloc should be maintained in its integrity and the clearing arrangements worked from London, the White plan obviously is not likely to get much support. U. S. bankers (to judge by observations in the Guarantee Trust Survey) are not impressed by the technical brilliance of either the Keynes or the White Plans. The problem for the U.S.A. is not the adjustment of balances, but the maintenance of full employment (and hence of imports) after the war. Large-scale investment abroad and regular annual receipts may or may not be desired, but the U.S.A. is decidedly keen on adjustment of costs and prices in relation to the U. S. level. That may not be wholly palatable to the sterling area because the depreciation of sterling will be then obvious, and committed as Britain is to increased expenditure on social services anything like regular deflation must be unwelcome.

Contribution of half the gold wanted for the unit as balance is possible only for South Africa. The British Empire even as a whole may not be able to provide the gold at the outset since the coming of peace must mark some departure from the paper or managed standard. Plans adopted in the past for South American countries cannot be applied to the sterling group. As for India, any danger to sterling will provoke misgivings, and cannot return to gold or resort to deflation after the enormous increase in debt. There is the further question whether the British Empire will have its former export surplus when the U.S.A. can get Bolivian tin and Brazilian rubber as well as home-produced synthetics, and this rather than the unwillingness to lend fully for postwar reconstruction or a contingent demand for a return for U. S. lend-lease supplies makes for disagreement. Participation in any international arrangement, as the Canadian experts insist, is primarily a question of self-interest. What is important to remark here is that a creditor status implies a steady rise in the cost of living. Temporary sacrifices on the part of India will bring due in returns for credit balances held in the form of either an expansion in imports or a reduction of exports. These are desirable and recent references to larger supplies from abroad and further restrictions on exports are valuable indications for the future.

A very important point connected with the currency and exchange agreement is the probable demand for dollars. The wartime increase cannot persist and if the position obtaining in 1938 is modified by a reduction in U. K. imports of U. S. grain, meat, cotton or tobacco, the original unbalance will be small though disinvestment must be allowed for and exchange control can deal with it while the Empire's surplus of exports, if reduced, may help in its way. Actually Canada's surplus of exports to the U.S.A. will be small as U. S. investments in Canada are large, and Newfoundland, when it recovers self-government fully, may not have a surplus of dollars. Since lease-lend is discharged in part by reciprocal aid, the Dominions' surplus may help Britain. But the preservation of the sterling bloc is, in a sense, more advantageous because India's export surplus in relation to the U.S.A. and the Continent, may be available for adjustment of British obligations to the U.S.A. Since India's holding of gold, in spite of the assumption that it is three times larger than its nominal value, is quite moderate and anything like a contribution to the Exchange Fund would impair the position of the rupee at home, since the metallic reserve is far more important when indications of inflation are noted.

The major point of difference is, of course, the identity of export policy of both the U.S.A. and Britain. Both want to keep exports up to avoid unemployment. Both look to oversea markets for custom and goods and the approach to self-sufficiency in wartime is to be given up by both for obvious reasons. But Russia probably has different views and the process of disinvestment which alarms Britain is unknown to Russia. Nothing has been said of Russia's inclination to stabilise the rouble which has depreciated very heavily since 1941 or of Russia's willingness to provide gold in return for present or future benefits. Evidently, reconstruction at home comes before the adjustment of external obligations, and to this extent, the Russian attitude has its value for both Britain and India. If exchange control is to be maintained alongside of an international agreement, the latter has no obvious advantages, and the fear that sterling balances may not be made available on any pretext should also be taken into account. The Indian problem is one of utilising balances built up already, not of liquidating adverse balances, temporary or permanent. This may be taken to imply that discussions elsewhere have very little interest for India. The more important question for India is whether an agreement may not limit the supply of gold and silver. An agreement to settle current debts in a neutral money of account should be regarded as a distinct danger to India whose prime concern after the war should be to regain the gold exported after 1931 by an active increase of exports based on industrial development at a rapid rate. The rehabilitation of silver for China's benefit is not unlikely and the bullion market, to judge by recent stability, is guarded by such calculations which find support also in the ascent of share prices. A boom in Cairo is attributed to the South African Premier's forecast of the duration of the war. Speculation in goods has revived and bullion perhaps is making a strong recovery. Spending by Allied troops in Egypt makes for inflation. Moreover, there is a bullion market in which gold is dealt in though the turnover as the Economist pointed out is much smaller in Alexandria than in Bombay. There has been considerable demand for hoarding apart from the normal offtake of jewellers. The price rose to 188 piastres per dirhem equal to 3.11 grammes or 0.11 ounces. In April, the Alexandria price was taken as equal to £17-10-6 per ounce and the prices in Bombay and Alexandria were roughly comparable. Supplies from gold hoards came on the Alexandria market and the Arabs who got the metal distributed by the Arab Bureau in the last war came to realise their good luck. The Alexandria market attracted naturally all production in the Middle East. If normal conditions obtained, Indian gold and Australian gold, too, would seek Alexandria but the prices there cannot be taken advantage of. In view of the revival reported this week, it is unlikely that the Dutch or any other Government would sell gold in Bombay on the assumption that gold prices in India should be peremptorily lowered. The course of prices in the past week points to the indefinite maintenance of the price around Rs. 70 per tola, while silver has shown marked recovery whatever be the adverse trend in cotton.

Further improvement in oil shares is not the only feature of the stock exchange in London. Though money may be temporarily tight, there is increased support for Chinese Bonds. China's credit as Dr. Soong observed lately, has improved considerably and difficulties regarding interest payment do not appear to affect the investor's view of prospects of repayment. The rise in Argentine rails is less important than the changes in Home Industrials and diamond minings in which the South African Government is as much interested as the mining companies. Planting shares have recently developed strength. Rubber may sell at 1/6 per lb. only, but Eastern shares are being bought on hopes of reconquest. The London quotation for Burma Corporation dependent on U. S. buying rather than options dealings is likely to raise the price in India by stages. The important change in sterling tea shares should not be ignored when auction prices are indicating a strong recovery. The boom in U. S. war industry and the increase in profits do not seem to influence the markets directly. Wall Street has been irregular with prices showing some recovery but it is difficult to call this an established feature like the advance in Home Industrials in London. The Quebec talks may have produced some impression on the investment outlook, but the irregular tendency in commodity markets and the strained relations with Labour, alarmed by the rise in prices, do not suggest that the position has altered greatly in August. It is noteworthy that Republicans are not

Fed up, not Fed

The people of India looked to the Government to be fed; they are only fed up. That would seem to be the comment, correct and comprehensive, on the Government's record in regard to the food problem. It is a record of denial of the problem in the early stages and evasion in the later, of half-hearted attempts and consistent bungling; of reluctance even when the crisis has deepened, to adopt the obvious remedy of enhancing supplies by imports from abroad. The proneness to evasive half-measures has become a wellnigh incurable habit. And the tendency to resort to power as a substitute for administrative efficiency only lands us in a worse quandary. Measures of price control drive commodities out of the market and petty grocers into jail. The cities wait for ration-cards and the mofussil continues a ceaseless trek to the cities. No more can the critical character of the present position and outlook be denied. And yet the Government of Bengal have nothing more to show than the opening of gruel kitchens; and the Government of India is playing with the personnel of the Food Department and of the Food Committees. It would be incredible, if we did not know it to be true, that the authorities still think of the food problem in terms of questions of constitution and administrative technique. When Sir Azizul Haque spoke on the question in the last debate in the Assembly, he referred to the obstructionism of some of the provincial governments and to the meedlesomeness of some of the lower officials. And Major-General Wood, too, wanted us to rule out the possibility of the Centre assuming and discharging the full responsibility for food distribution. While in the Provinces the hoarder is the villain of the piece, in the Centre there is a general share-out of blame for the failure of past measures. Even at this late stage, we hear little from Delhi except the possibility of another Food Conference in October. And "a hopeful development," according to the Staff Correspondent of the "Statesman", "is that Bengal's crisis has made certain Provincial Governments, such as the U. P., to realise the need for cohesive action by the bureaucratic element in the administration to handle the food crisis on a national basis." If Governments have to learn at this price, whole peoples will have to be wiped out before there can be any hope of solution of the food problem. The emphasis on the bureaucratic element in the administration is heightened by the observation that "it is said that the Viceroy will seek the personal co-operation of Governors to bring about the success of the plan that may be devised by the next food conference." Considering that the U. P. is under an Adviser regime and the Governor of Bengal is not known to leave his ministers in completely autonomous control of their departments, the reference to the bureaucratic element and the personal co-operation of the Governors is ununderstandable.

The same may be said of the importance attached to the Policy Committee report and the personnel of the Food Department. The quick change of personnel of the Food Department indicates not only the importance attached to it by the Government, but also the relief which its members feel when handing over charge to others. If it is true that the Centre will not assume full responsibility and the Provinces cannot and that co-operation between the two is rendered impossible by the inexorable facts of the case, is it not plain that the problem does not hinge on the personnel of the Food Department and that for the problem to be solved the start is to be provided elsewhere than in the routine of administration? As for the Food Committee the correspondent of the 'Statesman' observes: "The report of the Gregory Committee is not yet signed. It is understood that it favours the evolution of another basic food plan based on maximum co-operation with Provincial Governments. It also recommends price control of all food grains and rationing in all towns with a population of 100,000 and over. It is suggested that the Centre should exercise strict supervision but that Provincial Governments should be in charge of procurement and distribution of food."

One is tempted to ask whether the basic nature of food plan depends on the extent of the provincial co-operation that it asks for. We cannot help feeling that the crux of the food problem is always sought to be covered up with irrelevant or relatively unimportant issues. The cry of obstruction from the provinces has led to a controversy which, whatever its merits, clearly suggests that the blame does not lie wholly with the Provinces. Sir Chottu Ram has stated the case of his Province and though probably his statement may be criticised in details, the main point that the Punjab has been ready to export its surplus cannot be gainsaid. For our part, we feel that the Provinces, while they may not be examples of self-sacrifice, are far from deaf to the cries of stricken provinces like Bengal. At any rate, they are by no means averse to exporting their surplus grains where they are needed. If free trade has been opposed, it is mainly because free trade carried with it the threat that the surplus provinces will be deprived of even their normal requirements by powerful profiteers from elsewhere. It is high time that these constitutional questions are left aside and the problem dealt with on its merits.

At the present stage, the food question resolves itself into two broad divisions, procurement and distribution. And much of the troubles and confusion of the past could have been avoided if it were clearly realised and acted on that, while procurement on an adequate scale could, to a large extent, be a solution of the problem of distribution, the best system of distribution would by itself be no solution of the problem of supplies. By raising the cry that unsympathetic provinces and selfish hoarders have accentuated the shortage, the public has been induced to look to Food Conferences and Food drives so-called for relief. The number of surplus provinces and the size of their surplus are alike limited. Consumers' hoards are largely a figment of the imagination; and if they do exist, they cannot but yield the compensating advantages of lesser buying pressure on existing stocks. Hoarders' stocks are, of course, a different matter. One cannot be dogmatic about their size. But it stands to reason that hoarders' stocks must slowly move into consumption, though only in a clandestine manner, when prices have gone up to levels higher than the hoarders could have dreamt of. By all tokens, talk of hoards will continue even if the next harvest is a failure and no grain were imported in the meanwhile.

The search for scapegoats must end. Even the time for blaming the Government for not bringing more land under cultivation instead of putting more "grow more food" advertisements in metropolitan journals is long past. The problem of procurement must be split into the immediate and the comparatively distant. As we had occasion to point out in the past, it is, indeed, sad that all this pressure of demand has not enabled us to grow more food and that we are not in a position to utilise the present position to tone up our system of agriculture and our agricultural methods. Indeed, we have reached the point when to relieve the stress of the moment we have to be more or less wholly indifferent to the long-term needs of our agriculture. But the immediate and imperative need is an increase of supplies. We have need to import foodgrains from abroad, not only with a view to augment the available stocks, but also to cause those conditions of surfeit in which alone the controls can be withdrawn and the markets enabled to function freely and smoothly.

As for distribution, we have observed already that while procurement can ease the problem of distribution, distribution cannot help to overcome the shortage of supplies. But it must be recognised that the problem of distribution, though it is viewed as wholly a question of rationing, really rests on adequacy of supplies and adequacy of transport facilities. Sir Chottu Ram in his reply to the Assembly debate indicated that the movement of wheat from the Punjab was at a regrettably slow rate. Though no one will under-rate the strain on transport, it is reasonable to ask that it is up to the authorities to ensure that the food policy, when the Government embark on it, does not founder on the rocks of inadeqaute transport facilities. There can be no doubt that the Government of India will find themselves compelled to import food from abroad. Already reports from Delhi indicated the readiness of the Government to ask the United Nations to meet the food requirements of their fighting forces. But it is idle to think that the demand on the Allies can be so limited. Food cannot be imported except by special measures. And if special measures such as the requisitioning of Allied shipping and the like are to be resorted to, there is no meaning in asking each of the United Nations to send the requirements of their nationals in this country. It were far better that the imports are made on a scale sufficient to more than make up the food shortage, to threaten the hoarders with serious losses and to encourage the substitution of wheat in place of rice to a large extent. If necessary, it would be worth while for the Centre to incur losses in the marketing of imported wheat, if thereby we can enable the resumption of normal conditions. Sir Ramaswami Mudaliar, speaking at a luncheon in his honour at Madras, indicated that such imports of wheat would be possible before long. With all the glowing accounts we have had of the improvement in the shipping and naval positions of the Allies, delay in the import of wheat will convey the most regrettable impressions of Allied indifference to the minds of the masses in this country.

It is in the procurement of imports, and not in the introduction of rationing, that speed is required. In spite of the fact that rationing seems so obvious a remedy in conditions of shortage, we confess we have all along been at a loss to see its efficacy in the present position in India. The success of rationing in Britain is no index of its suitability here. It is not as well-known as it should be that in Britain the spade-work for a system of rationing had been completed and the administrative blueprints perfected nearly a month before the outbreak of war. The British Government had accumulated stocks of foodstuffs and has been bearing huge subsidies for the Food Department. None of these precautions were taken in India. On the other hand, the pitch has been queered by the system of large commercial and industrial corporations doling out foodstuffs to their employees at less than their cost price. Indeed, it would not be unreasonable to suggest that the increasing vogue of this practice is one of the main factors which disorganised the trade in foodstuffs. However, today such a system must cut across any system of rationing that the authorities may introduce. The pitiful inadequacy of rationing in a country so vast as this can be regarded with equanimity only by those who think only of the cities and are indifferent to the fate of the villages. The advocates of rationing think only of cities with a population of a lakh or more. The introduction of rationing in all these cities can only have the effect of leaving the villages destitute and driving the villagers to the town, where the townsmen will be forced to nibble at their meagre rations. Any attempt to solve the problem by shirking the problem of increased supplies can only add injustice to suffering and deepen the despair of the people, with what consequences we dare not contemplate.

SUGAR IN INDIA

The adoption of control and a system of licensed dealers under the terms of the Control Order of April 1942 has modified the structure of the sugar trade but not the basis of production. To that extent, and more, the marketing report on sugar retains its value and an official publication priced Rs. 1-4 only makes it unnecessary to look beyond a single reference work for all essential details relating to the Indian sugar industry. With nearly 4 million acres under sugarcane India produces about 17 per cent of the world's sugar though India has no exports and has long depended to some extent on imports. Grown in sub-tropical tracts, sugarcane in India has certain disadvantages, modified by the tariff protection available since 1932. Wide fluctuations in the area and yield are not prejudicial to the improvement of quality since 85 per cent of the area was under improved types in 1940. Since the cane crop comes to maturity between October and April the Indian sugar mills as a rule have afforded seasonal employment only. The zone system has made for stability of sugarcane cultivation in the U. P. and Bihar but the unmistakable preponderance of gur has created difficulties from last year,

particularly, in the U. P. necessitating another Control Order.

Since India's manufacturing capacity is put at 1½ million tons, there is a margin for exports and leave to export has been secured by the lapse of the 1937 agreement. Though factories claim only 17.4 per cent of cane production the problem of a constant, adequate supply of cane is not without its importance. Certain conclusions as to utilisation and demand may require revision in the light of the many changes observable after 1941. But broadly speaking, gur accounts for three-fourths of the market and white sugar for the remainder. Cattle claim 5 per cent of the gur available and the other industries take 5 per cent as gur is wanted for refining distilling, and treatment of tobacco, oilseeds etc. Only 11 per cent is taken for confectionery out of the 69 per cent which is taken for human consumption. The gur season generally coincides with the sugar mills season. The annual per capita consumption is in the proportion of 20 lbs. of gur and 7 lbs. of gur. Consumption is highest in the U. P. and surprisingly low in Bihar where the consumption per head is only 12 lbs. per annum. Statistical enquiry into consumption has revealed that consumption of both sugar and gur follows price-changes. Low prices encourage consumption as in 1936-37. As to the scope for increase in consumption, the report is definitely in favour of lower prices and higher quality, assisted by propaganda.

Differences between the cane-producing areas in regard to cane have no specific consequences for the consumer, though costs of production are inevitably affected, and the insulation of the market from price changes has been seldom achieved. Divorced from the world market fluctuations have been wider in the war period than in the past, and the Sugar Syndicate's system of quotas was a reform forced by the price-situation developing in 1940. It is noteworthy that a country able to export has been forced to experiment with rationing in certain places. This is, of course, not attributable wholly to the industry, but to transport difficulties for which the war is the obvious excuse. The mechanism of distribution is certainly not different from what has been described. The wholesale merchant and the commission agent retain their importance though mills have repeatedly indicated their unwillingness to evolve a new agency in return for reorganisation of the system under control.

While a year's experience of Control has not engendered great optimism it is clear that the super-imposition of an official agency dealing with producers directly at present has not been without effect on keeping down charges previously paid to middlemen. Regional variations are not allowed under Control and this certainly cuts across the view that a limit as between maximum and minimum prices for sugar (linked with predetermined local prices) should be preserved so as to make up for variations in cane prices. The familiar argument is supported by the recommendations contained in the Marketing Adviser's report. The most far-reaching recommendation, however, is one in favour of a commodity reserve. A central pool must be kept to prevent the adverse effects of a short crop from having full effect. Storage facilities could be improved and keeping quality enhanced and temporary adjustment of the import duty may keep sugar prices at ports in line with the Indian manufacturers' prices. This recommendation may be difficult to accept at present, but the de-linking of cane prices from sugar prices at any time may have decisive results for the manufacturers. A factor in the situation is the decay of lorry traffic in Northern India under petrol rationing. Lorries from the Punjab cannot take back sugar at low freight rates. Such advantages as rail rates give for sugar sent to ports must be reckoned small in relation to the wagon shortage. It is not that only 35,000 tons of sugar and gur are consigned by river steamers.

The decline in Java's imports after 1930 is the true measure of India's progress in sugar production. But Java after Cuba was the largest exporter and the immediate consequences of the war for India in respect of sugar are manifest from March 1942. Shortage tempered by price control has not made the appreciation of share values a very acceptable development.

MONEY FOR THE BEES

Throughout India, thousands of women volunteer for work parties and sewing bees, under the direction of the Indian Red Cross. These women make hospital accessories, surgical dressings and articles of clothing for the wounded of our fighting forces and for despatch to prisoners of war.

Without your money, we cannot continue to furnish these busy bees with the necessary materials for this work of mercy.

Please send your donation now to the Hony. Treasurer, Indian Red Cross Appeal, C/o. Imperial Bank of India, Strand Road, Calcutta.

INDIAN RED CROSS

CALL TO BENGAL

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications are invited from candidates to fill 13 vacancies of Apprentice Assistant Inspectors of Works on N. W. Railway, 12 of which are reserved for Muslims. *Applications must be made on the prescribed form,* obtainable at a cost of Re. 1 from large stations on N. W. Railway. Pay:—Rs. 50 p.m. for one year during apprenticeship and thereafter if retained in service Rs. 65—5/2—85 plus dearness allowance admissible under the rules. Minimum qualifications:—

1. Thomason College of Civil Engineering, Roorkee, Overseers' Certificate.

2. The Government School of Engineering, Punjab, Rasul, 'B' Grade Overseers' Certificate.

3. N. E. D. Engineering College, Karachi, Diploma.

4. Hewett Engineering School, Lucknow, Overseers' Certificate (1st Division).

Preference will be given to candidates with training and experience of reinforced concrete construction and design work. Age not to exceed 25 years, relaxable up to 40 years in the case of men with good practical experience and Works Mistries already in service of N. W. Railway, possessing the requisite educational qualifications. Last date for receipt of applications together with attested copies of testimonials:—4th October 1943. *Full details should be obtained on sending a stamped and addressed envelope to the Chairman.*

Rise in Factory Employment

Figures of special interest relating to employment in factories appear in the Indian Labour Gazette for August. It is clear that the war has led to an increase in the number of factory workers in India. The average daily number of workers has increased in all Provinces after the outbreak of war but the largest increase is shown under Bombay where the total in 1941 was 611,493 as against 648,711 for Bengal. The total for numbers employed may imply no major change in occupational distribution in India but the steady increase in the number of factory workers and their earnings must result in a change in the relative importance of wages in the national income. The factory statistics show that employment in Government and local fund factories has increased continuously after 1938. The numbers engaged in ordnance factories rose from 49,999 in 1940 to 76,488 in 1941 while State Railway workshops employed 69,098 in 1941 as compared with 61,454 in 1940. These two changes point to the decisive influence of the war on continuous paid employment. The decline of cavalry accounts for the reduction in seasonal employment in the forage presses recorded in 1941. An increase of over 50,000 in the Government's own labour force makes the expansion of employment in private industry also a direct consequence of the war. Some provinces report a further increase in employment in 1942 but the basis of comparison must be the 1941 statistics. Employment in 1942 but the basis of comparison must be the 1941 statistics. Employment in the cotton mill industry rose to a high level in spite of the setback due to the 1940 strike. Bombay with 364,177 workers out of 593,707 employed in 1941 retained its supremacy. Bengal with 286,681 workers in the jute mills was ahead of Madras with 7,123, the U. P. with 9,281 and Bihar with 7,539 workers.

The employment figures shed only little light on regional destribution as compared with industrial progress. Wartime progress in the Indian woollen industry is certainly reflected in the employment total which has risen to 12,484. The figures suggest that employment is limited to Bombay, the U. P. and the Punjab only. Employment in all branches of the engineering industry reflects the activity promoted by the war. The total in 1941 was 204.056 as compared with 158,665 in 1940. The increase noted under shipbuilding and engineering preceeded the new repairs programme. The great importance of petroleum cannot be measured by the employment figures (3,146 in 1941) but the total for iron and steel enterprises in 1941 points to continuous expansion in one more major industry. Employment in secondary industries like paint, milling and soap has shown small increase as compared with tobacco which gave employment to 29,371 workers in 1941. The development of new industries like chemicals can be measured by the 50 per cent increase in employment in a year. Since sugar is a seasonal industry the variations in employment are more moderate than may be expected. At any rate, the fall in output in 1941-42 actually reduced the numbers engaged. It is noteworthy that figures of employment in gins and presses followed the uptrend noted in the case of the textile industry. The paper and the associated printing industries employed about 43,000 workers in 1941. The total for perennial employment rose from 1,379,896 to 16,30,848 in 1941. The total for seasonal workers rose by 10,000 only to 305,443 in 1941. The substantial increase is confined to the bigger industries connected with war effort. The increase of employment in 1941 was much greater than that noted in 1940. Between 1938 and 1939 employment actually decreased: there has been more than recovery since. The available statistics do not cover the mining industries which come under the Mines Act; but it will not be incorrect to suggest that similar progress in employment must have take place. The shift of industry in wartime cannot be indicated here but the growth of cotton mills outside Bombay deserves notice.

Late Recognition

China and Russia alike have recognised the French Committee of National Liberation. The only Dominion to copy British example is Canada, and the French Committee's position has not been recognised by India, still important since French territory is involved here. The recognition accorded by the principal Allies followed the settlement in Martinique and the compromise in Algiers. The formal recognition removes doubts as to the unification of currency and exchange arrangements. There will be a new franc as against the depreciated Vichy franc and lease-lend assured for North Africa makes the local budgets of Algiers and Tunisia unimportant. Since the Corunna talks are over, the French Committee's position in North Africa must be known to Franco. An offer by Britain to respect Spanish colonial possessions implies a duty on the part of Franco to take note of changes effected by the Allies. The appointment of Resident Ministers has simplified the problem of continuous consultation. As for the future, the Committee is ready to help in the invasion and let France choose her own form of government after the war.

The consultations between Petain and Rundstedt cannot be regarded as the immediate result of the Allies' recognition of the Committee. If the Committee's status has been settled, it may be hoped that General Catroux would get his chance to deal with the problems of French Moslems. The High Commissioner will have to consider the recent Syrian election results as well the plans to set up an Arab federation. Allied policy may not eliminate any of the problems of French Africa. Evidently the colonial status will remain after the flouting of Vichy. But French co-operation in the government of occupied territory will be essential. Success in governing Italians in Tunis may naturally qualify for a share in the government of occupied Italy. The late recognition is a consequence of differences between the two major Allies rather than among Frenchmen who have agreed to put the war first. The recognition accorded may help the new Bank of issue to improve its position in the Near East. Since inter-Allied financial agreement is not in sight, the French colonies will be in the sterling bloc and the interest of the U.S.A. will anyhow be limited to relief and purchase of war materials.

A Cawnpore Survey

Labour in Cawnpore and the whole of Northern India was mostly unaffected by the August disturbance. The fact received special mention in Sir Padampat Singhania's survey of the year's events as Chairman of the Northern India Employers' Association. War production in Cawnpore did not suffer in 1942 and labour remained calm. The Employers' Association has sustained morale by opening cheap grain shops for labourer's with an outlay of about Rs. 21 lakhs. High wages, dearness allowances, etc., have been supplemented by the familiar device of special prices and guaranteed supplies. Sir Padampat declared that the policy so far pursued by his Association is the only suitable one. It is interesting to note that the food problem is related to the general scarcity. The villages' surplus cannot be drawn because goods in exchange cannot be offered. Lower prices and larger supplies may run counted to the doctrine of full reservation for military requirements as he observed. Cawnpore has a coal problem and Sir Padampat mentioned that a month ago Cawnpore

mills experienced acute coal shortage and some were threatened with stoppage of work. Strenuous efforts made by the Association and some employers resulted in immediate improvement but there is no security that coal supply would go on regularly. Sir Padampat Singhania advanced the view that the cure for inflation must be sought in large sales of bullion to the public. Those in control of financial administration expanded currency in order to pay for purchases on behalf of Britain and her Allies. He argued that unless gold and silver which have a psychological bearing on the markets are made available at normal prices, it is difficult to conceive of a situation in which the paper currency can be brought under proper control and inflation checked. Impressed by the striking improvement in the war situation the outgoing Chairman could look forward to the removal of misunderstandings and the continuance of industrial peace. The Association has gained in membership last year according to the Chairman. The position, to judge by industrial disputes in the first quarter, is better in Cawnpore in the war period than in other industrial centres, and the Association is entitled to credit for the achievement described on Monday last.

Hopeful Estimate

The Tea Control Act renewed this year envisaged the renewal of the international agreement. The Times' City Editor stated recently that the International Tea Committee prepared a review of the working of the scheme from 1933 to 1943 in advance of the renewal on April 1. Written before the continuation of the scheme was decided upon, it is clearly coloured by apprehensions then entertained that the scheme might be converted from a producers' scheme into a governmental agreement. Unlike the wheat, sugar, rubber and tin agreements the regulation scheme has never been a Government scheme as such but an agreement betwen the Tea Planters' Associations in British India, Ceylon and the Dutch East Indies. The scheme was extended in April without any significant change. Whether the idea of a governmental scheme has been abandoned or merely shelved until after the war has never been made clear. But the Committee points out that it cannot be assumed that the present scheme will necessarily continue in its existing form after the war; it would obviously have to undergo such adaptations as might be necessary to weld it into any general scheme for the international regulation of foodstuffs and raw materials, a matter discussed at the conference at Hot Springs. None the less, it does not disguise its opinion that Government action should stop at representation on its controlling body leaving the working of the actual machinery of control to the producers. The tea regulation scheme has been operated more liberally than most international commodity schemes, and no attempt has been made by the Committee to regulate prices or fix the price basis for regulation. But the corollary of a Government sanction is to compel the minorities to conform to a scheme which the Committee suggests is essential, and there must surely be some check on productive efficiency.

The City Editor of the News Chronicle raised not long ago the question of production on the basis of proved efficiency or suitability and adjustment of production to post-war needs. On both counts the Indian tea industry is likely to advance specific claims and non-regulating countries can obviously put forth no arguments when the British Government as consumer decides the price. The fact that 700 million lbs. are made available—the bulk from regulating countries—must weigh with Governments before the quota is readjusted.

The International Committee thinks that it may be two or three years before production on the estates of the N. E. I. gets back to normal. High crops may continue in India and Ceylon if ample supplies of fertilisers are not available. Consumption for a year or two after the war is likely to be below its pre-war rate. The Combined Food Board distributes the tea available to the Ministry of Food. The Committee considers that it would be wise to lift control gradually. Sir Robert Graham, Chairman, expresses the personal view that the former method of marketing tea through public auctions should be resumed. The Committee's view is, in a way, a guide to the future of Indian tea. Both production and profits should run at a high level and the end of the war should make no difference. There is, of course, a ban on new planting (modified slightly this year) but the N. E. I. will not re-enter the lists quickly; and abandonment of rationing after the war may have its own effect on consumption. The tea outlook must be rated very good and the repeated recommendations of tea shares receives support from the hopeful estimate of the afterwar prospects.

Savings Drive

Savings campaigns promised in several Provinces are part of the accepted anti-inflation programme. For the success achieved by the new Defence Loan in July, the U. P. savings drive is largely responsible. Up to the end of July the special savings drive produced Rs. 741.6 lakhs according to Sir Maurice Hallett who claimed that small savings constitute a big part of the total collected in four months. The Government of India aims at collecting Rs. 100 crores in seven months. How the total is to be apportioned among the Provinces and States; how the savings campaign will be linked up with tax prepayment and other plans; how the new taxation advised will influence savings and lending are large questions that cannot be answered. There is, however, the claim that cultivators will have Rs. 200 crores more in 1943-44 and a considerable part of the additional income must be diverted into war loans. When goods are scarce the impulse to spend is slight and the original promise to let the people have more goods is radically modified by the save-and-lend plans. Provincial Governments have been asked to enhance taxation but only in Bengal is there a specific proposal for agricultural income-tax on incomes over Rs. 2,000 per annum. Uniformity in taxation in the Provinces cannot be secured but the Provinces are expected to enhance stamp, excise and other duties so that the loans quota is reduced.

It is not likely that the deadlock is considered a retarding factor because the U. P. Governor's statement may suggest that the plans can go through. In four months Cawnpore alone had put up Rs. 91½ lakhs for the special savings campaign but the total of India in seven months may not come up to Cawnpore's average. Savings are an urban occurrence and the new plan is meant to take money out of the villages into the new loans. As against non-official suggestions in favour of gold and silver sales, the Indian Government favours war loans. The difference is not one of great moment, and the problem of getting the money from the villages is dependent on the means adopted. To discourage spending is part of the plan outlined for saving and lending. The per capita contribution required is only Rs. 2½ and the target of 100 crores is a small part of the national income. Actually, the plan is meant to neutralise the steady expansion of currency that continues as sterling assets increase. Other arguments employed in relation to high prices, scarcity of goods etc. are relevant only in the context of higher prices remaining. All Provinces have been told that last year's total subscriptions to loans must be surpassed. The save-lend campaign may reduce short-term borrowing and make money more plentiful. Giltedged should strengthen in consequence and higher prices in turn may turn new money into new defence loans. But the regular market is not the object of the drive. Small investors in the villages may be reached through the co-operative societies and local reconstruction funds may be built up. But a special short-term issue may appear more desirable for new, communal investments. The save-lend plan may excite in quarters usual apprehensions as to a war gift. A specific assurance that no gift from India is desired must, therefore, precede the start of the campaign.

Rajputana's Salt Industry

Dr. Dunnicliff's account of the salt industry of Rajputana in the Journal of I. and S. Research refers mainly to the Sambhar Lake and it shows that many sources in the region have been closed down at the instance of the Indian Government. The Sambhar Lake is the largest single source of salt in India producing in 1941-42 over two crores of maunds. The Lake is situated about 1,200 feet above sea level and is dry annually or nearly so at the end of the hot weather, but its mud is heavily impregnated with salts. The brine of the Lake is pumped into the main reservoir 5 square miles in area and thence into condensers. The flow into crystallising pans for treatment with reshta salt follows. The colour of the salt produced at Sambhar varies, but wind salt is of a high order of purity. Pan salt from wells is of good quality and is in considerable demand. Local rainfall is said to be a major factor in salt production. Drought compels early extraction and completion within the same official year while excessive rain as in 1892-93 brings down production. In the years of drought 1938-41 production was below normal. The yield of the Kyar salt in 1942-43 was affected by poor rainfall of the previous year. The impurities found in Sambhar brine are sodium, carbonate, sodium bicarbonate, sodium sulphate and a small quantity of ammonium salts. The bicarbonate employed in the bitterns has its use. Proposals for the use of the bitterns for the recovery of soda ash and salt cake have appeared. The basis of a chemical industry has been located. The admixture of slime called 'nil' was a problem which has been solved with the investigations undertaken. In consultation with tanning experts, the Salt Department has secured a market. In the first quarer of 1943-44 the Department issued 30,000 maunds of the malodorous waste salt for use in curing hides and skins. This means a saving in edible salt which would otherwise be issued duty-free for the leather industry. Other industries, for example, the manufacture of hydrochloric acid and chemical works producing ammonium chloride by the interaction of bitterns with ammonium sulphate are also using the formerly rejected material, the by-product, sodium sulphate, also finding a ready market. The Didwana sodium deposits

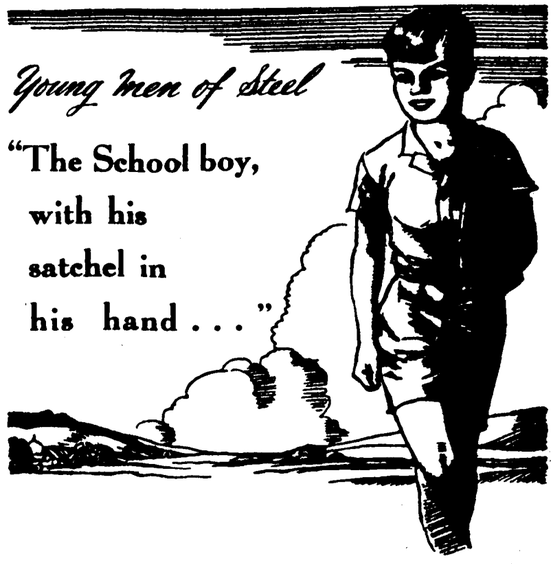
have attracted attention and the Jodhpur Dunbar has organised the sales of saltcake. Dr. Dunnicliff states that there is sufficient sodium sulphate at Didwana to meet India's requirements for many years to come and also to provide the raw material for other valuable products, notably, sodium sulphide and possibly sodium through sulphate and sulphur. A sodium sulphide factory is being built in Jodhpur. The Pachbadra deposits in Jodhpur supplement the sources of salt though in this case, calcium and magnesium sulphates or else carbonate are found along with sodium sulphate. The Luni basin which is the source of Rajputana's salt extends to the Gulf of Cutch. The salt from Cutch is not available at present because railway transport is not available. Revenue officers guard the area to prevent removal, but the population gets several thousand maunds of salt, the ration per head being 5 seers per annum.

Cochin Budget

The announcement that the Government of Cochin is going to repay the 5 per cent loan and float a loan at 3 per cent required no explanation. The Budget for the year 1943-44 indicates that revenue is expected to rise to Rs. 185.39 lakhs while expenditure would be Rs. 166.48 lakhs. The surplus budgets of four years naturally enhance Cochin's credit and the premium at which the 3½ per cent loan stands was interpreted as a pointer to the success of the new issue. Customs is the principal item of revenue and the anticipated improvement as under abkari also is clearly due to the rise in prices. Land revenue, to judge by budget totals, is stagnant. The Railway surplus is important like the States' forest revenue which continues to improve. It is noteworthy that the single largest head of expenditure in Cochin to-day is Education which claims Rs. 22.85 lakhs as against Rs. 21.45 lakhs in the preceding year. The Civil List as usual takes Rs. 7¼ lakhs and the increases under Medical Relief, Agriculture and Public Works serve to show that Dyarchy in the State is not without its benefits.

The flotation of a new loan accounts for the enhanced provision for the Sinking Fund. The budget looks for an increase under tobacco. Evidently, the State which anticipated British India in taxing tobacco has altered rates of taxation. Income-tax collections are expected to drop by Rs. 5 lakhs though collection charges in 1943-44 will be higher. The reduction in debt and interest through the issue of the new 3 per cent loan makes it superfluous to describe the state of the balances but one may note here that the surplus of Rs. 18.9 lakhs will raise the closing balance to Rs. 148.98 lakhs which is almost equal to a year's revenue. No province in India can claim to show a balance of such proportions at any time, and the essential difference between the Provinces with top-heavy administrative expenditure is shown by the unimportance of police and jail expenditure in Cochin as well as the recurring grants for charity. Most Indian States report rising expenditure offset by higher revenue but Cochin's investments in public works and industrial concerns are moderate, and the growth of revenue is independent of external factors.



Higher Cost of Living

The present complaint as to unbalanced prices and the exceptional burden of the cost of living may be modified by a reading, of similar changes elsewhere. Prewar prices do not obtain in any country at present, since graphs appearing in the March bulletin of statistics indicate that disturbances to the price level are, to some extent, independent of price control. The course of prices in 1942, suggests that large variations took place in countries as far removed as Peru and Palestine. The uniqueness of Germany where the index number rose from 83 to 84 oniy in July 1942 is deceptive. The rise in Canada from 94 to 101 was slight compared with the rise of 17 points in the U.S.A. Very considerable changes have been noted in neutral countries like Turkey, Spain and Argentina. In spite of improved export trade Mexico was not immune. The index for wholesale prices in Japan advanced from 150 to 163. The cost of living indices have clearly moved with the adverse price-trend. The experience of South Africa is shared by Egypt and Southern Rhodesia. Only in Canada was a small decrease noted towards the end of 1942. In the U.S.A. the National Industrial Conference Board's index rose from 94 in January, 1942 to 102 in February, 1943 (Base 1929). In Japan the cost of living rose steadily in 1942, but not to the same extent as in Manchukuo.

The cost of living has fluctuated least in Germany for obvious reasons, but in the Occupied countries it has risen relentlessly. In Iceland (occupied by the Allies) the cost of living was rising until December. Swedish experience suggests that the rise in prices had a direct effect on the cost of living before monetary policy claimed a new objective; and rationing has not helped Switzerland to arrest the rise in prices which characterised 1942. The figures available suggest that rationing mostly has helped Britain to hold down prices and the cost of living but the U.K. index for food has been lower in 1942, while the index dropped in December and has been stable from January. The unusual changes noted in Britain extend to the Dominions, but not to India where the violent upswing in prices produced changes in the cost of living as striking as those noted in Iran. Graphs indicate the flattening out of the rising curve not only in Canada and the U.K. but in Norway and Spain. The same explanation will not fit the phenomena because figures relating to note circulation in Spain and Norway are not available at present. Anyway the rise in note circulation in the U.K. has been without effect on the cost of living during 1942.

Argentine Crops

On the eve of the revolution which put Dr. Castillo to flight and brought a soldier

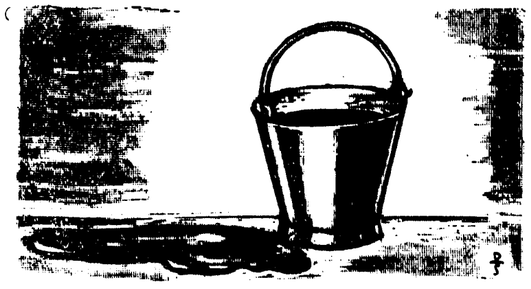
Those concerned with India's Industrial Development are taking steps to assure a thorough education for the future generation.

At Jamshedpur provision is made for the schooling of every child, be its father an unskilled labourer or a departmental head.

Thus the Company guarantees a steady flow of "Men of Steel" for India's future development.

TATA STEEL

ISSUED BY THE TATA IRON & STEEL CO. LTD. HEAD SALES OFFICE:—100A, CLIVE STREET, CALCUTTA.



to the Presidency Argentina reported what may be called full employment with prices relatively stable and food abundant. Mr. Jackman's a report on trade conditions pointed to no change although there was a constant increase in the prices of manufactured goods. His report (appearing in the Indian Jute Committee's bulletin) stated that construction has probably never been so active as it is now and there is practically no unemployment. Despite the contraction in foreign trade the export surplus showed an increase. Shipping shortage was reported to be acute. The report said "the merchant tonnage is scarce and importers find it difficult to secure transportation for more than a small percentage of essential merchandise while export of meet which Argentina produces is almost equally handicapped." The building up of a native shipping industry has evidently made no impression on the main problem forced by the war. The financial consequences are more favourable. The growing export balances plus the influx of foreign capital have brought greatly increased holdings of gold and foreign exchange which exceeded 2½ billion pesos. Hence the Argentina Finance Minister announced that control of incoming capital funds would be instituted through the Central Bank in order to prevent a further influx of funds, not intended for permanent investment or not connected with business and financial transactions. The Central Bank is empowered to prohibit the sudden export of funds, if this becomes necessary later. The major change, however, is the dramatic fall in maize production from 9.03 million metric tons in the previous year to 1.9 million tons. This will not more than meet the normal domestic consumption and seed requirements. Sunflower seed production also is lower but the ground crop of 1942 is larger in Argentina. The increase in potato cultivation contributed to a rise of 32.7 per cent in Argentina's production which was recorded. As in Canada and the U.S.A. the wheat surplus is very large. The Argentine as an exporter has a large surplus while Europe has less, and Russia's food position remains very light. Total surplus in the exporting countries in 1942-43 are known to exceed 3,378 million bushels owing to the larger carryover. Exports in 1941-42 constituted only a small part of the surplus and the combination of the largest carryover in history with the second largest crop in history, smaller only than that of 1928, makes it easy to predict that the Argentina's surplus would be dealt with under the terms of the international agreement. A larger crop of wheat aggravates the bag famine and compulsory return of bags is demanded by Argentine shippers. Empties are taken back—1,400 bales in April—but Argentina cannot go on with the construction of elevator's for handling grain in bulk in imitation of the practice in Canada. The bag famine persisted, and the only item of interest recorded is an interview at Buenos Aires between the commercial mission and Chancellor Stoni with reference to exchange of products between the Argentine and India, especially, the export of burlap. The report mentions the import of caroa fibre from Brazil—the intake in April being 1,184 bales.

Iraq's Experience

The economic consequences of the war in Iraq are considerable. A recent Oxford pamphlet observes that it has held up the construction of factories such as cement and sugar mills and certain major irrigation schemes such as the proposed Geli Bekhine Dam on the Greater Zab. The presence of Allied armies in Iraq has made for employment. Public works have been constructed and a stimulus given to industry of all kinds. The instability of grain prices obviously must have disappeared. Prices have advanced as in Iran so that war is not an unmixed blessing. The note issue has risen from a prewar figure of 4.5 million dinars to about 25 million dinars in March 1943. This enormous increase in the amount of money circulating in Iraq combined with an inevitable end to the import of all but essential goods has caused an economic condition which bears a close resemblance to inflation. In as much as the Government's credit is good and the dinar is tied to sterling, there is not true inflation. The main result so far has been to build up a considerable credit which could be used when the war is over for financing many of the public works schemes of which Iraq has long stood in need. For the first time, in her brief history, Iraq has become a creditor. Meanwhile, it is difficult to put the new accumulation of wealth to the best use. Economic control and voluntary or compulsory saving have to be accepted, but the ideas were new to Iraq but there is, in view of the hardships noted, a popular demand for their introduction. Until Iraq entered the war in January, 1943, the tendency had been for prices to rise with alarming rapidity, and for those who could, to speculate in land and commodities, taking full advantage of a rising market. After the declaration of sources military or economic. In accordance with this resolve, Iraq's Premier hopes that the position of an exporter of cereals would be regained. Exports of wheat in 1937 totalled 113,161 tons and exports of barley totalled 286,877 tons. Iraq incidentally grows wheat and barley as winter crops, and much crops as rice, maize, millet and sesame in the summer. The resemblance to India is complete with Iraq's reliance on irrigation going back to the time of the Babylonian Empire.

Precious Metals

The supply of three million ounces of U.S. silver to the British Government was a consequence of a change in the position of silver which has become a war material, largely owing to the shortage of tin and the larger demand for nickel in spite of the absolute increase in the International Nickel Company's output in 1942 and the increased recovery of scrap nickel. The great bulk of U.S. Treasury silver is assigned to the Defence Plants Corporation which is using it for non-consuming purposes in new war plants. This means, mainly employment as 'bus bars' and other concentrated electrical wiring in magnesium, aluminium, graphite and other works dependent on a large regular supply of electricity. The use of silver leads to a saving in copper, diverted for U.S. munitions production, the silver being returnable to the Treasury after the war. The Economist explained that silver is used also for machine parts and alloys such as solder and bearing metals. Virtually, war, Iraq is resolved to employ full re-

A Leaking Bucket

may not cause great concern but joints are generally of vital importance. A bad joint can mean not only loss of precious oil, unseaworthiness of a craft or breaching of the railway track but possibly loss of life. The vibration, the strain and the pressure that rivets, nuts, bolts and screws must bear has long been our study. That's why our products are made of the finest quality materials. You can rely on them.

TATANAGAR

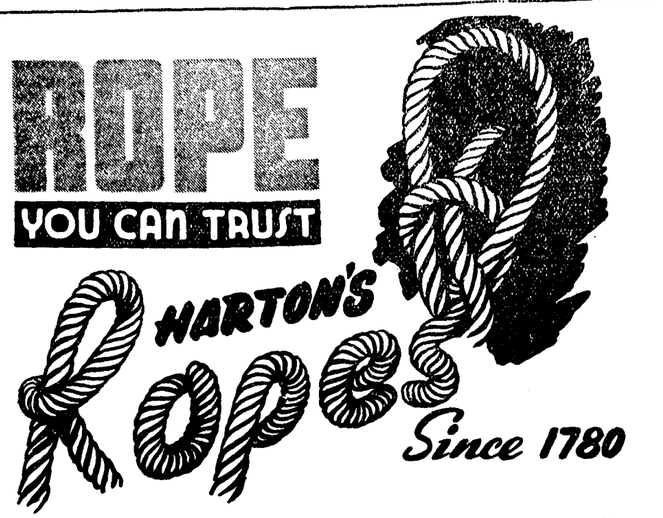
I.S.-10

the whole of U.S. imports of silver are used for these purposes. In future, imports are to be supplemented by domestic silver. Until the autumn of 1942 the U.S. Mint took all supplies of new-mined silver at 71.11 cents per ounce. After the introduction of restrictions on the use of imported silver, the industrial consumption of U.S. mined silver rose and a Conservation Order issued in February limited demands for non-war purposes to one-half the quantity used either in 1941 or 1942. The U.S.A. indeed expects additional supply of 25 million ounces per annum for essential war purposes. A similar Conservation Order applies to platinum. This precious metal is subject to strict control. There is a general prohibition on the use of platinum or its compounds in jewellery. The War Production Board ordered the regulation of stocks and sales and increased supplies at the expense of the jewellery trade which took over two-fifths of the platinum available. Since Canadian production is increasing, the U.S.A. can look for larger supplies apart from the saving at home. The W. P. B. announced last year that apart from uses for war production that platinum is required for radio valves and for communications equipment. Platinum incidentally is more precious than gold as before. The London price in May was £9 per ounce while gold quoted £8/8 per ounce.

Canadian Air Lines

Canada's interest in post-war aviation plans springs not only from the increase in aircraft output and the nearness of Botwood—the Atlantic terminus of many air services—but from the possession of many air routes and services. The Canadian companies are looking beyond local air services, and the Trans-Canada Air Lines, for example, is credited with a plan to operate services across the North Atlantic. An agreement made in 1935 gave Canada a share with Imperial Airways in new services but Eire being out of the picture, the Dominion Company has modified its plans. There is an agreement between the U.S.A. and Canada as regards air services. Civil aviation in the two countries is closely linked and the agreement of 1939 confers the rights to operate across the boundaries including the Canada-Alaska boundary. Reciprocal rights led to the operation of the Toronto-New York service of Trans-Canada. The agreement has been renewed up to the end of the war, and a conference in December will decide the allocation of routes. Canadian Pacific owns the Canadian Pacific Air Lines. There is also the publicly-owned Trans-Canada (affiliated to the National Railways) which runs the trans-continental air services. The T. C. A. runs the Halifax-Vancouver service to be extended soon to Victoria B.C. In the developing north-west the C.P.A. is the chief factor. Both companies are anxious to run ocean services. The U.S. Air Transport Command runs services across Canada and Pan-American and Northwest lines under contract to the U.S. War Department serve Canada. The latter operates the Winnipeg-Minneapolis route. The Canadian Parliament has been advised as to the plans to run services across the Great Lakes from Toronto to Winnipeg and beyond. The Canadian company clearly expects a share in the Pacific services to Asia from Alaska. As Trans-Canada is running a daily service to Newfoundland, it is hopeful also of getting a share in Atlantic air traffic. The President of T. C. A. Mr. H. J. Symington K.C. told Parliament that Canada occupies an important position in the future of the air world. The shortest routes between North America and Europe and Asia cross the Dominion and weather conditions are stable. Canada's national air line is destined to play an important part in world aviation. The Canadian Transport Department controls the landing fields and has developed an extensive meteorological service. Naturally Canada's bargaining power must be great and future air services like steamship services will look to two Continents. As compared with the confusion produced by reorganisation in Britain, the Canadian advance plans are clear and simple, and the Canadian Government's interest is clearly in the forefront.

African Supplies



In South Africa the maize crop is important, especially, for native labour and last year's short crop has been succeeded by a moderate crop. Recent reports referred to the delay in harvest occasioned by heavy rains. Price control has been incorporated into agricultural policy and in June the Union was expecting supplies to come on the market. There was, however, one danger to which African farmers are exposed. A certain amount of locust damage was expected after flying swarms appeared in the north. By May livestock was in better condition and the area under wheat was larger, specially in the Cape Province though rain was wanted. Damage to the maize crop from rain was officially admitted and the estimated supply of 22 million bags might leave no margin for exports. The South Rhodesian crop is expected to be smaller than expected and the wheat crop there may be smaller as the delay in ploughing as a result of heavy rains was noted. Yet the wheat crop is expected to be better as in South Africa. The maize crop is estimated at over 1,780,000 bags and the outbreak of foot and mouth disease was expected to reduce the supply of livestock. Scarcity of maize was noted in 1942 in most African colonies. In Northern Rhodesia the current year's crop of 250,000 bags is wanted to alleviate actual scarcity, but farmers had little to spare. And the general belief as to maize shortage in Kenya was modified only by a hope of a bumper crop in one Province, assuming that locusts did not damage the crop. The Rhodesias depend more on tobacco and cattle than on maize for export, but local food supply is important. The June letter of the Standard Bank of S. A. dwelt on the rather inadequate rainfall in Tanganiyika and famine relief measures claiming 25,000 tons of foodstuffs. In Kenya a reduction in herds of cattle and sheep was noted, and it was agreed that unless sufficient feed was assured the colony's herds of pigs could not be built up. The herds were badly depleted at the beginning of the food shortage. The war has not helped the African native to get on with agriculture and more cattle are eaten in the Kenya Reserves owing to the scarcity of grain. This may lead to important changes in plantation costs. From 1942 it has been clear that food shortage as in India was common in many British Colonies. The administrations had a food problem while drought in East Africa affected cotton, cattle and most commercial crops. The rise in coffee and sisal prices is a consequence of higher prices and higher wages arising from scarcity.

E. F. U. Progress

For 1942 the Eastern Federal Union Assurance is paying a dividend of 4 annas per share free of tax according to the Chairman Mr. A. R. Siddiqui who described the year's underwriting results and the increase in funds as contradicting his own pessimistic forecast. The increase in capital last year was independent of the announcement but certainly connected with the increasing influence and business connexions of the Company. The major feature claiming attention is the increase in the Reserve Funds from Rs. 6.54 lakhs to Rs. 10.43 lakhs. Special Reserves also have been raised, and except for the setback in the life branch, the Company's experience is in accord with the experience of all Insurance companies. In the Fire branch net premiums amounted to Rs. 7.37 lakhs and claims took Rs. 2.22 lakhs. Commissions etc. took Rs. 3.08 lakhs and the Reserve was increased by Rs. 40,000 so that the revenue account shows a reserve of Rs. 3.45 lakhs as against Rs. 2.75 lakhs at the end of 1941. In the accident branch the year's net premiums were slightly lower compared with 1941 at Rs. 1.23 lakhs and claims were considerably lower at Rs. 27,307-10-7. After providing Rs. 20,000 against unexpired risks the Account shows a surplus of Rs. 32,369-2-2. The large increase in the marine branch is linked with the higher rates enforced by the war. The year's premium income shows marked improvement at Rs. 8.98 lakhs of which claims absorbed Rs. 2.68 lakhs and expenses took Rs. 1.37 lakhs. The Fund has been raised from Rs. 1.89 lakhs to Rs. 4.34 lakhs. In the life branch new business accounted for the issue of 189 policies assuring Rs. 4.31 lakhs and the total premium income was Rs. 91,964-12-0. The lower expense ratio at 28.92 per cent and the light claim ratio account for the addition of Rs. 64,000 nearly to the Life Assurance Fund in a year. In view of the recovery after 1942 mentioned by the Chairman the moderate results may be ignored. Large provision for taxation from the sum transferred to Profit and Loss Account does not affect the disposable sum which after meeting the charge for dividend is higher at Rs. 33,982-1-4. The increase in the Funds explains the rise in the company's Investments by over Rs. 3.4 lakhs in a year. There is little in the balancesheet which calls for special notice but reference may be made to the deposits in two Indian States in addition to the statutory deposits. The Funds are supported by an Investment Reserve. The outstanding claims and other liabilities are covered by cash balances exceeding Rs. 20.15 lakhs. Investments in ordinary shares are unusually moderate and no mortgages figure among the assets. Investments outside the giltedged market are in the correct proportions and E.F.U. policy was again illuminated by the Chairman's speech at the 11th annual meeting when his observations on the burden of taxation were directed as much to Government as to the shareholders.

Hafco's 1942 Results

Without recording spectacular progress the Indian Life Assurance Company, Limited in its fifty-first year reported a moderate growth of both revenue and funds. Total new business in 1942 resulted in the issue of 1,750 policies for Rs. 49.07 lakhs with an annual premium income of Rs. 2.47 lakhs and single premiums amounting to Rs. 12,408. Business in force at the end of 1942 exceeded Rs. 3.15 crores and the year's premium income totalled Rs. 12.05 lakhs while claims and surrenders took Rs. 8,19,800. The Revenue account shows investment receipts of Rs. 4.64 lakhs and a life fund of Rs. 99.11 lakhs suggesting that the company has been able to earn 4.6 per cent on the Life Fund in this period of cheap money though the classified summary shows that the company's holding of government securities is very large in relation to such assets as shares, real property and mortgages. The soundness of the Company's investment policy is indicated by the yield obtained in 1942. The company's expenses amounting to Rs. 3.76 lakhs remain moderate as compared with the premium income. The year's surplus has been added to the Fund which stands in the latest balance sheet at Rs. 1,03,33,301-3-8 showing an increase of nearly Rs. 4.22 lakhs on 1941. The Balance sheet indicates that mortgages and loans at Rs. 16.19 lakhs are small compared with stock exchange securities valued Rs. 116.38 lakhs. The market value at the end of December 1942 was known to be Rs. 127.37 lakhs and the inner reserve is supported by an investment reserve of Rs. 6,74,350. The dividend of 25 per cent on the paid-up capital of Rs. 1.45 lakhs is proof of the high earning power of insurance shares, especially, of the older companies since the Dividend Appropriation Account and the Shareholders Fund are large in comparison with capital and the share in the valuation surplus is far greater than the amounted now allocated as dividend. The feature which deserves special notice is the smallness of the revenue items in the balance sheet. Premiums due, agents' balances and interest due come to Rs. 1.11 lakhs in a case where total assets are Rs. 156.23 lakhs and cash balances alone total over Rs. 9.6 lakhs. The outstanding liabilities listed total Rs. 6.57 lakhs while confidence in ILACO is illustrated by the provision of Rs. 28.8 lakhs nearly in the form of Sundry deposits by others. The Karachi Company's uniformly favourable experience is certainly reflected in the report and accounts for 1942 and policy-holders who measure the results by the conventional yardstick may note that the balance-sheet changes are again eminently favourable.

PRESS NOTIFICATION

Users of machine tools have been informed by the Notification which appeared in the Press in the third week of July, 1943, that all orders for machine tools must now be placed on the Machine Tool Controller, Calcutta, through Regional Representatives in Bombay, Lahore, Madras and Cawnpore. The procedure which must be followed for the import of machine tools is briefly described below.

(1) **Estimates:** The machine Tool Controller, Calcutta, is now required by the Secretary of State for India to submit, twice a year, simultaneously to the Secretary of State and to the India Supply Mission at Washington, an estimate of India's future requirements of imported machine tools. These estimates must reach London and Washington by the 1st January and 1st July of each year. The estimate due on the 1st of January must include all machine tools to be received in India during the period from 1st July to 31st December of the same year. The estimate due on the 1st of July must cover all machine tools required in India in the period from 1st January to 30th June of the following year.

To enable estimates to reach London and Washington by the proper date, information must be in the hands of the Machine Tool Controller by the 20th November and the 20th May, respectively. Machine tool users should, therefore, furnish all necessary particulars to Regional Representatives by the 1st of November and the 1st of May each year.

(2) **Orders:** Orders placed by commercial users form the basis of the Machine Tool Controller's estimates of industrial requirements and must, therefore, be received before the estimates can be prepared. It has been decided, therefore, that any order received by the Regional Representatives after 1st of November and 1st of May, must be held over for a period of 6 months, i.e., until the preparation of the next succeeding estimate.

2. The new procedure will take effect from the 1st of January, 1944, and will supersede the existing one under which estimates are submitted once a quarter. To cover the period of transition between the old procedure and the new, the Machine Tool Controller will send an estimate as soon as possible to cover the machines required in India from the 1st of January to the 30th of June, 1944. All the information necessary for the compilation of this intermediate estimate must be in the hands of the Regional Representatives not later than the 10th September, 1943; it will be the duty of the latter to see that the Machine Tool Controller gets their consolidated figures before the 20th September, 1943.

(S. A. VENKATARAMAN),
Joint Secretary to the Govt. of India.

"There is nothing new," I observed last week, "in the ideas that inspire international politics." "But," I am asked by a correspondent, "what is the scope for novelty in international politics? In all the long history of political thought, the range of variety in ideas is limited. The size of political entities may vary from the miscroscopic city states of Greece, to the mammoth Federations of the U.S.A. or U.S.S.R. The principles of politics, too, may vary, superficially, from the apparent direct action of a demos in a referendum to the equally apparent servility of multitudes under a Fuehrer. There may be variety, too, in the degree of subjection of one class to another or one race to another. But has not the scope for variation of political principles and ideas been wellnigh exhausted in these 2,500 years and more of man's civilised existence? If you are thinking of the failure of the Quebec Conference to send the jewel of Swaraj in a packet to your Congress, you have nothing but your unreasonable hopes to thank for this disappointment. Politics is power, draped or decked differently according to circumstance. If the problem is to force power to assume alround beneficence, it is too soon to talk of it, when the forces of alround malevolence are still untamed. I can well understand India being dazed and, perhaps, embittered by the nature of the Quebec talks. But that can hardly suggest the lack of a possible novelty in international politics."

* * * *

I must admit in great part the force of this criticism. But I was not thinking of India so much as the future of the great powers who are now entering the threshold of victory. Besides, it is an unduly narrow or pessimistic view of history to hold that the scope for variation in political principles has been exhausted in the 2,500 years of man's civilised existence. The future may well be as unlike anything that has gone before, as this war is unlike any of its predecessors. The trouble with most of us in the modern world is that we assume readily and without sufficient thought that we are entitled to be pessimistic or optimistic as we choose. Having lived through the most eventful times in history, we believe that the experience and knowledge we have of human history and human possibilities are too large to call for any necessary addition. Are we not heirs to countless civilisations that rose, flourished and died in the past? Have we not known the history, not of one race or period, but of humanity as a whole, thanks to the writings of men like H. G. Wells? Have we not seen the growth and withering of Victorian optimism, the stillborn idealism of President Wilson, the triumphs of a Hitler and the rebuffs of a Gandhi? With this knowledge of cycles, not only in trade, but in the fortunes of human communities, of the power of blind prejudice and hate to create a world war and paralyse the forces of goodwill, how can we believe in anything but vicissitudes of human fortunes with more or less regularity? How can we still retain hopes of progress, however checkered, to a millennium?

* * * *

This line of thought is happily not so common as well as it might be among serious students. Poets and other men of letters, attuned as their minds are to the state of mind prevalent in the community, are quite ready to sing sweet songs that tell of saddest thought. But no rational system of social thought, which is duly fed by empiricism of history, can possibly take a line of such unbalanced pessimism. History affords warrant only for the expectation of new and more vigorous life in every scene of forceful destruction. Scorched earth is, for that reason, a more fertile soil. The Dark Ages are but a provision, perhaps stagic, for the brilliant play of light that follows. The trouble is that living in the hub of events, we have no means of assessing them at their true worth and making worthwhile guesses as to what will follow. Too many of us mistake the plenitude of daily news reports for knowledge of the wide world. We think rather of the distortions of propaganda than of the intrinsic difficulties of judging the trends of the contemporary world. This task, difficult at any time, is almost impossible in such a crucially formative period as the present. Nearing, as we do, the complete victory of the Allies, we think solely in terms of the ideas in the minds of Mr. Roosevelt and Mr. Churchill. We think of ourselves, and of India. We think of how India might fare in the post-war settlement. In this rush to anticipate the post-war settlement, all the issues, that were once supposed to be involved in this war and, to some extent, are involved in this war, are overlooked and forgotten. And the idea of the world being ordered to the liking of a few politicians—a patently shallow view of history—prevails again.

* * * *

It is significant that we hear so little of this war as a war of conflicting ideologies. The great democracies, no doubt, continue to talk of the democratic way of life; but even there, this talk takes the form of a denunciation of the Axis than of positive praise of democracy. Praise not seen the growth and withering of widen or clarify its application, is indistinguishable from the assertion that one side and not the other deserves to come victorious out of this war. Whatever that may be, the old familiar talk of this war as a war of conflicting ideologies is no longer heard anywhere. I don't listen in to enemy radios. Probably the Axis, too, has dropped the ideological talk. The question, therefore, may be asked, whether it has ceased to be important, whether the war has become or always was a mere national war, and whether it will end in nothing more than the confirmation of the Anglo-Saxon powers in their world hegemony.

* * * *

The reason for this change lies in the fact that with the Russo-German war, it was no longer convenient to continue this talk of a war of ideologies. So long as Russia had a pact with Germany and stood outside the ring, it was possible to group the totalitarians together and set the democracies in sharp opposition. But now totalitarianism, so far as it concerns the war, is confined to only one species of it, Fascism. The generic term has to be abandoned, except when you have to say for purposes of whipping up the war effort that you cannot win a totalitarian war except by totalitarian methods. Otherwise, the term Fascism suffices. The lack of homogeneity in the literal sense in the enemies of Fascism created by the presence amongst them of a communist nation—is a matter on which the less said the better.

* * * *

But is that not precisely the reason why the attempt to understand the war as a war of ideas should be reviewed and carried out with as close correspondence with facts as we can possibly attain? Does the entry of Russia as an opponent of Germany deprive the war of its ideological character? Or, can it be said that this war was never in any respect different from the wars of the past and that the ideological character was only a deceptive appearance which the entry of Russia enabled us to overcome? Doubtless, it is impossible to indentify the two sides with two sets of sharply conflicting ideas without over-simplification. But some conflict in the ideas of belligerents apart from their concrete economic interests is, it stands to reason, inevitable. And in so far as ideas as a rule are determined by vital interests, there is indeed no conflict between what you call the material interpretations of history and the interpretation of history in terms of ideas and the conflicts amongst them. Besides, it is also possible and useful to examine the ideas and ideals involved in a war without attempting to apportion them exclusively to the two sets of belli-

gerents. Such an attempt frees you from that temptation to over-simplification, without which you cannot possibly represent the combatants on either side as mere personifications of the ideas which animate them in the war. It enables you also to isolate and estimate the ideal significance of the war; and once this ideal significance is understood it may be possible to see the practical results that may be expected from victory.

• • • •

Considered from this viewpoint, the present war is unquestionably unique in the multiplicity and variety of ideas that made this war possible. It is said of the last war that it was brought about by the competition of rivalry in imperialism and the struggle for markets. And this war seemed to lend itself, that is, before it broke out, to being viewed as a struggle between the Haves and the Have-nots in the international sphere. But the obvious indifference of Hitler to the proposal for a return of colonies or security of raw material supplies disproved the validity of that view. Innumerable writings and speeches of Germans and Italians showed that a special spiritual value was being attached to war as such, so that we arrive at the point that the Fascist ideology must have the lion's share, if not the whole, of the blame for bringing about the present war. But Fascist ideology may be to some extent definite and understandable in the writings of Fascist theoreticians. To believe that it can be realised and enthused over by the masses of more than one country to the point of courting recklessly all the horrors of modern warfare, is different from following in the writings of Fascists the theory of the Corporate State or the glorification of war as the supreme end of the Fascist State and its individual citizens. If one is to avoid the necessity for this impossible belief one has to get behind the crisp theorising of scholars and politicians in Germany or Italy to the social conditions and social forces which invest the operative part of Fascist theory with a terrible social dynamic. Not only is such an understanding of conditions in Germany or Italy impossible, but it is also hard to believe that such conditions whatever they may be, are peculiar to Germany and Italy and have no counterparts in other European countries or have no manner of kinship to social conditions in France, Britain or the U.S.A.

• • • •

In this context, Peter Drucker's thesis that the conditions which led to Fascism in Germany and Italy are, to a large extent, common to the whole of Western Europe and the United States is, indeed, of great interest. His view of Fascism is not one that I would readily subscribe to. I do not believe that, just because democratic government and economic organisation of modern industry have failed to provide the freedom and equality which are the foremost objectives of European civilisation, the European masses can spring as one man to the support of a Fuehrer and accept the ideal of self sacrifice for no conceivable individual or social end. His definition of Fascism as a body of social thought, which is content with denying everything that people had sworn by, is, indeed, very helpful to the argument that Fascism springs from the depths of social despair and disillusionment. Indeed, the despair is so deep that not only is no hope possible, but people have come to revel in a deliberate inversion of all values and to believe in the doctrine of stabilised hopelessness as an altogether new gospel for human societies. All this is so obviously the result of oversimplification, exaggeration and twisted reading of recent history that it is unnecessary to refute it in detail. But it is useful for reminding us of the critical nature of the present phase of European civilisation, useful, too, as providing in the bleak, unreflective despair of the masses an explanation of the incredible inhumanity of the Fascist masses. It is illuminating in as much as it prompts us to look for similar moods in the minds of the masses in the democratic countries. This similiarity is not ruled out either by the continuance of democratic forms of government or by the enthusiasm with which the people support their governments in the war against the Fascist powers. The difference is easily accounted for by the strength of the democratic tradition in France, Britain and the U.S.A. If we overlook this difference, we get at the fact that what is involved in this war is the ability of western nations to forge out of the anvil of this prodigious human suffering a way of life which cares less for the labels devised in current economic and political controversy than for its ability to satisfy the needs and wants, the instincts, urges and aspirations of human nature.

• • • •

In spite of the impressive achievements of the era of democratic liberalism, social thought in the last one century or more can hardly claim to have thought in terms of a social framework and a scheme of life for the individual and for society. A system of political thought in which the individual is regarded only as an isolated voter and an economic system in which the individual has a theoretical freedom of contract can neither ensure social stability nor meet the material and spiritual needs of the individual. That Western Europe and its colonies in America have been able to progress on the basis of these twin systems of economics and politics cannot be attributed wholly to the dynamic of democracy and "laissez faire." It is due as much to the ease with which the European peoples could expand and add to their material affluence at the expense of all other parts of the world. This expansion is often regarded not only as a sign and expression of cultural strength and virility, but also as a condition of it. But the strength of one society cannot be fed interminably by preying on another. And foreign wars, if they promote the solidarity of the community for the limited purpose of winning wars once they are on, can neither improve the harmony of internal life nor ensure stability against external dangers. The present crisis of European civilisation arises from the failure to achieve the harmony of internal social life, the indifference to amity among European peoples and studied indifference to the relations of European civilisation to the rest of the world.

• • • •

Almost every civilisation in history was characterised by these three features. But the world, then, was a large and wide world. The deterioration arising from internal disharmonies always coincided with formidable threats of external aggression, often of a purely barbaric kind; and together, the two forces solved the problem by extinguishing the threatened community. The broken threads of the old civilisation passed to other and more vigorous hands. The problem now is different in that European civilisation is heir to all the dead civilisations of the past. The facile, and to some satisfactory, solution of its utter extinction is not open to it. The victors in this war will be masters of the world; and victory by itself cannot solve the problems mentioned above. While probably amity among European nations may be secured by wiping out the vanquished, the problems of internal harmony and harmony with the rest of the world will not be secured; and Hitlerism is a warning against feeling too sure of the solution of the first.

• • • •

These questions are not wholly postwar problems. Their bearing on the conduct of the war, though, doubtless, exaggerated by the beneficiaries of their immediate, and inevitably partial, solution can also be and, in fact are, underrated. The unsatisfactory nature of the Quebec talks arises from the virtual denial of the bearing of these problems on the conduct of the war. The war against Fascism cannot be won so long as the ruling classes in the democracies cannot overcome the vacuous listlessness of the masses by offering them adequate material and spiritual satisfaction and convincing the average man that his life has again been invested with meaning and purpose. Likewise, the crisis in European civilisation will continue till it is able to define its position vis-a-vis the culturally non-European world. The latter problem has its economic and distinguishably political aspects. Talk of food for all and freedom from want is no answer to this call. Pacts of mutual non-intervention between the Anglo-Saxon Powers in internal affairs are no solution. Science and transport have made of every war a world war. And if the world has shrunk, it is not in order that the various peoples can live in little cubicles of their own, but in order that the human race can feel itself lord of a whole planet instead of being mere inhabitants of some plains and valleys.

(From Our Correspondent)

New Delhi, August 30.

THE Central Government have so far failed to put into force a rational and co-ordinated food policy. Hundreds of persons continue to die of starvation and there is still an incredible feeling of helplessness and complacency about the situation in Government circles. There are reports that the Government now intend to take a direct though belated share in relief operations in the distress areas. Plans are under consideration to make free or cheap food available to the starving populations of the famine districts. No explanation is forthcoming as to why these urgent relief operations which must be undertaken at any cost are being unnecessarily delayed. Neither has any reply come to the Punjab Minister's charge of utterly inadequate transport arrangements. The Central Government and the long-term Foodgrains Policy Committee seem to be concentrating on plans to increase production. The emphasis on long-term policy just now is a little misplaced. For what is needed is immediate succour to the famished millions of Bengal and saving of thousands of human lives. The famine spots must be eliminated and the problem must be viewed as one of urgent military necessity. Some surprise is expressed here that there has yet been no response from the British Government despite urgent appeals to Mr. Churchill to send immediate help to Bengal in her distress.

* * * * *

How the Government have failed to control prices of primary foodstuffs in India is made clear by a contrast with the working of food control in Britain. While prices in Britain during the four years of war have risen by about 20 per cent, the prices in this country have risen by at least 300 to 400 per cent. The Government has not been able to check effectively the production of luxury goods with the result that a large percentage of the national resources which should have been directed to the production of essential and primary goods are still busy manufacturing articles of luxury. Of course, huge Government subsidies (amounting in the case of Britain to 180 million pounds annually) have been mainly responsible for keeping down prices of essential commodities to a low level, but there is no reason why this experiment need not have been tried here. The long-term Foodgrains Policy Committee seems to have rejected outright the policy of Government subsidies to keep down prices for reason of the huge expenditure necessary to make it effective. The reports of intended imports of luxury goods in the face of terrible food shortage will cause painful surprise.

* * * * *

The preliminary report of the Conference of the Institute of Pacific Relations held in December last shows that the Indian and Chinese delegates expressed their apprehensions regarding the proposed post-war "reduction of tariffs". It was stated that though the two countries shared in the general desire for an independent world economy and expanding trade, they did not want in any way to assist "in restoring the system of international specialisation built up by European initiative in the nineteenth century". Fears were also entertained regarding foreign capital investment. It was made clear that, however, flexible and useful such investment was from the point of view of foreign investors, it was primarily for purposes of trade rather than for domestic consumption. Such investment invariably carried with it the danger of creating a network of foreign vested interests—production, shipping, insurance, banking and trading. It was recognized that the only rational post-war development would be a series of "bold national policies of direct attack upon basic deficiencies—transport, agricultural improvement, credit organization and industrial policies entered upon with the support of older industrial countries". It was clear that both India and China intended to embark on a programme of developing heavy industry as a means of security, as a basis for other progress in manufacturing and to improve the incomes and living standards of the people, Indian opinion generally, it was recognized, was opposed to the present foreign control of shipping, import-export business, insurance houses and all foreign exchange banks and aimed at breaking that control.

Mr. M. P. Pai and Dr. K. Venkataraman have now submitted a report on the raw materials required for the dyestuffs industry to the Board of Scientific and Industrial Research at the instance of the Dyestuffs Exploratory Committee. The report is of especial interest to the textile industry which is The main consumer of dyes in the country. The main conclusions of the Pai-Venkataraman report are: (1) the establishment of the industry, providing for about half of the consumption of dyes in this country is practicable as a large percentage of our present requirements is covered by a comparatively narrow range of 51 dyes; (2) the coal tar raw materials are already available or can be readily made available; (3) we are already producing on a large scale most of the heavy chemicals such as sulphuric, hydrochloric and nitric acids, soda ash and caustic ash. The report envisage a 15-year plan involving the manufacture of 51 dyes. It is hoped that the report would help in the early establishment of this key industry in our country as we already possess the necessary raw materials.

* * * * *

A report on the marketing of Indian lac issued by the Agricultural Marketing Adviser to the Government of India draws attention to the possibilities of developing the now neglected lac dye trade by finding out cheaper and better methods of recovery. A plea is made for improving the indigenous process of manufacturing seedlack and shellac so as to save time and labour and get a better product. The use of the double-bag system is recommended for melting shellac as it yields a better product.

* * * * *

In its interim report the Railway Convention Committee came to the conclusion that the present is not the suitable time to undertake a permanent revision of the convention as it is difficult to foresee the conditions that will prevail after the war. The Committee only considered the question of an interim arrangement for the allocation of railway surplus between railways and the general revenues. The consensus of opinion in the Committee was that the annual contribution to the Depreciation Fund should not be less than one-sixtieth of the capital charge. Due to heavier wear and tear of railway assets

4% Karachi Municipal Corporation Water Works Debenture Loan

(RECOGNISED AS TRUSTEE SECURITIES)

Karachi Municipal Corporation have been empowered by the Sind Government under their Resolution No. 2027-G A/42 dated the 28th July, 1943 to raise a loan of Rs. 34 lakhs being the second instalment of the loan of Rs. 95 lakhs for the Karachi Water Supply (Indus) Scheme, first instalment of Rs. 40 lakhs having already been raised in December, 1942.

The Scheme is estimated to cost Rs. 1,89 crores and the Municipal contribution has been fixed at Rs. 95 lakhs and the balance is borne by Government of India and Government of Sind.

The loan to be floated is for the period of 40 years bearing interest at 4% per annum payable half yearly.

The loan is recognised as Trustee securities and is secured on the revenue and assets of the Corporation.

The limit of the borrowing powers of the Corporation as per the Municipal Act is Rs. 344 lakhs. The present net loan liability after deducting Sinking Fund accumulations is Rs. 124.36 lakhs only.

Out of this loan of Rs. 34 lakhs, Rs. 10 lakhs are reserved and set apart for issue to and in the name of the municipal Corporation of the City of Karachi under Section 68 of the Municipal Act and the balance of Rs. 24 akhs is offered to the public at a minimum premium of 5 per cent i. e. Rs. 105/- for every Rs. 100/- loan.

Tenders will be received for minimum sum of Rupees one thousand and multiples thereof.

Brokerage at the rate of 1/8% will be paid to recognised brokers and banks through whom accepted applications are received.

Tenders on printed application forms will be received upto 13-0 p.m. (S.T.) Wednesday the 15th September, 1943 by the Undersigned at the Municipal office, Bunder Road, Karachi.

T. J. BHOJWANI.
Chief Officer.
For the City of Karachi.

Bombay, August 31.

DISAPPOINTMENT with the achievements of roadmakers in India compelled Mr. R. A. Parker to relate his arguments in favour of road development to adverse indications. At the Annual Meeting of the I.R.T.D.A. he declared that the setting up of he Road Fund did not stimulate spending on roads. In his view India remains backward and the food crisis is directly connected with the lack of roads. Cultivation of land has suffered and transport costs remain high. Investment in metalled roads would lower the cost of transport. Mr. Parker mentioned a saving of Rs. 55 crores in charges for annual transport if cart-tracks were converted into metalled roads. Revenue from motor transport would naturally increase and the railways would attract more traffic. After the war ends large scale employment for ex-soldiers could be obtained if road programmes were executed. Work for equipment like graders and bulldozers would also be found and vehicles laid off could find a ready use on the new roads. Employment for the drivers could also be found. Avoidance of loss on vehicles and trained labour postulates advance planning. The I.R.T.D.A. sent up a deputation in April. It is perparing two pilot schemes of road construction covering 500 square miles for submission to the Government of India. The schemes are meant to demonstrate the economic benefits of road construction which exceed the cost of construction and maintenance. But the pilot schemes are meant also to convince that a postwar programme should be drawn up by Governments. Certain recent departures in road-rail co-ordinaion were described in order to show that maximum benefits would follow co-operative working. He explained that the Southern Pacific Railay Company operates road services from and between a series of selected railheads to provide fast freight facilities for intermediate stations and branch lines thereby enabling the railway to accelerate train services. He urged that similar action could be taken in India with advantage.

The Gujerat Research Society of which the Gaekwar is patron, arranged for the bust of Dr. Bhagwanlal Indraji being placed in the University Library. The bust was secured through the generosity of Seth Chaturbhuj Gordhandas. Born in 1839 the Guzerati scholar pursued his historical and linguistic studies when foreign students had just begun to show interest. The Gaekwar attended the ceremony on Wednesday last to commemorate the achievements of Pandit Bhagwanlal and described the work done by the State archaeologists to carry on the work begun. It has been recalled that Pandit Bhagwanlal of Junagadh though unfamiliar with English profited greatly from the assistance of Mr. Forbes, Agent in Kathiawar. The Bombay Gazeteer, of course, shows most clearly how much was gained from the historical enquiries. The predecessor of Indian scholars showed that the dark chapters of Indian history could be illuminated by patient investigation. Mr. Wadia the Vice-Chancellor accepted the bust of the eminent historian of Guzerat. The pioneer carried out his studies i nspite of The pioneer carried out his studies inspite of material for subsequent studies.

The situation in Bengal excites much comment. The description given by Mr. J. P. Goenka to the meeting at the Indian Merchants Chamber Hall on Thursday was meant to indicate the need for relief. The Bengal Relief Committee has a branch in Bombay and the meeeting was informed that the committee fed 10,000 persons daily at its free kitchens. Asked whether the grain required would be available in Bengal, assuming that the necessary funds has been collected, he stated that the Bengal Government had given an assurance that they would help the Relief Committee by providing transport facilities. Donations of Rs. 15,000 from the N. M. Wadia Trust, Rs. 5,000 from Mr. Jehangir Sabavala and Mr. Mohamed Premji have been secured by the committee. The food situation in Bengal explains the demand for a ban on export of all essential articles. Mr. Haridas Madhavdas outlined the demand to the Commerce Member during discussions connected with the trade in cloth and cotton, post-war reconstruction and India's requirements under planning.

Motorists have seen the red light in the statement regarding tyre shortage. Car-owners have been told that old tyres must be retreaded before it is too late so that cars are kept on the road. It is said that it is impossible to obtain new tyres. The Area Rationing authority has explained that it may not be possible to get any tyres. It is understood that tyres will be available only to car-owners doing war work. This includes contractors and doctors who must prove that they must have cars. Strict control has made it necessary for motorists to turn to retreading which might add 10,000 miles to the existing mileage of tyres. There is no restriction on the issue of permits for retreading. Thefts of tyres and tubes are getting common and car-owners have been asked to exercise extra care in parking and garaging cars. Stolen tyres cannot be replaced and a spare wheel has become a luxury.

Discussions as to the correctness of ceilings prescribed by order recently influenced an appeal to merchants to sell their stocks. It has been stated that merchants have 500 million yards in stock and there is as yet no free flow of goods to retail shops. After the assurance that mills are not going to compete with merchants through their ration shops, the piecegoods market is recovering its confidence. The profit margins for manufacturers are described as large in view of the drop in cotton prices. Since returns are made, the Government may be able to modify ceilings and consumers have been asked to wait and see how the order is enforced. Wholesale prices having been fixed, the merchants can pass on supplies to retailers who are guaranteed replacements at certain rates. The transport difficulty cannot be permanent and mills may be inclined to lower prices, if wholesalers are reluctant to buy.

The opening of a shipping office in Bombay proves that Kathiawar which is linked sith Karachi is ready to develop closer connections with Bombay. The Jam Saheb opened the Jamnagar State Railway office and an entertainment on a reduced scale at the Taj followed the ceremony. Shipbuliding progress has been promised. The Jam Saheb mentioned that Kathiawar ports could build craft up to 300 tons and fit engines of 80 to 100 m.p. for making them independent of wind and sails. He hoped that Kathiawar sailors would go back to the old employment. The Indian Shipping Industry Limited represents the Nawanagar State which wants to develop the rail-cum-sea route. Rai Saheb Girdharilal explained that his original plan was to make Port Bedi the essential link in the chain of western India's martime services; but he could get through only the plan to divert traffic north of Viramgam and help the railways to keep more broad gauge wagons for essential services.

The Chamber of Princes' Standing Committee met to consider recommendations relating to reconstruction and the fight against inflation. Sixteen Princes were present and the Jam Saheb took the chair. The committee recorded pleasure in the performance of Indian States troops and looked forward to final victory. The war effort of the States was reviewed and the committee formally thanked the Maharaja Scindia for joining it. The Political Adviser to the Viceroy and Sir A. C. Lothian came to Bombay to confer with the Princes' Committee. The industrial policy of the Government as it affects States was an item on the agenda. The clue to Princely opinion is provided by the Jam Saheb's statement recording the views in favour of industrial advance. The Jam Saheb spoke on the need for agricultural improvement. The war had clearly shown that India must raise more food crops to meet her own demand. He suggested that State policy would follow the Government of India's policy after the war but with modification in the light of local needs.

Measures relating to economic development would be adopted by the States without any regard for uniformity. The save-lend plans have not been mentioned so far and it may be presumed that the Princes' Standing Committee got an outline of the plan last week. Mr. Knight expects the Collectors to do their utmost. The local government's intentions in the field of taxation remain obscure but many believe that excises will be made to

(From Our Correspondent)

Madras, Sept. 1, 1943.

The promised rationing is yet to come. Preliminary arrangements are not yet completed. Large number of people who were not included in the enumeration lists complained that ration cards were not supplied to them. With a view to bringing the 25,000 homeless persons within the rationing system the A.R.P. service men and the Police are conducting the necessary rounding up and enumeration. The beggars, it appears, are given the choice of taking ration cards if they choose to. All possible precautions were taken to prevent the rush into the city from outside. The collector of chingleput is arranging for the distribution of cards to all those persons who live on the outskirts but do their business in the city. Explaining the working of the scheme Mr. S. V. Ramamurthi, Adviser to H. E. the Governor assured that temples and religious institutions would be supplied with rice needed for purposes of worship and that extra rations will also be available for religious and festive observances, for shrardhas, funerals etc.

There seems to be no danger of short supplies. Under the basic plan the Eastern states would despatch 3,000 tons to Madras and the C. P. would supply 2,000 tons. Orissa and Punjab together have promised a further quota of 3,250 tons. As against this the Madras Government have increased the quota of rice allowed to Malabar from 11,000 to 14,000 tons per month. This increase of quota has resulted in an upward revision of the quota of rice allowed to the various taluks in Malabar. The labourers working on the plantations in Travancore and Cochin would receive 1,000 tons of rice per month. The army's share is fixed at 3,500 tons per month. While the Madras Presidency is not bound to guarantee the supplies to Cochin, Travancore or Ceylon it is committed to supply allotted quotas to the Madras states of Pudukota, Sandur and Banganapalle.

The introduction of rationing involves very grave responsibilities and lest the authorities in different parts of India should err on the side of excessive reduction of supplies the Government of India have addressed the Provincial Governments laying down the principles to be borne in mind before any scheme of rationing is put into operation. They have made it clear that rationing means distribution of the available supplies in an equitable manner and not reduction in consumption. Rationing should be supported and sustained by effective price control. The policy and details of the rationing schemes in different parts of India should be as far as possible uniform and comprehensive. Legal sanction should be secured and care should be taken that the staff entrusted with rationing scheme is efficient. Local Food Advisory Councils or Food Control Committees should also be set up for ensuring the success of the scheme. Local trade channels and Government grain shops should be used as agents for the distribution of supplies. The necessity of keeping moderate buffer crops is also emphasised. In order to evoke the confidence of the public and the different interests concerned the full co-operation of the press is indispensable.

The Tranvancore Government has been grappling with the problem of food scarcity for long and in spite of drastic steps taken to control hoarding and profiteering and accelerating the food production drive, the necessity for rationing could not be avoided. The normal deficit 377,000 tons per annum could not be covered by supplies from outside and greater utilisation of local production of paddy. Arrangements have been made for the purchase of excess stock that may be found with the cultivators after allowing deductions for the requirements of the landholder for seed, labour and domestic consumption. In a communique issued on the 24th August, the Travancore Government have stated that a rationing order is being enacted forthwith. While the Municipal Councils will issue cards in urban areas, the chief distributing authorities in the taluks will be the Tasildars who have been asked to prepare a register of families. A special inspecting agency under the Director of Food Supplies will be created to supervise the working of rationing in the rural areas.

The future of civil aviation in this country is indeed very bright and the public demand for greater facilities for training Indian youth in aviation is beginning to bear fruit. The scheme for training suitable university students for the Air Force was taken up the Government of India only as late as December last. The Madras University quickly realised the immense possibilities of civil aviation for young men with initiative and organised the flying section of the U. T. C. Now a course of training for the Indian Air Force has also been organised by the University. H. E. Sir Arthur Hope in inaugurating the course on the 26th August, stated that the scheme would benefit the Royal Indian Air Force during the war time. He was sure that even after the war the different countries were not going to disband large parts of their armed forces and that the Indian Air Force and other forces in the Allied countries would not be drastically cut down. Even in peace times the R.I.A.F. would grow into a permanent force. Besides, the large number of aerodromes constructed during the war would facilitate a rapid expansion of civil aviation in this land of distances. The Training scheme offers golden opportunities for educated men to come forward in large numbers and prepare to participate in the development of post-war aviation in India. The Madras University deserves our congratulations on the success it has achieved in the task of building an Indian Air Force.

A new hydro-electric system on the border of Madras and Orissa has been planned and according to a bulletin of the Central Board of Irrigation the preliminary investigations and surveys have been carried out. The project is estimated to cost Rs. 2.25 crores and would be remunerative. Before 1944 preliminary designs would be complete but the actual execution will be taken up only after the war. The above bulletin also refers to a proposal to increase the storage capacity of the Mukurthi reservoir in the Pykara system by installing four sinking type gates in the spellway located in the body of the dam. As a result of rapid increase on the load of the Pykara plant additional generating units have been set up. Since additional power is needed to use these units to full capacity, the storage capacity of the Pykara system has to be increased. It is estimated that the proposed works would cost Rs. 100,000.

The acreage under sugarcane and gingelly has shown rapid extension according to the first forecast for the period ending July 25, 1943, issued by the Revenue Board. Owing to attractive price of jaggery sugarcane cultivation has increased to 1,18,020 acres, an increase of 20,160 acres over the corresponding figure for last year. Higher prices and satisfactory rainfall has given a fillip to gingelly cultivation. The area under gingelly is estimated to be 31,59,000 acres an increase of 16,300 acres over last year.

The decision of the Government of India to permit the employment of women underground in the coal mines strongly criticised by those who have the welfare of the workers at heart. In European countries this retrograde step would have been condemned as preposterous and the labour organisations would have raised their voice against the introduction of the cruel system of allowing women to work deep in the bowels of this earth. If there is an urgent necessity to increase coal production surely there are other ways of encouraging labourers to put forth greater effort than suspending a beneficial measure calculated to protect the labouring classes. We hope the womens' organisations in the country would take up the matter and stop the evil.

Airway Port

(From Our Correspondent)

Karachi, August 24.

It looks as if Sind cannot escape the Ministerial crisis which is again brewing. It was thought at one time that with the enthronement of the League Ministry, this province was in for a spell of stable politics, but some of the Bills brought in by the present Cabinet are meeting with stiff opposition at the hands of the Hindus. Members of the Hindu Independent party have naturally to sail on the tide of popular opinion and it is likely that when the Assembly meets again, they may withdraw support altogether to the present Ministry. The Hindu members of the Legislature met recently to consider the Land Alienation Bill in the light of the offer made by the Revenue Minister to provide exemption for the Hindus, from the application of the Bill. The meeting passed a resolution, urging the introduction of an enabling clause in the Act, entitling the Hindus, and other communities to claim exemption from operation of Section 3 of the Act. The Meeting asked the Hindu Ministers to adopt a very firm attitude to see that the fundamental rights of Hindus are not jeopardised. The Hindu Ministers were also requested to approach the Governor for the exercise of his special powers for safeguarding the legitimate interests of the minority community.

The stage is set for a battle royal between the commercial community and the Government. When the August disturbances started in the country with the Government's declaration of war on the Congress, Karachi merchants withdrew all their representatives to the local bodies. Recently when the Indian Merchants' Association made a representation to local Government in connection with investigations for tracing the murderers of Mr. Allah Baksh, the Government curtly replied that as the Association had decided to non-co-operate with the Government and had withdrawn its representatives from official and non-official bodies since August last, the Government could not take any notice of its communications. Mercantile bodies are now considering the reply to indications of hostile attitude though some interested parties are working for a compromise.

Sind is deeply stirred by the harrowing tales of scarcity in Bengal. Local newspapers have written editorials urging instantaneous relief to stricken Bengal. The Ramkrishna Mission has been the first in the field to organise relief and Swami Madhavananda, the General Secretary of the Mission is here to collect funds. A strong and influential committee has been formed to undertake collections and more than Rs. 10,000 have already been collected. It is felt that more than Rs. 10,000 have already been collected. It is felt that more than money, what Bengal needs, is food grains particularly rice which Sind has in abundance. A maund of rice which is selling in Bengal round about Rs. 36 actually costs here only Rs. 9-4 and if the Government is prepared to forgo its profits, it will be easy to send a considerable quantity of rice to alleviate distress in Bengal. The local Committee is certain that it can raise Rs. 1,00,000 and if commodities are purchased for this sum and permits for export obtained, that will be a better way of affording relief than merely remitting the sum. So the local government is being approached to relax in the matter of its own profit and give the maximum facilities for export, within the quota.

The locust danger is again menacing Sind. Thar Parkar district is particularly affected and Mr. V. Iswaran, the Director of Agriculture, visited the district recently to concert measures against the menace. It is assumed that the locusts have come either from Rajputana or from a westerly direction.

Rationing of essential food commodities may start in Karachi and other urban areas from the beginning of October. The articles chosen for rationing include every essential foodstuff except meat and vegetables. Milk also may have to be rationed. A large number of Sind cows being exported the local supply of milk has become meagre and people have to pay three times the pre-war price for milk. Apart from export of milch cows, fodder is difficult to obtain and cows have continued to suffer from malnutrition.

The prices of most textiles have improved after the Government order imposing maximum prices. There is abundant stock in Karachi which is the distributing centre for the province.

The plight of cotton merchants is pitiable and several have been ruined because of the Government policy. Many of them had conserved stock which hardly fetches 75 per cent of the original price. There is considerable nervousness among cotton-growers; unless there is a change in policy, they also will suffer considerably.

Rao Bahadur Maneklal Lallubhai, Country Craft Organisation Officer to the Government of India, is on a short visit to Karachi to attend a conference of Port Trust officials and others called for the purpose of making some ling of country craft while in the harbour. alterations in the rules regulating the hand- According to R. B. Maneklal 15,000 country craft are at present being utilised for the coastal trade of the country. Though at present transport by country craft is much in favour, it is feared that after the war there will be a glut of shipping and local enterprise may not be encouraged.

The price of black pepper has shot up phenomenally in the city. Speculators are busy hoarding and the news that in Bombay, too, prices have risen up sharply has had its reaction in the local market. All the pepper brought into Karachi comes from Travancore and Cochin.

BASANTI COTTON MILLS LIMITED

Resume of Commodity Markets

There have been no important developments in the commodity markets during the past week. The jute market has shown a tendency to recover towards the close on reports of the possibility of regular working by jute mills. The jute manufactures market, on the other hand, has been easier. The gold market has continued quiet but the silver market has been firmer as it was given out that official policy might not affect silver and that with investment buying by the ryots, prices would be maintained at the higher levels. The piecegoods markets in Western India have been definitely easier following the fixation of ceiling prices for certain varieties. In the Calcutta market, however, there is an undecided tendency and both buyers and dealers are awaiting further developments.

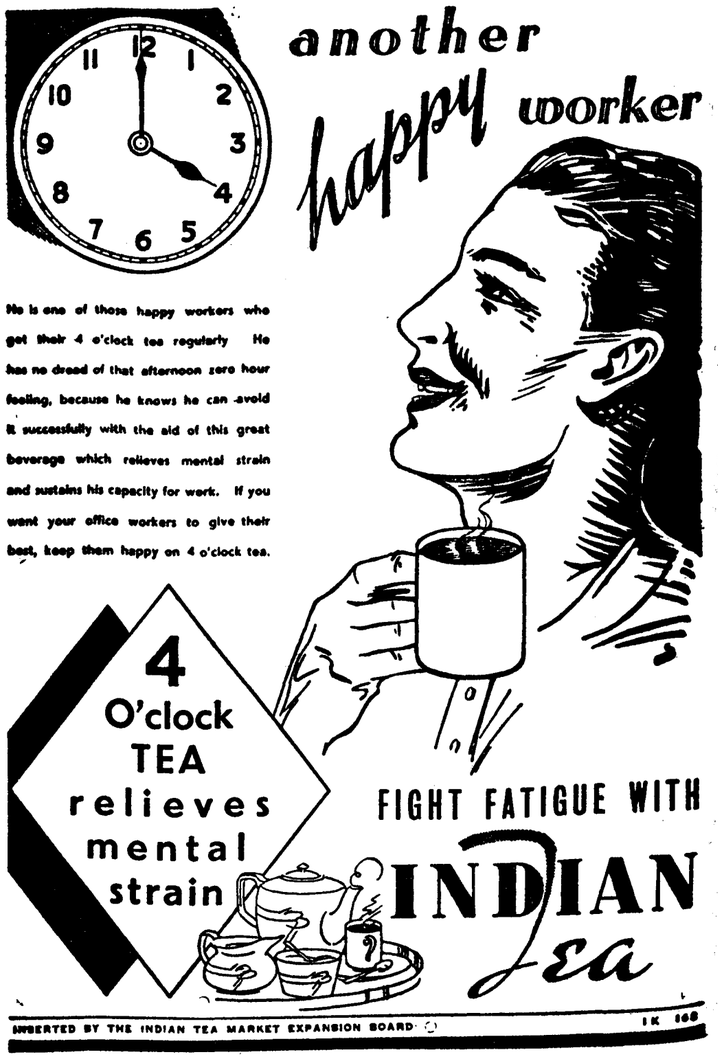
* * * *

In the raw jute market slightly better conditions prevailed in the latter half of the week though with the confused outlook for the jute industry, it is still felt that total consumption may fall short of the current season's crop and that with the need for the ryot to dispose of his holdings, there might be some pressure for sales as the Puja season arrives. It is satisfactory to note, however, that the Indian Jute Mills Association has been making some efforts to evolve a plan for working in the next three months and that on the promise by the Government authorities, for supplies of coal, it will be possible to keep mills working 54 hours per week for at least three weeks in the month. On the basis of this plan of working there might not be any squeeze for jute supplies. The ryot will not be in a position to dictate his terms but the fear of transport difficulties, just as they occurred last year, might possibly induce mills to lay in greater stocks of jute in the busy season. As a result of the buying on the part of mills an undue decline in prices of jute might be prevented. What exactly the Government propose to do with the Indian Central Jute Mill Committee's recommendation for some relationship between prices of jute and foodgrains cannot be said. In any case it would be difficult to evolve some formula on the lines suggested by the Indian Central Jute Committee as such a formula should be acceptable and capable of extension to other commodities as well. The difficulties involved in the procedure might prevent the formulation of any general scheme.

* * * *

An interesting situation has arisen in the bullion market. Whereas prices for gold have been fluctuating in narrow limits during the past week there has been a rise in the quotation for silver by several points. Strangely enough, it is now felt that, at least for the duration of the war period, it will not be possible to bring down prices for silver. With the difficulties in regard to exchange, shipping and production, it will not be possible to effect any appreciable reduction in prices. While there is some future for gold, with the efforts on the part of the authorities to restore it to its former position as an international monetary medium, it cannot be expected that it will be possible to maintain prices for silver at the present artificial levels even with the proved use for silver in wartime. Even with the assured future for gold in the postwar period there should be a drop in prices to bring them into line with the external value of the rupee. It need hardly be mentioned here that the quotations in the Indian market are out of relation to the U. S. and U. K. gold prices. There is a possibility of a greater depreciation in prices for silver. Any hope, therefore, of speculators being able to maintain prices should be shattered at the earliest possible moment as otherwise the acquisition of large stocks of silver at a high price by the small investor would prove to be of great disadvantage to him in the postwar period.

* * * *



With the small increase in the total area for 1942-43 from 34,039,000 acres to 34,298,000 acres the increase in the yield for wheat crop in India is expected to be as much as 9 per cent, the total yield from the crop being estimated at 10,971,000 tons against 10,037,000 tons in 1941-42. With the acute food situation in the country, this increase in the total yield of the crop should be welcomed.

* * * *

At the auctions of tea for consumption in India held this week the offerings amounted to 16,000 packages. Dusts were in strong general demand and prices advanced by 6 pies to 1½ annas per lb. Best liquouring sorts were higher by as much as 2 annas per lb.

* * * *

The maximum prices for Paddy and Rice were fixed by the Bengal Government last week. There is to be reduction in prices by stages. So far the effect of the fixation of maximum prices has been only to drive rice into the black markets and the poor consumer has been at his wit's end to get his daily ration. The Bengal Government still seem to be hopeful of controlling the situation and the Food Minister is shortly to visit Lahore to

(Continued from page 453)

arrange for the speedy despatch of the surplus supplies from that province. It is hoped that with the Central Government's notification regarding the policy in respect of the disposal of supplies acquired from other provinces, and the greater effort to despatch speedily foodgrains to deficit areas, the distress of the public will be relieved to a certain extent.

Rationing is to be introduced in the Calcutta area as from the beginning of next month and arrangements are proceeding vigorously for that purpose. The situation is admittedly difficult and co-operation is needed both from the consumer and the producer.

The First Cotton Forecast for 1943-44, published this week, shows a decline in the area under the crop by 4 per cent, the total area sown being 10,610,000 acres. According to trade descriptions, Bengals were 1,587,000 acres, Americans 2,815,000 acres, Oomras 3,664,000 acres and others 2,544,000 acres.

The First Groundnut Forecast for 1943-44 shows a reduction in the area by 2 per cent as compared with the corresponding forecast for 1942-43, the area under the crop being 2,807,000 acres against 2,809,000 acres. The figures for 1942-43 exclude those relating to the the Punjab from which forecast has been received for the first time this year. The condition of the crop is reported to be good on the whole.

(Continued from page 468)

during war-time, it was agreed that there should be no reduction in the present rate of contribution to the Depreciation Fund. It was also recommended to hold an immediate enquiry regarding additional contribution to the Depreciation Fund as an emergency provision. As regards the allocation of the surplus between railways and the general revenue it was recommended that the railways' share should be the maximum consistent with a fair allocation to general revenue based on the changing budgetary situation. Messrs. Jamnadas Mehta and Sardar Sant Singh were of the view that the accumulations in railway reserve should not be allowed to exceed two years' contribution to the general revenue. Both these members rightly stressed the need for increasing the amenities to the public rather than swelling the Depreciation Fund.

* * * * *

The Public Accounts Committee at its meetings on Friday and Saturday, last week, examined the accounts of the Posts and Telegraphs and Railway Departments. During the year 1941-42 the Government purchased the B. B. and C. I. and Assam-Bengal Railway paying off the share capital of Rs. 4.88 crores. The total private capital invested in railways has now dwindled to Rs. 22 crores from Rs. 77 crores in 1924-25, whereas the Government capital now amounts to Rs. 732 crores. The Depreciation Fund stood at Rs. 52 crores at the end of 1941-42 excluding the loan of Rs. 22 crores due to be repaid to it. The strategic railway lines earned a profit for the first time in 1942-43. The airgraph service started by the Post and Telegraph Department has proved very popular and a million airgraphs are being handled by the Department every week. It was revealed that the Karachi and Ahmedabad telephone exchanges will come under Government control from September 1 next.

HILL-BIRD.

impressed by the Treasury proposals for international agreement and the difficulty in the way of reaching a solution is the Republicans' preference for a return to the gold standard.

The uncertain situation is reflected in the stagnation of industrial issues. The New York market has lacked any incentive for a long period. The problem of the year is certainly the Revenue Bill and the Treasury has not yet shown its hand as Congress is in recess. The major factor is not the Treasury's unwillingness to tax, but the support that Congress may give to the Administration. Victories in April on the Bankhead Bill renewal of trade pacts, etc., have been offset by failures in connection with the use of the stabilisation fund and the food subsidy plan. One may suspect the Administration's position has not been improved by the assurances given to Russia, but the increased scale of aid under Lease-Lend to Russia raising the total expenditure up to June 30 to 14 milliard dollars may excite no comment. The President has reiterated that war debts are not desired by the U.S.A. which has given aid to the value of $4,453 millions to Britain and $2,444 millions to Russia. Since aid to Britain began much earlier the figures suggest that parity has been attained within two years. Lease-lend has claimed 12 per cent of the U.S.A. war costs according to the report. The President stated that a fair part of U. S. war production under aircraft and tanks was sent out under Lease-Lend in the last fiscal year, and it is quite certain that the current quarter is going to claim a further increase in Lease-Lend supplies.

(Continued from page 469)

increase more and stamp duties may be enhanced. The arguments in favour of an agricultural income-tax must yield to the present need for more food and land will perhaps be left untouched by tax proposals. An emergency budget in September is indicated though the proceeds of new taxation may be earmarked for investment in defence loans. In spite of reports as to new Provincial loans, there is not much to suggest that borrowing is likely. The field must be left clear for the Central Government at present and the fourth Defence Loan, but for the spcial drive in the U. P. would have met with moderate success in July.

Though an Indian has been recently selected for a high post in the shipping control office, there has been recently strong criticism of the government's neglect of Indian shipping. The Commerce Member stated that requisitioning could not be modified merely to fit with the Indian Company's quota. The answer was precipitated by diversion of the company's shipping to the western side last year and the favours bestowed or withdrawn formed the subject of comment by the managing agents. It is not known if profits in 1942-43 have suffered. Shipping shares have been rising here and the story of victimisation, discriminatory treatment etc. receives little support from the public estimate of Scindia profits and assets. The domination of British interests is described as reprehensible like the indifference of the Government to representations. The Commerce Member's visit to Bombay coincided with the issue of statements as to (rights and) wrongs. The major factor is not the chances available in coastal trade but the adjustment of quotas with due regard to country craft. The latter must be developed to take the strain off the railways and tonnage carried in country must be put up as part of the quota.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, September 2.

THE local jute mills have been enjoying (?) another week's holiday. According to the scheme propounded and agreed to last week, after standing idle for the week ending 4th September, mills will run 54 hours per week for 3 consecutive weeks, then close down for two weeks, from 27th September to 9th October for the Pujas, then resume working 3 weeks out of 4 up till the end of the year. This scheme is based on, and entirely dependent on the fulfilment of promises of coal supplies to the extent of 75 wagons per day, and it is understood that, in extracting this further concession from the Central Government, the Industry had the backing of both H. M. G. and the American authorities, that the mills should be enabled to function. It is obvious that, so far as the coal-consuming mills are concerned, the whole scheme stands or falls by the continuity of coal supplies. Mills on the public supply will be able to carry on according to the above schedule, but at the moment it looks as if the coal consumers will be lucky if they are able to keep step with the electric mills. Up to the time of writing it is understood that supplies are a long way behind schedule and the prospects of the coal consumers being able to work throughout next week distinctly bleak. Things may improve as the schedule of wagon supply gets more thoroughly organised and it is to be hoped that this will be so. Though the capacity of the railways to cope with emergencies has not been their most notable characteristic under war conditions. There is a rumour that one of the lines affected by the monsoon breach may be in working order by next week. If this were so, it would certainly facilitate matters greatly.

Some of the more pessimistic thought that the I. J. M. A. Committee had hitched their wagon (a coal-wagon presumably) to too lofty a star when they decided to maintain 54 hours per week working under the current scheme. But their reluctance to reduce the weekly working hours is easily understood. Any such reduction would be promptly followed by a demand for *koraki* to make up for the loss of earning power entailed by the shorter hours. And it is notorious that *koraki*, once thus established, is the most difficult thing in the world to do away with. It is immediately consolidated in the mind of the worker in his current pay, and if at a future date working hours are increased, he expects his wages to be increased proportionately. The idea of *koraki* as a sort of compassionate allowance during a term of curtailed earning capacity does not outlast the first week. The mentality of a section of the labour force has been recently demonstrated when, after an idle period in receipt of the "money-for-nothing" dole altruistically granted by the mills to compensate the labour for their inability to provide employment, though the fault for that lay in very different directions, some of the labour showed a distinct disinclination to return to work when the opportunity offered. Wages for idleness suited them very well and they were quite prepared to continue on these terms indefinitely. It was only when it was forcibly impressed upon them that it was only by working when the mill was able to offer employment, that they would qualify for the allowances for idle time, that they were persuaded to resume.

The fuller text of the resolution propounded by the I. C. J. C. on the subject of maximum prices for jute is given in the Bulletin. It would appear that the I. C. J. C. is reconciled to the indefinite continuance of foodgrain prices at their current astronomical levels, or at any rate until the next jute sowing season. If this calamitous state of affairs does in fact continue, there can be little doubt that the cultivator will be the most enthusiastic protagonist of the "Grow more food" campaign, and no matter what the relative prices are, will devote the bulk of his arable land to rice cultivation. The result of this policy would doubtless be disastrous to the cultivator, for an excessive paddy crop would probably bring down the price of that commodity and if jute were unduly scarce, arbitrary maximum prices fixed by any authority, would cease to function. It is to be hoped that supplies of foodstuffs can be arranged in sufficient quantity before next spring to avoid any serious upset in the normal balance of the two major Bengal crops and it is surely in this direction that every effort should be made rather in tinkering with maximum jute prices which may or may not be at all effective according to circumstances.

The Bulletin has its usual crop of reports as to the progress of jute substitutes in various parts of the world and it seems inevitable that these must continue to command a certain amount of success so long as shipping space has to be so strictly controlled. An interesting note says that an Indian Commercial Mission had a conference with an Argentine Minister at Buenos Aires on the subject of the exchange of products between Argentine and India, with particular reference to the export of burlap, but it does not say if any conclusions were arrived at. The bag scarcity in the Argentine seems to continue as acute as ever, only slightly relieved by the regulation now in force that any bags exported as containers of produce must be returned or replaced. This has resulted in a steady stream of returned used bags. Partially constructed grain elevators are being used as storage godowns, but the main pinch for bags seems to be in the actual handling of the grain in the harvest field.

When the U.S.A. War Production Board requisitioned practically all the lightweight burlap constructions, agricultural users found themselves in difficulties owing to the closer weave of substituted heavier constructions causing losses from mildew and similar causes by obstructing sufficient circulation of air to the contents. It is difficult in these circumstances to understand how the substitution of osnaburgs for burlap can prove satisfactory for the packing of the potato crop.

The Export pucca bale market has shown signs of rather more animation than for some time past. Old Crop Dundee Daisee 2/3 was reported at Rs. 74 for September shipment and later Rs. 74 was paid for October and Rs. 75 for September. Fours were sold at Rs. 68 September and at Rs. 67 October. Lightnings for shipment were reported at Rs. 68 and Rs. 69. No direct business with mills was recorded but inter-baler covering business for September shipment was done at from Rs. 76 to Rs. 78 for Firsts and at from Rs. 70 to Rs. 72 for Lightnings. Some Cuttings were reported at Rs. 32 for N.C. and at Rs. 31 for M.C.

In the Loose Jute section, sellers have been showing less anxiety to press for sales, though there has certainly been little encouragement from mill buyers. It is felt, however, that if the new working scheme gets really going, buyers will be tempted into the market. There is also much loose money floating around and speculatively inclined operators are looking at jute as a probable investment. In the mofussil more interest seems to be concentrated in dealings in rice than in jute and imports of the latter have not been coming forward as might be expected at this season. The result is that mofussil markets, which had never declined so far as Calcutta, have recently shown a hardening tendency which has its effect in causing reserve amongst sellers. Very little actual business has been recorded but the tone at the close is certainly steadier at the decline. European jute could probably be bought at Rs. 15 and Rs. 12 Middles and Bottoms for an assortment predominantly Jat, though sellers would prefer to have that price bid from them than to offer outright. A very limited business is reported with Indian Mills in Supervised Jat at Rs. 14-12 and Rs. 11-12, Middles and Bottoms with Indian Jat marks at four annas less. Some Indian Jat Tossa Middles sold at Rs. 15-8.

The Fabrics section has ruled quiet, subsisting mainly an inter-bazar business of small dimensions. Hessians show a slight decline from Rs. 21 in nine porters to Rs. 20-14 any position, while elevens also sagged from Rs. 28 near and Rs. 28-4 October-December to two annas less. In Heavy Goods "B" Twills sold at from Rs. 66 to Rs. 65-4 and Cornsacks at Rs. 66 and Rs. 67 near. Little interest was shown in anything else.

JUTE

Calcutta, September 2.

With the reports regarding the possibility of an increase in mill production in the next three months, a slightly firmer tendency has been noticeable in the raw jute market in the last two days. The hopes regarding the possibility of mills working longer hours are due to the promises made by Government authorities about adequate supplies of coal. It will be remembered that definitely easier conditions were noticeable in the raw jute market when last writing and that in the absence of any buying by mills prices were forced down and the discount over agreed maximum rates was as much as Rs. 2 per maund. With the fall in the rate of imports into mofussil centres and the slight reserve shown by ryots, sellers were not prepared to discount rates further and were inclined to await actual developments. It is generally felt that with the slight improvement in the conditions in the industry and the anxiety of mills to take advantage of the present improved conditions in the internal transport situation prices might show a slight rise and that the seasonal decline in prices with the approach of the Puja season might not be so pronounced.

In the loose jute section, earlier in the week some small business was done in European Middles at Rs. 16-8 per maund. Supervised Jat Middles and Bottoms were done at Rs. 14-12 and Rs. 12-12 per maund respectively. Business has been on a very small scale and only in the last two days mills have shown a tendency to buy on a larger scale.

In the Pucca bales section also not much business was put through and sellers were very keen to dispose of their old crop varieties. Dundee Daisee 2/3 was at one time as low as Rs. 73 per bale with firsts at the same level. New crop Firsts and Lightnings were done at Rs. 76-8 and Rs. 71-8 per bale respectively for September shipment. Cuttings N.C. and M.C. were done at Rs. 32 and Rs. 31 per bale.

The Department of Agriculture, Bengal, has issued the following final review of the jute crop for the season 1942-43 for Bengal, Bihar, Orissa, Assam and Indian States:—

The finally revised area sown with jute is 3,332,555 acres, an increase of 40,835 acres as compared with the final forecast of 1942.

It is estimated that the crop gave 9,061,565 bales of jute, an increase of 47,435 bales over the final forecast figures of 1942.

The consolidated returns are as follow:—

	Area in acres. Final review 1941-42.	Revised, 1942.	Yield in bales. Revised, 1942.
Bengal Estimated ..	1,532,855	2,704,075	8,015,820
Cooch Behar State ..	38,600	36,880	62,170
Tripura State ..	17,000	15,000	31,500
Bihar ..	242,500	232,900	354,800
Orisso ..	25,055	23,500	55,975
Assam ..	304,400	320,200	541,300
Total ..	2,160,410	3,332,555	9,061,565

Approximate yield per cre 2.7 bales.

JUTE MANUFACTURES

Calcutta, September 2.

The jute manufactures market has been definitely easier in the last two days. Slightly firmer conditions were noticeable early in the week with some speculative activity on the part of inter-bazar operators. There was not much buying enquiry and the strength of the market was only due to the hopes that mills' production would be considerably curtailed and that any fresh demand could be satisfied only from bazar stocks. Mills also were kept out of the market and no business was done by them except in special qualities. Reports regarding the possibility of a slight increase in production have resulted in a decline in the quotations towards the close. 9 porters were quoting Rs. 20-14 for all positions. 11 porters ready were Rs. 27-14, September Rs. 27-15 and October-December Rs. 28-2.

In the Heavy Goods section not much business has been reported and quotations are lower in sympathy with the hessian market. Sellers, however, are not quite free to dispose of their stocks. "B" twills for September sold on the basis of Rs. 65-8, Liverpool twills Rs. 73-8 and Cornsacks Rs. 66-8.

GOLD

Calcutta, September 2.

The bullion market has been uninteresting during the past few days and prices for gold have been fluctuating in narrow limits. A few days back there was a decline in prices on reports of official selling. It now appears that the Reserve Bank is not a seller below Rs. 70. There has been some demand at the lower levels. Some investment buying thus neutralises any speculative selling. The policy of the Government in regard to gold is not known and it remains to be seen whether the Reserve Bank would be an aggressive seller. There has been no appreciable decline in the quotation for sovereigns. Gold ready closed at Rs. 70-5 and forward at Rs. 69-15.

SILVER

Calcutta, September 2.

The silver market was easier in sympathy with the gold market, but there has been a rise in prices during the past few days as it is felt that the selling policy of the Government might affect only gold and that owing to the difficulty in regard to fresh supplies of sliver, the silver market will be left undisturbed. It is strange, however, that operators could artificially maintain prices for silver in spite of the general conviction that there would be a postwar slump in prices for the while metal and that, it would not be possible to sustain the present prices. Silver ready closed at Rs. 116 against Rs. 108-8 at the end of last week and forward at Rs. 115 against Rs. 107-8.

There is no change in the London market and the quotation for both Spot and Forward is 23½d.

PIECEGOODS

Calcutta, September 2.

The piecegoods market is still confused. Owing to the peculiar conditions in the Calcutta market it is not possible to take any definite view. Puja buying has been restricted in anticipation of a decline in prices by the end of the current month. Dealers, however, are maintaining the present rates and in some places there has even been a slight improvement. Business passing has been on a very small scale.

MICANITE
Sheets, Tubes, V. Rings Tapes, Washers, etc. etc., manufactured to any specification. Suppliers to I.S.D. and all big Industrial and Engineering Concerns in India.

Stock Markets to-day and to-morrow

SUDDEN RISE IN SUGAR SHARES

After a week of firm conditions in both the Calcutta and Bombay markets, Friday morning's news regarding Allied landings on the Italian mainland should prove to be a great bullish factor to stock markets. In Friday's session, however, there has not been any appreciable rise in prices, though a definitely firmer tone has been in evidence and sellers are inclined to adopt a reserved attitude. Though success of the operations is taken for granted there is a tendency to await actual developments. As there has been some broadening of interest in recent days, the rise in prices with greater public buying should prove to be more pronounced.

The feature of the week is easily the strength of the Sugar section. A substantial rise in prices has been recorded in almost all the counters. There is no special reason for the sudden interest in Sugar shares. It is pointed out that with the solved difficulties in regard to chemicals and the control over production of gur, it would be possible for sugar companies to report a substantially higher level of earnings for the next season. Also the reports of the important companies, that are due to be published in the next few months, are expected to make good showing. Champaraun have risen to over Rs. 40 from Rs. 38 and Samastipur Central by nearly a point to Rs. 19-4. New Savan are very firm at Rs. 20 with U. P. Sugar at Rs. 28-4 ex-dividend.

* * * *

During the past week there has been a further rise in the quotation for the shares of *Basanti Cotton* on reports that the company is issuing fresh capital on bonus terms to shareholders. The interim dividend of 6 annas per ordinary share, after paying in full the arrears of dividend on preference shares, has been announced. It is reported that 50,000 ordinary shares will be issued at a premium of Re. 1 per share to existing shareholders, both ordinary and preference, in the proportion of five new shares to every thirteen old shares held. Non-shareholders also can apply but in their case the issue price will be higher at Rs. 12 per share. Applications at Rs. 12 per share will be considered in respect of that portion of the issue that is not subscribed for by the existing shareholders. The object of the present issue is to improve the financial position of the company and enable it to repay the debentures now outstanding to the extent of Rs. 16.56 lakhs. They were issued on April 27, 1942, and are repayable in 1964 with the option of repayment at any time after five years from the date of issue.

Owing to the present high level of earnings and the improved financial position of the company, the Managing Agents will be able to find Rs. 10 lakhs towards the repayment of the debenture capital. With the proceeds of the new issue it should therefore be possible to wipe off entirely the debenture capital. There can thus be a saving of 5¼ per cent on Rs. 16.56 lakhs on account of interest charges. This by itself should enable the payment of a good dividend on ordinary shares. With the prospect of ex-dividend quotations at almost the same levels the shareholders stand to gain considerably if they take advantage of the new issue on bonus terms.

* * * *

Mahalaxmi Cotton Mills, Limited is again offering to its shareholders dhoties and sarees at concession rates. Even with the recent decline in prices for piecegoods, the rate at which the clothes are to be offered to the shareholders admit of a substantial gain. Prices at which the dhoties and sarees will be available to shareholders now are almost the same as on the last occasion, but the terms and conditions are somewhat different. With the payment of an interim dividend of Re. 1-8 per share in respect of the current year, it should be said that the shares are undervalued.

The former concession *plus* the interim dividend *plus* the present concession works out to a total benefit of Rs. 12 per share. Having regard to the fact that the shares are Rs. 25 paid-up the market quotation should be nearer Rs. 75 than Rs. 50. Mahalaxmi gave the lead in respect of a reduction in the price of cloth and the example set up by her was followed by other members of the industry. Cheap cloth was thus made available to the family of shareholders. It still remains to the credit of Mahalaxmi that the present offer has been made at a psychological moment and will be helpful to many in making their Puja purchases.

* * * *

In spite of many difficulties *Rohtas Industries Limited* has done very well in the year ended October, 1942. The net profit, before providing for taxation and depreciation, even with a lower level of production, is slightly higher at Rs. 21,87,624 against Rs. 21,74,156 for the previous 12 months. The amount set aside to depreciation is not very much changed at Rs. 8,77,719 (Rs. 8,71,978) but the provision for taxation is considerably higher at Rs. 5.5 lakhs (Rs. 3.2 lakhs). The Transfer to General Reserve is naturally lower at Rs. 1.5 lakhs (Rs. 4.5 lakhs). In view of the assured prospects for the current year, in spite of the difficulties experienced by the Company in regard to labour, raw materials and stores, the Directors have thought it advisable to increase the distribution to ordinary shareholders to Rs. 1-6 per share from Rs. 1-4 per share on the former occasion. The amount carried forward is slightly higher at Rs. 36,101 against Rs. 18,696 brought in.

The attraction in regard to the ordinary shares of Rohtas Industries Limited is the fact that the Company is interested in several branches of trade and that it is in a position to take advantage of the improved prospects for all industries at the same time. The Company manufactures cement, sugar, heavy chemicals and paper for all of which there is great demand at the present moment.

* * * *

The results of the Kilburn Group of tea companies for the year ended 1942 are satisfactory, thanks to larger crops and higher average prices realised. The net profit, before providing for taxation and depreciation, in all cases is higher than the figures for 1941.

The results of the *Pahargoomiah Tea Association Limited*, the important company in the group, make very satisfactory showing. The net profit, before providing for taxation and depreciation, is Rs. 3,08,560 against Rs. 1,46,781 for 1941. The provision in respect of taxation is Rs. 58,181 against Rs. 24,860 for the previous year. Transfer to reserves have been on a considerably higher scale, the General Reserve receiving Rs. 40,000 and the Improvement Fund Rs. 75,000 against a total allocation of Rs. 40,000 for 1941. The final dividend of 35 per cent, with the interim dividend of 15 per cent already paid, makes 50 per cent for the whole year against 30 per cent for 1941. The amount carried forward is Rs. 14,174 against Rs. 16,128 brought in.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 3.

THE Calcutta Stock Exchange has continued firm during the past few days and business passing has shown signs of expansion though professional operators continue to dominate the market. Earlier in the week there was good enquiry for cotton and coal shares. The strength of the Bombay market was helpful to the Cotton section while Coal shares were bought on the hopes of improvement in transport facilities. The Jute section also was inclined to be higher on reports that the Indian Jute Mills Association had been successful in getting a fair allotment of wagons for the regular supplies of coal in future, and that it would be possible to work mills for longer hours than was at first anticipated. Engineering shares also were higher on reports that the Indian Iron and Steel Company might declare a good final dividend for the year ended March, 1943. The undertone is definitely better and there seems to be a general feeling that in the next few months there will be a considerable improvement in prices.

The giltedged securities section has continued steady and there are no new features to be recorded. 3½ per cent Paper has been sticky around Rs. 97 with not much of business passing. Among terminable loans, it is reported that there was some selling of medium-dated loans for tax payments, but quotations have been well maintained, 3 per cent 1951-54 being Rs. 99-15, 2¾ per cent 1948-52 Rs. 99-2, 3 per cent Defence Loan Rs. 100-8, 3 per cent 1963-65 Rs. 97-6 and 3½ per cent 1947-50 Rs. 103-4. 4 per cent 1960-70 were better at Rs. 111-6 and 4½ per cent 1955-60 at Rs. 115-2; 5 per cent 1945-55 changed hands at Rs. 106-2. The only transaction recorded in Provincial Loans was in 5 per cent U. P. 1944 at Rs. 102-4.

Easy conditions continue to prevail in the money market and there has been a sharp decline in the average discount rate for treasury bills from annas 14 and pies 11 per cent per annum to annas 14 per cent per annum. No transactions have been recorded in public bodies' debentures. Among industrial debentures, 5½ per cent *Dalmia Cement* were Rs. 103-8, 5½ per cent *Dalhousie Properties* Rs. 105-4 and 5½ per cent *Basanti Cotton* Rs. 103-12.

Among Bank shares, there was a sharp rise in the quotation for *Reserve Bank* earlier in the week to Rs. 120. The quotation towards the close is steady at the same level. *Central Bank* were Rs. 73-8. There has been some good buying of *United Commercial Bank* and the premium is now Rs. 15-12 per share against Rs. 8 per share only a few weeks back. *Calcutta National Bank* were Rs. 13-2 while *Imperial Bank* fully paids were Rs. 1,822-8 and contributories Rs. 442.

On the strength of the Bombay market Cotton shares have been definitely firmer and quotations have been marked higher all round. *Bengal-Nagpur* were nearly a point higher at Rs. 33-13 while *Cawnpore Textiles* were a few annas higher at Rs. 12-12. *Basanti Cotton* encountered good demand and the quotation improved from Rs. 12-12 to Rs. 13-10. *Benares Cotton* were Rs. 14-2, *Dunbar* Rs. 278, *Elgin* Rs. 80, *Mahalaxmi* Rs. 43 and *Muir Mills* Rs. 425. *New Victoria* also were higher at Rs. 9.

Earlier in the week firmer conditions were noticed in the Coal section and *Amalgamated* improved to Rs. 39-4 and *Bengal* to Rs. 480. *Burrakur* were Rs. 18-6, *Central Kurkend* Rs. 16-14 and *Equitable* Rs. 40-6. *Katras Jherriah* were very steady at Rs. 43. *New Beerbhoom* were Rs. 21-10, *South Karanpura* Rs. 6-2 and *West Jamuria* Rs. 35-8. Among smaller shares, *Samla* were Rs. 4-6 and *Satpukuria & Asansol* Rs. 2-13. *Bhalgora* were were Rs. 8-4.

On reports that the Indian Jute Mills Association has been able to formulate a plan of working for the next three months Jute shares hardened a bit. Business, however, has not been on a large scale. *Anglo-India* were Rs. 388, *Bally* Rs. 342, against Rs. 333; *Chitavalsah* Rs. 24, *Howrah* Rs. 61-2 against Rs. 60-11 and *Kamarhatty* Rs. 537 ex-dividend against Rs. 543 cum-dividend. *Kanknarrah* were Rs. 436 ex-dividend against Rs. 446 cum-dividend, *National* were Rs. 27-8, *Nuddea* Rs. 99 and *Reliance* Rs. 60-12.

In the Engineering section, *Indian Iron* and *Steel Corporation* were higher at Rs. 35-8 and Rs. 25-8 respectively on reports that Indian Iron might make an early announcement about the final dividend for the year ended March 1943. So far no announcement has been made. Some selling at the higher levels brought down the price to Rs. 35 and Rs. 25. *Burn & Co.,* were steady at Rs. 382 while there was a sharp rise in *Kumardhubi Engineering* to Rs. 3-12. *Marshalls* were Rs. 3-8 and *Bhartia Electric* Rs. 14-2, *Indian Malleable Castings,* ordinaries, changed hands at Rs. 8-12 and *National Iron and Steel* at Rs. 13-1.

The Sugar section has been very firm in the last few days and a sharp rise in prices has been recorded for the popular counters. *Belsund* were 10 annas higher at Rs. 11-13 and *Balrampur* at Rs. 15-12. *Buland* were crossed at Rs. 40 while *Champarun* were nearly two points higher at Rs. 40-4. *Cawnpore* were Rs. 38-2, *New Savan* Rs. 19-10, *Purtabpore* Rs. 19-1 and *Ramnugger Cane and Sugar* Rs. 11-5. *Samastipur* were Rs. 19-4 and *U. P. Sugar* Rs. 28-6 ex-dividend. *Carew & Co.,* were further higher at Rs. 22-2 and *Murree Breweries* at Rs. 21-2.

Tea shares were not in great favour but select issues were marked higher, *Bishnauth* being Rs. 38-14, *Dimakusi* Rs. 43-8, *Sapoi* Rs. 19-2 and *Tezpore* Rs. 15-9.

In the Miscellaneous section, *Burma Corporation* were bought at Rs. 3-12 and *Indian Copper* at Rs. 2-8. *Consolidated Tin* were a shade better at Rs. 2-4. *B. I. Corporation* were very steady at Rs. 6-3, *Britannia Biscuits* were Rs. 17-14 and *Indian National Airways* Rs. 18. *Indian Rubber Manufactures* were Rs. 35 and *Rohtas Industries* Rs. 29-2. *Northern India Oil Industries* were Rs. 20-6; *Midnapore Zemindary* were lower at Rs. 89 but the quotation is higher at the time of writing at Rs. 92-8. Among Paper shares, *Titaghur Paper* were unchanged at Rs. 25, *Orient* were better at Rs. 27, *India Paper Pulp* at Rs. 191, *Mysore* at Rs. 24-12 and *Upper India Couper* at Rs. 270. *Assam Saw* were Rs. 4-10 and *Borooah Timber* Rs. 19-12.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Sept. 2.

THE same factors that induced a boom in the Cairo Stock Exchange are operative in the local Stock Exchange also. With the prospect of the war lasting for at least one more year, investors have taken the view that it is at once profitable and safe to convert their money in shares which are sure to yield a more than average return. In the absence of other peace-time avenues to make profits more and more people are coming forward to put their money in shares. The transactions in the local Stock Exchange in the two days it was open (Monday and To-day—Tuesday and Wednesday being holidays) reflected general optimism, with Textiles in the limelight. Mill shares seem to have caught the fancy of both operators and investors once more. After the publication of the price control order this section of the market has regained its lost support and prices touched their former levels. The popular belief in the market now seems to be that under existing circumstances mill shares are easily the best proposition in the entire market. That is the reason why prices in this section alone are steadily rising while other sections are rather stagnant. The latest quotation of *Bombay Dyeing* (Rs. 2,017) is more than 20 points above the quotation at the same time last week.

The giltedged market remained steady with 3½ per cent Government Paper quoting at Rs. 97.

But for the transactions in mill shares the Stock Exchange would have to be described as dull and colourless. The attention this section received at the hands of operators and investors was so much that it seemed that in the entire market no other shares existed. Prices soon began to shoot up and the latest quotations speak for themselves. *Bombay Dyeing* Rs. 2,017-8; *Century* Rs. 872 (846); *Kohinoor* Rs. 632 (606); *Indian Bleaching* Rs. 215-8.

Steels remained rather quiet in the absence of enquiries. Latest quotations indicate even a slightly easier tendency. *Tata Steel Defd.* closed at Rs. 1,885 (1,890); *Tata* Ordinary were more than one point lower at Rs. 180. *Indian Iron* however are nearly a rupee higher at Rs. 35-2 on rumours of a higher dividend.

JUBBULPORE ELECTRIC SUPPLY CO., LTD.

NOTICE

is hereby given that the Thirty-third Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 17th September, 1943, at 11-5 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance-Sheet for the half-year ended 31st March, 1943, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 11th to the 17th September, 1943, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 1st Sept., 1943.

CHAIRMAN'S SPEECH

MARKED RISE IN BUSINESS AND FUNDS

NORWICH UNION LIFE PROGRESS

In the course of his speech at the 135th Annual General Meeting of the Norwich Union Life Insurance Society held at Norwich on 25th May, 1943, the President, Mr. Ernest Hicks, said:

"Although for the fourth time our Annual Meeting is held under the shadow of war, and the end is not yet in sight, I think you will agree that we have certainly got beyond what the Prime Minister some months ago referred to as the 'end of the beginning.'

"We now have nearly 350 members of the Head Office and Home Branch Staffs serving in the Forces of the Crown, in all parts of the world, in addition to the many men from overseas who have rallied to the call, either of the Home Country or of their own Dominion, to whom we wish a safe and speedy return, though I much regret that we have lost during the year four more of our promising young men, all members of the Royal Air Force, and you will wish to join with me in expressing our most sincere sympathy with their relatives and friends.

"I have also to record with great regret the death during the year of Sir Phene Neal, Baronet, the Chairman of our London Board.

SUPPORT FOR WAR EFFORT

"Your Directors have continued to support the war effort of this country and of the Dominions and India to the utmost of their power, and during 1942 we increased our holdings of British Government Securities by over 1¾ millions in addition to purchasing on behalf of our members some £250,000 of Savings Bonds under our special Savings Bonds Schemes. I was pleased to see recently that the Government gratefully recognised that Offices, by these special schemes, were making a direct contribution to the national financial effort. We have also been able to pass over to His Majesty's Government a further £200,000 worth of those overseas currencies needed to finance our heavy purchases from abroad.

"In addition to these contributions to the Home Government, the Society has increased its holdings in Dominion and Indian Government Securities by over £850,000.

"During the past four years this Society and its sister institution, the Norwich Union Fire, have increased their total holdings, as shown in the Balance-sheets, in British Government Securities by £6,400,000 and in Dominion and Indian Government Securities by £2,500,000.

NEED FOR INSURANCE

"Many of you will have read in an address given by President Roosevelt some few months ago, his statement that "to carry adequate life assurance is a moral obligation incumbent upon the great majority of citizens", and it is very evident that the value of life cover is being realised more and more by the people of this country. The General Manager told us last year that with reduced staffs and the closing of many main as well as subsidiary Branch Offices it would not be possible for us to maintain that close touch with agents, policyholders and the general public which has been a characteristic of the Society in the past. Long before Lord Kennet's Report was published the Society had largely anticipated the Government requirements, and during 1942, with the release of more men (and women) for the Services, our field staffs were reduced almost to zero. It is, therefore, I think, a great tribute to the Society's good name and reputation, that we are able to record a new business figure of over £7,400,000, an increase of three-quarters of a million on the figure for 1941. We must continue during 1943 to rely upon our policyholders and friends to do the work which in happier times was performed by our efficient field force. Practically the whole of the new business now comes from within the Empire, 68% from the United Kingdom and 30% from the Dominions and India.

"As bearing upon the general recognition of the value of life insurance in these days I may mention that the surrenders show a fall of over £60,000. Indeed, we have to go back 18 years, to 1925, when, of course, the volume of business on the books was much less, to find such a small amount paid out in surrenders.

"With the increase in new business, and the inevitable increase in many items of expenditure, our expense ratio works out at 13.6% of the total premium income, against a figure of 13.3% for 1941. It is, however, much below the pre-war ratio.

WAR CLAIMS

"For the first time for many years—indeed for the first time since the last war—I have to report a small loss on mortality. Our total claims for the year were £1,356,536, and these included the large sum of £213,000 due to war deaths at home and abroad. This is regrettable from many points of view, but must be regarded as a further direct contribution by the Society to the Nation's needs. In addition to claims by death the Society paid out £2,000,000 under matured policies.

"Although we continue to exclude from our accounts all interest in respect of securities in enemy-occupied countries—much of which we hope to realise when peace comes—we are able to show a net rate of interest of £3 8s. 6d.% on the total funds. The small, but very welcome increase of 9d.% on the 1941 figures is mainly due to the fact that payment of interest on some of the securities held by the Society, which had been suspended in the early stages of the war, was resumed during the year.

INCREASE IN ASSETS

"Turning to the Balance-sheet, you will see that the Funds at the end of 1942, stood at approximately £55,000,000 and show an increase of £1,669,585. I was able to tell you last year that the market value of our securities was much above the figures shown in the Balance-sheet, and I am glad to be able to report that there has been a further very considerable increase in value during the year of account.

"I am, indeed, proud to put before you, such an excellent report, and on behalf of the Board and the members of the Society, I wish to express our most sincere thanks to our staffs at home and abroad, for the way in which they have carried on, men and women alike. I have referred earlier to the depletion of our home staffs, but the same remarks apply to the staffs overseas. In all cases outside representatives have almost ceased to exist and the inside staffs have been reduced to a minimum. In spite of all this the work has been carried on not only efficiently, but cheerfully, and we are grateful to them all for their loyal service to the old Society.

POST-WAR PLANS

"I must add one personal word. These are days of "planning" ahead, and I feel that the time has come when a younger man should take on the duties of President of this Society. This is, therefore, the last time I shall address you from this chair, though I hope, if you wish to re-elect me, to continue my work as a member of the Board and to give every assistance in my power to my successor, who will, I trust, soon be able to put into effect the post-war plans to which much consideration has already been given by the Board.

"I now formally move the adoption of the Report and Accounts."

In seconding the proposition, Mr. B. B. Riviere said that, as a member of the Medical Committee, he was particularly interested in the mortality figures. As the President had mentioned, the Society showed a very slight loss on mortality for the first time since the last war, but this was, of course, entirely due to war claims. Excluding these, the ratio worked out at only 90 per cent of the expected.

Up to the end of 1942 total war claims had amounted to no less than £518,702, but, even including these, if an average of the war years was taken, the mortality experience had shown a profit to the Society.

The Report and Accounts were adopted.

COMPANY REPORTS

DHUNSERI TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1942:—

	Rs.	A.	P.
After charging Manager's and Staff's Commission, the accounts show a profit on the year's working of	1,67,217	3	7
To which falls to be added the balance brought forward from last year	9,118	14	10
Making available	1,76,336	2	5
From which there has been deducted the following:—			
Provision for taxation and deposits under Section 10 of the Finance Act 1942	50,000 0 0		
Transfer to Debenture Redemption Reserve	1,20,000 0 0	1,70,000	0 0
Leaving a balance to be carried forward of ..		6,336	2 5

Debenture Issue.—During the year the Company purchased and cancelled 1,062 debentures and since the closing of the accounts further 1,294 debentures have been purchased by the Company. The question of redeeming the balance of the debentures is at present under consideration.

Expenditure.—The larger crop accounted for increases under Crop, Manufacturing, and Inland Freight and Shipping, while War Risks Insurance was a new item; further, the higher cost of materials involved increased outlay under Tea House Stores and General Stores and Implements. Against these increases there were decreases under Cultivation, Buildings and Machinery.

Planted Area.—The area under tea at 31st December, 1942, remained at 589.78 acres.

Crop Outturn and Prices.—A record crop of 6,325 maunds was made, which is an increase of 1,178 maunds on the previous season's outturn. The average price realised was 11.99 annas per lb. as compared with 12.07 annas per lb. in 1941. The estate again participated in the Ministry of Food Contract.

Estimate for 1943.—The estimate provides for a crop of 6,033 maunds at a cost of Rs. 1,35,162 excluding Calcutta expenditure. The crop figure is based on an export release of 85 per cent and an internal release of 17 per cent of the best crop basis and will therefore be subject to adjustment.

Secretaries and Agents.—Messrs. James Finlay & Co., Ld

(Annual General Meeting held on the 22nd September, 1943, at 11-45 p.m.)

Audited Accounts for the year ended 31st December, 1942:—

Result.—The result of the season's working after deducting the Manager's and Staff's commissions is a profit of Rs. 3,13,560-0-2. This, with the adjustment of the accounts for the previous year and provision for taxation and the contribution to the Retiring Allowance Fund, brings the amount at credit of Profit and Loss Account to Rs. 2,64,173-12-10, from which an Interim Dividend of 15% absorbing Rs. 39,000 has already been paid, leaving a balance of Rs. 2,25,173-12-10 which the directors propose to allocate as follows:—

	Rs.	A.	P.
To payment of a Final Dividend of 35% (making 50% for the year)	91,000	0	0
„ General Reserve	40,000	0	0
„ Improvement Fund	75,000	0	0
„ Subscription to War Funds ..	5,000	0	0
„ Carry Forward	14,173	12	10
TOTAL ..	2,25,173	12	10

Outturn.—Quota releases for the year totalled 112.68% of the Estate's Best Crop Basis and including unused balances carried forward from Season 1941, amounted to 8,129 mds. 32 lbs.

Climatic conditions throughout the year were very favourable and the final crop weighed out at 8,800 mds. 47 lbs. against an estimate of 6,300 mds. and an actual crop of 6,706 mds. 63 lbs. in the previous year.

Sales.—A total of 5,573 mds. was delivered to the Tea Controller for India under the Ministry of Food U. K. Contract and the Block Purchase Scheme, 573 mds. 40 lbs. were sold locally with Export Rights and the balance of the crop was sold for Internal Consumption.

The average price realised for the whole season is 13.70 annas per lb.

General.—Expenses during the year were heavy. The substantial rise in the cost of living necessitated Dearness Allowances to the staff; the cost of chemical manures and tea chests likewise showed a heavy increase and War Risks Insurance on the Company's Buildings, Plant and Machinery was made compulsory as from 1st of April 1942 at a premium of 4% for two years.

Estimate.—The estimate for the current season provides for a crop of 7,500 mds. at a cost of 7.95 annas per lb. (exclusive of commissions to the Manager and staff).

Managing Agents.—Messrs. Kilburn & Co.

Authorised, Issued and Subscribed Capital—Rs. 2,60,000 in 2,600 shares of Rs. 100 each, fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	2,60,000	Fixed Capital expenditure	2,96,140
Reserves and other funds ..	4,50,802	Stores & Spare Parts ..	61,067

(Annual General Meeting held on the 18th August, 1943)

Audited accounts for the year ended 31st December, 1942:—

Result.—The result of the Season's working after deducting the Manager's and Staff's commissions, is a profit of Rs. 1,15,952-3-5. This, with the adjustment of the accounts for the previous year and provision for taxation and the contribution to the Retiring Allowance Fund, brings the amount at credit of Profit and Loss Account to Rs. 1,06,119-4-10, from which an interim dividend of 10 per cent absorbing Rs. 12,500 has already been paid, leaving a balance of Rs. 93,619-4-10 which the directors propose to allocate as follows:—

	Rs.	A.	P.
To payment of a Final Dividend of 25% (making 35% for the year)	31,250	0	0
„ General Reserve	25,000	0	0
„ Improvement Fund	25,000	0	0
„ Subscription to War Funds ..	2,500	0	0
„ Carry Forward	9,869	4	10
TOTAL ..	93,619	4	10

Outturn.—Quota releases for the year totalled 112.68 per cent of the Estate's Best Crop Basis and, including unused balances carried forward from Season 1941, amounted to 4,338 mds. 1 lb.

In spite of drought conditions prevailing during the earlier part of the season and an extremely short rainfall being recorded for the year, the final crop weighed out at 3,858 mds. 53 lbs. against an estimate of 3,100 mds. and a crop of 3,426 mds. 35 lbs. in the previous year.

Sales.—A total of 2,848 mds. 28 lbs. was delivered to the Tea Controller for India under the Ministry of Food U. K. Contract and the Block Purchase Scheme, 158 mds. 72 lbs. were sold locally with Export Rights and the balance of the crop was sold for Internal Consumption.

The average price realised for the whole season is 12.388 annas per lb.

General.—Expenses during the year were heavy. The substantial rise in the cost of living necessitated Dearness Allowances to the staff; the cost of chemical manures and tea chests likewise showed a heavy increase and War Risks Insurance on the Company's Buildings, Plant and Machinery was made compulsory as from 1st April 1942 at a premium of 4% for 2 years.

Estimate.—The estimate for the current season provides for a crop of 3,400 mds. at a cost of 7.90 annas per lb. (exclusive of commission to the Manager).

Managing Agents.—Messrs. Kilburn & Co.

Authorised, Issued and Subscribed Capital—Rs. 1,25,000 in 12,500 shares of Rs. 10 each, fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	1,25,000	Fixed Capital expenditure	1,25,000
Reserves and other funds ..	1,84,950	Stores & Spare Parts ..	22,298

Dividend % ..	2½	Nil.	Nil.	Nil.

(Annual General Meeting held on the 27th August, 1943).

Audited Accounts for the year ended 31st December, 1942:—

Result.—The result of the Season's working is a profit of Rs. 93,157-15-9 which, with the adjustment of the accounts for the previous year, provision for taxation, the contribution to the Retiring Allowance Fund and the payment of Debenture interest amounting to Rs. 2,730 brings the amount at credit of Profit and Loss Account to Rs. 61,044-14-10. This the directors propose to allocate as follows:—

	Rs.	A.	P.
To payment of 2½% dividend	5,000	0	0
„ Improvement Fund	50,000	0	0
„ Carry Forward	6,044	14	10
TOTAL ..	61,044	14	10

Outturn.—Quota releases for the year totalled 112.68% of the Estate's Best Crop Basis and, including unused balances carried forward from Season 1941, amounted to 3,219 mds. 42 lbs. as follows:—

Export Quota	2,357 mds. 48 lbs.
Internal Quota	861 „ 74 „
TOTAL ..	3,219 mds. 42 lbs.

In spite of an unusually short rainfall being recorded during the year, the final crop weighed out at 3,100 mds. against an estimate of 2,500 mds. and an actual crop of 2,456 mds. 42 lbs. in the previous year.

Sales.—A total of 2,148 mds. 36 lbs. was delivered to the Tea Controller for India under the Ministry of Food U. K. Contract and the Block Purchase Scheme, 185 mds. 40 lbs. were sold locally with Export Rights and the balance of the crop was sold for Internal Consumption.

The average price realised for the whole season is 12.956 annas per lb.

General.—Expenses during the year were heavy. The substantial rise in the cost of living necessitated Dearness Allowances to the staff; the cost of chemical manures and tea chests likewise showed a heavy increase and War Risks Insurance on the Company's Buildings, Plant and Machinery was made compulsory as from the 1st of April 1942 at a premium of 4% for 2 years.

Finance.—The Managing Agents' loan amounting to Rs. 43,000, which has been outstanding for very many years and on which no interest had been charged since 1st April 1935, was repaid during the year under review.

Heavy expenditure is long overdue at the garden on renewals and replacements of machinery and repairs to buildings and a considerable sum of money will be urgently needed as soon after war as the necessary materials can be obtained.

It is vitally necessary, therefore, in the meantime to build up an adequate Improvement Fund and to conserve the Company's cash resources as far as possible.

Estimate.—The estimate for the current season provides for a crop of 2,500 mds. at a cost of 8.82 annas per lb. (exclusive of commissions to the Manager and Managing Agents).

Managing Agents.—Messrs. Kilburn & Co.

Authorised, Issued and Subscribed Capital—Rs. 2,00,000 in 20,000 shares of Rs. 10 each, fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	2,00,000	Fixed Capital expenditure	1,83,008
10% Debentures ..	45,500	Stores & Spare Parts ..	18,094
Current debts ..	98,017	Stock of tea ..	22,550
Carry forward ..	6,045	Outstandings ..	80,832
		Cash Balances ..	45,078

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions continue to prevail in the money market with interbank call money at ½ per cent in Calcutta and ¼ per cent in Bombay. The announcement regarding the provincial loans in mid-week has not had any effect on the money market so far and it is generally expected that the lists, when opened, will be considerably oversubscribed in a few hours. At the auctions of treasury bills held this week the response was quite satisfactory, the total amount of applications being at the high altitude of Rs. 18.85 crores and the Government has been able to get its requirements at the slightly lower rate of 13 annas 9 pies per cent per annum against 14 annas per cent per annum last week.

The confidence regarding the success of the new loan issues is evident from the fact that the offer for next week has been maintained at Rs. 8 crores. The Bengal Government also is coming into the market for Rs. 50 lakhs of twelve months' treasury bills and the subscriptions against this offer will be received up to September 15.

The returns of the Reserve Bank for the week ended August 27, show that there has been again no currency expansion and that the Government has taken advantage of the position to cancel rupee securities in the issue department. Total notes issued show a slight increase by Rs. 60 lakhs at Rs. 766.31 crores while notes in circulation are actually lower by Rs. 48 lakhs at Rs. 754.64 crores. This is the second decline in notes in circulation in seven weeks, the earlier decrease being in the week ended July 16 from Rs. 737.62 crores to Rs. 737.42 crores. On the assets side, sterling securities are higher by Rs. 4.99 crores at Rs. 618.82 crores. There is a corresponding decline in the amount of rupee securities to Rs. 88.39 crores from Rs. 93.38 crores. With the frequent cancellations of rupee securities in the issue department it has thus been possible to find entirely the finance in respect of the repatriation of 3½ per cent sterling stock earlier in the year. There is actually a net decline of Rs. 33.97 crores over the figures of January 1, 1943. It should thus be said that the authorities have even found part of the finance necessary for the repatriation of the next instalment of sterling debts.

In the banking department, in spite of the cancellation of rupee securities of Rs. 5, crores nearly, deposits of the Central Government are Rs. 6.13 crores higher at Rs. 29.08 crores. This increase in deposits is perhaps due to the larger sales on account of rupee counterparts. It may also be to a certain extent due to the payments on account of E. P. T. and income-tax.

This leads us to the question of sales of 3½ per cent paper by the Reserve Bank at increasing rates. It is now more than three weeks since the authorities increased the tap rate for 3½ per cent paper. It will be remembered that the earlier increases were at more frequent intervals. The delay on the part of the authorities to effect a fresh increase in the tap rate is perhaps due to the anxiety of some holders to cash their profits with the rise in the quotation for Paper to above Rs. 97. There has certainly been some profit-taking in recent weeks and that was the reason why the quotation was at times even below the official selling rate. It may well be that the Reserve Bank afforded some support to the market at the lower levels. The quotation now stands at Rs. 97 and it appears that most of the profit-taking has been absorbed and the stage has been set for a further increase in the tap rate.

Deposits of banks with the Reserve Bank are slightly lower at Rs. 60-57 crores against Rs. 62.68 crores. Balances held abroad show an increase of Rs. 2.34 crores to Rs. 96.67 crores even with the transfer of Rs. 4.99 crores to the issue department. There has thus been a net receipt of Rs. 6.3 crores during the week from the British Treasury. Ways and means advances are higher at Rs. 1.12 crores against Rs. 38 lakhs.

The statement of the Imperial Bank for the week ended September 3, 1943 shows some interesting changes. Deposits are Rs. 44 lakhs higher at Rs. 197.73 crores. Investments, however, are sharply lower at Rs. 130.39 crores against Rs. 134.96 crores. This decline is perhaps due to treasury bills maturities. Total advances are also lower at Rs. 35.62 crores against Rs. 37.49 crores. Cash balances, as a result, are higher by Rs. 6.76 crores at Rs. 39.47 crores.

The reports regarding an increase in the interest rates on defence savings certificates and postal saving bank accounts are inconceivable as with the policy of the U.S. and the U.K. governments towards a progressive reduction in interest rates any action on the part of the Government of India to effect an increase in interest rates in order to tap the surplus funds with the lower middle and agricultural classes will be a retrograde step. If an analysis is made of the subscriptions to defence savings certificates and postal saving bank deposits in recent years it will be clear that the bulk of the subscriptions has come from urban interests and public institutions and that any effort of the authorities, even as an anti-inflationery drive, to tap funds from the lower-middle and agricultural classes will prove to be a failure. We give below the relevant extract from the message published by a contemporary from its Delhi correspondent :—

> "Sir Jeremy Raisman told the Central Assembly last month that there was no need to be alarmed by the currency figures of Rs. 750 crores or even Rs. 1,000 crores, provided savings were sent to the Government. There has been remarkable success recently of Government loans, and more is expected from the 12-year National Savings Certificates to be issued from October 1, bearing a little less than 4 per cent compound interest. As an additional incentive to savings, interest on post office savings bank deposits is also likely to be raised from October 1."

The announcement regarding the flotation of loans by four provincial governments was made on Thursday this week. It was reported last week that there was every possibility of the provincial governments coming into the market for fresh

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on September 7, 1943. Total amount offered was Rs. 18,85,25,000. Tenders at Rs. 99-12-9 per cent were accepted in full and those at Rs. 99-12-6 per cent were allotted approximately 36 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-13-9 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on September 14, 1943, in Bombay up to 11 a.m. (standard time) and up to the close of business on September 13, 1943, at other centres. Successful tenderers should make payment on September 17, 1943. Other conditions are as usual.

During the week ended September 3, 1943, Government of India Treasury Bills for Rs. 3,72,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

BENGAL TREASURY BILLS

Tenders for Rs. 50,00,000 of 12 months' Government of Bengal Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta up to 11 a.m. on September 15, 1943.

Successful tenderers will be required to make payment and take up their bills on September 17, 1943. Other conditions are as usual.

ASSAM TREASURY BILLS

Tenders for Rs. 1,50,00,000 of three months' opened on September 9. Total amount offered was Rs. 1 crore and 75 lakhs. Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12 per cent were allotted approximately 88 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore and 50 lakhs, the average rate of accepted tenders being Re. 1 per cent per annum.

Finance Abroad.

Thursday Evening.

The surrender of Italy is the result of an arrangement between General Eisenhower and Marshal Badoglio. The economic and financial provisions of the armistice have not been disclosed, but Italian ships have been instructed to seek Allied ports. Italy's shipping, in spite of losses in the war period, is considered valuable like the navy which must be soon immobilised under the armistice. This week's smart improvement in giltedged anticipated the Italian surrender. But one may infer that the prolongation of Mr. Churchill's stay in Washington affects the buoyancy of London markets. Since the Allies have got occupation lire and are ready having fixed the rate of exchange at 100 lire to the dollar, the future is more or less settled. In February the rate was fixed in Tripoli at 480 lire to the pound, and that rate is more or less maintained after the invasion of Sicily. The armistice may contain no precise provision as to occupation costs as Italy's ability to pay may be taken into consideration. How far Italian workers in Germany will suffer after the surrender can only be guessed. They may be reduced to the condition of hostages and detained as part of the new slave labour. Professor Speer has been charged with the further modification of war production. The defeats in the Ukraine imply that the harvest and the minerals may not be available to the Nazis who also have to take into account the problems created by trouble in Denmark.

The behaviour of the Bourses has not been indicated so far but the armistice means that Italy's industries can look forward to a period of recuperation. Sequestration of the leading Fascist's wealth may give Badogolio the money to carry on the administration and the employers, who were alarmed by the developments following the air raids, can count on a respite. The acquisition of shipping may help the Allies more than such supplies as Italy may give. The State Department has detailed an expert to enquire into Italy's economic problems, and the Allies may extend relief under adequate guarantees. Since the first reactions in Washington point to relief, it is clear that the bullion markets in the East must take note of what may happen in Cairo. The price of gold there may fall again suddenly and hoarders may show greater eagerness to sell. In this event, South African sales of gold in Bombay (there is no longer conjecture as to British sales or Dutch sales) will have been wiser than imagined. If a premium over the London price is maintained in Bombay as seems likely, South Africa may become a regular seller in Bombay and the slight fall in the Union output may be offset by larger profits in sterling for South African companies. The South African sales may well be enforced by the liquidation of oversea debt and the disinclination of the U.S.A. to keep on buying gold. The war produced a large increase in South Africa's trade with America, but the shipping difficulty has become acute, and moreover the U.S.A. cannot export goods as usual. Hence South Africa with an adverse balance of trade, so far as India is concerned, was inclined to sell gold for gold is always the chief export and mining is the Union's chief industry. The question of lodging gold with any Central Bank does not arise for the restrictions as to export of capital do not apply, and rupees converted into sterling may satisfy the Union. The principal lesson for India is to be drawn from South Africa's willingness to sell gold in the best market. Instead of getting $35 per ounce, the seller of gold fetches a better price, and South Africa probably views the dollar at present as being much like sterling. Indian commercial organisations asking for either dollars or gold may be sufficiently contradicted by South Africa's action in selling gold within the British Empire and not worrying over the question of buying out British or American interests in the mining industry, and not thinking twice about the value of dollars because the South African pound off gold cannot depreciate even if gold depreciates.

Industrial progress in the Union for example in the steel and paper industries must, unless immigration is large, limit imports after the war and the surplus of gold available for export must be large. There is also the consideration that other Governments may not buy gold in quantity to provide subscriptions to the proposed Stabilisation Fund. British press comment takes the line that the U.S.A. is asking too much in order to protect its creditor position and compromise is ruled out. Apart from a revival of gold production in the Soviet Union after the war, which too must come on the U.S. market, there are many other factors in the way of large-scale imports of gold into Europe. The redistribution of U.S. gold is not contemplated; that does not affect the view that South Africa does not to-day reckon on the inevitable depreciation of sterling, and is quite ready to let the Union's assets in London increase. Assurances as to the proper use of oversea assets are not demanded because the Union Government will decide about the time and manner of their disposal, and present willingness to sell gold in exchange for sterling (South Africa is not like Ceylon, anxious for a large reserve of rupees) can only be interpreted as proof of exceptional confidence in sterling. An increase in the supply of gold may not bring down prices suddenly, but Indian bullion markets may well take note of the likelihood of exchange control, and capital restrictions, too, being maintained after the war.

If India's export trade does not revive promptly, and India cannot ship gold for any reason, the rupee may weaken but that is unlikely in the opinion of the majority, as invisible imports will be smaller, and the rupee will always follow sterling. In that case, depreciation is unlikely, and hoarding has no justification. If hoarding (even for the purpose of reducing the note issue) is unwarranted, the price of gold and silver at present levels cannot be maintained, and there is no need at all to stimulate saving by sales of gold and silver.

The field of investment for Indian capital after the war in Burma may not be large as U Tin Tut wants that home enterprise must have a chance. The restoration of mining properties to their former position may be delayed as rural reconstruction will claim most attention. Burmah Oil stock is said to have receded but the chances of an Allied offensive in Burmah must keep up interest in Burmah shares. In recent weeks, sterling rubber shares have turned very firm and the Indian markets latterly are taking note of the possibilities of dollar shares. If Malayan rubber shares like Foreign Bonds are tempting London to buy, the Indian speculator may also turn to dollar shares though air mail quotations cannot be had as in the past.

The strong upward movement in Eastern Bank shares is not ascribable to the maintenance of interim dividends, but to calculations of a shorter war. The irregularity noted in Industries now and then does not touch bank shares and the ability to hold their own in India has been indicated this year. The Bank Return on Thursday last pointed to an increase in Bankers' Deposits but earlier there was disinclination to take up bills. But the Treasury got its £90 million as usual and the reference to making up may have been due to eagerness to buy treasury bills maturing in December and available for showing in cash balances at the end of the year. The end of August thus witnessed a seasonal diversion of funds into treasury bills and the market's difficulties must be related to that circumstance rather than the drain of cash for taxes or the stock exchange though, it may be said, from the continued rise in values that money seeks the stock exchange and the brightening of export prospects must help others besides textile manufacturers. The surrender of Italy may raise the price of internationals as much as that of British Industrials though the fall in Levers may suggest that the tendency is not uniformly upward. The quietness of Wall Street and the inactivity of U.S. commodity markets point to tax fears more than anything else. After September corporate earnings may not run at the former level, and the quarterly earnings may suffer when war production demand slackens after the end of the Mediterranean operations.

LLOYDS BANK
LIMITED
(Incorporated in England.)

1677

Strength

Lloyds Bank has attained to the position of being one of the largest and strongest banking institutions in the world by its reputation for efficiency, thoroughness and financial stability.

Paid-up Capital £15,810,252
Reserve Fund £10,000,000

Branches in India:

CALCUTTA, 101-1, Clive Street and 37, Ghowringhee, DARJEELING, BOMBAY, Hornby Rd. and Princess St., KARACHI, RAWALPINDI, MURREE, AMRITSAR, LAHORE, DELHI, NEW DELHI, SIMLA, PESHAWAR CANTT., PESHAWAR CITY, SRINAGAR, GULMARG.

Provincial Government Loans

3 PER CENT LOANS, 1956

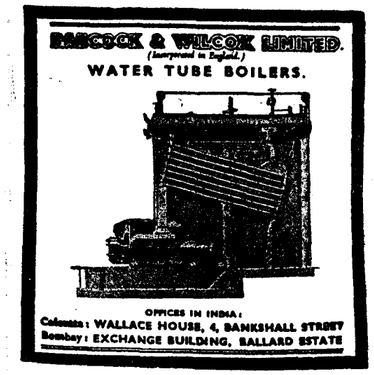
Government of Bombay	**Rs. 350 lakhs—Issue Price at Rs. 100-0 per cent.**						
Government of Madras	**„**	**125**	**„**	**„**	**„**	**99-8**	**„**
Government of the Punjab	**„**	**250**	**„**	**„**	**„**	**99-0**	**„**
Government of the C. P. and Berar	**„**	**50**	**„**	**„**	**„**	**99-0**	**„**

Each loan will bear interest from the 14th September, 1943.

Open for one day only, *viz.*, Tuesday the 14th September, 1943 and will be closed at any time on that day as soon as subscriptions approximate to the amounts of each issue.

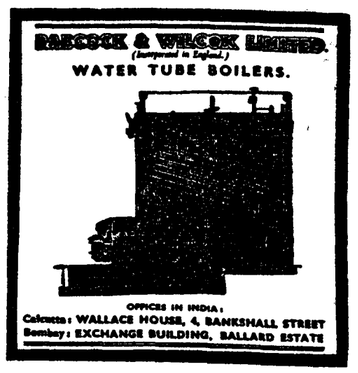
Subscriptions will be in the form of Cash/Cheque.

Applications for all four loans will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, Madras and Delhi from **10 a.m. Standard Time.**



Applications for any particular loan will also be received at branches of the Imperial Bank of India situated within the Province issuing that loan.

In the event of any one or more of the loans being over-subscribed, proportionate allotment will be made to the subscribers.



N.B.—Applications tendering their applications at the offices of the Reserve Bank of India, Bombay, Calcutta, Madras and Delhi will, in the event of oversubscription, be given the option of transferring their cash refunds to any of the other loans at the same or lower issue price which may not be fully subscribed, provided they complete and tender along with their loan applications, the SPECIAL OPTION FORM, copies of which are obtainable on application from the abovementioned offices of the Reserve Bank of India.

Copies of the Notifications and Application Forms may be obtained at any Receiving Office along with a copy of the Press Communique giving the financial position of the Provincial Government(s).

Editorial Comments

The Wider Gulf

The scrappy accounts of the revised American currency plan and the strong reactions provoked by it in its British critics leave large gaps in one's understanding of the nature and purport of the American revision. The full text of the proposals released by Mr. Morgenthau is probably necessary if pointed comments are to be made. But whatever the detailed provisions of the revised plan, the comments in the British press suggest a marked change in the prospects of these plans for the regulation of postwar international finance. From the accounts so far available, it would seem that the American experts, while they are ready to disarm the criticism that America is anxious to secure undue hold over the international financial organisation, are, by no means, ready to make concessions to the British viewpoint or to bridge the divergences between the British and the American proposals. An examination of the changes in the original proposals so far reported will bring out the reasonableness of such a feeling. For, while the American experts have been ready to make changes in the control of administration of the fund, and to relax the provisions in respect of changes in the exchange value of national currencies, they have made the American plan even more unacceptable to the British by increasing the gold contribution of member countries from 12½ per cent of the original proposal to as much as 50 per cent. In the original plan, decisions regarding important monetary changes could be made only by a four-fifths majority; and the provision virtually vested a veto in the hands of the U.S.A. or the U. K. and the Empire countries. The reduction of the percentage majority required from 80 to 75 per cent and the provision that no country can have more that 20 per cent of the votes together form the American answer to the charge that the original proposals sought to give the States an invulnerable control over international finance. The American experts probably think that such a veto for the U.S.A. in the case of the gold value of the Unitas cannot be open to any equally forcible objection, and the majority required for changing the value of the Unitas has been laid down at 85 per cent. It is not perhaps quite insignificant that changes in this respect are in tune with the suggestions made in the Canadian proposals that, while the majority of votes might suffice for all important decisions on monetary policy, a special majority should be insisted on only in the case of a change in the gold value of the currency unit. The special needs of countries like China which are subjected to the inevitable inflation of wartime, and the currencies of countries which are now in the control of the Axis have been more carefully provided for in the revised proposal. The general demand that national governments should have greater freedom than was accorded them in the original proposals for altering the exchange value of their currencies has been met by according such freedom not only to debtor countries but to creditor countries as well.

In view of the fact that these changes, which by themselves may be said to have improved the chances of a general acceptance of the American plan, are accompanied also by the palpably unacceptable increase in the gold quota of member contributions, one cannot help feeling that there is more about the American proposals than has been communicated to the world by the news messages. The fact that Mr. Morgenthau has emphasised not only the tentative character of the revised plan but also to its lack of formal official accord can do little to explain what seems at this distance to be a deliberate widening of the breach between British and American proposals. The increase in the gold contribution may well be either a gesture to emphasise the importance attached by America to the position of gold in any scheme of international financial regulation, or it may be meant to serve as what may be called a prelude to an oriental bargain. Whatever that may be, the fact remains that British opinion has been seriously alienated by an increase in the gold ratio when the British public were expecting a reduction.

The onset of a new element of intransigence, not to say truculence, in the discussions on these proposals is surely the most regrettable feature of the fortunes of these proposals. In Britain, where the memory of the troubles and tribulations of the period following the adoption of the gold standard are still green, the increase in the gold quota has raised in the minds of nearly all the financial critics the nightmare of another period of deflationary finance with all its disastrous consequences. The "Financial News" observes that "the revised scheme represents nothing more constructive than the equivalent of a return to the gold standard in 1921 instead of 1925 and that the plan offers unlimited possibilities of leading the world into a deflationary spiral." "The Economist" is more bitter when it says that "the original explanation of one-eighth quota in gold was difficult enough to swallow but the revised proposal that one-half must be so subscribed is the purest phantasy." The fundamentals of the problem naturally remain the same, whatever the changes in the proposals of the American plan, and the British press continues to harp on the well-known fact that for countries placed as Britain will be in the postwar world, there can be no hope of an equilibrium of external financial relations unless the United States either receives an import surplus appropriate to a creditor nation or is willing to export capital continuously and sufficiently to prevent any under-valuation of the dollar on current account. The 'Economist' far from being hopeful of such a reduction in the import surplus, feels almost certain that the new synthetic rubber industry will be protected to the partial or wholesale exclusion of natual rubber.

OBJECTS:

The Company has been formed for the purpose and with the object as set forth in the Memorandum of Association of the Company and in particular for carrying on the business as Manufacturers of Malt and Beer.

Fermented Liquors and beverages have always been consumed by men throughout the world. Since industrial development and growth of large cities, nourishing and low alcoholic Liquors began to be manufactured in a large scale. Beer met the necessity like no other liquor. In advanced countries, Europe, America and Japan, great brewing industries grew up replacing consumption of wines and distilled liquors to a considerable extent. In India its import has rapidly increased but due to high prices it has not replaced the naturally fermented Toddy or Neera. Except when taken in large excess it has been found to be physiologically helpful in aiding digestion and of nourishing value. With the rise of standard of living and industrial development the consumption of beer increased immediately and the huge import of Japanese beer is due not only to economic necessities but also to growth in consumption. Since the growth of refrigeration industries tropic is no barrier for the establishment of brewing industries. It is to be noted that the question of raw materials for manufacture of Beer in India is very satisfactory. Beer is made from Barley Malt and Hops and both Barley and Hops of good quality are available in India.

Messrs. Bengal Breweries Ltd., propose to put up a plant in Calcutta for manufacturing 5,000 bottles of Beer per day. The initial manufactured samples submitted to the Excise Department, Government of Bengal, has been examined and found satisfactory by the Chief Chemical Examiner to the Government of Bengal. In order to ensure uninterrupted production and overcome infantile disorders of trade, elaborate and continued experiments were made during the last six months in well equipped laboratory and the Managing Agents of the Company are now in a position to guarantee the production of Beer equivalent to the best imported material. The factory site is proposed to be taken on monthly rental basis from Mr. D. Bhattacharyya of 19A, Broad Street and no consideration money is passed.

The Managing Agents are particularly fortunate in obtaining the help and advice from Dr. P. N. Bhaduri, M.Sc. (Cal.), Ph.D., D.Sc. (Lond.), F.L.S., F.R.M.S., F.R.H.S., working in advisory capacity on all mycological and akin problems connected with the fermentation industry. His experience ensures production of pure culture and conduction of controlled fermentation. The services of Dr. A. Bhaduri, Dip., Eng. (Berlin), a member of the Managing Agents, is particularly valuable towards construction and working of the plant and production of Malt and Beer. Dr. Bhaduri had several years experience of the Beer Industry in Germany and his rich experience will be of great help to the Company.

The site of the Factory has been selected at No. 19 A and B Broad Street, Ballygunge, and considerable initial work has been completed. It is expected that with commencement of business, the company will start production within 4 months.

The specification and design of the equipment necessary for the manufacture has been completed and partial orders for some items have been placed or acquired. The necessary refrigeration equipment has been booked in advance. The arrangement for supply of bottles and crown corks has also been made.

We give below an estimate of the cost of production based on actual data obtained during the last six months in our experimental works.

Per 100 gallons of Beer.

Barley & Hops	Rs. 50
Bottles & Crown Corks	,, 115
Refrigeration cost	,, 6
Steam Coal	,, 20
Wages and Supervision	,, 25
Establishment, Tax and Rent ..	,, 25
Labels, Boxes, Packing, etc.	,, 55
Excise Duty	,, 50
Total ..	Rs. 346

The cost will be Rs. 350 per 600 bottles of Beer.

Judging by the comments in the British press one gains the feeling that the chances of an agreement between Britain and America on the problems of postwar international regulation have become more slender than ever. The revised plan has only confirmed the British belief that America expects the deficit countries to make adjustments by lowering the domestic costs structure, that is, by deflation and that the American Treasury is more anxious to meet the views of conservative Wall Street finance than of other nations who have to work the scheme. It is not surprising in view of this feeling that the 'Financial News' feels constrained to refer, as an alternative to a real international system, to "the second best policy open to the United Kingdom of a regime of bi-lateral trade agreements." The 'Economist' is noticeably truculent when it says that

> "Much has been said that American Congress will or won't accept, but 'perhaps it is as well to say with all necessary clarity that there is not the slightest chance of securing for any such proposal the approval of the British Parliament or the public'.
>
> "If the American Government refuses to depart far from the current proposals, it may be necessary to look for an alternative. It might not be very difficult to build up a system of currency groups with substantial freedom of payment within each group, and controlled exchanges between the groups as the French proposals appear to have somewhat in mind."

It should be remembered that the British proposals for a clearing Union did envisage the continuance of Empire currency groups even after the institution of the Union. It is possible therefore for the "Economist" to entertain the belief that

> "There is not the slightest reason why relations between these different groups and the Dollar Group should be hostile or discriminatory. But this would only be a second best, as anything that prevents world trade being fully unilateral is against British interest. Such a scheme, however, is workable, would not be unduly restrictive to world trade and would provide a very large field of multilateral trade, preferable to an overrigid international system unable to cope with what promises to be a very unruly world."

It may be premature to express the view that the revised American proposals pronounce the death-knell of Anglo-American agrument on the problem of international financial regulation in the postwar period. But the growing divergence of opinion set against the quicker approach of victory suggests that the Allied nations will not have their plans of postwar economic policy ready in their hands before the lights go up again. And yet it is no comfort to contemplate serious divergence of opinion between Britain and the U.S.A. on postwar policies.

THE BENGAL BREWERIES LIMITED, PROSPECTUS—Contd.

It is evident that inspite of highly inflated cost of raw material, container and packing goods, the cost of production is decidedly below pre-war selling prices. Thus a minimum dividend of 10-15 per cent is reasonably assured. Moreover, a sound foundation for this industry under post-war condition is also assured.

The prospect of the industry at present needs no comment. The dearth of beer is acute. The Management has been assured of demands from the Food Supply Department, Government of India, for supply of Malt and Beer. It is needless to add that this industry has the brightest future awaiting as well in the post-war period.

MANAGING AGENTS:

Messrs. Khar & Co., Ltd., will be appointed the Managing Agents of the Company for a period of 20 years. They will be entitled to a commission at the rate of 10 per cent on the net profit of the Company and an office allowance of Rs. 500 per month. In the case of inadequacy or absence of profit in any year, the managing agents shall get Rs. 6,000 as minimum payment for that year. 2,500 ordinary shares of Rs. 10 each will be allotted to them as fully paid up in consideration of the services rendered by the Managing Agents in the formation and promotion of the Company and in consideration of their making over to the Company certain plant, machinery, equipment and secret process of manufacture acquired by them. The said remuneration will be exclusive of the expenses which may be incurred in connection with establishment, maintenance, management and upkeep of the Company's office and of the remuneration and wages payable to Managers, Secretaries, Agents, Dealers, Brokers, Lawyers, or other officers or employees who may be employed by Managing Agents for and on behalf of the Company all of which shall be payable by the Company.

DIRECTORS:

The qualification shares of a Director shall be the holding in his own name 100 shares of Rs. 10, each. The Directors will be entitled to a fee of Rs. 16 each, per meeting of the Board attended by him and also such travelling expenses as may be approved by the Company in General Meeting also to 1 per cent of the net profit of the Company. The Managing Agents will be entitled to nominate one-third of the number of the Directors who will be ex-officio members of the Board of Directors.

MINIMUM SUBSCRIPTION:

The minimum subscription on which Company will proceed to allotment will be 2,500 shares of Rs. 10 each.

BROKERAGE:

The Company may pay a brokerage of not more than 10 per cent only on the value of shares in respect of application received from recognised brokers and allotted by the Company.

PRELIMINARY EXPENSES:

The estimated amount of preliminary expenses is Rs. 5,000.

RIGHT OF SHAREHOLDERS:

On a show of hand every member present in person shall have one vote irrespective of the number and class of share/held by him and on a poll every member present in person or by proxy shall have one vote for every share held by him.

No member shall be entitled to vote at any General Meeting unless all calls or other sums presently payable by him in respect of the shares have been paid. The Directors may refuse to register a transfer of shares upon which the Company has a lien and in case of the shares not fully paid up, to a transferee of whom they do not approve.

AGREEMENT:

It is proposed to enter into following contract:—

An Agreement between the Company and Messrs. Khar & Co., appointing them as Managing Agents for a term of 20 years on the terms and remuneration and otherwise therein contained. A copy of the said Agreement and copies of the Memorandum and Articles of Association of the Company may be inspected at the Registered Office of the Company any time during usual office hours. Copies of Memorandum and Articles of Association may be obtained from the office of the Company at Re. 1 per copy.

INTEREST OF DIRECTORS:

Dr. A. Bhaduri, Mr. M. Rahman and Mr. S. P. Bose are Directors of Khar & Co., Ltd., Managing Agents of the Company and as such are interested in the promotion of the Company.

APPLICATION FOR SHARES:

Applications for shares should be made on the accompanying form and returned to the Head Office of the Company at 6, Mission Row, Calcutta or to the Company's Bankers or Brokers. Copies of this Prospectus and forms of applications for shares may also be obtained from them.

APPLICATION FORM

TO
THE DIRECTORS OF
THE BENGAL BREWERIES LIMITED.
6, Mission Row, Calcutta.

Gentlemen,

I/We send herewith the sum of Rs..... being a Deposit of Rs. 5 per share on Application on..... Vegetable Rubber

War has everywhere necessitated active search for substitutes of essential war materials and in India the loss of Malayan rubber has resulted in a feverish search for new sources of this war essential. The existing rubber plantations of India yield just 1 per cent of the output now available for the Allies. If India is to be a basis of operations against Japan and if the shipping position continues to be difficult, the rubber scarcity in India may severely affect the war effort of this country. The necessity for finding out secondary sources of rubber is therefore very urgent. Under the direction of Mr. B. Viswanath, the Imperial Council of Agricultural Research has conducted investigations in co-operation with the Rubber section of the Supply Department; and the results are published in the June issue of the journal of S. I. Research. It has long been known that the plant C. GRANDIFLORA, which occurs throughout India, contains rubber. Its commercial value was emphasised by the Imperial Institute as early as 1925. A rapid survey of the occurrence and distribution of all kinds of lactiferous plants containing rubber has revealed that this GRANDIFLORA thrives in various soils, irrespective of climate, temperature, rainfall or humidity. There seems to be vast scope for commercial exploitation of rubber from this source. Though enquiry into the botanical, chemical and technological aspects of growing this plant is still incomplete every effort should now be made to grow the plant on a large scale. Information regarding the cultivation of the crop should be collected without delay and activities of the Government should not stop with appreciation of laboratory achievement. Events are moving fast and the demand for rubber is great and urgent. If the cultivation of this grandiflora is successfully accomplished during war time, India's problem of rubber would be eased very much during the post war years.

Tamarind and Textiles

The latent qualities of tamarind are now discovered and reported by Messrs. Krishna and Ghose (Indian Textile Journal, May 1943). The tamarind seed which is abundant in this country contains 58 to 59 per cent pectin necessary for sizing cotton yarn. Till now starches derived from various cereals and gums of the tragacanth type were used in sizing cotton fabrics. While the sources of tragacanth, which is an imported article, are now cut off, the food scarcity in the country has limited the availability of cereals for making starches. The crisis in the supply of sizing materials has resulted in the investigations which revealed the potentilities of the much neglected tamarind seed. Factory tests have been successful and the superiority of tamarind pectin over gum Karaya has been established. Methods have been systematised for the production of different sizing mixtures out of tamarind pectine so as to suit delicate fabrics and also for dyeing and printing. The Forest Research Institute in their recent investigations for new sources of vegetable dyes have found out that valuable dyes can be made out of tamarind pectine. The cost of extracting 1 lb. of dye from tamarind pectine is estimated at Re. 1-3-9 while the price of 1 lb. dye is annas thirteen only. If the by-product, testa, is utilised profitably the 3½ million maunds of tamarind now wasted all over the country could be pressed for active use in our textile industry and for adding to the meagre incomes of the agricultirists.

Advance Payment

Tax prepayment has been advocated in India as a mild remedy for inflation and the first direct outline was provided by Sir V. N. Chandavarkar during the Budget debate, when the Finance Member expressed willingness to try the system of tax anticipation notes. The system lately proposed is one of deposits for both income-tax and excess profits tax. Widespread acceptance of the system should certainly make summary assessment under the ordinance superfluous because interest-bearing deposits may be more acceptable. Interest 2 per cent (not free of tax) is payable at the time of tax-payment. Interest is allowed from the time of deposit to the date when tax is payable and will not be allowed on amounts which are not required to pay tax. The minimum period for deposits is 3 months and excess deposits can be withdrawn or carried forward to the next tax payment, interest being allowed from the date of original deposit. Deposits must be in multiples of Rs. 100 and made by means of challans obtained from income-tax officers and excess profits tax officers separately for such tax. Since demand deposits in Banks provide only 1½ per cent, the inducement to invest in tax deposits is sufficient. The Tax Reserve certificates of £10 and over carrying interest at 1 per cent taxfree, i.e., at 2 per cent gross are distinguishable from the new Indian deposits because the former are more or less negotiable securities and no limit is imposed on the deposit. Deposits in Britain are an addition to short-term debt as in the U.S.A. whereas the plan announced in the last week of August in India is merely a plan for prepayment by persons or bodies who can estimate their liability in advance. The adoption of the deposit system may have the effect of reducing demand liabilities of banks in India. But deposits with Government are possible only for those with large working capital, and the effects on banks' resources may not be great. At any rate cash ratios may be expected to fall before then. Indian States with income-tax may not be disposed to adopt the system, since they have no need to enlarge short-term debt; but Provinces might well encourage the anticipatory payment of revenue by offering a rebate equal to the interest allowed. On the more distant view the inflow of funds might check treasury bill borrowing and produce conditions favourable to the savings campaign since previous payment of tax is a form of saving and tax deposits may be replaced by further savings made by some assessees.

Oilseeds Recovery

The recent recovery in groundnut prices in Bombay was independent of the London market where the price is £36½ per ton. The removal of the export ban in Hyderabad led to an apprehension as to large supplies, but a weakening monsoon has altered the Bombay market sentiment. The regulation of copra and cocoanut oil prices can have letter effect at present because the demand for the groundnut crop is more or less constant and the Food Ministry is ready to buy Indian groundnuts. The first crop forecast points to a reduction in acreage. Though the Punjab is reporting for the first time, it is noted that there is a fall of 2 per cent in acreage; the total area under groundnut at 2,807,000 acres (2,809,000 acres in 1942-43) shows a slight fall. Crop condition is stated to be good so that the outturn may not be below the total of 2,714,000 tons recorded in 1942-43. The increase under sesamum this year may have no effect on groundnut prices, but the prohibition of futures in all oilseeds including cotton seed, only this week, may be regarded as an unfavourable development for the oilseeds market. The cotton crop forecast like the oilseeds forecast may suggest that food crops in India have received more attention this year, and the prospective fall in food grain prices may offset any improvement in oilseed prices. There is no prospect of oilseeds exports being dramatically enlarged while Allied supplies may be enlarged by the control of Senegal's exports this year.

Puppets in Burma

The creation on August 1 of an independent government in Burma which has promptly declared war on the United Nations was admitted rather late in Delhi where a Burma Government spokesman mentioned that it made no difference in regard to Allied intentions as regards Burma. A Batavia broadcast mentioned recently Ambassador Sawada's declaration that Burma and Japan must sink or swim together. Mr. Sawada is probably the envoy who arranged the Indo-Japanese trade treaty of 1934. His last mission was to Vichy and his appointment as Ambassador to Burma suggests that Burma has a High Commissioner on the lines adopted by Britain in Egypt after the formal recognition of independence. Mr. Sawada declared that there would be no treaties or engagements between Burma and Japan, though Burma's defence is entirely Japan's concern, and complete surrender to Japan was demanded as the price of independence long before the declaration.

The agreement drawn up in March anticipated the instrument drawn up for Indo-China as Japanese immigration were exempt from payment of taxes and Japanese goods were to be duty-free for the 15 years while other imports were liable to heavy duties. The agreement laid down that a compensation of Rs. 3,000 per Japanese soldier killed in Burma was to be paid by Burma. This is equivalent to the levy of occupation costs. The Assembly convened by General Kawabe elected Dr. Ba Maw, President, and the declaration of independence followed the dissolution of the previous Committee. The essential supremacy of the military administration is unimpaired by the declaration as the new Burma Government is directed to avoid a policy which may clash with that of the Army; and the Tokyo radio in explaining the proclamation announced that the Government's budget and important problems would be tackled by the military administration. The status of the Protectorate is indicated by the reservation of powers. The choice of Dr. Ba Maw for the position of President (on Japanese recommendation) is explained by his anti-British record rather than the limited strength of his party which was discredited completely before the fall of Burma and must owe its rehabilitation largely to the plans of Tokyo. The adjustment of territory in the Southern Shan States is obviously at the expense of Burma so that Ba Maw's popularity must have suffered in the result.

The air operations in August must have shown Dr. Ba Maw that independence makes no difference to the R.A.F. and U.S.A.A.F. and the Japanese retreat from Yunnan must also have shown that an independent Burma has no chance of building up a position as a satellite at once. The distinction between Thailand and Burma is proved by the grants of Malay and Burman territory to the former after General Tojo's visit. The Allies' main problem in Burma will be military, not political, since the Assembly may still lack the support of Karens and others; and the Burmans (as shown to the Wingate expedition) may be far from satisfied with Japanese rule. The promise of reconstruction in Burma may or not appeal to Burmans, but their experience of Japanese overlordship in the interval may produce a change of opinion that should help them to realise that independence can have no meaning when Burma is subject to the Greater East Asia ministry. Reconstruction after conquest may entail the revival of the trade treaty with India and a guarantee of preference for Indian goods may be available though it may be suggested that Burma's exports of rice and timber, claiming exemption from import duties, may be of no consequence after the war.

Textile Industry's Benefit

Textile manufacturers are benefited by control of mill stores. Bobbins, healds and reeds, shuttles, starch and chemicals are all covered by control wars and the fixation of prices for cotton manufactures has resulted in an examination of costs. The textile control board (probably on buyers' representation) has fixed maxima prices for bobbins and shuttles from August 25. The schedule of rates recommended by the Board's committee on mill stores has been accepted by the Government. In the case of imported shuttles to be sold under license only the price has been lowered. Speculators in mill stores stand to lose as all contract are subject to the new scale of prices. Though the price revision may even retard the development of an indigenous stores industry, the essential advantage promised to textile manufacturers, promised supplies if necessary by requisitioning, cannot be ignored. The problem of lowering costs has been mastered in part; and the cheapening of raw material has brought about a situation in which the mill industry's prospects are being re-examined. Since essential materials like steel baling hoops are made available in the interests of cotton mills, the mills are obviously able to keep costs down. The profit margins secured under control have been described as handsome for both yarn and cloth; and the upswing in cotton mill shares followed. Lower prices for mill stores may offset the increase in taxation and mill profits may permit the maintenance of dividends in nearly all cases Since the piecegoods market may throw off its lassitude and prices may be adjusted to the advantage of merchants, though there is no extension of time for clearance of stocks, the present

calculations are in favour of mills. And the reduction to the cost of bobbins, etc., had a direct effect.

Reconstruction Demands

The problem of the transition to peace includes the conversion of war plant to civilian needs. Sir M. Visweswarayya in examining the question of employment has said that the soil cannot provide for many and the majority must go into industry or service outside agriculture. Putting soldiers on the land is not easy, but special employment for war technicians must also be secured in advance. Many factories will have to be retained for meeting Defence requirements, but it is also expected that many factories could be transferred to Indian businessmen, who might maintain the workers in employment. The absorption of war workers in the transferred enterprises may not answer the requirements of the situation. More important than men would be materials that would be needed for deferred construction work; and the dismantling and disposal of emergency constructions promptly would be necessary. A census of disposable material and of actual cost is demanded so that the transfer of superfluous assets takes place promptly. To many in India reconstruction is almost the same as planning, and complaints agaist slackness or lack of sympathy underlie the plans for reconstruction. Sir M. Visweswarayya asks for revolutionary measures so that steady employment and economic security are available. Expenditure must not be stinted so that the taxpayer cannot count on relief. The plan of regional development must be retained; and heavy industries must take precedence. In the latest A.I.M.O. memorandum the emphasis is still on the essential heavy industries though postwar prospects for heavy industry cannot be called very bright. The old scheme of development in 5 years at a total coss of Rs. 1,000 crores, however, must be retained in view of the need to make India self-supporting. The reconstruction programme embraces varied industrial developments though it does not outline the financial requirements. The doubling of India's public debt in 5 years is certainly contemplated under such planning, but the effects on the balance of payments may be marked. If very large imports of capital goods into India take place after the war, apart from those actually arranged for in order to lighten sterling balances, the value of the rupee might be largely dependent on outside support. If Indian export trade does not revive to prewar proportions for any reason, the problem of paying would be more difficult for borrowing at home for Industrial projects will not provide the means of paying; only a healthy export trade can do that. The reconstructionists may not take note of the contraction of foreign trade but cannot be ignorant of postwar revival of imports (caused by the export drive of foreigners) which may entail the adoption of steps to encourage exports.

Interest in Latin America

Brazil as a source of iron ore, manganese and rubber has been appreciated by the Allies who depend more and more on Bolivian tin and the lead of the Andean Republics. Strategic minerals of the New World are not limited to tungsten and bauxite for the U.S.A. has been examining fibre resources and ordered experiments in Cuba and other places. Plantation rubber is scarce, and the jungles of the Amazon are described as more than promising. Transport difficulties and the wild tribes of the interior may make Brazilian rubber less important than the Belgian Congo's. Manila hemp is required in war and the U.S.A. wants to get the plant grown in Panama. Sisal and other fibres are being tried in Central America, not merely to reduce U.S. dependence on Indian jute, but to develop inter-American trade. Kapok from the Dutch East Indies is not available, hence the interest in wild kapok noted in Brazil. Kapok has many war uses, particularly, for making life-jackets. Interest in Peruvian bark (quinine) has been stimulated by the loss of Java supplies. In four countries the U.S.A. has encouraged cinchona cultivation since 1937. The loss of tapioca supplies from the N.E.I. (the U.S.A. imported 130,000 tons), which has been made good by the increase in Brazilian production. Tapioca is made from starch and for various industrial processes. The development of Latin American supplies may have the effect of winning a bigger share for U.S. goods in Latin American markets after the war. If the U.S.A. becomes the chief customer for vegetable products as well as minerals, the plantations of the East may not be able to win their former position. But there has been a forecast that U.S. rubber consumption would double after the war, and synthetics would not offer a very strong challenge to plantation rubber. The extension of interest from oil to various other products is, however, a measure of U.S. desire to rely on South America. Credit agencies, instead of stimulating trade, are concerned largely with developing new production nearer the point of demand. What has been done to make the most of Canadian resources has naturally influenced U.S. trade policy in Latin America where only one state is neutral and the ABC front directed against alien influence has disappeared. The U.K. as a large investor has a direct interest in the development, but U.K. interests are concentrated in the Argentine, and that country has obviously decided to buy out British railways and other enterprises. Though the terms have not been settled, the export surplus is larger and the depreciation of sterling in wartime is a natural inducement to the Argentine to prepare to nationalise the railways.

Australian Production

Industrial developments in Australia include the advance of dehydration (supported by a great vegetable growing plan) and the distillation of alcohol to the position of established industries. The Commonwealth Government's latest enterprise is the aluminium ingot industry. The extension of plant for the purpose was mentioned by Mr. Beasley who said that rolling mills, extrusion and forging plants were being added to; also that Tasmania's hydro-electric scheme would give the power required. This month's newsletter states also that the plant would probably be purchased by Britain. The glass industry has been rationalised. Fewer types are being made but the volume has been raised by 40 per cent over the prewar output. Utility types have come to help in the shortage of

crockery, chemical engineering is said to have made progress. According to report, a nitrogen fixation plant costing £500,000 has been set up in New South Wales near an explosives factory. It is one of several nitrogen fixation plants in Ausralia. After the war the same plant would help to give chemicals for drugs, dyes and fertilisers. Ausralia had to rely on Chilean nitrate for munitions production but the Ministry has since devised nitrogen plants. Australia which has produced bombers and trainers is to make three new types of aircraft. A mission which visited the U. K. and the U.S.A. has chosen types suited to operations in the S.-W. Pacific. The Boomerang Fighter is perhaps the first. Both countries have promised assistance to Australia in producing new aircraft. In spite of optimism promoted by successes war production has not fallen off in Australia. Mr. Makin claimed that workshops had maintained output. He stated that factories had completed the initial needs of the fighting services and in future would be occupied largely on replacements and building up certain reverses. Apart from the progress of flax in Australia, where 60,000 acres are under flax, and fibre output is 70 tons per week, the only change is the projected reduction in wheat. In 1942-43 the Commonwealth's wheat production was estimated at 155.7 million bushels representing a record average yield of 16.78 bushels per acre. Sowings in the 1943-44 season will be one million acres less than in 1942-43 and about 6 million acres less than in 1938-39. The enlargement of world wheat supplies this year has apparently caused the reduction in acreage, but the drop of roughly 10 per cent in grain production may be due partly to efforts made in Britain to increase wheat production further. As food commitments in the war period have increased, the exportable surplus may be small, more so as New Zealand is dependent to some extent on Australia. Alongside of food production, the Commonwealth has drawn up a plan for making of agricultural machinery. The plans provide for the extension of the manufacture of machines already in use in Australia and also of machines, designs for which have been received from the U.S.A.

Mussolini in Retrospect

Reactions in the Turkish press to Mussolini's failure were described in a recent despatch of Mr. Leonard Kirschen. The fall of Mussolini followed the meeting with Hitler at Verona in July. The people of Turkey were amazed on the morning of July 26 to read of the resignation. There is no other definition that we can give to this reaction. Mussolini's regime has been criticised but Turkey has nothing against the Italian people, as has been explained. But Mussolini was an enemy and his plans for Empire were endangering Turkey's security in the Mediterranean. When Italy entered Albania and meddled in the Spanish civil war, it was clear that the others would not be safe in the Mediterranean. Since the Italians have lost the possessions acquired in Mussolini's time, the anxiety produced by the attack on Greece in 1940 is a thing of the past. The Italian dictator's mistakes were critically examined in the semi-official Ulus by M. Atay who led the Turkish press delegation to India. He remarked that the prestige of fascism was shattered when, with the aid of Germany, Italy the all-powerful, was saved from the hands of little Greece. From that day Italy's fate depended on that of her ally. But after the defeat in North Africa, followed by that in Sicily, the people abandoned fascism and its boss convinced that a defensive war was of no avail. That Mussolini resigned from power after examining all the possibilities because he did not want the tragedy of war to be added to the tragedy of events at hand is one good point in favour of Mussolini, according to M. Atay who argued that the consequences of Italy's defeat and Mussolini's resignation would be many and great. In another article M. Atay referred to the disillusionment in Italy, and noted that if Italy had stayed neutral, she would have kept her hold on the coast of the Red Sea and her forces would have remained intact and Italians would also listen to the speeches from the Palazzo Venezia. The disappearance of fascism, committed to war as a sacred principle, is a great relief to peace-loving countries. Mr. Kirschen records his opinion that M. Atay's views reflect the opinion of the Republic.

Hamburg Smashed Up

The bombing of Germany's biggest port, Hamburg is said to have led to the loss of nearly a quarter of million tons of active shipping. Germany's shipping position must have deteriorated greatly though Emden and Bremen are available with Lubeck. These ports as Mr. McWhinnie marked recently have been bombed before and may be bombed again. The strain on German shipping should grow on account of the demands made on the railways. An eye-witness account of the raid given to the Daily Telegraph's Stockholm correspondent by a deserting stoker, certainly drew attention to the damage done to U-boats in Hamburg harbour. The submarine yards appears to be smashed beyond hope of repair. At Howaldts Werke the bows of three U-boats stick up from the water, said the stoker. In the terrible week from July 24 to August 1, the dock area was simply a mass of flames from which grotesquely twisted girders stuck out white hot fingers. Shipping out in the Elbe could not get near the dock area cordoned off by three big floating docks with ships in them (said the eye-witness) lie shattered to pieces. Work was not resumed. The firemen could not deal with the oil on fire as chemical equipment was lacking. All oil stores were burnt out. The great refineries of Rhenania Ossag burned for a fort-night; at Petrleeum Hafen the heat was so intense that it blistered buildings on the other side of the river. Dozens of tanks including those of the Deutsch Amerikanisch Company were burnt to the ground. Though fire brigades were brought from Kiel, Bremen, Munster and Hanover, they could only work for 8 hours as the City's water supply was hit and cut off. Firemen had to work with water drawn from the Elbe. Civilian morale in

Hamburg like shipping was broken. In the shelters the people went mad (according to the escaped stoker). Relief work did not begin properly for hours. Medical supplies in Hamburg were insufficient; they had to be telegraphed for from all over Germany. Food also was scarce until the Army brought supplies into the City on the second day of the blitz. A powder factory in a village, 15 miles outside Hamburg, caught fire and the whole village was wiped out. Flour mills and silos in the port burned for two days and two nights according to the informant who said that the main railway station was blasted and Lombards Bruecke to the east and Bilhorn Bruecke to the south-west were both smashed so that no train could run into or out of Hamburg from Sunday, July 26 to Thursday, July 29.

Prosperous Infant

A comparatively young company, Estrela Batteries, Limited has made exceptional progress. The manufacture of dry cell batteries has been stimulated by the war as well as technical advice given by the Government in the past. The policy of controlled prices has not affected profits and the statement of Mr. Choonilal Girdharlal to the company's shareholders deserves special notice in view of the fact that many industries in India to-day are subject to outside direction in regard to prices and profits. The policy of keeping prices at a reasonable level without inflating profits should be very useful after the war. The distribution of 7 per cent to shareholders is meant to be the permanent, regular dividend. The success of the pioneer Indian concern, using mostly indigenous materials, has special claims to public notice. The manufacture of dry cell batteries is essential in wartime, and when a motor car industry is set up, the Company's opportunities will be duly enlarged.

The issue of new capital to shareholders was referred to after the Company's proposed departures in production. The manufacture of carbon electrodes is to be undertaken. It is expected that plant etc. will be obtainable under special procedure, and the factory at Mahim, near the power station, is meant to develop existing lines. Plant extension may entail a fresh issue of capital but in view of the results described by the Chairman, this should be easy. The Company's progressive record warrants a re-appraisal of prospects while shareholders may derive great satisfaction from the report and accounts presented. The Company's part in war work must make for great confidence as to the future, and if the assurance as to tariff advantages is wanting, it is clear that the processes made available will constitute a special advantage. The electrical equipment industry in India is limited to a few concerns, but it must be mentioned that Estrela Batteries, Limited has shown singular promise, and investors' expectations have been more than fulfilled.

Hongkong and Shanghai Bank

Continued improvement in the quotation for the Hongkong and Shanghai Banking Corporation's stock in London may have been independent of the passing of the dividend but is certainly inspired by the Chairman's statement in June. The statement which temperately chronicles the effects of a great disaster on the famous old exchange bank is of special interest to India as proving the exceptional strength and resilience of Britain's great financial institutions at home or abroad. A year's balancesheet has not appeared but the 1942 accounts have been made up, and if the Bank does not show its former supremacy over all British exchange banks through its Deposit totals and Bills, Advances etc., which are naturally reduced by the events of 1942 one may direct attention to the fact that £27.23 million in deposits is a striking figure like the total of £13.8 million for cash and money at call and short notice. Mr. Morse's statement relates to a chapter in the financial history of the Far East which makes it clear that unusual conditions demanded unusual procedure, while it is pointed out that the Bank's losses in countries east of India are offset partially by the opening of a branch in Chungking, Mr. Morse's confidence as to the future is based on the Sino-British alliance as much as the known requirements of occupied countries.

The balancesheet figures show how the bank has taken the strain, how far liabilities are covered by assets, how the out size reserve is still a guarantee of stability and soundness. The statement, therefore, is of unusual interest to India where the loss of business from Burma branches is magnified into a great, unmerited disaster. The great Hongkong bank has been forced to move its headquarters, lose its chief executive, vital records, and very substantial assets but it is certainly functioning very well. Mr. Morse noted that in India and Ceylon the Bank participates to a satisfactory extent in the large volume of trade, and the branches in London, New York and San Francisco are dealing with matters arising from the position in the Far East and disposing of cargoes in which the Bank has a financial interest. The exceptional developments described now must be related to the formal link subsisting between the Hongkong currency and sterling as from 1941. In the future the Bank's opportunities must be enlarged by that as much as the uninterrupted growth of enterprise in Free China. The new alliance and the treaty abolishing extra-territoriality are new factors making for postwar recovery, and Mr. Morse, in assessing the future, naturally dwelt on what is promised by the postwar development of China. The statement indicates that outside the Enemy Occupied territories of the Bank retains a great position and is fully equipped to resume its work on the termination of hostilities. The Japanese may have demonetised the Hongkong dollar but that is of no consequence for the bank is not a bank of issue except in the Colony where too the status quo ante bellum may be restored; it is a commercial bank serving the Far East and the Indian Empire.

Bengal Breweries

In the prospectus of Bengal Breweries, Limited there is a detailed reference to cost of production and possible earnings. That deserves particular emphasis at present, because the Company's ability to produce beer below prewar selling prices is a guarantee of its ability to withstand the shocks of peace and war alike with equal success. As to the market for Indian made beer enough has been said about shortages, the priority given to Defence Services' demand, and the re-

THE

FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

HONGKONG AND SHANGHAI BANKING CORPORATION

To the Members of the
HONGKONG AND SHANGHAI BANKING CORPORATION.

Under an Order-in-Council made on 13th January, 1943, the Head Office of the Bank was, as a temporary measure, transferred to London as from 16th December, 1941. The London Committee were under the terms of the Order appointed Directors and your Board now consists of Messrs. A. H. Barlow, B. D. F. Beith, C. A. Campbell, A. Morse, and Sir Edward Reid, Bart.

The Directors now submit the Balance Sheet of the Bank as at 31st December, 1942, but it has been found impossible to prepare a Profit and Loss Account covering the period to this date. In existing circumstances your Directors are unable to recommend the payment of a dividend.

The Directors have appointed Messrs. Peat, Marwick, Mitchell and Co., Chartered Accountants, as Auditors, and they offer themselves for re-appointment.

By Order of the Board,
A. MORSE, *Chairman.*

London, 16th June, 1943.

STATEMENT BY THE CHAIRMAN OF THE BOARD OF DIRECTORS, TO BE SUBMITTED AT THE ANNUAL MEETING.

The Balance Sheet as at 31st December, 1942, which is before you to-day has been drawn up on lines which are unprecedented in the history of the Bank, but when it is understood that the Head Office in Hongkong and 33 out of 37 of our Eastern Branches are in the hands of the enemy, I am sure that the necessity for departing from the customary form will be fully appreciated.

Prior to the outbreak of the war with Japan, steps had been taken to enable the Head Office, if necessary, to be transferred temporarily to Singapore. However, events progressed with such rapidity that this move became impossible and our Chief Manager, Sir Vandeleur Grayburn, was unable to leave Hongkong. On 13th December, 1941, a message was received from the Colonial Office stating that information had been received from the Governor of Hongkong that it was thought best that the Head Office of the Bank should be temporarily transferred to London, and it was Sir Vandeleur Grayburn's wish that I should take charge as Acting Chief Manager. On 16th December the Secretary of State for the Colonies gave me the necessary authorisation of His Majesty's Government to carry on the affairs of the Bank from this country. In order to regularise the position of the Bank it was necessary that an Order-in-Council should be passed amending the Bank's Ordinance and Regulations. This Order-in-Council was finally passed on the 13th January, 1943, with retrospective effect as from 16th December, 1941. The Order made provision for General Meetings to be held in England and the Regulations to be construed in accordance with the Law in England.

The dual position I hold in being Chairman of your Board of Directors and Acting Chief Manager of the Bank is unusual. Owing, however, to the peculiar circumstances and to the complicated state of our affairs, the Directors decided that this arrangement was the best for the present.

In normal circumstances, Accounts as at 31st December, 1941, would have been prepared in Hongkong for submission to the Members. But for several days before the fall of Hongkong we were cut off from the Colony where all the records and data which are necessary for the building up of Accounts were maintained. Further, as the enemy advanced, more and more of our Far Eastern Branches fell under his control and in the disruption of our business and in communications which followed, returns and information which might have proved sufficient for us to prepare approximate Accounts as at 31st December, 1941, never reached us in London.

After close examination of the scanty information available here had been made by the Executive of the Bank and the Auditors, your Board decided that any attempt to establish the position as at 31st December, 1941, would prove fruitless, and all efforts were then concentrated on obtaining the figures and other information from abroad which would be sufficient for the purpose of producing a Balance Sheet as at 31st December, 1942.

In view of the fact that all Branch Returns were sent, in the normal course of business, to Hongkong, our great difficulty was in establishing the position of the occupied Branches as at the last dates on which business was carried on under the Bank's own management. The task of obtaining figures and information relating to our Far Eastern business has proved to be a long and a difficult one, but as time has gone on we have been able to surmount the major difficulties which precluded us from publishing a Balance Sheet at an earlier date. It will be observed that the currency liabilities in occupied countries and the assets unrealisable owing to the war are shown in totals only, and as they are incapable of valuation under present conditions there is no point in showing them in greater detail. Although the work involved in the dissection of the records available has occupied a considerable time, it was essential that this should be done in order that the important question of the Bank's position in the currencies of free countries should be established. I think that you will agree that the figures before you of the Bank's resources in free currencies show a position of great strength and liquidity.

Although the Balance Sheet is not presented to you in the usual complete form and it has been found impossible, owing to the difficulty of ascertaining the extent of the losses incurred in the Far East, to prepare a Profit and Loss Account which would even remotely reflect the results since 31st December, 1940, the fact that we are able, in all the circumstances, to publish a Balance Sheet at this date is a considerable achievement. Your Board regret that they are unable to recommend the payment of a dividend for the period subsequent to 30th June, 1941. I feel sure you will agree that the only prudent course open to us is to defer any question of dividend until we are in a position to measure the extent of the losses incurred in the Far East as the result of enemy occupation.

I ought perhaps to mention here that as far as our Offices are concerned, we know that in Hongkong and Shanghai the Japanese are attempting to liquidate the Bank, but to what degree we do not know. Our information is that the Yokohama Specie Bank has been entrusted with the duties of Liquidator. What the position may be when we are once again in possession of these Offices it is impossible to say.

The progress of events in the Far East is well known to you. Within a few months all our main Offices east of India were in the hands of the enemy, together with 162 members of our British Staff, as well as many hundreds of local Staff.

I regret to say that in Hongkong, Mr. T. E. Pearce, who for many years was one of our Directors, four of our British Staff and two of our local Portuguese Staff were killed in action, whilst another Director of long standing, Mr. K. S. Morrison, and two of our British Staff have died in captivity. The greatest sympathy will be felt for the relatives of these men who have died doing their duty. As far as is known, there were no fatal casualties amongst our Staff at other places, but the lack of information as regards Malaya and Java gives cause for anxiety. Twenty-seven of our Staff were amongst those repatriated from the Far East, and included in these were all our British Staff from Japan. I am glad to say that Mr. A. S. Henchman, for many years our Manager at Shanghai, was permitted to leave, and his presence in this country has been of great value.

I am sure you will all share the sympathy felt for Sir Vandeleur and Lady Grayburn and the many other members of our Staff and their families in enemy hands. Though the meagre information available tends to show that they are not in actual ill-health, it is obvious that confinement and possible hardship will reduce their energies to a state from which it will take some time to recover completely.

In past years it has been the custom for your Chairman to review at some length in his Speech to Members the political, currency and trade conditions in the Far East. It will be obvious to you that this is impossible this year, as so much of the trade concerned is at present controlled by the enemy. Such information, as we have, appears to show that the Japanese are doing their best to exploit those territories in their occupation without regard to the welfare of the local population.

But in China, where we are most closely concerned, there is a ray of sunshine in the oft-quoted tenacity and recuperative powers of the Chinese, which qualities have been confirmed once again during the present war. All friends of China who have admired her resistance for over five years against an aggressor so much superior in modern war equipment must hope that the day is not far distant when, with the material aid of her Allies, she will be able to sweep the enemy out of China. Meanwhile, and as an indication of the harmony between China and her Allies, it was welcome news that Great Britain and the U.S.A. have signed Treaties with the Chinese Government immediately renouncing their extra territorial rights and privileges in China. This will open up a new era in the relations between the Foreign Powers and China. During the years of the Concession period, large modern cities and great ports have been built up on what formerly were mud swamps. The Municipal Governments of Shanghai, Tientsin, Canton and Amoy have been models for any community. Generations of foreigners of every nationality have co-operated with the Chinese in devoting their energy, enterprise and administrative ability to the success of these communities. We feel confident that China will give full recognition to these past services.

China, we may be sure, is destined to play a big part in the post-war world. The country waits to be laced with railways, roads and airlines. Her rivers wait to be harnessed, her towns to be re-built and modernised, and her minerals to be mined. In this development and that of her foreign trade your Bank will be ready and anxious to co-operate to the best of its ability.

In this connection I may mention that the Bank has opened an Office in Chungking. Having lost all our Offices in China to the enemy, it was vital that we should be represented in Free China, and steps were immediately taken to get our Representative to Chungking, where he arrived in February, 1942.

In achieving this, we have to express our appreciation of the assistance received from the Chinese Government, also from the Chinese Bankers in Chungking.

Such is the position as far as China is concerned. But what of the other territories in which we are interested but from which we have been temporarily excluded—Hongkong, Malaya, Burma, Java and the Philippine Islands? All will require a reconstruction programme which will involve heavy demands on finance.

Though these are dark days for our Bank, with our earning power and powers of service very greatly curtailed, I firmly believe that we have good reason to look forward with confidence to the time when we will again take a prominent place in financing the requirements of those territories with which we have grown up.

Meanwhile, our Offices operating in India and Ceylon are participating to a satisfactory extent in the large volume of trade emanating from these countries, and the clearing up of our Rangoon Office is proceeding at Simla. Our Offices in London, New York and San Francisco are mostly occupied in dealing with matters arising from the position in the Far East, and endeavouring to dispose of cargoes in which we have a financial interest.

I wish to pay a tribute to our Staff of all nationalities, both overseas and at home, whose wholehearted efforts during the very difficult days through which we are passing are worthy of the best traditions of a Staff of which the Bank has always been proud. I would also like to make special reference to those now in enemy hands, who, up to the last moment, did everything in their power to render service to the public and to protect the interests of the Bank.

It is almost unnecessary for me to say that everything possible is being done to assist those in captivity, and that their dependents who are not in enemy hands are being fully cared for.

We have now 98 members of our Staff serving with the Forces, not including those who were serving with local volunteer units in the Far East, and I am sorry to report that of these, 5 have lost their lives, 1 is missing, and 3 are prisoners of war. To the relatives of these men we tender our deepest sympathy.

I much regret to have to record the death during the year of Sir George Macdonogh, who for over twenty years was a valued member of our London Committee.

I cannot conclude without acknowledging the generous consideration and help we have received from the various Government Departments concerned, and from our many friends in the City, at a time when there were so many obstacles to be overcome.

A. MORSE, *Chairman.*

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

We have examined the above Balance Sheet with the Books of the Corporation kept in London in which are incorporated the Returns received from the Offices abroad which have not been audited.

The Assets in Enemy Occupied territories and other Assets unrealisable owing to war are under present conditions incapable of valuation. We have not verified the Balance of Remittances and Drafts in Transit as the detailed records of this item are not fully available in London. Subject to these observations and the notes appearing on the Balance Sheet, we have obtained the information and explanations we have required and in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs, according to the best of our information and the explanations given to us and as shown by the Books kept in London.

Asking too much ?

Not necessarily. In all the giant steel structures that we see around us, the "little chaps" are holding their own. We're talking about the nuts, bolts and rivets that link the girders—and take their full share of the strain, too: little heroes in their way! They've got to be accurate and immensely strong. Sounds a tall order? But that's our job.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

To write a book on India at this stage of the war, and take in its broad sweep all the aspects of life in this country and the problems of the present as well as the future, is a task which few can have the courage to attempt. Not that books on India are not common. Hardly a season passes in England without a number of new works on Indian problems making their appearance. But they are almost invariably of the propagandist kind. A serious study and appraisement of India's problems and their purposive presentation in a small volume are a different matter. I would not have credited any one with such a purpose, or thought much of the result, if I had not come across Mr. Brailsford's latest publication, "Subject India." "My excuse", he says in the preface, "for this book is that I have certain things to say about India which no one else is saying". Never did any country so much need saying things which nobody said. My attraction for the book is its promise in this respect. I shall not attempt to say straightaway whether I have been disappointed. But one thing I might say now is that, though it is doubtful whether Mr. Brailsford has said all that he feels, he has certainly made the only attempt I know of to grasp our national problem in all its facets, to probe as deeply as any human brain can into the real causes of what I might call our worthlessness as a community and to bring the knowledge born of this into relation with the problems as they are now posed and attacked by Governments and by political parties.

* * * *

Perhaps, I have to make clear what I mean. It can be understood only if we realise the ways in which the Indian problem is generally sought to be understood. Take the Congressmen of the pre-Gandhiji days. They believed in the divine dispensation that brought the British from over the seas to rule this country. They believed in certain invaluable qualities of Hindu or Indian culture which were waiting for the contact with a sturdy alien culture to sprout forth a new life. And they believed that, if British rule in India seemed so sordid and selfish, they had only to pray and petition, to condemn Government actions in the strongest but most respectful terms for the British Government to realise the common destiny of the two countries and do the needful. With Gandhiji came a comparatively more realistic and dynamic force. The bearing of social problems like untouchability on our political freedom was seen. The cultural aspect of the individual Indian being able to hold up his head was also understood. Petition and prayer gave place to protest and sanctions. It was not long, however, before the Congress car was side-tracked and run into the bogs of a sterile individualistic ethics. But, to-day, the tendency is to assume away the Congress ability to win Swaraj and to concentrate the blame on the Muslim League for its obstructionism. It is not realised that, if the Muslims are obstructionist, the obstructionism and the inability of a largely popular party to overcome it are two phenomena which need to be explained. And the attitude and policy of the foreign government are no explanation either, since they need to be explained themselves. Likewise, in the economic sphere, the tariff duties on Dacca muslins nearly one and a half centuries ago is no explanation of our inability to increase our output of rice to-day, when the price of rice is ten times that of the pre-war price. To improve the fortunes of a people, it is not alone the moral qualities of its leadership that count. One has to have a clear and rational explanation of its fortunes in the past and an insight into the forces and factors that are now at work. Such insight is all too rare. It is absent in our political leaders. Indian scholars and publicists are not aware of the need for it. And foreigners cannot as a rule, hope to attain it.

* * * *

Mr. Brailsford is one of the few foreigners, who could hopefully attempt to acquire such insight and to put it to what we may call constructive use in solving the Indian problem. A few years ago, perhaps, one could not have said the same thing of him. For, sympathy in a foreigner can easily degenerate into uncritical enthusiasm for the cause of the underdog and an unreflective readiness to admire the Indian national movement in all its plans and policies. I suspect that Mr. Brailsford dwelt somewhat alarmingly long in such a state of sympathy. For his recovery, he perhaps owes as much to the disconcerting stalemate of our politics as to his own perceptual abilities and intellectual virility. It is, perhaps, an even stronger evidence of those qualities that he has not changed over to the kind of antipathy to the Indian cause, which now marks men like Bertrand Russell and Bernard Shaw. I should be the last to deny those elements in the Congress ideology and policy which may justly alienate the friends of Indian freedom. But the way these great men of letters forswear their earlier sympathies for the plight of India is no assurance of strength for the forces that seek to build a better world after this war.

* * * *

Though only in digression, I cannot help saying a few things about this disturbing trend. There are perhaps many in India to whom Bernard Shaw's remarks on the Indian problem have come as a surprise. But I flatter myself I am not one of them. If I may put it so crudely and bluntly, I was never an admirer of Bernard Shaw. Doubtless, if I were big enough to merit G. B. S.'s attention, I would be the target of one of his brilliant sallies. But being obscure, I recall Shaw's famous reply to his solitary detractor in a vast audience, "I agree with you. But we are only two against so many"! I assume, on the strength of this, that Shaw will agree with me when I say, admiration of G.B.S. has been largely uncritical. Sallies of Shavian wit are enjoyed without anyone stopping to think whether, with his natural endowment, the great G. B. S. could not have done better than to fly sweetly poisoned arrows at all and sundry. Shaw is one of those prodigies which Nature and human societies combine to create in order to disconcert the educationalist. Faith in regular education is shaken at the sight of supermen created by native capacities, keen ambition and the forces of Life itself. Men stand aghast at early success, and, more, the virility and uncanny shrewdness with which new and greater triumphs are appropriated by a Hitler or by a Shaw. But great men must be judged by the use to which they have put their natural endowments and the opportunities which come their way or which, in their egotistical frame of mind, they believe they have created. Who can question the powers which have gone to make the great G. B. S.? In sheer intelligence, that indefinable quality of the human mind and brain, which makes man nonpareil in God's creation, the quality that enables man to get at the truth of anything, however much it may be concealed by appearances, Shaw has few equals. One phrase of his will tear down the masks of Kingship and Democracy alike and leave you with no illusions about either. He can expose the absurdities of any system. He can hold any one to ridicule. But of the zeal to make his pen a trowel with which to build a better world, he has no more than what is indispensable for giving his writings an attractively revolutionary tinge. He was cut out to be a prophet, but chose to be a clown.

* * * *

Bertrand Russell's antagonism to the Congress is, for me somewhat difficult to understand. I make a large allowance for his aversion to propaganda which is not meticulously true. All his life, he has advocated resistance to propaganda; and if the supporters of the Congress in America have made certain sweeping statements which he regards as demonstrably untrue, his cultivated instincts may well rebel against it. But what I can't understand is Bertrand Russell writing an article, which "Dawn" will

seize with avidity and which the publicity agents of the Government will, doubtless, use most effectively against the Indian cause. And the pacificism of the Congress is the head and front of its offending! Some years ago, when Mr. Ramsay MacDonald banned the holding of an international pacifist conference under the presidency of Einstein, Bertrand Russell said of his fellow pacifist of the last war that Mr. MacDonald was probably ashamed of his past. One could say the same thing of Russell himself to-day, except that in his abhorrence of Nazism he has an excuse for modifying his earlier attitude to war.

* * * *

When such towering intellectuals find it hard to preserve their poise, Mr. Brailsford affords evidence in this book of that blend of clear perception and warm sympathy which is, after all, the only hope for a better world. While Bertrand Russell feels no constraint in virtually acquitting the British Government of fomenting the communal antipathies, Mr. Brailsford sees the position more deeply and fully, is able to separate the hard core of realities in the communal situation from the loose accretions of political controversy and the manoeuvrings of party politics. As a Leftist he is a master and not the slave of the Marxist apparatus of sociological enquiry and sees the identity of interest of the working classes of both communities and the facility which present conditions afford for bourgeois politicians to rally communal sentiment in support of the propertied classes. At no point is this diagnosis allowed to appear as armchair theorising; for there is a close examination of every vital problem with a view to see if there is any divergence of communal interest. Likewise, on this burning—yes, incendiary—question of Pakistan, he keeps his mind to a number of different possibilities; and his practical sense is best evidenced in his readiness to consider the possibility of the Pakistan provinces choosing after a short period of separation to merge themselves in the Indian Federation.

* * * *

Mr. Brailsford's poise is best seen in the readjustment of his mental attitude to the ideology and the practical policies of the Congress. In the second part of the book, which is a reproduction of some of the chapters in his earlier book "Rebel India", Mr. Brailsford shows himself the enthusiastic admirer of the civil disobedience movement of 1930, and of the unique methods which Gandhi had devised for expressing the will of an unarmed people. But the first part, which alone represents Mr. Brailsford's appraisement of the Indian situation to-day, suggests at more than one point, the onset of scepticism about the quality of our political leadership. Mr. Brailsford is doubtless, as fervent an admirer of Gandhiji as he ever was. But when he says that "his (Gandhiji's) is not a perceptive mind", and that what Mr. Brailsford for his part has always failed to grasp is the use of non-violence as a tactic of resistance which may strike at property and legitimate economic interests, though it will not wound or kill, one gets the feeling that Mr. Brailsford is sensing a weakness in the Congress method which he does feel called upon to be more explicit about.

* * * *

Mr. Brailsford does not go by the appearances on the surface of Indian politics. While he is prepared to apply his faculties to suggesting a solution of the present deadlock, he clearly sees the fatal weakness of the Congress and the Muslim League alike. He cannot bring himself to condemn the Congress. But he not only reserves the right to be sceptic of the efficacy of non-violence, but he also mentions, with implicit disapproval, the policy of the Mahatma in curbing the Leftist groups, his anxiety to placate the propertied classes and prevent the effective organisation of peasants and workers. Of the Muslim League, he has formed the definite opinion that it represents the attempt of Muslim landlords to retain their power and privilege by splitting the workers on communal lines. All this may seem in the eyes of many in India only a result of Mr. Brailsford's leftist modes of thought, which facts cannot warrant, but may easily be twisted into supporting. But the thousand and one issues that make up the Indian problem can be strung up only on the line of the economic interpretation. Those, who understand it in the broad terms of its general validity and not in its doctrinaire narrowness, are well able to separate the long-term forces from

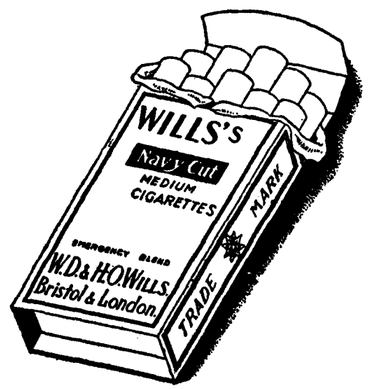
the short-term, see every given situation both in itself and in the wider setting of more long-standing forces. Mr. Brailsford can admire the splendid courage of Congressmen in the movement of twelve years ago and, at the same time, retain strong doubts about its efficacy in the freedom movement. He can adore Gandhiji as a saint, and not lose sight of the "disastrous fallibility" of his judgment. He subscribes to the nationalist argument that communal dissensions are the making of the third party, but cannot overlook either the differences in the outlook of the two religions or the ease with which the League can split the masses on communal lines. His analysis of the causes of the failure of the Cripps mission may well be the last word in this most vexatious controversy:

> "Had there ever been an offer of independence to India? The answer may be that before our reinforcements could reach the Peninsula over the long passage round the Cape, a rigid formula was carried to Delhi by an honest but unlucky messenger, who mistook it for an offer of independence. It failed in the opinion of all the Indian parties to transfer to them the reality of power to-day. It offered no prospect of independence to-morrow, because the Empire retained its 'friendly fortresses' in the princes' States. The military prospect has improved since Sir Stafford Cripps flew to Delhi. The Prime Minister's tone has also changed and he has dismissed the herald of reconciliation from the War Cabinet".

Mr. Brailsford has no illusions about an early change of policy. He has, as I have said already, weightly suggestions to offer about the best way to end the deadlock. But like me, if I may say so, he sees what drag or dead weight the people are on every progressive movement, how they are themselves weighed down by historic forces and present circumstances, how in the economic sphere there is an unbreakable vicious circle and poverty breeds ignorance and ignorance subjection. In a few chapters Mr. Brailsford has been able to give the clearest and the most comprehensive treatment of the Indian problem. He sees exactly where religion creates our disabilities for economic progress, where the interests of foreign overlordship intervene to bolster up a parasitic landlordism and why the peasants and workers cannot strive to master their destinies. He sees even more the enormous waste of manpower in the processes of daily work socalled and the obstacles in the way of rationalising and modernising such work. He does not grudge a tribute to Indian idealism. He does not mince words in condemning the wrongs done by his countrymen to India. But, though he does not rub it into us, we will do well to note the unflattering remarks where they occur; that "lawyers . . . fight his (the usurer's) causes for him and prostitute their brains to serve his interests in elected assemblies," that though "the capitalist party is small" and "the industrial capitalist may be reckoned in tens of thousands," "politics are dominated by parties based on property," that, if the Muslim League is unwittingly a rampart of Muslim property, the Congress is only more subtle in its alignment with propertied interests as a whole. The crux of the problem lies in our spiritual, even more than our material, poverty.

> "The arrest of development which matters, is that Indian society, as a whole, has passed through no experience comparable to the rationalistic and realistic movements which between the seventeenth and nineteenth centuries lifted Europe out of the Middle Ages. Such movements could take no root, because so soon as India was ripe for any collective thinking, she inevitably turned nationalist. Nationalism criticises the foreigner; it does not turn inward to analyse the inheritance of the past".



Such a rebuke from one so indubitably friendly, coming on top of the most penetrating survey of the Indian situation is something to ponder over. Mr. Brailsford's "Subject India" is the tonic for India at the present stage.

* * * *

If journalistic anniversaries are not suitably celebrated in special supplements, the profession as a whole will not fail to remember that the Editor of the Indian Review celebrated his seventieth birthday recently. Rao Bahadur G. A. Natesan has certainly attained distinction outside the profession. Madras knows him as a Sheriff and more recently as a vigorous consultant on war publicity. Canada knows him as a delegate to the Empire Parliamentary Conference while the majority in India recall his work on the Tariff Board with sufficient appreciation for having squared the circle; kept up protection, arranged for complementary production, and accepted Imperial Preference without prejudice to one or the other. An exponent of compromise, he showed then that Indian Liberalism could make the best of all worlds, and proved that the finessing genius rises superior to the fervour that is so common. The publishing firm he has conducted with exemplary skill is known for its varied output. Its interest in the Indian languages has never been dormant; and the Hindu religious classics have found in modern publishing enterprise adequate support. Rao Bahadur Natesan, of course, has other claims to remembrance. He has contributed to political consciousness by his collections of Victorian and Edwardian oratory and he has

New Delhi, September 7.

NEW DELHI is at the moment buzzing with unusual activity-conferences at the Viceroy's House, food talks at the residence of Sir J. P. Srivastava, important meetings of two all-India bodies, the Foodgrains Policy Committee and the Tripartite Labour Conference and more than one meeting of the Governor-General's Council during the week. The visits of the two officiating Governors, Sir Thomas Rutherford and Mr. R. F. Mudie, were not merely a formal call on the Viceroy —they were both very busy in discussing the food question with the officials of the Government of India. And as the Premiers of the Punjab and Orissa and the Civil Supplies Minister of Bengal have also been here, certain useful discussions have already taken place. Immediate arrangements for rushing food supplies to the deficit areas to enable Provincial authorities to go on with properly organised relief work are for the present the main objective, but when the Food Conference re-assembles next month, definite plans will be placed by the Government of India on the basis of the Foodgrains Policy Committee's recommendations. It is not yet clear, however, whether this committee will be able to submit a unanimous report, for I understand that there is disagreement on some portions of the draft report prepared by Sir Theodore Gregory. New administrative arrangements are also being made in the Secretariat to cope with the heavy responsibilities of the Food Department. As already anticipated, Sir J. P. Srivastava has been relieved of the Civil Defence portfolio which has now been tacked on to the Defence portfolio under Sir Firoze Khan Noon. Sir J. P. Srivastava continues, however, to be responsible for organising postwar reconstruction work.

* * * * *

Militarily also, there is a great deal of activity going on in New Delhi—thanks to the energy imparted by the new Commander-in-Chief, General Auchinleck. A new head has taken charge of the United States Airforces in India *vice* General Bisell, who has been given another important assignment. In addition another frontrank American General, General Stratemeyer, has arrived in New Delhi. As it has also been announced that the Commander of the South-East Asia Command, Lord Mountbatten, will have for the present his headquarters in New Delhi, there have been various reports current for some time. The general anticipation is that before the next fall the offensive for the retaking of Burma will be in full swing. Some expect it in the coming spring itself, but the final decision will depend upon the progress of the operations in Europe. In any case the military importance of this country will be at its height during the next few months. One advantage accruing to this country as a result of the rapid improvement in the war zone is the possibility that from October onwards the shipping position will be more favourable than at any time during the last four years. Sir Ramaswami Mudaliar, the Supply Member, has already indicated in a public speech that imports of foodgrains from Australia and America may be expected later in the year. It has already been mentioned in these columns that one at least of the unanimous recommendations of the Foodgrains Policy Committee will be provision of facilities for importing agricultural machinery and plants for fertiliser manufacture for helping the "grow more food" campaign. Some urgent consumer goods needed for the Defence forces and also the general public are also expected to come in before the end of the year. It may be noted in this connection that the trade figures available for the first two months of the current financial year, show fairly satisfactory improvement in the export side, imports have fallen to less than half of the 1941-42 figures. The total exports of Indian merchandise in May this year were very nearly Rs. 16½ crores in value—an increase of nearly Rs. 3 crores over the figure for May 1941. As regards imports the figure for May 1943 is less than Rs. 8 crores though it was nearly Rs. 18 crores in May 1941. As the need for importing machinery particularly machinery for emergency irrigation works and increased agricultural production is great, it is expected that something will be done to rectify the position during the coming months.

* * * * *

In this connection an interesting question has cropped up for discussion in non-official circles in New Delhi, the question of war expenditure in connection with the coming operations. The Committee of the Federation of Indian Chambers of Commerce and Industry spent a whole morning on Monday discussing this question and finally decided to address the Government of India in order to seek information as to the financial commitments under which India might be placed as a result of the campaign which will be waged by the East Asia Comand against Japan. As has been pointed out in these columns the general budgetary position this year has been very satisfactory. Revenues have been progressing far more favourably than anticipated in the Budget estimates. And there is no reason to think that even on the expenditure side there will be any violent fluctuations in the coming months. The Government's loan policy this year is also showing far more satisfactory results. But in any case there is the fear in non-official circles that further expansion of currency will be necessary in order to finance the cost of the East Asia Command though it will be reimbursed in London by His Majesty's Government. Not until the Central Legislature meets in November this year will it be possible to get some definite official information on the exact financial implications of all these new developments, but there is also a report that in order to discuss the whole question of war expenditure and other matters Sir Jeremy Raisman may have again to go to London. It is not yet known, however, whether he will go immediately or wait till the November session of the Central Legislature is over. At the moment the Finance Member is concentrating on plans for speeding up the savings drive and see that as much money as possible is invested by the public in the Government's defence loans.

* * * * *

The speech delivered by the Labour Member, Dr. Ambedkar, at yesterday's Tripartite Labour Conference, has aroused more than common interest. For the first time an official speech of a Government Member makes reference to Social Security plans and the Beveridge Report and admits "We in India cannot shut our eyes to them? What sort of social security plan has the Government of India in view for postwar India? And on what lines are the Postwar Reconstruction Committees working in this connection? In connection with industrial organisation two principles were, however, urged by Dr. Ambedkar. He referred to the contradiction between "fabulous wealth and abject poverty not in its simple form but in its aggravated form in which we see it, wealth to those who do not work and poverty for those who do". And then he went on to say "It will not be enough to bend our energies for the reduction of more wealth in India. We shall have to agree not merely to recognise the basic right of all-Indians to share in that wealth as a means for a decent and dignified existence, but to devise ways and means to ensure him against insecurity". As the conference is still going on, it is difficult to say what exactly are the reactions to the Labour Member's speech. According to the Indian Members of Government, a period of increased industrialisation is bound to follow as soon as the war is over. Already many prominent industrialists are preparing plans for the postwar period, for in the struggle for new markets and increased production, India cannot allow her interests to be sacrificed owing to neglect or lack of forethought. Unfortunately nothing tangible has yet been done by the Government to help these industrialisation plans, but when the Postwar Policy Committee meets this question of starting new industries is bound to figure largely in its discussions. With increased industrialisation is certain to come in the national income and also an improvement in the standard of living, but what the Labour Member is anxious about is that new standards should be set up for satisfying the working class in order that there may be an equitable adjustment between the respective claims of capital, labour and the consumer.

* * * *

I understand that the Oserseas Department of the Government of India intends to take a census of evacuees and refugees commencing from next month. The intention is to have full information regarding the number of these evacuees, their present residence and occupation and other particulars. A good deal of information is already in the hands of the Burma Government in Simla, but the coming census is expected to complete the process. The Government of India have already a register showing the names and other particulars regarding foreigners and Europeans. The coming census will therefore be confined to Indians, Burmans, Anglo-Burmans Anglo-Indians and similar classes from Burma, Malaya and other occupied countries. They are believed to be about half a million.

* * * *

A number of official changes has been announced this week, Mr. Ibbontsen who was mainly responsible for organising the Civil Defence Department is going back to the United Provinces as Adviser. His place goes to Mr. Symons, the present Additional Secretary, Mr. C. S. Venkatachar, I.C.S., from the United Provinces will join the Food Department as Joint Secretary.

Bombay, Sept. 6.

A REVIEW of famine relief operations in Bijapur may serve as a reminder to Bengal that Bombay has its own problem on its doorstep. This year's monsoon is not very strong in the Deccan and the Kharif harvest presents a big question mark. In the last nine months the expenditure on relief in the district amounts to Rs. 85 lakhs. Distribution of seed and fodder was but an item in the relief given. Employment of 50,000 people and gratuitous relief for 66,000 persons account for the bulk of the expenditure, devoted to land development schemes as well as relief works. The bunding of land to check erosion has been attempted after the appointment this year of a special officer. Improvements in relief operations have been produced as a result of criticisms. The Army has helped Bijapur by giving transport lorries for grain and fodder. The lorries have been recently withdrawn from use but lorries from the neighbouring districts have been obtained. Free kitchens have been run by the non-official Relief Committee which has been promised assistance to the extent of any deficit, provided that the number fed is limited to a certain figure. Scarcity in Bijapur has not led to any rise in prices there. The official rationing procedure has secured that result, and grain sells below cost price. An increase of cultivation with over one million acres under kharif crops has been secured.

Rumours as to sales of gold by South Africa, the Netherlands Government or any outside agency have not lowered prices. The bullion market here is getting firmer and the old argument as to the value of hoarding of metal or coin is not repeated in certain quarters. Though gold may be required for various purposes it has been urged by Sir C. B. Mehta that bullion imported and sold will have the advantage of holding down commodity prices. If 30 million ounces of gold can be had under lease-lend for approved purposes, the repayment could be effected by this country over a period of years. The export surplus could be used for discharging a debt to the U.S.A. This debt would help to check inflation in India by reducing the amount of notes in circulation. Sterling balances, too, could be applied to discharge a debt that will not grow burdensome as the U. S. price is still pegged at $35 per ounce. The assumption that the Union of South Africa is selling gold in India to pay for the Union's excess of imports from India is supported by reference to the trade returns of recent years and the price level in the bullion market. The major point to consider is the effect of large imports on the level of gold. If 30 million ounces bought at $35 an ounce (Rs. 46 per tola) come on the market in a steady stream, prices must go down, if not now after the war, and the buyers would be hit hard. The gain to the Government would not be large in comparison with the loss suffered by Indian hoarders. There is, of course, the consideration that contraction of currency by saving and lending on a large scale might yield better results than the retirement of redundant notes by the sale of gold.

Apart from reporting progress in the textile, paper and sugar industries of the State during the war period, Hyderabad has experienced the same monetary changes as British India. Circulation is rising and the annual increase of Rs. 83 lakhs has been surpassed. At the end of Fasli 1351 active note circulation was Rs. 18.65 crores and the reserves was made up of silver coin, Hyderabad securities and British Indian securities. The disappearance of silver rupees from circulation was a result of the bullion boom and the State has decided to issue one rupee notes printed locally. As the Mint is fully worked, the shortage of metallic currency is acute.

The A. I. M. O. held a meeting last week when the usual advice as to preparation and planning was offered by Sir M. Visweswarayya. He regretted that the official committees had not produced any schemes for the development of resources or expansion of employment after the war. The role of private enterprise in the post-war planning period has been satisfactorily indicated. Deficiencies have to be studied and made good thereby. The control of capital issues is deprecated by the organisation. Exemption has been demanded for issues connected with specified industries. The committee has recorded the opinion that India is unable to use existing conditions for the benefit of industrial growth because of the new restrictions. The Reserve Bank's new chief told Bombay rotarians about the changes in budgets and public debts. Taxation, especially direct taxation, has increased in all countries and the Governments had borrowed heavily at a moderate cost. The essential result was that one-third of the burden was shifted to later generations. He advanced the view that it might not be far from correct to say that almost the entire burden of the war was borne by those who loved and worked in the present. International finance has been altered by lease-lend. Large-scale borrowing is a rude check to inflation in the opinion of Mr. Deshmukh who described the technique of currency expansion and argued that foreign assets could increase without a corresponding degree of inflation as the link is optional. The Reserve Bank report's finding as to the value of controls to check speculation and profiteering was repeated by the Bank's Governor so that the Rotarians got the report in potted form.

Mr. P. D. Shamdasani has succeeded in an action against the Central Bank. In a revision application from the order of a Presidency Magistrate he has won. The High Court decided that a notification of the Governor-General in Council permitting banking companies to leave out bad and doubtful debts in the balance-sheet presented in accordance with Form F in the schedule to the Indian Companies Act was *ultra vires.* The Chief Justice and two judges heard the revision petition turning on the validity of the notification rather than the blemishes in the Bank's balance-sheet of December 31, 1939. The Magistrate acquitted the Board and Auditors of the Bank and the rule was discharged. But the exoneration is not at all touched. The Chief Justice objected to the amendment of Section 132 of the Act by notification by the Governor-General on his own authority. It does not look as if the Government will appeal but the Bank must certainly take note of the Bench's observations and show bad and doubtful debts as usual. Not one but all banks must respect the judgment.

The Department of Industries' report described the progress made by soap factories and oil mills and reviewed the increase in employment and the enhancement of opportunities. Blanket weavers are busy on war orders so that war prosperity has spread to cottage industries. A.R.P. workers are getting handloom blankets and 300 families of weavers in the Karnatak have been afforded employment. Local sheep-breeders too benefitted from orders for blankets. The blanket weavers of the U. P. and Madras, too, received direct benefits but cottage industries in Bombay are just looking up. Homespun may come into fashion because imported woollen clothing is scarce and handloom weavers may derive further benefits.

Mr. C. Rajagopalachari who asked for the revival of the Cripps offer has been answered by Sir Homi Mehta who is amused by the former's comments. He declared that Sir Stafford Cripps is not at the beck and call of Congress which refused the offer. He declines to believe that prospects of an agreement has improved. Indian politics is still confusing and Sir Homi Mehta in reference to the military effort developing in India suggests that war effort will bring independence. Sir Homi declared that C. R. does not express the views of the masses. C. R.'s duty is to ask Congress to put its house in order according to Sir Homi Mehta who says that controversy instead of reconstruction has come to claim attention because of Congress' dramatic failure.

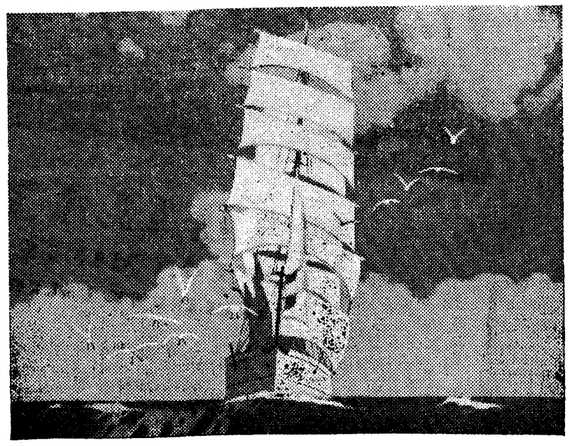
Madras, Sept. 8.

WHILE it is too early to assess the benefits of rationing, the elimination of the wholesale dealers from the entire distribution system adopted by the rationing authorities has definitely hit several merchants very hard. Government have failed to realise that in these days of scarcity of foodstuffs and ever-increasing control orders, the efficient administration of war time orders can be achieved only with the full co-operation of the merchant classes. The black market, profiteering, hoarding and speculation which ruin the economic stability of India to-day can be satisfactorily controlled, only if the merchants are induced to feel a warm interest in public order. To exclude them completely from the working of the rationing scheme is not the way to win their co-operation. The South India Chamber of Commerce, represented to Mr. S. V. Ramamurthi, Adviser to the Governor, that merchants had invested large sums in establishing business relations with numerous buyers and sellers of commodities and that, if the wholesale dealers of rice are to be totally excluded, as at present proposed, they would suffer heavy losses owing to the difficulty of recovering the dues from the respective parties. The Adviser failed to allay their fears but gave an assurance that the services of the wholesale merchants would be utilised if the necessity arises. The discontent of the dealers has become very acute when they learnt that the handling of rice transport in connection with rationing has been entrusted by the Government to an European firm. This discrimination has led to deep resentment; but the merchants appear to be helpless.

People are deeply moved by the harrowing tales of hunger and death issuing from Bengal. The local press has reproduced from the Calcutta papers the pictures of destitutes dying on the streets of India's biggest city. And this has led to a wave of sympathy for the sufferers in Bengal. Funds are collected in several places to aid the Bengal Famine Relief Committee. When the granary of India suffers the ravages of a man-made famine, the writing on the wall is clear that other provinces must take care to ward off the menace. Bengal famine, caused by official callousness and bungling, has several lessons for Madras. Firstly, this is the time to show the unity of India by pouring help to the unfortunate millions of that province. Secondly, public opinion and co-operation should not fail to tackle the hoarders and speculators and must make earnest attempts to grow more. To sit quiet throwing the whole blame on India's political status will neither help the suffering nor qualify the people for self-government.



The Grow More Campaign seems, at least from the official point of view, to have yielded good results. It is estimated that the area under food grains has been extended by 8½ million acres last year as a result of grow more drive. The part played by the Madras Government in this is not inconsiderable. A recent pamphlet issued by the Government gives a detailed account of the measures taken to accelerate food production. According to this publication the main lines of the food drive are "firstly, extensive cultivation by bringing new acres under food crops, increasing double crop cultivation and cultivation during the off-season; and secondly, intensive cultivation by the use of improved seeds and better manuring". The advantages of using hand-pound rice and growing vegetables and fruits on unused lands are also emphasised. A few days ago Mr. Austin, Adviser to the Governor, appealed to the Tanjore Mirasdars and trustees of temples to produce more food grains to meet the district requirements and also for helping the deficit areas. He said that an Agricultural officer would soon be appointed to help the Mutts and temples in the matter of intensive cultivation of their vast tracts.

The immediate worry of the city lies in the scarcity of milk and firewood. The Hotel Proprietors' Association have made representations to the Collector to take immediate steps to solve the difficulty. Now that South Arcot, Chingleput and Chittoor districts have failed as sources of supply of firewood, suggestions are put forward for bringing firewood from the Godavari and the Krishna Delta by means of coastal craft. There is no dearth of forests within the province and hence there should not be any insurmountable difficulty in exploiting them for urgent civilian needs. The transport charges would be reduced to a fifth if wood is converted into charcoal and then sent to the city. Milk, which is an essential article of food, has already become a luxury often beyond the reach of the middle classes. The chief cause of the steep rise in the price of milk lies in the scarcity of fodder crops. Wheat, bran, pottu (Bengal gram husk), kambu, oilcake and paddy straw have become very difficult to procure. The prices of such fodder has risen three to four times in recent months and thus the cost of maintaining milch cows has gone up very high. It is high time that Government afforded transport facilities for supplying cattle fodder and firewood to the city and alleviate the suffering of the people.

The possibility of exploiting the iron ores of Salem is discussed in detail in the March issue of the Quart. J. Geol. Min. Soc. Ind. That the iron ores of Kanchanamalai Hills can yield raw material for a 100-ton steel plant for several centuries is indeed revealing. Methods of treating and concentrating the low grade ores are discussed at length

(*Continued on page* 522)

Aspect of an Industry No. 18.

WHITE WINGS

THE dazzling white of full sails and seagulls' pinions as they catch the sun in high relief against the wine-dark water seems the ideal of whiteness. Yet it is illusory, and the purity of sails or feathers is far surpassed in the standards the public demands from the modern laundry. Laundering is indeed a highly technical business, in which the research and service of the British chemist is of the first importance. The launderer has to consider the nature of the textile fibre in question, the fastness of the dyestuff with which it is coloured and the character of the finishing agents with which it has been treated. He must, for example, not only remove every speck of dirt or sign of stain but also take precautions against the shrinking of wool, against silk's loss of sheen, and against the fading of the dyes. Dry-cleaning introduces another set of chemicals and its own range of problems. It is to the chemist that the launderer looks for help in purifying and softening his water supplies: in thoroughly wetting great masses of materials and in loosening and removing the dirt from them: and in providing an ever-increasing number of chemicals for determining the "feel," colour and appearance of textiles as well as their resistance to wear, grime, sunshine, rain or perspiration. Your launderer and dry-cleaner aim even in wartime at returning a fabric or garment with all its qualities unimpaired. The British chemist contributes by making this aim a possibility.

ICI

Imperial Chemical Industries (India) Ltd.

To the Shareholders

MAHALAXMI
COTTON MILLS LTD
15, CLIVE ST. CALCUTTA

Paid-up Capital Rs. 15,00,000

Divided into 60,000 shares of Rs. 25 each

On April 27, I had the pleasure of announcing the offer of Mahalaxmi dhoties and sarees at concession rates to Mahalaxmi Shareholders, and I was happy that some of the other Cotton Mills in India followed up with facilities on somewhat similar lines to their shareholders.

I have now pleasure in announcing a similar offer in connection with the forthcoming Pujah and Id festival.

The prices at which the sarees and dhoties will be available to shareholders now are almost the same as on the last occasion, but the terms and conditions are somewhat different. They are:

(a) Delivery of cloth will commence on 27-9-43.

(b) Shareholders will be entitled in respect of every share held by them, to one pair of saree 44" × 10 yds. at Rs. 6/- or one pair of dhoty 44" × 9 yds. at Rs. 4/2/-, or one pair of dhoty 44" × 10 yds. at Rs. 4/8/-, delivery ex Company's Head Office.

(c) So far as the concession for sarees is concerned, shareholders will get a maximum of 25 pairs of sarees or one half the number of shares held by them whichever is smaller.

(d) Delivery coupons will be sent to the shareholders whose names appear in the Company's list of shareholders as on the 18th September, 1943; and shareholders will fill up the coupons and forward them to the Managing Agents, together with a remittance on the basis of the special prices.

(e) Remittances are to accompany the coupons by G. C. Notes or Postal Orders or Bank Drafts on Calcutta and no remittance is to be made by Money Orders as M.O's are difficult to connect with relevant coupons; dividend warrants of this mill will also be accepted.

(f) Only such coupons will be valid as are received in the Company's Head Office not later than the 1st October, 1943. accompanied by the necessary remittance.

I extend my sincerest good wishes for the Pujahs and Id Mobarak to every member of the Mahalaxmi family on behalf of my colleagues and on my own behalf.

H. Datta

and the availability of charcoal makes the adoption of Stuerzelberg Process possible and profitable. Problems in connection with the mining, dressing and smelting of the magnetite ores of Salem are also elaborated. Big smelting works can be started to utilise the deposits of Chabali and Pagadalapalli in the Cuddapah district. But mere suggestions of large possibilities for steel industry can only excite our curiosity without satisfying our industrial thirst. Whether the Government would act upon the suggestions contained in the journal or shelve them as usual remains to be seen.

Deposits of fireclay are spotted in a village in Madura district and it appears that this single village can yield 2,500 tons of clay. The clay stands high temperature tests and is therefore suitable for use in the manufacture of refractories. The deposits contain 50 per cent clay and is not plastic even after washing. They can be used in making crucibles and fireworks. If further investigations are carried on, it is possible that similar clay deposits are found in the Periakulam Taluk.

The record of work done by the Board of Industrial Planning and Co-ordination of Mysore is indeed impressive. With its 15 sub-committees the Board has been ceaselessly trying to press scientific talent for exploring new avenues for the raw materials found in the State. During the brief period of its functioning it has carried on useful surveys of researches conducted by the industrial concerns and formulated measures for co-ordinating them. Nine schemes were successfully completed in connection with (1) manufacture of cream of tartar from green tamarind, (2) chromium oxide, (3) acid resistant earthenwares, (4) silkworm guts, (5) printing inks, (6) parachute cloth, (7) sulphanilamide, (8) ammonium carbonate, and (9) fuse bodies and galvanised iron buttons. The Government have also sanctioned the resumption of chrome mining at Byrapur. An association of the technologists of the State will soon be formed and the achievements of industrial Mysore will be displayed in a permanent industrial museum to be established at Delhi.

(Continued from page 511)

search devoted to containers and trasport. These problems may not affect a local brewery with local connections for brewery companies depend largely on local custom and the city of Calcutta is perhaps the most promising market that India can offer to any company. The virtues of beer are indicated rather briefly in the prospectus which mentions that Indian barley and hops of satisfactory quality can be had at present. The acquisition of public houses is superfluous for the demand is mainly for bottled beer. European and Japanese products are unobtainable and Indian beer enjoys almost a monopoly. A new producer has impressive advantages, and the production of Bengal Breweries, Limited will start within four months. The managing agents have ascertained costs: the finding as to quality has been given by the Excise Department and the Chemical Examiner. The laboratory experiments were conducted by a Director with experience of German brewing methods, and it is possible that the Company will repeat the success noted already in the case of other breweries in India. The record of the industry is such as to stimulate any investor's enthusiasm. Orders for plant have been placed in part, and the present issue of capital is the culmination of the promoter's efforts. The factory promises in Ballygunge have been arranged for: so also the supply of bottles and crown corks. The all-in cost of 600 bottles is Rs. 350 and the estimate of 10/15 per cent as dividend is in line with dividends being paid by established brewery Companies. As an industry in every country brewery is wholly immune from cyclical risks—that is a valuable consideration when investors are preparing to examine the peace risks of Indian industries must respect and the advice of an expert on fermentation will be available from the period of experiments described in the prospectus. Mr. A. N. Dey of Sen, Law is a Director, and Mr. D. C. Ghose, the leading figure in the group of India tea planters, is association with the company. The offer of ten-rupee shares at par is more than likely to meet with strong response and the unissued capital represents a reserve that will strengthen the earnings position in the future. The market's present rating of brewery shares is such as to suggest that a premium is inevitable, but our investors should not ignore the well-received opinion that brewery shares are strictly comparable to bank shares.

(Continued from page 499)

loans. The new loans are on behalf of the governments of Bombay, Madras, the Punjab and C. P. and Berar aggregating Rs. 7.75 crores. The loans are raised for the repayment of a portion of the loans advanced by the Central Government in respect of productive expenditure incurred prior to April, 1937. All the new loans carry interest at 3 per cent and are repayable at par in 1956. The issue prices, however are different. The Bombay Government is issuing at par, the Madras Government at a discount of 8 annas and the Punjab and C. P. and Berar at Rs. 99 per cent. The amount in respect of the Bombay Government is Rs. 3.5 crores, Madras Rs. 1.25 crores, the Punjab Rs. 2.50 crores and C. P. and Berar Rs. 50 lakhs. It was just at this time last year that the 3 per cent 1955 loan was issued by the same governments, the amounts being identical in individual cases. Only the issue prices were different. Bombay loan was issued at Rs. 98-8, Madras at Rs. 97½, and Punjab and C. P. and Berar at Rs. 97 per cent. There is a great demand for provincial loans at the moment and with the quotation for 3 per cent 1955 Punjab and C. P. and Berar at Rs. 99-6, the success of the new issues is assured. All the loans carry the provision for a depreciation fund at 1½ per cent. There is besides the contributions that the governments may make towards a sinking fund for open market operations.

preserved a periodical that has survived most of its rivals. The rigid maintenance of standards and traditions in and through the journal is well worth remembering when originality is scarce or reprehensible.

* * * * *

The Bank of India is to experience a great change soon as Sir Alexander Gray is due to retire. The Bank of India has been fortunate in having Sir Alexander to guide it for years since he knew Indian banking before and after the Great War. As the late Mr. H. P. Stringfellow's successor he has more than made the Bank of India retain its special favoured position right through. Sir Alexander left the Alliance Bank for the Bank of India and a long, distinguished career in Bombay has put the Indian banking world in his debt. The inflexible orthodoxy of one Indian bank is largely due to the standards laid down and observed in his time. The result has won universal appreciation. The Bank of India has flourished greatly, and the Bank's public knows that the long and singular immunity from strain has been due to exceptional direction for which Sir Alexander Gray, rather than the Board of very busy men, has been responsible. Bombay has always attracted talent of high degree, and the rare success that has been the fortune of the many Bombay enterprises has been due to readiness to use non-Indian talent. The successor of Sir Alexander is Mr. A. C. Clarke and continuity is ensured.

'EAVESDROPPER'

A faulty piece of steel subjected to extraordinary stress may have dire consequence for any structure or machinery of which it is an integral part.

It is for this reason that cross-sections of special steels produced at Jamshedpur are constantly examined microscopically and submitted to the most probing tests by "The Brains of Steel".

TATA STEEL

Issued by The Tata Iron & Steel Co., Ltd. Head Sales Office :—102A, Clive Street, Calcutta.

TO THE SHAREHOLDERS
OF
BASANTI COTTON MILLS LTD.

With a view to make some contribution to relieve the distress caused by high prices of cloth, and with a sincere offer of their good wishes on the eve of the Pujah, the Directors of Basanti Cotton Mills Ltd. have decided on the following scheme to supply cloth at concession rates to their shareholders:—

(1) For every three ordinary shares held by a shareholder, one pair of *dhoti* 45×10 yards or 45×9 yards will be offered at Rs. 6/5/- or Rs. 6/- per pair respectively.

(2) Delivery of cloth in respect of the shareholders whose names appear on the Company's Register of Shareholders on 1st September, 1943 will commence as from September 15, 1943.

(3) So far as the shares to be allotted in respect of the new issue are concerned, similar concessions will be offered but the terms and conditions of delivery in their case will be announced later.

(4) Notices indicating the pairs of cloth to which each shareholder is entitled and giving other particulars will be posted direct to the shareholders; and the Notices are to be returned duly filled in, together with remittance by currency notes, postal order or bank draft on Calcutta. Remittance by M.O. will not be entertained as it becomes difficult to trace M.O.'s.

(5) The Notices will be valid only up to October 5, 1943.

(6) Mofussil shareholders are requested to take delivery through their friends in Calcutta as the Company may find it difficult, in the present days of extremely difficult transport, to despatch cloth to mofussil shareholders. Attempts will however be made to send a limited number of cloth by postal parcel. These will be sent by V.P.P. for recovering the cost of V.P.P. parcel. The Company does not guarantee to send cloth by V.P.P.

On behalf of the Directors and the Managing Agents of the Company, and on my own behalf, let me offer you our sincerest Pujah greetings.

BASANTI COTTON MILLS, LD.

Resume of Commodity Markets

There have been no important developments in the commodity markets during the past week. The raw jute market has been slightly steadier with business passing on a restricted scale. Demand is confined mainly to new crop with not many sellers offering. It is reported that there are many sellers of old crop varieties. The jute manufactures market has been uninteresting and prices have been fluctuating in very narrow limits. The larger number of mills working at the present moment and the absence of any demand have been mainly responsible for the easier tone of the markets. The piecegoods market in Calcutta has been very steady owing to the shortage of supplies but an easier tone has been noticeable in the markets elsewhere. The bullion markets have not been very much interesting. It was only towards the close that a slight decline in prices was noticeable on reports regarding the capitulation of Italy.

* * * *

An interesting situation has been created in the raw jute market. It appears that, with the improvement in the shipping position, it would be possible to effect larger exports of jute to countries overseas and that the decline in the consumption by local mills might be offset to a certain extent by the increase in exports. It is the improvement in the export outlook that has been responsible for the improved conditions in the pucca bales section this week. It will not be possible, however, to take any definite view regarding the requirements for the current season with the present unsettled conditions. The slight accession of strength to the market has been mainly due to the scarcity of imports into mofussil centres and the firmer attitude of the ryots. Mills have been eager to dispose of their old jute and replace them with new jute. That is the reason why there has been a widening in the disparity prices for old and new crop varieties.

* * * *

The bullion market has been uninteresting and prices have been fluctuating in very narrow limits. With the capitulation of Italy and the possibility of a further substantial improvement in the war situation, operators are inclined to take a cautious view of the future. It is reported that the Government of India might acquire gold and sell it in this country in furtherance of their anti-inflationary drive. There has been no further selling of gold by the Reserve Bank during the past few days. As the last sale was made at Rs. 70, the quotation has been fluctuating around that level. With the higher interest rates offered on the 12-year Postal Savings Certificates, it might be that the pressure of demand for investment in the precious metals would ease though black money would still continue to seek refuge in this metal.

The reports that the Government of India might import silver from America for putting into circulation metallic currency to meet the demand of the ryot have not resulted in any appreciable decline in prices for the white metal but it can be said that the highest levels have been seen. Developments in the bullion market during the next few weeks should be carefully watched.

* * * *

The Government of India's action prohibiting futures trading in castorseed, cottonseed and sesamum is to prevent an undue rise in prices for oilseeds. With the ban on linseed and groundnut futures, there has been a diversion of speculative activity in the oilseeds referred to above. As there has been a sharp rise in prices for these varieties, without reference to the stock position, it has been found necessary to prohibit all futures trading to bring down prices to more normal levels. All outstanding contracts on September 6, 1943 will have to be closed at a rate fixed by the Government. Forward contracts for castorseed, cottonseed and sesamum of specific qualities, meant for specific delivery at specific prices, delivery orders and railway receipts or bills of lading against which contracts are not transferable to third parties are exempted.

* * * *

The statement by the Textile Commissioner to the effect that maximum prices announced recently might be revised if found necessary has not had any effect on the market so far. This statement is made evidently to prevent speculative activity and to enable transactions below the "ceilings". Otherwise mills might effect transactions at fixed rates, that is at maximum rates. There is every reason to hope that as time passes by the authorities will effect a downward revision of maximum prices. It is felt that with the control orders regarding stores and the arrangement for the import of foreign cotton, a substantial reduction in costs could be effected. Only recently, a commission went to Egypt to arrange for supplies of Egyptian cotton to this country. The Chief Controller of Imports followed by the Deputy Controller of Imports and Mr. Kasturbhai Lalbhai attended the conference in Egypt and a report will be submitted to the Government of India shortly in this regard. As a result of the negotiations it is believed that this country will be favoured with a quota of Egyptian cotton and that there will be a substantial reduction in prices for imported varieties.

There has been a demand for the revival of futures trading in cotton by the East India Cotton Association. Only recently, it will be remembered, two resolutions were passed by the Committee of the Association requesting the Government of India to reopen hedge contracts in cotton. It is said that with the short time available for the ryot to dispose of his crop, the ryot stood to lose considerably. Suggestions have been made also for fixing minimum prices for cotton at Rs. 500 per candy as it is felt that with the improved war situation and the ban on futures trading, prices might be forced down to unremunerative levels.

* * * *

At the auctions of tea for consumption in India, 18,000 packages were offered. Well-graded and Broken Orange Pekoe were in strong demand at higher rates. Black leaf grades recorded an advance by as much as 2 to 3 annas per lb. Tippy sorts were neglected while Darjeeling teas were not quickly taken up. Green teas were again in strong demand and the quotation improved from 1 to 2 annas per lb.

* * * *

The food position in Bengal is showing signs of improvement though the decline in prices that has taken place in the black markets cannot be considered satisfactory. Considerable difficulty is still being experienced by the average consumer in getting his requirements of rice. The efforts of the Food Member of the Government of India and the Food Minister for the Government of Bengal will, it is believed, result in a considerable improvement in the situation. As a result of the conferences held with the Premiers of the Punjab and Orissa, it is hoped that there will be large imports of rice and other grains into this province.

The position in regard to wheat has considerably improved. With the recent arrivals mills are working longer hours.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, Sept. 9.

Most, but not all, of the coal consuming mills have been working this week, but unfortunately the supplies of coal have not been keeping up to their regular schedule and daily arrivals have been falling steadily behind requirements, and it has only been by falling back on previous accumulations that most mills have been able to keep going. The result is that the prospects of any large proportion of the coal consuming mills being able to start up again next Monday with a reasonable assurance of being able to work throughout the week, are not too bright.

It is understood that a scheme has been prepared to ration all mills according to their number of looms. The idea of this is to equalise as far as possible the supplies of coal and to encourage economy in all directions. Process steam, as we have remarked before, shows great variation in the amount consumed from unit to unit. This, it is suggested, should be cut down to the very minimum by resort to dry beaming and cold calendering, etc. The starching of yarns after all is largely a development of the last 25 years and Calcutta Hessians established quite a good reputation when manufactured from "green" yarns. It may be admitted that a greater length per laid cut can be obtained when using starched warps, but the difference is not so great that it can be ignored in the present exceptional circumstances. Another aspect of the question is that the basis of all starching products is a foodstuff of one kind or another and at a time of critical scarcity like the present, the use of such material for anything but feeding the starving is to be deprecated. With regard to cold calendering, appearance and finish of the fabrics is of less importance than getting the fabrics produced in sufficient quantity. There is not much "spit and polish" about modern armies. Jute fabrics may justly claim to be well in the front line in the war and the "spit and polish" normally effected in the finishing of the goods can well be omitted for the time being. These may seem comparatively small matters considered individually, but in the aggregate, throughout the industry, the saving ought to be very material.

There are also suggestions of some measure of "rationalisation" within Groups where an electric and a coal consuming mill are contiguous or adjacent. The idea is to work the electric mill double shift and to close down the coal consuming mill entirely, pooling stocks, contracts, spares, etc., between the two. Thus the electrically driven mill might work during the day with its own staff and labour force, while after it closed down, the premises would be taken over for the night shift by the staff and labour force of the idle coal consuming mill. Thus the more economical electric unit might be run for 20 hours out of the 24 and the arrangement would also probably suit the Supply Company without undue interference with its normal load. The idea sounds perfectly practicable the only doubt arising being how the labour force would take to night working for any prolonged spell. However the probability is that the scheme would not have to be worked for very long as a reasonable improvement in coal supplies would put an end to the necessity.

Mill stocks of manufactured goods in godowns at the end of August showed a diminution of just over 25,000 tons as compared with the end of July. It is feared that practically the whole of this is to be attributed to the intermittent working of the mills during the month, though the production figures are not yet available to confirm this. Commercial Hessians showed a reduction of 147 lakhs yards or 3,500 tons. Commercial Sackings were lower by 384½ lakhs yards or 16,600 tons. Government Sandbags, Scrim and other Hessian bags and cloth and canvas showed a reduction of 5,500 tons. The only description which registered an increase was Government Sacking cloth and bags which was up by 550 tons. In the aggregate, Hessians were lower by 403 lakhs yards or 8,980 tons, while Sacking goods were down by 375 lakhs yards or 16,052 tons.

So far as Bengal is concerned, the only variation shown in the Final Review of the 1942-43 Jute Crop as compared with the Final Forecast, is a decrease of some 8,800 acres in the Khulna district and an increase in the outturn estimated for the Howrah district, the two set off together reducing the total outturn for the Province by 24,000 bales. Assam on the other hand admits an underestimate in acreage of 49,700 acres, mainly in the Nowgong district, which increases the estimated yield from that Province by 75,300 bales. The revised figures give an estimated crop from all Provinces of 90,61,500 bales from an area of 33,32,500 acres, or an approximate yield of 2.7 bales per acre overhead. These figures are 40,000 acres and 47,500 bales above the figures issued in the Final Forecast. The figures for the Final Forecast of the 1943-44 Crop will be issued between the 21st and the 25th of this month.

There is considerable speculation in the markets as to how existing Government orders for Jute goods may be affected by the capitulation of Italy. Quite a large quantity of Sandbags have already been cancelled as we have already reported. Even with Italy out of the war and possibly the Balkan States also, there can be no assurance that Germany may not still be in a position to put up a stiff resistance before she finally succumbs, and as the Allied ring closes round her, the war may tend to become more static. It seems certain therefore that very considerable quantities of Sandbags will have to be held in reserve. And as for other types of bags, we have emphasised many times in these columns that we can foresee a colossal demand for containers of all types for the rehabilitation of the devastated areas and for the supply and distribution of food-stuffs to the semi-starving populations of these unfortunate countries. Therefore a change in the aspect of the war does not of necessity indicate any diminution of activity in the Jute Industry's sphere of assistance for a long time to come. The Chairman of the I.J.M.A. is reported to be on one of his periodic flying visits to Delhi, but in what particular connection in this instance it is, of course, impossible to say.

There have been suggestions of greater activity in the Export Jute market, but the prices quoted as offering from Home have generally been well below the ideas of Balers here and it cannot be confirmed that any extensive business has been put through. Scarcity of arrivals into the local Bazar combined with firmer markets in the mofussil have tended to cause reserve amongst sellers, though there have been temporary spells of weakness, particularly towards the close when a large Mill Group has expressed its willingness to dispose of a fair quantity of its stock of pucca bales. There has been a certain amount of inter-baler covering of New Crop Firsts at from Rs. 78-8 to Rs. 81-8 and of Lightnings at from Rs. 67 to Rs. 71. Also in Old Crop Firsts at from Rs. 68 to Rs. 71 and in Dundee Daisee 2/3 at Rs. 75 to Rs. 74, mostly for September shipment. For shipment, Dundee Daisee 2/3 was earlier reported done at Rs. 78 and Rs. 77 Old Crop, while mills are reported to have bought Old Crop Firsts at Rs. 73-8 and Rs. 73 also Old Crop Lightnings at Rs. 67. Business was also reported with mills in Outport Tossa 4s at Rs. 71 and in Dundee Daisee 2/3 at Rs. 77, while a resale has been reported of Dundee Daisee 2/3 at Rs. 79 to a Baler.

At the end of last week when the decline in Loose Jute prices appeared to have been arrested, a moderate business was put through with mills in European packing on the basis of Rs. 15-4 and Rs. 12-4 for Middles and Bottoms, with four annas more reported for shipment after 15th October. At the same time Supervised Jat was done at Rs. 14-12 and Rs. 11-12 to four annas more for Middles and Bottoms, with sellers now holding out for a further four annas advance. Indian District Tossa sold at Rs. 15-4 and Rs. 12-4, Middles and Bottoms with further business done in that grade at the close at Rs. 15-4 for District Middles and Rs. 15-12 for Jat. Mofussil markets have generally registered an advance of eight annas or more and imports are being carefully regulated not to exceed the demand. Estimated arrivals of jute into Calcutta for the month of August are returned as 5,36,000 bales against 4,72,000 bales for the same month last year. Comparative figures since the 1st July are, 11,23,000 bales arrived this year against 7,27,000 last year for the same period.

Except for one weak spot when 11 porters dropped to Rs. 27-9 and nines to Rs. 20-11, the hessian market has ruled fairly steady though inactive. On the report of a Plate steamer having been fixed, there was some buying of 7½ oz. and 10 oz. at Rs. 20-12 and Rs. 27-12 for near. 20 oz. Brans were done at Rs. 58-8 October and ready Wheatbags at Rs. 33. In the Heavy goods section beyond "B" Twills around Rs. 64-8 to Rs. 64-12 and Liverpools at Rs. 73-8, there is little to report. Closing is steadier.

NORTH WESTERN RAILWAY

Tender No. 212-6/2/6 Code Word "CAMCO". Tenders are invited on a rupee basis for purchase by the North-Western Railway of pans M. S. Mortar. Tenders must reach office of the Controller of Stores, North-Western Railway, Lahore, not later than 14.00 hours on Wednesday, the 22nd September, 1943, and will be opened in his office at 11 a.m. on the following working day. Tender forms and other relative documents can be seen at and obtained from office of the Controller of Stores on and from 2nd September, 1943. The sale price of the tender is Re. 1 local and Rs. 1-8 Muffasil.

JUTE

Calcutta, September 9.

A steadier feeling was noticeable in the raw jute market though business passing was only on a small scale. The strength of the market has been due to the better advices from mofussil centres and the appearance of overseas buyers. There is considerable demand for new crop varieties which, with the small imports into mofussil centres, command a good premium over old crop varieties. It is even reported that local mills are sellers of old crop. Even without the conclusion of any appreciable amount of business, Calcutta rates are higher by 8 annas and it is generally felt that with the unwillingness of the ryot to part with his holding prices might be maintained at the higher levels though mills seem to be opposed to any appreciable increase in rates. The improvement in export enquiry is perhaps significant from the market point of view especially after the unconditional surrender of Italy. With the easier shipping situation and the demand for jute from overseas markets, it may very well be that there is a substantial increase in the rate of exports in the next few months. If the situation within the country also improves jute mills might be able to consume more jute and the future for jute prices can be regarded with equanimity.

In the loose jute section, as pointed out above, business passing has been on a small scale though rates are higher with sellers adopting a reserved attitude. Supervised Jat Tops were reported done at Rs. 17 per maund while Middles were done at Rs. 15 to Rs. 15-4 per maund and Bottoms at Rs. 12 to Rs. 12-4 per maund. Towards the close, however, there were some sellers at the last levels. European Middles were done at Rs. 15 to Rs. 15-8 per maund and Bottoms at Rs. 12 to Rs. 12-8 per maund earlier in the week.

In the pucca bales section balers have been active and it is reported some business has been concluded for export to Canada. Dundee Daisee 2/3 were done at Rs. 78 and Output Tossa 4's at Rs. 71 per bale. Mills are also reported to have purchased old crop Firsts at Rs. 75 per bale, New crop Firsts Rs. 81-8, and Lightnings Rs. 71-8 per bale. The tone towards the close is easier.

JUTE MANUFACTURES

Calcutta, September 9.

In the jute manufactures market quiet conditions have been noticeable and prices have been fluctuating in very narrow limits. Improved demand for jute export has not had any effect on prices in the hessian market and business has been mostly on account of interbazar operators. Closing quotations are slightly lower than the rates at the end of last week, 9 porters being Rs. 20-¾ for all positions. 11 porters Ready were Rs. 27-14, September Rs. 27-14 and October-December Rs. 28.

In the Heavy Goods section steadier conditions have been noticeable even with a small amount of business passing. "B" Twills for September delivery sold on the basis of Rs. 65-4, Liverpool Twills Rs. 73-4 and Cornsacks Rs. 66-4.

The local stock figures for the month of August 1943 have been published. With the considerable interruption to production there was a general feeling that the figures would show a substantial decrease over the previous month's figures. The market, however, does not appear to be satisfied with the decline in stocks. Total stocks of hessian, cloth and bags, on civilian account at the end of August were 25.97 crore yards against 27.45 crore yards on July 31, 1943. Stocks on military account were 30.61 crore yards against 33.16 crore yards. There is thus a net decline in total stocks by 4.3 crore yards to 56.58 crore yards. Sacking cloth and bags on civilian account show a much bigger decline. Stocks at the end of August were 22.21 crore yards against 27.06 crore yards at the end of the previous month. Stocks, on military account, on the other hand, show an increase of 1.6 crore yards to 2.06 crore yards. Total sacking cloth and bags were 24.27 crore yards against 28.02 crore yards. Figures are given below:

Total reported stocks of manufactured goods exclusive of Government Orders.

Descriptions.	31-7-1943.	31-8-1943.
Hessian cloth and bags—		
Yards ..	27,44,50,093	25,97,23,010

N.B.—August stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Kedarnath, Calcutta Jute, and Maheswari Devi. Against those are shown the actual stocks of member mills and Gagalbhai for the month of July.

GOLD

Calcutta, September 9.

There has been a complete lack of speculative activity in the Bombay gold market and quotations have been fluctuating in narrow limits. No reports have been received during the week regarding official selling. In the last two days, therefore, a slightly easier feeling has been noticeable and operators are inclined to await further developments. It is feared that further anti-inflationary measures might result in a decline in prices for the yellow metal. The unconditional surrender of Italy also has had a bearish effect on values. Gold ready closed at Rs. 70-7 against Rs. 70-5 at the end of last week and Forward at Rs. 70-5 against Rs. 69-15. In the local market, gold ready was Rs. 70-12 and sovereigns Rs. 51.

SILVER

Calcutta, September 9.

The silver market also has been slightly easier and quotations are lower than the highest levels touched last week. Speculative demand seems to have been satisfied for the time being. As in the gold market there is a tendency to await further developments. Rumours regarding the possibility of the Government of India acquiring fresh supplies of silver have not been fully credited though it is felt that with the negotiations conducted by the Government of India some effort may be made in this direction. Silver ready closed at Rs. 115-12 against Rs. 116 at the end of last week and forward at Rs. 115-4 against Rs. 115. In the Calcutta market silver bar per 100 tolas were Rs. 113-12.

PIECEGOODS

Calcutta, September 9.

Steady conditions continue to prevail in the piecegoods market. Owing to the shortage of certain types of goods dealers are adopting a reserved attitude. Considerable difficulty is still being experienced on account of internal transport facilities. A large amount of forward business has been reported done with mills, the Western Presidency accounting for most of the transactions. The statement made by the Textile Commissioner to the effect that ceilings fixed recently might be revised if necessary has not had any effect on the market so far.

Letters OF GUARANTEE

A variety of Letters of Guarantee, which are useful for eliminating use of cash and supplementing credit, are issued by us:

1. Guarantee on behalf of Suppliers, Contractors to the Govt., Municipalities and allied bodies and to bonafide firms, in lieu of cash deposit.
2. Guarantee to Customs in lieu of security deposit of clearing and forwarding agents.
3. Guarantee to limited companies in respect of lost share scrips or policies whose duplicates are to be issued.

A Scheduled Bank Guarantee adds to the goodwill

Stock Markets to-day and to-morrow

MARKETS EASIER ON WAR NEWS

After earlier firmness definitely easier conditions are noticeable in both Calcutta and Bombay markets. Till Thursday this week, the Calcutta market was inclined to be firm though the Bombay market showed a downward trend even in Wednesday's session on reports that the Government of India was contemplating further anti-inflationary measures and that the effect of these new measures might be unfavourable to stock markets. The unconditional surrender of Italy has not come as a complete surprise to the market, but it is now felt that the end of the war is in sight and that peace prospects will have a discouraging effect on stock exchange values. The Bombay market seems to be inclined to take a bearish view. There has been some selling of Textile issues and quite a substantial decline in prices has been recorded. Steels also were easier in sympathy. In the Calcutta market no appreciable decline in prices has been recorded so far though it should be said that the undertone is definitely easier and there is a tendency to await further developments.

The feature of the week can be said to be the strength of the jute section. In the last two days there has been good buying of jute shares on postwar prospects. While it is admitted that the improvement in the war situation points to an early termination of hostilities in the West, it cannot by any means be said that the war in the East will be soon over. With the difficult problem of postwar reconstruction and the greater part to be played by this country in the war against Japan, Indian industries will continue to be as busy as ever and it will perhaps be possible to work mills with greater ease. It is not quite correct, therefore, to take a pessimistic view of the immediate future.

* * * * *

The accounts of the *Orient Paper Mills Company, Limited* for the half-year ended March, 1943, make very satisfactory showing. There has been a sharp increase in the net profit, before providing for taxation and depreciation, for the half-year to Rs. 21,08,469 from Rs. 13,32,171 for the previous half-year. The increase in the net profit has been due to the larger sales, the total for the last accounting period being Rs. 58.57 lakhs against Rs. 46.21 lakhs for the previous six months. Most of the increase in earnings, however, has been taken away by the additional provision for taxation and it has not been possible for the directors to increase the dividend to ordinary shareholders. The amount set aside to depreciation is unchanged at Rs. 2.5 lakhs while the provision for taxation, as pointed out above, is substantially higher at Rs. 13.75 lakhs against Rs. 7.25 lakhs. The transfer to reserve is the same at Rs. 2 lakhs. After the payment of a dividend at 12 annas per share (same) the amount carried forward is higher at Rs. 2,17,257 against Rs. 1,46,101 brought in.

Having regard to the fact that the Orient Paper Mills was started only a few years back, the balance-sheet position should be considered extremely satisfactory. Against the total paid-up capital, including the loan capital, of Rs. 50.28 lakhs the net block amounts only to Rs. 29.04 lakhs. Cash and investments are as much as Rs. 55.6 lakhs.

* * * * *

Our readers will remember that sometime back there were reports regarding the managing agency of the E. D. Sassoon group of mills changing hands to Indian interests. Details regarding this deal are now available.

Messrs. E. D. Sassoon & Co., Ltd., who are the Managing Agents of the E. D. Sassoon United Mills, Ltd., which own five Cotton Mills of Bombay, *viz.* Jacob Sassoon Mill, E. D. Sassoon Mill, Alexandra Mill, Manchester Mill and Rachel Sassoon Mill and E. D. Sassoon Turkey Red Dye Works, have sold away their interests as Managing Agents of these mills to the well-known firm of Ganeshnarayan Onkarmal and other Marwari Industrialists of Bombay. Ganeshnarayan Onkarmal already hold a large interest in the Managing and Selling Agencies of the Morarjee Goculdas Spinning and Weaving Co., Ltd., since 1934. This deal brings to the forefront the Marwari Millowners of Bombay as the Sassoon group represent about 2,50,000 spindles and 6,500 looms. It is one of the biggest deals in the industrial history of India.

* * * * *

I have always had a soft corner for Assam Bengal Cement. Mr. P. Mukherjee, a member of the Managing Agency firm, consulted me before the enterprise was launched. I had also occasion to be present at the opening ceremony of the Company's works. The results for the first year of full working do not make brave showing but in accordance with the policy of Sardar Indra Singh maximum depreciation has been allowed out of the profits. After the payment of the debenture interest amounting to Rs. 1,74,360, the net profit of Rs. 3,42,343 for the year ended March, 1943, can be considered satisfactory. The provision for depreciation is Rs. 3,27,131 and the sum of Rs. 15,213 is carried forward. The lower level of profits for the last year was due to the entire output of cement being taken over by the Government and payment made on cost-plus basis. This did not take into account the continued increase in prices of stores, foodstuffs, coal and other materials required for operation of the factory. The Government of India still require a large quantity of cement, but it is expected that in fixing future prices of cement the Government will take a generous view of the increasing cost of production. But for the difficulties in getting raw materials, it would be possible to take an optimistic view of the prospects for the current year. The high prior charge on account of the debenture capital is a handicap to the company, but the debentures are due for redemption in 1945 and it should then be possible to replace the seven per cent debentures with four per cent debentures. This would result in a saving in interest charges by as much as Rs. 75,000 per year. In any case, the current year must see the disappearance of the debit balance and, possibly, the declaration of a maiden dividend.

* * * * *

My forecast about the declaration of an interim dividend by the Basanti Cotton Mills is now confirmed. It is now announced that an interim dividend of six annas per share is to be paid on ordinary shares for the current year. Details are also now available regarding the new issue of ordinary shares on bonus terms to existing shareholders. There has naturally been a further rise in the quotation to Rs. 14-8 per share. The benefit to the shareholder in respect of the new issue is more than Re. ¼ per share on the basis of the current market quotation. It is also announced that the Managing Agents are contemplating the distribution of clothes at concessional rates to shareholders. With these benefits, there is every possibility of the entire issue being taken up by the shareholders themselves. Non-shareholders also would be eager to apply for the new shares. In the result, this new issue may prove to be the most heavily over-subscribed in recent months.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 10.

STEADIER conditions were noticeable on the Calcutta Stock Exchange till Wednesday this week. Though there was not much of outside support business on account of professional operators was on a larger scale. Cotton and Coal shares continue to be the favourites. Jute shares also were firmer though business passing was on a small scale. In the Engineering section there was nothing of importance, while Sugar shares were steadier. The easier tone in the markets in the last two days is mainly due to the lower advices from the Western Centres and the tendency to await further developments. The unconditional surrender of Italy has been taken to mean that further developments in the war situation will be spectacular, and that there will be an early termination of hostilities. These prospects have proved to be a bearish factor for the stock markets. The revival of activity in the Jute section in the last two days is, in this sense, significant. The undertone is quietly steady and there is a tendency to await further developments.

There has been no change in the conditions in the giltedged securities section and 3½ per cent Paper continues to be quoted Rs. 97. Business in terminable loans has not been on a very large scale, and quotations are more or less unchanged. 3 per cent 1963-65 were done at Rs. 97-1, 3 per cent 1951-54 at par, 3 per cent 1949-52 at Rs. 100-12 and 3 per cent Defence Bonds 1946 at Rs. 102-8. 4 per cent 1960-70 changed hands at Rs. 111-3 and 5 per cent 1945-55 at Rs. 106-2. Among Provincial Loans, the only transaction recorded was in 3 per cent 1952 U. P. Loan at Rs. 99-15. The terms of the Provincial Loan issues have been announced. The four Governments of Bombay, the Punjab, Madras and C. P. and Berar are to raise loans aggregating Rs. 7.75 crores. In spite of the reports of the possibility of an early announcement about the new loan issues, there has been no change in the conditions in the money market and the treasury bills discount rate is further lower at 13 annas and 9 pies against 14 annas per cent per annum last week. No business has been reported in public bodies debentures which are still difficult to get.

Among Industrial debs. 5 per cent *Basanti Cotton* were done at Rs. 104-8. Business in Preference shares has not been quite on a large scale though quotations have been fully maintained. Among first-class jute mill preferences, *Hastings* were Rs. 150-8, *Hukumchand* Rs. 171, *Northbrook* Rs. 155, *Dalhousie* Rs. 182 and *Kinnison* Rs. 184. Among other sections, *Basanti preferences* were further higher at Rs. 15-13 cum-dividend while *New Victoria* were Rs. 11-1. *Kumardhubi Engineering* preferences have recorded a further substantial advance to Rs. 290 while *Steel Corporation* were unchanged at Rs. 126. *Titaghur Paper,* second preference, were Rs. 115-8.

Not much of business has been done in Bank shares but quotations are higher with *Imperial Bank* fully paids at Rs. 1,842-8 and contributories Rs. 448. *Reserve Bank* were Rs. 120, while *United Commercial Bank* were further higher at Rs. 16 premium and *Central Bank* Rs. 73-8.

In the Cotton section firmer conditions were noticed earlier in the week and quotations were marked substantially higher. In the latter half of the period under review, however, most of the gains have been lost with the weakness of the Bombay market. *Basanti Cotton* have improved further to Rs. 14-12 while *Benares Cotton* were unchanged at Rs. 14. *Cawnpore Textiles,* after being nearly Rs. 13, are now quoting Rs. 12-6, *Dunbar* Rs. 270, ex-dividend while *Elgin Mills* were Rs. 79-8 after being higher at Rs. 83-12. *Kesoram* have remained steady at Rs. 15-2 on satisfactory reports for the half-year ended March, 1943. The dividend has been maintained at 8 annas per share on an increased capital. *New Victoria* were slightly lower at Rs. 8-4.

Coal shares have been steady throughout the week *Bengal* being Rs. 485; *Bokaro and Ramgur* have provided the feature of this section with a rise from Rs. 22-8 to Rs. 24-8, *Burrakur* were Rs. 18-14 against Rs. 18-4 at the time of last writting while *Central Kurkend* were nearly a point higher at Rs. 17-8. *Dhemo Main* were steady at Rs. 15, *Equitable* at Rs. 40-6 and *Hurriladih* at Rs. 18-14. *Katras Jherriah* were Rs. 43-8, *Nazira* Rs. 10-9 and *New Beerbhoom* Rs. 23-6 against Rs. 21-10. *Raneegunge* improved from Rs. 27 to Rs. 28-4 while *South Karanpura* were Rs. 6-3, *Talcher* Rs. 4-1 and *West Jamuria* Rs. 36-2. *Samla* improved from Rs. 4-6 to Rs. 4-13. *Satpukuria and Asansol* also were marked higher at Rs. 3.

Steady conditions were noticeable in the Jute section in the early days of the week on reports that a greater number of mills were able to resume working on receipt of coal supplies. Further improvement in the war situation has brightened the postwar prospects of this group, and there has been some buying of the popular shares. The closing quotations are at the highest levels for the week. *Adamjee* improved from Rs. 32 to Rs. 32-10, while *Anglo-India* were 8 points higher at Rs. 388. *Bally* improved from Rs. 342 to Rs. 347, *Belvedere* from Rs. 495 to Rs. 500, *Barnagore* from Rs. 147-8 to Rs. 157-8, *Champdany* from Rs. 210 to Rs. 216 and *Chitavalsah* from Rs. 23-11 to Rs. 25-4. *Clive* were nearly a point higher at Rs. 27-10 while *Delta* put on 11 points to Rs. 518. *Hukumchand* were not very much changed at Rs. 26-8 while *Howrah* put on 12 annas to Rs. 61-8. *National* were Rs. 27-8, *Nellimarla* Rs. 25-4 and *Nuddea* Rs. 100-8. *Presidency* were dealt in at Rs. 6-11, *Soorah* at Rs. 15 and *Waverley* at Rs. 5-8.

In the Engineering section, *Indian Iron* and *Steel Corporation* were uninteresting and were quoted slightly lower towards the close, the quotation being Rs. 35 and Rs. 26-12 respectively. *Kumardhubi Engineering* were very steady at Rs. 7-14, and *Jessop & Co.* at Rs. 20-1. *Britannia Building and Iron* were Rs. 14-2, *Britannia Engineering* Rs. 14-1, *Bhartia Electric* improved from Rs. 14-2 to Rs. 15 while *Burn & Co.,* were higher at Rs. 386-8. *Hooghly Docking* changed hands at Rs. 65 and *Marshalls* at Rs. 3-11. *National Iron and Steel* were put through at Rs. 13-2 and *Saran Engineering* at Rs. 7-12.

Sugar shares continued to be in request earlier in the week and a further rise in prices was recorded for some of the counters. *Balrampore* were higher at Rs. 16-9, *Belsund* were slightly lower at Rs. 11 and *Carew & Co.,* at Rs. 21-15. *Cawnpore,* after being higher at Rs. 40-12, were quoted towards the close at Rs. 40. *New Savan* were Rs. 19-10, and *Purtabpore* Rs. 18-14. *U. P. Sugar* were a shade easier at Rs. 38 ex-dividend. *Gwalior* were crossed at Rs. 219 while *Darbhanga* were done up to Rs. 26-2. *Samastipur Central* were Rs. 19 and *Sitalpore* Rs. 3-4.

Business in the Tea section has been restricted in spite of the firmer tone at the local auctions in the last three weeks. *Bishnauth* were Rs. 39, *East India* Rs. 14-2, *Hattikhira* Rs. 27-8, *Tezpore* Rs. 15-9 and *Tengpani* Rs. 28-4.

In the Miscellaneous section, *Burma Corporation* were active around Rs. 3-15. *Consolidated Tin* improved to Rs. 2-12 while *Indian Copper* were unchanged at Rs. 2-8. *Alkali and Chemical* were Rs. 38-12; *Aluminium Corporation* were higher at Rs. 19-6; *Assam Saw were* better at Rs. 4-13 with *Bararee Coke* at Rs. 27-12. *B. I. Corporation* were steady at Rs. 6-5; *Calcutta Landing and Shipping* improved from Rs. 20 to Rs. 21-9 and *Frank Ross* from Rs. 8-3 to Rs. 8-10. *India General Navigation* were Rs. 117 and *Indian National Airways* ordy. Rs. 18-8. *Midnapore Zemindary* were Rs. 92-8, and *Northern India Oil Industries* Rs. 20. Among Paper shares, *Titaghur Paper* were Rs. 25-8, *India Paper Pulp* Rs. 192 and *Star Paper* Rs. 21-4. *Sree Gopal* were Rs. 22 and *Orient* Rs. 28-3.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, September 9.

Rumours of fresh Government measures to curb speculative activity and the Textile Commissioner's warning that if prices did not come down considerably, Government would not hesitate to impose sterner conditions on the Trade, had a dampening effect on Textiles. The bright atmosphere that lit up the market in the past week gave place to one of caution and prices gave way under selling pressure. On Wednesday it seemed as though the downward travel was only a short one for prices began to show signs of recovery. The unconditional surrender of Italy, though expected, made the position rather worse for it is widely believed now that the war cannot last long. With the prospects of an early conclusion of hostilities, operators and investors are in no mood to do much business.

Mill shares opened weak but in Wednesdays' session showed signs of recovery but was far from stable as was disclosed today. It was pointed out last week, that of all sections in the Stock Exchange, Textiles were conspicuous by the big advances they recorded in contrast to the rather steady conditions that were obtained in other sections. This week the story is to be reversed; for there were rumours that Government had under consideration some fresh measures for curbing speculation. The Textile Commissioner's warning was an adverse factor. In the wake of the rumours it was announced that Italy had surrendered. Prices went down faster than they picked up and the result is *Bombay Dyeing* is quoting at Rs. 1,920 whereas it was wanted above Rs. 2,000 only last Thursday. Century were Rs. 840; *Gokak* Rs. 335; *Kohinoor* Rs. 592; *Phoenix* Rs. 630; *Simplex* Rs. 275; and *Svadeshi* Rs. 536.

The small loss that is recorded in the Steel section is only in the nature of sympathetic reaction to Textiles. Otherwise rather steady conditions prevailed with prices showing a slight tendency to recover. *Tata Steel Defd.* were Rs. 1,872-8; *Tata* Ordinary Rs 377-8; and *Indian Iron* Rs. 35.

CHAIRMAN'S SPEECH

ESTRELA BATTERIES LIMITED

SATISFACTORY PROGRESS IN 1942-43

CHAIRMAN'S REMARKS

The Fourth Annual General Meeting of the shareholders of Estrela Batteries Limited was held on the 28th August. Mr. Choonilal Girdharlal, the Chairman, in moving the adoption of the report for the year ending 31st March, 1943, said:

"The net profit for the period under review has amounted to Rs. 1,00,477-13-5 after writing off all expenses and allowing for depreciation, interest, Managing Agents' commission and office allowance. In this connection, I am happy to tell you that your company has maintained its peace-time price policy of standard profit on production cost. To illustrate, our selling price of the most going standard cells was Rs. 19-8 per gross in the first months of the outbreak of this war. It is now only Rs. 30 per gross which is the highest fixed so far. This works out to an increase of mere fifty-four per cent which is indeed a very small increase considering very hectic conditions in all the markets.

"We have done this because your Directors have kept in view peace conditions with a long range policy of consolidating our position in the market. For many of our materials, we pay nearly three times more. In metals we pay nearly four times. The standard of our wages, dearness allowance and other benefits for the employees have been steadily improved. In spite of all these increases in the cost of production, your company has shown such good results only with a small rise in our selling prices as above stated. This has been achieved by our technical progress in production methods and by ourselves starting the manufacture of various components and materials used in our processes.

DIVIDEND DECLARED

"We have recommended, along with other appropriations, a dividend of Rs. 3-8 per ordinary share of fifty rupees. In matters of dividend your directors desire to follow a steady policy, keeping peace-time conditions in view.

"Gentlemen, the cell and battery manufacture is a highly technical, complicated and closely guarded process requiring scientific control at every stage of production. The Dry Battery Industry is not only a great peace-time industry catering to the daily necessity of urban and rural population, but is also an essential Defence Industry. Converted into cells, the present yearly requirement of the three fighting services is very considerable. The special mention of cells and batteries supplied from India to the fighting forces in the Middle East proves this industry's great importance to the prosecution of a modern war.

"The Wet or Motor Car Batteries, which your company also manufactures, are likewise important in war and peace time. With the establishment of the Motor Car Industry in the country, which is bound to come at the close of the war, there will be an extension of the market.

"Our industry has several natural advantages. Many of the raw materials are available in the country. It has a large peacetime home market. Let me strongly hope that it will receive from the Government proper encouragement as an essential war and peace-time industry, and that the Government will take steps to prevent the natural advantages of the industry being exploited by any foreign company or by an "(India) Ltd."

FUTURE PLANS

"Your Company desires to put up a plant for the manufacture of carbon electrodes. We are designing equipment and machinery for this purpose. But its construction will be taken in hand only if we receive necessary assistance and priorities from the Government. It will also be necessary for us to wait till our new premises are ready. Therefore we are not in a position to take immediate advantage.

"To meet the expansion of our production activities, your Directors have decided to construct a modern factory and a very suitable site admeasuring about thirty thousand square yards has been acquired. We are approaching the Government for necessary building materials and the construction will be taken in hand as soon as these will be received. When completed, it will accommodate our Dry and Wet Battery Plants, Carbon Plant, Ore Grinding and Manganese Treatment Plant, Mechanical Engineering Workshop, Zinc and Brass Rolling Mill.

"A further substantial increase in our capital will become necessary in the near future to finance our proposed extensions. But in conformity with our cautious policy, this will only be done when our plans are in an advanced stage. I am quite confident that the issue, when announced, will meet with the same great success as our previous issue.

"The education of staff and more particularly of labour has considerable effect on the working efficiency and the quality and quantity of production. Mindful of this, your Directors are taking steps to see that this aspect of our activities, together with schemes to stabilise conditions of service, keeps pace with our development plans.

"As shown in my speech elsewhere and in the report, we have consolidated our position in the period under review. Further we have important business on hand during the current year. Our development is following on the plans already laid down after investigation of all economic factors. With the lead that we have established as the pioneer Indian company in the line, I have no hesitation in telling you that the future prospects of our company are indeed good.

THE BARASET-BASIRHAT LIGHT RAILWAY CO., LTD.

NOTICE

is hereby given that the Seventy-Eighth Ordinary General Meeting of the abovenamed Company, will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 24th September, 1943, at 10-55 a.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance-Sheet for the half-year ended 31st March, 1943, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 17th to the 24th September, 1943, both days inclusive.

† For two half-years ending 31st March, 1943.

(Half-yeary Meeting, held on 21st September, 1943.)

Audited accounts for the half-year ended 31st March, 1943:—

The accounts show a gross profit of Rs. 33,70,648-8-6. After deducting Rs. 7,45,985-8-10 for insurance, interest, commission, etc., and providing Rs. 3,13,299-1-0 for depreciation and after making some sundry adjustments, there is a balance of Rs. 23,83,146-9-0. To this has to be added Rs. 11,82,071-3-1 being the balance of the last half-year's Profit and Loss Account after paying dividend on the Preference Shares. These make a total of Rs. 35,62,217-12-1. Out of the same Rs. 29,00,385-9-0 has been provided for taxation for the year ended 31st March 1943. This leaves a balance of Rs. 6,64,832-3-1 to the credit of Profit and Loss Account which the Directors propose to utilise as follows:—

	Rs.	A.	P.
To pay Dividend on 20,000 Preference Shares at 7% per annum, free of Income Tax (or Rs. 3-8-0 per share)	70,000	0	0
To pay Dividend on 8,00,000 Ordinary shares which include 2,00,000 Ordinary Bonus shares declared on 6th April, 1943 ranking for dividend with effect from 1st October, 1942 at the rate of 0-8-0 per share	4,00,000	0	0
And to carry forward the Balance to the Current half-year's account	1,94,832	3	1

Managing Agents.—Messrs. Birla Bros., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 35,00,000 in 20,000 7 per cent cum Preference shares of Rs. 100 and 6,00,000 ordinary shares of Rs. 2-8 each fully paid up.

Synopsis of the Balance Sheet as at 31st March, 1943:—

(Half-yearly General Meeting on 16th September, 1943, at 12-15 p.m.)

Audited accounts for the half-year ending 30th June, 1943:—

After transferring Rs. 5,181 to Insurance Fund, providing Rs. 25,000 for Depreciation, Rs. 4,75,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 2,26,665-1-8. After bringing forward the balance from the last account there is a balance at the credit of the Profit and Loss Account of Rs. 3,74,053-8-11. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	24,500	0	0
And on Ordinary shares at Rs. 15 per share ..	2,10,000	0	0

thus absorbing Rs. 2,34,500 leaving a balance of Rs. 1,39,553-8-11 to be carried forward.

Managing Agents:—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 21,00,000 in 14,000 Ordinary and 7,000, 7 per cent cum Preference shares of Rs. 100 each fully paid up.

(Annual General Meeting on 16th September, 1943, at 3 p.m.)

Audited accounts for the year ended 31st December, 1942:—

The season's working resulted in a profit of Rs. 1,66,177-1-10 after providing for depreciation. After making sundry adjustments, providing Rs. 50,000 for taxation, and transferring Rs. 25,000 to Reserve Fund and Rs. 25,000 to Special Reserve Fund, there remains a balance of Rs. 86,374-14-10 at the credit of Profit and Loss Account. From this the directors recommend the payment of a dividend of Rs. 2-8-0 per share absorbing Rs. 50,000 and leaving Rs. 36,374-14-10 to be carried forward.

A total crop of 4,673 maunds was secured of which 2,757 maunds have been sold for Export at an average price of As. 12-1 per lb. and 1,869 maunds have been sold for Internal Consumption at an average price of Re. 1-1-4 per lb.

Managing Agents:—Messrs. Andrew Yule & Co., Ltd.

(Annual General Meeting on 20th September, 1943 at 3 p.m.)

Audited accounts for the year ended 31st December, 1942:—

The season's working resulted in a profit of Rs. 4,57,208-2-11. After making sundry adjustments, providing Rs. 1,50,000 for taxation, transferring Rs. 50,000 to Building Reserve and Rs. 50,000 to Dividend Equalization Reserve, and paying an interim dividend of Rs. 10 per Ordinary Share absorbing Rs. 20,000, there remains a balance of Rs. 2,22,446-7-2 at the credit of Profit and Loss Account.

The Directors recommend that this balance be treated as follows:—

	Rs.	A.	P.
Preference Dividend for 1942 at Rs. 8 per share ..	16,000	0	0
Final Ordinary Dividend for 1942 at Rs. 65 per share (making a total Ordinary Dividend of Rs. 75 per share)	1,30,000	0	0
Leaving to be carried forward	76,446	7	2

A crop of 12,561 maunds was secured of which 6,400 maunds have been sold for Export at an average price of As. 12-3 per lb. and 5,932 maunds for Internal Consumption at an average price of As. 14-8 per lb.

Managing Agents:—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 4,00,000 in 2,000 Ordinary and 2,000, 8 per cent cum Preference, both of Rs. 100 each, fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942:—

(Half-yearly General Meeting on 16th September 1943 at 12-15 p.m.)

Audited accounts for the half-year ending 30th June, 1943:—

After transferring Rs. 4,338 to Insurance Fund, providing Rs. 2,50,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 1,24,186-14-9. After bringing forward the balance from the last account there is a balance at the credit of the Profit and Loss Account of Rs. 2,27,598-13-1. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	49,000	0	0
And on Ordinary shares at Rs. 10 per share ..	1,05,000	0	0

thus absorbing Rs. 1,54,000 leaving a balance of Rs. 73,598-13-1 to be carried forward.

In accordance with the Indian Jute Mills Association agreement the mills worked 54 hours per week, with 10% of the total looms silent, up to 13th March, 1943, 60 hours per week, with all looms running, up to 15th May, 1943, then 54 hours per week, with 10% of the total looms silent, for the balance of the period under review.

Managing Agents:—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed—Rs. 24,50,000 in 10,500 Ordinary and 14,000, 7 per cent cum Preference shares, both of Rs. 100 each, fully paid up.

Synopsis of the Balance Sheet as at 30th June, 1943:—

Liabilities.	Rs.	*Assets.*	Rs.

FRINGFORD ESTATES, LIMITED

Audited accounts for the year ended 30th April 1943:—

Profit and Loss Account.—The Directors are pleased to report that the result of the year's working is very satisfactory. After providing for Depreciation and Income-tax, a net profit of Rs. 70,941-12-2 has been realised, which together with the balance carried forward from last year of Rs. 6,852-9-2 amounted to Rs. 77,794-5-4. Out of this the first half-yearly 6% Dividend on Preference Shares was paid absorbing Rs. 1,800 and the second half-yearly dividend due on 30th April has been reserved for payment early May, which has since been paid. This leaves a balance of Rs. 74,194-5-4 which the Directors recommend be disposed of as under:—

	Rs.	A.	P.
Payment of 20% Dividend on the Ordinary Shares of the Company for 1942-43	36,460	0	0
Transfer to General Reserve	12,500	0	0
Transfer to Staff Pension and Gratuity Fund ..	5,000	0	0
Carry forward	20,234	5	4
Total ..	74,194	5	4

General.—Altogether the Company has had a very satisfactory year and conditions promise to progress steadily. An intensive programme of systematic cultivation was adopted during the year under review, such as filling up vacancies, planting of shade trees, and manuring, which have greatly contributed to the steady increase in yields.

Timber exploitation, as already anticipated in the previous report, has brought in good revenue, amounting to Rs. 11,242-14-9. Further activities in this direction had to be abandoned owing mainly to the difficulties in transport.

Managing Director.—Mr. A. V. Thomas.

Authorised Capital—Rs. 6,00,000. Issued and Subscribed—Rs. 2,42,300 in 18,230 Ordinary shares and 6,000, 6 per cent cum Preference shares, both fully paid up.

Synopsis of the Balance Sheet as at 30th April, 1943:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	2,42,300	Fixed capital expenditure ..	3,46,806
Reserves and other funds ..	1,05,993	Stores and spares ..	34,804
		Stocks ..	13,938
Current debts including taxation ..	54,690	Outstandings ..	20,685
Carry forward ..	20,234	Investments ..	4,673
		Cash balances ..	2,311
Total ..	4,23,217		4,23,217
		Total Liquid Assets	76,411

INTERIM DIVIDEND ANNOUNCEMENTS

(For Half-year ended 30th June 1943)

THE MERCANTILE BANK OF INDIA, LIMITED

"Interim Dividend declared 3% less Tax."

NATIONAL BANK OF INDIA, LIMITED

"Directors declared Interim Dividend for half-year to 30th June last at 14% per annum less Income Tax, payable 23rd September."

THE CHARTERED BANK OF INDIA, AUSTRALIA & CHINA

The Agent, The Chartered Bank of India, Australia & China, Calcutta, has received the following cable information from his London Office:—

"Directors have declared an interim dividend for the past half-year at the rate of 5% per annum subject to income tax dividend payable on 29th September".

(This is only an Announcement and not a Prospectus which will be furnished on request.)

BASANTI COTTON MILLS LTD.

14, Clive Street, CALCUTTA.

Chairman:
The Hon. Sir B. P. Singh Roy, K.C.I.E.

Managing Agents:
The Calcutta Agency Ltd.

Issue of additional shares
Re. 1 premium to existing shareholders
Rs. 2 premium to those who are not shareholders

50,000 Ordinary Shares of Rs. 10 each are now being issued at a premium of Re. 1 per share payable as to Rs. 6 per share on application and Rs. 5 on allotment on the basis of five new shares for every thirteen old shares (Ordinary and/or Preference).

Existing shareholders may also apply for such additional number of shares as they may like but in that case such additional shares will be available to them only if they are not taken up by the existing shareholders according to their allotted quota.

Those who are not at present shareholders may also apply for the present issue. The issue price in their case is Rs. 12 per share, payable as to Rs. 7 on application and Rs. 5 on allotment. Applications at Rs. 12 per share will be considered in respect of that portion of the present issue which is not subscribed for by the existing shareholders.

The object of the present issue is connected with the repayment of the debentures. The debenture loan stands at Rs. 16,50,000. The Company is in a position, in the near future, to mobilize cash resources for about Rs. 10 lakhs from out of the accruing profits. In fact, Rs. 7 lakhs has already been invested in Government securities.

The present issue of additional capital will provide a good part of the additional amount required. The proceeds of the issue will be invested in Government securities and kept in the joint names of the Company and the Central Government until required to repay the debentures.

This offer will be open to shareholders whose names appear on the list of the Company's shareholders as on August 31, 1943. The shareholders must notify their assent before the 18th September, 1943. Those who do not notify their assent within such date will be understood to have waived their rights.

While the profit in 1942, was a little over Rs. 4,00,000 this was not available for distribution as dividend as it had to be utilized for reducing the debit balance in the Balance Sheet. The profit so far in the current year makes much better showing; and it is possible to wipe off the entire debit balance. Further, the four-year arrears of dividend on Preference Shares are to be paid off; and the Directors have decided to pay an interim dividend of six annas per share free of income-tax on Ordinary Shares.

Full details are furnished in the prospectus which will be supplied on request and on the basis of which alone applications for shares will be considered.

A copy of the Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal. Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

This is not an invitation for shares but only an announcement. Copies of the Memorandum and Articles of Association can be inspected at the Registered Office of the Company at 14, Clive Street, Calcutta. Copies of the Prospectus and Application Forms can be had on application.

The Share Transfer Register will be closed from 11th to 21st September, 1943, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS, LTD.,
Managing Agents.

8, Royal Exchange Place,
Calcutta, 28th August, 1943.

KESORAM COTTON MILLS, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the above Company will be held at the Registered Office of the Company at No. 8, Royal Exchange Place, Calcutta, on Tuesday, the 28th day of September, 1943, at 2-30 p.m. to consider and, if thought fit, to pass, with or without modification, the following resolution, which will be proposed as a Special Resolution :—

That the Articles of Association of the Company be altered in manner following :—

That in Article 10, in line three, the words "or by the Managing Agents" be inserted after the word "Directors".

That in Article 99, in line 9, "(h)", be inserted after "(g)", and "(n)" be inserted after "(m)".

That in Article 105, in line 3, the words "or by the Managing Agents" be inserted after the word "Directors".

That in Article 87, in line one, the words "a majority of" be substituted in place of the word "all".

That in Article 108, the words "in accordance with the provisions of the Indian Companies' Act" be substituted in place of the words "not more than three months before the meeting from the time when the last preceding account and balance-sheet were made up or in the case of the first such account and balance-sheet from the date of incorporation of the Company".

By Order of the Board,
BIRLA BROTHERS, LTD.,
B. KUMAR,
Managing Agents.

8, Royal Exchange Place,
Calcutta, 31st August, 1943.

ORIENT PAPER MILLS, LIMITED.

NOTICE is hereby given that the Twelfth Ordinary General Meeting of Orient Paper Mills, Limited, will be held at the Registered Office of the Company, No. 8, Royal Exchange Place, Calcutta, on Friday, the 10th day of September, 1943, at 3 p.m.

(a) to receive and pass the Directors' Report and the Audited Accounts for the half-year ended 31st March, 1943,

(b) to declare Dividend on Preference Shares, which is payable, on application, to the Shareholders, when declared,

(c) to declare Dividend on Ordinary Shares, which is payable, on application, to the Shareholders, when declared,

(d) to elect Directors,

(e) to appointment auditors for the current year,
and

(f) to transact any other business that may be brought forward.

The Share Transfer Register will be closed from 1st to 10th September, 1943, both days inclusive.

By Order of the Directors,
BIRLA BROTHERS, LTD.,
Managing Agents.

Calcutta, 21st August, 1943.

ORIENT PAPER MILLS, LIMITED.

Report of the Directors for the half-year ended 31st March, 1943.

To
THE SHAREHOLDERS,
GENTLEMEN,

Your Directors beg to submit the report for the half-year ended 31st March, 1943, together with the Audited Statements of Accounts.

After payment of interest, Debenture interest, Managing Agents' remuneration and commission, Directors' remuneration, setting aside depreciation on Block, providing for taxation and taking into account the balance of the previous half-year, the combined Revenue and Profit and Loss Account shows a net surplus of Rs. 6,29,569-9-4 which your Directors propose to dispose of as under :—

	Rs.	A.	P.
General Reserve ...	2,00,000	0	0
Dividend on 20,000 Preference Shares at 5½ per cent per annum, free of tax ...	55,000	0	0
Dividend on 2,09,750 Ordinary Shares each fully paid at Re. 0-12-0 per share, free of tax ...	1,57,312	8	0
Balance to be carried forward	2,17,257	1	4

During the period under review the mills worked satisfactorily. Difficulties in connection with supply of raw-materials, chemicals and stores and transportation have been constantly increasing and the outlook of future is uncertain.

Since April the Government of India has released 30 per cent of total production of paper for civil consumption, but this too is inadequate to meet even the essential public requirements.

Mr. K. L. Poddar and Rai Bahadur Radha Krishna Jalan retire from the Board this time, but being eligible offer themselves for re-election.

The Hindusthan Paper Mills, Ltd., is a subsidiary of this Company, but as it was registered only in March, 1943, there is no Audited Balance-Sheet or Profit and Loss Account or Auditors' Report of that Company to be annexed to the Balance-Sheet of this Company.

Messrs. S. R. Batliboi & Co., Auditors, also retire and offer themselves for re-election.

Yours faithfully,

G. PRASAD,
N. R. SARKER,
AMRITLAL OJHA,
RAMKUMAR SOMANY. } *Directors.*

For ORIENT PAPER MILLS, LTD.,
Per Pro. BIRLA BROTHERS, LTD.,
G. PRASAD,
Managing Agents,

8, Royal Exchange Place,
CALCUTTA, *13th August,* 1943.

Note.—Mr. Kishenlall Poddar and Rai Bahadur Radhakrishna Jalan being absent could not sign the Report and the Accounts.

The 10th September, 1943.

(Continued from page 529)

THE announcement regarding the Provincial Loans has had a tonic effect on the giltedged market and it is generally felt that, with the large volume of surplus funds in the market, the governments could have been successful in their loan programme even if the issue prices were higher. As our readers are aware, there is a great demand for Provincial loans with not many sellers offering. Business has been extremely difficult in Provincial loans in recent months and any small lots offering have been eagerly swallowed up by investors.

Four Provincial Governments are raising new loans, namely, the Punjab, Bombay, Madras and C. P. Governments. All the loans carry interest at 3 per cent per annum and are repayable at par in 1956. The issue prices are different in the case of the four provinces. The Madras Government is raising a loan for Rs. 1.25 crores at an issue price of Rs. 99-8 per cent while the Bombay Government is raising Rs. 3.5 crores with the issue price at par. The Punjab Government is asking for Rs. 2.5 crores and the C. P. and Berar Governments Rs. 50 lakhs, the issue price in both cases being Rs. 99 per cent. Subscriptions are receivable only in cash or cheque and the list will remain open only for one day. As the new loans are required for the repayment of old obligations there is no creation of unproductive debts and the loans should, therefore, be a complete success.

* * * * *

Kesoram Cotton Mills Company, Limited has done very well in the half-year ended March 1943. The net profit, before providing for taxation and depreciation, is nearly Rs. 11 lakhs higher than the figure for the previous six months at Rs. 26,96,445. The figure for the corresponding half-year in 1941-42 was Rs. 13,95,048. Such a big improvement in earnings has been evidently due to the improved conditions in the piecegoods market. It has not been possible, however, to increase the dividend to ordinary shareholders though, it has to be borne in mind in this connection that the capital was increased by the bonus issue last half-year by Rs. 5 lakhs. Provision for taxation is very much higher at Rs. 29,00,385 against nil. The amount set aside to depreciation is lower at Rs. 3,13,299 against Rs. 3,75,425. The dividend on the increased capital has been maintained at 8 annas per share. The ordinary shares are now quoting Rs. 15-8 cum-dividend. On the basis of the latest dividend the return works out to more than 6.5 per cent tax-free.

* * * *

Choonabhutti Tea Company, Limited has been able to report a substantial increase in earnings for the year ended December, 1942 as the crop turned out by the Company's estates was considerably higher and the average price realised per lb. was as much as 14 annas 8 pies against 12 annas 1 pie for 1941. The net profit, before providing for taxation and depreciation, is Rs. 4,66,029 against Rs. 1,92,936 for 1941. The amount set aside to depreciation is Rs. 13,740 against Rs. 10,833 while the provision for taxation is Rs. 1,50,000 (Rs. 60,000). The Dividend Equalisation Fund receives Rs. 50,000 (Rs. 20,000). Even after the substantial allocations to funds the dividend on the ordinary shares has been increased to Rs. 75 per share from Rs. 35 per share on the former occasion. The final dividend is Rs. 65 per share and makes with the interim dividend of Rs. 10 per share, already paid, Rs. 75 per share for the whole year. The amount carried forward is considerably higher at Rs. 76,446 against Rs. 40,107 brought in.

WATCH-DOG.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have continued to prevail in the money market and call money has been unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. Applications in regard to Provincial loans and for treasury bills on the usual scale have thus not made any difference to the money market. In fact, there has been such a plethora of funds that even with the calls from the Provincial Governments the Central Government have been able to get their requirements of treasury bills at the lower rate of 13 annas and 4 pies per cent per annum against 13 annas and 9 pies per cent per annum last week. At the auctions of treasury bills held this week, the total amount of applications was lower at Rs. 14.91 crores against Rs. 18.85 crores but bidding was keener as will be evident from the substantial decline in the discount rate for the second week in succession. The offer for next week has been maintained at Rs. 8 crores. The U. P. Government is asking for Rs. 1 crore of three months' treasury bills and applications will be received up to Wednesday next week. The Bengal Government were able to get their requirements of 12 months' treasury bills for Rs. 50 lakhs at the comfortable rate of Re. 1-12 per cent per annum. It should be said that the rate secured by the Bengal Government for 12 months bills is lower than the rates offered by banks for 12 months deposits and perhaps provides an encouragement to Provincial Governments to raise short terms loans on a twelve month basis.

The returns of the Reserve Bank for the week ended September 3, 1943, do not show any important change so far as the total note issue is concerned. There has again been no currency expansion while the increase in the total of notes issued is due to the rise in the figure of rupee coins. Notes in circulation are higher by Rs. 2.3 crores as a result of decline in the banking department. Sterling securities show a further rise of Rs. 4.99 crores to Rs. 623.81 crores and rupee securities for a like amount have again been cancelled and the latest figure is Rs. 83.36 crores. In the banking department, Government balances are sharply lower at Rs. 4.67 crores, the decline over the previous week's figure being as much as Rs. 24.38 crores. This big decline, while due to the large month-early disbursements, the cancellation of "ad hoc" securities and the excess of treasury bills maturities over sales, is perhaps due to some other big payment. Provincial Government accounts show a rise of Rs. 3.35 crores while deposits of member banks with the Reserve Bank are sharply higher at Rs. 77.54 crores; an increase of Rs. 16.97 crores over the week. Balances held abroad show a decrease of Rs. 56 lakhs, but if the transfer of sterling securities for Rs. 4.99 crores to the issue department is taken into consideration, the net sterling receipt is of the order of Rs. 4.44 crores. There is no change in the amount of loans and advances to governments.

The return of the Imperial Bank for the week ended September 10, 1943, shows a slight increase in deposits to Rs. 198.39 crores from Rs. 197.73 crores. Investments are sharply higher at Rs. 136.45 crores against Rs. 132.48 crores. The increase of nearly Rs. 3.96 crores is perhaps due to the greater interest shown by the Bank at the auctions of treasury bills held last week, thus accounting for the appreciable decline in the treasury bill rate. Loans and advances are lower at Rs. 34.39 crores against Rs. 35.62 crores. Cash balances do not, therefore, show a proportionate decline at Rs. 37.37 crores.

As we go to press, it is announced that Central Provinces and Berar loan was oversubscribed in ten minutes and the list had to be closed. Subscriptions up to and inclusive of Rs. 5,000 will be allotted in full while those above Rs. 5,000 will be allotted 71 per cent with a minimum of Rs. 5,000. The list for the Punjab Government loan was kept open till the close of the day and was only slightly oversubscribed. Allotment will be made in full. The Bombay and Madras loans were fully subscribed only after a call was made on the underwriters for the balance of the loan amounts. The reception accorded to the new loans, therefore, is not exactly in accordance with expectations.

It is now understood that the Government of India have decided to issue, as from the beginning of next month, Post Office 12-Year National Saving Certificates. The 10-Year Defence Saving Certificates will not be issued after the end of this month. The new certificates are obtainable in denominations of Rs. 10, Rs. 50, Rs. 100, Rs. 500 and Rs. 1,000 and the maximum holding by any person, either solely or joinly, is limited to Rs. 5,000. No income-tax is payable on the yield from these certificates. It will not also be taken into consideration in calculating assessable incomes. These certificates cannot be cashed in the first three years after which period they can be surrendered at any time. If payment is made after three years, the holder will get for his certificate of Rs. 10 an interest of 8 annas and for every succeeding year an addition of 8 annas. At the end of 12 years the total amount that will be realised by the holder is Rs. 15 on his investment of Rs. 10. It will thus be seen that the taxfree return on the new type of certificates is 4.16 per cent and is very attractive for the small holder. Needless to say in these days of low interest rates and lack of avenues for investment for the small investor considerable sums of money will be attracted from the lower middle and agricultural classes. We pointed out last week that the Government of India should not in their anxiety to attract money from the lower ranks devise measures which would have an adverse effect on the giltedged market. The limitation of holdings to Rs. 5.000 certainly ensures the maintenance of giltedged values but whether the Government will be able to get very large sums remains to be seen. It may be that the higher ranks of society will be putting money up to the maximum amount permitted to a single individual.

The following 'communique' has been issued by the Reserve Bank of India:—

"The Central Provinces and Berar Loan was oversubscribed and closed at 10-10 a.m. Subscriptions for this loan upto and including Rs. 5,000 will be allotted in full and application for amounts over Rs. 5,000 will receive allotment at 71 per cent subject to a minimum allotment of Rs. 5,000.

"The Punjab Loan remained open for subscription till the close of the day and was slightly oversubscribed, all applications will receive allotment in full.

"The Bombay and Madras Loans were fully subscribed after a call on the underwriters for the balance not covered by public subscriptions."

The exchange market has been steady with a few more export bills offering.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 6 9/32d. and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

Finance Abroad

Thursday Evening.

Market developments are of very limited significance, and the confusion precipitated by the escape of Mussolini has not affected the widespread belief as to the shortening of the war. An approach to compromise in respect of the post-war exchange agreement is indicated in the report of Lord Keynes' journey to Washington D. C. The second White plan may be accepted if the U.S. Treasury guarantees assistance. Agreement regarding overseas investment has been reached between Britain and the U.S.A. according to the "News Chronicle". The agreement will probably leave existing investments intact and limit repatriation of British capital in the future. Since details are not known, surmise is useless. But the U.S. Treasury is developing very liberal views to judge from the plan for a new bank for reconstruction set up on the basis of co-operation among the United Nations. Two speeches this week, of Mr. H. A. Wallace and Mr. Cordell Hull, are important indicators of post-war policy. Republicans do not disclaim responsibility for world peace and Senators who toured Free China may go back to draw up the 1944 platform. An open alliance with Britain is desired outside the Administration and Mr. Hull's statement, amplifying the good intentions of the White Paper of January, points to a strengthening of the President's influence at home after the Quebec Conference. The Secretary of State outlined the aims of the U.S. policy now and after the war so that isolationism may not raise its head again.

The closer approach to the Allies is not without interest when there is vague talk of the price of gold being reduced to 25 dollars per ounce, so that the war-time depreciation of sterling is corrected. The reduction would of course modify the belief at home in the excessive depreciation of the dollar. The Administration would gain greatly, and put over its tax, price control and other plans. The nations asked to agree to the post-war stabilisation plans would also gain because they could get gold more easily later on for paying into the new common fund. If the gold content of the dollar is raised by Presidential order just as it was reduced during the depression, foreign trade would not suffer as the greater part is under lease-lend. A reduction in the U.S. price of gold may have effects on the bullion markets all over the world. High prices corresponding to rates in India are paid for gold in Europe as the hoarding demand there is strong. If the U.S. price is appreciably lower, an alteration in exchange rates may follow, and the price of gold will be reduced to the same extent. Since no definite proposals have been put forth after the reports of the unofficial conference in Washington about gold and exchange, it is hardly possible to predict what will take place after the conference regarding the world bank or the bank to hold commodity reserves. The food conference's aims are being translated into practical schemes for avoidance of slump. The Vice-President mentioned at Chicago the duty to maintain export of capital for the relief of war-ravaged countries and raising world production by the grant of assistance to backward countries. International investment under the auspices of a new authority is held desirable but India may not figure as a field of investment and any settlement of India's obligations without regard to her handicaps may excite suspicion, just as the bare mention of a new financial agreement with Britain on the eve of extended operations does at present. The placing of loans for reconstruction on the model of the League loans may be undertaken by the Bank for Reconstruction linked with the Clearing Union or Stabilisation Fund. Nothing has been said yet as to the position of neutral currencies or the position of the Axis currencies. Unprecedented depreciation would leave large areas out of the reconstruction plans and the maintenance of controls to exclude many countries would be inescapable.

The proposal to help Italy after the armistice must be modified by the encouragement given to Fascists in the new civil war. The Cremona government is a dependent of Germany and its authority does not extend to the Dodecanese. The currency confusion in the north of Italy must be greater than before. But the Ministry of Food has mentioned Italy's probable wheat requirements and the Allies probably want to see that the Amgot functions successfully.

The U.S. President's differences with Congress are unresolved but the session may not be stormy as presumed. Republicans object to new man-power regulations but they may swallow tax proposals. Last year's anti-inflation programme still holds the field and the revenue bill may go down very well. Congress is said to be prepared for a compulsory savings plan. The freezing of wages is objectionable to labour leaders who have taken the anti-strike legislation in good part. An increase in taxation is certain after the President's review of war expenditure in the fiscal year ended June. What taxes are likely to be accepted and why is more than anybody can tell because the British plan of subsidies for maintenance of rationing has been rejected and the only argument that can be emloyed is that wages will have to be raised if prices keep rising. A reduction in the price of gold is possible, only if prices do not go up, and the world is interested to some extent in the President's plan to keep down prices. There has been no reference to the possible conflict with the Supreme Court. Republicans who toured the States and took counsel on the post-war policies of the Republic may have developed fresh views after the caution of Mr. Churchill that the price of greatness is responsibility. The virtual disappearance of differences as regards foreign policy may influence Congress in its attitude to the tax bill provided that no disagreement follows over a fourth term for Mr. Roosevelt. The Treasury has the money market to fall back upon. The prospect of peace discourages Wall Street as much as Bombay and leading issues in spite of references to a firm opening on some days are hardly moving up while fluctuations are narrower on reduced turnover. The contrast between London and New York may be accentuated if gold mining issues fall back when the price of gold is lowered. Stoppage of purchases of Mexican silver may force down the price of silver.

The rise in bullion prices locally must be attributed to other factors than the abrupt cessation of foreign sales. Herr Hitler's threats and promises are, in the main, responsible for the rise in gold and silver. It is evident that proposals for gold contributions to a new fund stimulated the belief that the premium on gold will remain indefinitely. The improvement in gold mining shares may support such a belief while the decline in gilt-edged in London may have naturally fostered the belief that the war will not end soon. Home Industrials in London have been irregular (profit-taking is the immediate cause) of late and the only good feature has been the firming up of tea shares. This, along with the higher sale averages, has helped to raise quotations for tea shares in Calcutta. Reports of strikes in coal-mines may explain the irregular trend in Industrials, but the main effect of the armistice news has been favourable, even foreign bonds responding last week in an unmistakable manner. War news may have led to a quietening thereafter but the effect on savings and investment cannot be large. The four years of war have encouraged saving as non-essential consumption has been cut and the national savings movement by providing over £2302 millions showed what part small money played in the fight. The financial controls are the same as those described by Mr. Crick in 1941 but in India there have been many changes. Attention may be drawn to a recent notification permitting export of capital to Portugese India. Remittances, too, are not forbidden and the leave given to buy or transfer shares etc. must be related to the developments in Portugal. Last year many restrictions appeared as the depreciation of the rupee was manifest. Now the relaxation implies that the rupee will be like the escudo in Goa. The fresh prohibition as to export of rouble notes may have its justification but export of foreign currency notes to specified places and Indian notes to many countries is now permitted. In Iraq as in Kiuwait the Indian rupee has long been quite familiar and the relaxation of procedure, if it is not going to help our Muslim pilgrims, may help other countries to acquire rupees useful for the purchase of Indian goods.

Scope for Economy

Bengal's Budget has been presented to the Assembly almost in the middle of the year to which it refers. The Speaker's ruling, which prevented the budget from being presented on the last occasion, would appear to have portended the ill-starred course of Bengal's finances during the current year. The record levels to which revenue has risen is as featherweight against the budgetted deficit of over Rs. 7 crores. Admittedly, there is an extremely complicated and distressing situation in which no Finance Minister would feel tempted or called upon to touch up, however lightly, the darkness of the present outlook. The Hon'ble Mr. Goswami is, indeed, well-advised to bring up before the House estimates of revenue and expenditure, which leave a large, unbridged gulf of nearly half the normal revenue of the Province. His speech abounds in admirably apt and apposite phrases, calculated to soothe the exasperation which the Assembly is apt to feel on allied questions of policy and to bring about a proper attitude with which to face the inevitability of a deficit. Though the call to forget party differences is as old as party politics, there is need for a Finance Minister, anxious to save his budget from another constitutional reverse, to emphasise the main feature of the present position as it affects the people of Bengal in general and the finances of the Province in particular.

"The conditions confronting us to-day are quite unparalleled. This huge deficit is due entirely to the burden laid on our revenues by measures for the relief of distress in our present misfortunes. In Bengal to-day there is only one problem that matters: the food problem. Every one who has seen the plight in which Bengal finds herself to-day will agree that this is no time for half measures and no matter what the cost, Government must afford relief to those unfortunates for whom failure to afford relief may mean death by starvation."

That is a statement of Government policy to which few would make any objection and which all reasonable men will accept as adequate and satisfactory explanation of the serious disequilibrium of the finances of the province at this stage. But it is a question whether every effort has been made to reduce the deficit to the utmost minimum possible. Obviously, such a reduction, though largely a responsibility of the Finance Minister, can by no means be considered to be exclusively his. Questions of policy, which are primarily the concern of other Ministers, leave the Finance Minister to face the opprorium of a large deficit budget. Since the greater part of the current year is still before us, it is not pointless to urge here that the reduction of this deficit through ways which we shall examine presently is the responsibility of the whole Ministry and that it is the Finance Minister's special task to see that no improvement in the food policy likely to lighten the load of the deficit is neglected or lightly brushed aside.

At the moment, it would be wrong to overlook the fact that if the food situation and the measures necessitated by it are isolated, the rest of the financial picture is one of which the Finance Minister may even be positively proud. Both the results of 1942-43, which in the present budget appears as actuals nearly seven months ahead of the usual time, and the estimates of revenue for the current year make good reading. The opening balance at Rs. 1.32 crores was nearly 17 lakhs more than the previous anticipations, while the closing balance at Rs. 2.61 crores was better by Rs. 82 lakhs. Revenue at Rs. 16.50 crores showed an improvement of Rs. 80 lakhs to which income-tax contributed Rs. 47 lakhs and excise Rs. 72 lakhs. Income from excise profited by the large influx of liquor drinkers from other Provinces and by increased dependence on country-made spirits. Sales tax, however, had a disappointment in store, which is not surprising since 1942-43 was the first full year of its operation.

Revenue Expenditure was almost exactly equal to the estimate but suffered variations under three heads. The war caused a hold-up of ordinary expenditure and increased the expenditure on such items as A.R.P. and civil defence activities, while famine relief went up by nearly 50 lakhs. Outside the revenue account, a surplus of Rs. 1.51 crores resulted as against the anticipation of a surplus of Rs. 75 lakhs, due to a loan of Rs. 2¼ crores from the Government of India which is even set off by heavier outgoings under special advances and advances to cultivators.

As for the current year the estimated revenue is Rs. 18.44 crores or Rs. 1.94 crores more than the actuals of last year, the main sources of improvement being excise 65 lakhs, stamps 50 lakhs and other taxes and duties 75 lakhs. Out of the total increase of 75 lakhs under Other Taxes and Duties, some 40 lakhs are due to the enhancement of the rates of levy in respect of Entertainment Tax, Betting Tax and Electricity Duty under the Bengal Finance Act, 1943. The bulk of the remaining increase occurs under Sales Tax and is due mainly to the general rise in the price of the commodities and specially of imported consumer's goods. The estimated revenue expenditure in the current year is 25 crores 81 lakhs against an actual expenditure of 16 crores 73 lakhs in 1942-43. The increase is thus a little over 9 crores.

Of this increase of Rs. 9 crores in expenditure, nearly Rs. 1½ crores is accounted for by the increase in civil works consequent on the hold-up of last year, in police, due to supplementary dear allowances, in interest charges as a result of the large borrowings and in irrigation and the civil Supplies Department, both of which are closely related to the present state of the Province. The more staggering increases are to be traced to the estimated loss of 3½ crores on the sales of foodgrains and a rise of 66 lakhs under agriculture.

As Mr. Goswami has emphasised, cost can be no consideration when relief is so urgently required over all parts of the Province, and any attempt to criticise the budget merely on the ground of its being seriously unbalanced will be condemned all over the country as not only unjust but inhuman. But in view of the size of the deficit and in view of the widespread lack of confidence in the soundness of the methods adopted by the Civil Supplies Department, the duty rests on the Ministry as a whole and the Finance Minister in particular to exercise a constant scrutiny of the methods, in order that better methods, better alike in the results to the consumer and in their effects on the Exchequer, may be evolved before the current year is well advanced. For our part, we are not without hope that, if improvement is effected in time, the loss of 3½ crores on trading in foodgrains may be appreciably reduced. The statement of Sardar Baldeo Singh in the Punjab pointing to a wide margin between the buying price of atta in the Punjab and the price to the consumer is one which, while it may not suggest illegitimate private profits, certainly encourages the hope that civil supplies may be improved so as to avoid serious losses. Considering the price that the large mass of consumers have to pay and agree to pay in the black markets, it is not impossible to balance the loss on supplies to the poorer classes by profits on sales to the higher classes. What is needed is a vigorous effort to stop the leakage of supplies of goods like atta, sugar and rice to the black markets and their sale, on different terms to the famine-stricken classes and the well-to do classes. Such a scheme, evolved in time, may well result in the pleasant surprise of a diminished deficit when the budget for the next year will fall to be presented. Likewise, it is up to the Government to convince the people that as large a part as possible of the increased expenditure goes to the permanent improvement of agriculture and irrigation in the Province. No one will deny the folly of a deceptive brightening of the financial picture. But the expenditure as drawn up at present leaves scope for economies, of which the Finance Minister may not afford premature hopes, but which he will be failing in his duty if he does not explore to the fullest possible extent.

ARMISTICE RESULTS

While it is easy to tabulate and revise the military consequences of Italy's surrender it is not easy to reconcile the unconditional surrender with the problems that have overpowered Badoglio. A march away from the totalitarian economy was postulated by the liquidation of the Fascist party. The process may suffer through the surrender, for the Germans are preparing to fight in Italy, and the Allied advance therefore continues. The armistice then has not solved Italy's problem as to food and raw materials. Fuel shortage may be accentuated by the break with Germany, and the repatriation of Italian workers from Germany becomes conditional rather than probable.

The surrender has made it clear that Italy more than ever is the prisoner of the Mediterranean. It has also made it clear that Mussolini's failure to convince Hitler at Verona that the south demanded as much attention as the east could have only one result—surrender. If Mussolini's exit made surrender feasible, it produced convulsive confusion in the industrial north. What Italy's capital requirements are and what her realisable assets are cannot be determined except after the investigation that is contemplated by the State Department which has chosen Mr. Baldwin for the special task.

The problem of food supply is perhaps to be solved by drawing on wheat surpluses in the New World. But Italy no more than Argentina can claim Lease-Lend supplies and the Italian Government cannot pay for relief. A further capital levy has limited possibilities, especially, when a weak Government for the transition period is in power, and Italy's surrender made it plain that the new regime had a limited life. The King is expected to take over from Badoglio but the economic problems of swollen debt, inflation and privation, of devastation and destruction will remain with Badoglio's successors. The most realisable asset is the shipping. Since 2.4 million tons of shipping has been destroyed it is not likely that more than a million tons of shipping can be saved for Italy. The shipping may be sold to the U.S. Maritime Commission if the armistice does not contain provisions for compensation for Allied vessels sunk. The armistice agreement was made in secrecy and was published only after five days for reasons that cannot be determined precisely. If the economic and financial provisions are to be added, after the approval of the three major Governments, one may expect that the Italian Government's representations (limited to independence and unity) may bear fruit. The stoppage of intercourse with Germany will probably accentuate the trade difficulties and lead also to the seizure of Italy's assets in Occupied Countries. If European resources are taken over exclusively by the Germans the weakness of Italy will become an Allied problem, for Italy's surrender follows 39 months of war in which the standard of living has suffered more than the Government's resources.
