case in which for the first time the salaries are fixed by those who have come to office four months back. As I pointed out on another occasion these salaries had been fixed very long time ago at a low rate for almost all the Government servants. This is not a case in which the present Government took into its head to reduce the salaries which had been ranging at a high rate. Wherefrom has this enthusiasm come now? How has this been fomented by expressions which are not calculated to be of any service? I can understand if the Government has taken a sudden jump and reduced the salaries for protestations to be recorded. What has been going on for such a long time has been continued for a few months. Why this anger? Why this temper of the hon. Member Mr. Pocker and the hon. Member Mr. Natesan? (Mr. P. Natesan: 'I only requested that the Premier may see that something is done.') For anybody, Sir, it would be unjust and improper that they should get off the proper balance in considering this situation. Is there anything unreasonable which this Government has been endeavouring to do? How does this spirit come into these non-gazetted officers and then threaten the Government with direct action? Wherefrom did they get it? How did they forget that their union was recognized by Government to enable them to ventilate their grievances and put for every child—if they are fortunate enough—they get Rs. 10, which is of course up to a maximum of Rs. 30. I say, therefore, Sir, that justice should be done to them. It is no use talking in a light-hearted manner that we do not have funds, particularly when compared to the services which they render. It is unjust, as was pointed out by us that these people are forced to work 10 hours and 12 hours—that too responsible work. And what is paid to them? A meagre sum which is not in proportion to the work that is expected of them. It is inhuman and cruel on our part to expect them to do that responsible work for the pittance we pay. Apart from financial considerations, I am sure Government will rise to the occasion and do justice to them. If they fail, it would be a bad day for the Government as was pointed out by the Deputy Leader of our party."

THE HON. SIR T. PRAKASAM:—"We should consider this subject dispassionately without any excitement, without importing undue vehemence. As I have been stating in the past, I must tell here hon. Members of this House that they are all expected sooner or later to play the role of responsibility when their turn comes, and there is no good of discarding all rules and reason and speak whatever they consider proper to use it against the Government. It has been my anxiety that the hon. Members of this House would weigh the words when they enter defence for the non-gazetted officers and try to justify them without having any regard to the rules of discipline. No Government can function if indiscipline is sown and encouraged without looking to the consequences. Apart from the many considerations, can any institution function if indiscipline is preached. This is not a

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Though the half-year closing of bank accounts occurred this midweek, there was nothing like the pressure for funds which used to be the feature of the money market in days gone by on the year closing and half-year closing days. Time was when window dressing was accepted and practised even by the conservative banks. The idea was to proclaim to the world an abundant proportion of cash and a high degree of liquidity. Times are, however, changed. Thanks to the colossal increase in deposits, and thanks to the growth of large surplus cash resources in the hands of businessmen and business houses, the last three years have witnessed an intensification of the liquid assets of banks. In fact, the liquidity of banks has now reached a stage extremely embarrassing. It can therefore be readily seen that, while, each day and every day, banks maintain large cash balances and enjoy an extravagant liquid position, there is no special manipulation necessary to celebrate the end of the year and the end of the half-year.

This time twenty years ago, banks used to pay 2 percent on their current account; and, in some cases, the rate for twelve months' deposits was as high as 6 percent. In these two decades, there have been rate reductions by common consent among banks, in the rates payable on current accounts and savings bank accounts. The common rate today is ½ percent on current accounts. When the reduction in this regard was first made, it was feared that it may have adverse effects on the volume of bank deposits. This apprehension proved groundless. The banks were thus emboldened to reduce the rate further and further. It may now be said that the rate payable on current accounts has no effect of any kind on the amounts accruing to banks in current accounts. Another important development of recent years is the greater and greater increase in current account balances in proportion to fixed deposits. This is partly due to a good part of the business in India being transacted through bank accounts; and balances connected with business operations are preferably kept on current account. Another reason is that the rates payable for term deposits have suffered an even more drastic reduction than the current account rate. No decent bank will now pay more than 1¼ percent for one year's deposits. The spread between current account rate and fixed deposit rate, which used to be between 3 percent and 4 percent, is now less than 1 percent. There is thus no particular inducement to lock up funds in term deposits. This raises an important point with regard to the time-honoured commission payable by banks on deposits. Bonafide brokers who place deposits with bankers are entitled to a commission of 4 annas percent per annum. This rate has been in vogue, to our knowledge, for three decades. This rate was fixed when deposits were more difficult to get than the plans to take loans and advances. In simple terms, the banker a decade or two ago looked upon the depositor with more kindliness than upon the borrower. Whoever brought the contact between the bank and the depositor was thus suitably remunerated. The position is now reversed. A good many of the banks are in the mood to refuse deposits curtly. On the other hand, they would like to humour and pamper a really credit-worth party if he would take a substantial loan. In the change that has thus been wrought by time, the banker now looks with more favour on the borrower than on the depositor. Is it not then necessary to revise the attitude of banks with regard to commission? When the depositor was the favoured gent, the broker who introduced him was paid the commission. Now that the borrower has become the favourite, it stands to reason that the practice of paying brokerage on deposits must yield place to the new practice of paying brokerage to those who introduced the parties for loans and advances.

Interbank call money has remained unchanged, that is to say, all lenders and no borrowers. The nominal rate is ½ percent in Calcutta and ¼ percent in Bombay. On the treasury bill tender day, applications made very poor showing, being Rs. 9.07 crores aganist Rs. 8 crores on offer. The average rate of accepted tenders, however, was Rs. 1-1-0 percent per annum, the rate that has been maintained for seven weeks in succession. Sales of intermediates treasury bills also make poor showing at Rs. 1,20¾ lakhs. The offer of tender bills for next week is unchanged at Rs. 8 crores; and tap bills will continue to be sold at the same rate of Rs. 99-12-0 percent.

The Reserve Bank returns for the week ended June 25, have not reached our hands at the time of going to press; and we are to content ourselves with an analysis of the Imperial Bank's statement. The Imperial Bank's deposits have now crossed the Rs. 190 crores mark. Investments show a sharp jump from Rs. 129.66 crores to Rs. 133.26 crores. This may be due partly to the Bank taking up the Third Defence Loan in anticipation of the closing of the list. Advances also have risen by over Rs. 2 crores to Rs. 38.48 crores. In the result, cash shows a substantial decline from Rs. 34.33 crores to Rs. 27.92 crores.

Following the communique that has been issued from New Delhi the Government of India have issued an Ordinance liimting the rate of dividend, payable by the Reserve Bank to its shareholders, to a maximum of 4 percent as long as the Ordinance remains in force.

As a result of the enormous war expenditure in India by the Allied Governments including the Government of India, an abnormal expansion of currency has taken place and since the profits of the bank consist mainly of interest on securities, these profits have swollen abruptly.

The distribution of the bank's profits between the Government and the shareholders is regulated by Section 47 and the Fourth Schedule of the Reserve Bank Act. The normal operation of these provisions would result in an abrupt increase in the rate of dividend. The Government believe that stabilisation of divi-

TREASURY BILLS

India

Tenders for Rs. 3,00,00,000 of three months' Government of India Treasury Bills were opened on June 29. Total amount offered was Rs. 9,07,00,000. Tenders at Rs. 99-12% were *accepted in full and those at Rs. 99-11-9%* were allotted approximately 28%. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 1-1-0% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on July 6 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on July 5, at other centres. Successful tenderers should make payment on July 9, 1943. Other conditions are as usual.

Three months Intermediates will be sold from June 30 to July 5 at Rs. 99-12-0% subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if the Government think it necessary).

Three months' Intermediates sold from June 23 to 28 amounted to Rs. 1,20,75,000.

During the week ended June 25. Government of India Treasury Bills for Rs. 7,82,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

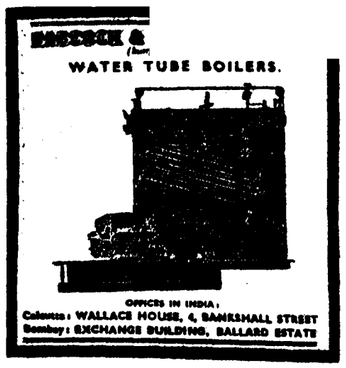
Finance Abroad.

Thursday Morning.

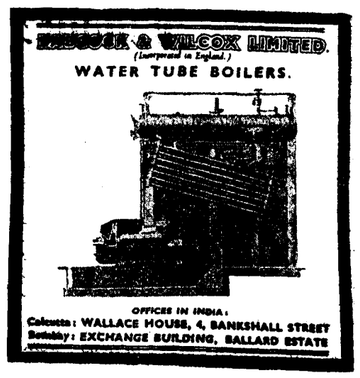
The difficulty created by Congress action on the anti-strike bill has not stood in the way of Congress accepting the Appropriation bill. Difference between the Vice-President and the Secretary for Commerce who is also head of the R.F.C. should have little or no influence on Congressional opinion as to Federal spending. The growth of the U. S. public debt in 1942-43 from $76 billions to $140 billions is not unexpected. At first sight, it looks small in relation to the total expenditure of $80 billions of which $71½ billions went for the war bill. The increase in debt was sanctioned when the Federal debt limit was raised at the President's request by Congress; and the debt of $140 billions is well within the sanctioned total. It is, however, proper to note that the increase in debt is far greater than the increase in tax revenue, and the familiar criticism that the Government has taxed too little and borrowed too much finds further justification in the figures published. Mr. Chester Davis is not the last to sound a warning as to the need for higher taxes. The Victory tax is there, but the public has to be prepared for doses of additional taxation when it is counting on relief from 1942 income-tax because of the pay-as-you-go tax plan. How Congress manifesting considerable independence at present will treat tax proposals in the future need not be discussed to show that the U.S.A. which is finding (on outside estimate) only 30 per cent of the war costs from taxes, should raise taxes.

New excises and a sales tax appear more suitable than the previous attempt to fix a definite limit to incomes. In a period of rising public expenditure, inflation control appears even more important, and the differences over the food subsidy plan must prejudice the success of the anti-inflation programme. Mr. Prentiss Brown openly recommended subsidies to avoid a rise in wages. The Treasury will, however, have its plans and nothing is more certain than the inauguration of a new scheme to control prices and wages. The satisfaction of the President in regard to war production and the home front will even suggest that mastery of the situation is within reach. The dangers of inflation in the U.S.A. have been referred to only recently by the City Editor of the News Chronicle who pointed out that if the price structure in the U.S.A. were askew world trade could not revive, and the U.S.A. would be compelled to part with gold in order to take its usual imports. Reference was made to Brazil's decision to rescind its exchange agreement. The most important possibility outlined is the redistribution of gold. The note circulation in the states in spite of the increase of 50 per cent (Mr. O. R. Hobson's estimate) has an unusually large gold backing and the loss of gold in the post-war period would not entail any sacrifice but make for stability in other countries. The possibility of exports of gold from the U.S.A. must be related to the Indian level of bullion prices at present. On a distant view imports from the U.S.A. would push prices down and this might have a salutary effect on commodity prices. As for the U.S.A. to-day Congress approves farm subsidies but not subsidies to help out rationing from August. The railroads, too, are to get subsidies so as to meet rising costs, and the stockholder has a very good chance of a square deal.



This may explain the rise on Wall Street. The turnover has rapidly improved and the tone appears wholly cheerful in spite of the strike in the coal mining industry. The big motor shares have gone up in spite of strikes reported in the Ford and Chrysler plants. Evidently the stock market makes light of the struggle over the anti-strike bill and of the plans for subsidies and taxes. The Bombay stock exchange has not ignored the favourable signs on Wall Street and is content to take foreign markets as better guides than the stories as to official control of the market or the U. S. President's reported resignation.

The reduction in Treasury deposits at a time when the Clearing Banks in Britain have large balances with the Bank of England must be related to the improvement shown in the Exchequer returns. For the first quarter as for the final quarter of 1942-43, revenue is buoyant and the Treasury which maintains the weekly tender issue at £90 millions is reducing its short-term borrowing. The reduction is likely to improve the tone in the stock exchange so far as British Funds are concerned. For a week and more prices have shown little change and the improvement in oil and tea shares finds no counterpart either in the railway or the giltedged markets. Since all dealings are for cash the flatness of Home Rails can be explained easily. Recent changes in oil shares have naturally favoured the holders. Venezuelan shares have strengthened further and the connection with Shell has been decisive for V.O.C. shares. Mexican Eagle remains dull, but all other shares have appreciated and outstanding for several reasons is the rise in Royal Dutch. The Netherlands Government's broadcast warning as to the Allied invasion of Holland must, indeed, be a bull point for Royal Dutch shares which have not touched par even at the worst times. The general tendency in Home Industrials has been firm as usual though Stores shares have lost ground. The textile group continues firm and a market feature has been provided again by Dunlop Rubber. The London market has raised the price of Burma Corporation shares only recently after the improvement in Indian markets but Barnagore Jute (£5) quoted locally at Rs. 164 is still quoted at £7½ in London. This is, however, a small matter as compared with the notable improvement in tea shares in London. This should be of direct assistance to Calcutta where the shares are now described as easier. The usual profit-taking has not subsided, and the next revival may be found in the local sales averages after the record crop of April rather than the rise in a few sterling shares.



The U. S. oil industry under Mr. Ickes' control, has escaped the scandals associated with the names of Daugherty and Sinclair. The Standard Oil of California has been called upon by the Department of Justice (after the usual Congressional enquiry into the new contract) to give up the Elk Hills Reserve. It is not known if the Navy Department, which is primarily concerned with Californian oil properties, has been charged with negligence or improper conduct. Colonel Knox referred merely to his refusal of the price asked by the Standard Oil Company, and the further enquiry ordered by Congress is conditioned by its attitude to the Administration on other matters. That Shell Union may stand to gain from the cancellation and re-acquisition ordered is probably understood and one may easily connect the jump in Shell shares in London to the Congressional probe into oil contracts. Colonel Knox's warning as to the danger of depletion of U. S. oil resources in 14 to 20 years is not likely to interest Shell shareholders though it is of definite importance to Venezuela and Trinidad companies in any assessment of the future. There has been reference to recovery prospects in the case of Burmah Oil. Indian shareholders have been told that Attocks are rising (the quotation last week was around 45sh. for the £1 shares) and Bombay was said to buy Japanese Bonds and Eastern oil shares on chances of early appreciation.

General de Gaulle's committee has made a statement as to Soviet aid. The Committee has denied receipt of monetary help for propaganda and announced that Allied help is defined by the Churchill-de Gaulle letters of 1940. The Soviet Union's ability to help others in return for help received has long been problematical. Trade with the Allies through Central Asia or Iran may be possible, but is unlikely, and the Polish Army in the Middle East certainly is not looking forward to Soviet help. The financial assistance offered to the Committee for French liberation must be a subject of conjecture in view of the Fighting French Committee's statement that help received is on the lines offered in 1940. Evidently, the compromise at Algiers has not been followed up by fresh financial agreements as to the future. The Allies' assistance to Giraud as against their aid to Arabs is unknown; the status of Algerian francs has not been determined. But trade with the French Empire has been legalised. India is allowed to trade with Somaliland which means that trade with East Africa as a whole will increase. India can also trade with Madagascar.

Editorial Comments

Foreign Trade after War with Japan

Despite their imperfections and inadequacy, the figures of India's foreign trade in 1942-43 repay attention. Quite clear-cut conclusions are, no doubt, out of the question, since the bluebook does not bring within its scope all the movements of goods that have taken place in the past year between India and the foreign countries. As the war progresses, more and more of the normal functions of trade and of merchants are taken on by the Government; and since inter-governmental transactions are not included in the figures of exports and imports recorded in the usual publication, it cannot be taken to be more than a part, though probably, the bigger part, of the picture of our foreign trade. Nevertheless, that part of the picture which has been bared to the public view reveals trends and tendencies which it were wrong to ignore for fear of their being probably unreliable. The war will shortly be fully four years old; and in modern times four years are a long enough period for new economic tendencies to make themselves manifest. Add to this, the pressure of the special exigencies of the war period, and one can realise that the trends are bound for the present at least to be very pronounced and strong. There is, of course, the question how far the changes occurring in wartime can survive peace and steady themselves in the postwar period. But our ideas of the transience of wartime changes are apt to be exaggerated. In any case, it is time that the trends of our foreign trade during the war period were taken note of and carefully watched and studied.

There is, in the first place, the serious fall in the value of our foreign trade, imports having declined by nearly Rs. 63 ocrres and total exports by more than Rs. 58 crores as compared with 1941-42. But it would be wrong to conclude from this that there has been any change in our competitive capacity. For, we have to remember that the occupation of Burma by the enemy accounts by itself for a cut of Rs. 28 crores in imports and more than Rs. 11 crores in exports. The Straits Settlement, Borneo and Hongkong are also responsible, for the same reason, for a decline of about Rs. 6 crores on both sides of the account. Imports from Japan amounted in 1941-42 to Rs. 12 crores and our exports to that country in that year totalled Rs. 4.6 crores. Thus the outbreak of war with Japan and its course in the opening months account for themselves for a big difference in both imports and exports.

Only Rs. 46 out of the Rs. 63 crores of the decline in imports and Rs. 21 crores out of the Rs. 58 crores of the decline in exports has been thus accounted for. But the balance cannot warrant any adverse conclusion about the trends of our foreign trade. As we said earlier, more and more of the ordinary functions of trade are taken on themselves by the Governments as the war progresses; and the result is that what should have figured in the published trade accounts becomes a government transaction. The action of the British Government in buying up the whole of the surplus tea in India after the ban on exports of tea in this country ha caused a difference of Rs. 8 crores nearly in the value of ou "exports" of tea. Likewise, it may be presumed that mor of the trade between India and the U.S.A. has been draw into the channels of inter-governmental transactions by wa of lease-lend and its reverse, thus causing a fall in import from the U.S.A. from Rs. 46 crores in 1941-42 to Rs 19 crore in 1942-43; and in exports from Rs. 43.59 crores in 1941-42 t Rs. 27.79 crores in 1942-43.

Similar factors are, no doubt, operative, as in the case c tea, in the case of the United Kingdom. But here, other an more powerful forces have also been at work. The financi relations between Britain and Argentina and the Sout American countries are now put on a different basis. Th guarantee, which Britain has afforded to Argentina again the depreciation of sterling, has enabled Great Britain t buy comparatively more freely from neutral countries ou side the sterling bloc. Some of India's staple exports are boun to be hit more or less seriously in the future. The dange must, however, have lost its terrors since the exports c India's raw materials are now at an extremely low level. Bu the fall of nearly Rs. 20 crores in our exports to Britain whic is offset only in part by a drop of Rs. 7 crores in imports ha its hardships for India, particularly at a time when the los of Burma and the far Eastern possessions is hitting us har in more than one way.

If we leave aside the decline in the trade with Britai and the loss of our trade with Burma, our trade with th Empire may be said to have shown some improvemen Except Canada, whose offtake of Indian goods has fallen fro Rs. 6.47 crores to Rs. 3.78 crores, all the important parts of th Empire have increased their imports from India. Our export to Australia have increased from Rs. 12 crores to Rs. 16 crore while our imports therefrom have declined from Rs. 4.9 crores to Rs. 3.34 crores. Egypt has increased her imports t India while our exports to that country register a fall.

Generally speaking, the most arresting feature of India' foreign trade during the war is the way India and the Middl East are being drawn closer to each other. The same is tru of Africa as well, since South Africa, Kenya, Tanganyika hav all registered increases in exports and imports. How far thi development is due to the emergency of the war, when th East is cut off from India and shipping difficulties mak Europe and America inaccessible, it is not easy to say. Bu it stands to reason that India's trade with her neighbour should gain in importance in the future. It is of no avail t check up the correctness of such ideas with an examination o current figures. A year's trading, in which the increase i exports of cotton goods is roughly equal to the fall in th imports of raw cotton, has an obvious emergent characte which it is idle to overlook. But it would be wrong, too, fo foreign countries to assume that India will easily let go he hold on the neighbouring markets which the war has so t say, thrown on her.

BETWEEN TWO TERMS

The belated announcement that Lord Linlithgow's term is to end in October and Field Marshal Wavell is to succeed him as Viceroy of India, is not, in any sense, a departure from policy. In Field Marshal Wavell's first public speech there is an assurance that he has retired from the profession of arms and there is no intention of setting up a military regime for any reason. That speech disposes of one apprehension, but it certainly reveals nothing which goes to allay others. The situation in India is not going to change. No change of policy is foreshadowed by the selection of an eminent soldier for the Viceroyalty. In the view of the Viceroy-designate, the main task is to develop and extend war effort for the removal of the Japanese menace. It is not the first time that the external peril is magnified. Concessions to the Muslim League were insistently recommended by Mr. C. Rajagopalachari for the same reason last year. The campaign of the dissidents against the Congress before the Congress Party turned to the 'Quit India' issue was based on the fear of invasion. It is therefore pertinent to ask why the Yellow Peril should be exaggerated, particularly, when the Washington conference reached a decision as to the concurrent speed-up of war against Japan. It may be that after the monsoon a large-scale effort against Japan may follow with a view to reopening of the Burma Road. The external peril, however, is submerged by Japan's own difficulties. Her air power is weakening after the losses in the S.-W. Pacific and the present confidence of Australian statesmen as to the removal of the invasion threat can only mean that Japan is powerless to attempt an offensive against the Allies, because she is kept busy guarding the positions in New Britain, New Guinea and Burma. But Field Marshal Wavell's speech asking India for a bigger effort here for the sake of the United Nations suggests that India is peculiarly exposed to Japanese attack.

The statement may be linked to the other that past pledges stand, though no constitutional change is possible till the war ends. There is a significant shift of emphasis from the disunity prevailing in India to the Japanese menace. It is certainly related to Mr. Churchill's resolve to put India outside the field of controversy and Marshal Wavell's visit to Washington may have led even to modification of U.S. views on the impasse. Japan's more obvious difficulties suggest that negotiations can be opened if Congress provides some kind of assurance. But from the Viceroy-designate there is no demand for assurance; only a more vigorous war effort is wanted. This is, to say the least, an unpromising beginning. Gandhiji's fast may have changed nothing; but in India it aggravated the deadlock. The main purpose of the fast was not accomplished; but it has been clear since that the grounds of difference between the League claim for independence and the Congress claim for independence were vanishing, so much so that a compromise could be promoted from without. But of the intention to promote compromise there is no sign. An assurance of sympathy with Indian aspirations conveys nothing. It is almost certain that the Indian business community, which for long has repeated the argument that political appeasement is the vital preliminary to intensification of war effort, will be disappointed by the very conventional expression of interest in India's economic and social progress (which is largely the concern of Indians according to Marshal Wavell). To the rigidity of the official attitude has been opposed the Indian businessmen's demand that a national government is required as much to-day as in the difficult transition period. For them the speech of Marshal Wavell is barren as also for the League which well might look for a sudden revival of the Cripps offer in another form. It is clear that the new Viceroy will be merely the executant of a policy that has accentuated the feeling of frustration without producing results that should impress the United Nations. The burden of Whitehall has obviously become heavier with the selection of a new Viceroy, and the search for advice in London might quicken prejudice. There may be nothing to warrant the belief that the new Viceroy is an expert politician but the politician's view of the impasse has hardly come to the surface. The men of wisdom and goodwill wanted for proper development are not many. The majority of such men are in prison under Rules validated summarily by Ordinance, and the amount of co-operation available is at present strictly rationed in accordance with the main demand for independence.

The rooted hostility to change explains the selection as Viceroy of one who would plead military necessity against every representation. Proposals for administrative reform could be easily stultified by the bureaucracy. The new Viceroy is evidently reconciled to the policy pursued since August 1942 and his allusions last year to civilian interference with defence preparations, if surpassed by the utterances of his subordinates, created the feeling that obsession with security deprived the C-in-C of the capacity to remain independent in opinion and pursue a different line of action for any reason. The disadvantage of previous Indian experience is manifest in the case of the new Viceroy for his nearest advisers will be his former colleagues since India cannot have a new council with a new Viceroy. The disturbing dislocation of Indo-British relations will, in any event, be projected into the future and this must compromise the effectiveness of India as a supply base.

The general impression that political advance is ruled out by the nature of the appointment, in the middle of a war, is sustained by the desperate efforts to revive Autonomy in several Provinces. That such efforts will precede the arrival of the Viceroy who will find the old Assembly still here and the departments unable to escape from set practices is understood. The contrast with the Allies' efforts to secure speedily French unity at any cost, is as obvious as the refusal to go forward in India. The Labour Party's refusal to inconvenience His Majesty's Government may not wholly explain the reiteration of intentions to stick to promises or keep offers open, for political India has ignored them and has insisted on fresh negotiations. The continuance of the deadlock seems inescapable. The effects on industry and trade cannot be measured. The complications of control have been added to inherent difficulties arising from a limited increase in home production. The promise of help for work in the interests of economic and social progress does not carry India very far. It is not necessary to recall in detail that the leading commercial organisations supported the demand for the release of Gandhiji, and favoured the essential departure in policy to secure Indian co-operation. The importance of the demand lay mainly in its anticipation of the Indian Chambers' Federation's resolutions asking for a conference to consider the situation in India afresh. These representations have been shelved and the new Viceroy's task will be more limited in scope than imagined. The promise of an open mind counts for little against the absence of any statement on Indian policy. The Parliamentary debates in March left the impression that no change was likely because of the difficulties in India for which the most obvious solution was the least acceptable. It is increasingly obvious that the coal, food and transport problems will get more serious in the next few months. The cloth problem has been solved in some measure, but the difficulties in the way of increasing home production outside the textile industry remains. The flight from the rupee has been arrested but discussion as to the necessity for deflation persists. The scarcity-inflation complex is not so formidable as the survival of hoarding and the retardation of industrial progress. These obstacles will endure since the policy of Britain is to be the same as before. If Indian effort threatens to be ineffective in the fifth year of war, when the pattern of victory is ready it will not be hard to connect it with the political bottleneck. There may be objections to a drastic change, but investigation of discontent cannot be postponed. That Field Marshal Wavell comes to take up heavy tasks of which the chief is the reconquest of Burma through the new East Asia Command with goodwill at an ebb is freely recognised by those who have no prejudice against a non-political choice. It would have been easier to carry out improvement and co-ordination of effort on the basis of popular co-operation. There are several crises (not only in the field of transport), and the indispensable element of willing assistance is absent and intolerance of evils is not noticeable so far.

Falling Production

The trend of industrial production in India was unsettled by the August disturbances and much else. Figures available up to January indicate that in the most favourably placed industries like cotton and jute production actually fell. The trend was not altogether reversed in 1943 and the argument as to chronic scarcity finds support in the changes in production. In most months of 1942-43 cotton yarn production was lower than in 1941-42 and production of piecegoods also fell away. The first signs of recovery appeared only in January 1943. In the case of jute mills the fall in production is a consequence of the fall in exports rather than the cause. The steep fall in the output of flour mills points to the very qualified success of wheat control as much as anything else. Production started to fall in March, and except for fitful recovery now and then flour output fell away steadily owing to high prices and scanty supplies. Since the second memorandum appeared it may be urged that sugar remains an exception like coal. In the case of paper, production in every month of 1942-43 was appreciably lower than in 1941-42 and the Paper Control Order is primarily directed towards an increase in paper production. From February 1942 it has been a story of falling output (though figures are labelled promising) and higher prices. The steep fall in imports of paper and stationery had its own effect. In the case of iron and steel the stability of prices is no decisive indication. Imports continued to fall. Total imports for 10 months ending January 1943 amounted to 44,000 tons as against 121,000 tons in the same period of 1941-42. Exports of pig iron continued to fall after March 1942 and the fall was even more pronounced in the case of exports of iron and steel. The advance in iron and steel production (though the efficiency of producers is unquestioned) cannot be conjectured like the rise in coal output in 1942-43. Exports of coal fell sharply in 1942-43 owing to the war; but prices started to move up in August 1942 and prices were firmer in the cold weather. The steady ascent of the Calcutta index of wholesale prices can be explained as a direct result of the growing scarcity. The index which stood at 157 in April 1942 (Base July 1914) rose interruptedly to stand at 250 in January, 1943. Metals being fully controlled showed the least change in price, and the only export item to show a relatively small increase in price was hides and skins largely owing to the fall noted under exports last year.

Industrial Activity Abroad

From statistics available in the usual source, the League of Nations statistical bulletin, conclusions as to industrial activity in 1942, may be obvious as regards the U.S.A. where the index rose within a year from 152 to 176 owing to the rapid extension of manufacturing activity. Figures relating to India are estimated or provisional figures. Steel production in the first half of 1942 did not exceed the average of 1941 which was 10 points above that for 1940. The average in the first half of 1942 for textile production was lower than at the end of 1941 and the average monthly output of paper in 1942 was lower than that noted in 1941. The comment on the slackening of industrial production and the shortages which developed in India, finds support in the figures. But more important is the moderate recovery shown by the industry in Denmark and Sweden. In the latter the production of paper increased, and some increase was noted in the case of consumption goods but not so in Denmark. Figures as to other Occupied countries are not known, but the broad conclusions drawn as to Canada's industrial progress in 1942 find considerable support since the general index rose in 11 months from 191 (December 1941) to 219 (November 1942). Mining showed no increase of production comparable to textiles or iron and steel. Late in the year, textile output in Canada fell back slightly like pulp and paper production. In the U.S.A. mineral production showed no striking increase in 1942 but transport responded strongly to war demands, and the machine industries showed remarkable growth as in 1941. Food production was virtually stationary to judge by the very slight changes in the U. S. index from month to month. In spite of war demands the textile production of the U. S. was almost stagnant, and the Fall revival did not show up in November. The great fall since 1939 in the production of pulp and paper is reflected in the figures relating to Finland as in those furnished for Sweden. A very moderate recovery was noticed in both countries last year but from May 1942 the trend became unfavourable in Canada owing to the curtailment of production and also of exports outside North America. The mines in Chile did not report any considerable increase in output in 1942 but the retreat from neutrality must alter the trend of Chilean mineral output. The average for 1941 was certainly higher than in 1940 and the U. S. demand for copper must have sent up the index since the end of 1942.

Textile Shortages

The fall in imports during 1942-43 accounts for shortages of textiles and most foreign manufactures. The imports of cotton piecegoods in January fell away to 100,000 yards only. The fall is continuous from October 1941 and became most pronounced after March 1942. The total imports for ten months ended January were 13 million yards against 175 million yards in the same period of 1941-42. The fall in re-exports during 1942-43 is explained by the smaller imports. In 1941-42 there was an appreciable increase in re-exports but in 1942-43 export control in Britain reduced supplies to India and re-exports naturally showed a decrease. Contrary to the popular impression India's textile exports showed no considerable decrease. Exports in January amounted to 50 million yards, but this is lower than the quantity shipped in January 1942 namely, 95 million yards. From June 1942 exports have been limited by licensing procedure but the total for 10 months ending January is 720 million yards against 602 million yards. This increase occurred at a time when home production for ten was 3,281 million yards as against 3,807 million yards in April 1941 and January 1942 since production for the 4 months, August to November, tended to be lower owing to the stoppage in Ahmedabad. The decline in India's cotton imports in 1942-43 is explained by the absence of any increase until December in Indian mill production, and the total for cotton consumed in mills must have risen only slightly owing to the fall in imports of cotton. The fall of 526 million yards in mill production accounts for the firmness of cloth prices in the past and the tendency to hold stocks in anticipation of better prices. The fall in cotton exports did not retard the advance in raw cotton prices, primarily based on the crop limitation programme of 1942-43. In retrospect, the campaign to curtail short-staple cultivation is justified by the increase under food crops but the cotton market, looking at the obvious shortage of cloth, was naturally inclined to push prices up. The events of the past five months can be explained readily in terms of the fall in cloth production, the decline in cotton imports and the advance in cotton and cloth prices. The only encouraging feature was the late recovery in imports of cotton, but this must be modified at present by the plans to secure priority in East African markets for Lancashire and the decision to license and concentrate Indian imports of all African cotton. The rise in prices (hardly perceptible in Bombay up to January 1943) cannot be determined by reference to movements of the index for Calcutta and the price of 40s yarn (Indian Grey) in Calcutta over a year is not known at present. Perhaps the textile control order will lead to an accumulation of information as regards price changes in 1942-43 and this will help consumers to relate future movements in prices to supplies of raw material rather than the state of demand.

Handicaps In The Ruhr

Germany's production difficulties are underlined by a Swede's impression of the abnormal number of foreigners. Polish and Ukrainian workers along with prisoners of war are to be seen in Berlin and even more in Leipzig and Dresden. The German people are uneasy according to Swedish witnesses who referred to the increase in sabotage. How production can be maintained in Germany, dependent on involuntary alien labour, is a problem for Professor Speer whose recent survey of German production feats contained allusions to the increase in May 1943 as compared with the monthly average for 1941. Professor Speer stated that production of locomotives in May 1943 had been increased by 300 percent, the output of munitions was 6.3 times as great as that of tanks and aircraft, several times as great and so on. The "Times" remarked in this connection that the production of German armament factories in 1941 was probably at a lower level than at any time since the beginning of the war. Hitler declared on 3rd October, 1941 that large sections of industry had gone off production altogether because immense stocks were available. It is easy to see why Professor Speer chose to make comparisons with 1941. The reason why Speer did not venture to draw comparisons with German production this year was given by the Minister for Economic Warfare, Lord Selborne, when he stated that already the R.A.F. had cut German industrial production in the Ruhr by 35 percent compared with twelve months ago. In this connection reference may be made to the results of Wing-Commander Gibson's work. Reports from Germany (says a cable to the Associated Chambers) confirm the forecast that the long-term effects of the raid on German dams are even more serious than the immediate effects. Since the destruction of the dams has meant a breakdown of all water undertakings, developed to supply the vast needs of war industry in the Ruhr and also farther east, the whole system has been thrown out of equilibrium. This means that Germany's war industry must compete for scanty water supplies not only with the public but with the civil defence services also. It has already been made clear that before the summer is out, the Germans will have only one choice, either to shut down industries on an enormous crippling scale within these areas or to let their cities burn. Reports have already come in, both of Ruhr factories which have been compulsorily closed and of areas which have burned for days after a raid solely through lack of water.

NORTH WESTERN RAILWAY

Tender No. 223-S/1/4

Code Word "CZBCD"

Regarding chemicals for water treatment are invited on a rupee basis for purchase by the N. W. Railway of (1) Coarse crystal salt, (2) Tannin Extract (Cutch) and (3) Calgon required during 1-9-43 to 31-8-44. Tenders to reach office of General Manager, N. W. Railway, Lahore, by 14 hours on Monday the 12th July, 1943, and will be opened in his office at 11 hours the following day. Tender form can be seen at and obtained from office of Controller of Stores. The sale price of tender is Re. 1. Annas 8 will be required for posting and packing of document to outstation.

Bauxite in India

An excerpt from the Dictionary of Raw Materials for India on bauxite is interesting for several reasons. Bauxite occurrences from Kashmir to Salem prove that it is the most common mineral. Mr. N. L. Sharma's article in the April issue of the Journal of Scientific and Industrial Research refers to bauxite in the Palamau and Ranchi districts in Bihar. Deposits in the Khargpur Hills in the Monghyr district have also been reported. In Bombay the Kolhapur deposits containing about two million tons are well known. In Belgaum, Kaira Thana and Ratnagiri districts also bauxite is found. The most important workable deposit with 45 to 50 per cent of al-oxide is near Harnai in Ratnagiri. Fairly high-grade deposits have been noted in Jubbulpore, and deposits are distributed between the Balaghat, Bilas pur and Mandla districts. In the E. S. A. Bastar and Jashpur are known to possess bauxite, the latter in rather inaccessible places. The most recent location of bauxite was in the Shevaroys. It may be possible to procure material with 55 per cent alumina. The tonnage is put at 6 to 7 millions of which one-third will be marketable. Anyhow, the Salem deposit is larger than the occurrences in Jammu and Kashmir. Smaller deposits in Mysore and Orissa have also been noted. Bauxite has to be washed and dried before it goes to the aluminium works. With the help of cryolite smelting takes place. Bauxite is used for the manufacture of abrasives if its titanium, silica and iron content is low. For making refractories also bauxite is used and firebricks made with magnesite have been more resistant to fire, though costlier, than those made of fireclay. Fused cements are made out of bauxite which sets and attains full strength more quickly. Calcined bauxite is used for the treatment of kerosene and oil companies were hence large buyers of bauxite. India produces only a tiny part to-day of the world's bauxite. Three major producers are France, Hungary and Yugoslavia. Bauxite, noted in 1905, has been mined in Kaira and Jubbulpore regularly for years but production has been insignificant as 14,768 tons mined in 1938 were valued at Rs. 25,540 only. The development of the aluminium industry in India on the basis of cheap power must, however, make a great difference, though it is quite likely that imported bauxite may be used for making alumina.

Progress in Canada

Canada's large harvests in 1942 had a decisive effect on production and trade. The Bank of Commerce in evaluating the record of 1942 refers to the intensified war effort. War expenditure including the gift to Britain amounted to $3,156 million as compared with $1,150 million in 1941. The national production altered in character as 50 per cent was meant for

war purposes, but the proportion varied in different departments. There was more war work in progress and a considerable shift to production of combat equipment as numerous new armament plants came into operation, a development that necessitated the processing of a greater variety of materials as well as a substantial increase in employment. War demands required that food production should increase by 20 per cent in 1942. In spite of deficient manpower, the cropped area in Canada increased by 7 per cent to 61 million acres. Production of coarse grains increased though wheat was limited and root crops increased by 10 per cent while fodder increased by 25 per cent. Dairy production also increased by 5 per cent. In spite of a drop in wheat deliveries the volume of products marketed declined only slightly. Farm revenue rose to the highest level since 1930 but wages rose and farmers' profits hardly rose though improvement in the last quarter is probable.

An increase of 17 per cent in manufacturing production in 1942 was reported though civilian demand was curtailed. Apart from the recovery in automobile production after retooling Canadian industry produced more for export and for war purposes. Textile output must have risen by over 11 per cent but pulp and paper production was lower. Iron and steel trades raised their output by about 30 per cent. Iron and steel production for 11 months of 1942 recorded an increase of 33 per cent in pig-iron and 16 per cent in ingots and castings over the tonnage reported for the same period of 1941. The biggest industry in which production was reduced owing to the scarcity of labour was lumbering. Newsprint production fell by 7 per cent and exports alone fell by 60 per cent though shipments to the U.S.A. rose.

Canada's mineral production valued at $564.2 millions reached a new record despite the fall in the production of gold. A further increase in production is expected in view of the plans made to increase the supply of strategic minerals. More mineral fuels were produced in 1942. If the output was short of requirements as operations in coal mines and the Alberta oilfields were affected by shortage of labour and technical difficulties. A downturn occurred late in the year in both petroleum and coal production. Since 75 per cent of mineral production was destined for war purposes, Canadian mining became a vital factor in the Allies' armament production. Most notable change introduced by the war was that, instead of exporting 90 per cent of her non-ferrous metals, Canada consumed in her own arms production about two-thirds of the copper, one-third of the zinc and one-fourth of the lead produced there.

Canadian fishermen reported a good year as catches were larger and the prices obtained were higher and the late running of sockeye, the most valuable type of salmon increased the value of the pack. The entire salmon pack was earmarked for export to Britain at prices ranging up to 25 per cent higher than in the 1941 season. The herring catch of B.C. (also earmarked for Britain) was slightly smaller than in 1941. The constructional trades were affected by the shortage of raw materials and the volume of work carried out fell by 15 per cent; but more work was performed for war purposes, though factory construction since has shown signs of decline. Power development in Quebec at a cost of 50 millions was carried out in 1942 and the cost of work for the Alaska Highway and other Government engineering schemes has not been made public. Higher production led to a jump in employment by 11 per cent up to November. Expansion led to an increase of 20 per cent in payrolls raising the gross total for wages paid to $4,000 million. Canadian exports rose by 45 per cent in 1941 to the value of $2,385 millions and total trade in 1942 including imports was valued at $4,000 millions.

Hindusthan's Achievements

The Hindusthan Insurance Society, Limited, entered its 38th year with the satisfaction of having written more new business in 1942, than in 1941. The full report and accounts recently published indicate the strong position retained after the loss of oversea connections. New business resulted in the issue of 13,649 new policies, assuring a total of Rs. 288.05 lakhs. The net annual premium income on the new business comes to Rs. 13.08 lakhs. Total business in force exceeds one lakh of policies and the total value is Rs. 19.37 crores nearly. Premium revenue for the year amounted to Rs. 93.2 lakhs and the interest receipts amounted to Rs. 16.2 lakhs. Total payments in respect of claims amounted to Rs. 26.97 lakhs and Surrenders took Rs. 4.55 lakhs. Commissions and expenses took Rs. 23 lakhs nearly, and after providing for tax, depreciation, and writing down of investments the revenue surplus is added to the Life Fund. The addition of Rs. 51 lakhs to the Fund, raising it at the end of the year to Rs. 472.89 lakhs makes 1942 memorable, particularly after the valuation carried out and the declaration of bonuses. The Directors draw attention to the fact that the expense ratio in 1942 was 26.47 per cent in spite of the recovery noted under new business. The net income from the Fund has been shown in the revenue account as Rs. 15.54 lakhs and profit on sale of properties Rs. 65,224 is added thereto. The Life Fund is the principal liability of the Society in the balance-sheet. The Society held over Rs. 1.9 crores in giltedged securities apart from the statutory deposits. Policy loans account for Rs. 52.87 lakhs and mortgages for Rs. 41..87 lakhs. As in the past, lands and houses form a considerable portion of the assets. The total is Rs. 55.39 lakhs and Rs. 65.72 lakhs respectively. Stock exchange investments including debentures remain small as compared with revenue items like premiums due. The cash balances totalling Rs. 25.3 lakhs call for general attention in view of the proportion of fully liquid assets (which are meant to cover outstanding claims, expenses, etc.) in this case. The Society's position as the second most important life office in India today is illustrated by the revenue and balance-sheet figures cited from the 1942 report: The major change in the balance-sheet is the higher proportion of giltedged to other assets in line with legislative requirements. The Society retains the Contingency and Investment Reserves to meet the changes in the familiar features furnished a favourable background for the observation of Kumar K. C. Mullick at the annual meeting on June 7. He referred to the diversification of investments and its effect on the average yield over a period. He remarked, like all chairmen, on the poor yield on new investments. Compensation, of course, is available through the appreciation in the value of land. The new Alipore property has been undeveloped (if greater part has been requisitioned) it is likely to improve in value and the Head Office building is being completed because it has been also requisitioned. The 1941 valuation showed a surplus of Rs. 37,87,788 for the period of 4 2/3 years. The valuation basis was strengthened by reducing the rate of interest by ¼ per cent and providing for all contingencies. A bonus of 1 per cent was declared after the valuation. Mr. Mullick announced to the meeting that Mr. N. R. Sarker's resignation from the Executive Council has been followed by his resumption of office as President.

Aspects of an Industry No. 17.

THE ACID TEST

No mere colloquialism. Sulphuric acid is so widely used in Industry that it is commonly taken as an index to the state of trade. The acid is used as it is produced and therefore the chart of its consumption reflects the fluctuations of business quickly and closely. Acids, with their opposites, the alkalies, are both in volume and range of uses the most important direct contribution of the chemical industry to Production. There is scarcely a commodity, scarcely even a single article which can be made without either acids or alkalies entering at one or more stages of its manufacture. Sulphuric acid, otherwise known as oil of vitriol, is used in almost every conceivable industry—from chemical processes to brewing, from paper-making to coal-mining, from glass to bleaching. It is noteworthy that the modern method of producing the acid from iron pyrites, air and water was suggested in 1831 by Peregrine Phillips, an English vinegar brewer. The other essential "heavy acids" are nitric and hydrochloric. Tens of thousands of tons of nitric acid, once known as "aqua fortis" or "strong water," are produced by the chemical industry every year, and more in war even than in peace, for it forms the basis of nearly all explosives, as well as of the inorganic fertilizers which are today required in increasing quantities to grow more food. Hydrochloric acid, or spirit of salt, is a combination of hydrogen with chlorine and finds wide uses in the metal pickling, tanning and textile trades. The heavy acids are in one sense the manufactured products of the chemical industry. In the much wider sense they are essential raw materials without constant and adequate supplies of which the wheels of production would stop turning.

(IC)

Imperial Chemical Industries (India) Ltd.

Cawnpore's Own Bank

Cawnpore's growing importance is certainly enhanced by the addition of a new, large bank to serve its many industries. Of the connections of the new bank there is little need to speak. The appearance of the prospectus (published today in "Indian Finance") is the final proof of the successful promotion of a bank designed on the new pattern with an issued capital of Rs. 2½ crores in ordinary shares only. The unissued capital represents a reserve, warranted by the circumstances of today including competition for business.

The entry of a purely Indian bank should be welcomed by supporters of Swedeshi enterprise at a time when savings tend to grow rapidly. The

(Continued on page 22)

"Consent of the CENTRAL GOVERNMENT has been obtained to the issue under D. I. R. 94-A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

The Subscription-list will open on 2nd day of July 1943 and close 15th day of July 1943 or earlier at the discretion of the Directors.

PROSPECTUS

THE HINDUSTAN COMMERCIAL BANK, LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, VII OF 1913)

AUTHORISED CAPITAL:

Rupees 5,00,00,000 divided into 400,000 Ordinary Shares of Rs. 100/- each, and 10,000 Preference Shares, 4% Cumulative, Free of Income-Tax, of Rs. 100 each.

ISSUED CAPITAL:

Rupees 2,50,00,000 divided into 2,50,000 Ordinary Shares of Rs. 100/- each, payable as follows:—

Rs. 25/- with Application and Rs. 25/- on Allotment and the balance upon calls made by the Directors, which shall not exceed one-fourth of the Nominal Amount of Shares and be payable less than one month from the last call. Of these the Directors and their friends have agreed to take large number of Shares which shall be allotted in full and the remaining Shares are offered for public subscription payable as mentioned above.

DIRECTORS:

(1) SIR PADAMPAT SINGHANIA, Kt., M.L.A., Governing Director J. K. Group of Industries, Banker and Millowner, Kamla Tower, Cawnpore, (Chairman.)

(2) SIR CHUNNILAL B. MEHTA, Kt., Director, Scindia Steam Navigation Co., Limited, Bombay Bullion Exchange, Ltd., etc. Banker and Merchant, 51, Marwari Bazar, Bombay.

(3) LALA SHANKER LAL, Managing Agent, Delhi Cloth Mills Co., Ltd., Banker and Millowner, New Delhi.

(4) LALA KARAM CHAND THAPAR, Chairman, Indian Sugar Syndicate Ltd., Managing Director, Shree Gopal Paper Mills Co., Ltd., Bharat Starch and Chemicals, Ltd., Indian Medical Supplies Laboratories, Ltd. The Standard Refinery and Distillery, Ltd., Mahabir Insurance Co., Ltd., Banker and Merchant, and Industrialist, 53|4, Hazra Road, Calcutta.

(5) LALA RAM RATAN GUPTA, M.L.A. (Central), Proprietor of M|s. Beharilal Ramcharan and Allied Concerns, Managing Director, Lakshmi Ratan Cotton Mills Co., Ltd., Aluminium Corporation of India, Ltd., etc., Banker and Millowner, Behari Nivas, Cawnpore.

(6) RAI BAHADUR RAMESHWAR PRASAD BAGLA, Chairman, U. P. Chamber of Commerce, U. P. Stock Exchange, Ltd., Municipal Board, Cawnpore, Banker and Millowner, Bagla Cottage, Cawnpore.

(7) SARDAR BAHADUR SARDAR GUR BAKSH SINGH, Proprietor, R. B. Saligram and Sons, Lucknow, Contractor and Banker, 5, Park Road, Lucknow.

(8) BADR-UL-ISLAM, Esq., B.A., LL B. (Cantab.), Bar-at-law, Managing Director, The Cawnpore Tannery, Ltd., Director, The British Motor Car Co., (1934) Ltd., Merchant and Industrialist, Curzon Road, New Delhi.

(9) MR. KISHEN CHAND PURI, B.A., F. I. B. (London), Banker, Hazratganj, Lucknow. (Managing Director).

BANKERS:

THE IMPERIAL BANK OF INDIA,
THE CENTRAL BANK OF INDIA, LTD.

AUDITORS:

MESSRS P. L. TANDON & CO.,
Incorporated Accountants (London)
Cawnpore.

MESSRS. SODHBANS & CO.,
Registered Accountants.
Cawnpore.

BROKERS:

MESSRS. GUPTA BROTHERS, Cawnpore.

REGISTERED OFFICE:

MARWARI LIBRARY BUILDING, Cawnpore.

OBJECTS OF THE COMPANY:

The Company has been formed with the object of carrying on the business of a Bank as defined in Sec. 277 (F) of the Indian Companies Act, VII of 1913, and generally for the several objects detailed in the Memorandum of Association (which forms part of this Prospectus and is printed herewith).

MINIMUM SUBSCRIPTION

The minimum amount on which the Directors may proceed to allotment is fixed at Rupees 25,00,000 i.e. 25,000 Ordinary Shares of Rupees 100 each.

PRELIMINARY EXPENSES.

The Preliminary Expenses including Registration Fees and Printing Charges and other incidental expenses (but excluding Commission and Brokrage) are estimated not to exceed Rs. 40,000.

DIRECTORS' QUALIFICATION AND REMUNERATION.

The qualification of Director other than a lawyer, banker or technical adviser shall be the holding of shares in the Company of the nominal value of Rs. 25,000 at least in his own Right.

The remuneration of a Director will be such sum as may from time to time be fixed by the Directors not exceeding Rs. 150 for each Meeting of the Board attended by him. The Directors shall also be entitled to be paid their reasonable travelling and other expenses, if any, in consequence of thir attendance at Board Meetings, and otherwise in execution of their duties.

NATURE AND EXTENT OF THE DIRECTORS' INTEREST.

Of the Directors, Mr. Kishen Chand Puri, B.A., F. I. B. (London) has agreed to act as Managing Director of the Bank on the remuneration, for the period and on the terms and conditions contained in the agreement as provided for in the Articles of Association.

VOTING RIGHTS.

On a show of hands every member present in person holding at least one share shall have one vote and upon a Poll every member present in person or by proxy shall have one vote for every share held by him.

Cumulative Preference Shares do not confer a right to vote to the holders thereof.

RESTRICTIONS ON MEMBERS AS TO VOTING ETC.

No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another at any General Meeting of the Company or a Poll or be reckoned at a Quorum, whilst any call or other sum in respect of shares held by him, shall be due and payable to the Company by such member.

RESTRICTIONS ON TRANSFER OF SHARES.

No transfer of shares shall be made to an infant or a person of unsound mind.

The Directors may, at their discretion, decline to register any transfer of whom they do not approve, and of shares upon which the Company has a lien and in case of shares not fully paid up may refuse to register a transfer to a transferee of whom they do not approve, or who objects to registration. They may also refuse to register a transfer of any shares to any person, who shall in their opinion, be not desirable in the interest of the Company to be admitted to membership, without assigning any reason.

MANAGEMENT

The Articles of Association do not impose any restrictions upon the Directors' power of management.

COMMISSION

The amount of Commission for Subscription or agreeing to subscribe or procuring any shares or debentures of the Company shall not exceed 2½ on the issue price thereof. Such Commission may be paid on or allowed in cash or in shares or debentures of the Company.

BROKERAGE

The Directors have decided to pay Brokerage of As. -|8|- per share to Approved Brokers for the number of shares allotted on the Applications received through such recognised brokers bearing their Stamp.

APPLICATIONS FOR SHARES

Applications for Shares should be made upon the Form accompanying the Prospectus, and application money may be paid at the following places.

Cash or Cheque or Draft at any place in India will be accepted without any banking charges.

(1) Registered Office of the Company in Cawnpore.
(2) Offices of The Imperial Bank of India.
(3) " The Central Bank of India, Limited.
(4) " Chartered Bank of India, Australia and China.
(5) Offices of The Punjab National Bank, Ltd.
(6) " Bharat Bank, Ltd.
(7) " The United Commercial Bank, Ltd.
(8) " Bank of Baroda, Ltd.
(9) Messrs. Gupta Brothers, Brokers, Cawnpore.
(10) Office of the Aluminium Corporation of India, Ltd. Calcutta.
(11) Office of Messrs. Karam Chand Thapar & Brothers Ltd., 5, Royal Exchange Place, Calcutta.

Where no allotment is made the deposit will be returned in full and where the number of Shares allotted is less than the number of shares applied for, the balance of the deposit will be utilized against allotment and the surplus if any, will be refunded.

INSPECTION

A copy of the Company's Memorandum of Association which forms part of this Prospectus and the Articles of Association can be inspected at the Registered Office of the Company at Cawnpore during business hours and can be obtained therefrom on payment of Re. 1 per copy.

The Registered Office of the Bank will be in Cawnpore while will be its Head Office. The Directors intend to open Branches immediately at other important centres as and when they deem necessary with a view to provide adequate banking facilities and to enhance the same in furtherance of the growing needs of the respective centres of Trade and Commerce of the country.

Applications will be made to the Bombay Stock Exchange (The Native Share and Stock Brokers' Association) The Calcutta Stock Exchange, the U. P. Stock Exchange and the Lahore Stock Exchange Association, for official quotation.

THE NEW ECONOMICS

X

The conclusion of international financial agreements which, while holding out an assurance of order in international finance, allows freedom in the management of currency and credit is, I said last week, the first step in the change from the regime of the old economics to that of the new. It will be obviously a change that will affect equally both finance and economy in the international as well as the national sphere. Opinion on questions of international financial regulation is now divided more or less sharply, American opinion tending towards comparative rigidity of international control and Britain inclined towards freedom and elasticity. But agreement is impossible except on the basis of a compromise. Indeed, it will have to take the form of a compromise between conflicting principles and rival viewpoints. And the agreement will in practice have to provide not only for the kind of fuse wire between the national and the international systems which will neither break too soon nor endanger the two systems by its incapacity to break when something goes wrong, but also for a series of buffers, to vary the metaphor, which will prevent the shocks spreading their impact over wide areas.

* * * *

From the proposals that were published some time ago, it is clear that the international financial agreement of the future will give importance to a series of antithetical principles, which may be listed as below. Firstly, there is the principle of the supremacy of gold in international finance with its opposite, namely, that the handicap of countries suffering from a shortage of gold should be reduced as far as possible. Secondly, while it is desirable that international balances of payments should be smoothly and automatically settled from time to time, heavy adverse or favourable balances, when they occur, should not be heedlessly allowed to throw out of gear the economic and financial systems of the countries directly concerned or of other countries who are indirectly concerned therein. Thirdly, while the freedom of movement of funds should not be unduly impaired, the stability of national exchange and international finance requires that movements of funds, which are whimsical or are due to panic or greed, should be controlled. Fourthly, while countries with surplus capital are, in one view, entitled to the freedom to invest it in the socalled undeveloped countries, the stability of international finance requires that movements of international capital should be such as to promote, and not endanger the stability of national and world economy. And lastly, while free trade and a free international gold standard are ideally the best basis of stability, the practical requirements of the present phase of national and world economy require a high degree of management both of trade and of financial relations.

* * * *

In the attempt to provide for these antithetical principles and policies, the international financial agreement will necessarily be two-faced, one looking aslant to the past which is being fast left behind and the other turned, somewhat timidly and hesitantly, to the future. The clauses will re-affirm with great ardour the sanctity of the principles that are being discarded and at the same time make grudging concessions to the principles of the new economics which will brook no denial. The drastic standstill agreements, with which this new era in international finance began, will for all practical purposes be accepted principles of international financial relations, though in forms which will afford the battered and bruised face of the debtor the saving it so badly wanted in the past. The principle will be glossed over or watered down by the provision of overdrafts at the international bank. It will be dignified by the anauguration of special conferences under the auspices of the Bank to consider the position of the debtor country. And more often than not, it will probably be tided over by finding special markets for the products of the debtor country. But whatever may be done, the old rule that adverse balances should take the country concerned down the inclined plane to financial and economic ruin, and that the country should suffer without demur a denudation of all its gold and a terrible deflation of its currency will no longer be allowed to work. The buffers that the international financial agreement will have to provide, if it is at all to come into being, will be the means by which the conflict between national freedom and international order will be reconciled in the sphere of finance.

* * * *

By the same token, it will provide for the freedom of nations to follow their economic policies without excessive regard for the claims of free trade. In international trade, as in international finance, there is a clash between national freedom and international order which can neither be tackled directly nor evaded altogether. The claims of free trade are disregarded by the nations in the formulation of their tariff and other economic policies. But they compel deference through the effects of their disregard on the financial relations with foreign countries. So that, an international financial agreement, which provides for buffers to protect each nation from the shocks of international finance, will in the actual result be providing them freedom in two important spheres, viz. that of national currency and credit and that of tariff and economic policy at home.

* * * *

I have been at pains to show that developments in the realm of finance are not antagonistic to the new trends in national economic policies, that even international financial agreemens, which seem to be so threateningly on the side of external control and retreat towards the old regime, will eventually help progress, rather than reaction. I may now turn to consider how the freedom of internal currency and credit will be utilised for the promotion of a non-communist N.E.P. in the various countries of the world. I have already indicated that the mainspring of the new economic programmes of the post-war period lies in the new concept of capital. That capital is not mere saving by individuals, that the process of creating capital, considered from the communal angle, has little to do with restriction of current consumption and that credit is a social creation, these are ideals, whose modes of operation it is extremely difficult to predict. There are, however, two developments in this direction which are already noticeable and which are bound to gather strength in the future. The first is the universal approbation which the policy of low interest rates has evoked, with all its practical consequences in the financing of the present war. The second is the readiness with which State participation in and partial State control of large scale commercial projects are accepted by the leaders of private enterprise. The second, to some extent flows from the first. But it is useful to examine the first a little more closely since it may conceivably afford a peep into the future.

* * * *

The policy of low interest rates, the benefits of which are being reaped so plentifully in this war, originated, so far as the present phase is concerned, in the reaction from the deflationary policies of the period before the abandonment of the gold standard. Deflation and high interest rates were necessitated by the high and rigid exchange rates of the period before September 1931. The first fruit of the abandonment of the gold standard, therefore, was cheaper and more plentiful money. Industry and the taxpayer alike benefitted by the change. And the feeling grew that, since the plenitude of money was the result of a public policy and not of private virtues of saving, the benefits of such a policy should not be

appropriated by a few private individuals. It is significant that in the discussions on the best methods of financing the war, the "Economist" insisted that subscriptions to the war loan that are made possible by credit created by the banks should not be allowed. Subscriptions to the capital of new companies often do not represent the savings of subscribers, but only credit created by the banks and by the currency policy of the country. Those, who are inclined to question the truth of this statement, have only to recall the simple fact that new enterprise is impossible in a period of deflation. There is little that the saving class can do by itself to increase the price at which it can lend its saving for productive enterprise. It follows, therefore, that genuine savings by themselves cannot be the motive power of economic development and that, in so far as new activity is conditioned by national currency and credit policy, the community is entitled to participate in and control new enterprises.

* * * *

But for the present, the low rates of interest at which the present war is being financed represent the concrete benefit flowing from the new currency and credit policy. This feature of financial policy, one may be sure, will gain strength in the post-war period. The low price of capital and credit will bring within the bounds of profitability a large number of projects, which would formerly have had to be ruled out as unremunerative. The old idea of measuring the potentialities of economic development by estimates of savings will be felt to be obsolete and unnecessarily regressive. On the other hand, it will be realised that to graft new productive activities to the existing framework of the national economy, all that is needed is a clear plan by which the labour and the raw materials required will be obtained without detriment to already existing lines of production and clear ideas as to how the newly produced goods or services will mingle with the nexus of exchanges that make up the existing economic life of the nation. Capital, in the sense of purchasing power necessary for sustaining labour during the process of such production, can offer no serious problems when the currency and credit policy is managed with an eye to the volume of circulation needed by the country at the various stages. Thus, economic development will require not an increase of saving with its adverse consequences on demand and, through demand, on production, but fulness of technical knowledge, perfection of blueprints of every stage of increased production and the regulation of the capital market through an appropriate currency and credit policy.

* * * *

It is necessary, however, to consider the requirements of the kind of capital which undeveloped countries are said to need to import from the advanced industrial and financial nations of the world. The notion of export of capital has always been the subject of serious misconception both in the countries which export it and those which suffer its import. Even serious students of economics often believe that the truth of this phenomenon is reached when it is said that what is exported is not money, but goods. But statistical computations of the amount of capital exported by lending nations will show that the value of the goods they have exported to the various countries is not by any means equal to the value of the investments they own in such countries. Even the addition of such invisible items as services will not account for the difference. The truth is that even such increase of internal economic activity as the importing countries can effect without recourse to capital goods from abroad is brought about only after the foreign firms dole out purchasing pwer from credit locally obtained. The inability of the importing country to effect the same increase without foreign intervention is due, in some cases to political causes, and generally, to hidebound ideas of integrity of currency and finance. With the passing of such ideas and with a clearer appreciation of how new productive activities are initiated and incorporated in the framework of the economic life, the place of, and the need for, imported capital will be seen to have shrunk a great deal.

* * * * *

Nevertheless, there will be a place for foreign machinery and even consumer's goods in some cases in the economic development of the backward regions of the world. For may part, I do not see why such machinery should not be obtained in the ordinary course of trade among the nations and why it should be necessary to float loans in foreign centres and convert them into machinery for purposes of transfer. In the case of India, foreign capital can no longer be said to have any place in our economic development. On the other hand, the change in India's status from that of a debtor country to that of a creditor country implies that before long she should be exporting capital to other countries. But India is not a manufacturer of capital goods; and, for my part, I do not relish the idea of India having vested interests in foreign countries. In the case of other countries, too, the days of international capital pouring in and then paving the way for political control must before long be ended. Such capital goods as these countries may need may well be exported by countries like the U. S. A. in the interests of stability of world economy and in more or less the same spirit in which America provides lease lend aid to all anti-Axis countries in the world. Whatever that may be, it is more or less certain that the revision of national currency and credit policy helped by accurate technical knowledge of potentialities of development will reduce the dependence of national economy alike on saving at home and international loans. To what extent, this will enlarge the extent of state control over industry or narrow the scope for private proprietary interests, it is unnecessary to speculate on. But that there will be no shortage of domestic capital or large scale need for Foreign capital, there can be no doubt.

'EAVESDROPPER'

NORTH WESTERN RAILWAY

Tender No. 197-S/667/1
Code Word "CAECD"

Tenders are invited for supply to the North-Eastern Railway for a total quantity of 28, 250 lbs. of TEA similar in quality to Liptons' White Label and Brooke Bonds Green Seal on cheaper brands (Separate quotations are required as specified in the tender for bulk supply in chests) at the following stations in quantities indicated in the tender form:—

Multan, Ferozepore, Quetta, Lahore, Amritsar, Rawalpindi, Delhi and Karachi.

Tender forms can be obtained from the office of the Controller of Stores, N. W. Railway, Empress Road, Lahore, at Re. 1 local and Rs. 1-11 each if posted outside Lahore. Applications for tender forms per V.P.P. will not be entertained, but will only be issued on receipt of cash by Money Order.

Sealed tenders must reach the General Manager N. W. Railway, Empress Road, Lahore, not later than 2 p.m. on Wednesday the 14th July, 1943, and will be opened in his office at 11 a.m. on the following working day. Tenderers will be allowed to be present at the time of opening tenders if they so dsire. Controller of Stores, Lahore.

(From Our Correspondent)

New Delhi, June 23.

WITHIN the next two or three days the Viceroy and most of the Members of his Council are expected to be back in New Delhi. It is still the food question which is seriously agitating official circles—particularly because of the last minute protests of certain Provincial Governments which led to the cancellation of their proposed free trade order. An urgent meeting of representatives of Provincial Governments to which certain States Ministers also may be invited is being called to reconsider the entire problem. Undoubtedly the problem is partly constitutional, for though the Central Government may bring experts from England and devise big schemes, there is the difficulty of dealing with autonomous Provincial Governments who are obliged to place the interests of their own provinces first. And there is the further complication arising from the fact that while certain provinces are under Ministries others are under official Advisers—not to mention the States. All the measures tried so far by the Central Government to deal with price control or distribution of supplies have failed primarily because of the difficulty in securing the required co-ordination between the Provincial and State Governments and the effective functioning of their administrative machinery. This problem has now come to a head owing to the acute differences on the free trade question. As a result of official discussions in Simla the Govenment of India are reported to have decided upon certain important modifications to placate the provinces, but they appear to be looking forward to the coming Interprovincial Conference in Delhi to secure complete understanding between the various units. Owing to the urgency of the food problem this conference cannot afford to fail.

* * * *

There is some complaint that even to this conference no non-official representatives have been invited. It is apparently Major General Wood's idea that as soon as possible a committee consisting both of officials and non-officials should be set up to advise the Government of India on food questions but this can hardly be expected to be as helpful as the association of non-official representatives with the forthcoming conference in July. The food problem cannot be treated as a purely official responsibility owing to the large number of interests concerned. The best plan would be to hold a tri-partite conference—on the lines of the conference recently held by the Labour Member—in which not only officials but also representatives of the commercial community and of consumers can participate for full and unprejudiced discussions for the general good of the community. And it is an unfortunate fact that certain Ministry-governed Provinces have for reasons of their own, shown some unwillingness to face the food supply question on an All-India basis and sacrifice some of the advantages which they now possess as the main producing areas in certain essential commodities. In order to get this All-India outlook for determining an All-India policy, nothing would be more effective than a conference of this kind in which all interests will be represented.

The difficulties facing the Central Government in the matter of regulating civil supplies and prices are well illustrated in the present sugar position. The Sugar Controller's Department takes the view that under existing circumstances its duty consists only in allocating production among various provinces and States and in ensuring that supplies move sufficiently rapidly to the consuming centres. The authorities actually responsible for local distribution are the Provincial Governments who have to take into consideration the actual state of affairs in their respective areas and adopt such measures as they consider necessary—like the sugar rationing scheme in Bombay. For local shortages the Government of India refuse to take the responsibility on the ground that so far as they are concerned they have done their part in moving sufficient supplies to the areas in question. From the information available here it would appear that Provincial Governments have taken steps to see that the quantities allotted to them are distributed in fixed quantities within a specified period, but in some provinces there have been difficulties caused by reason of the double factor—certain merchants who do not play the game, and also members of the public who buy larger quantities than are really needed for actual consumption. Often advice is given from the Centre on the best way to deal with these and other problems, but provincial authorities generally prefer to do as they think best. With reference to criticism which has been appearing in newspapers on the Sugar Controller's recent press note, one harassed official told me: "If the papers knew how circumscribed the Sugar Control-

ANDREW YULE & Co., Ltd.,

hereby advise the public that as they are suppling essential foodstuffs to their labour at concessional rates, any increase in the price of these foodstuffs reflects upon the cost of production of coal, and thus necessitates an increase in coal prices. The cost of rice has recently gone up to a very high figure, and therefore until further notice the standard pitsmouth selling prices of the undernoted selected grade coals will be as follows for such supplies as may be available:

Super Jharias	Rs. 10/8	Sirka	Rs. 9/8
Dishergarh	„ 10/-	Patmohna	„ 9/4
Poniati	„ 10/-	16 seam Jharia	„ 9/-
Selected Jharias 13 seam upwards (excluding 16 seam)	„ 9/12	Other Selected Jharias (excluding 10 seam)	„ 8/12
Chanch	„ 9/8	Kajora	„ 8/12
		10 seam Jharia	„ 8/8

Per ton F. O. R. Colliery Siding in full wagonloads.

Gateway of India

(From Our Correspondent)

Bombay, June 29.

THE Stock Exchange has been distinctly uneasy since the Government indicated its intention of putting an end to the fourfold increase in business which invited scrutiny for several reasons. The Stock Exchange has already asked the Government to look to the other exchanges before it is called upon to enforce its rules as to cash business only. The proposal that *budla* business should be checked in every way does not excite much opposition. But the danger of bucket-shops springing up is very real. There is no law against share-pushing and new companies have been known to resort to very questionable practices in order to procure capital. The Board has been asked to tighten its rules as to delivery and force brokers to limit contracts to a week. This will make for stability of prices but the street market too must disappear, and the call to wipe out speculation in the name of war effort has gone forth. It is not a very happy choice as speculation is an essential function, and brokers have found that powerful speculators are an important adjunct at all times. The President of the Stock Exchange has stated in a mild manner the objections to outright control and pointed also to the danger of speculation outside the stock exchange, with investors suffering more damage. The call to stop speculation when all futures trading in commodity markets is at an end may be unheard of in other countries. The promulgation of Defence Rules must damage the autonomy of the stock exchange. The Morrison Committee in 1937 offered suggestions for reform and Bombay took them, in good spirit. But new Defence Rules are another matter, and the stock exchange's very cautious approval of arguments against overtrading, appears justified.

The Fourth Defence Loan was announced on Saturday at the same time as the redemption of the 4 per cent. 1943 bonds by a 3 per cent. 1963-65 loan. The securities market here put a hopeful construction on the news, because the Indian investor can take one of the two new issues, and the issue price seems right. The market believes that the giltedged market would have been in better shape if sales of Rupee Paper at Rs. 94 by the Reserve Bank had been suspended. It has been noted that Rs. 75.68 crores of 1963-65 loan is outstanding, and if Rs. 15 crores more are added, this stock may become the principal security, if and when Rupee Paper is turned into a dated stock or paid off. The Fourth Defence Loan which replaced the third is a tap issue welcome to investors who want a safe place for their money for a dozen years at least.

The Textile Control Board met on Monday. Its tasks were outlined when the visit of Mr. Hydari, the second time in a month, was announced. The cloth market has been nervous because of the Order which enforces liquidation. Prices are now 40 per cent below the level of April, and the offtake is disappointing. Retailers still carry stocks in hopes of full prices, and the decision of mills to open their own shops is about the only thing to encourage the consumer to look for lower cloth prices. The danger of black markets, particularly, in the States, has been mentioned often, and the Government has been asked to set up soon cloth shops similar to those of mills. Mr. Haridas Madhavadas welcomed the cloth control order but asked plaintively why cloth dealers did not find representation on the new Board and its committees. He drew attention to the possibility of a panic in the cloth market and the consequences for the mill industry. The danger of panic was mentioned because of the rule as to the disposal of stocks by the end of October. An orderly flow of supplies is desirable. Ahmedabad dealers are likely to put up a case of their own. Mr. R. W. Bullock indicated only last week at the Simplex Mills meeting that cloth prices must fall. It might affect profits, but the mills in any event would cease to be tax-gatherers for the Central Government. The Company has paid 12 per cent. as final dividend raising the total for 1942 to 36 per cent which means that Simplex around Rs. 300 is distinctly promising from the investor's point of view.

The minor's sugar ration is now the same as the adult's. In other countries, the sweet tooth of the young has been recognised; and children below two are not qualified for sugar rations which means that the older children will get less. Bombay has now fallen in line with the more enlightened cities. The demands of growing children, at work or at play, have been recognised rather late by the Civil Supplies department which has been told that rationing has been defective, though supplies are called large owing to the increase in India's sugar production in 1943. The Bombay Deccan factories do not give enough for the province which has to get imports, but there is no hope yet that rationing is a temporary device.

Sir Sultan Chinoy said on Wedneseday last that the new Viceroy's statement to journalists in London had dispelled apprehensions. The public in India put varied interpretations on the choice of Field-Marshal Wavell. Sir Sultan recalled that eminent civilian Viceroys could not cut loose from British ideas and political machinery. Since the new Viceroy has expressed sympathy with Indian aspirations, he argued that the responsibility was ours now to compose differences and prepare a united front to obtain our demands. The All-India Muslim Chamber meeting must have received the assurance without a tremor. The recent speech of Sir A. H. Ghuznavi created the impression that Muslim businessmen shared the views of the Indian commercial organisations as regards the political situation and most generally. Anyway, the advice to work for unity cuts across the League's demand for Pakistan. It is noteworthy, that business interests have so far refrained from discussing Pakistan.

The glass industry in India has been assured that soda ash, subject to an import duty, if used for glass-making, is eligible for a rebate as in the past. A recent notification referred to the decision to renew the concession given in 1935. Though home production of soda ash has begun, it is not adequate, and the concession (meant for the glass industry which did not get the tariff protection it asked for) is retained for a year. If the Government is satisfied that soda ash in commercial quantities is produced the decision as to rebate will be reviewed.

The Dharwar District Rural Development Board does not like the soldiers' Land Settlement plans. The Board said that private property rights would suffer if the plan went through, though the object was unexceptionable.

In the famine-ravaged Karnatak ex-soldiers are not likely to find much encouragement. The Board has set up a committee of its own to suggest improvements to the Bill. The Collector of Dharwar has denied the reports as to exports of rice. The reduction in the grain ration in Bijapur follows the intensified emigration from the District. Imports have been asked for. Dharwar according to the Collector appears to be getting fair supplies and shops have been set up in Belgaum to sell food at fair prices.

Since the request of various Chambers was turned down without reply Bombay hardly dared to hope for a reduction in the compulsory premium charged for insurance against war risks. A recent notification stated that the rate for the third quarter of 1943 is 2½ annas per cent per quarter instead of 3 annas the rate in force for a whole year. Since the Government got much money and paid out little, there has been the feeling that the rate was too high. In fact, some people here thought the new rate would be 1½ annas per cent. The Tunisian victories have evidently influenced the decision in favour of a reduced premium. The expenses will, of course, remains the same, and the loss ratio only will be lower. The traders are now assured that the drop in commodity prices have brought about lower rates of premium, and the factory-owners may probably raise a cry for reduced premiums on their plant and premises. The other insurance scheme, too, has obviously yielded the Government a profit, and the considerable improvement in the war situation has inspired a demand for a lower premium instead of the four per cent payable for two years.

The Bombay Chamber of Commerce has answered the questions put by the Special Officer in respect of sickness insurance. It is not against the plan, but it is not enthusiastic about it. It has asked that any scheme adopted must be fully contributory and it should apply to the States as well as India. In the view of the Chamber it is desirable to limit benefits to employees with long service in stable industries. It has no prejudice against contributions, but wants that the benefit of holidays with pay should be intergrated with the new health insurance plan. It has also asked that exemption should be given in cases where a private plan for medical relief was in operation. Employees may have club doctors subsidised by employers, and that implies merely duplicating expenditure. The reserve adopted by mill-owners in regard to the very small advance promised by the scheme under investigation has influenced the Bombay Chamber in its outline of conditions for acceptance.

South India

(From Our Correspondent)

Madras, July 1.

SINCE the loss of Malaya strenuous attempts are being made to locate new sources of rubber from indigenous plants. South India is particularly busy investigating the possibility of tapping new sources. Preliminary investigations in the Cuddappah and Kurnool districts have yielded promising results and the Madras Agricultural Department has completed a scheme for the production of raw rubber. In order to study the possibilities of manufacture of rubber a special officer has also been deputed to Travancore. It is hoped that the Agricultural Department will shortly place before the public full details of their scheme. But the rubber plantations of Travancore and Cochin have to face the problem of supplying rice to their workers. It is feared the food crisis would jeopardise the production of rubber. Sir C. P. Ramaswami Iyer, Chairman of the Indian Rubber Production Board, pointed out the seriousness of the food situation on the rubber plantations. A telegram has been sent to the Government of India requesting immediate despatch of adequate quantities of rice to rubber estates so that the production of this most important war material may not be affected by the hardships of labour.

The Government of India have decided to constitute an All-India Central Coconut Board to stabilise the coconut industry which is concentrated in Mysore, Cochin and Travancore. In tea, coffee and rubber industries as well the control system is expected to yield considerable benefit to all interests connected with the industry. After the loss of the Dutch East Indies, the Straits Settlements and the Philippines, the demand for copra has increased enormously. There is a pressing need for stabilising the Coconut industry on a sound basis, encouraging research for increasing its productive capacity, for controlling the price so as to benefit the poorer clauses, and also for supplying the necessary finance. The usual method of levying a cess on copra crushed by power mills will be adopted. Since about 163,000 tons of copra are crushed every year in India, a cess of Rs. 3-2-0 per ton, it is expected, would be adequate for the successful working of the scheme. The All-India Coconut Board will consist of 16 members representing the Government of Cochin, Travancore, Mysore and Madras. Adequate representation for the growing and milling interests as well as the coir industry would be given.

The Madras Government, it appears, have decided to take steps to solve the food crisis. Recently rice imports into the City had been severely affected due to the ravages of cyclone in the southern districts but, since railway communications have been restored, the position has now become normal, an enquiry regarding the number of families in the City has been ordered. Since the figures collected by the A.R.P. staff for a census of families in the city differed widely from the census figures of the Government of India, the Government of Madras have appointed a special staff to conduct a fresh enquiry. A statement showing the stocks of foodgrains held by individuals will also be prepared so that on the basis of the collected information food ration cards may be issued if necessary. The Government have issued two orders to facilitate their pre-rationing enquiries. The first, the Madras Rationing (Preparatory Measures) order 1943 enables the Government to appoint numbering officers and enquiry officers for the collection of statistical information. The second order, the Madras Essential Articles (Restricted Acquisition) Order, 1943 prohibits the hoarding of essential foodstuffs like rice, cholam, cumbu and ragi. No one can hold quantities of these articles beyond what is necessary for a month for his family or establishment. Though enquiries are being conducted in right earnest the Government have stated that the inquiry does not commit the Government to the introduction of the rationing system at any time or in any locality. However since the Commissioner of Civil Supplies has just returned after attending the All-India Food Conference at Bombay it is expected that rationing will be introduced at an early date.

For the promotion of technological education Mr. R. M. Alagappa Chettiar of Cochin Textiles Ltd., has donated Rs. 5,00.001 to the Annamalai University. This munificent gesture would surely go a long way in accelerating the industrial progress of the South. Though 5 lakhs make a good beginning it is inadequate. After the bright example of Mr. Alagappa Chettiar, technological studies in the Annamalai University would receive a valuable stimulus.

The Southern India Millowners' Association have addressed the Standard Cloth Commissioner putting forward certain suggestions in the mater of allocating standard cloth for manufacture by the South Indian mills and in regard to the rationalisation of the textile industry in general. They suggest that allocation of standard cloth should be mostly of counts 20s and 30s, that the allocation to every mill should be only two types of cloths so that the mill may be given the opportunity to choose the type suitable to itself, and that in fixing prices, greater margin should be allowed so that smaller units and mills with older and inefficient machinery are not at a disadvantage. The Association have also asked for the removal of control by the Provincial Government in the matter of prices and the movement of goods. Since the price control is to be on an All-India basis, the demand that Provincial Governments should not interfere appears reasonable.

(Continued from page 17)

ler's functions are in the matter of distribution, they would not blame him, but would appreciate the work that he has been doing in connection with the one commodity that is being successfully controlled and moved even more rapidly from the producing centres to the consuming markets than in prewar years." If one looks at the problem in the correct prospective, one can easily realise the main problem not only with regard to sugar but all the other essential commodities—the problem of co-ordinating the policies and measures of the Central Government and the Provincial (including States) Governments and also of dealing with merchants or members of the public who hoard. The latter is connected with the general problem of creating public confidence and providing the conditions necessary for popular co-operation.

A deputation on behalf of wool exporting interests met the officials of the Commerce Department the other day and represented to them that adequate facilities have not been afforded to them for exporting the allotted quota to Allied countries. The quota granted to wol exporters for 1942-43 is said to be 35,000 bales, but as no arrangements have been made for shipments huge stocks are lying at the main supplying centres and also Karachi and other ports. Representatives of the Karachi Wool Merchants Association also waited on the Commerce Member in this connection and made strong representations. The general view in New Delhi is that as a result of the Tunisian victory the shipping position is likely to ease considerably during the next few months.

I understand that when the Central Legislature meets the Finance Member will make an important pronouncement on the Government's proposal to use our sterling assets for funding pensions, provident fund payments etc. payable in England. What the Finance Member said in this connection during the Budget session of the Assembly was that "the Government of India had under consideration a scheme for making advance provision for the requisite sterling remittance wherewith to make future payments in respect of these liabilities (sterling pensions, family pensions, etc.) on the lines of the arrangement recently made for sterling railway annuities." It has been claimed that this arrangement would be capable of absorbing a considerable sum and would indeed be the equivalent of a large scale repatriation. A lump sum of £30 millions has been paid to H. M. for Railway annuities. It is said that a sum of £240 millions would be required for this new scheme. There is bound to be some criticism of the proposal in the Assembly—though no final decision has so far as I am aware yet been taken.

CALCUTTA — BOMBAY — MADRAS — RAJAHMUNDRY

Resume of Commodity Markets

The feature of the week is the pronounced decline in prices in the piecegoods market following the statement made by Mr. Hydari and Mr. Thackersey regarding the possibility of there being a substantial decline in prices for piecegoods with a reduction in costs, thanks to the comprehensive control over every branch of the industry. The jute market has been uninteresting but the jute manufactures market has been firmer on reports that several mills have been rendered idle owing to the shortage of coal supplies. The gold market has continued steady but the silver market has turned easier and the quotation is two or three points lower on balance.

The food problem is still in the forefront and the Centrol Government appears to be in a quandary. No satisfactory solution can be found for the many problems confronting the Central and Provincial Governments. Opinion is now divided as to the efficacy of continuing controls. Though the Indian public has always been sceptical regarding the policy of the Government to effectively control prices the authorities certainly had the feeling that they would be able to control prices at some stage at least. They themselves now feel diffident about their ability to bring about a substantial decline in prices and suggestions have been made whether it would be advisable to relax restriction regarding the movement of food grains or do away with controls in certain areas. It appears that these and several other problems were considered by the Commerce Member recently and that it was not possible to come to any immediate decision. A conference of the representatives of the provincial governments and the Indian States is to be held early next week, to frame short-term and long-term policies regarding food production. It is to be hoped that some measures will be devised to relieve the present distress in the country. The acuteness of the food position in Bengal will be evident from the fact that the Minister for Food has found it necessary to take a flying trip to Delhi and represent to the Central Government the difficulties confronting the Bengal Province. The Controller of Food Supplies, Bengal and the Minister in-charge will attend the conference that is to be held early next week.

The ban on the movement of food grains from the Orissa Province has created some difficulties so far as Bengal traders are concerned. July 5 was fixed as the last date for referring disputes to the Orissa Government at Sambalpur. It is now understood that on representations from the Bengal Government the last date has been indefinitely postponed.

* * * *

There is apparently no difficulty in the conduct of business in the raw jute market at the agreed maximum rates though sellers are not prepared to commit themselves to any large extent. There is a feeling that if the present maximum prices are lifted, jute prices will be pushed up. It is due to this feeling that mofussil prices in certain areas are higher than Calcutta parity prices and ryots are not prepared to part with their holdings freely. Reference was made in this column last week to the fact that the fixation of maximum prices for jute without maximum prices for jute manufactures gave room for some criticism. Reports have been current during the week that there is every likelihood of maximum prices for jute manufactures also being fixed by the Central Government. So far there is no confirmation in this regard. It may very well be that the Indian Jute Mills Association in consultation with the Central Government comes to some sort of gentlemen's agreement and fixes maximum prices for both jute and jute manufactures.

More than the jute problem, getting adequate supplies of coal seems to be presenting greater difficulty to mills. Several mills have had to be closed down this week without supplies of coal. Unless some arrangements are made in this regard continuity of production cannot be ensured. From the industry's point of view production in the long run may not be affected but frequent stoppages of production will certainly add to costs, as labour will have to be fed and paid whether there is work or not. On reports regarding the closing down of some mills due to lack of supplies of coal the hessian market has firmed up and some of the ground lost in the earlier days has been regained.

At the first meeting of the Textile Control Board the Chairman said that he was hopeful of a substantial reduction in prices through a reduction in costs. He gave the assurance that whatever economies in expenditure mills were able to achieve would be passed on to the consumer. It is also reported that in a short time mills will be producing standard cloth up to 50 percent of their capacity and that large supplies will be available in the next few months. Mills also are reported to have been willing to accept forward contracts at lower rates. These developments have naturally had a weakening effect on the piecegoods market and a decline in prices for both yarn and the coarser varieties of cloth has been reported during the past few days. Dealers have been advised by mills to dispose of their stocks as quickly as possible to the consuming public as it is anticipated that new supplies at lower rates might result in an appreciable loss to holders.

Buried Treasure...

IN WAR, margarine can take the place of butter. For the packing of oil, however, nothing can take the place of steel. But today, steel is needed more than ever to give us ships and shells, tanks and trucks, lorries and locomotives, the sinews of war, and the weapons of victory.

Oil too must flow in an unceasing stream to the yards and shops engaged on war production and still more oil to drive and lubricate the machines which they turn out. Oil must reach the power houses that give us light, the looms that clothe us, the flour mills that feed us, the omnibuses that take us to work.

But oil itself needs steel—steel for its containers—casks, drums, tins and cans. In times of peace there was steel in plenty to replace old containers—in war there is not; their conservation is thus a vital necessity. An idle receptacle is as useless as a buried currency note and both soon become unfit for circulation.

If the essential needs of industry and of the private consumer are to be met, oil containers must not lie empty. The Railways ask Industry to keep wagons moving.

BURMAH-SHELL urges all users of petroleum products to protect every steel barrel, drum, tin or can from RUST, DAMAGE & DIRT and

Return Containers Quickly

A BURMAH-SHELL ANNOUNCEMENT

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, July 1.

JUTE Mills' most acute supply problem has switched for the moment to coal, for the lack of which many mills on the lower reaches of the river are at a standstill. The "depot" system of supply of which much was hoped does not seem to have been effective in this section. Of course no depot system can be unless it is not only assured regular supplies but also has some reserve to fall back on. The idea of the depots was that wagons could be more expeditiously discharged and turned round without breaking up a "rake" or a portion of a rake and that distribution could be more equitably effected to mills urgently requiring supplies. But when the depot is swept bare, the position is merely aggravated by reason of the treble handling and delay which is entailed. Ufless stocks can be built up and maintained the "depot" system of supply seems to offer little advantage over direct supply to mills. And while the difficulties of the Railway authorities in the present situation are recognised, it cannot be said that their organisation to meet emergencies is impressive.

We were premature when we recorded that jute for Mill destinations was to receive priority over other destinations though we have reason to believe that the railways were promised immunity from any consequences which they feared might ensue from such action, though it seems curious that the inland water transport companies have been working such a scheme and have even been giving priority to contracts according to their due dates. It might be too much to expect that this idea could be applied to all the numerous railway stations where jute is offered for shipment, but there are a number of the more important stations where the greater bulk of the jute is held where the experiment might have been tried out. The railways have again been furnished with up-to-date figures showing the quantities of jute awaiting shipment to mills from rail stations and it is to be hoped that these may be at least used for guidance in the allotment of wagons where they are most urgently wanted. In the meantime the only apparent result of negotiations with the railways is an increase of supplies into the local bazar.

Several articles in the June issue of the Bulletin of the Indian Central Committee add emphasis to the very apparent shortage of textile bags of all descriptions in the U.S.A. Exhaustive control and price regulation in respect of second-hand textile bags is quoted *in extenso*. The full text of an amended Conservation Order by the War Production Board is also quoted, which Order exercises control over new and old textile and paper and combination bags of all descriptions used for packing foods, chemicals, seeds and other specified products. Under this Order no user may acquire more than 50 per cent. of the number of new textile bags made of burlap delivered to the user during the year 1941. Strict regulations are laid down with regard to the type of products which may be packed in cotton textile bags. Used textile bags must be repaired and patched before being resold and the size of a burlap bag may not be changed while it has a commercial use as a bag with or without mending. It is interesting to note that it is forbidden to purchase or accept delivery of any new or used textile bag to be used for protection against air raids or other war hazards! A nasty crack for the humble hessian Sand-bag.

There can be little doubt however that the recent huge order for jute cloth for the U.S.A. is the result of a belated realisation of the plight into which the States were drifting as a consequence of the restricted imports of burlaps. Statistics compiled in New York show that burlap imports during 1942 were only 43 per cent of the normal imports during pre-war years. Of that meagre total, so much was taken for Government purposes that only 15 per cent of the normal supply was left available for ordinary users. Bag circles anticipate that a very acute shortage of textile bags would develop in the latter part of this year as the present supplies of available material constitutes only a small portion of the amount normally required to handle the agricultural products of the country. It was reported that the W.P.B. had suspended indefinitely all shipments of burlap sugar bags from Calcutta to the U.S.A. for transhipment to Cuba and other sugar producing countries in the West Indies as sufficient bags were available for bagging the present sugar crop. The W.P.B. also announced that it it was planning for the annual production of an additional two hundred million yards of osnaburgs and sheetings for use for bagging purposes with the possible curtailment or elimination of other less necessary types of cotton fabrics. It also seems that the scheme for largely replacing jute coverings for cotton bales by cotton coverings was threatened by a shortage of cotton materials for bagging purposes. Again it transpires that owing to an estimated shortage of 5 million wooden crates required for the shipment of this season's citrus fruit crop from California, an additional 10 million textile bags will be required for the handling of the crop. In face of all this it is reported that the acreage of cotton to be planted during the present season was likely to be reduced by 2.7 per cent as compared with last year, owing to the shortage of farm labour together with the diversion of acreage to other crops for essential war purposes. With all these facts before us it is not surprising to find the U.S.A. Government having to fall back on the Indian Jute Industry to help them out of their manifest difficulties in providing a sufficiency of containers to supply their domestic needs as well as for war purposes. It is apparent that burlap is still a very important and essential item in the economy of U.S.A. trade, despite all the efforts to squeeze it out in favour of cotton or to replace it by other fibres. But it should not be forgotten that though price in war time may be a secondary consideration, there will come a time again when it will be a primary consideration, and unless jute prices can be deflated to more normal levels, the pinch of competition may be severely felt.

An article prepared by the American Board of Economic Warfare and quoted by the American Board of Economic Warfare and quoted by the Bulletin emphasises that the supremacy of Indian jute in competition with similar fibres grown in other countries is largely due to the cheapness with which the crop can be produced in India and this is an advantage which should not be lightly thrown away to serve political or quasi-political ends unless and until the pundits can suggest how this commodity is to be replaced in the internal economy of Bengal.

Latest reports from the Aregntine indicate that there is still much anxiety as to the prospects of the importation of Calcutta jute goods for the handling of the next Argentine grain crops. The experimental jute crop grown in the Misiones district of the Argentine has not proved a success owing to drought.

There has been some activity in the Export Jute market, but at the close prices are quoted easier due to larger imports into the local bazar. At the end of last week Short Group Dundee Daisee was recorded at Rs. 97 for July-August shipment with Long Group at Rs. 88 and Dundee Tossa at Rs. 96-12. Today there are sellers of the above at Rs. 96, Rs. 86-8 and Rs. 96 respectively. Some Dundee Daisee 4s were reported done at Rs. 80 and Rs. 80-4 for ready shipment. Some business was also recorded for Valparaiso in Hearts at Rs. 84-8, Dundee Tossa 2/3 at Rs. 94-8 and Outport Tossa 2/3 at Rs. 87. A small business in Cuttings is all that has been reported with mills, N.C. at Rs. 42 and M.C. at Rs. 41.

In Loose Jute Indian Mills have evinced considerable anxiety to buy and full maximum rates have been paid by them for Indian Jat and District marks. Quiet buying by European Mills has secured them further supplies of Supervised Jat and District jute at Maximum rates, but the business has not been extensive. Sellers showing some reserve. Some Indian District jute actually sold at four annas under the maximum rates. Upcountry markets rule firm with only limited imports and prices are above the parity of Calcutta maximum rates.

With mills out of the Fabrics market entirely, business in this section has been confined to dealings with and inter Bazar. The tone has generally ruled easy with minor fluctuations and at the close the recognised counters quote:—Eleven porter Hessian Rs. 27-6 ready, Rs. 27-7 July and Rs. 27-8 August-December. "B" Twills quote Rs. 65-12 any position up to the end of the year, with Liverpools similarly Rs. 70-4. Nine porter hessians quote Rs. 20-4 up to September and Rs. 20-2 October-December.

IT'S A FACT—

basic factor today is the annual addition to deposits, but supporting this is the tendency for corporate profits to increase, particularly, in Cawnpore. The issue of shares has been permitted by the Central Government. Though the formula makes no mention of the scrutiny of the prospectus by the Reserve Bank it may be inferred that this preceded sanction by the Examiner. As the first financial flotation under the new regulations the Hindusthan Commercial Bank has decisive advantages. The capital is large but the structure is singularly simple and elastic. Investors who have shown great awareness of the merits of bank shares will not fail to note the provision as to disposition of voting power in this case. Advance information certainly stressed the fact that Delhi interests represented by Sir Sriram were associated with this new bank. Lala Shanker Lal's place on the Board of Bank furnishes an indication of the support given to the Juggilal Kamlapat group in regard to the Bank. Rai Bahadur Bagla and Lala Karamchand Thapar represent the textile and sugar industries along with the Chairman, Sir Padampat Singhania. Mr. Islam of the Cawnpore Tannery Ltd., reinforces the Cawnpore contingent, and outside experience, particularly of indigenous banking, is adequately represented in Sir C. B. Mehta. The bank is thus assured of a promising start from its connexions.

It has been announced that the Directors and their friends have agreed to take a large number of shares to be allotted in full and the public will get only a part of the 250,000 shares now offered for subscription. The importance of this flotation which is regulated by Section 277F of the Companies Act will be readily understood by intending shareholders who should do well to note the business connexions of the Bank and the central position of Cawnpore in regard to Northern India. To estimate prospects and potentialities of a bank with a capital of Rs. 2½ crores is easier than usual. And it may be added that the Cawnpore industrialists' venture, if it is fashioned on conventional lines, has a great future owing to the proximate links with trade and industry and the conditions outlined as to branch expansion. Remarkable as the success of certain new issues in the last twelve months has been, it may be fairly said that history will more than repeat itself in regard to the ready acceptance by the market of the Hindusthan Commercial Bank's shares in view of the complete assurance of a future exceptionally bright.

Bombay Mutual Assurance Society

Rao Bahadur U. S. Desai's speech at the Bombay Mutual Assurance Society's meeting on June 26 was devoted to an examination of the progress made in 1942 and the possibilities of the future. The Society's results certainly sustain optimism. The new business secured in 1942 amounted to 8,558 policies assuring in the aggregate Rs. 1.73 crores nearly, and the annual premium thereupon amounted to Rs. 8.99 lakhs nearly. Total business in force amounted at the end of 1942 to Rs. 14.03 crores. The Society's revenue account shows a premium income of Rs. 66.01 lakhs and investment receipts of Rs. 11.77 lakhs. Payments to policyholders and annuitants last year took over Rs. 13.5 lakhs and surrenders accounted for an outgo of Rs. 2.07 lakhs. After providing Rs. 1.24 lakhs for taxation and Rs. 43,233-15-0 for depreciation and meeting all expenses and commissions there is a substantial surplus, transferred as usual to the Life Fund which stood at Rs. 295.59 lakhs at the end of 1942 explaining the increase of 44.32 lakhs in investments during the year. The greater part of the Fund was in stock exchange securities. The stiffening of giltedged by debentures and preferences is no new departure in investment policy. Loans including policy loans amounted to Rs. 50.16 lakhs out of the total assets of Rs. 3.16 crores. Cash balances and revenue items cover all liabilities outside the Life Fund and the Society's results conform to the expectations raised by the continuance of Rao Bahadur Desai as Chairman. House property in India at cost is shown at Rs. 32.14 lakhs and total investments at market value on December 31st 1942 are put at Rs. 2.96 crores. The Society's favourable experience in regard to claims and expense ratio needs no mention, but the striking increase in investments last year proves that in the second stage of its long career the Bombay Mutual is setting a remarkable example. Rao Bahadur Desai expressed the Members' satisfaction with the year's results and indicated that opportunities for expansion at the usual pace are not limited by the war since insurance offers undeniable advantages to the public even when the value of money tends of fluctuate.

(*Continued from page 3*)

dends is in the bank's own interest and will be welcome to the shareholders, as it will discourage speculation in the bank's shares. Section 47 of the Reserve Bank provides for the allocation of surplus profits as under: "After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five percent per annum on the share capital as the Governor-General-in-Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor-General in Council.

"Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount, shall be allocated to the Reserve Fund." Subsequent to the inauguration of the Reserve Bank, the Government Notification fixed 3½ percent per annum as the cumulative rate in accordance with this section. This is the rate that has been paid on the Reserve Bank shares hitherto. But under the scheme of paying additional dividend as detailed in the Fourth Schedule of the Reserve Bank Act a fraction equal to one-sixtieth of the excess up to the first Rs. 1½ crores over a suplus of Rs. 4 crores was to be available for additional dividend; out of each successive additional excess up to Rs. 1½ crores, the amount available for additional dividend would be one-half of the fraction payable out of the next previous Rs. 1½ crores. The Reserve Bank has now earning assets for nearly Rs. 800 crores, owing to the colossal accumulation of sterling. The Bank wil thus be earning an enormous amount by way of interest on securities. If the Fourth Schedule remains effective, the Reserve Bank shareholders would be receiving dividend much more than the present 3½ percent. It has therefore been decided to limit the maximum dividend to 4 percent. It is only fair and proper that no unduly large benefit is passed on to the shareholders who have done precious little to cause the increased profits of the bank. It is the general state of India's finances which are responsible for the bank's increased profits; and it is time to reason that the benefit of increased profits must go to India's finances.

The exchange market has been steady, with slightly more business, but nothing to rave about.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

JUTE

Calcutta, July 1.

ATHER uninteresting conditions have been oticeable in the raw jute market during the ast week and business passing has been on small scale at the agreed maximum rates. appears that the measures taken for the peeding up of jute from mofussil centres to onsumers would bear fruit. The crop reorts are also satisfactory, though it is reorted that in some places on account of xcessive rain cutting of the crop as had to be proceeded with though was immature. Though consumption being regulated and mills are adjusting eir purchasing programme there is onsiderable uncertainty regarding the ontiuance of the present maximum prices. In ertain mofussil centres prices are higher than e maxima. Sellers are therefore not iking to commit themselves to any large xtent.

In the loose jute section earlier in the week orthern Middles and Bottoms were done at s. 16-4 and Rs. 13-4 per maund for July ipment. Considerable difficulty is being xperienced in getting higher grade jute. ndian Jat Middles and Bottoms were done Rs. 17 and Rs. 14 per maund with District ute 8 annas lower.

In the pucca bales section, some small business has been done in Dundee Daisee 4's at Rs. 80-4 per bale. Sellers are asking for Rs. 89 per bale for Dundee Daisee 2/3 but shippers are offering only Rs. 88 per bale. Mills purchased N.C. and M.C. at Rs. 42 and Rs. 41 per bale respectively.

JUTE MANUFACTURES

Calcutta, July 1.

SLIGHTLY better conditions have been noticeable in the jute manufactures market in the past few days. The disappointment over the publication of stock and consumption figures for the month of May is now over and with mills still keeping out the market and the slowing down in production on account of the scarcity of coal interbazar dealers have been anxious to carry over stocks. There was some covering earlier in the week and the quotation improved by a few annas for both 9 porters and 11 porters. The closing quotations are higher on balance; 9 porters ready being Rs. 20-6, July-September Rs. 20-6 and October-December Rs. 20-6. 11 porters ready are Rs. 27-5, July-September Rs. 27-8 and October-December Rs. 27-8. There has been a slight improvement in the quotations for forward positions as there is a general tendency to take a more liberal view regarding the shipping position in the latter half of the year.

In the Heavy Goods section there is nothing of importance to be reported and quotations are around the lowest for the week. "B" twills for July delivery sold on the basis of Rs. 65-12, Liverpool twills Rs. 70 and Cornsacks Rs. 66.

GOLD

Calcutta, July 1.

THE Bombay gold market has continued steady throughout the period under report. Quotations were fluctuating in narrow limits till Wednesday and investment demand was rather meagre. In sympathy with the strength of the stock markets, however, closing quotations are higher, Gold Ready being Rs. 82-13 and First Settlement Rs. 82-8. Sovereigns were quoted Rs. 57-12.

In the Calcutta market, Gold Ready sold at Rs. 82-9 and Sovereigns Rs. 58-14.

SILVER

Calcutta, July 1.

THE silver market, on the other hand, has been easier and quotations are nearly two to three points lower on balance. With the arrival of more supplies and a small demand there has been some selling. Silver Ready closed at Rs. 122-8 against Rs. 125 at the end of last week and First Settlement at Rs. 122-10. There is no change in the London market and the quotation for both spot and forward remains unchanged at 23½d. Only a small amount of business has been reported.

PIECEGOODS

Calcutta, July 1.

DEFINITELY easier conditions have been noticeable in the piecegoods market during the past few days. It is generally felt that as a result of the measures taken by the mills and the Government of India, there will be a substantial decline in prices and that it will not be possible for dealers to maintain the present level of prices. Buyers also have showed a correct disposition in keeping out of the market. Dealers have been rather anxious to dispose of their holdings. It is reported that there has been a decline by as much as 3 annas per lb. in the yarn market. In the cloth market, the quotations for coarser varieties have come down by 10 to 20 per cent. If, as stated by the Chairman of the Textile Board recently, mills are able to effect a reduction in production costs, it can be expected that replacement values will be lower and that the bazar prices will have to be adjusted as a result. As has been pointed out on earlier occasions, developments during the next few weeks should be carefully watched.

JARDINE SKINNER TEA GROUP RESULTS FOR 1942

NOTHING of importance is to be recorded in the stock markets either in Bombay or Calcutta. Generally steady conditions were noticeable in both centres with business passing normally. It might be said that in the early part of the week a slightly easier tone was noticeable in the Western centre, with the liquidation of textile issues on reports that a substantial decline in prices had taken place in the piecegoods market. Subsequent developments, however, have caused a rally in prices for the popular textile shares and it is now generally felt that there may not be any appreciable decline in cotton mills' earnings. The reason for this feeling is to be found in the statement made by the Secretary, Industries Department and the Chairman of the Textile Control Board. It is pointed out that it would be possible to achieve a substantial decline in prices even with a decrease in costs as with the comprehensive control over every branch of the industry mills would be able to get raw materials and stores at controlled rates. The anticipated increase in production is expected to offset the decline in earnings as a result of the increase in production of standard cloth. As the activity in textile shares keeps the Bombay market alive, the rally in prices during the last two days has imparted a general bullish feeling to the other sections too. The Calcutta market was never affected by the weakness of the Bombay market and there was even a rise in the quotation for Indian Irons and Steel Corporations. Only towards the close on Friday, the quotations are slightly lower on profit-taking.

* * * *

The announcement of the terms of the new loan issues of the Central Government early this week has had an encouraging effect on the giltedged section. An all-round rise in prices has been recorded. With the continuance of the present conditions in the market, it is felt that there is scope for a further improvement in prices.

* * * *

Speculation regarding the possibility of a substantial increase in the dividend of the Reserve Bank for the year ended June 1943, has been set at rest by the new Ordinance issued recently limiting the rate of dividend payable by the Reserve Bank to its shareholders to a maximum of 4 per cent as long as the Ordinance remains in force. It will be remembered that there was a sharp improvement in the quotation three weeks back from Rs. 108 to Rs. 122 on hopes of a higher dividend for 1942-43. Under section 47 and the Fourth Schedule of the Reserve Bank Act, the shareholders are entitled to a portion of the surplus profits above Rs. 4 crores. As the profits of the bank have swollen abruptly owing to the abnormal expansion in currency it was believed that the shareholders might derive some advantage out of the increased earnings. The new Ordinance, however, limits the dividend to a maximum of 4 per cent. It is, therefore, to be expected that the distribution for 1942-43, which is due in a few weeks, will not be more than 4 per cent. The market does not seem to have reacted adversely to the announcement and the quotation at the time of writing is around Rs. 119.

* * * *

In spite of the difficulties regarding labour the *Singareni Collieries Company, Limited* has been able to report a slight increase in the amount of raisings in the year ended December, 1942. The total figure of 1,214,019 tons constitutes a new record for the Company. The net profit, before providing for taxation and depreciation, is slightly higher at Rs. 10,73,348 against Rs. 10,28,972 for the previous year. After providing Rs. 6.4 lakhs (same), Rs. 1 lakh (Rs. 50,000) is placed to the Contingencies Reserve. The sum of Rs. 6,24,504 is carried forward to the next account. An interim dividend of 2½ per cent was paid earlier in the year and the Managing Agents would have decided on the payment of a final dividend but for the direction by the British income-tax authorities to furnish returns of income from the tax year 1939-40. Until it can be ascertained that the liability, if any, to income-tax may exist, the Directors do not consider it would be in shareholders' interest to recommend the payment of a further dividend in view of the complications which must ensue should the Company be held liable. No dividend was paid in respect of the previous year. The sum of Rs. 3 lakhs which was refunded by the Nizam's Government against cess collected during the 31 months ended June, 1942, has been credited to the Depreciation Reserve.

* * * *

The results of the Jardine Skinner group of tea companies for 1942 have been published. A general improvement in earnings has been reported and it has been possible to increase the dividend in all cases. *Chandypore Tea Company, Limited* has increased the dividend for 1942 from 5 per cent to 10 per cent; *Central Cachar* from 5 per cent to 7½ per cent; *Kallinugger and Khoreel* from 5 per cent to 7½ per cent; *Rydak* from 45 per cent to 75 per cent; and *Baradighi* from 30 per cent to 50 per cent.

* * * *

The results of *Baradighi Tea Company, Limited*, before providing for taxation and depreciation is Rs. 5,60,629 against Rs. 1,93,536 for the previous year. Provision for taxation is Rs. 2.5 lakhs (Rs. 40,000). A sum of Rs. 20,098 has been set aside for depreciation, Rs. 50,000 to Improvement Fund and Rs. 75,000 to Dividend Equalisation Fund. A sum of Rs. 50,000 was transferred to funds in 1941. Even after all these substantial transfers the dividend has been increased to 50 per cent from 30 per cent. The amount carried forward is considerably higher at Rs. 45,185 against Rs. 19,149 brought in. At the present quotation of around Rs. 70 the shares afford a return of more than 7 per cent taxfree.

* * * * *

The net profit of the *Rydak Tea Company, Limited* for the same year is Rs. 5,65,126 against Rs. 2,06,579 for 1941. The provision for taxation is Rs. 1,90,000 against Rs. 50,000 while the charge on account of depreciation is Rs. 40,108 against Rs. 44,455. The transfer to Improvement Fund is Rs. 5,000 (nil), to River Protection Reserve Rs 50,000 (nil) and to Dividend Equalisation Fund Rs. 75,000 (nil). The dividend has been increased to 75 per cent from 45 per cent and is the highest for over a decade. The amount carried forward is Rs. 43,335 against Rs. 23,917 brought in. The yield on the shares on the basis of the latest dividend is nearly 8.5 per cent tax-free.

* * * *

With its premium income virtually stabilised around Rs. 4 crores and investment income over one crore a year the Oriental permanently retains its position at the head of Indian insurance. Sir Purshotamdas Thakurdas discussing the 1942 results referred to the recovery in new business, the favourable claim experience, and the limited rise in the expense ratio. The addition of Rs. 2 crores to the Life Fund stands out again as

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 2.

QUITE steady conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing has been on a larger scale. The weaker tone of the Bombay market had a slight restraining influence in the earlier part of the period under report but with the rally in prices in that centre and the strength of the giltedged market the close has been steady. There is a tendency to await further developments and it is generally expected that the upward trend in prices will be resumed. Indian Irons and Steel Corporations have recovered their lost ground. There has been good buying of Steel Corporations. Jute and Coal shares have been steady.

The giltedged securities section has been firmer with the announcement of the terms of two new loan issues made by the Government of India. There has been a rise in the quotation for 3½ per cent Paper from Rs. 94 to Rs. 94-8. Terminable loans are higher with 3 per cent 1963-65 quoting Rs. 95-10 and 3 per cent 1949-52 Rs. 101. 4 per cent 1960-70 were Rs. 110-4, 4½ per cent 1955-60 Rs. 114-6 and 5 per cent 1945-55 Rs. 107-6. Among Provincial loans, 5 per cent 1944 U. P. Bonds were Rs. 102-10. Of the two new loans one is a fourth issue of the 3 per cent 1963-65 Loan at Rs. 95-8 and the other is the fourth Defence 1953-55 Loan issued at par and repayable at par. Subscriptions for the third Defence Loan closed on June 30, 1943.

Not many transactions have been recorded in the Bank section. *Imperial Bank* fully paids were Rs. 1,848 and contributories Rs. 470. *Reserve Bank* were slightly lower at Rs. 118 on the promulgation of an ordinance that the maximum dividend payable on the *Reserve Bank* shares has been limited to 4 per cent.

No business has been reported in public bodies' debentures. Preference shares have been well held. Among first class jute mill preferences, *Alliance* were Rs. 145, *Birla* Rs. 135, *Kamarhatty* Rs. 155, *Kinnison* Rs. 172 ex-dividend and *Lawrence* Rs. 167. *New Victoria* were Rs. 11-10 cum-rights, *Burn & Co.*, six per cent preferences Rs. 153 cum-dividend, *Kumardhubi Engineering* Rs. 199 and *Titaghur Paper* Second preferences Rs. 113-8.

Cotton shares were rather quiet in the early part of the week. During the last two days a slightly steadier feeling has been noticeable but quotations are not very much changed on balance. *Bengal-Nagpur* were marked higher at Rs. 31, but *Cawnpore Textiles* were quiet at Rs. 13-14. *Bowreah* were steady at Rs. 590 and *Dunbar* at Rs. 303. *Elgin* were uninteresting around Rs. 73-8. *Mahalaxmi Cotton* were better at Rs. 41-8 on the announcement of an interim dividend of Re. 1-8 per share for the year ended June, 1943. *Kesoram* were Rs. 15-8, *New Victoria* Rs. 9-11 cum-rights and *Muir Mills* Rs. 415.

Coal shares were firm though *Bengal* were easier at Rs. 465. *Amalgamated* were steady at Rs. 38-12, while *Burrakur* were Rs. 16-10 and *Bokaro and Ramgur* Rs. 19-14. *Burra Dhemo* were higher at Rs. 24-2 against Rs. 23-10 at the end of last week as also *Central Kurkend* at Rs. 16-13 against Rs. 16-2. *Equitable* were steady at Rs. 38-8 with *Hurriladih* at Rs. 17-7. *Pench Valley* changed hands at Rs. 40-10, ex-dividend, and *North Damuda* at Rs. 7-3. *Samla* were marked further higher at Rs. 4-8, *Talcher* at Rs. 4-3 and *West Jamuria* at Rs. 34.

The reports that several jute mills had to close down owing to the difficulty in regard to the supplies of coal did not have any effect on jute prices as it was pointed out that the loss in working hours would be made up at a later stage and that mills earnings would not be affected thereby. *Adamjee* were quoted at Rs. 36, *Agarpara* at Rs. 26-12 and *Anglo-India* at Rs. 41-6. *Belvedere* were sharply higher at Rs. 516, while *Barnagore* were fluctuating around Rs. 163. *Caledonian* were twelve points higher at Rs. 462. There has been some good buying of *Chitavalsah* and the quotation has been marked higher by one and a half points to Rs. 26-4, *Delta* were Rs. 528, *Gourepore* Rs. 830 and *Howrah* Rs. 64-6. *India* were dealt in at Rs. 572 ex-dividend, *Kamarhatty* at Rs. 582 and *Lawrence* at Rs. 301. *National* were in favour at Rs. 29-4 and *Nellimarla* at Rs. 26. *Nuddea* were Rs. 106 and *Presidency* Rs. 7-3.

In the Engineering section, *Indian Iron* have again been marked higher at Rs. 35-14 and *Steel Corporation* at Rs. 27-12 ex-dividend. *Jessop & Co.*, have been frequently dealt in around Rs. 22-4. *Bhartia Electric Steel* were a shade better at Rs. 15-3 and *Britannia Engineering* at Rs. 16-5. *Burn & Co.*, were Rs. 398, *Indian Standard Wagon* Rs. 72 and *Indian Steel and Wire Products* ordinaries Rs. 52-4.

In the Sugar section, with the exception of U. P. Sugar, there is no important change in prices to be recorded. It is expected that the balance-sheet of *Carew & Co.*, for the year ended June, 1943, will make good showing and that in all probability a dividend on the ordinary shares will be paid. *Buland* quoted Rs. 40-12, *Carew & Co.*, Rs. 10-3, *Gwalior* Rs. 226, *Champaran* Rs. 38-5, *Belsund* Rs. 11-7, *Raza* Rs. 42-2, *Samastipore* Rs. 18-7, and *Ramnugger* Rs. 10-12.

In the Tea section, not much of activity has been reported but there has been some buying towards the close and the earlier profit-taking has been fully absorbed. *Bishnauth* were Rs. 39-4, *East India* Rs. 14-14, *Jutlibari* Rs. 20-4, *Hattikhira* Rs. 32-14, *New Samanbagh* Rs. 37-4, *Patrakola* Rs. 1,182-8, *Tezpore* Rs. 17-5 and *Rajabhat* Rs. 54.

In the Miscellaneous section, there has been a sharp rise in *Burma Corporation* to Rs. 3-7 on Bombay buying. *Indian Copper* were steady at Rs. 2-11. There were good buyers for *Northern India Oil* and the quotation has improved in recent weeks by several points to Rs. 21-1. *Aluminium Corporation* were Rs. 20-1, *Balmer Lawrie* Rs. 375 ex-dividend, *B. I. Corporation* Rs. 6-4, *Calcutta Safe Deposit* Rs. 8, and *Indian Wood Products* Rs. 3-4. *Indian National Airways* preferred ordinaries were in good request and the quotation has been marked one and a half points higher at Rs. 19-3. *Calcutta Trams* were very firm at Rs. 28-4, with continued demand from London while *Dunlop Rubber* were very well held at Rs. 55. *National Insulated Cable* were easier at Rs. 16-4, while *National Rolling Mills* were higher at Rs. 13-4. *Rohtas Industries* were Rs. 31-13. There has been a sudden rise in *Spencer & Co.* to Rs. 9-14 and the quotation is talked further higher.

Among Paper shares, *India Paper Pulp* were a few points higher at Rs. 199 while *Mysore* were Rs. 26. *Orient Paper* were Rs. 29-10, *Titaghur* Rs. 27-1 cum-dividend and *Sree Gopal* Rs. 23-3 ex-dividend.

Among Real Properties, *Humayan Properties* ordinaries were quoted at Rs. 11-2 and deferreds at Rs. 2-15.

BOMBAY STOCK EXCHANGE

(From Our Correspondent).

Bombay, June 30.

THE period under review is short of two working days, markets being closed to-day on account of a bank holiday. On Monday markets were closed on account of the death of a member. A rather quiet tone was noticeable in the early days of the period under review. Textile shares especially came in for selling. Quotations in other sections were marked lower in sympathy. In the last two days, however, definitely firmer conditions have been noticeable and closing quotations are at the highest levels for the week.

The giltedged securities section has been firmer following the announcement of the

(*Continued on page* 48)

CHAIRMAN'S SPEECH

INCREASE IN BUSINESS AND FUNDS

BOMBAY MUTUAL'S PROGRESS IN 1942

RAO BAHADUR U. S. DESAI ON THE OUTLOOK

At the Annual General Meeting of the Bombay Mutual Life Assurance Society, Limited, held at the Registered Office of the Society, Bombay Mutual Building, Bombay, on 26th of June 1943, the Chairman said:—

GENTLEMEN,

Before I proceed to review the Report proper, which has been read out to you just now by the Secretary, I think I must offer a few observations on the new procedure we had to adopt this year, in discontinuing the usual practice of serving notices and submitting copies of the Annual Report and Accounts to every member of the Society. You are, I believe, already aware that, in pursuance of Sections 79 and 131 of the Indian Companies Act, every company registered under the Indian Companies Act has to serve notices and submit copies of the Annual Report and Accounts to all its members. In case of a joint stock concern the position is simple, inasmuch as the number of members is limited for the time being. In case of a Mutual Life Office, by virtue of its constitution all policyholders are members and, therefore, are entitled to the individual service of notice and the copies of Annual Report and Accounts. This position of a Mutual Life Office makes it liable to a constantly increasing expenditure year by year. This difficulty was thoroughly examined by the legislators while the Insurance Act was on the anvil and that is why they provided for a way out of the difficulty by enacting the provisions of Section 100 of the Insurance Act, 1938.

The management of the Society has so far never grudged any facility or privilege to members but one thing was certain, that with an annual addition of about eight to ten thousand new members to a body which is already about one lakh strong, the management would have been some day required to follow this course to save an enormous expenditure by way of printing and postage. The situation created by the war only helped to hasten the step. I trust that you will all appreciate this procedure which is calculated to lead to an enormous saving to the Society.

Coming to the Report proper, it is indeed gratifying to your Board to be able to submit very satisfactory accounts for the fourth year under the shadow of war. With the enemy pounding our Eastern borders, we might well have envisaged a declining premium income with increasing claims but so far we have escaped this unhappy combination.

The year covered by this Report will be remembered in the history of this country and also in the history of Indian Life Assurance as a year of great anxiety and even hardship for all our countrymen. Intermittent panic and continued nervousness characterised the civic life of this country for some months. But as the year progressed the activities of the enemy appeared to have received a check and a sweeping offensive as probably contemplated by the enemy was a thing of the past. The people in consequence have gained considerable confidence and insurance business has at present ample scope for covering lost ground.

NEW BUSINESS

Coming now to the record of work done during the year under review, I am glad to be able to report that notwithstanding the difficulties created by the war situation, the Society was able to maintain its progress. The total New Business registered with the Society amounted to Rs. 2,07,69,500. New Business completed during the year amounted to Rs. 1,72,59,500. The fact that having regard to the prevailing nervousness among the people, increasing level of taxation and a sharp rise in the cost of living we have been able to cross the previous year's figures, is, to my mind, an achievement in itself for which compliments in a full measure are due to our Chief Agents and Fieldworkers. The current year is showing signs of considerable improvement and if the results achieved so far bear any indication to the possible results at the end of the year, I can confidently say that we are going to exceed considerably our pre-war record. Up-to-date our completed business is about 66 per cent. More than our completed business for the corresponding period of last year.

INCOME AND EXPENSE RATIO

The premium income during the year amounted to Rs. 66,01,482-10-3 and the total income to Rs. 77,93,360-5-0 if we add to it the investment income and other sundry receipts. The Life Fund has advanced by about 45 lakhs and is a little less than the Three Crores mark. The overall expense ratio of the Society is 22.29% of the premium income as against 23.65% during 1941. The renewal expense ratio as calculated according to Rule 25 (b) is 13.51 as against 13.93 during 1941. This improvement in expense ratios both overall and renewal, in spite of progressive business and increase in certain items of expenditure due to war, should be considered as highly satisfactory.

CLAIMS

The claims by death inclusive of bonus additions amounted to Rs. 9,65,226-7-0 as against Rs. 8,73,329 during 1941. Those by maturity amounted to Rs. 3,70,186-15-0 and by Permanent Disability Benefit to Rs. 5,865. An amount of Rs. 12,709 was paid by way of annuities.

Of the outstanding claims shown in the Balance Sheet Rs. 3,35,938-5-0 has been since paid and Rs. 2,36,893-6-0 has been passed for payment and is awaiting proofs of title.

INVESTMENTS

The total investments of the Society in Government and other securities valued at market price as on 31st December 1942 together with the investments in real estate amounted to Rs. 2,96,20,689-2-10 as against Rs. 2,51,88,094-14-8 at the end of 1941.

The net yield on our investments during 1942 was 4.19 as against 4.18 during 1941 and 4.43 during 1940. The factors affecting the interest yield of Life Offices are now too well known to need any repetition at my hands. Until recently Section 27 of the Insurance Act possessed a halo of doubt with regard to tis interpretation. The test case has now clarified the position and until the section is re-amended it will continue to be a permanent hardship on the Investment portfolio of Life Offices.

Another factor to which I must draw your attention is the rising level of the burden of taxation. In 1939-40 Life Offices paid 42 pies in a rupee by way of income-tax, surcharge, super tax and surcharge on super tax. This was raised to 45½ pies in 1940-41, to 56 pies in 1941-42, to 63 pies in 1942-43 and it will be as high as 74 pies in 1943-44. It has to be remembered that Life Offices stand on a footing entirely different from other corporations inasmuch as the profits they declare are not profits of turnover in the true sense of the term. The profits returned to policyholders constitute premia charged in excess of the actual requirements for covering the risks. It is true that Life Offices earn a certain amount by way of investment income. But this income forms part of the basis of the actuarial calculations on which the Actuary expects the working of a company to be solvent. Any factor, which tends to encroach upon these calculations, is bound to affect the company's working adversely. It is not my intention to aver that Life Institutions should not be subject to any taxation at all. As institutions claiming the benefits of Law and Order Life Offices do not grudge their share of taxation but, taking into consideration the nature of the responsibilities shouldered by Life Offices, that share ought to be reasonable. Life Offices cannot be put into the same category as other corporations, when it is evident that they are doing a great social service and are like public utilities. Even in England, the Government has differentiated between Life Offices and other corporations for the purpose of taxation. Life Offices in England pay 7½s. in the pound, whereas other companies pay 10s in the pound. It will be noticed from what I have said above that Life Offices deserve a lenient treatment at the hands of the Finance Department of the Government of India. Representations were made by our Association but they seem to have fallen on deaf ears.

The Society's building under construction at Calcutta stands in the same incomplete condition as last year. Our attempts to get the work completed as early as possible have been futile, because labour and material are not available.

If we take all these factors into consideration, our yield during 1942 should undoubtedly be considered as satisfactory.

WAR-TIME CONCESSION

While addressing you last year I gave you an idea of the responsibilities shouldered by the Society in respect of the policyholders stranded in enemy occupied countries. You are probably aware that a number of policyholders have since returned to India but their policies are lying in a lapsed condition due to non-payment of premia since the trouble started in Burma. As such cases deserved sympathetic consideration your Directors have have decided to give the following concession:—

1. As soon as they secure employment or set up business or are in a position to pay premiums or as soon as communication with Burma is restored, their policies must be revived by paying all arrears of premia with interest and producing such evidence of health and on such conditions as the Directors may then decide.

CHAIRMAN'S SPEECH

LARGE INCREASE IN ORIENTAL'S NEW BUSINESS

INCOME OF Rs. 487 LAKHS IN 1942

At the Sixty-eighth Ordinary General Meeting of the Shareholders and Policyholders of the Oriental Government Security Life Assurance Company, Limited, held on the 16th day of June 1943 at the Registered Office of the Company, Oriental Buildings, Bombay, when Sir Purshotamdas Thakurdas, Kt., C.I.E., presided. The Chairman said :—

GENTLEMEN,

I rise to address you on the results of the operations for the year ended 31st December last as disclosed in the Report and Accounts a copy of which has been in the hands of those of you who are Shareholders of the Company and also of those of you who are Policyholders and who have requested that a copy should be sent to them before the date of this meeting. I hope, therefore, that you will allow me to take the Report as read.

In deciding that on this occasion a copy of the Report and Accounts should be issued only to the extent required by the Indian Companies Act, namely, to the Shareholders, your Directors were actuated by the urgent necessity of conserving paper supplies to the utmost extent possible but every Policyholder, who after receiving notice of this meeting requested a copy of the Report, has been supplied with one. The size of the Report has also been cut down with the same object of saving paper but only those portions have been cut out which are not of much general interest. Any Shareholder or Policyholder who wishes to have in respect of the operations of last year any information which has been cut out on this occasion may have it on request.

The amount of New Business completed last year at 36,713 Policies assuring just over Rs. 951¼ lakhs shows an increase in the aggregate Sums Assured of just over Rs. 135 lakhs though a decrease in Policies issued of 354 as compared with the results of 1941 and bearing in mind that last year we were without the new business which we normally receive through our Branches in Burma and Malaya, I think you will agree that this result is satisfactory.

You will be interested to know that, if the New Business results during the current year achieved up-to-date are any indication of the possible results during the remainder of the year, we should be able to show a very substantial further increase in New Business over last year not only in Sums Assured but in Number of Policies issued as well. Up-to-date our completed business is more than double the completed business upto the same date last year.

Our total Premium Income last year was Rs. 381 lakhs as compared with Rs. 384 lakhs in 1941, showing a decrease of about Rs. 3 lakhs which is entirely due to the temporary loss of Premium Income in respect of the Company's business in Burma and Malaya which in 1940 amounted to just under Rs. 28½ lakhs.

Our Net Interest Income was nearly Rs. 116 lakhs as compared with just over Rs. 114½ lakhs in the previous year showing an increase of only about Rs. 1½ lakhs. This unusually small increase is mainly due to the very substantial increase in the amount of income-tax deducted at the source from Interest on Securities which for the year of account was over Rs. 19 lakhs while for the previous year it was only Rs. 13½ lakhs and for the year 1940 only Rs. 7½ lakhs. This increase in taxation at source is partly due to the repatriation of certain of our Sterling Securities during the year of account and partly due to the increase in the rate of Surcharge on all income-tax deductions.

It is perhaps hardly necessary for me to repeat the explanation which I gave when I last addressed you in connection with the expected increases in Taxation deducted at the source mainly through the gradual repatriation or redemption of our Investments in India Sterling Securities when I stated that since this Company would in future be assessed to Income-tax on the Interest less Expenses basis, the Company would not, as it has in the past, be called upon to make additional payments in respect of Income-tax beyond the amounts deducted at hhe source but would on the contrary be entitled to refunds of Income-tax depending upon the extent to which Income-tax Authorities allowed Expenses as a set-off against Interest Income.

CLAIM EXPERIENCE

Our Claim Experience continues to be satisfactory. The Claims by Death last year amounted to just over Rs. 71½ lakhs, less by about Rs. 2 lakhs than the Claims by Death of the previous year, while the Claims by Maturity at just over Rs. 105 lakhs show an increase of about Rs. 6¾ lakhs on those of the previous year. The reduced amount of Claims by Death last year is, of course, partly due to the fact that claims which have occurred among our Policyholders still resident in Malaya and Burma could not be intimated to the Company. Although a large number of our Policyholders were able to escape from Burma and are now resident in India, very few were able to escape from Malaya. Included in the Claims intimated last year were claims aggregating nearly Rs. 3¼ lakhs under 140 Policies in respect of the business of our Rangoon Branch and nearly half of these arose as a result of enemy action and allied causes due to the War either in Burma or while the Policyholders were *en route* to India.

The Ratio of Actual Deaths to those Expected and provided for by the Mortality Basis adopted in the last Valuation is 46.1 per cent as compared with 48.2 per cent in 1941 and 46.0 per cent in 1940 and it has been estimated that taking into account the abnormal claims intimated in respect of our Burma business which were mainly due to deaths of our Policyholders in Burma during or as a result of their journey from Burma to India, the normal additional claims which might have been expected in respect of our Burma business and the normal claims from our Malaya business, the Ratio would not have been more than about 47.1 per cent.

The Expenses of Management last year worked out to a Ratio of 21.2 per cent of the Premium Income as compared with 19.6 per cent in 1941 and 20.6 per cent in 1940. The increase of 1.6 per cent over the Ratio of the previous year was almost entirely due to the increase in the First Year's Agency Commission on the largely increased amount of New Business during the last two years together with the cost of Dearness Allowances payable to the employees throughout the Company's Organisation and Special War Emergency Allowances paid to the staff of certain Branches, the latter two items amounting last year to nearly Rs. 2½ lakhs. Taking everything into consideration, our Expenses Ratio for last year cannot, I think, be considered unduly high.

Our total Expenditure last year necessitated direotly or indirectly as a result of the War including the two items above mentioned under "Expenses of Management," amounted to just over Rs. 4½ lakhs, the other items making up this amount being cost of Air Raid Precautionary measures at Head Office and Branches, cost of Insurance of the Company's Staff against death or injury as a result of War operations, Compensation to Employees for loss of property in Burma and Malaya and Expenses of evacuation of such members of the staff who escaped from Burma and Malaya.

LAPSE RATIO

I should just like to say a word about our Lapses. Our aggregate Lapse Ratio has increased somewhat as a result of our operations for last year from the very low rate which had been attained in 1941 and the increase is partly due to non-revival during last year owing to the compulsory closure of our branches in Rangoon and Kuala Lumpur of many of the lapses which took place as a result of the anxiety felt by our Policyholders during the months prior to the occupation of Malaya and Burma by the Japanese and partly due to the anxiety engendered among our Policyholders in India in the beginning of the year as a result of the reports of the War situation in both the Eastern and Western theatres of War not having been sufficiently dissipated by the end of last year to permit revival of such lapsed policies which would otherwise have been revived. There are, however, indications that during the current year we should see a much greater number of these lapsed policies revived coincident with the substantial increase in our New Business and coincident also with a reduction in the number of loans applied for by our Policyholders.

As a result of the year's operations the Company's Funds increased to just over Rs. 31½ crores as compared with about Rs. 29½ crores at the end of the previous year.

Coming now to the Balance Sheet, you will find among the Liabilities two new large items, viz., a War Contingencies Reserve Fund amounting to Rs. 7,06,000 and a Special Bank Overdraft amounting to Rs. 2,72,499-4-7. The War Contingencies Reserve Fund represents the Book Value of our buildings in Kuala Lumpur and Rangoon excluding the value of the sites together with the Book Value of the Company's holding of Singapore Municipal Debentures, the last mentioned of which was kept in safe custody with the Chartered Bank of India, Australia and China, Singapore, which found it impossible to remove them when their staff was evacuated. The provision made for these three items does not mean that they will necessarily have to be written off our assets as a total loss but your Board thought it prudent, especially in view of the Valuation, to carry the Book Values of these assets to a separate Fund pending the restoration of normal conditions when the exact position with respect to them could be ascertained.

The Special Bank Overdraft represents the cost price of purchases of Government of India securities made by your Directors during the latter part of last year in anticipation of the redemption of the 3½ per cent India Sterling Loan on 5th January last, the securities so purchased being included at their cost price on the Assets side of the Balance Sheet.

The value of our investments in House Property was increased by over Rs. 5½ lakhs during the year by the purchase price paid for 'Ewart House' in Bruce Street which should prove to be a remunerative investment. The portion of that building occupied by the Company is utilised partly for the keeping of one set of our Statistical Machinery which is irreplaceable until the end of the War, for Stationery Stores and for a Record Room.

REDUCED STERLING HOLDINGS

The Company's holding in India Sterling Loans was substantially reduced last year as a result of the repayment of our holding in the 3 per cent India Sterling Loan 1948 of a face value of £2,877,765, the proceeds of such repayment being utilised in the purchase of Government of India Loans of various denominations. This had the effect, as I have already pointed out, of increasing substantially the Income-tax deducted at the source from Interest on Securities, and the redemption on 5th January last of the Company's holding of 3½ per cent India Sterling Loan will still further accentuate this during the current year.

The total amount of new Loans advanced by the Company during last year amounted to slightly more than Rs. 85½ lakhs which, as anticipated by me when I addressed you on the last occasion, shows a new high record in the history of the Company. The reason why there was such an abnormal demand for loans during the commencing months of last year should be obvious. The situation, however, has altered with the return of confidence which commenced in the second half of the year, and I am glad to be able to inform you that during the current year, there has been a substantial diminution in the demand for loans from our Policyholders and many outstanding loans are being repaid.

Before passing from the Balance Sheet, I would just mention that as at 31st December last the aggregate Market Values of our Investments in Stock Exchange Securities showed an excess over the aggregate Book Values of nearly Rs. 348-2|3 lakhs, the corresponding figure as at 31st December, 1941 being just over Rs. 327¾ lakhs. All the securities stand in the Books as at 31st December, 1942 at or below cost price and at or below Market Value.

While addressing you last year I referred to the alteration in the Rules under the Insurance Act providing for the rotation of retirement of Policyholders' Directors and in conformity with these Rules as altered a meeting will take place on 21st instant for the election of three Policyholders' Directors in place of the three gentlemen who have represented th Policyholders on the Board for the last three years and who have rendered valuable assistance to the Board during that period. All these Directors are eligible and have offered themselves for re-election by the Policyholders on this occasion.

VALUATION IN PROGRESS

The year under report was the last of a Triennial Period at the end of which the Valuation of the Assets and Liabilities falls to be made to ascertain the profits for distribution between the Shareholders and the Policyholders. The Valuation is now in progress and the results will be available in a couple of months. Without trying to prophesy what will be the exact result of this Valuation I may say that the difficulty still being experienced in finding new and more remunerative avenues of investment for the funds of Life Assurance Companies points only in one direction and that is towards a further reduction in the profit earned by the Company proportionate, of course, to the amount of its Funds, and the time has arrived, as I have stressed in the past, for Policyholders to attach greater importance to the security to themselves and their dependents given by the sum assured than to the continuance of declarations of substantial rates of bonus. The position as regards the investment of the funds of Life Assurance Companies is becoming very acute what with low yields on securities of the type which alone should be considered suitable for the investment of their funds on the one hand and high rates of income-tax and super-tax and surcharges to which even these slender yields are subject on the other. While several Companies in Great Britain have passed their periodical bonus declarations to Policyholders and have been content with only declaring an Interim Bonus with respect to Policies that go off the books either by death or maturity and suggestions have been mooted in India for the Government to take action to prohibit Life Assurance Companies from distributing any profit under the present War conditions, I am in a position to inform you that your Board continue to hold the view into which I went in detail on the last occasion when I addressed you that it will not be in the best interests of the Policyholders of Indian Companies to carry forward undistributed any substantial amount of the profit emerging as a result of the Valuation provided ample provision has been made in estimating the liabilities for the abnormal contingencies created by the War and particularly the great fall in the net rate of interest earned on the investment of new funds.

CEILING TO TAXES

While on the subject of low yields on gilt-edged securities combined with high rates of income-tax thereon, I should like to draw the pointed attention of the Finance Department of the Government of India and the Members of the Legislatures to the desirability, if not the necessity, of fixing a ceiling to the rate of Income-tax and Super-tax to which Life Assurance Companies should be subject. This principle has already been accepted in Great Britain on the realisation that a Life Assurance Policy is by its nature a long-term contract under which the Company must earn a previously estimated minimum net rate of interest to be in a position to meet its obligations and if this minimum rate is not earned merely because of high and increasing rates of income-tax thereon, even the best managed concerns may find themselves in a position of serious embarrassment to say the least.

The rate of taxation on the assessed income of Life Assurance Companies has now reached a percentage higher than the percentage at which the rate of income-tax on the assessed income of Life Assurance Compaies has been pegged in Great Britain, namely, at 7s. 6d. in the £ or 37½ per cent as against the present standard rate of 10s. in the £ or 50 per cent. If the maintenance of cheap money for as long as possible by all possible means available is to be the policy of the Government of India, as it is the policy of the British Government, it is essential that the Hon'ble the Finance Member of the Government of India should, in the interests of the Policyholders, particularly of Indian Life Assurance Companies, give his most sympathetic consideration to the representations already placed before him both by the Association of Indian Life Assurance Companies and the Association of non-Indian Life Assurance Companies operating in India to the effect that the income-taxation of Life Assurance Companies in India should be pegged. In my opinion, it should be at a figure lower than the existing one.

Without such a provision, Indian Life Assurance Companies are already severely handicapped and in the event of further increases in income-taxation, they are likely to experience greater difficulties than what Life Assurance Companies in Great Britain would even now be experiencing, but for favourable consideration given by the Chancellor of Exchequer to their justifiable representations for a ceiling to income-taxation. If Insurance Companies are to be kept from temptation to invest in securities and shares yielding an alluring return, it is necessary to relieve their anxiety on the score of increased income-tax, enabling them to assess more accurately for purposes of their business and in the interests of their Policyholders, the future trend of low interest yields, I am sure that Government cannot have their loans at low rates of interest and at the same time get a fat return of income-tax from those who should, according to the known views of Government, look after the savings of the people by a cautious and conservative policy.

In my speech on the occasion of the last Annual General Meeting I dealt fairly exhaustively with a number of questions affecting Life Assurance Companies as the result of the War or otherwise and I need not repeat myself on this occasion. The War situation as it exists to-day differs greatly from the situation existing a year ago and it is obvious from the results of our operations that the anxiety then existing as to the final outcome of the War and its result on India has been greatly minimised and a feeling of confidence in Victory for the United Nations has taken its place, India has suffered comparatively little from enemy attacks, much less so than many of us imagined might be the case after the occupation of Burma, and it has fortunately never been necessary for Life Assurance Companies to seriously consider the suspension for the time being of the issue of unconditional policies on the lives of residents in any part of India. I feel confident that no further emergency is likely to arise which will make it necessary for Life Assurance Companies to act otherwise during the course of this War.

NEED FOR MORE COVER

Before concluding I should like to point out to our Policyholders that, in view of the lessened purchasing power of the rupee, the amount of life assurance which they may have already effected mainly for the benefit of their dependents will not, so long as the purchasing power of the rupee stands as at present, provide for their dependents to the extent which they had hoped it would at the outset, and they should very seriously consider increasing the amount for which their lives are insured to the limit of their ability so as to leave to their dependents in the unfortunate event of their early death a sum of money which will bear a somewhat similar ratio to the present cost of living as the amount for which they may have originally effected assurance bore to the cost of living then experienced. This point of view has obviously been appreciated by many of our Policyholders already as among the largely increased number of proposals we are now

(Anual General Meeting on 9th July, 1943 *at* 3-15 *p.m.)*

Audited accounts for the year ended December, 1942:—

Accounts.—The Revenue Account shows a profit of 1,35,471 12 5

and after deducting from this:—

	Rs.	A. P.	Rs.	A. P.
Manager's Commission on Profits	4,206	4 0		
Managing Agents' Commission on Profits	2,709	7 0		
Reserve for Taxation ..	30,000	0 0		
			36,915	11 0
			98,556	1 5
and adding:—				
Dividend on Investments ..	13	8 0		
Refund of Income Tax ..	10	0 0		
			23	8 0
there is a nett profit for the year of			98,579	9 5

After adding to this the credit balance of Rs. 11,365-15-10 brought forward from the previous year, there is a credit balance of Rs. 1,09,945-9-3 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—

Place to General Reserve Account	1,00,000	0	0
Carry forward	9,945	9	3
TOTAL ..	1,09,945	9	3

The Directors regret that the Company's cash position precludes the payment of a dividend for season 1942.

Managing Agents.—Messrs. Octavius Steel & Co., Ltd.

Synopsis of the balance sheet as at 31st December, 1942.

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	5,63,690	Fixed Capital Expenditure ..	6,66,151
Reserves and other funds ..	1,75,000	Stores ..	37,630

Carry forward ..	9,946	Stock of tea ..	2,14,454
		Outstandings ..	1,700
		Cash ..	19,451
Total ..	9,39,886	Toal ..	9,39,886
		Total Liquid Assets ..	2,73,735

CALCUTTA SAFE DEPOSIT COMPANY, LIMITED.

Audited Accounts for the year ending 31*ts March* 1943:—

It is gratifying to note that the business is satisfactory even inspite of the difficulties due to enemy bombing on the City in December last.

The total receipt from Lockers during the year is Rs. 34,249|- as compared to Rs. 51,486|9|- in the previous year, the drop being principally accounted for by the fact that there was mass evacuation of the general population from the City in the first half of the period under review. To this sum of Rs. 34,249|- has been added Rs. 25,494|9|4 brought over from last period on unexpired locker leases thus making a total of Rs. 59,743|9|4. Out of this Rs. 16,502|2|10 has been credited to the next period against unexpired locker rent and Rs. 43,241|6|6 has been credited to Revenue Account for the year. No provision for taxation has been made since the period's profit is not liable to taxation as all unabsorbed depreciation of previous years have been set off against this profit.

After deducting all expenses, the nett profit for

	Rs.	A. P.
After deducting all expenses, the nett profit for the year amounts to	24,307	2 3
To which is to be added the balance brought forward from the previous year's Profit and Loss Account of	247	9 11
Making a total of	24,554	12 2
This amount, the Directors recommend to be disposed off as under:—		
Towards payment of a Dividend at -|3|- (annas three) only per share on 74,195 Fully paid up Ordinary Shares absorbing	13,911	9 0
Leaving the balance to be carried fôward ..	10,643	3 2
	24,554	12 2

Agents and Secretaries:—Messrs. Amritlal Ojha & Co., Ltd.

Authorised Capital—Rs. 10,00,000. *Issued—Rs.* 7,50,000. *Subscribed—Rs.* 7,41,950 *in* 74,195 *shares of Rs.* 10 *each fully paid up..*

Synopsis of the balance sheet as at 31st March, 1943.

(*Continued from page 27*)

(2) In the meantime if their policies result into claims during the present emergency the amount of claims less the unpaid premiums with interest at 4 per cent. compounded half-yearly will be paid, provided relevant conditions are fulfilled.

Another incident of note is the appeal from the Government of India for a generous treatment of policyholders on active service, who are and who may be reported missing or prisoners of war from time to time.

In response to that appeal your Directors decided to exempt such policy-holders from the payment of further war risk extra for the period for which they continued, to be confirmed as prisoners of war or were notified as missing or believed prisoners of war provided such policyholders were already covered by the extra premium paid on the date of capture. As regards policyholders who are not covered for war risk but who are also confirmed as prisoners of war, their next of kin have been given the option to pay one year's war risk extra at the non-combatant rate to cover all future risks upto the date of repatriation irrespective of whether they proceeded on active service as combatants or non-combatants. In addition to this members of the Defence of India (Railway) Units have been exempted from the payment of the extra for war risk payable on their proceeding to a war zone in India or coming within the range of warlike operations within the country provided their duties remained the same.

THE OUTLOOK

On the whole the year, though full of vicissitudes, has been one of steady progress all round. It is true, the progress of the war has brought in its trail immense hardships on the war-weary world. It is, however, also true that war-time prosperity enjoyed by the various industries essential for strengthening the sinews of war has increased the purchasing power of those associated with such industries. This increase in the purchasing power, though greedily swallowed by the increased cost of living, is seeking an outlet and this explains, to some extent, the briskness visible in Life Assurance business during the current year. Life Assurance is probably the only form of investment which is never quoted at a premium nor at a discount whatever the political or economic situation. Likewise there is no other form of investment, which secured during the period of inflation does not depreciate in value in normal or postinflation period.

CYCLONE RELIEF FUND

You must have noticed in the Revenue Account that your Board has donated on behalf of the Society Rs. 1,000 to the Midnapore Cyclone Relief Fund. You are already aware of the devastation caused by cyclone in the districts of Midnapore and 24-Parganas. Various agencies collected funds for organising relief and an appeal was made to Insurance Companies for generous donations. Insurance Companies as humanitarian institutions have some special responsibilities in this direction. Many of these afflicted persons must be the Society's members. Taking these factors into consideration, your Board handed over Rs. 1,000 to the Ramkrishna Mission, which was a Central Agency organising the relief work. Looking to the necessity of such a donation for a humanitarian cause, I trust you will all appreciate the step taken by the Board and accord your confirmation to it.

GENERAL

In conclusion I take this opportunity of thanking sincerely all our Chief Agents and Agents for the tremendous labour put in by them in the course of the year. I have already drawn their attention to the opportunities at hand and I would strongly urge them to work with greater zeal and enthusiasm so that the year 1943 breaks even pre-war records.

I have also to thank the public who have shown their appreciation of this oldest and mightiest Institution of its kind in this country. I would request them and others who have not yet joined the Society to note specially the great principle,"*Alterum Alterius Auxilio Eget*" aOne for all and all for one) on which this Institution has been founded and worked with conspicuous success during the past 73 years and to continue their support and co-operation as they have done heretofore.

To the Secretary and the Staff at Head Office we owe our appreciation for their devoted service, in recognition of which your Directors recommend the payment of one month's salary as bonus to such members as have served for 12 months and half a month's salary to those who have served for six months or more and who are now and who were in the Society's service on the 31st of December 1942.

Gentlemen, now I beg to move that the Directors' Report and Audited Revenue Account and Balance Sheet for the year ended 31st December 1942 be approved and adopted.

HUMAYAN PROPERTIES, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, Humayan Place, Calcutta, on Tuesday, the 27th day of July, 1943, at 11 O'clock in the forenoon for the purpose of considering, and, if thought fit, of passing with or without modification, the following resolution, which will be proposed as a Special Resolution, namely :—

"That the regulations contained in the printed document submitted to this meeting and for the purposes of identification subscribed by the Chairman thereof be and the same are hereby approved and that such regulations be and they are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

By Order of the Board,
LOVELOCK & LEWES,
Secretaries.

Mrs. Edith A. Greig or Inglis, Mrs. Winifred de Bois Shrosbree, Comdg. Genl. Sir Baber Shum Shere Jung Bdr. Rana, Col. Richard B. Butler, Capt. O.S. Board. Messrs. Ernest Graves, John R. Coulthard, Hugh F. D. Jacob, W. H. Hulme, W. F. Marchinton, A. E. Warren, A. L. Jones, Kenneth W. Leslie, N. H. Qudri, F. G. Sequeira, A.R. Mellis, Sir W.M. Craddock.

HUKUMCHAND JUTE MILLS, LTD.

Notice To Shareholders

NOTICE is hereby given that the Forty-seventh half-yearly General Meeting of the Shareholders will be held at the Registered Office of the Company, 4, Clive Ghat Street, Calcutta, on Thursday, the 15th July, 1943, at 4 p.m. for the following purposes :—

(1) To receive and pass the Directors' Report and Audited Accounts for the Half-year ended 31st March, 1943.

(2) To declare Dividends.

(3) To elect Directors.

(4) To transact any other business that may be brought before the Meeting.

Dividends, if declared, will be paid to Registered Shareholders only on application.

The Share Transfer Register of the Company will be closed from the 2nd July, 1943, to 15th July, 1943, both days inclusive.

By Order of the Board
RAMDUTT RAMKISSENDASS,
Managing Agents.

Calcutta, the 24th June, 1943.

JESSOP & COMPANY LIMITED.

NOTICE IS HEREBY GIVEN that the Eleventh Ordinary General Meeting of the Shareholders will be held on Wednesday, the Twentyfirst Day of July, 1943, at 11 a.m. at the Registered Office, 93, Clive Street, Calcutta, to transact the following business :—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st October, 1942.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To transact any other business of an Ordinary General Meeting.

The Tranfer Books of the Company will be closed from the 15th to 21st July, 1943, both days inclusive.

By Order of the Board,
C. C. MATHESON,
Secretary.

Calcutta, 25th June, 1943.

MAHALAXMI COTTON MILLS LTD.

Notice is hereby given that an interim dividend of Rs. 1-8-0 per share, free of taxes, is payable on or after the 16th July, 1943.

Dividend Warrants will be issued to Shareholders whose names appear on the Company's register on the 15th July, 1943 or in accordance with instructions received from them.

By Order
H. DATTA & SONS LTD.
Managing Agents.

Dated, Calcutta, 30th June, 1943.

(Continued from page 29)

receiving a very large number are coming from our existing Policyholders.

I feel that this year our active Agents may have a greater opportunity than they have ever had before during their connection with the Company to substantially increase their income from the Company and I hope they will in their own interests take full advantage of the situation in the realisation that the increased income which they will certainly earn if they do so will cover to a great extent the increase in the cost of living towards meeting which it is not possible for the Company to increase its Agency Commission Terms beyond the rates laid down as the maximum by the Indian Insurance Act or in any other manner. I see no reason why during the course of this year every active Agent of the Company should not earn the maximum rate of First Year's Commission allowable under that Act.

In conclusion, I wish to convey our appreciation to our Officers and Staffs at the Head Office and at our Branches of the excellent services rendered by them during last year. At the same time, I should also like to convey to our Medical Examiners our appreciation of their careful work in the conduct of their medical examinations on behalf of the Company which continues to help us to maintain our Claim Ratio at the satisfactorily low figure which has persisted for a number of years past.

Gentlemen, I have now pleasure in moving that the Directors' Report and Audited Accounts for the year 1942 be adopted.

(Continued from page 26)

terms of the new loan issues, 3½ per cent Paper has improved to Rs. 94-7. There has been a slight improvement in the quotations for terminable issues also.

The reports regarding the weakness of the cloth market caused some selling of textile issues early in the week and the popular shares shed some points. As the week progressed, however, a firmed tendency was noticeable as it was pointed out that mills' earnings would not be affected to any great extent. The statement made by Mr. Thackersey has had a favourable effect on the market. *Bombay Dyeing* have improved from Rs. 2,022-8 earlier in the week Rs. 2,045 *Central India* were seven points better a Rs. 446. *Century* were Rs. 829, *Gokal* Rs. 333-8 and *Simplex* Rs. 317.

In the Engineering section, there was smart recovery in Tata deferreds and ordinaries to Rs. 2,075 and Rs. 415 respectively The declaration of dividends for the yea ended March, 1943 has not had any effect o the market. The accounts for the year ar eagerly awaited.

Among hydro-electric issues, *Andhra Valley* were Rs. 1,895, *Tata Power* Rs. 1,832 an *Tata-Hydro* Rs. 202-8.

In the Miscellaneous section, *Alcock* were unchanged at Rs. 935. *B. E. S. T.* were fluctuating around Rs. 156-8. *Scindia* were a shade better at Rs. 33-6 and *Bombay Steam* at Rs. 380. *Premier Construction* were further higher at Rs. 180. *A. C. C.* were Rs. 232 and *Shivrajpur* Rs. 70-8.

(Continued from page 25)

proof of age and magnitude. Temporary losses have been neutralised by new reserves, though the appreciation in the value of existing investments is more considerable than ever. It could be stated that the Oriental's Chairman is against the 'no bonus in war-time' decision and against the raising of income-tax on interest earned on the Funds. Of importance from the market angle is the diversion from sterling into rupee securities. The giltedged market must benefit from the large annual accretion to the Funds and the revival of confidence mentioned in connection with insurance should also sustain giltedged.

* * * * *

As was anticipated in these columns *Mahalaxmi Cotton Mills Limited* is paying an interim dividend of Re. 1-8 per share for the year ended June, 1943, the distribution for the whole of 1941-42. With the possibility of the directors deciding on the distribution of clothes to shareholders at concessional rates in the Pujah season and the likelihood of a final dividend payment it should be said that the shares are good for investment.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The rate for interbank call money continues unchanged at ½ per cent in Calcutta and Madras and ¼ per cent in Bombay; and conditions in the short loan market are so easy that there is hardly any borrower. In spite of such plethoric money, applications for this week's treasury bills tenders were only Rs. 4,81¼ lakhs against Rs. 8 crores offered. The poor showing of applications is attributable not to the state of the money market, but to the comparatively smaller amount of treasury bill maturities during this week. In fact, throughout the first week of July, treasury bill maturities amount to less than Rs. 15 crores. The results announced this week once again confirm the correctness of our view that sales of treasury bills from week to week are less dependent upon the actual money market conditions than upon the treasury bill maturities of the week in question. Though the applications on July 6 came to Rs. 4,81¼ lakhs, the total amount accepted was only Rs. 3,12½ lakhs. The Reserve Bank has rejected all applications below Rs. 99-12 per cent. Till last week, applications at Rs. 99-11-9 per cent were receiving partial allotment. The insistence of Rs. 99-12 as the lowest rate may be taken as a gesture to the market that the Reserve Bank would like to see a progressive decline in the treasury bill discount rate in accordance with the seasonal trend. The average rate of accepted tenders this week was Re. 1 per cent per annum as compared with Rs. 1-1-0 per cent which was the rate ruling for seven weeks. It is also noteworthy that sales of three months' tap bills came to only Rs. 40½ lakhs. The Government have now decided to suspend, for the time being, sales of intermediate treasury bills. The offer of tender bills will continue at the present level of Rs. 8 crores per week. As the total treasury bill maturities in July are only Rs. 36½ crores, the Government should be able to adjust their ways and means plans on the basis of sales of treasury bills for Rs. 8 crores per week. The stoppage of tap bills will have the effect of further pushing down the discount rate.

This week also, the Reserve Bank returns have not reached our hands up to the time of writing. We have, therefore, to review the statements for the week ended June 25. Sterling securities in the issue department are unchanged—a rather unusual thing in recent weeks. Rupee securities have been withdrawn to the extent of Rs. 1 crore; and as the deposits of the Central Government with the Reserve Bank are nearly Rs. 20 crores, we may expect further cancellation of "ad hoc" treasury bills in the next week or so. Rupee Coin has increased by Rs. 1.29 crores. In the result, active note circulation is higher by Rs. 40.82 lakhs. In the banking department, the deposits of the Central Government show a substantial rise of Rs. 10.36 crores. Balances maintained by banks are lower by Rs. 3.43 crores. Foreign balances show a bulge of Rs. 7.19 crores.

The return of the Imperial Bank establishes another record for deposits at Rs. 191.94 crores. While investments have decreased from Rs. 135.26 crores to Rs. 133.97 crores, bills discounted and purchased reveal a sharp increase from Rs. 4.53 crores to Rs. 9.49 crores. This increase must be accounted for by rediscounting of treasury bills; and it is, therefore, quite on the cards that the amount shown against bills discounted and purchased is restored to the former figure in the course of July. The Imperial Bank's cash has declined from Rs. 27.92 crores to Rs. 24.78 crores.

As anticipated in these columns, the list for the New Loan for Rs. 15 crores closed much ahead of the scheduled date. The original press announcement vouchsafed the information that the list would be closed as soon as it appeared that Rs. 15 crores had been subscribed by conversion or cash. Rs. 15 crores was subscribed by Monday last. We understand that there was more partiality shown towards 3 per cent 1953-55 than towards 3 per cent 1963-65. As a result of the closing of the list, 3 per cent 1963-65 has improved in price by over 8 annas. We also understand that the sale of this loan through the tap has been stopped. This should help in further improvement of the price of this stock.

The three loans that are now being sold through the tap are 3 per cent 1946 bonds, 3½ per cent non-terminable loan and 3 per cent 1953-55 Fourth Defence Loan. So far as 3½ per cent Rupee Paper is concerned, the tap rate was kept at Rs. 94 for a considerable time. Last week it was raised to Rs. 94-8. The tap rate this week is Rs. 95. Before the rate was raised to Rs. 95, there was a large volume of purchase from the Reserve Bank as the market took the view that a further increase in the tap rate was inevitable. In this connection, we would like again to impress upon the authorities that either the sale of 3½ per cent paper through the tap must be stopped or the rate at which tap sales are made must be raised in quick stages to Rs. 99. With the suspension of sales of intermediate treasury bills and with the successful flotation of the New Loan for Rs. 15 crores, conditions in the giltedged market are propitious for staging such further improvement as will provide a most favourable background for the inauguration of a defence loan week for Rs. 100 crores.

From the point of view of the present inflation, the sooner such a week is arranged for, the better. We also hope that the plans for the collection of Excess Profits Tax in advance are being worked out expeditiously. It should also be a highly important move if the Finance Member can evolve a scheme for income-tax payment on the basis of "pay-as-you-earn". This principle is now applicable to salaried men. Why should it not be made applicable on a wider basis? In Canada, "pay-as-you-earn" is now in actual practice. In America and Britain, shrewd observers expect this to be in active operation very shortly. As a deflationary measure, "pay-as-you-earn" will prove an effective weapon.

The exchange market has been dull but steady.

(*Continued on page 74*)

Finance Abroad

Thursday Morning.

THE Senate votes on the subsidies indicate that a Presidential Message is less effective than it was. The Commodity Credit Corporation, as an agency for subsidies, has been knocked out but the Senate is likely to change its mind when a joint conference is called to reconsider the question of stabilising retail food prices. The dispute between Congress and President is far more important than the quarrel between the Vice-President and Mr. Jones. But neither development seems to touch Wall Street like the charges made against an investment trust by the S. E. C. The threat of determined action is not going to hold up the late improvement. The turnover has again improved, and leading shares have responded to the good news from the S.-W. Pacific. The U. S. Treasury programme for the current year has not been outlined. Everything obviously depends on the control of inflation. The strike is slowly ceasing to interest the world. The miners are taking the four-month truce as the inescapable minimum.

The mixed showing made by the Administration in its battle with a Congress keen on its Summer Recess is not related to external developments like the adherence of Martinique to the Committee for the Liberation of France. The problem of subsidies has overshadowed the lease-lend appropriations which provided for subsidies to farmers. The cotton acreage decision limits payments but the New Deal policy of guarantees to farmers is retained. The financial burden is not the cause of difference but the revolt of the Democrats in the south well in advance of the 1944 elections. If inflation is not rolled back, what will be the main results? America may lose gold because she can export little owing to the high costs and high wages. But she may step up tariffs and subsidies and maintain a policy of isolationism in regard to trade and exchange. The Opposition perhaps favours that for a modified liberalism. The outer world should certainly feel apprehensive, but the disclosure of the President's weakness in the fight over the subsidies has also created the feeling here that price ceilings for hessian are not unalterable. There is, for the moment, a measure of optimism as to hessian because of the President's defeats over the anti-strike bill.

All this is not unfavourable to Wall Street which does not worry about inequality of incomes. Steel production is not seriously in danger, if coal is, according to Mr. Ickes. The U. S. Government might not suffer in its short-term borrowing or the influx of tax reserve certificates, but the dollar might weaken against Latin American currencies in the future; and the consequences for the future may be serious, though a section of investors should have no misgivings because of a presumed rise of $4½ billion in the cost of war. The firmer tone in Brazilian issues in London might well suggest that, besides pointing to the improved prospects for Brazil's coffee and minerals in spite of the war. The estimates of the Brazilian Ambassador as to rubber output and the factories on war work in Brazil, suggest that South America is not hit by the war to the same extent as in 1940.

The Minister of Production indicated that lease-lend makes for a slowing down of production after the success in North Africa. The financial results cannot be ignored, though the effect on employment and income may be negligible. The conclusion of Wings for Victory weeks is a real stimulus to savings but the reduction of short-term borrowing through a reduction in six months' treasury deposits to £40 million this week is a bigger factor. The slowing down of production may conceivably mark saturation in regard to tank and aircraft output (though not ship-building) as also to the belief that the Germans cannot have a war potential comparable to Britain's, whatever be the reason the assurance of Captain Lyttelton implies that war expenditure might fall while war workers may enjoy Bank holidays at home. The further increase in Clearing Banks' total balances makes it clear that the giltedged market should attract more support. There has been this week quite a striking rise in the Funds corresponding to the rise in giltedged securities noted in Indian markets. The well-spread advance in the Funds account for the quietly firm referred to in the cables. In the main, changes suggest that money is easier than at the end of June, and the larger volume of applications for Treasury Bills last Friday (173 millions for 90 millions on offer) proves that the market has more cash and fewer bills to take up so that reinvestment is more or less automatic.

Of special importance to the future of European currencies is the mission of the French National Committee's representative in London. It has been suggested that the object of M. Maurice Couve de Murville's visit is to produce parity between the Algiers franc (exchanged at 200 to the pound) and the franc current in the former Free French territories (quoted at 176 to the pound since 1940). Unification of the currency and exchange is desired by Mr. Murville who was Secretary-General to Giraud's Government. It is known that M. Murville is a comparatively young man who has held posts in France as an Inspector of Finance and took risks in coming to North Africa. The quantum of Allied assistance to the French will, probably, be settled in Washington. The Committee will certainly get a share of Lease-Lend assistance in view of the earlier help given to North Africa. The Allies may find increased use for the raw materials of Colonial France and the peremptory dissolution of the corporative system should have no effects on local production.

Distinguishable from the improvement in gold-mining shares in the last two weeks in London is the rise in oil shares. The drop in bullion prices in India is ascribed to nervousness induced by good news from the fronts and the fall in cloth and yarn prices promoting profit-taking. The rise in South African gold shares was confined to developing properties on the western extension of the Rand but shares of holding companies like Union Corporation have gone higher. The General Election might be a mild tonic for the Kaffir market as West African shares are said to have improved in sympathy. And the rise in Kolar gold shares is noteworthy like the rise in Burmah Oil stock. The Shah like his Premier has outlined plans for the development of Iran and indicated faith in the treaty of 1941. The interviews given to the News-Chronicle are certainly suggestive of Iran's disinclination to interfere with the development of the oil industry. Anglo-Iranian shares have risen partly on account of the fears as to the life of oilwells in the U.S.A. If these fears are not worthy of general or serious notice, it is clear that the oil share market does not ignore them. Reference was made to a big rise only recently in the Venezuelan Ultramar. There has been a useful rise in Trinidad issues and the only share neglected by British investors is Mexican Eagle, still at a high premium as the shares aer of the value of 4 pesos only.

Home Industrials have been singularly firm after the first half-year. The firmness has reduced the difference in the yield between giltedged and industrial stocks in London. Courtaulds and Dunlop have been more than usually prominent, and Electrical and Musical Industries have been fancied on hopes of a merger with Cossor Radio. The big amalagamation in the radio industry looked like going through even in April. The Chairman of A. C. Cossor (Sir Louis Sterling) resigned and the former E.M.I. Directors became joint General Managers of Cossor. The rise in Barrow Haematite Steel has been reported as something out of the way, but is clearly a result of the Ministry of Supply's offer to buy up the undertaking for £640,000 three months ago. Only the hoop and bar mills and the steel works were mentioned in the offer as the Company was to keep the blast furnaces, quarries ect., for itself. The Board wanted the shareholders to accept the Government's offer and stated in a circular that the money obtained could be used for developing the other assets and the utilisation of certain wastes products. The Government's oer affnd and its acceptance may improve prospects and last week in a rather dull industrial market Barrow Steel went up quickly. Government interference in the steel industry has certainly taken a more desirable form than in the aircraft industry. Apart from the new board planted on Short Bros. by Sir S. Cripps, the M.A.P. put in a Controller for General Aircraft to safeguard production.

The post-war financial pattern has not been settled as yet Mr. Herbert Morrison promised control and told the workers to be ready for the removal or other jobs. He stated that in the transition to peace, three maxims would retain pride of place: priorities in expenditure, increase in national income and the control of money values. The utterance s important as indicating the continuance of financial control on present lies. The restoration of the status quo ante bellum is to be postponed, and what Britain accepts will certainly influence Indian policy, for instance, in regard to control of capital issues.

Clearing Union or Stabilisation Fund ?

The publication of the British and American proposals for the regulation of international finance in the post-war period enables India to think out her post-war economic policies without being utterly in the dark about the intentions of the great powers. It is true that the proposals now published emanate from the experts of the respective Governments, that the Governments are not committed to these plans and that the two schemes are too divergent to afford any clue to the upshot of the discussions they are meant to initiate. Nevertheless, one can have some idea of the demands which proposals for the regulation of international finance will make on countries like India and the way in which the great powers will expect us to treat our abnormal war balances. Quite apart, however, from the relevance of schemes of international regulation to our own national policies, the papers now issued by the British and American Governments are important as the first indications we have of the possible climate of opinion on these questions in post-war times. Some dailies in India carry reports of the indifference of public opinion in Britain to the proposals now published in full. It is tempting to conclude from this that the whole question will be shelved and that the experts who have produced these memoranda have laboured in vain. But it is impossible that continuity of effort will not be secured in arriving at some measure of common agreement on the broad principles and essential features of a scheme by which the common tasks of the United Nations will be tackled after victory is won.

Both the British and the American memoranda refer to their respective schemes being a beginning in the accomplishment of these tasks. The latter emphasises that "the people must know that we at last recognise the fundamental truth that prosperity, like peace, is indivisible", though it also suggests that "the temptation to embrace within a single international agency the responsibility" for dealing with various international economic problems should be resisted. The British note concludes with the observation, that "the plan makes a beginning at the future economic ordering of the world between nations and the 'winning of the peace'. It might help to create the conditions and the atmosphere in which much else would be made easier". These two quotations, perhaps, hold the key to the differences between the two schemes, differences which may be traced to the divergence of racial instinct, genius and outlook. The authors of the American plan envisage a number of different agencies each entrusted with particular aspects of the problem of world prosperity and peace, but they focus their attention on the International Stabilisation Fund, which, they recognise, "is only one of the instrumentalities which may be needed in the field of international economic cooperation." The British experts, on the other hand, have taken care to regard certain conditions, which the groundwork of an international economic system should satisfy if it is to prove durable. They dilate, in the latter part of the memorandum, on "the wider purposes which the foundation of the Clearing Union might be made to serve." But they insist that "there should be the least possible interference with internal national policies and the plan should not wander from the international terrain". Thus, while the British proposals lend themselves to organic grafting of other international agencies to the Clearing Union now proposed and the present proposals are deduced from established and well-understood principles of finance, the American proposals seem a cut-and dried scheme for a Stabilisation Fund, the provisions of which have to be judged, not in reference to certain well-known principles, but to each national or group interest.

The basic principles of the British scheme for a Clearing Union have been stated by its authors with admirable clarity and great power of persuasion. "The idea underlying the Union", it is said, "is simple, to generalise the essential principle of banking as it is exhibited within any closed system", the principle being "the necessary equality of credits and debits". Its corollary is that since no credits can be removed outside the Clearing system, the Union can never be in any difficulty as regards the honouring of cheques drawn upon it. By the adoption of this principle, the plan aims at the substitution of an expansionist pressure on world trade. In the absence of an international clearing, automatic tendencies towards a general slump in international trade disable certain countries from buying and cause a fall in the exports of the creditor countries. When each country is allowed a certain margin of resources and a certain interval of time within which to effect a balance in its economic relations with the rest of the world the effect of a Clearing Union would be to enable the creditor country to allow its exports to continue and accumulate the receipts in the form of credits at the clearing. This, it is urged, completes the analogy with a national banking system :

> No depositor in a local bank suffers because the balances which he leaves idle are employed to finance the business of some one else. Just as the development of national banking systems served to offset a deflationary pressure which would have prevented otherwise the development of modern industry, so by extending the same principle into the international field, we may hope to offset the contractionist pressure which might otherwise overwhelm in social disorder and disappointment the good hopes of our modern world. The substitution of a credit mechanism in place of hoarding would have repeated in the international field the same miracle already performed in the domestic field of turning a stone into bread.

That the expansionist tendency of the plan might be a danger in the early post-war days of a sellers' market and an excess of demand over supply is frankly recognised by the British experts, who argue that, while caution is necessary in the application of the principle, 'we must not be over-cautious.'

The American proposals are lacking in this appeal to a well-tried principle of economic development and have a somewhat forbidding look of being dogmatic in what they recommend. Though the purposes of the Fund include the creation of conditions under which the smooth flow of foreign trade and of productive capital will be helped, the provisions seem to give more importance to the settlement of foreign obligations than to the creation of conditions in which the threat of disequilibrium can be warded off. The powers and operations of the Fund, which are lacking in the naturalness which the British experts have succeeded in imparting to their proposals form by far the bigger part of the whole picture. The American proposals insist that "all member countries agree that all of the local currency holdings shall be free from any restrictions as to their use." They envisage the scarcity of one currency, say, dollars, relatively to the demand and provide for apportioning "the sales of such scarce currency". They insist that each member country should agree to sell to the Fund for its local currency all fresh foreign currency of any member country and these limits can be exceeded only if improvement in the balance of trade is expected and the country agrees to the changes proposed by the Board of Management of the Fund.

It will be seen from the above that the American experts can claim but a low degree of elasticity for their scheme. The British genius for providing checks and balances manifests itself in the emphasis on the necessary equality of credits and debits. The memorandum argues that "the system must look on excessive credit balances with as critical an eye as on excessive debit balances, each being indeed the inevitable concomitant of the other"; that its object must be that "the creditor should not be allowed to remain entirely passive" and that in recognising that the creditor as well as the debtor may be responsible for a want of balance, the proposed institution would be breaking new ground."

The differences between the two schemes are the natural result of the difference in the basic principles and the difference in the emphasis on the objectives. The various objectives of international regulation taken together in a bunch, no doubt, enjoy the allegiance of both the British and the Americans. But the U. S. experts aim at the stabilisation of currencies and the settlement of international balances, while the British seek to provide the basis of expansion of trade through the avoidance of the contractionist pressure which disequilibrium of foreign trade must otherwise cause. A clearing union, by its very nature, insists on balance; and from the point of view of balance, the end that tilts up calls for as much attention as the end that sags down. The objection that a clearing union may benefit the world as a whole at the expense of the creditor countries is met partly by the quotation in the previous paragraph, but more by the argument that "the existence of the Clearing Union does not deprive a member state of any of the facilities which it now possesses for receiving payment for its exports" and that "the fabric of international banking organisation built up by long experience to satisfy practical needs would be left as undisturbed as possible." It is also contended that "it is not necessary to interfere with the discretion of countries which desire to maintain a special degree of intimacy within a particular group of countries associated by political or geographical ties".

Many will, doubtless, see in this the cloven foot. The care with which the continuance of the sterling bloc is provided for, together with the ingenuity displayed in branding the creditor country as the villain of the piece in every international financial debacle, in making the one way traffic of gold a merit of the scheme instead of the trap that it is for a country like the U. S. A. or, for the matter of that India, too, these features of the British memorandum will offset in large part, the soundness of the concepts underlying the scheme and the power of logic and persuasion displayed by its authors. When scrappy accounts of the two schemes were first received in India, we expressed the view that the British proposals were an attempt to circumvent the two great obstacles in the way of Britain's economic reconstruction in the post-war period, shortage of gold and insecurity and inadequacy of export markets. There is, indeed, much naivete in the British memorandum on the question of the relation between lack of balance in a country's relation with the rest of the world and its standard of life. It observes: "If indeed a country lacks the productive capacity to maintain its standard of life, then a reduction in this standard is not avoidable. If its wages and price levels in terms of money are out of line with those elsewhere, a change in the rate of its foreign exchange is inevitable. But if, possessing the productive capacity, it lacks markets because of restrictive policies throughout the world, then the remedy lies in expanding its opportunities for export by removal of the restrictive pressure. We are too ready to assume the inevitability of unbalanced trade positions, thus making the opposite error to those who assumed the tendency of exports and imports to equality." The importance of one nation's production being complementary to that of others and of other nations having productive activity of the magnitude and value necessary to sustain Britain's exports on the old scale is conveniently ignored. Hostile comment of the British scheme will stigmatise it as an attempt to boster up Britain's trade and finance in the face of shortage of gold and decline of exports.

Nevertheless, the British plan offers a more attractive basis of discussion on the problem now dealt with and a more convenient base for attack on the whole array of economic problems which the postwar world will be confronted with. More than the Stabilisation Fund, the Clearing Union can form the nucleus or nerve centre of other international organisations for the solution of world problems. But considering the many points that are common to the two schemes the ban on hasty unilateral currency depreciation, the treatment of defaulters, the functions of the international organisation in case of disequilibrium of one or more members, and the treatment of abnormal war balances—it may be possible on closer examination to combine the two schemes into one with better chances of around acceptance. Discussion has hardly passed the preliminary stages; and it is unfortunate that the ticklish question of management and control has preceded other points. It would be unduly pessimistic to rule out all chances of agreement. Whatever the fate of particular proposals may be, it is necessary that opinion on India's position in regard to international regulation, should be made clear. We hope to attempt this task in our next issue.

EXCELSIOR !

From height to height and from strength to strength the HINDUSTHAN climbs higher every year. Its all round progress and achievement even in the difficult year of 1942 are an arresting landmark in the onward march of Indian Insurance. Here are a few impressive figures from its 1942 ANNUAL REPORT

New Business	**2,88,05,001**	**Total Assets**	**5,18,19,443**
Increase in funds during the year	**51,28,076**	**Assurances in force**	**19,36,75,435**

POST-WAR INTERNATIONAL FINANCIAL REGULATION

BRITISH & U. S. PROPOSALS

[In the following summary of the respective proposals of the British experts and American for an International Clearing Union and an International Stabilisation Fund, the provisions of the two schemes on particular problems of international finance are juxtaposed to facilitate comparison. Points of detail are omitted for considerations of space; and only important points of principle and provisions of moment are given here.—Ed., I. F.]

INTRODUCTION

British

The proposal that follows relates only to the mechanism of currency and exchange in international trading. It appears on the whole convenient to give it priority because some general conclusions have to be reached under this head before much progress can be made with the other topics.

There should be the least possible interference with internal national policies, and the plan should not wander from the international terrain.

The Plan makes a beginning at the future economic ordering of the world between nations and "the winning of the peace." It might help to create the conditions and the atmosphere in which much else would be made easier.

U. S. A.

It is recognised that an international stabilization fund is only one of the instrumentalities which may be needed in the field of international economic co-operation. Other agencies are also needed to provide capital for post-war reconstruction and development, to provide funds for rehabilitation and relief, and to promote stability in the prices of primary international commodities.

It should be emphasised that the following draft deals only with an international stabilization fund.

OBJECTS

We need an instrument of international currency having general acceptability between nations, so that blocked balances and bilateral clearings are unnecessary; that is to say, an instrument of currency used by each nation in its transactions with other nations, operating through whatever national organ, such as a Treasury or a Central Bank, is most appropriate, private individuals, businesses and banks other than Central Banks, each continuing to use their own national currency as heretofore.

We need an orderly and agreed method of determining the relative exchange values of national currency units, so that unilateral action and competitive exchange depreciations are prevented. The idea underlying such a Union is simple, namely, to generalise the essential principle of banking as it is exhibited within any closed system. This principle is the necessary equality of credits and debits.

To stabilize the foreign exchange rates of the currencies of the United Nations and natjons associated with them.

To shorten the periods and lessen the degree of disequilibrium in the international balance of payments of member countries.

To help create conditions under which the smooth flow of foreign trade and of productive capital among the member countries will be fostered.

To facilitate the effective utilization of the abnormal foreign balances accumulating in some countries as a consequence of the war situation.

To reduce the use of foreign exchange controls that interfere with world trade and the international flow of productive capital.

To help to eliminate bilateral exchange clearing arrangements, multiple currency devices and discriminatory foreign exchange practices.

THE PLAN

The proposal is to establish a Currency Union, here designated an International Clearing Union, based on international bank-money valled (let us say) bancor, fixed (but not unalterably) in terms of gold and accepted as the equivalent of gold by the British Commonwealth and the United States and all the other members of the Union for the purpose of settling international balances. The Central Banks of all member States (and also of non-members) would keep accounts with the International Clearing Union through which they would be entitled to settle their exchange balances with one another at their par value as defined in terms of bancor.

The member States will agree between themselves the initial values of their own currencies in terms of bancor. A member State may not subsequently alter the value of its currency in terms of bancor without the permission of the Governing Board except under the conditions stated below; but during the first five years after the inception of the system the Governing Board shall give special consideration to appeals for an adjustment in the exchange value of a national currency unit on the ground of unforeseen circumstances.

The monetary unit of the Fund shall be the "Unitas" ("UN") consisting of 137 1/7 grains of fine gold (equivalent to 10 dollars U.S.). The accounts of the Fund shall be kept and published in terms of Unitas.

The value of the currency of each member country shall be fixed by the Fund in terms of gold or Unitas, and may not be altered by any member country without the approval of four-fifths of the member votes.

Deposits in terms of Unitas may be accepted by the Fund from member countries upon the delivery of gold to the Fund, and shall be transferable and redeemable in gold or in the currency of any member country at the rate established by the Fund. The Fund shall maintain a 100 per cent reserve in gold against all Unitas deposits.

No change in the value of the currencies of member countries shall be permitted to alter the value in gold or Unitas of the assets of the Fund. Thus if the Fund approves a reduction in the value of the currency of a member country (in terms of gold or Unitas) or if, in the opinion of the Board, the currency of a member country has depreciated to a significant extent, that country must deliver to the Fund when requested an amount of its local currency equal to the decreased value of that currency held by the Fund. Likewise, if the currency of a particular country should appreciate, the Fund must return to that country an amount (in the currency of that country) equal to the resulting increase in the gold or Unitas value of the Fund's holdings. The same provisions shall also apply to the Government securities of member countries held by the Fund. However, this provision shall not apply to currencies acquired under III-9 (abnormal war balances).

MANAGEMENT

The Governing Board shall be appointed by the Governments of the member States, those with the larger quotas being entitled to appoint a member individually, and those with smaller quotas appointing in convenient political or geographical groups, so that the members would not exceed (say) 12 or 15 in number. Each representative on the Governing Board shall have a vote in proportion to the quotas of the State (or States) appointing him, except that on a proposal to increase a particular quota, a representative's voting power shall be measured by the quotas of the member States appointing him increased by their credit balance or decreased by their debit balance, averaged in each case over the past two years. Each member State, which is not individually represented on the Governing Board, shall be entitled to appoint a permanent delegate to the Union to maintain contact with the Board and to act as liaison for daily business and for the exchange of information with the Executive of the Union. Such delegate

The administration of the Fund shall be vested in a Board of Directors. Each Government shall appoint a director and an alternate, in a manner determined by it, who shall serve for a period of three years subject to the pleasure of their Government. Directors and alternates may be reappointed.

In all voting by the Board, the director or alternate of each member country shall be entitled to cast an agreed upon number of votes. The distribution of voting power shall be closely related to the quotas of member countries, although not in precise proportion to the quotas. An appropriate distribution of voting power would seem to be the following: Each country shall have 100 votes plus 1 vote for the equivalent of each 100,000 Unitas (1 million dollars) of its quota.

Notwithstanding the approved formula for distributing voting power, no country shall be entitled to cast more than one-fourth of the aggregate votes regardless of its quota. All

shall be entitled to be present at the Governing Board when any matter is under consideration which specially concerns the State he represents, and to take part in the discussion.

Executive offices of the Union shall be situated in London and New York, with the Governing Board meeting alternately in London and Washington.

Members shall be entitled to withdraw from the Union on a year's notice, subject to their making satisfactory arrangements to discharge any debit balance. They would not, of course, be able to employ any credit balance except by making transfers from it, either before or after their withdrawal, to the Clearing Accounts of other Central Banks. Similarly, it should be within the power of the Governing Board to require the withdrawal of a member, subject to the same notice, if the latter is in breach of agreements relating to the Clearing Union.

The Central Banks of non-member States would be allowed to keep credit clearing accounts with the Union; and, indeed, it would be advisable for them to do so for the conduct of their trade with member States. But they would have no right to overdrafts and no say in the management.

The Governing Board shall make an annual Report and shall convene an annual Assembly at which every member State shall be entitled to be represented individually and to move proposals. The principles and governing rules of the Union shall be the subject of reconsideration after five years' experience, if a majority of the Assembly desire it.

decisions, except where specifically provided otherwise, shall be made by a majority of the member votes.

The Board of Directors shall select a Managing Director of the Fund and one or more assistants. The Managing Director shall become an ex-officio member of the Board and shall be chief of the operating staff of the Fund. The Managing Director and the assistants shall hold office for two years, shall be eligible for re-election, and may be removed for cause at any time by the Board.

The Managing Director of the Fund shall select the operating staff in accordance with regulations established by the Board of Directors. Members of the staff may be made available upon request of member countries for consultation in connection with international economic problems and policies.

The Board of Directors shall appoint from among its members an Executive Committee to consist of not less than eleven members. The Chairman of the Board shall be Chairman of the Executive Committee, and the Managing Director of the Fund shall be an ex-officio member of the Executive Committee. The Executive Committee shall be continuously available at the head office of the Fund and shall exercise the authority delegated to it by the Board. In the absence of any member of the Executive Committee, his alternate shall act in his place. Members of the Executive Committee shall receive appropriate remuneration.

The Board of Directors may appoint such other committees as it finds necessary for the work of the Fund. It may also appoint advisory committees chosen wholly or partially from persons not employed by the Fund.

The Board of Directors may at any meeting, by a four-fifths vote, authorize any officers or committees of the Fund to exercise any specified powers of the Board. The Board may not delegate, except to the Executive Committee, any authority which can be exercised only by a four-fifths vote.

Delegated powers shall be exercised only until the next meeting of the Board, and in a manner consistent with the general policies and practices of the Board.

The Board of Directors may establish procedural regulations governing the operations of the Fund. The officers and committees of the Fund shall be bound by such regulations.

The Board of Directors shall hold an annual meeting and such other meetings as it may be desirable to convene. On a request of member countries casting one-fourth of the votes, the chairman shall call a meeting of the Board for the purpose of considering any matters placed before it.

SUSPENSION OF MEMBER COUNTRIES

If a member State's debit balance has exceeded **three-quarters** of its quota on the average of at least a year and is excessive in the opinion of the Governing Board in relation to the total debit balances outstanding on the books of the Clearing Union, or is increasing at an excessive rate, it may, in addition, be asked by the Governing Board to take measures to improve its position, and, in the event of its failing to reduce its debit balance accordingly within two years, the Governing Board may declare that it is in default and no longer entitled to draw against its account except with the permission of the Governing Board.

A country failing to meet its obligations to the Fund may be suspended provided a majority of the member votes so decides. While under suspension, the country shall be denied the privileges of membership but shall be subject to the same obligations as any other member of the Fund. At the end of two years the country shall be automatically dropped from membership unless it has been restored to good standing by a majority of the member votes.

Any country may withdraw from the Fund by giving notice, and its withdrawal will take effect two years from the date of such notice. During the interval between notice of withdrawal and the taking effect of the notice, such country shall be subject to the same obligations as any other member of the Fund. A country which is dropped or withdraws from membership shall have returned to it an amount in its own currency equal to its contributed quota, plus other obligations of the Fund to the country, and minus any sum owed by that country to the Fund.

Any losses of the Fund may be deducted pro rata from the contributed quota to be returned to the country that has been dropped or has withdrawn from membership. The Fund shall have five years in which to liquidate its obligation to such a country. When any country is dropped or withdraws from the Fund, the rights of the Fund shall be fully safeguarded.

Net profits earned by the Fund shall be distributed in the following manner:

(a) 50 per cent to reserves until the reserves are equal to 10 per cent of the aggregate quotas of the Fund.

(b) 50 per cent to be divided each year among the members in proportion to their quotas. Dividends distributed to each country shall be paid in its own currency or in Unitas at the discretion of the Fund.

MEMBER QUOTAS AND COMPOSITION OF FUNDS

Each member State shall have assigned to it a **quota**, which shall determine the measure of its responsibility in the management of the Union and of its right to enjoy the credit facilities provided by the Union. The initial quotas might be fixed by reference to the sum of each country's exports and imports on the average of (say) the three pre-war years, and might be (say) 75 per cent of this amount, a special assessment being substituted in cases (of which there might be several) where this formula would be, for any reason, inappropriate. Subsequently, after the elapse of the transitional period, the quotas should be revised annually in accordance with the running average of each country's actual volume of trade in the three preceding years, rising to a five-year average when figures for five post-war years are available.

The value of bancor in terms of gold shall be fixed by the Governing Board. Member States shall not purchase or

The Fund shall consist of gold, currencies of member countries, and securities of member governments.

Each of the member countries shall subscribe a specified amount which will be called its quota. The aggregate of quotas of the member countries shall be the equivalent of at least 5 billion dollars.

The quota for each member country shall be determined by an agreed upon formula. The formula should give due weight to the important factors relevant to the determination of quotas, e.g., a country's holdings of gold and foreign exchange, the magnitude of the fluctuations in its balance of international payments, and its national income.

Each member country shall provide the Fund with 50 per cent of its quota on or before the date set by the Board of Directors of the Fund on which the Fund's operations are to begin.

acquire gold, directly or indirectly, at a price in terms of their national currencies in excess of the parity which corresponds to the value of their currency in terms of bancor and to the value of bancor in terms of gold. Their sales and purchases of gold shall not be otherwise restricted.

Member States shall agree to accept payment of currency balances, due to them from other members, by a transfer of bancor to their credit in the books of the Clearing Union. They shall be entitled, subject to the conditions set forth below, to make transfers of bancor to other members which have the effect of overdrawing their own accounts with the Union, provided that the maximum debit balances thus created do not exceed their quota. The Clearing Union may, at its discretion, charge a small commission or transfer fee in respect of transactions in its books for the purpose of meeting its current expenses or any other outgoings approved by the Governing Board.

A member State shall pay to the Reserve Fund of the Clearing Union a charge of 1 per cent per annum on the amount of its average balance in bancor, whether it is a credit or a debit balance, in excess of a quarter of its quota; and a further charge of 1 per cent on its average balance, whether credit or debit, in excess of a half of its quota. Thus, only a country which keeps as nearly as possible in a state of international balance on the average of the year will escape this contribution. These charges are not absolutely essential to the scheme.

The initial payment of each member country (consisting of 50 per cent of its quota) shall be 12.5 per cent of its quota in gold, 12.5 per cent in local currency, and 25 per cent in its own (i.e., government) securities. However, any country having less than 300 million dollars in gold need provide initially only 7.5 per cent of its quota in gold, and any country having less than 100 million dollars in gold need provide initially only 5 per cent of its quota in gold, the contributions of local currency being increased correspondingly. A country may, at its option, substitute gold for its local currency or securities in meeting its quota requirements.

The member countries of the Fund may be called upon to make further provision toward meeting their quotas 'pro rata' at such times, in such amounts, and in such form as the Board of Directors of the Fund may determine, provided that the proportion of gold called for shall not exceed the proportions indicated in above, and provided that a four-fifths vote of the Board shall be required for subsequent calls to meet quotas.

Any changes in the quotas of member countries shall be made only with the approval of a four-fifths vote of the Board.

The Fund shall have the following powers:

1. To buy, sell, and hold gold, currencies, bills of exchange, and government securities of member countries; to accept deposits and to earmark gold; to issue its own obligations, and to discount or offer them for sale in member countries; and to act as a clearing house for the settling of international movements of balances, bills of exchange, and gold.

All member countries agree that all of the local currency holdings shall be free from any restrictions as to their use.

This provision does not apply to abnormal war balances.

To fix the rates at which it will buy and sell one member's currency for another, and the rates in local currencies at which it will buy and sell gold. The guiding principle in the fixing of such rates shall be stability in exchange relationships. Changes in these rates shall be considered only when essential to correction of a fundamental disequilibrium and be permitted only with the approval of four-fifths of member votes.

To sell to the Treasury of any member country (or stabilization fund or central bank acting as its agent) at a rate of exchange determined by the Fund, currency of any member country which the Fund holds, provided that:

The foreign exchange demanded from the Fund is required to meet an adverse balance of payments on current account with the country whose currency is being demanded.

The Fund's holdings of he currency of any member country shall not exceed during the first year of the operation of the Fund, the quota of that country; it shall not exceed during the first two years 150 per cent of such quota; and thereafter it shall not exceed 200 per cent of such quota; except that upon approval by four-fifths of the member votes, the Fund may purchase any local currency in excess of these limits, provided that at least one of the following two conditions is met:

The country whose currency is being acquired by the Fund agrees to adopt and carry out measures recommended by the Fund designed to correct the disequilibrium in the country's balance of payments, or

It is believed that the balance of payments of the country whose currency is being acquired by the Fund will be such as to warrant the expectation that the excess currency holdings of the Fund can be disposed of within a reasonable time.

DISEQUILIBRIUM OF MEMBER'S BALANCES

A member State may not increase its debit balance by more than a **quarter** of its quota within a year without the permission of the Governing Board. If its debit balance has exceeded a quarter of its quota on the average of at least two years, it shall be entitled to reduce the value of its currency in terms of bancor provided that the reduction shall not exceed 5 per cent without the consent of the Governing Board; but it shall not be entitled to repeat this procedure unless the Board is satisfied that this procedure is appropriate.

The Governing Board may require from a member State having a debit balance reaching a **half** of its quota the deposit of suitable collateral against its debit balance. Such collateral shall, at the discretion of the Governing Board, take the form of gold, foreign or domestic currency or Government bonds, within the capacity of the member State. As a condition of allowing a member State to increase its debit balance to a figure in excess of a half of its quota, the Governing Board may require all or any of the following measures:—(i) a stated reduction in the value of the member's currency, if it deems that to be the suitable remedy; (ii) the control of outward capital transactions if not already in force; and (iii) the outright surrender of a suitable proportion of any separate gold or other liquid reserve in reduction of its debit balance. Furthermore, the Governing Board may recommend to the Government of the member State any internal measures affecting its domestic economy which may appear to be appropriate to restore the equilibrium of its international balance.

The monetary reserves of a member State, viz., the Central Bank or other bank or Treasury deposits in excess of a working balance, shall not be held in another country except with the approval of the monetary authorities of that country.

The Governing Board shall be appointed by the Governments of the member States, those with the larger quotas being entitled to appoint a member individually, and those with smaller quotas appointing in convenient political or geographi-

When the Fund's net holdings of any local currency exceed the quota for that country, the country shall deposit with the Fund a special reserve in accordance with regulations prescribed by the Board of Directors. This provision does not apply to abnormal war balances.

When a member country is exhausting its quota more rapidly than is warranted in the judgment of the Board of Directors, the Board may place such conditions upon additional sales of foreign exchange to that country as it deems to be in the general interest of the Fund.

A charge at the rate of 1 per cent per annum, payable in gold, shall be levied against any member country on the amount of its currency held by the Fund in excess of the quota of that country. Abnormal war balances acquired by the Fund shall not be included in the computed balance of local currency used as a basis for this charge.

When the Fund's holdings of the local currency of a member country exceed the quota of that country, upon request by the member country, the Fund shall resell to the member country the Fund's excess holdings of the currency of that country for gold or acceptable foreign exchange.

The right of a member country to purchase foreign exchange from the Fund with its local currency for the purpose of meeting an adverse balance of payments on current accounts is recognized only to the extent of its quota, subject to limitations.

With the approval of four-fifths of the member votes, the Fund in exceptional circumstances may sell foreign exchange to a member country to facilitate transfer of capital, or repayment or adjustment of foreign debts, when in the judgment of the Board such a transfers is desirable from the point of view of the general international economic situation.

cal groups, so that the members would not exceed (say) 12 or 15 in number.

The Governing Board shall be entitled to reduce the quotas of members, all in the same specified proportion, if it seems necessary to correct in this manner an excess of world purchasing power.

The Governing Board shall be entitled to ask and receive from each member State any relevant statistical or other information, including a full disclosure of gold, external credit and debit balances and other external assets and liabilities, both public and private.

When the Fund's holdings of any particular currency drop below 15 per cent of the quota of that country, and after the Fund has used for additional purchases of that currency.

Gold in an amount equal to the country's contribution of gold to the Fund, and

The country's obligations originally contributed,

the Fund has the authority and the duty to render to the country a report embodying an analysis of the causes of the depletion of its holdings of that currency, a forecast of the prospective balance of payments in the absence of special measures, and finally, recommendations designed to increase the Fund's holdings of that currency. The Board member of the country in question should be a member of the Fund committee appointed to draft the report. This report should be sent to all member countries, and, if deemed desirable, made public.

Member countries agree that they will give immediate and careful attention to recommendations made by the Fund.

Whenever it becomes evident to the Board of Directors that the anticipated demand for any particular currency may soon exhaust the Fund's holdings of that currency, the Board of Directors of the Fund shall inform the member countries of the probable supply of this currency and of a proposed method for its equitable distribution, together with suggestions for helping to equate the anticipated demand and supply for the currency.

The Fund shall make every effort to increase the supply of the scarce currency by acquiring that currency from the foreign balances of member countries. The Fund may make special arrangements with any member country for the purpose of providing an emergency supply under appropriate conditions which are acceptable to both the Fund and the member country.

The privilege of any country to acquire an amount of other currencies equal to or in excess of its quota shall be limited by the necessity of assuring an appropriate distribution among the various members of any currency the supply of which is being exhausted. The Fund shall apportion its sales of such scarce currency. In such apportionment, it shall be guided by the principle of satisfying the most urgent needs from the point of view of the general international economic situation. It shall also consider the special needs and resources of the particular countries making the request for the scarce currency.

In order to promote the most effective use of the available and accumulating supply of foreign exchange resources of member countries, each member country agrees that it will offer to sell to the Fund, for its local currency or for foreign currencies which it needs, all foreign exchange and gold it acquires in excess of the amount it possessed immediately after joining the Fund. For the purpose of this provision, including computations, only free foreign exchange and gold are considered. The Fund may accept or reject the offer. To help achieve this objective, each member country agrees to discourage the unnecessary accumulation of foreign balances by its nationals. The Fund shall inform any member country when, in its opinion, any further growth of privately-held foreign balances appears unwarranted.

ABNORMAL WAR BALANCES

The position of abnormal balances in overseas ownership held in various countries at the end of the war presents a problem of considerable importance and special difficulty. A country in which a large volume of such balances is held could not, unless it is in a creditor position, afford the risk of having to redeem them in bancor resources at the outset. At the same time, it is very desirable that the countries owning these balances should be able to regard them as liquid, at any rate over and above the amounts which they can afford to lock up under an agreed programme of funding or long-term expenditure. Perhaps there should be some special *over-riding* provision for dealing with the transitional period only by which, through the aid of the Clearing Union, such balances would remain liquid and convertible into bancor by the creditor country whilst there would be no corresponding strain on the bancor resources of the debtor country, or at any rate, the resulting strain would be spread over a period.

The advocacy of a control of capital movements must not be taken to mean that the era of international investment should be brought to an end. On the contrary, the system contemplated should greatly facilitate the restoration of international loans and credits for legitimate purposes.

To buy from the Governments of member countries, abnormal war balances held in other countries, provided all the following conditions are met:

The abnormal war balances are in member countries and are reported as such (for the purpose of this provision) by the member Government on date of its becoming a member.

The country selling the abnormal war balances to the Fund agrees to transfer these balances to the Fund and to repurchase from the Fund 40 per cent of them (at the same price) with gold or such free currencies as the Fund may wish to accept at the rate of 2 per cent of the transferred balances each year for 20 years beginning not later than 3 years after the date of transfer.

The country in which the abnormal war balances are held agrees to the transfer to the Fund of the balances described above, and to repurchase from the Fund 40 per cent of them (at the same price) with gold or such currencies as the Fund may wish to accept, at the rate of 2 per cent of the transferred balances each year for 20 years beginning not later than 3 years after the date of transfer.

A charge of 1 per cent, payable in gold, shall be levied against the country selling its abnormal war balances and against the country in which the balances are held. In addition a charge of 1 per cent payable in gold, shall be levied annually against them on the amount of such balances remaining to be repurchased in each country.

If the country selling abnormal war balances to the Fund asks for foreign exchange rather than local currency, the request will not be granted unless the country needs the foreign exchange for the purchase of meeting an adverse balance of payments not arising from the acquisition of gold, the accumulation of foreign balances, or other capital transactions.

Either country may, at its option, increase the amount it repurchases annually. But, in the case of the country selling abnormal war balances to the Fund, not more than 2 per cent per annum of the original sum taken over by the Fund shall become free. and only after 3 years shall have elapsed since the sale of the balances to the Fund.

The Fund has the privilege of disposing of any of its holdings of abnormal war balances as free funds after the 23-year period is passed, or sooner under certain conditions.

Bengal's Food Shortage

The food problem in Bengal was examined by Mr. A. C. Sen in advance of the non-official conference during the week-end. Scepticism as to the anti-hoarding policy marked the speech delivered at the meeting of the Bengal National Chamber on Friday last. The President declined to offer any solution and merely stated that "with acute shortage of rice and still six months to go, before the main rice crop comes to our rescue, we have to tighten our belts and manage to meet our requirements with such stock as is locally available supplemented by whatever little can be imported from elsewhere". He remarked that substantial relief from imports cannot be expected. Bengal must rely as far as possible on herself. The Central Government supplies wheat to Bengal, and Mr. Sen expects that, if rice shortage is openly admitted, Bengalis would take more wheat than rice as Atta is cheaper than rice. Mr. Sen went on to stress that total rice and wheat supplies in India will fall short of total requirements owing to the influx of military personnel. He referred to the pressure of population produced by a large Army and the evacuation of Burma. He asked therefore for the import by sea of rice and wheat from foreign countries like Argentina and Australia. India, he noted, has supplied other countries in the past with food grains and is entitled to expect shipping and other facilities.

More important for the future is the development of agriculture in Bengal which produces about a third of India's total rice supplies. He criticised the local Government for its previous neglect and for its encouragement of jute last year. He recalled that the restriction of jute acreage led to a bumper crop of rice in 1941-42 and argued that rice shortage is directly related to the jute acreage decision last year. Since 50 percent of the licensed area is under jute this year, there is, according to Mr. Sen, no guarantee that scarcity of rice will disappear. Reports which have reached us so far (he declared) do not encourage one to hope for a bright prospect of the 'Aus' crop but this would not be very serious if we have a better 'Aman' crop regarding the prospect of which we have, however, no indication as yet. He appealed for a vigorous programme aimed at an increase in the quality and outturn of food crops in Bengal. The Ministry's most recent efforts to encourage agriculture were not described by Mr. Sen who emphasised that the facilities in regard to seed grains, manure etc. are necessary in order to secure an increase in the cultivation of rice.

Rivals of Jute

A note on Mauritius hemp appearing in the June bulletin of the Indian Central Jute Committee shows that another rival has to be recognised. The fibre may not be made to produce sugar bags like malva in Cuba, since the plant grown in the island of Mauritius is as much a rival to East African sisal as Indian jute. The plant in appearance and characteristics is similar to sisal, but its fibre is not regarded as satisfactory as sisal for making binder twine and certain classes of ropes, but the proper growing and processing take a great deal of force out of the objections. For the manufacture of bags and mattings fourcroya or Mauritius hemp is regarded by many people as more suitable than sisal. Introduced into Natal over 50 years ago it was taken up by planters. Though the plantations were abandoned, the plants remained, and experiments continued in South Africa. A twine and rope factory was set up and prospered greatly in the last war. Exports overseas followed. The First South African Cordage and Spinning Company made the greatest advance with the fibre. Growing best in light, sandy soil, rich in lime, the plants require only light rainfall. Frost is injurious; so is waterlogging. A rich soil is not required for the plant propagated from bulbils grown out in nurseries which require occasional weeding only. The June bulletin records the failure of the Argentine experiment in the cultivation of jute and refers to the findings of the fibre mission sent from the U.S.A. by the Board of Economic Warfare. The mission noted the comparative success of jute-growing trials in Brazil. Other countries are interested in trials with jute. The Mission concluded that 'further investigation may point to the way of producing jute sufficient to decrease the present dependence on supplies from India.'

Fall In Exports In 1942-43

The March trade returns indicate that trade in 1942-43 was smaller in volume and value than in the two preceding years. The decline in imports is not unexpected in view of the 20 percent customs surcharge and the tightening of restrictions. The decline in re-exports is a consequence of the fall in imports and the keener demand at home for stocks in bond. The fall in India's exports is related to the course of the war as much as the pressure of home demand for exports like cotton, oilseeds and rubber. The total value of exports last year was higher than the total value of imports. There never was any sign of an adverse balance as in the last quarter of 1941-42 and the excess of exports at Rs. 11 crores is illustrative of the tendency for oversea receipts to increase. The shrinkage in trade turnover will, however, cause some anxiety as to the future. The reduction in exports of cotton and jute entails the maintenance of crop restriction plans. The large decline in coal exports must always modify the outlook for coal, and the fall shown under guns, resins and lacs will suggest that Indian shellac no longer holds the position it occupied as a strategic material. Exports of all raw materials except silk show a fall as compared with 1941-42. The fall in exports of grain and flour is understandable but the decline under tea (which in value was the single largest item in India's exports in 1941-42) seems unusual in view of the higher quota and the better prices.

The increase noted under India's exports of spices and sugar will certainly interest those who have agitated against exports to the Middle East. There were practically no imports of sugar in 1942-43 but exports and re-exports alike increased. The scarcity of sugar coinciding with control from April last did not militate against exports, and the present demand for the cessation of all exports of sugar is justified by a reference to the increase of Rs. 76.18 lakhs in the value of seaborne exports of sugar. Exports by land to Afghanistan, Nepal etc. must be considered unavoidable but seaborne exports (for the benefit of the U. K. C. C.) are clearly ruled out when home production in 1942-43 falls short of estimated consumption. The loss of the Japanese market accounts for the fall noted under raw cotton, hides and skins, tobacco, jute and jute manufactures as compared with exports in 1941-42.

The main change of the war period is the striking increase in exports of cotton yarn and manufactures, a development that is unresertredly deprecated by Indian commercial organisations. It is noteworthy that the former trend towards an expansion in exports of Indian manufactures, has been reversed last year. In spite of the increase under cotton manufactures India's exports of articles wholly or mainly manufactured, have fallen by Rs. 14 crores largely because imports of all manufactures fell by Rs. 44.16 crores and re-exports too fell by Rs. 2.14 crores. To relate the decline under imports to the other is easy because the deficiency of food is overshadowed by the deficiency of chemicals, paper, machinery and metals. The introduction of controls proves the scarcity, attested already by the fall in exports. The Seaborne trade figures unquestionably point to a progressive fall in imports of machinery, prime movers, electrical equipment, textiles, fabricated steel sheets and metals, copper and tin. The decline may well account for the slow

progress of industry in the war period and modifications of procedure cannot bring about a change when the major factors of progerss have been withdrawn. The scarcity of productive equipment in relation to potential demand is a pointer to the correct use of sterling balances after the war, but industrial progress, previously limited by the dearth of skilled labour, is likely to suffer from the shortage of essential imports.

Help From S. Africa

India is also allowed to trade with Madagascar. So is South Africa to-day. Specified exports from the Island will, however, be subject to control as pointed out in a notification issued in April in South Africa giving leave to South African firms to resume business with Madagascar. That means mica, graphite etc., will be at the sole disposal of the Supply authorities in London and Washington and private trade will never be encouraged. South African firms were also told that import permits were necessary for all imports from Madagascar and Reunion. The Indian Government notification authorising the resumption of trade with certain French colonial territories did not indicate the rate fixed for francs which have to be acquired by importers. Evidently such trade will pass through London the familiar medium of of sterling, and the usual conversion is by-passed. But the rate fixed cannot be left out of account; and the future relationship between oversea French currency and sterling may have important consequences for the future in French India at least.

French colonies in Africa are known to have received metallic coinage from South Africa where the Mint has turned out coins for East Africa. In the past an offer to make coins for the N. E. I. was taken but not fulfilled. But the Belgian Congo expects the S. A. Mint (which lost bullion in transit recently) to strike 100 million pieces. Egypt has received help in the supply of piastres; and the recent design for French Equatorial Africa has been provided by a South African sculptor. Of greater interest is the news that the cost of living in South Africa has risen since the war as retail prices are up by 75 per cent or 100 per cent. Control has kept prices down. and the overall increase for nine centres in the Union is still estimated at 22 per cent only in 3½ years of war.

Money Rates In 1942

Figures indicating the continued ease of money conditions in many countries are available in the statistical bulletin of the League of Nations. The highest bank rate was that of 6 per cent, obtaining in both Bolivia and Iran. In many of the Occupied countries the discount rate of the Central Banks was below the 3½ per cent reported from Germany. Neutrals like Switzerland and Eire had the benefits secured for Sweden by a bank rate of 3 per cent. Indeed the most common rate in 1942 appears to have been 3 per cent. The Bank rate has made for a downward course of money rates in the war period in all countries including India. But in the U. S. A. the increased borrowing of the Treasury has evidently raised the Treasury bill slightly though the rate is still below the 1.03 per cent in force, for a long period in the U. K. The only country in which money was light happens to be Rumania. The yield on

Government bonds has certainly dropped since 1941 even in Argentina where money was dear. The yield for the U.S.A. on Government bonds at 1.95 per cent in 1941 hardly rose in the next year and the industrial bond yield was below 3 per cent whereas the yield in Germany was over 4¾ per cent in 1942. The cheapening of money in Portugal corresponds to the appreciation of the escudo and the steady increase in export trade noted last year. A reversal of the unfavourable trend of 1941 was noticed in Italy but the Axis countries had to borrow at rates higher than Britain or the U.S.A. party because of the rise in the value of industrial shares last year. The movements of indices point to a recession as compared with prewar values in Canada and the U.S.A. and to a sustained upward movement in most other countries including the U. K. The yield can have altered little but the inflation observable in France and Czechoslovakia and the Netherlands had its own effect on share values which went up as the value of money sank. A neutral in which the same symptoms on a reduced scale were noted was Spain. Though figures as to note circulation are wanting the price level rose steadily after 1941 and the cost of living certainly kept on rising after 1941.

Rationing in Wartime

Experience of rationing in many countries has little bearing on the food problem in India but control of consumption through direct and indirect means in the war period suggests that more money is spent on essentials owing to reduction of goods rather than incomes. The U.K., Switzerland (upto October 1942) and Portugal and Eire are the only countries in which neither bread nor potatoes are rationed. Up to the summer of 1942 Denmark and Sweden did not ration potatoes, for the decrease in bread has to be always met by potatoes. In the U.K. the consumption of bread has increased by as much as 20 per cent mainly because meat is rationed. The legal food rations obtaining in the summer of 1942 showed that differences existed as between rations for young and old, light workers and heavy workers in many countries. The meat and fat rations in Germany appeared to be big on paper. But rationing, particularly in the Occupied countries, has not been accompanied by a guarantee of supplies. Holland appeared to fare better than Norway (where meat was practically unknown) or Poland and the exiguous bread and sugar rations in Greece last year support the stories as to famine. Rations in Yugoslavia were also low but heavy workers in Croatia received special allowances of bread and flour. Canada and the U.S.A. started to ration sugar but the Axis countries had little cause to curtail sugar consumption despite form of rationing. Shortage of fruits and vegetables is common to all countries but only in the U.S.A. consumption scarcely has suffered to the same extent. Conservation of food as in European countries is rendered superfluous by the big increase in food. It is noteworthy that nothing is known about rationing in Russia. Most countries have unrationed foods to supplement the rations and completeness of rationing as in Germany merely points to the damage done to the standard of living. It is certainly noteworthy that the percentage of rationed food is lower in Sweden and Denmark than in Britain and Switzerland which depend on imports to a greater extent and have to order consumption so as to fit in with shipping facilities. Meat consumption in the neutrals like Sweden and Switzerland has been higher than in Britain or Germany where the consumption is considerably below pre-war standards. The German diet has been described as deficient in Vitamins A and D and the position in the Occupied countries is worse. The restoration of pre-war standards implies the abolition of rationing in the first instance and the food conference at Hot Springs has resulted in wider recognition of the decay of standards of nutrition in the Occupied countries.

Indo-China, Japan's Colony.

In spite of the reports as to the discontent of French officials serving in Indo-China there is nothing to suggest that Japan's hold on French Indo-China has been shaken by lack of success elsewhere. A Central News despatch quoted in the China Information bulletin recently, giving details of the plans to replace Haiphong by another port mentioned the collaboration of the local government The Chinese agency quoted London reports as to Japanese plans for the development of Port Coupet in Indo-China The new port is to be connected with the railway system of Indo-China by a new line 100 kilometres long at an estimated cost of 2 million piastres. The construction period is estimated as 20 months. The plan is related to a new agreement between Indo-China and Japan which provides for greater facilities for Japanese enterprise and the removal of existing barriers. Inadequacy in the former agreement in respect of Japanese immigration is to be modified. The new agreement is said to contain provisions for the simplification of passport procedure in regard to Japanese travellers and the right to establish private practice is given to Japanese physicians, dentists and professional men; the right to acquire and keep property is also conferred. Provisions for the entry of Japanese as partners and for the securing of control in business undertakings and an equal share in the import and export trade and important business concerns in Indo-China are found in the

Buried Treasure...
IN WAR, margarine can take the place of butter. For the packing of oil, however, nothing can take the place of steel. But today, steel is needed more than ever to give us ships and shells, tanks and trucks, lorries and locomotives, the sinews of war, and the weapons of victory.
Oil too must flow in an unceasing stream to the yards and shops engaged on war production and still more oil to drive and lubricate the machines which they turn out. Oil must reach the power houses that give us light, the looms that clothe us, the flour mills that feed us, the omnibuses that take us to work.
But oil itself needs steel—steel for its containers—casks, drums, tins and cans. In times of peace there was steel in plenty to replace old containers—in war there is not; their conservation is thus a vital necessity. An idle receptacle is as useless as a buried currency note and both soon become unfit for circulation.
If the essential needs of industry and of the private consumer are to be met, oil containers must not lie empty. The Railways ask Industry to keep wagons moving.
BURMAH-SHELL urges all users of petroleum products to protect every steel barrel, drum, tin or can from RUST, DAMAGE & DIRT and

new agreement along with one for unrestricted employment of foreigners by Japanese firms. The main purpose of the agreement was to transfer power from Vichy to Tokyo. The French colony has been finally turned over to Japan which has acquired a naval base in Saigon and another in Cam-ranh bay. Plans to include Indo-China with the conquered territory have certainly succeeded beyond expectation and the surrender in September 1940 has been followed by penetration of the usual type. The Chinese have laid no claim to Indo-China which is being still developed as a base against Free China in collusion with the French authorities.

Australian War Effort

Total war and total effort in the Commonwealth are always mentioned in connection with Australia. The number of Australians in the three services to-day is almost double the number that served in the last war. The overall figure exceeds 700,000 and the British equivalent is 4¼ millions; the U. S. equivalent is 13¼ millions and the Canadian equivalent is 1.1 million. Since February 1942 between 40,000 and 50,000 men and women have been diverted from civil production either to the services or direct war work. Since the outbreak of war, employees in Government munition factories including aircraft plants and shipbuilding yards have increased by more than 800 per cent. In Government factories at the end of 1942 there were 113,000 workers of whom 26,000 were women. The decline in the number of workers producing civilian goods during the war period is equally pronounced since 194,000 employees as against 540,000 before the war were producing civilian requirements. War production alone claims in Australia as many workers as pre-war industry. The number of factory workers has risen from 540,000 to 700,000 of whom 513,000 (equal to 72 per cent of the total) are on direct war work. The number of women workers in Government factories on war work has risen from 1,300 in September 1939, to 126,000 of whom 26,000 were in Government factories and the rest were working on contracts in private factories.

The increase in war expenditure is largely a consequence of the shift of production. In the ten months ended April 1943, Australia's war expenditure averaged more than £10 million per week. The total was £45.5 millions. The budget estimate was exceeded by £11 millions by April and for the full year ending June 30 Australia's war expenditure is likely to be up by £100 million on the estimates. The Finance Minister is credited with a desire to adopt the pay-as-you-go tax plan. The Commonwealth Government is receiving reports from the U. S. A. about the U. S. tax plan. Australia's own effort is more than ever important as she is known to have got only 4.7 per cent of lease-lend aid provided from March 1941 by the U. S. A. Senator Keane published figures from the report to the U. S. Congress to show that Australia's share of lease-lend aid was valued at $452 millions equal to £141 millions. Of the total assistance provided by the U. S. A. under lease-lend, the U. K. received 46 per cent, Russia 19 per cent and China 1.6 per cent. Supplies to the Pacific theatre in 1941-43 were limited by other factories than Russia's demand for adequate assistance.

Britain's Agriculture

Britain has produced from her soil much of the food imported before the war and the increase in food production is to stay as Mr. Hudson has given assurances as to the post-war programme for British agriculture. The increase in food production has been secured without any increase either in the tilled area or number of workers. An evaluation of achievements, issued by the Ministry of Agriculture, places in the forefront the increase of 70 per cent measured in colonies in the net output of the soil of the U.K. since the war broke out. There has been a big advance in the arable acreage, but the total cultivated area is down by 2 per cent owing to the transfer of land for military and other purposes. The increase in non-agricultural uses is probably due to the extension of airfields, camps etc. all over Britain. Major change of the period is the emphasis on wheat and the comparative unimportance of meat. The difficulty of feeding livestock is illustrated by the fall from 8.5 million tons to 1.3 million tons in British imports of feeding stuffs; but the number of cattle has increased by 4.6 per cent since home-produced milk has to do duty for imported food stuffs. Sheep, pigs and poultry have suffered in numbers during the war period as stocks are down by 17.8 per cent, 51.9 per cent and 24.2 per cent respectively. Other changes forced by the war are the extension of beet cultivation. Britain gets 35 per cent of her total sugar from beet sugar which is

enough to satisfy domestic sugar rations, and the great increase in tractors; last year 150,000 were in use as compared with 55,000 before the war. Home supplies have been steadily expanded in order to support rationing. The dual policy has impressed U.S. observers who are in favour of subsidies meant to keep prices down. The New York Herald Tribune reported that U.S. experts were studying British methods of food control the perfected organisation having produced the stubborn good health to which the recent reports of medical officers draw attention.

Moves in the S.W. Pacific

The sweep in the Solomons and New Guinea is seen as a trial of strength between the U.S. naval and air forces and the Jap forces which have been in possession for over a year. Mr. Grew's most recent estimate of a powerful enemy did not overlook the adequate strength available for offensive operations. That Rabaul will be recovered late rather than immediately is apparent from the resolute acceptance of a naval battle near New Georgia. Munda like Guadalcanal will prove to be one of Japan's last outposts; but the main problem set for the Allies is not the recovery of islands on the route from Australia to America, but the preparations of a direct attack on south-east Asia. The complete conquest of New Guinea will appear largely as a preliminary to operations against the East Indies; and the slow advance is a proof of the Japanese ability to continue their defensive tactics. That the Navy is likely to be employed for defence when air power has diminished has been indicated by the German radio expert saying that the pursuit up to Truk in the Carolines would be necessary to give the Allies a chance to exploit the weakness disclosed by analysis of Japanese naval losses.

The New Georgia operations have been more successful than those in New Guinea since the early occupation of two groups of islands (the Trobriand and the Woodlark) preceded the U.S. landing on Rendova. The air battles of recent months have not made a great difference to the offensive since the Japanese continue to lose pilots and planes. The U.S. bombers have more bases of late but any attack on Rabaul is clearly dependent on bases nearer than Port Moresby. The U.S. air force is therefore bent on securing Japanese airfields for its own use, and the Americans may even reduce New Britain as rapidly as Attu. What is obvious from the failure of Yangtse Valley operations, and the present anxiety to increase garrisons in Indo-China and Malaya, is the Japanese change-over to the defensive. The shipping losses of a year ago have been heavy for a country that can add hardly half a million tons by new construction; and they go far to explain the decision in favour of a shorter arc of defence in the Pacific. Retreat from the Solomons and New Guinea may be delayed, but it will appear inevitable in view of the Japanese need to shorten the line to be served by junks or rubber lighters.

Paper Industry in America

South Africa's considerable success in developing the paper industry in the war period has shown that former importers have been more successful than India. In spite of a new organisation to regulate supplies to the free market which gets 30 per cent of the available paper supplies, the shortage of paper still remains. The U.S.A. has diverted pulp and paper to many war purposes, but the acute paper shortage noted in Britain has not appeared. That North America retains unusual advantages like Northern Europe may be inferred from the existence of 638 paper mills and 194 pulp mills in the U.S.A. which can count also on Canadian supplies. The South American countries are not conspicuously dependent on imports as paper production in South America has been rising in the past two or three years. Argentina, Brazil and Chile account for the bulk of the paper production as they claim 85 out of about 100 paper mills at present. The Argentine industry goes back to 1885 and total paper production in 1939 was put at 130,000 short tons. Except for a few specialities and newsprint, the 35 Argentine paper mills meet most of the country's requirements. Paper-board and paper bags for cement are also produced by the Argentine industry. Argentine imports of paper in 1940 including newsprint amounted to 224,325 short tons indicating that a relatively small population used more paper than India's 400 millions. Brazil claims 37 paper mills producing most types of paper required in the country. The annual output is placed at 134,000 short tons. The paper mills contemplate development of newsprint manufacture since 80 per cent of Brazil's imports of paper consisted of newsprint. The establishment of a wood-pulp industry is under consideration according to reports. Chile's share in American paper production is relatively small as the 13 mills produced 41,355 short tons in 1941. The Republic's production is however equal to 78 per cent of estimated local consumption. The development of the protected industry in India cannot be measured against the increase noted in South America since production was falling in 1942 and recovery under the control plans cannot create the conditions that accrue from the expansion of interregional trade in South America. The South American industry should derive a real stimulus from the war as shown by the fall in most imports and the increase in employment noticed in Argentina and Chile last year.

Supplies from the Congo

The Belgian Congo is allied with the United Nations. As a source of many essential raw materials, the Congo is the most valuable territory in Africa, and its trade relations with the Union of South Africa, anxious to develop trade on the Atlantic coast, are more intimate after the despatch of a special Mission. In the years before 1942 the Congo developed gold in order to supplement Allied production. Last year it turned to rubber, tin and tungsten—strategic materials which had become scarce owing to the defeats in the Far East. The Congo needed equipment for extending production; under lease-lend it got what it wanted. The Congo is a large exporter of copper in spite of restriction. Ranking fifth among the world's producers, it is

C8K 13

second only to Northern Rhodesia in Africa as it accounts for 5 percent to 6 percent of the world production of copper. Nigeria and Bolivia are sources of tin open to the Allies, but their production has to be supplemented by the Congo's exports. From being sixth the Belgian territory is now second among the producers of tin. The Allies get a quarter of their total tin supplies from the Congo. Tungsten production is being increased in order to make good the loss of Chinese and Burmese supplies. Exports of copal (for varnishes) are increasing, and Belgium's overseas Empire is providing both wild and plantation. rubber. Old plantations are being reopened. Rubber is, undoubtedly, more important than the cotton and oilseeds that are shipped from the Congo Industrial diamonds, radium, manganese and cobalt are minerals available elsewhere but in regard to rubber, the Congo bolds a special position arising from the only old trade in rubber. As in Brazil natural advantages were largely neutralised by the rise of the plantation industry in Malaya and the N.E.I. but now, owiing to the loss of cultivated rubber outside India and Ceylon, the wild rubber too has become valuable. Other African territories produce the oilseeds, fibres, cocoa and cotton that the Congo exports; but the Congo has a few manufacturing industries of its own. The victories in Africa ensure an uninterrupted flow of the Congo's minerals for both Britain and the U. S. A. and Belgian patriots may find that King Leopold's bequest instead of attracting undesired attention as in the past. is rightly appreciated for its war effort.

Australia's Tender Industries

The Australian war effort intensified in 1941 has led to division of manpower for selected industries. Half the population works for the war according to Mr. Chifley and the increase in employment is reflected in the expansion in arms output. Figures show that 48 Government arms factories and 178 annexes working in May employed 79,000 persons. The capital expenditure on the factories amounted to £141.6 millions. Out of the total war expenditure of £560 million (exceeding the budget estimate by £120 millions) the Commonwealth has put a considerable part in war production as shown in the fact that £90 millions of the increase in 1942-43 went into Australian expenditure and £30 millions into expenditure abroad. The arms programme has been supported by the increase in steel production. In 25 years Australia has become self-sufficient in repect of steel. It has been claimed that Australia to-day can produce steel more cheaply than either the U.S.A. or Britain while post-war prospects for steel makers seem assured. In the first world war Japan was an ally but major factor was the opening of the B. H. P. steel works in 1915. By 1939, the plant under private management has grown to be a significant force in world steel production. In the short period of 25 years Australia has become self-sufficient in steel. Her production per capita is equal to that of Britain, more than double that of Russia and five times that of Japan. Only Germany and the U.S.A. can claim a higher production. Since the optimum population for Australia is put at 25 millions (Dr. Evatt mentioned the figure in his interview to The Observer in London) the home demand for steel is likely to grow apace. Faster and smaller ships are planned by a committee. Shipbuilding is one of the industries developed on the basis of local steel, and Mr. Chifley's promise that capacity for secondary industries expanded under the spur of war will be fully used after the war makes for optimism. But of more direct importance is the statement of Mr. Basley that coal production in Australia for 1942 amounted to over 14.97 million tons, the greatest output in any year of war. Production in 1940 was 11.71 million tons and that of 1941 was 14.21 million tons. The rise in coal production is an advantage for the steel and building industries like the post-war plans of the N. S. W. Government estimated to cost £50 millions. Concentration and rationalisation in order to save manpower has influenced consumption as well as production in Australia. Drugs have been produced locally and these include morphine from poppies. Dr. B. T. Dickson reviewed the success of experiments and described the winning of hyoscine and atrophine from the corkwood tree which flourishes on the coastal hinterland. So successful has Australia been with these drugs that she now produces enough to supply the world.

A faulty piece of steel subjected to extraordinary stress may have dire consequence for any structure or machinery of which it is an integral part.

It is for this reason that cross-sections of special steels produced at Jamshedpur are constantly examined microscopically and submitted to the most probing tests by "The Brains of Steel".

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

Whether it is a relief to the average reader or no, the fact is that the series of articles on "The New Economics" has this week to yield place to a theme which claims space in these columns. The control of cotton, yarn and cloth, on which the Government embarked some time ago, has met with unexpected initial success. And in these cases, the success of a government policy fills at least as many minds with dread as it fills with hope. The initial success is not by any means the prelude to a Caesarian campaign; reverses are not to be ruled out. But it certainly rescues the scheme from the attitude of scepticism and hostility which was its lot at the beginning. In fairness to the public, it must be said its experience of government control in the past is not calculated to inspire confidence. Rice, sugar, why, the whole food problem is there to testify to the fairness of the public in its attitude to the Government. But in this case, co-operation between government and industry has made possible a good beginning; and well begun, they say, is half done. For this change the Government must thank the good sense, none too common with them, which suggested consultation with the industry. As a result of the deliberations between the parties concerned, a comprehensive control of the affairs of the industry was planned. It was recognised as it was not in the case of rice, that control would be of no use without proper attention to the supply side. The large scale manufacture of Standard cloth was ensured, the number of varieties was reduced, the speedy distribution of stocks was taken up to bring about a substantial decline in prices.

* * * *

It is only three weeks since the Cotton Control (yarn and cloth) Order was passed. According to this order, mills were asked to submit before the middle of August, 1943 a return of stocks as at the end of July. And all the cloth manufactured prior to July 31, 1943 was required to be disposed of before the end of October 1943. No one, except those interested in the trade, was to keep stocks in excess of normal requirements and the Courts trying offenders had the power to forfeit hoarded stocks to Government besides inflicting other punishment.

* * * *

In spite of the care taken in drawing up the order, it did not have any effect on the cloth and yarn markets. Prices kept around the higher levels. The feeling persisted that the scheme would be delayed in coming into effect and that there would be no maximum prices. The failures of the earlier schemes were cited and it was freely discussed that in the absence of any adequate arrangements for transport and an increase in production it would not be possible to bring down prices, that even if there was a decline in prices, it might prove to be temporary.

* * * *

But the banning of forward transactions in cotton cloth and yarn did the trick. Speculative transactions were forbidden and business in forward contracts was possible only in specified qualities for actual delivery in a future date and the documents against these contracts were not transferable to third parties. The personnel of the Textile Control Board also was announced and the twenty-five members of the Board include the representatives from the Industry, the Distributing trade and the Government. Eight sub-committees have been appointed to deal with the various aspects of control and it is understood that on no question is the Government to pass orders without previous consultation with the Board or the committees concerned.

* * * * *

When it was known that the Government contemplated price fixation and determination of profit margins, speculators were compelled to liquidate their forward contracts which did not involve actual delivery. There was confusion in the Bombay market. Heavy selling followed and quotations dropped by 25 to 40 per cent in many cases.

* * * * *

The fall in wholesale prices has not been reflected in retail prices so far but a time-lag is not unusual. One happy feature in the present circumstance, is the co-operation afforded by the consumer. The anticipation of larger stocks by October next has led almost to a complete cessation of buying. Dealers have hastily liquidated stocks and the lowest levels for the week were touched last week-end. Leopard cloth, which touched a maximum of Rs. 3-12 during the last three months, cannot be sold above Rs. 2-10 per lb. now and the effective quotation will possibly range between Rs. 2-4 and Rs. 2-10 per lb. Similarly, mulmul 43 inches wide which touched Rs. 20 per piece has a maximum of Rs. 15 per piece and the price probably ranges between Rs. 12 and Rs. 15 per piece. Grey longcloth which sold at Rs. 38 per piece has now come down to Rs. 29 per piece and will possibly range between Rs. 23 and 29 per piece

* * * *

All this surely is something to shout about. But, at the same time it is too soon to "shout". There is the possibility that the recent decline in prices is due less to the order than to the nervousness of the Kathiawar dealers. Black markets may turn to the trade in washed styles, the control stamps disappearing in the laundry. The trade, too, may have been hit more than is just or expedient or safe in the long view. All these have to be considered. Mr. D. Thackersay, the Chairman of the Textile Central Board, has expressed his satisfaction regarding the initial decline in prices. But more important than that is the assurance that the authorities would come to the help of the trade if there was an undue decline in prices. That has perhaps been responsible for the slight rally in prices during the

past few days which is in the nature of testing the ground so far won. In any case, the piecegoods trade for its part, has got alarmed at the recent decline in prices and has pointed out that unless it is given protection, the loss in the disposal of high-priced stocks might spell ruin to many. It is as unwise as it is unfair to assume that recent losses offset earlier gains. The disturbance in the trade on account of the recent control measures must be taken note of and legitimate grievances listened to. An extension in the time-limit in respect of the disposal of seasonal goods is so obviously first that the Chairman of the Textile Board has already indicated that blankets, malida, bedsheets, towels etc., can be granted the necessary extensions of time. The Distribution Committee has already recommended that the necessary extensions of time should be granted for the disposal of these goods within the respective seasons.

* * * *

This process of correcting errors which are inevitable in a scheme of such scope, and which can be detected by trial, will before long be complete. But the problem of making the control serve the interest of the large mass of consumers in the country is there. And here there are a good bunch of problems to be considered?

* * * *

Shortly, mills in India will be producing Standard Cloth to the extent of 50 per cent of their capacity and it is estimated that 500 million yards will be produced in the next three months. This will achieve the goal of 2,000 million yards of Standard Cloth per annum, if production is kept up. Of the balance of 50 per cent of production 20 per cent will be on account of war orders and the remaining 30 per cent for civilian requirements. It is not clear from Mr. Thackersay's statement whether Government have any control over the last mentioned 30 per cent of production. Mr. Hydari has given the public definitely to understand that there would be complete control of the industry; and it has, therefore, to be presumed that mills will regulate prices for the better styles as well.

* * * * *

Some doubt has been expressed regarding the ability of the authorities to dispose of the large quantities of standard cloth which do not admit of variety and which may leave a surplus over consumers' demand. I see such apprehensions in some quarters. But for my part, I can hardly think them justified and it is patently premature to judge its final result. But one thing, I am clear in my mind. If there should be a surfeit of anything which the masses need, I can't bring myself to look on it as disaster.

* * * *

But the apprehension regarding exports are on a different footing. In clothing, as in food, our charity begins too far from home to reach home. Consider the figures. In spite of the introduction of the licensing system since July, 1943, exports have been on a large scale and are well over 1,000 million yards per annum. Thirty per cent of the total estimated annual production of 4,800 million yards, leaves only 1,600 million yards for middle-class and higher class consumption. If 1,000 million yards of this quantity are exported to foreign countries, the balance left over will hardly cover our needs. It may be that as a result of the increased efforts for larger production the quantity available will be a little more. But that can hardly obviate the need to cut our exports. That is a matter largely for the Government to do. And we look in vain for any sign that the Government will. All that we publicists can do is to make it clear that if all this control should leave us but poorly clothed, there is nothing to prevent the public from concluding that the aim of the control was not the consuming interests in India but the interests of the Middle East.

* * * *

The Export Committee of the Control Board has recommended to Government that exports should be substantially reduced, aiming at such a maximum figure as the Committee considers reasonable in the present circumstances and that negotiations should be opened with countries like Australia, South Africa and Egypt, which have been discriminating against India. The Committee has also recommended that unless such discrimination is dropped within a reasonable time exports of cloth and yarn should be banned to those countries: that in view of the fact that prices in this country have been substantially reduced in the interests of the Indian consumers, Government should levy a substantial export duty on cloth and yarn.

* * * *

It remains to be seen how far the Government will agree with the recommendations of the Committee. And the public, too, must remember that our present needs for cotton cloth are not the only consideration in deciding the question of exports. The importance of winning and retaining these markets is not to be ignored. Mr. Hydari observed some time ago that the prices charged to these neighbouring markets are not calculated to enhance our reputation. But fairness does not require that the benefits of the forced decline in cotton goods prices should be extended in full to the foreign buyer. The proposed export duty may be a fair compensation for the loss of revenue due to the decline in the profits of the cotton mills.

* * * *

And that takes me to the question of the earnings of cotton mills and the outlook of cotton mill shares.

* * * *

The Chairman of the Textile Control Board has indicated that with 50 per cent of the total production devoted to standard cloth, sold around cost price and 20 per cent on war orders with a

margin of profit of 10 per cent. mills can be expected to earn profits only at the level of 1940-41. Evidently, Mr. Thackersay has not taken into consideration the possibility of an increase in production or the decrease in working costs. For our purpose, it is well to bear in mind that the year 1943 is well advanced and that even with the first six months working, mills should have been able to earn fabulous profits. It should be remembered in this connection, that the boom in textiles started only towards the closing months of 1942, and that the peak levels were touched some weeks back. During this period, mills were free to effect sales. So far as the current year is concerned, earnings therefore may not show any appreciable decline and may well be around the levels for 1941-42. During the last season, mills have been able to report the largest profits for the war period. Ten mills publishing their balance-sheets since the beginning of the year have been able to show a net profit before providing for taxation and depreciation of Rs. 3.76 crores against Rs. 2.19 crores for the same companies which published their balance-sheets in 1942; and Rs. 77.23 crores in 1941. Of this amount, Rs. 2.21 crores has been provided for taxation in 1943 against Rs. 1.17 crores in 1942 and Rs. 21.91 lakhs in 1941. The amount paid by way of dividends is Rs. 52.29 lakhs against Rs. 43.62 lakhs and Rs. 26.65 lakhs for 1943, 1942 and 1941 respectively. The new rules regarding Excess Profits Tax might affect distributions next year, but this factor has been already discounted. The slump in textile issues in the past few days on fears of an appreciable decline in mills' earnings cannot perhaps be justified. From the figures given above it will be seen that nearly the whole increase in earnings in the published accounts in 1943 has been set aside as additional provision for taxation, and that the sum of Rs. 9 lakhs only has been distributed to the shareholders as additonal dividend. There will certainly be a reduction in dividends, but not such as to warrant the recent decline in prices. With every possibility of an increase in production and a reduction in working costs, the future is assured and an unduly pessimistic view should be avoided. Many things may happen between now and the spring of 1944.

* * * *

The loser under the present circumstances is, therefore, the Central Government. The bulk of the Excess Profits Tax is at present paid by the Cotton Textile industry and if there is a drastic decline in prices for an industry which has a very low profit for the standard period, it is the Exchequer that stands to lose rather than the shareholder. It is perhaps relevant at this stage to point out that having regard to the sacrifice made by the industry and the vastly depreciated state of the machinery of most of the mills, a liberal policy in respect of depreciation allowances has to be pursued so that, in the post-war period the whole industry might be re-organised and equipped to face foreign competition.

* * * *

The inauguration of the United Commercial Bank was celebrated by "Indian Finance" by the unusual feature of a Special Supplement; and, in explanation, it was suggested that the United Commercial was destined for an exceptionally prosperous and fruitful career. The statutory report, released to the press this week, lends powerful support to this optimistic forecast. The paid-up capital of the Bank is Rs. 1 crore; and the deposits as on June 30 amount to Rs. 1.79 crores. This figure of deposits in itself is a sign and symbol of an auspicious start. But when it is added that the Bank's active operations commenced only from June 5, the date on which it was admitted as a full member of the Calcutta Clearing Banks' Association; and when it is remembered that the Bank has so far only one branch in Calcutta, it is easy to realise that the building up of deposits of over Rs. 1¾ crores in a space of three weeks and through one branch, provides testimony to the powerful backing which the Bank enjoys. The Bank has invested nearly Rs. 2 crores in government securities, all of which are dated stocks and most of which mature within ten years. The Bank's cash position is exceptionally strong at Rs. 66 lakhs. Fully secured loans account for Rs. 11 lakhs. The Bombay branch is to be opened on July 19; and considering the status of the Bank's Directors in Bombay, instantaneous success is assured at the Western centre also. The immediate programme of the Bank is to open branches in Karachi and Delhi. I need only stress again that the Bank is fortunate in having a versatile businessman like Mr. G. D. Birla as its chairman and an experienced banker like Mr. B. T. Thakur at the head of the executive.

* * * *

With his 20 years connection with the Central Bank of India, Mr. Thakur must be considered a chip of the old block. Another chip of the old block is Mr. Kishenchand Puri, who is the Managing Director of the Hindusthan Commercial Bank, started under equally impressive auspices. In spite of two chips thus cut off from the block the Central Bank should still be able to maintain its commanding status as it has now attained an unassailable position based on a close-knit but far-flung organisation, and as the heady expansion of banking business in India allows scope for well-planned new enterprises, while enabling the present strong banks to grow stronger.

(From Our Correspondent)

New Delhi, July 6.

It is really a week of conferences for the Imperial Capital—the Food Conference, the Pegging Act Conference, and one or two other minor meetings. The Inter-Governmental Conference which opened on Monday is one of the largest gatherings of the kind ever held in New Delhi—in itself, welcome evidence of the importance which Provincial and State Governments attach to these discussions. As the Viceroy has now personally taken in hand the food question, His Excellency came over to the conference himself and opened the conference with a brief speech. As the Viceroy wish to be completely free and frank in his speech His Excellency is reported to have made a strong appeal to Provincial Governments to take an all-India view of the problem and co-operate with the Central Government—the speech has been treated as confidential. The whole of the first day is reported to have been taken up by statements made by the Food Member, Sir Azizul Haque, and representatives of the Provinces and States on the difficulties and problems as they see them. To-day these problems will be examined by sub-committees, and it is expected that to-morrow the conference will be in a position to take certain tentative decisions—if the discussions succeed in removing the present divergencies. It is said that free trade throughout the country excepting north-western zone including the provinces of Sind and the Punjab is the basis of the new food policy advocated by the Government of India. It is said that the Governments of these two Provinces which are the main wheat-producing centres are still unwilling to take the risk of decontrolling, for they fear that it will have an adverse effect on wheat prices in the province. It appears, however, to be the Central Government's hope that after the free trade scheme begins to work in the rest of the country and shows satisfactory results, these two Provinces also will in course of time fall in line with the rest of the country.

It is still difficult to say whether the Government of India will be able to persuade all the Provinces to accept the free trade scheme. Certain Provincial Governments like Madras and Bombay—not to mention the difficulties which have arisen in the north-eastern zone—view with apprehension the proposed decontrolling scheme. Evidently the Government of India are prepared to make certain modifications to satisfy these and other Governments who have raised objections, but at the moment it is difficult to say whether the conference will be able to reach any agreed decision at all on the subject. In addition to this conference which is limited to the definite purpose of considering certain Government measures based on the free trade policy there is to be a Food Committee consisting of seven officials and about 17 non-officials to consider in detail all aspects of food policy, both short-term and long-term, and advise the Government of India and Provincial Governments. This committee will assemble later in the week and continue its sittings for about a month. The proposal that there should be a separate Food Member is also reported to be engaging the Viceroy's attention. It is said that Sir Azizul Haque has been so deeply interesting himself in food questions that he is prepared to give up the Commerce and Industries Departments and concentrate on food supply organisation.

In view of the appointment of a Food Committee, a large number of suggestions find prominent mention in New Delhi talks. One is that all exports of foodgrains should be immediately stopped. As in spite of the intensive production drive, the position during the coming months will be far from easy, the Government of India have to observe the strictest precautions in the matter of exports. Crop forecasts for 1942-43 show that the estimated outturn of rice is reduced. As regards wheat the position is that though the estimated yield has risen by 9.5 per cent the area under wheat cultivation has only increased by .4 per cent—it is said that in British India the area has actually declined while in the States it has increased. The summary of the wheat forecast shows that in 1941-42 185,900 tons of wheat were exported from India as compared to 7,800 tons in 1939-40. The suggestion has come from Sir Shri Ram and a number of others that owing to the present improvement in the shipping position the Government of India should arrange to get wheat imports from Australia on a large scale. There is also the proposal that the Government of India should provide facilities for importing the necessary plant for immediately starting the fertiliser industry in this country on a sufficiently large scale. According to reports here, the Government of India are arranging to import a large quantity of chemical fertilisers from outside for helping agricultural production in India, but if this shipping space is at least to some extent set apart for getting the required plant, India will be able to start its own fertiliser industry, as all the required raw materials are locally available.

There is reason to believe that the Government of India are now very strict in the matter of permitting exports. Recently there was a delegation from East Africa for arranging cloth exports from India, but they got no encouragement from the authorities in New Delhi. It is practically certain that all exports from India whether of food-grains, textiles or any other commodity will be considerably curtailed during the coming year and that no new permits will ordinarily be allowed. This question of exports is expected to figure largely during the coming session of the Central Legislature.

To-morrow the conference called by the Overseas Member to consider the Indian situation meets in New Delhi. Unfortunately many prominent leaders invited like Mr. Jinnah, Sir T. B. Sapru, Mr. V. S. Srinivasa Sastri and a number of others are unable to come, but the conference is expected to be fairly representative. It is expected that the new Overseas Member, Dr. Khare, will be able to make one interesting announcement—the appointment of Mr. M. S. Aney as the Government of India's Agent-General in Ceylon. It is said that Dr. Khare met Mr. Aney personally in Nagpur and prevailed upon him to accept this post. An official announcement will be made as soon as the usual formalities of correspondence with the Secretary of State and the Ceylon Government have been completed. The question of raising the status of the Government of India's representative in Ceylon, who hitherto has been a junior I.C.S. officer, has been for a long time under consideration. The questions requiring discussion between the two Governments have now become much more important and urgent than before. As the Ceylon Government have sent one of their own senior Ministers, Sir Baron Jayatilaka, to New Delhi, the Government of India have rightly decided to send a non-official public man of standing to Ceylon. In New Delhi there is great satisfaction that Mr. Aney has agreed to go to Ceylon, for it is difficult to think of any one with a higher public standing or better knowledge of the problems to undertake this difficult job. And it is felt that the Indian community in Ceylon will also be pleased with the appointment.

As regards the position in South Africa, it is evident that the Government of India have no definite proposals to place before the conference to-morrow. Dr. Khare intends to make a detailed speech and explain the efforts made by the Government of India. Dr. Khare is personally in a difficult position as he took up office only a few weeks ago. Among non-official members of the Legislature whom I have met, the view is certainly gaining strength that if the Smuts Government does not show any willingness at least now to come to terms with the Indian community, the Government of India should as a protest withdraw its High Commissioner. From the speech of Sir Shafaat Khan in South Africa one can see that he also holds strong views on the subject and will certainly not mind returning to India rather than continue as a helpless spectator of the South African Government's measures against the Indian community. If the leaders assembling to-morrow make the recommendation—it is believed that a good number of them hold that view—the Government of India may accept the proposal. As regards economic retaliation the view expressed by Mr. N. R. Sarker in Calcutta finds favour here. It is said that whatever may be the provocation offered by the South African Government India should at present not do anything which will prejudice the war effort. Soon there will be a meeting of the Standing Emigration Committee to consider the whole question.

I understand that General Hutton, the Secretary of the Post-war Reconstruction Committee of the Viceroy's Council is shortly proceeding on tour to meet Provincial Governments, commercial bodies and others. It has already been decided to set up a number of policy committees with non-official representatives, to some of whom invitations have already gone. A number of additions including an Indian economist have been made to General Hutton's staff in order that they may complete the work of collecting statistics as early as possible. An official of the department told me that at present they are concentrating on the task of collecting adequate and reliable information, so that when the Policy Committees meet they will have all the necessary information. As in all likelihood a resolution on the subject will be moved in the Central Legislature, Sir J. P. Srivastava will make a detailed statement on the measures now being taken to push forward the work. India's economic plans will have to depend on the plans adopted by other countries. As now there is some idea of what the United States and the United Kingdom are intending to do after the war, India can also now proceed to settle her own programme of industrial, economic and agricultural reconstruction. It is understood that before the end of autumn the various Policy Committees will be called to make a preliminary study of the situation and make reports.

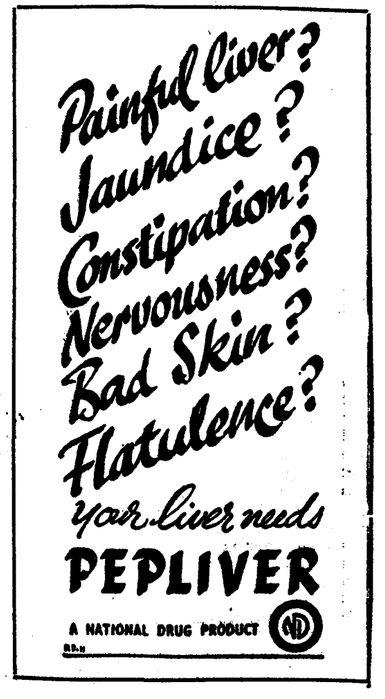
I understand that the new Viceroy, Lord Wavell, will take charge of his office in the third week of October. His Private Secretary will probably be Mr. E. M. Jenkins, Secretary of the Supply Department at present in England.

Hill-Bird.

Gateway of India

(From Our Correspondent)

Bombay, July 5.



Charges of unusual delay in the delivery of mails and even graver delays in regard to telegrams and telephone calls have become so familiar here as to attract little notice. Telegraph delays complained of by business interests have lately figured in a leading article. An official telegram has miscarried; confirmation of the wire by letter made the addressee aware of the request. Official telegrams evidently suffer from the same malignant delay as private communications. The delay makes it clear that improvement this year is absent. Inefficiency is a serious accusation levelled at a great Department which is to undergo independent examination by a retired postal official. Rai Bahadur J. N. Dhar has been appointed Special Officer to examine postal delays with special reference to the railway mail service. The Rai Bahadur has had special experience of sorting and he is to examine arguments in favour of supplementary accommodation for the mails in certain areas and also for stationary sorting offices. Extra traffic must produce additional facilities, particularly, when postal rates have been raised; and it is to be seen whether enquiry precedes improvement or is merely part of the tactics of delay. The complaints referred to last month are not confined to Bombay for in all Provinces delays have become so common as to pass without criticism. But the delay in delivery of telegraphic instructions from a Member of Government issued to a newspaper proprietor is inexplicable; and the commercial community hopes that improvement will follow the astringent discussion of the latest example of delay.

Depression has hit the bullion market in earnest from July 1. Bulls have withdrawn. Rumours are mentioned, but one suspects that the fall in share prices is the real reason for the steady fall: yet it may be urged that after the forward business disappeared and offtake shrank, the market cannot but lose its vitality rapidly. In spite of the belief that silver supplies will remain scanty as lease-lend silver is unlikely there is no desire to take silver up and profit-taking has been more than usually prompt. Trading for weekly delivery is marked by irregularity, and spot rates are naturally higher. The monsoon market is really bearish, and stories of official intervention find ready acceptance apart from the belief that Mysore gold will be arriving soon. Professional selling has accentuated the decline more than the favourable war news. Kathiawar is said to be bearish, and apart from the old discussion as to the import duty on silver from Kathiawar, the easier feeling in Jamnagar markets cannot be overlooked. The fall in cloth prices has an effect far beyond mill shares, as Bombay has come to realise. The seeds market has gone flat after the Ministry of Food stopped buying and Kathiawar markets turned weaker.

The support given by the public to Indian life offices was mentioned by Sir C. H. Setalvad at the annual meeting of the Industrial and Prudential Assurance Company. The Chairman in describing the year's outstanding results referred to the possibility of further improvement in business and revenue alike. The Company issued last year 3,017 policies assuring in the aggregate Rs. 98.86 lakhs. The average value of the policy issued in 1942 was higher than expected New business in 1943 is expected to be even better. The Company's premium income for 1942 amounted to Rs. 36.75 lakhs and its investment income amounted to Rs. 6.48 lakhs. The quinquiennial valuation is in progress according ot the Chairman who referred to the favourable claim experience and low expense ratio as advantages retained by the company last year. The drop in the yield on the Fund was examined by the Chairman in relation to the increase in taxation. He endorsed the general view as to the need for some relief in the matter of taxation. As suggested by the Commerce Member, the Company has revised premium rates without any adverse effect being noticed on new business. Since part of the funds are invested outside the giltedged market the yield has been kept up, but Sir Chimanlal referred to the difficulty of finding good mortgages with a reasonable rate of interest. Sir Chimanlal stated that taxation has been raised from 42 pies in the rupee in 1939-40 to 74 pies in the rupee this year. A reduction in companies supertax and surcharges is desired by the public as well as the life insurance companies. A deputation to the Finance Member is contemplated.

A meeting convened by the Textile Contracts directorate discussed the proposals outlined by the Textile Control Board. The disparity in wholesale and retail prices of cloth received attention. The public is aware that the drop of 40 per cent or even 25 per cent in cloth prices has not materialised so far as the private consumer is concerned. The drop in cotton rates last week suggests that the drop in wholesale prices of cloth will be permanent but unless mofussil markets lower rates, and retail shops follow suit within three weeks, the consumer will gain little. That market conditions are disturbed has been indicated by Mr. R. A. Poddar in a recent statement asking for a review of cotton policy. His view as to the future of textile industry is shared by Mr. Ramnivas Ramnarain who said last week that control of production and higher taxation would minimise the profits available for distribution to mills' shareholders. Price fixing is likely to be delayed by the combined fall in cloth prices. Anti-hoarding measures will accelerate the fall, and ceilings may be unnecessary, but stable prices are essential for the trade to keep on after the supplies are increased by special measures. In the first six months demanded by Mr. Hydari the cloth trade cannot remain idle; it has to serve the public and meet export requirements on a limited scale.

In pursuance of a recommendation made in March by the Rural Development Board, the Bombay Government has decided to requisition fallow lands. The Grow-More-Food-Plans explained the decision to take over cultivable land which is not used by the owner or his tenant. The proposal for a special tax on fallow land has not been adopted but the Government is to lease them free of rent for cultivation. There is nothing to suggest that title will suffer through requisitioning. The Government ascertained by a survey that 20 per cent of cultivable land in three districts lay fallow because of disputes or indifference of owners, and the practice of fallow was uneconomic in the Thana District. Applications for cultivating fallow land belonging to private owners on the same lines as for Government waste land are invited. Requisitioning under the Defence Rules is to follow the examination of applications, meant primarily for increasing food production in the province. Leases of fallow given under the Defence Rules are to run for the duration and six months afterwards.

South India

(*From Our Correspondent*)

Madras, July 7.

HOPES are rising high in every part of this province of seeing before long better distribution of cloth and lower prices. People have got a somewhat sinister satisfaction that, thanks to the recent Cotton Cloth and Yarn (control) Order, the dealers in textiles are getting it back for having raised cloth prices to intolerable limits. There is in evidence a wave of optimism amongst the consuming public at the prospect of lower prices for cloth, but numerous complaints from cloth dealers throughout the presidency are also heard every day. Meetings are held, memoranda to Viceroy are drawn up and fresh suggestions are made for easing the rigours of the control order. The Madras Piecegoods Merchants' Association and the Piecegoods and Yarn Merchants' Association, Palghat, are making strenuous attempts to point out the injustices involved in the control order. Criticism is directed mainly against clause 14 (2) of the order which prohibits the holding of stocks manufactured before August 1, 1943 beyond October 31, 1943 and clause 13 (1) which directs the supply and sale of the price controlled cloth from 31st July, 1943. First and foremost, it is urged, the order is ill-timed because it overlooks the existence of forward contracts entered into by the Merchants with the mills. The passing of this control order, would discourage consumers' purchases till the arrival of the price controlled cloth and thus force the prices of goods already stocked to low unprofitable levels. The necessity to dispense with the stocks before October 31, would induce undue haste in selling at present, with the result that merchants and agents would be forced to incur loss. Further, if stocks are not fully liquidated by October, the surplus would be illegal; and it is not clear as to what to do with this contraband surplus after October. It is also pointed out that large sections of the agricultural population generally go in for their cloth requirements only after disposing of their crops by the end of November and therefore the time limit for dispensing of the stocks should be extended at least to December 31, 1943. Opinion amongst the piecegoods and yarn merchants is favourable for the following suggestions in the matter of modifying the control order to suit the convenience of the commercial classes in this country: Total deletion or suspension for a year of clause 14 (1) and (2); and purchase by Government of the stocks unsold by November 1, 1943; the existing forward contracts should be declared null and void by Government as otherwise, the merchants would be utterly helpless in the matter of effectively co-operating with the Government. The Department of Industries and civil Supplies, it is expected, would give a sympathetic consideration to the legitimate criticisms levelled by the merchants and make the Textile control order as fair and equitable as possible.

While cloth will probably be cheaper potatoes threaten to get dearer as the Government is engaged in tightening its grip on this article of food. The importance of potato for the military and civil populations seems to have exercised the minds of the controlling authorities to-day and steps have been taken to control and direct the sale and movement of potato in this Province. Under the Madras potato (Dealers and Transport) control order, which took effect from 1st July, 1943, everyone carrying on business as a wholesale dealer, or storing potatoes for sale, in Nilgris District and the Kodaikanal Taluk of Madura District is directed to take a license for the purpose. Growers are prohibited from selling potatoes in quantities exceeding 200 lbs. at a time to any one except a licensee. Excepting the licensees and the growers others cannot keep a stock more than 20 maunds in any place. Further potatoes should not be transported from any place in this Province to any other place in India except with a permit from the Commissioner for Civil Supplies or any officer specially authorised by him for the issue of permits. The order however, does not apply to the transport of potatoes, not exceeding half a maund at a time, for private consumption.

It appears that demand for Madras potatoes from other parts of India has greatly increased in recent months and in order to ensure regular supply of potatoes for the military and for the general public, the producers and sellers of this article have to be brought within the net of Government control. Anyone who has watched the potato position in India since 1940 would certainly have anticipated this control order. With regard to potatoes India has been an importer to the extent of 11½ lakhs of maunds (1939). Her annual production hardly comes to 1% of the world production of potatoes. Before the war the chief sources of import of this article were Burma, Italy and Kenya. Our connections with Italy have been cut since 1940 and we have only large number of Italian prisoners here without their potatoes. Burma has been lost to the Japs and Kenya's supply is greatly strained for want of shipping and other facilities. The total potato crop in India yielded 491 lakhs maunds in 1939. Madras provided only 14 lakh maunds—(Summer and winter crops added together)—only 3% of India's total production. Thus the insufficiency of potatoes has already been a matter of grave concern particularly in view of the fact that the army requirements of this article have been growing by leaps and bounds. There has been a pressing necessity to regulate the potato market and the working of the potato order would be watched with considerable interest, not untinged with misgiving.

Controls are increasing in number and intensity. Prices continue to soar up and the food crisis is deepening day by day. The natural corollary of this widespread distress and famine is the increase of beggars in every city. While law and religion alike recognise the right to beg in British India and the Indian States in general, Mysore has come forward to break the tradition. Beggars—Mysoreans only—will not be allowed to beg any more but would be suitably dealt with by the State. The Government of Mysore had formed some time ago a committee for the Prohibition of Beggary and the report of this committee is now published. This committee have laid down that state legislation is indispensable for the prohibition of begging and that legislation must go hand in hand with adequate relief measures for the beggars of Mysore. Their recommendations are briefly as follows. There are 15,000 beggars in Mysore and nearly 5,000 of these are non-Mysoreans and therefore they should be repatriated. Provision should be made for Reception Centres where each beggar will be examined. Diseased men would be sent to hospitals and the rest kept in Relief Homes. A draft bill will be submitted to the Representative Assembly and Legislative council to appoint a Central Relief Committee for

Resume of Commodity Markets

(*Continued from previous page*)

The feature of the week is the substantial decline in prices for piecegoods and bullion. The jute manufactures market also has been easier. The cotton and jute markets, however, have continued steady. The weakness of the piecegoods market, as our readers are already aware, is due to the recent control measures and the banning of forward transactions in cotton cloth and yarn. There was heavy liquidation in the middle of last week and prices were marked down sharply. In some cases, the decline was as much as 40 percent. The enforcement of actual delivery and the prevention of forward contracts, except in specified qualities which had to be delivered against railway receipts and documents which were not transferable to third parties, had naturally a depressing effect. Only the statement by the Chairman of the Textile Control Board that he was satisfied with the decline in wholesale prices and some covering at the lower levels have caused a rally in prices towards the close. There is still considerable anxiety regarding the future of prices and it is felt that if the industry and the Government of India are really serious about their scheme, it would be possible to keep prices around the present low levels.

* * * *

The weakness of the piecegoods market has had its effect on other markets as well. There was some selling in the gold market for realisation; and the reports that the Government of India might sell gold contributed to the decline in prices. Sovereigns are quoting at the lowest level for some time, while gold ready is around Rs. 78/8, the lowest level for the week being Rs. 77/4. How exactly the Government propose to sell gold in the open market cannot be anticipated. There are proposals that the authorities should release gold held on account of the British Stabilisation Fund in this country and that they should also arrange with South Africa for the import of gold. Whether the authorities will do anything towards this end remains to be seen.

* * * *

The fall in prices in the jute manufactures market has to be ascribed to special reasons. Readers are perhaps aware of the agitation against the fixation of maximum prices for jute without the fixation of maximum prices for jute goods. This agitation has gained nomentum and the Indian Jute Mills Association appears to have taken cognisance of the matter. It is reported that a scheme for the fixation of maximum prices for jute goods as well is under consideration, and that details are being worked out. The aim of the industry appears to be that such maximum prices as are fixed for jute manufactures should be strictly enforced, and that the consumer should derive the advantage of the lower level of prices. If it were only the fixation of maximum prices as far as mills are concerned, there is no difficulty in coming to an arrangement; but it will be encouraging the bazar to corner stocks and demand higher prices from the free markets. The fixation of maximum prices should, therefore, be made applicable to everyone concerned in the trade. An announcement in this regard is expected early. On these reports there has naturally been a decline in prices and the closing quotations are at the lowest levels for the week.

The tea export allotment for 1943-44 under the Indian Tea Control Act has been announced. The quota has been fixed at 421,567,207 lbs and represents approximately 110 percent of the Indian standard export figure against the maximum of 125 percent permitted by the International Tea Committee. This quota has taken the market by surprise as with the satisfactory conditions for the growth of the tea crop, it will leave a big surplus for internal consumption. At present there is a ban on private exports of tea and the British Ministry of Food is the sole buyer of the export surplus. It is believed that the increase in internal consumption will take up the entire surplus. Also the prospect of large supplies will bring about the much-needed decline in prices for this popular beverage.

working out the scheme. To begin with, Relief Homes would be started at Mysore and Bangalore. Provision is to be made for the religious mendicants who would be allowed to beg under license. It is estimated that the initial cost of the scheme would come to about 1 lakh of rupees which is to be raised, not from the receipts of any new taxes, but from Government grants, subscriptions and donations. Mysore Government may be heartily congratulated on this bold and noble venture to liquidate what has till now been considered a very cumbersome problem. The success of the scheme evidently depends upon the degree of active co-operation from the general public and if the problem of beggary is ably and satisfactorily solved in Mysore, the Mysore Government would not have only done a great service for their own poor and destitutes but would have set up a bright example for British India and the other Indian States to follow.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, July 8.

As a masterpiece of fact distortion the Memorandum presented by the Bengal Chatkal Mazdoor Union to the Minister for Commerce and Labour is an astonishing document and should not be allowed to go unchallenged. In justice to the 50,000 workers who are alleged to have signed it, it must be said that few if any of them could have known what they were signing other than as effort to secure higher wages. Certainly few of them could have grasped or understood the arguments set forth in the memorandum which, as an example of *suggestio falsi* combined with *suppressio veri* will take some beating. On the face of it, it is nothing short of subversive political propaganda with a strong flavour of Fifth Column about it. The professed demand for 100 per cent efficiency and maximum output and all-out production advanced on behalf of the labour is, with all due respect, sheer bunk and immediately arouses suspicion in the mind of any intelligent person as to the genuineness and validity of the arguments advanced, which closer scrutiny only serves to confirm. The people mainly, if not solely interested in attaining 100 per cent efficiency, etc., are the Managers and Managing Agents of the Mills and they will we think be prepared to admit that results fall far short of this level. War or no war, the ideal set up for himself by the average jute mill labourer, as of most other workers here or elsewhere, is not how much, but how little work he can get away with. It is mainly because he has to tend and keep pace with a machine that the average worker does as much as he does. We have yet to hear of a petition that a Manager be sacked because he did not drive his labour hard enough! This imaginery enthusiasm for work, however, is promptly contradicted a couple of pages later when it is maintained that the jute worker is "to-day working harder in terms of sheer physical toil and being sweated more than ever before in his history." The two lines of argument simply will not coincide and, as we have suggested above, the amount of work done by most individual workers depends largely on the speed of the machine and that speed is not a variable quantity. The hours of work are restricted by law within reasonable limits and though these limits have, to meet special exigencies, been occasionally extended, the worker has received extra pay for the extra work. There have been very good reasons for any alterations to the working hours fixed from time to time by the I. J. M. A. and these reasons were understood by and had the approval of the Government departments concerned. To suggest any sinister motive for these changes simply stultifies the whole argument. What is carefully ignored is that, only about a year ago, the Industry was calltd upon to "rationalise" itself down to a production just about half of what it is turning out to-day. The memorandum gives the I. J. M. A. no credit for having fought the Government on this issue, partly at least on behalf of the labour force, and successfully carried the day.

The recent order for America, far from being received with joy, as is alleged, was rather received with consternation and the steps taken to secure its orderly production were actuated, not from a profit motive except inasmuch as endeavour was made to avoid a financial loss if possible, and to prevent the circumstances being seized upon by speculators to inflate further already inflated markets, but to ensure that the urgent requirements of an Ally were fulfilled at whatever inconvenience to the Industry.

The statement that no jute will be loaded in the jute districts except for direct delivery to the mills is incorrect and the memorandum's vicarious concern for the ryot and the middleman might well have been omitted. Its sincerity is too open to doubt. Why, in face of the stocks of 120,000 tons of manufactured goods in mill godowns, the stoppage of the sale of manufactures should be disastrous, is not explained and if the interest of the labour force in 100 per cent efficiency were real, they also would be showing concern at the rising cost of production instead of making proposals further to enhance it. Again, where is the alleged "veiled threat of attack on the workers" in the statement that, in view of the rising costs of foodstuffs it is not possible to say what costs will be by next March. Rather this would seem to imply, as we certainly think it does imply, that the mills conceive it their duty to see that their workers get food supplies at controlled rates no matter what the outside market prices may rise to.

The memorandum professes to desire increased production of goods alongside the fulfilment of the American order. The Jute Industry may indeed possess the resources and the scope to increase production, but a grandmaternal Government has seen to it that it will not have the raw material to do so. And part of the reason for this shortage of raw material is supposed to ensure the greater production of foodstuffs so that the inflated prices of these may be reduced to normal. Apparently the jute workers have no interest in the price of foodstuffs so long as they get increased rations at controlled rates and increased allowances to enable them to pay inflated prices for other commodities. Enough has been written to show that the whole premises of the arguments propounded in the memorandum ring false.

When we come to the actual demands of the workers, it is conveniently forgotten that *khoraki* was allowed in the past to make up for loss in wages when trade conditions necessitated a reduction in working hours. When working hours were again increased, this *khoraki* was not "wrested away" but made up in increased wages. It is notorious that when wages have been increased to balance longer working hours, corresponding decreases have never been enforced when hours were reduced and the tendency of special allowances has always been that they are ultimately incorporated in the standard wages. When all the amenities such as medical attendance, maternity benefits, educational facilities, etc., are taken into account, there can be few labour forces in any organised Industry in India that receive as much consideration from their employers as the jute mill workers. Any comparison of their living conditions with the figures compiled for outside workers not so fortunately situated is illusory, and almost the only item which strictly applies is that of clothing the high cost of which must be blamed on the Bombay cotton industry which the memorandum professes to admire so much. Why are not the dividends of some of the Bombay Cotton Mills quoted in comparison with those of selected jute mills? These latter do not appear excessive when it is considered that they are based on share capital figures which bear a very small proportion to the amount of capital actually employed in the businesses.

It is estimated that the provision of foodstuffs at controlled prices to their workers is costing jute mills not less than 30 lakhs of rupees per month at present. For two and a half lakhs of workers, that is Rs. 12 per month per head, not Rs. 6 as the memorandum suggests. Gratitude for anything they have done is not looked for by the mills, but the memorandum might at least have acknowledged that the mills have in fact done a great deal. After all they also have a duty to their shareholders, but there is no shadow of doubt that all reasonable provision to keep the labour force contented has been in the forefront of the mills policy, particularly sinc the outbreak of the War. When the memorandum proceeds to demand equality of sacrifice, what is really meant is further sacrifice on the part of the mills and none on the part of the workers. And there is little doubt that this would be the finding of any impartial committee, though impartiality scarcely seems to be the Committee of investigation whose appointment they demand. We venture to suggest that the combined demand for increased rations and Rs. 30 cash Dearness allowance clearly indicates that no sacrifice is contemplated on the part of the workers. Nor does it seem to occur to them that, in the present time of food scarcity, an increase in their rations would inevitably entail hardship and privation by curtailing the rations of many of their fellow countrymen whom they profess to love so dearly. Again, what is the basic cause of the present inflated prices? Scarcity of commodities combined with a superabundance of purchasing power. To this chaotic situation the memorandum proposes to add Rs. 30 per month cash allowance to each of 2½ lakhs of workers, in other words to increase the purchasing power of the labour force by seventy-five lakhs of rupees per month. Quite apart from the prohibitive cost to the Industry, such as flow of fresh cash could only result in further disastrous inflation, causing still greater misery to workers outside the jute industry and no ultimate benefit to those within it. Finally, it would be pertinent to enquire whether there has been any cessation or even falling off in the amounts of cash remitted from Post Offices in the industrial areas to workers' homes. This is the acid test as to whether the workers are really badly off in present conditions.

Mill stocks of manufactured goods at the end of jute showed a net increase over the previous month of 9,073 tons. Commercial hessians were higher by 4 crores yards or 8,600 tons while commercial Sackings were lower by 52 lakhs yards or 1,724 tons. Government hessian stocks also showed increases but sacking goods were lower. In the aggregate, Hessians were up by 12,250 tons or 430 lakhs and heavy goods down by 86 lakhs yards or 3,177 tons.

JUTE

Calcutta, July 8.

The raw jute market has continued steady and business passing has been restricted only by the reserve of sellers. Mills are reported to be interested buyers of the new crop and seem to be of the opinion that they should get their requirements of jute out of the next season's crop for the maximum prices that they pay. It is also said that this policy of purchasing new crop for their future requirements will help the movement of the old crop against old contracts which have been contracted at low levels. Sellers, however, are not keen to offer freely in new crop as it is feared that with the removal of maximum prices, they might be in an awkward position. In the mofussil centres ryots are not willing to part with their stocks and are awaiting further developments. The statement by the Indian Jute Mills Association that maximum prices for jute will be continued is, therefore, of great importance. There are reports that a scheme is under consideration for the fixation of maximum prices for jute manufactures also. The progress of the new crop is quite satisfactory and weather conditions in the mofussil are quite favourable. With the freer movement of jute and a clearer outlook, it might be expected that mills may be able to get their requirements of jute in full. They have not as yet completed their purchases against the American order.

In the loose jute section mills are eager buyers of Supervised Jat with not much quantity offering. Some business has been reported done in Northern and Assam at 4 annas lower than the agreed rates.

In the pucca bales section shippers have taking greater interest and some small business has been reported done in Dundee Daisee 2/3 at 86/8 per bale and Dundee Daisee 4's at Rs. 80 per bale. Mills are reported to have purchased Firsts at Rs. 90 and Lightnings at Rs. 85 per bale. Hearts were done earlier in the week at Rs. 79; Cuttings N. C. & M. C. quoted Rs. 42 and Rs. 41 per bale.

JUTE MANUFACTURES

Calcutta, July 8.

In the jute manufactures market definitely easier conditions were noticeable on reports that the Indian Jute Mills Association is contemplating the fixation of maximum prices for jute manufactures also and that an announcement in this regard has not been made only because of the fear that the fixation of maximum prices so far as mills are concerned might not benefit the general public, and that the bazar might take advantage of the position and get higher prices from consumers in the free markets. An immediate announcement was expected, but owing to the difficulties involved it is pointed out that it may take some time yet for a complete scheme to be formulated. There has been no export business and business passing during the week has been mostly on account of inter-bazar operators. 9 porters ready closed at Rs. 19-14 against Rs. 20-6 at the time of last writing; July Rs. 20 against Rs. 20-6; August/September Rs. 20 against Rs. 20-6 and October/December Rs. 20 against Rs. 20-6. 11 porters ready were Rs. 26-10, July Rs. 26-10, August/September Rs. 27-2 and October/December Rs. 27-2.

In the Heavy Goods section dull and uninteresting conditions have been noticeable and only a very small amount of business has been reported. B. twills sold on the basis of Rs. 65-8, Liverpool twills Rs. 69-8 and Cornsacks Rs. 65-8.

Local stock figures for the month of June are now available. Owing to the unsealing of 10 per cent of the looms as from June 14, 1943 a slight increase in production was to be expected but such increase as is shown by the latest stock figures for hessian is mainly due to the lower rate of exports. The increase in hessian stocks is mostly on civil account, the figure at the end of June being 28.7 crore yards against 24.7 crore yards. On military account, total stocks were 32.67 crore yards against 32.29 crore yards. Total stocks showed an increase of about 4.3 crore yards to 61.32 crore yards. Sackings, cloth and bag, on civil and military account showed a decline. Total stocks are 86 lakhs yards lower at 29.26 crore yards. The figures are given below:—

Total reported sotcks of manufactured goods exclusive of Government Order.

Description.	31-5-1943.	30-6-1943.
Hessian cloth and bags—		
Yards ..	24,73,78,513	28,70,21,067

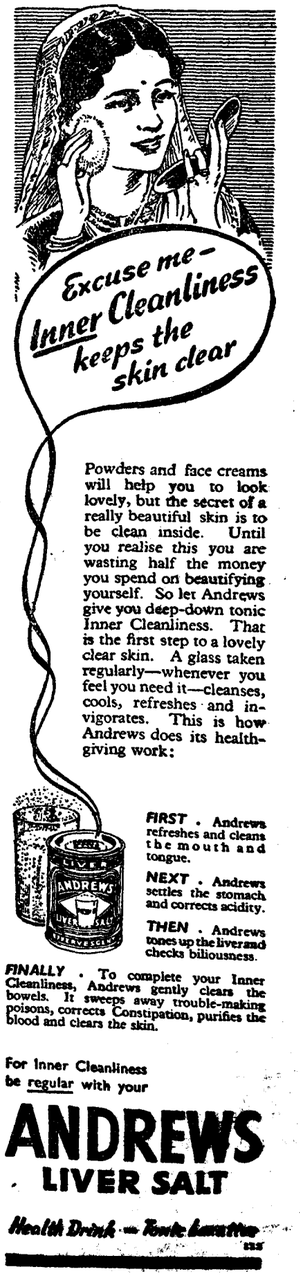
N.B.—June stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Kedarnath, Calcutta Jute, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of May.

GOLD

Calcutta, July 8.

The weakness of the piecegoods market and the share markets resulted in heavy selling in the Bombay gold market and a substantial decline in prices was recorded in the early days of the week. The lowest level touched on Wednesday was Rs. 77-10. The quotation at the end of last week was Rs. 82-13. There has been a slight rally towards the close to Rs. 78-4. Sovereigns are quoted Rs. 56-8 against Rs. 57-12 at the time of last writing. It will also be remembered that it was pointed out on an earlier occasion that having regard to the small demand the artificial prices for both gold and silver could not be maintained and that as time progressed a decline in prices was inevitable. The weakness of other markets has naturally brought about a decline in prices during the last few days.

SILVER



Calcutta, July 8.

The silver market too has been easier but the decline in prices has not been pronounced as in the case of the gold market. Silver ready closed at Rs. 119-8 against the lowest quotation for the week of Rs. 118-8 and the quotation at the end of last week of Rs. 122-8. In the Calcutta market, silver ready closed at Rs. 117-12. In the London market, the quotation was unchanged at 23½d for both Spot and Ready.

PIECEGOODS

Calcutta, July 8.

There was great confusion in the piecegoods market following the suspension of forward trading and panicky selling by prominent dealers in the Bombay market. For the coarser styles the drop in prices was more pronounced. In some cases it was as much as 40 per cent. As the Chairman of the Textile Control Board pointed out, the total decline in prices was between 25 to 40 per cent according to varieties. The statement that the industry was satisfied with the decline in wholesale prices for the present has led to a slight recovery during the past few days. There has also been some covering but actual business has been on a very small scale. Buyers are inclined to await further developments.

Powders and face creams will help you to look lovely, but the secret of a really beautiful skin is to be clean inside. Until you realise this you are wasting half the money you spend on beautifying yourself. So let Andrews give you deep-down tonic Inner Cleanliness. That is the first step to a lovely clear skin. A glass taken regularly—whenever you feel you need it—cleanses, cools, refreshes and invigorates. This is how Andrews does its health-giving work:

FIRST . Andrews refreshes and cleans the mouth and tongue.

NEXT . Andrews settles the stomach and corrects acidity.

THEN . Andrews tones up the liver and checks biliousness.

FINALLY . To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

For Inner Cleanliness be regular with your

Stock Markets to-day and to-morrow

JESSOP MAINTAINS DIVIDEND FOR 1942-43

Stock markets, both in Calcutta and Bombay, have been very quiet during the past few days. Perhaps, for the first time in several months there has been an all round decline in prices with a reduction in the volume of business passing. The reasons for the weakness of the markets are not far to seek. The fall in prices in the piecegoods market has led to considerable selling of textile shares in Bombay. The decline in the level of earnings for the Tata Iron and Steel Company, Limited, in the year ended March, 1943, has also had an unfavourable effect. In the Calcutta market there are reports that the Indian Jute Mills Association is contemplating the fixation of maximum prices for jute goods and that an announcement will be made to this effect at an early date. As regards the war situation, the resumption of the offensive by the Germans against Russia was not quite expected, and the hopes of a Second Front at an early date are receding. There has been no selling, however, and the undertone is confident. A section of the market is still inclined to believe that before long markets will adjust themselves to the new conditions and that with the admittedly satisfactory outlook prices would be marked higher.

* * * *

The strength of the giltedged market is, perhaps, the most convincing argument. There is plenty of money seeking investment and with the continued decline in the yield available on giltedged and semi-giltedged securities, there should be greater interest in equities. Operators and investors alike will be ultimately compelled to accept a low, return on equities too, the average yield for first-class securities being around 4 per cent.

The firmness of the giltedged section during the past few days has been due to the satisfactory response accorded to the new loan issues. The list for 3 per cent 1963-65 loan for Rs. 15 crores approximately was subscribed fully in two days. After the closing of the list, there has been a rise in the quotation to Rs. 96 from the issue price of Rs. 95-8. 3½ per cent Paper has improved to Rs. 95 from Rs. 94-8 and is being talked higher.

* * * *

The accounts of *Jessop & Company, Limited* for the year ended October, 1942, have been published. Contrary to market expectations, the dividend for the year has been only maintained at Re. 1-4 per share. A final dividend of 4 annas per share with the interim dividend of Re. 1 per share already paid makes Re. 1-4 per share for the whole year. There has been a decline in the quotation for the shares from Rs. 22-2 to Rs. 20-8. The directors, however, point out in their report that trading and manufacturing results for the year have been satisfactory. The works at Dum Dum have been employed almost exclusively on Government work and but for the difficulties in procuring adequate supplies of raw materials and components, it would perhaps have been possible to report a higher level of earnings. The net profit, before providing for taxation and depreciation, is Rs. 19,68,885 against Rs. 23,92,708 for the previous accounting year. The provision for taxation is naturally lower at Rs. 9.5 lakhs against Rs. 14 lakhs. The amount set aside for depreciation is Rs. 2,29,276 against Rs. 2,22,696. The sum transferred to Reserve Fund is unchanged at Rs. 1 lakh. The amount carried forward is Rs. 3,68,291 against Rs. 3,72,278 brought in.

Regarding the prospects for the current year, the directors point out that the earnings might be affected by the difficulties referred to above and also by the steadily rising costs, in spite of the large contracts on hand. In view of the fact that the dividend on the ordinary shares have been earned many times over, there should be no difficulty, however, in making the same distribution for the current year. The shares at Rs. 20-8 afford a very satisfactory return.

* * * *

Hasimar Tea Company, Limited has benefited fully by the prosperous conditions in the tea industry. With the lapse of the voluntary Internal Regulation Scheme and the prevalence of favourable weather conditions, the company was able to produce the remarkably large record crop of 5,652,892 lbs. With a reduction in the costs of production and a higher average selling price the net profit for the year 1942 is naturally very much higher at Rs. 27,96,201 against Rs. 12,22,064 for 1941. After providing Rs. 6,96,616 against Rs. 2,86,845 for taxation, and Rs. 7,64,317 (Rs. 3,61,420) to reserves, it has been possible to double the dividend on the ordinary shares to 65 per cent. The amount carried forward is very much higher at Rs. 4,11,023 against Rs. 1,78,343 brought in. The shares at Rs. 70 cum-dividend afford a return of over 10 per cent tax-free.

The prospects for the currnt year also are satisfactory though with the lesser export quota, it might not be possible to realise the same average selling price but weather conditions are satisfactory and it will be quite possible for the Managing Agents to realise the estimated crop from the Company's Estates. The dividend of 65 per cent can be paid even with a slight decline in earnings. The shares are, therefore, very good for the investor.

* * * *

Cochin Malabar Estates Limited has been able to report a further improvement in earnings for the year ended February 1943, even with a slightly smaller crop. The net profit, before providing for taxation, is higher at Rs. 4,82,498 against Rs. 3,89,179 for 1941-42. After providing Rs. 12,000 (Rs. 15,000) for taxation, the dividend on the ordinary shares is 57½ per cent against 50 per cent for the previous year. The profit figure for 1942-43 has been struck after providing for depreciation. The dividend on the ordinary shares has been increased for the sixth year in succession, the dividend paid in 1937-38 being only 7½ per cent.

* * * *

On expectations of a higher dividend for the half-year ended April, 1943, *National* were marked up to Rs. 29 a few days back. If the quotation at the itme of writing is around Rs. 28 cum-dividend, it is only in sympathy with the weakness of other markets. The dividend in respect of the half-year is actually higher at 14 annas per share against 12 annas per share for the previous six months though the higher dividend has been possible only with the transfer of Rs. 75,000 from the War Risk Insurance Reserve. The net profit, before providing for taxation and depreciation, is Rs. 6,86,696 against Rs. 7,72,216 brought in. The sum provided for taxation is Rs. 4.4 lakhs against Rs. 4.25 lakhs. The sum of Rs. 75,000 has been transferred to the profit and loss account from the War Risk Insurance Reserve against the transfer of Rs. 50,000 to the Gereral Reserve from the profit and loss account. The amount carried forward is Rs. 1,43,256 against Rs. 1,45,310 brought in.

* * * *

Bengal Coal Company, Limited has been able to report a higher level of earnings for the half-year ended April, 1943, thanks to

(*Continued on page* 80)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 9.

VERY quiet conditions have been noticeable on the Calcutta Sock Exchange during the past week. There has been a noticeable decline in prices of jute and cotton shares especially. The volume of business was on a considerably smaller scale. Only in Thursday's session a slightly firmer tendency has been noticeable and closing prices are higher than the lowest levels for the week. The weakness of the markets during the period under report has been mainly due to the slump in prices in the piecegoods market and the reports regarding the possibility of fixation of maximum prices for jute manufactures also. The only exception has been provided by the giltedged securities section where prices have been marked higher with an increase in the number of transactions. There is a general tendency to await further developments.

The Giltedged securities section, as remarked above, has been very firm and business in non-terminable loans and terminable securities, which are not on tap, has been restricted only by the scarcity of scrips. 3½ per cent Paper has improved from Rs. 94-8 at the end of last week to Rs. 95. 3 per cent 1951-54 were Rs. 100-2, 3 per cent 1963-65 Rs. 96, 3 per cent 1949-52 Rs. 100-13; 3½ per cent 1947-50 Rs. 103-12, 4 per cent 1960-70 Rs. 100-12 and 4½ per cent 1955-60 Rs. 114-10. No transactions have been recorded in Provincial loans.

Conditions in the money market have remained unchanged and the Central Government has been able to get a reduction in the average discount rate on treasury bills in spite of the smaller amount of applications. Only one transaction has been recorded in Public Bodies' Debentures, 5 per cent *Calcutta Municipal Debentures* being sold at Rs. 117-4.

Preference shares are very well held and transactions were not very many in number. Among jute mill preference shares *Delta* were Rs. 147, *Howrah* '(A)' preference Rs. 163 and *Reliance* Rs. 174. *New Victoria* were Rs. 11, *Associated Hotels* Rs. 106, *Orient Paper* Rs. 116, *Steel Corporation* Rs. 126-4 and *Rohtas Industries* Rs. 182.

Bank shares remain steady though *Reserve Bank* were slightly lower at Rs. 118-8 on the announcement made last week to the effect that the maximum dividend on these shares has been limited to 4 per cent. *Imperial Bank* fully paid shares were steady at Rs. 1,840 while *United Commercial Bank* were dealt in at a premium of Rs. 8 per share.

Some business has been recorded in Guaranteed Railway shares at Rs. 96. *Hoshiarpur-Doab* were quoted at Rs. 107-8, *Darjeeling Himalayan* at Rs. 105-8 and *Sara-Serajganj* at Rs. 107, *Shahdara (Delhi) Saharanpur* were in favour at Rs. 218-8.

Cotton issues have been quiet on the fears that in future it will not be possible to earn big profits. *Cawnpore Textiles* are nearly a point lower at Rs. 12-12 as also *Kesoram* at *Rs.* 14-10. *Dunbar were Rs.* 280, *Elgin* Rs. 72, and *New Victoria* Rs. 8-14. *Mahalaxmi* were steady at Rs. 43.

The Coal section has remained unaffected with the exception of *Bengal Coal* which on the comission of the bonus payment in respect of the half-year ended April, 1943, were lower at Rs. 463. *Amalgamated* were unchanged at Rs. 38-12 cum-dividend while *Bokaro and Ramgur* improved by 12 annas to Rs. 20-8. *Burrakur* were fluctuating around Rs. 16-4, while *Central Kurkend* were frequently dealt with around Rs. 16-12. *Equitable* were steady at Rs. 38-8, *New Beerbhoom* at Rs. 21-4, *Pench Valley* at Rs. 40-10 and *West Jamuria* at Rs. 34. *Samla* were unchanged at Rs. 4-5 and *Talcher* at Rs. 4.

The Jute section also was quiet on reports that there was every likelihood of maximum prices being fixed for jute manufactures as well. No announcement has as yet been made in this regard, but it is generally felt that the Indian Jute Mills Association will take some action before long. There was some selling earlier in the week and the bigger denomination shares dropped by as much as twenty points. *Anglo-India* quoted Rs. 395, *Belvedere* Rs. 498, *Delta* Rs. 507, *India* Rs. 547, *Kamarhatty* Rs. 553, and *Kanknarrah* Rs. 461. There has been a recovery towards the close. *Barnagore* encountered some selling and were lower at Rs. 148. *Chitavalsah* were Rs. 25-12, *Howrah* Rs. 62-12, *Hukumchand* Rs. 26-4, *Megna* Rs. 76-12, and *Nuddea* Rs. 101-8.

In the Engineering section, easier conditions were noticeable in sympathy with the other markets. *Indian Iron* and *Steel Corporation* were a few annas lower at Rs. 35-4 and Rs. 26-15 respectively. *Burn & Co.* were Rs. 398, and *National Iron & Steel* Rs. 12-14. *Marshalls* were Rs. 3-8 and *Saran Engineering* Rs. 7-11 ex-dividend. *Jessop & Company* were lower at Rs. 20-8 on the maintenance of the dividend at Rs. 1-4 per share for the whole year.

Sugar shares have not been very much affected though a fewer number of transactions has been reported. *Belsund* were Rs. 11-3, *Carew & Co.*, Rs. 18-14, *Champarun* Rs. 38-14, *New Savan* Rs. 17-8 and *U. P. Sugar* Rs. 24-6.

Tea shares have been better. But for the generally quiet tone of the market a greater improvement in prices would perhaps have been recorded. *Bishnauth* were Rs. 39-8, *Dufflaghur* Rs. 25-4, *Hasimara* Rs. 70-4, on the higher dividend of 65 per cent for 1942, *Jutlibari* Rs. 20-4, and *New Samanbagh* Rs. 37. *Killcott* were Rs. 23-12 ex-dividend, *New Cinnatolliah* Rs. 506 and *Tezpore* Rs. 17-6.

In the miscellaneous section, *Burma Corporation* were Rs. 3-6 after being higher at Rs. 3-11 while *Indian Copper* were sticky at Rs. 2-11. *Rhodesia Copper* were easier at Rs. 2-2 and *Tavoy Tin* at Rs. 1-2. A few deals were reported in *Consolidated Tin* around Rs. 1-15. *Alkali and Chemical* were uninteresting around Rs. 37, with *Assam Saw* at Rs. 4-12. *Bararee Coke* were noted at Rs. 29-4, *Calcutta Trams* at Rs. 27-2 and *Dunlop Rubber* at Rs. 54. *Humayan Properties* (ordinary) were Rs. 10-8, and *India General Navigation* Rs. 121. *Midnapore Zemindary* were three points lower at Rs. 93-8 while *National Insulated Cables* were rather weak at Rs. 14-8. *New India Investment Corporation* changed hands at Rs. 76-8 and *Publicity Society* at Rs. 12-12. *Bengal Assam Steamship* were crossed at Rs. 265-8 and *Calcutta Landing and Shipping* at Rs. 18-10. *Fraser & Co.*, were lower at Rs. 15-8 while *Port Shipping* were higher at Rs. 20-14.

Among paper shares, *Titaghur* were Rs. 26 ex-dividend and *Bengal Paper* Rs. 205. *India Paper Pulp* were put through at Rs. 194 and *Orient Paper* Rs. 29-10. *Mysore* were quoted at Rs. 25-4 and *Sree Gopal* at Rs. 23 ex-dividend.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 8.

THE launching of the summer offensive by the Germans and the unexpectedly low earnings of the Tata Iron and Steel Company the accounts of which reached the market early in the week have imparted a gloomy feeling to the Stock Exchange which was just then recovering from the effects of the various Control orders. Even without these fresh adverse factors there was an undercurrent of doubt and pessimism out of which the market was struggling to free itself. But anxiety resulting from the continued uncertainty regarding the control of cloth and yarn prices after the decline in the piecegoods market was further accentuated by the end of the lull on the Russian front and the publication of Tisco accounts. These factors have not only brought the prices down but have induced a definite downward trend.

The gild-edged section is firm with 3½% Government Paper quoting at Rs. 95. Among short-dated loans 3½% (1947-50) were Rs. 103-11; 5% (1945-55) were Rs. 107-6. 4% (1943) were done at Rs. 100-2 and 3% (1946) Defence bonds were wanted up to Rs. 102-15.

The hopeful mood that was slowly gaining ground last week-end has not continued into this week. On the other hand news from the Russian front and the low earnings report of Tatas were instrumental in checking the upward trend noticed towards the end of last week. The control scheme regarding cloth and yarn prices has not yet been put down in clear-cut terms, and this makes it impossible for the operators and investors to come to any decision and latterly mill shares have lost considerably. Latest quotations are:—*Bombay Dyeing* Rs. 2,025; *Century* Rs. 831; *Gokak* Rs. 332; *Kohinoor* Rs. 832; *Colaba Land* Rs. 238; and *Svadeshi* Rs. 549.

Ever since the dividends were known Tata Steel shares were rather depressed though no selling wave was discernible. But the moment the accounts were published, the unexpectedly low earnings disclosed in them have brought down the prices rather abruptly. The war news from the Russian front is of course a contributory factor in the present depressed mood prevalent in this section. *Tata Steel* Deferreds were Rs. 1,987-8. *Tata* (ordinary) Rs. 401-8 and *Indian Iron* Rs. 34-14.

The miscellaneous section was still to-day rather firm. However, easy conditions have set in in sympathy with Steels and Textiles. The outstanding feature in this section was again *Premier Construction* which once went up to Rs. 185-8 and to-day is quoting at Rs. 182. *Alcock Ashdown* were Rs. 935; *Bombay Burmah* (old) Rs. 365; *Bombay Burmah* (new) Rs. 131-4; *Bombay Steam* Rs. 575. *B. E. S. T.* Rs. 156 and *Burmah-Corporation* Rs. 3-4.

(Conutinued on page 80)

(continued from page 77)

the higher level of raisings and despatches. The increase in costs was offset by an increase in selling prices. The net profit, before providing for taxation and depreciation, is higher Rs. 21,46,276 against Rs. 16,07,064 but nearly the whole of the increase in earnings has had to be provided as additional provision for taxation, the total provision in this regard being Rs. 14,00,003 against only Rs. 9.5 lakhs in the previous half-year. The sum set aside to depreciation is unchanged at Rs. 3 lakhs. The dividend is maintained at Rs. 10 per share, but no bonus is payable. The amount carried forward is higher at Rs. 1,41,891 against Rs. 94,819 brought in. No bonus was paid out of the profits for the corresponding period in 1941-42.

* * * *

There has been a substantial improvement in the earnings of the *Katras Jherriah Coal Company, Limited* for the half-year ended January, 1943, and earnings are at the highest level since January, 1939. Raisings and despatches were better than in the preceding half-year and somewhat higher prices were realised. The new pits at Laikdih Deep Colliery have been fully equipped and raisings have now commenced.

The net profit, before providing for taxation and depreciation, for the half-year is Rs. 1,99,045 against Rs. 64,245 for the previous six months. The provision for taxation is considerably higher at Rs. 95,000 against Rs. 15,000 while the amount set aside to depreciation is Rs. 29,868 against Rs. 15,001 After paying a dividend of one rupee per share (same) the amount carried forward is considerably higher at Rs. 45,211 against Rs. 21,035 brought in.

With the commencement of raisings from the new colliery and the present large demand for coal it can be expected that there will be a further increase in earnings for the current half-year. There is every reason for a rise in the quotation for Katras Jherriah shares. The present quotation is around Rs. 41-8 cum-dividend and the return on the basis of the last dividend is five per cent tax-free.

* * * *

Hukumchand Jute is paying arrears of dividends for two more half-years out of the earnings for the six months ended March, 1943. The arrears of dividends still payable are for three half-years. The shares presently quoting around 161 are good for long-term investment.

"WATCH-DOG."

(Continued from page 78)

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, July 6.

THE uncertainty still prevalent in the piece-goods market consequent on the Government ban on forward trading is responsible for the weakness of the local stock exchange in the past few days. The turnover in both the prominent sections has been on a reduced scale and a general decline in prices was also noticed. But the market was not utterly featureless. The bright spot was provided by the giltedged and bank sections. The giltedged section which has been uniformly steady for a long time has firmed up on the rising of the buying rate for 3½ per cent Government Paper to Rs. 94-8. Much investment buying was encountered in this section and short-dated loans and State Loans attracted many a buyer though in the case of the latter scrips were not easily obtained.

Next to government securities bank shares met with keen enquiry. While almost all prominent bank shares are eagerly bought, interest in Reserve Bank shares continues unabated. Indian Bank (Big) were done at Rs. 253, small shares of the same were crossed at Rs. 56. Reserve Bank were crossed at Rs. 119 and Central Bank at Rs. 69-8.

Though the remarks of Chairman of the Textile Control Board have gone a long way in removing at least partly the apprehensions entertained by mills, the position does not seem to have changed materially. The weakness of both the Calcutta and Bombay markets has imparted a sympathetic weak trend here also. Operators and investors alike are not prepared to take risks and mill shares have shed many ponits. However, shares like Mettur Industries continue to receive support from buyers. Latest quotations are: Coimbatore Spinning Rs. 312-8; Janardana Rs. 214 c.t.; Sri Sarada Rs. 285; Mettur Industries Rs. 324-8 cum-dividend.

The Planting section was somewhat better than textiles. Business passing was slightly on a larger scale and interest still centres round old shares. New issues continue to occupy the back ground if not altogether neglected. Chembra Peak were done up to Rs. 14-2; Nilgiri Neerugundi were crossed at Rs. 13-4; Cochin Malabars rose to Rs. 22-4 cum-dividend on the announcement of the final dividend of 35 per cent; but has declined to Rs. 21-12 c.d. Peermades were a strong feature at Rs. 53-8 c.d.

Among Miscellaneous shares Spencers have firmed up to quote at Rs. 9-8; Mysore Paper were done at Rs. 25-12 and Mettur Chemical new ordinary changed hands in small lots at Rs. 19-8.

Weather during the season was exceptionally favourable and crops of 15,005 mds. and 5,182 mds. were harvested from Rydak and Kartick respectively.

The Company supplied 12,013 mds. of tea to the U. K. and Block Purchase Schemes.

During the year the Dhowla river changed its course thereby threatening serious damage to Rydak Division. Protection works have been carried out and it is hoped that these will afford the necessary safeguard but a repetition of such threats cannot be ruled out and it is recommended that the reserve fund for these contingencies be reinstituted.

Managing Agents.—Messrs. Jardine Skinner & Co.

Authorised Capital—Rs. 4,00,000. Issued and Subscribed—Rs. 2,48,800 in 24,480 shares of Rs. 10 each fully paid up.

Dividend per cent. ..	2½	Nil	5	5

(Annual General Meeting held on 23rd June, 1943).

Audited accounts for the year ended December, 1942:—

During the year a refund of Rs. 3,00,000 was received from H. E. H.'s Government against Cess collected during the thirty-one months ended 30th June, 1942. This amount has been credited to Depreciation Reserve.

After providing for the payment of Debenture Interest and placing Rs. 6,40,000 to Depreciation the net profits amount to Rs. 4,33,347-11-7 which with Rs. 4,49,192-4-6 brought forward from the previous account, leaves an available balance of Rs. 8,82,540-0-1. Out of this sum, the Directors have paid on the 12th December, 1942, an Interim Dividend of 2½% amounting to Rs. 1,58,036-4-0 and have placed Rs. 1,00,000 to Contingencies Reserve leaving a balance of Rs. 6,24,503-12-1.

It was the Directors' intention to recommend an immediate further distribution but the Company have now been required by the British Indian Income-tax Authorities to furnish returns of income from the tax year 1939/40 to date and until it can be ascertained what liability, if any, to income-tax may exist, the Directors do not consider it would be in Shareholders' interests to recommend the payment of a further dividend in view of the complications which must ensue should the Company be held liable.

They therefore recommend that the balance of Rs. 6,24,503-12-1 be carried forward to the next account, but will examine the position again immediately the situation can be clarified.

No Debentures were redeemed during the year, but in accordance with the terms thereof the debentures held by H. E. H. the Nizam's Government are redeemable at par in twelve equal annual instalments from 1st January, 1943. 417 of these Debentures were consequently redeemed on 1st January, 1943 and this repayment will appear in the accounts for the current year.

The Directors report that in spite of numerous difficulties the record figures of output and despatches from the Collieries achieved in 1941 were exceeded during the year under review, the output rising from Tons 1,212,583 to Tons 1,214,019.

Secretaries.—Messrs. Best & Co., Ltd.

Authorised Capital—Rs. 90,00,000. Issued and Subscribed—Rs. 63,21,450 in 6,32,145 shares of Rs. 10 each fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	63,21,450	Fixed Assets ..	1,56,67,153
6% Debentures ..	24,51,200	Stores ..	10,14,826
Reserve Funds ..	69,30,000*	Outstandings ..	7,62,233
Current debts ..	17,34,517	Investments ..	1,61,437
Carry forward ..	6,24,504	Cash Balances ..	4,56,022
Total ..	1,80,61,671	Total ..	1,80,61,671
		Total Liquid Assets ..	23,94,518

*Includes Reserve for Depreciation of Rs. 60,80,000.

HARINAGAR SUGAR MILLS, LIMITED

Audited accounts for the year ended 30th September, 1942:—

The Accounts shows a net Profit of Rs. 4,07,392-6-8. This together with the Balance of Rs. 1,186-0-5 brought forward from last year's account makes a total of Rs. 4,08,578-7-1 which the Directors propose to dispose of as follows:

	Rs.
Provision for Depreciation	1,20,000
Dividend at 7½% per annum, free of Income-tax and Bonus at 5% per annum, free of Income-tax	1,25,000
Provision for Income-tax, Super-tax & Excess Profit Tax	1,60,000
	4,05,000

leaving a balance of Rs. 3,578-7-1 which the Directors propose to carry forward to the next year.

During the year under report the Sugar Industry under Control did not fare well. As compared to some other industries under war conditions, the margin of profit allowed to Sugar Industry by the Government is very low. It is hoped that the Government would change their present attitude and treat the industry more fairly.

Looking to the small crop and short crushing season, the Directors consider that the results of the Company's working are satisfactory.

Managing Agents.—Messrs. Narayanlal Bansilal.

Authorised Capital—Rs. 15,00,000. Issued and Subscribed—Rs. 10,00,000 in 7,500 shares of Rs. 100 and 25,000 shares of Rs. 10 each, fully paid up.

‡ Assess. of Dividend on Preference Shares Rs 15,35,000. Depreciation Fund Included Rs. 12,77,54,965 (a) Bearer bonds of Rs. 500 each issued to bearer any time at par after 30th June 1958, on 3 months notice. The date of repayment was extended to 30th June, 1965, with option repayment in whole or in part, anytime after 30th June, 1948 and the rate of interest reduced to 5 per cent per annum tax free. (b) Issued at par on January, 1935, repayable at par on 31st December, 1944. (c) Shares numbered 1-6,000 have priority over any other rank equally. (d) Issued as par on 15th Nov, 1922, redeemable as par on 31st Dec, 1951. Option redemption in whole or part on any interest d Commencing in 1941 Option redemption in whole or in part on any interest date after 31st December, 1951. Latest date of redemption 31st D redemption in whole or in part at par, premium on any interest date after 31st December, 1943 after six month's notice. Option to holders verted ordinary shares rank for dividend in the following year after conversion. Interest is paid at 4 per cent. in respect of year on which opti cent cumulated convertible registered mortgage debentures (unconditionally guaranteed as to principal and interest by the Indian Iron & Steel Co., Ltd.) Issued at par in May, 1937, repayable at par exist January 1967, option redemption in whole or in part at 2 per cent premium six months notice on any interest date after 1st January, 1947. Option to holders at anytime upto 1st January, 1947 to convert £50 worth debentures into 40 Ordinary Shares of Rs. 10/- each. (l) Entitled to a non-cumulative dividend of 2½ per cent, payments, after the dividend on preference shares and 2 per cent. on Ordinary shares (m) Repayable after 1944 with the option of redemption after 1940. (n) Includes 3 per cent being arrears for 1937-38—1939-40.

ISSUED WEEKLY

Vol. XXXII. No. 3 SATURDAY, JULY 17, 1943 Price Re. 1

Aeroplanes, Tanks and Anti-Aircraft Guns etc. are required in ever increasing quantities to defend our country.

Army clothing is another war time necessity and we have placed our entire plant at the disposal of Defence Service.

We regret we shall not be able to meet civilian demands at present.

LAL-IMLI
PURE WOOL
FABRICS

THE CAWNPORE WOOLLEN MILLS ESTD. 1876 CAWNPORE, U.P.
(BRANCH OF THE BRITISH INDIA CORPORATION LTD.)

Advertisements usually pay.

But this one won't.

Because we are only advertising the fact that we cannot manufacture sufficient cables to satisfy the presentday demands.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Cheap conditions have continued to prevail in the money market and interbank call money has remained unchanged at ½ per cent. in Calcutta and Madras and ¼ per cent in Bombay. There is a plethora of funds in the market with no borrowers. At the auctions of treasury bills held this week bidding was rather keen and the total amount of applications was considerably higher at Rs. 13,22½ lakhs against Rs. 4,81¼ lakhs last week. The The Government was thus able to get its full requirements of treasury bill at the slightly lower rate of 15 annas and 11 pies per cent per annum. We pointed out last week that the poor response to treasury bills offer was only due to the comparatively smaller amount of treasury bills maturities and that it was in no way an indication as to the state of the money market. It must also be remembered that only earlier in the week applications for 3 per cent 1963-65 loan were heavy and banks were not prepared to put in any large sums in short-term bills. The offer for next week has been maintained at Rs. 8 crores. With the continuance of the present conditions in the money market and with maturities on a fairly large scale, it should be possible for the authorities to achieve a further decline in the average discount rate on treasury bills. As in the next weeks maturities of tap bills are on a fairly large scale there must be keener competition.

The returns of the Reserve Bank for the two weeks ending July 9, 1943, show that expansion of currency on a large scale has been resumed; the returns for the week ended July 2, 1943, were not received in time last week. In this week there has been expansion of currency for Rs. 13.3 crores against sterling securities, total notes issued being Rs. 746.15 crores against Rs. 734.75 crores on June 25. Notes in circulation were Rs. 733.61 crores against Rs. 723.35 crores. Sterling securities were higher by Rs. 13.3 crores at Rs. 567.79 crores. Rupee coin showed a decline of Rs. 70 lakhs to Rs. 15.54 crores, while rupee securities also were lower by Rs. 1.3 crores at Rs. 118.41 crores. The latest return shows a further increase in note issue to Rs. 748.26 crores. The increase in note circulation is very much more at Rs. 737.62 crores as notes in the banking department show a decline from Rs. 12.54 crores to Rs. 10.64 crores. Rupee coin are further lower at Rs. 14.63 crores. Sterling securities show a rise of Rs. 3 crores to Rs. 570.79 crores. There is no change in the amount of rupee securities at Rs. 118.41 crores.

In the banking department Government deposits show an appreciable decline in the week ended July 2, 1943 to Rs. 15.43 crores from Rs. 19.33 crores, but in the latest return are slightly higher at Rs. 16.34 crores. Bank deposits with the Reserve Bank after being lower at Rs. 53.03 crores are higher at Rs. 54.13 crores. Even after the transfer of Rs. 13.33 crores in two weeks, foreign balances show a net decline of only Rs. 2.54 crores. Ways and means advances are Rs. 64 lakhs against nil in the previous two weeks.

The statement of the Imperial Bank for the week ended July 9, 1943 shows a decline in deposits from Rs. 191.94 crores to Rs. 190.53 crores, but investments are higher at Rs. 135.93 crores against Rs. 133.97 crores. Total advances are Rs. 6.55 crores lower at Rs. 37.35 crores. The decline in the figure is mostly on account of bills discounted and purchased which increased sharply in the week ended July 2, 1943 from Rs. 4.53 crores to Rs. 9.49 crores. The increase must have been mainly due to maturing treasury bills. There has again been a decline to Rs. 3.11 crores this week. Loans are slightly lower at Rs. 10.04 crores and cash credits and overdrafts at Rs. 24.2 crores. As a result of the decline in the amount of bills discounted, cash balances have risen from Rs. 4.4 crores to Rs. 28.83 crores.

The giltedged market has continued steady and quotations have been well maintained for tap loans. It is reported, however, that the Reserve Bank has not been able to make any large sales during the past few days, the market apparently requiring some time to absorb the earlier purchases from the Reserve Bank at the higher rates. There has been a rather sharp decline in the bullion market during the last two days. Ever since the control order was passed by the Government banning trading in forward contracts bullion prices have perhaps touched the lowest levels. No satisfactory explanation is offered but it is reported that there has been some influential selling and that the stock position is definitely easier.

The exchange market has been fairly active for dollar bills though business passing has been only a fair scale.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D. A. bills on London at 1s. 6 9/32d. and four months at 1s. 6 11/32d.

Banks are buyers of T. T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money is unchanged at ½ per cent lenders.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on July 13. Total amount offered was Rs. 13,22,25,000. Tenders at Rs. 99-12-3% were accepted in full and those at Rs. 99-12-0% were allotted approximately 68%. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-15-11% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on July 20 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on July 19 at other centres. Successful tenderers should make payment on July 23. Other conditions are as usual.

During the week ended July 9 Government of India Treasury Bills for Rs. 35,59,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

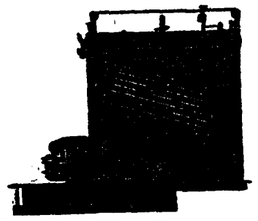
Finance Abroad.

Thursday Morning.

A very brief report as to the rise in U.S. debt during 1942-43 to 137 billion dollars to a level above the national income for a year hardly calls for notice in view of the threatened breach between the President and the Congress on other issues. There are quarrels about the Navy Department which has been condemned by the Department of Justice for its action in leasing the Elk Hills Reserve to the Standard Oil Company of California. The Departments have their own quarrel with the Congress. Investigations have been held up by the President's order as to the submission of documents concerning FCC. The Director of the Budget Bureau has obeyed orders by refusing to hand over the files because certain matters relate to military programme. The refusal is unconnected with the quarrel between the Wright Aeronautical Corporation and the Truman Committee as to the quality and performance of aero engines supplied to the Government. The problem is not related to the estimated increase in war expenditure this year put at about 266 million dollars per diem for it has been clear from April that the President was unable to meet Congressional criticism. Bills were introduced by Congressmen in order to provide money for the farmers, and the pay-as-you-go tax plan meant to help the taxpayer, went through. The Farm Bloc is still powerful like the labour unions. Both are not greatly interested in the success of anti-inflationary measures. The farmers sought exemption of agricultural workers from military service through the Bankhead Bill which was passed in the Senate by a two to one majority. Farmers wanted that higher labour costs should be considered in fixing prices of farm products. Hence the Pace Bill which had been passed before April. The Senate accepted the measure and subventions to farmers could not be deducted in fixation of prices.



The anti-inflation programme was making heavy weather before the crisis on subsidies arose. Subsidies for consumers were novel, and the destruction of the appropriate agency implies that subsidies to help rationing cannot be intraduced. There have been resignations—but not from the Cabinet and the quarrel between Mr. Jones and Mr. Wallace appears to be dying out though Mr. Jones has aired his faith in private enterprise. But the resignation of Mr. Chester Davis may be taken to mean that the farm programme is not going through. If food supplies are inadequate U.S. prices must move up, and the victory for monetary stability seems as remote as ever. The curtailment of the U.S. cotton acreage by a small percentage is put down to floods and labour shortage. Both these make for higher prices for farm produce and the President naturally wanted to adopt the means used in Canada to keep prices down. But Congress has more or less consistently taken a different view and the elections of 1944 have a perceptible effect on the stiffening of Congress. Congress says nothing about war effort but is merely investigating it. There are claims and counter-claims as to shipping losses, war productions and further additions to U.S. tonnage etc. A census of property owned in foreign countries, as on May 31 by Americans is not going to make the Administration popular with the propertied classes. They might combine to oppose the Executive in every field and the opposition may affect both tax and borrowing programmes for the current year when the war plans call for steady increases in expenditure. The U.S. which has been told through lectures by a visiting Colonel of India's war effort anyway has plenty of problems that cannot be solved by bank reserves or low interest rates. They are not helped by the submission of Martinique or assurances as to China's position after the sixth—the most difficult—year of the war. Victories in the S.W. Pacific may have no determinate effect on Congressional views. The Administration drew up plans for post-war relief of Europe. The Dutch Government has entered an objection because the places given to China and Russia on the Relief Council proposed might be better given to others. Holland has lost her empire in the East and looks to its recovery. But the Dutch are not represented on the post-war council and may act independently like the Belgians—take relief in return for cash. It would always be possible for the Dutch or any other government with funds of its own to arrange for supplies from Argentina which agreed to the wheat conventions but is not connected with the Allies' plans for relief of Occupied countries. The trouble over subsidies indicate that relief operations may have to begin at home, and the relief may become a factor in polilitical struggle this year. The U.S. outlook remains disturbed; little will be heard of inter-allied plans or of compromise agreements. The calculation as to the course of commodity prices in the U.S.A. seems warranted by the rise on Wall Street. Markets are active and firm say the cables and U.S. Steel at 58 looks like going up in spite of reports as to the decrease in U.S. steel output arising from the coal strike.

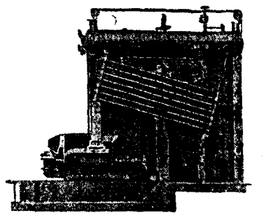
SAVINGS BANK ACCOUNTS
provide an ideal method of setting aside small regular deposits which quickly accumulate to a substantial sum. Safety of capital is ensured, interest is allowed and withdrawals may be made by cheque.
Branches in India:
CALCUTTA, 1864, Clive Street and 37, Chowringhee; DARJEELING, BOMBAY, Hornby Road and Princess Street; KARACHI, AMRITSAR, LAHORE, PESHAWAR CANTT., PESHAWAR CITY, RAWALPINDI, MURREE, DELHI, NEW DELHI, SIMLA, SHIMKARI, GUJRANG



The presumed increase in the National Debt to over £17,700 million has been made clear by Sir H. Kingsley Wood. The war period has witnessed a very large addition to debt but the money has been raised, not only through bills and deposits, but through the larger savings which follow an increase in incomes. Prices have risen, but savings have not suffered, and the account of price control in Britain, given by Mr. Walter Hill recently, shows that consumption has been held to a minimum partly because prices were held down. There was nothing to encourage hoarding and the expansion of the debt by over £9,000 million is the ultimate proof of the Treasury's success in passing on part of the cost of the war to future generations. The war must have cost so far over £17,000 millions of which roughly half has been provided by revenue and the other by borrowing. This division of expenditure between the present and the future has not been followed by special measures to encourage savings or discourage all forms of savings outside Government's new loans. The stock exchange works as usual and investors are free to buy tin and rubber shares, reckoning on the progress of U.S. arms in the Pacific. Apart from the estimates as to world demand for rubber after the war, put at two million tons, and the relative unimportance of synthetic rubber after the emergency, there is the belief that an East Asia Command means an early offensive against Japan. Mr. Eden objected strongly to co-prosperity last week, and rubber shares went up. Earlier, tea shares rose because tea shares looked good for mixing with other investments. A speculative favourite like Gula Kalumpong has risen more smartly than the Anglo-Dutch Plantations of Java. There is a chance of Rubber Trust rising to par though the Chairman's speech in March was not too encouraging.

The revival in Eastern Oil shares evidently influenced the buying of rubber and tin mines. It has been said that Burma Corporation is fancied by London investors as may be seen from a jump of sixpence in the quotation on Wednesday. Previously mention was made of Bombay buying of oil shares and the rise in Japanese Bonds on the reckoning that after defeat Japan would pay interest punctually and Japanese bonds were cheaper than the rest. The Foreign bond market took a knock when the new 3 percent Funding issue of Brazil was announced. The alliance for the war has not made Brazil liberal to her creditors. This fact as also the drop in Argentine rails made London irregular but the abundance of funds and convenience of borrowing for the Government remain. There has been no change in giltedged comparable to the rise in Hongkong and Shanghai Banking Corporation shares last week, or the rise in Royal Dutch shares this week on the appearance of the report and accounts. Attention may be drawn to the improvement in the price Barnagore Jute shares in London though the London price is still below the Calcutta price.

The promise of a victory for the Smuts Government has helped South African mining. West African shares are said to have gone up in sympathy. This week's improvement in oil shares is connected with the failure of the German effort round Orel. Home Industrials have been favourable as usual and prompt denial of allegations made [illegible] the U.S.A. has helped Imperial Chemical ordinary shares as

India & International Finance

The average Indian's attitude to international schemes in the economic sphere is one of suspicion that the great powers could and would easily override India's interests and confidence that India's self-sufficiency will obviate the need for participation in such schemes. Suspicion of foreign intentions is not a mere complex, for, it never fails to gain warrant from current developments. Nor can a broad self-sufficiency be stigmatised as a perversity of Indian economic thought. The facts of the economic situation in India and the whole course of the history of our economic relations with the rest of the world, form a strong prima facie case for our refusing to line up with these enthusiasts for international financial regulation. A country like India, which produces within its own borders most of the raw materials and foodstuffs it needs, and which has in addition a monopoly of more than one staple of world trade, with which to secure the necessary imports, can stand aloof without either jeopardising her interests or exposing herself to any just charge of obstruction to world progress. But at the present rate of progress in the political sphere, it is not possible to hope that India will be altogether free to join, or stand aloof from, an international scheme. It is therefore, worth while to examine the relation between India and international finance as it has been in the past and as Indians would like it to be in the future.

The outstanding fact in India's economic relations with the rest of the world is that practically throughout the whole course of history, India has been in the enjoyment of a favourable balance of trade. India's export trade, however, has never been tainted by political pressure or exploitation or dumping or any of the blemishes so common to the export trade of many countries in modern times. No country has taken anything from India except of its free will; and except in the unfortunate case of the opium trade developed by the British in India, India has not exported anything which is not the real or healthy need of the importer. What India has been blamed for, with what justice it is not necessary to examine to-day, is that she had till very recently, been converting the greater part of this favourable balance into gold and silver and that throughout history, she had been a veritable sink for the precious metals. That the U.S.A. to-day is no better, despite certain obvious differences, is a retort which readily occurs to one in this context. But the sin of hoarding in days, when its effects could not have been consciously felt, has been more than expiated by India being the first to economise the monetary use of gold by the adoption of the gold exchange standard and by her disgorging nearly 200 crores worth of gold when the world was hungering for gold. In the sphere of international finance, India, then, has no sin or crime to answer for. On the other hand, she has a title, such as few countries have, to the best consideration and treatment at the hands of other nations.

We may now turn to consider the main features of our financial and economic relations with the rest of the world as they may be in the post-war years. The most arresting of them will, doubtless, be the large holdings of sterling in London which have to be regarded firstly as a matter between India and Britain, and secondly, as between India and the rest of the world as a whole. Next only to our sterling balances in importance will be our lease-lend accounts with the U.S.A. of which nothing more can be said at present than that it would be contrary alike to the best traditions of the U.S.A. and her former experience of war debts, not to speak of the spirit in which the war should be fought, if the war should end up with large-scale debts owed by India to the U.S.A.

Leaving aside these two questions of sterling balances and lease-lend accounts, the financial relations of India with every other country in the world will, in the main, be the result of ordinary transactions in trade. There can be few instances of countries with whom India will have adverse balances. Where adverse balances are likely to be experienced, their payments in forms acceptable to the country concerned can offer no problem worth speaking. The normal favourable balance of trade had, in the past, been liquidated partly by the import of treasure and partly by our foreign obligations. The building up of credits owed by the rest of the world to India, which one would naturally expect on the strength of a consistently large favourable balance of trade, was never attempted. Thus the mechanism of exchange between India and the world was rendered simple and smooth by the failings and disabilities of this country. Conditions in the future may differ slightly in point of the size of the favourable balance of trade and the wider spread of such favourable balances than in the past. The whole question has to be discussed against the background of our foreign trade relations. Time was when a huge adverse balance with Britain was paid off by an even larger favourable balance with the Continent of Europe and Japan and the U.S.A. formed but a small part of the picture. That age was followed by the period of Empire trade and bi-lateral pact with Japan. The Continent of Europe, which was being overshadowed by the Empire, has now, in common with Japan, been blotted out of the picture by the present war. Trade relations with the U.S.A., the Eastern Empire countries and the Near East are being tightened. This wide spread of India's foreign trade may well be deemed to be an argument against participation in schemes which are devised in consideration of special difficulties.

But normal trade does not exhaust the financial and economic relations of a country with the rest of the world. India has to give special consideration to the needs of her post-war development. She has to decide how best she can make use of the sterling resources she has built up during the war. She has to clarify in her mind the relations she will have with a country like the United States which will occupy in the reconstruction work of the post-war period a place as unique as she is now occupying in war work. Though it is true that India will have no need for foreign capital in the sense of loans raised abroad and imported into the country with varying degrees of encumbrance, the capital goods she will need to import from foreign countries can be obtained only as part of a system of commercial and financial relations with the more important foreign countries. And these countries will, doubtless, be reluctant to provide capital goods to a country which will not play her part in the ordering of international finance.

It may be said, therefore, that, while narrow considerations might reveal no harm in India being isolationist, the needs of national economic progress suggest that India should assert herself and pull her weight in the international finance. Any plan for the regulation of international finance, if India is to participate in it without danger and with advantage to herself and the world, must satisfy three conditions. Firstly, a sound consitution which precludes domination by special groups, secondly, sound principles and aims which favour smooth and vigorous development rather than narrow outlook and frequent friction, thirdly an institutional and executive framework which can tackle immediate tasks with justice to all and relief to many. These terms are too general; but their concretisation in reference to the British and American proposals is not difficult. It may be said without hesitation that, in respect of the constitution of the new institution, whether it is the Clearing Union or the Stabilisation Fund, neither the British nor the American proposals will satisfy a country in the position of India. In the former, voice in management is related to volume of foreign trade and in the latter to holdings of gold and foreign exchange, our sterling balances being made ineligible for inclusion under this head. Though it is difficult to formulate a criterion by which India's share in management may be increased, it is not unreasonable to ask that in consideration of India being tenth in the ranking of industrial countries, her importance in the world trade judged by the indispensability of her goods and not alone by their market value, and her potentialities as a market, particularly for producer's goods and, not least of all, of her vast population, India, and China, should have special weight in the management. And what is more important, the mistakes committed in the past should not be repeated and the practice of sending foreigners or unrepresentative Indians should be expressly forbidden by the statutes of the International body.

The question of institutional framework and general aims and principles is, however, far more important. Considering that India may well leave out of consideration the chances of serious disequilibrium in her foreign relations and that her primary interest is smoothness of exchange of goods and services with foreign countries, the elastic clearing system of the British may be deemed more attractive than the written constitution of the American proposals. But the Clearing Union scheme holds the danger of India's favourable balances being locked up, even if it be in the more or less broad expanses of the Clearing Union. The scheme, too, suffers from the obvious anxiety of its authors that Britain should be able to continue to import from the U. S. and South America, showing them in return her favourable balances with the continent of Europe, regardless of the state of America's balances with countries other than Britain. The Clearing Union has a real danger of deadlocks, from which India, too, must suffer. It is reasonable, therefore, for India to insist that the British experts should not be content with applying only one part of the banking principle viz., equality of credits and debits, but also the other part, viz., security and facility of encashment of cheques. The Clearing Union, while it may well set off normally one debt against another, can well have other assets by which bancor balances can be cashed by creditor countries in other forms. Why should no attempt be made to build gold reserves for the International Union by countries like the U.S.A. paying the whole of their quota in gold and others in different proportions according to capacity? Why should not the world's new production for the next ten years be made over to the International Union? Such special measures will create confidence in the Union such as no elaborate argument or intricate constitution-making can. Political issues will, no doubt, arise in relation to custody; but they must be got over.

While all these issues are comparatively remote, it is the treatment of what are called "abnormal war balances" which will provide for India the acid test of these international schemes. It is unnecessary to argue the point at length. India's war balances are not to be classed with the war balances of other countries. They are not the result of war profiteering. They have been built up at the cost of starvation and misery throughout the land for which the best use we can make of them in the post-war times would be but poor compensation. And the indispensable and basic condition of good use is the freedom of these balances. The American proposals envisage the handing over of our sterling balances to the international institution and our buying forty per cent of them back during a period of 23 years. The British proposals are vague except in their insistence on the liquidity of these balances and on their involving no strain for the debtor. The financial acumen of the experts should tell them that India will have nothing to do with a scheme which involves freezing of her foreign assets.

AN EXECUTIVE IN DIFFICULTIES

Temporary involuntary nationalisation is the fate of the U.S. coal mining industry since Mr. Ickes has confessed his inability to say when the mines would revert to the owners, and referred also to the imperative need for coal for the nation.

The dispute that began in May has run an unusual course. The War Labour Board became a party to the dispute when the question of an increase in wages under the contract became vital. The mining industry usually adopts two-year contracts, and the wage agreement has often turned on wider issues like the closed shop. The great strike of 1939 organised by Mr. Lewis produced a new agreement in which the U. M. W. obtained its own terms. Subsequent agreements have been affected by outside developments, and an understanding of inflation in the U.S.A. has become essential. Mr. O. R. Hobson recently drew attention to the fact that the wage-level in the U.S.A. rose by 15 per cent in 1942. It was certainly in line with the increase in the note circulation, but the failure of the anti-inflation programme forced on the Administration the consideration of a wage-stop. The U. M. W. stood out against that, and the strike in May duly followed. The mine-owners were persuaded during the first truce to raise wages by the adoption of the door-to-door principle; but the United Mine-workers did not get what they wanted.

The original issue has altogether disappeared after the introduction of the Smith-Connally Bill. The 78th Congress voted for the measure and the President declined to sign. Congress re-enacted the Bill passed to make strikes illegal. It was no longer a fight between miners and owners but one between Congress and Executive. If that is understood, it is easier to see why it has developed. The U.S. Constitution lets the President do what he wants, but an absolute final veto does not exist. That Congress stuck out for the anti-Strike Bill instead of Mr. Roosevelt's own proposal to take workers aged between 45 and 65 for military service is not surprising because Congress (where the President's party strength has dropped during the elections of 1940 and 1942) is not responsive to the President's programme of higher taxes, subsidies for the purchase of food and general anti-inflation measures. There has been no follow-up of the suggestion of a conspiracy between the Isolationist Republicans and Mr. Lewis.

The test of the Third Term has arisen rather late after the elections in which the voters' indifference after the initial success in North Africa played a greater part than presumed. The Democrats had a small working majority in both Houses, but the struggle has certainly come. In the war period, the President as C-in-C has vast powers but the authority of Congress is unimpaired, as was shown in the long debate over the renewal of Lease-Lend this year. The President certainly accepted in his second term the retreat from the New Deal like his defeat by the Supreme Court. In the Third Term, without labour developing prominent hostility to emergency powers, a struggle has arisen over the right to legislate. The British analogy as to 'no strikes in war' is not complete. Wages have been raised in Britain by a threat of strikes, and strikes have taken place on the Clydeside and held up shipbuilding.

In view of the Administration's good luck over the appropriations bill for the Army and Navy as well as the trade pact programme, one may come to view the anti-strike bill as a minor defeat like the failure over the renewal of the U. S. Stabilisation Fund in April. Congress declined to give the President the power to devalue the dollar, and it also declined to let the Treasury do anything with the Stabilisation Fund without letting the Coinage Committee know what was going to be done and how. That defeat had no effect on subsequent grants, and we may be certain that it will not touch the next Revenue Bill. It is not difficult to see why Congress, which agreed to subsidies for farmers and railroads, declined to give subsidies to consumers. The fight against inflation would be

spoilt if the incomplete rationing were modified by food subsidies. In the U.S.A. many foods are unrationed after the transition to war economy. The reduction in consumption—the inflationary gap has been mentioned many times after the Budget Message of January—cannot be procured through subsidies in spite of British experience. If there were no subsidies there might be strikes which ought to be prevented by law. That is perhaps the familiar line of Congressional reasoning. It is singular that we do not know the views of the leading Governors or of the only living ex-President on the issue that has divided Congress from Administration. It is well to recall that Congress has latterly developed liberal views on foreign policy and the party line does not cut across the demand for an Atlantic System with sea power always supporting the framework of world peace. The two Republicans in the Cabinet have no views distinct from those of the Administration which, at the same time as the expansion and conversion of industry, has extended the working week (average 40.5 hours only in 1941) to 48 per week in certain cases by October 1942. We have only to recall the increase in fuel and power production in North America during 1941 and after to realise that the stoppage is not going to cut down U. S. steel production which has been more or less stationary for months.

It might be plausibly urged that dissatisfaction with the Executive's handling of price control (as proved by Mr. Henderson's resignation and Mr. Byrnes' failure to hold the cost of living down) underlies the Congress' decision to get all strikes out of the way. Wholesale prices and the cost of living rose right through 1942 in the U.S.A. Subsidies as in Canada were demanded to roll back prices, and Congress has disagreed on this, as on the question of declaring strikes illegal. The restoration of peacetime standards of wages by the War Labour Board, like the voluntary adjustment of wages in relation to the cost of living without reference to the War Labour Board, has perhaps modified the results of the anti-inflation programme, and Congress has registered substantial disagreement except in regard to farm subsidies. The acceptance of the latter has a real significance for the countries shipping the usual exports to the U.S.A. The increase in employment and income during 1942 may have led to a shift of emphasis in the U.S.A. on the measures needed to fight inflation. Credit expansion has been checked; savings have increased, but the symptoms of inflation linger. Organised Labour put up the inevitable demand for higher wages, and the mineowners, later the War Labour Board, have refused. The strike was manifestly a consequence of President Roosevelt's failure to brake the rise in prices and wages.

The Democratic revolt against economic stabilisation is to be reckoned as one of the major causes of the Government's crisis. The crisis has come despite the efforts to avert it by extension of Selective Service to recalcitrant Labour including miners. The consequences may not be great for the U. S. President has power enough to get new tax bills and get in the money which may go into permissible wage-increases.

(Consent of the Central Government has been obtained to this issue under Defence of India Rule 94-A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.)

ANNOUNCEMENT

THE BAITAKHAL TEA COMPANY LIMITED

(*Incorporated under the Indian Companies Act. 1913*)

REGISTERED AT CALCUTTA ON THE 6th JULY, 1943

Application has been made to the Committee of the Calcutta Stock Exchange Association for permission to have the Shares quoted in the Official List.

AUTHORISED SHARE CAPITAL - -	Rs. 10,00,000
ISSUED SHARE CAPITAL - - -	Rs. 4,00,000
5% DEBENTURES - - - -	Rs. 2,50,000

All Debentures and Ordinary Shares having been fully subscribed for by the Secretaries, Directors and their friends, no further application will be received and no Prospectus will be issued.

U.S.—India Trade After The War.

It is encouraging to find that the American Council of the Institute of Pacific Relations has paid attention to the prospects of Indo-American trade after this war. The May issue of "The Far Eastern Survey" published by the Council, contains an article in which the writer envisages closer and richer trade between India and the U.S.A. and, what is more important, the U.S. taking a hand in the industrial development of this country. Before this war, it is said, India was well-maintained as a close preserve of British firms and American businessmen could not, and, for that reason, did not seriously try to, break the ring of British interests well entrenched in India. But the future would appear to be very different. Since 1940, the U.S.A. has had valuable opportunities, thanks to the war, of penetrating into the Indian market through the flow of the Lease-Lend materials. Munitions, machines, tools, raw materials and other essential goods are now pouring into India primarily for the acceleration of India's war effort. Factories are springing up under American direction which may well serve to lay the foundations of our industrial structure. When peace is established, America cannot automatically relapse into her pre-war position in Indian trade. Industrialists and businessmen of the two countries would naturally try to cement the commercial contact already established during the critical days of war. The article in the Far Eastern Survey states: "The war-time influx of U.S. goods to India especially capital goods, might well be the prime pump for peace-time trade. New factories with American equipment might be expected to turn to the same source for replacements and plant expansion". The influx of American goods into India is really imposing. The Survey gives these figures: "In 1942 the U.S. exports to India were $378,000,000 nearly ninefold of 1939 and mostly Lease-Lend, but commercial exports are more than double those in 1939". Under what precise terms these Lease-Lend imports are coming into India, what India's responsibility would be after the war with regard to these imports, how far the U.K. would succeed in regaining her pre-1939 position in India's foreign trade, etc., these are questions that cannot be fully and finally answered now. We do not know how far the activities of the U.K.C.C. would help to perpetuate India's excessive dependence on the U.K. Surely much depends on India's political status at the end of the war. This is well recognised by the 'Far Eastern Survey' which suggests that the pace of India's industrialisation in the post-war period depends on the measure of political independence achieved. American businessmen are aware that, if India's constitutional status remains as it is today, their struggle for the Indian market might lead to undesirable political friction with Britain. A free India would consider the question of trade with America on its merits and would be free to foster Indo-American trade, even at the expense of Britain, in order to lay the foundations of a balanced economy.

Leaving aside the political forces and undue speculation on their future, and arguing on the facts of the economic situation in India, it is clear that we must be prepared for a new orientation of our foreign trade in future. This war has already wrought several remarkable changes in the distribution of India's overseas trade. India's bonds with the European countries, Japan and the U.K. have all alike been definitely loosened and India has drawn closer towards Africa, the Middle East, Australia and the U.S.A. The gap created by the withdrawal of the U.K. and Japan in the markets for cotton goods in the neighbouring countries has been to a great extent filled by India. She must be extremely inefficient to lose in the post-war years the ground thus won during the war. Anyway, India's true interests do not require the further development of trade with any country which can offer mainly consumers' goods in return for the exports of foodstuffs and raw materials. Her progress lies in tightening the commercial links with countries which can export capital goods to India in exchange for India's exports of industrial raw materials.

India's foreign trade has during all these years been such as to present her with a serious dialemma in regard to her fiscal and economic policy. Her chief customers for raw cotton have also been the chief competitors of her domestic industry. Any attempt to reduce the competition of imports involved a glut of the raw material with disastrous consequences to the stability of the national economy. To increase the consumption of raw material in indigenous industry, it was necessary to import capital goods from abroad; and neither political nor economic factors were favourable to such imports. It is idle and to some extent unfair to blame Britain for declining to aid India's industrial development, as Britain's national economy requires a large-scale export of consumer's goods which the export of capital goods will necessarily render insecure. It must be said to the credit of Britain that her free trade policies of the past did help a larger flow of capital goods to foreign countries than a just regard for her interests would warrant. The advent of Japan as an important customer of India next only to Britain only accentuated the deadlock character of our foreign trade. For, while India's trade relations with Japan are not different from those with Britain, Japan has no capital resources comparable to those of Britain; and what is worse, unlike Britain, which specialised in quality goods, Japan took advantage of the proverbial "Price market" in India and threatened the most obscure workers in rural areas with unemployment.

The rescue of India's foreign trade from what may be called duress to one of exchange on the basis of rational division of productive activity depends on the development of trade relations with countries which do not look on us as a market for goods which we can produce for ourselves, but which can export the capital goods we require without fear of adverse consequences on themselves.

Neither England, nor Japan, nor any other European or British Empire country for that matter, belong to this category. They cannot attain, in the near future, the capacity to export capital goods to India without injuring their own economic systems. In this respect, the U.S.A. stands on a unique position. With her abundant raw materials, high degree of industrialisation and surfeit of capital she has already attained, she will be able to export the capital requirements of India and thus take an active hand in India's industrial progress without endangering her economic interests, here or elsewhere. The writer in the 'Far Eastern Survey' sees in our repayment of our sterling debts a great help to such developments.

But the "Manchester Guardian" thinks otherwise. It is decidedly reluctant to concede that war-time liquidation of India's debts to Britain will permit a greater diversification of our foreign trade. It argues that what is happening now as a result of the repatriation of the sterling debt is not a dissolution, but only a reversal of financial relationship between U.K. and India. That is, if India's debtor position with U.K. had caused a close commercial interdependence in the past, her future creditor position with U.K. would not loosen the ties but would only reverse the relations. In other words, India instead of being obliged to export more than she imported, would be forced to import from U.K. more than she exported to that country. It is difficult to believe, though it is tempting to think so, that India's creditor position in relation to Britain will develop to the point of this country being obliged to take British goods as the only way of securing a return on her loans to Britain. The chances rather are that, once India becomes free to choose what she will buy and where, Britain will begin to complete with the U.S.A. on equal terms in providing the goods that we need, rather than lose all

trade by holding out for exports of consumers' goods. India is one of the few countries which trade with all parts of the world and the future may well see an increase in the diversification, as much as the far flung character, of her foreign trade.

"Problem Of Unemployment"

Lever Brothers and Unilever Limited have adorned their brows with new laurels by producing the little booklet on the "Problem of Unemployment", as part of a wider study they are making of social and economic problems. The scrappy accounts of this publication, which filtered through immediately on its release in England, have done it injustice. It is a remarkable piece of work, which shows not only the alacrity which Lever Brothers can attune themselves to the spirit of the new era in the world's economic life, but the clarity and strength with which they can take up a position from which they can check the excesses and exaggerations of a period of revolutionary change. The author of the pamphlet has the capacity, all too rare, to keep antithetical ideas and trends together, sift the good from the bad of both alike, and suggest policies that are in keeping as much with the facts of economic life as with the aims of modern economic ideology. That the views of a big business corporation are not out of tune with the spirit of the age, is a complement which we have rarely had the occasion to give. This is not to say, however, that all the practical suggestions made in the booklet will meet with ready acceptance; and it is impossible to deal with them all within the limits of this note. But the observations on irregularities in the extension of capital equipment, the suggestion of a twofold budget, the light it throws on the way by which unemployment figures can be utilised for the regulation and direction of industrial activity—all these give the booklet a unique importance in the literature on this subject. We hope that Lever Brothers in India will give the booklet as wide a circulation as it is possible to achieve in these days of paper shortage.

Electricity for Tools

Electrical progress in the U. K. was described in a recent cable from the Federation of British Chambers of Commerce. The total consumption of electricity in the U. K. during 1942 was 47 per cent higher than in 1938, according to the Ministry of Production. Industrial consumption alone has increased by nearly 79 per cent since 1938. The reduction in consumption by those industries not essential to the war effort has been more than offset by the increase in new factories, the expansion of employment, and the extension of working hours. In addition, there has been a remarkable increase in the proportion of electrically operated equipment and appliances used in production. The extension of mass production methods has resulted in a great increase in the installation of electrically operated handling devices, conveyors, cranes, etc., and many manual operations have been displaced by those effected with the aid of electricity. The most important aspect of the increase in the use of power is the electrification of machine tools. Instead of an overhead line, shafts are driven by a single or a few large motors and the modern factory is equipped with individually electrified machine tools. Almost every machine tool made by British manufacturers today is designed for individual electric drive, and nearly every tool received from the U.S.A. is either provided with its own motor or equipped with a British motor and control gear. The advantages are many; the installation, disposal rearrangement and expansion of plant are all facilitated by the fact that modern machinery tools are self-contained with their own electric equipment. In addition, the risk of shutting down and complete production line as a result of the failure of a single motor or line shaft is removed. The assurance is certainly forthcoming that the British tools manufacturers have been in the forefront of the development of the application of electric drive to machine tools.

The Sixth Year of War

The decrease in outside supplies to China in the sixth year conferred additional importance on the war effort of the country. The U. S. Office of war information described the great effort made in regard to war materials, manufactured goods and farm produce. China began the sixth year with victories and ended it with victories, and the improved position was been emphasised in all surveys appearing in China Week. Battles in the Yangtse Valley have saved the rice growing districts of Hupeh and Hunan from invasion. The coastal provinces did not yield to the summer offensives of 1942, and potential air bases have been retained at the same time as the U. S. air force came to supplement the meagre Chinese air force. Progress in production matches the defence of Free China. Despite the difficulties arising Government enterprises completed between 60 and 80 per cent of their production schedule. The U.S.O.W.I. survey notes that gasoline production and the manufactures of radio surpassed the schedule amounts and alcohol, pure soda and transformers stayed near 100 per cent of the quotas. The production of caustic coda, coal, tungsten, zinc and tin remained at more than 70 per cent of quotas. Production in iron and steel, however, fell below 50 per cent. More food was produced in accordance with the decision to increase production and the improvement of seed and farming methods. Free China yielded 48,640, 932 piculs (1 picul=110 lbs.) more of foodstuffs than usual. That was more than 15 million piculs above the goal set for 1942. The acreage under cotton in China increased and efforts were made to increase herds of cattle, sheep and goats by breeding and disease control. Road-building and railroad construction continued in spite of the lack of most materials. About half the planned railway construction was carried out and road-building surpassed the goal. A total of 1,072 kilometres of new highways was built. River transport was improved with new junks and new canalisation of the Mapien and Yan Rivers was completed partially. Supplies from the north-west had come by river said a recent Chungking report. The carriage of petroleum on rafts made of a thousand inflated goat-skins is one of the many feats. The Central Planning Boards's attempt to develop the six north-western Provinces with 22 million inhabitants made progress in the past year. New factories were set up, says a recent account, and the problem of skilled manpower is being dealt with by the migration of whole families to the north-west. Payments to cover the cost of removal are made by the Government with special allowances to workers to cover rent and medical care.

Russian Farming

Facts and figures relating to rural Russia were provided by Sir John Russell in a broadcast on farming in the U.S.S.R. Nine-tenths of farm land is cultivated through collective farming according to Sir John and that more than use of mechanical appliances makes Russia unique. The average collective farm is about a thousand acres, that is to say, 6 or 7 times the size of an ordinary English farm. The farm is divided into six or seven fields for the different crops, but there are no hedges or fences. Grain takes up three-quarters of the collective farm, but a quarter is devoted to forage crops and market garden crops as well as crops for factories like cotton, flax and beat sugar. But cereals are foremost and cash crops come a long way behind. Russia is a dry country and the short winter is quite sharp in the South even as in the North. On the Steppes tractors and combines are common, but the average farm depends on borrowed machines, the hire being paid in produce to the Government. After the seed grain is taken and the taxes paid the produce is shared among the workers, not according to the manhours put in, but in proportion to the actual work done. Wages are not at all equal as one man may claim 200 labour days and another 600 labour days. Cottages and allotments are common since 1935 on the collective farms. A worker can keep his own livestock which is private property. Russia has had to made good the losses noted in the period of the first Plan. The number of cattle increased steadily up to 1938 and would be very high if it were not for the war. Women do the same work on the farms as men and the children are kept in the creche attached to each farm or group. Surplus produce from the workers' own parcels of land can be sold to the co-operative shops or food can be sold at the railway stations and the peasants' markets. Sir John noted that the rural standard of living was rising steadily till the German invasion followed by appalling damage. But Russia recruited her tank crews from the trained drivers of tractors and the tractor factories became tank factories. In paying a tribute to the Russian peasants' virtues, Sir John emphasised their keenness on education for both young and old, and the self-reliance of the village community for education and entertainment. The villager's diet remained simple, and it was only recently that meat became common. Sir John Russell recalled that he saw tinned meat in 1939 in the villages, proving that the bread and cabbage soup diet was undergoing modification. The huge hedgeless fields of the collective farms have made for a common agricultural practice, and departures in dry farming have been mentioned in connection with the grow-more-food plans in India.

Changes in Markets

The conclusions frequently drawn from the direction of trade in 1942-43, may be illustrated by reference to the seaborne trade returns for March. Imports from the U. K. totalled Rs. 29.53 crores in value. Exports to the U. K. totalled Rs. 57.34 crores in value. The fall recorded under both shows that high prices ruling did not secure an increase in the value of exports. The large increase in mineral oil imported last year accounts for the increase in the total shown against imports (Rs. 4.02 crores) from the Bahrein islands and the total of Rs. 17.8 crores shown against imports from Iran. The loss of Burma accounts for the enormous expansion in imports from Iran and Bahrein. It is noteworthy that a similar increase does not occur in respect of imports from Iraq and Saudi Arabia. Trade with the Empire has declined in spite of the increases shown in respect of imports last year from Ceylon and South Africa.

The outstanding feature of the year is not the decline in trade with Sweden and Switzerland but the large increase in imports from Egypt while imports from Kenya and Tanganyika were lower. Though the U.S.A. has acquired a bigger position in world trade owing to the war, the selective import policy applied there has affected Indian exports. But India retains a favourable balance of trade as in the past and those asking for a dollar reserve might refer to the excess of exports in 1942-43 namely Rs. 8.79 crores. Attention may be drawn once again to the large increase in exports to Portguese East Africa. The mild appreciation of the escudo hardly affected Colonial trade. Exports to Turkey continued to increase but export to Palestine fell away, partly on account of the substantial increase in Indian exports to Syria. The trade figures, which reflect the enormous increase in exports to Aden and Dependencies, Iran and Saudi Arabia last year indicate that the new sterling bloc outside the British Empire claims a larger share of Indian trade than the U.S.A. In view of the arguments heard in connection with the pegging bill a reference to the very large increase in India's exports to South Africa seems proper. The total was Rs. 10.49 crores against the total imports valued at Rs. 2.25 crores. It is not surprising that retaliation has been depreciated by the South African Indian Congress before and after its split. The increase in exports corresponds to that noted in the case of Nigeria which from last year became an important market though import control is enforced in that Colony as in others.

Raw Materials In 1942

The course of raw materials production in 1942 did not always run smooth. The most obvious conclusion arising from the statistics compiled at Geneva is that U.S. production of oil, coal and cement rose only moderately. In regard to oil, the average monthly production in the U.S.A. fluctuated, and in April 1942 when rationing on the eastern seaboard was enforced, was actually below the average of 1941. A gradual rise in the oil production of Argentina suggests that a new producer in Latin America is coming up. Outstanding for several reasons is the fall recorded after June in Colombian oil production. The oil production of Venezuela continued to increase in 1942 (production in the first quarter showing an increase of half a million tons per month). The steady rise in Canadian output has been described in relation to the progress of war industry in the Dominion. Apart from Trinidad, the Dominion is the only considerable producer in the Empire. The 1942 figures exclude Burma and Dutch Indies for obvious reasons, and there is no indication of the progress in Iraq and Saudi Arabia. As for Iran, the oil production in 1942 has exceeded the monthly

average of 527,000 tons recorded in 1941. The undeniable recovery in Mexican oil output preceded the Republic's entry into the war. No comparisons can be made in regard to Axis-controlled Rumania but the World Economic Survey suggested that output declined in 1942 though transport arrangements were improved. The figures indicate that Venezuela comes after the U.S.A. and the British interest in Venezuela's oil is very substantial. The rise in Peru's output supports anticipations as to the part assigned to Latin America's mineral production in the war in face of the increased demands from the U.S.A. It is noteworthy that the December 1941 output was not attained in any month of 1942 in the U.S.A. and the Federal Coordinator had not secured the increase in output. There was, however, a notable rise in the production of electricity, both hydraulic and thermal—the latter being far more important than in Canada. The major change in U. S. mineral output relates to copper-production being stepped up after November, 1941. The increase in U. S. supplies of lead last year was only small, but a considerable increase was noticed in the case of lead. The Geneva bulletin draws attention to the very considerable increase in tungsten from the Peninsula. The loss of Asiatic supplies made Europe's production far more important, and in July 1942 Portugal's ouput of wolfram attained a record in the same way as Spanish output touched a new height in April 1942. While pig-iron production in Spain has been more or less static in 1942 there have been perceptible increase in the case of copper and tungten while the rise in Spanish shipping activity is reflected in the monthly coal production figures of 1942 as in those of Portugal.

R.A.F. Havoc And Lost Time

The production crisis in Germany has not been met by the use of all available reserves of plant, manpower etc. and Speer has recognised that the increase ordered by Hitler in 1942 is an almost insoluble task. The difficulty increases with the success of R.A.F. raids on industrial centres. The last mentioned attack was on the synthetic oil plant at Gelsenkirchen. In the month ended June 22 the Bomber Command dropped 15,000 tons of bombs and the nightly raids are increasing in violence and frequency. The Ruhr has suffered severely as much as Cologne and the task of repairing the damage is bigger than that of keeping the industries going. Industries transferred to the east are now exposed to danger and what bombing causes to production can be calculated from an interesting set of figures, drawn from the post-raid photographs of Essen and Cologne. It is assumed that 4,000 acres of Essen have been laid waste by the total of 10,000 teons of bombs dropped on Essen during various raids. If it is conservatively assumed that one bombload devastates half an acre the ratio of industrial property to other property destroyed by bombing may be a sixth of an acre. Since one-third of factory area is occupied usually by buildings and the average number employed per acre runs to 90 men each time a bombload dropped means that the work of 15 men suffers re-employment by transfer of workers is certainly possible, but quite a number must be kept back for repairs to factories and other property. Transport and production difficulties will also affect industrial output in bombed areas up to a point. In the light of observed results it may be inferred that a bombload of 2½ tons means for the enemy a loss of 21,487 manpower. The monthly load of 15,000 tons (May-June total) works out to a loss of 120 million manpower for Germany. The bomber offensive means in short that 75,500 men are laid off because of the R.A.F. offensive. The U. S. Air force raids by day and night increase the heavy liability for repairs etc. Bombing in effect means that men sorely needed are not available for war production or essential civilian trades in Germany.

Sicily, Essential Appendage

The airfields of the Mediterranean would be fewer in view of Allied progress in Sicily after the landings reported on Saturday last. The threat to Italy has been obvious since the Allies collected their fleets in the Mediterranean. The island is the largest in the Mediterranean and its history from the first Punic war to the making of Italy, (Sicily and Naples voted for a union in 1860 A.D.) has indicated its strategic position in relation to the peninsula. Apart from the danger spelt for Italy by landings across the Straits of Messina, there is the threatened loss of sulphur supplies as the Italian mining industry is most developed in Sicily. Sicily is a small producer as compared with Texas but Sicily's sulphur is essential for the Axis. The Statesman's Year Book gives Sicily's area as 9,935 square miles and the population of the 9 departments as 3.9 millions (census of 1931) showing a fall as compared with 1921 has a higher average density of population per square mile than Italy and its two cities, Palermo and Catania were giving. With a coastline of 893 miles Sicily is more dependent on the navy than Sardinia or Elba. The olive orchards and citrus groves of the island are not rare in other Mediterranean islands; nor are the vineyards, though Sicily's fertile soil presents opportunities for the cultivation of cotton and hemp, maize as well as sugar. The South Wind blows no good this time to the prefects who face a danger greater than any arising from the local volcano. They would be aware that the valuable fisheries are lost to Italy like those of Tunisia. The island is represented in Italy's parliament but its political record is undistinguished.

War in the Pacific

The war in the Pacific has led to a steady decrease in Japan's naval strength. The U.S.O.W.I. has tabulated the losses up to June, 19 in a special note combining the reports received from the S.-W. Pacific; MacArthur's reports have been used: also the Navy Department's communiques; but there may be a duplication and complete accuracy is not claimed for the figures provided by the U.S.O.W.I. It is noted that seven aircraft carriers have have been sunk so far. This makes a real difference for the Japanese who made the most of the Navy's planes in the first five months of the war. Two capital ships and 26 cruisers have been sunk. The S. W. Pacific headquarters reported the sinking of 10 cruisers and 14 destroyers in addition to 10 submarines sunk and two damaged. The Navy Department cited the sinking of 6 submarines, one probable kill and 6 damaged. The totals are 120 combatant vessels sunk 28 probably and 147 damaged. Losses of non-combatant ships up to June 19, are equally heavy as the total of 195 sunk 23 probably sunk and 96 damaged indicates. The total for non-combatant ships is a measure of Japan's shipping difficulties to which might be added the limitation of the yards and the shortage of steel. The loss of transports and tankers must have serious consequences for the fleet in the S. W. Pacific, General MacArthur's communiques furnish a total of 41 combatant vessels sunk, 2 probables and 47 damaged (1 battleship and 20 cruisers among them). The three battles in the Solomons clearly reduced the advance force of the Japanese fleet and the peace of the Indian Ocean is the direct result of the heavy toll taken by the U.S. forces of Japan's navy. The losses in submarines are not heavy compared with Germany's but Japan believed in battle-cruisers and aircraft carriers more than in any other type and 7 sunk 3 damaged (to take the total of the two different sets of communiques) form a very large part of the carrier strength. Additions to capital ships have been mentioned in frequently but new carriers have not been referred to and the offensive power of the fleet has been strictly limited by the reduction in aircraft-carriers. The absolute addition to Japan's strength in the war period cannot be determined at present but it must fall far short of tonnage sunk. The mercantile marine may be supplemented by timber junks or even rubber ships towed by other craft, but the navy cannot be reinforced without steel hulls. It is by no means surprising that Japan is concentrating on defence measures after the failure to keep up the fight in Papua. Air strength has latterly been reduced drastically by U. S. fighter planes and this may have far-reaching effects on the disposition of the Japanese fleet below the Equator.

LET YOUR CONSCIENCE BE YOUR GUIDE

To-day, in spite of the war, we enjoy and often take for granted, a hundred and one ordinary every-day things, which to prisoners of war, the sick and the wounded, are **luxuries.**

Warm clothing, razor-blades, soap and cigarettes are among the many articles, that you can help to provide your soldiers and airmen with.

Let your conscience be your guide next time you decide to buy yourself a luxury. We need that extra money for the simple things that make life bearable for others less fortunate than you are.

Send your contributions now to The Hony. Treasurer, Indian Red Cross Appeal, C/o Imperial Bank of India, Strand Road, Calcutta.

Rations in 1942

A table illustrative of food rations in many countries in the last quarter of 1942 appears in the Geneva bulletin of statistics. It brings up to date and supplements the information already provided as to wartime control of consumption. Canada rations only sugar. There is no rationing in the U. K. of bread or of potatoes. The U. S. sugar ration is the same as that in Canada or Britain, but eggs and milk are still unrationed in North America. There is no information as to tea or coffee in Canada but in the U. S. A. the coffee ration is fixed at 90 grammes per week; it is certainly higher than the German ration of 60 grammes per week. The graduation of rations adopted in Germany provides for extra meat for heavy workers, and for night workers who are however given no milk and have to take the same quantity of cheese and eggs allowed for the others. The German rations are certainly larger than those in the Baltic States or Belgium. Bread and potatoes are rationed in the Axis countries, but not in Britain. The Italian sugar ration is also smaller than that allowed for Germans.

It is noteworthy that Germany does not discriminate between the young and the old as regards sugar, though it gives less bread to those below the age of 14. There is no difference between the rations allowed in Germany and those allowed in Bohemia and Moravia but workers in Holland and Norway get less than those in the Reich. The German fat ration last year was adjusted according to age, and appeared to exceed that given in Britain. In Poland those in the incorporated provinces get more than in the Government—general. The Jews got even less than the Poles—adults or children—and the sugar ration for Jews was 40 grammes only against the 100 grammes given to other consumers. Of the neutrals Sweden and Switzerland took to rationing rather early, but the Swedish sugar ration is still the highest in Europe, and the heavy worker with special demands on his energy gets more sugar than the rest. The meat ration is smaller than in Switzerland and milk is locally rationed but not so in Switzerland where the ration exceeds that in any other country. The Swedes have been forced to cut coffee consumption below that adopted in Denmark; and Norway has obviously no coffee ration at all as imports are unlikely. In Denmark milk and cheese, as one may expect, are unrationed and the Dutch got more cheese than the British in their cards. It is interesting to find that the conquests of 1942 have not made Japan independent of sugar rationing.

Saving the Cattle

Not for the first time has a protest been made regarding the slaughter of cattle in India. The Federation of Indian Chambers in a recent representation referred to the concern caused by reports as to purchase of prime cattle for meat. The Federation described the permanent need in India for livestock. The Federation also referred to the urgent need to increase food production in India and the danger of a scarcity of working animals. The letter made reference to the reports that a large number of cattle is bought for slaughter. Meat is dehydrated and exported according to reports received by the Federation. Figures as to the purchase and slaughter of cattle in India are lacking, but the request for information has been repeated. The export of living animals is unknown, and in the absence of figures, the Federation prefers to accept the ruling prices of cows and bullocks in rural areas as an indication. Scarcity is proved by the prices obtaining at present, and the committee referred to the possible dangers. The depletion by the slaughter of animals able to work and earn their

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the Balance Sheet of the NATIONAL INSURANCE COMPANY, LIMITED, as at the 31st day of December, 1942, above set forth, and also the annexed Balance Sheet of the Life Assurance Fund as at the 31st day of December, 1942, and the Life Assurance, the Capital Obligation and the Guarantee Business Revenue Accounts and the Profit and Loss and the Profit and Loss Appropriation Accounts of the said Company for the year ended 31st December, 1942, in which are incorporated the Returns received from and certified by the various Branch Secretaries and Agents concerned, and have obtained all the information and explanations we have required. In our opinion the above Balance Sheet, the Balance Sheet of the Life Assurance Fund, and the Revenue and the Profit and Loss and the Profit and Loss Appropriation Accounts have been drawn up in conformity with the Insurance Act, 1938, and the Balance Sheet exhibits a true and correct view of the state of affairs of the Company according to the best of our information and the explanations given to us and as shown by the books of the Company. In our opinion books of account have been kept by the Company as required by Section 130 of the Indian Companies Act.

We certify that no part of the assets of the Life Assurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relating to the application and investment of Life Assurance Fund.

We have verified the Cash and Bank balances at the Head Office in Calcutta, and those at the Branches have been taken as per the Returns certified by the Branch Secretaries; we have verified the Securities relating to the Company's Loans and Investments by actual inspection of the documents and scrips concerned or with the certificates of the Banks, the State and the parties concerned with whom such documents or scrips were lying deposited, with the exception of Federated Malaya State Loans, Strait Settlement Government Securities and Penang Municipal Debentures, all together of the total face value of $2,00,305 and included under the heading British and Colonial Securities which were lying in Kuala Lumpur in Safe Custody with the Chartered Bank of India, Australia and China at its Branch there but in respect of which there is no confirmation as at 31st December, 1942.

BATLIBOI, PUROHIT & DARBARI,

CALCUTTA, 26*th May*, 1943.

We hereby certify that:—

1. The Investments in Stocks and Shares have been shown in the Balance Sheet at Book Value after careful scrutiny of each Security and the market values have been arrived at from the published market quotations.

2. The Values of all the Assets have been reviewed at the date of the Balance Sheet and that in our belief the Assets set forth in the Balance Sheet under the several headings are shown in the aggregate at amounts which taking into consideration the Investment Reserve Fund, Contingency Reserve Fund and the General Investments Reserve Fund do not exceed their realisable or market value.

3. No part of the Assets of the Life Insurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relating to the application and investment of Life Insurance Funds.

keep seems injudicious to all Indian commercial organisations. It has been stated that in August last the Food Advisory Council deprecated the slaughter of cattle used for draught purposes and suggested he imposition of certain conditions. The Federation urges that the former recommendation has not limited the Army's takings of cattle for meat. Without reference to religious or other considerations at all the representation of the Federation referred to the possible danger to agriculture from large-scale slaughter, and the general alarm engendered by the reduction in livestock.

Pamphlet On Inflation

Dr. L. Nemenyi's late excursion into this field of controversy makes his study of War & Prices (Gulab Singh & Sons, Lahore Rs. 1/8) hardly formidable to the general reader who might even welcome a summary of differences and points of resemblance. The author does not altogether accept the official view, but in the preface, written in April, he has made a slip by saying that rice is pouring into Bengal and wheat prices are coming down because of imports from Australia. Others have become wiser after the event, and Dr. Nemenyi's original optimism is not supported except in regard to the inauguration of anti-inflationary measures and the rigid control of speculation. In his analysis of causes and effects, he is determined to be original; and steering a course between the Inflation and Scarcity theories, he makes much of speculation, psychology and impalpable factors. Inflation on the Austrian, German or French scale has not come; all that is happening is expansion supported by sterling balances corresponding to the increased economic activity in India. Dr. Nemenyi does not adopt this enchantingly simple theory but his review of events, in trying to pick causes and effects, leaves the impression that the flight from the rupee is not independent of non-academic speculation. The extension of control and increase of taxation, desired in advance of deflation (described as an essential for boom control) may have no specific effect on the cost of living. Experience indicates that control must be complete and pervasive but the public's interest in stable prices must be fully recognised. Many familiar arguments as to the imperative need for the unchanged purchasing power of the rupee recur, and the interest of the Government (with its revenue fixed) and or employers (anxious to keep wages down) is emphasised. The pamphlet contains no disturbing truths or daring suggestions. The anti-inflation programme was obviously anticipated by the propagation of views as to the proper use of sterling balances yet it is well to admit that the public is anxious to avoid the rise in prices as the Government which is snowed under with suggestions as to borrowing, taxes, price control, prohibitions and embargoes, excises and levies. A capital levy is not favoured but death duties are acceptable to the author who has got all the plans pat.

Mr. Amery on Indo-British Trade

It is indeed a pleasant surprise to see that Mr. L. S. Amery is capable of taking a realistic attitude towards any aspect of Indo-British relations. Blind to the changes in political sphere, his eyes are strangely sensitive to the realities in the economic sphere. He is aware that the unique place Britain occupied in the net work of international trade before 1939 must change owing to the factors arising out of altered circumstances. Britain will have to modify her relations with the rest of the world and begin to reorganise her production and export so that she can fit in in the new economic order to come. Presiding over a meeting of the Institute of Export held in London the Secretary of State for India warned the British traders that they must face the fact that "most of the world is going to be able to make for itself the old staple goods on which we relied in the past." He pointed out that in order to cope with the needs of the post-war world, Britain must "concentrate more and more on newer types of production, and the installation of capital plant, on salesmanship, on reliability and promptitude in delivery—in fact on co-operative service for the needs of individual countries with which we have to deal" India has to develop her own resources in order to raise the standard of living of her impoverished ryots. This would surely involve a diversion in the character of India's import trade. Mr. Amery does not deplore that diversion, even though it might affect some British export industries. The changed character of this diversion has to be fully recognised and harnessed to British prosperity. On Britain's role in India's trade after the war, the views of Mr. Amery deserve our whole hearted appreciation. He says, "In the immediate post-war period, British opportunity for co-operating most effectively with Indian requirements and aspirations would no doubt be in the provision of capital goods which India would most urgently need for industrial requirement and expansion. Later, it might lie more in the provision of more specialised types of consumers' goods that the growth of India's prosperity might call for. In either case British success would correspond directly to the extent to which British export policy was one of whole-

NATIONAL INSURANCE COMPANY LIMITED—BALANCE SHEET—Contd.

DIRECTORS' REPORT

For the period of 12 months from 1st January to 31st December, 1942

The Directors have pleasure in submitting their *Thirty-sixth Report* of the Company's operation together with the Audited Revenue Accounts and Balance Sheet as at the year ending 31st December, 1942.

During the year 6,717 New Proposals under Life Assurance and Capital Obligation Fund were received for sums aggregating Rs. 1,60,53,764 and for Annuities of Rs. 1,121/- per annum. Of this number 5,826 were accepted and resulted in New Policies including two Annuities of Rs. 1,121/- per annum. The total Sum Assured is Rs. 1,41,22,095 including sums reassured of which the sum assured under Capital Obligation Fund is Rs. 2,05,567/-. The rest were either declined or accepted on terms which have not been agreed to by the proposers, or are awaiting completion. The net Annual Premium Income attaching to the New Business for the year after deduction for sums Re-assured is Rs. 6,86,855-12-0.

During the year claims on account of death have been presented for an aggregate sum of Rs. 10,84,572-15-0/- and the further sum of Rs. 18,81,710/- became due in respect of matured Endowment Assurances.

The Life Assurance Fund now amounts to Rs. 3,86,92,450-0-1 as compared with Rs. 3,69,81,039-8-5 at the beginning of the year, The funds have thus increased during the year by the substantial sum of Rs. 17,11,410-7-8. The Capital Obligation Fund stands at Rs. 5,69,847-9-0.

The total interest Income of the Company on its investments was Rs. 15,29,602-2-4 after deducting Income-Tax. The ratio of Expenses of Management to Premium Income in the Life Revenue Account is 25.4%.

Sir H. S. Paul, Kt., and Mr. K. M. Naik retire from the Board of Directors by rotation and being eligible offer themselves for re-election.

Mr. J. K. Doss, Mr. P. K. Dutt and Dr. R. L. Bhattacharya were elected Policyholders' Directors at the Meeting of the Policyholders held on 27th August 1942. Mr. P. K. Dutt having failed to attend meetings of the Board for a continuous period of three months without leave of absence from the Board, his office as a Director was declared vacated and Mr. P. C. Daw was appointed a Policyholders' Director under Rule 15 (3) of the Insurance Rules, 1939, in his place.

The Auditors Messrs. Batliboi, Purohit and Darbari retire and offer themselves for re-election as Auditors for the current year.

The Directors recommend the payment of a Dividend of 6% free of Income-tax for the period under report.

The Directors wish to record their appreciation of the work of the Agents of the Company and of the Officers and Staff at Head Office and Branches.

Statement pursuant to Section 132*A of the Indian Companies Act of* 1913 *as amended by Act XXII of* 1936:—The National Fire & General Insurance Co., Ltd., has not declared any dividend during the period under report and the credit balance of the Profit and Loss Appropriation Account has been carried forward in the Accounts of that Company.

What has the New Economics to say of the future of interest rates? That is a question which, I imagine, many readers have often mentally addressed to me and which, I feel, must be answered. The careful reader must have noted that the material for answering this question has already been presented in the earlier articles of this series. To some extent, repetition of ideas already expressed and expounded, will be inevitable. But it is necessary to put them together in the logical form in which they can yield conclusions of some value regarding the future of interest rates. It is natural that on the question of interest rates and their future, there should be wider divergence between the old economics and the new than in any other branch of economic thought. And since the sway of new economics with its emphasis on the social subjectivity of value depends to such a large extent on political factors, the conformity of interest and interest rates to the new conceptions will depend, by the same token, on the extent of change in the political sphere. Practical forecasts, if they are to have a reasonable chance of proving true, will have to be confined to a mere projection into the future of known trends, in the political as well as the economic sphere. But the advantage of clarifying the difference in the theoretical approach of the new economics and the old to the problem of interest rates is not to be despised.

* * * *

The theory of interest rates in the old economics is, hardly speaking only an application in the sphere of investment of the principle of equilibrium fundamental to classical economics. It abstracts a capital market, similar to the markets for other values of life, from the medley of activities and transactions connected with the creation of savings and the lending of their use in investment. It posits a demand, varying, like the demand for other values, in accordance with the expectations of satisfaction or profit to be derived, and a supply, the volume of which is sensitive to the inducements or discouragements offered by the current level of prices. The elasticity of supply and demand, within limits, is an indispensable postulate for the reasoning of equilibrium economics. It is as necessary for carrots as for capital. It is only on this basis that the law of supply and demand can have application. And when it is applied, there is, in essence, no difference between interest rates and wages or between wages and vegetables. Supply is determined by the cost of production and the margin between costs and probable prices. And demand is determined by worthwhileness at current prices.

The uniqueness of interest rates arises from the special features alike of the supply and the demand for capital. On the supply side, the motives and factors that govern savings are of the most nebulous character. On the demand side, to determine the productivity of capital, one has to take not only the two-dimensional landscape of productive activity in a given moment, but also add the third dimension of time to it and take into consideration probable changes in the future. The economist has his psychic present; and what extends beyond that, he conveniently labels as "long-term". But even the short-term trend is baffling enough. Since theories are not laws, they can be formulated on the basis of useful abstractions from the facts of empirical economic life. Different investments may yield different returns. Entrepreneurs may differ in ability and integrity. But taking into your ken the whole vista of productive activity, you can talk of the productivity of capital, you can imagine new capital being offered in successive doses, each giving a dimishing yield, and you can form the notion of the marginal productivity of capital. There, the economist says, you get the Holy Grail of the determinant of interest rates, so far as the demand side is concerned. As for the supply side, doubtless, changes in interest rates are the prime factor in deciding the volume of savings. The higher the interest rate, the greater is the volume of savings, and every fall is a discouragement of savings. More than that, it is not necessary for the purpose of the economist to say. Why, under what conditions and to what extent the average individual will prefer a dubious dividend to the certain enjoyment of today is a question for the psychologist to answer, not the economist. Perhaps it is all to be traced to some congenital mental trait, or the working of a gland, or perhaps it be referred to the thermometer and the barometer. But it should suffice for the purpose of the economist that savings react in more or less measure to changes in interest rates, and that the productivity of capital also is not a constant factor. The edifice of equilibrium economics is intact.

* * * *

So far, it is all so simple. But the complexities of life beat rudely on this simplicity. This theory of interest depending on the marginal productivity of capital has no value, unless there is a common denominator of all values, money. And money, once it comes into use, has by its very nature to fulfil a number of functions, which are not wholly congruous. Money is at once a store of value and a medium of exchange. It is both capital and current coin. A change in its forms according to the functions it discharges cannot be left to be worked out by natural forces. To confine all forms of money to the precious metal or metals would, in practice, be a terrible handicap to business. And the validity of economic theory would be appreciably improved by making its abstractions more untrue to life. The difference between money as a medium of exchange and money as a store of value to be retained by the owner or transferred in varying degrees of possession to a user, is one that has to be worked out through a multiplicity of devices by the banker and the financier. And all these devices introduce new factors into the picture in addition to the primeval factor of productivity of capital, loosen the links between savings and investment and increase the complexity of modern finance. As a result, the distinction has to be made between the money market in which money, in itself or in the garb of credit, is only a medium of exchange and the capital market, where money is capital. Even in the capital market the distinction has to be made between long-term capital and short-term capital. The money market has its variety of interest rates, ranging from call money to term deposits. But the outstanding feature of the development of money during the last one century and more is the rise of the central banking institution, and the increasing necessity of investing it with authority over the financial life of the country and, latterly, of ensuring that its authority is exercised in the interest of the community as a whole.

* * * *

All these developments have altered and complicated the simple conditions, in which individuals effect savings after a nice balancing of the advantages of immediate expenditure against the satisfaction of future security, savings flow through various channels into not wholly disconnected parts of investable funds, and entrepreneurs are given the use of these funds on terms determined by current yields on old investments and the prospective yields of new ones. It is not alone the showers of individual savings that irrigate the broad fields of industry and commerce. Banks have their way of tapping sub-soil water for the purposes of credit. Central banks can create a sort of synthetic water without either oxygen or hydrogen. The old idea that saving involves a sacrifice of present enjoyment is not as true to life today as it probably was some time ago. Large institutions like Insurance Companies and Building Societies, whose revenues are derived from what are in essence current expenditure for the individuals concerned, swell the total volume of savings in ways which involve little or

no privation. Big business has its ways of securing capital without anybody having an equal cut in current resources. And above all, there is the Central Bank at the top which can create a plenitude of cash in the money market and, through the money market, in the capital market.

* * * *

It is not to be denied, however, that the devices of banks and financiers cannot altogether alter the basic facts of economic life. The total income of the community in terms of goods and services and in terms of money, the extent of current expenditure and the volume of real savings are all facts which cannot be wholly ignored. The pressure of these facts may be increased or reduced by central banking policy, by the credit policy of commercial banks and by the activity or inactivity of important groups of industrialists. But they are not to be denied altogether. Instances have been only too numerous in history of these facts being so far overlooked that they took revenge on the financial world by severe crash. But the fact, that their pressure can be, and is, so often reduced by the development of the technique of central banking, commercial banking and financing of new issues, is one that is in close accord with the central point of the new economic theory in regard to capital, namely, that the form of capital is capital goods and not money or credit and that the creation and increase of capital wealth does not in reality involve a cut in, or postponement of, current consumption. It will be seen, therefore, that in the facts of modern banking and finance, no less than in the theory of the new economics, capital has the loosest relation to genuine savings.

* * * * *

Nevertheless, professional economists continue to retain the apparatus of thought invented by their predecessors and seek to provide for the changed conditions by introducing new factors in the old formulae of interest rates. Even Lord Keynes was inclined in the earlier stages of the Great Depression to explain that phenomenon as the result of lack of balance between Saving and Investment. But he has moved far away from the old belief in the close dependence of economic development on savings or in the wisdom of interest rates being left to find their level according to the law of supply and demand. The example of so outstanding an economist as Lord Keynes has not served to discourage the futile attempt to read too much into the link between savings and investment. There has been much impressive talk about the fluctuations in the supply of capital relatively to the demand for investment. I have not read Mr. Colin Clark's work. But I can well understand the temptation to render history, particularly economic history, in wavy graphs; and the role of the prophet has temptations which the author of so novel an interpretation of the past would find it hard to resist. But in my way of appraising the facts and trends of the economic world of our day, there is little place for such terms as capital hunger and capital surfeit. All the phases of modern economic life have so changed that the old approach can yield little or nothing of value.

* * * *

As I said, the proper approach will be furnished not by imaginative theorising on the basis of special reading of facts over long periods, but by bringing together the active principles of the new economics and the more forceful trends of recent times. The active principles are the social subjectivity of value, the goods character of capital and the primacy of projects of popular significance over those of private profit. As for the trends of recent times, there is the outstanding fact that the Bank of England rate has remained unchanged at 2 per cent since the beginning of the war, and before that at 3 per cent ever since September, 1931 except for a short-lived rise on the outbreak of hostilities. Twelve years is a long enough period to discount all theories of cyclical changes in interest rates. And I hope it will not be argued that the lease of life for low interest rates was afforded only by the war but for which the forties might have witnessed a rise in the bank rate. Speculation as to what could have happened if there had been no war is futile. But there is no doubt that, if war had not loomed in the horizon from, say, 1937, the course of world and national economies would have been such as to compel the enquiry as to how the national economic systems could secure fuller benefits out of the low interest rates. For all practical purposes, doubts about the feasibility of low interest rates have been set at rest. Every one feels sure that central banks can continue to keep interest rates at the present low levels. And there are no complaints heard that the national economy or the legitimate interests of any large group have been hit by these low rates. The only possible, but no means probable, danger is the conclusion of agreements for the regulation of international finance entailing a contractionist pressure on some, if not all, national currencies. The discussion of these question both in these question both in these columns and in other sections of this journal should convince the reader that such agreements are most unlikely to be concluded. There is nothing than to warrant doubts on the continuance of low interest rates in the post-war years.

(*Continued from page 105*)

much of hopes of an interim. Last week there was mention of a striking rise in British Celanese. Fine Spinners looks like going up to par in view of the firmness noted in textiles, and one might say that the post-war boom has been produced for Lancashire by concentration and control. Heavy industrials like Vickers and A.P.C. have been subdued for weeks, and the investors' attention is diverted to oil shares and Eastern minings. There has been no revival in Straits tin or rubber shares here suggesting that India has taken little notice of the market optimism apparent in London. The visit of Mr. Stimson may prove a stimulant to oil markets. The general assumption following Mr. Roosevelt's reference to a French expeditionary force of 300,000 equipped by the U.S. Government is that Greece will be attacked after Sicily. The Allies' swift success in Sicily has encouraged markets outside India. The drop in bullion prices here must be attributed to war news rather than selling of gold by Travancore. A newspaper story as to offering of 35,000 tolas of gold in one lot may have helped the bears, but it may be pointed out that the future for gold is not very bright in the light of the full report of the Keynes and White plans. Gold will be taken in limited quantities, and the reduction in U.S. imports of gold after 1941 is far more important than the calculation as to the gold cover for bancors. If the U.S.A. is not going to devalue her currency merely because of inflation at home, the dollar will be equal to 1/35th of an ounce as usual.

The Chinese Ambassador on his return to London referred to the great increase in the cost of living. It has been noted by all that in Chungking the cost of living has gone up. Frugality has been practised, and life has become simpler. Civil servants have been hit hardest but students too have suffered. The merchants as a class have done well for themselves. But in the capital they run risks for Hawthorne Cheng in a description of life in Chungking described hoarding and profiteering and referred also to the hazards of war. A whole shop with its full array of valuable goods may be wiped out and a rich businessman or banker may go bankrupt overnight. But the irrepressible spirit of the Chungking merchants is bombproof. Farmers face the same increase in the cost of living but are turning to better methods and expansion of cultivation. Finance comes from the Farmers Bank and loans to farmers exceed 25 million American dollars in value according to Gunther Stein though the average farmer has to borrow at high rates put at 12 to 20 percent per annum.

3 TO 1

The odds are 3 to 1. Sufficiency of paper has made us careless in the use of this precious commodity, and today we waste more than 3 times the paper surface actually needed. Examine all the stationery you use, letterheads, bill forms and other stationery. You can save 2/3 of the paper surface you are using.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :—

- Use the smallest sheet of paper for any purpose that will do the job.
- Write, type and print on both sides of the paper.
- For short letters, bills and accounts reduce the size of the paper.
- Do not make copies except where absolutely necessary.
- Always type single spacing.
- In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.
- Reduce the size of the labels on manufactured goods.
- Use the back of the letters received for the carbon copy of your replies.

Save paper

ISSUED BY THE TITAGHUR PAPER MILLS CO., LTD.

Olympus

(From Our Correspondent)

NEW DELHI, July 13.

There appears to be a general measure of satisfaction that the Food Conference convened last week ended in agreed decisions. It is too early to judge the results, but the fact that Provincial Governments have now assumed a certain measure of responsibility, is undoubtedly one good ground for optimism. The real difficulty is the Punjab Government's unwillingness to control wheat prices to the extent which provinces less fortunately placed desire, for the Punjab Ministers are strongly against measures of control which would deprive the agriculturists of their province of the profits which were legitimately theirs. Immediately after the conference the Food and Transport Members accompanied by General Wood proceeded to Lahore to confer with the officials of the Punjab Government. Though nothing definite has yet emerged as a result of these discussions, there is some reason to hope that as a result of all-India measures proposed to be taken prices in the Punjab also will settle down to a normal level. All Provincial Governments have agreed to control prices within their areas and also organise an anti-hoarding campaign. In the course of the next two or three days certain new Orders and Ordinances are expected to be issued vesting additional powers in Provincial Governments to deal with hoarding and sales. The problem is twofold, firstly, to induce the cultivators to disgorge their stocks and arrange for their regular transport to the consuming centres, and secondly, to prevent speculative hoarding or profiteering by middlemen. One proposal for dealing with the latter problem is the institution of a system of licensing of dealers by Provincial Governments. It is likely that in the proposed amendment of the Foodgrains Control Order, provision may be made for giving effect to it.

* * * *

It was obviously the Government of India's idea that if free trade was established at least in zones outside the Punjab-Sind area the flow of normal trade would naturally set conditions right. If, initially, it might show a tendency to raise prices, there was the hope that it would at least prevent black market conditions—in other words, foodgrains would after all be preferable to having no foodgrains at all at controlled prices. As there was general opposition to free trade from Provincial Governments, the Government of India bowed to their wishes and entrusted them with the responsibility of having direct dealings with each other for purchases of foodgrains within their respective quotas. In non-official circles there is a good deal of pessimism about the successful working of this scheme from the point of view of deficit areas, but as a Food Committee in which there are Sir P. Thakurdas and other non-official leaders, is now going into the question in greater detail, its report may help to improve the position. This Food Committee under the chairmanship of Mr. Vigor is now having preliminary discussions with the officials of the Government of India, after which it will split up into sub-committees to examine different aspects of the problems, production, supply and distribution. After the report of this committee is available the Food Conference will again meet in New Delhi to reconsider their decisions in the light of the experience gained in the meantime.

* * * *

Some official witnesses are reported to have themselves expressed the opinion that the best way to get the cultivator to give up his stocks is to offer silver. Nothing is yet known about the result of the Government of India's negotiations with the United States authorities for the import of silver under Lend-Lease, but according to reports in American circles here, the United States Government is anxious to help in easing the food situation in the country and, if silver imports will help, will be quite prepared to do what it can. At the present moment, the Government of India seems to be anxious that rationing schemes should be introduced in all urban areas. So far as purchases and supplies for the military departments are concerned, the Central Government has its own arrangements. And now in cities like Delhi there is also a scheme for ensuring rationed supplies at controlled prices for all Government employees. Suggestions have also been made to big industrial employers that they should organise similar schemes for the supply of essential commodities to their workers. If in addition there is an organised rationing scheme for the civil population in all urban areas, it would have a general steadying effect, but as the success of any rationing scheme depends upon steady and adequate supplies, the entire question depends upon distribution. Even in Delhi there are often difficulties owing to the failure of supplies. As the Food Member has agreed to initiate a debate in the Central Assembly on the Food question as early as possible during the coming session, it will provide an opportunity to the Government of India to explain its policy and answer criticism. There is a feeling that a good deal can still be done to improve production in deficit areas and also arrange for wheat and other imports from Australia and outside countries, in return at least for what India has given in the past to peoples in the Middle and Near East.

* * * *

I understand that Sir Shafaat Ahmed Khan, the High Commissioner in South Africa, is shortly coming to India on leave. As in the meantime the Government of India will come to a decision on the action to be taken in pursuance of the recommendations of the conference of leaders last week, it is not unlikely that there may be no occasion for him to return to South Africa. It is reported Dr. Khare, the Overseas Member, made an unexpectedly strong speech at the conference and gave clear indications of his willingness to consider retaliatory measures against South Africa. It is expected that at tomorrow's meeting of the Viceroy's Council the South African question will be taken up for consideration, but as a large number of Members are away from headquarters, no final decision can be taken immediately. There are still two possibilities which cannot be ruled out of consideration. Firstly, there is the hope that as soon as the elections are over, Field Marshal Smuts may be in a mood to reconsider the whole question in the light of Government of India's representations and find some compromise. There is also the likelihood that the new Viceroy, Field-Marshal Wavell, may directly intervene and try to persuade the Union Government to withdraw or postpone the legislation. So far as one can gather, the Government of India have exhausted their efforts and can frankly do no more. Something can still be done if His Majesty's Government is prepared to intercede, but the Churchill Cabinet is in no mood to offend Field Marshal Smuts, particularly at the present critical time

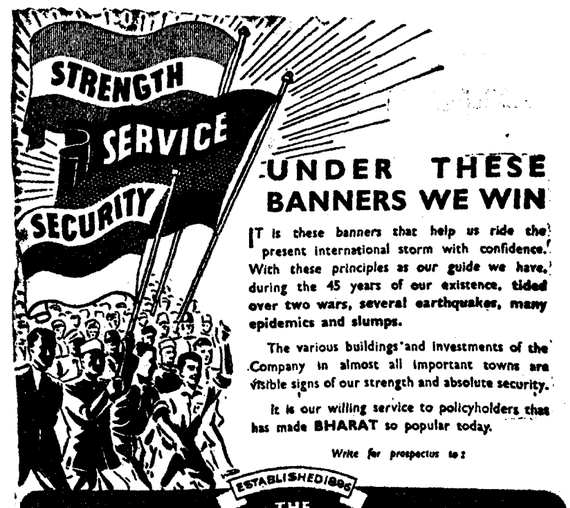
(From Our Correspondent)

Bombay, July 15.

BOMBAY where criticism of Government's reluctance to take proper note of local possibilities is common has been given time to digest the report of a scheme to develop the machine tool industry in India. The five favoured firms are to be nucleus firms for the new type of concentration in the specialised industry. Those with grievances to air certainly had their say in the press. The caravan has passed on, and the arrival of Mr. S. Oldfield, Adviser to the Roger Mission and Mr. Trubshaw indicates that the plan is going through. Britain has again promised more than goodwill. Drawings, manufacturing information, jigs and fixtures are to come from Britain because more machine tools are wanted at once. Plant extensions in India are known to be complete and new plant is on the way. By August the installation will be over. The Supply Department wants 500 tools a month in place of the 275 available at present, and the pooling of technical knowledge and practice might help greatly. The machine tool industry is young and is being carefully nursed. The Supply Department wants a local industry which will save shipping by avoidance of imports and add to the scope of the war effort. It wants also a foundation for a flourishing local industry, able to serve all other industries.



The standard cloth plans have led to a rearrangement of holidays in the mills. To save fuel and space the demand for hydro-electric power mills are going to regroup their holidays in the interests of power holidays. Staggering is a word imported to describe the change proposed. The Government intend to adjust the holidays. Mills have been divided into seven groups. Each group will have a weekly holiday which means that six-sevenths will be at work while one-seventh is idle. All the big religious holidays will be retained, not for one group only but for all the mills as usual. The load on generating stations will be lightened. The idea has not apparently occurred to Calcutta where power and shortage in the light of coal scarcity, has become a market factor already. A press note dwells on the benefits available to all concerned by the rearrangement of the weekly holiday in mills.

Bombay's new stock exchange has revised its articles of association at an extraordinary meeting. The Indian Stock Exchange is five years old and is not like the duplicate market which fades out in a slump. When the older market stayed idle, the new one was invariably open, and cash business helped to keep it going. Sir C. B. Mehta remains Chairman and the market has 76 members on the register. The financial position is good, but when control of dealings comes the turnover might fall. Seth G. Seksaria is on the Board of Directors like Mr. R. A. Podar. The second market gives the rates very close to the rates ruling in the other markets and the quotations often favour holders who want to realise. The meeting on Thursday last went through the routine business and listened to a survey of recent developments outside the market.

Hyderabad merchants do not want E.P.T. Business interests organise opposition and the local Chamber objects to the preamble of the Bill. Taxation will not lower prices, and help the consumer says the Hyderabad Chamber of Commerce in a criticism of the measure. The Finance Member has been asked to take note of the many interests affected by the measure. The Finance Member promised sympathetic and skilful administration in describing the objects and reasons of the Bill. Profits are unduly high, taxation is essential, runs the argument. Reference to British India's example was made and it was pointed out that taxation here does not injure producers. The Hyderabad Bill is not meant to increase State revenue, but to deflate profits—a very important difference—though the postwar refund plan adopted recently as part of the compulsory deposit plan is going to help.

The Corporation discussed cloth control last week. Merchants outlined their grievances only recently, but consumers have said little, so that the City Council had a right to give its views. The Textile Control Board does not give the consumer adequate to representation but Mr. Jamnadas Dwarkadas said that a proper panel cannot be set up. Mr. S. C. Joshi objected to control being

South India

(From Our Correspondent)

Madras, July 13.

War has not denied its compensations to South India. If it has curtailed our overseas commerce, it has intensified economic and scientific activity at home and South India seems to be making significant strides in the matter of research, survey, and to solve some of the pressing problems of the day. The Madras Government are busy doing their best to increase the productivity of the soil, in order to alleviate the present food crisis. Quite apart from the famine relief works started in the Andhra districts and the attempts at making pre-ration enquiries and plans, the Government of Madras have given thought to the urgent necessity of starting new irrigation schemes. As part of the Grow-More-Food Campaign the execution of the following irrigation schemes has been sanctioned: (1) construction of an anicut in Uduthorahalla scheme in East Godawari district at a cost of Rs. 90,000, (2) Mahadevapuram Tank project in Coimbatore District at a cost of Rs. 1,10,600 (3) Provision of irrigational facilities for the dry lands in two villages in Tanjore taluk at a cost of Rs. 13,000, (4) Improvements to the Balathalev tank in Krishnagiri taluk, Salem District, at a cost of Rs. 2,02,275. Irrigation is the hand maid of agriculture and the success of these schemes would come to the rescue not only of these villages in this Province, but of the deficit.

There seems to be an early prospect of the paper shortage being reduced appreciably. The Government of Madras have appointed a qualified paper technologist, as their paper expert to go into the question of manufacture of hand-made paper on a large scale in the Presidency. A thorough and comprehensive survey of South Indian forests with a view to find grass and bamboo suitable for the manufacture of paper has not yet been attempted. The Tariff Boards of 1925 and 1931 reported that the supplies of bamboo in areas where the other conditions were favourable for exploitation were sufficient to meet the needs of Indian mills and to leave a surplus from which an export trade in pulp could develop. It has been estimated that nearly 70,000 tons of suitable bamboo are available in the Madras Presidency while the capacity of Travancore and Mysore are 25,000 tons and 50,000 tons respectively. In Madras the distribution of bamboo seems to be as follows: Papanasam Forests in Tinnevelly District 25,000 tons; Reckapalli hills in Upper Godawari Division 20,957 tons; Ramapuram range (Kollegal) 17,000 tons and Papikonda Reserve in Lower Godawari 5,710 tons. There are possibilities of extending the use of 'ETA' reed for the production of paper in Madras. The market for paper is indeed extensive in view of stoppage of imports and of the growing needs at home and hence the price factor would operate as a powerful stimulus for production of hand-made peper. Labour for the production of hand-made paper is abundant and not very dear. The hydro-electrical schemes of South India should also offer new scope for the extension of paper productions. No doubt the paper expert would investigate all these sides of the question. survey the possibility of new kinds of grass and evolve a scheme by which the hand-made paper industry can be established in different parts of the South so that a valuable subsidiary industry may agument the poor income of the villagers. Further, a successful scheme of universal primary education and the spread of educational facilities over the 7½ lakhs of villages in India would be inconceivable on the basis purely of machine-made paper. Supply will have to be supplemented by paper locally produced and locally consumed. Madras has done well in taking up this question at this cruicial hour and the investigations of the expert would be watched by the public with keen interest.

The problem of securing adequate petrol is always with us. It was only recently the commercial bodies of South India represented to the Government of India that the working of he petrol rationing system is unsatisfactory particularly after the introduction of the control of rubber tyres. While the general merchants are thus complaining about want of petrol, the groundnut-growers and dealers, who have been hard hit since 1940, were looking up for something to turn up so that groundnuts could sell as before. As if to satisfy the needs of the above two parties Mr. T. K. Nair, formerly Chief Chemical Analyst and Metallurgist of the East Indian Railway, has devised a new method by which fuel oils can be used for running motor cars. He has constructed a new kind of carburettor fixed to the engine construction and using groundnut oil Mr. Nair has already covered nearly 750 miles. This new car secures a speed of nearly 42 miles per hour and the fuel consumption comes to 25 to 30 miles per gallon. If this invention wins the approval of technical experts, the worries of petrol scarcity as well as the anxieties of groundnut surplus will have been solved. The success of this new motor car driven by groundnut oil would prove to be a landmark in the history of industrial advancement of South India.

News regarding the activities of the Indian Institute of Science has been most encouraging. Under the inspiring guidance of Sir C. V. Raman the Institute has been prosecuting research which is of direct importance not only to the war effort. but also in solving certain intricate problems of dietetics. Department has been engaged on the production of viamins and foodstuffs. Much sustained work has been done to find out a cheap and safe anti-malarial for general use. The Organic Chemistry Department has successfully completed the production of potassium Chloride which is now manufactured on a large scale in South India. Formaldehyde, phosphorus, anaesthetics, bariburates and some other important chemicals are also produced. Insulin has been achieved by the Bio-Chemistry Department which is now exploring the possibilities of the preparation of rennet and peptones. Attempts have been successfully made for the bonification of mill waste so that it could be used as manure for agricultural purposes. Groundnut has received due attention and a new edible powder has been prepared out of it. The Electrical Technology Department has trained no less than 250 war technicians. Thus the resources. workshops, general equipment and the organised energy of an indefatigable team of research workers in the Institute are being pressed not only for the service of the Army and Air force but also to solve some of the pressing economic needs of the country.

DEPARTMENT OF SUPPLY
D. G. M. P. CALCUTTA
REVALIDATION OF IMPORT LICENCES.

Holders of licences valid for the period January to June 1943 under Notification No. 25-ITC/40 and the Machine Tool Control Order, 1941, are hereby informed that where shipment has not been made against the licences within the period of their validity, they should (except in the case of licences for panel items) apply to the appropriate licensing authority, viz.,

(a) the Deputy Steel Import Controller, 7, Wellesley Place, Calcutta, in respect of import licences or certificates issued by him under items (a) to (zm) of Notification No. 25-ITC/40 ; and

(b) the Machine Tool Controller, 31, Chowringhee Rd., Calcutta, in respect of licences issued by him under the Machine Tool Control Order, 1941.

The licences should be returned along with the application for revalidation.

2. Licences issued by the Director of Licensing, 7/8, Ezra Mansions, Calcutta, in respect of items falling under the panel scheme (items (zn) to (zzl) of Notification No. 25-ITC/40) will stand automatically re-validated to cover shipments made in the period July to December 1943 and need not be returned.

Resume of Commodity Markets

Commodity markets have been rather quiet during the past week and there is nothing of outstanding interest to be recorded. The jute market has been easier with the jute manufatures market and nothing is yet known regarding the decision of the Indian Jute Mills Association regarding the fixation of maximum prices for jute manufactures. The bullion market has been quiet while the piecegoods market has continued weak.

* * * *

The results of the Food Conference which was held last week were awaited with interest by the general public as with the acute food shortage in several provinces, it was felt there was need for immediate action. There were also reports that the Central Government was contemplating the removal of all ban regarding interprovincial movement of food grains. We pointed out on an earlier occasion that it was not quite likely that the Government would decide on the de-controlling of all commodities as there was considerable opposition from the Provincial Governments and as it was generally felt that the restoration of free trading in the Eastern Zone had not helped matters. The proceedings of the Conference were held "in camera" and it is not definitely known what decisions were taken. It has been, however, announced that the proposals for decontrolling were considered but on account of the opposition from some provincial governments they were dropped. Among the new measures contemplated are the introduction of rationing schemes in urban areas, physical control of stocks and greater provision of transport facilities for the movement of grains from the surplus to the deficit areas. The provincial governments have been allowed to negotiate directly with each other and provide for the payment and movement of food grains without the intervention of the Central Government. It is beleived that, as a result of the new measures, the position would improve considerably.

That the Government is in earnest about improving the food situation is evident from the visit to Lahore of the Transport Member, the Food Expert to the Government of India and the Commerce Member to negotiate with the Punjab Government for the purchase of its surplus. As a result of these negotiations it appears that the Bengal and Bihar governments have received assurances regarding supplies of wheat.

The position in regard to rice, however, appears to be acute. In the absence of any imported supplies it cannot possibly be expected that there will be any appreciable decline in prices.

* * * *

The jute market is easier with the proposals regarding the fixation of maximum prices for jute manufactures. Sellers in the Calcutta market have been eager to do business with mills inclined to purchase only their immediate requirements. It is generally felt that with the control of prices for jute goods also, ryots will be forced to part with their stocks at the agreed maximum rates and that the arrangements for adequate transport facilities will help the situation to a considerable extent. Reports regarding the progress of the new crop also are satisfactory, though the published preliminary forecast figures show that the total acreage under jute is slightly lower than the licensed area which is 8 annas of the area recorded in 1940 against 10 annas for the last season.

* * * *

The sharp decline in the piece-goods market during the past two weeks has been welcomed by the consuming public. It is felt that with a further intensification of control measures, prices will record yet further decline. The industry, however, appears to be satisfied with the initial decline in prices. Mill prices have been reduced substantially on this basis. From the distributing trade, however, there have been numerous protests and the piecegoods traders' associations all over the country have demanded an extension of the time limit for the disposal of their stocks. It is pointed out that, with the poor demand on account of the slack season and the delays on account of deliveries many engaged in the trade will be ruined if they were not granted an extension of time for the disposal of stocks which were manufactured prior to July 1943. This question was discussed at length in the last week's issue and it was pointed out that the Distribution Committee's recommendation to grant an extension of time for the disposal of the seasonal styles was quite in order and that any suggestion of a general extension of the time limit for the disposal of goods by dealers and others engaged in the trade would spoil the good work done in the earlier stages. The Central Government appears to be in right earnest in putting into effect its original orders. Dealers have been asked to furnish reports regarding stocks at the end of the current month before the middle of August.

* * * *

The bullion market has been featureless during the past week and quotations in the gold market have been fluctuating within very narrow limits. It looks as if prices will be fluctuating around present levels for some time to come. Investment demand is on a very much smaller scale while there are more plentiful supplies of the yellow metal, thanks to the recent large arrivals from the Mysore gold mines and the reported sales by the Travancore Government. Last week there were rumours regarding the possibility of Government coming out as a seller in the market. There were suggestions for the disposal of gold stocks held by the Central Government on behalf of the British Equalisation Fund. It has also been pointed out that selling by Native States was engineered by the Central Government. It cannot be said whether there is any truth in these reports but one cannot rule out the possibility. It is well-known that the Native States hold large quantities of the yellow metal. It will be advisable for them to sell out if they can realise their profits at the present levels. The Central Government might have impressed on the native states the necessity for keeping down bullion prices at low levels in order to check the operation of inflationary forces. There are no reports yet regarding silver being sold by large parties though it is said that Kathiawar dealers have hoarded plenty of stocks.

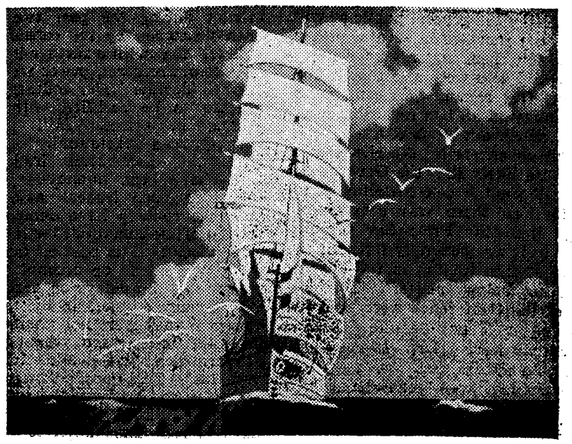
(*Continued from page* 122)

when he has to face strenuous opposition in the elections. If the Government of India decide to withdraw the High Commissioner, neither the Government of India nor His Majesty's Government will be greatly affected, but economic retaliation stands on a different footing. As imports from South Africa like wattle bark are required for war industries, the Government would not like to stop these imports. As regards India's exports of jute, textile goods etc to South Africa, they are also described as war requirements. It is a difficult position for the new Overseas Member who has in his speech identified himself with Indian sentiment and is anxious to go as far as he can.

* * * *

I believe that the Governor General has decided to appoint Mr. Deshmukh as the Governor of the Reserve Bank, but the official announcement has been delayed as no final selection has yet been made for the Deputy Governorship. The name of Mr. Wijayat Hussain, I.C.S., a senior officer of the United Provinces, is being mentioned but as his services are also required for the Food or Civil Supplies Department, it is difficult to say which he will finally accept. It is likely that Mr. Ghulam Mahomed, now Finance Minister of Hyderabad, may return to the Government of India to take up an important post in the Supply Department. As its permanent Secretary, Mr. Jenkins, has been selected by Field Marshal Wavell as his Private Secretary, the Supply Department needs an experienced official like Mr. Ghulam Mahomad. The Supply Department is also losing the services of its present Finance Officer, Mr. Zahid Hussain, who is succeeding Mr. T. S. Sankara Iyer as Financial Commissioner of Railways.

* * * *



An important statement was issued by the Finance Department this week which answers recent statements expressing certain apprehensions on the subject of industrialisation. Two or three points of importance have been made clear in this statement. Firstly, it is the intention of the Finance Department in examining applications for new issues not only to encourage industries which directly aid the war effort but assist also those enterprises which are in a position to embark on the production of essential consumers goods in the near future. If a liberal interpretation is given to this assurance, it would certainly go a long way to remove public apprehensions. As regards enterprises which purport to be in a position to produce only at the end of the war, the Government's statement conveys the vague hint that special care will be required in dealing with them, but it adds that consent will be granted in suitable cases for an issue of capital required to purchase plant or machinery for which an order has been placed for delivery after the war subject to the condition that the money is invested in defence loans or other new Government securities. So far as information available in New Delhi shows, the Government of India have been fairly liberal in dealing with applications for starting new companies or raising new capital. There is no intention to discourage industrial enterprise which aims at immediate production or proposes to deal with post-war requirements. The only thing which will be discouraged is the production of luxury goods which cannot, under present war conditions, claim priority for capital equipment or technical personnel.

* * * *

I understand that when the Assembly meets the Government will be requested to start locomotive factories in India at least now, as the transport position is already serious. If one or two railway factories now doing munitions work can be released for locomotive manufacture, it may ease the position, for if the expected deliveries from the United States do not arrive, the Railways will be seriously handicapped.

Hill Bird.

Aspects of an Industry No. 18.

WHITE WINGS

THE dazzling white of full sails and seagulls' pinions as they catch the sun in high relief against the wine-dark water seems the ideal of whiteness. Yet it is illusory, and the purity of sails or feathers is far surpassed in the standards the public demands from the modern laundry. Laundering is indeed a highly technical business, in which the research and service of the British chemist is of the first importance. The launderer has to consider the nature of the textile fibre in question, the fastness of the dyestuff with which it is coloured and the character of the finishing agents with which it has been treated. He must, for example, not only remove every speck of dirt or sign of stain but also take precautions against the shrinking of wool, against silk's loss of sheen, and against the fading of the dyes. Dry-cleaning introduces another set of chemicals and its own range of problems. It is to the chemist that the launderer looks for help in purifying and softening his water supplies: in thoroughly wetting great masses of materials and in loosening and removing the dirt from them: and in providing an ever-increasing number of chemicals for determining the "feel," colour and appearance of textiles as well as their resistance to wear, grime, sunshine, rain or perspiration. Your launderer and dry-cleaner aim even in wartime at returning a fabric or garment with all its qualities unimpaired. The British chemist contributes by making this aim a possibility.

ICI

Imperial Chemical Industries (India) Ltd.

(*Continued from page* 115)

hearted co-operation in India's efforts to raise herself to a higher plane of economic efficiency. There must be equally wholehearted jettisoning of any lingering survival of the idea that India was in any sense a reserved market for British trade or capital. There must be no assertion or implication of British dominion." The Secretary of State deserves warm congratulations on this excellent piece of advice to British exporters. If his speech should really represent Britain's post-war economic policy with reference to India it should be perfectly agreeable to the economic interests of the two countries. Points of friction may then be minimised and the old friction and acrimony which attended our trade agreements and cotton duties in the past may not recur.

National Insurance Company

In its 36th year the National Insurance Company received 6,717 proposals and issued 5,826 policies for an aggregate value of Rs. 1.41 crores. The new business yielded premiums of Rs. 6.87 lakhs. Total premiums for the year amounted to over Rs. 57 lakhs (only Rs. 2 lakhs less than the income for 1941) and claims totalled Rs. 29.66 lakhs. Investment receipts in 1942 amounted to over Rs. 15.05 lakhs. The ratio of expenses to premiums in the life revenue account is moderate at 25.4 per cent. After meeting surrenders, taxes, depreciation and other expenses, there is a surplus which is added to the Life Fund. At the beginning of 1942 the Fund was Rs. 369.8 lakhs. It has risen by Rs. 17.11 lakhs to Rs. 386.92 lakhs. The Capital Obligation Fund stands at Rs. 5.7 lakhs nearly. The year's results certainly correspond to expectations though oversea business was affected by the war. The Company's revenue position has undergone little change, and the best proof of the solid and secure position attained by National is found again in the balance-sheet published for information. That the Company's capital and reserves remain assets independently supporting the Life Fund need not be stated here. For policy-holders it is the distribution of the Life Fund's assets which always counts, and in this case, it may be noted that giltedged investments are large at Rs. 1.8 crores apart from the statutory deposits. The increase in loans on policies within their surrender value, last year take the increase in surrenders requires no explanation. Since the Chairman has described the fall in the yield on the funds, the investments in preference shares and ordinary shares which amounted to Rs. 63.5 lakhs call for no explanation, though it is essential to state that book value in nearly all the cases is below the market value as on 31st December, 1942. Outstanding liabilities are covered by the revenue items and cash balances at the end of 1942 amounted to Rs. 8.45 lakhs. The high proportion of Stock Exchange securities to other assets is a mark of the progressive policy associated with the National. The classified summary of assets shows that house property amounted to Rs. 28.48 lakhs and mortgage loans to Rs. 15.35 lakhs. The Chairman in reviewing the year's results drew attention to the fall in the expense ratio though there was new liability for allowances, A.R.P. measures and paper, printing and all charges are higher. A further decline in the ratio is desired, and may materialise along with the recovery in new business. The important part played by life insurance, as a corrective of inflationary tendencies, was described by Mr. J. Chaudhuri in his examination of the prospects in the current year. The Chairman assured the annual meeting that the effects on revenue can well be readily regarded as temporary though the falling yield on the funds is, in the main, due to factors outside control, the repatriation of sterling debt being one of them.

(*Continued from page* 121)

worked by mill-owners or traders. Mr. Sabavala spoke bitterly about the traders' readiness to exploit all advantages; but the debate was adjourned. Merchants have been given notice about the date fixed for the declaration of stocks. Sales are freely advertised to get stocks out. Accusations of hoarding are very common, in fact, hoarding is a major industry. Someone wrote about the speculation in vegetable oils here. The trade in seeds was given up, and the speculators turned readily to edible oils. The middle class cannot get oil, and the defects of Control Orders are made public.

The Air Services of India, Ltd. has been taken over by Scindia Steam from the present Managing Agents. Scindia's Directors go on to the other Company's expanded board. The Air Services of India could not put its own plans through but it has trained pilots and ground staff after it surrendered its aircraft. Mr. Walchand Hirachand was asked to look over the possibilities of a merger by the other company, and he becomes Chairman of Air Services—a public limited company. It may be that shares will be bought up very soon for control by the new Directors. The plans of the future can only be guessed, but Air services will launch out in a big way, and start civil aviation in India on its second phase. Shipping companies can run air services, if the railways can, and Mr. Walchand will certainly prepare his post-war plans with a view to prevent the survival of monopoly.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, July 15.

COAL supplies continue to be the crucial factor so far as the Jute Industry is concerned. A number of fresh mills have had to close down for lack of supplies and some which managed to start up again, have again had to close. Altogether the position seems to be rather worse than a week ago. A suggestion has been made that Mills should take a week's holiday (paying the labour their normal wages), to enable stocks of coal to be accumulated in the dumps. It is certainly not an economic method of working for a mill not to know from one day to the next whether it will be able to start up. At the same time, the danger of a general closure is that, if this fact were generally known, coal supplies intended for the Jute Mills might be diverted elsewhere and the Mills thus be no better off. There are also bitter complaints of the quality of the coal supplied from the dumps, up to 30 per cent more coal required to keep steam up being reported in some instances. This is certainly not economy, in material, in handling or in transport. And it is definitely not the case that better quality coal is not available. In existing circumstances it is false economy to handle any but the best available quality.

An officer from the Supply Department is at present in Calcutta to discuss with the Mills the whole question of supply of goods and the prices to be paid. No final conclusions appear to have been arrived at yet but the scheme is believed to be a comprehensive one. To some extent at least it would appear that the Industry is about to be "rationalised" and it is only to be hoped that the result will not justify the cynic's definition of rationalisation—the modern phenomenon of doing it first and finding excuses for it afterwards.

With every will in the world to help on the war effort, the Mills have to suffer a good deal at the hands of the Supply Department. For instance, a "rush" order was recently placed with, and accepted by, the Mills for "B" Twills, though it was remarked at the time that there was an ample supply of ready goods held in Mill godowns on behalf of the Bazar, if quick delivery was so urgent. One Mill, finding itself in an oversold position by the imposition of this order, notified the Supply Department that it could only deliver so much in July and the balance in August and September. The reply came that extension might be given to 15th August, but not a day longer, but the Supply Department had no objection to the Mill supplying goods bought out of the Bazar. No reason was given why the Supply Department could not have bought out of the Bazar direct, nor was it suggested that the mill might buy out of the Bazar *on behalf of* the Supply Department. The point of the tale lies in the fact that the mill does not yet know at what price it is to be paid for the bags by the Supply Department.

Mills production for the month of June was returned as 104,700 tons as against 103,041 tons for the previous month. Of the total, 15 crores yards or 41,500 tons was Hessian and almost 14 crores yards or 58,000 tons Sacking. The proportion of goods manufactured on Government account was 12½ per cent in June as compared with 8.7 per cent in May. As stocks of goods at the end of June showed an increase of 9,073 tons over the figures for May, it follows that despatches of goods from mills during June amounted to 95,627 tons, quite a substantial figure if not up to the level of some recent months. It is reported that shipping facilities are satisfactory and the prospects of some reduction in stocks this month are good.

With the production figures for the whole of the seasonal year 1942-43 now before us, we find that mills have produced just over one hundred thousand tons of goods per month, a total of 1,205,407 tons to be exact. This compares with a total of 1,225,106 tons for the 12 months ended 30th June, 1942. The shortfall can be wholly accounted for by the loss in production in consequence of the Air Raids in December-January. To arrive at the corresponding consumption of jute, we once more, on account of the short supply of oil and other batching material, prefer to convert at the figure of 28 maunds to the ton, which gives us a total consumption figure of 68,60,000 bales of jute based on the production of goods. This, one is glad to see, corresponds almost exactly with the estimate propounded by Professor Todd.

The detailed figures for arrivals of jute into Calcutta during the past season are now available and show a total of 66,35,831 bales as compared with 56,73,910 bales during the 1941-42 season. Inland steamer arrivals have been maintained at a level of an average of over 13 lakhs of maunds per month, and showed little of the usual falling off towards the end of the season. Railway arrivals for June showed a satisfactory rise again to over 13½ lakhs of maunds, having fallen to under 11 lakhs the previous month. Arrivals by country boat during the season are, of course, far ahead of any total previously recorded, being almost 30 lakhs of maunds for the year, a seven fold increase over the previous years figures.

It is known that mills consumed during the 12 months ended 30th June, 68,60,000 bales of jute. Against that only 66,35,000 bales were imported into Calcutta. Here is a shortage of 2,25,000 bales, to which has to be added the total of exported jute for which final figures are not yet available, but which may be taken as approximately 12,25,000 bales for the season. It is thus apparent that, apart from any variation in Bazar and Presshouse stocks, estimates of which are not yet complete, mill stocks of raw material in godowns have suffered a reduction in the course of the season of no less than 14% lakhs bales, the equivalent of about two and a half months consumption. Some mills are in the rather anomalous position of not only having anxieties about their available stock of jute, but also of where to put more even if and when they get it. For so many godowns normally devoted to the storage of jute have had to be converted to store gunnies, or for use as sewing sheds for the manufacture of tents, or have otherwise been taken over for Government purposes, that storage accommodation is in many cases a serious problem.

The Preliminary Jute Forecast for the current season, as published so far, leaves us very little wiser than before and it is not surprising that its publication elicited practically no interest. *Eheu, fugaces labuntur anni,* and like Lucifer, the Forecast is sadly *fallen from its former high estate even as* entertainment value. Not even an estimate of the area sown is ventured so far as Bengal is concerned. Only the area *licensed* to be sown is published, and so far no indication is given whether full, or only part advantage has been taken of the licenses. With the standard "recorded acreage" at 54 lakhs of acres, an eight anna acreage as was supposed to be sanctioned this season would amount to 27 lakhs of acres, but the published figures would indicate that no more than 25% lakhs of acres were actually licensed for Bengal. This, at the old-fashioned, rough and ready ratio of 3 bales per acre would indicate a crop of 76 lakhs of bales, to which has to be added the outside Province of Bihar, Assam and Orissa, estimates for all of which show heavy shortages and total no more than 3,90,000 acres. The out-turn in these provinces being normally much lighter than Bengal, may be taken at 2 bales per acre, so we see a prospective crop of 84,30,000 bales, sufficient for immediate requirements, but leaving no, or very little margin for emergencies. The crop is not yet out of the wood, so to speak, though conditions have so many expect a prospective crop of 84,30,000 seemed somewhat backward have had the opportunity to develop owing to the slow rise of the rivers. But it is some years since we have had serious floods and there are indications that we may not escape that calamity this year, which might very seriously affect the final weight of the crop, and possibly land the industry in severe difficulties. Much depends on the behaviour of the weather and the rivers in the next few weeks.

Interest in the Export Jute market has again been confined to transactions in Dundee Daisee, mainly at Rs. 86 for near and at Rs. 85 for forward shipment. Mills have bought to a moderate extent of Firsts from Rs. 89 to Rs. 88 combined with Lightnings at Rs. 84 to Rs. 83. Cuttings have been recorded at Rs. 40 and Rs. 39 for N.C. and at Rs. 39 and Rs. 38 for M.C.

A fair turnover has been reported in Loose Jute. Some European Jat appeared on offer at maximum rates and was quickly snapped up, whereas Supervised Jat and District, which had previously been held for full rates, dropped by four annas, at which level mills resumed purchases. Some Indian Jat and District have also been reported at eight annas under maximum rates. A number of mills announces having completed their quota purchases against the American order.

With mills still non-operators in the Fabrics market, business has been confined to inter-Bazar dealings with a few transactions between Shippers and Bazar, but the volume of outside enquiry has been very limited. Hessian prices have not yet come to a level which would attract mills to buy back, and even then it would only be to correct an oversold position, as manufacturing still shows a reasonable margin of profit. Nine porters are quoted at Rs. 19-12 and position, with eleven porters at Rs. 26-8 near and Rs. 26-10 to Rs. 26-12 forward. "B" Twills now stand at Rs. 61.

JUTE

Calcutta, July 15.

RATHER quiet conditions were noticeable in the raw jute market during the past week. Earlier in the week slightly firmer conditions were noticeable with a larger amount of business passing but in the latter half of the week, with the withdrawal of mills from the market and the anxiety of sellers to do business, jute was available even below the agreed maximum rates. Reports regarding the possibility of fixation of maximum prices for jute manufactures have been mainly responsible for the easier tone of the market during the last three days. It appears that mills are not in a hurry to buy their requirements of jute as their production programme has been disturbed to a certain extent by the scarcity of coal supplies and there is a tendency on the part of most mills to await further developments. Weather conditions in the mofussil districts continue to be favourable though it is said that dry weather will be advantageous for the growth of the crop in certain districts. New crop arrivals are not on a large scale though it is reported that harvesting has been nearly completed in the lowlands. The ryots are still of the opinion that they will be able to get higher prices for new crop and that the present maximum prices will not be continued for long. It should be pointed out however in this connection that the Indian Jute Mills Association has made a statement to the effect that the present maximum prices will be continued for the whole season.

In the loose jute section, as pointed out above, mills were buying rather freely Supervised Jat Middles and Bottoms at the agreed maximum rates in the earlier days of the week. In the last two days, however, very little business has been done on account of mills and sellers have been offering a discount of 4 annas below the agreed maximum rates. Business in new crop is still restricted.

In the pucca bales section easier conditions have been noticeable with shippers buying Dundee Daisee 2/3 at Rs. 84 per bale and Dundee Daisee 4's at Rs. 79 per bale. Mills are reported to have purchased combined Firsts and Lightnings at Rs. 89 and Rs. 84 per bale respectively. Cuttings were Rs. 3 per bale lower at Rs. 38 per bale.

JUTE MANUFACTURES

Calcutta, July 15.

The jute manufactures market has been very uninteresting and quotations have been fluctuating around the low levels touched last week. Business was mostly on account of interbazar operators. Overseas consumers prefer to await the announcement by the Indian Jute Mills Association regarding the fixation of maximum prices for jute goods. There are reports that mills are trying to fix maximum prices which admit of a profit of 7½ per cent on the total turnover and that they have approached the Central Government to take the necessary action. Nothing definite is yet known. Mills are reported to have purchased back from the market 9 porters at the lower levels. There was a slight recovery in prices. It is common knowledge that mills have a heavily oversold position and will be glad to lighten their commitments by purchasing back from the bazar any contracts that are available at low rates. 9 porters ready are quoting Rs. 19-12, July Rs. 19-12, August/September Rs. 19-14 and October/December Rs. 19-14. 11 porters ready are Rs. 26-10, July Rs. 26-12, August/September Rs. 26-12 and October/December Rs. 26-14.

The Heavy Goods section has been rather weak and a very small amount of business has been passing at lower rates. B. twills for July delivery sold on the basis of Rs. 61-8, Liverpool twills Rs. 66-8 and Cornsacks Rs. 61-8.

The production figures for the month of June are now available. The total production for the month is estimated at 104,700 tons against 103,041 tons for the previous month. Production on account of hessian was higher at 41,580 tons. Sacking, cloth and bags, were 58,125 tons while other manufactures totalled 5,057 tons. In spite of the increase in total hessian production, that on commercial account was lower at 30,338 tons against 33,793 tons. The figures are given below:—

Total Reported Production of Manufactured Goods.*

By the mills in the membership of the Association and also by Gagalbhai Mills.

Description.	Quantity.
1. TWIST AND YARN—	
(a) For sale ..	2,839 tons
(b) all other, including that used in sewing bags	1,739 tons
2. CANVAS—	761 tons
	14,65,980 yards
3. GUNNY BAG (Tonnages exclude sewing twist) ..	1,859 tons
	71,20,042 yards
(a) Hessian ..	50,87,015 number
(b) Sacking ..	52,352 tons
	12,48,41,828 yards
	5,13,04 509 number
4. GUNNY CLOTH—	
(a) Hessian ..	27,718 tons
	10,11,29,807 yards
(b) Sacking ..	3,950 tons
	1,02,02,181 yards
5. OTHER MANUFACTURES, (including ropes) ..	479 tons
6. TOTAL PRODUCTION (above figures combined) ..	
(i) All kinds ..	91,697 tons
(ii) Hessian (both as bags & cloth)	10,82,49,849 yards
(iii) Sacking (both as bags & cloth)	13,50,44,009 yards
(iv) Canvas (both as bags & cloth)	14,65,980 yards

TOTAL REPORTED PRODUCTION OF GOODS MANUFACTURED ON GOVERNMENT ACCOUNT.

(By the Mills in the membership of the Association and also by Gagalbhai Mills).

Description.	Quantity.
7. Sandbags ..	1,196 tons
	56,11,754 yards
8. Scrim cloth ..	1,950 tons
	64,13,204 yards
9. Hessian bags and cloth and canvas ..	8,034 tons
	2,92,22,663 yards
10. Sacking bags and cloth ..	1,823 tons
	41,36,502 yards

GOLD

Calcutta, July 15.

The bullion market was uninteresting for the most part of the week and quotations were fluctuating in narrow limits. There was not much of investment demand. The large arrivals of stock from Mysore and the reports of selling by Indian States were responsible for the appreciable decline in prices last week. It was feared that, with the easier stock position and the predominance of sellers, prices might be marked further lower. The close has been rather quiet and quotations are at the lowest levels for the week. Gold ready closed at Rs. 78, the quotation at the end of last week was not very much higher at Rs. 78-4. The decline in the quotation for sovereigns is rather pronounced at Rs. 55-8, the same at the end of last week being Rs. 56-8.

SILVER

Calcutta, July 15.

The silver market has not been very much affected but quotations have been marked lower in sympathy. Reports regarding the arrangement of large supplies of lease-lend silver for Britain have naturally had a dampening effect on prices but it is not yet known whether any of this silver will be available for India. The fact that Britain will not be indenting on Indian supplies any more, however, will have a restraining influence. Silver ready closed at Rs. 118-5. In the Calcutta market the quotation was Rs. 118-8.

In the London market, the quotation for both Spot and Forward is unchanged at 123½d. The undertone is rather quiet.

PIECEGOODS

Calcutta, July 15.

The piecegoods market has remained very quiet. Business passing was very poor. At this time of the year there is a slack demand. As there is considerable uncertainty regarding the future of prices, buyers are naturally inclined to await further developments. With the anxiety of mills to book forward contracts at lower rates and the keenness of dealers to dispose of stocks even at a slight discount below the existing bazar rates, it might well be that the Government would prove to be successful in carrying out their scheme. But if any extension of time regarding the disposal of stocks by dealers is granted, the market will resume its upward trend. Retail prices have not been marked lower to the extent of the decline in wholesale prices, and retailers are in the hope that the recent fall in prices might be short-lived.

Stock Markets to-day and to-morrow

TATA IRON & STEEL ACCOUNTS FOR 1942-43

The sharp decline in prices for most of the popular counters in both the Calcutta and Bombay markets in the early days of the week was not quite expected. And, it must be said, some investors were taken by surprise. There have been no particularly unfavourable developments in the stock markets during the last few days. As a matter of fact, with the improvement in the war situation, one should have expected that there would be an improvement in the general sentiment. Operators, however, have taken more seriously the decline in the piecegoods and bullion markets. Also the decline in the earnings of the Tata Iron and Steel Company for the year ended March, 1943 by over Rs. 2 crores has had a disappointing effect. Bears have naturally taken advantage of the position and there has been heavy selling of cotton and steel shares. All sorts of rumours have got current but there is no reason to believe any of them. Only in Thursday's and Friday's session a better feeling is noticeable though business passing is very much restricted and the undertone is not quite confident.

* * * *

The accounts of the *Tata Iron and Steel Company, Limited* for the year ended March, 1943 have not been very favourably received by the market. The profits for the year 1942-43 are substantially lower than those of the preceding year. This is, as the directors pointed out, mainly due to the serious loss on production caused by a strike which took place at the works in August, 1942. After work was resumed it took a long time before full production was obtained. Other difficulties also were experienced, such as the breakdown in January this year of one of the generating sets which also affected production. With the increased working expenses and the lower level of production the net profit for 1942-43 is, therefore, lower by as much as Rs. 2 crores.

* * * *

The earnings, before providing for taxation and depreciation, but after providing for bonus, amount to Rs. 6,36,73,525 against Rs. 8,43,06,083 for 1941-42. The provision for taxation is lower at Rs. 2.92 crores against Rs. 3.82 crores. The amount set aside for depreciation is unchanged at Rs. 1.25 crores, while no amount has been provided for Employees' War Risk Insurance against Rs. 20 lakhs on the former occasion. The transfer to Reserve Fund is lower at Rs. 35 lakhs against Rs. 1 crore. The distributable surplus including the balance brought forward from the previous account, is therefore, not very much lower at Rs. 2.1 crore against Rs. 2.4 crores for 1941-42. As has been pointed out already in these columns, after the payment of the dividend on the first and second preference shares, the ordinary dividend is to be Rs. 23 per share against Rs. 27 per share previously and the deferred dividend Rs. 129-8-9 per share against Rs. 158-4-4 per share.

* * * *

The sum of Rs. 50.37 lakhs equal to one-fifth of the Excess Profits Tax paid last year has been deposited with the Government in accordance with Section 10 of the Indian Finance Act, 1942. As the payment was made after the accounts were closed, there is no entry in this regard in the latest balance-sheet.

The Company has been conducting successfully research work in special steels and alloys and developed a number of special tool steels, a new composition of armoured plate steel and various alloy steels. The plans for an increase in the steel-making capacity, in pursuance of the recommendations of the Grady Mission, have been dropped after negotiations with the Government. Instead, it has been decided to proceed with the construction of the Billet Mill which had been a long-standing project and which was held up on account of the war. Production in other branches, have been substantially increased.

The entire output of the Company is now controlled. During the second half-year prices under the main war supply contract with the Government were raised in agreement with the Government owing to the increased costs of production.

* * * *

As regards the prospects for the current year, given the continuance of the present conditions and the satisfactory progress of the new departments, it can very well be expected that profits will climb to the level of 1941-42 and may perhaps be even higher. On the basis of the latest dividends, the ordinary shares afford a return of 6 per cent tax-free and the deferreds 7 per cent tax-free. In view of the assured prospects and the possibility of higher dividends for the current year, it should be said that the shares retain the same attraction.

The accounts of *Kumardhubi Engineering Works* for the year ended November, 1942, make encouraging reading. There has been a substantial improvement in the earnings for 1941-42. The net profit, before providing for taxation and depreciation, being Rs. 9,74,699 against Rs. 6,23,040 for the year ended November, 1941. The provision for taxation is very much higher at Rs. 6,61,340 against Rs. 3,14,000 while the amount set aside for depreciation is Rs. 1,65,923 against Rs. 1,79,799. The provision in respect of taxation for the last two accounting years are, however, considerably in excess of actual requirements as, since the close of the accounts, the Managing Agents have been notified that standard profit has been fixed at Rs. 2.15 lakhs against the basis assumed by the Company of Rs. 36,000 only. The debit balance carried forward is considerably lower at Rs. 27,985 against Rs. 1,75,471 brought in. It is interesting to note that the directors have under active consideration a scheme for capital reconstruction of the Company and , it is hoped to bring these proposals shortly before the shareholders, which if proved will take effect from December, 1943. We have pointed out the need of capital reconstruction on former occasions and, therefore, welcome the decision of the directors to present in a clean balance-sheet. The dividends on the preference shares remains unpaid from December, 1920. The total amount in respect of arrears of dividends is as much as Rs. 18.9 lakhs to the end of December, 1942. It can be expected that some portion of this amount will be found from the surplus amount in respect of taxation provision. If the preference shareholders can be induced to take a portion of the arrears of dividends in preferred ordinary shares or the like, the assets can be depreciated to a great extent by writing down the value of the ordinary shares, especially as the directors point out that considerable sums, probably necessitating the raising of fresh capital, will be required for the purchase of up-to-date equipment, as soon as such equipment can be obtained after the war to replace the worn-out and obselete machinery. This is perhaps the reason why the preference shares have reacted favourably to the proposals made by the directors and there has been a rise in the quotations to Rs. 248, a rise of 30 points in a few days. The ordinary shares, on the other hand, have come down to Rs. 6-10.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 16.

RATHER quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week with the undertone inclined to be definitely weaker. Business passing has been on a very much smaller scale. Earlier in the week on the announcement of the news regarding Allied landings in Sicily, slightly firmer conditions were noticeable but operators were more concerned with developments within the country. There were rumours regarding the possibility of limitation of dividends, though there is no foundation for these rumours. The continued weakness of the piecegoods market and the slump in bullion prices had a depressing effect on the stock markets, but towards the close a slightly better feeling was noticeable, though no appreciable rise in prices is to be recorded. The only exceptions during the week have been provided by the Giltedged and Coal sections where prices have been very well maintained and even improved upon.

The giltedged securities section has continued firm and business in short-dated loans has been on quite a large scale. Provincial loans especially were in good favour with not many sellers offering. 3% per cent Paper was slightly easier at Rs. 94-15, though the quotation for most part of the week was around Rs. 95. 3 per cent Paper was quoted at Rs. 81-12, while among terminable loans, 3 per cent 1963-65 were steady around Rs. 96 and 3 per cent 1949-52 Rs. 100-4. 3 per cent 1951-54 Rs. 100. 3½ per cent 1947-50 was not very much in favour at Rs. 103-11, 4 per cent 1960-70 at Rs. 110-14 and 5 per cent 1945-55 at Rs. 107-4. No business has been reported in Provincial loans. There has been no change in the money market and Government has been able to get their full requirements of treasury bills at the slightly lower rate of annas 15 and pies 11 per cent per annum.

Bank shares have been easier with the maintenance of the *Imperial Bank* dividend at 12 per cent per annum for the half-year ended June, 1942. Fully paids were done at Rs. 1,830 and Contributories Rs. 436. *Calcutta National Bank* were higher at Rs. 13-8 while *Reserve Bank* were very much lower at Rs. 117.

Among Railway shares, *Darjeeling-Himalayan* were done at Rs. 107, *Hoshiarpur-Doab* at Rs. 107-8, *Howrah-Amta* at Rs. 103 and *Bukhtiarpur-Bihar* at Rs. 68-8.

The cotton section was the weakest spot in the whole market and a very substantial decline in prices has been recorded. Closing prices are only slightly higher than the lowest levels for the week. *Cawnpore Textiles* were at one time as low as Rs. 10-8 against Rs. 12-12 at the end of last week. The close is slightly better at Rs. 10-12. *Elgin* after being lower at Rs. 65-8, closed at Rs. 68, the quotation at the end of last week being Rs. 72. *Dunbar* were Rs. 268 against Rs. 280, *Kesoram* Rs. 13-6 against Rs. 14-10, *New Victoria* Rs. 8-14 and *Benares* Rs. 12.

Coal shares have been rather firm on the encouraging earnings report published by some of the more important companies in the industry. *Bengal Coal* were higher at Rs. 475 with *Bokaro and Ramgur* were very much in demand at Rs. 23-14. *Burrakur* also were some annas higher at Rs. 16-12 while *Central Kurkend* were Rs. 16-7. *Equitable* were unchanged at Rs. 38-4, *Dhemo Main* Rs. 14-10, *South Karanpura* Rs. 5-14 and *Talchar* Rs. 3-13. *New Beerbhoom* were Rs. 21-12, *Satpukuria and Asansol* Rs. 4-7 and *West Jamuria* Rs. 34-12.

In the Jute section, no appreciable change in prices is to be recorded. The market has apparently got over the fears of the proposed maximum prices affecting considerably mills earnings. The easier tone of the other sections, however, has resulted in a slight marking down in prices on balance. *Anglo-India* were Rs. 386 against Rs. 395, *Bally* Rs. 336, *Belvedere* Rs. 490 against Rs. 498, *Delta* Rs. 510 against Rs. 507, *India* Rs. 532 against Rs. 547, *Howrah* Rs. 60-12 against Rs. 62-12 and *National* Rs. 27-10 against Rs. 28-7. *Nuddea* were Rs. 97-8 against Rs. 101-8 and *Megna* Rs. 77 against Rs. 76-12. *Chitavalsah* were Rs. 25-8, *Clive* Rs. 26-2 and *Northbrook* Rs. 28-4.

In the Engineering section, there has been some selling of speculative counters. *Indian Iron* and *Steel Corporation* were marked down to Rs. 34-13 and Rs. 26-12 respectively. The lowest levels touched during the week were Rs. 34-7 and Rs. 26-7 respectively. *Kumardhubi* were lower at Rs. 6-12, *National Iron and Steel* Rs. 12-12. *Saran Engineering* were crossed at Rs. 7-12 while *Jessop & Co.* were slightly higher at Rs. 21.

Sugar shares were uninteresting. *Carew & Co.* were Rs. 18-8, *Champaran* Rs. 38-8, *Purtabpore* Rs. 16-11, *Ramnugger* Rs. 10-4 and *New Savan* Rs. 17-9. *U. P. Sugar* were marked higher at Rs. 25-14.

There were not many transactions in Tea shares and prices were more or less maintained with *Bishnauth* at Rs. 39-4, *Tezpore* at Rs. 17-8 and *Banarhat* at Rs. 955 cum-dividend. *Hasimara* were Rs. 17-8 cum-dividend and *Hantapara* Rs. 715 ex-dividend.

In the Miscellaneous section, *Burma Corporation* were higher at Rs. 3-4 while *Indian Copper* were noted at Rs. 2-7. *Rhodesia Copper* were lower at Rs. 2-7 while *Tavoy Tin* were done at Re. 1-2. *B. I. Corporation* were marked down at Rs. 5-10 with *British Ceylon* at Rs. 15-4, *Aluminium Corporation* were lower at Rs. 17-12 while *Associated Hotels* were steady at Rs. 14-10. *Calcutta Trams* were a point lower at Rs. 26-8 with *Indian Wood Products* steady at Rs. 30-6. *Rohtas Industries* were crossed at Rs. 32-4. *Port Shipping* were higher at Rs. 21-2.

Among Paper shares, *Bengal* were Rs. 207, *Titaghur* Rs. 26-2 ex-dividend and *India Paper Pulp* Rs. 190-8.

Midnapore Zemindary were Rs. 93-8 and *Assam Saw* Rs. 4-11. *India General Navigation* were lower at Rs. 119. There were buyers of *Calcutta Landing and Shipping* at Rs. 18-12. *Calcutta Steam Navigation* were put through at Rs. 250.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 15.

THE easy conditions that were evident last week-end did not take a straight course in the days fololwing on the local stock exchange. The market has been shifting from one side to the other like one who is obliged to sleep on an extremely uncomfortable bed. The frequent ups and downs naturally imparted an irregular and tired feeling, now improving and a little later on sagging, only to repeat the zig-zag movement. Even though no apparent reason was discernible, the undercurrent of doubt and pessimism which was noticed as early as the beginning of last week still continues. Unlike the mythological bird that is said to take only milk eliminating water from a mixture of both the market leaves out of account all favourable factors that have happened during this week and prefers to cling to genuine but minor, and imaginary fears. While the Allied invasion of Sicily and the failure of the German offensive have entirely left the market unmoved, renewed rumours of restriction of dividends coupled with the feeling that cotton mills would not be as prosperous in the coming year as in the preceding one, on account of the cloth and yarn price-control scheme, continue to condition any wish to look at the brighter side of things. What applies to Textiles applies to other counters also; for the former leads and the others follow.

The giltedged section has been steady throughout the period under review.

Textiles.—Mill shares are suffering from not only lack of enthusiasm but even modest support, for the past few days now. Though there has been no violent upheaval, uncertainty dogged the steps at every turn. Restriction in movement is the logical consequence and weakness set in. Many believe that the cloth and yarn price-control

(Continued on page 148)

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 8th July to 14th July, 1943 both days inclusive)

GOVERNMENT SECURITIES:

2¾ per cent Loan (1948-52):—(13th) 99-11.
3 per cent Loan (1951-54):—(18th) 100 s.l., 100-1; (12th) 100 s.l.; (13th) 100-4 s.l., 100-1; (14th) 99-15, 100 s.ls., 100-2.
3 per cent Loan (1949-52):—(9th) 100-12 s.l.; (12th) 100-14, 100-10; (13th) 100-4, 100-14 s.ls.; (14th) 100-13, 100-14 s.ls., 100-14.
3 per cent Loan (1963-65):—(9th) 95-14, 96-2 s.l.; (12th) 95-15, 96 (96-3, 96-4 s.ls.); (13th) 96-1 s.l., 96-1.

(Annual General Meeting on 28th July, 1943 at 4-30 p.m.)

* Taxable.

Audited Statement of Accounts for the year ended 31st March, 1943.

The disposable profits for the year are as under:—

	Rs.
Net profits after providing for income-tax, super-tax and excess profits tax and after setting aside a sum of Rs. 1,25,00,000 for depreciation	2,72,23,525
Add—Amount brought forward from last year's account	11,63,751
Add—Income-tax deducted from dividends on Preference Shares (1941-42)	13,25,093
The amount available is thus	2,97,12,369
Out of which the Directors have transferred ..	35,00,000
To the Reserve Fund leaving a balance of ..	2,62,12,369

The Directors have determined to dispose of this amount as follows:—

A. To Shareholders:	
(1) A dividend of Rs. 9 per share on First Preference Shares	4,50,000
(2) A dividend of Rs. 7-8-0 per share on Second Preference Shares	52,03,642
(3) A dividend of Rs. 23 per share on Ordinary Shares	80,50,000
(4) A dividend of Rs. 129-8-9 per share on Deferred Shares	63,15,625
B. To Employees: Bonus under the Profit-Sharing Scheme ..	52,50,000
C. Carry forward	9,43,102
Total ..	2,62,12,369

(Dividends on First and Second Preference Shares will be subject to deduction of Income-tax).

The profits for the year 1942-43 are substantially lower than those of the two preceding years. This is mainly due to a serious loss of production caused by a strike which took place at the Works in August, 1942. This strike which was entirely of a political nature started on the 21st August, 1942, and ended on the 3rd September, 1942. It took some months thereafter before full production was obtained. Further, production was lost owing to the breakdown in January, 1943 of one of the Company's generating sets, which was out of action until April. Fortunately the 15,000 K.W. set, which was borrowed from the Cawnpore Electric Supply Corporation through the Government of India, in order temporarily to replace a new set, the installation of which has been delayed owing to the loss of a part of it at sea, came into operation in the first week of February, and helped in restoring the power situation.

The lower profits for the year have necessitated a reduction in the allocations to the Reserve fund as well as in the Dividends on Ordinary and Deferred shares and in the profit-sharing bonus, as compared with last year.

Under the War Risks (Factories) Insurance Ordinance, the factory and the surface machineries at the mines and collieries were insured for a little over Rs. 21 Crores and further insurance was effected from time to time in accordance with the provisions of the Ordinance as additions were made to the plant. All stores and materials required to be insured were also insured under the War Risks (Goods) Insurance Ordinance. As explained in the last year's report, the Company voluntarily undertook a non-contributory scheme of insurance for injuries or death caused by enemy action and made a provision of Rs. 20 Lakhs from the profits to meet its liabilities under the scheme. An insurance policy was obtained at a high rate of premium. Government have recently notified a scheme for the insurance of industrial employees against war risks. When that scheme is brought into operation, it will be applicable to the employees of the Company, but as the benefits under the Government scheme fall short of the benefits announced by the Company under its own scheme, cover for the balance of the risk will be obtained by further insurance, if necessary.

FINANCE.

In accordance with Section 10 of the Indian Finance Act, 1942, the Company deposited with Government a sum of Rs. 50,36,923 equivalent to twenty per cent of the excess profits tax paid last year. As the payment was made after the accounts of this year were closed, it will appear in the next year's accounts. By a recent Ordinance the payment of this deposit is now made compulsory.

After a careful examination of the Ways and Means position of the Company, the Directors have decided to postpone for some months the repayment of the Bearer Deposit Certifictes created last year.

OPERATIONS.

As in the previous year, practically the whole of the Company's operations were directed towards meeting the requirements for war, for the Railways, and for urgent civil purposes.

271 employees and 48 apprentices have been released for war service during the last three years. These figures include 26 employees and 11 apprentices sent to England for training under the Bevin Training Scheme. The training of Air Force mechanics, referred to in last year's report, was discontinued as the building was required by the R.A.F. for work connected with their Balloon Barrage.

During the second half of the year, prices under the main war supply contract with Government were raised, in agreement with Government, owing to increased cost of production.

Billets, scrap and re-rollable steel have now all been brought under control and prices fixed. Thus the manufacture and distribution of all classes of steel made in the country are completely controlled. The Iron and Steel Controller has fixed prices at which re-rollers can be supplied with raw materials, and also the prices at which their finished products can be sold.

Owing to the reasons mentioned in the earlier part of the report, the output of the main products of the Company was lower than in the preceding year. There was, however, a record production of tools made and despatched at the Agrico Factory.

The extension to the Benzol plant was completed in February. With this extension the output of motor spirit and toluene was nearly doubled.

"C" Blast Furnace was completely rebuilt during 1942-43 and is ready for operation. It will be started just before the "D" Furnace which is running well at present, is blown out for relining.

The Acid Furnace at Steel Making Shop No. 3 tapped its first heat on June 8th. The steel from this furnace is utilised for the manufacture of wheels, tyres and axles. Another furnace, which is now making basic steel, was started in October. The actual manufacture of steel on what is known as the Perrin process has not yet started.

Production as the Wheel, Tyre and Axle plant increased steadily. The axle forging hammer came into operation in April and the manufacture of axles has begun. The capacity of the axle forging plant is to be increased. The plant has been experiencing some difficulty owing to lack of experienced hands and proper equipment, but despite this its operation is satisfactory.

Three bays were added to the Machine Shops and several new machines were installed.

A chamber kiln was installed and put into production at the magnesite brick plant. With this addition, this plant will almost double the monthly output of dead-burnt magnesite.

A temporary calcining plant was erected to supply burnt lime to Steel Making Shop No. 3 and will operate until the new dolomite plant is ready.

Research into the production of special steels and alloys was prosecuted with vigour and resulted in the development of a number of special tool steels, a new composition armour plate steel and various alloy steels. Experiments on the manufacture of ferro-vanadium have been completed and a plant for its manufacture will be installed in the near future. A plant for the manufacture of ferro-tungsten has been installed and will be brought into production shortly.

As a result of the recommendations of the Grady Mission, it was proposed to undertake an extension of the plant which would have increased its steel making capacity and balanced its rolling capacity with the increased steel production. This project was, however, dropped after certain negotiations with Government had been carried on. The Company has decided to proceed with the construction of th Billet Mill, which has been a long-standing project and was held up owing to the war. Under existing conditions, however, the work will necessarily have to proceed slowly, and the greater part of the mill will be fabricated in the workshops of the Company itself.

The selling arrangement with the Steel Corporation of Bengal continued to work satisfactorily. This arrangement, which was in force for three years, expired in December 1942, but is being continued by mutual consent. Owing to control over the distribution and price of billets the terms under which the Company undertook to run the plant of the Indian Steel Rolling Mills at Negapatam were revised for the duration of the war. The arrangement is working satisfactorily.

COLLIERIES.

The development programme undertaken in 1938 was completed as far as possible, but certain units of plant and equipment still remain to be delivered from England.

Equipment at all the collieries was maintained in good condition and pumps and haulages were installed and re-arranged at all the collieries. The aerial ropeway for carriage of sand for sand stowing was put into commission in October 1942 at Digwadih.

Stowing operations were undertaken at all the collieries.

Labour conditions at the collieries were very unsatisfactory owing to war conditions, food shortage, etc.

LABOUR.

Except for the political strike referred to earlier, the labour situation at Jamshedpur was satisfactory. Owing to the continuous steep rise in the prices of foodstuffs, increased dearness allowances were paid to all the employees of the Company. In March, 1943, it was decided to freeze the dearness allowances paid to employees at Jamshedpur at the rates then prevailing and to supply rationed quantities of food to them at the prices prevailing in October, 1942, when the dearness allowance was last revised, all subsequent increases in prices being borne by the Company. A Supply Committee with the General Manager as Chairman, and the Deputy Commissioner and Heads of other Associated Companies and representatives of the public as members, was set up to arrange quotas and permits, make purchases, distribute supplies and keep accounts. Whilst in the early stages this scheme worked satisfactorily, considerable difficulties were experienced recently in securing supplies, particularly of rice.

It has been decided to give all employees of the Company 2½ months' pay under the profit-sharing bonus scheme for the year 1942-43, which will involve an expenditure of about Rs. 51 lakhs.

Owing to the very heavy demand for labour from other industries and Government, it was extremely difficult to recruit skilled and partly skilled labour. This difficulty was specially experienced in the two new departments of the Wheel, Tyre and Axle plant and Steel Making Shop No. 3. The operation of these plants was, therefore, carried on by transferring trained men from the Machine Shops and Steel Making Shops Nos. 1 and 2, with consequent partial loss of efficiency in the latter departments. The unskilled labour position was also somewhat uncertain throughout the year, owing to extensive employment by Governments on the construction of aerodromes, roads and other work. This caused difficulty in the handling of raw materials. It was, therefore, considered necessary to have a permanent reserve labour force at the disposal of the Company to take care of the handling of raw materials and to carry on essential processes of operation as well as to maintain the essential processes of operation as well as to maintain the essential services during and after an air raid, should there be a fight of labour. A labour camp has, therefore, been instituted inside the Works and the men are provided with accommodation and free rations. The strength of the camp is about 500.

Following on repeated complaints from contractors' labour in the matter of dear food allowances, the Company introduced a provision in the contracts making it obligatory on the contractors to grant a dearness allowance of three annas per working day. The contractors are reimbursed for this allowance by supplementary payments over and above their tendered rates.

(Half-yearly General Meeting on 28th July, 1943 at 11 a.m.)

*Including purchased coal.

†Includes Bonus of 2 per cent.

Audited accounts for the half-year ended 30th April, 1943:—

After providing Rs. 3,00,000 for Depreciation and Rs. 14,00,003 for taxation, including Excess Profits Tax, there is a balance at the credit of the Profit and Loss Account of Rs. 5,48,891-6-10 from which they recommend:—

	Rs.	A.	P.
Dividend of Rs. 10 per share	4,00,000	0	0
Provision for Commission to Directors and staff	7,000	0	0
Carry forward	1,41,891	6	10

Labour attendance improved during the half-year, and the Company was able to provide foodgrain rations to all its employees and miners at reasonable prices. The loss on foodstuffs so supplied materially added to the cost per ton on raisings, but was offset by an increase in selling prices.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

JESSOP & COMPANY, LIMITED.

Audited accounts for the year ended 31st October, 1942:—

Report.—Trading and Manufacturing results for the year have been satisfactory, the Works at Dum Dum having employed almost exclusively on work for Government. Difficulties, however, continue to be experienced in obtaining adequate supplies of raw materials and components, with consequent dealers in completion of orders, and although there are large contracts in hand, the prospects for the coming year appear likely to be affected by these difficulties, as also by steadily rising costs including among other items heavy food subsidies to the workers.

Accounts.—After providing Rs. 2,29,275-12-0 for depreciation, Rs. 9,50,000 for taxation, and for all other charges, the Accounts show a net profit of Rs. 7,89,608-11-1 to which sum is to be added Rs. 3,72,278-4-10, the balance brought forward from last year's Accounts, and there is to be deducted Rs. 31,096, the Dividend on Preference shares for the period 16th September, 1941 to 30th April, 1942, leaving a total of

	Rs.	A.	P.
	11,30,790	15	11
From this sum is to be deducted the amount of the *ad interim* Dividend on Ordinary shares of *Re.* 1 per share paid on 1st May, 1943 in respect of the year to 31st October, 1942 ..	5,10,000	0	0
	6,20,790	15	11
Also to be deducted is the Dividend on Preference shares for the half-year to 31st October, 1942	25,000	0	0
Balance available ..	5,95,790	15	11

The Directors recommend that this Balance be dealt with as follows:—

Payment of a final Dividend of 4 annas per share making a total of 12½ per cent. free of tax for the year	1,27,500	0	0
Transfer to General Reserve	1,00,000	0	0
Carry forward to next year's Accounts ..	3,68,290	15	11
Total ..	5,95,790	15	11

Authorised Capital—Rs. 1,00,00,000. *Issued and Subscribed*—Rs. 61,00,000, *in* 10,000 5 *per cent. cum. Pref. of Rs.* 100 *and* 510,000 *Ordinary Shares of Rs.* 10 *each, both fully paid up.*

CENTRAL BANK OF INDIA

The net profit of the Central Bank of India Ltd., for the half-year ended June 30, 1943 subject to audit, including the amount brought forward from last year's accounts, amounts to Rs. 41,01,314 which the Directors have resolved to dispose of as follows:—

To pay an ad-interim dividend at the rate of 10% per annum, free of income-tax for the half-year ended June 30, 1943—Rs. 8,40,660-0-0; to carry forward to next half-year's account subject to provision for taxation.—Rs. 32,60,654-0-0. Total—Rs. 41,01,314-0-0.

IMPERIAL BANK OF INDIA

The Directors of the Imperial Bank of India at the meeting of the Central Board *held at* Bombay on July 9, declared a dividend to shareholders for the half-year ended June 30, 1943, at the rate of 12% per annum, payable on and after July 19, 1943.

The profits available, including Rs. 45,51,700 brought forward from the previous half-year, amounted approximately to Rs. 90,76,700 which sum was disposed of as follows:

Payment of a dividend of 12% per annum free of Income-tax, Rs. 33,75,000; transferred to Pension Funds, Rs. 1,03,700; bonus to staff, Rs. 8,50,000; carried forward to next half-year, Rs. 47,48,000. Total, Rs. 90,76,700.

The average rate for Demand Loans during the half-year was 3½%.

THE BANK OF BARODA, LIMITED

(Incorporated in Baroda, Liability of members being limited).

The profit of the Bank of Baroda, Ltd., for the half-year ended 30th June, 1943, subject to audit, including Rs. 2,43,316-10-5 brought forward, amounts to Rs. 11,32,814-6-7.

The Directors have resolved to declare an *ad interim* dividend at the rate of 10 per cent per annum, free of income-tax which will absorb Rs. 3,00,000 and to carry forward the balance of Rs. 8,32,814-6-7 to the next account.

scheme would ultimately deprive the mills of a large slice of their profits. Hence no one wants to venture beyond a self-imposed and, therefore, narrow limit. Latest quotations are; *Bombay Dyeing* Rs. 2,006-4; *Century* Rs. 806; *Gokak* Rs. 316; *Kohinoor* Rs. 814; *Svadeshi* Rs. 529; and *Central India* Rs. 413.

Steels.—There is very little to record except, of course, to mention the fact that what applied to Textiles applies equally to Steels also though in a limited manner because of their being sympathisers and not the principals. *Tata Deffereds* were nearly 10 points down at Rs. 1,977-8; *Tata* Ordinaries were Rs. 399-8 and *Indian Iron* Rs. 84-10.

Miscellaneous.—Shares in this section were not so completely engulfed in gloomy forebodings as those in the major counters. While *Alcock Ashdown* remained unchanged at Rs. 935, *Premier Construction* had shed 3 points to quote at Rs. 179, *Bombay Burmah* (Olds) were 5 points lower at Rs. 360 and the new shares could be bought at Rs. 128-12. *Bombay Steam* have lost 10 points to quote at Rs. 565. *Shivrajpur* were Rs. 66. *Burmah Corporation* were unchanged at Rs. 3-4 and *A-C-C* were lower at Rs. 219.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, July 13.

EXCEPT for the firmness of the giltedged section there seems to be hardly any strength left in the Stock Exchange. While the Banking scrips in general showed some improvement in sympathy with the giltedged section, Reserve Bank shares which were keenly bought till recently, have begun to exhibit a slight easiness. Otherwise, the market is listless with all the favourite counters labouring under a variety of emotions which ultimately resulted in widespread selling. Prices both in Textiles and Plantings section have considerably come down. In their immediate anxieties, buyers and sellers alike have ignored even the good news from Sicily. It is becoming increasingly difficult to spot out buyers since erstwhile buyers are turning up now as sellers. The scheme to control prices of cloth and yarn has, it seems, unnerved operators all over India and in view of the weakness of mill shares elsewhere, there is hardly any likelihood of local operators taking a different view. The giltedged section continues firm with 3½ per cent Government Paper at Rs. 95.

In the Textiles section the turnover has rapidly dwindled with the majority of the shares losing substantially in the bargain. *Mettur Industries* were quoting at Rs. 312-8 cum-dividend. *Pankaja* ordinary were done at Rs. 320. *Coimbator Spinning* can now be bought at Rs. 306. *Cambodia* were Rs. 38-8. *Ranga Vilas* were done as low as Rs. 198.

IMPERIAL BANK OF INDIA

NOTICE

The Annual General Meeting of the Shareholders of the Imperial Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Monday, the 16th August, 1943, at 4 p.m. (Standard Time) for the transaction of the following business:—

1. To receive the Central Board's Report, the Balance Sheet of the Bank made up to the 30th June 1943, and the Report of the Auditors.
2. To elect three Auditors and to fix their remuneration.

W. LAMOND,
Managing Director.

Bombay, the 9th July, 1943.

THE KALITI TEA CO., LTD.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 27th day of July, 1943, at 3-35 P.M., to receive and pass the Directors' Report and the Audited Accounts for the year ended 31st December, 1942, to declare a dividend, to elect a Director in place of the retiring Director, to elect Auditors for the ensuing year, and fix their remuneration and to transact any other business that may be brought forward.

WORLD OF INDIAN FINANCE

Calcutta. Friday Evening.

Dullness continues to characterise the money market and rates remain unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. The plenitude of funds is further accentuated by the general feeling of nervousness about the legitimacy of possible advances. The Government's acquisition of new powers under the Defence of India rules to restrict and control loans and advances by banks against commodities including bullion, has served to reduce still further the low volume of activity in the markets. Like most powers taken under the Defence of India Rules, the latest is also of too wide a scope to afford assurance to those concerned that their customary activities will not be interfered with. The natural tendency, immediately after an announcement of this kind, is to introduce an extra element of caution in new advances, and a more or less rigorous checking up of old ones. Businessmen, too, would like to keep a more liquid position in order to be able to return advances when they are called upon to do so on one ground or another. The result is a lower ebb of business activity. Even the stock markets have little to report; and from all accounts, the stock exchanges are not free from the feeling of nervousness engendered by the new announcement. In the setting of business in India, in which big businessmen are operators in a number of markets at the same time, markets like liquids, tend to find their levels. The slump in the bullion market in the early part of the week has not so far been adequately explained, except on the basis that that selling was induced by persons who felt themselves affected by the new powers taken by the Government. The decline in bullion rates was, however, shortlived; and even at the lower rates, such public demand as there was as a consequence of the sharp decline in rates, it would appear, was not satisfied.

It is strange that so far there is no improvement in the state of the markets in consonance with the improvement in the war situation. One would think that a succession of good news from the war front would have the effect of stimulating optimism and thus lead to enhanced activity in the markets. This has not, however, been the case. On the other hand, good war news is not unoften succeeded by a further setback in business activity. The triumph of Allied arms in Sicily and the reverses suffered by Germany in her offensive against Russia, an offensive that has almost led to a turning of the tables, have been followed only by further accentuation of dull conditions in the money market and more inactivity in the stock markets. One can only attribute this to the steady increase of Government interference in the activities of the business community. In the case of the latest order, by which the Government acquired powers to restrict loans and advances of banks, apprehensions of Government interference have been unusually lively. Protests have been made by numerous commercial organisations. Although it has been said that the Government have no intention of interfering with 'bonafide' trade transactions, confidence would seem to take time to revive. It is easy to criticise the Government on the score of such interference in trade, but it is only fair to recognise that in dealing with such a complicated problem as inflation in India at the present time, the Government would feel called upon to resort to a variety of measures. But announcement of any such measures should also be accompanied by a clear statement of the scope of the contemplated action. Instances of the Government having to explain their position after witnessing undesired results have not been lacking in recent times. The order in regard to new capital issues is an illuminating instance of the harm that would be done by the publication of Government's measures without adequate explanation of their purpose and the mode of their enforcement.

The statement of the Reserve Bank of India for the week ended July 16, is remarkable for its showing, for the second time in the current calendar year, a small fall in total note issue from Rs. 748.26 crores to Rs. 748.02 crores. The decline by Rs. 24 lakhs is indeed nothing to speak of. But after a long period of weekly increases, which amounted sometimes to over Rs. 10 crores, a decline, however little, affords welcome relief. The only occasion during the current year, when the Reserve Bank's statement showed a fall in total note issue, is during the week ended January 25, when there was a fall of Rs. 98 lakhs. During the week under review, the decline in total note issue is accounted for wholly by the fall in rupee coin from Rs. 14.64 crores to almost Rs. 14.40 crores. In the banking department, deposits of the Government of India show a negligible fall to Rs. 16.25 crores while other government accounts have gone up from Rs. 7.79 crores to Rs. 8.68 crores. Banks' deposits show a big jump from Rs. 54.13 crores to Rs. 63.56 crores. On the assets side, balances held abroad show a spurt from Rs. 84.67 crores to Rs. 93.13 crores, other items remaining with little or no change.

The statement of the Imperial Bank for the week ended July 16, shows persistence of easy money conditions. Government securities have gone up from Rs. 133.83 crores to Rs. 135.30 crores, at the same time advances have declined from Rs. 37.35 crores to Rs. 36.14 crores. Loans have declined from Rs. 10 crores to Rs. 9.87 crores. Cash credits have also declined from Rs. 24.20 crores to Rs. 23.85 crores and bills discounted from Rs. 3.11 crores to Rs. 2.42 crores. Cash on hand and with the Reserve Bank and balances with other banks have gone up from Rs. 28.83 crores to Rs. 31.08 crores.

The results of the treasury bills tender during the week also show even easier money conditions during this week than the last. The total amount offered against tenders of Rs. 8 crores amounted to Rs. 15.94 crores against Rs. 13.22 crores.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, July 20. Total amount offered was Rs. 15,93,75,000. Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 44 per cent. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-15-9 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, July 27 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, July 26, at other centres. Successful tenderers should make payment on Friday, July 30. Other conditions are as usual.

During the week ended July 16, Government of India Treasury Bills for Rs. 10,64,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

A VERY sharp drop in bullion prices cannot be related to the developments abroad, but to local apprehension as to the course of commodity and share prices in the near future. Rates in London are unchanged, and the only sold item of information was a news agency message about a slump on the Cairo bourse. The response to war news in London has been of a different order. A rise in all Home Industrials puts the boomlet of August last into the shade. Progress in Sicily stimulates buying of oil shares as well as gold minings and the only conclusion to be drawn is that the conditions and outlook here are different.

A drop in Bankers' balances with the Bank of England disclosed in last Thursday's return is an indication of further slackness in money conditions rather than any special outflow arising from demand. The proportion is much higher than in the past, so that it might be argued by some that sterling is distinctly stronger at home despite the increase in note circulation in Britain to £952.2 millions. The Treasury's borrowing every week remains the same, and the banks have fewer bills to buy than in the past, to judge by the lower quota for treasury bills. The outlook for the Government as borrower cannot be described without a reference to the improvement in revenue recorded in 1942-43. National revenue at £2,819.2 millions was more than 50 per cent of the expenditure in 1942-43. Income-tax receipts improved by £237 millions over 1941-42 receipts and customs and excise showed an improvement of £181 millions in the total yield over 1941-42. In the fourth year of the last war, only 26 per cent of total expenditure came from taxes while in 1942-43 accounted for more than half the total expenditure. Record revenue explains the rise in revenue by £193 million over the estimates. The yield of income-tax alone exceeded £1,000 while Excess Profits Tax provided £346.88 millions. The budget deficit for 1942-43 was £2,803.3 millions and the Government got most of it by borrowing. Figures available in April showed that £346 million came from savings certificates and 3 per cent. Defence Loans while £35 million came from National War Bonds and £456 millions from 3 per cent Savings Bonds. Collections from Tax Reserve Certificates in the first full year of operation amounted to £252 millions. The latter is a variant of short-term borrowing without the usual liability to repay. The tax-payer's effort in the war remains creditable. Savings have been put up because private issues are non-existent and the local resources are supplemented by repayments of oversea debtors.

The major question has been answered at the time of the vote of credit. The increase in the National debt last year has been explained, and the big questions are not in regard to saving or taxation but about control after the war. Mr. Morrison who objected to monopolies has argued only recently in favour of control of spending and saving while the national income is made to increase by control measures. The wider application of controls is desired in the interests of the Four Year Plan promised by the Premier. A slight drop in giltedged in recent days is merely the indirect result of the firmness in other sections. The main change has been the rise in Dunlop Rubber and the leading textile issues. The improvement in Bredford Dyers is issued largely on the realisation that the ordinary shares should receive dividends because the arrears of preference dividend from 1933 have been wiped out after the start made in 1941. The company has travelled a long way from the debacle of 1928-30 and recovery may be sustained by an expansion of exports. The forty-fifth meeting of the company listened to the statement that preference dividends will be paid regularly. The company intends to issue half-yearly accounts to facilitate declaration of half-yearly dividends. The radical change in the British rayon industry is that it is allied with wool, linen and other natural fibres. Production of yarn and staple fibre increased and exports for example to Argentina showed satisfactory growth. The Rayon Council has helped the industry to develop the flexibility of what is as much a chemical as a textile industry. Except in the last quarter of 1942, the export of yarn and tissues was higher than in 1941, and the setback feared in regard to wool hardly touches rayon. The outstanding feature in oil shares is not Royal Dutch, but Anglo-Iranian still going up. All Eastern oil shares including Attock have been rising for over two weeks; and it is possible to say that the market is not too optimistic. Col. Knox's warning as to the duration of the war in the East cannot hold up the improvement in share prices. Fears of taxation do not affect Indian buying of Attock as the annual meeting is due soon.

The big change in regard to Sicily's administration has been decisive for oil shares. An Allied administration means that the Mediterranean will soon be in use, and there is no need to think about shipping when oil is wanted in larger quantity for the war. The well-spread rise in oil shares leaves Mexican Eagle out again. The steadier tendency in rubber shares like the irregular movement in tea shares does not call for notice, but one may draw attention to the increasing support available for tobacco shares. The South African election results support are not known, but the Cape is buying gold shares, says a recent report. The buying is independent of hopes of a plan for promoting world trade or of the point that the colonies in Africa in which the Union is interested are going to be kept by Britain without bringing in outside controls.

The attack on Congressmen hostile to the Administration launched by Mr. William Green is not a market factor, but Wall Street has latterly been quiet, and the quotations for the market leaders have declined slightly compared with last week. The labour leader complained of defective control and asked for the anti-inflation programme. Otherwise, a demand for higher wages was inevitable in his opinion. The anti-strike Act remains an obstacle, but the realisation that subsidies are required may grow after the President's intervention in the Wallace-Jones dispute. The U. S. market outlook is not getting clearer, and the increase in food supplies is not so certain as it seemed. But June was a good month for lease-lend. Shipments valued over $1,000 millions went to the allies from the U.S.A. and the U-boat trouble does not seem to have held up supplies to the Mediterranean.

The setting up of a military regime in Sicily helps the displacement of the lira. The occupation must have been followed by the acceptance of the sterling by Sicilians. The first decrees against fascism say little about finance, but it is clear that Canadians and others will use the pound rather than the franc of N. Africa. As to the franc it may be expected that part of the frozen assets of the Bank of France might be made available to the Committee of Liberation, pending the emergence of a sovereign authority acceptable to the Allies. A brief message suggests that the envoy from Algiers has succeeded. Nothing has been said about the gold lying at Martinique. It is possible that the gold may be used to equip the French African armies for operations in Europe, or treated as reciprocal aid for lease-lend. The results of General Giraud's visit to Washington can only be guessed at present, but one may note here that the unification of French currency will not be delayed. A block grant to Oversea France for the purpose of adding to monetary reserves is more than ever likely as trade within the Mediterranean is bound to increase. The Allies' appeal to Italy has been followed by a meeting between the dictators. The meeting is likely to have few results outside Europe though, the reported transfer of Macedonia to Bulgaria is not going to improve the position of the leva. The steady rise in defence expenditure produced expansion of the Bulgarian note issue throughout 1942, after the large increase noted in 1941. Money was light in Bulgaria last year and the cost of living continued to rise. Blocked balances in marks meant little when the gold reserve was stationary at 2,006 million leva. In the second half of 1942, a fall in foreign assets was noted in the Bank's returns though commercial banks deposits continued to increase like the deposits in savings banks. From April 1942, State borrowing increased and the Bulgarian public debt was increasing also. The Bulgarians do not get Salonika under the latest award of the Axis so that the port on the Aegean is still unobtainable. The addition to Bulgaria's tobacco exports may be no permanent benefit, but Greece gains nominally as Salonika is not assigned. The Yugoslav and Greek Governments have not issued their views as to the decision meant to oblige the IMRO. As Turkish minority lingers in Macedonia the

Decline of Agriculture in India

The multiplicity of specific problems ranging from wrapping paper to food for the people has served to obscure the adverse changes that have occurred at the base of India's national economy in recent years. Too few of us realise that our agriculture had been suffering, even before the outbreak of war, what we may call a process of erosion, which unfitted it more and more for serving the needs of the whole population, even were there no war to increase beyond measure our normal needs. In our leading article in the issue of June 19 last, we pointed out that, though there have been present during the war period more than one stimulus to productive activity, the economic system has been singularly unresponsive to such such stimuli. We suggested that this failure of production to register an increase can be attributed only to a chronic inelasticity of our economic system. When we are faced with shortages in essential foodstuffs, we are content to look for an explanation in the cessation of the imports of rice from Burma or the need to go to the aid of neighbouring countries like Ceylon. But it is not realised that, if the basic economic conditions were healthy, a vast agricultural country like India should be able, under the twofold pressure of high prices and insistent demand amounting to national emergency, to expand its production considerably, even if it should fail to meet the increased demand in full. Within a year of the war, Great Britain was able to reduce considerably her dependence on imports for the food of the population. The U.S.A. substantially increased its output of foodgrains. Only in India was there a positive setback.

The question arises whether the failure of Indian agriculture to cope with the demand is to be attributed to special factors which have been in operation during the war period. It is difficult to think of such special factors, not to speak of proving or disproving their presence in the economic conditions of the country during the last few years. In the case of most countries of the world, shortage of labour for farming is likely to be experienced, though no belligerent would make the mistake of not according the highest priority to food in war time production. Another difficulty likely to be experienced in the way of increasing agricultural production is the shortage of fertilisers. In India, the production of fertilisers, like all essential activities, is very much on the lines of a cottage industry. In any case, while lack of fertilisers may account for the absence of more intensive cultivation, it cannot in the prevailing circumstances, be operative to the point of bringing about a fall in production. There is, therefore, a fair presumption in favour of more deeprooted and long-standing trends which tend to deprive the agricultural system of all resiliency and power of accommodation.

Scrutiny of available statistics shows that agricultural production in India even at the time of the outbreak of war was at a low ebb. In our last article on this subject, we were content to examine the figures of acreage and yield during the war years and to point out that the latter years of the war period, far from revealing an increase, showed a decline, wheat being a notable exception, and that, too, only in point of yield and not acreage. Taking this enquiry back to the pre-war years, we are confronted with an even more depressing conclusion. The following table gives the total area under foodcrops in the decade before the war.

Table I

(in million acres) (Br. India only)

Year.	Total area sown with crops.	Area Irrigated	Forests.	Not available for cultivation.	Other uncultivated land excluding follows.	Fallow.
1930-31	229·1	49·7	88·0	146·8	154·0	49·6
1933-34	232·2	50·5	89·1	145·0	153·6	47·6
1936-37	213·7	50·2	67·2	93·5	92·2	44·8
1939-40	210·0	54·9	68·1	89·3	97·2*	47·3

*Of this 9·9 million acres are known to be definitely cultureable.

The above figures are for British India alone; but the addition of the figures for the Indian States can hardly affect the broad conclusions. It will be seen that in the decade before the war, wheat was the only foodgrain which registered an increase in acreage. The special factor that was responsible for the increase is a matter of common knowledge, the extension of irrigation in the Punjab and Sind. But in all other cases, there has been a very considerable decline in acreage, rice being the worst sufferer.

For so widespread a tendency, available statistics afford no adequate explanation. On the other hand, the basic factors which affect agricultural production have been such as to favour a growth, rather than cause a decline. The area of irrigated land has been steadily on the increase during the period in question. From 49.7 million acres in 1930-31, "area irrigated" has gone up to 54.9 millions in 1939-40. The percentage of area irrigated to area sown has naturally gone up, the more so as the "area sown" has shown a decline. The following table gives the statistics of cultivable and cultivated land which makes the fall under area sown even more puzzling.

Table II

Total area under Food Grains. (Br. India. In million acres)

Article.	1930-31	1933-34	1936-37	1939-40
1. Rice ..	80·6	80·4	69·0	70·1
2. Wheat ..	24·8	27·6	25·2	26·1
3. Barley ..	6·7	6·7	6·5	6·1
4. Jowar ..	22·8	21·4	28·5	21·7
5. Bajra ..	13·7	13·1	11·5	13·4
6. Ragi ..	4·0	3·7	3·6	3·4
7. Maize ..	6·5	6·0	5·7	5·8
8. Gram ..	13·6	16·5	15·5	11·7
9. Other grains and pulses.	30·0	30·6	28·8	28·8
10. Total food grains ...	202·7	206·2	189·8	187·1

The tale told by these figures will be deemed by all to be extremely disheartening. That total area sown should fall in the face of an improvement in irrigation and a fall in fallow land and land under forests is a fact which is in many ways disconcerting. Whatever explanation may be offered for this untoward development, the statistics prove clearly that our agriculture at the beginning of the war was in a most deplorable state. If ordinary economic reasoning were to hold good in this case, one might perhaps explain it on the one hand as the result, after an unusually long time-lag, of the unremunerative nature of agricultural operations in the early 'thirties and on the other of the better outlook for commercial crops in the later years of the decade. If this view were valid, there is nothing surprising in the decline of food production before the war. What is surprising is that no efforts were made as part of the grow-more-food campaign to increase the area sown to the levels of the pre-depression years.

AFTER THE CONFERENCE

To the pamphleteers of the day the food conference held at Delhi from July 5 to 8 provides invaluable material for discussion. For the people the conference spells inaction and much worse to-day. The basic reason for the conference was the demand for the restoration of internal free trade involving necesssarily the abandonment of the principle behind the Food Grains Control Order. The Order is to remain because the Provinces want it, more because of the lack of price control and distribution machinery than for any other reason. The background for the Conference's decision is more important than the decisions. It is useless to examine the trend of discussion as the proceedings were secret and the daily newspapers gave little indication of the outcome, tame to unexpected degree. The surplus Provinces have expressed satisfaction. An Orissa official has declared that the Ministry there has won its main case. A Bengal Minister has urged that adequate assurances as regards supply and transport have been received, and we are left with the impression that the circle has been squared, if nothing else has been achieved.

Little surprise has been occasioned by the vein of argument struck by the Food Member. The basic plan is to remain, but there are still some doubts as to the basic plan. When wheat control was formally given up this year it was realised that price control had broken down. The producer as much as the profiteer had won. The crop forecasts in regard to rice and wheat emphasised the shortage, but it is singular that the latest figures as to imports were not made available by the Food Member. It is only in regard to the restoration of free trade that the fact of shortage is interposed as an obstacle. Otherwise, the basic plan or its maintenance should be treated as the proof of something more than regional self-sufficiency. Since the recommendations of the Conference can only be guessed in the light of the formal statement, we may turn only to the admission of failure by the Central Government in regard to price control and procurement of supplies contained in the Commerce Member's speech announcing the decisions. The Government of India when it set up a new department to supervise the procurement of food this year did not recognise any direct responsibility. Since the Provinces have set up their own independent rights against a proposal to revive free trade, the Central Government is clearly functus officio. Given that decision, it is impossible to look for anything beyond what was undertaken in March, and the Central Government's present attitude will be described as realistic if it does not promote satisfaction. The basic condition is shortage; remedial action is cultivation of food crops. The action was taken in 1942 after Mr Sarker decided in April last that a real threat of scarcity was developing. If the provinces and States had not secured the desired increase in food supply for other reasons, the Central Government's responsibility was strictly limited. But the clamour for uniform and prompt action had to be met and the steps taken since March only illustrate how ineffective measures can be if they are unrelated to the main object of bringing enough supplies to support a rationing scheme. In the view of many, the Central Government's decisions fall short of what was desired, but that is no reason to regard them as valueless. The urban experiments in rationing are approved, but their extension is made to depend on various factors including the success of the procurement operations and the anti-hoarding campaign.

Since the Bengal Assembly's discussion last week made it plain that procurement operations by the Centre have brought very little, compared with what was promised, the Food Member's assurance as to expediting transport of food grains will not go down very well. But the Centre has responsibilities in connection with war which the Provinces have not and the only inference to be drawn from the Food Member's speech is that procurement (certainly watched by the Centre) will not lead to any change of priorities. The civilians in deficit provinces come before anyone else, but the Food Member's last statement said little about the Army's purchases, stocks and much else. There is an impression (sustained by the C-in-C's assurance of supply and transport, of a shipload, in fact, of wheat to the Civil Supplies Minister in Bengal) that the Army has drawn off large supplies in addition to a share of imports. Precise figures are not available and the Army's hoards cannot be got at while the large employer's stocks are not excluded. The suggestion that the Army can increase food supply has been heard, but Italian prisoners cannot be made to work in an uncongenial climate and the Army, a small, professional force, voluntarily recruited from specialised castes and classes, can do little for food production when much of it is raw and has to learn the soldier's job first before taking up part-time jobs like farming. The Army's consumption, including that of the Allied forces in India, has not been mentioned. The stocks, too, have not been indicated. Civil authorities under the Control Order can, or may, obtain information, but the public is not in possession of facts as to what is the volume kind or quality of supply for the Army. The enforcement of the Control Order may not add to the knowledge of what has been reserved for the Army so far.

The Indian States have been asked to help in the fight against hoarding. But mal-distribution may be independent of hoarding. It is known that the anti-horading campaign and the creation of village committees have not reduced either prices or added to supplies in Bengal. It is hard to say whether all Provinces and States will take the same view of the hoarded as Bengal since the responsibility to adjust purchases to quotas, is not vested in the Centre but in various administrations. As for the decisions published two weeks ago it is important to remember that continuity of policy was an over-riding consideration. Fixation of maximum prices was impossible in view of recent experience; and the success of rationing is contingent on supplies which it would be impossible to secure, if ceilings were fixed. The Food Member recognised the monetary phenomena as independent factors, and spoke of the anti-inflationary programme. The Provinces' part in the latter has not been indicated, though it may be argued that steps adopted in Madras to stimulate subscriptions to Defence loans fall within the scope of the programme.

The only recommendation stated to be that of he conference relates to purchase and sale without the intervention of the Central Government. A duplication of agents, if not transactions, is obviously undesirable, and the consumer, rather than an intermediary, must settle terms. It may be urged that the devolution of powers will make the seller put prices up, but the local price-level cannot be independent of prices at main consuming centres. More disturbing than scarcity has been the variation in prices e.g. of wheat until the Control order was given up, and the price was raised by the demand of the importing provinces. In any case, movement of price must in the near future remain a subordinate consideration as against transport facilities, especially, as deficit areas are given a free hand to make their own efforts to get food supplies.

In his oversimplified answer on the question of famine in India, Col. Amery referred to the increase in consumption produced by the rise in incomes. The Food Conference did not discuss the limits of consumption though it is clear from the acceptance of quotas for the deficit areas that stability of consumption is wanting at present and the surplus provinces areas know cases of excessive consumption. But uniformity of regulation like free trade, is not approved of, and the differences in quantity needed may exert an effect on prices which will not be offset by the anti-hoarding drive promised. The drive should have started before the 1942 crop was harvested. If it starts late, it may conceivably affect the supply of seed or even the area under food crops in spite of the familiar assurance that a fair return to the producer is essential and is available. Long-range planning has been already assigned to another conference. We must confess to dissappointment that the large, representative gathering did not record during its session its news on the plans to stimulate cultivation, but has given up in favour of a committee which Dr. Junadi is Secretary. The problem of long-range planning cannot be taken up without a restoration of free trade for the true mark of regional or other self-sufficiency is the absence of licensing procedure. It is noteworthy that the Food Member said nothing as to India's exports. The U.K.C.C.'s Chairman, Sir F. Joseph, Bart, spoke of India's responsibility to the Middle East. It is known that

sugar must be exported to oblige others and grain may be exported by sea though export has ceased from the surplus provinces. That danger was not referred to, though the revival of internal free trade which threatens to raise prices was deprecated, up to the point, at which it cannot be examined by the smaller expert committee. Stabilisation of prices has been officially blessed and the Provinces are free to adopt measures to bring prices of all goods down. The Government's specific interest in lower prices has been proclaimed, and the food conference was made aware of the fact that stability ean be created without ceilings and also that ceilings do not create stability.

The questions that may be provoked by the mere absence of fixed maximum prices cannot be answered by reference to the rise in wholesale prices, the advance in wage-rates, or the known defects of distribution. As to what good may follow from the cheapening of cloth or the abundance of coin, we may remain sceptical. Cheaper cloth may not encourage buying before the harvest; and the farmers' purchases, like his work, are seasonal. Other manufactured goods cannot be made available at lower prices in order to bring the price level down, and the only thing to go by is the order restricting bank advances against stocks of commodities. The order issued last week affected bullion rather than commodities in the first stage, but the drop in bullion may have decisive effects on commodity prices. The bearish feeling incidentally has emanated from the States and a continuous drop in bullion prices may have long-run effects on the food supply though rural distress may grow as things stand. The decisions outlined are not yet in operation.

As for Bengal, the Central Government's original promises stand, and the free trade in the Eastern Zone is not abolished peremptorily. Contracts are not affected by the projected changes in the Control orders. The deficit areas in any event are left free to get on with their work of suppressing hoarding and buying wherever possible. The plain fact is that the circumstances of Bengal and Sind are radically different, and a brief crisis in Bengal cannot be made to justify a divagation from policy ordinarily acceptable to others. Muslim majorities do not count for much. There is nothing to show that the Punjab Government yielded on the question of wheat sales and prices because the 1943 crop is larger. The original defect of all control schemes was that rationing was outside the scope of discussion and the fact of inflation was ignored. The steps since adopted to counter speculation do not affect the conclusion that the middleman himself had not been unhelpful. He must realise that grain is perishable and cannot be hoarded indefinitely; and hoarding too is not unknown among the cultivators as Mr. Amery reminded us. The cultivator's view of food control may be wholly different from that of urban areas pining for ration cards and assured supplies. The majority view indeed may not be that of the many Indian Chambers of Commerce which ask for a uniform, all-India policy at once. In view of efforts made last year to limit the cultivation of cotton and encourage growing of jute, there was a conflict of purpose which does not recur. The case for enlarged production would affect the argument that the note issue is the villain of the piece, but the Food Member's speech has left the Provinces and States free to develop their own views on the place of money and the use to which it has been put by the Central authorities.

Large reinforced concrete water tanks, Illinois. Similar tanks are now being used for storing oil.

THE VERSATILITY OF CONCRETE as a construction material is a valuable asset to the war building programme which demands conservation of critical metals. New designs for concrete, with a minimum of steel reinforcing, and entirely new uses as a substitute for steel have been developed. Some of them will no doubt have their influence in post-war uses of cement and concrete.

NEW DESIGNS for concrete pavements, airport runways and streets, which require an absolute minimum of reinforcing steel or none at all, are now being used. Meeting all the structural requirements, these designs are being employed widely by the Services in building access roads, airport runways, etc.

STRUCTURAL CONCRETE DESIGN has also undergone changes. Concrete spans are replacing steel beams and trusses to a considerable extent, with a saving of about two-thirds in steel tonnage.

Money and Coinage in 1942-43

The considerable advance in the prices of primary commodities makes the monetary history of India in 1942-43 more uncomfortable reading than expected. In the Reserve Bank's annual report on currency and finance reference is made to the fact that the increase in the Calcutta wholesale price index in 1942-43 was 78.3 per cent as compared with 19.7 per cent in 1917-18. The causes are not analysed at length, but the rise in prices can be readily related to the fall in oversea trade, conditioned largely by the loss of Burma. Special importance naturally attaches to the changes in the quantum of trade and the price level. The contraction in imports and exports alike is greater than that noted during the last war while the rise in prices is greater. But the export surplus is not larger than that of Rs. 93 crores noted in 1917-18. But Government trade does not come into the totals in the returns though the report describes the increase in imports of raw materials to nearly one-half of the total imports. The working of exchange control is closely related to the trade controls. The export by air of Indian goods to China gave rise to a special problem. It is clear that sterling is far more important than in previous years, and the report makes it plain that the growing trade with Portugese East Africa is financed in rupees provided through the accounts in India of branches of banks in the Colonies. Exports to the 'hard currency' countries were going down, and India's exports to non-Empire countries also were going down. More than foreign exchange shipping space came to determine the volume of imports of which a part is covered by Lease-Lend which requires no transaction in foreign exchange. The Reserve Bank fixed last year the rates for conversion into rupees of foreign currency notes presented by soldiers and travellers. West African, Egyptian and English pounds are exchanged for Rs. 13-2 and U. S. 100 dollars for Rs. 327 per 100. Only in exceptional cases are Straits dollars changed at the rate of Rs. 155 per 100 dollars.

The Reserve Bank's report dwells on the unprecedented demand for small coin. Issue of small coin increased by 148.3 per cent in 1942-43 but scarcity was manifest and the Calcutta Mint started to work an additional shift from January, 1943. By the end of March output was raised to 136 million pieces by 89 per cent as compared with December, 1942, and 152 per cent as compared with April, 1942. An addition of 30 million pieces will result from the opening of a new mint at Lahore in August. The increase in the total absorption of small coin amounting to Rs. 11.64 crores corresponded to the increased absorption of notes and rupees noticed last year. The silver rupee and half-rupee are evidently struck by the Bombay Mint only while the Calcutta Mint produces quarter-rupees, 1 anna pieces and half-anna pieces to a greater extent, explaining why the value of output is higher in the case of Bombay. The pies struck in 1942-43 to the value of Rs. 5,526-14 came from Bombay except for Rs. 18-8 worth from Calcutta. The new pice also came in February from Bombay. More important from the average man's view was the displacement of standard silver rupees. Hoarding was countered by notifications as well as the issue of Rs. 21.16 crores worth of quarternary rupees.

Postwar Programmes

The President of the All-India Manufacturers Organisation who referred to the discouraging outlook for industrialisation is not deterred by setbacks. The statement issued by Sir M. Visweswarayya recently recalled the limited progress made by industry in India even during the war period, and related it to the poverty of the people. Listing retarded development and the obstacles erected by the Government to the establishment of new heavy industries, he described the dependence of India on imports of steel, motor vehicles, aircraft and ships. The dependence justifies the programme chalked out by the Manufacturers Conference in February. That programme embraces District Plans and Regional concentrations. What is important in Sir M. Visweswarayya's view is that postwar reconstruction should take note of projects for industrialisation. The Government has, therefore, been asked to take note of demands for investment of about Rs. 1,000 crores on basic industries, public works, etc. The doubling of industrial and agricultural production in 5 to 7 years is the chief aim of the programme. But the programme requires State help to the extent of tariffs and import licenses, and the Industries Department should work out detailed plans with the help of a Development Council. Since economic and social reform is the concern of Indians, the country must take the plan seriously. Rationalisation in the textile industry can be made the starting-point for a plan meant to put 200 million people into industry at some time. An aggressive policy of industrialisation depends on the supply of capital goods. The prospects of large imports after the war have not receded, and the export plans of British manufacturers suggest that the Indian market will not be neglected after the war. A development loan of Rs. 1,000 crores can only be raised after adequate guarantees are given by the Government. But capitalists must also be prepared to lend without hope of early gain. An addition to Government staff for consideration of plans and programmes cannot help to get the money, but constitutional changes should help greatly. Agriculture has to be developed and the plans drawn up 23 years ago by Sir M. Visweswarayya and the familiar comparisons made to India's disadvantage acquire greater importance from the scarcity raging. Government's reconstruction plans can only be guessed, but there is need to look to the financial foundation. To create a council of industrialists to put a five-year plan through is easier than raising the money for the establishment of heavy industries. The AIMO offers its co-operation in drawing up the programme for investment of about Rs. 1,000 crores, a sum not far short of total capital invested in existing industries. Undeveloped resources exist but the effort is more important, though Mr. Amery's assurance that fiscal policy is not subject to supervision and the character of British exports is more significant for the future than their volume can be made to justify such effort.

Reduced Flow

According to figures recently issued the total subscriptions to defence loans in May 1943 amounted to Rs. 2.83 crores. Bombay provided more than half the subscriptions received in May, and very considerable decreases in subscriptions were reported by Bengal and the U. P. The worsening food position explains the drop in the total for Bengal to Rs. 12.59 laks only in May against Rs. 142.91 lakhs for Bombay. The good showing made by Madras is temporary like the large drop in subscriptions from the States. The total raised by borrowing up to May 31 is known to be Rs. 156.23 erores giving an average of one crore per week for the borrowing period of the war in India, a figure likely to attract as little attention as the total for certificates sold for Rs. 583.99 lakhs. The progressive total for the three defence loans cannot be over Rs. 150 crores (total up to May 31 was Rs. 143.83 crores) and the revision of terms of issue this month for the Fourth Defence Loan is clearly due to other reasons. How much of the defence loan apart from Rs. 3.09 crores worth of interest-free loans went to banks and big investors and how much to individuals cannot be determined; but it may be stated that the Defence Loan being a 3 per cent dated stock, sold through the tap, is likely to appeal more and more to big investors for whom accumulation of funds present a problem, particularly, as 3½% Rupee Paper is not available at Rs. 94 as before. The limited appeal to the small saver is reflected in the total of Rs. 5.84 crores only for the sales of defence savings certificates for three years. The thrift campaign and savings drive have not been launched, but the conditions for success are not lacking in spite of the deadlock that receives attention from speakers at the quarterly meetings of commercial organisations.

British War Finance

The increase in taxation explains the steady increase in the revenue and expenditure in Britain. But the Canadian contribution in 1942-43, made up for the slackening of tax collections noted in March, and the total revenue exceeded estimates. The tax revenue for 1942-43 is put at £2,440 millions and Canadian contribution at £244.7 million. Actually over £2,000 million of tax revenue has been collected by Feb. 20. Average daily expenditure in February showed a decrease and total expenditure for the year was put at £5,575.8 millions. Between 1940-41 and 1942-43 Britain's tax revenue has doubled though the percentage collected had fallen away slightly. From £1,201.7 millions tax revenue had risen in two years to £2,361 millions. The tax revenue for 1942-43 shows an increase of £600 millions. The 11.2 million families provide £4-4sh. per week and lend £4-16sh. per week which means that £9 per week is provided by each family in Britain for Government spending. The larger money contribution implies that the Government spent more than the people in 1942. The national income in 1942 is estimated at £8,370 millions and national expenditure including £4,950 millions spent by the Government amounted to £9,640 millions. The Trust of Insurance Shares in analysing these figures suggests that the per capita deficit per diem is 2sh. and the process of dis-investment is still going on. Larger expenditure means a draft on capital and reduced capacity to pay for farreaching social reforms. The excess of borrowing over tax revenue (shown in the estimate of each family's contribution) is not concealed by the Canadian gift, but the Government is taking about 60 per cent of the people's income for its own purposes and cannot expect increases either in taxes or subscriptions to loans after three successful years of war finance. The increase in the floating debt this year is suggestive of the demands of the Treasury as well as the slackening in the response to the tap issues. Treasury deposits and treasury bills issued every week have increased in 1943 because the upper limit of tax revenue had been reached in 1942-43 and more money had to be got from the big banks rather than a scattered army of savers.

Study of Profits

An enquiry into the growth of industrial profits in India between 1918 and 1939 was undertaken in connection with an examination of the general trend, not to give a theoretical basis for the taxation of Excess Profits. Mr. M. H. Gopal in the **Sankhya** argues on the basis of dividends paid nn three distinct periods and concludes that the variations in India do not obscure the phenomenal gains of some firms. Between 1918 and 1936 quite a large number of firms declared dividends exceeding 25 per cent. The majority of jute mills paid over 10 per cent except in 1938 and 1939. In the earlier part of the period 1918 to 1939 the prosperous mills constituted the majority, but the statistical enquiry indicates that in 1939 as many as 20 mills failed to declare a dividend. It is singular that the enquiry does not cover the position of earnings in relation to prior charges which also have a claim on the residual earnings described as profits. The true criterion is always the earnings on ordinary capital. Mr. Gopal's main point appear to be that the level of profits in india during the years 1918 to 1939 was invariably higher in India than in the U.K. though essential differences are not overlooked. In regard to payment of dividends over 25 per cent jute mills have paid such high dividends in 12 years and dividends over 15 per cent have been paid in 15 years. Light railways and utility concerns in India have never paid such high dividends but timber companies have pair some good dividends in prosperous years. 1942 exceptionally was such a year. On the basis of distributed profits alone, it may be concluded that recovery from the depression began in 1934 and continued till 1938 with jute mills having developed a greater measure of stability in earnings, even in the depression. It is certainly interesting to find that saw mills and timber companies (described as enterprises with steady profits), experienced in an accentuated from the ill effects of the depression which affected tea companies only in two years according to a statistical note prepared for the purpose of showing the trend of profits in India. Averages are given but the chain index is absent. South Indian rubber companies had an exceptional period of prosperity from 1925 to 1927 which certainly looks like reproducing itself. The year 1920 to 1922 marked maximum prosperity for India's cotton mills but the industry which did best in the post-war boom was paper though the slump hit it very hard and protection alone saved it thereafter. In regard to statistical investigations which cover a large number of concerns good and bad, there is no saying as to what value must be attached to the suggestion that dividends are high but not in the newer industries. The managing agents' commission cannot be ignored in reckoning profits for it is purely earnings of management. The table shows the trend of profits in the case of engineering concerns has been more irregular than in other. Dividend policy is never uniform yet the conclusion that jute, cement and paper mills in India have not reserved profits to equalise dividends is a statement open to challenge for very obvious reasons.

Winter Oilseeds

The final forecast on winter oilseeds issued last month described the fall in the area under rape and mustard in India. The area under linseed in 1942-43 was only slightly higher than in 1941-42. The figures indicate that the U. P. (where rape is grown as a mixed crop), is the principal producer of rape and mustard as well as linseed at present. Bengal is third and the non-reporting Provinces provide an estimated quantity of 52,000 tons which must be added to the estimated outturn of 10,43,000 tons this year. The decline in area and outturn this year indicates that the cultivation of all oilseeds has not increased. The area under linseed has gone up by 60,000 acres only in 1942-43 but the outturn is placed at 411,000 tons showing an appreciable increase on 1941-42. The C. P. crop is subnormal as the average yield there is put at 158 lbs. to the acre, but the Bengal crop, giving 32,000 tons for 157,000 acres, is expected to be better than in most years. Total supplies of linseed available are put at 440,000 tons—a quantity below that obtained in pre-war years. Other important producers report large crops this year. The Argentine has about 1½ million tons and the U.S.A. over 1.06 million tons. Linseed is an important crop in Canada to-day. The Canadian export surplus must be large and the Indian exporter may have one more rival in the U.K. with the benefit of preference. Local linseed at a lower price has come on the markets. The point need not claim attention at present, but one may note here that the total area in India under winter oilseeds—namely 9.5 million acres—may be reduced further in the interest of millet-growing, particularly, in the U. P. Among the States Hyderabad is the chief producer of linseed and the price level in Bombay certainly favours the grower there. High prices of oil have evidently stimulated the cultivation of mustard in Bengal during 1942-43. The larger crop in India explains the drop in linseed prices in Calcutta after May though it may be due to the ban on forward trading. Rapeseed quotations at Karachi show a considerable drop as compared with May and export prosepects may further influence the course of linseed and rapeseed prices as has been shown already by the steady drop in groundnut prices after the Ministry of Food suspended buying here. The demand for oilseeds from local crushers may increase, and the many new uses found for vegetable oils may arrest the fall in prices, deducible from the movements recorded in June.

Openings for Indian Goods

The Indian Trade Commissioner at Alexandria in his last report has referred to the improvement in Egyptian markets after the victory of October-November and the retardation of such improvement by shipping difficulties. Owing to the war, Egyptian importers still look to India for many goods, and shippers here have been advised to keep alive connections and make new ones whenever circumstances permit. The interest of Egyptian buyers is described below. "Merchants are still intent on going to India to make first-hand contracts with a view either to transacting business at the present time or preparing the ground for the future. A certain number have already visited India. In the last report it was hoped that such visitors would receive all assistance possible. It would appear that the experience of some has not been too happy. While they are grateful for the cordial reception accorded to them yet they find that many manufacturers and exporters are not sufficiently responsive to their proposals for future trade. Some even complain that speculators get preference to serious firms working out a long-term policy. There are, of course, difficulties in the abnormal times; yet it is hoped that all possible efforts will be made to lay the export trade on a lasting foundation." The quantity and value of Indian cotton piecegoods exported to the Near East and Middle East have shown striking improvement. Favourable comments have been received. Unfortunately, in a number of cases complaints as to want of uniformity, carelessness in marking and packing and failure to supply according to samples have been made. Had it not been for shortage and high prices many a dispute would have arisen. Apart from general advice tended, Indian shippers have been asked to forward enquiries and furnish a list of the articles they are in a position to sell abroad. In Egypt trade enquiries have been made as regards jute manufactures, cigars and tobacco, woollen piecegoods, motor tyres and tubes, paper and stationery, earthenware, porcelain and glassware. Egypt is also desirous of oils for soap manufacture, buttons and electrical goods from India. Pepper is wanted there after the loss of the supplies from Dutch Indies and Indo-China made the small Indian crop exceptionally important. And the official report from Alexandria supports the conclusions advanced as to pepper supplies and prices, especially, after the introduction of control in Great Britain.

Improvement in Traffic

The latest communique relating to State Railway earnings shows that their revenue keeps rising. Earnings for the first ten days of June amounted to Rs. 4.76 crores showing a rise of Rs. 43 lakhs on the same period as 1942-43. The total earnings from April 1 amounted to Rs. 33.59 crores showing an increase of Rs. 4.65 crores on the actuals for April 1 to June 10 in 1942-43. The increase in earnings is distributed over all Class 1 lines but the N.W.R. alone accounts for an increase of Rs. 1.28 crores in its revenue. As it is generally known that goods traffic fell during 1942-43 the increase in wagon loadings this year is distinctly satisfactory. Up to June 10 there was a perceptible increase in loadings of coal and food grains, cotton and miscellaneous goods on the broad gauge but traffic on the metre gauge tended to fall, as shown by the fall under grains, oilseeds, cotton and miscellaneous goods though the reduction is offset by increases under coal and miscellaneous full wagons. It is however noteworthy that the increase under grains and pulses is only 0.15 per cent as compared with 1942-43 and the greater part of the increase in goods traffic was absorbed by coal and soke for the public and for foreign railways and miscellaneous full wagons. Indicative of a recovery in goods traffic is the total for tonnage lifted on the Railways from April 1. Total for broad gauge is 13,680,101 tons being 1.94 per cent more than the tonnage lifted in the same period of 1942 and the total for the metre gauge was 3,011,042 tons showing an increase of 8.37 per cent on the figures for the same period of 1942. The figures certainly support the view that the increase in Railway earnings is not wholly attributable to coaching receipts or military traffic but follows an improvement in internal trade largely coinciding with the advance in prices at the ports.

Developments in Siberia

Soviet Asia's resources have been described often but the development of Kemmerovo in Western Siberia is hardly typical. Western Siberia has been called upon to house the industries shifted from the areas taken by the Germans and

Head Office
Hindusthan Buildings, Calcutta

Kemmerovo's industrial history has been transformed by the war. Mr. Barker who knows the district said that a small mining town on the Ton which had the only chemical plant in Siberia became important suddenly. On the east of the town rose great cliffs flecked with seams of coal. North and south lay the Kuzbass with its fabulous coal resources—for steam. coking, distillation and chemicals. The Trans-Siberian railway ran on its fringe and beyond by the Altai. The OB system drained it with wide rivers. In the Five-Year plan the region woke up. Miners and engineers took Kemmerovo in hand and the chemical plant was made productive while American engineers laid down the central shaft. Tractors soon ploughed the steppes. More important was the link with the Urals. Coal and iron from West Siberia was connected with minerals in the Urals a thousand miles away. A great steel city, Stalinsk grew up in the south, the second in size and output in the Union. The coal hummock at Prokopieve with seams 90 feet thick became a coke centre. A new railway was built solely to carry coal from Leninsk mines direct to Novosibirsk en route for the west. Long before the Donetz Basin was lost the USSR's industries were moving eastward. New arsenals sprang up and the army fell back to the Volga basin on the assurance of guns and ammunition coming from the east. The chemical plants of Kemmerovo produce explosives, aviation spirit and the many requirements of scientific warfare. New furnaces at Stalinsk supplemented the supply of alloy steel for leapfrogged industries. The Kuznetz industrial area in the vast Novosibirsk province is designated the Kemmerovo region. It is the most powerful industrial region in Asia according to one who knows how the Russians fronts are served by accelerated development of the back blocks.

Scheme for Railway Priorities

The working of Railways has been subject to criticism on the score that transport difficulties interfere with distribution of foodstuffs in the country. The grant of railway priority certificates has been entrusted to a large number of civil and military authorities. Absence of any plan amongst these authorities has till now been largely responsible for the delay in transport of foodstuffs. In view of the all-India food crisis, a thorough reorganisation of the machinery for the issue of priority certificates was called for. The Government have now formulated a new scheme which will come into effect from 1st August, 1943. The various railway systems in India are grouped into five convenient areas—viz., Calcutta North, Calcutta West, Bombay, Madras and Lahore—each under a Regional Controller of Railway priorities. There will be a Deputy Controller at Cawnpore attached to the Calcutta area. All orders for priority and priority certificates in the respective grouped areas will be issued by the Regional Controller concerned, and not by the civil and military officers who till now were exercising such powers. In order to help the Regional Controller in the proper exercise of his powers an Advisory Panel composed of the representatives of the Army, the Departments of the Central Government, Local Governments, Provincial Transport Boards, and representatives of the Railways and other agencies of transport has been created. This Panel would supply the Regional Controller with information and advice concerning the urgency etc. of consignments. Applications for priority on Government account will have to be made through the Government representative on the Panel who would advise the Regional Controller as to the order in which applications should be granted. Applications for priority certificates from those who are executing war contracts shall have to go through the Government Department concerned which will forward them to the Government representative on the Advisory Panel. Instructions have been issued to the Railways to meet all legitimate demands but if the Railway could not afford to grant the required facilities within a reasonable time the Regional Controller has to be approached for help. Applicants for priority certificates should submit fullest possible particulars of their consignments and show that no alternative mode of transport is available. The new system is intended to do away with well-known defects in the field of transport. It is expected that this new remodelled machinery would ensure the easy and rapid movement of foodstuffs and other materials. The pressure of traffic is increasing and any attempt to increase turnround is bound to be beneficial.

The Hidden River

Certain facts as to subsoil water supplies for agriculture in the U. P. were provided by Sir William Stampe in his address to the Roorkee College students last week. Nine-tenths of the U. P. population is agricultural and seven-tenths of these exist illiterate and very close to calamity. Sir William declared that the insecurity of their existence is due mainly to the hazardous rainfall of these localities. The object of artificial irrigation is by equating the moisture actually received from rain to the optimum requirement of the crop to ensure either yields from existing crops or the growing of better crops in place of better ones. Irrigation thus secures not only the existing cultivation of particular tracts, but makes a better agricultural economy possible. The surface water of the Ganges, Jumna, Ramganga and Sarda rivers has long ago been appropriated for irrigation. The way has been opened more recently, to the extent of one million acres, for economic exploitation on a vast scale of the hidden Ganges, the Saraswati which, as we know now and as the pundits knew long, long ago creeps silently through the sands to the sea. The Saraswati's value is great but unrealised. Sir William mentioned certain basic figures. A rough computation suggests that taking the breadth of the Saraswati as 100 miles from the Vindhyas to the Himalayas and the depth of the Gangetic alluvial rough as half a mile not less than 4,000 cusecs flow continuously beneath the thirsty plains. In making this rough approximation, it is assumed that water-bearing layers in the alluvial substrata comprise one-third of the aggregate depth of the various lenticular strata and further that some 40 per cent of the sand contains water. The rate of flow is assumed to be only 10 yards per day. The Saraswati is reinforced throughout its course by rainfall on the ground above, by the inflow from zones of much higher rainfall along its northern shore, and lastly by similar seepage from the Vindhya range to the south. It has been alleged that extensive subsoil pumping in the U. P. may result in depletion of the underground river to the detriment not only of our own canal systems but also those of Bihar and Bengal. In reply one is tempted to point out that rainfall grows no less as we move south-east, both of the mainland flanks and on the plains themselves. Admitting, therefore, that rainfall is the real source of supply, it is not clear why this hidden river should not be reinforced to an increasing degree as it moves forward to the Bay of Bengal. Tubewell pumping is regarded as feasible in Bihar and Bengal. Sir William stated that though the sand grains decrease in size towards the Hooghly, there are vast local patches of coarse sand on both flanks of the Saraswati in Bihar and West Bengal where tributary streams join the Ganges from the Himalaya and the Chota Nagpur Hills. Nature, concluded Sir William Stampe, has given opportunities to Bihar and Bengal engineers to tap water resources. Electricity in the service of irrigation has certainly come from the canal system but more power can be provided by the tributaries of the Jumna according to Sir William Stampe who looks forward to a fleet of more than 20,000 pumps providing water from tubewells.

Jupiter's Progress in 1942

Since the annual meeting at which the new Chairman of the Jupiter General Insurance Company reviewed the year's results took place many will turn with interest to the report and accounts available. The increase in life business corresponds to expectations. The value of 1429 policies issued in 1942 comes to Rs. 66.95 lakhs nearly. The life revenue account shows that the Fund has received an addition of over Rs. 4 lakhs, because claims, expenses etc. were below the premium income of Rs. 8.95 lakhs and interest receipts of Rs. 1.04 lakhs. The Life Fund has been raised to Rs. 28.49 lakhs. The life branch, in spite of the further increase in business, is overshadowed by the Fire and Marine business of the Company. Like other Indian companies Jupiter reports an increase in premiums as compared with 1941. Marine premiums totalling Rs. 7.72 lakhs were more than the claims for Rs. 1.7 lakhs and the expenses amounting to Rs. 1.41 lakhs. The Marine Fund at Rs. 9.57 lakhs is equal to 137.57 per cent of the year's premiums. Fire premiums in 1942 totalled Rs. 15.05 lakhs. After meeting losses (Rs. 4.69 lakhs) expenses, taxes, etc., equal to 44.3 per cent of premiums the Fire Branch allows a transfer of Rs. 2.36 lakhs to profit and loss account. The Fund is maintained at Rs. 9.3 lakhs. The receipts in the accident branch went down but the Fund for expired risks is maintained at Rs. 1.2 lakhs and Rs. 47,956-11-1 is transferred to profit and loss account.

The shareholders get a dividend of 12 annas plus a bonus of 2 annas per share on the ordinary shares while the preference shareholders get 6¼ per cent tax free. The increase in life business merits more attention than usual as Jupiter relies largely on its Chief Agencies. The increase in 1942 appears gratifying and policyholders should do well to note that the Company's holding of industrial and other shares is important as raising the poor yield on giltedged securities totalling Rs. 12½ lakhs held by the Life branch. Since the interest in the subsidiary has been liquidated, it may well be claimed that Jupiter's investments are exceptional, and the present proportion of debentures and preference shares to Government securities is not too small. The Company's oversea connections and local influence have been more manifest in 1942 than in previous years, and the rate of progress is satisfactory in the life and marine branches. The paid-up capital of Rs. 23,74,800 supplements the Reserves and Funds of the Company. In the balance-sheet published to-day the feature is not the large cash balances but the distribution between approved securities and other investments. The results evoked satisfaction and Mr. D. M. Khatau's continuance as a Director must be mentioned here. The Jupiter's progress in the last three years has been greater than in its earlier years and the marks of vitality are those which were described at the meeting in Bombay last week.

GOVERNMENT OF INDIA, DEPARTMENT OF SUPPLy, CALCUTTA

For the assistance of machine tool users, a system of ordering and distribution of machine tools now in force is briefly described below:—

It has been arranged in consultation with the Machine Tool Authorities in the United Kingdom and the United States of America that all orders for the import of Machine Tools, whether intended for Defence, Government or for Industrial requirements, will be placed through the Machine Tool Controller, Calcutta, on the Secretary of State for India in London. It has also been decided that all orders for Class I, II, or III machines to be manufactured in India should be placed on the Machine Tool Controller. All orders for Machine Tools, therefore, will now be placed direct on the Machine Tool Controller, Calcutta. These Orders must be sent through the Regional Representatives in Bombay, Lahore, Madras and Cawnpore respectively, whose addresses are as follows :—

BOMBAY AREA :—Mr. C. W. Clarke, Dy. Controller of Supplies (M & E) & Regional Representative, Machine Tool Control, Strand House, Graham Road, Ballard Estate.

LAHORE AREA :—Mr. J. M. Smith, Director, Munitions Production & Regional Representative, Machine Tool Control, The Mall, Lahore.

MADRAS AREA :—Mr. E. W. F. Johnson, Dy. Controller of Supplies & Regional Representative, Machine Tool Control, United India Buildings, Madras.

CAWNPORE AREA :—Mr. M. H. Ismail, Industrial Planning Officer & Regional Representative, Machine Tool Control, Office of the Controller of Supplies, U. P. Circle, Cawnpore.

Regional Representatives and the Machine Tool Controller have the right to modify demands in consultation with the indentor to ensure that the most suitable machine is provided for the type of work required. It will be for the Controller to decide whether the machine tool should be manufactured in India or imported from abroad. It may be necessary to substitute the machine tool demanded by some other type, and where possible the indentor will be given the option of accepting or declining the substituted machine, and all information relating to price, etc., will be given to him as early as possible. It will be open to the Controller to demand a deposit up to 100% of the estimated value of the Machine Tool before he actually accepts the order. Machines will be sold at prices to be determined by the Controller, which must be accepted by the indentors before orders can be placed.

All Machine Tools imported into India with the exception of those intended for factories under the control of the Additional Director-General, Armaments Production, will be distributed through the Distributing Agents appointed by the Government of India. Where possible, these Agents will be the recognised agents for the particular makes of machine tools imported, and will carry out on behalf of indentors the duties and services which would normally be expected of them in peacetime. Distributors will bill at rates determined by Government and received payment on behalf of Government for machine tools delivere to industrial firms. Except in the case of Government machines, Government will not be responsible for inland insurance, which may be negotiated direct between the industrial indentor and the distributor.

The method of procuring imports of spares and replacements will not be changed, i.e., it will continue to be through the various importing agents under Licence from the Machine Tool Controller, except for Defence Services who will indent on the Machine Tool Controller direct. Spares and replacements do not include Cutting Tools, which are dealt with by the Cutting Tool Control.

When a machine procured under Lease-Lend and valued at Rs. 500/- and over is allocated to an indentor, it will be a condition of the allocation and acceptance of the order that the indentor will undertake to abide by any instructions issued by the Government of India regarding the use and disposal of the said machine.

S. A. VENKATARAMAN,
Joint Secretary to the Govt. of India.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

I find something particularly irritating in the small bits of news appearing in the dailies about a grocer here or a shopman there being fined for selling things above the control levels. Not that I ever felt that laws should be broken with impunity or that there is nothing criminal in dodging the controls. But think of the impression that these bits of news will create in the average man's mind. That there is a body of laws carefully framed to penalise all acts of profiteering and that there is a vigilant administration which spares no effort to bring to book all offenders against such laws? But the average man knows as a matter of direct personal experience that the law has not helped him to escape the profiteers, while rumour fills his ears with stories of fabulous fortunes being built on the very things for which he has to wait in endless queues, and often in vain. What I read of this morning is, I think, the third conviction that my eyes have alighted on during the last few days. Doubtless, there are many more which have not found their way to the news columns of the dailies. As you hear of more and more of such cases, you recall to mind the remark of Harold Laski that what is petty larceny in East End is neurasthenic kleptomania in West End. To sell ten seers of rice at an anna above the control price is a crime. But to bring thousands of maunds bought from a neighbouring province from cultivators who have no idea of prices here, and to sell them at rates which cover, shall I say, a small margin of costs would, probably, rank as a meritorious public service rendered to a starving population at the nick of time.

* * * *

All these months, I have carefully scanned the statements of officials on the food situation to see if anyone of them will deign to give the public an account of the administrative measures taken by the government by way of ensuring economic distribution of rice and other scarce commodities. There is always an imposing array of figures to prove that the shortage of stocks is exaggerated. There is a certain amount of reasoning to show that the stocks can be made to go round, loud curses on the heads of hoarders and profiteers, whoever they are, and eloquent appeals to the public for co-operation. But nothing to tell us how the stocks handled by the Government are acquired, who are the agents who are authorised to buy on behalf of the Government, what are the terms on which one is allowed to act for the Government and what is the upshot of the working of this system over a period. Doubtless, large amounts of public money are advanced for purchases. The Finance Member of the Government of India said in his Budget speech that the Central Government would be prepared to increase the appropriation for the purpose. This probably means that Provincial Governments are enabled to acquire stocks and distribute them according to recognised principles. There must be a financial result of such operations; and broadly human result. I am not aware that the accounts of these operations have been rendered in these terms, to the public, which is the "malik". It is high time they were.

* * * *

The Government, perhaps, feel that they have some achievement to their credit on which, out of a sense of modesty, they do not pride themselves. But the fact remains that anti-profiteering measures have by no means been fully efficacious; and at the end of the fourth year of the war, we are having a most depressing chaos both in the economic life of the people and in problems like inflation which are having official cognisance. Think for a moment of the high hopes in this regard on the outbreak of the war. We all thought then that the ethical doubt, which haunted governments during the last war about price control and delayed their action, had for ever been set at rest. We thought of the exeprience that had been gathered in the sphere, both on account of price restriction schemes and on account of the grip which the Governments of the world had acquired over the national economy. And we assumed almost without question that in this people's war, no section of the community would be allowed to play the Thenardier to those engaged in the war, whether on the battlefront, or in field and factory. The Government, too, gave us to understand that the Supply Department had perfected a system of estimating costs and alloting contracts at rates which would leave no more than a legitimate margin of profits. For a time, too, there was widespread feeling that the Supply Department drew its strings too tight. I have myself noted, in the earlier stages, the lack of enthusiasm for war orders. Very probably, the technique has not been altered except to the extent required by the rise in prices and a few other quite relevant factors.

* * * *

But when your eyes take in a broad sweep, the economic landscape of the country, it is hard to feel that the spirit of profiteering has been exorcised. On the other hand, there is a growing volume of evidence, not, of course, of the indubitable statistical kind, that fabulous fortunes are being made in ways and forms that shun the light of day. I said, not only ways, but also forms, because, remember that the anti-profiteering measures, so far as war contracts are concerned, are of two kinds. Firstly, there is the close scrutiny of costs and the pre-audit of the financial advisers. Secondly, there is the excess profits tax which is expected to swop up what has passed

through the sieve of prior enquiry into costs and profits. Profits, which have got over two such hurdles, have necessarily to be kept in forms which the eye of the tax collector cannot detect. I have heard stories of people resting their heads on pillows stuffed with notes—uneasy lies the head! I have heard that people have more rings with precious stones than they have fingers to wear them on. Of course, the new rings are purposely dulled and dirtied to look like the heirloom of generations, instead of the new acquisitions that they are. I have digressed. The point is there is evidence of fabulous wealth being accumulated by small knots of big businessmen all over the country. Take the figures of the Reserve Bank alone. The huge total of 748 crores of note issue is itself eloquent testimony to the pace at which people are making their pile.

* * * * *

From the standpoint of public interest, two questions arise from this. Are all the profits that are being made legitimate; and, do all these profits pay up the proper share to the Exchequer? Taking the first question, I am inclined to ask if the checks and controls devised by the Supply Department at the start have slackened. There is the constant pressure of rising costs and prices. Ideas formed some time ago do call for revision; and revision may well lead to relaxation. There is, apparently, need for fresh scrutiny.

* * * *

But a wider margin of profits in war contracts affects the average man only through a long chain, while profits made in food grains touch him too near. It is some time since the Government spokesmen started to give long-winded speeches on the food situation. And in Bengal particularly, food attracts as much attention from the Government as from the opposition. Quite heroic measures are propounded and discussed. But the consumer has had no appreciable relief. Unboiled rice cannot be got at a price less than Rs. 38-8 per maund. Scarcity is still as severe as ever before; and with this talk of free trade being again ended; things will be worse before long. But prices, however high, can be cheerfully paid, so long as there is an assurance that they are economic, in the sense that the price paid by the consumer has some relation to the price obtained by the producer. It is this assurance that is utterly lacking to-day. I understand that the price paid in neighbouring provinces like Orissa is but a fraction of the price that the consumer has to pay in the city of Calcutta. How is the large difference to be accounted for except by exhorbitant profits, which are particularly odious at the present time? If you suppose that, in the transit of rice between the producer and the consumer, there are, say, three stages, then the middleman in each stage makes a profit equal to the price of rice before the war. In other words, profits made on rice to-day are many times the total value of the rice crop a few years ago. This country can be thought of either as consumers or as producers of food crops. But both are left in the cold while small knots of middlemen are making fabulous profits.

* * * *

It is high time that an enquiry is made into the structure of the trade in rice and other foodstuffs. Between the outbreak of war and the present time, many things have happened to alter that structure radically. Many must have taken fright at the vigorous police action of the early days and shown their trade a clean pair of heels. Later, when the system of licensing was introduced the automatic continuance of the trade in its old form was made impossible. There was room for new entrants on the strength of statements, recommendations or other more

NORTH WESTERN RAILWAY

Tender No. 212-S/2/2.

Code Word "CAHCD".

Tenders are invited on rupee basis for purchase by the North Western Railway of the following Handles made of Kew, Shesham, Sundry, Kikar or other suitable wood. Tenders may be submitted on firm's own forms and must reach the office of the Controller of Stores, N. W. Railway, Empress Road, Lahore, not later than 14 hours on Monday, the 9th August, 1943. Drawing and Specification can be seen at and obtained from office of the Controller of Stores on and from 16th July, 1943. The sale price of the drawing and specification is Re. 1/-/- Local and Rs. 1/8/- Muffasil. Tenderers will be required to deposit a sum of Rs. 500/- as earnest money with the Chief Cashier and Treasurer, N. W. Railway, Lahore. The tender will be governed by the Standard Conditions of Contract A 3-40.

1. Handles for iron beeters 36" long = Nos. 30,000
2. Handles for hammer hand 18" long = Nos. 16,000
3. Handles for hammer flogging 36" long = Nos. 20,000
4. Handles for phowrahes 30" long = Nos. 10,000
5. Handles for shovels 30" long = Nos. 10,000

Tenderers should specify the wood of which handles would actually be manufactured.

NORTH WESTERN RAILWAY

Tender No. 210-S/22/67.

Code Word "CAGCD".

Tenders are invited on a rupee basis for purchase by the North Western Railway of 5000 Nos. (Five thousands) glasses gauge white plain with fused ends 10½" x ⅝" diameter (ten and half inches by five-eighth inch) to Specification No. Z1-34.

Tenders may be submitted on firm's own form and must reach the office of the Controller of Stores, N. W. Railway, Lahore, not later than 14.00 hours on Tuesday, the 3rd August, 1943.

Tenderers will be required to deposit a sum of Rs. 100/- as earnest money with the Chief Cashier and Treasurer, N. W. Railway, Lahore. This tender will be governed by the standard conditions of Contract A-3.

The copy of I.R.S. Specification can be obtained from the office of Manager of Publications, Central Publication Branch, New Delhi.

The Brand and the name of manufacturers of the gauge glasses offered should be specified.

pressing influence. Old traders may have chosen to keep out, sniffing at the new regime. By its very nature, a system of permits does not help faultless administration. While, on the one side, the trade was undergoing structural changes, there was on the demand side, too, changes which were helpful to the growth of abuses. Demand for rice, instead of being the cumulative demand of millions of individuals for a few seers per head or per family, was crystallised into bulk orders. There was the Government demand on military account and for civilian consumption. Large business firms, which undertook for various reasons to supply their staff and labour with rice and foodstuffs, had necessarily to buy the goods in the requisite large quantities. And even private individuals felt obliged to increase their normal demand to abnormal proportions. In the setting of highly nervous talk about rice shortage and soaring rice prices, it was easy to get higher and higher rates, while the supplier had his stocks ready or had made pucca arrangements for supplies at very low rates. Where dealers find it feasible to arm themselves with some manner of official status or connection, the task is rendered easier and the margin of costs is further narrowed! The rice trade has held out big prizes for those who can act quick and adapt themselves to the changing circumstances. There is, probably, a new class of dealers in rice, who cannot tell Atapchaval from Pukkachaval, but who, nevertheless, make fortunes denied to hard, sustained and honest work. If I say that the accounts must be rendered to the public of the doings of the authorities in this sphere, it is because I feel that the normal channels of trade have been cluttered up with controls and the door opened to a new race of interlopers. At any rate, the public is entitled to know how the Government's dealings in rice are effected and what facilities are afforded to, and restraints imposed on, those who are acting for the Government in the trade in rice or other foodstuffs.

* * * *

It is not alone in rice that the position calls for scrutiny. In piecegoods, it is freely said that goods were taken on a large scale to the Native States and disposed of in State territory, so that you and I as consumers and Sir Jeremy Raisman as the Finance Member of the Government of India, have both been done in the eye. This combination of victims is not fortuitous. For, where there is a system of controls, large profits can be made only in ways which preclude their disclosure to the public eye. Take the Excess Profits Tax, in many ways an admirable provision, as necessary as it is just, but nonetheless the most potent force for the encouragement of clandestine methods in business. It has done one good, that, for the first time employers have not set their face grimly against increase in salaries and allowances. But—and the "but" is more important—employees do not always benefit to the full extent of the increases in salary. Much the bigger part is got back—so, I am told—by the employer and goes to stuff the pillows which I mentioned at the start, the pillows that are stuffed with notes, stuffed with a material which, in one view, is softer than down, and in another, harder than the gold and precious stones that make crowned heads so proverbially uneasy.

What is the moral of your tale?—You may well ask. It is simple. We cannot go on in this fatalistic attitude towards prices and profiteering. I, too, sometimes think that India may soon be a land of millionaires. But commonsense and the rudiments of economics tell me that it can mean nothing when wealth is dwindling. They tell me, too, that in most trades costs, and not profits, should be the bigger part of prices. Therefore, the authorities in every sphere must look into the things committed to their charge. When prices are quoted, they must not be content with checking the immediate costs, but go right up to primary costs and bring all cases of profiteering to light. Not only grocers and shopmen, but big businessmen, too, must be watched with vigilant eyes. While petty larceny is petty, cases of kleptomania may not be neurasthenic and may well lead to big hauls. Sources of corruption must be hunted out and sterilised. A friend, who is no teetotaller, made me a present of this idea, that, if you track the course of whisky at present prices, you will probably track down the agents and beneficiaries of corruption. Something to work on, or probably just a joke. But the fact remains that corruption and profiteering should be hunted down if we are to make life livable.

(From Our Correspondent)

New Delhi, July 19.

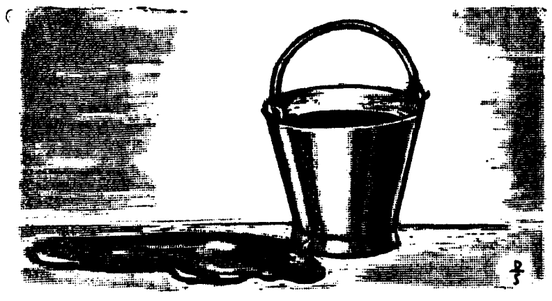
WHILE the main interest of the brief monsoon session of the Assembly starting next Monday will naturally centre round the debate on the deepening food crisis with large areas of the country already in the grip of famine, there is a good deal of official business to be gone through. At least seven new official bills are to be moved, most of which the Government expect to be passed this session. A bill to amend the law relating to Government Securities will be introduced and circulated for opinion. The bill provides that, while parties disputing the title to a security fight out the case legally, the Reserve Bank will not be involved in the dispute or incur any liability. At present unnecessary trouble is caused to the Bank by courts issuing injunction on it. In one case even a fraudulent order was served on the Bank cancelling a previous injunction. A bill to amend the Agricultural Products Grading and Marketing Act will enable the Government to recover the cost of quality control of graded produce and cost of publicity. It is also proposed to amend the India Army and Air Force Act making certain changes in the powers of the Courts-martial. The Mines Maternity Benefit Act will be amended to clarify the law regarding the period for which the benefit is available. The Indian Boilers Act will be amended to remove some technical defect. A bill to amend the Motor Vehicle Drivers Ordinance to provide for the reinstatement of drivers in former employment on completion of service under the Ordinance. Thus drivers will get the privilege assured to others under the National Service Ordinance. Then there is a bill to remove the difficulty experienced regarding offences committed on the borders of Indian States, witnesses to which live in the States. It is now proposed to amend the Criminal Procedure Code to enable commissions issued by British Indian courts to be sent for execution to courts of Indian States recognised for the purpose by the Crown Representative. The Assembly has also to consider some official bills brought forward from the last session including the Select Committee Report on the Delhi University Bill and the Joint Select Committee Report on the Hindu Intestate Succession Bill.

* * * *

The Central Government, I understand, have under urgent consideration several "emergency irrigation projects" to increase India's war crops. Sir William Stampe, Irrigation Adviser to the Government, is at present working on those schemes. It is learnt that Sir William had had previous consultations with the British Ministry of War Transport and the Middle East Supply Commission before he submitted his plans to the India Government. The proposed irrigation plans include short-term projects, adopting speedy construction methods, which will enable new crops to be raised within 12 or 18 months of their being sanctioned; schemes which will yield results only during the 'second stage of the war' say by 1945-46, and comparatively long-term projects to raise bigger crops for the postwar reconstruction period. The projects include construction of tube-wells including canal-feeder tube-wells, floating pumping plants for river bank irrigation and surplus water storage tanks in non-tube-well areas. As it will be impossible to build new hydro-electric stations to supply power for working the tube-wells during the war period, it is proposed to utilise some surplus plants said to be lying with the Indian Electric Commission, and certain Diesel engines now lying idle in the hands of Certain Departments, and to use sugar and cotton ginning plants wherever available to generate electricity during the off seasons. It is thought that 600 additional tube-wells can be built in the electrified area of the United Provinces in two years. The projects are designed to irrigate large tracts of the western Gangetic plain (between the Jumna and the Ramganga areas), the Khari-Haldoi tract of the Sarda Valley, the western Jumna alluvial tracts of the Punjab and large areas of western Bihar. It is intended, I understand, to place immediate orders for the material required for the projects as an emergency reason.

* * * *

The exigencies of war have at least forced the Government to start manufacture of locomotives in India. It is proposed to construct 25 locomotives during the year 1944-45. In spite of insistent public demand, locomotive production in India was held up due to the intransigent attitude of the Government of India. During the last three years most of the railway workshops were engaged on munitions production, and so the manufacture of railway engines had to be postponed. Now with the improvement in the war situation the Government may feel it possible to switch on at least some of these workshops to locomotive production. The programme for 1944-45 also provides for import of 195 broadgauge locomotives. It is proposed to construct 29 boilers during the year in India and import 234 from outside, though deliveires are uncertain. There is also provision for over 3,000 general service broadgauge wagons. The whole rolling stock programme is estimated to cost 11.94 crores. The latest available figures show that the surplus for the year 1942-43 is expected to exceed even the revised estimates of Rs. 36.28 crores by over Rs. 4 crores. The approximate gross earnings for the first three months of the year 1943-44 are Rs. 42.8 crores which were Rs. 5.16 crores more than the actuals for the first quarter of last year.



* * * *

I understand that Sir Alan Lloyd, Examiner of Capital Issues has over 1,500 applications for new capital issues now pending before him. It is not yet clear what final criteria the Government are going to laydown regarding the grant of permission for new companies to be floated, but Sir Alan is giving his personal attention to the disposal of the applications in consultation with the Reserve Bank. Some plantation companies in the South, it is learnt, have been issuing two-rupee shares on the model of the two-shilling shares of certain British companies. The Government, I understand, do not want to encourage this practice as they think it lends itself easily to speculative manipulations.

* * * *

Several useful suggestions regarding Co-operative Marketing of Agricultural production in India are made in a report issued

(From Our Correspondent)

Bombay, July 21, 1943.

Mr. K. M. Munshi is not alone in asking Congressmen to meet and modify the August resolution. The changes in the war situation justify a withdrawal from the negative attitude, and adjustment of programmes is meant to procure effective assistance in the time when there is real war in Burma again. Nationalists outside the jails are asked by Mr. Munshi to combine in order to rescue the country. The support given independently to Mr. Gopinath Srivastava is interesting, but Mr. Munshi asks for a new Swaraj Party and a constructive programme in advance of the release of Congress leaders. The August resolution was passed in Bombay, so that its cancellation or amendment must be attempted in Bombay. The Sind Minister's efforts to get Mr. Jinnah's views on the Congress-League differences suggests that the biggest party should prepare betimes, and the move will help the Working Committee to know how much more is required after the 'Quit India' cry. The Bombay view is naturally different from that expressed in Bengal by Congress leaders. The advent of a new Viceroy creates the opportunity for a change of policy.

Sir J. C. Coyajee's death in Bombay at the age of 67 means the disappearance of an educationist who was a practical expert. He wrote a few pamphlets to order, but his literary output was far below his reputation. A long career in the Education Department did not break his many links with Cambridge. A number of lectures followed his work on various Royal Commissions, but as expositor he took the official side always. Parsis remember his connection with Sir S. N. Pochkanawala. He worked then for the setting up of a bureau to relieve distress among Parsis. The only educationist to go to Geneva for three years, Sir J. C. Coyajee had certain chances denied to Indian economists so far. The Economic Journal as well as the local press published his contributions, but most people here must remember him as an academic opponent of Prohibition, one who let communal interests determine his view of Congress measures.

Apart from the Police conference to examine crime problems there is the news that crime is increasing. The Poona meeting is expected to improve detection. There has been no celebration in Poona but only an official meeting to survey the major problem, apart from the August disturbances. Crime may fall if the black-out goes. Government has given it up for the monsoon period until October 15. Lighting restrictions will however be kept and the gain is that of the motorists and drivers of vehicles, a valuable concession in view of the heavy rain experienced this year.

For a week there has been much talk by Editors to Editors. Sir Sultan Ahmed did not fail to get support for his new Committee. The Southern Army's Commander dealt more with the Public Relations side. The most revealing statement was a court of inquiry followed every accident in which soldiers were found guilty of negligent driving. That the Army has its garrison farms, keeps cows and grows grass is known to all. Of more importance to the press is the brief message saying that Canadian newsprint makers expect Washington to raise the price of newsprint. Manufacturers have stated a case for enhancing the price after the increase of 4 dollars a ton allowed earlier this year. The Editors' Conference, of course, is more concerned with shipping space than price schedules, but if the U.S.A. raises prices to oblige the Canadians the costs of newspaper production must go up. There have been attacks on pornography from the Catholic hierarchy here and the paper shortage does not seem to affect the issue of certain magazines. Newspapers with news coming out first can be called upon to cut out some advertisements but the daily press is not that against which charges are made but publishers of magazines and books.

A letter in the newspaper draws attention to the war-time growth of Bombay. The present population is estimated at over two millions. There has been no increase in building activity. Overcrowding has followed. The slums are worse than ever and ten people in one room are not rare. Rent control has not helped the immigrants; in fact rents have gone up as congestion worsens. The public health problems are acute, but the epidemics are not coming. Government has helped little, though most of the newcomers come here to take up war jobs and find that housing is non-existent. Government as employer has set a very poor example in the matter of housing. Commandeering of all open plots and rigging up of tents offers a solution. Rent can be had from temporary tenants but the Corporation may not care to encourage *al fresco* architecture. Guzerat may not have good crops. A warning has been given by the Khedut office in order to increase food supply and regularise distribution.

The latest ban applies to oilcakes. Somebody will limk it to grow food plans, the requisitioning of fallow lands and other events. Vegetable oilcakes is wanted at home and whatever happens to oils or seeds the cake must stay—stocks having been frozen in the usual manner. A shortage of oilcake has been proclaimed. Nobody wants to connect it with cows, but inter-provincial trade is not discouraged. Sugar factories depend greatly on this manure and so an assurance was sought and given. Agriculturists can reckon on the usual supplies as commission agents can take their supplies from local crushers. Other Provinces will get little or nothing. Cottonseed is the speciality of Bombay, but the plantation industries take all oilcakes. Deprived of large supplies of inorganic manures most plantations look to oilcake but food crops have first claim and the Bombay ban will not only help local farmers, but help oil-crushers elsewhere to get better prices for oilcakes.

Panic is reported from various cloth markets. Locally clearances are poor and yarn prices even of imported types are coming down with a rush. Outside buying is poor and a cartoon referring to cloth traders, crocodile tears does not seem to help the consumer. In Amritsar, prices are down by 50 per cent says a recent report. Cotton prices are turning steadier after the boom broke. The demand for long-staple cotton is constant and the increase in cotton acreage in Sind and the Punjab, is decidedly favourable to mills. Price trend is regular, huge contracts are superfluous and the market reports refer to East African growths and the price trend instead of detailing the fortunes of local types. Anyway Jarila is quietly steady at Rs. 550 or so. Mills are taking more cotton and the stronger monsoon has made it clear that cotton supplies will not be abnormal this year. The new parity between cloth and cotton prices is not obvious but mills are clearly in a better position and mill shares are not slumping as was once feared. Averaging is not the only idea that occurs to investors who know that bullion is now less safe than shares and not so easy to deposit as collateral with banks as in the past.

Since six of its directors are in Bombay the United Commercial Bank is no immigrant. The branch opened here on Monday promises to do better than expected and a notice in the papers of Monday said that the Bombay branch with Mr. C. H. Gheewala in charge was making its bow. Mr. Thakur,

NORTH WESTERN RAILWAY

The notice issued to the public regarding the closing of stations Matli exclusive to Badin inclusive on the Hyderabad (Sind)—Badin branch line, which appeared in certain news papers during the first week of January, 1943, is cancelled. The section in question will not now be closed on the 23rd July, 1943 but will remain open without interruption.

The public is also advised that the train service between Hyderabad and Badin will continue as at present, and the timings shown as coming into force from 23rd July, 1943 at page 85 of the official time-table in force from 1st July, 1943 are cancelled.

General Manager, Lahore.

South India

(From Our Correspondent)

Madras, July 21.

POLITICAL gossip is particularly lively here since the proposals of Mr. Srivastava were announced. Life seems to come back slowly to politics in India, and the despair and resignation, which were so marked since the failure of Rajajee's recent moves to bring about a reapproachment with the Muslim League, is giving place to some activity and speculation. People find nothing appealing in the idea that members of the A.I.C.C. now out of jail should meet together to withdraw the operative part of the August resolution passed by A.I.C.C. at Bombay last year and thus pave the way for a fresh approach. Nor has Mr. Munshi made much impression with his suggestion that a Swarajya Party must now be formed to serve India within the limits set by war legislation. That the moves of Mr. Srivastava and Mr. Munshi will not lead to any improvement in the political situation seems to be the general impreasion in this Province. When Gandhiji and the big guns of the Congress are in jail, any attempt of a rump of the A.I.C.C. to commit the Congress to new policies will not only fail to get public support but would probably make matters worse. There is no doubt a widespread anxiety that something must be done immediately to stop the rapid deterioration in the political and economic conditions in India. Speculation on the usual lines is futile. Even more is a national "demand." Everybody is anxiously awaiting further news regarding the mysterious letter from the Mahatma to the Viceroy wherein, he is reported to have withdrawn for his part the operative part of the Bombay rsolution. Th release of a large number of political prisoners, particularly noticeable in recent months, is taken to indicate a responsive mood in Government circles. Some go to the extent of saying that Mr. Srivatsava's proposals may be something of a feeler indicating to the Government the present attitude of Congress circles. Anyway, since the Allies are winning now, and the internal disturbances have been completely put down, it is time that there was some stir in the political field. The Jap menace is staring still and an all-out offensive on Burma is being planned. The necessity for reconciliation between the government and Congress has never been more pressing. But will it come?

Amidst the medley of gossips and armchair speculation, the question is often raised "What about C. R.?" This incurable, incorrigible optimist has not yet indicated his response to the new political move from the U.P. People are anxious to know the views and reactions of Mr. C. Rajagopalachari. It is not known yet if he will renew his activities for a political settlement or maintain his intriguing silence, suggestive of a sagacious belief that the time is really not yet ripe for a new turn in Indian politics.

Famine conditions seem to be particularly virulent in the Ceded Districts and the Government is taking all possible measures to combat the crisis. According to a Press Note 26 relief works in the Bellary District, 14 in the Ananthapur District and 5 in the Kurnool district were in operation in June, 1943. It is stated that no less than 1,36,371 workers and 35,649 dependents were relieved per day in the famine works of Bellary. Works in Ananthapur District gave succour to 49,907 workers and 18,897 dependents. The Kurnool famine relief works came to the aid of 18,759 workers and 5,728 dependents. Exclusive of wages paid to workers in Bellary District in the form of grains, the total amount spent for relief works in June came to Rs. 11,88,483. Famine labour is also harnassed for digging certain portions of the Tungabhadra canals.

The Food situation continues to be grave. The Food Conference at Delhi has helped the Madras situation to some extent in so far as it did not decide on a free movement of foodgraiins in this country. But reports of starvation from the Andhra and Malabar areas prove that the province has not achieved self-sufficiency in rice. The arrangements for rationing in the city of Madras are proceeding without undue delay. Mr. C. Tadulinga Mudaliar, the Mayor, suggested that, if the Government take control of the stock from the producing and trading centre, and store it in their godowns and sell it to the public directly instead of allowing the middlemen to interfere the position in the city may not be so bad as to require an early introduction of rationing.

But now the Madras Rationing Order has now been issued. The order has laid down that, except by means of a ration document some should obtain or try to obtain supplies of rationed articles after the date of the coming into force of this order. The Commissioner of Civil Supplies, Madras, has been empowered to authorise any wholesaler or retail dealer to supply any rationed article in particular area. No person other than the authorised dealer, on or after the rationing date, can supply any rationed article to any person. The order extends to the whole of the Presidency and the local area where rationing will come into effect will be shortly notified.

The Government on their part are doing everything in their power to invigorate the Grow More Food campaign. They have directed Municipal councils and local Boards to utilise uncultivated lands under their control for poultry and dairy units. They are to subject reports submitting details of lands brought under cultivation of food crops. All available lands attached to schools and dispensaries managed by the local bodies and the open spaces in public parks are to be utilised for cultivation wherever possible. Local boards are also empowered to lease out the road margins for cultivation for the duration of the war.

Among the new amenities added to the city life of Madras the completion of the third Napier Bridge across the River Coum deserves special mention. The Marina, the second best in the world and the pride of the city, has now become more enjoyable. This bridge is but a reconstruction work started by Messrs. Cannon Dunkerlay in July, 1941. The bridge was nearly completed in 1942 but owing to the military situation and the general evacuation of the citizens, the construction had to be postponed for a few months more. Work was renewed in February, 1943 and completed by June, 1943. This bridge would relieve the present congesion on the Mount Road and the residents of Triplicane, Mylapore and Adyar can easily appreciate the short cut to George Town now available to them. The Governor, who declared the Bridge open the other day, said that he was himself benefited by the bridge since it enabled him to get to the Secretariat a few minutes quicker.

The future of our industries is not secure unless we realise the supreme necessity of preparing here and now for the ruthless competition to be encountered after the war. This was the striking warning administered the other day by Sir C. P. Ramaswami Iyer, Diwan of Travancore, who inaugurated the B.Com. Degree course in the Pachaiyappa's College. Many who are to-day witnessing the springing up of new factories for war effort are under the comfortable impression that India will emerge from this war as an industrialised country stronger than ever before in facing international competition in our home markets and abroad. Nothing is so dangerous as to harbour such flabby hopes. Under the terrific stress of this global war the erstwhile agricultural countries have geared up to a high pitch of indutsrial production and, as the hostilities cease, the war-time industries and organisation would be utilised for peace time manufactures. One who is watching the tremendous strides of progress achieved by U. S. A. Canada, Australia and S. Africa would feel the glaring contrast presented by India. Here the Government have been following a short-sighted industrial policy of not filling up the essential gaps in the industrial structure of our economy. India is still not on the way to producing essential machinery, ships, planes, locomotives and automobiles. Others

Resume of Commodity Markets

COMMODITY markets which have been rather quiet in the early part of the month developed a definitely easier tendency since last week on the announcement of a new Defence of India Rule regarding advance of money on the security of bullion or commodities. It is apprehended that this new Rule may seriously dislocate normal business, and the bullion market has weakened considerably since then. Other commodities already suffering from the effects of the control measures recently issued are weakening further. As was feared the coal position in Jute mills has considerably deteriorated and the Indian Jute Mills Association has decided to close down all Jute Mills in Bengal for one calendar week ending July 31. It is hoped that this will have no adverse effect on supplies against Government orders since large stocks of goods exist in mills both on Government and Civil account.

With the prospect of the closure of the mills for one week and in the absence of any decision regarding the fixation of maximum prices for jute manufactures, the jute market remains dull and neglected. In spite of the vigorous protest made by various associations of traders, the Government seem to be bent on seeing their programme of price control of cloth and yarn implemented. The Central Government and the Provincial Directorates of Civil Supplies have issued orders for the submission of stock figures as at 31st July, 1943 from dealers in cloth and yarn before 15th August, 1943.

While all from the manufacturer to the consumer agree that the control order is an inevitable consequence of the inordinate prices of cloth, the merchants seem to be troubled very much over the operative part of the schemes. The declaration of stocks as on 31st July and the clearing of them before the end of October, 1943 are held to be too stringent a condition which will only result in seriously dislocating business; for there are certain special varieties of cloth which can be sold only at particular seasons.

The Government have turned down proposals regarding exemption of handloom products from the operation of the scheme on the ground that will leave a loophole which may defeat the entire purpose. However it was pointed out that handlooms will receive special consideration in the matter of supply of yarn at prices that will enable the producer to derive a reasonable margin of profit on his products. The piecegoods market, therefore, is easy without much business passing. It is clear that dealers and consumers alike are waiting for a further drop in prices to make their purchases. Already in Bombay many varieties of cloth are quoting at what may be called reasonable rates. Between the growing anxiety of merchants to clear their stocks within the period specified by the Government and the determination on the part of the consumers to buy only at what seem to them reasonable rates, the piecegoods market is bound to react again.

• • • •

The Delhi Food Conference is generally assessed as a failure. Nothing has come out of it. Without giving any specific proposals the Central Government have refused to take responsibility for free trade or price control but left the situation to be tackled by the Provinces themselves as best as they could. The Provincial Governments have been assured of their co-operation in any measure they may embark upon to combat the inflationary situation.

The Provincial Governments have therefore begun to take measures on their own initiative to secure supplies. Bihar has re-imposed the embargo on export of foodgrains to other provinces. Without the prospect of the Provincial embargo being lifted, each Province is keen on protecting its own interests. Deficit provinces like Bengal have no other alternative but to woo the nearby Surplus Provinces and it is now known the Minister-in-charge has been successful in getting the co-operation of the neighbouring Provinces, the Central Government and military authorities. The Central Government will help in getting special transport facilities for getting foodgrains into Bengal with the minimum loss of time. The military authorities have promised the loan of one of their ships for bringing food supplies to places like Chittagong. The drop in rice prices has not come as yet and much depends on transport in the West Bengal area.

The anti-hoarding drive is now to be applied to Calcutta and Howrah which were exempted from the country-wide campaign inaugurated by the new Ministry some time ago. It is understood orders have already been passed for the starting of the drive. The President of the Punjab Beopari Mandal in his telegram to the Civil Supplies Minister, Bengal, speaks of the huge stocks of good rice available in the Punjab. It is good news for people in Bengal, and with the assurance already given by the Central Government it must be possible for the authorities to import as much as is available into Bengal with-

out any loss of time. It is too early to hazard a forecast of the food situation in this province. As it is, prices continue to go up by leaps and bounds and the queues in front of Government grain shops are lengthening. While Bihar and C. P. are taking measures to prevent their food position from deteriorating further, Madras and some Native States seem to have caught the contagion of shortage in respect of foodgrains. The Madras Government has drawn up a scheme of rationing to be applied wherever and whenever necessary. It is stated that the foodgrains shortage in Cochin State has assumed alarming proportions and the Government has taken steps to augment their supplies. It is pointed out in this connection that they are bent upon seeing that the people get adequate foodgrains even if it means import of commodities from far away Baluchistan! Time alone can determine whether the piecemeal measures taken by the various Provincial Governments and States bear results expected of them. In the stampede that is sure to result, it is sure the Surplus Provinces stand to gain but it is not clear how the deficit provinces buying foodgrains at high rates can keep down the rapidly rising prices in their own provinces.

With the announcement of the new D. I. Rule regarding advances on securities and commodities including bullion, there was something like panic in the bullion market. Heavy selling pressure brought down prices considerably, and on Tuesday Gold ready was quoting Rs. 67-8 and silver Rs. 103-4. For the past two days more buying enquiries were encountered, the reason for such return of confidence being a belief that the new Rule may not affect bullion as drastically as was feared in the beginning. Prices recorded a small gain and the latest quotation is around Rs. 70 for gold ready and Rs. 105 for silver. In spite of this recovery, the bullion market cannot be said to have regained its position a month ago and it is idle to expect that either the recovery will be stable or the upward trend will continue.

(*Continued from page* 151)

in the previous week. Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12 per cent were allotted approximately 44 per cent. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-15-9 per cent per annum. The amount of tenders for next week remains unchanged at Rs. 8 crores. During the week ended July 16 the Government of India treasury bills for Rs. 10.64 crores were sold in favour of the Issue Department of the Reserve Bank as compared with Rs. 35.59 crores in the previous week.

The report of the Central Board of the Reserve Bank of India for the year ended 30th June, 1943, issued recently, reveals a record net profit of Rs. 7,69,80,740-3-0. Out of this amount, the sum of Rs. 20,00,000 has been set aside for payment to shareholders of a dividend at 4 per cent being the maximum rate fixed by an ordinance issued on the 30th June, 1943, by the Government of India. The balance of Rs. 7,49,80,740-3-0 is to be paid to the Central Government.

The exchange market has been dull but steady.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D. A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¾.

Banks are sellers of T.T. New York ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

(*Continued from page* 153)

subject of changes in the Balkan frontiers will not be ignored in Ankara.

The principle of discriminating against hard currencies is carried further by a notification meant to apply from August 2. Indians cannot go to the U.S.A. because it means buying of dollars. Exchange control can be made to encourage or discourage tourists, as the Italians realised first. It may be concluded that the long list of exemptions is meant to help the eager traveller, but it will also be said that the main purpose is to prevent Indians going out for study or other purpose to the U.S.A. or Canada. Travel to the U. K is not affected, but the ban on issue of ticket until the exchange permit is shown will produce the impression that it is all part of the Government's plan to gag nationalists rather than part of a plan to ration the scarce currencies. Indian students in the U.S.A made it clear that Congress had a real case which was not damaged by British propaganda, but the latest measure in exchange control will prevent that. Perhaps remittances to students abroad will also be prevented under exchange control and the principle of discrimination in imports, etc., worked in such a way as to break the ties with the U.S.A. Dr. Beyen is said to have criticised recently the principle of distinguishing between one currency and another on any ground. All countries are off gold and the whole scheme of exchange permits, etc., belongs to the darkest age of the Nazis.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, July 22.

COAL, or rather the lack of it, continues to dominate the situation which since last week has become still more acute owing to a breach in the E. I. Railway, due to floods, cutting off direct communication with the coalfields. It is reported that several weeks will elapse before repairs can be effected and normal running restored. Meantime, congestion on alternative routes is bound to complicate matters. Mills were loath to consider the proposal for taking a compulsory week's holiday to ease the situation, when it was first mooted, but this latest calamity has brought matters to a head, and rather than continue the wasteful system of depending on hand-to-mouth supplies of coal, it has been agreed that all mills shall close down for the whole of next week, *from* 26th to 31st July, to enable supplies of coal to accumulate. The danger of such supplies being diverted to other uses during the period of closure has, it is understood, been guarded against as it was made a condition precedent with those in authority that, if mills took this step (at very considerable cost to themselves) to ease the situation, there would be so diversion of supplies either during or after the stoppage, so that mills might reap the full benefit of their self-denial. Labour is to be paid a fixed allowance during the period of stoppage as well as amenities allowance and will also continue to draw rations at controlled rates. Altogether it is estimated that this compulsory week's holiday will cost the mills something in the region of thirty-five lakhs of rupees. But it is probably the wiser policy to grasp the nettle firmly and it is to be hoped that replenishment of the dumps will be so effective as to remove for some time to come the nightmare of doubt whether a mill will be able to start up the following day. At the same time the transport position is such that a reduction of working hours to perhaps 40 per week may have to be considered before long.

It is understood that after consultations with the emissary of the Supply Department last week, that official took back to Delhi proposals for control of the Industry by the Industry itself. Provided these can be reconciled with the views of the Supply Department, they are much more likely to be acceptable to the Industry as a whole that any imposed by an outside authority which cannot have the same intimate knowledge of the special idiosyncracies of the Jute Trade. In this connection, it is possible that the ban on free trading may be lifted within a week or two, by which time presumably price levels for goods may have been fixed. So far as the purchase of jute is concerned, those mills or groups of mills which have not yet completed their quota purchase against the American order, show no anxiety to get on with it, so there is no valid reason for restraining any mill that does wish to go on buying, from doing so.

The consolidated figures for the Preliminary Jute Forecast are still woefully uninformative. The Preliminary Forecast was always limited in the past to an estimate of the acreage under jute. Now it is not even that, and it is open to questions whether expenditure can be justified on operations which merely indicate the area licensed and then qualify that figure by stating that a considerable, but undefined, proportion of the licensed area was actually sown with paddy. The total acreage reported, including the outside Provinces, is 29,84,800 acres. According to the official "Recorded Acreage" of Bengal, an eight-anna crop should have produced a licensed acreage of 27 lakhs of acres, but the figure returned as actually licensed is only 25,59,000 acres, and as noted above, it is stated that not all of that has been sown in jute. No reason is adduced for the full proportion of the "recorded acreage" not being licensed, nor is any estimate ventured as to the area licensed for jute but switched on to paddy. Altogether a vague and worthless publication for the cost involved. But to take it at its face value, calculating 3 bales per acre for Bengal and 2 bales per acre for outside Provinces, the yield would be around 85¼ lakhs of bales, except for the unknown, or at least unrevealed, factor of the area licensed for jute but not sown with that crop. Very much a case of your guess being as good as mine!

The anomalous situation created by the republication by the I.J.M.A. of a list of stations officially described as "Jat" has not been greatly clarified by a subsequent circular which gives buyers discretion to purchase what they may be satisfied is Jat jute, if so guaranteed, even if shipped from a station not on the official "Jat" list. The circular admits that the subject is too wide to be dealt with exhaustively but proceeds to say it is still under active consideration by a sub-committee, which leaves many buyers still in doubt as to what pitfalls an exercise of their discretion may lead them into.

American Stock and Consumption figures are now to hand for June though in view of the existing restrictions on imports, the latter should not be read too literally. Spot stocks are up on last month at 930 lakhs compared with 530 lakhs. In June last year they were returned as 890 lakhs. Afloat stocks show another sharp fall to 650 lakhs compared with 1,140 lakhs in May and 1,500 lakhs in April. *In June last year* when the Burlap "freeze" was well under way, only 300 lakhs were afloat. *Consumption* for June is returned as 460 lakhs which compares with 300 lakhs in May and 270 lakhs in June last year. The total for the first six months of the year at 2,120 lakhs yards compares poorly with 3,050 lakhs for the first six months of last year but is a great improvement on the 1,170 lakhs which was the figure returned for the latter half of last year. For the seasonal year, July 1942 to June 1943, the consumption total is only 3,290 lakhs yards, which means that during that period, when they were trying to do without burlap and concentrating on substitutes, the U.S.A. cut their requirements by half, the result being the recent urgent order for 70 crores for delivery within 9 months. It would have suited the long-suffering Calcutta Jute Industry better, and saved it a few shocks, if the demands from the U.S.A. had been allowed to take a more normal course.

The Baled Jute market has been almost wholly neglected, neither the Export side nor demand from local mills amounting to anything. The tone is easy and for export Dundee Daisee could be bought at Rs. 85 Old Crop and at Rs. 84 New Crop. Firsts, Lightnings and Hearts combined are on offer to Mills at well under the maximum rates at Rs. 88, Rs. 81 and Rs. 75, but for Firsts alone a premium of two to three rupees is wanted. The discount is only in the lower grades. Exports of Jute during June are returned at 69,500 bales, which makes the total for the 1942-43 season 12,25,000 bales as we estimated last week.

Trade in Loose Jute has also been inactive. With mills' anxieties centred on the coal situation and the week's holiday in prospect they have been naturally reluctant to commit themselves, such as still had purchases to make against their quotas. Limited transactions were reported in European Jat packing at maximum agreed rates with Supervised Jat at four annas under maximum. On the other hand, for most of the week sellers were not inclined to press for sales, as wet weather upcountry was restricting imports and prices in many of the mofussil stations were above the parity of Calcutta. Towards the close there is more jute on offer, probably in expectation of upcountry prices coming down when it is known that Mills are closing for a week and may have later to reduce working hours to comply with the limited coal supplies. A fall in price of eight annas to a rupee would prove the solution to a number of problems at present facing the loose jute market, including the vexed question of Jat and District stations. Arrivals of jute into Calcutta for the first half of July are returned at 2,34,000 bales, a satisfactory figure compared with the corresponding total for the same period last year of only 79,000 bales. At the same time, tarnsport difficulties seem likely to beset the trade even more acutely in the future than in the past. As indicated above, the mofussil experienced a week of very wet weather which, though no actual damage has been reported, certainly delayed the preparation and the marketing of the crop. Conditions are now reported *improved and a spell of dry weather would* be beneficial all round.

With Mills still banned from trading, except for occasional reported "buying back" transactions, business in the Fabric section has again been confined to inter-Bazar and Bazar-Shipper. Further lots were reported bought ex-bazar for the U.S.A. at Rs. 19-8 and Rs. 19-12 for ready nine porters and at Rs. 19-8 for July-September. Ready elevens were reported at Rs. 26-4. Brans sold at Rs. 54 July. In Heavy Goods the principal item was as usual "B" Twills in which business was reported at Rs. 61-12 ready and at Rs. 61-8 October-December. 6 x 8 Sugars sold at Rs. 72 ready. Closing quotations are, 9 porters, Rs. 19-12 near, Rs. 19-14 forward. 11 porters, Rs. 26-11 near Rs. 26-14 to Rs. 27 forward. "B" Twills Rs. 62-8 July-September. Liverpools Rs. 67-8.

are speeding up while our progress is limping and tardy. The post-war planning groups, the Government Post-War Reconstruction Committees and our commercial bodies should realise that unless we take active steps to counteract the post-war competition and save our industries we would become poorer when peace is achieved. The Dewan's warning is well timed and deserves serious consideration. The Businessmen should prevail over the Government to give a categorial assurance that industries, including those which have sprung up during war time, should be given adequate post-war protection and that India would not be now committed to any international scheme which would, in post-war years, hamper her industrial progress. Every endeavour should now be made to utilise our industrial raw materials within our country. Planning of our post-war foreign trade should be based on the principle that imports of capital goods should be given preference over manufactures which India can produce for herself. It is upto every one to realise that a country has to be prepared as much for peace as for war.

(*Continued from page* 168)

by the Central Agricultural Marketing Department. The report suggests that along with the development of credit societies, more attention should be paid to the organisations of Co-operative Societies for marketing. Co-operative supply of producer's requirement like seeds, manure, and implements should also be organised. The report recommends the Madras system of linking credit with marketing by which borrowers from a credit society must sell their produce through the associated loan and sale society. It is suggested that the provincial Co-operative Departments should take steps to restrict the admission of members in producer's sale societies to agriculturists. Repayment of dues in kind should be encouraged, says the report, but the element of speculation should not enter into the business of co-operative societies by selling the produce immediately after it is received. It is suggested that arrangements should be made for providing necessary facilities for the production in marketing of newly introduced varieties of commercially important crops. The report also suggests expansion of the activities of sugarcane growers societies and the organisation of ghee, milk, egg and poultry societies. The report stresses the need for legislation to force the minority to join a co-operative production and sale society in a particular area and setting up of price control boards. It is suggested that the possibility of federating primary sale societies into marketing unions and linking up the unions into provincial organisations to be federated into an All-India body should be studied.

* * * *

The Forest Research Institute at Dehra Dun whose latest report is available to-day, has been doing useful research work on behalf of the Indian paper industry. The reorganization of the machinery and plant of the experimental mill was completed last year. The research work of the Paper Pulp Section is now largely controlled by the Advisory Committee of the Indian Paper Makers' Association. Experiments were carried out on the resistability of bleached bamboo pulp for rayon manufacture. The samples supplied by the Mysore Paper Mills were found unsuitable for the purpose. Work was carried on many war supply problems ranging from testing Indian timber for aircraft construction to extraction of valuable chemicals from waste products. A large number of plywood containers ranging from 50 lb. medical stores containers to drums for oils and paints and even small boxes for injection phials were designed in the Institute. The preparation of adhesives from maize and groundnut proteins—now a waste product in starch industry as well as the plywood industry, hit by the high price of casein was undertaken. Research to find the best charcoals for producer gas plants have a particular significance when thousands of vehicles are running on producer-gas.

* * * * *

Several new research schemes including the manufacture of direct cotton colours, development of si-cu-bronze, preparation of gelatine and development of power metallurgy technique for the manufacture of self-lubricated bearing and composite metal graphite brushes were sanctioned by the Governing body of the Council of Scientific and Industrial Research held here this week. Detailed schemes for a National Physical Laboratory and a National Metallurgical Research Institute were examined while a Committee was appointed to examine a scheme for a National Chemical Laboratory. A committee was also appointed to draw up a scheme for a Central Glass Research Institute. Plans for commercial exploitations of certain completed researches including the manufacture of three vegetable dyes and vacuum pumps for chemical and pharmaceutical industries were also considered.

* * * * *

I understand that Mr. C. D. Deshmukh is to be confirmed as Governor of the Reserve Bank on a salary of Rs. 7,500 a month while Mr. Wajahat Hussain, I.C.S. (of the United Provinces), and Mr. Trevor, Chief Accountant of the Bank, are to be appointed Deputy Governors on a salary of Rs. 4,500 a month. The final decision regarding these appointments is to be taken at the meeting of the Governing Board of the Bank to be held this week. Mr. Deshmukh's appointment as Governor will be generally welcomed in Indian banking and financial circles. He will be the first Indian to hold this key job. Mr. Deshmukh was for some years Financial Secretary to the C. P. Government before he joined the Reserve Bank and earned a solid reputation both as Financial Secretary in the Central Provinces and as Deputy Governor of the Reserve Bank.

HILL BIRD.

the General Manager, can claim to have opened the first branch (Bombay was first choice for many reasons) within 3 months. The branch has got its share of money seeking safety, and a very large number of accounts were opened on Monday itself. There was a big crowd and the visitors included Sir Alexander Gray. The Bank is authorised to deal in foreign exchange and certainly has an advantage available to a few only. The bank's connections are very good, as everybody observes, and the very good start made in Calcutta after May 10 has not been without its effect. Clearing and other facilities should be automatically secured for a bank which has attracted great attention. Indeed leading businessmen of Delhi, Ahmedabad and other cities were here to see the branch open formally.

UNDER THESE BANNERS WE WIN

IT is these banners that help us ride the present international storm with confidence. With these principles as our guide we have, during the 45 years of our existence, tided over two wars, several earthquakes, many epidemics and slumps.

The various buildings and investments of the Company in almost all important towns are visible signs of our strength and absolute security.

It is our willing service to policyholders that has made BHARAT so popular today.

JUTE

Calcutta, July 22.

THE onset of slacker conditions followed the publication of the preliminary forecast figures. Crop reports so far received seem encouraging and the increase in the licensed area in Bengal is having its own effect on prices for New Crop. The District figures do not seem to be regarded as proving that supplies will be unduly large since floods in West Bengal must effect the supply position this year. Further, the reduction of nearly 300,000 in the acreage as compared with the past year, must be taken to mean that the Ministry's decision has been given effect to by the cultivators; but the District figures showing an increase in one and a fall in another, do not seem a satisfactory guide.

The drop in prices has not been braked by the statement issued on Saturday to the effect that the 19-17-14 formula is that of the mills, not of the Bengal Government which has no interest in lower or higher prices at all. Meanwhile, the jute growers' friends in the press write of 'ramps' but press criticism does not touch the market, when it is known that commodity prices generally have declined in June and have fallen since.

The mills having many production difficulties have taken less interest than usual, and the market is flat, though business at rates below the maximum for Jat has been reported more than once. The improvement in the war situation has not helped sellers of pucca bales. Business remains restricted and Dundee Daisee 2/3 quoted at Rs. 86 to Rs. 84-8 which is the only business reported along with that in Cuttings at Rs. 40 and Rs. 39. Compared with prices a week ago, there is little or no change. The stagnation in the jute market is not due mainly to the idler conditions in hessians, but to the feeling that price control or control of the mill industry, on the lines applied to cotton, may be tried. Mills having enough stocks of manufactured goods, and enough jute to go on with for the U.S. order, look to large arrivals when the transport position is easier. The bazar operators, worried by the flatness of hessian, is giving less attention to jute than ever.

JUTE MANUFACTURES

Calcutta, July 22.

THE talk of agreed maxima for hessians has not died down and a week's holiday in the mills from July 24, means nothing to the speculator. Prices have been falling slowly, and interbazar business has not encouraged the revival which must come from buying by shippers.

Heavy goods showed a slight measure of improvement in prices, but hessian is stagnant. Prices on Thursday revealed no change on the last week with 9 porters quoting Rs. 19-12 for July and Rs. 19-14 for August-September delivery. There is practically no change in 11 porters which quoted Rs. 26-11 for July and Rs. 26-13 for August-September on Thursday. The shortage of coal for the mills and the recent buying back of stocks with the bazar have not helped the jute manufactures market to recover poise. Nor does the improvement in the U.S. consumption help the market to throw off the feeling of helplessness. As mill labour will get compensation for the holiday enforced by coal shortage, the hessian operator cannot look to outside trouble to help him out. As for the outlook the U.S. order has cleared up many things and the increase in U.S. stocks in June does not seem to have special importance.

The ban on sales limits business in the bazar, and prices have worked downwards. They may drop soon to the level of the U.S. ceilings, in which case, only a change in raw jute prices can affect the level. The stability imported into the cotton market may soon be available for both jute and hessian, and the market reports of the future may detail only the volume and grades dealt in.

GOLD

Calcutta, July 22.

A PRESS note last week calling attention to a Defence Rule empowering interference with bank advances against stocks of commodities etc., proved too much for the nerves of the bullion market. The Bombay market turned bearish when big brokers came out as sellers. A little covering since then does not conceal the downward trend in prices.

The Indian Chambers of Commerce object to the idea of control, but the bullion market in Bombay has recognised official interference as inescapable. A limited recovery in gold on Wednesday and Thursday brings out the fall in prices over a week. There is a very considerable spread between Bombay and Calcutta, but it should narrow soon. Gold is quoting Rs. 70 per tola and coin at Rs. 49. During the week a drop of Rs. 8 per tola and Rs. 6 per coin in Bombay points to a real slump in bullion. London quotes 168sh. per ounce and New York $35 per ounce with exchange rates not moving at all. The Bombay bullion market reported offtake equal to arrivals, but stocks must get larger when the anti-inflationary drive gathers momentum.

SILVER

Calcutta, July 22.

A VERY big change has come over the silver market recently. The drop in gold affected silver at once. Quotations show a drop of Rs. 15 per 100 tolas on the week in Bombay. The Bombay market has given up settlement business but expects the introduction of ceilings for bullion though not for food grains and other articles. There is no information as regards sales by States, but there is nothing to suggest that the Indian Government's silver will come on the market though it will be urged that resumption of selling by the Reserve Bank after a year may help to the acceleration of the decline in order to counter the common belief that the rupee is falling. The big drop in gold on Monday did not touch silver nor did the recent recovery but prices have run a parallel course. Silver is down from Rs. 109 per 100 tolas to Rs. 106-12 in three days. London has been quiet as usual suggesting that a small part of U.S. silver production passing through the usual channels makes no difference to the buyer or seller there just as the big increase in home consumption makes no difference to the U.S. silver interests who are dependent on the Treasury as much as ever.

PIECEGOODS

Calcutta, July 22.

REPORTS of panic in upcountry trade centres and the fall in yarn has shaken up the piecegoods market a little. The Bombay trade did its protesting well but the official notice calling for returns appeared. Buyers have developed extra reserve in view of the slump in prices in Bombay, and the eagerness of traders for business. The monsoon makes for quieter conditions but a railway notice referring to large bookings of piecegoods to Calcutta, and the duty of consignees to clear goods quickly, can only precipitate a further decline in prices.

Disparity between wholesale and retail prices was mentioned at the time of the issue of the Control Order and the level of cotton prices in the South helped resistance. A change has been apparent since then. Cotton prices are steady at the decline, if long-staple varieties are in better demand of late. The local Government has indicated that the control scheme is to be worked out like the standard cloth plane. Though cloth prices are almost double those of last year, the tendency is for prices to go down though the cold weather styles may hold up owing to the scarcity of woollen goods.

Stock Markets to-day and to-morrow

FLATTERING TEA COMPANY RESULTS

Stock markets were very quiet in the early days of the week. The slump in bullion prices following the passing of the new ordinance empowering the government to restrict allowances by banks on commodities had a discouraging effect. There were also fears regarding the possibility of restriction of dividends. As a result, business passing has been on a considerably smaller scale.

The decline in prices for gold and silver after the new ordinance has been recovered to a great extent but stock markets have not put on a more cheerful appearance. The tendency at the present moment is to make much of adverse factors. The bogey of restriction of dividends has been raised once again. The coal shortage is cited as another factor. That the Indian Jute Mills Association should have been obliged to close down for a week and that the jute mills do not propose to work additional hours to make up lost production, in order to enable the government authorities to provide adequate facilities for coal supplies, shows the seriousness of the coal situation. When such a situation has risen in the jute industry which is in the heart of the coal mining area, there is naturally a tendency to exaggerate the difficulties of other industries. It will take yet sometime for markets to be active once again.

The new ordinance giving powers to the government to prohibit advances by banks against commodities had the desired effect on bullion prices at first. There was a slump in the quotation for Gold ready from Rs. 77-8 to Rs. 63-8 and for silver from Rs. 118-12 to Rs. 103-12. There has been a recovery however, during the last three days and most of the lost ground has been regained. It is pointed out that the effect of the ordinance had been discounted to a certain extent.

* * * *

In this period of passionate planning defence of capitalist enterprise based on the profit motive might be surprising to many, but Sir Alexander Roger at the meeting of British Insulated Cables indicated clearly what one part of Lancashire thinks to-day. The great enterprise known the world over as B. I. sprang from the vision and faith of adventurers over years ago who set out to make cables of a new design and overcome all difficulties till success crowned their efforts. The enterprise added to its capital out of profits and maintained employment. B. I. Cables keeps thousands at work and produces essential materials. What is more important is that there are thousands of shareholders who look to the Company for a moderate addition to income. The average stockholder's holding in B. I. Cables is only £300 and the diffusion of ownership has made for financial democracy which may be lacking in the event of a State Trust taking over an undertaking whose efficiency cannot be measured by the financial results of the year. The results must please B. I. shareholders. Net profit has slightly risen despite the increases under taxation, depreciation and the allocation of £100,000 to the War contingencies Reserve. The addition of £50,000 to the Provident Fund for work people is a mark of the generous policy adopted towards the staff which has every opportunity of rising to seats on the Board, as Sir Alexander reminded the shareholders. The financial success merely reflected the increase in output and the proposed increase in authorised capital to £4 millions is meant to extend the company's influence and operations when a chance occurs. The Company's factories, old and new, are devoted to war work and the B. I. motto of 'highest quality by most efficient means' has been applied. Very successful salvager of the infant cable industry in India, B. I. Cables have a special interest for many investors. The vast technical resources in addition to financial assistance required were available to the Indian Cable Company of Tatanagar. In the war period, Indian Cable has acquired an unexpected measure of strength argely through its uninterrupted association with B. I. Cables. The results for the year ended March, 1943, should show what advantages have further accrued to the Indian Cable industry. It might well be that Indian Cable might develop the same strength as B. I. Cables in view of the large addition made to reserves last year.

* * * *

The Oodlabari Tea Company, Limited has reported satisfactory results for the year ended 31st December, 1942, and has declared a total dividend of 35 per cent (Interim—7½ per cent and final 27½ per cent) against only 20 per cent for 1941.

"A good standard of manufacture was maintained throughout the year" and the actual crop was 7,500 maunds against 5,460 maunds during 1941. The working expenses increased to Rs. 2,24,547 (1,78,232), mainly due to exorbitant freight charges and incurrence of new expenditure locally at Calcutta towards war risk insurance. Other expenses remaining more or less the same, the net profit is Rs. 1,58,495 (Rs. 95,059) after providing Rs. 75,000 for taxation. Provision for reserves has been doubled during the year to Rs. 50,000 against Rs. 25,000 previously. The amount carried forward is slightly lower at Rs. 12,098 against Rs. 15,661 brought in.

* * * *

The results of the "India Paper Pulp Company, Limited," for the half-year ended 31st March, 1943 are very satisfactory. There has been a substantial increase in earnings in spite of increased cost of production and acute difficulties in obtaining and transporting to the mills adequate supplies of bamboo and coal. The net profit before providing for taxation and depreciation is Rs. 16,78,141 against Rs. 12,52,655 in the last half-year. The company has transferred Rs. 1 lakh (Rs. 75,000) for Reserve. But for the huge sum of Rs. 12 lakhs provided for taxation against Rs. 8 lakhs in the last half-year, the Company would have been in a position to declare a higher dividend. However, the dividend has been maintained as in the last half-year at 5 per cent.

* * * * *

The accounts of the "Banarhat Tea Company, Limited" for the year ended 31st December, 1942 disclose an imposing record of results both in respect of outturn and in the declaration of a very high rate of dividend of Rs. 100 per share. (Rs. 10 declared as interim dividend on 15th January, 1943 and Rs. 90 now recommended as final dividend). Favourable climatic conditions improved the tea crop during 1942 and the Company reported a total crop of 32,569 maunds for 1942 against 21,698 maunds for 1941. The estimate for 1943 is 35,000 maunds. Despite the high cost of production, the net profit before providing for taxation and depreciation amounted to Rs. 13,73,065 against Rs. 4,80,696 during last year. A sum of Rs. 5 lakhs (Rs. 1.4 lakhs) was provided for taxation and Rs. 34,871 (Rs. 29,665) for depreciation. A new building reserve was created during the year and a sum of Rs. 70,000 has been set apart for that purpose. The carry forward is as high as Rs. 1,67,093 (Rs. 60,946).

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 23.

BUSINESS in the Calcutta Stock Exchange this week has been smaller, and the trend still remains irregular. Prices have yielded to selling pressure only to a slight extent, but the market is quieter in the last 2 days owing to the announcement of a holiday in the jute mills.

Giltedged securities have been firm and good features have been noted in coal and other mining shares. The miscellaneous section has been in poor form and Indian Iron has been affected by speculative selling. The market must remain hesitant though war news is consistently encouraging, largely because the bullion and commodity markets have been easier this week. Buying inquiry of a selective nature is limited to bank shares and tea shares. Jute shares do not look like recovering in the near future, and the main trend is unfavourable in spite of the report that Bombay is buying textile and steel shares once again.

Dealings in Government securities have not been limited to 3½ per cent paper over Rs. 95. Improved demand for 3 per cent paper at Rs. 82-2 and over has been noted recently. There has been little business in dated stocks but Defence Loan has been over par and Defence Bonds (1946) have been taken up to Rs. 102-10 for small lots. There has been no business in Provincial or Municipal Loans. Fixed-interest stocks dealt in include Rohtas Industries debentures at Rs. 104-8 and Dalmia Cement debentures at Rs. 105-8. The interest in bank shares has been sparser than usual and United Commercial at Rs. 7-12 premium is lower on the week. Calcutta National is higher at Rs. 13-6 while Imperial (500) is standing at Rs. 1,820 c.d.

The demand for guaranteed railway shares is not as good as it was though the conditions in giltedged make for higher quotations. Hoshiarpur-Doab has gone up to Rs. 110 and a small lot of Darjeeling Himalayan (Ordy.) was taken up at Rs. 105-8. There is no quotable change in other stocks.

The decline in jute shares continued into the current week. The fall in hessian has not been without effect on jute shares and rumours of control have lowered prices. The big shares like Anglo-India and Kamarhatty show losses like the small ones like Soorah and Rameshwara.

The announcement of 7½ per cent dividend for the half-year has helped Bengal to rise to Rs. 26-12 but the tendency is towards lower levels in the case of shares like Kelvin and Champdany which has receded to Rs. 205. Nuddea is below Rs. 100 and the appearance of the notice has not led to market support for Birla Jute. There is, however, no change in Jute Preference shares and Hastings Pref. has hardened to Rs. 148, Caledonian Pref. to Rs. 175, Budge Budge Pref. to Rs. 175.

Cotton mill shares have been irregular but prices are above the lowest levels. Elgin at Rs. 67, Cawtex at Rs. 11-3 and New Victoria at Rs. 7-14 are steadier at the decline. Averaging is not unknown at present. Interest in mining shares has been spasmodic and Burma has weakened on Bombay advices. Indian Copper has been latterly steady at Rs. 2-8 and the real feature is Karanpura Development which has been bid up to Rs. 14-4.

The sugar section has derived no encouragement and quotations for 3 days show that the U. P. Sugar Co.'s 10 per cent interim announcement was discounted when it went over Rs. 27. The share is now steady at Rs. 26-8 while Belsund is no better than Rs. 10-8. There has been more inquiry for Carew & Co.'s shares as the Company's accounting year ends in June. There has been good buying up to Rs. 19-4 but the market outlook is too obscure to lead to a follow-up.

The coal group has attracted more attention but the appearance of the notice has forced down Samla. The small shares like Parasea and Talcher have moved up and down but Deoli has been supported over par and Pure Sitalpore has gone as high as Rs. 17. Of the leaders Bengal at Rs. 475 has been quietly held and Pench Valley is over Rs. 40 though Amalgamated is lower after the dividend was paid.

Sentiment in regard to paper shares has been somewhat damaged and Titaghur has lost ground after going ex. Quotations of the week include Sree Gopal at Rs. 22 while the Participating Pref. share is as high as Rs. 172.

The chemical group is firmer than expected and Alkali and Chemical Ordy. stands at Rs. 35. Selling of Frank Ross down to Rs. 7-10 has been noted recently with the price recovering to Rs. 8-4 at once.

Engineering shares have mostly followed Indian Iron now standing below Rs. 35. Bengal Steel has worked down to Rs. 26-10 after the midweek recovery to Rs. 27. Indian Standard Wagon and Burn Ordy. have turned firmer against the general trend. Kumardhubi shows a small gain after the accounts appeared showing a smaller debit balance. In the miscellaneous section the bright feature has been British Ceylon Corporation which has risen to Rs. 18 rather suddenly. The drop in Calcutta Ice to Rs. 12 takes explaining.

The tea share market has been irregular. Inquiry for East India raised the price to Rs. 16-8 but sellers at the rise are in the majority. The new share Atal is advancing, and Gohpur in the Williamson Magor group is latterly prominent. The big shares are apparently fancied on the Bombay side, and the appearance of the Begg Dunlop group notices may encourage buying of shares in companies whose 1942 dividends are yet to come.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 22.

The weakness of the bullion market and the Government resolve to go on with their control schemes have contributed to the continuance of the easy conditions noticed last week-end. Only the exceptionally favourable war news from the Middle East and a return to activity by bulls somewhat imparted a better feeling on the local Stock Exchange towards midweek. The market is on the way to steady conditions with the principal counters slowly gaining part of their lost ground. However it is too early to say anything definite about the conditions in the Stock Exchange in the immediate future for the simple reason that the atmosphere is not yet free from rumours regarding limitation of dividends.

In marked contrast to other sections, Government securities are quite firm with 3½ per cent Government paper quoting at Rs. 95-8.

Mill shares were rather weak for the greater part of the week under review. Conditions that induced the present state of affairs in this section have not undergone any appreciable change. On the contrary the weakness of the piecegoods market and the bullion market had an adverse effect on prices. However, prices have improved on short covering and bull support. Closing prices are: Bombay Dyeing Rs. 1,895; Century Rs. 732; Kohinoor Rs. 748; Phoenix Rs. 535; Simplex Rs. 262-8 and Svadeshi Rs. 521.

Steels:—Tata deferreds have shed nearly 40 points during this week, to quote at Rs. 1,932-8 as against Rs. 1,977-8 on last Thursday. The weakness of this section like that of Textiles is due to the rather irregular condition prevailing in the commodities market and to renewed rumours regarding limitation of dividends. For the past two days rather steady conditions were noticed. Tata Ordy. were quoting at Rs. 388-8.

Miscellaneous:—Easy conditions were noticed in this section throughout the period under review. While the principal counters derived support from bulls towards midweek, shares in this section met with no such enquiries and hence the downward trend continues without break. Shivarajpur Syndicate have lost 6 more points to quote at Rs. 60. Premier Construction are lower at Rs. 177, A.C.C. Rs. 214-4 and Bombay Steam Rs. 565.

THE UNITED PROVINCES SUGAR COMPANY, LIMITED

NOTICE is hereby given that an Interim Dividend for the current year of 10 per cent on the paid-up Capital of the Company or Re. 1 per share has been declared and will be payable on 31st August, 1943, to all shareholders whose names stand on the Company's Register on that date.

The Share Transfer Books of the Company will be closed from 18th August, 1943, both days inclusive.

By order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

1, Clive Street,
Calcutta, 16th July, 1943.

IMPERIAL BANK OF INDIA

NOTICE is hereby given that the 23rd Local Meeting of the Shareholders of the Imperial Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, 3, Strand Road, Calcutta, on Wednesday, the 25th day of August, 1943, at 10 a.m. (Standard Time), for the purpose of electing two persons to be Members of the Local Board to fill the vacancies caused by the retirement of Mr. W. F. Scott-Kerr and Sir George Morton, O.B.E., M.C., who go out of office at such Meeting, but, being eligible, offer themselves for re-election.

By Order,
F. H. MOORHOUSE,
Secretary and Treasurer.

Dated 15th July, 1943.

CHAIRMAN'S SPEECH

BRITISH INSULATED CABLES LIMITED

Statement by Sir Alexander Roger for the Annual Meeting

In accordance with war-time practice, this review of the Company's Accounts and activities for the year to 31st December, 1942, is being sent to Members with the Directors' Report and Accounts. At the Annual General Meeting on 1st April, I will suggest that the Report and this Statement taken as read.

DIRECTORATE AND MANAGEMENT.

During the year we have been fortunate in filling the two vacancies on the Board by the appointment of Sir Eugene Ramsden, Bt., with his wide and varied experience, and Mr. B. Welbourn with his intimate knowledge of the Company's affairs gained through long service with B.I.

An important change has also been made in the management structure. Over a period of years the B.I. business has expanded in many directions and has extended its associated and subsidiary interests at home and abroad far beyond cable making.

It became clear that, if the B.I. Group were to maintain its great position, the burden of management must be more evenly distributed in order to grapple successfully, not only with war-time difficulties, but also with the many post-war problems which will inevitably arise. The offices of Joint Managing Directors were allowed to lapse and Mr. Martin-Harvey was appointed Deputy-Chairman while Mr. Travis devoted himself mainly to other interests. Messrs. D. W. Aldridge, F. Waine and W. H. McFadzean have been appointed Executive Managers. These gentlemen have all won their spurs in the service of B.I., and not only is the new arrangement showing every promise of success, but it has been an inspiration to all other members of the staff in proving that the highest offices in the Company are open to one and all.

Several changes in senior staff positions have followed the new arrangements, and in particular I would mention the appointments of Dr. J. L. Miller as Chief Engineer; of Mr. N. K. Bunn—for many years our Contract Manager—to the position of Works Manager, Prescot; and of Mr. R. B. Paul as General Sales Manager.

PROFIT AND LOSS ACCOUNT.

Profit on Trading, Dividends on Investments, etc., after making provision for Taxation and Contingent Reserves Adjustment have increased by £20,722 to £831,107, but as Depreciation and other charges absorb £10,890 more than in 1941, the Net Profit available from the year is only £9,832 higher at £557,180. Due to the effect of higher costs and the heavy incidence of taxation the results only partially reflect the output achieved during 1942.

The Directors recommend a further strengthening of "War Contingencies Reserve Account" by £100,000, and an addition of £50,000 to what has hitherto been known as "Compassionate Fund for Workpeople" but has now been given the more appropriate title of "Provident Fund for Workpeople". At the General Meeting in 1929 a capital sum of £50,000 was set aside in a separately invested fund to be used at the discretion of the Board to provide allowances for retired workpeople and their dependants. The experience gained has proved the great value of the Fund, and having regard to the increased number of workpeople now employed your Directors are confident you will approve the further appropriation of £50,000 bringing the Fund up to £100,000.

BALANCE SHEET.

At an Extraordinary General Meeting to be held immediately after the Ordinary General Meeting on 1st April a resolution will be submitted to increase the Authorised Capital from £3,000,000 to £4,000,000. Your Directors feel it is in the interests of the Company to have this further Authorised Capital readily available for any purpose although there is no immediate intention of making an issue. You will remember that at the beginning of 1940 the Debenture issue, amounting to £700,000, was paid off.

"Current Liabilities and Provisions" are up by £735,329, mainly due to increases under the various heads of "General Creditors, Taxation and Contingent Reserves".

During the year £355,498 of capital expenditure was incurred on new Buildings and Plant, and the depreciation applied for 1942 of £257,382 leaves "Fixed Assets" £98,116 higher at £2,062,455.

Investments in "Subsidiary Companies" have increased by £214,632, mainly accounted for by the acquisition of shareholdings in Companies whose products are complementary to our own.

"General Investments" show little change apart from the addition of £100,000 in British Government securities.

A valuation of investments was made at 31st December, 1942, and although this presented difficulties under existing conditions, your Directors are satisfied that it shows an excess over the figures at which Investments appear in the Balance Sheet.

"Stocks and Work in Progress" and "Debtors" are both higher reflecting the increased activities of your Company, while "Cash in Banks and in Hand" shows a small improvement.

GENERAL.

This brief review of the 1942 Accounts gives a totally inadequate idea of the activities of your Company during another year of war, activities which have included taking over the direction or management of several additional factories. One day the full story will be told, and to-day I can only assure you that all our efforts are being focussed on the successful prosecution of the war.

Your Directors would, however, be lacking in their duty if they did not give some thought to the motives necessary to win the subsequent peace. As I see it a manufacturing concern should have three main motives, namely:—

(1) to produce goods of the highest quality by the most efficient means:
(2) to pay an equitable remuneration to all employees and to assist them, or their dependants, after their service with the Company has ended; and
(3) to earn a reasonable profit for shareholders on the capital invested in the business.

The results of numerous investigations rightly made into our figures since the war: the trust and confidence placed in the Company by Government Departments; and the production we have achieved, prove that under existing conditions your Company are fulfilling motive number (1). The same claim, we are confident, will be justified under more normal conditions.

With regard to (2), we have a loyal team of employees all of whom are equitably remunerated whilst in the Company's service. Furthermore, in the case of staff, a Pension Fund was created as long ago as 1916 under which substantial pensions and benefits are payable depending on length of service. Although the Company provided the original capital required, refreshed subsequently by way of additional sums, the annual contributions are now made equally by the Company and its eligible employees and these two parties also share the management. This B.I. Pension Trust Limited, which is a separate entity from the B.I. Company, has now invested funds of almost £1,200,000 spread over some 359 different concerns and is in a sound actuarial position.

Although many factors exist to render difficult the operation of a similar Pension Fund for Workpeople, the building up of the "Provident Fund for Workpeople" will permit us to do even more than hitherto for our retired workpeople and their dependants. We have also for many years past given every support to the B.I. Employees' Hospital Fund and to the Home of Rest, both of which continue to operate most successfully.

Motive (3) involves what is commonly known as the "profit motive", a subject of much adverse and misplaced criticism. What the critics are tilting at is "profiteering" and this confusion of thought should be removed.

There is a vast difference between the profiteering motive and the profit motive. Very briefly the profit motive means to me the desire to earn a reasonable wage or return commensurate with the quality and fidelity of services rendered and the risks undertaken. Its effect is to ensure initiative and progress not only for the individual but for the community as a whole.

Take the case of your own Company. Over fifty years ago a few adventurers pooled their very limited financial resources to embark on the manufacture of an entirely new design of cables—a risky business. On more than one occasion money even had to be borrowed to pay the weekly wages, but the pioneering spirit of private enterprise persisted and ultimately a reasonable return was earned. But in addition, those adventurers and you as their successors, have unselfishly ploughed back into the business substantial sums not only to provide against bad times but to enable research and development work to be undertaken, without which it would have been impossible to maintain and increase employment.

Original shareholders, if there be any, have benefited from this profit motive policy, but surely to an infinitely greater degree benefit has accrued to the common good.

The justification is seen in the great structure known throughout the world as the B.I., which is giving gainful employment to many thousands of people and incidentally making an important contribution to the pressing needs of the country in war.

I think I am entitled to add that these beneficial results have not been disproportionately shared.

It would be ridiculous to claim that the capitalist system is faultless, but I do claim emphatically that it has enormous advantages over and other economic system yet tried and, because under its operation the standard of living in this country during the past fifty years has steadily improved, it would be dangerous to discard it lightly.

Virtually every person in Britain to-day has become a capitalist, and in this connection I am sure it will interest you to know that the average individual holding of the Ordinary Stock in your Company is under £300—a fact which should help to dispel the misconception that the profits of a joint stock company largely accrue to rich individuals. But to talk of the abolition of capital is to use a form of words which is meaningless. What most people who use them really mean is one or other of two things. Either that capital is in the wrong hands or that the division of the joint product of capital and industry is defective and should be altered. Merely to change the ownership of capital provides no guarantee of its better use.

I would add another thought, the social security which is so dearly desired by all men to-day depends on the universal acceptance and practice of the profit motive, for social security in the ultimate must depend on the continuous efforts and success of the individual.

In concluding this statement it is a pleasure to record the devotion once again displayed by our Management, Staff and Workpeople during 1942 to the interests of the Company and the country, and our special thanks are due to every one of them. Nor do we forget those of our employees, numbering almost 1,800, who are serving the country in other spheres, and above all those who have made the supreme sacrifice.

ALEXANDER ROGER,
Chairman.

PRESCOT, LANCASHIRE,
18th March, 1943.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 15th July to 21st July, 1943 both days inclusive)

GOVERNMENT SECURITIES :

2¾ per cent Loan (1948-52):—(17th) 99-5.
3 per cent Loan (1963-65):—(15th) 96-1, 96-4 s.ls.; (17th) 96-3 s.l.; (19th) 96-4; (20th) 96-3, 96-4 (96-5 s.l.), 96-4, 96-5; (21st) 96-4.
3 per cent Defence Loan (1949-52):—(15th) 100-14 (101 s.ls.); (17th) 100-14 s.l.
3 per cent Loan (1951-54):—(15th) 100; (17th) 100-2 s.l.; (19th) 100 s.l., 100 s.o.l.; (20th) 100, 100-1 s.ls.; (21st) 100.
3 per cent Defence Bonds (1946):—(16th) 102-10 s.l.
3 per cent Govt. Paper:—(21st) 82-2 s.l., 82-2, 82-3.
3½ per cent Loan (1947-50):—(19th) 104-2 s.l.
3½ per cent Govt. Paper:—(15th) 95-1 s.l., 95; (16th) 94-15 s.l., 95; (17th) 95-1 (95-2 s.l.); (19th) 95-8, 95-11 s.ls., 95-8, 95-9, 95-8-6, 95-9-6, 95-7, 95-3 (95-2 s.l.); (20th) 95-8 (95-7 s.l.), 95-9; (21st) 95-8 (95-10, 95-11 s.ls.), 96-4 s.l., 95-9, 95-10.
4 per cent Loan (1960-70):—(19th) 111-6 s.l.; (20th) 110-12 s.l.; (21st) 110-11 s.l.
4½ per cent Loan (1955-60):—(16th) 114-15 s.l.

DEBENTURES :

5½ per cent (1939-47) Dalmia Cement:—(16th) 105-8.
5½ per cent (1938-45/50) Rohtas Industries:—(19th) 104-4.

BANKS :

THE SATPUKURIA AND ASANSOL COLLIERIES LIMITED

NOTICE

is hereby given that the Seventieth Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Saturday the 7th day of August, 1943 at 12-10 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1942, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 29th July to the 7th August, 1943 both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Calcutta, the 21st July, 1943.

* After transferring Rs. 50,000 from War Risk Insurance Reserve.

(Half-yearly General Meeting held on 22nd July, 1943)

Audited accounts for the half-year ending 30th April, 1943:—

After transferring Rs. 2,477 to Insurance Fund, providing Rs. 20,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 55,878-5-8. After bringing forward the balance from the last account and transferring Rs. 50,000 from War Risk Insurance Reserve and Rs. 25,000 to Dividend Equalisation Reserve, there is a balance at the credit of the Profit and Loss Account of Rs. 1,13,480-14-4. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	31,500	0	0
And on Ordinary shares at Rs. 4 per share ..	48,000	0	0

thus absorbing Rs. 79,500, leaving a balance of Rs. 33,980-14-4 to be carried forward.

In accordance with the Indian Jute Mills Association agreement, the mills worked 54 hours per week up to 13th March, 1943, and thereafter 60 hours per week, during the period under review with 10 per cent of the total looms silent. As the result of enemy air action, there was a loss in working hours, and in addition, the running of the mill generally was adversely affected.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

* After transferring Rs. 1,00,000 from War Risk Insurance Fund.

(Half-yearly General Meeting held on 22nd July, 1943)

Audited accounts for the half-year ending 30th April, 1943:—

After transferring Rs. 6,125 to Insurance Fund, providing Rs. 5,00,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 2,25,359-1-2. After bringing forward the balance from the last account and transferring Rs. 1,00,000 from War Risk Insurance Reserve and Rs. 80,000 to Dividend Equalization Reserve, there is a balance at the credit of the Profit and Loss Account of Rs. 3,49,981-9-11. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	31,500	0	0
And on Ordinary shares at Rs. 12-8 per share ..	2,25,000	0	0

thus absorbing Rs. 2,56,500, leaving a balance of Rs. 93,481-9-11 to be carried forward.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

HUKUMCHAND JUTE MILLS, LIMITED

Audited accounts for the half-year ended 31st March, 1943:—

The Revenue Account, after deduction of Interest, Commission, etc., shows a profit of Rs. 16,00,772-0-0 which the Directors recommend should be dealt with as follows:—

	Rs.	A.	P.
Depreciation	1,00,000	0	0
Reserve for taxation	9,00,000	0	0
Paying Preferences Dividend for the two half-years ended 30th September, 1941 ..	2,80,000	0	0

leaving a credit balance of Rs. 3,20,772-0-0 to be adjusted against the debit balance of Rs. 12,06,644-14-6 brought forward, leaving a net debit balance of Rs. 8,85,872-14-6, to be carried forward.

During the half-year the Mills worked 54 hours with 10 per cent looms sealed until the 15th March, and after that 60 hours per week.

Air Raids in December and January caused an exodus of labour from Calcutta District and the Company's production suffered considerably.

Due to increase in rates a considerable amount has to be provided for taxation during the half-year. The amount set aside for taxation does not include the compulsory deposit which has to be made under the recent Government Ordinance.

Managing Agents.—Messrs. Ramdutt Ramkissendass.

* After transferring Rs. 75,000 from War Risk Insurance Reserve.

(Half-yearly General Meeting held on 22nd July, 1943)

Audited accounts for the half-year ending 30th April, 1943:—

After transferring Rs. 5,408 to Insurance Fund, providing Rs. 4,40,000 for Taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 2,46,696-0-6. After bringing forward the balance from the last account and transferring Rs. 75,000 from the War Risk Insurance Reserve, there is a balance at the credit of the Profit and Loss Account of Rs. 4,67,006-0-7. From this the directors recommend payment as follows:—

	Rs.	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	17,500	0	0
And on Ordinary shares at As. 14 per share ..	3,06,250	0	0

thus absorbing Rs. 3,23,750, leaving a balance of Rs. 1,43,256-0-7 to be carried forward.

In accordance with the Indian Jute Mills Association agreement the mills have worked 54 hours per week up to 13th March, 1943,

and thereafter 60 hours per week during the period under review with 10 per cent of the total looms sielnt.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

KATRAS JHERRIAH COAL COMPANY, LIMITED

Audited accounts for the half-year ended 31st January, 1943:—

After providing Rs. 29,868-9-9 for Depreciation and Rs. 95,000 for Taxation and Cesses, there is a balance of Rs. 95,211-10-3 at the credit of the Profit and Loss Account out of which the Directors recommend:—

	Rs.	A.	P.
Dividend of Re. 1 per share	50,000	0	0
Carry forward	45,211	10	3

Raisings and Despatches were better than in the preceding half-year and somewhat higher prices were realised. The new pits at Laikdih Deep Colliery have been fully equipped and raisings have now commenced.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 5,00,000 *in* 50,000 *shares of Rs.* 10 *each, fully paid up.*

Synopsis of the Balance Sheet as at 31st January, 1943.

HASIMARA TEA COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1942:—

Profit and Loss Account.—The gross profit for the year is Rs. 27,63,756-13-1, out of which the directors have reserved Rs. 5,64,316-15-3 for renewals and additions and Rs. 6,96,615-14-0 for taxation, leaving a nett profit of Rs. 14,93,679-11-6. The Preference Dividend for the year and an Interim Ordinary Dividend of 10 per cent absorbing Rs. 1,81,000-0-0 were declared payable on the 15th December, 1942; and there is a balance on this Account of Rs. 14,91,023-3-9, which the directors propose to deal with as follows:—

	Rs.	A.	P.
Pay a Final Dividend of 55 per cent. on the Ordinary Shares (making 65 per cent for the year)	8,80,000	0	0
Transfer to General Reserve (bringing this up to Rs. 17,00,000)	2,00,000	0	0
Carry forward to 1943	4,11,023	3	9
Total ..	14,91,023	3	9

Managing Agents.— Messrs. Davenport & Co., Ltd.

ETHELBARI TEA COMPANY, LIMITED

Audited accounts for the year ended December, 1942:—

	Rs.	A.	P.
The Revenue Account shows a profit of ..	1,43,795	6	1

and after deducting from this:—

	Rs.	A.	P.		
Income Tax on Interest on Investments	269	10	0		
Manager's Commission on Profits	7,189	12	0		
Managing Agents' Commission on Profits	2,875	14	3		
Reserve for Taxation ..	22,000	0	0		
				32,335	4 3
				1,11,460	1 10

and adding:—

Interest on Investments	1,217	8	0
there is a nett profit for the year of	1,12,677	9	10

After adding to this the credit balance of Rs. 7,254-3-11, brought forward from the previous year, there is a credit balance of Rs. 1,19,931-13-9 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—

Pay a Dividend of 20%, free of Income Tax, for Season 1942	70,000	0	0
Place to Reserve Account	40,000	0	0
Carry forward	9,931	13	9
Total ..	1,19,931	13	9

Authorised, Issued and Subscribed Capital—Rs. 3,50,000 *in* 35,000 *shares of Rs.* 10 *each fully paid up.*

Synopsis of the Balance Sheet as at 31st December, 1942.

SINGTOM TEA COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1942:—

After providing for depreciation the season's working resulted in a profit of Rs. 56,457-1-4. After making sundry adjustments, providing for taxation, and transferring Rs. 10,000 to Reserve Fund and Rs. 10,000 to Equalization of Dividend Fund there remains a balance of Rs. 42,969-4-2 at the credit of Profit and Loss Account. From this the directors recommend the payment of a dividend of Rs. 15 per share absorbing Rs. 24,000 and leaving Rs. 18,969-4-2 to be carried forward.

Estimates for the current season have been framed for a crop of 2,600 maunds to cost Rs. 1,56,874.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 1,60,000 in 1,600 shares of Rs. 100 each fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942.

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	1,60,000	Gross Block ..	2,19,898

HOOGLY DOCKING & ENGINEERING COMPANY, LIMITED

Audited Accounts of the Company for the half-year ended 31st December, 1942.

The Trading Result for the half-year shows a decrease as compared with the preceding half-year, the Gross Profit amounting to Rs. 4,74,558-8-11 as against Rs. 5,60,050-1-10. After deduction of all charges for Auditors' fees, Debenture Interest, Debenture Trustees' fees and Managing Agents' commission and providing for Depreciation and Taxation there is a net Profit for the period of Rs. 1,33,461-5-5.

This sum, deducted from the debit balance of Rs. 4,04,346-11-6 brought forward from the preceding half-year leaves a net debit on Profit and Loss Account of Rs. 2,70,885-6-1 to be carried forward.

General Report.—The net value of work done during the peirod amounted to Rs. 18,23,220-9-9 against Rs. 19,91,600-15-6 for the preceding half-year.

Debentures.—The Debenture issue of Rs. 20,00,000 matured for payment on the 31st December, 1942 and has since been discharged by the repayment of the Rs. 7,42,000 Debentures issued for cash and by the surrender and cancellation of the Rs. 12,58,000 Debentures deposited with Messrs Martin & Co., under the provisions of the agreement dated 22nd March, 1935.

Managing Agents.—Messrs. Martin & Co.

Authorised, Issued and Subscribed Capital—Rs. 12,50,000 in 25,000 shares of Rs. 50 each fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1942.

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	12,50,000	Gross Block ..	33,99,410
Debentures outstanding	4,07,000	Less Depreciation ..	23,59,633
Current debts including taxation ..	33,58,566	Block (Net) ..	10,39,777

		Total Liquid Assets ..	39,04,904

KILLING VALLEY TEA COMPANY LIMITED

Audited accounts for the year ended 31st December, 1942:—

	Rs.	A.	P.
After charging Manager's and Staff's Commission, there is a profit on the year's working of ..	45,344	3	5
From which there has been deducted the following:—			
Provision for Taxation	9,300	0	0
Transfer to General Reserve ..	10,000	0	0
Transfer to Renewals and Replacements Reserve	10,000	0	0
	29,300	0	0
	16,044	3	5
Add—Balance brought forward from last year ..	13,051	3	10
Making available	29,095	7	3
Which the directors recommend should be disposed of as follows:—			
Payment of a Dividend of 10 per cent for the year to 31st December, 1942	20,000	0	0
Leaving a balance to be carried forward of ..	9,095	7	3

Hitherto no charge has been made in the accounts for depreciation and the cost of renewals when incurred has been met out of Revenue. In view of prevailing conditions, however, it has been considered desirable to create a Reserve for Renewals and Replacements, out of which the cost of renewals will be met in future.

Weather and Crop Outturn.—Weather was even more unfavourable than in 1941, the season opening with drought conditions, which were followed by floods in June and September. The resultant loss in crop was assessed at 300 maunds made tea although the final outturn of 2,477 maunds was only 52 maunds behind the 1941 figure.

Expenditure.—Increased expenditure on machinery, labour welfare and plucking and the new item of War Risk Insurance were offset by lesser cultivation and by the reductions consequent upon the smaller crop.

Labour.—The force at 31st December, 1942, was 611 or 1.04 labourers per acre, compared with 623 or 1.06 per acre at the end of 1941; these figures exclude villagers.

Estimate for 1943 provides for a crop of 3,350 maunds of tea at a cost of Rs. 1,30,000, to which certain Calcutta expenditure will fall to be added. It is now apparent, however, that the crop for 1943 is unlikely to exceed 3,000 maunds unless climatic conditions are exceptionally favourable.

Managing Agents.—Messrs. James Finlay & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 2,00,000 in 20,000 shares of Rs. 10 each fully paid up.

RESERVE BANK OF INDIA,

Central Office,
BOMBAY.

No. 16. 12th July, 1943.

NOTIFICATION.

It is hereby notified that the Ninth Annual General Meeting of the Bank will be held on Monday, the 9th August, 1943, at the **Reserve Bank of India, 8, Council House Street, Calcutta, at 3 p.m. (Standard Time).** The following business will be transacted :—

(a) The Balance Sheet as on the 30th June, 1943, and the Profit and Loss Account of the Bank for the year together with the Auditors' Report will be read and considered.

(b) The Auditors will be elected and their remuneration fixed.

In this connection it is also hereby notified, in accordance with Election Regulation 20A(i), that three notices have been received to the effect that the following propositions will be moved at the meeting, viz.:—

1. "(i) That the retiring auditors be re-appointed for the year 1943-44 on such increased remuneration as may be deemed reasonable by the Board of Directors and the shareholders at the meeting in view of the increase in work involved as a result of the rise in note circulation and the increase in the cost of their establishment, and

(ii) that the auditors be also paid at this higher rate for the year 1942-43."

2. "That the remuneration of the auditors be raised to Rs. 5,000/- each."

3. "That the remuneration of the auditors be raised to Rs. 6,000/- each."

C. D. DESHMUKH,
Deputy Governor.

WORLD OF INDIAN FINANCE

Friday Evening.

Plethora reigns supreme in the money market, with all lenders and no borrowers. Interbank call money is nominally quoted ¼ per cent in Bombay and ½ per cent in Calcutta. In recent months, however, a new vogue has risen for business at agency houses to take call loans; and quite a substantial business of this kind is reported. The rate that such houses are prepared to pay for call money is, sometimes, as satisfactory as 1 per cent. This development in Calcutta corresponds to the practice in Bombay of dealers in Government securities borrowing money on call basis against deposit on giltedged and at rates which are higher than the interbank call rate. When the giltedged market is active, and the turnover lively, the amount involved in call loans against Government securities is quite considerable. By this means, the jobbers and operators in giltedged are able to raise funds at a rate which is anything like 2 per cent lower than the rate yielded by the securities. This margin of 2 per cent, which is a saving in interest, serves as an insurance against fluctuations in giltedged values.

For this reason, the giltedged market in Bombay has always held a predominant place in India and, it may be said, that the market sentiment and rates from time to time are dominated by the Bombay operators. For the same reason, and also because the Head Offices of the larger banks including the Imperial Bank, are situated in or controlled from Bombay applications from the Western Capital for new loans always make better showing than those from Calcutta. There have been sporadic bouts of intensified activity in giltedged in Calcutta; but, generally speaking, the giltedged section in the Eastern Capital is only a minor factor in the stock exchange. It will help both the Calcutta Stock Exchange and the Government's loan programme if aught can be done to stimulate and liven the activity of the Calcutta giltedged market.

One of the important steps in this direction will be the extension of loan facilities to brokers and operators on terms analogous to those available in Bombay. That is to say, banks must be prepared to make advances on call basis, with a smaller margin than hitherto and at a rate which is only ½ per cent or 1 per cent above the interbank call money. If these facilities are available, a large number of operators will divert more of their activities and affections to giltedged; and it may even be hoped that specialised operators in giltedged may spring up.

The present affords exceptionally good opportunities for inspiring and inducing a development of this kind. In the last two months, the Government of India have been able to show what a strong status they enjoy as a borrower. Nearly two months ago, we suggested in these columns that the defence loan programme could function more smoothly if sales of 3½ per cent Rupee Paper through the tap were suspended. Our general argument was that the sale of 3½ per cent paper at the tap rate of Rs. 94 amounted in effect to making a present of ¾ per cent per annum to investors. While such a present was gratituous and unnecessary, these sales through the tap have had a further effect of curbing any rise in giltedged. The Finance Member has given effect to our suggestion in his own way. His own way is to raise the tap rate for 3½ per cent paper step by step. From Rs. 94 the rate has been increased in stages of 8 annas to Rs. 96, which is the present tap rate. The Government will, no doubt, have noticed that sales of 3½ per cent paper during this process of gradual stepping up in prices have been far greater than all the sales in the preceding period. Herein is to be found confirmatory evidence for our view that the maintenance of the tap rate at the unchanged level of Rs. 94 is a wet blanket to market optimism. Market circles are now expecting the tap rate to rise to Rs. 99 in the course of the next two weeks. Government operations seem also to be designed toward this end. In this context, may we suggest that the further increase in the tap rate should not be in stages of 8 annas each but in stages of Re. 1. In other words, if the next change in the tap rate will bring up the price to Rs. 97, the Government should be able to effect record sales of 3½ per cent paper at this rate. We may also suggest that, once the tap rate has been brought to Rs. 99, the question of stopping sales of 3½ per cent Paper must be seriously considered.

With 3½ per cent paper rising by two points in two months, that of 3 per cent 1963-65 quoting nearly 10 annas higher than the issue price in its recent re-issue, and with the first three defence loans quoting at a premium, the prevailing sentiment in the giltedged market is one of well-grounded confidence. President Roosevelt's speech, reported in this morning's papers, is the first authoritative pronouncement in which we may note his unqualified confidence in the outcome of the war. This may be said to be a most powerful bullish factor for giltedged.

There is another important reason for taking a rosy view of the future of giltedged. The advance collections of E.P.T. should account for an addition of Rs. 100 crores to the cash balance of the Central Government. If our suggestion of "pay-as-you-earn" is accepted, that is, if even businessmen and business-houses are to pay income-taxes on the basis of self-assessment, it may be expected that anything like Rs. 40 crores will be gathered earlier than scheduled. We have also in mind the observance of a Defence Loan Week with the object of roping in Rs. 100 crores. Thus viewing the present and prospective position, we foresee conditions in the near future which will oblige the Government to suspend sales of treasury bills, and even to stop further subscriptions to the Fourth Defence Loan. In simple terms, the Government will clear out of the short loan market and the giltedged market as a borrower. Should this forecast prove true, it is easy to imagine what strident optimism will permeate the Indian giltedged market.

A correct apprecation of the position we have outlined should convince stock exchange circles that one section which is

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Govenment of India Treasury Bills were opened on July 27, 1943. Total amount offered was Rs. 19,76,50,000. Tenders at Rs. 99-12-3 per cent and above were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 30 per cent. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-15-7 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on August 3, 1943 in Bombay up to 11 a.m. and up to the close of business on August 2, 1943, at other centres. Successful tenderers should make payment on August 6, 1943. Other conditions are as usual.

During the week ended July 23, 1943, Government of India Treasury Bills for Rs. 3,59,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

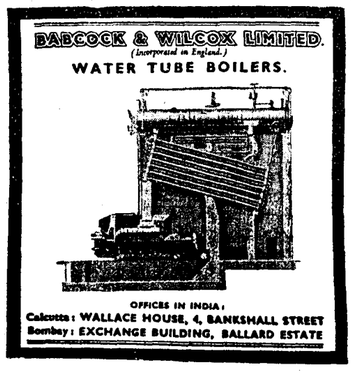
Finance Abroad

Thursday Morning.

THE lira has been devalued by the Allies who have set up a military administration for part of Italy. The fixation of the rate at 400 to the £ suggests that the lira has depreciated substantially in the war period. The credit of Italy's Fascist Government was sinking, and the black markets in their variety and scope, were increasing, to judge by letters appearing in the Italian press. The lira in the black markets, e.g., in Lisbon must have fallen so low as to force the Allies to choose a rate as low as 400 to the £ and 100 to the $. The rate fixed for Tripoli in February by the new Allied military administration was 480 to the £ so that, it will be said that Sicilians are at no disadvantage as compared with overseas Italians. The Allies, according to *Reuter's* financial correspondent, could have fixed the value lower had they been set on garnering local supplies for their own forces. Occupation currency has been mentioned more than once in regard to N. Africa, but the choice of rates for Sicily makes the introduction of foreign money unlikely, so far as Italy is concerned. Italy stopped the issue of gold in 1927 and after the Abysinnian war, the lira has been weakening. The exchange arrangements of 1936 forced the lira to follow the pound and franc to a certain extent and the exchange on Milan in 1938-39 hardly corresponded to the original rate of 92 lire to the £. Mussolini stabilised the lira at 19 to the $ in 1927, but the gold standard restored then never worked, and the reduction of the note issue between 1927 and 1932 was only a symptom of the depression in Italy. Before Italy entered the war, the lira quoted in New York at approximately 20 lira to the $, so that the present measure of depreciation really corresponds to that undergone by the Chinese dollar in the war period, with this important difference that external assistance has been lacking. Though the Bank rate has been 4½ per cent since May 1936, Italy's finances have been disordered by two wars, and the increase of 30 per cent in the note circulation in 1941 alone indicated along with the high yield on new State issues and the unusual measures adopted to produce subscriptions the depreciation of the Italian currency. For years, there have been no figures from the Bank of Italy, and the State's emission of notes must have increased after the reduction of the Bank's reserve. Silver coinage must have disappeared in the war period and the substitution of nickel for bronze coin must have been arrested long before the war. The rate announced on Saturday last may be revised in the light of the local requirements or changes in Italy. The fall of Mussolini may make for a stronger position so far as the Italian currency is concerned, and Count Volpi's return may seem sufficient cause for confidence as to the future of the lira.

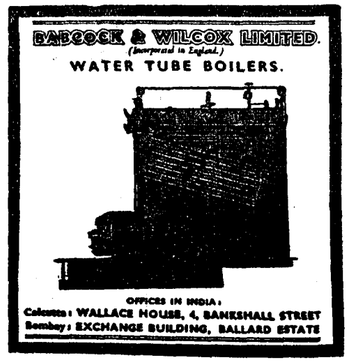
The inflation struggle has been carried further in the U.S.A. by the War Labour Board's insistence on the year-old "Little Steel" formula limiting increases in wages. Mr. William Green in supporting Mr. Roosevelt against Congress asked for increases in wages to meet the higher cost of living. Mr. Roosevelt has recently promised effectual restraint of both prices and wages, but no mention has been made of the food subsidy plan. Congress having declined to oblige as it did in connection with the Bankhead Bill (a measure vetoed by the President after it was passed by both Houses) the Administration has been formed to think of other means to push prices back. The new savings drive meant to get $15 billions for war bonds in August against $12 billions (the figure set by the Treasury Secretary for the December campaign) may play a big part in taking off superfluous purchasing power. The shortages multiply and the assumption that more oil will have to be shipped from U.S.A. for the war does not make for satisfaction. The stock exchange in New York encouraged by war news was taking a moderately bullish view for some days. U.S. Steel is not the only share to move up last week though it has fallen since. Oil shares have hardened and the improved turnover is as striking as the news from London that Mussolini's fall is a bull point for British industrials. The announcement that the Wings for Victory weeks have brought in a larger sum than any previous savings drive proves the success of the war savings movement. The total borrowed for the war last year was fully equal to money raised by taxation. That saving has helped the B.W.S. in India to get heavy bombers for the R.A.F. has been made known recently, but more important is the view that an increase in savings may be affected by cutting down smoking. The Chairman of the War Savings Movement notified Britain that tobacco is off the lease-Lend list and Britain will have to pay out dollars for U.S. tobacco. An improvement in the offtake of Empire tobacco is expected; and the assumption that consumption of drink and tobacco must be reduced is implict in the successive increases in taxation. Total imports of tobacco from the U.S.A. valued at $50 million in a year seems too large and paying by gold from South Africa seems too expensive. The market for Virginia tobacco according to some must shrink. Reciprocal Lease-lend does not help tobacco importers out though the saving in supplying space and dollar exchange may influence consumption of non-American growths. The talk of cutting down consumption has not had any effect on tobacco shares in recent months and they have shared in the improvement reported after Mussolini's resignation. The big feature of the week is the rise in British Celanese based on postwar prospects for the Company and its links with the plastics industry. Perhaps Dr. Henry Dreyfus will have something special to say after the reconstruction of preference capital at the coming meeting. The rise in Courtaulds seems moderate, but a point to note here is that rayon producers can sell their output to producers of linen who are short of flax and find staple fibre adapted to their plant. A noteworthy change is the rise in Vickers ordinary, the 10th shares on which the last dividend was 10 percent have long been rated as very sound. More to the point is the fact that Britain's steel is a sheltered industry and its postwar prospects are rated poor in comparison with that of Australia which is able to produce its steel cheaper and makes fewer demands of the home consumer. The fact that Britain is an inefficient rival deserves to be noted in relation to the future of the Indian iron and steel industry. The outlook appears much better in view of the Auditor-General's finding that the producers' agreement (meant to protect the marginal units of the B.I.S.F.) has made steel dearer for the British Government as consumer. The general impression that British exports are falling owing to the war, and overseas customers are developing their own industries, has not been absent from Colonel Amery's speech on Indo-British trade relations. If Britain cannot compete with others in neutral markets, she may readily turn to India but fiscal autonomy has been assumed again and wartime industrial development promises important advantages to the iron and steel shares; it should not, for it is clear that Britain, however keen on maintaining full employment at home, cannot hope to recover trade in prewar proportions, either with the U.S.A. or India.

The mild improvement in oil shares is largely due to the war news and recent rise in Burma Oil and Anglo-Iranian shares is based on calculations of resolute armed action against Japan in the near future. The stock exchange is said to be turning from one group to another and it is likely that the August boom will be in the industrial market. Attention may be drawn to the renewed buying of monies by British investors. The additon of U.S. built ships to Britain's merchant fleet does not seem to promise any advantage to shipping companies and for the moment it is more important to notice the sudden rise in A.P.C. shares. As the giant of the building trades group, the Company has acquired a special position and the diversion of interest to industrials should help sound old shares like Wallpaper and London Brick.



The money and exchange markets in London were summed up in the usual cursory cable referring to the weekly treasury bill issue and the taking of treasury deposits. The only change in commodity prices deserving local notice is the reduction in the price of groundnuts shipped from the west coast of India. The rate for linseed is unchanged for a week but the usual difference between the quotation for Plate and East Indian is somewhat less. It may be noted that the appreciation of the peso in recent months may have retarded Argentine exports but in view of major changes in the Government in B.A. the situation since June may be different and Argentina may be a more serious rival.

LLOYDS BANK
LIMITED
(Incorporated in England.)



For every class of Banking Business

SAVINGS BANK ACCOUNTS provide an ideal method of setting aside small regular deposits which quickly accumulate to a substantial sum. Safety of capital is ensured, interest is allowed and withdrawals may be made by cheque.

Editorial Comments

Extension of Control to Jute Indutsry

The nests of Government control are flung wider as the war progresses. Starting with iron and steel, obviously the first and foremost to be brought under close government regulation, control has spread by stages to jute, the premier industry of Bengal. Neither the practical difficulties experienced nor the costly errors committed have deterred Government from extending the scope of the control; for the pressure for control, it must be said in fairness issues from the urgency of practical tasks which are important to the war effort, whether directly or indirectly. While the control of the paper industry is at the least an administrative necessity and the control of iron and steel is indispensable in war time, there are industries like cotton textiles and trades like rice, the control of which is rendered imperative by the need to keep the stability of general social conditions. The jute industry is somewhat differently placed, inasmuch as not only its products are needed for war, but its supply to other allied nations has to be ensured on reasonable terms where the motive behind control is to ensure fair prices and not to bring about equitable distribution of a scarce good, it is possible for the industry concerned to obviate the need for control by taking on its own initiative the necessary measures for price control. A notable instance of such freedom from control in the past is the paper industry. And to some extent it may be said, the jute industry is similarly placed. But the similarity is not close. The occasion for considering the imposition of control on the jute industry is the receipt of a large scale order from the U.S.A.; and such orders almost invariably give rise to questions of prices and rates.

It is perhaps necessary at this stage to analyse the developments of recent months leading to the decision this week of the Indian Jute Mills Association to fix maximum prices for standard qualities manufactured by mills in the membership of the Association. In May this year, a large order was received from the U. S. Government by the jute industry for the suppiy of 70 crore yards of hessian cloth to be delivered over a period of eight and a half months. Not only was this order unexpected but the quantity involved was more than the U.S.A's requirements for one year, on the basis of the consumption figures for 1941 and 1942. The result was a stir in the market. Jute and jute manufactures markets were buoyant. But as the U. S. Government insisted that it would not pay for the order above the ceiling prices previously fixed, the Indian Jute Mills Association had to decide about the problem of securing the raw material for the order at prices which would admit of deliveries against the new order at the ceiling prices. The U. S. ceiling price was Rs. 26 per 100 yards 11 porters against the market quotation of Rs. 28-12 at that time. It was, therefore, decided that mills in the membership of the Indian Jute Mills Association should not buy raw jute at prices not exceeding the agreed maximum rates of Rs. 19, Rs. 17 and Rs. 14 per maund for Marwari Jat, Middles and Bottoms. Members were asked to limit their purchases of jute to the requirements under the American order. They were also prohibited from effecting sales of jute manufactures in the bazar until further notice. It was not stated as to how long the maximum prices for jute would be in operation; but it was felt at that time that they would be lifted as soon as the purchases against the American order had been completed.

The decision of the Indian Jute Mills Association had no statutory authority, as the Bengal Government pointed out recently. It was also said that the provincial authorities had not been consulted in this regard. There was naturally opposition from the interests representing the ryots to the action taken by the Indian Jute Mills Association in fixing unilaterally maximum prices for jute. It was said that, as in the case of the cotton textile indusry, the cart was put before the horse and that, insitead of tackling the question of fixing maximum prices for jute manufactures, the raw material side was attacked first. Without the fixtion of maximum prices for jute purchased for the execution of the American order it would not have been possible to execute the order at all.

There were sarcastic comments on the generosity of the jute mills obliging foreign consumers at the expense of primary producers at home and it was said that with the abrupt increase in the cost of living and the remunerative prices offered for other commodities, there was no case for sacrificing the interests of the jute growers in Bengal.

The Indian Jute Mills Association took note of the opposition and it was reported sometime back that a detailed scheme was under consideration and that the delay in the announcement of maximum prices for jute manufactures was only due to the anxiety of the Association to ensure that such maximum prices as were fixed should not lead to the emergence of black markets and that the benefit of the maximum prices should be derived by the small consumers. There were some difficulties in the way and negotiations had to be carried on with the Central Government, but as early action was found necessary in the light of Government's requests a by-law and order were passed on July 27. According to this By-law and Order, the partial restriction on the extent of raw jute purchases which had been previously imposed by the Committee on jute mills is entirely removed, but the price qualification is still there. No rate above Rs. 19-8 per maund can be paid for the best quality of loose jute; other kinds of raw jute have been similarly governed by maximum price levels in accordance with their market potentialities. The entire prohibition on the sale of manufactured goods operative since the middle of June has also been removed, and a maximum price level for hessian and sacking introduced in accordance with the market prices in the middle of June. For instance, 40 ins. 8 oz. cannot be sold for higher than Rs. 21-10½ yards and 40 inst. 10 ozs. for higher than Rs. 28-8; again "B" Twills and Cornsacks must not be sold at higher than Rs. 67-12 per 100 bags. All other fabrics have price maxima determined in relation to these standard jute cloth manufactures. It is the fixed determination of the Committee that these control measures shall be fully effective in their benefits to consuming markets prepared similarly to enforce price control. War orders placed on mills have always received priority in delivery and special concessions in price; and this will continue.

At a special meeting of the members of the Indian Jute Mills Association to be held on Friday afternoon, the Chairman of the Association will outline the reasons for and the various stages of the discussion for the control of the jute industry initiated by the Government of India and how it is proposed fully to implement the wishes of the Government in this matter.

It will be seen from the above that there is no change in the maximum prices for jute fixed by the Indian Jute Mills Association sometime back, and that mills are now free to purchase jute in any quantities. Mills are also free now to resume forward sales in the bazar. The policy of the Association has therefore been fully vindicated and, as on former occasions, owing to the skill with which the affairs of the industry have been conducted by the Association and the compactness of the organisation, it has been possible to achieve the necessary results without direct intervention by the Government.

ITALY WITHOUT MUSSOLINI

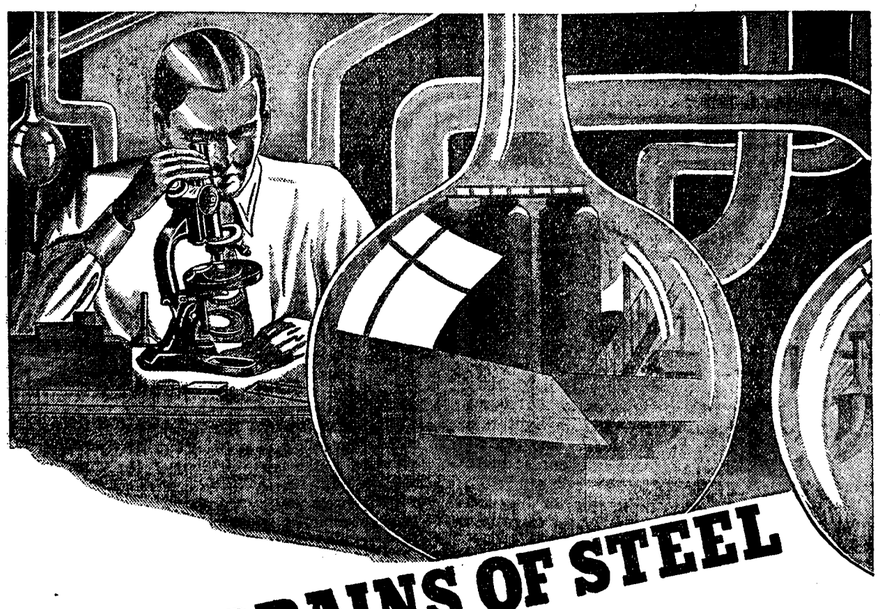
The revolution in Italy points to a new Italy in the making. Of its future little can be said with the confidence of prescience. But the Fascist Grand Council played a fateful role in the overthrow of Mussolini, and its own surrender of authority preceded its reported dissolution. The acts of the new Government, headed by Marshal Badoglio, suggest that for Mussolini there will be no Hundred Days. Retirement is to be permanent for the party which hoisted him to power which is forcibly condemned to death, and the too prompt disappearance of Gayda reinforces the belief that the Fascist regime has ended in a war which it welcomes but has caused to regret.

The announcement that the corporations have been dissolved has been followed by reports of labour unrest. The working class is not satisfied with the proclamation that Italy remains at war with the Allies. For the working class, peace is an end in itself, and General Eisenhower's offer came only after the Allied leaders recorded their views as to the course of action dictated by Italy's circumstances. The daylight raid on Rome followed the Allied successes in Sicily. The leaflets thrown in May provoked the Senate to hear grievances: more it made the heads of the services describe the weakness in the air and at sea. The meeting between the dictators in July did not conceal the weakness that has helped the Allies to reopen the Mediterranean in the face of a hostile fleet in being.

The origin of the dictator as of Fascism has not been lost sight of by the Allies. Yet the party of discontent has been overwhelmed by discontent. No evaluation of its positive achievements including the Lateran Treaty of February 1929 can ignore the determined suppression of parliamentary institutions. The Allies, however, regard the Italian people as entitled to order their own affairs and such leadership as Italy enjoys today has an inordinately heavy task. First, there must be a resolute breach with the Nazis, and this is made easier by General Eisenhower's offer that Italy must stop helping the German army and leave the Allies free to pursue their course. The Fascist lost ground to the extent that Mussolini turned to Scorza. But the directorate has been rejected at the same time as Mussolini, and the complete destruction of the system in its political and economic aspects makes it easier for the Allies to negotiate through one or more neutrals, set out conditions for an armistice, and create a situation in which the survival of the new regime is dependent on the making of an armistice.

Of Italy's concern over further defence there has been little indication, and Nazi anxiety over the fleet is underlined by the continued inaction of all units except the submarines. The end of Fascism does not portend the revival of the Bolshevism that disgraced Italy after the last war. It is the military disasters in Tripoli, Tunisia and Sicily that have forced the Duce out of his place, and the strikes in Milan can only be temporary. The ardent emigres may look to a republic but the fissiparous tendencies evident in the 19th century will have to be resisted. Italy's history is a vindication of the principle of nationalism against the small principalities and republics that assisted foreign invasion. The Allies have no reason to plunge Italy into the confusion of the early 19th century, much less to create a republic meant to satisfy malcontents abroad. The Monarchy's break with the dictator is absolute. It has denied the familiar charge that the Throne was maintained by Fascism by its ability to act independently after the abrupt resignation of Mussolini. The Fascist episode—twenty-one years long-has never modified the basic foundations of national sentiment, monarchism and clericalism. For us, it is important to note that the Russian alliance has not influenced the Allied view of Italy as a country bound to get back to a parliamentary regime. The dissolution of the second Empire is not the true parallel though Marshal Badoglio has taken office after a series of defeats. The Allied view of Italy's future has been stated by Mr. Churchill who wants to avert confusion in the interests of all nations. The claims of Slovenes, Albanians and Greeks formulated peremptorily have been ignored by Mr. Roosevelt as well as Mr. Churchill. The idea of vengeance has disappeared in view of the break-up of the Empire and the sudden end of Fascism. The outbreak of disorder should be temporary. In the view of the Allies the underside of the Axis should not be too soft, and the deliverance of other countries from the German yoke is contingent on prompt acceptance of terms appurtenant to the main demand for Italy's surrender.

The judgment pronounced on Italy by Allied statesmen has to be modified by rigorous appreciation of the situation in Italy. Italians abroad, though not Fascists, may have definite views as to what Italy deserves. The indications of famine like the decay of Italian heavy industry are of importance to the Allies who accept the view that violence is no cure for the corruption of Fascism. Nor can they be blind to the traditional aversion in the north of Italy to the Germans, from Barbarossa to Bismarck. In so far as British Conservatives recognised the reforms promoted by the Fascists in the first ten years of power, from regularising railway timings to the reclamation of the Pontine Marshes, there is reason to believe that a harsh armistice is unlikely.



For the Allies, the ultimate advantage does not lie in getting Italian sulphur, olive oil or mercury in return for relief tendered, but in the sudden end of the Anti-comintern pact and the associated instruments. Italy gets back to the position she adopted in 1934 before or after the armistice, and that should satisfy the Allies who should be aware that the Danubian basin is out of Italy's reach and the Russians probably take the view that an Italy out of the Balkans and the Near East is a guarantee of a free hand in the east of Europe. The appointment of M. Maisky to a new post indeed suggests that Russia is taking great interest in the changes likely to follow in the Balkans, though she may not adopt the active role assigned to neutral Turkey by circumstances. The main problem however is that of the maintenance of law and order. The confusion engendered in France by German occupation has to be avoided for the sake of total victory as well as the nation rescued from German rule. For the end of German rule in one part of Europe may have a greater effect than the V campaign of 1941 in the Occupied countries and the satellites which copied totalitarianism after Hitler's success may give up after Mussolini's failure.

The promise of an honourable position to Italy in the new Europe by Mr. Churchill differs from that given by Hitler in his New Order to Italy. To turn a belligerant Italy into a neutral Italy may be easier for the Allies in view of the manifestations of disorder and suspicion in Spain and Portugal where dictatorship is tolerated and even more through the eclipse of Deat and Doriot in France.

The dealings with Italy may also have a very important effect on the German people's will to fight. Reverses in Russia coupled with the strenuous bombing of ports and industrial centres may reinforce the impression made by the older dictator's exit on the Nazis. As for the effects on the war it may be said that armistice by itself will not hasten the end. Mr. Churchill has described once again the power and resources of the Nazis. Mr. Roosevelt has described the obligations of total effort and the market reaction seems unimportant in view of the resolute deprecation of optimism. The setback on Wall Street suggests that enthusiasm is largely lacking but the pro-

portious signs in the Mediterranean have not been altogether ignored in Indian markets though there may be set views on the overthrow of despotism whether in Africa or in Italy. The armistice belongs to the future, but its effects may have to be studied before long. Relief for a subjugated Italy may entail claims on U. S. exports, diminished by the war and the lifting of the blockade may help South American exports more than Indian exports. The economic consequences of the peace forced on Italy by the break-up of Fascism may not be uniformly good, but Italy may be made to contribute to the supplies of the Middle East and the pressure on India may be eased.

Postwar problems of Italy must necessarily be solved with Allied assistance and Mr. Hull who indicated in the White Paper of January what U. S. foreign policy always aims at may be the architect of the new Italy just as Napoleon III made his contribution well in advance to the unity of Italy in the past century.

THE BRAINS OF STEEL

Roaring converters, belching forth fire and golden smoke, great cauldrons brimful with bubbling white-hot metal ; steel in the making.

Each process is timed to a split second ; each temperature measured to a fraction of a degree and registered on delicate instruments by "The Brains of Steel".

In silent laboratories new steels are designed, tested and improved ; then only do the great furnaces roar to life beneath ovens packed according to exact formulae.

This is steel made with brains and brawn.

Fruits of Intervention

Strikes have been prevented or settled by the Defence of India Rule 81A introduced into operation in January, 1942. The "Indian Labour Gazette" recalls that the Rule supplements legislation by providing for adjudication, distinct from arbitration, but enforceable like awards. Up to March, 1943 the adjudication under Rule 81A covered 57 cases. The industrial disputes usually turned on wages, bonus, allowances or supply of food grains. No permanent court has been set up but the special machinery is nearly always the same for all disputes. In Bombay judges retired or serving have been enquiring into disputes, and the Commissioner for workmen's compensation dealt with cases in Bengal. The Government usually directs adoption of procedure observed in the case of trade disputes but in Bombay the Industrial Disputes Act with its machinery has been first choice. The new procedure has produced good results through early settlement of disputes. Strikes have been few, and the duration limited. The machinery of adjudication has answered its purpose as strikes lasting over two weeks have been rare. In 1942 there were 15 cases in Bombay and five arose in engineering workshops. But only 3 out of 15 awards were enforced, mainly because employers signified willingness to give effect to the award and formal decrees were superfluous. The table prepared in this connexion shows that in the first quarter of 1943 more disputes arose in the U. P. than in other Provinces and the awards called for enforcement. The value of the Rule is demonstrated by the absence of strikes or lockouts when adjudication under Rule 81A was in progress. Both sides in a dispute relied on the adjudicator and penal action in respect of proceedings has not been called for in any Province. The Central Government has powers under Rule 81A independent of the Trade Disputes Act and their application has proved that as in the War Injuries Ordinances and National Service Regulations the Central Government had to keep concurrent powers in regard to labour legislation and the interest exhibited in the provision of workers' canteens, for instance, has proved that uniformity is not sought but only co-ordination. The increase in labour disputes after 1942 in India has no bearing on the Defence Rule through it may be noted here that January—a bad month for strikes— was exceptional owing to the air raids.

International Food Conference

The Conference at Hot Springs (Va.) from May 18 to June 4 was held in order to secure an exchange of views as to the most desirable means of dealing with post-war problems relating to foodstuffs and agricultural products. Forty-four Governments including that of India were represented at the conference. The final agenda was drawn up in four sections and Section I dealt with consumption levels and requirements in respect of both food and other agricultural production. Section II was concerned with production and the problem of adjustment to consumption. Section III examined the problems of improved distribution while Section IV was engaged in considering arrangements to give effect to recommendations and continue the work of the conference. The study of nutrition and the improvement of diets was considered by the conference which asked Governments to improve their food resources and fix consumption goals in relation to possible improvement of food supply. As regards the consumption of non-food products it was recommended that the possibility of establishing standards of minimum consumption should be examined along with the problem of supplying adequate food to areas which have to concentrate on the production of non-food crops. Recommendations made under this head imply that special efforts should be made to increase agricultural production, particularly, of cereals so as to be able to meet the post-war demand to the extent that transport permits, and countries should thereafter switch over gradually to the production of larger quantities of protective foods like milk and vegetables and decrease cereal production where necessary.

The guarantee of fair prices and an assured market go with the expansion programme and the conference approved the view that producers receive a fair return for their produce. Maximum production entails the grant of facilities like implements and fertilisers to producing countries. The special problems arising from the growth of population in India at the rate of 5 million a year were mentioned at the conference which recorded its view in favour of agricultural development, extension of cultivation, and the construction of public works as well as development of public services. It is possible that the programme anticipates that drawn by a local reconstruction committee. The Interim Commission may give an indication of the lines on which Indian agriculture should develop. The present food shortage indicates that India cannot figure as an exporter and her population problem, in the absence of emigration, will grow more acute with the years. The land settlement plans for ex-soldiers like that of the Governments concerned with the abolition of fallowing require an assured supply of implements and fertilisers. It has been said by Sir G. S. Bajpai that the conference broke with the idea of restriction and accepted the principle of an expanding world economy. The conference in examining distribution answered some questions raised by surpluses which are really connected with international trade and exchange. The problem for India after the war will not be one of surplus is for the decline of commercial crops in the war period must be permanent, at least in the interests of the food supply. The conference indicates that the true direction of advance is in the matter of field crops. Livestock comes second for countries like India but more important for the crops of the future is the restoration of fertility. That the I.C.A.R. and its advisory board have made much the same recommendations in the past for developing India's agriculture does not reduce the value of the recommendations concerning implements and fertilisers though India's reluctance to export foodstuffs will persist beyond the period of scarcity for improved nutrition should take precedence over the claims of foreign trade after the war.

Rice Exports Prohibited

The ban on exports of rice announced on Saturday naturally suggests that other grains too may be covered by a prohibition. The argument that India's exports in wartime have been subnormal and such exports as were made for war purposes up to the end of last year were unconnected with the shortage of food this year has been made familiar by repetition. But even a fall of 4 per cent in food supply has an unusual effect on prices, and whatever encouragement may be derived from the decline recorded in the index numbers for wholesale prices in June it is hardly possible to say that the ban on exports of rice requires special explanation. The import and export figures for 1942-43 are not available but the ban, if it restricts trade, makes for a more satisfactory food position in ports like Calcutta. The Provincial Government's ban on exports had to be completed by an assurance against removal in ships. The ban may be based on the improved food position in the Middle East after the moderately good harvests of 1942 but it may be attributed by some to the rupture of the Indo-Ceylon negotiations since the only constant export market for rice is Ceylon. That market does not demand special consideration in spite of the great increase in Indo-Ceylonese trade last year. The ban may be maintained for a period only, and export licenses may be issued when normal harvests are the rule. The main result of the ban may be the diversion of South Indian supplies by coastal steamers to the deficit Provinces and States. To that extent the Food Grains Control Order

may be modified and both supplies and prices may be adjusted in consequence elsewhere. The ban is likely to be explained in the Central Legislature when the food position is again reviewed. For the present, it is enough to note here that the ban is largely formal, and is the final admission as regards scarcity in India. To a country obliged to import food at any cost exports are suicidal and the decision will thus command general approval. The two Provinces accustomed to export rice are Madras and Bengal. Neither can spare rice for shipment, and the Central Government, apart from restoring faith in remedial measures, has satisfied a demand that has been heard for months in most places.

Fall in Prices

Charts appearing in the "Indian Trade Journal" of July 8 indicated clearly the downswing in commodity prices to which reference has been made. A strong presumption that the fall in prices is the result of anti-inflationary measures launched by Government towards the end of May undoubtedly receives support from the movement antecedent to the fall in bullion prices produced by a Defence Rule relating to bank advances. The supply position may also be influenced by the increase in outturn of several crops e.g. wheat and the ban on exports of rice. If the larger supplies have a due effect on prices a further decline is probable and the fall in July and August may exceed that recorded in June for which month figures are available. The Calcutta wholesale index for all commodities dropped from 325 to 319—the base being July 1914 and August 1939 when the Calcutta index stood at 100. The main movements in June suggest a slow decline rather than a convulsive drop in the case of cereals and pulses. It is noteworthy that the index number for tea also is lower. In this case sale averages in July have disclosed a sharp fall in the case of tea sold for internal consumption and tea will no longer be an exceptional to the downtrend in commodity prices. Sugar is an important exception to the statement that food prices were falling in June. The increase noted under miscellaneous food articles in June cannot count for much in the working class cost of living. A direct beneficiary of the decline in prices is the large employer who has been forced to buy foodstuffs at high prices and distribute them to workers at specially reduced prices. The fall means that profits for major industries like jute and coal should improve to some extent. The introduction of cloth control has stablised cotton but there is no way of saying how yarn and cloth prices have moved. Raw materials including jute were stagnant to judge by the movements of the index. But building materials were dearer in June than in May. The conclusion that higher cost of production rather than scarcity has raised the cost of cement after May to Rs. 60 per ton is permitted by a reading of the circumstances though the increase in the cost of timber is greater and it has been gradual; while the enhancement of the price of cement is the result of the producers' agreement. The end of forward trading pushed down the price of oilseeds but the fall in the case of mustard oil is quite small. The wholesale price index in June 1942 stood at 182. The peak was passed in May 1943 when the index rose to 325 from 293 in April. The index stood at 250 in January and at 319 in June, 1943. The rise during the first half of 1942 was moderate to judge by the rise from 155 to 182 perhaps because the discussion of monetary phenomena then was restrained in comparison with that conducted this year.

Peril of Soil Erosion

Following the bulletins prepared by Sir Harold Glover on the danger of soil erosion in the Punjab there appeared another account of soil erosion by Col. F. L. Brayne published as a bulletin of the Central Irrigation Board. The broadcast talk (now published as a bulletin) describes the nature and extent of soil erosion in India. A friend of Col. Brayne travelling through a part of India said that it looked like what the mountains of the moon must be like. The consequences of erosion are serious, when hills, grazing grounds and fields alike are eroding. In many areas the rainfall is decreasing and the sub-soil water is receding. There is a connection between rainfall and vegetation, and although we cannot prove that the loss of trees causes the rainfall to decrease, it is quite obvious that it must be more difficult for rain-clouds to precipitate rain on to a hot desert than to a cool forest. Col. Brayne said deserts are man-made. Once man had stripped the trees off a large enough area the uncontrolled forces of nature may take charge and expand the desert. The American dust bowl is ample warning to us that deserts are not all prehistoric. They are being made to-day by the carelessness of man. How carelessness is making deserts was explained. The Indian weather consists of short, sharp rain-storms and long periods of drought when the soil becomes very dry and powdery. The result is that bursts of heavy rain wash soil away from all unlevelled land unless it is permanently covered with a mat of vegetation. Arable land can only be covered with thick crops for short periods and therefore all unlevelled land should be levelled before cultivation. Vast areas in India have not yet been levelled and instead of steadily gaining are steadily losing soil and fertility. Terracing is necessary and where necessary drains to remove surplus water must be provided. Terracing is well understood in some parts, but most of India is sadly in need of terracing and is steadily deteriorating. Apart from terracing the control of grazing is recommended. Closure of hills and pastures and feeding cattle with fodder crops and cut grass seems the preferable alternative as cattle then will give more milk and breeding will improve. Control of grazing by the innumerable cattle and goats in India appears to Col. Brayne all the more important for improving the natural vegetation in areas where erosion has been evident. The problem is not confined to the Punjab or the U.P. Ravines have been produced in Central India by soil erosion and the preservation of the soil has latterly become the cardinal object of forestry.

Mixed Results of Control

Lala Karamchand Thapar devoted his speech at the annual meeting of the Indian Sugar Syndicate to a critical review of the working of the Sugar Control Order in operation for over a year. The public has reason to feel dissatisfied with supply and prices and arguments for revision of control, therefore, find a place in current discussion. It is, however, more important to note the increase in production. The Syndicate expects that 8½ lakhs of tons produced by its members in 1942-43 would offset the bad crush in Madras, Bengal and the Punjab. But producers still have many difficulties and the expenses of production demand an increase in the price fixed by the Controller according to the Sugar Syndicate's Chairman, particularly, as an increase in the cost of sugarcane is more than probable. The reservation of 1 lakh of tons by the authorities for undisclosed purposes was mentioned in the speech. There have been many strong objections to export of sugar for the benefit of the U.K.C.C. and rationing as a remedy is not justified in the eyes of the Syndicate which argues that shortage is more imaginary than real. Black markets have survived the control measures so far adopted, and the producers, represented in the Syndicate, have asked for improvement of distribution so as to by-pass the black market. Given sufficient production and efficient marketing, the Syndicate expects that reasonable prices can be maintained, and the Chairman has again claimed that an all-India organisation must be created for marketing. In India the Syndicate is the logical choice, especially, as it has improved the quality of sugar produced in India even in the shorter working season of 1942-43.

The principal demand voiced by the Chairman was one for a longer season and cheaper cane. The sulphur difficulty is not resolved by the offer of Baluchistan ore and producers expect deterioration in keeping quality when sulphur is not made available. The major problem to-day for sugar mills is, however, that raised by the diversion of land to food crops. Cane prices must be fixed early at a fairly high level in order to prevent the cultivator from giving up the cultivation of sugarcane. This may entail an increase in sugar prices, but revision is also demanded for the reason that a profit of 0-5-11 or 0-8-0 per maund is inadequate for the average manufacturer. Lala Karamchand Thapar drew attention to the difference between profit margins in the cotton, jute and other industries as compared with sugar mills. Comparison of earnings in various industries suggested to the Syndicate's Chairman that profits in proportion to capital invested are lower in the sugar industry in spite of production having risen. The sugar industry is compelled to take unduly low prices for its exports and this extension of control creates a grievance to which particular reference was made. What is most obvious is that the reward for the effort made in 1942-43 to increase supplies has not been vouchsafed to the sugar industry. Taxation in this case through the excise takes away the lion's share of the manufacturer's profits and the burden of taxation is not reduced by the advance fixation of prices for sugar. The differences in profits in various industries in wartime may be explained readily but the striking fluctuations in the sugar industry's profits produced by statutory control of cane prices, etc., have made it different from other protected industries.

Beer and Bottles

The beer shortage in India arising from the limited volume of imports has sent up the prices of brewery shares. Less obvious are the efforts made to increase the supply. The production figures for 1942 of Indian distilleries and breweries are not available but the output must certainly have increased. Rationing of supplies to civilians has not concealed the expansion of output, and only recently has it been made known that the principal obstacle to better supply is the glass bottle. The Canteens Directorate has begun experimentally to use Indian-made bottles manufactured at Ghaziabad for Indian beer. The bottles will be packed in the usual wartime style in straw and gunny bags and distributed to troops. The outcome of this experiment may be far-reaching. If the bottlenecks are strong enough, the container problem is solved, because while India can produce the beer she has been unable to turn out receptacles into which it could be put. Prospects for consumers may brighten if the glass bottles prove satisfactory, but efforts are being made to procure substitutes. Troops in the Middle East found that captured German enamelled water-containers were ideal for the purpose. Samples for testing under India's difficult climatic conditions are being shipped from the Middle East. Tins have proved impracticable because of the need to import lacquer for the inside and wax for sealing. Casks require special wood and beer inside casks may deteriorate during waits at railway sidings. Tank-wagons were ruled out as impossible but used bottles, obtainable from the Middle East and after the emptying of bottles in which Australian and Canadian beer comes, are being collected for use. Last month it was made known that beer is regarded as a necessity for the troops. The entire output of India's three brewery concerns is taken over by the Q.M.G., ten per cent being reserved for civilians and the re-difficulties include the supply of hops. Shipping space has to be arranged to coincide with the picking season in England and the U.S.A. The collection of barley for the brewery in South India has led to an elaborate organisation though the risk of barley getting spoilt while waiting for transport remains. The temporary stoppage of work at a brewery

owing to want of coal was reported last month and it is known that breweries have difficulty in getting fuel for lorries which are being gradually fitted with producer-gas plants. The brewery outlook was summed up by an officer of the Canteens Directorate last month. It is possible that imports may decrease as the pressure of the war effort on the producing nations grows stronger. But with the resources at our disposal in India it should be possible to double and even treble the production of beer in course of time.'

U. S. Shipbuilding

The U.S. Maritime Commission intends to build 18,890,000 tons of ocean-going merchant ships this year. With the addition of military and minor craft the output will be over 20 million tons for 1943. The Chairman of the Commission declared in April that plans were revised more than once to produce an increase in output. When the U.S.A. entered the war the goal was set at 8 million tons for 1942 and 16 million tons for 1943. The delivery of 746 ocean-going vessels totalling 8,090,000 deadweight tons in 1942 meant that achievement was more than equal to anticipations while shipyard capacity was developed to permit an increase in tonnage up to 20 million tons for 1943. U.S. shipbuilding capacity was stepped up in a year from 4 ships a week to 4 ships a day. In March 1943, the output averaged 5 ships a day after the delivery of 283 vessels in January and February—the two months' total exceeding by five the output for the first half of 1942. The increase in tonnage was attributed by Admiral Land to the concentration on the Liberty ship type, of standardised design, extensively prefabricated and assembled in large sections. 597 ships were built last year representing about 80 per cent of the year's total production. Of 60 vessels delivered to Britain 55 were provided last year. In the current year output of Liberty ships has run to 80 per month and in March alone 100 vessels were built. Most yards working on Liberty ships were newly built and only two of them delivered their first ships before January 1942. Ten new yards came into production in 1942 and the remaining five early this year. Under the original programme 17 yards with approximately 150 quays were meant for the construction of Liberty ships. Since output has risen two yards have been diverted to tanker production and part of the other yards' facilities have been assigned for special craft for the armed forces. When the plan started about 8 months were required for building a Liberty ship. This was slightly better than the building time taken in mass shipbuilding plan 25 years ago. Since then construction period is reduced to 2 months or less. For instance, 79 vessels delivered in January took an average of only 52.6 days. Of about 1,800 cargo vessels built in 1943, Liberty ships will number 1,300. The remainder will be about equally divided between superior long-range ships and high-speed tankers. Tugs, barges, coastal craft and other vessels will be added.

Under the Maritime Commission's construction programme from 1938 to 1944 as many as 4,880 ocean-going ships totalling 50 million deadweight tons will be built. The answer to the U-boat campaign is the increase in shipping. The U.S.A. has increased production of escort vessels for merchant ships. New escort vessels are slightly larger than the corvette, fast, well-armed and highly manoeuvreable. The conduct of war operations in Europe has shown that the U.S. shipyards have made good the promise of more ships and faster ships. The U.S. navy has received very large appropriations, and building for a Navy on the job up to 1949 should raise the Navy's total tonnage to an exceptional total. The improvement in the Atlantic last month suggests that the net increase in Allied tonnage will be far greater than that of 1942 especially as the current year's construction will provide 1,800 ocean-going vessels. The remarkable increase in U.S. ship production suggests that British mercantile tonnage will fall to the second place after the war and special efforts (like the running of air services which have been approved by Lord Essendon) will be required to keep up the mercantile marine—more important after the war as a source of oversea income. The figures cited by Admiral Land prove that U.S. shipbuilders headed by Mr. Kaiser have given the answer to the question raised by intensified U-boat warfare last winter. For the present it is desirable to note that vast resources and unusual energy have been available to the U.S. Maritime Commission. State control and direction have not led to confusion or inefficiency, though Col. Knox and others have made it plain that victory is dependent in great measure on the ability to produce more and more ships.

Food Problem Analysed

The food problem interests the non-official much more than the salaried servant of the Government. Naturally, the landed aristocracy evince greater interest in the fruits of the soil than the agency devoted to war and tax-gathering. The food problem to-day claims the attention of landlords even more than of the middlemen and Mr. P. N. Singh Roy, the Honorary Secretary of the British Indian Association, in a recent book examined the fundamentals to demontrate that shortage

ARE YOU A MEMBER OF THE S.P.S.C.?

You may have joined the S.P.C.C. and the S.P.C.A. but the S.P.S.C. is doubtless new to you. We are referring to the "Society for the Preservation of Steel Containers". Anyone can be a member; everyone should join. There are no entrance forms or fees, no governing body, no organising secretary, and there are only two rules. Its *raison d'être* is the war and you are invited to "Join for the Duration".

Steel containers are scarce today and may become even scarcer. The nature of some commodities is such that manufacturers are able to resort to cardboard packages, or even do without containers. We would follow suit if we could. But for the distribution of oil, steel containers are indispensable. Their loss today, like that of our ships, means much more than the mere waste of money spent on their manufacture. They are one of the lifelines on which the fighting forces and essential industries must rely.

The object of the S.P.S.C. is to maintain this lifeline intact. Its only rules are :—

1. That every steel container shall at all times be protected from rust, damage and dirt : and

2. That no steel container shall be permitted to lie idle.

Elect yourself to active membership today.

BSOK 55 A BURMAH-SHELL ANNOUNCEMENT

is no transitory condition, curable by the usual formulas but a chronic symptom that warrants radical measures. He is duly impressed by the stagnation of agriculture in India and the limited progress made in the adoption of seed for better types of crops by the Indian farmer. Where irrigation ensures double-cropping there is no guarantee of adequate returns, though the problem in West Bengal arises from various other factors. The poor yields in India mark out a primitive peasant economy, and recent discussion as to soil erosion etc., has directed attention to the prime condition of progress—the maintenance of soil fertility.

The last is imperative in view of the pressure of numbers. Population has outstripped the food supply, and nutrition is even more important than medical relief to-day. The large increase in food exports in 1941-42 may have little bearing on present shortage but the persistent dependence on rice imports should have indicated how easily famine could develop. The food problem in Bengal with 61 million people is more acute than in other Provinces, and doubts as to shortage have not been dispelled by official estimates of the carry-over and the production. A shortage of over half a million tons of rice has been admitted, and the presumed increase of one million tons in the supply of rice is contingent on the success of the Grow-More-Food plans. A distinctly critical note has been struck in regard to the Bengal Ministry's programme, and the author has urged that official fulminations against hoarders have to be followed up by many positive measures. The sombre conclusions are lightened by an account of what has been done by the new Ministry and the landholder's view is not far removed from that of the Opposition which argued recently that cultivators were not hoarding but that encouragement had been given to the middlemen to hoard in the now excluded areas. Price control rather than rationing is approved, and subsidies to help the consumer are favoured. It is clear that the resolutions of the All-Bengal Food Conference last month have influenced the author's conclusions in regard to most measures of improvement. But the issue of rationing was not so clearly posed last month and the food policy pursued by the Ministers remains the same in Bengal without inviting much comment on the benefits of free trade restored on May 17 to be suspended after brief notice.

Hyderabad's Minerals

Hyderabad's mineral production in 1942 is described in the July issue of the State's monthly "Hyderabad Information". The most important mineral of the State is coal and 1942 output at 12,77,191 tons was equal to about 4 per cent of India's coal output. Graphite mined in the State amounts to 28 tons and marble to 148 tons. Shahabad stone quarried in the 28 quarries in the State was equal to 3.35 million square feet and the limestone of the State was responsible for cement production totalling 146,354 tons in Fasli 1351. The State's coal production came from various collieries, but the closure of the Singareni collieries by the company in September 1941, was followed by a payment of Rs. 15,000 in view of royalty in 1942. The areas leased to the Singareni Collieries Company, Limited, and other concerns over which no mining operations were carried out in 1942 are Singareni, Chinnur, Allapalli, Sivawaram, Medawaram, Sarangapalli, Tikmatla, Wardha Valley, Paloncha, Kanala, N. Godaveri, S. Godaveri and Asifabad. The assignee of the Paloncha graphite lease gave the working to a company which extracted 28 tons of crude graphite from the mines last year. The company sold 142 tons of graphite in 1941 and 1942 and the Government received Rs. 479. The two quarries of the Deccan Marble and Mining Company yielded 148 tons, but work at the Munditog quarry has been suspended since April, 1942. The royalty from the quarries amounted to Rs. 25,373. Cement from the Shahabad factory provided a royalty of Rs. 1,09,765 on 146,354 tons of cement. War has held up the plan to develop the mines at Huth. Development operations in connection with the gold mine then have been restricted to dewatering the mine, so that when the milling plant can be had, and circumstances favour working of the mine, the Government could count on the mine being in a satisfactory state.

B. I. G. Assurance's Improvement

The uniform excellence of the underwriting results for 1942 simplified the task of Sir H. M. Mehta at the B. I. G. Assurance Co.'s annual meeting. The fire branch's revenue account shows that income at Rs. 12.81 lakhs exceeded losses and commissions, so that the profit and loss ac-

Payable as under :

PREFERENCE SHARES

On Application Rs. **50**/per share — On Allotment Rs. **50**/per share

ORDINARY SHARES

On Application Rs. **50**/per share — On Allotment Rs. **25**/per share

and the balance on the Ordinary Shares by calls of such an amount payable such time (not being less than four weeks from the time of making the call) and at such place as may be determined by the Directors. Interest at the rate of 9 per cent per annum, will be charged on calls overdue, which, however, may be waived at the discretion of the Directors.

The balance of the Authorised Capital may be issued either as 'Ordinary' or 'Preference' Shares or both as may be decided in future.

The rights attached to the Preference Shares are as follows:—

(*a*) The Preference Shares shall confer on the holders the right out of the profits of the Company which it shall be determined to distribute in dividends to fixed cumulative preferential dividends at the rate of 5 per cent per annum on the capital for the time being paid up on the Preference Shares respectively. (*b*) The holders of the said Preference Shares shall on a winding up have priority as to return of capital and payment off of arrears of the said preferential dividend whether declared or earned or not up to the commencement of the winding up over all other shares of the capital for the time being of the Company, but shall not have any further rights to participate in the surplus profits or assets.

DIRECTORS:

THE HON. SIR SHANTIDAS ASKURAN (Member of the Council of State), (*Chairman*), Banker and Mill-owner, Mahendra Bhuvan, Nepean Sea Road, Bombay.

Messrs. N. M. RAIJEE & CO., Apollo Street, Bombay.

SECRETARIES:

Messrs. K. U. ADVANI, LTD.

REGISTERED OFFICE:

Aga Khan Building, Dalal Street, Fort, Bombay.

PROSPECTUS

This Company has been formed for the purposes more fully set out in the Memorandum of Association and in particular to carry on the business of an Investment Corporation.

In England, the investment trust has been for many years past, a very prominent feature of Joint Stock enterprise and hundreds of millions of pounds have been invested in a large number of companies of this nature. It is somewhat surprising that so few investment trusts have so far made their appearance in this country, for their functions, more than any other form of investment, are admirably suited for the encouragement of the investment habit amongst Indian investors.

The main object of these Trust Companies is to employ the funds of their shareholders by investing them in the shares of carefully selected concerns. Those who invest in them, therefore, can do so secure in the knowledge that their investment risks are lessened by a large spread of investments whilst their interests are protected by an expert organisation, with a wide and extensive experience of the subject and an intimate knowledge of market conditions. As a result of this experience and knowledge investment opportunities can be secured beyond the reach of the ordinary man in the street. Moreover, with the ever increasing industrialization of India opportunities will occur when it will be possible for the Corporation to assist in the development and expansion of existing industries.

In endeavouring satisfactorily to utilise to the best advantage the monies of this Corporation, the management will be guided, in co-operation with investment experts, by the following principles:—

(1) For Safety: .. Wide diversification over essential industries and first-class companies.
(2) For Income: .. Proved earning power and good dividend records.
(3) For Stability: .. Sound financial position and good reserves.
(4) For Capital Appreciation: .. Key positions in progressive industries; enterprising Boards of Directors; Good management.

Present conditions necessarily limit the activities of the Corporation to investments in concerns operating in India but in the postwar era, it may become possible to take advantage of prosperous conditions abroad.

The management will be conducted in as economical a manner as possible, being in the hands of a company the Directors of which have had many years of investment experience in this country.

Not more than 5 per cent of the Issued and Subscribed Capital for the time being (including debenture capital as well as share capital) shall be invested in or lent on any one security other than a *trustee security*, but securities of different titles or denominations shall not be deemed to be one security by reason only of their possessing or being entitled to a guarantee from or by the same State, Government, Municipality, Corporation or other body. This provision shall not operate as regards investments or loans which at the time they were made, were within the prescribed limit, but by reason of amalgamation, consolidation or otherwise subsequently exceeded the limit. The Directors have resolved that at least 20 per cent of the present capital raised will be invested in Government of India Loans.

MINIMUM SUBSCRIPTION.

The minimum subscription upon which the Directors may proceed to allotment is twenty-five per cent of the present issue which amount has already been subscribed.

The Articles provide for payment of a commission not exceeding 5 per cent to any person for subscribing or agreeing to subscribe or procuring or agreeing to procure, whether absolutely or conditionally, for any Shares, Debentures, or Debenture Stock of the Company.

The qualification of a Director shall be the holding of 100 shares of the Corporation of the aggregate nominal value of Rs. 10,000.

The remuneration of the Directors will be Rs. 12,500 per annum or ¼ of 1 per cent of the Issued Capital per annum, whichever may be larger to be divided amongst them in such manner as they may decide.

Special remuneration may be paid to any Director who shall be called upon to perform extra services or to travel on the Corporation's business.

VOTING.

Upon a show of hands every member entitled to vote and present in person shall have one vote and upon a poll every member authorised to vote and present in person or by an agent duly authorised under a power of attorney or by proxy shall have one vote for every share held by him and no member shall be entitled to be present and vote either personally or by proxy or as a proxy or attorney of any member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Corporation in respect of the shares of such member.

RESTRICTION OF TRANSFERS.

The Directors may at their own absolute and uncontrolled discretion and without assigning any reason, decline to register or acknowledge any transfer of shares and in particular when the Corporation has a lien on such shares or any of them or if the Transferor is indebted to the Corporation on any account whatsoever or any moneys in respect of such shares have remained unpaid.

The preliminary expenses which are payable by the Corporation are estimated not to exceed Rs. 20,000 (exclusive of the commission paid in respect of shares already subscribed) in addition to a brokerage of annas 8 per Ordinary Share and Re. 1 per Preference Share which will be paid on shares allotted in respect of applications for shares bearing the stamp of a broker, banker or other approved agents.

By an agreement, dated 21st July, 1943, the Corporation has appointed Messrs. K. U. Advani as the sole brokers to the Corporation for purchasing and selling securities for the Corporation in India, Burma and Ceylon for a period of ten years from the time the Corporation is entitled to commence business on the terms and conditions as to the payment of brokerage at the rates prevailing on the respective Stock Exchanges. Mr. K. U. Advani a Director of the Corporation is the Proprietor of Messrs. K. U. Advani and as such is interested in the brokerage to be paid by the Corporation to the said Firm. If the said Firm employs any other broker or brokers for carrying out any sale or purchase the Corporation will pay to the said Firm only one brokerage at the rates prevailing on the Stock Exchange where such broker is employed and where there is no Stock Exchange, at the rate prevailing on the Bombay Stock Exchange and the Firm will remunerate the broker or brokers so employed.

By an agreement, dated 21st July, 1943, the Corporation has appointed Messrs. K. U. Advani Ltd., as the Secretaries to the Corporation for the period of 10 years from the day of 21st July, 1943 on a remuneration of (*a*) Rs. 12,000 per annum as allowance payable by equal monthly instalments of Rs. 1,000 each and (*b*) a commission of 7½ per cent of the net annual profits of the Corporation provided the Corporation pays to its Ordinary shareholders an annual dividend of not less than 4 per cent (free of income-tax) on the capital for the time being paid up thereon with a minimum commission in any case of Rs. 12,000 a year. Mr. K. U. Advani a Director of the Corporation is interested as a Director of the said Messrs. K. U. Advani Ltd.

Application for shares should be made on the accompanying form and forwarded with the amount payable on application to any of the bankers or brokers of the Corporation.

If no allotment of shares be made, the application money will be returned in full, and where the number of shares allotted is less than the number applied for, the surplus will be credited in reduction of the amount payable on allotment and any excess will be returned to the applicant.

A copy of the Memorandum of Association of the Corporation is printed in the fold and forms part of this Prospectus. A copy of the Memorandum and Articles of Association of the Corporation and copies of the said agreements may be inspected at the Registered Office at any time on any week day except Saturday, between the hours of 11 a.m. and 3 p.m. whilst the subscription list remains open.

Copies of the Prospectus and Forms of Application can be obtained from any branch of the Corporation's bankers or from its brokers in Bombay.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

After a week's break, the taste for "new economics" has, I hope, been whetted. I might say frankly that if, on the reader's side, the break is a safeguard against new economics beginning to pal, on my side, it is somewhat like leaving the land follow in the hope of improving the qualities of the soil and raising a better crop. The quick change of metaphors is, perhaps, an index of the indecision and flux that characterise my present state of mind. As the reader knows, this series of articles on the new economics is "unpremeditated." I have been carried forward by the momentum gathered in the course of the earlier articles. And though I would fain draw the series to its close, there are some who seem to have been expecting a stirring denouement and would feel that they have been baulked of a sensation, if I were to ring the curtain down. I have, of course, my defence. This series was never meant to be sensational. It had its origin in certain observations of mine on Joad's comments on the Beveridge plan. I was called upon to bring to the fore the background of ideas against which my remarks were made; and in delineating that background of ideas, I had to present them as a new system of economic thought with its structure of internal logic, its base in the empirical facts of our contemporary world and a super-structure which comprises a probable orientation of economic policy in the postwar period. I should, for my part, have been content with this. I would not consider it reasonable for any reader to feel that I was all the time narrating a fanciful tale, but that there are too many loose ends to be tied, that, so to say the hero and the heroine are sighing for each other in separation, that the villain of the piece has neither triumphed nor been foiled and that the play ends when the plot has but neared its crisis.

* * * *

Nevertheless, I do recognise the legitimacy of the feeling that in dealing with what I have all along called the operative part of the new economics, the operational aspect has not been quite manifest. It is true the application of the new economic concepts to the practical problems of the postwar world has been made clear. These applications are simple enough; that practical policies will aim at the execution of schemes of social value rather than private profit; that the release of the concept of capital from its mesalliance with savings will facilitate the perpetuation of low interest rates and a better division of labour both among the nations and between capital and consumer's goods within each country. But this application is inherent in the very theory of the new economics. To do justice to the operational aspect, one has to show how the new principles can, and most likely, will enter into practical policies in the postwar period. This, task, it will be readily appreciated, is not easily accomplished. For one thing, the extent to which the new principles enter into and shape practical policies will depend predominantly on the political complexion of the party in power; and that involves a kind of political forecast, which is dangerous in more than one way. For another, it also depends on the nature of the economic problems of each country as they will be posed and appraised by its Government. For instance, postwar Britain might regard the revival of her export trade to the levels of the pre-depression years as her most vital economic problem. Or she could, if she should so choose, go all out for a higher degree of self-sufficiency, raising more out of her soil and utilising her resources to the direct satisfaction of the needs of her people instead of indirectly through the circuitous links of multilateral trade. This uncertainty of application of principles is in the very nature of the new economics. I have, therefore, been content so far, with bringing out the practical significance of the conceptual changes of the new economics instead of attempting to concretise their application to policy.

* * * *

But the attempt must be made; and in as much as it is comparatively easier to postulate with some clarity the background of social conditions in India than in foreign countries, it may not be quite unprofitable to make the attempt in the case of India. It must be made clear, however, that what is attempted is in no sense and to no extent, a kind of economic forecast. Rather will it be an illustration of what the adoption of the principles of the new economics can achieve for a country like India. Personally, I have no doubt in my mind that, if economic policy should continue to be moored to the old economics, there is no chance of our moving out of the present state of poverty. Only the new economics with its emphasis on social value and, through social value, on social organisation, holds out any hope of increase in wealth production and of economic uplift; and it is a truism that without economic uplift, there can be no progress in the political sphere. My exposition of the application of new economic principles to India's economic problems in the postwar period should be regarded, then, not as a forecast, which as such would be a worthless piece of wishful thinking, but as a reasoned plea for discarding obsolete policies and modes of thought and adopting ideas and measures which are in accordance with the spirit of the age and are specially suited to our needs and conditions.

* * * *

I say, specially suited to our needs and conditions, because, as will be evident on a little reflection, the Indian economic problem is insoluble on the basis of the old economics. Our economic history is in itself ample proof of it. The slight deviations, we ventured to make from orthodox economic theory, as in the case of the policy of discriminating protection, have not only availed us little, but have created a series of dilemmas in our public finance, in foreign trade and even in the relations between industry and agriculture at home. Such achievements as we can claim for our protectionist policies only serve to emphasise the immensity of the problems before us and the pitiful inadequacy of the measures that we have so far been able to think of for lifting the country from the depths of poverty, ignorance and disease into which it is immersed. In saying this, I do not mean to exonerate the Government from its share of the responsibility for our failure to achieve any progress. A foreign government with its own

special interests to look after has two handicaps to overcome: one is the natural indifference to the well-being of others; the other is the unreasoning fear that the progress of the subject country has, in some way, its own threats to the prosperity of the ruling country. No serious attempt was made to overcome either; and the result is that India has not made the progress which in more natural conditions would have been more or less inevitably realised. But it would be wrong and dishonest to think that such progress would have sufficed for our purpose. On the other hand, it might have proved just sufficient to stir the masses out of their pathetic contentment and create problems of social unrest and discord, by the side of which the communal problem in our political life must pale into insignificance.

* * * *

If the Indian economic problem is ever to be solved, India must learn to harness the energies of the whole people to the increased production of wealth in all forms. It is true, in fact, of all our problems. Swaraj is no easier of attainment than economic progress by the efforts of this class or that. The bane of India is the centuries-old paralysis of all limbs of society, a paralysis that may be attributed to a variety of causes and factors, but which is explained only by the lack of a social will. It stands to reason that, so long as there is no social will as such, there can be no progress in any walk of life. Whether it is the political field or the economic, we may be able to move forward upto a point on the strength of a few gifted individuals, a Gandhiji or a Tata; but there, we are bound to stop, coming up as we have done against the insuperable obstacle of mass inertia. This inertia of the masses is an even more serious obstacle to our economic progress than to our political progress. For, politics, after all, lends itself to dodging and diplomacy, while in economics the tasks are far more concrete and call for qualities, at once sturdy and steady.

* * * *

The value of the New Economics to a country placed as India is today, lies in the ease with which the adoption of its principles can bring about an active social consciousness amongst the people and inspire them for all the varied efforts necessary for the solution of our economic problem. The old economics, with its insistence on treating human societies as a collection of atomic individuals motivated and brought together by private profit, can only serve to perpetuate the paralysis of Indian society. No doubt, it served countries like Britain, the U.S.A. and Japan whose peoples were well-endowed with a keen social consciousness. But in India, where the absence of such a social will has been made manifest by political subjection over centuries, it is idle to think that the economic problem can be solved on the basis of spontaneous individual effort. For one thing, avenues of remunerative work for a population which is adding millions to its numbers every year, are conspicuous by their absence. Talks of individual initiative, which even in the best conditions would be platitudinous and which in our present circumstances are provokingly unpractical and untrue, can lead us nowhere.

* * *

There are surprisingly many in this country who believe that we have only to provide the ordinary incentives to production for this country to flow with milk and honey. It is assumed that, if there are markets, prices which leave reasonable profit margins, production of the requisite goods will show progressive increase. Such people do not stop to enquire how these markets can be created or, for the matter of that, what, indeed, such markets are. Of late, economics, like politics, seems to have created its own cliches, the kind of catchwords that are employed almost automatically in certain conditions and provoke identical mental reactions in the minds of those who listen to them. Markets imply purchasing power; and purchasing power, where it is not income from inheritance, is only production of values, tangible or intangible, waiting for exchange. If you remember that a market is a place where values are exchanged, then you will realise that there have to be at least two lines of productive activity if there is to be an exchange in a market. If you want the agriculturists to constitute a market, or to become a better market than they are, they must have more of what they produce, some other persons have to be in need of more of this agricultural production, and the latter should have something in their hands to give to the agriculturists. It doesn't help to say that markets must be created, when our problem is to bring about an increased production of all kinds of values, tangible as well as intangible, of agricultural goods as well as industrial goods, when we have to create better farms as well as build better machinery, when we have to think as much of the men who will work as of the implements they will employ; when, in a comprehensive view, the quality and quantity of the work in schools is not of less importance than the output in field and factory. No, in vain will the Unseen Hand wave its magic wand; the profit motive will not do the trick.

* * * *

These four years of war economy have proved my point to the hilt. Here are things selling at fabulous rates. Middlemen at more than one point are making on rice profits well in excess of the total value of the rice crop in the prewar years. We still grow one blade of grass where formerly there were two! In this country of loincloth and langoti, we are famished for cloth; and I am not aware that hand spinning has gone up. And what is more important, our national economy, which is so unresponsive to increasing and even insistent demand, will be most sensitive to the postwar slump, if and when it should come. The reasons are not difficult to find. Besides the lack of social will and energy, there is the hard fact, which the public is yet to appreciate, that our economic system is chronically inelastic and that we have come to the point when our natural resources cannot be coaxed by routine methods to yield more. And what the routine methods can yield is enough to keep only a part of the population above want.

* * * *

In these circumstances, what can the old economics do to this country? You may, as a start bring more industries under the scope of your protectionist policy. You will then make indifferent things at home; imports will fall; and foreign nations, whether because they can't or because they won't, will fail to buy your goods and the agricultural commodities will experience a slump; and our politicians, never very good at economics, will wring their hands in despair. Or, you may begin at the agricultural end, think of big schemes of rural reconstruction and come up against shortage of funds for financing them. You will turn to higher or more taxes and find that, even if the taxpayers are willing to pay, their pockets are nearly empty. If you succeed in increasing agricultural production, you will find you are hard put to it to protect prices from the effects of a larger supply. And the bigger industrial problems require a special technique to solve them. No, the methods of the old economics will not do. To solve the Indian economic problem by the old methods will be like trying to clothe an elephant with just one yard of cloth—if you pull at one end, the other side is left bare!

* * * *

Far different will be the case with the New Economics. It will help you in the first place to set the national economic problem in a correct perspective, to see it, not as the blind men of the old story "saw" the elephant, but as a whole, with a proper sense of proportion, with a sense of values, which is not a vulgar dictate of the market place, but a rational estimate of human needs and resources. The tasks we have to accomplish will be seen, not only in a reasonable order of priorities, but in the inter-relation which subsists between them. We will learn to build without either straining the foundations or darkening the neighbouring structures. And we will not destroy except when destruction is indubitably the starting point of new and impressive construction. I have been somewhat rhetorical. But no one, who has grasped the principles of the new economics and their application as far as I have explained it in my previous articles, will experience any difficulty in translating the language I have used into more prosaic economic terms. The superiority of the new economics over the old lies in its enabling us to attack the Indian economic problem from all sides. It will enable us to tackle public finance and currency and credit, agriculture and industry, foreign trade and internal exchange, capital accumulation and current consumption all at the same time. We shall have none of the chilling experience of having a sound scheme and lacking the wherewithal for executing it. It will be my task in the subsequent articles of this series to apply the principles of the new economics in concrete terms to every facet of the Indian economic problem.

(From Our Correspondent)

New Delhi, July 26.

THE brief monsoon Session of the Assembly which commenced this morning is likely to be rather dull with the present depleted strength of the house. About 70 members have arrived so far. The House will have a secret sitting for a day to hear the Commander-in-Chief's report on the war situation. The main debate of the session will be on the food crisis and the South African issue to be initiated by the Commerce Member and the Overseas Member respectively. All the seven official bills introduced today are of a rather non-controversial nature though minor debates are expected on the Select Committee Report on the Delhi University Act Amending Bill and the Bill to amend the Reciprocity Act. The Bill to consolidate and amend the law relating to Government Securities issued by the Central Government and to the Management by the Reserve Bank of India of the public debt of the Central Government intends to draw a clear distinction between those parts of the law which ought to relate to Government Securities as a whole and those which merely relate to promisory notes. This amendment is felt necessary due to the recent increase in Government loans held as stock certificates. It is also proposed to provide for a summary adjudication by the Reserve Bank of disputes as to the title to be the holder of a security with a guarantee of indemnity to ensure that the interests of the party who may ultimately succeed in establishing in a court of law his right to hold the security are not prejudiced. It is considered necessary to amend the Reciprocity Act as the existing legislation is merely declaratory and unworkable in practice. The amended bill empowers the Central Government to impose reciprocal disabilities on persons domiciled in British possessions. The bill to amend the Motor Vehicles Ordinance provides for the reinstatement of drivers on termination of their compulsory service under the ordinance. It also safeguards the position of an employee, who is about to be called up for service and who is dismissed by his employer in order to evade the liability to reinstate him. The bill to amend the Boilers Act provides for inspection of the feed water system which occasionally gives rise to serious accidents.

* * * *

Sir Ramaswamy Mudaliar, the new Supply Member of the Government of India, is now expected in New Delhi any day. I understand that as a result of the increasing importance of economic questions the arrival of Sir Ramaswamy Mudaliar may bring to the forefront the proposal for the creation of an Economic Committee of the Executive Council consisting of members dealing with economic problems. This will help in co-ordinating action of the various departments when their decisions relate to the same problem. It will be recalled in this connection that little has been heard of War Resources Committee of the Executive Council, recently set up as a result of the Grady Mission's recommendations.

* * * *

The Food Committee which has been sitting now for some weeks has concluded taking evidence and started general discussion. As soon as the discussion is concluded, Sir Theodore Gregory, who has been presiding at the meeting in the absence of the Chairman, Mr. Vigor, due to illness, will proceed to Simla to prepare his report. It is expected that the members will be in possession of the report in a fortnight after the present session of the committee is concluded and will assemble again after another ten days to discuss it. I understand that there is no likelihood of free trade being reintroduced in any area at present though there may be greater central control subject to the regulation of supplies by Provincial Governments according to their needs. There has been widespread criticism that the Food Conference did not decide on comprehensive and co-ordinating action on an all-India basis and failed to fix price ceilings. The plea that this failure was due to the powers given to the Provincial Government under the Government of India Act is untenable for whenever the Central Government has wanted to intervene it has done so with the utmost ease. In regard to the food crisis which if allowed to develop may seriously jeopardise the country's war efforts and lead to widespread suffering, a co-ordinated plan for the whole of the country is urgently called for, with ceilings for prices, a just allocation of available supplies and the maximum of imports possible. The Government, I learn, is again arranging to obtain wheat supplies from Australia which may be easier now due to a slight easing of the shipping situation. The imports, if they materialize, will certainly have a steadying effect on the market.

* * * *

How Indians are being gradually eliminated from the export trade of their country is made clear from a representation made by the Federation of Chambers of Commerce and Industry to the Government during the week-end. The allocation of shipping, directed from London and Washington, discriminating in favour of foreign exporters, the administration of various export controls the concessions and privileges granted to non-Indian monopoly organizations like the U.K.C.C. and selling of goods to Britain and United States at low rates than those prevailing in Indian markets have all worked to the detriment of Indian industrialists, consumers and shippers. The Government is urged to revise this invidious policy in consultation with Indian interests.

* * * *

The interim commission appointed by the Hot Springs Food Commission is now at work on "a specific plan for a permanent organisation in the field of food and agriculture." A study of the declaration, resolution and recommendations" of the conference made available here during the week-end shows that the organisation envisaged is something like the International Labour Office with no sanctions beyond the power to make recommendations to member governments regarding nutrition and all matters connected with agricultural production, distribution and conservation. The organisation will naturally be quite ineffective in filling the terrible gap between adequate nutritional needs and the existing dietary standards in Asiatic countries like India. Even where the International Committee makes some worth while recommendations. There is no guarantee taht they will be implemented, particularly in the colonial and semi-colonial countries. Moreover "the provision of adequate food for all the people in each nation" is regarded even by

MAKING AND BREAKING

Indian Red Cross Work Parties in Bengal have made, between November 1942 and March 1943, over 45,000 articles of hospital clothing and ward accessories.

This is a record for any province in India.

Your fighting men who return sick and wounded from battle, need these things urgently.

We need money to break another record.

the conference as primarily the responsibility of the nation concerned and this responsibility will be met primarily by national measures." International action is merely regarded as secondary. "The primary responsibility lies with each nation for seeing that its own people have the food needed for life and health. Steps to this end are for national determination." The international exchange of the latest results of agricultural research and experience, however, will be of some help to India provided there is a government at home to put these to practice. Some of the recommendations of the conference has Sir P. M. Kharegat, one of the delegates to the Conference, explained at a press conference particularly those asking member States to help producing countries by supplying them with fertilisers, machinery and seeds to stimulate production and expert advice, are of particular interest to India. It was recognised at the conference that countries like India should be encouraged processed agricultural articles instead of raw materials. The emphasis by the conference on economy of abundance is to be welcomed.

The mystery surrounding the complicated lease-lend transactions is not yet completely

(*Continued on page 225*)

THE AWAKENING OF A NATION

For centuries, the riches of India's soil attracted to her shores traders and adventurers from far-off lands. The fame of her handicrafts penetrated to the four corners of the earth.

The Industrial Age came, India became mainly a supplier of raw materials, and her arts and handicrafts languished.

The middle of the 19th century saw the economic re-birth of the country. The foundations of the textile industry were laid, and slowly in its wake followed other industries.

Foremost amongst the pioneers of that age was Jamshedji Tata. His vision saw far into the future, as he toiled to industrialise India and raise her stature in the modern world.

Tatas and many others who labour in this field serve a truly national cause which helps to bind the people together.

Tata interests, representing an invested capital of over 70 crores, cover:-

Iron and Steel . Textile . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Vegetable Oils . Industrial Investment . Hotels . Cement . Engineering . Scientific Research.

Bombay, July 27.

THE Indian Central Cotton Committee apparently shares the views of the E.I. C.A. for it would be difficult otherwise to explain its resolutions asking for the reopening of hedge contracts and the modification of the Defence Rule against Bank advances on the security of commodities. The immediate desire is the protection of the Indian cotton grower but over and above there is the distrust of Government interference which is however demanded in a request to buy cotton at minimum prices. Dr. W. A. Burns presided over the meeting last Friday, when the resolution referred to was accepted by the whole Committee including Sir O. W. Roberts representing the E.C.G.A. The speeches made by members emphasised the need to restore forward trading. The meeting passed another resolution stating that in view of the short period of 3 months available for marketing the cotton crop hedge contracts must be reopened immediately. Minimum prices required in case Government is called upon to buy and keep cotton should be fixed in consultation with the Central Cotton Committee according to a resolution sponsored by Mr. R. G. Saraiya. Most members of the Central Cotton Committee advocated the grant of an assurance to the cotton-grower as to prices in view of the many Control orders adopted recently on its own behalf it asked for a reconsideration of the decision of Government in regard to a grant of Rs. 2 lakhs from the cotton fund created increase in the import duty last year. The other was for an increase in the rate of cess from 2 annas to 4 annas per bale. The Committee expect that the states too would be ready to raise the cess on Indian cotton consumed in their mills. The Committee has learnt that steel baling hoops would come under lease-lend from the U.S.A. and there is no cause for anxiety at present.

The Indian Central Cotton Committee's latest argument so as to give the grower certain guarantees is supported by price movements in the cotton market. The market has been easier for the past fortnight owing to the slump in yarn and piecegoods the stability designed by Government in regard to raw cotton is absent; the speculator cannot as usual intervene to prevent a fall in prices. The press note of May indicated the settlement rates as well as the maxima for consumers. But the market is swinging backwards and the trade has got to help by cutting fluctuations out. Lancashire in the war period knows no price changes at all and in New York too cotton prices are stationary and sales so sparse as to invite special comment. If Government has intervened only in order to curb outside speculation the trade can have no grievance, and sometime later, when the trade is its old self changes may be made in the contract to keep the so-called investor out.

Dr. Hemandas Wadhwani from Hyderabad has met Mr. Savarkar and hopes to produce quickly Hindu-Muslim unity. But Mr. Jinnah has been attacked at home by a co-religionist and the police court may claim a good deal of his attention. Dr. Wadhwani certainly had his talk with Mr. Jinnah and has got no little satisfaction. His trip to Bombay was hardly well-timed though the Non-party Leaders are at present asking for the closing of the dismal chapter of strife a phrase that can be stretched to cover all unity moves. Mr. Savarkar encourages responsivist hopes without looking to the Pakistan plan and the League's claim to dominate Punjab politics. The Hindu Mahasabha, when it meets at Poona next week should anyway register anxiety and quite soon it may be found that Mr. Jinnah is not ready for compromise until he gets the assurance he expects from the British Government.

There have been many company meetings this month, mostly of Insurance Companies. Indian Life Offices have had a good year to judge from revenue figures and claim ratios. The loss of oversea connections has made very little difference to companies since they are able to get more business at home. The appeal of insurance as a method of saving for the future is certainly getting stronger to-day and business in 1943, promises to be better than what has been reported. Mr. Manecklal Premchand at the Bombay Life meeting drew attention to the maintenance of new business at the one-crore level and the higher average value of the policy issued in 1942. The Company's total premium income declined to Rs. 39.32 lakhs from Rs. 40.45 lakhs, but this was due to the fall in new business and the loss of premiums due from policyholders in enemy-occupied territory. Interest receipts, etc., rose to Rs. 6.69 lakhs and the Chairman put in the familiar plea for a ceiling to the income-tax collected from insurance companies as the nett yield on the Life Fund in the case of Bombay Life had flattened out to 3.56 per cent. Total claims in 1942 took Rs. 11.47 lakhs against Rs. 10.86 lakhs in the previous year. Expenses, particularly, commissions had been reduced and the expense ratio for 1942 was 25.3 per cent as compared with 27 per cent in 1941. The Fund has been raised by Rs. 24.13 lakhs to Rs. 204 lakhs at the end of 1942. A dividend and bonus of 12 per cent was declared at the meeting on Thursday last. The young Great Social is making fast and firm connections in Bombay.

The report that scarcity of yarn will lead to closure of 32 mills in Surat is as important to the piecegoods market here as a rumoured grant of railway priority for mill goods. The coal shortage may curtail working hours in Cawnpore mills, but in Surat the main cause is said to be yarn and cloth control. Thirty-two weaving factories have issued a notice to the effect that they are closing down from August 4. There is to be a deputation to Delhi to describe the circumstances in the handloom industry of Surat. The new Yarn Controller's inquiry into the situation in the handloom industry and the grant of facilities as regards yarn is anticipated by the decision taken by the Surat power-loom factories. Shortage of yarn is not unusual but the threat of fixed prices for all goods is novel.

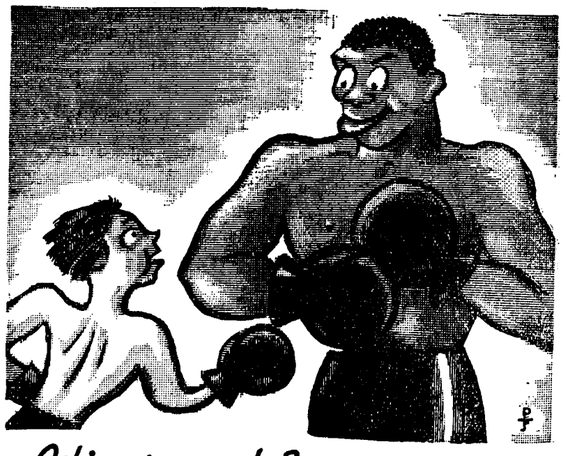
There were complaints about milk prices last month. There were complaints regarding profiteering in vegetable oil though oilseeds were subject to Control Orders insued in order to eliminate speculation. The middle-class pointed to the difficulties arising from scarcity even at a time when the crops are said to be better. Eggs are said to be dear beyond belief to-day. The report of restrictions on exports from Madras sent up the price of potatoes last week and even earlier. In the months July to December Bombay takes 200,000 maunds of potatoes from Madras which province has a surplus. But shortage of food grains may enlarge local consumption though it has been noted that the Nilgiri-growers have at present a surplus and are ready to sell at Rs. 25 per bag of 190 lbs. The Co-operative Sale Society is said to be ready to help Bombay out, and the price maintained appears reasonable though Bombay has no other source of supply in the monsoon period.

The adjustment of war risks premium for commodity stocks has been followed by an extension of the scheme to cover other goods and inland craft on rivers. The compulsory scheme is accepted though dispersal of commodity stocks in the anti-inflation drive will tell on the receipts of the Government. The compulsory insurance scheme for factories is over a year old. A claim for lower premium has been put forth, but the Government is obviously against a reduction because the scheme is due to lapse in March 1944 and rate revision can be undertaken then in the light of war developments. Commercial organisations asked for a reduction because the war damage premium has been reduced in the U.K. The Government is averse to a reduction because the premium in Britain is fixed per quarter and varies according to circumstances whereas the Indian factories insurance scheme is introduced for two years and the premium fixed last year (payable in 8 instalments) was meant to cover the whole period without undergoing the periodical revision applicable to the other compulsory insurance scheme.

South India

(From Our Correspondent)

Madras, July 28.



Food continues to be the foremost amongst the pressing problems of this Province. Both in the city of Madras and in the muffasil towns, preparations are being hurried up for an early introduction of rationing as envisaged in the recent order. The Government assure the people that the stock of rice in the city has increased and that all necessary arrangements for the regular despatch of Nellore rice have been made. But scepticism still prevails and the doubt whether we have enough stocks to carry us through till the next crop comes to our rescue is widely expressed. At a meeting of the Mayor's Civic Association held recently Mr. C. H. Masterman, Commissioner for Civil Supplies, admitted that there was only just enough foodstuffs in the Province to feed the people till the next harvest arrives. The cief difficulty lies in controlling the stocks and arranging for satisfactory distribution at reasonable prices. The authorities seem to be quite sure that effective co-operation from the Railways will be forthcoming and transport at any rate will not occasion a bottleneck, only co-operation from the public has to be full and satisfactory. The Commissioner has also promised to take steps to ensure that good quality rice is distributed to the public. It is expected that, since it is impossible for the Grain Purchasing Officer to inspect every bag of rice, food inspectors will be appointed for the purpose.

Heart-rending stories about the famine distress in Royalaseema are still pouring in. The Government have done and continue to do their best. But suffering has not yet been appreciably mitigated. Non-official organisations seem to be active collecting funds and rice to be rushed to the unfortunate thousands in the Andhra districts. The Maharajkumar of Vizianagram is taking a leading part in rousing peoples feelings for the famine striken folk and in organising relief measures. He has already collected Rs. 50,000 and efforts for further aid have been intensified. The well-to-do sections of this Province have got a grave responsibility of quickly responding to the call of the hungry in the Ceded Districts.

Complaints against the recent Cloth Control Order have not in any way decreased. Memoranda and communications are being sent to Government urging the cancellation or modification of this clause or that. The Southern India Chamber of Commerce criticises the short time-limit specified in the Order and points out that since transport difficulties are too many and too severe the rigors of the control order should be reduced. The control of forward contracts has been subjected to strong criticism and the Andhra Chamber of Commerce states, that while dealings in futures have been prohibited with effect from the 24th June, contracts previously entered into and still pending execution, were all based on prices higher than those which will rule in the market hereafter. Since production will be allowed in future only at controlled prices, the Government should cancel all earlier forward contracts or a clause similar to the relevant one in the Sugar Control Order should be adopted. Or, it is suggested, the earlier contract prices should be scaled down to the prices prevailing at the time of delivery under the control order. The Tinnevelly Piecegoods Merchants Association have represented to the Government that all cloth woven on handlooms should be exempted from the scope and application of the Cloth Control Order. The Committee of the Madras Yarn Merchants' Association are urging that since the cotton cloth and yarn control order has been issued to achieve an all-India control of the textile and yarn trades, some of the drastic regulations of the Madras yarn control orders should be immediately abrogated. Close examination of the numerous representations from the dealers and merchants Associations will be necessary, and, though the authorities of the Civil Supplies Department are confronted with a tough job, a suitable modification of the control order would be indispensable as otherwise the lack of co-operation from merchants would jeopardise the satisfactory working of the control scheme.

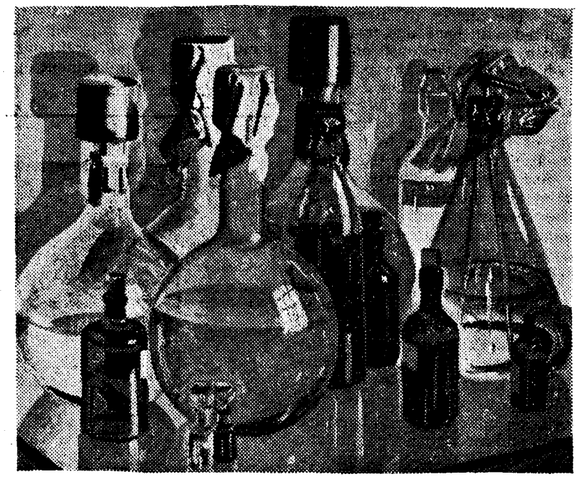
The Government of Madras are unconsciously setting up an example to the Banking organisations in the matter of affording facilities for savings. The country is now being flooded with inflation money produced by the Central Government and the big banks are doing the job of absorbing the surplus money. Now, the National Defence Loans and Defence Saving Certificates are being used as anti-inflation devices at the Provincial end. The Madras Government have decided to intensify the savings drive and in order to facilitate the sale of defence certificates the District collectors have authorised canvassers who would establish contact with the people and collect money for the purchase of securities on behalf of the subscribers. When any money is received from a subscriber, the authorised canvasser will give a receipt for it, and when the certificates or bonds are ready he would deliver them to the subscriber and take back the receipt given before. To convince the people of his *bona fides*, each canvasser will carry a certificate signed by the collecter authorising him to do the canvassing and collect money. The Government claims that by the end of December nearly Rs. 10 crores of surplus purchasing power will be withdrawn from circulation and that this savings will pull down the prices, help the war effort and develop the habit of saving, all at one stroke.

Village communications and rural roads are now receiving the attention of the Madras Government who will shortly draw up a scheme of classification of second and third class roads in the presidency. The District Board Engineers are fully co-operating with the Chief Engineer for Roads in chalking out a well co-ordinated five-year plan for the development of roads and improvement of marketing facilities in the districts. The urgency of rural roads in this province has been pressing since nearly 50.3 per cent of the total area is more than 10 miles away from the railway lines. Compared to other provinces, Madras is backward in respect of road development. For 51,487 villages of this province covering 142,277 square miles there are only 35,717 miles of roads whereas Bengal with her 86,618 villages spread over 77,521 square miles only enjoys 91,192 miles of roads. During the years 1935-1939, the amount spent on extra-municipal roads in this province have shown a decrease from Rs. 131.6 lakhs in 1935-36 to Rs. 112.5 lakhs in 1938-39, while all other provinces, excepting Assam, have recorded appreciable increase. Bengal for example has increased her expenditure from Rs. 73.4 lakhs to Rs. 96.2 lakhs during that period. Already during the depression period, this province had to experience an enforced neglect of roads owing to the reduction in the income of the District Boards. While lack of funds was responsible for bad maintenance, the increased motor transport contributed heavily to the depreciation of the rural roads. The poor local Boards could not themselves improve the situation and the Madras Government appointed Mr. A. Vipan as the Special Road Engineer to investigate the problem and suggest lines of improvement. He drew up a scheme involving co-ordination of inter-district roads, bridge projects, and feeder roads leading to rail-heads. His plan has been put into effect and appreciable progress has been made in recent years. Still the task of providing adequate mileage of marketing roads remains and it is hoped that this long felt want will soon be satisfied so that the agriculturists' staying power could be increased. The planning and construction of rural roads must be such as to tap the interior rural areas and relieve the strain of road-rail competition. Due attention should be paid to improve the wearing quality of the road and all avenues for the introduction of new types of cheap roads should be explored. Recently researches in road-making were conducted in Delhi and a "Test Tract" has been experimented with. It is to be hoped the Chief Engineer will also examine the possibilities of constructing this "Test Tract" in this province.

Asking too much ?

Not necessarily. In all the giant steel structures that we see around us, the "little chaps" are holding their own. We're talking about the nuts, bolts and rivets that link the girders—and take their full share of the strain, too: little heroes in their way! They've got to be accurate and immensely strong. Sounds a tall order? But that's our job.

INDIAN STEEL & WIRE PRODUCTS LIMITED



TATANAGAR

I.S.-11

(*Continued from page 213*)

count receives Rs. 1,79,912 and the Fund an addition of Rs. 1.37 lakhs. The increase in Indian business accounts for a rise of 36.47 per cent in the net income and the current year should see an improvement in revenue and profit alike. The premiums in the Marine Branch amounted to Rs. 2,47,365 and claims took Rs. 1,72,244. After meeting expenses partly offset by commissions and interest on the Fund the Fund is higher at Rs. 1.98 lakhs. The higher loss ratio is due partly to the inclusion of claims of preceding years. The B. I. G.'s local marine business is being developed slowly and cautiously, and hence the Chairman assumes that increase in business is assured. In the accident branch there was a slight setback in income owing to the reduction in motor policies but a recovery is on the cards, according to the Directors' report. Total premiums amounted to Rs. 4.64 lakhs and claims absorbed Rs. 1,35,468, the loss ratio being only 29 per cent. After transfer of Rs. 1,17,880 to Profit and Loss account the Fund stands at Rs. 2,15,592 at end of 1942. The Funds have been raised by the surpluses and the Company's investments have increased by over Rs. 4½ lakhs. The B. I. G.'s recovery from the adverse results of 1936 was complete earlier, but last year's improved results have been affected, to a certain degree, by higher taxation. The Chairman drew attention to the point that the Reserves are more important than the claim of Government to collect E.P.T. and the whole question of taxation of insurance funds demands a review. The B. I. G.'s balancesheet shows a paid-up capital of Rs. 10 lakhs. As Sir H. M. Mehta observed the Company is in a dynamic stage and an increase in capital is warranted, particularly, in view of new opportunities for Indian insurers. The Funds total Rs. 9½ lakhs and together with the capital have gone into investments totalling Rs. 19.53 lakhs at the end of 1942 though the market value is higher in every case. Cash balances etc. cover the outstanding claims. After allowing for liability for taxation, the balance at credit of Profit and Loss account is shown as Rs. 1,19,400 out of which sum Rs. 75,000 is applied to pay a dividend of 12 annas per share. 7½ per cent free of tax. The uncalled capital of Rs. 40 lakhs allows the increase in capital mentioned by the Chairman and the B. I. G.'s improved position this year may be reflected in a paid-up capital raised to promote expansion.

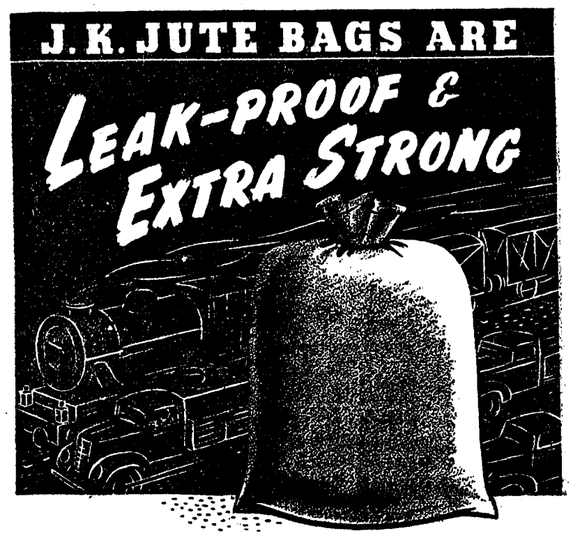
Aspects of an Industry No. 19.

THE DISPENSARY

THE part played by the British chemical industry in the discovery and preparation of healing drugs and specifics is fundamental. It is not perhaps as obvious. That is, people do not readily associate the soda bicarbonate they buy, or the sulphanilamides that the doctor prescribes, with the limestone, salt and coal which are the raw materials of the great chemical factories. The apothecaries of old—and in some parts of the world even today—made their extracts, decoctions and elixirs chiefly from vegetable substances. These were given to patients without any precise knowledge of what their effects would be. About a hundred and fifty years ago the science of pharmacology began to be developed. The pioneers tried out their discoveries on animals and even on themselves. This method of trial and error sometimes had painful results, and one of the fathers of the science, a Scotsman, William Alexander of Edinburgh, nearly killed himself. Nowadays the research chemist, the pharmacologist and the medical practitioner work together to perfect new drugs with new effects and special properties. The great majority of these are organic compounds, many of them the result of research in the dyestuffs industry. Suramin, to give one example, a specific for African sleeping sickness, was discovered as a result of the biological examination of dyes related to Congo Red—one of the earliest synthetic dyes, which is still used for the bright garments of the East. Modern drugs are largely synthesised from coal tar, from which substances like benzene, toluene and naphthalene are first obtained. These are next modified and combined with other chemicals by the research chemist. There are few industrial chemicals produced today which are not used at some stage in the preparation of drugs. The chemical industry is the basis on which the British research chemist is building up a constantly increasing supply of new and better drugs for the benefit of the Indian as much as the British community of peoples.

ICI

Imperial Chemical Industries (India) Ltd.



A New Investment Trust

For the particular investor who puts caution and care in the choice of holdings always first the investment Trust provides a great convenience. The Bombay flotation (whose prospectus appears in this issue) is distinctly helpful to the ever-growing class of investors for whom speculation is ruled out and who put a regular, moderate return above the enticing possibility of capital appreciation. The Oriental Industrial Investment Corporation Ltd. which offers both ordinary and preference shares for subscription has very important advantages. The investment trust is most familiar to Scotland but it is no novelty in India for investment trusts have become popular of necessity in recent years. The shares of investment trusts are ranked with bank and insurance shares for convincing reasons, and the principles which will guide the policy of the new trust have been setdown in the prospectus. They are sufficiently comprehensive to obviate questions as to the place and purpose of this addition to financial machinery. The function of a trust is to reduce the normal risks and ensure stability of capital and income for the shareholder. The purely financial issue has many specific merits and oversea connexions may follow the end of the war. The assistance that a trust may give to promising new ventures makes the trust important for others besides its shareholders, and one may emphasise that mixing and spread still offer real advantages denied to other agencies of investment.

The association of Mr. K. U. Advani has been taken up and more than three-fourths of the preference capital has been provided through the firm designated as Secretaries of the Trust. The Trust begins its career with the guarantee of more than half its issued capital, and the constant attention of a leading broker's house will be available to the management in this case. The emience of the Directors may have no little effect on the support forthcoming from the investing public. Sir S. Askuran, a leading figure in Bombay business and sport, is Chairman, and Sir Rustom Masani, one of the creators of the Central Bank, is on the Board along with Mr. Ramniwas Ramnarain. The Board is small and carefully chosen so as to show that a coherent, unified policy will be pursued by the Trust. It is certainly necessary to draw special attention to the fact that delay has led to an unusual degree of success in regard to the placing of the shares. For Mr. Advani has procured a considerable part of the capital, and the issue (permission under the new Rule having been secured) appears at a time when the investment horizon is clearing up rapidly. To dogmatise on the success of the issue is easy, but one must end a review with commendation of the prospectus to the investor's attention in the belief that the advantages of knowledge and discrimination will weigh with him in his selection of a highly eligible new security. Few will deny that the choice of an investment trust's share is a ready solution of most problems for the investor to-day. That 20 per cent of the capital secured is meant for Govt. loans is a guarantee of backing for the war effort. Further advantages are offered in the support promised to India's industrial development and the absence of any demand for imported materials or plant as well as the conditions laid down as to the limit of investment in any particular stock or share.

A New Coal Concern.

A colliery in working condition in the Central Provinces has great advantages in the present conditions. For, with the existing difficulties in regard to transport facilities Central Provinces collieries have been asked to provide as much coal as they can possibly raise to the consuming markets in Western India. The Shree Mahakali Coal Company under the managing agency of Messrs. Amritlal Ojha and Company, Limited, starts, thereofre, with a great initial advantage. Mr. Ojha has an instinct for picking up good propositions. It will be remembered that the New Bansdeopur Coal Company, Limited, now in a flourishing condition, was only a few years ago bought from Messrs. Jardine Skinner & Co. The entire capital of the new company has been subscribed and it is reported that in unofficial transactions the shares are quoting at a premium of Rs. 2 to Rs. 3 per share.

J. K. Jute Bags and Hessians are made extra strong to withstand heavier weights and an increased number of fillings. The special sewing and twine binding of the seams provide for complete safety of goods in transit.

cleared. All Government statements so far regarding these deals are in general terms and the exact cost of the Lease-Lend Bill India has to foot is still a secret. Sir Jeremy Raisman explained in the Assembly today that the liability attaching to the receipt of lease-lend stores, whatever it may be, is of course, assured by the Government to which they are allocated in this way. Accordingly lease-lend aid to railways, Post and Telegraph, and other civil concerns—public and private—in India, is allocated to India. As regards the allocation of lease-lend supplies sent for defence purposes, the allocation between the Government of India and the British Government is determined in accordance with the principles of the financial settlement and depends upon the nature of the stores and the manner in which they are utilised. India is thus allocated lease-lend, the cost of which if they had not been lease-lent, she would eventually under the settlement have to bear herself. Such defence stores consist mainly of tanks and M.T. vehicles of all kinds since the British Government have accepted complete liability for providing other non-indigenous stores and equipment required for India's expanded army and air forces. "The best practical method of allocating lease-lend aid" between Britain and India is still being considered. As regards the issues of rations, clothing, etc., to the American forces in this country, under the Reciprocal aid arrangements, the transactions were not always regular or uniform and it was found difficult to assess their cost by the capitation rate method. It has accordingly been decided to adopt a direct method of assessing the value of these supplies. The Government are engaged in the task of completing their records of lease-lend aid and comparing them with those which the Indian Supply Mission in America have been asked to maintain. The records are not yet completed and the Government are at present unable to give any figures regarding the respective shares of India and Britain.

HILL BIRD.

(*Continued from page* 218)

I had the pleasure of visiting the factory of Narayan Hosiery; and I was impressed by the new and fresh ideas which are being put into effect alike in the manufacture of the hosiery goods and in the improvising of various kinds of machinery, which hitherto were being imported. The drive and initiative are furnished by the young proprietor, Mr. Lokanath Jalan. I had, further, the pleasure of using Narayan hosiery; and, from my experience, I can testify that the fabrics are cool and correct-fitting. I always believed that hosiery under-wear is the national dress of a country with a climate like India's; and I see unlimited prospects for the hosiery industry generally, and for Narayan Hosiery in particular.

'EAVESDROPPER'

(*Continued from page* 203)

most worthy of their attention under existing conditions, is giltedged. The giltedged operator will be doing business in which the risk is minimum and the chance for appreciation is maximum. That is why we would like banks in Calcutta giving careful thought to what they can do to strengthen and enliven the giltedged market in this city.

As was to be expected, applications at this week's auction of treasury bills were very heavy. They just fell short of Rs. 20 crores. In spite of such heavy applications there was nothing like keen bidding. For, the average discount rate records a decline of only 2 pies to 15 annas 7 pies per cent per annum. The Reserve Bank would have done well in accepting applications only at Rs. 99-12-3 and rejecting all applications at Rs. 99-12. Such a gesture would have been correctly understood by the market as an indication that what is proper in existing circumstances is not only heavy tendering but also keen bidding. There was no special reason why it was necessary to secure the full quota of Rs. 8 crores from tender bills. If the Reserve Bank got a few crores less this week, the ways and means position of the Central Treasury would not have suffered in any way. We repeat that we would like to see the treasury bill discount rate pegged round about 12 annas per cent per annum, during this slack season.

There has been very little doing in the exchange market. Slack money means slack exchange.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D. A. bills on London at 1s. 6 9/32d. and four months at 1s. 6 11/32d.

Banks are buyers of T. T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

Interbank call money is unchanged at ½ per cent lenders.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, July 29.

FREE trading has been restored in the Jute Industry by a Bye-law passed at the Committee Meeting of the I.J.M.A. on 27th inst. By this bye-law that of 14th June, which prohibited all selling of manufactures and restricted the purchase of jute to individual mills' quota requirements under the American order, has been cancelled. The maximum prices for all classes of jute have been reaffirmed, but mills are at liberty to purchase whatever quantities of jute they please within these price limits. With regard to the sale of manufactured goods, maximum prices have been laid down for all standard types, presumably with the approval of the Supply Department and the Central Government. In so far as Hessians are concerned, these maxima are merely token prices for the time being, as mills' production is fully occupied with the American order right up to the end of March, so that the prices fixed would only be applicable to business which anyone taking a long view cared to place for delivery April 1944 and beyond. As a matter of record, however, the maximum limits may be quoted as Rs. 21-6 for 7½ oz./40, Rs. 21-10 for 8 oz./40, Rs. 28-2 for 10 oz./40 and Rs. 28-8 for 10½ oz./40. It will be noted that these maximum prices have been fixed at a level appreciably higher than those at which the American order was accepted and also higher than the current market quotations. The reason for this is doubtless with a view to making provision for the steadily rising costs of manufacture, the level which may be attained by these being beyond the power of anyone either to control or to prognosticate. In the matter of Heavy Goods, which mills *are* in a position to sell, the prices have also been fixed at a level considerably above the current market. They are on the basis of Rs. 675 per ton, and for 2¼ lb. bags like "B" Twills, Heavy Cees and Cornsacks, are fixed at Rs. 67-12 maximum. The ceilings for other standard descriptions are Liverpools at Rs. 75, D. W. Flours at Rs. 79, "A" Twills at Rs. 79-8 and Cuban Sugars at Rs. 81. Mills are given discretion to sell other non-standard fabrics on a parity with the above maximum prices, and to decide any doubtful questions which may, and are almost bound, to arise, a panel has been constituted, consisting of the Vice-Chairman of the I.J.M.A. acting with a representative of the Shippers of Fabrics, to deal with such matters. A similar panel of reference consisting of the same gentleman representing the mills acting with a representative of the Pucca Balers will deal with any questions arising concerning pucca bales. It is not anticipated that any difficulties will arise in the matter of Loose Jute.

In order to avoid the evolution of anything in the nature of "Black Markets" in connection with the products of the Industry, the widest publicity is to be given in all consuming markets to these decisions of the Committee, and it is further laid down in the bye-law that Member Mills shall, at the request of the Committee, undertake either in whole or in part the manufacture and supply at prices not exceeding those fixed, any orders for jute manufactures which, to the satisfaction of the Committee, have been unobtainable by consumers through ordinary trade channels at the equivalent of the prices sanctioned by the Bye-law.

A Special Meeting of the members of the I.J.M.A. was called for Friday, 30th July, to give the Chairman an opportunity to explain so far as was permissible, the reasons for and the stages in the negotiations with Government in this connection.

The reactions of the market to these decisions have not been so marked as might have been expected. Prices registered some improvement in the end of last week, but since the promulgation of the new Bye-law there has been no further noticeable advance. Although it is again permissible for mills to trade, we have pointed out above that their whole hessian output is already earmarked up to the end of March, 1944, while as regards Heavy Goods, the enforced week's holiday this week, which time will not be made up, has thrown back the delivery of current orders and it is by no means certain that this week will see the end of the mills' coal difficulties. Mills are therefore unwilling to commit themselves to any extent till they can see their way more clearly and, except for some specialities for which a premium is obtainable, little fresh business has been recorded. Nor has there been any tendency on the part of the Bazar to try to rush prices up to the maximum rates laid down, as in normal circumstances might have been expected. The Bazar has apparently realised that the outlet for exported goods is strictly limited and controlled, while for the country trade there is a superabundance of goods and to spare to fill all likely requirements for some time to come. So the net result of the promulgation of the new Bye-law on the market has been almost nil, which presumably is an indirect indication that it embodies sound economic policy in present circumstances.

The Coal situation is still the cause of no little disquietude amongst the mills. A certain amount has certainly been received at the dumps but nothing like what would be necessary to justify the resumption of work free from the ever-recurring prospect of further shutting-down. The opinion is generally held that until a really adequate reserve of coal has been accumulated, it would be wiser policy to continue the self-imposed holiday rather than make a premature start and have to close down again. The breach on the railway has, of course, thrown a large-sized spanner into the works which may take longer than expected to extract, and the consequent congestion on alternative routes complicates a problem which appears beyond the wit of those in authority to solve. There are vital public services which *must* get coal supplies and the handling capacity of the railways at the moment seems to be taxed to the utmost even to feed these. And however urgent the jute mills may consider their demands, it stands to reason that they must come some little way down the list of priority.

There has been a lackadaisical tone in all markets during the period under report and the Export Jute market has been no exception. A few small sales of Old Crop Dundee Daisee 2/3 were reported at Rs. 85 and Rs. 84-8 with 4s done from Rs. 78 to Rs. 76 for August shipment. Most of this was inter-Baler and little of it fresh business. Mills have been generally out of the market, and even after the "quota" ban was lifted, only a very limited quantity of business was recorded, mainly in Old Crop Dundee Daisee 2/3 at Rs. 85 to Rs. 85-8 and in Dundee Tossa 4s at Rs. 88, both for quick shipment. Mixing Cuttings sold at Rs. 40.

The Loose Jute market also has been mainly idle and the permission to resume purchases has resulted in little fresh enquiry. Limited quantities of European packing are on offer at full maximum agreed rates and even Supervised Jat marks cannot be bought under that level and are only sparingly offered at that. Indian Mills have shown a small interest in Indian Jat packing at two annas under maximum. There is no pressure to sell as imports into mofussil markets are not yet coming forward in quantity and are held for prices which in many cases exceed Calcutta parity. Most sellers have a fair bear account open and are disinclined to commit themselves further till they can do some more covering.

As noted above, the announcement of the fixation of maximum rates for the sale of all types of fabrics, though these were at considerably higher levels than the ruling market rates, had little effect on the market. Towards the end of last week prices hardened quite noticeably, the principal counters being marked up, 9 porters from Rs. 19-10 to Rs. 20-4, eleven porters from Rs. 26-8 to Rs. 26-12 and "B" Twills from Rs. 61-12 to Rs. 63. Up till the 27th business continued to be purely Bazar, sales being reported in ready nine porters at Rs. 20-4, in October-December elevens at Rs. 27 and in "B" Twills at Rs. 64 August and at Rs. 64-14 October-December. When the selling ban on mills was lifted it only applied in practice to Heavy Goods, the current market rates of which proved unattractive to mill sellers except for a few instances here a premium for specialities was obtainable. Salts sold for ready at Rs. 56, Cape Packs at Rs. 3-4 and Dump Packs at Rs. 3-5, both for August shipment. Little else of interest has been recorded. Closing quotations are, 9 porters at Rs. 20-8 any position up to December. 11 porters at Rs. 27 ready, Rs. 27-2 August-September, Rs. 27-4 October-December. "B" Twills Rs. 63-8, Liverpools Rs. 69, Cornsacks Rs. 64, all for near delivery.

JUTE

Calcutta, July 29.

FOLLOWING the statement by the Bengal Government that the maximum prices fixed by the Indian Jute Mills Association had no statutory authority, and that prior to the fixation of maximum prices the Provincial Government had not been consulted, it was expected that some early action would be taken by the Indian Jute Mills Association regarding the fixation of maximum prices for jute goods as well. It was announced on Wednesday that maximum prices had been fixed for jute goods also, and that there was no change in the prices fixed for jute, earlier. The restrictions on the purchase of jute and the ban on sale of manufactured goods by mills have been removed. Mills are now free to effect purchases of jute for unlimited quantities at the agreed maximum rates.

Earlier in the week, rather quiet conditions were noticeable as mills were not taking any interest in the market following the decision to close down mills for one week to enable the authorities to bring in coal supplies. There was also a tendency to await the decision of the Indian Jute Mills Association regarding the fixation of maximum prices for jute goods. There were some sellers at rates slightly below the maximum prices but they did not show any great anxiety to do business as imports into the mofussil districts were on a small scale and it was feared that the standing crop might have been affected by the recent floods. During the last two days firmer conditions have been noticeable and quotations are nominally unchanged at the maximum levels.

In the loose jute section, only a small amount of business was reported earlier in the period under report. Indian Jat Middles and Bottoms were available 8 annas lower than the maximum rates with Supervised Jat 4 annas per maund lower. In the last two days, however, quotations are fully steady. It is pointed out that mills might be more liberal in their purchases now that the ban on forward sales has been removed.

In the pucca bales section shippers were not active and only a very small amount of business was done in Dundee Daisee 2/3 at Rs. 86 per bale and Dundee Daisee 4's at Rs. 76 per bale. Mills are reported to have purchased Firsts, Lightnings and Hearts combined at Rs. 2 below the maximum rates, Firsts alone commanding a premium of Rs. 2 per bale. Mills also bought Dundee Daisee 2/3 at Rs. 88.

JUTE MANUFACTURES

Calcutta, July 29.

THE announcement regarding the fixation of maximum prices for jute goods also has not had any effect on the market as it is felt that with the freedom of mills to accept orders directly from consumers, speculators would not be allowed to have the upper hand. Beyond the slight improvement in rates earlier in the week on the announcement by the Indian Jute Mills Association to the effect that mills would close down for one week, there has not been any appreciable rise in prices in the last two days. Business passing has been on a small scale and confined to interbazar transactions. 9 porters July were Rs. 20-6, August/September Rs. 20-6 and October/December Rs. 20-6. 11 porters July were Rs. 27-2, August/September Rs. 27-4 and October/December Rs. 27-6. Maximum prices now fixed are Rs. 21-10 and Rs. 28-8 for 9 porters and 11 porters respectively.

As we go to press the following communique has been issued by the Indian Jute Mills Association:—

"The hopes and aims of the Association in their voluntary closure of mills for one week to meet the difficulties in the coal supply position, have not been realised. These difficulties still remain and the Association Committee therefore with the support of their members have decided to close all mills down for a further week ending on the 7th August.

The supply position will not be adversely affected as mills from their stocks are well able to meet all demands of them.

Labour will still continue to receive the same level of compensation payments from the mills even though not working; and their food rations are assured."

In the Heavy Goods section only a very small amount of business has been reported and quotations are higher in sympathy with the hessian market. B. twills for August delivery sold on the basis of Rs. 64, Liverpool twills Rs. 69 and Cornsacks Rs. 63-8. Under the bye-law that has been passed by the Indian Jute Mills Association, B. twills and Cornsacks must not be sold higher than Rs. 67-12 per 100 bags. All other fabrics have price maxima determined in relation to the standard jute cloth manufactures.

GOLD

Calcutta, July 29.

THE bullion market was inclined to be rather quiet earlier in the week with not much of business passing. But the lower levels attracted some investment buying and quotations are slightly higher than the lowest levels for the week. It will be remembered that there was a sharp decline in prices following the announcement that a new ordinance was promulgated empowering the Government to restrict advances by banks against commodities including bullion. After the sharp decline in prices some buying and covering has naturally resulted in a slight recovery but there has not been any reversal in the trend and it appears that quotations will be fluctuating around present levels for sometime to come. Gold ready closed at Rs. 71-4 against the lowest level for the week of Rs. 68-14. Sovereigns after being lower at Rs. 49 are now quoting at Rs. 51-8. For a time, the quotation was as high as Rs. 52-12. In the local market the quotation is Rs. 72-12 for gold ready and sovereigns Rs. 52-8.

SILVER

Calcutta, July 29.

SIMILAR conditions have been noticeable in the silver market also and the close is at the highest levels for the week. Earlier in the week the quotation was around Rs. 98. The close has been fully steady at Rs. 105-12. There has been some genuine buying at the lower levels. There were reports earlier in the period that the Government of India was arranging for the import of silver on lease-lend basis. How far they have been successful is not known. In any case it is very doubtful whether lease-lend silver will be available for the market as it is pointed out that American silver can be used only for coinage or for other purposes directly connected with the war effort.

PIECEGOODS

Calcutta, July 29.

THE piecegoods market was easier and sellers were eager to do business. As it has been definitely notified that the Government will not grant general extension of time to holders of stocks manufactured prior to July 1943 and as it has been announced that cloth and yarn will be granted priority next to food grains, it is felt that there will not be much delay in regard to deliveries and that there will be compulsory liquidation of stocks in the next month or two. Earlier in the week it was felt that the difficulties on account of transport might possibly result in local shortages of cloth and that dealers would not be forced to liquidate their holdings.

Stock Markets to-day and to-morrow

JUTE MILLS CLOSE DOWN FOR ANOTHER WEEK

After earlier weakness a slightly steadier tendency has been noticeable on the stock markets both in Bombay and Calcutta. The news regarding the fall of Signor Mussolini had a mixed reception in the market. For a time Bombay operators were inclined to attach a bearish significance. It was said that peace feelers might have a discouraging effect on stock exchange values. Later considerations, however, have resulted in a recovery in prices. But for the cautious attitude adopted by both operators and investors and the uncertainty regarding the future of the cotton textile industry, the late recovery in prices would perhaps have been more pronounced. The Calcutta market was rely steadier though business continued be on a small scale. The announcement regarding the fixation of maximum prices for jute manufactures by the Indian Jute mills Association and the decision on Friday afternoon to close down mills for another week, that is till August 7, 1943, however, have had a depressing effect though there has not been any marked decline in prices in the jute section.

* * * * *

The feature of the week is the continued strength of the giltedged securities section. There has been a further rise in the quotation for 3½ percent paper to Rs. 96, with the increase in the selling price of the Reserve Bank from Rs. 95-8 to Rs. 96.

* * * *

Friday afternoon's news regarding the decision of the Indian Jute Mills Association to close down mills for a further week, ending on August 7, 1943, and the reported difficulties of the cotton textile mills in the Western Presidency, have naturally given rise to the fears regarding the difficulties in respect of coal supplies affecting production materially. It is only to be hoped that the authorities will do everything in their power to provide adequate facilities for the transport of coal as the earnings of companies will be drastically affected if continuity of working is not ensured.

Unless there is an improvement in the internal situation, it would be idle to expect any sustained recovery in prices. Little importance is being attached at the present moment to external developments. Otherwise, the favourable turn of events in the war situation should have had a greater influence on the stock markets long ago.

The accounts of *Borooah Timber Company Limited* for the year ended March, 1943 make disappointing reading. But having regard to the difficulties experienced in the matter of extraction the results for the year should be considered satisfactory. The profit, before providing for taxation and depreciation, is Rs. 1,93,535 against Rs. 2,52,488 in the previous year. The amount provided for depreciation is Rs. 628 against Rs. 1,712 while the provision for taxation is Rs. 63,693 against Rs. 89,923. The transfer to reserve is lower at Rs. 20,000 (Rs. 40,000) while the amount written off against advances is Rs. 4,256 (Rs. 6000). Allocation to reserve against Pine Consignment is Rs. 10,000 against Rs. 15,000 to Reserve against G.P. notes in stock. After these allocations it has been found necessary to reduce the dividend to 10 percent from 12 percent on the previous occasion. The amount carried forward is slightly lower at Rs. 14,966 against Rs. 17,602 brought in.

* * * *

Tezpore Tea Company, Limited, another company belonging to the Shaw Wallace group, has been able to report an increase in the profits for the year ended December 1942, thanks to the larger crop turned out from the Company's estates. The net profit, before providing for taxation and depreciation, is Rs. 6,08,387 against Rs. 4,47,087 for 1941. The amount transferred to depreciation and other funds is Rs. 1,38,699 against Rs. 1,36,032 while the provision for taxation is Rs. 2,08,449 (Rs. 1,39,222). The dividend on ordinary shares has been increased to 15 percent from 10 percent. During the year debentures to the value of Rs. 1 lakh were repaid. The outstanding debenture capital is Rs. 3 lakhs.

* * * *

Against the loss for the year 1941 of Rs. 1,62,615 the *Textile Machinery Corporation Limited* has been able to earn a net profit of as much as Rs. 5,17,922 for the year ended December, 1942. The Company's works at Belghurria were exclusively engaged in war work throughout the year. The products manufactured by the Company have a good market and are well appreciated. Some machinery and a part from the stores were removed to Gwalior with the consent of the Government to set up an additional working unit for the manufacture of looms and spinning frames. The erection work at Gwalior is complete and the programme of manufacturing has been taken on hand.

After wiping out the debit balance carried forward from the previous accounts and providing Rs. 1,63,946 to depreciation, the arrears of dividend on the preference shares as also the dividend for 1942 have been paid. The ordinary shares receive a dividend of 8 annas per share. The amount carried forward is the substantial sum of Rs. 72,669.

* * * *

The announcement by the Indian Mills Association on Wednesday regarding the fixation of maximum prices for jute manufactures did not have any appreciable effect on the market as it was generally expected that some such announcement would be made, there being reports earlier regarding a comprehensive scheme for control of prices of jute manufactures under the consideration of the Association. The market, however, was certainly not prepared for the decision of the Association on Friday afternoon to close down mills for a further week ending on August 7, 1943. The hopes and aims of the Association in their voluntary closure of mills for one week to meet the difficulties of the coal supply position have not been realised. It was pointed out that the cost of keeping labour paid was about Rs. 35 lakhs for the industry. The total loss so far as the mills are concerned will be Rs. 70 lakhs for the period they remain closed. There is in addition the loss in revenue on account of the stoppage of production. With the small margin of profit on sales and the difficulties in regard to coal supplies, there is naturally a tendency to be pessimistic regarding the outlook for jute shares.

* * * *

The results of *New Samanbagh Tea Company, Limited* would perhaps have made a better showing if there had been no reduction in the crop outturned from the company's estates. The net profit for the year ended Dec. 1942, before providing for taxation and depreciation, is Rs. 3,00,407 against Rs. 2,36,296 for 1941. The provision for taxation is Rs. 99,155 against Rs. 71,437 while the amount set aside to depreciation is Rs. 5,000 (Rs. 6,999). The transfer to General Reserve is Rs. 40,000 (Rs. 41,609). The dividend on the ordinary share is increased to 30 per cent from 25 per cent. The amount

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 30.

THE Calcutta Stock Exchange has been slightly firmer during the past few days though there has not been any appreciable increase in the volume of business passing. The news regarding the resignation of Signor Mussolini, early in the week, did not have any effect on the local market though it was generally believed that it was favourable from the market point of view. The slightly steadier bullion market and the favourable progress in every theatre of war have caused a slight recovery in prices during the last two days, but there is still a tendency to await further developments. The announcement of maximum prices for jute manufactures did not affect the market as it was generally expected that the Indian Jute Mills Association would take early action and that it had a detailed scheme under consideration.

The feature of the week is the strength of the giltedged securities section. With the increase in the tap rate for 3½ per cent Paper from Rs. 95-8 to Rs. 96, there has been a further rise in market quotation for this non-terminable loan to Rs. 96-1 and quite a large volume of business has been reported. Owing to the apathetic tone of the other sections, there has been greater interest in giltedged and semi-giltedged securities. Terminable loans also have been marked higher in sympathy with 3½ percent Paper, 3 percent 1963-65 being noted at Rs. 96-8, 4 percent 1960/70 at Rs. 111, 3 percent 1951/54 at Rs. 100, 3½ percent 1947-50 at Rs. 104 and 5 percent 1945/55 at Rs. 107-10. There is good demand for Provincial loans without many sellers and a transaction has been reported in 3 percent 1961/66 U. P. loan at Rs. 96-8. Money conditions have remained unchanged and there has been a further decline in the average discount rate from 15 annas 9 pies percent per annum to 15 annas 7 pies percent per annum.

Some business has been reported in Public Bodies Debentures, 3¼ percent *Howrah Bridge* debentures being done at Rs. 97-14. 5 percent 1956-86 debentures of the same public body were done at Rs. 125-4. No business has been reported in industrial debentures.

Business in preference shares also has been restricted owing to the scarcity of sellers. Among first-class jute mill preference shares, *Kamarhatty* were noted at Rs. 158 and *Northbrook* at Rs. 151-8, *Hukumchand* changed hands at Rs. 162-8 ex-dividend, *Kumardhubi Engineering* had good buyers at Rs. 243, while *New Victoria* were sold at Rs. 10-4 ex-rights. *Steel Corporation* preference shares were noted at Rs. 106, and *B.I. Corpn.* at Rs. 201-8. *Orient Paper* were dealt in at Rs. 117 and *Purtabpore* at Rs. 20-12.

Bank shares have been rather quiet with *Imperial Bank* fully paids at Rs. 1,790 ex-dividend and *Reserve Bank* at Rs. 113 ex-dividend. *United Commercial Bank* were slightly lower at Rs. 7 premium.

In the Cotton section, slightly firmer conditions have been noticeable towards the close and it should be said that the closing prices are at the highest levels for the week. It is felt that the recent decline in prices has been overdone. *Benares* were Rs. 12-6, *Bengal-Nagpur* Rs. 28-12, and *Cawnpore Textiles* Rs. 11-5. *Elgins* were nearly 4 points higher at Rs. 72 while *Kesoram* were Rs. 14-8. *Muir Mills* were Rs. 405 and *New Victoria* Rs. 7-4 ex-rights.

The Coal section has remained steady though *Amalgamated* are slightly lower at Rs. 37 with *Bengal* at Rs. 465. *Burra Dhemo* were steady at Rs. 7 and *Burrakur* at Rs. 16-8. *Central Kurkend* were firm at Rs. 17-1, *Pench Valley* at Rs. 41, *South Karanpura* at Rs. 6, *Standard* at Rs. 22-12 and *West Jamuria* at Rs. 34-6. In spite of the disappointing report for the half-year ended December 1942, *Samla* were steady at Rs. 4-10, the market still being hopeful of the proposed capital reduction scheme being advantageous to the buyer.

Rather quiet conditions have been noticeable in the jute section. It will be remembered that there was some selling last week on the decision by the I. J. M. A. to close down mills for one week to enable the authorities to get adequate coal supplies for the industry. As it was generally expected that some early announcement would be made in regard to maximum prices, the decision on Wednesday this week of the Indian Jute Mills Association to fix maximum prices for standard qualities has not had any effect on the market. Adamjee was noted at Rs. 33, Alliance Rs. 376, Anglo-India Rs. 389, Bally Rs. 342, Chitavalsah Rs. 25-5, Gourepore Rs. 785, Howrah Rs. 61-9 and Hukumchand Rs. 26-3. India were unchanged at Rs. 544 and Nuddea at Rs. 100.

Quieter conditions were noticeable in the Engineering section in the early days of the week, *Indian Iron and Steel Corporation* being done as low as Rs. 33-12 and Rs. 26-10 respectively. A slightly firmer tendency has been noticeable in the last few days and quotations are now around Rs. 34-6 and Rs. 27 respectively. *Britannia Building and Iron* were in some request at Rs. 13-12 while *Jessop & Co.*, were not very much unchanged at Rs. 20-6. *Kumardhubi Engineering* were uninteresting around Rs. 7 as also *Marshalls* at Rs. 3-4.

Sugar shares have been a bit easier with *Balarampur* at Rs. 13-10, *Belsund* at Rs. 9-12 and *Carew & Co.*, at Rs. 18-4. *Champarun* were Rs. 36-6, *Samastipore* Rs. 16 and *Cawnpore* Rs. 34-8. The announcement of an interim dividend by the U. P. Sugar Mills Company Limited for the current year has not had any great effect on the market. The quotation for these shares is now around Rs. 25-14.

Tea shares have not been very firm, *Hasimara* being noted at Rs. 64-4 and *Hantapara* at Rs. 703. *Hattikhira* were Rs. 31-4, *Killcott* Rs. 68-8 and *Roopacherra* Rs. 22-14. *Sonai River* were Rs. 25 and *Tezpore* Rs. 17-8. The last mentioned company has declared a dividend of 15 percent for the year ended December, 1942.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper* have been uninteresting at Rs. 3-6 and Rs. 2-9 respectively. *Dalmia Cement* were noted at Rs. 18-2, while *Aluminium Corporation* changed hands at Rs. 18-4. *Associated Hotels* were easier at Rs. 14-4 with *B. I. Corporation* uninteresting at Rs. 5-12. *Indian Wood Products* were steadier at Rs. 31 and *Spencer & Co.*, at Rs. 9-3. *Rohtas Industries* were Rs. 31-6. A dividend of 13¾ percent has been declared for the year ended Octobr 1942. Among Shipping companies *Calcutta Steam Navigation* were Rs. 245 and *India General Navigation* Rs. 119. *Port Shipping* were crossed at Rs. 20-12. Paper shares were slightly higher with *India Paper Pulp* at Rs. 188-8, Titaghur *Paper* at Rs. 25-9 and *Mysore Paper* at Rs. 24-12. *Humayan Properties*, ordinaries, were Rs. 10-15 and deferreds Rs. 3-4. *British Burma Petroleum* were dealt in at Rs. 2-7 and *Indo-Burma Petroleum* at Rs. 48-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 29.

The local stock exchange which opened rather easy, later on rallied and since then the gains have not only been consolidated, but it appears steady conditions will be restored before long. The news of the resignation of Mussolini has come as a surprise to the stock exchange as to everybody else. While the general reaction was one of enthusiasm the stock exchange was rather nervous because of the consequences of the exit of the Dictator. There was immediately a decline in prices, but such fall as was noticed turned out to be precautionary for when the implications of the new situation were fully grasped prices once again reached their previous levels. The real factor that helped a hesitant market to move further up was the announcement regarding railway priority given to cotton cloth and yarn in respect of transport. As a matter of fact the stock exchange had been very quick in reacting to this announcement than to news regarding the tremendous success the Allied armies have achieved in various theatres of war. This may appear strange but a close examination of the transport difficulties the industries are experiencing will make the

CHAIRMAN'S SPEECH

BRITISH INDIA GENERAL INSURANCE CO., LTD.

ANOTHER SATISFACTORY YEAR OF WORKING

GREATLY IMPROVED FINANCIAL POSITION

I presume that, as usual, you kindly take the Report, Accounts and Balance Sheet as read. You have had the document in your possession for some time now and have no doubt digested it.

1942 proved to be another successful year for your Company, it being most gratifying to see continued growing financial strength and expansion. This is due—as you will no doubt agree—to the cautious, yet progressive policy which your Directors and Management have laid down and followed during recent years. War conditions, of course, still produce difficulties, but we meet them as they arise with the cheerful confidence engendered from our experience of the last few years.

The Fire Department results again give cause for gratification. Gross Premiums increased by Rs. 4,85,068 (say 34.16%) whilst the net figures show an increase of Rs. 3,42,245 (36.47%). The increases are largely from Indian business, as was the case in 1941. The net incurred loss ratio at 29.06% is lower than that in 1941 by 3.93%, and there has been a substantial addition to reserve. From figures available for 1943, I am pleased to be able to tell you that progression continues.

In our Accident Department the income dropped by only Rs. 66,463 (12.53%), which is an inevitable repercussion from wartime conditions. As stated in your Directors' Report, however, 1943 figures indicate that this drop is only temporary.

Satisfactory results are produced from our Marine activities in 1942. For its size, the "British India" underwrote a large volume of business—but cautious underwriting reduced the net premium income to Rs. 2,47,000 odd, and reinsurance brought commission into our coffers greatly in excess of the commission paid on the net business.

Your Company added to its investments purchases to the extent of Rs. 4,51,292, whilst the Bank and Cash balances as at 31st December, 1942 stood at an increased figure.

I am now confident that we may look to continuous dividends hereafter, thus making up for the lean years of the past.

Only recently we sought your approval to increase the Company's capital. At the Extraordinary General Meeting held last month the Resolutions were passed unanimously and I am confident that Government sanction will be given. As soon as the extra Capital is collected and is at our disposal, steps will be taken to utilise it towards still further development.

It was most unfortunate that in 1936 we had to utilise the whole of the then additional reserves in the Fire, Marine and Accident Accounts—totalling Rs. 2,75,000—to assist towards meeting the disastrous losses with which we were faced in the Accident Department. Not only this, but the capital of the Company was impaired by over 3¼ lacs. It took us fully four years to wipe out the deficit and to stabilise the position of the Company. The Company is now progressing well and we had intended to rebuild the lost reserves and to provide even greater reserves as added security against the additional hazards arising from present-day, war conditions, but the increases in income-tax, sur-charges, super-tax and Excess Profits taxation have made serious inroads into our surpluses and we have had to create a fund to provide for such taxation. It so happens that the years during which deficits were being liquidated embrace the Standard periods fixed by Government in respect of Excess Profits taxation, and our standard profits were naturally very low, thus causing great hardship to the Company. We shall not be able to make any saving in respect of Income-tax, sur-charges and super-tax, but we shall make every effort to place before Government our whole case in its true perspective and request Government to give us relief from Excess Profits taxation because of the circumstances in which we were placed in past years. I feel sure Government will do their utmost towards meeting our legitimate request and alleviate the position as regards the Excess Profits taxation. It is imperative that we should build up additional reserves for all departments to a much greater percentage than the 40% reserve which is recognised to-day. The so-called 40% reserve is only in fact prepaid premiums in respect of unexpired liability, and is utterly inadequate to meet exceptional losses. The 40% reserve has been proved inadequate in the past and is certainly inadequate under present-day, war conditions; consequently this matter will be taken up strongly with Government, so that relief can be obtained, thus allowing additional reserves to be built up such as other sound Companies have provided during past years—years which were more fortunate for them than for your Company.

I must thank my colleagues, your Directors, for their continued support during last year. Our Agents, Managers and Staffs, too, have worked excellently and loyally and we should feel happy that through their efforts our progress has been so marked.

I now invite comments on the Report, Accounts and Balance Sheet.

THE BOROOAH TIMBER COMPANY, LIMITED

NOTICE

is hereby given that the Twenty-Fourth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday the 16th August, 1943 at 11 a.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the year ended 31st March, 1943 and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 8th to 16th August, 1943 both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 28th July, 1943.

(*Half-yearly General Meeting on 7th August, 1943 at 12 noon*)

Audited Accounts for the half-year ended 31st December, 1942:—

Accounts.—After providing for all working expenses and also a sum of Rs. 16,500 for the half-year as Depreciation, the Company has made a loss of Rs. 56,860-6-8. This sum includes Rs. 39,710-11-5 as the loss on Trading Account. This is deplorable and while it is regretted the Directors have to explain that such loss is entirely due to circumstances beyond the control of the Colliery Management and the Managing Agents in as much as the loss has been caused by the raisings for the half-year being seriously reduced owing to our labour having been induced by the Government Contractors to leave the Colliery work and take up service with them at greatly enhanced rates of wages re. the building of Aerodrome etc. In addition costs of stores and supplies of plant have very materially increased so that it has been impossible to work to a profit. The Managing Agents did all in their power to prevent the exodus of the Colliery labour but their efforts failed. The total loss of Rs. 56,860-6-8 has been transferred to Profit and Loss Account which account with the balance brought forward for the previous half-year now amounts to Rs. 11,44,563-15-5 which is carried forward.

Managing Agents.—Messrs. Martin & Co.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

Audited Accounts for the year ended 31st March, 1943.

Notwithstanding difficulties attending the availability and transport of essential materials, the production of main products was maintained satisfactorily. The manufacture of certain new chemicals essential to the country's industries and war effort was taken up on a limited scale.

The distribution of main chemicals, viz., liquid chlorine, Caustic Soda and Bleaching Powder, was placed under control by the Government of India with effect from November 1942 and deliveries could be effected only under release orders issued by the Controller of Heavy Chemicals. Though this control has affected the markets for civil consumption to some extent, it is gratifying to note that the products go to meet essential defence and civil requirements when imports of such chemicals have become greatly restricted.

During the year, two Capital issues were made; one of 50,000 deferred shares of Re. 1 each at a premium of Rs. 4 per share and another, 1,00,000 ordinary shares of Rs. 10 each (Rs. 5 payable along with the application) at a premium of Rs. 7-8-0 per share. Both the issues were considerably oversubscribed. The balance of Rs. 5 per share, due on the ordinary shares, is now being called up in two equal instalments. Notices of call will be sent to the shareholders almost immediately.

As in the case of last year, dividend on the deferred shares has been rounded off to the nearest anna to facilitate easy payments. This has resulted in an increased payment to the deferred shareholders in excess of their rights, of the sum of Rs. 1,875. This sum is too small to be divided among the 1,10,000 ordinary shares. Sanction is solicited for this.

The Directors have written off the preliminary expenses of Rs. 40,000 standing over from last year, from the premium on shares account, and have transferred the balance of Rs. 11,09,402-8-0 in this account to the General Reserve.

The Directors wish to place on record their appreciation of the services rendered by the Managing Agents and the Staff and Labour in all departments.

After payment of interim dividend and after carrying forward to the accounts of next year a sum of Rs. 20,096-3-2, the net profits of the company available for distribution among the shareholders is Rs. 2,00,500.

The Directors recommend payment out of this sum of Rs. 2,00,500 a final tax-free dividend of:—

	Rs.	A.	P.
(a) *Rs. 3 per share on preference shares ..	10,500	0	0
(b) *Re. 0-14-0 per share on ordinary shares (*excluding interim dividend & making 15% for the year) ..	96,250	0	0
(c) Re. 0-12-0 per share on old Defd. shares ..	75,000	0	0
(d) Re. 0-6-0 per share on new Defd. shares ..	18,750	0	0
Total ..	2,00,500	0	0

Chairman.—Mr. N. Gopalswami.

(Annual General Meeting on 4th August, 1943 at 12-15 p.m.)

Audited accounts for the year ended 31st December, 1942:—

Crop.—A high degree of quota releases for the year was made in order to avoid any restriction on total production, and it was decided to allow the voluntary internal regulation scheme to lapse on the 31st March, 1943. Weather conditions were very favourable and the large record crop of 1,280,000 lbs. was made. The Government of the United Kingdom took over the purchase of all export teas from the 15th September, 1942, and the Company contracted with the Tea Controller for India to supply in all 603,514 lbs.

	1942	1941
	Annas.	Annas.
Gross average export sale price ..	11.80	12.63
Gross average internal sale price ..	13.66	7.16
Total net average sale price ..	12.48	9.56
Total working cost per pound of tea produced	6.04	5.93

Notwithstanding substantial increase of expenditure, the cost of production per pound shows only a small increase, due to the large crop made.

Profit and Loss Account.—The gross profit for the year is Rs. 5,06,446-11-7, out of which we have reserved Rs. 1,04,112-3-0 for renewals and additions and Rs. 1,37,023-14-0 for taxation, leaving a nett profit of Rs. 2,58,682-0-7. An interim dividend of 10 per cent was declared payable on the 11th December, 1942; and there is a balance on this Account of Rs. 2,40,206-2-6, which the Directors propose to deal with as follows:—

	Rs.	A.	P.
Pay a Final Dividend of 27½ per cent (making 37½ per cent for the year) ..	1,51,250	0	0
Transfer to General Reserve (bringing this up to Rs. 3,60,000)	30,000	0	0
Carry forward to 1943	58,956	2	6
Total ..	2,40,206	2	6

Estimates for 1943 are based on a crop of 15,000 maunds at a cost of Rs. 7,23,308 including increased cost of living allowances to labour and staff.

Managing Agents.—Messrs. Davenport & Co., Ltd.

Authorised Capital—Rs. 6,00,000. *Issued and Subscribed—Rs.* 5,50,000 *in* 55,000 *shares of Rs.* 10 *each, fully paid up.*

(Annual General Meeting on 11th August, 1943 at 3 p.m.)

Audited accounts for the year ended 31st December, 1942:—

The season's working resulted in a profit of Rs. 13,38,194-1-5 and after providing for Taxation, making sundry adjustments, and transferring Rs. 70,000 to Equalization of Dividend Fund, Rs. 70,000 to Building Reserve, and Rs. 60,000 to Reserve Fund, there is a balance of Rs. 6,99,092-10-10 at the credit of Profit and Loss Account. Out of this, there has already been paid an interim dividend of Rs. 10 per share on the Ordinary Shares absorbing Rs. 50,000 and the Directors now recommend:—

	Rs.	A.	P.
Payment of the Preference Dividend for 1942 of Rs. 8 per share	32,000	0	0
Payment of a final dividend for 1942 on the Ordinary Shares of Rs. 90 per share ..	4,50,000	0	0
Leaving to be carried forward	1,67,092	10	10

Favourable climatic conditions were experienced throughout the year and the rainfall although somewhat less than usual was evenly distributed with the result that another crop record was set up by both divisions.

A total crop of 32,569 maunds was secured of which 16,111 maunds were sold for export and 16,458 maunds for internal consumption.

Estimates for the current year have been framed for a total crop of 35,000 maunds to cost Rs. 12,29,044.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

(Half-yearly General Meeting on 11th August, 1943 at 12 noon)

Audited Accounts for the half-year ended 30th April, 1943:—

After providing Rs. 9,923-1-0 for Taxation and Rs. 1,00,384-2-3 for Block Depreciation, there is a balance of Rs. 1,16,568-5-10 at credit of Profit and Loss Account, which it is proposed be dealt with as follows:—

	Rs.	A.	P.
Dividend on Preference Shares at 7 per cent per annum	7,000	0	0
Dividend on Ordinary Shares at 7½ per cent per annum	66,608	10	0
Carry forward	42,959	11	10
Total ..	1,16,568	5	10

The Company's profit for the Standard Period for Excess Profits Tax has now been settled and the amount provided in the attached accounts together with provisions previously made fully covers all the Company's Taxation liabilities.

The total raisings of all classes of coal were 228,909 tons, which compare with 209,463 tons in the preceding period and 245,963 tons in the corresponding half of last year.

The total despatches were 203,348 tons against 250,053 tons in the preceding half-year and 232,640 tons in the same period in 1941-42.

While the labour supply showed some improvement during the half-year, the wagon supply continued at an unsatisfactory level, consequently stocks were increased.

The Company provided foodstuffs to its labour force at concessional rates and the loss thus incurred increased raising costs but this was to some extent offset by an increase in the selling rates of coal.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ltd.

(Half-yearly General Meeting on 16th August, 1943 at 12 noon).

Audited Accounts for the half-year ended 31st March, 1943:—

After providing Rs. 12,00,000 for Taxation, Rs. 2,25,000 for Depreciation and placing Rs. 1,00,000 to Reserve, there is a balance of Rs. 2,39,012-14-5 at the credit of Profit and Loss Account, from which the Directors recommend payment of a dividend of Rs. 5 per share absorbing Rs. 1,50,000, and leaving a balance of Rs. 89,012-14-5 to the carried forward.

In placing the sum of Rs. 1,00,000 to Reserve the Directors have in mind the heavy expenditure on replacements and repairs at the Mill which will become necessary after the War. The amount is more than covered by the cash deposited with Government under Section 10 of the Finance Act.

Production of paper has been maintained at a satisfactory level. Costs continue to rise and great difficulties have been experienced in obtaining and transporting to the Mill adequate supplies of bamboo, china clay, rosin and other materials. Owing to the wagon shortage coal supplies have caused anxiety and the Mill is now dependent for Sulphur on allotments by Government of Lease/ Lend Sulphur and on supplies of Baluchistan Sulphur Ore.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

OODLABARI COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1942:—

Accounts.—The Revenue Account shows a profit of Rs. 2,46,928-4-9 and after deducting from this:—

	/Rs.	A.	P.	Rs.	A.	P.
Income Tax on Interest on Investments ..	1,506	7	0			
Manager's Commission on Profits	14,293	3	0			
Managing Agents' Commission on Profits ..	4,146	3	0			
Reserve for Taxation ..	75,000	0	0	94,950	13	0
				1,51,977	7	9
and adding: Interest on Investments				6,517	8	0
there is a nett profit for the year of ..				1,58,494	15	9

After adding to this the credit balance of Rs. 15,602-13-10 brought forward from the previous year, and deducting Rs. 24,000-0-0, being the amount of an Ad-interim Dividend of 7½% for Season 1942 paid on 28th December, 1942, there remains a credit balance of Rs. 1,50,097-13-7 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—

	Rs.	A.	P.
Pay a Final Dividend of 27½% free of Income Tax (making 35% for Season 1942) ..	88,000	0	0
Place to Reserve Account	50,000	0	0
Carry forward	12,097	13	7
Total ..	1,50,097	13	7

Manufacture.—A good standard of manufacture was maintained throughout the year.

Area.—A further 15 acres were planted up during the year, and the area under cultivation is now 556 acres.

Managing Agents.—Messrs. Octavius Steel & Co., Ltd.

(Continued from page 229)

carried forward is slightly higher at Rs. 28,252 against Rs. 25,400 brought in.

* * * *

The accounts of the *Kingsley-Golaghat (Assam) Tea Company, Limited* for the same year, on the other hand, make better showing. The net profit, before providing for taxation and depreciation, is considerably higher at Rs. 4,08,795 against Rs. 2,84,321 for 1941. The total crop obtained was 14,831 maunds against 13,487 maunds in the previous season. The average price realised was higher by 1 anna at 13 annas 9 pies per lb.

After providing Rs. 1,57,331 (Rs. 91,778) for taxation the dividend of 75 per cent (55 per cent) is to be paid. The final dividend of 60 per cent, makes with the interim dividend of 15 per cent already paid, 75 per cent for the whole year.

"WATCH-DOG."

(Continued from page 230)

point clear. If it is remembered that due to transport difficulties jute mills in Bengal have been forced to close down for a week, the advantages derived by the announcement regarding railway priority to cotton cloth and yarn will be found to be not negligible. And it is no wonder the stock exchange considers it a favourable factor.

The giltedged market is firm with 3½ percent government paper quoting at Rs. 96.

Mill shares have staged a recovery on the announcement of the Railway priority order. As the order will be in force only till August 31 all those who are affected by the cotton cloth and yarn (control) are sure to take advantage of the situation. The immediate prospect, therefore, seems to be bright. The market leader, *Bombay Dyeing* has gone up by nearly 25 points and other shares have also improved. Latest quotations are *Bombay Dyeing* Rs. 1,920; *Century* Rs. 751; *Indian Bleaching* Rs. 199; *Phoenix* Rs. 530 and *Svadeshi* Rs. 527-6.

The encouraging war news and the absence of any adverse developments, coupled with the better outlook for Textiles have gone a long way in enabling Steel shares to record substantial gains. *Tata* Deferreds are higher by nearly 30 points at Rs. 1962-8 as against Rs. 1932-8 on last Thursday. *Tata* ordinaries have gained 10 points to quote at Rs. 398 (388-8). *Indian Iron*, however, saill remain neglected at Rs. 34-5.

The miscellaneous section continues to be dull with prices moving around previous levels. *Alcock Ashdown* were steady at Rs. 935 while *Premier Construction* were fluctuating around Rs. 178. *Bombay Steam* were further lower at Rs. 547-8. *Shivrajpur Syndicate* were slightly better at Rs. 62. *Andhra Valley* were Rs. 1832-8; *Tata Power* were Rs. 1797-8; *Tata Hydro* were Rs. 197-8 and *Associated Cement* were Rs. 217-8.

CALCUTTA COMMERCIAL BANK, LTD.

15, CLIVE STREET,
CALCUTTA.

The constituents of the Bank at its Head Office and the different Branches are hereby notified that the rates of interest on Current and Savings Bank Accounts will be reduced to ½% and 1½% respectively with effect from the 1st August, 1943.

A. K. DAS,
Manager.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

ALL money market indices point to plethoric supplies of funds. The rates for interbank call money are purely nominal being ½ per cent in Calcutta and ¼ per cent in Bombay. The average rate of treasury bills tenders this week shows a substantial reduction from 15 annas 7 pies per cent per annum to 15 annas per cent per annum. The deposits of the Central Government with the Reserve Bank stood at nearly Rs. 19½ crores on July 23, 1943, showing a rise of Rs. 3.20 crores for the week in spite of the utilisation of cash for Rs. 6.90 crores for the cancellation of *ad hoc* treasury bills held in the issue department of the Reserve Bank. The deposits of member banks with the Reserve Bank are higher by Rs. 1.82 crores and are now at the substantial level of Rs. 65.38 crores. The Imperial Bank of India establishes an all-time high record for deposits at Rs. 196½ crores as on July 30. The Imperial Bank's cash balance is as high as Rs. 36.87 crores. August marks the middle of what may be described as monsoon months finance; and it is, therefore, no matter for surprise that all available indices emphasise and underline easy monetary conditions.

On August 3, tender treasury bills offer to the public was for Rs. 8 crores; and applications came to Rs. 13.83 crores. Applications are about Rs. 6 crores less than in the previous week; but, obviously, bidding has been very much keener. The result is, as stated, a reduction in the average discount rate by 7 pies. Applications at Rs. 99-12-6 percent were accepted in full while those at Rs. 99-12-3 were allotted approximately 81 percent. In a routine way, the communique adds "lower tenders were rejected". This sentence really has no meaning as allotment of 81 percent in respect of applications at Rs. 99-12-3 percent means that tenders to the extent of 90 percent even at this rate had to be rejected. Be this as it may, *Indian Finance* welcomes this week's reduction as an earnest and promise of further substantial declines in the discount rate till a rate in consonance with the seasonal conditions is reached and thereafter stabilised. Bengal treasury bills for Rs. 1½ crores were on offer from August 2; and applications exceeded the offered amount only by Rs. 28 lakhs. The average rate of accepted tenders was Rs. 1-1 percent per annum, showing an advance of 2 annas over the Central treasury bill rate.

The latest returns of the Reserve Bank are not in our hands at the time of going to press; but we have to deal with the returns for the week ended July 23 which likewise did not reach us in time for the last issue. On the assets side, in the issue department, sterling securities have been strengthened to the extent of Rs. 6.90 crores. This operation, however, has not resulted in any currency expansion as rupee securities for a corresponding amount have been withdrawn. Rupee securities in the issue department are now at Rs. 111.52 crores comparing with Rs. 122.36 crores on January 1, 1943. There has thus been a decrease of nearly Rs. 11 crores in spite of the considerable addition of *ad hoc* treasury bills which took place in the first week of January in order to provide the rupee finance for the payment of the 3½ percent India sterling stock. This means, that temporary rupee finance provided early this year for sterling debt redemption has now been transformed into a permanent rupee debt. Over and above this, *ad hoc* treasury bills for Rs. 11 crores have been cancelled. It may thus be said that the technique adopted by Sir Jeremy Raisman and the Reserve Bank authorities for the providing of rupee finance for the programme of sterling debt repayment, has worked completely successfully and smoothly. We may shortly be witnessing another large provision of rupee finance by this means on account of the withdrawal of sterling securities from the issue department for the scheme to capitalise sterling pensions and permanent fund payments. The amount involved in this transaction is believed to be between £150 millions and £200 millions. So far as the India Government are concerned, we understand, the decision has been reached that this arrangement should be put through. Nothing shows the unrepresentative character of the present Government more glaringly than the adoption of the scheme in the teeth of strong opposition from the entire Indian public. *Indian Finance* has been solidly behind the Government in the various types of sterling debt repatriations that have so far been effected. But *Indian Finance* cannot support this scheme for capitalising future sterling liabilities. It must be made perfectly clear to the world that the Indian Government are carrying through this operation and are able to carry through this operation only because they are not answerable to the Indian Public. We are sorry that Sir Jeremy is associated with this transaction particularly because we have so far been able to see eye to eye with him in most of his policies and operations.

In the last week's issue, we analysed the situation as arising from the advance payment of E.P.T. and from the adoption of our suggestion for a defence loan week. We visualised conditions in the near future which would oblige the Government to suspend sales of treasury bills and even to stop further subscriptions to the Fourth Defence Loan. This analysis had reference to the implications of these developments so far as the future giltedged outlook in India was concerned. We may now look at another aspect of this problem. If the Government of India might not need any money either from the short loan market or the long-term market, it should provide an ideal opportunity for the British Government to enter the Indian market firstly as borrowers of treasury bills and, later on, as borrowers of long-term capital issues. The most serious factor of the present financial situation in India is that we are faced with the prospect of limitless additions to our sterling securities and, to a lesser degree, with limitless expansions of our currency. This is due to the present method of financing Britain's war commitments in India. The Government of India have been, so to say, the financing party. In this arrangement, there is certainly ground for suspicion that the Indian Government are not a free agent; and that they have mostly to carry out what they are told to do by the British Government. Why should the Indian Government continue with an arrangement which breeds this suspicion? Let this financing of Britain's war commitments be done

(*Continued on page 278*)

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on August 3, 1943. Total amount offered was Rs. 13,83,00,000. Tenders at Rs. 99-12-6 per cent were accepted in full and those at Rs. 99-12-3 per cent were allotted approximately 81 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-15-0 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on August 10, 1943, in Calcutta up to 11 a.m. and up to the close of business on August 9, 1943, at other centres. Successful tenderers should make payment on August 13, 1943. Other conditions are as usual.

During the week ended July 30, 1943, Government of India Treasury Bills for Rs. 3,47,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad.

Thursday Morning.

THE Vice-President's prediction as to the impending struggle between the U. S. President and his opponents may have little connection with the recent improvement of stocks on Wall Street, but it is clear that the bigger deficit and the higher taxation mentioned in the review of U. S. finances in 1942-43 had a rather depressing effect. The Vice-President's declaration suggests that the Administration today is equipped to deal with its opponents who are described as desirous of a return to capitalism, while the President presumably stands for the resumption of the New Deal. The ex-candidate attacked Mr. Roosevelt bitterly and the Republican Chairman described the President's broadcast on the war as a vote-catching device. Opposition to the threatened Fourth Term may have a damaging effect on war loan subscriptions this month. But the President has survived many defeats and the developments abroad may force the Republicans to drop party politics. Mr. Donald Nelson asked for bigger production after his review of what took place in June, especially, the failure of U. S. aircraft production to expand.

The U. S. President's problem is eased by the drop in war expenditure. War expenditure in July totalled over $6,431.6 million and allowing for the book adjustment it was about $500 millions lower than in June 1943. The reduction has great significance for the current year, for a downtrend in public expenditure will help the President to say that the U. S. taxpayer is not being forced to shoulder increasing burdens. The acceptance by the employers of the mineworkers' claim for higher wages, however, is bad for the anti-inflation programme, and whatever may be the decision of the War Labour Board, it is clear that the President has to cut the inflationary gap out. On July 31, the President reminded the people that Federal spending will exceed $100 billions in the fiscal year 1944. The Treasury estimates total expenditure at $106 billions and the deficit of $68 billions is the biggest ever. The Federal debt is expected to go over $200 billions by the end of June 1944. The deficit can be reduced only by revenue measures as the President insisted. The deficit for 1942-43 is put at $58 billions. An increase of $10 billions is not excessive, in view of the increase in production, particularly, shipbuilding which has enabled the President to offer Britain the use of 200 ships to be manned by British seamen who may want employment. War expenditure alone is expected to increase by $25 billions in the current year. But the decrease in war expenditure during July was announced after the President reviewed the situation. Most encouraging is the assurance that war losses are lighter than anticipated and the forecast of an increase in certain fields of war production. The Navy is expected to spend more and the Army less than was estimated in January. There was advice to the people to spend less pay more taxes and save more. The President recommended additional taxation or savings or both in January, and repeated the recommendation to avoid economic disruption at home. The war effort, he urged, must be backed by revenue measures. The Congressional critics who objected to subsidies in support of rationing have been reminded again that inflation is a real danger. The U. S. Treasury has relied largely on bank credit, and the idle funds. This dependence has been called a danger to economic stability. The U.S.A. has borrowed at extremely low rates from the money market on Bonds, Certificates and Treasury Bills, but funding the debt after the war will present a problem and the growth of the debt in 1943-44 will make it even more difficult. An increase of over $100 billion in a year and a half may not seem large to the U.S.A. where the debt rose by $25 billions nearly in the five years of peace from 1933 to 1938. The war's financial consequences may be ignored, but not by the Treasury, which may find that rediscounting of treasury bills facilitates bank credit and lets the public spend. The problem of holding down prices and wages therefore remains but the President is assured of Labour support and expects Congress to realise its duty to vote taxes. An increase in indirect taxation may not help to lower commodity prices, especially, retail prices but it may cut civilian consumption and convince the people that sacrifice is essential, that motoring is a luxury, not allowed by the war which demands more and more petrol, and that victories must be paid for in taxes and savings. The Administration is confident (to judge by Mr. Wallace's reference to the coming fight) that it can win. The estimate of $100 billions for the war indicates that over two-thirds or nearly three-fourths of the U. S. national income will be taken by the Government for itself in 1943-44. The proportion of public spending to income will be as large or larger than in Britain but the resources available should be considered.

The introduction of Washington lira into Sicily to circulate alongside of the Italian currency notes does not correspond to the occupation notes introduced by the Nazis in Denmark, France and other countries in return for foods bought up eagerly by the Germans. There will be no inflation in Sicily according to the announcement made by the Allies. Invasion implies the arrival of a new rival currency, but in this case, the Allies have stabilised the lira while allowing their own administration the freedom to introduce new notes for which the conventional reserve may be lacking. But the new Currency is better than the lira in the homeland whose value must be affected by evacuation, caused by anti-fascists' quarrels with the discredited party and peace demonstrations. The Germans with eighteen divisions in the North have little chance of influencing Badoglio's decision. The search into the secret fortunes may issue in foreign exchange. Fascist capital certainly emigrated to the Argentine before the war, and the action now launched will discredit the old regime completely and strengthen its successor. The bourses must have been shut and little is known about the financial developments inside Italy. The Allies are nearer Calabria than last week, and the Croat Kingdom has toppled down. That an armistice means the end of the overseas Empire has been mentioned in connection with an appraisal of armistice terms, and the Allies may look to the return of Yugoslav properties to British companies. Trepca and other mining shares must have improved after the Allies' march across Sicily began. Reports of unrest in Spain have helped to raise the price of Rio Tinto which is interested in many Rhodesian and other mining enterprises. A monarchist revival in Spain is perhaps encouraging the City, but the strikes in Lisbon must have been rather disturbing though not to the Foreign Bond market. A decree of the Portugese Government this year ordered the nationalisation of foreign capital in limited companies in Portugal. The decree may not have come into effect, but the issue of regulations was expected. British-controlled utility companies in which shareholders were interested were brought within the scope of the decree which raised questions as to how, in the absence of an agreement with the shareholders or the lapse of the concessions, the Portugese Government could order the transfer of foreign capital. Future concessions and probable undertakings, of course, could be brought under the new regulations. In April the Foreign Secretary told the House of Commons that in the interests of Anglo-Portugese trade relations, the Government would ensure fair play for British interests in Portugal.

The improved Mediterranean outlook has led to the further rise in oil shares. There was a lull on the stock exchange in May and last month there was a vigorous revival, particularly, in the industrial market. Mild improvement in rubber shares was accompanied by a lift in Home Rails. Railway earnings help the Treasury more than the stockholders, but the future is better, and in the event of nationalisation, the compensation may be adjusted to the level of wartime earnings, *e.g.* in 1942 when more than double the standard revenue was earned. A sharp rise Industrials attests the change in sentiment in all sections except giltedged where prices are exceptionally lower on the week. The biggest change is the jump in British Celanese which looks like rising to the position of Courtaulds ordinary shares though the price fell by 1/6 on Wednesday. Strong revival is noted in Coats which must benefit most from its monopoly position after the war. The textile boom invited special notice, because in spite of cautions that may be given by many Lancashire expects to get a stronger position in European markets. When minor industries like films are expecting a bigger market after the war the textile manufacturers can look forward to a better future after 'concentration' cleared out the dead growth.

The Viceroy and our Economic Problems

In his address to the Central Legislature, Lord Linlithgow has attempted a review of his term of office which is too eventful to admit of an impartial survey even by an academic historian in the distant future. While His Excellency's purpose in going over the last seven years is to explain his viewpoint and method of approach to the crucial problems of this period, the public in India is entitled to feel aggrieved at the complacent, self-righteous tone of the utterance. The political part of the speech has, for our purpose, less importance than Lord Linlithgow's appraisement of our economic problems. Needless to say, the Viceroy has as buoyant a sense of achievement in the economic, as in the political, field. It does not seem to have occurred to His Excellency that much of the improvement he claims in the matter of inflation and prices belongs to a very late stage of his period of office and that the improvement in the food situation is yet to be accomplished. The public agitation against inflation had to be carried on for months before an even implicit official agreement as to the presence of inflationary forces was forthcoming. The average Indian, who is not easily persuaded of the Government's goodwill to the people might wonder whether even this belated recognition of the fact of inflation is not due to the Government's need for a strong brief in support of such measures as the E. P. T. ordinance and the regulation of new capital issues, measures of which the Government's finances are the foremost beneficiary. Nevertheless, those who have some idea of the disastrous consequences which might follow the continuance of unbridled inflation will feel a measure of satisfaction that the brake has at long last been applied on the forces of inflation. The wholesale price index may not be a trusty guide to the course of prices, considering that the country still abounds in black markets and the sale of grain and other goods at Government shops is but a drop in the ocean. But it is reasonable to feel that, unless the Government should again give way to some expediency, fancied or real, and reverse the policy, the worst of the present inflation has for the present been left behind. This is not, however, to say that the problems which inflation gives rise to have been solved. And it may also be said that to reduce the volume of circulation merely by Government helping itself temporarily to the excess profits and balances of companies is by no means a solution of the problems. Inflation is only one strand in the tangle of problems arising from foreign government's purchases of goods and services from India and the methods of payment adopted by them and acquiesed in by the Government of India. While today, the Viceroy might feel elated by the few weeks that have been without fresh additions to currency or prices, the public cannot feel reassured that inflationary forces have been once for all brought under control.

Despite all that the Government attempted and achieved in regard to inflation, there is still no sign that the Government have begun to appreciate the popular viewpoint in the matter of inflation and allied problems. Clearly, there is a point at which Government is prepared to exert their utmost to check inflation. It is not difficult either to spot that point or to divine the motives which give importance to it. For, inflation has its obvious threats to law and order and the morale of the working classes. Watered currency saps the foundations of law and order; and any Government must step in to prevent such a disaster. The Indian public, at any rate, that part of it which is not so desperate as look to chaos to generate the forces of rebirth, will no doubt, feel grateful that the country has been pulled back from the brink of such inflation. But if there is to be general satisfaction that we shall not near the precipice again and be far enough from it to feel a sense of security, there must be signs of the Government's readiness to tackle the allied problems of sterling balances and to undertake measures to ensure the expansion of productive activity in the country. The most drastic measures against inflation are bound to leave, in the present war period, a considerable volume of redundant money. And it will be generally admitted that contraction of currency in the post-war period will do more harm than good. The sounder part of anti-inflationary measures must lie, therefore, in fostering the growth and expansion of agriculture and helping the country to grow to a large volume of currency circulation.

Of such policies, there is not the slightest hint in the Viceroy's speech. On the other hand, there is evidence of the persistence, in official circles, of a line of thought which the public most abhors. From the beginning of the war, there have been lively apprehensions in the country that India's war profits will be no safer or more fruitful on this occasion than on the last and that it would prove that India's lot would be no more than the fleeting and dubious satisfaction of handling large amounts of paper money for the duration of the war. The repayment of the sterling debt of the Government of India has, to that extent, proved those apprehensions to be unreasonable. But much more still remains to be done. From what remains of our sterling accumulation and what may still be added to it during the course of the war, India has so far had no advantage; on the other hand, it is the cause of the inflation which is oppressing our economic life. Indian opinion has asked that these sterling balances should be changed into forms which signify a permanent transfer of trustworthy value to India. The Government of India have not only declined to accept this demand, but they have from time to time given signs of a policy which is diametrically opposed to the views of the public. The provision for our pension liabilities and the constitution of an Industrial Reconstruction Fund showed us the way the wind was blowing. And when Lord Linlithgow tells us in the valedictory address that India must accommodate an excess of imports in the post-war period by reason of the so-called change in her position from a debtor to a creditor country, there is little room left for doubt that British trade is to be the principal beneficiary of India's sterling balances.

It is unnecessary to go again into the question of our sterling balances and it should suffice to say in this context that there is no justification for providing for the contingent liabilities of the future or for constituting a fund for imports at a later time, when India has throughout her history been able to maintain a favourable balance of trade. Lord Linlithgow argues that India has changed from a debtor country to a creditor country and since creditor countries have as a rule had an excess of imports, the Viceroy goes farther than those who are responsible for the constitution of the Industrial Reconstruction Fund and suggests that in the post-war period India must accommodate an excess of imports. Now even the premise on which this argument is based is questionable. Is it true that India has changed from the position of a debtor to that of a creditor country? Lord Linlithgow himself has been careful to say that only the external debt of the State has been repaid. If, thus, the Viceroy left out of scope the large volume of British investments

on which India will have to pay dividends and profits in the years to come, how can India be described as a creditor country? It will, perhaps, be said that the existence of 669 crores of India's sterling balances in London will serve to invest India with the status of a creditor country. But a country which holds short-term balances abroad, which are not greatly in excess of the value of foreign investments within the country has never yet been regarded in economic discussions as a creditor country which ought to behave as such in international trade. We could well understand a plea from the Viceroy that, in view of the large sterling balances which she now holds and with which, presumably, she will start the post-war period, India should give up the old attitude of disfavour to imports and contemplate an appropriate expansion of her import trade. But the Viceroy has gone much farther and asked for an excess of imports, presumably over exports. For it is only an unfavourable visible balance of trade that will go with the conferment on India of the dignity of a creditor country. We are at a loss to conjure up the picture of India's foreign trade in the post-war period, which Lord Linlithgow seems to have clearly envisaged, in which India will be able to support an excess of imports over exports without running herself into bankruptcy. It is not correct to attribute India's export trade, as Lord Linlithgow has done, to the necessity of making payments on our exernal debt; and the disappearance of that debt cannot make such a difference in our international commercial relations as to call for an import surplus for the sake of international equilibrium. Mere absence of external debts is no compensation for an excess of imports. What sustains a visible adverse balance of trade in the case of Britain and a few other countries is the large invisible exports. And India will not only lack such invisible exports, but she will continue to shoulder the weight of invisible imports signified by British investments and other interests in India. The Viceroy's plea for an excess of imports is only a poignant reminder that on the question of sterling balances, India can expect in the Government no sympathetic understanding of the Indian demand.

INDIAN AGRICULTURE AT THE OUTBREAK OF WAR

Attention was drawn, in more than one recent issue of "Indian Finance", to the state of Indian agriculture during the 'thirties; and it was suggested that the setback, which our agriculture suffered during that period, probably as a result of the unremunerative character of agriculture during the years of the depression, disabled it for meeting the needs of the present war period. An inadvertent error in the tables given in our issue of July 24, has unfortunately created the impression that in our reasoning, account was not taken of the separation of Burma, and that our broad conclusions have therefore been completely vitiated. While we regret that from the figures for 1929-30 and 1933-34 given in the article on the "Decline of Agriculture" in our issue of July 24, the figures for Burma were not deducted, the conclusions were based only on the figures which are comparable. The recent improvement in the All-India acreage under rice was emphasised in our leading article in the issue of June 14. But the decline in the yield of rice together with other features of our agricultural position, such as the fall in net area sown, the large difference between population increase and the increase of acreage under food crops, the absolute decline in more than one province, suggest unmistakably the parlous state of our agriculture at the beginning of the war. Considering the importance of the theme, and the room afforded for misapprehension, it is necessary to look in greater detail into the position of agriculture during the decade before the outbreak of war. It is unnecessary to harp here on the imperfections of the figures on which one's enquiry has necessarily to be based. But it is well to bear in mind that agricultural operations are not sensitive to fractional changes in profit margins and that figures over a period as long as a decade may be deemed reliable for all practical purposes.

Let us see in the first place, the broad changes that had come over Indian agriculture between the Great Depression and the present world war. The following figures for British India (Burma excluded) are revealing:

(In million acres).

	1929-30	1936-37	1939-40
Net area sown	210.38	213.72	209.96
Total area irrigated	49.54	50.16	54.95
Area "not available for cultivation"	93.12	93.54	89.31
"Other uncultivated land excluding fallows"	95.60	92.23	97.19
Fallow land	45.78	44.84	47.33

It will be seen that, though the net area in 1939-40 is approximately the same as that for 1929-30, it reveals a marked decline from the level of 1936-37. This decline occurs in the face of an increase in area under irrigation from 50.16 million in 1936-37 to 54.95 million in 1939-40 and is strongly suggestive of considerable tracts of marginal land going out of cultivation. The area "not available for cultivation" does not seem to have improved till 1936-37 after which year there has been a welcome shrinkage. Fallow land which stood at 45.78 million acres in 1929-30, recorded a slight decrease in 1936-37; but the 1939-40 level, it will be seen, is worse than in the pre-depression year. Taking all the five items together, it can be stated that Indian agriculture has shown signs of stagnation and decline instead of progress and extension.

Since the food grains group are the most important part of the agricultural economy, and very vital to national well-being, we shall see how Indian food grains have fared during the period under review. The following table shows the area under food grains and pulses in different provinces of India.

(In million acres).

Province.	1929-30	1936-37	1939-40	1939-40 compared to 1929-30
Madras ..	28.95	25.92	25.70	—
Bombay ..	23.43	19.95	19.95	+
Sind ..	—	3.97	4.24	+
Bengal ..	21.68	23.72	24.17	+
U. P. ..	36.44	38.12	38.72	+
Punjab ..	22.01	22.38	19.90	—
Bihar an Orissa	25.93	20.20	19.63	—
		6.18	6.16	
C. P. and Berar	19.56	20.33	20.54	+
Assam ..	4.42	5.68	5.61	+
N.-W. F. P. ..	2.48	2.28	1.95	—
Ajmere Merwara	0.36	0.30	0.21	—
Total for British India (excluding Burma) ..	185.51	189.35	187.05	+0.85

The All-India figure of acreage under food grains, while it shows no great improvement in 1939-40 as compared with 1929-30, shows a marked fall of over 2 million acres from 1936-37. Madras, Punjab, Bihar & Orissa, N.W.F.P. and Ajmere-Merwara have, in fact, shown a decline, while only Bengal and the U.P have had any increase in acreage to speak of. The gravity of the situation can be realised only if this 0.8% increase in the acreage under food grains is seen in relation to the great growth of population. The census of 1941 records a 15.3% increase of population in British India compared to 1931. It can be seen clearly that food production, relatively to the growth of India's millions, shows an alarming decline.

Let us examine the area under some important food grains and pulses:—

Area under Foodgrains. (1,000 acres) British India only. Burma excluded.

	1929-30	1939-40	Increase or Decrease
Rice	66,538	70,101	+
Wheat	24,700	26,128	+
Barley	7,027	6,101	—
Jowar	22,742	21,677	—
Bajra	13,291	13,362	+
Maize	6,330	5,766	—
Gram	11,255	11,690	+
Ragi	4,000	3,408	—
Total of the above ..	155,883	158,233	+1.5%

There has been an increase of only 1.5% in ten years and in view of the rapid increase in numbers, the progress can hardly be deemed satisfactory. Though rice and wheat have not fared very bad, the decrease in the acreage under barley, jowar, maize and ragi should have hit the poorer sections of our population very hard.

While thus the area is not in anyway encouraging, the figures for the yield of the above mentioned food grains and pulses reveal a worse picture:—

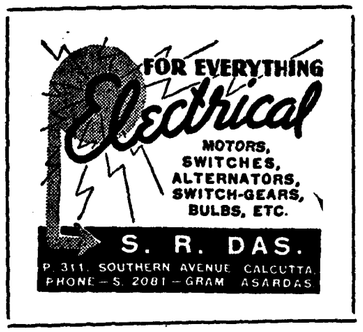
Yields of Food grains in Tons (000's omitted). British India only: Burma excluded.

	1929-30	1939-40	Increase or Decrease.
Rice	25,460	24,550	—
Wheat	8,925	8,925	stationary
Barley	2,293	1,981	—
Jowar	5,050	4,512	—
Bajra	1,998	2,020	+
Maize	2,409	2,118	—
Gram	2,975	3,085	+
Total of the above ..	49,110	47,191	—4%

A 4% fall in total outturn of foodgrains and a decrease in rice, barley, jowar and maize point out that all was not well with our agriculture during the decade 1929-39. The yield of wheat in 1939-40 remained the same as in 1929-30, though the acreage shows a considerable increase. In the case of rice, increase in acreage is accompanied by decline in yield. There is thus a distinct suggestion of deterioration in the effectiveness of food cultivation, which, should be regarded as even more disturbing than other adverse changes. The decline in yield per acre in the case of the two most important constituents of the people's diet is a matter for serious concern.

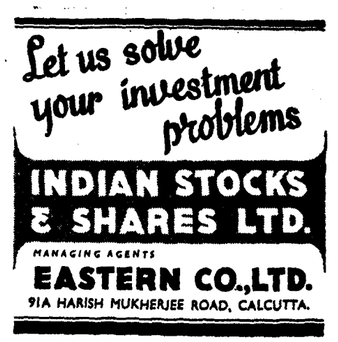
It is useful now to consider the position of rice province by province:

Rice Production in Tons (000's omitted) Burma excluded. British India only:



Province.	1929-30	1936-37	1939-40	Increase or decrease in 1939-40 compared to 1929-30.
Madras ..	5,255	4,794	4,467	—
Bihar and Orissa ..	6,011	3,359	3,178	—
		1,601	1,374	
Bengal ..	8,202	9,805	8,455	+
Bombay ..	1,283	700	668	=
Sind ..	—	455	433	—
C. P. & Berar	1,787	1,781	1,453	—
U. P. ..	1,523	1,919	2,427	+
Assam ..	1,346	1,904	1,742	+
Total for Br. India ..	25,460	26,373	24,550	—3.5%

It will be seen from the above table that while the All-India figures for rice show an increase in acreage of 5 percent and a decline in yield of 3.5 percent there are more provinces showing a decline, and that those which claim increases are too few. Linking the progress of rice production with the growth in population, we get a glimpse of the enormous pressure on our rice resources. The following table indicates the intensity of the pressure on rice resources in the important rice-producing provinces by showing side by side the increase in population and the changes in the production of rice:—



Province.	Population increase in 1941 compared to 1931.	Production of rice in 1939-40 compared to 1929-30.
	%	%
Madras ..	+11.6	—13.1
Bombay ..	+15.9	—13.4
Sind ..	+16.7	..
Bengal ..	+20.3	+3
Assam ..	+18.2	+29
Bihar and Orissa ..	+12.3	—24
	+ 8.2	
U. P. ..	+13.6	+60
C. P. and Berar	+ 9.8	—18.7
Total for Br. India ..	+15.2	— 3.5

The U.P. and Assam have done well in so far as rice production has outstripped the increase in population. But Madras, Bombay, Sind, Bihar, Orissa, C.P. & Berar have allowed the production of rice to go down while the increase in numbers has by no means been modest. Bengal heads the list in the matter of population increase and her progress of 3 percent in rice production can hardly be taken as sufficient for her growing numbers

Altogether, the picture of Indian agriculture generally, and of food production in particular, as at the outbreak of war was far from heartening. A similar study for the war period will be attempted in a subsequent issue. It should suffice here to stress the fact that the state of agriculture at the beginning of the war was not such as to suggest that our agriculture could easily shoulder the burdens of the war period. The period, it must be remembered, at the same time, was one marked by the inauguration if irrigation and power projects calculated to bring about the speedy progress of agriculture. It is not easy to account for the decline that actually occurred, except on the basis suggested on earlier occasions that the persistently unremunerative character of agricultural operations had told on the volume of agricultural work in the country.

Editorial Notes

Civil Aviation Plans

The report that the Government of India is already taking moderate interest in postwar air transport plans confers importance on the assurance that this country would not lag behind in the field of air transport. The civil aviation directorate laid the foundations of air transport for this country, and the lessons of the U.S.A. which has unified air transport and maintained services in the war period are available to all. The major problem still is one of subsidies. For the British Empire air traffic may be large and operating conditions may be different. But India's peculiar conditions may demand a modification of the conditions outlined by advocates of air lines run without subsidies, largely because the ground organisation is adequate and traffic in sufficient volume. Major Beaumont, formerly legal adviser to *Imperial Airways, writing in the Manchester* Guardian said that state-subsidised lines are inappropriate and air transport should be on the same footing as the Merchant Marine. He laid down certain other conditions. Economic cruising speeds of 175 to 220 miles per hour should be maineained and operational economies can only come from the use of bigger craft. A further condition was that aircraft must not be scrapped before the end of their economic life. Standardised types mean longer life. Air lines should receive proper remuneration, and where long distances have to be flown without refuelling, there should be differential rates, but otherwise the mail rates should be internationally standardised. The claim that uneconomic subsidised competition must be eliminated in the future follows from the demand for international agreement as to air mail rates. By the offer of airport facilities etc. on a reciprocal basis, the British Empire, it has been held, can secure an agreement. The principle that port dues etc., should be fixed by one independent outside authority like the International Commission of Air Navigation has been variously cited. The demand that competition must be retained and the air services run on a strictly commercial basis, has to be related to the plans of major British shipping companies (and the Society of British aircraft constructors too) which object to monopoly and ask for permission to run air services after the war. That India's own air lines will ask for a monopoly or subsidies is obvious but the operation of foreign air services which can use landing grounds etc. in the country will naturally affect prospects. It has been suggested that a rate of 3d. per half ounce would be enough for the Empire air mail service. Whether the internal lines could operate satisfactorily at rates proportioned to the Empire air mail rates certainly demands investigation before the post-war plans for air mail services can be framed. To get a cheaper service an outside agency may appear desirable and the conflict of interest may be overlooked if an inefficient official service tied to the Railways or any department can be avoided.

Wartime Controls

The working of wartime trade control was reviewed by Professor Anjaria in his lectures to the Institute of Bankers in Bombay. The list of prohibitions started before the war broke out when the export of certain instruments and chemicals without the permission of the Customs Controller was forbidden. On the outbreak of war, the export of gold bullion and coin except under license was forbidden. Exports to enemy territory directly or indirectly were prohibited on September 8. A notification issued on September 11 forbade the export of a large number of articles except with official permission. The recent modifications as regards procedure do not affect the main conclusion that import control is subject to the Control Order of August, 1941. Imports from the U.S.A. became difficult thereafter, and last year, imports from the U. K. became liable to the same procedure. The original consideration was the avoidance of payment in foreign exchange; since then the major concern is with shipping space. A large number of authorities, some outside the Supply Department, have to deal with import control. Exchange considerations dominate export control. The principles laid down in a notification of February 7, 1942 apply to various goods. Licenses are required in some cases and absolute prohibition applies in other cases. Import and export control are co-ordinated with exchange control. The Reserve Bank receives the Bank of England's instructions and the system of licenses and applications has become complex. In the war period it is plain that foreign trade has been subject to diverse influences and the usual figures leaving out treasure and Government transactions have become less illuminating. Whether exchange control leading to accumulation of sterling, leading in turn to expansion of currency in India, is wholly advantageous is not the only question raised by the tendency for trade to move in a new channel cut by control. The value of the control for peacetime planning in India is doubted by some. Professor Anjaria argues that international agreement might make the transition to peace smooth, but enters a warning as to the way the Allies might decide to fulfil the promise made in the Atlantic Charter as to equal access to the world's goods. Export trade particularly in food and textiles threatens to fall away under the pressure of new regulations, and if foreign trade ceases to be as important as before the war, the whole system of control will lack the usual basis when the war ends.

Sugarcane in Bengal

Mr. S. N. Chatterji of the Bengal Agricultural Department records the high ambiguity of sugarcane cultivation in all parts of Bengal and suggests that Gaur and gur are connected etymologically. The cultivation of thick canes is limited to a few areas. Cultivators have taken to Mauritius canes introduced thirty years back but they have been hard to crush, and Coimbatore types are latterly displacing them. The large number of tillers, hardness, long inter-nodes, richness in sucrose, easy crushing, drought-resisting power, high yield and crystalline gur with good keeping quality have made these very popular. The Department had to overcome the prejudice occasioned by he flowering of the Coimbatore type. At present Co 213 is the predominant type in Bengal according to Mr. Chatterjee's article in Indian Farming. The opening of seven mills and several open pan factories stimulated sugarcane cultivation in Bengal as it was known that Co 213 withstood a certain amount of waterlogging it spread beyond the high lands. Careless cultivation engendered deterioration of cane and in the last two years the fungus disease and boress took a firm hold practically all over West Bengal and parts of North Bengal, and the problem confronts cultivators, sugar mills and the Agricultural Department today. Remedial and preventive measures are being adopted at the instance of the district staff of the Department. Two new Coimbatore types are being tried at Dacca and the yields have averaged over 1000 maunds in several districts. Rationing is discouraged and mills too are starting farms to extend the cultivation of improved types. A number of early-ripening varieties have been evolved, and improvement in cane prices is having its own effect. Sugar-cane as a cash crop is winning greater appreciation. In Bengal sugarcane takes ten to eleven months to mature. Since irrigation is hardly practised, proper planting determines the growth. October-November is best on silt soils and in red laterite soils. December-January is chosen. Well distributed rainfall helps the growth unless there is shallow planting. The Department advocates deep-trench planting, the trenches being 4 feet part and the setts separated by a distance of 9 inches. For an exhausting crop heavy manuring is required and the Department encourages the use of mustard or castor oilcakes

since artificial fertilisers are difficult to get. But the cultivator is not careful about selection of setts and the Department has always recommended top cuttings for multiplication. The Department is eradicating defects largely due to lack of proper intercultivation and manuring while rationing has assisted attack by sugarcane borer as well as red rot. The Department (concludes Mr. Chatterji) has been called upon to face a grave situation at the present and is doing its best to improve it. The mention of disease must be related to the fall in Bengal sugar mills' production in 1942-and the shorter crushing season. The prospects for sugar mills are governed largely by the conquests of disease as well as improvement in cane cultivation for which the I.C.A.R. has financed the Testing Station at Dacca.

Steel In India

The All-India Manufacturers Organisation in a brief monograph indicates the present and future of the iron and steel industry in this country. Total production of steel in the three plants mentioned amounted to 1¼ million tons per annum before the war. Present production is estimated at 1½ to 2 million tons per annum while the usual export of pigiron has fallen away. The monograph refers to retarded development, conditioned largely by the Government's indifference. India's steel output is inadequate and she is dependent on imports even for war purposes. Australian output is equal to or larger than that of India and the A.I.M.O. reiterates that 5 million tons could be produced if there were an assurance that heavy industries in India would be developed rapidly. Plant expansion has very definite limits in view of the present level of costs, and demand must pre-exist before the supply can be added to. Since the Indian industry started its career in 1912 steel imports have fluctuated from 1.45 million tons in 1926-27 to 1.4 million tons in 1936-37. The imports since then have continued to fall in the face of a higher local production. Production range has been modified, and armourplate, spring steel and high-speed steel for machine tools have been made in India along with a new type made to Admiralty specifications for shipbuilding.

The re-rolling mills faced with difficulty in getting scrap have been assured of steel billets imported under Lease-Lend from the United States. The familiar argument that steel production must be developed to the highest pitch recurs, and it is urged that new outlets have to be created in the building, machinery and other trades for Indian steel. World steel production between the two wars more than doubled in many countries and the danger of foreign dumping must be guarded against. Since steel is the most common and acceptable metal, the future is with steel. Attention is drawn to the National Emergency steels developed in the U.S.A. in order to develop alloy steel scrap cheaper than virgin alloys. And more economical alloy compositions only mark one line of advance. The survey of the year's achievements at Jamshedpur showed that India, too, is producing new alloys, and plans for higher output have been drawn up though only a part of the projected additions is to be now provided. What could do in the shipbuilding and other fields with a great increase in home steel production, impresses the advocates of industrialisation who note that an automobile industry will take little steel as compared with shipbuilding or the building of locomotives and wagons while deploring that efforts to set up new industries are at a standstill.

South Africa's Shortages

Short supply, controls and higher purchasing power are common to all countries in wartime. The reports from South Africa as to higher production and quicker progress must be reviewed in the light of the Standard Bank's report dealing with conditions in May. Trade conditions were steady but the volume of business was influenced by the position of available stocks. Some of the new supplies coming forward (according to the May review) are of less satisfactory quality than earlier stocks, and prices generally are higher but very little, if any, slackening in demand is evident. Recent reports from country districts are placing more emphasis on the shortages of various general lines and upon contined buying pressure. The decline in turnover has not been very marked so far, except in connection with goods which cannot be replaced, but shopping difficulties owing to scarcity of supplies are being mentioned very frequently in various reports, and it is clear that the general stock position is reflecting the effects of elimination of less essential lines and the diversion of economic activity to war effort requirements. The shortage has led to difficulties in the export trade as well. South Africa satisfied the enquiries of African territories of oversea countries. In the first two years of the war, there was a very noticeable increase in enquiries and trading relations but while enquiries in the past year covered a wide range of goods, there has been a marked decline in interest shown by Union exporters owing to the absence of exportable surpluses. And the similarity between India and South Africa is indicated by the reluctance to the ship goods. Factory activity in the Union indicates that more attention is being paid to repairs of plant, farming machinery and equipment. Labour shortage has been experienced as the result of men for the armed forces in the latter half of 1942 alongside of the expansion of demand for factory products and at one time, the decline in native labour supply for the gold-mining industry was very heavy. In spite of the fall in building activity, after control came in July 1942, the Union index of employment was not appreciably lower than in April 1942. Some months ago a scarcity of maize was apprehended. There has been no improvement in supply, but maize prospects have improved and probable supply was put at 22 to 24 million bags in spite of damage to ripe maize in some areas by heavy rain. The diversion from wheat to wool in South Africa is a wartime development in the Cape Province assisted by the higher prices realised for the Union clip in the last season. Employment and output was maintained in the gold-mining industry, but output was below the 1942 level while the diamond mining industry was shaping better as the demand for rough and cut stones was rising. The Citrus Board's operations left prices high though the volume of exports was lower. Control of retail prices was introduced. The credit position reflected the increase in S. A. bankers' balances and lower clearing totals at the larger centres. Deposits increased and advances were stagnant indicating that the slacker conditions noted in India have a close parallel in South Africa.

Canada And The World

The war altered the course of world trade, and it is clear that the shrinkage in India's trade with Europe falls into the greatly altered pattern described recently by the Canadian Bank of Commerce. The war led to the imposition of controls in 1939 in nearly all countries. With the German occupation of neutral countries, the collapse of France, and the entry of Italy into the war conditions of trade changed naturally. As the naval blockade extended to Occupied countries, and the chief lines of communications with oversea markets for such countries as Sweden and Finland were interrupted, the trade of the Continent fell to very small proportions. Trade within Europe came largely under German control. That of the rest of the world came to centre round the U.K. and the U.S.A. Occupied Europe found little scope for normal trade and the U.K. had its exchange difficulties. But a great change came in March 1941 when Lease-lend came into operation. Apart from helping Britain, the system tuned up the great U.S. industry for the greater task which developed upon it when the U.S.A. was drawn into the war. Reciprocal Lease-lend has modified the volume and nature of Anglo-American trade, and shortages and amplified supplies are, in many cases, the consequence of Lease-lend. Canada has her Lease-lend system as half the value of exports is assigned to Britain as a gift. Aid to Britain cost a billion dollars last year but the aid has been more than local, since it has strengthened the outer defences of North America and contributed to the huge shipments made by Britain—about three quarters of her armament production—to all the battle fronts, including Russia. Since the closure of the Far East to non-Japanese trade, word trade has shrunk, and the neutrals, especially, have became dependent on thin and uncertain lines of supply. The United Nations have made agreements ancillary to Lease-lend last year for the return assistance and have pledged themselves to reopen the channels of world trade. Canada's attitude to world trade has changed with the course of war, and postwar policy of a sovereign state in the Commonwealth may be a continuation of the present policy. In the first two months of 1943 the rate of economic progress in Canada was more than maintained in the automotive trades and the heavy sections of iron and steel which recovered from the end of the strikes at two major establishments. The Bank of Commerce index by pulp and paper producers as well as wood products. The Newsprint Association reported that production ratio for newsprint was 63.1 percent of capacity. Except in the case of pulp and paper, there was a considerabe increase in regard to the use of current capacity in all branches of Canadian industry and the index for industrial production in the first two months showed an increase of about 25 percent compared with the same months of 1942.

Art and Exports

The Potteries produce besides utility ware for the Home market decorated ware for the 'dollar' countries. The British industry looks for an export revival after the war and an account of the Staffordshire industry in wartime must begin with the beginning of export in the 18th century when Wedgwood's experiments led to the production of Green Glaze and Cauliflower ware. The Ivy House works at Burslem started with useful ware. Export lines developed after Royal patronage found in Wedgwood's ware a work of art. The original partnership with Whieldon was replaced by another with Bentley which led to the Etruria works. The development of canals helped the import of clay. The famous link with the founder has not disappeared with the passing of Lord Wedgwood, for the industry can be counted upon to play its part after the war. It has been noted that the export trade in works of art has survived the war and several millions' worth of pictures etc., have gone to the U.S.A. in 1942. Books and chinaware have reached the U.S.A. safely, and what was said of Raeburns as a source of dollars in the past was proved by the sale for £2,625 of the portrait of George Paterson of Castle Huntley, Perthshire last January at Christie's.

U. S. Steel Output

The injunction to produce more for victory is hardly applicable to U. S. steel masters. The output of 60.2 million tons in 1940 has been exceeded again and a review of figures up to March should help appreciation of what has been done before the temporary setback induced by the U.S. coal strike. In March 1943 the U. S. steel industry produced 7,670,187 short tons of ingots and castings. This exceeded the previous monthly peak (October, 1942) by 90,000 tons. The March output was equivalent to an annual output of 92 million tons compared with 86 million tons, the total for 1942 and the prewar total below 53 million tons for 1939. On the basis of W.P.B. plans U. S. steel output was to rise over 97 million tons by the middle of 1943. Production of raw materials for blast furnaces and steel mills continued to increase in order to secure the increase in U. S. steel production. Limestone production was raised and larger supplies of construction of a number of new coke-oven-plants. The short supply of scrap was dealt with by a salvage drive. The Salvage Division of the W.P.B. announced that nearly 28.5 million tons of scrap were collected in 1942 in the second half scrap collections equalled 95.7 per cent of the national target. If the salvage drive continues, the U. S. steel producers can reckon on adequate supplies of scrap to supplement iron ore supplies. The mines were called upon to put forth a special effort. The target for the movement of ore on the Great Lakes was fixed tentatively at 95 million tons. The figure exceeds the total for 1942 shipments by 3 million tons and that of 1941 by 15 million tons. The shipping season of 250 days must see a big increase in ore shipments. Since last autumn rail and harbour improvements on the ore route have been completed, and there is to be an addition of 16 new large vessels to the ore fleet which will raise the total to 321 vessels. Apart from the Lake Superior region other U. S. mining areas which in the past accounted for about 25 per cent of ore supplies, are expected to increase ore supplies this year to meet the demand for steel. There is, however,

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS
OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act 1920 do hereby report to the Shareholders upon the Balance Sheet and accounts of the Bank as at 30th June 1943.

We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. D. Mitchell, B. S. Billimoria and C. Gill respectively.

D. MITCHELL,
B. S. BILLIMORIA,
C. GILL, } *Auditors.*

28th July 1943.

the possibility that more ore will be required, and the liberation of North Africa appears a means to the expansion of U. S. imports of iron ore this year.

Argentine Experience

The July bulletin of the Central Jute Committee dwells on the bigger balance of trade in favour of Argentina in 1942. The report sent by the Committee's correspondent makes it clear that the increase was due to the fall in imports. The Central Bank of the Republic in its report pointed out that the cause lies in the restrictions imposed in foreign countries, not in the lack of buying power in the Argentine which is, in fact, very high. Gold reserves have reached a very impressive level of no less than 2,000 million pesos. The Argentine paper peso has a gold cover of 127 per cent said the report. Nevertheless, the value of importations per capita is lower now than in the hard days of the world depression and is, in fact, lower than at any time in the last 50 years. The Bank's report recorded that economic activity was intense and commercial failures few, the banking system liquid, and trading in stocks and bonds wide and open. Yet credit and currency conditions undermined the Castille regime and promoted a revolution not long after the report appeared. The Argentine report however draws attention to a transformation at home, not incidental. Its industrial efforts satisfy a large part of the country's needs, thanks to the growth of the means of production which has been increasing since the depression. The establishments in operation at the beginning of the war are in general functioning at full capacity, and the plants have been enlarged to the extent that circumstances permitted. There have also sprung up numerous small and medium-sized factories. Apart from new products, the manufacture of those already in production before the war has increased in quantity, and in some cases, has been improved in quality. Important substitutions of material have been achieved, and wherever possible, the recovery of used material has been diligently effected. But stocks of materials are diminishing, and in some branches of industry, the situation may become critical if supplies from abroad are not obtained in such quantities as the limited capacity of the available boats will permit. "Failing this, industrial production must lose its present speed" said the report. Higher prices and the higher cost of living were the direct consequences of the war, and the revolution in Buenos Aires was provoked by the failure of the Government to solve the domestic problems of inflation. The drought noted up to March 10 may have engendered discontent. The maize crop is put at 2½ million tons only, and the serious shortage of maize has followed the curtailment of the acreage to two-thirds of the decennial average. The shortages mentioned in the Argentine report include bags. The Government decreed the use of cotton bags for the annual output of 22 million bags of flour. A committee to examine the chartering of ships for import of jute was set up and the Argentine Government acquainted grain exporters with its plan for meeting the shortage of jute. The Minister of Agriculture held a conference to examine the possibilities of shipping wheat to Bombay and so reducing the cost of bringing jute to the Argentine on the return voyage.

New wine
in old bottles

Through the ages, the practice of putting new wine into old bottles has been condemned. In the oil industry too, it has been the general practice to put new oil into new containers.

We do not know whether new wine in an old bottle is better than no wine at all, but we do know that oil does not suffer from being packed in a clean second-hand receptacle and that consumers prefer to receive their oil so, rather than go without.

This is fortunate. Today steel for the manufacture of oil containers is scarce with the result that they must give repeated service if all essential needs are to be met. It is therefore of vital importance that every steel container should be looked after carefully and returned for refilling as soon as it can be made empty.

BURMAH-SHELL urges all users of petroleum products to protect petrol and oil containers from RUST, DAMAGE and DIRT and

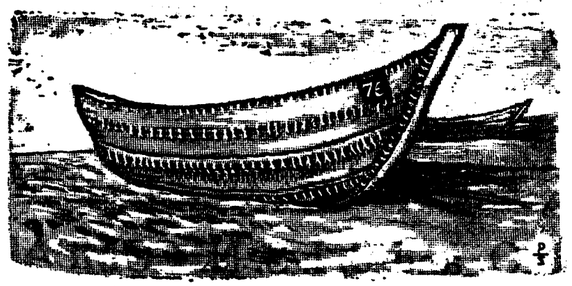
Capital and Profits

Since the Statistics Act has afforded little information as to the distribution and output of industries the records from which a survey of large-scale industries remain very much the same as before the war. The A. I. M. O. in arranging figures relating to large-scale industries assumes that the large-scale establishment has a paid-up capital of Rs. 30 lakhs and over. The figures available relate to 1940 when earnings were somewhat lower than at present but the return on the gross paid-up capital of Rs. 88.3 crores for 89 factories in 12 industries was 17.19 per cent. The rate certainly suggests that the levy of a tax on excess profits proceeded from the expansion of earnings. The table prepared in this connection by the manufacturers' organisation discloses that 30 cotton and 26 jute mills are classed as large factories giving employment to 104,225 and 141,750 workers respectively. It looks as if the average jute mill employs more operatives than the average cotton mill, but capital bears no relation to employment since Rs. 22.2 crores invested in electricity make for the employment of 33,636 persons only whose wage-bill is put at Rs. 88,96,000. If wages are less the rate of profit is 9.66 per cent as against 19.59 per cent in the jute industry. The table suggests that few sugar mills can be classed as large-scale factories, but five paper mills employing 5,951 workers are ranked with large-scale factories. The paid-up capital of the five paper mills at Rs. 300.14 lakhs exceeds the paid-up capital as in several other industries. It is significant that profits appear highest in building construction. The single large concern listed earned 26.28 per cent. in 1940 on the paid-up capital though the average annual wage was Rs. 1,890 as against the general average of Rs. 551.1 for all large-scale industries.

Earnings in the iron and steel industry tend to be higher than in other industries, but the percentage of profits in proportion to paid-up capital appears to be higher in the case of chemical and oil companies. The A.I.M.O. statement puts it as 47.05 per cent though the value of production in relation to capital is smaller than in many other industries. The lowest rate of profit is that shown for the match industry. Paid-up capital in 1940 is put at Rs. 70 lakhs, the number of workers at 700 with a payroll of Rs. 2 lakhs and a profit of Rs. 2.5 lakhs only is shown. The statistical table, of course, may give no indication of relative efficiency or help valid comparisons between wage-earners' position in various industries. In the case of iron and steel, the rate of profits on capital in 1940 is put at 27.24 per cent and the total shown as profit namely Rs. 4.5 crores exceeds that shown for any other large-scale industry; but a better yield on invested capital is shown in respect of the rubber industry where the percentage of profit on paid-up capital was as high as 32.32 per cent. Since debentures and bank loans are excluded, the percentage of profit earned by Indian industry in 1940 appears higher than presumed, and in the case of cotton mills the return on paid-up capital at 15.71 per cent is moderate suggesting that the wartime recovery had just begun in 1940 and the wage-level too was more stable than after the great strike of 1940.

Two Bank Statements

The Imperial Bank of India in the year July, 1942 to June, 1943 obtained an increase of over Rs. 59 crores in deposits. The balancesheet published to-day sums up the general trend more effectively than most. The increase of Rs. 55 crores nearly in investments is symptomatic of the slacker conditions of the year. Total investments at Rs. 129.44 crores greatly exceed Advances totalling Rs. 40.4 crores. A year ago cash balances were very large; that they have fallen by Rs. 2 crores nearly to Rs. 36.3 crores makes for satisfaction. The cash ratio is still high at 18 per cent and the linked increase in the gross profit from Rs. 238.3 lakhs to Rs. 250.5 lakhs is a sign of what has come when interest rates have been low and the supplies of money increasingly plentiful. The addition of one crore per week to deposits certainly marks off the Imperial Bank from the other jointstock banks in India. The very mild improvement in the average return on Treasury bills must be set against the increase in taxation announced this year. The increase in net profit reported last year has not taken place again and the transfer to Reserve is reduced to Rs. 5 lakhs as before. The shareholders have received 12 per cent as usual and the bonus to staff takes Rs. 8.5 lakhs. The carry-forward is Rs. 47.48 lakhs against Rs. 45.33 lakhs brought in. The increase in deposits and the diversion of funds into investments have become established features like the failure of Advances to keep step with Deposits. The accelerated progress in two fields however has definite consequences for the giltedged market in India which is strengthening steadily. The total resources of the Imperial Bank exceed Rs. 208 crores—a figure that certainly raises it to the position of any of the Big Five in England.



The improved demand for funds following the rise in commodity prices explains the marked increase in Advances in the balancesheet of the Bank of India as on June 30th. The total for Advances has improved in 6 months from Rs. 9.28 crores to Rs. 12.29 crores and the only other considerable change is the fall in cash balances coinciding with a rise in Advances. Progress in other directions has been substantial. In the six months ended June, 1943 the Bank of India's total deposits have risen from Rs. 36.81 crores to Rs. 47.14 crores. The increase is not confined to current deposits in this case as savings deposits have risen by Rupees one crore nearly. Without any increase in branches the notable increase of Rs. 10 crores has been secured and the increase points decisively to the revival of confidence which was expected after the fall of Tripoli.

The main change in the balancesheet is the continuous rise in the Bank's investments. Treasury bills at Rs. 16.56 crores show an increase of over Rs. 4½ crores and the other investments are up by Rs. 3.77 crores. The cash balances amounting to Rs. 8.75 crores indicate a ratio of nearly 20 per cent, well above the normal average for a bank so strong and self-contained as the Bank of India. In the second half of 1942 there was an expansion of Advances which has continued into 1943. The half year's profit of Rs. 20.03 lakhs is reduced by taxation. But the interim dividend of 11 per cent claims Rs. 5.5 lakhs and the sum carried forward in the profit and loss account is Rs. 16.47 lakhs so that no change is likely in regard to the distribution of the year's profit which should be higher. The Bank of India's improved position supports the common belief that the Bank's business continues to function satisfactorily, and one may dwell on the growth of Advances in the slackest cold weather as a sign of increased trade activity within the country, stimulated by the improvement in commodity prices, and hardly checked by the Ordinances. The entry of new banks has not appreciably interfered with the progress of the older banks and the rate of increase in Deposits and Advances alike, in the case of the Bank of India, is well above expectations.

CHAMPAGNES, WINES AND SCOTCH WHISKY ALWAYS AVAILABLE

I said last week that the Indian economic problem is wellnigh insoluble on the basis of the old economics and that only the adoption of the principles of the new economics will enable us to break the vicious circle in which our economic life in every-one of its aspects seems to be imprisoned. It follows from this that, in applying the principles of the new economics, our foremost purpose is to break this vicious circle at its most strategic points. For, once this vicious circle is broken, our national economy enters into the inheritance of all its natural advantages. The forces of progress are no longer confined and smothered; they are released to work all the benefit they can for the people. A proper setting will then be provided alike for the spontaneous growth of private enterprise and for the smooth accomplishment of public projects. But the question is, wherein lies the vicious circle and what are its strategic points? Those who have applied their minds to the Indian economic problem in a creative, as distinct from an imitative, way know that no one factor, political or economic, can be held responsible for the backwardness of the country and that, considering the immensity of the problem and its intricacy, no one clear-cut policy or principle can be trusted to bring about the progress we are seeking.

It is clear enough that the first big push along the road to prosperity has to come from well-planned State action. For it is only when the State takes the initiative that the generation of the forces of progress at more than one point and at the same time can be ensured. Private enterprise, activated as it is by the profit motive, chooses the channels of its effort according to the possibilities of profit. And the most profitable is not the most urgent or vital from the point of view of society. There is every chance, too, that such activity may cause, in the absence of certain basic and general economic conditions, impediments to progress at a later stage. It may be said therefore that the importance of initial State action is due to a number of circumstances, the immensity of the problem, the propensity of private enterprise to seek the sources of private profit and thereby to clog progress at a later stage and, above all, the necessity to ensure an attack on the problem simultaneously from more than one point. The insistence on State initiative is not to be attributed to preconceived ideas of a doctrinaire kind, but to a recognition of the hard facts of the situation in India.

* * * *

It should not be supposed, however, that State action is regarded as the sole motive power of economic progress. On the other hand, the aim must be to stimulate the economic consciousness of the people, to induce and strengthen the will to economic betterment, to educate the masses to co-operative and co-ordinated action in the economic field and to teach them to look for the economic needs of their neighbours and meet them on well-accepted business principles. I may recall here the clear statement of this position which was made in the leading article of the National Planning Supplement of Indian Finance as early as March, 1939: "With the present resources of the State, material and non-material, and particularly of administrative talent, the State will be unequal to the task of bringing about by its own direction the requisite increase in the standard of living, and that the aim of economic planning in India should be, tentatively at least, to provide facilities for new production, to cut the channels of new productive activity, and to regulate its volume and pace so that economic equilibrium will be preserved at every stage of progress." The primary purpose of State action in the initial stages is to overcome the inertia of ages, to ensure the preservation of equilibrium at every stage of economic progress and to remove the obstacles to the growth of productive activity among the people.

* * * *

All that, you may say, is vague and, however pleasing it may be, it is certainly not getting to brass tacks. I agree; but I trust it will be recognised that, so far as the Indian economic problem is concerned, clear thinking of fundamental principles and basic measures is far more important than an array of figures. So that, while I sympathise with the impatience, I cannot respect it unduly. If I have written at some length on the scope and aim of initial State action, it is only to emphasise the fact that, without it, no project, whether of State or of private enterprise, has any chance of achieving our aim. Economically, even more than politically, we are bound hand and foot by a perverse concatenation of historical developments and circumstances. We need freedom to move and use our limbs. And we need to strike at the fetters that bind us.

* * * *

Release is resurgence. And the State must release the people from every circumstance that fetters them in their economic activities. The people are fettered by ignorance, disease and poverty. Obviously, to say that, for stimulating economic activity, the State must release the people from poverty would be guilty of begging the question. But ignorance and disease are on a different footing. And it is not non-sensical to say that poverty is a stumbling block to economic progress, because what is meant is not that the poor man can be enriched if he is given wealth, which is obvious as a statement of fact and absurd as a suggestion for practical policy, but that the poor man can be enabled to become a better agent of production and, in himself, a better market for others' products, if the pressure of poverty on him were reduced. The latter is a distinctly different proposition. From which it follows that the release of the limbs of our

body economic, if I may so put it, consists in reducing the pressure of poverty, ignorance and disease on the masses of the country.

* * * *

That, I believe, should be the first aim of the State in its postwar economic policy. Here, again, it is necessary to explain that the effort to remove these evils should be related directly to the aim of making the average Indian a better agent of production and in all ways a more worthy entity economically. It is tempting, when you talk of education or public health, to introduce arbitrary standards of education and health. But when the aim is definitely recognised as one of raising economic efficiency, there will, in all probability, be less scope for differences of opinion on these highly controversial subjects. In any case, outlay on education and public health can yield no direct return. No economist or financier or underwriter will regard it as productive expenditure; and while the economist will approve of the expenditure, if it were feasible, no finance minister will agree to provide appropriation for such expenditure if it is to be an addition to the unproductive debt. And the only way of making the outlay and avoiding an addition to the debt is to tax the people. Since the pressure of poverty is as serious an obstacle to progress as the pressure of ignorance or disease, taxation for such expenditure has a self-defeating aspect about it. There is no escape from this dilemma in what is called progressive taxation. It is idle to think that if the higher grades of income-tax were raised, money would be found for financing nation-building without cutting into the purchasing power or the standard of living of the masses.

* * * *

The value of the new economics lies in its providing the key to this deadlock. On the one hand, it releases men from the bondage to old ideas; on the other it provides ideas which can well be the dynamic of new developments. Hide-bound notions of financial integrity can be put aside not in a spirit of recklessness about the future, but in the confidence that the deviations from conservative ideas of finance are made to facilitate productive work. the fruits of which will eventually justify the apparent imprudences of the start. I do not suggest for a moment that legitimate sources of increased revenue should be overlooked. In fact. if the new economic programme is carefully drawn up and vigorously worked out. it will be possible before long for public finance to drop its more heterodox features and become more respectable in the eyes of the orthodox. But I maintain that, in India, a revision of the principles underlying our public finance is the starting point of our N.E.P. and that revision must be made with imagination and courage and not weak knees and blinkered eyes. Consider for a moment. that for a country so vast as India and a population numbering 400 millions, the total amount of money spent by public authorities hardly comes to 290 crores a year. The central budget is about Rs. 125 crores while the budgets of the eleven provinces put together come to about Rs. 104 crores. District boards and municipalities collect and spend about Rs. 60 crores a year. Of this amount of Rs. 290 crores, nearly 50 crores is absorbed in military expenditure. On an important item of public expenditure like education, the Governments and local bodies spend no more than Rs. 23 crores, which hardly suffices to provide us a 15 per cent literacy in the whole country. Of various nation-building departments education is probably the most favoured; and is it any use thinking of financing increased expenditure on education, agriculture, public health etc., by money extracted straight from the pockets of the taxpayer? And we have found already that the starting point of our N. E. P. is State action to remove the handicaps on progress; and that, if the State is to act effectively, it must have larger volume of funds to expend.

* * * *

Even death duties and taxation of agricultural incomes are bound to be delayed, though their ethics is doubted far less today than a decade ago. While the need to give the N.E.P. a most favourable start by liberal outlay on the nation-building departments is urgent, the ordinary ways and means of increasing public revenue are such as to cause delay that might well prove fatal. This expenditure cannot wait for anything except the advent of a truly national government.

* * * *

Now, what are the suggestions and promptings of the New Economics for finding the money necessary for such expenditure? Let me remind the reader that the basic principles of the new economics are the social subjectivity of value, the true nature of capital as a social creation which is not tied down to savings, and the creation of purchasing power through division of labour and diversification of production being the mainspring of economic progress. The bearing of these principles on our problem on hand is not obvious. But it will be, when I say that the expenditure that we wish to incur is really in the nature of a capital outlay on progress in all walks of national life, of which the economic is the only most important; that such capital need not come from that variant of individual saving which we call "taxes" and that if the money is so expended as to aid division of labour and diversification of production, it will create at the same time productive activities and effective demands which by their mutual satisfaction will increase the national wealth and wellbeing and more than justify the outlay on these items. The reader will see that I come

by circuitous and *almost* insidious paths to the advocacy of expenditure through the aid of the printing press or plain inflation. I know I shall be shocking many of my readers. The present is in every way the most inopportune moment for the advocacy of inflation though it may refer to a period which is still far away from us. The whole country is now fighting inflation with its back to the wall. And inflation has always been a hateful word. The tyranny of words was never more complete or ruthless than in a period of war, when propaganda is the most deadly weapon and words are the most efficient recruiting officers. Nevertheless, I do expect my readers to shake off the thraldom of words. And next week, I shall try to bring out, as well as I can the difference between the inflation which I have been opposing and the inflation which I now advocate.

* * * *

Opinion sometime ago tended to emphasise the value of more such commercial undertakings for securing the large amount of public revenue which we shall need for expenditure on education and public health. There is no need now to tighten that emphasis. On the other hand, there is a natural trend towards expansion of the commercial activities of the Central Government. The acquisition of the Bengal Telephone Corporation is a significant instance in point. Communications of all kinds are marked out as a sphere for State enterprise. The expiry of the contracts with public utility companies will almost automatically convert them to the status of State or, in the alternative, municipal enterprises. And the capacity of these services to yield steadily increasing revenue has been amply borne out in recent years. In the case of the Railways, however, there are most questions to be decided before the Government of the postwar period can be sure of its ground regarding revenue. For, in the first place, there is no knowing whether the repairs and renewals that will be needed after the war will be over will not take away most or all of the vast profits that the Railways are now supposed to be making. The question as to what constitutes adequate provision for depreciation has long been shelved and may well come on us with vengeful magnitude and urgency. Secondly, it is not certain whether the country will be served better through the State deriving large profits from the Railways than through the lowest rates and fares consistent with the financial soundness of the Railways. These uncertainties notwithstanding it would not be wrong to look to the commercial departments to yield handsome surpluses, which the Central Government can devote to expenditure on economic reconstruction. And it is necessary also to regard the expansion of such activities to other suitable spheres as the established policy of the Government. Cigarette manufacture, life insurance for lower middle classes in rural areas and urban labourers may be cited as the spheres in which such expansion is most likely to take place.

* * * *

But the growth of public revenue through these methods is bound to be a slow process. It will have to await the

TATA STEEL

ISSUED BY THE TATA IRON & STEEL CO. LTD. HEAD SALES OFFICE:—102A, CLIVE STREET, CALCUTTA

Olympus

(From Our Correspondent)

New Delhi, August 2.

LORD LINLITHGOW's summing up of his seven years of Viceroyalty before the Central Legislature to-day was remarkable for its political complacency and its vital omissions. Curiously enough there was no reference to the failure of the Cripps Mission, to future relations between Britain and India, to the autumn disturbances and the repressive measures which have paralysed political life in the country. There was not the slightest hint of any constructive proposal to remedy the chronic deadlock and end the growing feeling of bitterness and frustration in the country. The farcical claim was made that Provincial Autonomy tested by experience over many years "was a workable scheme and a sound scheme" and that the Federal Scheme "would have solved the bulk of India's problem had it been possible to bring it into being." There were the usual official cliches about the cause of the deadlock which was attributed to "discordance" between the principal political parties and "the lack of trust, the lack of readiness to accept the legitimate claims of the minorities." There was the same complacency, though in a slightly less degree, about the growing economic distress in the country. It was claimed that the Government are determined to do everything in their power to stabilize economic conditions at tolerable levels" and that the "drive against inflation is being pursued simultaneously in the monetary and the commodity fields." Then was no announcement of any new measures to end the famine now gripping several parts of the country. It was merely stated that the present 'austerity plan' will hold the field "until having secured physical control of all available surpluses of food grains, administrations throughout India are in a position to control distribution, through rationing or otherwise." There was a rather cheery account of India's recent industrial expansion. The anti-Indian legislation in South Africa which has been agitating the public mind so deeply just came in for a curt, passing reference.

* * * *

There will be an interesting debate in the Assembly this week when the House discusses Sir Aziz-ul-Haq's resolution recommending India's "participation in any scheme that may be formulated by the United Nations for the establishment of a United Nations relief and rehabilitation administration for the relief and rehabilitation of areas devasted by the war." Several non-official amendments to the resolution are suggested. Maulvi Mohammad Abdul Ghani wants to make sure that the resolution does not in any way commit India "to be saddled with any expenditure of such rehabilitation and relief without the express consent of the House." Mr. Govind Deshmukh and Mr. T. T. Krishnamachariar in a joint amendment make India's participation in the scheme dependent on the "assurance of an independent international status to the country." Two other amendments in the name of Mr. Govind Deshmukh suggest that India should participate in the relief plan only if "Indians are allowed to enjoy the same political, social and trade rights as are enjoyed by the citizens of America, France and Britain in America and in Dominions of Canada, Australia and South Africa "and provided India is guaranteed the same political status by the United Nations as is enjoyed by such members of the United Nations as America, France and Britain."

The precarious situation of both Industrial and Railway coal supplies was officially admitted in the Assembly. It was stated that a number of industrial concerns in the country were forced to close down for a short period due to lack of coal supplies. Loco coal stocks were depleted due to short raisings in the coalfields of Central India and Hyderabad State and to the short supply of wagons in Bihar and Bengal coalfields. Last autumn's disturbances and the Cyclone havoc were also mentioned as partly contributing to the depletion of the stocks. During the winter and spring supplies to essential industries could only be maintained at the expense of railway requirements. When the railway stocks reached "dangerously low level," supplies to railways were again placed on the priority to which they were entitled to rebuild their stocks which in many cases had fallen below the level of industrial stocks. It was proposed to build up railway stocks up to the "target date" of September 30, and this was naturally having adverse effect on industrial requirements. The Government were now putting into operation certain proposals which, though considerably relieving industries, will not completely fill the gap recently caused in the coal stocks. Supplies are henceforth expected to be more regular though on a somewhat reduced scale. It was also revealed that the existing priority list has not been operated with such strictness that classes lower on the list are not given supplies till the requirements of those higher on the list have been fully met. Allotments are adjusted from day to day in the light of the wagon position so as to balance supplies to each class according to the needs of the country, and special *ad hoc* assistance is given where possible to industries whose stocks are low.

* * * *

The Central Exchequer returns for May, 1943, show that all the main sources of revenue except salt have recorded appreciable increase compared to the corresponding period last year. The total receipts for the month (Rs. 9.74 crores) are almost 50 per cent more than the receipts during May, 1942. The defence expenditure at the same time has been rising at an enormous rate and is now about 65 per cent more than in the previous year. It has risen from under Rs. 10 crores in May last year to over Rs. 16 crores during May, 1943. The war is now costing the country over Rs. 50 lakhs a day. There has been a progressive rise in railway earnings showing the increasing pressure on the country's transport system. The total gross earnings from April 1 to July 10 at Rs. 48.45 crores exceed the actuals for the corresponding period of last year by Rs. 4.65 crores and Rs. 13.38 crores more than the actuals for the corresponding period of 1941. As it is not possible to clearly foresee postwar transport conditions, the committee of the Central Legislature appointed to examine the Railway Separation Convention has decided that the present is not the right time to undertake a permanent revision of the convention. The Committee examined at length the question of a satisfactory interim arrangement for the division of railway surplus between railways and general revenues without coming to a final decision. It was recommended that a committee be appointed to examine the whole question of convention including such allied questions as betterment fund, amortisation of capital and fixed contribution to general revenues.

The Government still refuse to define their export and import policy precisely and in detail. It is, however, briefly explained that whereas "imports are regulated and confined to articles in essential demand to ensure the best utilisation of available shipping and to conserve difficult currency, exports are regulated according to economic warfare considerations and to the supply position of each article in relation to our own civilian and war requirements." It is further explained that exports of certain goods are prohibited to all destinations, principally countries normally dependent on India for supplies, and other controlled foods are allowed to be exported to all allied and neutral countries subject to varying degrees of restrictions. All exports outside India are controlled by the Central Government, licences being issued by the appropriate Departments of Government or by Export Trade Controllers at the ports and it is stated that there is no South African firm in India doing import and export business. There is only one South African Company, which is located in Calcutta and doing real estate business. The total British India exports to South Africa during 1942-43 amounted to about 10.35 crores, while imports from the Union came to only about 2.25 crores. This shows how South Africa is far more dependent on our exports than this country on imports from the Union. The trade figures justify the argument of those who think that only trade sanctions can be effective in making the Smuts Government see reason and revise their policy of racial discrimination against the nationals of this country.

The highest monthly ration of a single weekly newspaper, it is officially stated, is about 27 tons and of a single daily newspaper about 26 tons. The lowest monthly ration alloted to a newspaper is 10 lbs. The smaller newspapers are being generously treated under the graduated scale of cut which was brought into force with the agreement of newspaper interests with effect from April, 1943. Under this graduated scale, bigger newspapers are allotted only 45 per cent of their basic consumption while smaller newspapers get as much as hundred per cent of their basic consumption.

A sum of Rs. 1,43,00,000 was spent during the last financial year on arrangements made for the reception, dispersal and maintenance of Indian evacuees Rs. 70 lakhs was given as financial assistance to evacuees and dependants of Indians stranded in Axis—occupied countries. A sum of Rs. one crore is budgetted for this purpose in the coming financial year. It is stated that about five lakhs Indians have been left behind in Burma and 7½ lakhs in Malaya. The exact figure for Indo-China, Siam and Java are not obtainable.

I understand that due to his pre-occupation with the deepening food crisis, it may not be possible for Sir Theodore Gregory to leave for Washington to attend the Allied Currency Conference. Because of the importance and complicated nature of the discussions, Sir Jeremy Raisman himself may go to Washington. I also learn that Mr. Vigor, Chairman of the Food Committee, who has now been ill for some time, may be shortly returning to Britain.

Bombay, August 4.

THE Agricultural Department has prepared plans for developing crop production by seed distribution and offer of technical advice. The Director of Agriculture promised full assistance to ryots and others in regard to the despatch of seed. Private persons anxious to grow vegetables have been given seed without delay. But the Department has received no enquiries so far from non-agricultural families and looks forward to helping them. Except in the scarcity areas, the seed supply position is described as satisfactory. Even in the districts attacked by scarcity, enough seed for the kharif crops had been secured by imports from within and outside the Province. The Government of Bombay assigned Rs. 4.12 lakhs for the purchase and distribution of seed in connection with the "grow-more-food" campaign last year. In the three Divisions over three million lbs. of seed was distributed in the cold weather. This year the grant has been raised to Rs. 10.5 lakhs. For the scarcity area of three Districts a larger sum, namely, Rs. 21.84 lakhs had been set aside for the purchase and distribution of seed. A further grant of Rs. 12.5 lakhs had been made for the distribution of seed for an improved variety of cotton. It is hoped that Jarilla cotton in the Khandesh district would be grown on 11 million acres. In areas near Bombay City, fallow land was hardly suitable, but in other places, it is proposed to requisition fallow land for cultivation. Manure remains a problem as groundnut oil-cake sells at Rs. 140 per ton. Mr. Jenkins suggested that farmers could buy easily if the price came down to Rs. 80 a ton. Town waste cannot be readily utilised, though the possibility of using compost prepared by the Bangalore method was mentioned because the available quantity is not large.

Messrs. Premchand Roychand's review for 1942 dwells on inflation and other monetary developments. The reports is not displaced by the Reserve Bank's report on currency and finance and foreign markets are likely to pay as much attention, as in the past, to the P. R. Review. The report struck a gloomy note in view of the failure of price control and in its predictions the success of recent anti-inflationary measures was hardly expected. Progress in Indian industry has been measured in the conventional manner, but Bombay markets, which look for a fall in textile exports, will not be encouraged by the suggestion that the peak has been passed in respect of production in the steel and textile industries. The Bombay bullion trade's eventful year gets full attention in the Review in the light of the strain on supplies. The inter-Allied currency plans do not modify the traditional partiality for bullion, and the fall in the world's gold supplies last year remains a factor of some importance to local operators. The striking recovery in gold prices indicates that the downswing in commodity prices will not touch gold. The present level of food prices might keep bullion prices up, to the advantage of those selling distress.

Sir Ardeshir Dalal went down to open the new College of Commerce in Poona. The Deccan Education Society started the college at Poona to serve many communities which should get over the belief that business ability is confined to one or two communities. The Raja of Sangli confessed that Maharashtra had so far been indifferent to trade and the time had come to follow Guzerat. The new college is meant to supply one of the requirements for a business career. The Society runs two arts colleges and some schools. The addition raises the number of colleges of commerce affiliated to the Bombay University to five. The new college should also help the claim for a separate university for Maharashtra. Sir A. R. Dalal declared that education is essential for a balanced judgement, helpful in business as in every other field.

The Marwari and other Chambers of Commerce here have followed the Calcutta example by entering a protest against new restrictions on bank advances. The Bombay Shroffs Association joined in the joint protest against the D. I. Rule 94B meant to regulate advances against goods including bullion. The organisations fear that the Rule would disrupt the economic structure while the Calcutta protest dwelts on the dislocation arising from the compulsory repayment of bank loan on the score of checking speculation.

An interesting case relating to taxation of foreign income of a nonresident company has been reported recently. In view of the fact that a similar case in Calcutta went against the tax authorities the public's interest was certainly great. Wallace Bros., a partner in Wallace & Co., doing business in Bombay, is a non-resident with a share in the profits of the Indian Company. Its total income in British India in 1938 was Rs. 17 lakhs and income outside British India was Rs. 7½ lakhs. Both were taken as liable for taxation. The Chief Justice in his judgment declared that the Act of 1938 could be invoked to tax on foreign income of a non-resident because the Indian Legislature if it had no extra-territorial powers was quite competent to legislate. The whole Act is not ultra vires or even a particular section, and the Bench held against the assessee in the case. The Appellate Tribunal held that the foreign income could be taxed; and its order has been upheld.

The Bombay Andhra Association welcomed the Maharajkumar of Vizianagram last week when he came to collect funds for the purpose of famine relief in the Ceded Districts. An appeal was issued and the Andhra Community was asked to make a special effort on August 1st to gather funds for relief. The relief camps had helped partially, said the Maharajkumar. The Government should execute the Tungabhadhra project to help the Ceded Districts over their recurrent famines. It was stated that nearly a lak of rupees had been obtained in donations i Madras. Mr. Konda Venkatappiah is to com to Bombay to collect on behalf of the Andhr Mahasabha. A branch is to be formed i Bombay and a fair sum is likely to be col lected. The President may come again t Bombay to help in the drive for subscription

The Industries Department's report fo 1941-42 refers to intense activity in the mil industry and an expansion in factory em ployment consequent on an increase in bot seasonal and perennial factories in the Pro vince. Increased consumption of electri energy was evident of industrial progres and the advent of new enterprises wa marked especially in the textile field. The woollen mills reported an increase in production but artificial silk mills were hampered by lack of yarn. In spite of an increase in sugar imports, supplies were reduced by the setback suffered by the Khandsari producers. There was a decline in the number of chemical concerns owing to the shortage of essential supplies. Two out of the six match factories stopped work and production fell, but the 5 paper mills reported an increase in output, corresponding to increase in local demand. The oil-milling industry did well and exports rose to 2½ million gallons valued at Rs. 73.78 lakhs. Vegetable ghee, soap and other factors reported progress. Investigation of industrial possibilities was not limited to power alcohol and strawboard manufacture. The new commercial and industrial intelligence section provided increased contact with the public and over 3,000 enquiries were dealt with in the year. The Department introduced its scheme for loans to artisans for the purchase of tools, and a new scheme for helping the educated unemployed came into operation. The Department received Rs. 15.52 lakhs from the Government and its own revenue from fees collected by Inspectors of Weights and Measures and the fish-curing yards amounted to over Rs. 4.8 lakhs. The decline in the price of cotton in 1941-42 was not without advantage to the mills and other Bombay industries did well, especially, the woollen mills which reported that in 1941-42, the output of yarn and piecegoods including hosiery, was double that of the preceding year.

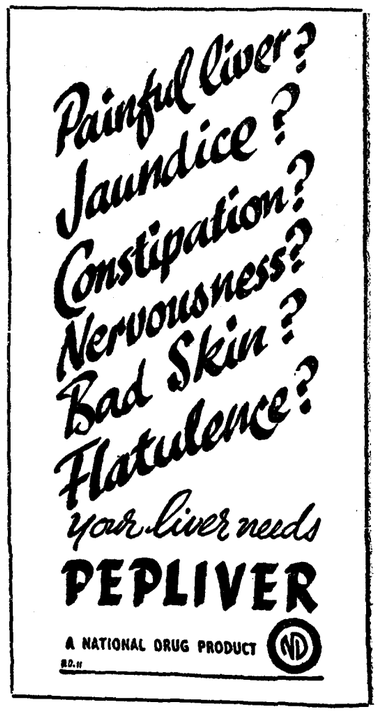
War news has been the main factor in raising and lowering bullion prices. Since up-country buying has revived of late there is no reason to fear a slump, and the reduced arrivals of gold point to the maintenance of gold at Rs. 70 per tola for some time. Improved demand for coin has been cited in market reports, and the discouragement of speculation has led to renewed demand for gold. Inflation is likely to promote hoarding in spite of the official argument that inflation in India has been dealt with by various measures including the increase in E. P. T.

South India

(From Our Correspondent)

Madras, August 3, 1943.

Inflation is the root cause of many of our economic troubles and the Indian States do not lag behind the Government of India in introducing urgent measures for controlling it. The Travancore and the Cochin budgets presented recently mark the anxiety of the States to fall in line with the rest of India in combating the inflationary trends and withdrawing surplus purchasing power. Problems like speculation, profiteering, mushroom company floatations, higher prices and scarcity of essential articles, are not the exclusive worries of the Government of India. In the budget session of the Travancore legislature the Dewan announced that this year's surplus of Rs. 80.84 lakhs and the estimated surplus of Rs. 57.75 lakhs in the coming fiscal year would be credited to a Post-War Reconstruction Fund which would be utilised for regulating the impact of inflation now and deflation in the post-war period. Owing to high prices of agricultural produce and the remittances by soldiers to their families in the state a considerable amount of income is now derived by the people, and plantations industries like rubber, tea, coffee, cardamon have been reaping windfall profits as a result of war demand. War-time prosperity should not blind the State to the dangers of peacetime factors and the need to prepare the ground for the future is real. The Travancore Government has therefore done well in building up a reserve which may save the State from uncertainties after the peace. In three years several new factories have sprung up including a glass factory, a plywood factory, a cement factory, an aluminium factory, a factory to manufacture sulphuric acid and acetic acids, a factory for the manufacture of electrical machinery and a textile factory producing yarn. Proposals for reorganising canal, coastal backwater and sea traffic are also outlined in the latest budget. Among the taxation proposals announced by Sir C. P. Ramaswami Iyer, there is a notable departure from the traditional ideals of taxation in Travancore Agricultural incomes above Rs. 5,000 are proposed to be subjected to duty and a revenue of Rs. 9 lakhs is expected from this new tax. The revision of land tax has been taken up in right earnest and, as the Dewan pointed out, there is no reason why industries alone should be called upon to pay more while what may be called industrial agriculture such as tea, timber, coffee, rubber and cardamon plantations are making huge profits. A committee would soon be appointed to examine the question of future land taxation, and allied questions like alternative sources of revenue, fragmentation and consolidation of holdings etc. Travancore's proposed experiments to find out whether an agreeable transition from the present system of land tax to a full fledged new system of agricultural income tax would be watched with keen interest.



Cochin's budget for the year 1943-44 reveals the active measures taken by the State to aid agriculture and combat the food crisis. The food department, created last year, arranged for importation of food grains, purchased paddy and tapioca produced in the State, opened Fair Price Shops, licensed dealers and kept a watch over profiteers, hoarders and smugglers. Cochin gave a lead to the rest of India in the matter of introducing a scientific system of rationing which has been working satisfactorily for some time past. Under the Hill Paddy Cultivation Scheme forests were made to yield as much of food grains as possible. 8,000 acres of forests have been cleared and paddy was sown in about 5,000 acres which is expected to yield 4 lakhs paras of paddy. During the coming year 20,000 acres would be brought under cultivation yielding nearly 11 lakhs paras of additional food grains. The manure depots attached to panchayats will receive larger allotments this year. A scheme for extending veterinary services to each panchayat area is under consideration and with the help of the inspector previously deputed to study tobacco farming elsewhere, the cultivation of tobacco will soon be taken up. Investigation of the Challakkudi Irrigation Scheme is almost complete and the total cost is estimated at Rs. 11 lakhs. The scheme is expected to benefit 25,000 acres and would yield 8% return on the outlay besides bringing a lump receipt of Rs. 3 lakhs on the sale of poramboke lands.

The rubber estates of South India seem to be passing through a crisis. Scarcity of labourers and heavy shortage of foodstuffs for the available labour have increased the cost of production two-three-fold since June 42. At a recent meeting of the Rubber Growers' Association a demand was made for raising the price of rubber to Rs. 2 per lb. as otherwise the production of this vital war material would decline considerably. Since their demand represents a rise of 160% over the present levels it is doubtful if the Government of India would accede to their request in full. But the case is clear that in order to keep production going the Government should step in to help and increase the supply of foodstuffs, and copper sulphate, and raise the price of rubber to a reasonable level.

The worries of Indian exporters in the matter of obtaining shipping space form the subject matter of a letter addressed to the Commerce Department by the Andhra Chamber of Commerce. War has not denied opportunities for the export of Indian products to the neighbouring countries but the bottleneck in transport has been frustrating the hopes of enterprising merchants in India. Commercial bodies are naturally displeased that the allocation of shipping space should be left, not with the Government of India, but in the hands of outsiders at London and Washington who are not anxious to encourage Indian export trade. The Government of India should represent the grievances of Indian Commercial community and try to assume the responsibility of allocating shipping space instead of leaving this important function to be discharged by foreign interests and British shipowners. The Government is also invited to pay attention to the working of the control system under which goods are made available to outside countries at prices lower than the prevailing market rates in India. The remedy lies in including representatives of Indian businessmen in commercial missions operating in this country and in including prominent Indian businessmen in the advisory panels helping export and import controllers.
