Steel shares fared better. Earlier in the week the general depression in the market affected the shares adversely and prices were marked down considerably lower. But with the return of confidence in other sections, prices rallied more rapidly than textiles. While the prevailing prices of Mill shares are somewhat lower on balance, steel shares show even a slight improvement. *Tata Deferreds* after going down as low as Rs. 1,896-4-0 rallied later on to close at Rs. 1,908-12. *Tata Ordinary* closed at Rs. 395 and *Indian Iron* at Rs. 36-4.

Among Miscellaneous shares *Shivrajpur* were slightly higher at Rs. 74 while *Premier Construction* were lower by one point at Rs. 191. *Bombay Steam* were unchanged at Rs. 677-8 and *Scindia Steam* were lower by nearly 6 annas at Rs. 37-10. *A.C.C.* were wanted upto Rs. 217-12. *Andhra Valley* were Rs. 1,840; *Tata Power* Rs. 1,847-8 and *Tata Hydro* Rs. 198.

THE STEEL CORPORATION OF BENGAL, LIMITED.

NOTICE is hereby given that the Directors have authorised the half-yearly payment of dividend due on the 5% Cumulative Preference Shares of the Corporation for the half-year ended 30th November, 1943.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is no change in the conditions in the money market and call money rates are unchanged at ½ percent in Calcutta and ¼ percent in Bombay. It would appear, however, that the large taxpayments in the last few weeks have resulted in a slight contraction of funds with banks and that with the increase in advances of scheduled banks by over Rs. 10 crores, there is not so much pressure from surplus funds. That is, perhaps, the reason why at the auctions of treasury bills held this week the reduced offer did not produce a lower average discount rate. Total applications at Rs. 9.15 crores should be considered relatively large for the offer of Rs. 6 crores, the amount of applications last week being Rs. 10.70 crores against the offer of Rs. 8 crores. The average discount rate was unchanged at thirteen annas and eight pies percent per annum; so that, in spite of the relatively large amount of applications bidding has not been keen. The offer for next week has been maintained at Rs. 6 crores.

The returns of the Reserve Bank for the week ended November 5, 1943 show that after a lapse of four weeks there has again been expansion of currency. It was pointed out last week that with the large receipts of sterling in recent weeks and the intensified operations of the S.E. Asia Comamnd, further expansion of currency was inevitable. The fresh addition to currency is Rs. 10 crores against sterling securities. The latest expansion of currency carries the figure of total notes issued to above the Rs. 800 crore mark. Total notes issued on November 5, 1943 were Rs. 800.05 crores against Rs. 791.05 crores at the end of the privous week. Notes in circulation are higher by Rs. 8.54 crores at Rs. 790.62 crores. Notes held in the banking department show a rise to Rs. 9.43 crores from Rs. 89.6 crores. Sterling securities are higher by Rs. 10 crores at Rs. 684.84 crores while there is no change in rupee securities. Rupee coin are lower by Rs. 1 crore at Rs. 12.47 crores.

In the Banking Department, Government deposits are further higher at Rs. 49.51 crores against Rs. 46.72 crores in spite of month-early disbursements. The expansion of currency and large tax payments have, perhaps, been responsible for the higher level of deposits. It has to be borne in mind here that maturing treasury bills are in excess of sales by Rs. 2 crores.

Speaking in the Central Assembly the Finance Member said that response to the defence loans has been satisfactory, and that the anti-inflationary drive has netted large sums of money. The cooperation afforded by the provincial governments has been very helpful. The U.P. Government alone had been able to collect subscription for Rs. 7½ crores worth of Defence Certificates. The Bihar Government is shortly to launch a drive for subscriptions for Defence Certificates. Rs. 6 crores is the target. But the reports that Government agencies are employed and a commission of 2½ percent is to be allowed on the sale of certificates are not encouraging as with the high rate of interest on the National Savings Certificates any additional discount would result in an unnecessary increase in the cost of borrowing.

The total amount realised since March this year, as a result of subscriptions to the defence loans, certificates, sale of counterparts etc., is estimated at Rs. 165 crores. A good part of the increase in currency in these months has thus been sterilised.

Provincial and other Government accounts show an increase from Rs. 13.34 crores against Rs. 11.94 crores. Bank deposits are Rs. 5.41 crores lower at 66.39 crores. In spite of the transfer of Rs. 10 crores to the issue department sterling securities are only Rs. 1.48 crores at Rs. 138.91 crores. The net receipt of sterling during the week is, therefore, Rs. 8.52 crores.

The returns of the Imperial Bank for the week ended November 5, 1943 show that there has been a slight decline in deposits to Rs. 196.61 crores from Rs. 197.73 crores. Investments are sharply higher at Rs. 135.17 crores against Rs. 127.5 crores. This big increase in deposits is perhaps due to the greater interest shown by the institution at the recent auctions of Bengal and Central Government treasury bills. Advances are even slightly lower at Rs. 36.3 crores against Rs. 36.6 crores. With the slight decline in deposits and the sharp increase in investments, cash balances are naturally lower at Rs. 35.03 crores against Rs. 43.57 crores.

The return of the Scheduled banks for the week ended October 29, 1943 reveals a decline in demand liabilities, for the first time in several months, the decline being as much as Rs. 5.26 crores to Rs. 467.32 crores. Time liabilities have also improved by Rs. 76 lakhs to Rs. 138.71 crores. Cash balances are lower at Rs. 19.89 crores against Rs. 21.6 crores but balances with the Reserve Bank are higher at Rs. 70.37 crores against Rs. 68.2 crores.

The exhange market has been steady.

EAST INDIAN RAILWAY

TENDER NOTICE.

Special item costing over Rs. 8,000/-
CLASS I CONTRACT.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, up to 12 noon on 30th November, 1943.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday Nov. 9, 1943. Total amount offered was Rs. 9,14,50,000. Tenders at Rs. 99-12-9% and above were accepted in full and those at Rs. 99-12-6% were allotted approximately 57%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 0-12-8% per annum

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Nov. 16, 1943, in Bombay up to 11 a.m. and up to the close of business on Nov. 15, 1943, at other centres. Successful tenderers should make payment on Nov. 19, 1943. Other conditions are as usual.

During the week ended Nov. 5, 1943, Government of India Treasury Bills for Rs. 1,68,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Evening.

A CRISIS in Lebanon and another in North Africa may have little or no effect on the franc today because the National Committee of Liberation pursues its labour with one set purpose. Herr Hitler's speech at Munich and Mr. Churchill's in London contain no assurance of an early termination of hostilities. That may explain the drop in the Funds satisfactorily. Australia's increased expenditure on the war, too, has no effect on the quotations for the Dominion's stocks. The 5 per cent loan 1945-75 as it approaches the date of repayment keeps rising. The rise in Dominion issues may be due to the successful operations in the Solomons as much as any other factor, but the big change of the week is to be found in the fall in textile shares in London because of fears to the deferred revival of exports.

The main problem set for Britain's textile industry is the control of supplies and prices during the war. Emancipation looks distant and the adverse movement in prices follows the general assumption as to reduced supplies for the home market though rayon's success as a substitute for wool, silk and linen has been established. The fall in oil shares, before and after the Prime Minister's speech may be the consequence of the dullness referred to or to some other factor like news from America. Fractional losses have been recorded in the Railway market as well as Minings and the continuous uptrend has been checked for once. It is difficult to resist the conclusion that the Prime Minister's promise of Russian achievement has been ignored by London jobbers whose main concern is to take note of inauspicious signs. Wall Street has been strengthening despite the recent decline in the face of reports as to strikes, pending or past. The leading U.S. industrials have gone up since May in spite of indications that the Federal Government skims off profits effectively, and the rise in corporate earnings is actually accompanied by a reduction in total dividends paid this year. Belief in peace in 1944 kindled by Mr. Spengler's affirmation of a widespread Republican revival may account for the upswing noticeable up to this week but a fall (selective in any case) will not cause dismay. That inflation may be prolonged is a conclusion arising from the U.S. coal crisis. Mention of Russia's interest in international financial arrangements will excite speculation as to the scope of cooperation. The Moscow agreement when worked out is to take note of Soviet Russia's financial requirements. Evidently the Russians hope to restore the old value of the rouble and treat present depreciation as something exceptional. Whether Russia will give gold or take gold, whether Russia likes the new White plan or prefers the Keynes plan which permits retention of exchange control in pristine severity are questions that are easily asked rather than answered. All that is known today, is that Russia and presumably China manifest interest in inter-allied discussions and want to keep exchange steady so as to promote their trade. Mr. Churchill assigns nearly every problem to the Allied Commission on which M. Vissinshky is likely to represent Russia. The Foreign Ministers have reached their capitals and the Moscow agreement endorsed by a Senate resolution remains the most important factor in inter-Allied relations. But hopes of an agreement influences gold mining shares in an unexpected manner though it may be urged that the drop in gold prices in the East is a determinant. The debate on inflation in India may have considerable effects on the bullion market in the light of Sir John Anderson's admission that the worst part of the crisis is over. There is also the promise of threat of longer civilian supplies in the interest of stabilisation of the rupee's value at home. The break in bullion prices is independent of stories as to Russian participation in the post-war financial agreement. But Mr. Morgenthau's hope of Russian approval may revive in another form, the gold scare of 1937 provoked directly by large offerings of Russian gold in London. Official intervention has not been without effect in Bombay and the Indian bullion market is now facing both ways.

The Truman Committee's request for a return from Britain for Lease-Lend may be wholly independent of the Administration's views. The Committee asks the Senate to collect something on account. It asks for a return for U. S. petrol supplies. Some thought should be given to the acquisition of British-owned reserves in Asia and South America. The oil share market in London has, naturally, taken fright over this rider and one of the proximate effect is in the fall in Burma mining shares in all Indian markets. U. S. gifts of rubber have been mentioned and the Senate may air its opinions.

Stories of spoilation in the Ukraine are surpassed by a report as to damage done by the Nazis before evacuation. Krivoi Rog and Nikopol are essentially mining centres whose relation to the German war effort has been obvious but earlier the Donetz Basin was wrecked deliberately. The Germans resolved not to let the Russians get back to the position of the world's third producer of steel. Simply because the coal and the ore are gone there cannot be any patching up. The Soviet Government ascertained by investigation the extent of wanton destruction. In the light of the conclusion that the Donetz Basin would not be the same again, there may be claims for compensation in Silesia.

Germany's economic disagreement, as planned at present, may be made to yield territorial or other advantages to the Soviet. The Czechs may be helpful to Teschen again and the obscurity surrounding Poland's future suggests that the States which survive in Eastern Europe would be treated as part of Russian lebansraum largely because the Germans have looted and destroyed on an incredible scale. The monetary value of losses has not been published, but it is noted that much time will be needed for rehabilitation of the Donetz basin. The U.N.R.R.A. may not show direct interest in making Russia a major industrial Power again. Russia probably will have to borrow from the projected World Bank because it is unlikely that savings at home will be enough for the vast tasks of reconstruction. Who should lend, and on what terms, cannot be determined when the whole question of inter-Allied agreement hangs in the balance. Next year the Republicans may win and the U.S. without going back on its promises may try to live unto herself. What is increasingly obvious is that Roosevelt's stock is falling as common stocks are rising. The sullen South may play a big part in the Democratic convention against a Fourth Term and home politics may easily displace the war as the biggest thing in America's life. But Mr. Bernard Baruch (Keyman in Wilson's time) is at Mr. Roosevelt's disposal and postwar questions when settled by Mr. Baruch with speed and skill may be ignored by the party politicians. Mr. Byrnes has created a new office so that Mr. Baruch could work out issues of readjustment. Not many forget that he was adviser to five Presidents and made a big name in Wall Street before he was middle-aged. He gave up business, put his money into Liberty Loans, and has been U.S. elder statesman ever since.

A further deterioration in U.S. Argentine relations has been reported as reprisals have been reported and U.S. nationals' funds have been blocked. The Ramirez Government dropped many ministers and avoided the September elections. The Provinces were overpowered by the Federal Centre and the pursuit of neutrality led to a display of anti-semitism. Explanations may not be advanced by Mr. Norman Armour because he is going back to B. A. but many will urge that the U.S.A.'s domestic difficulties encourage the belief that sometime later the U.S.A. will go back into its shell and the old, cordial relations can be restored. The Argentine's resources have increased and the debtor status of the past has vanished. There has been nothing from Britain to suggest that Argentine neutrality is treated as a handicap. There may be difficulties over equipment for the oil industry and Argentine imports may fall further. But the consequences would have been examined in advance and Argentina's future relations may be more intimate with Britain than the U.S.A. The opportunities for buying out the railways should increase, and the U.K. too may look upon the Argentine as a second string in the New World. For the present, exports may fall and Argentine trade may shrink because ships and markets may be harder to obtain. The jute trade may see in the week's news an unpromising development. The linseed market may draw some encouragement for different reasons. The Argentine like Brazil was allowed to borrow in New York and the facilities may not be restored.

Coal Control

Of the major industries of India, coal is among the last to be drawn into comprehensive official control. Despite frequent shortage of wagons, and the consequent slowing down of industrial production, one heard little of the coal industry in the first four years of the war in connection with any detailed or comprehensive scheme of official control of production and distribution. The scarcity of coal caused by the floods in Burdwan and the serious dislocation of traffic between Calcutta and the coal areas was regarded by many as a passing phase. But the pressure of events in war time has been relentlessly exerted towards bringing the coal industry in common with other great industries into the network of official control. Perhaps, the most important of the forces working in that direction is the shortage of labour experienced in the collieries. Labour shortage is a strange term to use in Indian conditions, except in reference to highly skilled labour. But the conditions of the labour market during war time have had the effect of cutting the labour force available for the coal mines. The position has been reached when, to prevent raisings falling to further lower levels, the ban on women labour has had to be lifted. Such obviously regressive measures are bound to cause strong reactions in the minds of those accustomed to measure progress in terms of the recommendations of the I. L. O.; and protests have naturally been made against the change. But necessity flouts the law even of progress; and one has to be content with the compensation afforded in the shape of greater attractiveness of the employment now offered to women. In any case, in the absence of up-to-date mechanism of coal lifting, labour shortage becomes a limiting factor of no small importance. The need to rationalise the general framework of industrial life is itself sufficient to lead the authorities to interfere in the detailed working of the coal industry. Conditions of transport do not permit indifference to the ways of raising and distributing coal. It facilitates the proper deployment of transport to concentrate transport facilities on the larger units, though the resulting hardships of the small collieries cannot be regarded with indifference. Above all, there is the general background of the coal situation as it affects all the allied nations. With the U.S.A. still in the grip of the coal strike and British coal resources strained in many ways, Indian coal has to reckon with the possibility of being called upon to fill the breach in the Middle East. All these considerations may not have the same weight with the public as with the Government. But the case for bringing about a scheme for regulating the functioning of the coal industry is indubitably clear.

Difficulties in regard to production as observed already, are a late development. The total output for 1940-41 was 29 million tons, the chief consumers of Indian coal being the Railways and the Iron and Steel Industry. But with the railways overworked and the capacity of the Indian Iron and Steel Industry steadily expanded, there has naturally been a great increase in the demand for this important raw material. If ever there were reports of coal shortage in particular centres, especially in the Western Presidency, it was due to lack of transport facilities and not lack of production. The Government did their best to provide wagon supplies to the respective collieries and consumers were asked to get their requirements from the nearest mines; but the efforts of the Coal Controller were not enough to keep industries fully supplied. The position has been made more difficult by the recent sharp decline in raisings from collieries owing to the difficulty in regard to labour. Coal mining is by no means an attractive job and with the higher wages offered by Government contractors and industries, there has been a migration of labour from the collieries to industrial areas. From wagon shortage it came to lack of production. Even the smaller number of wagons allotted to the respective collieries had sometimes to be detained for want of stocks. In the C.P. and Berar women labour had to be permitted underground and greater facilities afforded to such labour to make the work attractive. Increase in the cost of production has been compensated by the increase in prices and at the tenders for railways higher prices were offered to important producers. The permission to utilise women labour underground is to be extended to Bihar and Bengal; and it is hoped that with the renewed efforts of both the Central and Provincial Governments, it will be possible to attain the level of 25.64 million tons. If in a year it was possible to raise as much as 29 million tons, the figure stated by the Transport Member cannot, by any means, be regarded as sufficient for the requirements of Indian consumers not to speak of the provision for exports to other countries. There have been complaints of the slow progress of sand stowing and extraction of coal is still on old-fashioned lines. To talk of mechanisation of the coal industry at the present moment would, perhaps, seem ridiculous; but the problems of the coal industry that now confront us cannot be overlooked in the postwar years.

The total estimated output of 25.64 million tons a year is to be rationed on the basis of actual supplies made during the twelve month period from August, 1942 to July, 1943; and it is said that the increase in the consumption of essential services has been taken into account for this purpose. The total estimate for industries and domestic supplies fixed at 1,024,587 tons a month represents an increase of 20 percent of actual supplies made between August 1942 and July 1943. It is pointed out that the limitation of quotas on the basis of the twelve-month period from August 1942 to July 1943 might prove to be inadequate as in some centres production was very much affected in the latter half of 1942 owing to the political disturbances and not much of the lost production was made up in the subsequent months. The reference to the pooling of resources between India and U.K. is not quite clear. The figures regarding despatch of coal supplies to industries so far as Calcutta is concerned are very interesting. Against an average daily requirement of 22 wagons Calcutta received only 18 wagons per day for July, 23 wagons a day in August, 36 wagons a day in September and 35 wagons a day up to October 22, 1943. This perhaps accounts for the higher level of production in jute mills in October. But the screw of coal shortage is tightening. And in these conditions one cannot take an optimistic view of the prospects of coal companies. Even with a large output in 1940 coal companies were not able to make the same profits as in 1937-38. With the higher level of prices, there has not been any increase in the margin of profits and the fall in production can only depress earnings still further.

Inevitable as it seems to be, the extension of control to the coal industry is neither free from the complications of subsidiary problems nor sure of ready support from the general public. To the average man, harassed and worried in many ways by the combination of war time scarcity and half-hearted control and inefficient rationing, the inclusion of coal in Government control will seem to hold but more dismal prospects. But more important are its effects on the industries, and coal itself not less than others. We have referred to the hardships that may be caused to the small collieries by rationalisation of transport, hardships which call for some compensation. Likewise, the cut in the supply of this important fuel affects the working of other industries and, through them, as in the case of jute, the growers of the raw material. Within the ranks of each industry, too, as in the case of the rerolling mills, the rationing of units must go to the wall. Repercussions of this kind must be carefully provided against, if control is not to become associated in the public mind with indifference to the interests of small units. The stage has arrived when the authorities must recognise that the war effort and its requirements must be carefully devetailed into the normal economic life of the country. As Sir Jeremy Raisman observed in the Assembly, the Home Front must be given due deference to prevent its developing weak spots of its own.

PLANS, OLD AND NEW

In the circumstances of today planning is described as a logical, if not, economic necessity for India. Planning has, of course, only one purpose, the creation of balance between industry and agriculture. Self-sufficiency is not the overriding consideration as it was in Germany, preparing for a war of revenge at the end of economic recovery. But for the development of scarcity (not merely local) it is doubtful if the advantage of larger production would be held up as desirable. The indications so far available do not warrant confidence as to a production drive. The shortage of fuel may be cured by increase in mining output, improvement of transport or any other means but it seems certain that supply may not follow demand to the extent presumed in the average inference from the promise of more goods for civilians. The plain fact is that the risks of peace have ceased to be amorphous or distant. There are distinct possibilities of competition in the Indian market and entrepreneurs are not afforded as yet the guarantees they seek. Their interest in the national income and taxable capacity is remote. What is of specific value to them is the guarantee of benefits. In the light of experience there is no real place for confidence but the major question posed by war developments is whether the attainment of a fairly exact balance between agriculture and industry is desirable. Had India stuck to food crops and utilised the depression to reduce the area under commercial crops, the food crisis of today would assuredly be mild. Industrial development for defence purposes is certainly not an acute need as the end of the war draws near while the demand for exports like jute and tea may grow. The trade returns from month to month rub in the conclusion that the foreign market for cotton, oilseeds etc, is continuously shrinking.

It may well be urged that consideration of the war as a factor in Indian economy must end at once and preparation for peace must be the only concern. When a country like France possessing at least a third of Germany's war potential ceased to matter from 1940 it is questionable whether the Supply Department's activities alone will prepare the industrial foundation for defence. If an international organisation to maintain peace is set up, after the military and economic disarmament of Germany, the interest in defence can only be related to the problematic introduction of a new policy. What the aspirant for India's political freedom implies by the demand for control of defence is unrelated to the development of shipbuilding, aircraft or any other industry, still in embryo, it must be confessed. The more alarming factor is the backwardness of Indian agriculture. When the food supply is inadequate in respect of quantity and quality, there is only one industry deserving attention. The breakdown of the village community before the economic transition in India was passed over. Enquiry and investigation are hardly necessary to indicate that low production is the cause as well as the effect of the conditions of the agriculturist. Recent pamphlets on the land and the food supply have made plain two facts, the deterioration in outturn and the growth of numbers. These are not remediable by the setting up of ordnance plants or forward planning by one or two departments. Indeed, taxation for defence expansion may destroy the incentive to improve agricultural methods. It is easy to make up a list of improvements required from fertiliser production to the encouragement of subsidiary industries. Redistribution of land with one aim only, namely, higher outturn may be as difficult as the adoption of collective farming where possible.

That India's export trade thrives on agriculture and Indian industries require the home market before the question of export outlets can be examined is well understood; but the agricultural problem today presents peculiar features. It is not a case of shortage of manpower (though that might occur today in places) or of livestock, implements, seed or any other necessity. It is really a question of creating employment on the land for successive additions to population and progress hence undeniably lies in the direction of intensive farming. Figures as to rice yields in Japan and China were recently quoted by Mr. Hore-Belisha to indicate the destructive backwardness of Indian agriculture. So far as can be seen the elements of larger demand at home will remain. Given stability of prices for a long period it is to be presumed that agriculture will develop on familiar lines. It has been said by nutrition experts that the food supply must be doubled within five years. Imports permitted in the emergency period cannot continue, for the problem of foreign exchange will appear time and again. That agriculture calls for less capital than heavy industry is, perhaps, the chief consideration in advocating the expansion of output. Whatever new crops like soya beans, flax or tungsten may be tried the basic problem is still food supply. If the food supply is enlarged, the low per capita income of the masses ceases to matter. Cyclical fluctuations also cease to matter, if the export trade in food grows progressively smaller.

The fact that Indian industry is still in swaddling-clothes compared with U.S.A. or British industry, may claim attention for the reason that their capital requirements may be widely advertised but agriculture requires fiscal assistance of a new kind. Old remedies like debt relief legislation or co-operative credit can be scarcely called adequate when agriculture is viewed as the means to a social revolution. It may be urged by some that France by encouraging home agriculture at the expense of large-scale industry, endangered her position in Europe; but India's position is different because there is not today a hostile nation with a larger population on her borders and the main question—the only question—is the abolition of poverty.

Interest kindled by reports of subsidies for ammonium sulphate production is the measure of the hope based on agriculture. It is not the heavy chemical manufacturer but the farmer who is to benefit through this development and a late admission of the farmer's true needs has been provided for by a revision of sugar prices so as to permit the increase in cane prices desired this season by the mills, even more than the farmers. Apart from the question of production for the avoidance of famine, there is the consideration that the U.K. market requires only a few specified exports especially as her import surplus after the war may have a new content. It is difficult to resist the conclusion that after the war the only market for India's raw materials would be Britain since the U.S.A. has turned south, and the division of world markets in the future governed by such factors as costs and lower tariffs may not favour India. If crop planning limits the agricultural export surplus there is perhaps greater need to follow Empire economic policy after the war in view of the benefits afforded in the famine by the Commonwealth including Canada still outside the sterling area. Such advantages as may arise in the Far East should be deemed accidental as compared with the permanent prospects. It might also be urged that the recovery of lost markets would modify India's dependence on British or Colonial markets but there is no assurance that the Dominions might not cut in here or there. Few would have the courage to ignore the war as a transitory embarrassment and look only at permanent factors like industrial inefficiency, the scarcity of capital and of technical staff, and the perennial problem of underemployment in the villages. But the famine is leading to a shift of emphasis

from the war effort to the problem of India's poverty. Indeed, German experience of self-sufficiency suggests that food more than raw materials is important in war and peace and social security, at any rate, in India begins and ends with an adequacy of food. The manufacturers and industrialists who plan bravely ignore two salient facts, the abundance of labour in relation to cultivable land and the prolonged scarcity of capital for which the demand from the State is emergent. Nor can we forget that an agricultural revolution would entail no disturbance of the urban labour supply and may possibly ease the problem of demobilising the two-million army. The Army may by itself provide the capital wanted for the changes required, and closer relations between the soil and the soldiery may be required in advance of conscription. It is not without interest to recall that Army pensioners in the Punjab with a supplementary income have long been more aware of economic circumstances and requirements than the traders. The departures that will follow the use of the Reconstruction Fund, built up in the Army for the Army, may prove more realistic than much academic sun (moon) shine.

THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Fall in Textile Output

The production statistics of 1942-43 in respect of cotton textiles are reassuring, though a decline in Indian mill production is recorded. The Indian mills produced 4029.2 million yards against 4493 million yards in 1941-42. The expansion of exports and the decline in re-exports as well as imports were important results of the war which led to a rise in prices and created conditions necessitating official intervention. What is most important is the increase in mill consumption of cotton. The total for 1942-43 was 3.968 million bales higher than in 1941-42. The Indian cotton crop of 4.55 million bales was absorbed to a larger extent as Indian imports fell. But the fall in exports of raw cotton to 310,000 bales, justifying the crop restriction programme, is an indication of what has to be done still to balance textile consumption to cotton production. The decline in cotton mill production last year was accompanied by a fall in jute mills' production. The fall is connected with the fall in exports of jute manufactures and probably points to the vulnerable position of the industry even in the war period. The fall in exports of raw jute from 315,000 tons to 243 000 tons in 1942-43 has a distinct bearing on the crop curtailment decision enforced this season.

The main changes in respect of iron and steel are the substantial fall in the exports of pig-iron and steel, coinciding with a bigger decrease under imports. India's pigiron exports fell from 521,500 tons in 1941-42 to 239 800 tons in 1942-43 affording a measure of the progress made by the iron and steel industry here last year in spite of prices remaining stationary. The production statistics of other industries are lacking, but it is generally known that sugar output rose in the 1942-43 season. In the case of coal total output must be conjectured but the fall in exports, occasioned by the war, stands out in the trade returns. Indian mines benefited by the fall in imports but they lost more through the fall in exports from 15,49,970 tons to 320,980 tons in 1942-43 and prices too did not move up till December last in the case of coal. The Indian tea statistics are not complete as the South Indian production is usually left out. The production for the April-December period was 476.3 million lbs. as compared with 415.36 million lbs. in 1941. Surprisingly enough, there was no increase in exports during 1942-43 as the total was 321.5 million lbs. against 381.9 million lbs. in 1941-42—the value also showed a fall. The fall in exports had no effect on prices which continued to improve.

Food and Health

Sir John Orr, Sir William Beveridge and Prof. Julian Huxley have prepared booklets entitled "Targets for Tomorrow." According to Eugene Lennhoff Sir John puts freedom from want first because food is always important. More than half the population of the world is engaged on agriculture. Foodstuffs are still the most important item in international trade. The greater part of the wage-earner's income still goes into food. At the end of the last war, food was treated as a remedy for certain diseases and nutrition study gained in importance. Since the last war, the consumption of protective foods i.e. fruit, vegetables, milk and eggs has risen by about 50 per cent and public health has improved in proportion. But Sir John Orr thinks there is scope for further improvement. Revolutionary measures are wanted. Malnutrition must cease to be a consequence of poverty. He asks for a policy to end disease and guarantee the same chances of health and growth for the children of the poor as those of the rich. Resistive power against disease will be increased and infant and maternal mortality will be lowered.

The nutrition policy requires admittedly changes in the distribution of wealth. Wages must be raised so as to guarantee proper nutrition for workers and the family. A direct, drastic levelling up is demanded. But adequate food implies in turn an increase in agricultural production. Sir John Orr estimates that energy foods must be increased by 20 per cent and protective foods by 100 to 200 per cent. The increase in agricultural output should react on industrial production. According to Sir John opportunities for employment would increase, and an extension of international trade is likely. Uniformity of policy and agreement as to ultimate aims are advocated for the reasons which lead to the emergence of the recent agreement at Hot Springs as to post-war food requirements and the appropriate policy for dealing with surpluses and deficits. The conclusions have been discussed in India but the settled policy is yet to come; not merely in the application but in the formulation. The strain of rationing may well explain the setting up of nutrition goals, but when rationing obtains, as in India, without the pressure of war enfeeblement is a problem, distinct from public health. The Foodgrains Policy Committee hardly started on the question of nutrition but the universal doubt as to the adequacy of basic rations raises questions as to what is the food supply required for India. That is obviously the biggest issue raised by the food crisis and agricultural improvement and expansion is now to be viewed merely as a means to an end.

Against Spending

The last official contribution to the inflation controversy came from Sir Sultan Ahmad speaking at Indore on October 24. Admitting the existence of hoarding and profiteering in the land, he looked for the causes of confusion and distress. He said that hoarding puts up prices. "We also know that rising rices send stocks into hoards. There is a word for all this and it is something we can, and must, fight. That word is inflation. There are varieties of inflation and we can see it in many countries in different stages. If by inflation we understand an appreciable excess of available money seeking to be spent over the quantity of goods on which money can be spent, then some degree of inflation is unavoidable in a country at war. For, in wartime, both man-power and resources are as completely mobilised as possible for war production instead of producing civilian goods. While consumer goods become scarcer, money becomes more plentiful as increasing numbers of prople are gradually employed. The consequences, according to Sir Sultan Ahmad, are grievous. He admitted that inflation concentrates economic strain on the poor. And in India, the rich are few, and the poor are pitifully many. He distinguished between inflicted inflation and inevitable inflation. The former obtains in Japan's co-prosperity sphere today. But in India it is the natural consequence of a reduced supply of goods on the one hand, and on the other, the expansion of India's wealth on account of war production and the extensive purchases of our materials by the United Nations.

In Sir Sultan Ahmad's opinion, any form of inflation which we may suffer from is fundamentally different from the inflicted inflation jointly patented in Tokyo and Berlin. The various anti-inflationary measures were described and the savings campaign also was described. Sir Sultan argued that saving means refraining from converting money into stocks or goods or any valuable consideration that can be bartered in future. A person who buys with money either land or gold or silver or more food than he can eat does not truly save but spends; and what is worse, speculates in these commodities. The principal object of saving should be to keep prices down by refraining from unnecessary buyink. Therefore buy less now. Chinese experience, apart from British, was adduced in this regard. Sir Sultan Ahmad pointed out that National [illegible] and Reconstruc-

tion Movement launched in September, 1940 by the Marshal resulted in a collection of 846 million dollars. Russia, too has a war savings movement and in its first eight weeks collected 457 million roubles in addition to food in quantities. How far prudence alone will count in the savings campaign is doubtful, but the need to save more certainly remains. After the war loans for reconstruction may appear and new fields of investment may be opened up so that money lent to the State for the war now may be available for private investment. Sir Sultan Ahmad told his Indore audience that savings certificates afforded a generous return. Collections in the first month may inspire greater faith in the Save-Lend campaign than the qualified success of the recent funding loan issued at a discount.

The Excluded Areas

The aboriginals have made no demands; their political claims are not known but their condition interests others besides anthropologists. Mr. Verrier Elwin's pamphlet breaks new ground in putting forth the Aborigine's claim to be let well alone. The aborigine's way of life presents advantages and the mission of civilisation in the backward areas is not very clear. The conclusion cuts across the familiar theory as to uplift. In the background is the claim advanced from Chota Nagpur notably by Mr. Jaipal Singh for the Aborigine's special claims to a share in the Bihar Government. The communal life of the tribes is distinct from the wilder life on the Frontier. The essential distinction between the tribes subdued by Islam and the Bhils or any other forest tribe is apparent. Contact with civilisation in the case of the Pathan tribes makes for peace, but in the case of the C. P. tribes it destroys much that is fine. Mr. Elwin does not enquire into ethnic origins or stone age survivals. For him, the Aboriginal is a pleasant and permanent factor in India, and enquiries in Bastar have convinced him that communal life promotes morality and the right use of leisure.

India does not know its wilds but the Aboriginal is not merely the object of preservation like big game. The extinction of the Red Indians has no parallel here but the Aborigine's survival value has not been established as yet. Mr. A. V. Thakkar has done remarkable work in Khandesh and the late Sarat Chandra Roy found in Chota Nagpur the field for much besides investigations. What is clear is that the 25 million people have to stand up to an acquisitive society. The protection vouchsafed by the administration is small, for the forests are the property of the State and the exploitation in the interests of war or something else destroys the foundation of all tribal life namely, shifting extensive cultivation.

The virtues of the Aborigine are little known, but tribal solidarity has an abiding value. Forest tribes scattered from Central India to the south have their peculiarities. In the Indo-Gangetic plans they are unknown, but on the eastern frontier they merge into Burma's tribes. In mediaeval times the tribes were in for a spell of Hindu infiltration, and dynasties in Bundelkhand and beyond mostly tribal in origin upheld an older civilisation against the flood tide of Islam. There is no bibliography in a pamphet which will naturally lead enquiring readers as to the why and wherefore of conclusions. But the case against the march of civilisation has been stated without qualification. The fact of decay cannot be denied; neither can the value of a primitive culture divorced from a commercial civilisation. That Aboriginals should coexist in India with Hindus, Muslims and Scheduled castes is understood, but the writer hardly indicates that the British Dominions so far have taken the shortest way with the tribes, and in Africa the native (compelled to work for others) is far worse off than the Aborigine in India.

Moscow Agreement

Turkish and Swedish newspapers welcomed the Moscow conference which ended on Saturday in complete agreement as to the conditions of surrender and the framework of post-war security. It is singular that complete accord as to military operations should have been followed by agreement as to Italy, the re-establishment of Austria, and the general purpose of an organisation for peace. For the first time in Allied discussions, the Second Front was not brought up, and the Allies' work in Italy received adequate recognition like the break-up of German industry by the R.A.F. The unity of the three Allies until now was rather shaky. It was widely argued that neutrality in the Far East put Russia on a different footing. That argument has been over-ruled finally. The conference agreed as to the abolition of Fascism in Italy. The Duce's Republic has no chance of survival and formal association of the French Committee for National Liberation follows the calculation as to the reward for work in Corsica against the Nazis. The seven-point declaration promises that Russia, cold-shouldered in the past, is not going to keep out. It is certainly not unlikely that M. Litinov will revive his plans for security and early assurance as to equality in a new organisation (membership open to all peace-loving countries) may have its due effect on neutrals.

Monday's news also raised hopes of early end of the war and the Moscow communique elucidating the agreement as to armistice and war guilt made it clear that the old demands made on neutrals remain. Though formally rebutted, it was made clear by neutral opinion that the right of asylum may be withheld in certain cases. The biggest result of the conference is the European Advisory Commission bringing the U.S.A. and Russia together as on the Algiers Commission. Both Powers manifested after 1919 a disinclination to treat Europe's malady continuously and courageously. Awkward issues are assigned to new bodies to investigate and report and Russia is presumably free to settle matters between Hungary and Rumania or Poland and Lithuania. There is, however, the possibility that all claims and counter-claims might go before the new independent Commission. It is clear that the Commission will have to prepare the international organisation whose aims have been defined specially under Article 7 of the joint declaration. Being more limited in scope than the Atlantic Charter it is more specific in respect of both ultimate and desired objects. The more important result, however is that doubts provoked by the sensational tour have been put to rest and the direction of the war must gain in incisiveness from the realisation that the Russian defence is not a problem and Hitler has no ally worth the name.

Food From Australia

More than any part of the British Empire today Australia has evinced interest in the Indian famine. Food production in the Commonwealth is still sparing and Australian supplies account for the arrival of one food ship after another. Senator Fraser told the Australian Senate in October that larger quantities of wheat had been exported from Australia to India this year. Additional large supplies would be exported to India from both South and West Australia when shipping became available. The Australian Government is said to be interested in increasing food exports. According to recent reports, it is likely to take up with the British Government the question of private sale by the Commonwealth of several thousand tons of wheat to the Middle Eastern Countries, particularly, Turkey, Iraq and Iran. The proposal for the sale, which would involve several shiploads, was placed before the Minister for Commerce and Agriculture (Mr. Scuilly). Australia has accepted in recent weeks orders from Britain for 250 000 tons of wheat and a part of these supplies is destined for the Middle East. The Commonwealth is selling in addition half a million tons of flour. The remarkable food production record is summed up in a statement to the effect that Australia has obligations to every American serviceman in the S. W. Pacific and is also supplementing supplies to the extent that New Zealand cannot meet them. Not one Allied or Australian serviceman has gone hungry. Quite recenty, an arrangement was concluded with the Indian Canteens Directorate and Naafi Canteens for Australian orders to be negotiated at Indian and Naafi Canteens in India, Ceylon and Aden.

In spite of shortage of manpower, fertilisers and equipment, food production in Australia has been maintained and, on the whole, increased. The dairy industry alone lost production. But the Federal Cabinet has since fixed targets for meat, butter and cheese. Men are to be released for rural industry and Australia's whole milk output is to be stepped up by 10 per cent in 1943-44. In the year ending August, butter and cheese output dropped appreciably, offering in this a contrast to Canada where dairy production has shown very consistent increase in the war period. Men from the Forces in Australia are to be released for rural industry according to an announcement made by Mr. Forde. Agricultural changes reported from Australia include the establishment of flax. Despite serious difficulties, Australia in the war period has increased the area under flax from 2.000 to 60,000 acres and the yield of fibre from 150 tons yearly to 100 tons weekly. There is good ground for the belief that the development will not be merely a war contribution but will mark the inauguration of a permanent industry which may eventually meet Australia's requirements. Besides food, Australia has developed timber production. The Northern Territory's resources have been developed by the Allied Works Council. A series of saw-mills has been set up to meet the demands of construction, and the development of the Territory has been undertaken in advance of the return of the inhabitants to the area nearest the war zone. Australia is different from the countries at war in having an abundance of meat. Rationing is not regarded as inevitable as supplies of mutton are plentiful; and the introduction of rationing next year is a contingency rather than a certainty. Of special interest to India is the imposition of more restrictions on imports. The Minister for Customs has restricted imports of spoons and forks. Only if the Commonwealth certified importation as essential could the release of exports be secured even from the sterling area. The biggest industrial development reported in Australia news is that Mr. Beasley has been instructed to prepare a bill for the aluminium ingot industry to be established in Tasmania. The Government proposes to allot £3 millions for the project and Tasmania was chosen because of the cheap power available in that State.

Tighter Blockade

Last year reports from Washington appeared as to transport of tin and rubber by Japanese ocean-going vessels over the South Pacific and the Atlantic. These strategic materials are intended for Germany and the traffic was described as a leak in the blockade. The blockade, however, appears to have mastered the leak, in the light of Lord Selborne's recent assurance that blockade runners from Singapore to Bordeaux have been beaten. The interview to the "Star" reporter dwelt on the MEW's success in keeping the Bay of Biscay under control so as to prevent any help going from Germany to Japan or 'vice versa.' Germany and Japan know that if they could link up they would increase each other's strength enormously. According to the Minister, Germany wants vegetable oil, rubber and tungsten. Japan wants machine tools, ball bearings, technicians and blue prints. Japan has been fought by what Lord Selborne called a blue print blockade. A service to exchange the high priority goods was started by blockade runners. Highspeed ships with sufficient bunkerage capacity to disappear into the oceans was started, and the blockade runners used neither lights nor wireless off recognised routes. At first neither British naval forces nor air strength was large enough to stop them observed, Lord Selborne who pointed out that these crafts had to be spotted from the air and intercepted. But Britain did get at them. More than three quarters of the ships have been sunk, and the service driven to submarines. These were difficult to detect, but submarines cannot carry much. Blockade-running by submarines is uneconomic, according to the Minister. Since Britain has obtained control of the Azores for the duration, a further check on clandestine supmarine traffic has been imposed.

Lord Selborne adheres to the view that Japan is short of shipping. Her prewar tonnage was 6½ millions and this has been reduced to less than 5 million tons. Monthly sinkings run at the rate of 130 000 tons and demands for shipping have increased through conquest. Fuel is a complicating problem. Japan has to take oil in bulk from the East Indies, about 5,000 miles away from Japan. Rubber, tin and bauxite supplies entailed equally long journeys. There is also the major problem of carrying food and metals from Manchuria. Japan is short of iron and steel because U. S. scrap supplies are at an end. It is presumed that wooden vessels driven by Diesel engines would be used, but Lord Selborne remarked that they would be small, slow and vulnerable. They could not be regarded as a solution to Japan's problem, Lord Selborne ad-

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications on the prescribed form are invited from Nurses to fill the following temporary vacancies on N.-W. Railway:—

	"A" Division	Waiting List	"B" Division	Waiting List
Muslims ..	1	1	1	1
Anglo-Indians and Domiciled Europeans ..	2	3	2	3
Other minority communities, *i.e.*, Sikhs, Parsees and Indian Christians	Nil	1	Nil	1
Unreserved ..	Nil	1	Nil	1

Note.—Waiting list will be current for a period of one year.

Qualifications.—A candidate must hold a Certificate/Diploma of training as a Nurse and must be registered under the Punjab Nurses Registration Act of 1932 as a Nurse in "A" or "B" Division. Preference will be given to candidates with A.R.P. training and those who have training in midwifery and special experience of work among women and children.

Pay.—(1) "A" Division Rs. 160 p.m. fixed plus dearness and other allowances admissible under the rules. (2) "B" Division, Rs. 100-10/2—120 plus dearness and other allowances admissible under the rules.

Age.—No age limit is fixed but candidates will be required to pass the prescribed physical examination. Last date for receipt of applications together with attested copies of tesimonials:—13th December, 1943.

Full details and the prescribed application form can be had free of cost on sending a stamped and addressed envelope to the Chairman.

NORTH WESTERN RAILWAY

Tender No: 210-S/E22/69.

Codeword: CALCD.

Tenders are invited on a rupee basis for purchase by the North-Western Railway of Carts Conservancy Night Soil with Wooden Wheels. Tenders must reach office of the Controller of Stores at 14.00 hours on the 29th November, 1943, and will be opened in the Office of the Controller of Stores, N.-W. Railway, Lahore at 11 a.m. on the following working day. Tender can be seen at and obtained from the Controller of Stores Office, N.-W. Railway. Empress Road, Lahore on and from 5th November, 1943.

The sale price of the tender with 2 copies of drawings is Rs. 3 for local and Rs. 3-8 for muffusil.

mitted also to the 'Star' reporter that the Japanese fleet was held in reserve but would have to face the American fleet, reinforced by a superior air force. Lord Selborne argued also that beating Japan is important and the forces of Britain will be every bit engaged in it as well as against Germany now. The war against Japan is just as urgent and serious as that against Germany, he said in conclusion.

Planning for Expansion

The work of the year old U. S. Commission for Economic Development (CED), primarily concerned with the maintenance of full employment, has indicated that planning in the U.S.A. has very finite objects. The Committee set up last year has only one aim, to raise the output by 40 per cent as compared with 1940 and expand total employment by 20 per cent. Investigation always comes before the organisation of resources, and private enterprise is being coached for the job of expansion, and small businessmen are being taught that reconstruction after the war is their own concern. The job undertaken by the C.E.D. which is another name for Paul Hoffman, who put the Studebaker Car Company into prosperity, is to convince U. S. employers that they must give jobs to those who come back from the war. Individual companies have been asked to get their development plans ready. It is also aiming at keeping competition going and hoping for expansion to continue. The N.L.R.B's work on planning has been eclipsed by a new survey of organisational possibilities. Since the work of the C.E.D. is independent of Government direction, it may well be suggested that a pattern for Indian employers already exists. It may be suggested that reconstruction schemes sponsored by the State are of less import than those connected with the A.I.M.O. which persistently makes known deficiency rather than achievement.

Regional planning is not the only idea tried out by the U. S. Committee. In view of possible changes in the White House and Washington next year, the U. S. plan has definite political implications. But the C.E.D. has no pre-occupation with export policy and it has no international contacts either. Its main object is to avoid unemployment. If the war stops the U.S.A. may have a bigger unemployment problem than ever, and the chief concern of empoyers is to keep up the national income around $150 billions so that apart from the empioyers the Treasury has no overwhelming problem after the war. To the extent that individual enterprises can draw up plans for expansion on the basis of E.P.T. refunds and sponsored imports of capital goods, Indians may find in the work of the C.E.D. (organically linked with the U. S. Department of Commerce) something more than an example of how things are done better abroad. The Government of India has formulated lately enquiries as to the mechanical requirements of enterprise after the war. While it is easy to consult any plan with the use of sterling balances, it is more important that an adequate assurance as to employment and wages should be given. That is the branch of social security that interests most people who may even be persuaded to overlook the peremptory rise in the cost of living if a guarantee against the dismissal is given. What is more important is that the ghost of superfluous productive capacity would be laid and

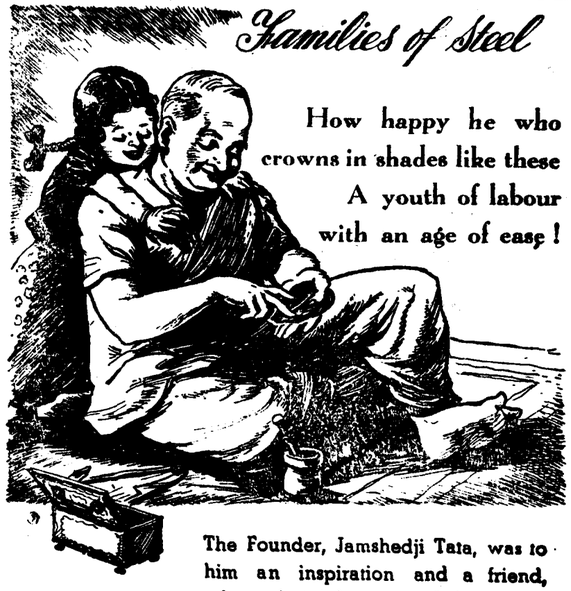
such gains as are promoted by fuel economy would be made permanent. With less than two million men in organised industry at present the problem of demobilisation appears formidable. Industry has to give the answer and the question of planning is of interest to both workers and investors who are latterly haunted by the fear of peace. The fear would vanish, if industry had its own plans ready. In the case of steel, cement, and sugar, the risks of peace are small as compared with those industries which have to face up to renewed competition. An assurance as to fiscal autonomy may help, but only partially, because the problem of expansion is related to the price-level and much else. The charges that industry has to bear in respect of transport, taxation and managerial ability call for investigation and the kind of research that has to be undertaken is obviously different from the setting up of committees which have no touch with the individual enterprise's advantages and handicaps as compared with formulation of general policy. The post-war planning of private agencies may be removed in scope and content but the maintenance of purchasing power is of some importance to Indian agriculture, encouraged to expand from year to year.

South African Supplies



Import licenses and certificates of essentiality are the rule in all countries and South Africa has applied regulation to textiles from Britain as well as all goods. In July 1943, the Union decided that imports of textiles from South America should cease and the Indian Trade Journal which records changes in import regulations of the Dominions and Colonies has shown that countries at war have no desire to keep up trade relations. But South Africa has embarked on some changes from September. Only regular and well-established importers can count on certifcates and time of shipment, quantity involved etc. must be specified on the permit, valid for six months after the quarter indicated on the permit. More important is the news contained in the Standard Bank's monthly review as to arrival of merchandise including textiles and hardware. As an importer South Africa has advantages in being able to offer gold and a shorter route. Shopkeepers are reported to have relaxed restrictions and buyers showed a distinct preference for quality. The Union's war expenditure led to the issue of a 3 per cent 1957-66 loan at par. This loan was followed by a tap issue of local registered stock 1958-68 at par. The issue was favoured by an increase in gold production during July and a rise in business activity.

Footwear and clothing have become important local industries owing to the war. Civilian demand more than the Government orders help South African factories. Port Elizabeth reported that factories were turning to civilian orders after finishing war contracts which have been reduced. Besides the Union's engineering industries, the diamond industry has boomed. Firm demand forced sales in the first half of 1943 to a record level. Shortage of staff led to reduction of orders to view but the output of industrial diamonds is not affected. Demand for industrial diamonds even after June was noted as very firm. South African exports of cut diamonds have slackened slightly owing to the fact that quotas for the imports of diamonds into India have been filled for the present. The rise in the price of gem stores generally during the war and the extension of control in Britain to diamonds indicated how new war wealth and the depreciation of paper currency help the diamond industry. That India takes her quota promptly will not surprise either the jeweller or the economist who finds the expansion in the note issue the outstanding factor. The supply of maize in South Africa is said to have improved though rain delayed harvesting in some areas but Southern Rhodesia reported a sub-normal crop and special measures to encourage cultivation for next year by offer of guaranteed prices. The cattle-raising industry in Southern Rhodesia was helped by the cold storage commission which extended facilities and granted a bonus to suppliers of stock. The demand for meat in wartime is apparently going up and the Empire is getting a larger share of the U.K. market.

Inside Russia

The food problem in Russia is not eased by the taking of the Ukraine where the Germans made sure of destruction. Bread is a bigger problem today as the manpower question recedes and the most optimistic estimate is that till the end of 1944 anxiety will persist. Black bread is scarce and supplementing it by potatoes and cabbage is not very attractive. Reports from Russia agree that sugar is rare and butter almost unobtainable. Land from the U.S.A. was actually hoarded. In 1941 butter was plentiful but the war has swung this way and that and the scarcity of meat has been even more remarkable than in the period of promiscuous slaughter over ten years ago. The Soviet Union's food policy has been mainly concerned with encouragement of allotments. In place of the collectives the small holdings have become important. What are called Victory gardens have become the rage and 2.5 million acres have been aded to cultivation. In the summer ten million people took to allotment cultivation and digging for victory was part of the defensive toil. The Soviet Union's food problem this year is not dissimilar from Britain's and Victory gardens were begun with only one aim. In the Urals every major munitions plant owns a garden whose produce is used up. Many a factory grows cucumbers and cabbages for its own needs and puts away the surplus in cases. Food is a by-product of many industries. Leningrad's City Council grows and preserves its own food. Seed for the new gardens is a different problem and recaptured territory's demands naturally come first. Russia sowed the "acres of friendship" to provide

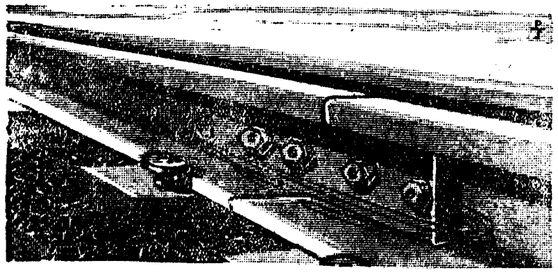
seed for the farmers going back to scenes of spoilation. U. S. help has also taken the form of providing seed and American types of many vegetables have been launched. In the past Ukrainian immigrants gave the U.S.A. special types of wheat and oats and the favours have been returned. Labour on allotments may be a change for the Russian workers, compelled to labour for 84 hours a week, 66 hours in the case of women. The use of school children for farm work has been reported and as many as 5 million have gone into the fields to sow and pluck. The percentage of women among farm workers now is as high as 70 at present, and report says that children work harder than adults before the war. Agricultural production is treated as a branch of war work and Russians, eager to show the world what they can do, have discarded comforts to increase the supply of food.



Before the Election

Mr. Willkie's speeches in favour of international co-operation go down well though not with the Isolationist fringe. The fringe, however, should be satisfied with his warning to Britain not to say anything about next year's election of a Fourth Term for Mr. Roosevelt. The warning may suggest that Mr Willkie is backing himself very strongly but it is also a warning to Britain in view of her abandonment of elections that the democratic process in the U.S.A. is independent of the war and of the alliances.

The warning came at the time of the Moscow talks when it was imperative that U.S. support for the British view of Europe's frontiers should be secured. There is no question of the British Ambassador or any Mission saying anything about the proper candidate. It is simply a question of letting the stronger party machine get into trim. Mr. Willkie claimed in 1940 that he had no commitments, even less than George Washington. Today having taken the stump, the candidate has to think of the defeat of 1940 and his own prospects besides the Party's attitude to alliances or action.

Comment on the difference between President and Congress reached a point at which the U.S. press felt bound to question the opinion expressed in Britain about the President's critics. The two Republicans in the President's cabinet have taken a different line so far, advocating a complete merger policy but Mr. Willkie is evidently ranged with the five Senators who saw the working of the alliance. The Presidential attitude to Congress, resentful of labour today, looms larger than ever. In the 1940 election when Willkie stood against Roosevelt, Britain could not be neutral though Mr. Allen White had turned against Roosevelt but this year's European developments make for better neutrality. The President has to win the next election off his own bat, mainly because the Republicans do not want any outside direction. Mr. Willkie's view of the British Empire, half-free still, conditions the Republican Party's opinion. The Republicans in the past have been more pro-British than their opponents. But U.S. opinion must be changing as the President has dropped Mr. Sumner Welles and is merely going on with the anti-inflation fight. The President has shown so far no signs of being able to dominate Congress after the reduction in the Democratic majority. Mr. Willkie has to face rival candidates (potential only, it may be said) but he does not want his great opponent to have the benefit of British support. Mr. Willkie wants that seconds should be out of the ring in the next round. Mr. Churchill's visit to Washington and his Harvard address in favour of Union Now raised fundamental questions before the Election. It is clear that Mr. Willkie does not want the Prime Minister to go there again. It is evident that the Republicans have failed to secure an amendment of the Constitution that would prevent Mr. Roosevelt from again standing for election.

Though the British alliance is endorsed in the Connally Resolution, the Republicans are angry and getting united as a party. In the last election Mr. Willkie was a dark horse compared with Mr. Roosevelt, and the British naturally favoured Mr. Roosevelt, and his first act in the Third Term was lease-lend. That may be not ignored by Mr. Willkie whose argument is against British meddling in U.S. politics. The Russian dictatorship gives Britain no chance of interference and community of interests cannot be regarded as a claim to regard U.S. politics as the concern of Britain. Labour troubles in the U.S.A. excited comment in Britain and it was retorted that Britain is not free from strikes in wartime. Mr. Willkie's warning to Britain may be a wholly self-regarding action, but the lesson is

A penny for your thoughts

Travelling over miles of railway track do you give a thought to the nuts and bolts in the fishplates? Little things these, but of great importance, for without them safe effectual joints could not be made. The building of ships, tanks, guns, bridges and a thousand and one other things is made possible today by rivets, screws, nails, nuts and bolts. To withstand strain and vibration they must be accurate and immensely strong and it is precisely in this field that our products have made their mark.

plain. The U.S. political situation is a matter for Mr. Fulbright or his critic, Colonel McCormick, not at all for those who speak of greatness and responsibility. In regard to foreign policy Republicans in the past have been good friends of Britain, and Mr. Theodore Roosevelt was not less eager to take the British view of Germany than Mr. Franklin Roosevelt.

Conditional Resumption

Last week futures trading returned but the E.I.C.A. was compelled to accept conditions which make hedge contracts less of a reality than presumed. A single market and unitary control remain advantages, but the function is limited to putting buyers, namely mills, in a position to buy cotton for delivery at prices that must move within two set points. The orders of May dealing with cotton have not been modified. The rate of Rs. 550 per bale of Jarilla cotton at the best and Rs. 400 at the lowest will give outsiders enough chances to study opportunities and examine the supply position. In the past week prices eased and export restrictions on medium staple cotton were mentioned as the original factor. Cotton prices in India are not free to follow New York and the Bureau estimates have ceased to interest the Indian trader who is only called upon to look at textile control and anti-inflation measures. There will be no market for Sind and quotation as before at so many points on may not help the grower of Americans. But in the light of Sir Victor Sassoon's assurance that good days are in store for Indian mills, it may be said that all long staple cotton available locally would be snapped up by mills, not able to import more than a limited quantity of African cotton.

The reopening of futures has been called an experiment and the reports dealing with the first day's trading indicated that the tone was irregular. The decline in bullion may have real effects on the price structure but the floor has been fixed and the price level in relation to the working class cost of living index is not too low. The elimination of options makes the futures market a nominal one and the broker called upon to deposit Rs. 25 per bale may find no point in bringing outsiders in. The further power of requisitioning for the benefit of mills is to be regarded as a guarantee in favour of the consumer. The revival in cotton mill shares especially in Calcutta may find some support in the trend of cotton prices. The safeguards mentioned in the press note issued last week show that control of the cotton trade follows the control of the cotton industry, and Government which regarded the cotton market as the starting-point of speculation, fostered by talk of inflation, has exacted the full price for a regulated futures market against the conditions set down must be counted the reduction in the acreage under cottton in India. Like every commercial crop, cotton is past its prime, and more food plans have limited cultivation again. Mill consumption outlook is good and price changes may not be decisively against the grower.

The Commons debate on famine and food scarcity in India seems to me to defy all attempt at dispassionate comment. The debate was announced a long time ahead; and many in India, in accordance with established habit and, as things are today, much against their inclinations, were looking forward to it. For there was a belief that famine, if no other of the features of the Indian situation today, should stir the British national conscience deeply and that the debate must give some heartening indications of a new attitude to the Indian problem. But to adjudge the debate dispassionately from this point of view seems well-nigh impossible. There are a few things to show that the traditional Indian faith in British goodwill is not wholly wrong. Mr. Pethick-Lawrence's speech had an obvious ring of sincerity. The other speakers notably Sir George Schuster introduced a spirit of vehemence and a passion which are far from out of place. There is a genuine ring of sincerity in the indignation shown by the British Press. But the debate as a whole must strike the average Indian more as a sop to the troubled conscience of a few than as an attempt on the part of a great nation to vindicate its fair name. There are other features of a debate than the phrasing of the speeches by which to judge its worth. The attendance, the standing of those who participated in the debate, the interest evinced by the public in it these too are important pointers. Mr. Jayakar, of all leaders in India, has pointed out with disgust that only 35 to 53 out of a total of 600 members attended the session and that Mr. Churchill, who finds time to speak on the affairs of the smallest country in Europe, was notably absent. Neither Mr. Amery nor Sir John Anderson, who replied to the debate, showed any consciousness of serious errors of omission. And in the speeches of both there are suggestions which may be said to add insult to injury! What is heartening is not the debate, but the possibility that it may not be without a sequel of some significance to the future. A "Patrika" report says that both Mr. Amery and Sir James Grigg may have new portfolios; and according to the special correspondent of the "Patrika", the former was unusually meek when he spoke during the debate in the Commons. It is by no means impossible that the famine has disturbed the complacency of the British ruling classes about their record in India.

But the value of the debate, so far as India is concerned, seems to be little or nothing. A debate of this kind is valuable either as a promise of relief in the hardships of food shortage or as a promise of a better attitude on the part of the British Government towards India. In both these respects, far more would seem to depend on the attitude and energy and drive of Lord Wavell than on changes in the British Cabinet. As a matter of fact, the first notable step in combating famine conditions has been taken by the Viceroy in approaching the Army, not only for releasing its stocks of food, but providing transport and guard for the movement of food and ensuring its proper distribution. Sir Claude Auchinleck in a characteristically frank and clear statement has said that the reason why the Army did not render this service earlier was that it was not asked earlier; and no one would contend that it is one of the duties of the Army, preoccupied with a powerful enemy at the frontier, to offer to assist in the solution of the food problem. That the civil authorities did not make such a request to the Army is certainly a matter that requires to be explained; and Lord Wavell's links with the Army are by no means an adequate explanation of the change. The Bengal Government, it is understandable, should have thought it outside the pale of consideration—even if the thought had occurred to them. But that Lord Linlithgow failed to attempt what Lord Wavell has accomplished within a few days of his arrival is a fact which certain members of the House of Commons have commented on with notable acerbity. Even conventional cheering, when Lord Linlithgow's name was mentioned by Mr. Amery, seems to have been frowned on by the Opposition.

* * * *

Dissatisfaction with the Government's record in India has had one notable result; and that is the general recognition that in the discussion on the famine problem in India, irrelevances behind which the Government formerly had taken refuge, should be recognised as such. On all previous occasions, when the food problem in India was raised in the Commons by interpellations or other methods, Mr. Amery used to give a long recital of historic forces leading, more or less inevitably, to the acute conditions of today, a line of argument that is suggestive of a faith in historical determinism which one has never associated with Mr. Amery. It is palpably unconvincing to suggest that famine in Bengal has been caused by long-

term demographic trends. Perhaps, Mr. Amery has not taken note of the fact that Bengal is alone almost among the provinces in India, to effect a considerable increase in the acreage under food during the last ten years. There is thus a smaller difference between increase of population and increase of production of foodstuffs in Bengal than any other province in India. But whatever that may be, Mr. Amery's frequent references to the birth rate in India, when he is called upon to account for the serious mishandling of the food problem are graceless, to say the least of it. If India has been imprudent in its neglect of birth control, the Indian population too, has made less demands on natural resources for its sustenances. What has caused famine and the depressing death roll of today is not the Malthusian gap between food and numbers but the numerous sins of commission and omission of governmental authority. It is these sins that Mr. Amery has to account for. And any attempt to side-track the discussion into a half puritannical condemnation of the Indian population for the unchecked birth rate or a judgement on the merits of provincial autonomy can succeed only up to a point. Likewise, Sir Alfred Watson's mischievous attempt to make the famine in Bengal a death sentence of Provincial Autonomy, had little effect on those who participated in the debate. It is true that both these questions of birth rate in India and the shortcomings of the Ministry in Bengal have a bearing on the apportionment of blame for the present deplorable conditions. The over-population and the consequent narrow margin between starvation and normal feeding magnifies the impact of shortage and helps the situation to get out of hand very soon. The Administrative difficulties involved in bringing about an effective central control also cannot be denied. But the need to respect the susceptibilities of autonomous provincial governments was not a serious obstacle in the way of more efficient administration of the food problem.

* * * *

Administrative difficulties and over-population are but extenuating circumstances which Mr. Amery would, no doubt, be entitled to cite in his reply; but they are by no means adequate defence. Mr. Pethick-Lawrence was quite pointed in his remarks on this aspect. He referred to the fact that, according to Mr. Amery, the Government of India ought to be pitied not blamed for their failure, like a swimmer who battled nobly but failed to make land. "But," says Mr. Lawrence, "let us be quite candid with ourselves, that is not the view taken by a very large number of our Indian fellow subjects. It is not the view taken in the United States nor by myself. I have no desire to oversimplify the problem and do not dispute any contributory and extenuating causes detailed by Mr. Amery on many occasions. But having said that, I still think our Government of India including in that expression all our acting personnel both here and in India—must take a substantial share of the blame for what has taken place. In my view they are directly responsible for what are the main causes of the trouble." Mr. Lawrence referred to the visit he had paid to India 40 or 50 years ago during which there was a local famine. At that time there was plenty of food in India, but the main cause of starvation of certain individuals in that particular area was that they were without the means to buy the food they needed. "It had been one of the great triumps of the Government of India that in recent years up to the present disaster, famine had been almost unknown. I think the main cause of the present famine is the same—large numbers of people in certain provinces have not got the purchasing power to pay for such food-grains as will keep them alive. The main cause of this increase in price was inflation. For that inflation, the Government of India and nobody else could be held responsible." While Mr. Amery talks of over-population and the difficulties created by the new constitution, the fact remains that the primary responsibility of the Central Government in respect of the food problem is in regard to transport and currency administration. The problem of transport is no doubt, complicated. The priority for the needs of the army cannot be questioned. But the sequel has shown that the "needs" of the army could be cut into without danger or risk. And there are the statements of the Punjab Ministers who have said definitely that the movement of grain from their Province had often been slow.

* * * *

But leaving transport aside, there is the question of inflation. Mr. Lawrence's statement that it is the main cause and Mr. Amery's virtual agreement with him should open the eyes of some publicists in India who thought it fit to question the fact of inflation. Perhaps, they thought it profound to make nice distinctions, to quote great authorities and to mystify the question in the eyes of the ordinary man. But there is nothing mystifying in the simple proposition that unless a stable relation is preserved between the quantity of money and the quantity of goods, the price level must rise or fall and have serious consequences on the economic life of the country. The course of public discussion of this question of inflation is to me one of the most depressing features of

public life in this country. "Indian Finance" uttered the warning against inflation as soon as the war broke out and outlined the main respects in which our experience of the last war may be expected to repeat itself in this. And the plea was made for the separation of the transfer problem and the currency problem, so that inflated currency may not be forced down the throats of this country under the pretext that there was no other means of paying for India's exports. What has actually happened during the last two years has not only proved the prognosis but justified the fears we expressed years ago. The pace of inflation was arrested for some time by the policy of repayment of sterling loans, a measure which we advocated on the outbreak of war. But as soon as inflation got into stride, we renewed our warning and expressed the view that relief must be sought in other ways besides repayment of our sterling debt. Academic support was not enlisted, till Mr. Vakil wrote his pamphlet on the "Falling Rupee;" but doubts continued to be expressed here and there whether what we were experiencing could be accurately described as inflation. The Government themselves were not disposed to admit the fact of inflation—even food shortage was denied up to a late stage—and the admission was made only when the ordinances regarding E. P. T. and control of new issues were prepared. This admission was followed later by one or two weeks in which notes in circulation showed a small fall instead of the usual big rise. The last few months have been singularly free from public interest in the problem of inflation; and the note issue has gone up merrily from 525 crores, the weekly average of 1942-43 to 800 crores in the statement of the Reserve Bank for November 5.

* * * * *

It is idle to believe that all these additions to currency are only swelling the idle bank balances of a few and not exerting some pressure, however minute, on the price levels. Contrary to the beliefs of the anti-inflationists, the pressure of increasing money on a dwindling stock of goods is not less but more. The following table shows that far from being out of the wood, so far as inflation is concerned, we are in the heart of it.

RESERVE BANK OF INDIA

*Figure for October

With such inflation, the food problem should be very difficult indeed to solve. For, while all other aspects of it may be made easier by import of grain, increase of central authority, rationing and the like, the price factor will be uncontrollable. Sir John Anderson in his reply to the debate suggested that, unlike the British Government, the Government of India lacked experience in tackling the problem of inflation. That is less than fair both to Sir Jeremy Raisman and to his unofficial and self-appointed advisers of the financial press. I have pointed out already how the problem was foreseen in all its essentials; and the efforts made by Sir Jeremy Raisman to reduce the extent of inflation cannot be denied by his worst detractors. If more was not done, I for one would hardly lay the blame at the door of the Finance Member. The other steps required to combat inflation touched wider political and economic spheres in which Sir Jeremy could hardly proceed without the necessary consensus of opinion. That he is thinking straight and clear on this question will be seen in his ready acceptance of the League Party's resolution and in his recognition of the importance of the home front at the present juncture. It is to be hoped that the Commons debate, in spite of its many disheartening features, will lead to genuine attempts to fill the gaps in the home front.

(From Our Correspondent)

New Delhi, Nov. 10.

THE Congress members of the Central Assembly decided at the last moment to attend the brief autumn session which opened to-day with a view to participate in the famine debates. Only about 15 members of the Party are present in New Delhi just now. After a spell of dull and monotonous session, the Opposition will be more lively now. As a first result of the Congress members' decision, the House was able to carry an adjournment motion censuring the proposed non-official lecture tour to Britain and U.S.A. to publicise the country's war effort. Most of the members were critical of the huge expenditure (Rs. 60,000 per head) which the tour involves and suspected, in spite of the Government's denial and assurances, that the tour was designed to justify the Government of India's policies to British and American public. The famine debates will naturally form the main feature of the session. Non-official speeches are expected to throw more light on the crisis that has engulfed Bengal and reveal new points about the food muddle. Even the European group will support the demand for an enquiry into the causes of the famine. Their amendment to Pandit Laxmikant Maitra's main resolution on the subject demands that the Commission will include special points of enquiry as to the accuracy or otherwise of mortality statistics and the effect of the present famine on mortality rates; the steps to be taken to counteract or mitigate the effects of starvation and malnutrition upon the younger generation and the measures to be taken to prevent a recurrence of the present trouble. The Viceroy in a message to the House expressed his inability to address the present session due to his preoccupation with the famine crisis. The Governors' conference which is meeting here in about a fortnight is expected to devote itself solely to the food problem and greater cooperation between surplus and deficit provinces. Recent speeches in the Punjab Assembly have shown that the biggest surplus province is still unreconciled to the policy of price control and rationing. No political importance is attached to the conference and it is understood that the question of resolving the political deadlock will not come before it. There is still some uncertainty about the new Viceroy's political plans and doubts are entertained whether he will take any early steps to resolve the impasse. Meanwhile the Commander-in-Chief gave interesting details at a Press Conference as to how the military are helping in the food distribution work in distress areas. He revealed that two-thirds of the units employed were motorised units and were using their own transport to carry food, particularly to remote and inaccessible areas. A limited number of army medical units had also been made available for the purpose. From November 3 onwards about 2,000 tons of food are being daily sent out of Calcutta to the districts with the help of the army. There is a general complaint here that the army authorities have not been able to release any part of their huge food reserve for immediate relief work as this would help in saving thousands of lives. The army stocks could be easily replenished later as supplies are received from outside. So far only about half a dozen food ships have arrived. This is considered rather meagre. The British Government refused to disclose even during the Commons debate on the Bengal famine their plans as regards shipping released for the purpose and the exact quantity of food it was intended to send to India.

* * * *

The Government refuse to disclose the nature of the discussions that took place at the recent Empire Air Conference held in London. It is stated that as the talks were of an informal and exploratory nature, there was no question giving any instructions to the High Commissioner for India in London, the Indian delegate at the Conference. The Government's reply has only confirmed suspicions that India may not have a fair deal in post-war civil aviation. It is considered necessary to obtain absolute guarantees that no rights as regards use of airfields will be granted to any foreign countries without India being assured of reciprocal rights in that country. Moreover it is thought essential that India should make a start with aircraft industry immediately if she is not to be at a disadvantage in competing with other countries in the postwar world. The Government, it is stated, have in hand the preparation of plans for the development of civil aviation in India after the war, but these are not yet complete.

* * * * *

Due to certain Government measures including increased output in the coal fields, it is expected that a total of 25.64 million tons of coal will be made available for distribution in the country. The total allotment for industry and domestic supplies has been fixed at over one million tons a month, which represents an increase of 20 per cent of the actual supplies made available between August 1942 and July '43. The British Government have agreed to provide some shipping for the carriage of coal by sea in return for supplies of coal for bunkers. In view of the adverse effect on industries of the loco coal stocking programme, at a 45 days' target, it has been decided to slow down the building up of stocks for the present to a target of 30 days. Industries in various parts of the country have been forced to make extensive use of firewood, the Ahmedabad mills having used over 1,27,000 tons during the year ended June 30, 1943. A larger quantity of steel for civilian consumption is expected to be allotted during 1944. The Government are also considering the possibility of releasing a certain portion of stocks of materials required for war purposes for civilian consumption.

* * * *

The returns from direct taxation continue to increase at a rapid rate. Within the last few years incometax collections have risen from Rs. 16 crores to Rs. 102 crores. The defence expenditure also continues to show an upward trend with the result that the gap between income and expenditure remains as wide as ever. The defence expenditure is now about Rs. 21 crores a month. The phenomenal increase in income-tax shows that the peak in direct taxation has already been reached. The Government is already feeling the adverse effect of high taxation on certain industries whose output has declined during recent months. Those members of the House of Commons who advocated a further increase in taxation as a means to arrest the inflation spiral in India probably did not know that income-tax has been increased proportionately more sharply in India than in Britain where the tax being on a much higher scale. It is being realised that it is only the increased production of consumer goods and external assistance that can effectively check inflation in India.

The Central Government soon intend to institute a drastic control of drug prices. A comprehensive schedule intended to have immediate effect will fix the maximum selling prices for a large number of drugs and other pharmaceutical articles. In the first instance, only those drugs ordinarily prescribed by doctors and in popular demand have been included in the control list. These are mostly imported drugs. The Government's objection has been to return to pre-war prices as far as possible and they have arranged for large imports of pharmaceutical supplies.

* * * *

Several official bills were introduced in the Assembly today. A bill to amend the Indian Trade Unions Act of 1926 provides for the compulsory recognition of Trade Union under certain conditions and defines what recognition will imply. Power is taken to set up Tripartite Boards of Recognition which will report on the representativeness of Trade Unions and their fitness to be recognized. The main conditions of recognition will be that the Trade Union must have been a registered union for 12 months and that it must have previously applied to the employer concerned for recognition. It will be recalled in this connection that the Royal Commission on Labour considered the question of recognition of Trade Unions and gave the reasons for which employers were not inclined to recognise Unions. These were that the Union embraced only a minority of workers; that another Union was already in existence; that the Union had refused to dispense with the services of a particular official; that outsiders had been included in the executive or that the Union had failed to register under the Trade Union Act. All reasons except the last were considered invalid by the Commission. A bill to amend the Companies Act is designed to legalise the long-standing practice followed by banks not to disclose those bad and doubtful debts for which adequate provisions had been made in their accounts to the satisfaction of the auditor. A bill to amend the India Tea Control Act empowers the Central Government to authorise the Tea Licensing Committee to refuse the grant of special export licences and to exempt from the requirement of export licences small gift parcels of tea sent for troops overseas. Two other bills propose minor amendments to the Criminal Procedure Code and the Victoria Memorial Act.

(From Our Correspondent)

Bombay, Nov. 9.

BOMBAY has been repeatedly advised to go in for scientific farming. This is a deficit province but other Provinces today stand in need of urgent supplies. The Commons debate provokes reflection as to the ultimate policy. There is a real fear that the Government may take away the results of grow-more-food plans from the actual cultivator. It is also feared that concessions offered are too small to bring enthusiastic response. Free land i.e., free from tax, must be provided in the opinion of some who want that reclamation of waste should be taken in hand at once. The provision of working capital at 3 percent is also wanted. It would not be improper if the revenue balances were lent at 3 percent for taqavi advances. More important is the provision of pumps and fuel oil where irrigation is possible. Tubewell irrigation in the Konkan districts implies an outlay on the part of the State. It has been made known that in the Konkan districts small-scale agriculture is not very paying. To make it fully remunerative is the prime object of all plans but more important is a guarantee of fair prices when the Government is embarking on the purchase of a portion of the crop. That the agriculturist should have at least 60 percent of the outturn is regarded as essential by those who ask for fair play in connection with the development plan. This plea is the consequence of unlimited graft, for the famine has been aggravated by official and non-official malpractice that has made our masters sit up and take notice, rather late, it must be argued.

The backward classes are the concern of correspondents who desire protection from the missionary, the trader and all so-called agents of civilisation. The press here has received explanations of what the aboriginee wants. The Government has a plan to extend medical relief. Voluntary agency is, if necessary, to be subsidised but the village medical aid scheme will be the cardinal factor in the new scheme to improve their health. The elimination of the rural slum is an object of the health plan. The maximum advantage that the backward classes will derive will not be from medicine but from housing. How the Government will rebuild and rehouse the backward classes when materials are scarce, is not a question that demands an immediate answer. But many believe that housing will have to be postponed and the special committee's work can bear fruit only when conditions are favourable.

Particulars as to the mill workers' bonus are lacking. The Millowners' Association has decided to pay two months' wages in two instalments as before. The decision suggests at once that mill profits for 1943 are quite satisfactory in the case of the Bombay mills and there need be no alarm as to the impact of control on dividends. The mill workers' bonus is meant to reinforce the dearness allowance. The cost of living continued to rise upto July in Bombay and other Textile centres. And the bonus decision is based largely on the calculation that double shift working etc. are not enough to keep wages in a way is a charge against the monetary policy pursued so far. Indeed, Professor Vakil's most powerful supporter today appears to be Mr. Pethick-Lawrence while Sir George Schuster's fierce criticism of the India Office may be taken as virtual endorsement of arguments put forth in books and pamphlets that have educated the public here out of apathy. The new Chancellor of the Exchequer spoke of the peak of inflation being past presumably, in the light of New Delhi's announcement that a greater share of India's own industrial output would be assigned for civilian use.

The Maharashtra is to have a university if the committee's words go into effect. A compact virile Hindu group with a literature and a history of its own needs and deserves a regional university. Guzeratis certainly think their turn will come later on for intellectual eagerness marks Maharashtra out and Poona contains enough colleges as well as the Bhandarkar Institute to make a new university a reality. Mr. Jayakar's Committee endorsed the familiar view that a university in Poona is logical, and affiliated colleges in the Deccan States may provide support in addition to the grant of Rs. 5 lakhs and the recurring annual grant of Rs. 2½ lakhs. The presence of Karnatak students will not complicate the position as the new university will not be a projection of Maratha ambition. Press comment is wholly sympathetic because Gokhale has given the essential foundation for a new university and Maratha princes may find an opportunity for benefactions on an adequate scale. A de-officialised university may have its merits and not many can afford to forget that Professor Karve has provided for women a university that is limited in everything except ideals, and flourishes for that reason. Bengal has two and Madras has three universities so that Bombay may well run on two universities. Professional education is already available and Poona's major advantage is its historic position.

A reading room for the use of the young on holidays has been opened by the National Council of Women. Readers' interests are not limited to world affairs or the Indian languages for the three weeks in which the children had access to literature served to show that the young are fully aware of the world we live in. Periodicals claimed as much attention as the books and the young readers revealed themselves to be intensely conscious of Russia and China. The rising generation's vision is not limited as the young devoured available journals and books on current affairs.

One more ban, this time on copra and coconut oil may reflect the shortage as much as profiteering rampant. The Government has prohibited exports from Bombay to any part of India and control takes the form of a demand for returns as to stocks and sales. Licensed exports from Bombay are possible but the ban on coconut oilcake seems unusual as its uses are limited. Stocks in excess of 15 maunds of copra or 10 maunds of oil are to be notified. Foodgrains movement except under permit are banned and a new penalty is added to the old ones as confiscation of goods is included among the penalties for infringement of extant orders relating to rice, pulse and sugar.

The piecegoods market here reports a little more business and a mild hardening of prices. Diwali turned out to be a disappointment but sellers are developing reserve. The fall in bullion checked only by a cessation of the Reserve Bank's sales at a decline may have wider effects on all markets. A revival of Calcutta demand on improved transport facilities has been noted recently. In the case of superior fabrics and fancies only demand has broadened and forces are a shade better. But rumours of peace and war upset dealers who are looking apprehensively to the turn of the year as the raw material is getting cheaper and ceilings generally are going into effect. Reports of good harvests in the C.P. certainly make for lower prices specially of cotton. This week's speeches pointing to a climax yet to come may lead to revised estimates of prices and profit in more than one market.

India's chemical manufacturers meeting in Bombay last week agreed that research is vital. Their association intends to set up a committee in pursuance of a suggestion in favour of cooperative research. Sir S. S. Bhatnagar who presided over the meeting, attended by the trade and representatives of universities and research organisations, spoke of the need to undertake joint work for development because the drug and pharmaceutical manufacturer in India could not face up to competition if he failed to help or be helped by his fellow manufacturers. Chemical manufacturers, thinking of chemistry as the foundation of many enterprises, have discussed planning and its place. Dr. Ghosh described the need for starting new basic chemical industries because agricultural progress demands immediate advance.

Madras, November 10, 1943.

For the past few weeks the scarcity of firewood has become acute. Though the Government have controlled the price of the commodity they could not suppress the black markets and ensure regular supply. It is clear that the rationing of rice would not serve its purpose of solving the food problem if firewood becomes scarce. There is an insistent demand that all arrangements must be made for rationing of firewood in Madras. The suffering of the poorer classes has been so intense that the out-going Mayor Mr. C. Tadulinga Mudaliar stated that firewood must be rationed without delay because there is a tremendous black market in that commodity. It is the duty of the Government to arrange for adequate transport facilities to supply 15,000 tons of firewood every month for the city consumption. H. E. the Governor is taking a keen interest in solving the crisis. He paid surprise visits to National War Front depots and having studied the situation at first hand, it is understood, he has given necessary instructions to the authorities concerned. The Fuel Advisory Committee is considering the feasibility of introducing a system of rationing firewood. Since it is not possible to draw up a scheme of family rationing an alternate system of ward rationing is under contemplation. While the scarcity of firewood is causing anxiety in every hearth and home in this Province the shortage of coal supplies is creating anxiety amongst the owners of factories. The Southern India Chamber of Commerce has represented to the Government of India that even quotas for March last remained undelivered and that as a consequence several public bodies and factories are affected. The Government are requested to take necessary steps to improve the situation.

The urgent need of protecting the interests of handloom weavers has been realised by the Madras Government who, it appears, have drawn up a scheme for the production and marketing of Handloom Standard cloth. The idea is to obtain yarn from the mills at concession rates and distribute to the Collective Weaving Centre and the various Weavers' Societies in the Province to be made into sarees, dhoties etc. The handloom goods produced by these agencies would be marketed through co-operative stores and emporiums at controlled prices. If the co-operative stores are found to be inadequate to handle the rapid turnover of cloth produced, the normal channels of trade will be utilised for quick and successful disposals of the products. While there are several restrictions imposed on the dealer of mill-made standard cloth, the dealer in handloom standard cloth can sell unlimited quantities and is even allowed to sell on credit. The dealer in mill-made standard cloth will also be allowed to sell hand-made standard cloth (on the basis of a 3% commission on retail price) on condition he sells it in separate shops. This scheme of handloom standard cloth would ensure continuous employment to thousands of weavers who have been hard hit recently and the consumers would be immensely benefited. The handloom products scheme is complementary to the mill-made standard cloth and so deserves approval. If the authorities take sufficient interest in putting this scheme into effect they would have done a distinct service to an important industry in Madras.

In his opening speech at the Economic Conference held as part of the birthday celebrations at Trivandrum Sir Victor Sassoon made very useful remarks relating to the economic development of Travancore. Dwelling on the limitations of cotton textile industry in the State he said that if Travancore decided to encourage the production of cotton goods she would do well not to copy Northern Indian mills but to take into account the fineness of the yarn she would require, the existing competition from mills, under-cutting by importers of yarn etc. He would never favour purchases of second hand machinery for starting an industry. In these days of quick technological developments it is bad business to purchase what others might be willing to sell as out-of-date stuff. The scope for handloom industry in Travancore is indeed great. According to Sir Sassoon the cheap electricity available from the hydro-electric scheme should be pressed for organising handloom weaving on a cottage industry basis. He pointed out that six or twelve power looms could be worked by a family or group of families with the use of electric power. Production could be encouraged and speeded up if a Central Co-operative Society is organised to supply yarn to the families and undertake to market the products. A designing expert and a finishing plant would be necessary to raise the quality and saleability of the handloom goods. When a similar scheme is working very successfully in England there is no reason why Travancore should not produce high grade cloth to compete with imported goods. The State, Sir Sassoon further pointed out, could make the best use of saw dust and resin for the manufacture of trawlers for deep sea fishing.

Airway Port

(From Our Own Correspondent)

Karachi, Nov. 5.

The decision of the Government of India to exclude the Karachi cotton market from resumption of forward trading in cotton is resented in local commercial circles vitally interested in cotton trade. Lala Niranjan Prasad, Chairman of the Karachi Cotton Association in an interview stated that the Karachi Cotton Association has been serving for the last 20 years the provinces of Sind and the Punjab which produce about two-thirds of long-staple cotton in India, and the Karachi market has been more regulated, disciplined and controlled and much less speculative as regards opening and closing hours. If the intention of the Government in the resumption of the hedge trading is to serve cotton growers and also control undue speculation, Lala Niranjan Prasad declared that the Karachi ought to have been the proper market to be allowed to trade. He further contended that the cotton growers in Sind and the Punjab and factory owners would be put to considerable hardship and lot of expenses in hedging their produce in Bombay. And more than that, some of the growers and traders might not be able to make necessary arrangements at Bombay at all. The Board of directors of the Karachi Cotton Association held an urgent meeting this week to consider the situation and it is learnt they are now in communication with the Government of India on the subject.

Ways and means of utilising a liquid balance of nearly five crores of rupees which the Government of Sind have been able to accumulate is at present engaging their serious consideration. It is gathered that the Government would not like to utilise the amount in defence bonds lest it should be locked up without being available at proper time. It is now proposed to invest them in treasury bills.

How the small coin situation in Karachi has not very much improved in spite of the best efforts of the Reserve Bank of India will be clear from the fact that coupons and postage stamps are in vogue even to-day. The Karachi branch of the Reserve Bank give daily Rs. 6,000 worth of change including small coins and Rs. 200 worth of half anna pieces and Rs. 100 worth of quarter-anna pieces are distributed to the clients throughout office hours. This practice was being followed for the past 12 months and yet at the end of every day, many have to go back without getting their needs of small coins. In an year, the Karachi branch has given nearly Rs. 18 lakhs worth of changes and there is still more demand for small coins.

A demand that the Government of Sind should fix the control price in consultation with merchants and should make no profit out of it was made by Mr. Lalchand Navalrai, M.L.A. (Central) in the course of his presidential address at the Sind Grains Merchants' Conference which was held here early this week.

The main points made out by Mr. Lalchand were that the Government's intended policy of capturing all production was wrong; that their policy to take trade out of the hands of the merchants and to trade through their own agents was wrong; that they should not employ syndicates to do trade; that the present policy of the Government caused unemployment among grain brokers, retail brokers and labour of all kinds and that the control price should be fixed in consultation with local merchants in consideration of the ruling price in the province and outside. Mr. Lalchand demanded that the Government should make no profit on this trade.

The Government of Sind have just published the details of the order in regard to rationing in the province. The rationing order which is expected to come into force from November 15, provides that rationed articles are to be supplied to the public by authorised retail distributors and to authorised retail dealers by authorised wholesale dealers, after the date on which rationing comes into force. After that date, acquisition of rationed articles except as provided in the order has been prohibited. Rationed articles are to be obtained by means of ration documents (cards or coupon books) and they are not transferable. The regulation, among other things mentions that temporary ration cards will be issued for those coming to Karachi and staying for one week and over upto eight weeks. The rationing articles will be specified by the Government in a later notification in the gazette.

Wisdom of the policy of price control of food grains in Sind has been fully vindicated by the New Delhi decision for enforcing all-round price control, claimed the Hon'ble Sir Ghulam Hussain Hiadayatullah, Sind Premier, in the course of an interview on his return to Karachi, giving his impressions about the recent Food Conference. The Sind Premier added that Sind was saved from a calamity similar to that witnessed today in Bengal by such foresight on the part of his Government. Criticising the policy of free trade followed by some provinces, Sir Ghulam Hussain felt that it would mean rise in prices. In defence of rationing being introduced in a surplus province like Sind, the Premier said that such a policy was justified in view of the help needed by "friends in distress."

* * * * *

No subvention; no Barrage debt—that is Sind's reported offer to the Government of India on which negotiations are reported to be in progress. Sind is even reported to be ready to pay cash down such difference in the capitalisation value of the two as would be agreed upon mutually. For some years, Sind has been pleading for some reduction of interest on the Barrage debt in conformity with prevailing market rates as it would mean a saving of several lakhs for the province. Objections from the Government of India to the offer are stated to be mainly on the grounds that funding of the Barrage debt and the payment of subvention to Sind are part of the Niemeyer Award and departure from it on behalf of Sind would create an unpleasant precedent for other provinces. But the Sind Premier is determined to pursue the subject with the Government of India. It is estimated that Sind will have to pay Rs. 5 crores straightaway if the Governpresent gets a subvention of Rs. 105 lakhs a year.

Resume. of Commodity Markets

There are no important developments in the commodity markets during the past week. The jute market has been rather idle while the jute manufactures market has been firm in spite of the warning administered by the Government that stocks would be requisitioned by them if any undue rise in prices was recorded. The bullion market was inclined to be weak earlier in the period but the tone is definitely firmer. The raw cotton market has been quiet.

The easier tone of the jute market is due to the difficulties of mills in regard to coal supplies. Even with the announcement that coal deliveries will be speeded up and that raisings will be increased, there is no disposition to take an optimistic view. There has been no selling pressure, however, and quotations are at the lowest levels touched sometime back. Production figures for October should perhaps have an encouraging effect as since the introduction of the restricted plan of working the figures for October are the highest. But without any improvement in the offtake and the ability on the part of mills to increase purchases of jute no appreciable improvement in prices can be expected.

The stock figures of jute manufactures at the end of October are discouraging to the market as there was a net decline of only 467 tons over the figures for September. With the production figures now available it is clear that the absence of any large decline in stocks was due to the higher level of production in October in spite of the difficulties experienced by mills and the holidays. In the last three months, offtake has been averaging around 70,000 tons and unless efforts are made to increase exports on a considerably larger scale, it cannot be expected that stocks will show any appreciable decline. Perhaps the authorities have deliberately slowed down deliveries in order to prevent speculative activity and allow stocks to be kept at a fairly high level. The production figures for the month of October show that total output is considerably higher at 69,739 tons against 55.544 tons The increase is mainly due to the higher level of sacking production, the figure for October being 37,556 tons against 29,692 tons; hessian production totalled 29,506 tons against 23,394 tons.

* * * *

It was announced this week that the Government of India has decided to increase the ex-mill price for new season sugar by 13 annas a maund. An ordinance was issued in the same day the announcement was made imposing a special excise duty of 13 annas per maund on all stocks of sugar held by factories and dealers. The duty is to be levied by the Central Excise Department on all stocks in factories and with dealers and also by Provincial Governments on stocks held by smaller dealers. This new duty, it is explained, is levied as it would be inequitable that the increased prices should apply also to the stocks of sugar already in the hands of factories and dealers.

It is said that the increase in the price of sugar that is to be granted will not be a very great inducement to the ryot to hand over their cane supplies to the factories as the prices offered by gur manufacturers are still very much higher. The Government authorities, it is pointed out, are sure of this season's supply of sugarcane, as it is already standing, and the dissatisfaction of the ryot with the prices offered by the Government will result in smaller cane supplies only for the next season. By that time it is expected that the situation will improve considerably and there will be no temptation for the ryot to grow other crops. The industry is not prepared to share this view and, at the moment, it is pointed out that sufficient inducement should be afforded to the ryot for growing sugarcane and handing over his crop to the mill. Even with gur control, it is feared that it will not be possible to ensure adequate supplies of cane for the sugar factories. It is also pointed out in certain quarters that it is not correct to expect that there has been no increase in the cost of production and that manufacturers would be in a position to part with the whole of the increase to the cane grower.

A survey of the sugar position in all producing areas in India for the week ending October 22, 1943 discloses total production at 10,74.247 tons or 161 tons higher than in the previous week. Despatches totalled 19,650 tons against 19.484 tons while the progressive total of despatches was higher by 19,650 tons at 914,404 tons. The percentage of progressive despatches to production was 85.1 per cent against 83.2 per cent. The physical stock in factories was lower by 19,461 tons at 154,842 tons. The balance of 1941-42 sugar was 310 tons.

At the auctions of tea for consumption in India, 11,000 packages were offered. The market opened with a strong tone but as the session progressed, quieter conditions were noticeable and prices realised were generally lower. Fannings, however, showed little change. Clean common and medium types decline by 3 pies to 6 pies per lb. and commonest sorts by 6 pies to 1 anna. 11,000 packages of dusts were sold this week. Best sorts were strong but all others were irregular with prices lower by 3 pies to 6 pies.

* * * * *

The All-India Second Groundnut Forecast for1943-44 estimates the area under the crop at 6,854,000 acres against 6,374,000 (revised) in the corresponding forecast for 1942-43. There is, thus, an increase of 8 per cent. This increase should come in handy at a time when demand for groundnuts has considerably increased and there has been a sharp improvement in prices for groundnuts and groundnut oil. The present condition of the crop is reported to be fairly good on the whole.

Special To "Indian Finance"

Calcutta, Nov. 11, 1943.

THE coal deliveries to mills has shown a considerable improvement so far as the quantity arriving is concerned. If it were merely a question of quantity mills might be justified in thinking that the worst of the crisis was over and more normal conditions might be looked forward to with some confidence. In the matter of quality of the supplies however there is still much to be desired and few mills are able to keep a full head of steam up on their normal coal consumption. Indeed there are still many complaints to be heard of frequent stoppages due to loss of steam pressure owing to inferior coal. This sort of thing, apart from turning Engineers' hair prematurely gray, is bound to have an unsettling effect on labour, and it is to be hoped that representations which have been made in this connection will bear fruit in the shape of deliveries of a more consumable type of coal. We have already stressed the poor economics of handling any but the best available quality in present circumstances of restricted wagon supply.

Taking into consideration the fact that mills were closed for the most part of two weeks in October, not to mention a good deal of intermittent working, the production returns published are surprisingly good, being 69,739 tons as compared with 55,544 tons in September, an improvement of 14,190 tons or fully 25 per cent. Hessians showed an increase of 6,112 tons, divided as to 197 lakhs yards on commercial account and 49 lakhs on Government account. Sackings showed an increase of 7,864 tons, divided as to 178 lakhs yards on commercial account and 1½ lakhs on Government account. Total production on Government account was 9,117 tons, 13 per cent of the whole.

The return of stocks of manufactured goods held by mills at the end of October showed only a very minor variation from the previous month of 467 tons decrease. There was considerable variation in individual items however. Commercial Hessians were lower by 96 lakhs yards or 1,057 tons. Commercial Sackings showed an increase of 28 lakhs yards or 2,154 tons. Sandbags and Scrim cloth for Government account both showed decreases, but Hessian bags, cloth and canvas stood higher by no less than 96 lakhs yards. In the aggregate, Hessians were lower by over a crore of yards or 1,739 tons while Sackings were higher by 28 lakhs yards or 2,206 tons. The aggregate stocks totalled 230,866 tons, of which 5,270 lakhs yards was Hessian weighing 133,557 tons and 2,346 lakhs yards was Sacking goods weighing 97,309 tons.

Taking these two returns together, it would appear that during October mills despatched goods to the extent of over 70,000 tons, just keeping pace with their current production. This scarcely bears out the reports that freight for overseas is in ample supply, unless it is that the freight is offering for ports for which there are no orders, or for which orders are not yet manufactured. It would be unfortunate if any freight were going a-begging for one market while goods were on offer for shipment to another market. But mills have been so handicapped recently by various disabilities that they can scarcely be blamed if circumstances are as suggested. For instance, shipments to the Argentine can scarcely be facilitated by the political tension between that country and most of the Allied nations, which has been accentuated lately by the mutual freezing of credits between the Argentine and the U.S.A.

A further step has been taken towards the requisitioning of mill premises for military purposes. It is understood that terms have been agreed upon for taking over one unit *in toto* and another two units in part, while the taking over of still another large unit is still under discussion. In the three cases already decided, arrangements will be made for maintaining production by multiple shift working, though it is almost inevitable that there will be some loss of production by the change-over. Night-shift workers never produce the same turn-over, either in quantity or quality, and when working multiple shifts, it is always the other fellow who is to blame for any faults or bad work. Mills working thus will also be severely handicapped for storage space, for the military authorities require a proportion of the storage godown accommodation as well, not to speak of a large share of the residential quarters. So there will be little elbow room in any respect in the working portions of the requisitioned units.

It is understood that the attention of the Government of India has been directed to the revival of Fatka operations in the Calcutta Jute Market and it is to be hoped that no time will be lost in taking the necessary steps to deal with this menace to the trade. It is from the Centre that action must be looked for, because, rightly or wrongly, there is an impression that the Local Government is inclined to look with a lenient eye on Fatka and its operations, ostensibly under the mistaken impression that these operations may somehow be of vicarious benefit to the jute cultivator. That logically they are just as likely to be harmful, and in extreme circumstances possibly disastrous, does not seem to occur to some people. But the most striking fact must surely be that Fatka has been revived, not by any section legitimately connected with the industry, but by a handful of operators whose sole object is speculation and the hope of making money thereby; while the whole idea is vehemently opposed by all sections with a vital stake and interest in the trade. The fact that the industry has been able to weather the last critical eighteen months without the adventitious assistance of Fatka is surely sufficient proof that it is entirely unnecessary and undesirable. Further, the fact that Fatka closed down incontinently through the precipitate departure for safer climes of all the principal operators at the commencement of that critical period, is sufficient testimony to the measure of its usefulness in the trade, the genuine elements of which weathered the crisis without its aid, and in spite of its disappearance from the scene—perhaps the more successfully because of that fact. Fatka operations have not yet attained important dimensions nor have they yet had any serious effect on markets. All the more reason why the menace should be summarily dealt with while it is still in the embryo stage and before it has time to do any serious damage.

The interest shown in Export Jute has been limited to transactions in Dundee Daisee 2/3, the Long Group being reported at Rs. 69/- to Rs. 69/8- for near and at Rs. 70/8 for December shipment while sales of Short

MONEY FOR THE BEES

Throughout India thousands of women volunteer for work parties and sewing bees, under the direction of the Indian Red Cross. These women make hospital accessoris, surgical dressings and articles of clothing for the wounded of our fighting forces and for despatch to prisoners of war.

Without your money we cannot continue to furnish these busy bees with the necessary materials for this work of mercy.

Please send your donation now to the Hony. Treasurer, Indian Red Cross Appeal, C/o. Imperial Bank of India, Strand Road, Calcutta.

INDIAN RED CROS

Space donated by the Imperial Bank of India.

Group were recorded at rates varying from Rs. 73/- to Rs. 75/8. Mills have not been operating to any extent beyond some high quality Short Group Dundee Tossa 2/3 for canvas manufacture at Rs. 95/-. Further small sales of Cuttings were recorded at Rs. 31/8 N.C. and Rs. 30/8 M.C.

In Loose Jute there has been a moderate turn-over in European packing on the basis of Rs. 15/- and Rs. 12/- for Middles and Bottoms. Some Indian District Tossa has also been reported at from Rs. 14/12 and Rs. 11/12 for Mids and Bots to four annas higher. Demand has been by no means general and sellers for the most part are still keen for business.

Mofussil markets continue firm with imports small and no evidence of pressure to sell. It would appear that spare money, of which there is no lack in the mofussil, is being invested in jute in the belief that it is relatively cheap compared with other commodities, and that there may be less grown next season. Whether these views will prove to be justified depends greatly on the success of Government efforts to bring down the price of rice and paddy to the levels they have decreed. Meantime there appears to be a large army of small hoarders of jute, quite apart from the larger dealers who normally hold quantities under favourable conditions, and this new factor is one of the reasons for the paucity of imports. Nor is any increase likely to be seen before the 'aman' paddy crop is reaped, for every cultivator's attention is fixed on this at the moment. Labour is becoming scarce on this account too, for every small holder wants to be on the spot as soon as his crop is ready for harvesting. He is determined that nobody else shall reap where he has sown, and no man trusts his neighbour at a time like this.

There is little change to record in the Fabrics market, both Hessians and Heavy Goods having stood at maximum prices, or over, during the reporting period. A certain amount of "budli" business has been put through, holders releasing ready goods to replace with forward. At the close Hessians took a turn easier, eleven porters being reported down to Rs. 28/4 and some "B" Twills were also offered for sale at the ceiling rate of Rs. 67/12. But business remains very restricted owing to lack of sellers.

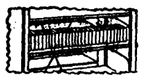
STEEL FOR GOOD STORAGE

by Godrej

For durability, space-saving and planned efficiency in storage, steel is unrivalled. It cannot rot or warp, nor be eaten by white ants, like wood. But it must be of first-class fabrication, in accurately fitting units and with full protection against rust.



GODREJ SECTIONAL STEEL SHELVING—as supplied to a great Life Assurance Company.

EVERY GODREJ ARTICLE IS AN ACCURATE ENGINEERING JOB

GODREJ STEEL SHELVING CUPBOARD — with adjustable shelves, and secured with a Godrej unpickable Lock. Example. 48 x 24 x 16

PORTION OF LIBRARY STACK BY GODREJ—as supplied to well-known university and other libraries.

- Godrej use none but best tested sheet steel and sections, pickled and machine-scrubbed for anti-rust before the successive coats of hard-baked enamel are applied: Godrej alone, in India, have facilities for such thorough treatment.
- Godrej Shelving offers a variety of different types, shapes and sizes in shelf and locker accommodation, and is erected, taken down, or rearranged easily with a spanner and a screw driver.
- The colossal Godrej Presses turn out sheets self-braced with cold-bent flanges—so that the maximum strength, rigidity and load-capacity are secured with minimum weight and cost.

JUTE

Thursday, Nov. 11.

THE raw jute market has been rather quiet during the past week, the slightly steadier feeling noticeable last week being only temporary. Arrivals in upcountry centres have been on a larger scale and sellers have been offering more freely. It was generally expected that with the announcement of a scheme for increasing coal raisings, the jute mill industry would not feel any great difficulty in regard to its requirements of coal. This, it was believed, would prove to be a bullish factor for the jute market but actual mill buying has not been on a large scale and there is no tendency to take an optimistic view of the immediate outlook until satisfactory supplies of coal are received in time and mills are able to work continuously. The undertone is quiet and it is pointed out that there may not be any important fluctuations in prices unless any exceptionally favourable developments happen. The absence of any appreciable decline in stocks in Calcutta at the end of October also was an unfavourable factor.

In the loose jute section, balers are still interested in buying Tossa qualities. Mill buying has been on a very small scale. Indian Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 respectively.

In the pucca bales section also, easier conditions have been noticeable. Shippers have kept out of the market and the rise in prices noticeable last week has not been sustained. Sellers predominate the market for deliveries in October and November. Dundee Daisee 2/3 have been marked down as low as Rs. 69-8 per bale and Short Group Rs. 75 per bale. Mills bought Firsts at Rs. 75 per bale. Earlier in the week it was reported that cuttings N.C. and M.C. were done at Rs. 31-8 and Rs. 30-8 per bale.

JUTE MANUFACTURES

Calcutta, Nov. 11.

THE jute manufactures market has continued firm in spite of the disappointing local stock figures and the announcement that efforts will be made to increase coal raisings and facilities afforded for the transport of coal to industrial areas. Mills have kept out of the market and the small overseas demand has been satisfied by the bazar. 9 porters are quoting Rs. 21-10 for all positions as also 11 porters Rs. 28-8.

In the heavy goods section, very steady conditions have been noticeable with practically no business reported. Quotations are nominally around maximum rates, B. twills for November delivery being Rs. 67-12, Liverpool twills Rs. 75 and Cornsacks Rs. 67-12. The stock figures for the month of October, now available, show that there has been only a slight decrease in stocks of hessian with a token rise in stocks of sacking cloth and bags. Stocks, on civil account, of hessian cloth and bags were 22.82 crores yards against 23.78 crores yards at the end of September. Stocks on military account were 29.89 crores yards against 29.96 crores yards. Sacking socks, both and bags, on civil account were 21.74 crores yards at the end of October against 21.46 crores yards and those on military account 1.72 crores yards against 1.73 crores yards. The decline of only 1.04 crores yards in the total of hessian stocks came as a surprise to the market as it was generally expected that there would be a greater decrease in local stocks. Figures are given below:—

Total reported stocks of manufactured goods exclusive of Government Orders.

Description.	30-9-1943.	31-10-1943.
Hessian cloth and bags—		
Yards ..	23,78,04,502	22,81,93,472

N.B.—October stock figures include returns of Gagalbhai in addition to those of member mills but contain an estimate of the stocks of Calcutta Jute, Kedernath, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of September.

GOLD

Calcutta, Nov. 11.

THE Bombay gold market has been fluctuating within narrow limits within the past few days and there is nothing of interest to be recorded. Even with the unwillingness of the Reserve Bank to sell gold below Rs. 78, it is generally felt that a high level of prices for both gold and silver cannot be maintained for long especially as the developments in the war situation are very favourable for the Allies. No selling by the Reserve Bank has been reported during the last three days, but investment buying has been on a smaller scale and there is a tendency to take profit at every rise. Closing quotations would perhaps have been lower if the Reserve Bank had indicated its willingness to sell below Rs. 78. Gold ready was Rs. 77-2 and forward Rs. 76-14 against Rs. 75-12 for both positions at the end of last week.

In the Calcutta market, gold bar per tola sold at Rs. 77-9 and Sovereigns Rs. 54-6. In Bombay, sovereigns were unchanged at Rs. 52-12.

SILVER

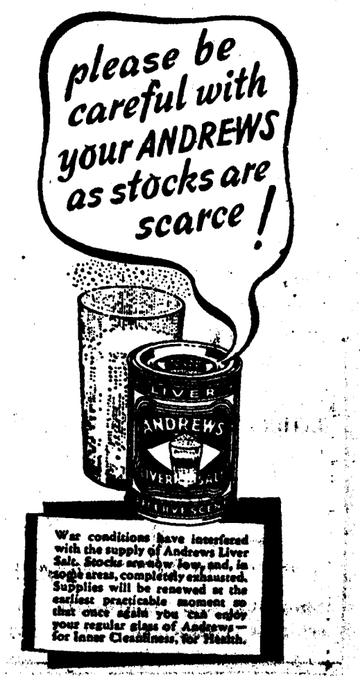
Calcutta, Nov. 11.

FIRMER conditions were noticeable in the silver market also. With not much of buying quotations have been fluctuating in narrow limits. As in the gold market, closing prices are higher on balance, Silver ready being Rs. 122-6 and forward Rs. 121-4. There has been a widening in the discount for forward from Rs. 1 to Rs. 1-2.

There is no change in the conditions in the London market and the quotation for both Spot and Forward is unchanged at 23½d.

In Calcutta, silver ready quoted Rs. 119-8 against Rs. 117-4 at the end of last week.

COTTON



Calcutta, Nov. 11.

THE Bombay raw cotton market has been rather quiet and closing quotations are only slightly higher than the lowest levels for the week. The fluctuation in prices has not been on a large scale, and speculative interest seems to be surprisingly small. There has been some delay in the movement of the crop this season. It is feared that with the heavier movement of crop in the next one or two months, there might be some selling and that no substantial increase in rates can be recorded. The conduct of business in futures on the floor of the East India Cotton Association has been found satisfactory so far. If the authorities of the East India Cotton Association observe scrupulously the conditions laid down by the Government of India, wild fluctuations in prices can be avoided. Jharilla January closed at Rs. 456-4, March at Rs. 459-4 and May at Rs. 464-4 A greater premium is demanded for forward positions, especially for May.

PIECEGOODS

Calcutta, Nov. 11.

BUSINESS in the local piecegoods market is rather restricted and there is a tendency to await the announcement by the Textile Control Board regarding the revision of maximum prices for both cloth and yarn. Mills also are not free sellers and consumer buying has been confined only to immediate requirements. It is unlikely that, with the present scale of consumption, it would be possible to clear the entire quantity of unmarked goods before the end of the year. The fears regarding the possibility of an early peace have also induced a slightly easier feeling in this section. Winter goods are very scarce and prices are higher in spite of the fact that stocks are poor.

Stock Markets to-day and to-morrow:

OUTLOOK FOR SUGAR SHARES

CONFLICTING trends have been noticeable in the stock markets both in Calcutta and Bombay. While steady conditions continue to prevail in the Calcutta market, in the past two days quite a substantial decline in prices has been recorded in the Western Centre. The reason is not quite clear. The absence of any activity in the raw cotton market and the drop in prices for bullion have, perhaps, been contributory factors. But it is pointed out that reports of an early termination of hostilities and the restrictions on business on the floor of the exchange have been mainly responsible for the dwindling interest in shares. In spite of the approach of the cold weather and the possibility of air raids, no nervousness is evident in the Calcutta market and the slightly easier tone in some sections is only in sympathy with Bombay. Investors are showing great reserve and are not quite free sellers. As there is some oversold position on professional account prices have been kept at high levels. It is still felt that the war will last for another one or two years and that even in the post-war period demand will be very high. The drop in bullion prices might incidentally prove to be a bullish factor for Equities as fresh investment can be only in stocks and securities. The immediate effect of a sharp decline in prices for both gold and silver might, however, prove to be bearish, though temporary. The developments in the next few weeks must be carefully watched.

* * * *

Reports that coal supplies have been reaching Calcutta on a larger scale and that jute mills have been able to work longer hours would, perhaps, be encouraging to investors. Repairs to the breaches on the railways have been responsible for the increase in supplies to mills. It is hoped that with the rationing of supplies and allotment of quotas to the respective industries, complaints regarding lack of fuel may not be so frequent in future. While the news about larger supplies of coal to the jute industry is to be welcomed, there is great concern about the reports that the Government have requisitioned several mills. Hitherto, the policy of requisitioning by the Government has not adversely affected jute mills as, excepting one, the mills requisitioned by the Government have other units working and it is proposed to utilise the loom hours of requisitioned mills in the other units.

The accounts of the *Anglo-India Jute Mills Company Limited*, for the half-year ended September, 1943 have been published. The net profit, before providing for taxation and depreciation, at Rs. 7,63,308 (Rs. 11,30,163) should be considered rather satisfactory having regard to the difficult conditions under which the industry had to work. After providing Rs. 2.5 lakhs (Rs. 5.3 lakhs) for taxation the dividend on ordinary shares has been reduced to Rs. 7-8 per share from Rs. 10 per share on the last occasion. The amount carried forward is Rs. 1,76,105 against Rs. 1,28,527 brought in. Sales have not been very much affected but working costs have considerably increased. As from October 1, 1943 the Company's Upper Mill (steam-driven) has been requisitioned by the Government, and it is intended to utilise its loom hours by the two electrically driven mills.

* * * *

The announcement regarding the increase in the ex-factory price of sugar by 13 annas per maund in the 1943-44 season has not been correctly understood by the market. It was at first taken to be a bearish factor for the industry as it was pointed out that imposition of a countervailing excise duty, so far as stocks in factories and with dealers are concerned, would nullify the effect of such an increase and that with the higher cost of production there was actually a smaller amount of profit available to mills. It is, however, pointed out by the Government that the industry requested the authorities that any increase in the price of sugar should be passed on to the ryot as they were very much worried about adequate supplies of cane even in the next season. Any inducement offered to the ryot to tender his cane to the sugar mills should be considered a favourable factor for the industry. With gur control in force and the efforts made by the authorities to utilise to the maximum available cane supplies, it should be said that sugar companies stand to gain. The Government should, however, give all possible assistance to manufacturers in regard to supplies of stores and chemicals.

* * * *

That cane shortage has been mainly responsible for the decline in earnings of many companies, will be evident from the balance-sheet of the *Mysore Sugar Company, Limited*, for the year ended June, 1943. The quantity of cane crushed during this period was only 163,212 tons against 327,720 tons in the previous year. Production of sugar does not show a proportionate decline owing to the higher percentage of recovery and the actual quantity produced was 15,666 tons against 27,455 tons in the previous year. It is the working in regard to the distillery that deserves mention. With the insatiable demand for alcohol there was no difficulty in marketing. The outstanding achievement of the year was the successful fabrication of the duplicate distillery plant with the aid of the company's staff.

The net profit, before providing for taxation and depreciation, is Rs. 13,86,374 against Rs. 17,46,327 for 1941-42. The amount set aside to depreciation is Rs. 3,94,153

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Nov. 11.

THE Calcutta Stock Exchange has been rather quiet in the past few days and business has been on a considerably smaller scale. The weakness of the Bombay market and the easier tone of the bullion markets have been mainly responsible for the absence of any great activity. The week, however, is not completely devoid of interest. In the last two days there has been a slight rise in prices for Cotton and Sugar shares. Speculative counters do not show any important change on balance but the undertone is quite steady and but for the irregular behaviour of the Western centre prices would have been marked higher. There is a tendency to await further developments.

In the giltedged securities section, business has been on a smaller scale but prices have been fully maintained. 3½ percent Paper was quiet around Rs. 97-6, with 3 percent Paper at Rs. 84-10. Terminable loans were steady with 3 percent Defence Bonds at Rs. 102-4, 3 percent 1963-65 at Rs. 98-4 and 3 percent 1951-54 at Rs. 102. 3 percent 1949-52 were sticky at Rs. 111, while 4½ percent 1955-60 were firm at Rs. 115-12 and 5 percent 1945-55 at Rs. 106-4. No transactions have been recorded in Provincial loans. Cheap conditions have continued to prevail in the money market and the average discount rate is unchanged at 13 annas 8 pies percent per annum.

There has been slightly more enquiry for Bank shares, *Central Bank* and *Imperial Bank* in particular being in good demand. A solitary transaction was recorded in Central Bank at Rs. 82 and *Imperial Bank* fully paids at Rs. 1,870. Contributories were Rs. 462. *Reserve Bank* also have been marked higher and the quotation is Rs. 123. *United Commercial Bank* were a shade better at Rs. 26 premium.

In the Cotton section slightly easier conditions have been noticeable and the upward tendency has been resumed in the last two days. *Bengal-Nagpur* quoted Rs. 36-12 and *Cawnpore Textiles* Rs. 15. There is still no confirmation of the possibility of a bonus issue by the Elgins Mills. After being lower at Rs. 95-12 the quotation at the time of writing is Rs. 98-8. *Dunbar* were Rs. 274. *Basanti* Rs. 13-6. *Kesoram* were easier at Rs. 16-2 while *New Victoria* were steady at Rs. 10. There has been a further rise in the quotation for *Radheshyam* to Rs. 19.

The announcement of a scheme to increase coal raisings has not had any effect on the Coal section and quotations have been fluctuating around last levels. *Amalgamated* were Rs. 43-8, *Bengal* Rs. 531 and *Bokaro & Ramgur* Rs. 32. *Burrakur* were Rs. 24-15, *Dhemo Main* Rs. 17-12 and *Equitable* Rs. 45-8. There is rise in the quotation for *Kalapahari* to Rs. 24-8 and *Talcher* to Rs. 6 from Rs. 5-4. *New Beerbhoom* were fluctuating around Rs. 27-6 while *North Damuda* were a shade better at Rs. 9-3. *Samla* were crossed at Rs. 5-4 and *South Karanpura* at Rs. 8-8. *Standard* were 1½ points higher at Rs. 29-2; *West Jamuria* were quiet at Rs. 37-10.

The prospects of larger coal supplies and the satisfactory production figures for the month of October have not resulted in any appreciable rise in prices for the jute shares. *Adamjee* were a point higher at Rs. 33-4 while no business has been reported in *Anglo-India* on the reduction of the dividend for the half-year ended September, 1943. *Bally* were 5 points higher at Rs. 357; *Barnagore* were more or less unchanged at Rs. 166-8. *Champdany* quoted Rs. 212; *Howrah* were 10 annas higher at Rs. 65-2. *Gourepore* were Rs. 796 and *Hukumchand* Rs. 27-4. *India* were 20 points lower at Rs. 528 while *Kamarhatty* were Rs. 553 and *Kinnison* Rs. 371. *National* were Rs. 27-14, *Megna* Rs. 93-8, *Northbrook* Rs. 31-12, *Nuddea* Rs. 104-8 and *Rameshwara* Rs. 14-1. *Soorah* were crossed at Rs. 14-2.

In the Engineering section, *Indian Iron* and *Steel Corporation* were fluctuating around Rs. 37 and Rs. 27 respectively. *Bhartia Electric Steel* were a shade better at Rs. 15-12 while *B. I. Corporation* were strong at Rs. 18-4. *Burn & Co.* were steady at Rs. 397, *Indian Galvanizing* came in for attention at Rs. 42-4, *Indian Steel and Wire Products* deferreds were Rs. 33-4 and *Jessop* Rs. 21-8. *Marshalls* were Rs. 4-3 and *National Iron & Steel* Rs. 13-3.

The improvement in the Sugar section noticeable last week was not maintained. *Cawnpore* were marked back to Rs. 44-4 from Rs. 47 and *Champaran* to Rs. 44 from Rs. 46-8 on reports that the accounts will not make as satisfactory a showing as expected. *Murree Brewery* were Rs. 26-15 and *New Savan* Rs. 20 ex-dividend. *Ramnugger Cane & Sugar* provided the feature of the week with a rise up to Rs. 14 in today's session while *U. P. Sugar* also were higher at Rs. 34 after being around Rs. 32-4 for the most part of the week.

An irregular tone has been noticeable in the Tea section. *Hasimara* were steady at Rs. 71-4 and *Hattikhira* at Rs. 31-2. *Tezpore* were quiet at Rs. 17 and *Tukvar* at Rs. 17-14. *Patrakola* were crossed at Rs. 1,115 and *Nagarisuree* at Rs. 1,260.

In the miscellaneous section, *Burma Corporation* were quiet at Rs. 3-10 while *Indian Copper* were steady at Rs. 2-9. *B. I. Corporation* were interesting around Rs. 6-8 while *Bararee Coke* were Rs. 30-14. *Dunlop Rubber* were Rs. 55-8 and *Rohtas Industries* Rs. 32-2. *Spencer* were higher at Rs. 12-11.

Among paper shares, *Indian Paper Pulp quoted* Rs. 209-8, *Mysore Paper* Rs. 26-4 and *Orient Paper* Rs. 28.

Midnapore Zemindary changed hands at Rs. 96, *Assam Saw* at Rs. 4-12 and *Boorooah Timber* at Rs. 21-6.

No transaction have been recorded in Public Bodies' Debentures. Among Industrial Debentures 6 percent *Associated Hotels* were Rs. 103.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Nov. 11.

There was considerable activity in the local stock Exchange on Monday and prices showed an upward tendency. While more buyers were coming out into the market there was a scarcity of scrips owing to a general reserve on the part of sellers. Consequently prices recorded considerable improvements, especially, Textile mill shares and Iron shares. Among miscellaneous shares *Premier Construction* and *A. C. C.* were very prominent. Tuesday's transactions were in marked contrast to the previous day's lively activity in the market. The easy conditions in the commodity markets coupled with the war news had a direct effect on the share market and prices at once began to decline. Steel shares were the worst sufferers. *Tata Steel Deferreds* went down by more than 40 points. Churchill's speech had brought down prices further on Wednesday. The Prime minister's emphasis on a hard battle ahead is interpreted here to mean that the end of the European war is near at hand and hence Indian Industries cannot hope to reap the benefits of war contracts for many more months. Today's session saw no improvement in the situation.

CHAIRMAN'S SPEECH

Oriental Government Security Life Assurance Co., Ltd.

Twenty-Third Valuation Report

Chairman's Remarks: Government Urged to Peg Taxation

An Extraordinary General Meeting of the Shareholders and Policyholders of the Oriental Government Security Life Assurance Co., Ltd., was held on 25th October, at the Registered Office of the Company to consider the twenty-third Triennial Valuation of the Assets and Liabilities of the Company as on 31st December, 1943, as disclosed in the Actuary's Report. In the course of his speech the Chairman, Sir Purushotamdas Thakurdas, stated:

"When I addressed you three years ago on a similar occasion I drew attention to the fact that, although there had been a substantial drop in the New Business completed in the year 1939 as compared with that of the previous two years, the total New Business of the Triennium ending in that year amounted to slightly more than that of the Triennium ending 1936 and created a new record for the Company. The drop in the New Business of 1939 as compared with the previous years was practically entirely due to the commencement of the present War towards the close of that year and though in 1940 a further slight reduction in New Business completed took place, in 1941 there was a slight increase over that of the previous year and last year, as you know, a substantially increased New Business was completed.

"The lower amounts of annual New Business completed during the last three years as compared with that of the previous three years has resulted in the number of policies issued during the Triennium being 1,09,544 assuring nearly Rs. 25¼ Crores as against 1,48,581 policies completed during the previous Triennium assuring nearly Rs. 27½ Crores. Inspite of this fall in New Business during the period, the total Premium Income still continues to expand and for the last Triennium amounted to Rs. 11,37,89,547, an increase of nearly 9 per cent. on the total Premium Income for the previous Triennium. The net interest income at Rs. 3,42,48,816 shows an increase of 16½ per cent. on that of the previous Triennium.

EXPENSE RATIO REDUCED

"The Expense Ratio for the Triennium works out to 20.5 per cent. as compared with 22.5 per cent. for the previous Triennium and 22.8 per cent. for the Triennium before that. The decrease is mainly due to the smaller volume of New Business placed on the Company's Books as compared with that of the previous Triennium.

"Claims by Death during the Triennium amounting to Rs. 2,13,10,146 show an increase of just over 16 per cent. on the Claims by Death which occurred during the previous Triennium while Claims by Maturity at Rs. 2,88,71,494 show an increase of nearly 24 per cent.

"The Ratio of Actual Claims to Claims Expected and provided for by the Mortality Basis assumed in the Valuation is 46.8 per cent, as compared with 47.8 per cent. for the previous Triennium and 52.2 per cent. for the Triennium 1934-1936 but, as pointed out by the Actuary, the claims for the last year of the Triennium do not include those which must have taken place in respect of the Company's existing business in Malaya and Burma and it is estimated that, were the claims from this source to be included, the Ratio of Actual Claims to Claims Expected for the Triennium would be increased to about 47.1 per cent., which even then is lower than the ratio of the previous Triennium which was in itself a very satisfactory figure.

LOWER INTEREST YIELDS

"In my speech on a similar occasion three years ago I drew attention to the fact that at that time the Market Values of Gilt-edged securities had been maintained at such a figure that it was not possible to secure on 3 or 3½ per cent. Government Paper at rates then current more than a gross yield of 3.9 per cent. subject to Income-tax which meant a net yield of 3.3 per cent. after deduction of Income-tax. The position has so much worsened today that it is not now possible to secure on 3 or 3½ per cent. Government Paper at the current Market Values more than a gross yield of 3.6 per cent. which after deduction of Income-tax at current rates and the increased Surcharge, brings out a net yield of only 2.7 per cent.

VALUATION POLICY

"In agreeing to the Actuary's recommendation to reduce the rate of interest for the Valuation from 3⅛ per cent. to 3 per cent. instead of adopting a more stringent basis and reducing it to below 3 per cent., your Directors were actuated by the desirability of maintaining a surplus interest margin to provide for future profits to the greatest reasonable extent without trenching so much on the Trading Profits of the current Triennium as to have the effect of further reducing the Bonus which could be declared now to participating Policy-holders as a result of the Company's operations during the last Triennium and follows on the Valuation Policy of the Company in vogue for many years past, to which I have already referred as calculated to strike as far as possible a happy medium in order to give to existing participating Policyholders the largest possible share of the Trading Profits of a Triennium while keeping at the same time in view the necessity to provide for the maintenance of the Bonus rates then declared or at least to provide for not too great a reduction in the Bonus rates which it might be possible to declare as a result of the Company's operations in the immediate future.

TRADING PROFITS

"This increase in the stringency of the Valuation Basis through passing from 3⅛ per cent. to a 3 per cent. Valuation has cost nearly Rs. 54 Lakhs which has been entirely met from the Trading Profits of the Triennium which but for this would have been disclosed at about Rs. 205 Lakhs as compared with the corresponding figure for the previous Triennium of Rs. 210 Lakhs. One of the reason why the Trading Profits on this occasion are slightly less than the Profits for the previous Triennium is that the profit from Interest during the last three years for the reasons I have already mentioned, is estimated at about Rs. 88 Lakhs while the profit from Interest during the previous Triennium was estimated at about Rs. 96 Lakhs and a second reason is the transfer of a sum of just over Rs. 7 Lakhs from the Life Assurance Funds to set up a War Contingencies Reserve Fund in order to cover the possible total loss of our properties and investments in Burma and Malaya.

"A further reason for the reduction in the Trading Profits which would otherwise have been disclosed is that, although we have treated as in full force as at the date of the Valuation all policies on the lives of persons still, so far as we know, resident in Burma and Malaya besides a number of policies on the lives of evacuees therefrom who are absolutely unable to continue payment of premiums in the meantime and have valued our liabilities thereunder accordingly, we have taken no credit on the other side of the account for the net premiums under these policies which would normally have been received during the period since communication with Burma and Malaya became impossible and the estimated reduction in the Trading Profits on this account is about Rs. 12 Lakhs. I have no doubt that this loss will be recouped at least in part when such of those Policyholders who are able to continue their Policies after the War is over are in a position to make payment of the arrears of premiums.

FIX CEILING TO TAXATION

"The rapid reduction in the annual net interest yields on the Company's Funds during the last three years, amounting to nearly a quarter per cent. per annum, taken together with the estimate of the net rate of interest which this Company may earn on its Funds for the current Triennium, namely, not much more than 3½ per cent., shows most clearly the urgent necessity of immediate steps being taken by Government to fix a ceiling to the rate of Income-tax, Surcharge and Super-tax taken together for the assessment of the income of Life Assurance Companies, to which I have already referred in my speech at the Annual General Meeting of this Company held a few months ago. As I then pointed out in Great Britain the rate of income taxation was pegged at a figure of 7s. 6d. in the £ which is three-quarters of the present standard rate.

"This was done, as far as Great Britain was concerned, in 1940 and in my opinion, if it be decided by the Government of India, as I sincerely hope it will, to follow the policy of the British Government in helping Life Assurance Companies to pass through a critical period due to a combination of low interest yields and high taxation, the total tax to which Life Assurance Companies are subjected should be pegged at the rate of Income-tax, Super-tax and Surcharges prevailing in India in the financial year 1940-41, namely, 45½ pies in the Rupee. This figure, though only just over 61 per cent. of the present total Income-tax, Surcharge and Super-tax to which Life Assurance Companies are assessed today, is, I consider, the highest rate to which the income of such Companies should be subjected and is justifiable not only because it was the rate of tax at which Life Assurance Companies were assessed in India in 1940-41, the same year in which 7s. 6d. in the £ was the rate of Income-tax to which Life Assurance Companies were assessed in Great Britain, but because the great majority of Indian Companies require most definitely, in order to enable them to tide over the present crisis, a greater concession in view of their average shorter period of existence and the weaker measure of their strength as compared with what British Companies have attained.

"So far as our own Company is concerned, the fact that our investments in the Government of India non-terminable 3 per cent. and 2½ per cent. Loans, which form a very large proportion of our total investments, were standing in our Books as at 31st December last at a value equivalent to 81.5 per cent. for the 3½ per cent. Loans as against the present market value of 97½ has acted as a brake on what would otherwise have been a considerably more rapid decrease in the net interest yield, due to the facts I have above mentioned, but there are few Indian Companies in a similar position and the great majority of the Indian Life Assurance Companies not having been in existence for such a period as to give them the opportunity of purchasing at or writing down such investments to a comparatively low rate, are in a much worse position. It is essential, therefore, for the protection of their Policyholders even more than it is for the protection of the Policyholders of such Companies as our own, that the tax to which they are subjected should be pegged at the rate I have suggested, which rate has also been suggested as a fair and reasonable one by the Indian Life Assurance Offices Association.

"Although as I have indicated, the older Indian Life Assurance Companies, generally speaking, are in a rather better position in this respect than those of more recent origin, our own Company, as you know, is compelled by the provisions of its Trust Deed to invest 80 per cent. of the annual increase in its Life Funds in Loans of the Government of India which now give a very low net interest yield whereas, Companies, which are

(*Continued from page 907*)

not bound by such a provision, are in a rather better position in that they are under compulsion to invest only 25 per cent. of such increase in Loans of the Government of India. Though they are also bound in terms of the provisions of the Insurance Act to invest an additional 30 per cent. in such loans or other approved securities, they are left free to utilise the remaining 45 per cent. at the discretion of their Directors to secure a higher yield than is possible through investment in Government of India Loans or other approved securities. We, on the other hand, can invest less than half of that proportion otherwise than in Government of India Loans or other approved securities.

"The mode of distribution of the Profits as recommended by the Actuary has been carefully considered by your Directors and has the full approval of the Board and Resolutions covering these proposals will be placed before you today.

PUBLIC CONFIDENCE

"The history of the progress of this Company is ample evidence of the confidence in which it is held by the insuring public and that this confidence has in no way been weakened but rather to the contrary is proved by the remarkable expansion in the number of policies placed on the Company's Books during the current year as compared with the results of past years. There has undoubtedly been during the last year or two considerable awakening among the public who have hitherto not apparently appreciated the value of Life Assurance at all times and particularly under the conditions existing today as a profitable means of investment of surplus income than which there is no better, combined as it is with the purely death risk provision which after all is the main purpose of Life Assurance.

"We have up-to-date issued policies assuring practically double the amount assured by the policies issued during the same period last year and proposals are still being received in such numbers as to indicate that this proportionate increase in New Business is likely to be maintained for some time longer. Such a result speaks for itself and is indicative of the continued and even increased confidence of the public in the soundness of the Company's direction and management, which has raised its prestige to a high point and it is the sole aim of your Directors to continue to administer the affairs of this great Company in such a manner as to meet with the approval of its Shareholders and its Policyholders alike, and so that it may continue to prove increasingly worthy of the confidence reposed in the methods of its administration by the people of this Country."

(Half-yearly General Meeting to be held on 22nd November, 1943, at 3 p.m.)

Audited Accounts of the Company for the half-year ended 30th September, 1943:—

	Rs.	A.	P.
The Accounts, after writing off for Depreciation Rs. 1,00,000, show a profit of ..	7,55,909	2	11
To which has to be added the balance brought forward from the last account, namely ..	53,859	7	10
giving a total of	8,09,768	10	9
From this is deducted the amount set aside as a Reserve for Taxation and as provision in respect of Deposits under Section 10 (1) of the Finance Act 1942	5,00,000	0	0
leaving a balance for disposal of ..	3,09,768	10	9
It is recommended that this should be dealt with as follows:—			
To paying the dividend on the Preference Shares for the half-year ended 30th September, 1943 at the rate of 7% per annum (i.e. Rs. 3-8 per share), without any deduction for Income-tax payable by the Company	49,000	0	0
To paying a dividend on the Ordinary Shares at the rate of 25% per annum (i.e. Rs. 12-8 per share), without any deduction for Income-tax payable by the Company ..	1,75,000	0	0
To carry forward	85,768	10	9
Total ..	3,09,768	10	9

The Company's mills worked 60 hours weekly until the middle of May when it was decided to revert to 54 hours with 10% of the looms sealed. On June 14th an order for hssian cloth on account of the U.S.A. Government, equivalent to about a year's normal consumption, was received by the Indian Jute Mills Association for delivery from July to March 1944, and the sealed looms were thereupon opened up. The Committee passed a bye-law fixing maximum prices for jute and for all classes of manufactures.

The coal wagon supply has deteriorated further and as the result of a crisis in July when floods caused serious interruption in railway traffic it was resolved that all mills should remain closed for two weeks. Arrivals at the Industry's central coal dump, however, continued on such an unsatisfactory scale that a revised working time agreement was concluded which, allowing for five closed weeks between September and the end of this year, represents an average of approximately 40 hours weekly, with the proviso that mills having coal available may make up previous lost time in the closed periods.

Results for the half-year under review have been adversely affected by loss of production at the mills through lack of coal, whilst the weekly compensation payments during stoppages to all workers; plus the usual amenity allowance, have added very considerably to the working costs. The exorbitant market difference borne by the Company in providing its employees throughout the six months with food rations at about normal prices is shown in Profit & Loss Account.

(Half-yearly General Meeting, held on 22nd October, 1943.)

Audited Accounts of the Company for the half-year ended 30th June, 1943:—

After providing Rs. 29,372-0-0 for Depreciation the Accounts show a sum of Rs. 4,648-13-5 at credit of Profit and Loss Account including Rs. 7,945-14-10 brought forward from last half-year. It is proposed that this should be carried forward.

The Company's Colliery has been maintained in good order.

As forecast in last Report sand stowing has not yet enabled the Colliery to effect the necessary increase in raisings and results remain disappointing.

The recent floods and cholera epidemic have also fallen particularly heavily on this Colliery and only the devoted efforts of the staff have prevented very serious losses.

As sand stowing progress, however, its good effects are becoming more apparent and the Directors confidently hope for better results towards the end of the year.

Costs have risen rapidly, principally owing to the tremendous increase in the cost of foodstuffs, which the Company has continued to issue to Labour at normal rates.

Labour is in short supply and the war is making heavy demands upon their usual sources of recruitment.

Stores and material are costly and difficult to obtain though so far the Directors have avoided actual shortage.

Sandstowing, which is essential for safety, may be expected to be another big factor in increasing costs. The present contribution from Government, through the Stowing Board, towards meeting this is only a small percentage of the total cost.

The large and increasing demand for Indian coal which undoubtedly exists might be conceived as a happy augury for the future, but if advantage of it is to be taken there will have to be drastic steps by Government to make available more men, material and, above all, transport.

The Company is in a sound position to benefit by any such action.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 27th November, 1943.

By Order of the Board,
MACNEILL & CO.,
Managing Agents.

Calcutta, 11th November, 1943.

ANGLO-INDIA JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Fifty-fourth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, 101, Clive Street, Calcutta, on Tuesday, 30th November, 1943, at noon, for the following purposes:—

1. To receive the Report of the Directors, and to pass the Audited Accounts for the half-year ended 30th September, 1943.
2. To declare dividends.
3. To elect a Director.
4. To appoint Auditors.
5. To transact such other competent business as may be brought before the Meeting.

The Share transfer books of the Company will be closed from 19th to 30th November, 1943, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board of Directors,
DUNCAN BROTHERS & CO., LTD.,
Managing Agents.

Calcutta, 9th November, 1943.

(*Continued from page 905*)

(Rs. 3,83,276). The provision for taxation is Rs. 2.75 lakhs (Rs. 3.15 lakhs). After transferring Rs. 2.5 lakhs to reserve (nil) the dividend and bonus has been maintained at 20 percent for the year. Out of the profits for 1941-42 the Cane Price Stabilisation Fund received Rs. 6 lakhs. The amount carried forward is Rs. 89,842 against Rs. 73,684 brought in.

The prospects for the current year should be considered satisfactory as with the larger capacity of the distilleries and the extension of the Company's farms, it can be expected that larger earnings will be reported. The Company would also benefit by the increase in the control price of sugar. The Company also benefit by the increase in the control price of sugar. Nearly one-third of the 1942-43 production was sold prior to January 1, 1943 and this reduced the sale realisations by Rs. 3¼ lakhs.

* * * *

Then sudden interest in the ordinary shares of *Ramnugger Cane and Sugar Company, Limited*, has taken up the quotation to Rs. 14 and it is the highest for some time. There are reports that the Company has done very well in the year ended August, 1943 but it cannot be expected that any increase in earnings would admit of the arrears of preference shares being paid in full and a maiden dividend on ordinary shares. As was pointed out on the last occasion, preference shares are attractive for investment purposes and the quotation is now around Rs. 148. Arrears of preference dividend from March 1, 1938 to August 31, 1941 are to be paid; there is besides the dividend for Rs. 1941-42.

"WATCH DOG".

KHARDAH COMPANY LIMITED.

NOTICE is hereby given that the Ordinary half-yearly Meeting of the Shareholders of the Khardah Company Limited, will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, at noon, on Wednesday, the 1st December, 1943, for the following purposes:—

1. To receive the Report of the Directors and to pass the Audited Accounts for the half-year ended 30th September, 1943.
2. To declare Dividends on the Preference and Ordinary Shares.
3. To transact any other business which may properly be brought before the Meeting.

The Share Transfer Register of the Company will be closed from the 17th November to 1st December, 1943, both days included.

ANDERSON, WRIGHT & CO.,
Managing Agents.

Calcutta, 9th November, 1943.

To the shareholders of the Khardah Company Limited, and in particular to:—

Messrs. W. B. Shewan, F. R. Revell-West, D. Mackenzie, G.E. Reid, Lt. General Krishna Snum Shere Jung B.R., Mrs. J. M. King Taylor, Miss A. M. W. King, and Mesdames I. G. Thomson, D. A. Blunt and M. E. Swift.

THE GANGES ROPE CO., LTD.

Notice is hereby given that the Eighty-second Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No.2, Fairlie Place, Calcutta, on Tuesday, the 7th day of December, 1943, at 12-10 p.m.

AGENDA

(1) To receive and approve the Report of the Directors for the half-year ended 30th September, 1943.

(2) To receive and pass the Company's Audited Profit and Loss Account for the half-year ended, and Balance Sheet as at, the 30th September, 1943.

(3) To declare a dividend.

(4) Any other ordinary business.

(5) As special business; to consider and if thought fit to pass the following resolution which will be proposed as a special resolution:—
That the Articles of Association be altered by deleting all the words and figures in Article 45 after the words "think fit".

The Share Transfer Register will remain closed from 28th November to 7th December, 1943, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividend, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 27th November, 1943.

By Order of the Board,
MACNEILL & CO.
Managing Agents.

Calcutta, 11th November, 1943.

(*Continued from page 906*)

Prices have gone down still further and it is not easy to say when and where the break will come. With the Germans retreating on all fronts the hope that the war in the west will come to an early and happy end soon seems justified. From the market point of view it is an adverse factor and at the moment it is the one factor tha really counts.

Mill shares though opened firm soon deteriorated. The uniformly encouraging war news coupled with the British Prime Minister's Mansion Hall speech has contributed not a little to the present easy conditions obtained on the market. With the prospects of the continued receipt of war contracts growing dim operators and investors are in no mood to venture beyond what they consider, safe limits. *Bombay Dyeing* which opened at Rs. 1,977-8 on Monday, closed on the following two days at Rs. 1,951-4 and Rs. 1,957 respectively and at the time of writing are quoting around Rs. 1,927. *Century* were 18 points lower at Rs. 935. *Swadeshi* after undergoing some change is at Rs. 608. *Phoenix* were Rs. 702-8. *Gokak* were Rs. 340.

Steel shares were the worst sufferers during the week under review. The stray enemy air activity along the east coast of India in the past few weeks is an additional adverse factor for shares in this group and hence the rather heavy decline in values in Tata Steel shares. *In sympathy* with the Textiles Tata Deferreds which opened at Rs. 1,950 on Monday recorded a big drop on the following day and today closed at Rs. 1,886-4, thereby losing more than 60 points in the course of four days. Tata ordinary were Rs. 3[illegible] and Indian Iron were neglected at Rs. 36.

Among Miscellaneous shares *A. C. C.* were a strong feature at Rs. 222 on Monday. Owing to the easy conditions on the other sections no further improvement was possible and the latest quotation is Rs. 221-8. Another share that was able to record substantial gains was *Premier Construction* which had gone upto Rs. 199-8. *Shivrajpur Syndicate* was also wanted upto Rs. 72-8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Nov. 9.

Steady conditions continued to prevail on the local Stock Exchange during the period under report. Though the turnover is by no means large, the volume of business passing is definitely on the increase and with the steady increase in the turnover, prices have also shown some improvement.

Among Mill shares *Ranga Vilas* firmed up to Rs. 216 from Rs. 202 on the declaration of dividend. *Janardans* were crossed at Rs. 213; *Cambodias* were Rs. 37-12 x.d. *Coimbatore Spinnings* were lower at Rs. 287-8 cum dividend. *Mettur Industries* were crossed at Rs. 298-8 and *Maduras* were Rs. 64.

The planting section did not show much improvement though the turnover is slightly on the increase. *Cochin Malabars* were done around Rs. 17-8 in small lots. *Nilgiri Neerungundi* were Rs. 13-5 cum dividend. *Midlands* were wanted upto Rs. 16-2.

Among Miscellaneous shares there was keen buying enquiry for *Bruntons* around Rs. 17-8 cum dividend. *United Breweries* were Rs. 152. *Mettur Chemicals* (New) were crossed at Rs. 23-4 while olds were Rs. 25-1 and *Spencer* (ord.) were crossed at Rs. 12-4

The giltedged section was very firm throughout the period under review with 3½% Government Paper quoting at Rs. 97-9. 3% (1951-54) Loan were done upto Rs. 100-5 in small lots and 3% (1963-65) Loan were Rs. 98-6; while 3% (1949-52) Loan were crossed at Rs. 100-11. State Loans and Provincial Loans also met with keen enquiry though it was not always easy to get the former in required quantity.

Bank Shares were in good demand. *Reserve Banks* were quoting around Rs. 124-8. *Indian Bank* (small) were Rs. 76; *Indian Bank* (Rs. 50 paid) were Rs. 146 while there was a good demand for the fully paid shares around Rs. 295. *Indo-Commercial Bank* 'C' and 'B' shares were wanted up to Rs. 56-8 and Rs. 26-8 respectively.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Seventy-fourth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Tuesday, the 7th December, 1943, at 12-5 p.m., for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1943.

(2) To declare Dividends.

(3) As special business, to consider and if thought fit to pass, with or without modification, the following resolution, namely:—

"That in compliance with the recommendation of the Committee of the Indian Jute Mills Association that the Company contribute to the Government Central Relief Fund for relief of distress in Bengal and to His Excellency the Governor of Bengal's Red Cross and St. John's Ambulance Appeal on the basis of Rs. 5 per loom in each case, the Directors be and they are hereby authorised to make a donation of Rs. 6,380 to each of the two said funds from the assets of the Company."

(4) To transact any other business that may be brought before the meeting.

On application, Dividend Warrants will be made out in favour of Shareholders whose names are in the Company's Books on the 22nd November, 1943, or their Attorneys authorised to receive them. Holders of Scrip under blank tranfer are reminded to send in their shares for registration in the Books of the Company as soon as possible, but not later than Monday, the 22nd November, 1943.

To facilitate the issue of Dividend Warrants, Shareholders are requested to insert share numbers and the nature of the shares held by them in their applications.

The Share Transfer Register of the Company will be closed from Tuesday, the 23rd November, 1943, to Tuesday, the 7th December, 1943, both days inclusive.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 27th October, 1943.

HOWRAH MILLS COMPANY, LIMITED

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions continue to prevail in the money market and call money rates are unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay. There is some demand for funds for foodgrains and a seasonal demand for funds for the movement of cotton is expected in the next few weeks. But the volume of surplus funds seeking investment is so great that any increase in demand for funds cannot make any difference in money rates. The easier money conditions, however, have not resulted in a lower average discount rate on treasury bills. Even with a large increase in the amount of applications bidding has not been keen and at the latest auctions for treasury bills the average rate on accepted tenders was unchanged at thirteen annas and eight pies per cent per annum. Applications amounted to the very large figure of Rs. 13.21 crores against Rs. 9.14 crores last week. It appears from the recent statements that the Imperial Bank has not taken any large interest in treasury bills. With the fresh increase in advances there might probably be keener bidding at the next auctions. The offer has been maintained at Rs 6 crores.

The returns of the Reserve Bank for the week ended November 12, show that there has been a further expansion of currency against sterling securities. Total notes issued are higher at Rs. 804.38 crores against Rs. 800.04 crores at the end of the previous week. Notes in circulation show an increase of Rs. 4.02 crores to Rs. 794.64 crores. Notes held in the banking department are slightly higher at Rs. 9.74 crores. On the assets side, sterling securities are higher by Rs. 5 crores at Rs. 689.54 crores. For several weeks in succession rupee coin have been showing a steady decline. In the latest return they are lower by Rs. 67 lakhs at Rs. 11.80 crores. There is no change in the figure of rupee securities.

The policy of cancelling of 'ad hoc' securities seems to be at an end. In the last four weeks there has been no cancellation of rupee securities in the issue department in spite of the fact that large sterling payments have been received and expansion of currency has been on a very much smaller scale. The authorities have to take up the question of the disposal of the large sterling balances at an early date. This question is very important as even with the repatriation of large sterling loans sterling balances have increased by over Rs. 300 crores in a year. Against the average rate of Rs. 25 crores per month sterling receipts in the last four weeks have been as much as Rs. 48.76 crores. If it means that with the establishment of the South-East Asia Command sterling receipts will be on a larger scale some plans for effective utilisation of surplus balances should be made.

In this connection the suggestions put forward by the London press for the import of bullion, to help the anti-inflationary drive of the Government, are interesting. In recent weeks the Reserve Bank has been selling large quantities of gold in the Bombay market at varying prices. The source of supply is not known and there is no indication to show that the Bank has sold from its reserves. There is no change in the figure of gold coin and bullion held in India, as shown in the issue department. How the Government has paid for its purchases is not also clear as sterling payments have continued on a large scale. The consistent increase in government balances and sterling receipts is perhaps due to the credits on either side on this account.

In the banking department, government balances are at the highest levels for sometime. There is a rise of Rs. 5.2 crores, in the latest return to Rs. 54.72 crores. Other government accounts show a decline of Rs. 3.23 crores to Rs. 10.11 crores. Bank deposits are higher at Rs. 69 90 crores against Rs. 66.40 crores. Foreign balances are higher by Rs. 3.32 crores at Rs. 142 23 crores. There has thus been a net receipt of sterling for Rs. 8.82 crores during the week.

The statement of the Imperial Bank fo the week ended November 12, shows a increase in deposits of Rs. 3.1 crores t Rs. 199.78 crores. Investments are eve lower at Rs. 134.18 crores against Rs. 135.1 crores. There is only a slight increase i the figure of advances from Rs. 36.2 crores against Rs. 31.07 crores.

The statement of the scheduled bank for the week ended November 5, show tha there has been a further increase in bot demand and time liabilities. Deman liabilities were higher by Rs. 5.65 crore at Rs. 472.97 crores and time liabilities b Rs. 1.64 crores at Rs. 140.35 crores. Cas balances are higher at Rs. 22.20 crore against Rs. 19.89 crores but balances wit the Reserve Bank are lower by Rs. 5.3 crores at Rs. 65.05 crores. Advances sho a rise of Rs. 42 lakhs to Rs. 154.70 lakh while bills discounted are substantiall higher at Rs. 5.52 crores.

The exchange market has been stead with a few export bills showing.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Nov. 16, 1943. Total amount offered was Rs. 13,20,50,000. Tenders at Rs. 99-12-9% and above were accepted in full and those at Rs. 99-12-6% were allotted approximately 77%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 0-13-8% per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Nov. 23, 1943, in Bombay up to 11 a.m. and up to the close of business on Nov. 22, 1943, at other centres. Successful tenderers should make payment on Nov. 26, 1943. Other conditions are as usual.

During the week ended Nov. 12, 1943, Government of India Treasury Bills for Rs. 1,81,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Evening.

Except for an assurance from Mr. Hull tnat Russia is going to join in the Inter-Allied monetary discussions there is nothing to show that White Plan II or any compromise is going through. Wall Street has no set opinion as to the scope or nature of post-war co-operation, and share prices there have not moved uniformly. The war news has not been good enough to raise prices and a fall in U.S. public spending in one month contains little to cheer the market. The irregularity in home industrials is not much in evidence in London this week. Profit-taking has apparently ended and the changes this week have been mostly upward. Pronounced improvement in British Funds may well explain this. The former may be due to better sales of the new series of 2½ per cent war bonds on offer from August rather than any other reason. Dominion issues still appear good in view of the "Times" note on Australian debt repayment. Sterling balances have helped to extinguish debt, but it is not known if the £ (Australian) has registered improvement in terms of dollars or if the increased scale of war expenditure in Australia affects judgment.

The Syrian crisis does not seem to hold up markets abroad. That is a very important conclusion though some might imagine that disorder in the East would automatically push up bullion prices at least here. There is no change of note in India because the Reserve Bank armed with South African gold is ready to sell. How South Africa takes the proceeds, in sterling or rupees, can only be guessed but one might say that the demand for sterling might be larger. The sales of gold would in effect be the same as larger imports of goods from the British Empire. There has been in London some questioning as to the need for treasure; the duty to meet hoarders' demands because of the unchecked outflow of gold for 10 years is mentioned. The gold controversy in India as to the causes and course of gold exports may not be remembered but a part of the London Press thinks that gold is as important as flour today.

The Treasury's success in borrowing £190 million a week mostly from the banks may be due as much to the larger resources at call as the faith in victory. British banks with less scope for advances than in the past have to invest more and more in short-term funds against the advance of peace and the Government has found its opportunity also in the increased note issue. It is singular that agreement between U.S. industrialists and British industry on after-war policy has not helped Home industrials much. The explanation may be found in quieter markets, following the German recovery in the Aegean.

The U.S.A. is busy framing programmes for relief after the war. The U.S.A. is asked by the President to put up 1,500 millions for the purpose. Control of policy would certainly be centralised in Washington and beneficiaries barring Russia would have little control over the disposition of materials. From the market angle that means bigger outlay when prices and wages are unbalanced spells inflation and that may lift common stocks though the peace risks are not to be ighored in any case. The arrangement reached at Atlantic City implies borrowing for relief of nine Occupied countries. The parts of the British Empire overrun by Japan are not included and this may force a reconsideration of the future of Burma shares. There has been a steady fall after the speculative rise and who gained and why must remain obscure though it may be said that Lord Louis Mountbatten's goings and comings cannot be viewed as an important market factor but Indian investors may be impelled to draw the conclusion that there is nothing in Burma for them, and no Burma share is worth as much as its face value at present.

In spite of the news from the Near East leading oil shares have picked up. There is certainly hope of a solution if the Anglo-French entente is restored. What may be viewed is not a Sykes-Picot agreement but the groundwork of a plan for Arab unity. The Wafd is friendly to Britain as Nahas Pasha has indicated only recently, and the Allies may gain more than Turkey's moral support in view of guesses as to the outcome of the Cairo conference between the Turkish Foreign Minister and Mr. Eden.

There has been no news of the inflation peril in U.S.A. after the railway brotherhood came out with a demand for higher pay. The War Labour Board is now relegated to the second place. The Administration has to deal directly with organised labour. How to hold prices down so as to prevent wages going up is still the big problem at home and the U.S.A. is not yet ready with its fourth war bonds campaign. Controls are weakened by the compromise with miners which led to the demand for higher prices for coal. All industries will certainly react to the increase and the industrial outlook is apparently disturbed by other things than the demand for lease-lend repayment.

LLOYDS BANK

LIMITED

(Incorporated in England.)

1677

Saving Made Easy

You can help to bring prices down by curtailing your spending and increasing your savings.

Five Rupees will open a Savings Bank Account at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

Interest is allowed, and withdrawals can be made by cheque.

If goods come back the home market will take less. Hence there is a danger to the U.S. industrialists if the President's opponents today win all along the line. Turkey is to pay off on November 25 the remnant of her debt. Seven and half per cent bonds issued in 1933 are to be paid in anticipation through the usual agents. Holders of the Ottoman debt in Britain are to be paid in England. After the last war the Turkish debt was reduced and shares of this debt were given to Albania, Greece and Palestine. The New Turkey which took over the Bank etc. set up in the Sultan's time did not repudiate the debt settlement, and her success in liquidating external debt when borrowing at home for defence may provide more than a parallel to the example set by India in this war.

The U.S. Treasury Secretary has said little or nothing about post-war agreement and may prefer to await the return of Mr. Eric Johnston. Tariff concessions may soften the currency scheme adopted in August by the Treasury. The London Mission of Mr. Johnston has been apparently fruitful. The key-point in the White Plan is the retention of exchange rates prevailing on 1st July, 1943, and avoidance of revision for three years. There is, however, the British claim for retention of restrictions on transfers of capital and the view that the quotas fixed for the stabilisation fund are too high. The quotas fixed up to 50 per cent in gold cannot be got out of blocked balances by any country which means in a way that White Plan II is of less interest to India than the previous plans. The Canadian plan gave a chance to any country with an export surplus to acquire gold but the White Plan does not give India a chance of getting gold in lieu of foreign exchange and makes others judges of what is required for India.

Mr. Roosevelt's report on Lease-Lend operations has been followed by the statement in London as to reciprocal aid from Britain. Sir John Anderson made known the scope of aid offered without payment and indeed without calculation. Figures contained in the White Paper are not available here but Sir John Anderson spoke of local purchases for war purposes. Imports are not possible and purchases represent an addition to debt. The conclusion that India's sterling balances are part of Britain's short-term debt receives some support from the statement made on November 12, but Mr. Pethick-Lawrence's own comment on the statement is not known. There is, of course, the aid to the Allies in the east, but over and above is the borrowing. Mention was made of a prospective burden and a liability overhanging Britain's economic recovery. Sir John Anderson indicated that indebtedness must be reckoned along with disinvestment in this case and he made known that the assistance, for instance, to India's defence is given without reference to Britain's own capacity.

There have been suggestions that a loan may be raised in India for Britain's sake. Also one in favour of a war gift on the same lines as that made in the last war. Both suggestions may be viewed in a new light after the declaration as to the scope of Britain's help to her allies. This week there has been an assurance from New Delhi that the old formula as to war costs remains, but Sir John Anderson may not be slow in indicating that Canadian example should not be overlooked in India.

Modern Midas

After the debate on the food question both in the Indian Legislative Assembly and the British House of Commons, the Indian public is left wondering what is in store for it in the days ahead. Not even the end of the war, it would now appear, can mean the end of the trouble for food. For, we are now told, though not by an official spokesman, that, as a refreshing change from having to ask foreign countries for food, India should be prepared to produce and part with an export surplus and that the need for regulating the distribution of food will continue for some time after the war. The net result of the debates of the two legislatures, sovereign and non-sovereign, is that those who are responsible for the food muddle have got off by pointing accusing fingers to others and that the opportunities for official bungling will be increased, and not reduced, by the introduction of a system of rationing. A debate in the highest legislatures of the two countries should normally lead either to the fixing of responsibility for past blunders or to a thorough diagnosis of the trouble, such as would facilitate the adoption of a number of remedial measures. Neither result has, however, ensued. That no one Government or Government department was held responsible for the tragedy is only understandable; for each could plead dependence on some extraneous element for some vital part of the measures needed to prevent the tragedy. And after tens of thousands have died of starvation, little would be gained by precise fault-finding, unless it can help to prevent the repetition of past blunders. But it is not unreasonable to expect that, after the matter has been debated at length, the legislators of two countries will secure some assurance that measures will be taken against every one of the forces and factors that in their cumulative effect brought this tragedy on this country. The disappointment is all the keener, since all these circumstances, particularly inflation, which is the most potent of them, were mentioned by more than one speaker. That the Government should be left to tackle the food problem with nothing more than a trickle of foodgrains from abroad and the adoption of a system of rationing for a small fraction of the area and population of the whole country is a result which is by no means in keeping with the prestige or the responsibilities of the House of Commons or the Legislative Assembly.

One advantage, however, must be noted. Both the debates succeeded in breaking down the smug self-righteousness of the respective Governments. One can well believe that the outspokenness of Sir George Schuster and the weighty restraint of Mr. Pethick-Lawrence had told on Mr. Amery. And in our Central Legislature, too, Sir Frederick James's reference to the manufacture of compost out of stale bread was a devastating comment on the Government's methods of economy in food. If it is an advantage to have less complacency in autocratic Governments, the debates may be said to have secured it.

But it is the task of the Legislature to force on the Government policies adequate for the problems on hand. And in the case of the food problems, the measures necessary for its solution cover a wide range. There is first and foremost the need to ensure adequacy of food supplies. And this has to be considered both in the near and in the far view. There is then the question of ensuring its proper distribution. And distribution may be viewed both as an emergent administrative concern and as part of the normal automatic function of the economic organisation. Above all, there is the monetary background of the economic life and the need to ensure that the best schemes of production and distribution are not endangered by serious changes in the price levels. It will be readily admitted on all hands that not the least fertile of the various sources of trouble is inflation. Sir Ramaswami Mudaliar in his speech in the Assembly debate made pointed reference to those who had been asking the peasants to keep back their grain instead of helping the Government to complete its plan of procurement and distribution. But the Indian peasant has a nose for rising prices; and with currency and prices racing at breakneed speed, he was above need for such advice from political partisans. The role which inflation has played in this tragedy of famine and starvation should make it clear to the Government that the food problem cannot be solved merely by tightening the screws and the belting of the administrative machinery.

The requirements of the food problem as it must now be appraised are not difficult to state. Present shortage of food supplies has to be overcome by imports of foodgrains, for which the Government of India must continue to exert the utmost pressure on His Majesty's Government. And more life and reality must be imparted to the grow more food campaign. It is interesting to note in this connection that while claims have been made in the House of Commons for an addition of 9 to 12 million acres to the area under food crops, the crop forecasts for rice and wheat show very small increases, so that one has to infer from the fall in acreage under cotton and groundnuts an increase in the area under other food crops. However, an increase in area is not the only, nor the best, means of improving our food position; and this crisis would be without any compensation if it did not lead to measures for improving the productivity of land. But neither the emergent measure of increased imports nor the long term one of increasing area and yield would avail us if distribution were to be endangered by drastic changes in prices or by undue official interference or by official incompetence. The success of official measures depends more on what it does not attempt than what it attempts. And it is wrong to interpret the outcry against the food muddle as an invitation to extend the scope of the control and lighten it, too. The Government has been criticised not for their failure to introduce a countrywide system of requisitioning and rationing, but for their inability to gauge the effects of their half-hearted measures of control, to foresee the shortage and to adopt timely measures for increasing the supplies.

But it would now appear that the effect of all the outcry both within the legislatures and without will be that, while the public is left with no precise ideas about adequacy of supplies, measures of requisitioning rationing will be made far-reaching. We confess we fail to see the safeguards necessary for the rural areas, though the talk of feeding the cities with imports thus reserving internal production for rural areas goes some way to allay our fears on this head. But there is no reason why Government should not be content with knocking out the two main adverse factors in the food situation, the shortage of supplies and the prospect of higher prices. All the havoc on the food front has been caused by these two forces; and to neutralise them would be as sufficient as it would be futile to embark on other measures leaving these two untouched. Nearly every one of the points raised by the Government in its defence is closely related to one or the other of these factors. If the surplus Provinces have been reluctant or slow to part with their grain, it is either because they are apprehensive of shortage for themselves or because they expect higher prices. The same is true of the peasant and the hoarder and the profiteer. And if shortage is incurable, then rationing, which admittedly presupposes sufficiency of stocks and which at its best can only touch a fraction of the population, is no remedy. Shortage of goods and plenitude of money are about the worst curse that a people can be under. India to-day is a modern version of Midas turning everything she touches into "managed" currency instead of the old fashioned gold.

POOL AND POMP

If it is generally known that general agreement as to post-war relief was independent of the Hot Springs Conference the inter-Allied discussions following the Moscow conference open up a vista of gifts, loans and subsidies through an approved international agency, besides giving an assurance that the liberated countries will not be called upon to hoe their own row. After the last war the confusion in Europe following revolutions in many countries threw the job of relief on one nation, the U.S.A. which let altruism master the native isolationism of the Harding period. In this war relief is viewed as a composite job, and questions addressed in India by some as to the scope of relief and the obligations of the nations with comestic crises of their own only, serve to show that the decisions of the earlier conference have not to be explained. It was certainly known that following the liberation of North Africa a new supply problem was thrown up, and the ex-Governor of New York, beaten by the Republican, Mr. Dewey was given a job which led to a bigger one.

The first conference set up an executive bureau in Washington but the old remnants of the League of Nations at Princeton or elsewhere were not called upon to help. This alone would provoke questions as to how the consumption problems of the transaction can be studied and dealt with. Since the present Indian famine is excluded from the conference which has in appropriately chosen Atlantic city for making a sea-side holiday out of the conference many in India will not show more than limited interest. The news so far available suggests that India's liability under the agreement will be small and the question of improving export prospects of Indian industries by any agreement as to postwar relief materially sinks into significance. The main question raised by inquirers was in relation to relief operations supporting Indian exports after the war. That has been answered this week by an announcement which dwelt on the need for textile supplies from India to the Near East and Balkan countries and the usual demand for hessian for packing goods consigned for relief from all countries. The official announcement supports anticipations of good days to come for both major branches of the Indian textiles industry. Reference was made in this context to India's own needs and the available margin for exports. The announcement is obviously to give an assurance that export obligations would be limited duly by consideration for the home market, that is to say that scarcity at home would take precedence over scarcity elsewhere.

The Atlantic City discussions afford no clue as to the way that China will help or be helped. Indian interests anxious to stake out special claims in the Far East would certainly draw no encouragement from the recent broadcasts of Mr. Roosevelt. The export of consumption goods for the special purposes of U.N.R.R.A. may be linked by some with the import of many capital goods after the war. The contribution envisaged may be linked with the sterling balances held abroad. The contribution is to be fixed on the basis of national income. The original estimate that the U.K. would have to give 1 000 million dollars has been modified by subsequent estimate outlining the capital requirements of the U.N.R.R.A.

While food remains a weapon to-day the post-war use of food will be pacific, but the approach to neutrals has not been made even after Sweden's decision to raise funds for Scandinavia's relief. The association of Russia whose resources for assistance of others must be problematic has certainly led to a development that will be viewed as unfortunate. Countries like Switzerland engaged already on relief work of a substantial nature at home independently are not grouped with the 44 Nations. Quotas have been mentioned in respect of the capital needed for U.N.R.R.A.'s work. The grant of £375 million or 1½ billion dollars from the U.S.A. will entail a direct request for Congressional appropriations. In the light of the U.S. Senate's decision as to foreign policy approval may be expected.

President Roosevelt has laid down no conditions as to what India must contribute for the purposes of U.N.R.R.A. and the purely voluntary nature of the contribution has been made known. The gift is for a special purpose to provide work food and homes for nations that will probably be convulsed by constitutional debate or some other issue. Since the flow of goods for the many purposes outlined by Mr. Lehman last week is desired perhaps U.N.R.R.A. would secure tariff revision in advance. Nine Occupied countries including France are qualified for relief. Britain may well find the opportunity for selling goods for more than £153 millions now fixed as per contribution. The U.S.A. may not have the necessary goods or ships and the dollars may be turned over to British for the goods shipped. Russia has been exempted from payment of any contribution. Questions as to national income or taxation therefore are unnecessary and the distinction already drawn between lease-lend and relief-rehabilitation work may be impressed on the minds of U.S. politicians who are disturbed by the prospect of continuous gifts without control over the affairs of donees. It is encouraging to find the offers of help to China a year after the lapse of extra-territoriality and the scheme is unconnected with any demand for reparations from Japan. There is, however, no certainty that the Russian claim for reparations has been disposed of by the decisions of U.N.R.R.A. Since India received a sum as reparations following her own gift to Britain in the last war the interest in reparations here is not the less obvious.

What the U.N.R.R.A. is going to do for the restoration of the bare framework in countries as differently circumstanced as Greece and Denmark need not be described in anticipation. That Allied supervision of relief will follow the payments is generally understood. If U. S. nominees dominate the administration at present it is perhaps a guarantee that old alignments in Europe would be ignored in the distribution of relief. The arrangements promise the extension of RFC into the foreign field. The more distant effects of U.N.R.R.A's programme on food stocks and prices immediately after the war will not pass unnoticed. The many countries which have suffered privation may require more than normal intake but foreign trade controls will be in operation through this tight interval but there need be no question of indebtedness. Of course there will be schedules of priorities and one country or another may gain a little more. But the agreement makes for impartiality in administration and how the pool will draw help from the Dominion may be the answer to the question posed by temporary gluts of wheat or wool. Surpluses are not the rule today. No importance need then be attached to the promise that supplies must be maintained during the critical period following the economic position of nations, because that is neutralised by a condition as to self-denying limitation of imports by the liberated as well as the liberators. The assumption that the U.S.A. would have to give 20 per cent of the food required implies also the transference of people by the war. So far this year's conference on the refugee problem has scratched only the surface and Mr. Lehman's estimate of 20 million people requiring attention certainly covers many in addition to the Jews. The problem of immigration is one for the Dominions alone, and nothing has been said by one or all of them.

The assessment of 35 millions (taken as less than 1 per cent of India's income) may suggest to some that India's national income to-day is at least 3.500 million dollars or over Rs. 1 100 crores in which case all estimates of taxable capacity may be modified. It is very doubtful if the delegation could offer an authoritative estimate of either gross or per capita income at present but the claims for relief, advanced by one or many to-day, are likely to come up only when the Indian Legislature is called upon to authorise the gift as determined by the U.N.R.R.A. executive. The discovery that India is poor and cannot pay as much as others, e.g., Australia is not original or very timely. But the Legislature may go over the whole field in relation to the sacrifices imposed by the war on India, and

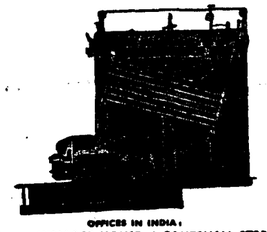
there is nothing final or conclusive about the estimates (as we have learnt from the various figures relating to the U.K's share of U.N.R.R.A's programme) for the bridge to peace. It is not the function of the U.N.R.R.A. to plan for all the aspects of the transition but the U.S. plan to collect 90 per cent of the assessed contribution in the form of goods, be it textiles or coal, raises immediately hopes of postwar benefits to India's major industries. Unemployment in the shipping industry is ruled out by the plans drawn up to collect ships and use them. British shipping is to benefit most, but the report that only Canada has accepted the transport plan without reservation will excite attention. The U.S.A. after the five Senators found occasion for criticism may apprehend that the plan for maritime supremacy would suffer, and Anglo-American rivalry, even in philanthropy, suggests that the U.N.R.R.A's object, projected into the peace period, may not help to defeat the view that the use of the pump for priming international economy for certain purposes may load to differences of opinion. Of course, it is easy to recognise that the quotas fixed will cause a new sudden demand for dollars, and goods are therefore sought along with cash. But shortage of dollars may persist and Latin American countries with large balances built up from war time exports alone may be comfortably placed to exercise generosity to outside direction.

THE

FOURTH DEFENCE LOAN

1953-1955



3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Larger Rice Crop.

Since the 6 per cent increase in the area under rice this year has received particular mention in more than one speech of late, reference may be made to the first crop forecast issued on October 27, 1943, dealing with 96 per cent of the area under rice in India. The first forecast covers the autumn and winter crop while the summer crop is covered only by the final memorandum. The variation in the area shown is hardly over 7 or 8 million acres but the final crop memorandum gives modified estimates of outturn as compared with the first which records the condition of the crop at the end of September or the beginning of October. The 1942-43 forecast discloses that the total area under rice in India including three States, Hyderabad, Baroda and Bhopal has risen from 67.5 million acres to 71.77 million acres. The increase of 4.22 million acres is due largely to the increase in cultivation noted in Bengal.

The increase of 3.47 million acres in Bengal alone this year is the true measure of the success of the grow-more-food programme. The jute acreage decision is also justified by the increase recorded under rice. Since rice is the chief political issue of to-day in the light of the decision to reduce prices from Dec. 1st, the details furnished as regards Bengal which accounted for 29 per cent of the rice acreage in the years 1936 to 1941, are important. The area sown with autumn ('aus') rice is estimated at 7,935,000 acres against 6.25 million acres in 1942. The season was generally favourable though the crop suffered in some parts of North Bengal. Some damage was reported from West Bengal. On the whole a good harvest is expected and the average outturn for the 'aus' crop works out at 91 per cent of the normal as against 66 per cent in 1942. The area under the winter 'aman' crop is estimated at 17.87 million acres as compared with 16.1 million acres at this time last year. The increase in area is attributed to the abnormal rise in the price of paddy and the grow-more-food campaign. Weather conditions have favoured the crop except in parts of North Bengal where transplanting suffered through irregular rainfall. Floods in Burdwan also affected the crop. The official view was (and is) that the crop outlook, is promising. The average outturn according to the District Officers' estimates works out at 88 per cent of the normal against 78 per cent last year.

In the light of the food deficiency and price controls in force, attention was drawn to the reduction of Bengal's rice crop in 1942-43 and the final crop memorandum was regarded as a danger signal. Since then, there has been a recovery in paddy cultivation since seed distribution, crop loans, etc., have produced their results. The reduction in the area under rice in Bihar and the U. P. may be due to purely local factors. The increase in Madras is smaller than that reported in Bengal. In September the Madras crop was called satisfactory but there has been flood in more than one District and the 6 per cent increase in area there may not be reflected in a higher outturn. The Punjab surprisingly grows as much rice as Sind at present and the present percentage of crop cultivation reported is the best so far. The increase in paddy cultivation in Bombay and Orissa this year is negligible while Hyderabad reports a sharp decrease owing to deficient rain in July and August. As for India there was a small increase in paddy cultivation last year followed by a more substantial increase in 1942-43 accounted for by the recovery reported in Bengal. Since Bengal claims 25.8 million acres the total acreage of 71.77 million acres of the quinquennial average of 29 per cent in relation to total area has been surpassed. The effects of the 'aus' crop on prices are indicated in the Minister's statement that rice at Rs. 18 per maund is on sale at Diamond Harbour near Calcutta. The purchase of the 'aman' crop has not been decided upon, but prices have been lowered and the main effect on prices will be perhaps seen after January 15.

Tele Communications Progress.

It is not generally known that delays arising from the strain on the telegraph are to be removed by the development of telephone and telegraph facilities. The original grant of Rs. 1 crore for development work in 1942-43 has been raised to Rs. 8 crores and a big plan was undertaken in order to support defence measures and also to make available for civilian use roughly twice as many circuits as were previously available. The Post and Telegraph department set up a construction branch, and a development board with the Director-General as Chairman was set up and given full powers to spend money and carry out the scheme.

Since work started one year has passed and the 8-crore scheme has become a 16-crore scheme. The requirements of the future are being studied and the Post and Telegraph Department's development work has made considerable progress. The line construction and equipment installation are being dealt with. A number of carrier systems, adding about 20,000 miles of speech and telegraph circuits to the main network have already been put in, and are in use. Experience makes for rapid extension of carrier systems and additional staff is being trained. Already 80 attendants have been picked and trained, and a further hundred attendants are being required. The production of components and equipments for construction and exchange installation has been stepped up in the three workshops at Calcutta, Bombay and Jubbulpore and in addition several manufactures are making telegraph line stores for the Department. Practically all the line construction material is being made in India and in very large quantities; for example five million insulators for the new lines are being produced in India. Work on the initial group of road lines has begun, and posts of steel, concrete and wood are being used. The expansion scheme provides for extension of Telephone exchanges and the provision of 20,000 new instruments. The load on the exchanges in cities like Delhi, Poona and Lahore has increased greatly owing to the war and demands for new connections may be satisfied to some extent when the exchanges have been extended and new equipment has arrived. Large numbers of men from every possible source have been drawn for the development scheme. Telephone, radio and cable concerns have also provided many recruits and trained members of the public as well as the retired employees of the Department have been engaged on a temporary basis. For training sub-ordinates and workmen new establishments have been set up and additional supervisors and maintenance duties while there has been a big increase in the number of linemen and operators. Despite expansion of facilities the strain on the system persists, but alleviation has been obtained through the development work described above.

Trade Unions in Bombay.

In the light of legislative changes under consideration to-day, the report on trade unions in Bombay in the first half of 1943 possesses special interest. The official review for the period ended June 1, 1943, refers to the absence of returns from many unions and the disappearance of six unions from the list. It is rather surprising to find that the unions which had obtained more or less favourable settlements of trade disputes disappear from the list but there was an addition of 21 new unions to the list of unions so that the total figure is over 205 unions with 208,392 members. Admittedly, the Unions' totals are not imposing but in the first half of 1943 there was a substantial rise in the membership of the Ahmedabad Unions. Between March 1938 and January 1943, the total membership of unions registered under the 1926 Act has almost doubled. The rate of increase has slowed down since March 1940, but the setback recorded in 1941 has proved temporary. Among the new unions added to the list is that of the Reserve Bank's D class employees and those of the employees

of the Scindias and associated companies. Some of the older unions were replaced by new registrations and Bombay alone had 91 unions out of 205. The labour situation in Bombay calls for no notice except for the occurrence of a few strikes caused by employers' decision to reduce wages.

Details as to past strikes appear in a new form in the Bombay Labour Gazette and the classified list of stoppages, settlements, etc., leave out the names of concerns affected. The ban obtaining has been extended for obvious reasons. In the case of labour disputes originating in Bombay, the details are furnished as in the past. A novel development reported was the plan of bidi workers on strike in Surat to open bidi shops in order to provide work for the men on strike. The workers opened one shop, followed by four more after some days, but the employers refused to raise wages except for those who took back workers at higher pay. The strike ended; the result is called indeterminate, but the fire of syndicalism has been kindled by the Bidi Kamgar Mandal of Surat. The experiment duly launched in July 1943 will certainly excite much attention on the part of those who may ask how far producers' co-operation can go. The similar strike in Dhulia went in favour of the employers, but that in Surat produced compromise and to some extent a valuable departure in self-government for industry. The small-scale unorganised industry in which private competition is fierce while labour admits that female competition is rife, can be turned to advantage, and the main problem is not one of capital but of the market. Perhaps, working class goodwill helps the new Surat shops (set up after the strike), but for more than one reason the success in finding employment in new shops for men who had left because they were refused an increase of 25 per cent in wages must be noticed as a signal proof of the trade unions' power to secure to-day for workers something more than altered conditions of work.

Textile Control in Working.

In the review of the standard cloth scheme provided by the Commerce Member last week in the Assembly, mention was made of the distribution arrangements in the Provinces. The industry asked for arrangements being made before contracting to produce cloth. The success of textile control was described in its turn. According to the Commerce Member, "the Government has been going on with the cloth control scheme and insisted that all the quantity which was lying in stock with the dealers all over India should be unbaled and we stood firmly by that because we knew that in the interest of the consumer we must not allow any time to the dealers, the dealers who had been saying only four months ago there was sufficient stocks in the country. It is now well known that at least about eight months' output of the total production of textiles was in the hands of dealers. When there was cloth famine in the country, we gave about two months time, and so found that it was a physical impossibility to sell the entire quantity in the course of two months and therefore allowed another two months to sell all this cloth. The Government in the meantime placed orders with the mills for the production of standard cloth and this production has been going on". The Central Assembly was told that within the last two months or so we have sent to the two different Provinces and States standard cloth to the extent of about 218 million yards. This has been distributed all over the Provinces and the States: to quote a few examples the U. P. has got

BETTER TAKE A MAC

IN using the word "Mac" to mean waterproof, we pay tribute to the Scot, Charles Macintosh (not Mackintosh as the dictionaries usually say!) who in 1823 produced a waterproof material by impregnating fabric with a solution of rubber in naphtha. How to make clothes withstand water is still a major problem for the chemist, for modern standards demand something more than heavy proofs against heavy weather. Rubberised garments and oilskins are certainly proof against water, but they are also proof against air and in the absence of special ventilating arrangements are apt to be heavy and hot. Your rain-coat today must be light in weight as well as keep out the wet. It must be water-repellent: that is, water must not cling to it. The difficulty is to treat textile fabrics so as to combine protection with ventilation, but a number of methods have now been perfected, some of which can be applied to the most delicate materials. The latest achievement of British chemists is a waterproof finish which will stand up to laundering. Today there are also the special needs of engineers, fitters and others in the fighting services and in Industry. Their working dress must be both light enough to give freedom of movement and strong enough for protection against weather. It is to the credit of the chemist that he has enabled the British textile manufacturer to combine these qualities.

ICI

No. 2 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

over 31 million yards, Madras over 31 million yards, Bengal about 27 million yards, Bihar about 22 million yards and Assam a little over 8 million yards.

The Government of India has pressed for the further despatch and production of standard cloth and has also got at stocks lying with dealers. The distribution of 218 million yards has undoubtedly helped to ease the cloth situation though the Government would like much further progress to be made in the matter. The Commerce Member declared that the aim is to distribute 2,000 million yards all through the year. "We have already placed orders for the next six months of thousand million yards which the mills are producing, and we have been distributing as much as we could to other Provinces and States." It was pointed out that control had led to the fixation of ceilings for certain cloths and yarns and at the last meeting of the Textile Control Board it was decided to fix ceiling prices for all varieties of cloth and yarn in the market. The Industries and Civil Supplies Department has succeeded in bringing down prices and the slowing down of offtake is based on expectation of a further fall in prices. The Commerce Member announced that a conference at Madras soon would examine the problem of yarn supply for the handloom weaving industry, and how control should be applied to handloom production. The recovery in cotton mill production from January lends support to the claim that mills habe turned out more cloth at the instance of the Government and the state of employment in Bombay mills for instance is reflected in the lower percentage of absenteeism in July 1943 as well as the fact that 125 out of 144 mills in Bombay were working night shifts in the month of August.

Decisive Weakness.

Colonel Knox spoke recently of the destruction of half of Japan's merchant shipping in the war. The figures probably cannot be checked but reported sinkings outstrip new construction as proved by the Japanese decision to build wooden ships. Ships and the blockade represent but a part of the difficulties thrown up by the war. Co-prosperity is not very effectual, and the new Ministry in Tokyo has proved unequal to the tasks following the conquest. The civilian's inefficiency compared with the soldier's daring and skill, is one of the accepted facts of Japanese life; and Japan's failure to get the most out of conquests may be set down to the civilians rather than the soldier. The first phase of looting ended in 1942 and the phase of exploitation began this year, when the puppet regimes in Burma and the Philippines were set up to cover Japanese operations. The conquered areas have large resources but they are densely populated and economic infiltration is by no means easy. Too much rubber or too much sugar is but one aspect of the problem of surpluses. Japan wants and takes war materials like steel and oil. She has to take oil from Saghalien and keep on the right side of Russia for that reason alone. The home fleet still requires oil while she cannot recondition the fields in Burma or Borneo. The familiar belief that Miri would have been set right very rapidly is not supported by evidence. Japan was forced, by scorched earth tactics from Borneo to Sumatra, to take over wasted assets from others. Not having the technical equipment or the refinery capacity at home she has a surplus that cannot be moved where it is wanted. Large armies fighting from Shanghai to Akyab take up the available shipping space and the South-West Pacific theatre is the scene of failures because the Japanese cannot send other men or ships out to Rabaul. Local efforts from Rabaul against New Guinea and Bougainville have suffered for the same reason.

Japan's precarious position in the South-West Pacific is manifestly due to the shortage of shipping. Field forces must be enormous, and the war—stricken areas cannot support them. That is but one aspect of the situation in occupied territories which are short of food, labour, etc. and which face also the threat of invasion. Aircraft losses in and around Rabaul last month have been heavier than in the Solomons previously. The naval forces have been reduced by attack, and the aircraft strength especially, in Burma can be only conjectural. The reports of patrol clashes are seldom accompanied by reports of fighters in action, and the air war in Burma in October looks very much like what was reported in December 1941 to January 1942, when the enemy overran Malaya and moved into Burma because the British had not enough planes and lost airfields, one after another. The reversal of positions is all the more interesting after the setting up of an emergency puppet regime in Burma. The protectorate may vanish sooner in Burma than in Indo-China where the tradition of colonial rule and native princes is strong. The probable fate of the Ba Maw regime may well be decided by the shortage of shipping, but Burma's present independence of foreign trade by way of Rangoon must surprise those who imagined that the country lived by the export of certain raw materials to India or any other country.

Disorder In Syria

Since a shadow Government, opposed to that set up under French auspices in Beirut, has emerged in Syria it may not be correct to speak of the crisis in Lebanon as affecting only the small republic. Every Mediterranean Power is interested in Syria though the pipeline from Iraq to Tripoli is not working because Arab unity is the issue in the background. And the French interpretation of obligations under the Mandate is challenged by persons as far removed as the King of Saudi Arabia and Turkish deputies. The Lebanese outbreak, originating in a plan to amend the constitution has taken the course of all Near Eastern crises. It may be very difficult to link Von Papen's trip to Berlin from Ankara with the trouble in Beirut which imposes a strain on the modified Anglo-French entente of 1941-43. The Christian minority of many sects under many Patriarchs is apparently adopting the same view as the Arabs. The protest of Iraq's assembly may spring from the brief connection of the days when Feisal I became King of Syria by invitation and was expelled because the French would not then countenance either an Arab prince or a federal solution. Disaffection appears to be confined to Lebanon but Beirut is the capital for the French Mandate, modified by the Treaty of 1936 promising independence. Nationalism in the Near East has long been more active in Syria and the independence of Iraq produced a definite impression in view of the experience of disorders in Syria from 1920 to 1932. The Jebel Druse appears to be peaceful unlike the Lebanon but that may be due to memories of punishment inflicted by Gen. Sarrail. Since the frontier was delimited in 1929 and the Sanjak of Alexandretta detached in 1939 by agreement. Turkish interest in Syria's affairs tends to be small. No neutral has a direct interest in Syria today but the pressure of two British Ministers on General Catroux and the sympathetic agitation launched in Cairo indicates that the colonial rivalry of the 19th century has been revived in a new form, especially, after the French National Committee underwent drastic changes, and Giraud's authority decreased. The U.S.A. as a traditional supporter of Syrian nationalism against the Turks, and now the French, may not hesitate to adopt the arguments addressed in Egypt to the French who decline to take the view that the disturbance is spontaneous or sufficiently important to attract outside intervention.

Rust spells Ruin...

When the inside of a petroleum container starts to rust, that container is soon useless. External rust too can ruin it. Packages should be scrupulously protected against moisture, and should never be left without an efficient closure. When possible they should be stored in a dry room and when this is not possible they should be protected from exposure.

Today, oil containers of various kinds form one of the lifelines of the industrial war effort, because without them it is not possible to distribute oil. Most of the steel which in peace time was used to make containers is now required for the manufacture of ships, tanks, guns, and other war material.

Containers are scarce

They should further be able to read and write English easily. and read mechanical drawings. Age:—Preferably under 30 years. Men in service eligible, provided they satisfy the prescribed conditions and apply through the Head of the Department concerned. Last date for receipt of applications together with attested copies of testimonials:—15th December, 1943. *Full details should be obtained on sounding a stamped and addressed envelope to the Chairman.*

China's Development Plans.

According to the China Information Bulletin the Chinese Government has already propounded certain principles for economic development. Dr. Wong Won Hao speaking in Chungking on November 11 at a public lecture at the Banker's Club referred to five principles. One is that development should be in a progressive and modernising spirit. Dr. Sun Yat Sen's three principles the industrial project and the defence project which lay down schemes for material reconstruction are to be followed. The Minister pointed out that President Chiang in 1935 accepted the need for industrial development in his statement, that it is the first prerequisite for any nation which wants to exist independently, to keep abreast with other nations and maintain its freedom and equality. China is to become an industrial country in order to avoid exploitation. That too is a principle laid down by President Chiang. The postwar plan for China embraces agriculture and trade. The second principle is in line with Dr. Sun's principle that land should be fully developed. resources fully utilised, and goods well distributed. Equal emphasis is to be laid on industry and commerce after the war. Foreign trade should be developed in pursuance of a policy of international collaboration. The Minister cited Dr. Sun again to say that people and Government must collaborate. Mobilisation for industrial development was the doctrine of Dr. Sun, and the Minister subscribed to this. He also said that all people should be given work and manipulation and monopoly by capitalists should be prevented while heavy industries which need larger capital should be made state enterprises. The Government should give full protection and assistance to private enterprises. The other points described in the Minister's programme were that intensive development of China's resources (moderate in his opinion) must be undertaken. Essential imports must be got for available surpluses, and substitutes should be tried. The development of resources should be a yardstick to measure progress in construction. The final principle, in favour of international co-operation, is based on the need to raise the standard of living—peace being a means to the end. The five principles are of some interest to India because of the compromises reached in the programme for self-sufficiency. The Chinese Economics Minister said nothing of external capital or tariffs, but one may infer that foreign capital will be welcome in the light of changes recorded, and to come. The grafting of Dr. Sun's principles on to the Government's outline suggests that all economic programmes must have a political groundwork.

Oriental Chairman on Taxation.

The main interest of the speech of Sir P. Thakurdas to the shareholders and policyholders of the Oriental Government Security Life Assurance Co., Ltd., undoubtedly lies in the observations on the yield on the funds. Oriental experience illuminates the finding as to cheap money and high prices for giltedged, and to-day's gross yield of 3.6 per cent makes valuations look askew. How Oriental practice has been adapted to the results of the triennium ending 1939, was explained to those who were told of the ecects of the outbreak of the war on new business, though they have been modified since by striking recovery. Oriental's premium income has consistently risen and expenses have fallen. The mortality ratio too has fallen; and three factors in combination warrant the very moderate adjustment of the basis for the next valuation.

A net yield of 3.3 per cent only on the Life Fund made the maintenance of bonuses difficult. The position has worsened, and the net yield is 2.7 per cent only. This was cited in support of the familiar plea for pegging taxation at 45½ pies in the rupee—the rate in force in 1940-41. There have been representations and deputations in this regard, but the differential advantages denied to Oriental make the plea even more noteworthy. The hint of vastly improved prospects for Oriental this year confers interest on the address published last week. The desirability of keeping the rate of tax on what are not trading concerns requires no formal statement, but it is to be hoped that the assurance required will be provided, as much in the interests of managements as in the interests of all policyholders who may have taken out policies in the hope of bonus rates suffering no reduction.

"A Beveridge plan for India" is a phrase that compels attention from the worst disbelievers in Britain's good intentions towards India. It is the tangible result of the B.B.C's noble attempt to make up for Mr. Churchill's refusal to apply the Atlantic Charter to this country. The B.B.C. has initiated discussions into the question of the four freedoms for India; and freedom from want was only discussed between Sir William Beveridge and Sir Atul Chatterjee with Mr. Wickham Steed in the Chair. The gist of the talk was cabled out to the press in India; and close on its heels comes what is presumably the full text of it. Those who expected to find in the latter something more of importance than in the earlier news report must be left to take the disappointment as well as they can. But those, who are aware that not more can be said of a Beveridge Plan for India than of snakes in Iceland, would rather look for the approach to the question of freedom from want which Sir Atul and Sir William adopted. Mr. Steed's interlocutory guidance seems to have had no special value, since in the discussions it seems to have been Sir Atul's job to cite the special features of the conditions in India and Sir William's to stress the inapplicability of the principles of his scheme to such conditions. If social insurance were the only way of securing freedom from want, then, on Sir William's showing, Mr. Churchill was not unreasonable in denying it to India.

* * * * *

But the Beveridge plan is not apparently inapplicable to the whole of India and social insurance is not the only way of securing freedom from want. The talk would have been more profitable, if these two points had been adopted as the starting point, instead of the assumption that "after this war India will attain full political freedom and be managing her own affairs". For Sir William, "it is easy to make that assumption", for no other reason than that "my father was saying that sort of thing in India more than 50 years ago". The wag would remark that generations of Beveridges would continue saying "that sort of thing". And, there is nothing in the subsequent development of the discussion to bring out the importance of this assumption. India's poverty is one of the imponderables of our national life as it is easy to-day; and it would be an immense advantage in our efforts to overcome it, if it is widely recognised that a truly national Government has better chances of success than a foreign one. Given such a national Government, there is use for expert advice such as Sir William Beveridge can give, either as the author of the Beveridge Plan for Britain or as an economist of high standing. Indians would read the talk with the great care and consideration if Sir William had proceeded, on the assumption of India's freedom to manage her own affairs to indicate how India could attain the state in which a Beveridge Plan could be inaugurated with reasonable hopes of success. Sir Atul Chatterjee apparently did not feel impelled to draw out Sir William on these points. The talk thus reduces itself to a well-rehearsed, but poor, play with little or nothing in it to impress the audience. True, the problem in India is not one of distribution of the national income either among the various individuals and classes or as between the present and the future, but one of increasing productivity, particularly in agriculture. But that is too much of a commonplace to call for the fanfare of the B.B.C.

* * * *

But it is well, on the whole, that people in India are set thinking on the problem of social security even in the admittedly penurious conditions of the present. After all, it can hardly be said that social security, is applicable only to certain standards of living. One's ideas of one's needs and deserts are not formed by statistical comparisons of per capita income in the various countries of the world, but by reference to what one has been used to and what one sees around one'self in one's own restricted environment. The average Indian might well wish that he could be more sure of the food which he is normally able to get, even though the Nutrition Committee of the League of Nations may not consider it adequate for any human being. There can be security even for such food and for such living; particularly as in recent times, the insecurity of it has been borne in on us with such poignancy. Industrial workers are admittedly in need of security through social insurance. It is only about the agriculturists that some doubt is entertained. But, consider for a moment the two cases. Compare the position of the average cultivator with that of the average industrial worker during a cyclical trade depression. The latter is thrown out of employment. But the unemployed are able, by virtue of their numbers and their concentration in an urban area, to make their grievances heard. They are able even in a country like India to kick up a row and secure some redress. But the woes of the agriculturist during a depression are far greater, in that he has to suffer more, in silence and with little or no chances of relief. The forces that cause industrial unemployment are also the forces that depress prices of agricultural produce and leave the famished agriculturist to face dire want. That the agriculturist is better placed than the industrial worker is a pure myth, which has been sustained

only by the belief that the majority of the agriculturist classes are small scale owners of land, that agricultural production is to some extent for own consumption and that the domestic budget of the cultivators is to a large extent proof against the storms that sweep over the money economy of the wide outside world. But all these assumptions, even if they were true at some time in the past, are not true to-day. The mass of cultivators is landless. Agricultural workers are paid in kind, if at all, only to cover their requirements for a short period. And those agriculturists, who are in possession of land often find their frugal living endangered seriously by changes over which they have no control.

* * * * *

It must be remembered, too, that social security as it is conceived and provided for in the Beveridge Plan, does not refer solely to the consequences of breaks in employment. As Sir William has pointed out in his talks under comment, sickness is the foremost of the evils it tries to combat. No one can say that sickness has a partiality for industrial or agricultural workers. What is meant by social security is freedom from harrowing anxiety about contingencies for which no individual by himself can make adequate provision. Sickness, early death, old age, unemployment are evils which every one is heir to. They are contingencies for which no one can make provision except by starving himself in the present; and even such a course may not suffice. Contributions from all who are running the same risks will, doubtless, enable adequate relief to those who are actually struck by an unkind fate.

* * * *

It is in this view that social insurance becomes identical with social security. Insurance is almost the only claim of individualist society to being civilised, that is, if the mark of a civilised society is its ability to protect its members from the consequences of capricious fate. For my part, I do consider that no society can claim to be civilised, if it does not afford protection from the consequences of misfortunes which admit of no question of whether they are deserved or otherwise. Take the case of the wife and children of an industrious, thrifty young man in a job with a good salary cut off in his prime. Surely to leave the widow and the orphaned children in penury would be a blot on any community. Equal liability to early deaths—pace astrologers—together with profit margins for shareholders have made life insurance possible. It is not in life that insurance made its beginning; and we have not seen the limits to its extension. But insurance is the one means open to an individualistic society to afford to the individual the security which is so necessary for civilised existence. Since social security is an aim which is not quite in consonance with individualism, it has to be treated as identical with social insurance.

* * * * *

The question to consider in the case of India is whether she, too, should place the same reliance on insurance in order to attain social security, and how, if she has no choice in the matter, she can bring about the conditions in which schemes of social insurance can be assured of smooth working. I suppose, it will be some time before India can usefully consider the comparative merits of rival forms of social organisation. As we jolt along on the road of our economic, progress with our divided allegiance to socialism and individualism, we shall be obliged to offer varying degrees of social security to the various classes of our population.

* * * *

To neglect the agrcultural classes in schemes of social security may seem to be well grounded on administrative and other reasons. But the U.S.A. has shown that the interests of the agricultural classes cannot be neglected for long and that in a democratic Government such neglect will lead inevitably to the concentration of the farm vote and the introduction of measures of agricultural relief which it will not be easy to fit into the framework of a national economic policy. The danger of a similar neglect of agricultural interests is in India not less, but more. Already, with a system of Government which is far from democratic, industrial workers in urban areas have acquired an influence on public policy out of all proportion to their numbers or even to the place of large scale industry in the national economy. The urban workers have come out of the food muddle wholly unscathed, while the agriculturists who produce the food suffered heavily. Even if India should fail to secure the pace and scale of industrialisation which is really needed, industrial labour will have its needs satisfied, while the agriculturists will be left defenceless against social insecurity.

There is thus need to correct the misapprehension that the agriculturist has a natural provision for social security or that it is not possible to ensure such security for him by public policy. No one can deny that the most imperative need is to increase productivity and to secure a very considerable expansion of the national income. But social security, in so far as it is attainable by social insurance, is independent, at least to some extent, of the

size of the national or individual income. Sir William Beveridge has brought out this point with great force in his answer to the question, which he is often asked, whether Britain can afford the Beveridge plan. Sir William's reply is:

> That is a question with a catch in it, like the schoolboy question 'Have you left off beating your mother'? It assumes something that is not true; it assumes that wise distribution of your income costs anything. Now to my mind, it doesn't cost anything to distribute your income so that you spend it upon the more urgent things befroe you spend any of it on the less urgent things. That is merely wise spending. When people ask, can Britain afford the Beveridge Scheme, it's like asking if a housewife can afford to buy bread for her family before she buys a radio. Of course she can and should. There's a real question—and the real question to ask is this: if the housewife does spend money on bread first, will she have enough money to buy enough bread? That's a question of the standard of living. Now, the answer to that question for England before the war, and I'm sure it's going to be the same after the war, is that we have far more than enough to buy all the bread that is necessary, and have some cake as well.

Sir William, of course, adds, "I am not sure that it is so in India". But if we assume that the postwar period will witness the twofold improvement of a decline in numbers and an increase in productivity, then we may arrive at a stage when by cutting out cake altogether and rationing bread judiciously, we may, so to say, put the catch in the question, whether India can afford a Beveridge Plan, of a sort though.

* * * * *

But Sir Atul Chatterjee is resigned to the exclusion of the agriculturists from social insurance; and even in the case of the industrial workers, its scope is to be restricted. even for purposes of discussion, to sickness. But sickness insurance offers no less knotty problems; costs apart, the absence of statistics is thought to be a great impediment. And if you bring in the question of costs of a statistical system you will begin to feel dizzy like a cat chasing its tail. The fact is, there is no need to feel so helpless. The war period will have done not a little to break these vicious circles. We shall have had an appreciable decline in numbers; and if we try to consolidate this accidental gain by a drive for birth control, there will be less reason for Mr. Amery's taunt about numbers. The war will also have done something to increase the total stock of technical ability in the country. As for actual food production, I consider it a great advantage that the spectre of a cataclysmic fall in food prices immediately after the signing of peace is no longer held up before the Indian agriculturist. On the other hand, the needs of the devastated areas and the liberated countries are now expected to keep world demand for foodgrains at an even higher level than during the war. In the case of India, far from

TRUMAN COMMITTEE ON TO POST-WAR PLANNING

(BY CABLE)
SPECIAL FOR "INDIAN FINANCE"

Mr. Churchill, Mr. Roosevelt and a host of other leaders of the United Nations may reiterate their warnings that the war in Europe is likely to continue for many months. But neither official Washington nor financial circles in New York are impressed by such warnings. Congressmen privately and Wall Street publicly think that there is a good chance of the war ending in the near future; and both are taking steps to discount such an eventuality.

The latest evidence of Congressional pre occupation with post-war problems, to the virtual exclusion of the current conduct of hostilities, was the decision of the Senate Committee, headed by Mr. Harry Truman to digress from the Lend-Lease enquiry, a subject to which the past semester was devoted, and initiate a survey into the planning of the domestic economy in the post-war period.

The Truman Committee's study parallels similar investigations by approximately two hundred separate business and industrial organizations. All such attempts at long-range planning, however, have to reckon with two intangibles: first, what will be the peace terms; secondly, what kind of administration will there be at Washington. The first question is obviously still unanswerable. The second can be partially solved to the satisfaction of businessmen by the belief that the New Deal as such is dead. Mr. Roosevelt may be re-elected a year hence for a Fourth Term; but it is almost certain that the House of Representatives will have a Republican majority and the Senate too may be Republican. With a hostile Congress, even Mr. Roosevelt could do little to promote unorthodox New Deal economic theories. Although Congress almost ignores today's domestic issues in concentrating on post-war plans, the general conviction in Wall Street that the end of the war is imminent is quite apparent. It will be recalled that in August 1939 on the eve of the outbreak of war in Europe, the stock market broke sharply. As soon as war was actually underway the markets advanced briskly, discounting the expected increase in business and larger corporate earnings.

Now, rightly, or wrongly, Wall Street expects early peace. Owing to that belief, and accompanied by the wildest rumours, the stock markets declined irregularly in the past month, with steel shares and other so-called armanent stocks weakest, while stocks of companies that might be expected to benefit by the resumption of peacetime activities are either relatively steady, or positively strong. Total estimated value of all shares listed on the New York Stock Exchange has dropped by a milliard and a half dollars since mid-October. In other words, stock markets are again attempting to discount what the mass of United States investors think is a distinct possibility, the collapse of Germany before Christmas.

Businessmen and Government economists are both planning to the same end, obviating tremendous unemployment, the kind that followed World War I, and demobilization of millions of troops. They are planning a Utopia, where unemployment for employables will be non-existent. Both groups realise that a perfect solution is impossible; yet both know that the chaos of a quarter-century ago is also unthinkable.

The problem may be worked out but so far there is a large economic question mark overhanging both Washington and New York.

Calcutta Branch - - - - - 15, CLIVE STREET

IN IMITATION OF RUSSIA

Our London correspondent cables:

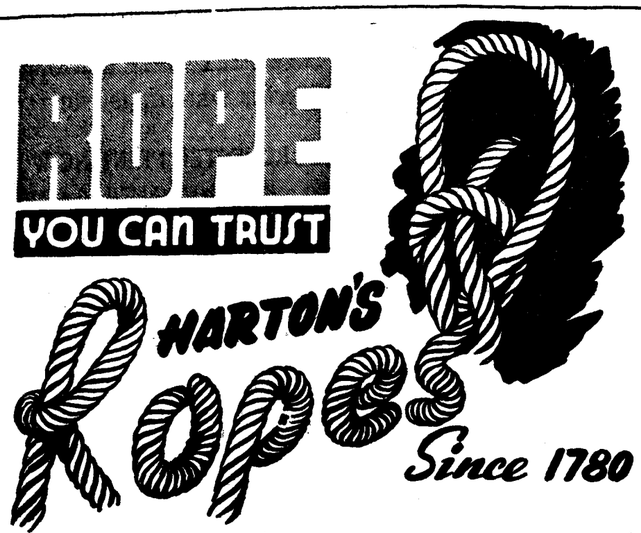
The future of the United Kingdom Commercial Corporation in the postwar period has disturbed deeply trading circles in Great Britain. Some of them are painfully impressed with the resemblance between the U.K.C.C. and "Arcos" the famous trading organisation of Soviet Russia. They are not, of course, prepared to deny the important part played by the U.K.C.C. in the Government's war effort.

They appreciate particularly the way the U.K.C.C. put up the price of Portugese tungsten from £300 per ton to £6000 and prevented the supply from falling into German hands. Similarly, their scale of operations in India and the Middle East for which they were able to draw upon the British Treasury unlimited amounts admittedly facilitated British aid to Russia. But British merchants are apprehensive that the Government may be tempted by the immense advantages afforded by the U.K.C.C. to continue the Corporation during the difficult times of the postwar period.

Reflecting these misgivings, the Glasgow Chamber of Commerce invited the two managing directors of the Corporation, Sir Frank Nixon, Mr. L. C. Paton and a third Director, Mr. Angus Campbell to address them in the past week. All the three speakers stressed the fact that the U.K.C.C. is conducted on business lines as a limited liability Corporation and never failed to utilise the channels of private trade, where these were adequate. However, Mr. Angus Campbell gave them a hint; "I want businessmen to consider carefully their views about the continuance of the U.K.C.C. in the postwar period. It is essential that you express your views to the Board of Trade, and not wait until the Board of Trade tells you what it proposes to do".

This tip from our insider is interpreted, rightly or wrongly, to mean that the Board of Trade is seriously thinking of prolonging the life of the U.K.C.C. in the postwar period. In any case, various Chambers of Commerce are expected to get busy. It is considered that the Board of Trade may be influenced by the fact that even if the U.K.C.C. should be liquidated, at the end of the war, British merchants would still be excluded from most of the important trade routes.

In addition to the U.K.C.C. there are State Buying Commissions in dozens of countries; and as Britain's postwar imports must be rigidly controlled, these Commissions—possibly consolidated into branches of the U.K.C.C. must continue to function. Similarly, exports too, must inevitably be controlled in the postwar years. British manufacturers are fully conscious of this, even if British merchants are not. In short, capitalists in Britain may be forced by circumstances beyond their control to perfect a "State Trading Organ" on much the same lines as the one which Russia pioneered twenty years ago.



(Continued from page 947)

being asked to be prepared for the import of cheap Burma rice or other disturbers of economic peace, she is now exhorted to produce some surplus of foodstuffs for export to foreign countries. In such conditions, one may expect, on the strength of the reconnoitring already done for the grow-more-food campaign, that Indian agriculture will be enabled to increase the productivity of land and its total output. Industry, too rendered more self-sufficient by war time developments, will be in a better position to meet internal needs.

* * * * * *

That is, I believe, an infinitely more cheerful background of economic conditions than we could have dared hope for a few years ago. It should suffice at any rate to take the masses out of their inert fatalism and the leaders and the Government out of their established habit of shaking their heads whenever any scheme of popular amelioration is broached. It is time that people realised that economic progress is meaningless without social security and that only when the two are taken up together will the average man be able to enthuse over the targets of economic plans and put forth his best for reaching them. If the Russian plans were such impressive successes, in spite of all the hardships that they involved it is because social security as such was inherent in collectivist planning. A country like India, which will be at best a pale pink in social ideology, cannot achieve any notable progress in economic planning unless plans for social security are given equal importance with plans for increasing output.

(From Our Correspondent)

New Delhi, November 15.

To-day is the second day of the famine debate which has been a very dull affair so far. Most of those who participated in the debate seemed to be discussing on academic economic problem and not speaking on an urgent, terrible crisis that is daily killing thousands of their countrymen. The Food Member's speech was peculiarly colourless and unenlightening, for apart from vague statements that he would "never be satisfied as long as hunger and distress exist", he refused to give any definite undertaking.

The country does not know how far the Indian Government have succeeded in persuading the British Ministry of War Transport to release adequate shipping to bring food for starving Bengal. While all parties seem to be agreed on the immediate necessity for an enquiry, there are still differences as to the form it should take.

* * * *

The Muslim League President is making an attempt to settle the quarrels between the surplus and the deficit provinces and frame a common and unified policy for the four Muslim Provinces in the first instance and then seek its extension to the rest of the country. Mr. Jinnah who has summoned the premiers of Punjab. Sind. Bengal and N.W.F.P. to Delhi, is now busy discussing the food situation with them. The League Council resolution on the famine crisis however fails to make any constructive suggestion. It says nothing apart from asking the Government of India to take more vigorous measures and appealing to the people of Bengal to cooperate more fully with the Ministry There is general resentment at the slow rate at which the promised food shipments seem to be arriving. No food ship has arrived during the last five days and it is felt that at this rate the imported food will hardly be able to meet Bengal's needs. As regards imports from surplus areas in India, the Government of India claim that supplies continue to be received to the "maximum feasible extent". Whereas during the whole of 1942, Bengal received only about 90,000 tons of foodgrains during the four months from April to July this year, the province had received over 320,000 tons.

* * * *

There was an interesting debate on the Government's currency policy in the Assembly last week. Though the Finance Member still fights shy of admitting the terrible sacrifices that the Government's method of financing the war has imposed on India, he at least made the belated admission that "we have reached a stage at which, in order to maintain war effort, it is necessary to cater for civilian requirements; otherwise, civilian morale would undoubtedly suffer." The Finance Member however reiterated his faith in remedies which have so far proved quite ineffective. His promise to increase production of common consumers goods was rather vague, while he still pinned his faith in taxation and the artificial limitation of prices. It is generally felt that immediate abandonment of the policy of accumulating sterling assets and large-scale expenses of industry and agriculture are needed if the national economy is to be saved from utter ruination. An idea as to the extent this country has suffered is given by Mr. Jamnadas Mehta's estimate of India's war sacrifices at Rs. 20,000 crores.

* * * *

It was officially revealed to-day that India is not bearing any part of the cost of the South-East Asia Command set up here under Lord Louis Mountbatten. It was stated that the cost of all troops raised in this country for operations abroad was wholly borne by the British Government as also the expenditure incurred when they were sent abroad. It was also stated that the cost of building the new road between Assam and China is also being met by the British Exchequer.

* * * *

It is learnt that plans are already under way for the construction of locomotives in India. The Kancharapara workshops of the Bengal and Assam Railway is being converted for the purpose while the necessity of a second plant at another site is being investigated. It is stated that the plans depend on the import of certain special plants. The British Government has been requested to arrange for the supply of this plant.

* * * *

It is officially stated that the Government are taking steps to increase the volume of consumer goods available to the civil population. A quantity of steel has already been diverted from war production to the fabrication of simple agricultural implements. The Government are also arranging to increase imports of bicycles, drugs and other consumer goods. The increased supplies thus made available will be controlled in regard to distribution and price. As regards the suggestion to put large quantities of bullion on the market to check inflation, it is stated that aspect of the anti-inflation fight is not being ignored. The Government however refuse to discuss the movements of bullion between India and other countries. It is explained that the securing of precious metals involved internal arrangements which are not wholly within the Government's control. The Government have relaxed the import restrictions on pearls, emeralds and other precious stones to augment the supplies available for sale to the public.

* * * *

It is learnt that India imported machinery to the value of over Rs. 44 crores during the first few years of the war. Electrical machinery including generators come at the top with 7.82 crores. Cotton textile machinery which comes next amounted to Rs. 6.67 crores. Metal working machinery including machine tools of the value of over Rs. 2.32 crores were also received. It is not revealed what percentage of this machinery was imported to replace worn-out plant.

(From Our Correspondent)

Bombay, November 16.

Comparisons between the prices for American and Indian cotton have provoked a reply from Sir C. B. Mehta. The E.I.C.A. is authorised to keep the I.C.C. between Rs. 400 and 550. In the opinion of Sir Chunilal there is no international market for cotton today and parity is to be ignored when cotton is no longer an international commodity. Both the U.S.A. and India depend almost entirely on mill consumption at home, and the U.S.A. still has a loan programme. The Government of India has not promised to buy and store cotton if the latter is not wanted. What it has promised is to help mills to get cotton at the maximum price by requisitioning. The main argument of Sir Chunilal rests on the fact of inflation. The general index for wholesale prices in India has gone up by 116 per cent while it has gone up by 25 per cent in the U.S.A. The approved prices must be fixed in relation to the change in the general price level here not to the U.S. price policy. The cotton grower's view was that the minimum should be Rs. 500 instead of 400 for Jharilla cotton. No mention has been made of the fact that U.S. Middling is different from Jarilla in regard to quality. Sir Chunilal echoes Mr. Niranjan Prasad's plea for the reopening of the forward market in Karachi. There is no need to cite the maintenance of New Orleans in addition to New York as a market, but the major fact, that U.S. price changes have been negligible this year has not been brought into the argument concerning cotton prices. The argument of Sir Chunilal may be modified by reference to the assurances given concerning price stabilisation and the abolition of scarcity. If food grains are cheaper, less should be heard of what is the proper price for Indian cotton.

The Rotary club here listened to Mr. J. R. D. Tata's lecture on the dawn of the air age. He looks for air travel facilities on the same scale as railway and steamer facilities 20 or 30 years hence when the Air age will come. He expects a cruising speed of 400 miles per hour for civil aircraft. The present crushing speed of 200 miles per hour for transport plan or heavy bomber and progress towards the speed of 400 miles per hour might take 20 or 30 years as the average annual increase in speed has been 8 miles in recent years. At present the U.S.A. is three weeks' journey from India and Britain is two weeks' distance while the journey from Bombay to Calcutta takes 40 hours. In the air age distances will be cut and Calcutta will be only three hours' journey from Bombay. Mr. Tata's vision of the future implies that the world will have shrunk to 1/15th of its present size in 1973.

The new Controller of Civil Supplies had the usual conference and Bombay learnt that silks and cameras would be cheaper in the near future largely because of the anti-profiteering ordinance. It seems prices have been fixed by consulation with the trades. The existing stock are to be disposed at cost plus 20 per cent. For new stocks new prices will apply and the profit margin will be that permitted by ordinance. In the case of textile goods the price will be stamped in order to protect the consumer. As regards photographic materials like films there is a promise of lower prices soon. Amateurs rather than film producers stand to benefit because the price control will be applied only to certain items. In the case of goods passing through many hands the profit margin will not be enhnced. The trader's plea has been overruled. Woollen goods are to be cheapened by decree.

The non-martial Gujarati is asked by some to go in for military training. The plea has been misunderstood because Bombay's military traditions rest on the secure foundation of the Maratha empire which passed away in the last century. What Gandhiji wants for Gujarat is not treated as a real or final argument. It is urged that defence is the concern of every race and community in India and Gujarat should not rely in the future on the Punjab. Citizenship covers the duty to take up arms and nonviolence is still a theory. India when she is free may be menaced and a Gujarati correspondent writing to the Editor of a daily questions the opinion that Gujarat is pledged to nonviolence because of Gandhiji's influence, past or present. The correspondent makes the point that experiments in national education under Congress auspices have failed, and the Gujarati latterly is anxious for a University. The last point is perhaps due to the recent report recommending a separate university for Maharashtra.

There is a report that States may try anti-hoarding and anti-profiteering measures. Mr. C. C. Desai's warning came after the Calcutta High Court acting independently enhanced the sentences on convicted shopkeepers. The declaration of war on the profiteer was followed by an assurance that some manufacturers would stamp retail prices on their goods. In the case of soaps etc., retail prices are announced by the factories and there is a certain amount of protection. The practice may be extended with advantage. How Indian States will deal with the menace of 'Marche Noir' has not been indicated but Mr. M. L. Dahanker appears to have suggested that wholesale and retail prices of certain articles be fixed in consultation with manufacturers and that prices be revised once in six months. Rationing of one or all goods is clearly out of the question today and price control when it is applied must be in line with manufacturers' requirements.

The rate of Rs. 5 per dollar fixed for book prices does not seem to find general acceptance so far. The official class may regard books as unimportant but the imports are duty free and the publisher's discount to the trade apepars enough ot the consumer who is surprised by the 'authorised' exchange of Re. 1 per shilling and Rs. 5 per dollar, the latter based perhaps on the cross-rate. The announcement dealing with books and papers is clearly meant to stabilise profiteering prices put up because of the presence of so many moneyed foreigners in India today.

The Army is producing a part of its vegetables today. Its agricultural activities are extending. A recent press note gives details of what is done to supplement the soldiers' horticulture. In three districts vegetable growing is to extend and any surplus available is to be sent to the markets serving civilians. The Bombay scheme is to help growers to fight pests, put knowledge at their disposal and offer guaranteed prices at the military depots. The plan followed a rise in prices, and in a year about Rs. 7 lakhs worth of vegetables were obtained by an outlay of Rs. 10,511 only. So the plan is being extended and the Bombay scheme is to be shown as an example to all Provinces. The area under vegetables cultivated by registered growers in Nasik, Ahmednagar and Poona is to increase from 4,000 to 12,000 acres and the Military are expected to draw up plans for seasons and zones.

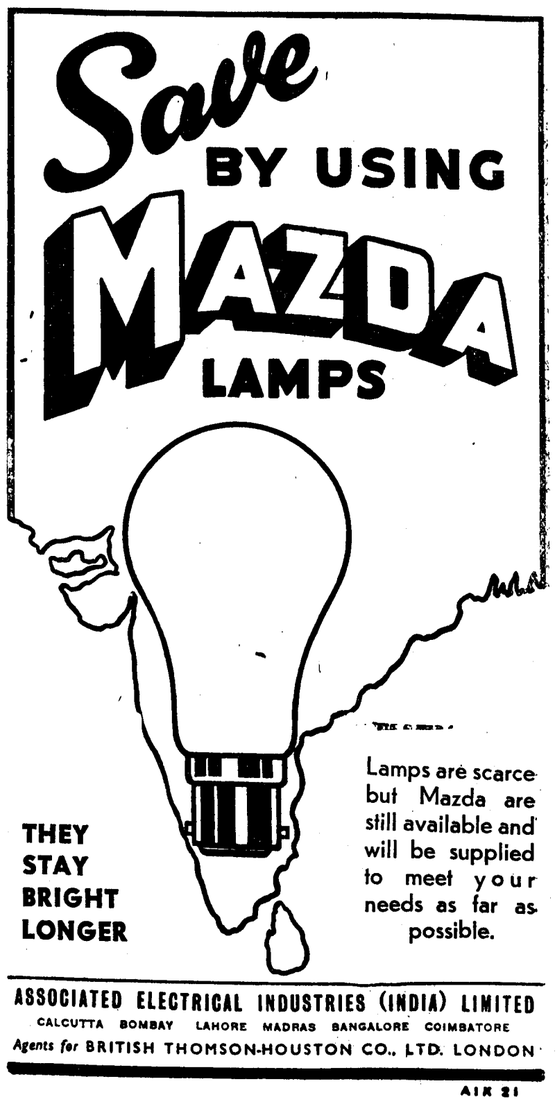
(From Our Correspondent)

Madras, Nov. 15.



War has created numerous pressing problems for our big cities and the responsibility of acting quickly and efficiently in the interests of citizens had fallen on the Mayors. It was a trial for Mr. Tadulinga Mudaliar to manage the affairs of the Madras City during a period of exceptional crisis. Not the least important of the problems which faced him was the recent floods in the city and elsewhere. Mr. Mudaliar, who is to retire shortly, has throughout his term of office worked incessantly to alleviate the misery of the people seriously affected by prices, scarcity, floods etc. He has recently emphasised the need for a plan for clearing the 200 slums in Madras Area. The worries of the city are not likely to decrease in the near future as the war clouds gather fast and it is hoped that the new Mayor, Mr. Niyamatulla, would, like his predecessor, spare no efforts in attending to the needs of the poor and the unfortunate. The city looks to him to take up the question of an Improvement Trust and lay the foundations of a beautiful, healthy and prosperous metropolis.

It appears the Madras Government is losing faith in land colonisation schemes as part of the Grow More Drive. In a Press Note they state that there are 17 colonisation schemes now in progress and that the lesson learnt from their working is that these schemes are no good for producing food grains quickly. While the food crisis in the country calls for a quick drive, agriculture as an industry in this country cannot react to the urgencies of a Government which has remained indifferent over decades. The public are not aware as to the reasons why the schemes should not be a success in Madras while they are progressing satisfactorily in the Punjab. If more facilities are to be given to induce intensive cultivation in the colonised areas the Government would do well to do so in the interests of landless poor, and for bringing greater areas into cultivation. The Press Note states that no more land colonisation schemes would be put through but lands suitable for such schemes can be cultivated with food crops till the end of Fasli, 1356, the cultivation being free of assessment but subject to water cess if Government water is utilised. It is hoped that the Government would at least keep the existing schemes going without abolishing them one by one.

The Government order prohibiting the export of groundnut oil from Madras Province except under permit issued by the Commissioner of Civil Supplies has come in for criticism. The Kurnool Groundnut Oil Merchants' Association have represented that normally 90% of the groundnut oil manufactured in the Presidency was exported to Northern India and that the Government ban on exports has resulted in closing down of oil mills in Kurnool throwing nearly 5,000 workers out of employment. The groundnut seeds of the Ceded Districts which found a profitable market in the oil mills are now threatened with severe loss. It is hoped that Government would do their best to accede to the demands of the oil merchants and reduce the hardship, loss and inconvenience caused to the different interests in famine-stricken Ceded Districts.

The food situation in Orissa is causing great anxiety. Mr. K. Santhanam, who recently toured the affected areas in Bengal and Orissa, laid the blame on the Government of India for bungling and the inefficient way in which the food crisis had been tackled. According to him the suffering in Orissa is acute and rationing must be introduced both in the urban and rural areas so that equitable distribution of foodgrains could be ensured.

Hyderabad is developing all the necessary adjuncts of a full-fledged modern State. The latest budget presented by Mr. Ghulam Mohammad indicated that the State is being prepared for the coming reforms and the financial structure of the Government has been remodelled accordingly. If the technique of managing Government finances is to prove a success a system of treasury bills would be indispenable. To draw surplus funds from the public when Government needs money and to release funds when the Government has surplus balances is an essential feature of public finance in all modern Governments and treasury bills serve as an excellent instrument for the purpose. The success of treasury bills in British India has now inspired Hyderabad to adopt a similar scheme in the interests of Hyderabad finance. H. E. H. the Nizam has approved of a proposal to introduce a system of Treasury Bills through the agency of the Hyderabad State Bank. It is expected that the system would enable the Government to carry on with minimum cash balance. If the Bills are issued at low interest rates without disturbing the money market they would help not only the Finance Member of the State but also the numerous traders and merchants who require reasonal finance for marketing and trading purposes. They can also serve as an instrument for anti-inflationary drive.

Resume of Commodity Markets

THE important features of the week are the sharp decline in prices for cotton, the irregular tone of the bullion market and the sudden decline in prices for jute manufactures. The piecegoods market has been uninteresting while the raw jute has been quietly steady.

* * * *

The easier tone of the jute manufactures market should have resulted in a firming up in prices for jute. For, the decline in prices for jute manufactures has been due to the hopes of an increase in production by mills with the larger coal supplies and the willingness of mills to enter into forward contracts for certain lines. It is pointed out, however, that the bearish factor for the jute manufactures market is not necessarily a bullish factor for the jute market. In the absence of any definite assurance regarding the level of raisings and the willingness of mills to buy jute on a large scale there cannot any substantial improvement in prices. While the lower levels have been fixed by the unwillingness of the ryot to part with his holding the improvement in prices has to come about only with liberal purchasing by consumers and a definite improvement in the outlook. There are reports that all the mills will be able to work next week and that the I.J.M.A. is even considering the increase in the number of working hours as from the beginning of the New Year. It is too early yet to believe reports of this sort as only two weeks back the outlook appeared so gloomy and fears were expressed regarding the ability of the ryot to market his supplies. Arrivals at the moment equal consumption. There would be need for buying on a larger scale only when the increase in the production exceeds arrivals of jute in the Bengal area. Till then one cannot possibly expect a sustained rise in prices.

* * * * *

When business in cotton futures was resumed two weeks back the opening was rather brisk and opinion was expressed that fluctuations would be confined to narrow limits and that the hedging facilities afforded would prove to be for the benefit of everyone concerned. After the initial rise in prices however a downward trend has been in evidence in the last few days and the general tendency is predominantly bearish. There is no special reason for the sharp decline in prices as it was generally known that there would be a late movement of the crop this season and that there woud be more supplies. It is now said that the Government would not interfere effectively if there was a decline in prices to below Rs. 400, an assumption completely unwarranted. The Government of India with the help of the Textile Control Board, will certainly extend the necessary support to the market if any undue decline in prices takes place. Hitherto Rs. 447 for Jharilla January was considered as the resistance level. As this level has been broken through sentiment has become bearish.

* * * * *

While a slight decline in prices for gold and silver is enough to upset the cotton market the bullion market itself has not been affected by the reports of the possibility of heavier selling by the Government of India. At first it was feared that heavier selling by the Reserve Bank might result in substantial decline in prices but when it was known that the intention was to absorb surplus purchasing power to prevent hoarding it was pointed out that the object of the Government would be achieved by selling at as high an average price as could be obtained. It is also interesting to note that selling of gold only is mentioned. The silver market has not, therefore, been affected. With the large demand for the precious metals selling at fixed prices might not have any appreciable effect on the market but continual selling on tap should ultimately result in lower prices. If developments in the war situation prove to be favourable the downward movement would be accelerated. In any case, it can be said that in future there will not be any appreciable rise in prices.

* * * *

At the auctions of tea held for consumption in India an irregular tendency was noticeable. Medium grades were steady but common teas were easier and stalkier types were difficult of sale. Green teas were in strong demand.

* * * *

As from December 1, 1943, all cloth and yarn is to be marked with prices. All holders of Tex-Marks have been addressed to get the prices fixed by the Chairman of the Textile Control Board. If there is any manufacturer or possessor who has not received such a notification he should get in touch with the member for the area of the Textile Control Board representing the industry or the Chairman of the Board at once with details of the process he uses and samples of his finished products.

The announcement of the new ceiling prices is keenly awaited by the market. As already indicated by the Chairman of the Textile Control Board it is generally expected that the new ceiling prices would be considerably lower but there is a tendency to await the actual announcement.

Special To "Indian Finance"

Calcutta, Nov. 18, 1943.

THE Coal position in so far as it affects Mills, has shown a marked improvement in the last week. Not only have supplies been coming forward in much greater quantity, but the quality of the coal shows a gratifying improvement over some of the incombustible rubbish which was previously being foisted on the industry. As a consequence there have been fewer complaints of involuntary stoppages due to inability to maintain the necessary head of steam. While the position at the moment appears much more promising, reports from the Coal districts speak of poor raisings on account of lack of labour, so that it is perhaps premature to gamble on the mills being altogether out of the wood yet. Real confidence can scarcely be expected till a substantial reserve of coal has again been established.

Meanwhile the improvement in the coal supplies has had its repercussions in the Fabrics market. Rumours began to circulate in the Bazar that Mills would shortly start working 60 hours per week against the present schedule of 54 hours. As it is improbable that the existing arrangement, which extends up to the end of the year, will be interfered with, and as there has, so far as is known, been no official consideration given to the working schedule beyond that, it is to be presumed that the rumours were merely set circulating to assist a Bear movement in the Bazar. They certainly had a weakening effect on prices for some days and eleven porter hessians were marked down from the region of maximum rates to Rs. 27 temporarily. There was also some anxiety shown to release holdings of Heavy Goods and ready "B" Twills were marked down from Rs. 67-12 to Rs. 66-4. The weakness was not however of long duration and the market soon recovered a good deal of its lost confidence and Heavy Goods are once more back at maximum rates though hessians still stand at some discount. Another rumour current was that the maximum rate for eleven porter hessian would be reduced from Rs. 28-4 to Rs. 26-8, and while it is within the power of the Jute Mills Committee to do so, either of their own volition or at the instance of higher authority, there has been no suggestion that this step is in contemplation. While the fact of manufactured goods standing at maximum rates when the price of raw material has dropped considerably below the ceilings fixed at the same time, might suggest that a large margin of manufacturing profit existed, against this must be set the great increase in working costs which has resulted from the famine prices for foodstuffs with which the labour is provided, as also the reduced production caused by coal shortage and intermittent working. It is doubtful therefore if mills have benefitted at all from the drop in the prices of raw material, though if Government control prices for foodstuffs are realised and coal supplies permit of full schedule working hours, the position in the future might be different. What may have given rise to the 60 hours rumour is a misunderstanding of the position of mills who have lost hours to make up. Mills which have lost time under the present working schedule, may work up to 66 hours if necessary to make up the lost time. Coal-consuming mills may also work during the "off" week both this month and next, to make up lost time. But the suggestion that mills drawing power from the Supply Co. which have been able to run up to the full schedule so far, will be permitted to work during the "off" weeks, is not correct. But if coal supplies continue on the current level, there is every chance that many, if not all of the coal consuming mills may catch up on their schedule by the end of the year. That they hope to do so is perhaps indicated by a greater interest shown in raw jute purchases during the past few days.

The American Stock and consumption figures for October, just published, are again obscure. We remarked last month on the improbability of the figure quoted for "afloat" stocks, 10 lakhs of yards of hessian, being really indicative of the true position. The figure quoted for "afloat" in October is again 10 lakhs yards. Now whatever was shipped during September was almost certainly still afloat in October, so the assumption would be that nothing whatever had been shipped in October, which as Euclid might say, is ridiculous. Further, "spot" stocks had increased in October by 130 lakhs yards, while in August only 30 lakhs yards were quoted as "afloat", again difficult to reconcile. We therefore merely quote the figures for what they may be worth without pretending to interpret them. Consumption, 250 lakhs yards against 270 lakhs last month and 300 lakhs in October 1942. Spot stocks, 740 lakhs yards against 610 lakhs last month and 370 lakhs in October 1942. Afloat stocks, 10 lakhs yards against the same quantity last month and 370 lakhs in October 1942.

It is interesting to note that, at the conference of the United Nations' Relief and Rehabilitation Administration in Atlantic City, it was stated that India's contribution, estimated at a value of 35 million dollars, would consist primarily of cotton, cotton textile goods and burlap which will be needed for wrapping purposes in the extensive relief plans. This is an aspect of the future jute situation to which we have several times called attention in these columns, and with the nearer approach of the termination of hostilities in Europe which we all hope for, the provision of these quantities of jute goods will require forethought and preparation. For when hostilities end, the wrappers and containers will be wanted urgently by the relief organisations, and in the already "pinched" position of the jute and fabrics markets, it is difficult to see how sufficient supplies are to be forthcoming quickly. There are admittedly considerable stocks of jute goods held in Mill godowns which could, if necessary, be requisitioned. But much more than that would be required, and the opposing claims of "grow more food" and "grow more jute" will have to be considered in relation to the next crop. Approximate estimates of the probable U.N.R.R.A. requirements of containers would be of great value in arriving at these decisions and it is to be hoped that such will be asked for.

Comparatively little interest has been shown in Export Jute during the week under review. Some Dundee Daisee was reported at Rs. 69 for Long Group and at Rs. 75-8 for Short Group, while inter-bales business in Lightnings was recorded at Rs. 66. During October Exports of Jute amounted to 71,000 bales as against 1,27,000 bales in 1942 and 1,99,500 bales in 1941—a heavy falling off. Total exports for the season up to date, July to October only amount to 2,61,000 bales against 4,27,000 during the same period last year and 5,42,000 bales in July/October 1941. Mills were taking no active interest in pucca bales either. Dundee Daisee at Rs. 73 and some special Tossa marks at fairly high rates being all that has been reported.

In Loose Jute a much more active and general interest has been shown than for a long time past. European packing, Jat and District, sold at Rs. 15 and Rs. 12 for Middles and Bottoms and there are now no sellers under Rs. 15-4 and Rs. 12-4 and no great quantity at that. Bottoms alone sold up to Rs. 12-4 for January shipment. Supervised Jat has sold at Rs. 14-12 and Rs. 11-12 Mids and Bots with few sellers left at the rates. Supervised Jat Bottoms alone sold at Rs. 12. Indian Jat packing sold at Rs. 14-8 and Rs. 11-8 Mids and Bots with buyers over. Quite a considerable turnover has been recorded in Tossa, Indian District Tossa having sold at Rs. 14-12 and Rs. 11-12 to four annas more in assortment, with Bottoms alone at Rs. 12 to Rs. 12-4. Assam Tossa Bottoms fetched Rs. 11-12 and Jungli Tossa Rs. 14-8 and Rs. 11-8. Balers have been steady buyers of Tossa also, paying up to Rs. 16 and Rs. 13 for good District marks with eight annas more for Jat. Arrivals of jute into Calcutta for the first half of November reflect the lack of buying interest that has prevailed for the past two months. Estimated arrivals only amount to 2,15,000 bales against 3,47,000 bales for the same period last year. Since the beginning of the season arrivals are now behind last year's figures, 23,38,000 bales as against 24,20,000 bales for July-Mid November 1942.

We have remarked above on the factors affecting the fluctuations which have been noticeable in the Fabrics section during the past week. With more sellers in evidence, a larger turnover than usual has been recorded. In Hessians, nine porters were recorded at Rs. 21 and Rs. 21-2 ready with elevens between Rs. 28-4 and Rs. 27-6. Australian Bran bags sold at Rs. 56-12 for Feb./March and April/June delivery. In Heavy Goods, descriptions previously unobtainable at maximum rates came to market at these ceilings, such as Liverpools at Rs. 75 Jan./March, Cornsacks at Rs. 67-12 for the same delivery, Cubans at Rs. 81 Novr., "E" bags at Rs. 53-8 April/June, while "B" Twills sold as low as Rs. 65-4 Jan./March. The close is again quiet with 11 porters at Rs. 27-10 Nov./March and "B" Twills at Rs. 66-8 Jan./March.

JUTE

Calcutta, Nov. 18.

QUIET conditions have continued to prevail in the raw jute market. The hopes of larger mill production, with the receipt of adequate coal supplies, have not resulted in any large increase in buying. Mills are reported to be buyers of jute at slightly lower levels and there is no hurry on their part to enter into fresh commitments. Existing stocks of jute are enough to carry on production for sometime. There is naturally a tendency to await further developments. It is feared that even if the transport position improves there may not be enough coal for the mills. Sellers, on the other hand, are not very keen to do business and have not offered any discount in rates. Upcountry markets are firm and ryots are not free sellers. The prospects for the jute crop for 1944/45 are not considered to be very bright if there is no real improvement in the food situation. In the absence of any important developments prices are, therefore, expected to be fluctuating around present levels.

In the loose jute section slightly more business has been reported. A larger volume of business would have materialised if sellers were prepared to offer a slight discount in rates. Earlier in the week European Jat Bottoms and Supervised Jat Bottoms were done at Rs. 12-4 and Rs. 11-12 per maund. Indian Jat Tossa Middles and Bottoms were done towards the close at Rs. 14-12 and Rs. 11-12 per maund.

In the pucca bales section also there is no important change in prices to be recorded. Shippers are reported to have bought Dundee Daisee 2/3 at Rs. 69 per bale and Short Group Daisee at Rs. 75 per bale. Mills bought Lightnings at Rs. 66 per bale and Firsts at Rs. 73 per bale.

JUTE MANUFACTURES

Calcutta, Nov. 18.

THE jute manufactures market was inclined to be definitely easier earlier in the week. With the appearance of second-hand sellers quite a substantial decline in prices was recorded. The liquidation by stock holders was due to the reports that mills expected to work longer hours as from the beginning of the New year and that with the continuity of coal supplies no great difficulty would be experienced in regard to the supplies of jute manufactures. Mills also are reported to have been sellers for limited quantities. Only the doubts regarding the ability of mills to effect any appreciable increase in production and some covering resulted in a recovery in prices towards the close. 9 Porters were Rs. 21-4 for all positions after being lower at Rs. 21. 11 Porters were Rs. 27-14 after being lower at Rs. 27-10.

In the heavy goods section also quiet conditions have been noticeable though the decline in prices has not been as pronounced as in the hessian section. Some business was reported in B Twills for November delivery at Rs. 67. Liverpool Twills were Rs. 75 and Cornsacks Rs. 67-12. A small discount is offered for forward positions.

The stock and consumption figures for the United States for the month of October are disappointing. There is a further decline in the consumption for the month from 27 million yards for September to 25 million yards for October. Stocks afloat are again only one million yards. Stocks spot, on the other hand, are higher at 74 million yards against 61 million yards. As stocks afloat in the last four months have been only 30 million yards the decrease in stocks spot of only 9 million yards is not explainable. The total consumption for the four months ending October was as much as 119 million yards. The difference of 80 million yards is difficult to be acounted. The figures are given below:

U.S.A. HESSIAN STOCK AND CONSUMPTION

Excluding Pacific Coast Business

Millions of yards

GOLD

Calcutta, Nov. 18.

RATHER quiet conditions have been noticeable in the Bombay gold market during the past week. The reports that the Reserve Bank of India might come out as a bigger seller have been responsible for the decline in prices in the last two days. Earlier in the week some selling was reported by the Reserve Bank around Rs. 77-8. The close, however, is higher than the lowest levels for the week. There has been a further widening in the discount for forward over ready. After being lower at Rs. 76-4 Gold ready closed at Rs. 76-12. Forward was Rs. 76-5. Owing to the shortage of sovereigns the quotation was actually higher at Rs. 53 against Rs. 52-12 at the end of last week.

In the Calcutta market there is no important change in the quotation to be recorded. Gold ready quoted Rs. 77-2 against Rs. 77-9 at the end of last week. Sovereign were Rs. 53-11 against Rs. 52-12.

SILVER

Calcutta, Nov. 18.

SIMILAR conditions were noticeable in the Silver market also and quotations were marked slightly lower. But the feeling that greater emphasis was being laid on sales of gold led to the assumption that the decline in prices of silver may not be proportionate. Ths has resulted in a late rally in prices and the whole of the lost ground has been regained. Silver ready closed at Rs. 122-12 and forward at Rs. 120-8 against Rs. 122-6 and Rs. 121-4 respectively at the end of last week. It will be seen that there is a further increase in the premium for ready over forward.

In the Calcutta market silver ready quoted Rs. 119-12 against Rs. 119-8 last week.

There has been no change in the conditions in the London market and the quotation for both spot and forward is unchanged at 23½d.

PIECEGOODS

Calcutta, Nov. 18.

A RATHER sharp decline in prices has been recorded in the Bombay raw cotton market during the past week. The easier tone of the bullion and stock markets and the fears that there will be heavier hedging pressure in the near future have been responsible for the sharp decline in prices. It is reported that arrivals in mofussil centres have been on a larger scale. It is also rumoured that Government intervention at the lower levels might not be effective. Bulls have kept out of the market while there has been considerabl speculative activity on the part of bears. Jharilla January closed at Rs. 441-12 against Rs. 456-4, March Rs. 443-4 against Rs. 459-4 and May Rs. 446-12 against Rs. 464-4. It will be noticed that there has been a reduction in the premium for forward positions over January.

COTTON

Calcutta, Nov. 18.

THERE has not been much of activity in the piecegoods market. There is a tendency to await the announcement of new ceiling prices by the Textile Control Board. Business passing has been on a smaller scale. In some centres there is a lull following the Diwali season and no decisive trend may be noticeable before the end of the year. Both dealers and buyers in the local market are inclined to await further developments.

Stock Markets to-day and to-morrow:

BEGG, SUTHERLAND SUGAR GROUP RESULTS

THE sudden weakness of the Calcutta Stock Exchange early this week would seem to call for some explanation. For even with the weakness of the Western centre quite steady conditions were noticeable in the Calcutta market last week and professional operators were as keen as ever. The reduction in the volume of business this week has been due to the absence of any outside interest and the reports that Government might promulgate new ordinances and increase taxation. It should be said that the fears in this regard are to a certain extent exaggerated for it has been clearly pointed out that there will not be any large increase in taxation so far as the Central Government is concerned. Any new measures will be only anti-inflationary in effect and might result in the locking-up of funds with Government, to be refunded at a later stage. It is on these realisations perhaps that there has been a slight recovery in the last two days.

* * *

The recent rise in prices for sugar shares would seem to be fully justified by the results of the Begg Sutherland group of sugar companies for the year ended June, 1943. Even with the difficulties in regard to cane supplies and Government control, the aggregate profit for four companies for the year is as much as Rs. 37,06,293 against only Rs. 11,16,209 for 1941-42. The bulk of the increase in earnings has been taken up by additional provision for taxation but even with the heavier incidence of taxation it has been possible to increase dividends to shareholders. Balrampur Sugar Company, Limited is returning to the dividend list after the lapse of many years, while Champarun is paying a dividend of 30 per cent against 15 per cent, Samastipur Central 10 per cent against 5 per cent and Ryam 20 per cent against 5 per cent.

With the prospect of larger cane supplies and the benefit of higher prices for sugar the prospects for the current year should be considered rather encouraging.

In the group, the results of the *Champarun Sugar Company, Limited* should be considered to be the most satisfactory. The net profit for the year, before providing for taxation and depreciation, is Rs. 20,72,440 against Rs. 6,89,561 for the year 1941-42. The provision for taxation is the substantial sum of Rs. 11,30,000 (Rs. 1,95,850) while the charge on account of depreciation is Rs. 1,50,000 (Rs. 1,37,500). The transfer to General Reserve is Rs. 1 lakh (Rs. 1,37,142). After transferring a further amount of Rs. 50,237 to Renewals and Improvements Reserve the dividend on ordinary shares has been increased to Rs. 3 per share from Re. 1-8 per share on the last occasion. The amount carried forward is very much higher at Rs. 2,42,270 against Rs. 1,39,967 brought in.

At the quotation of around Rs. 44 cum-dividend the yield on the basis of the last dividend should be considered very satisfactory.

Samastipur Central Sugar Company, Limited was very fortunate in respect of its cane supplies and the total quantity of cane crushed in the 1942-43 season was 23,52,259 maunds against 9,85,200 maunds in the previous season and 22,57,572 maunds in 1940-41. The net profit, before providing for taxation and depreciation, is Rs. 3,52,531 against Rs. 1,82,457 for the previous year. The amount set aside for taxation is Rs. 5,80,000 (Rs. 1,18,762) while the charge on account of depreciation is Rs. 40,493 (Rs. 50,000). The Debenture Sinking Fund receives Rs. 20,000 (Rs. 1 lakh) while the transfer to General Reserve is Rs. 48,748 (nil). The amount carried forward is Rs. 67,322 (Rs. 23,932) after paying the dividend of Re. 1 per share against eight annas per share on the former occasion.

* * * *

The net profit of the *Balrampur Sugar Company, Limited* for the same accounting period is Rs. 4,90,412 (Rs. 1,07,464). A larger amount has been placed to depreciation, Rs. 2 lakhs against Rs. 1 lakh. The dividend of eight annas per share (nil) is to be paid. The amount carried forward is Rs. 66,937 against the debit balance of Rs. 83,475 brought in.

* * * *

The net profit of the *Ryam Sugar Company, Limited* for the twelve months ending June, 1943 is Rs. 2,90,910 (Rs. 1,36,727). The provision for taxation is Rs. 1.75 lakhs (Rs. 49,054). The Debenture Sinking Fund receives Rs. 18,750 (Rs. 1,12,500). The dividend has been increased to Rs. 2 per share from eight annas per share.

Having regard to the difficult conditions in the industry the results of the two jute companies in the Barry group should be regarded as satisfactory.

The net profit of the *Gourepore Company, Limited* for the half-year is Rs. 14,12,925 (Rs. 17,44,229). The provision for taxation is Rs. 9.7 lakhs (Rs. 11.50 lakhs). The dividend has been reduced to Rs. 15 per share from Rs. 20 per share. The amount carried forward is Rs. 4,53,443 against Rs. 4,50,018 brought in.

The net profit of the *Nuddea Mills Company, Limited* for the same half-year is Rs. 15,30,829 (Rs. 19,31,383). The amount set aside to depreciation is Rs. 1,75,406 (same) while the provision for taxation is Rs. 10.30 lakhs (Rs. 12.1 lakhs). The ordinary dividend has been reduced to Rs. 2-4 per share from Rs. 3 per share. The amount carried forward is higher at Rs. 1,46,722 against Rs. 1,21,977 brought in.

The inability of the *Nazira Coal Company, Limited* to earn enough profits for paying dividends has naturally resulted in a decline in the market quotation for the shares of the company. Owing to the difficulty in regard to labour and timber supplies raisings have been very much affected. The dividend of 1¼ per cent (2½ per cent) for the half-year ended August, 1943 could only be paid by omitting the provision for depreciation. The net profit for the half-year was only Rs. 9,624 and the dividend amount needed Rs. 9,353.

The accounts of the *Nilgiri Neerugundi Estates Company, Limited* for the year ended June 30, 1943 make very satisfactory showing. There is a big jump in the net profit before providing for taxation and after depreciation. The increase in earnings is due to a bumper crop and the improved prices of coffee. Provision for taxation is unchanged at Rs. 5,000. After setting aside Rs. 50,000 to Debenture Redemption Reserve the dividend of 80 percent on ordinary shares against 15 percent is to be paid.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Nov. 19.

DEFINITELY easier conditions were noticeable on the Calcutta Stock Exchange during the period under review. There was no special reason for the easier tone of the markets. The weakness of the Bombay market and the absence of any large outside interest brought about some selling by professional operators. Business passing has been on a smaller scale. Only in the last two days a slightly better feeling is noticeable. There is a tendency to await further developments.

The week's dull trading is not altogether devoid of features. Among Cotton shares, *New Victoria* were marked higher on reports of a higher dividend for the year ended October, 1943. In the Coal section, *Baraboni* attracted some attention and were done up to Rs. 2-8. In the Engineering section, *Britannia Engineering* had good buyers and were done up to Rs. 25. *Marshalls* also were in good request. There were buyers for selected tea shares at last rates.

The giltedged securities section has been absolutely uninteresting and turnover has been very small. The only feature of interest is the sale of a large parcel of 3 per cent. 1946 bonds at Rs. 102-5. There was some selling of 3½ per cent Paper and the quotation was as low as Rs. 97-2. The quotation at the time of writing is slightly steadier at Rs. 97-3. Other terminable loans were more or less unchanged. There were not many buyers but there was no selling pressure. 3 per cent. 1963/65 were noted at Rs. 98-4, 3½ per cent. 1947/50 at Rs. 103-6, 4 per cent. 1960/70 at Rs. 112-4, 3 per cent. 1953/55 at Rs. 99-13 and 5 per cent. 1945/55 at Rs. 106-2. There is no change in the conditions in the money market and the average discount on treasury bills has remained unchanged at thirteen annas and eight pies per cent per annum.

The interest in Bank shares has not been sustained though there has been no appreciable decline in prices from the highest levels touched recently. There are reports that the Central Bank might issue fresh capital shortly on bonus terms to shareholders. That was the reason why there was a rise in the quotation for the shares to Rs. 83. *Imperial Bank* fully paids were noted at Rs. 1,859. *United Commercial Bank* were lower at Rs. 22-4 premium. *Reserve Bank* were unchanged at Rs. 224-8.

Coal shares have been rather quiet. The recent interest seems to have petered out and closing prices are generally lower on balance. It is now feared that without reports of a definite increase in raisings it would be useless to entertain hopes of a large increase in earnings. Earlier in the week there was some speculative buying of the smaller shares but here too interest has not been sustained. *Bengal* were five points lower at Rs. 523. *Bokaro* and *Ramgur* changed hands around Rs. 31-8. *Bhalgora* were firmer earlier in the week at Rs. 12 but are quiet at the time of writing at Rs. 11-10. *Burrakur* were relatively steadier at Rs. 25-2. *Equitable* were Rs. 44-12, *Hurriladih* Rs. 20-6, *Mundulpoor* Rs. 15-12, *Pench Valley* Rs. 46, *Standard* Rs. 28-8 and *Union* Rs. 39-2. *Talcher* were further higher at Rs. 6-2. *Samla* were dealt in at Rs. 5-1 and *Satpukuria* and *Asansol* at Rs. 3-8.

The Jute section was rather quiet earlier in the week on the announcement of lower dividends by prominent jute companies but was slightly better later on the reports that with larger production mills earnings might not perhaps show a large decline. With the exception of Hukumchand closing quotations are lower in all cases. *Anglo-India* were Rs. 386, *Agarpara* Rs. 24-8, *Bally* Rs. 357-8, *Champdany* Rs. 214, *Kamarhatty* Rs. 548, *India* Rs. 545 and *Naihati* Rs. 277. *National* changed hands at Rs. 27-12, *Nellimarla* at Rs. 24 and *Presidency* at Rs. 6-10. The Bird and Heilgers group of companies has reduced the dividends for the half-year ended September, 1943 in all cases. *Howrah* were steady at Rs. 65 with the maintenance of the dividend for the last half-year at Rs. 1-12 per share.

In the Engineering section, *Indian Iron* were marked lower at Rs. 35-2 earlier in the week but there has been a recovery towards the close to Rs. 35-6. *Steel Corporation* were all the time steady and the quotation at the time of writing is even higher at Rs. 27-7. A level as high as Rs. 27-12 was touched. *Britannia Engineering* had buyers up to Rs. 15. *Arthur Butler* were steady at Rs. 16-10, *British India Electric Construction* at Rs. 16-12 and *Bhartia Electric Steel* at Rs. 16-2. *Marshalls* were in good request and done up to Rs. 4-6. *Kumardhubi Engineering* were Rs. 7-12, *National Iron and Steel* Rs. 13 and *Saran Engineering* Rs. 9-8.

The favourable showing made by the Begg Sutherland group of sugar companies has not had any effect on the market as the increase in the dividends had already been anticipated. *Carew* were firmer at Rs. 27-14 while *Buland* were Rs. 42-4. *Cawnpore* were steady at Rs. 45-8 while *Champarun* were Rs. 44-4 cum-dividend, *Raza* Rs. 43-8, *Samastipur* Rs. 20 and *Sitalpur* Rs. 16-4. *Ramnugger Cane and Sugar* met with good buying and were done up to Rs. 14.

In the Tea section, there is no important change in prices to be recorded. There are some buyers for selected stocks. *Banarhat* were Rs. 860, *Bateli* Rs. 15, *Rydak* Rs. 84, *Sonai River* Rs. 25-4 and *Tezpore* Rs. 16-14.

In the miscellaneous section, *Burma Corporation* were lower at Rs. 3-8. They are now better at Rs. 3-10. *Indian Copper* were Rs. 2-10 and *Karanpura Development* Rs. 16-4. *B. I. Corporation* were firm at Rs. 6-9 while *British Ceylon Corporation* were noted at Rs. 17-3. *Indian Wood Products* were Rs. 32-4, *Balmer Lawrie* Rs. 413, *Dunlop Rubber* Rs. 55 and *Calcutta Trams* Rs. 25-10. After a long time *Publicity Society* were recorded at Rs. 13-2, *Midnapore Zemindary* were sharply higher at Rs. 109 while *Humayan Properties* ordinary were Rs. 13-2. Among Paper shares, *Titaghur Paper* were quiet at Rs. 27. *Shree Gopal Paper* were Rs. 24-8, and *Star Paper* Rs. 22-4. Among Shipping shares, *Fraser & Co.* were Rs. 18-12 and *India General Navigation* Rs. 125.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Nov. 18.

It was in a comparatively bright atmosphere the local market opened on Monday with the leaders once more in the forefront. It would appear that both the operators and investors had with one accord decided that the time had arrived for putting a stop to the downward trend that was allowed to prevail throughout last week. This change of attitude led to more enquiry resulting in higher prices. Both textiles and steels took part in the upward movement. There was considerable turnover in the Miscellaneous section also. The only section that showed signs of weakness was the giltedged. After the heavy selling pressure last week-end the market failed to record much improvement, but remained quietly steady.

Mill shares were again popular after a spell of rather dull conditions. Bombay Dyeing recorded an increase of nearly 20 points to quote around Rs. 1,951. Century were Rs. 936; Kohinoor were Rs. 626 and Svadeshi Rs. 605.

Steel shares also received considerable attention. Tata Steel Deferreds recorded some useful gains and to-day's closing rate was Rs. 1,902-8 and Tata ordinary were Rs. 395. But for profit-taking by weak holders at higher levels, prices would have been even higher.

Among Miscellaneous shares Premier Construction still continues its upward course and at to-day's closing was wanted up to Rs. 213-8. Associated Cement after touching as high as Rs. 224 earlier in the week closed a bit easy at Rs. 219-12. Shivrajpur was a strong feature at Rs. 75-8. Bombay steam were done up to Rs. 680.

(Half-yearly General Meeting on 30th November, 1943 at noon)

Audited accounts for the half-year ended 30th September, 1943:—

The accounts show a profit on Revenue Account of Rs. 7,11,645-9-0. On transfer of this sum to profit and loss account and after reserving Rs. 2,50,000 for Taxation there is a balance at credit of that account of Rs. 6,41,834-10-8, which the directors recommend be dealt with as follows:—

	Rs.	A.	P.
To payment of dividends, free of income-tax:—			
On Preference Shares at the rate of 7 per cent per annum (Rs. 3-8-0 per share) ..	96,677	0	0
On Ordinary Shares at the rate of 15 per cent. per annum (Rs. 7-8-0 per share) ..	3,69,052	8	0
Total ..	4,65,729	8	0

The Company's mills worked 60 hours per week until the middle of June when the working week was reduced to 54 hours. Towards the end of July a serious breach in the railway line from the coalfields, due to flooding, brought about a drastic rationing of fuel and the two stream driven mills were especially affected by irregular working for the rest of the period under review. The position now shows a slight improvement but is still far from normal.

These conditions, together with rising costs and loss on foodstuffs supplied to labour at concession rates, have greatly affected the results for the half-year.

As from 1st November, 1943 the Company's Upper Mill (steam driven) has been requisitioned by Government and it is intended to utilize its loom hours in the two electrically driven mills.

Managing Agents.—Duncan Brothers & Co., Ltd.

Authorised Capital—Rs. 1,00,00,000. *Issued and Subscribed—Rs.* 76,82,900 *in* 27,622, 7 *per cent Cum. Pref. and* 49,207 *Ordinary Shares, both of Rs.* 100 *each, fully paid up.*

*Includes Rs. 35,000 transferred from Reserve Funds.

Audited Accounts of the Company for the year ended 31st *March,* 1943:—

The total maundage carried was 3,97,697 against 5,06,721 for the previous year. China Brick Tea and Building Materials were the main disturbing factors during the year, apart from wool which has now begun to move.

The Net Earnings for the year amounted to Rs. 39,957/- as compared with Rs. 44,532/- for the previous year. The decrease is due to higher Taxation. The amount available for final distribution after adding the amount brought forward from last year of Rs. 11,596/- makes a total of Rs. 51,553/-. The Directors now recommend that this sum should be disposed of as follows:—

	Rs.	A.	P.
Payment of Dividend at the rate of 7½ per cent without any deduction in respect of Income Tax payable by the Company ..	33,750	0	0
Taxation Reserve	6,000	0	0
Carry Forward	11,803	0	0
Total ..	51,553	0	0

HOSHIARPUR-DOAB BRANCH RAILWAYS COMPANY, LIMITED

Audited Accounts of the Company for the year ended 31st *March,* 1943:—

Capital.—The adjustment of Capital Expenditure during the year amounted to reduction of Rs. 431 making total expenditure from the commencement of operations Rs. 66,13,507.

Net Revenue.—The Net Earnings for the year amounted to Rs. 4,56,464 as compared with Rs. 3,47,048 for the previous year. The continued improvement in Earnings is directly attributable to Petrol Rationing and to the greater volume of Military Traffic.

During the year an Interim Dividend at the rate of Rs. 2-4 per share, less Income Tax, was paid. The amount available for final distribution is Rs. 2,32,423. The directors now recommend the payment of a Final Dividend at the rate of Rs. 2-8 per share, less Income Tax, making a total of Rs. 4-12 per share for the year. This final distribution will absorb Rs. 1.62,500 and leave, after payment of the Managing Agent's Commission amounting to Rs. 8,813, a balance of Rs. 61,110 to be carried forward.

Managing Agents.—Messrs. Gillanders Arbuthnot & Co.

Authorised, Issued and Subscribed Capital—Rs. 65,00,000 *in* 65,000 *shares of Rs.* 100 *each fully paid up.*

MYMENSINGH-BHAIRAB BAZAR RAILWAYS COMPANY, LIMITED

Audited Accounts of the Company for the year ended 31st *March,* 1943:—

Capital.—The adjustment of Capital Expenditure during the year amounted to a reduction of Rs. 1,013, making the total expenditure from the commencement of operations Rs. 1,03,88,940.

Net Revenue.—The Company's Share of Net Earnings for the year amounted to Rs. 4,60,162 as compared with Rs. 5,76,435 for the previous year.

During the year Interim Dividends at the rate of Rs. 1-4 and Rs. 2 per share, less Income Tax, were paid on the Guarantee and Rebate Shares respectively. The amount available for final distribution on 31st March, 1943 was Rs. 2,63,234. The directors propose to pay Final Dividends at the rate of Rs. 2-4 per share on both classes of Shares, less Income Tax, making a total for the year of Rs. 3-8 and Rs. 4-4 per share on Guarantee and Rebate Shares respectively. This final distribution will absorb Rs. 1,41,750 and Rs. 51,750 respectively, and after paying the Managing Agent's Commission amounting to Rs. 9,710 will leave a balance of Rs. 60,024 to be carried forward. Of this balance the sum of Rs. 46,560 is applicable to the Guarantee Share Capital and Rs. 13,464 to the Rebate Share Capital.

Managing Agents.—Messrs. Gillanders Arbuthnot & Co.

Authorised Capital—Rs. 1,00,00,000. *Issued and Subscribed—Rs.* 86,00,000 *in* 63,000 *Guaranteed and* 23,000 *Rebate Shares of Rs.* 100 *each, both fully paid up.*

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

November is drawing to a close; and, far from there being any sign or symptom of cold weather finance, there appear to be indications of accentuation of trends and tendencies associated with the slack season. Short credits are in plethoric supply, and none so poor as to take any. Interbank call money is ruling at the nominal rates of half per cent in Calcutta and quarter per cent in Bombay. The deposits of the scheduled banks with the Reserve Bank have established, on November 19, an all-time record at Rs. 80.22 crores. For many a long day, the Government of India did not enjoy such opulence as they have known in recent weeks. Since the inauguration of the Reserve Bank, the Central Treasury's deposit has not attained so high an altitude as during the present week at Rs. 56.19 crores. There are reasons to think that the surplus funds in hands of banks will swell even more, as treasury bill maturities now exceed fresh sales of bills. In fact, it is difficult to see any justification for the continuance of the sales of Central treasury bills. The Central Government are rolling in money; and another windfall this week was through the delivery of rupee coins of Rs. 5 crores to the Reserve Bank. It may, therefore, be said that, from the point of view of the ways and means plans of the Government of India, it should be possible to discontinue sales of treasury bills. But it must be borne in mind that treasury bills have also another important function to subserve, namely, as a handy money market instrument. In the maintenance of relatively even conditions in the money market, treasury bills are recognised as a very useful device.

While we are, in this view, for the continuance of treasury bills, we would like to suggest that the present ways and means position of the Central Government provides a most suitable opportunity for the withdrawal of the Indian Government from the treasury bill market and for the British Government to step into their place. In simple terms, conditions are most propitious for the launching of the experiment of British treasury bills in the Indian market. This question is vitally linked with the solution, at any rate, the mitigation of the growing inflation in this country. The root source of inflation in India is the scheme by which the war commitments and purchases of the Allies are now being financed. The main result of this scheme is to release sterling which has to be utilised for the currency reserve. By the British Treasury borrowing directly from the Indian short loan market, this fatal defect of the present scheme will be got over. We are afraid that inflation is being tackled by the authorities in a lighthearted and half-hearted manner, and the pity of it is that the real sufferers are the general public, and not so much the Government.

Contrary to the forces at work in the short-loan market, applications for treasury bill tenders this week were much smaller than last week, being Rs. 10.71 crores against Rs. 13.20 crores. The bidding, however, has been definitely keener; and the average discount rate records a fall of eight pies to thirteen annas per cent per annum. The offer of tender bills for next week remains unchanged at Rs. 6 crores. The total of treasury bills outstanding in the hands of the public is now Rs. 106 crores.

The returns of the Reserve Bank for the week ended November 19 have to be studied in conjunction with the returns for the week ended November 12. Active note circulation shows hardly any change as compared with November 12, but is up by Rs. 4.06 crores as compared with November 5. This is mainly due to the delivery of rupee coins by the Government. The increase of sterling securities by Rs. 5 crores for the week ended November 12 is set off by the withdrawal of sterling securities for a corresponding amount in the following week. In the banking department, the Central Government deposits are up by Rs. 1.46 crores as compared with a week ago, and by Rs. 6.68 crores as compared with a fortnight ago. Deposits of member banks are higher by Rs. 10.33 crores as compared with November 12 and by Rs. 13.83 crores as compared with November 5. On the asset side, foreign balances have increased by Rs. 12.93 crores as compared with a week ago and by Rs. 16.25 crores as compared with a fortnight ago. As, in the space of a fortnight, sterling securities in the issue department show no change, we may conclude that sterling receipts on account of inter-Governmental transactions are of the order of Rs. 16¼ crores in this period.

The statement of Imperial Bank for November 19 creates an important landmark by deposits exceeding the Rs. 200 crores mark. The latest figure of deposits is Rs. 202.58 crores. Since the war began, Imperial Bank deposits have expanded by nearly Rs. 120 crores; that is, by 150 percent. This raises the question whether the time has not arrived for strengthening the capital base of the bank. The capital of the bank is Rs. 5,62,50,000. The reserve fund exceeds the capital by Rs. 12½ lakhs. Even so, a capital plus reserve base of Rs. 11 1/3 crores for deposits exceeding Rs. 200 crores must be considered inadequate. The capital is now made up of 75,000 shares of Rs. 500 each fully paid up, and 1,50,000 shares of Rs. 500 each, Rs. 125 paid up. There is a strong case of making a call of Rs. 125 on the partly paid up shares. This should strengthen the capital by Rs. 1.87 crores. In fact, it may be even desirable, in successive stages, to make the contributaries fully paid up. Should our suggestion be accepted, it will lead to significant developments in the Stock Exchanges,

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on November 23, 1943. Total amount offered was Rs. 10,71,25,000. Tenders at Rs. 99-12-9% were allotted approximately 95%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 0-13-0% per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on November 30, 1943 in Bombay up to 11 a.m. and up to the close of business on November 29, 1943, at other centres. Successful tenderers should make payment on December, 3, 1943. Other conditions are as usual.

During the week ended November 19, 1943, Government of India Treasury Bills for Rs. 3,47,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Bengal

Tenders for Rs. 3,00,00,000 of three months' Government of Bengal Treasury Bills will be received at the office of the Reserve Bank of India Bombay and Calcutta up to 11 a.m. on December 2.

Successful tenderers will be required to make payment and take up their bills on Saturday, December 4.

United Provinces

Tenders for Rs. 1,50,00,000 of three months' Government of the United Provinces Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta, upto 11 a.m. on Monday, the 29th November, 1943.

Successful tenderers will be required to make payment and take up their bills on Wednesday, the 1st December, 1943.
Other conditions are as usual.

Finance Abroad

Thursday Evening.

No estimates are offered of the cost of the war to all nations combined. There is a general belief that Germany which is said to have shewn 3,76 billion marks in four years has drawn part of the cost from the occupied countries and the U.N.R.R.A. seeking contributions has said nothing as to what Germany should receive or pay for herself. The steadier appearance of markets abroad this week may be due to the belief that inflation in the U.S.A. will meet with no decisive check, and that the Allies have to get their own agreement on world trade and currency. The prospects for the latter are certainly improved by the assurance that Russia is to join in the talks. Wall Street, reporting on some days a turnover of less than half a million shares, has lacked animation, and leading issues are apt to drag. The failure of the oil negotiations between Standard and the U.S. Government for a new, big refinery in the Middle East may be called a bull point for British oil companies, for, on the long view, it would be essential to keep the U.S. Government out of the oil business in the East. The proposals made by the Government were turned down. It may not be easy to link the Elk Hills quarrel with the refusal but to bring the U.S. Government in as a partner would affect the validity of the previous claim of American oil companies for a share in the Indian market. Oil shares in London have been slipping back, but the value of such a development as that recorded after the Saudi Princes' visit to the U.S.A. will not be overlooked by jobbers in the oil market. The problem of keeping Russian oil out of world markets would certainly be solved by co-operative effort and the rejection of the U.S. Government's plans to refine more oil in the Middle East ensures larger buying at home as well as the longer life of properties in the East. Since much oil has been lost in the war with Japan, the shareholders in oil companies would expect conservation, and the fact that taxation leaves dividends unchanged is a bar to full production for temporary purposes.

Last week's rise in the giltedged market has been more or less maintained and the main change to claim attention is the fall in textile shares which appreciated rapidly after the capitulation of Italy and have fallen owing to the limited progress up the peninsula. There was mention of a rise in aircraft issues and a gain in Marks and Spencer's shares despite the dividend being unaltered. Naturally the retrograde movement described in the industrial market has affected railway stocks. There has been a fall in Rio Tinto shares. This may not be due to complications in Spain for Sir Samuel Hoare's talks with General Franco on the scope of non-belligerency led to a striking rise in Tinto over two months ago. Interpretation of the rises and falls is difficult but it may be presumed that the general war situation, rather than the setting up of this Commission or that, calls for notice in the market. Less money may be available for investment and reduced demand for Treasury deposits this week is just a sign of the change in market weather. Mr. Norman Crump of the Economist described lately how the market works today amid a welter of controls and the existence of sensivity is all to the good. It is noteworthy that Burma Corporation quotes higher in London than in India today, and this may be due to the dying out of optimism in India in respect of all Burma shares rather than special support in London. Gold mining shares which went up on hopes of the war coming to an end and South African taxation being reduced have been rather vulnerable. The Indian shares too have fallen back and the stories of big gold sales at local sales might not be accepted very promptly though any specific offer of treasure imports would help South African shares to recover. The total for 4 years' borrowing by the Treasury was known to be £9,726 millions. Only £260 million is described as external borrowing which is different from the Canadian war gift and the U.S. total for lend-lease aid to Britain. The Treasury got £550 million in Tax-Reserve Certificates (introduced in December 1941) and this addition to short-term debt was independent of the regular increase in floating debt to which the raising of the Treasury Bill offer to £90 million points.

In spite of large additions the Treasury's new borrowing at 2½ per cent was undertaken without difficulty and this year's issue at 98½ went up at once to a premium. These points illustrate the strength of giltedged whenever the market lacks tone and the experience of the U.S.A. suggests that without compulsory saving purchasing power can be drained by new loans. There was a loan drive in September in spite of the new Revenue Bill making heavy weather in Congress. The issue depended on the money market's support as before and the target for September was set higher by the U.S. Treasury at 15 miliard dollars. The war loan drive was helped perhaps by the well-spread rise in the stock market during September.

One industry in preparing its export plan in advance. Sir Miles Thomas of Morris motors heads a new Committee to put the manufacturers' claims by on the public and the motor Industry's wartime contribution was stressed in this first statement. Before the war motor manufacture gave work to 1,385,000 people and the number has increased. The industry could give a lot of employment and its return to normal working depended (in the opinion of Sir Miles) on Govt. policy in regard to controls, taxation and transport. New models are not likely as the industry has to resume production from the point at which it left off in 1939. Morris Motors reported record profits for 1942 and the dividend at 17½ per cent has put the 5 shilling shares well above 40s. in the market. The balance sheet with reserves exceeding capital (as was noted in September in cabled reports) is very strong and special provision for reconstruction and development has been made by the Company which became public only in 1936.

The U.S.A.'s monthly expenditure totals cease to astonish but the W. P. B. Director's satisfaction with the progress of production in spite of strikes will suggest that money, prices and wages do not mean much when the materials are converted into weapons. In spite of report of strikes Ford's bomber plant at Willow Run has made striking progress and more bombers will come from the plant set up largely at the request of the British Government by the Ford Company. Shipping figures are said to surpass expectations as 80 per cent of the total tonnage aimed at had been got ready in 10 months. The recovery in plane output also in October was mentioned and full employment in the U.S.A. beats the story put out by Hitler as to the workless millions. Manpower shortage gave less trouble in October according to Mr. Nelson but the jobbers are an extinct race. Hitler described conditions in Germany provided by Nazi rule and pictured the millions without work in the U.S.A. The report of 8,362 planes in a month must lead to questions as to when and where they will be used. It is quite likely that aircraft is a bigger industry than shipbuilding in respect, of employment totals and wages. Indeed the struggle for mastery of the air after the war has begun rather early. The U. S. Government may be impelled to take a share in civil aviation to let the foreigner know that, as in the case of shipping, the U. S. Government is backing private enterprise.

A cable on another page describes the tussle between Congress and President. The Administration's anti-inflation programme does not meet with Congressmen's approval and a veto of the bill passed on Thursday is reckoned certain even after the Senate endorses the decision of the Lower House. It is doubtful if bumper crops in the U.S.A. (referred to in Mr. Roosevelt's proclamation of November 25) will themselves produce lower prices though in the average citizen's view subsidies to help consumers out would be superfluous if plenty of foodstuffs were available. On the manpower issue compromises have been the rule but the Administration has failed again. Mr. Morgenthau's request for 10½ milliards in new taxation has been rejected. The defeat may have its own effect on Wall Street and the effect may be communicated to Indian markets very soon. A reverse for the Administration invariably helps the bulls, and the stock markets in India may derive some strength from the news.

LLOYDS BANK

LIMITED

(Incorporated in England.)

1677

Saving Made Easy

You can help to bring prices down by curtailing your spending and increasing your savings.

Five Rupees will open a Savings Bank Account at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

Interest is allowed, and withdrawals can be made by cheque.

India and the U.N.R.R.A.

The formation of the United Nations Relief and Rehabilitation Administration and the signing of the agreement relating to it by the representative of the Government of India signify an addition to our international obligations which the country must ponder over. It is true that the agreement will not be effective unless it is ratified by the Central Legislature. But the Indian constitution is in a state in which provisos of this kind cannot be easily evaluated. Whether the Legislature ratifies the agreement or not, there is need to consider the position which this country should take in relation to international obligations of the kind that the post-war settlement of the Allies may confront us with and to decide what should be done about a specific question like the U.N.R.R.A. Strictly speaking, there is little to be said for India undertaking international obligations of any kind. Duties go with rights and rights are inherent in status. A country without the status of a sovereign and self-governing unit can have neither rights nor duties. Discussions on international schemes are necessarily based on the assumption that the Government may be persuaded to remove specially obnoxious features, if the public succeeds in detecting them and raising an agitation of the necessary force and dimensions. But it is obvious that, unless there is to be a National Government in Delhi before the war draws to its end, India will have the anomalous and trying experience of being treated by her Government and other Governments of the world as a subject country, but being called upon at the same time to discharge all the obligations of a free self-governing member of the comity of nations. This anomalous position will naturally be even more irksome and galling in the sphere of international relations than in the relations between India and Britain. On the one hand, India will find in it a 'prima facie', but decisive, case for rejecting such obligations. On the other, foreign opinion will find more than one occasion for holding that India is lacking in a proper spirit of internationalism.

It is unfortunate that nationalist opinion in India has always been too much obsessed with the struggle for Swaraj to give any thought to our relations with the rest of the world. The fact that our foreign relations are controlled by the British Government cannot absolve us of the responsibility for thinking out our relations with the outside world. It is not always nor in every sphere can India turn her face sullenly away from contact with foreign countries. In a world war, there is involved a force majeure that has no respect for nationalist susceptibilities. Likewise, in post-war economic reconstruction, there are bonds between India and the rest of the world which do not cease to be merely because we choose to deny them. Even in matters political, nations grow in a climate of world opinion, and feeling, whether of fear as for Germany and Japan, or of friendliness, more often both. India has need to gain the respect of the world, though, it may be added, such respect is not got by a tame aquiescence in an arbitrary assignment to her of international obligations. If India is to disown any such obligation, she should do so with an unmistakable resoluteness of purpose, as distinct from mere protests from public meetings and Chambers of Commerce.

The proposals so far adumbrated in connection with the U.N.R.R.A. bids fair to offer India an opportunity for such resolute disavowal. The news reports on this matter put together make their own comment. The famine in India is not a matter for the concern of this Relief Organisation! Even the London "Times" has some passionate words to utter by way of comment on this. The contributions of the member nations are to be computed as a percentage of the national income. The nations thought little at first of the incidence of such a flat rate; and the suggestion comes later that India's obligations would be lightened in consideration of her special circumstances. It would appear that no contributions of foodstuffs are expected from her and that her job will be chiefly to supply finished cotton goods to the Middle East. But it is not the amount or the nature of the contributions that matter so much as the basis on which India's co-operation in relief work is sought. The Indian Chamber of Commerce in a memorandum to the Government has asked very pertinently whether areas which have suffered on account of the denial policy will be deemed to be entitled to help from the U.N.R.R.A. The compensation involved may be little. But the principle that all those who have suffered as a direct result of the war should be regarded alike is unexceptionable, and every infringement of that principle will weaken the position of the U.N.R.R.A. Doubtless, the formation of this organisation is actuated by truly humanitarian impulses. But its importance to the successful conduct of the war can hardly be denied. The freedom, which the Allied armies will take to the occupied countries, will seem in the eyes of the people concerned provokingly empty, if the Allied Governments are not in a position to give them relief and thus afford concrete symbols of the New Order. There is thus a palpable inequality both in the interest in the work and the capacity to undertake it. This inequality is altogether ignored in the flat rate of contribution; and its unfairness is aggravated by the bland statement that the Indian famine will not receive its attention. Indian attitude to international obligations of this kind is naturally determined by the world's actions, not mere reactions, in the present food crisis. Without appearing unappreciative of world sympathy, one may justly say that outside help has been meagre, grudging and tardy. And in such conditions, it is next to impossible to enthuse over "first aid" to the occupied countries.

Nevertheless, one cannot ignore the important difference between the Indian famine and relief work in the occupied countries. Despite obvious exaggeration of difficulties, India's need for relief occurs when the war has entered a critical stage and the strain on shipping has been conceivably increased instead of lessened by recent successes; while the relief work will be undertaken in conditions of lesser pressure. As we have said already, nations grow in an atmosphere of world opinion; and where fear is ruled out, goodwill is not only an alternative, but in some ways a better substitute. But the price of India's co-operation must be a constructive goodwill towards the people of this country and not mere deference to our political overlords. It is for all foreign nations to remember that there will be numerous occasions for exhibiting such a spirit of constructive goodwill. In the trade relations of the post-war period, in the schemes of international financial regulation, in the treatment of India in matters of relief in emergencies, there will be scope for the display of such a spirit. So far, such an attitude has been conspicuous only by its absence. The U.S. proposals for the International Stabilisation Fund were such as to freeze our sterling assets over a long period. Gestures to India are possible without risk of diplomatic displeasure. Only such gestures can create in the Indian mind a readiness to co-operate in schemes of post-war relief and reconstruction.

WAR AND PEACE RISKS

A cabled report describing Wall Sreet's preoccupation with the risks and possibilities of peace appeared in our columns last week. War risks have disappeared in the U. S. investor's view. To some extent, the Indian investor may be inclined to view developments through American spectacles, and present concentration of interest in stock markets on coal, sugar, cotton and latterly, jute shares can be explained readily in terms of the adjustment of market opinion to the changes in the situation abroad and at home. There is, of course, the complicating factor—the political deadlock, but we may adhere to the opinion that politics ceased to interest the market after the fast, and the main elements in the situation today are the trend of profits and the burden of taxation. While the latter may cause some alarm (calculations as to the increases in taxation in the war period have appeared) the former remains wholly favourable.

While statistics can never be complete, the general conclusion that industrial profits are higher in India than in Britain or America does not stand in need of proof. Temporary and special aberrations can certainly be explained to satisfaction, and we record with satisfaction that company statements appearing this year have supported fully the rise in equities. Comparisons appearing week by week in our supplement point to a healthy growth of profits in 1942-43. The presumed fall in India's industrial production has not affected earnings. Between January and November the public jointstock companies whose results have been analysed have increased their appropriations to Depreciation. The increase is admittedly moderate, but the Central Board of Revenue is undertaking an inquiry, and larger depreciation might be allowed, at any rate, in the case of cotton mills in the future so that taxation might press less heavily on corporate profits in one industry.

Certain conclusions derived from the statement of company results by groups might be expressed in summary form. Only in the case of jute mills are allocations to Reserves and Depreciation in 1943 lower than in 1942. There is an increase under coal, tea and cotton as well as miscellaneous industries. Gross profits in the case of jute are higher (results received up to 5th November taken into consideration) but lower in the case of engineering companies. In the case of coal the increase in profits is very moderate as compared with 1942 and the amount set aside for dividend is lower than in 1941. Undistributed profits, however, are higher in the case of coal companies as also in the case of jute mill companies. Academic inquiry into profit trends is largely concerned with the scope for taxation, but we have however a different purpose, to establish that the risks of peace are more illusory than real for India's major industries. Such a conclusion would support the prevailing market view as to the outlook for more than one industry. The abundance of money is an operative factor as before, but the main factor is the elimination of war risks in the case of industries improving export prospects now and after the war and the general assumption that postwar development, facilitated by imports of capital goods, would sustain Indian industries. It is on this reckoning alone that coal shares have risen to impressive premiums and the average yield turns out to be lower than that derived from bank shares. Yet the future is readily discounted on the assumption that increased output, higher prices, and additional transport will more than offset the increase in mining costs. It is satisfactory to note here that 35 coal companies whose accounts have been analysed reported an aggregate profit of Rs. 84.63 lakhs against Rs. 77.18 lakhs in 1942 and this increase had an effect on additions to Reserves as well as the dividends and taxes paid by companies this year. Whether the figures for the immediate future would be as reassuring as in the past remains to be seen, but the major factor is today the prospective revival of exports and special measures meant to improve output. The special measures may limit the growth of profits, but the point to bear in mind is the recovery of markets for Indian coal from Aden to Hongkong during or after the hostilities. It has been mentioned recently that Indian coal is wanted beyond the Red Sea and such factors as the shortage of labour or cost of food supply will have no effect on post-war earnings. Imports of coal have fallen away steadily, and the greater the progress of South African industries, the greater is the assurance that State-subsidised exports of South African coal will not appear.

A large scale revival in foreign trade is postulated by the inter-Allied plans for relief. European rivals having faded out, British coal will be supreme in European markets, and let us note in passing, that India is the only considerable producer of coal in Asia. The demand for bunkering must be increased, and the industry's problem only today is higher output, for which various measures are in course of adoption. If undistributed profits have fallen, coal companies have made provision for Depreciation on a larger scale this year, and the companies with large properties awaiting development, and the cash to carry out such work claim the investor's attention more than those in the recovery stage.

Coal is not the only industry whose peace risks are viewed as negligible. Textiles of all types are likely to encounter the pent-up demand at home and abroad. Various measures to stimulate output have been adopted and the pending solution of the fuel problem is given due weight in all independent assessments of the future. Experience of mill companies this year has been gratifying. There is an increase of 97.84 per cent in the case of 15 representative companies which paid more than double the tax paid in 1942 and increased their allocations to Reserves and Depreciation while keeping in their books a larger share of the year's profits. As the future is judged by the cheapening of the raw material and the assurance that new markets for Indian goods would be kept after the war, the investor is apt to ignore the effects of Control. The post-war future is likely to be judged also in relation to a free flow of cotton imports and the adequacy of productive equipment. The major consideration today is that war effort has produced no 'concentration' similar to that noted in Britain, and the exporter's problem here is vastly different from what may be noted in Britain where the burden of social security on costs may tend to be heavier than assumed. The implications of this conclusion will not be lost on those who have noted that Bombay mills have decided to maintain the workers' bonus for 1943 and look forward to the development of full employment within the industry.

While the outlook for raw jute may be clouded by the war and the destruction of Europe's jute industry, in whole or in part, by the emergence of substitute fibres as well, the immediate outlook for jute manufactures must be viewed in the same light as in June when the big U. S. order came through. It is not surprising that the progress of Russian arms has caused a thaw in the jute share market which surpasses all anticipations. The effect of peace on every staple industry must be the same. Jute mills have prospered without protection, and voluntary control has solved all problems.

If the immediate future is still appraised in terms of coal wagons the afterwar future is certainly treated in relation to agreements covering world trade and finance. It is worth remarking that if Britain has an import surplus in regard to the U.S.A. the latter must draw jute and jute manufactures as well as other raw materials from India. The disappearance of Controls must favour one or more parts of India's export trade. Naturally jute goods come first and present indications are in favour of full production after the war. In a sense, the loss of export outlets will make the jute mills fully able to draw the raw materials and the post-war equation of demand and supply will perhaps, as in the case of the cotton mill industry, be different from experiments in regulation. It should find fresh chances if cheap jute manufactures are provided by our export policy that puts the consumer's interests first. In the case of cotton the U.S.A. has a large home industry, but India is exceptional in having many fibres besides cotton, and the home consumption of jute manufactures should also increase concurrently.

The case of sugar may be treated as exceptional. Little need be said about the abrogation of the 1937 convention prohibiting seaborne exports or about the bearings on control on prices and profits. The disappearance of Javanese competition may be a permanent factor in neutral markets. Whatever policy may be pursued, the agricultural factor may hamper improvement, but the by-products may be made to support the growth of profits. The absolute improvement in company profits following the recovery in profits during 1942-43 was indicated in a review of some outstanding company reports. Former conclusions as to competitive power would appear to lack validity at present, and companies, in the states unexposed to control, may loom larger in the future. That is a view which is not without the support of investors at present.

Engineering enterprises which have reported a modest decline in profits for 1942-43 in most cases reduced proportionately their allocations to depreciation and reserves as well the distributions to proprietors may, on a strict view, be treated as companies whose peace prospects are obscure. There is some reason to treat 1942-43 experience as conclusive, since we cannot ignore the ambitious export plans of both British and American manufacturers, the readiness of both to book orders for

machinery and equipment, and the certainty of war orders coming to an end. The smaller non-descript enterprise may weather the depression less comfortably than the large concern but here too, one must note that taxation will press less rigidly, and the post-war refund may be used to finance the expansion justified in any case. While it is rash to assume that iron and steel consumption will fall off after the war, the assurance of imports at world prices may retard the expansion of profits. In this case, the experience of the most recent period confirms diagnosis of what are called peace risks.

It is noteworthy that there is no fundamental difference between the trend which developed in London after Italy's capitulation and the trend of prices in India, though the latter must be influenced by the conditions as to cash dealings only The prospect of peace makes for firmness in both cases, and the view taken in the U.S.A. as to the disappearance of depression in the consumer goods industries (if it does not find favour in India) may certainly be cited as an argument in favour of composite industrials. Wartime experience in this field has been uniformly favourable, and the risks of peace are dissolved by the destruction of Europe's flourishing industries. In a sense, the R.A.F. has done more for Indian capitalists than the tariffs of twenty-one years. And the conclusion may be used to reconcile many to the burden of taxation.

THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Editorial Notes

Rationing Explained

In the Assembly last week Mr. Kirby described the objects of rationing. He mentioned in his speech that the Army meaning of rations as guaranteed food supply must be adopted by the civilians. According to Mr. Kirby, Food Control is a better title than rationing, and his notes presented to the Assembly should create confidence in Bengal similar to that noted in Bombay. The object of rationing is not primarily to reduce consumption but to distribute short supplies in an equitable manner. When supplies are ample and assured as in certain Provinces and States the control of consumption is necessary for effective mobilisation of resources for war purposes, but when supplies are short and irregular, a closely controlled rationing scheme is necessary to ensure fair distribution to all. Food rationing must go hand in hand with price control; each helps the other. No price control can withstand unaided the pressure of increasing demand on dwindling supplies, and it must be accompanied by quantitative controls over demand and supply. Equally rationing requires price control. Since however widespread rationing is, it will not ensure equitable distribution among all income groups, unless prices are low enough to enable everyone to buy his ration. Food rationing schemes in their policy and detail should, as far as possible, be uniform. Their smooth operation depends on the degree to which they are co-ordinated with related policies, more especially controls over production, price and income. These cannot be separated in water-tight compartments. There is seldom any justification for local variations in rationing schemes. It is more efficient, more intelligible, and less wasteful for a uniform system, prepared and supervised by experts, to be adopted throughout the country.

Food rationing should be comprehensive. It is seldom possible to introduce rationing for a particular commodity in short supply without extending it very soon to cover other commodities. It is however advisable to keep food rationing distinct from the rationing of other commodities. All rationing must have its legal sanctions which will give the necessary powers for enumeration, registration and control. They must be rigorously enforced, and it is advisable, as in the U.K., to employ special staff for the purpose. (The number of successful prosecutions for food offences in the London Division alone exceed 600 a month and extremely heavy terms of imprisonment and fines have been awarded.) It is necessary to associate the public and trade with rationing administration. Local advisory councils or food control committees should be set up. Their functions should be advisory and not executive. The distribution of foodstuffs must be co-ordinated with the supply position and its planning supported by an accurate 'balance sheet' adjusted day by day. Both in supply and distribution, wholesale and retail traders should be used under Government license and supervision to carry out operations as Government agents. But in case working through the trade proves to be impossible, an alternative scheme to be operated entirely by official agency must be ready to take its place. There is no reason why distribution through efficiently-run Government grain shops as well as through licensed retailers should not continue simultaneously.

The maintenance of reserve stocks of essential rationed foods is important. The buffer stocks can be accumulated gradually and 'turned over' in order to prevent deterioration. Storage should be divided and sited strategically. Food is news and publicity is recommended. No method should be neglected and in addition to the press, cinemas and the wireless should be used. Where a country is in the middle of a crisis, it is illogical that the population of certain Provinces and States are at starvation level whilst others are surrounded by ample food supplies. The inauguration of rationing enables Authority to calculate exact requirements and give a statement that will show much surplus foodgrains can be released for the deficit areas. Rationing helps the urban areas to draw supplies in return for manufactured goods. In his view rationing procedure is going to enlarge employment. Goodwill and confidence can be restored by an efficient food control scheme. The cost to Bombay works out at one rupee per person per year—a fact that is continually overlooked by critics of the most efficient Bombay scheme.

Rationing as a means of promoting security and confidence was described by Mr. Kirby in listing the advantages of rationing. In his view rationing provides (a) a yardstick for measuring consumption, (b) reduces consumption when necessary, (c) ensures equitable distribution, (d) prevents a run on a commodity in short supply, (e) prevents hoarding, (f) prevents profiteering—prevents queueing, (g) releases surplus quantities for deficit areas, (h) enables Authority to build up reserves on a mathematically correct basis, (i) controls prices, (j) raises efficiency of administration, (k) restores confidence, and (l) allays the suspicion of hard-pressed cities that their more fortunate brethren are exploiting a national calamity. Mr. Kirby's arguments in favour rationing concluded with a reference to imports as he observed that help will be governed by the amount of control, initiated and maintained in the Provinces and States. The United Nations could not carry on their war effort without rationing. Therefore they will judge the food administration by the rationing schemes inaugurated or neglected.

Ordinance 35 of 1943

The last Ordinance of Lord Linlithgow is Ordinance 35 of 1943 meant to provide for the prevention of hoarding and profiteering. The Commerce Member explained on October 15 the objects of the emergency measure of 17 articles. The Controller-General has gone to Bombay, explained and defended, heard deputations, and given assurances. Lists of goods covered by the Ordinance appear from time to time, and the most recent is cigarettes though it may appear that information regarding manufactured stock etc. in the case of an excisable article must be in the possession of Government already and price control in relation to the permitted margin of profit in this case may be unnecessary. The Ordinance authorises fixation of maximum stocks and maximum prices limit the quantity dealt in, and the stocks of both producers and dealers. Where the maximum is not defined, stocks of any article in dealers' possession are limited to 1/4th of the quantity held in 1939 or any limit presented by the Controller-General. Section 6 defines the right price; only 20 per cent is to be added as profit or the percentage allowed by normal trade practice to the landed cost of imported articles or the cost of production in the case of an article not imported. If the purchaser is

asked to buy at the same time any other article, the consideration is to be regarded as unreasonable. In the case of private persons the quantity needed for three months' consumption is regarded as reasonable stock. Excess becomes a hoard, but this section applies only to articles notified in the Gazette by the Controller-General of Civil Supplies.

The duty to declare possession of excess stocks is laid down in Section 8 and the excess is to be dealt with by official direction. Refusal to sell must be only by authorisation and a cash memo is compulsory for all sales to the value of over Rs. 10 or less if the customer demands a memo. Exemption of dealers etc. is to be by notification. Section 11 deals with marketing of prices and exhibition of price lists. How far this will help the consumer is not determined by experience, but retailers are forbidden to remove a manufacturer's marks. The publishers' prices on books for instance must be on the flap. The Controller-General's powers are defined under Section 12 and penalties for infringment are imprisonment for a term which may extend to a term of imprisonment for 5 years or a fine or both. Goods involved in the case are to be forfeited to the Crown but sanction of Government is needed for every prosecution under the Ordinance. Food grains are excluded, but the similarity with certain Ordinances is obvious. Sir A. Haque related the problem of food prices to the need for consumer goods at reasonable prices. In this view the Ordinance seeks to rationalise profit and every dealer is promised a fair profit. The Commerce Member offered to set up committees representing manufacturers and the distributing trades along with consumer's representatives. The Textile Control Board is the pattern for such organisation, but the goods covered are so many and the classes of traders so diverse that the Ordinance has been criticised as ignoring the liabilities of importers, the obligations of retailers, and the interests of established distributors in places far from the ports.

Post-War Relief

Since the plans of U.N.R.R.A. are under discussion at present what was performed after the last war may be of interest to many. A League of Nations' publication dealing with relief deliveries and relief loans in 1919-23 describes experience which illuminates more recent conclusions. The term relief covered all transactions of or through the various relief agencies and especially the American Relief Administration by which deliveries of food and certain other goods were made to Europe. It covers therefore, in addition to gifts or relief against credit, such straightforward business transactions as the sale of these products against gold or other assets. In point of fact, direct gifts in the post-war period were of minor importance. Total deliveries through the various relief agencies considered in the post-armistice period amounted to nearly 1.8 billion dollars of which 400 millions were paid for in gold or its equivalent. Rather less than 400 billion was covered by gifts and the remainder about one billion by loans. But the interest and amortisation received on the relief loans granted by the U.S.A. both during and after the war only amounted to some 150 million dollars, so that by the far the largest part of the amount sold on credit

partook in the end of the nature of gifts.

Relief was furnished to 20 European countries the largest needs being those of Germany, Belgium, Austria, Poland, Czechoslavakia, Roumania and towards the end of the period Soviet Russia. The bulk of the food distributed came from the U.S.A. to be distributed by the American Relief Administration headed by Mr. Herbert C. Hoover. As U.S. Food Administrator since 1917 Mr. Hoover had taken measures to secure a great expansion of agricultural production. The supplies thus made available facilitated the work of relief which started early in 1919 and continued till the summer of that year. Thereafter the most important relief activity consisted in specific relief for undernourished children. The U.S. Government donated the goods and national committees took them over for distribution. School-children in many lands got meals on account of the relief programme.

The financial implications of relief need not be examined. The U.N.R.R.A. is to get its capital from donations made by Governments and the recipient Government is to have a voice. Since quotas have been settled with the percentage of administrative expenses there has been a straight request from Mr. Lehman for clothing for Europe. Whether gifts made in the course of hostilities e.g. to Russia, which has received British woollens, are to be reckoned important or not the desirability of countries able to export building up reserves for relief shipments may be indicated. In this view the largest demand may well be for hessian as the U.N.R.R.A. has to package its despatches the actual value of Indian supplies may far exceed the 35 million dollars to be given with the formal approval of the legislature. How far jute mills will be able to step back to full production now concerns others besides the shareholders in jute mills. It may be said that shareholders have not missed the time bearing of relief on the jute industry's prospects and stories of coal shortage are obviously ignored this week characterised by a striking thaw in the jute share section.

Reduced Losses

U-boat losses have been heavy and Allied shipping losses look light this year. That is the burden of more than one speech and Mr. A. V. Alexander pointed to the decisive improvement over a year in which the flow of supplies across the Atlantic has increased. In six months the Germans have lost 150 submarines and already the wolf-pack tactics have been modified, not merely because the U-boat has to reckon with better protected convoys and air patrol. The reduction in war risk rates to the West of Africa is the result of the improvement described in respect of shipping. Germany's four years' losses in U-boats must be heavy but more important for the future, is the destruction of the yards and the crews Allied shipping losses last winter rose rather abruptlly but there has been a continuous decline in the spring and it has been remarked that shipping losses in June 1943 were the lowest since September 1939 and the best month for shipping losses was June 1940 when sinkings totalled 97,604 tons only. Since Allied shipping losses from June 1941 are not released officially, it is enough to go by the First Lord's statement as to losses. In August and September the average losses were the best record of the war, the smallest total on record being 116,488 tons for March and April 1940. Enemy claims have been reduced to scale and in October the enemy claimed only 39 ships. The German claim for 10 months relates to 77 ships. Since the U.S.A. has produced in 10 months 80 per cent of the tonnage arrived at for the year the position in regard to replacements is distinctly reassuring. Additional tonnage has been provided by Britain and Canada and in spite of quarrels over Victory and Liberty ships, the U. S. Maritime Commission has got what it wanted. New tonnage is vastly greater than the tonnage sunk by the enemy, and the absolute improvement is independent of additional protection furnished by escort-carriers this year. The major contribution has, however, been the U.S. shipyards and the estimates of war production must be related to the programme of five ships per diem—the comparable figure for 1942 being three ships per diem.

The Open Balkans

The U.S.A.A.F which flew from the Western Desert to Ploesti now with Italian airfields at Call chose Sofia for a target. Earlier Sofia had had a long alert. Whatever be the relations between Russia and Bulgaria there is no guarantee of immunity for Sofia which is the capital bombed last week to show that the Allies strong and the Mediterranean in the Middle East can move against the Balkans in spite of differences in Yugoslavia and dissensions in Greece. The German reactions to the raid are surprising, for Bulgaria was the last of the satellites to join the Axis and is apparent-

ly the weakest link in the chain. Yohng Simeon's principality is become a base for the Germans, meant to guard the retreat from Russia into Rumania and also to prevent Turkish intervention. The raid followed eager speculations about a turn in Turkish foreign policy and preceded the loss of Leros to the Germans. King Boris' death made things easier for the Germans, but the regency is far from popular and Pan-Slav sentiment is still strong. What was lost to Russia in 1941 may be regained in 1943 and the calculation is not absent from the minds of the Germans who control Bulgaria through the Gestapo.

Territorial concessions in Macedonia have not made Bulgaria stronger to face an invasion threat. The Sofia raid indicated what could be done from South Italy. The confusion in Yugoslavia and Albania makes interception difficult, while the concentration of fighter strength in the West leaves the Balkans open to attack from the East. The Bulgarians in the last war were the first to surrender, but they have been anticipated by Italy this time. Allied naval dominance of the Adriatic may be an important factor in the shift of the air war to the new centres of German industry in the East. The Soviet Union's objections to a Balkan federation may be more favourable to Bulgaria than presumed. It is important to note that the Black Sea divides Bulgaria from Russia, and complete Russian ascendency in the Black Sea after the Germans are expelled from the Crimea may have very important effects on Bulgarian policy, during and after the war. That would not be lost on the Germans who see in the raid more than a threat to communications.

War in the East

War in the Chin Hills serves as a reminder of the new exposed frontier. The S.E. Asia Command by its mere creation has not altered the external aspects of India's defence. A Maritime Power controls territory to the east of India and the Near East today may be defined for Bengal as territory from Chittagong to Singapore. Apart from the fact that old communiques are merged in the new announcement from Lord Louis Mountbatten's H.Q. and the Indian taxpayers' obligations are strictly defined as heretofore, there has been nothing to indicate that the S.E. Asia Command has begun to function and the Chinese and the Americans in the S.W. Pacific have received powerful support. It was assumed in September that everything connected with the Command was settled at Quebec to satisfaction and India's adequacy as a base confirmed by the drawing up of plans for the war against Japan.

The undeniable fact is that millions have passed under Japanese rule and their emancipation is the direct object of the operations to be undertaken. In earlier descriptions of the tasks assigned to Lord Louis, it was implicitly assumed that the Indian Command would provide the impetus for combined operations after the end of the rains in October. What has come actually is mere patrolling activity and the moderate increase in bombing of Burma's targets. But nearly all realise that the pivot of the enemy's defence is Bangkok and that is today a target for the American fliers in China rather than the R.A.F. in India.

The re-opening of the Burma Road is always described as the first task of any army bent on retaking Burma and a road from Assam to Lashio is being built. Such a road will threaten the Chindwin valley and the Japanese control of Upper Burma while the attack against Rangoon-Moulmein begins. Since Lord Louis has visited Chungking the essentials of the Allied problems for an advance from the N.E. Frontier to the Salween front may have been discussed but for the present India might note that before the Allies strike southeast, the recovery of the Andamans, used as a submarine and seaplane base by the Japs, and the Nicobars must be undertaken. Market sentiment has veered decisively against the facile optimism generated by the announcement in September. The broadly defined task is that Lord Louis Mountbatten must recover what Field-Marshal Wavell lost in 1942. That recovery may be secured because Japan is inevitably shortening her line under pressure in the Pacific. But that is not the only consideration arising from the delay in the beginning of the offensive. There are indications of preparations for naval superiority in the East but the check in the Aegean may have unintended effects at present. The more important feature of the operations to come is the guarantee of help to China so that when circumstances permit air attacks may be launched on Japan proper. Whether the slowing down of the advance in Italy exerts any influence on the timetable in the gast may be doubted, but many will consider the unexplained delay a result of the food shortage in Bengal. If that were so the Allies might have a reasonable grievance against the civilian administration in India and those who picked up Burma mining shares on recovery prospects might also be forced to admit that Indian authority have caused them loss. The loss certainly is shared by British investors who fancied tin and rubber shares on the strength of optimistic conclusions drawn over two months ago.

Work for Indian Cotton

The Indian Central Cotton Committee's laboratory in the year ended May, 1943 received more samples and enquiries from mills in and outside India. Agricultural Departments sent the largest number of samples, and as before, cloth and yarn provided by the Stores Department was examined by the Laboratory. In regard to spinning tests a large number of samples were furnished from Hyderabad, and the qualities of pure and mixed strains of Gaorani were ascertained. The U. P. sent Perso-American cotton along with American strains. The tests extended to the mills in certain cases. The cotton trade as usual sent many samples and foreign cotton also was sent up for examination. The laboratory found that longstaple cotton grown in N.W.F.P. does not really yield the right fibre. Reference is made in the report to extension of cotton cultivation in Bikanar, and the success with certain cross-strains. The laboratory began to investigate the effects of agricultural practice on quality and investigated the effects of manures on fibre properties. Work on linters was undertaken in order to establish the process required for preparing any type of chemical cotton. Services to other industries included the examination of filter cloth for sugar factories.

A machine to ascertain tensils strength of yarn wanted for cords used for belts and typres was prepared. Nonstretchable rope for bales were examined and the laboratory found, for economic reasons namely, that jute ropes appeared the most promising. The notes in the report refer to the fact that the treatment for reducing the stretchability of the ropes does not adversely affect the strength. A jute mill in Calcutta co-operated by making special types of ropes either by modifying twist or chemical treatment of non-stretchable character. The British Cotton-growing Association tried these ropes and results are described as gratifying. The laboratory embarked on experiments on reducing by a simple and cheap treatment the water permiability of heavy cloths like canvas. Indian materials were used and the results are viewed as so promising that it is proposed to follow up these in a systematic way.

Pakistan Opposed

The collection of articles by Mr. Rezaul Karim on the Pakistan plan published by the Book Company, Calcutta, Rs. 2, should attract attention for the reason that the economic consequences of partition are outlined along with the danger to Muslims in the minority Provinces. The origin of the Pakistan movement must not be ignored. It is certainly disturbing to find that Pakistan, rather than the deadlock, is the issue on which the League's attention is focussed today. The movement is not older than 1938 but the League toyed with the idea earlier. Whether Pakistan can expand towards the north-west has seldom been examined. The Moguls thought of Herat as an outpost and looked always beyond the Hindukush. The Muslim League, in spite of its proclaimed interest in Islam abroad thinks primarily of power in the Provinces, and the present distrust of federalism is not wholly due to the plan for partition. Mr. Rezaul Karim's articles were written before the Cripps mission, so that what Sir S. Cripps offered and withdrew, what the League sought and why, are not included in the review of League policy.

That the Pakistan ideal makes for neutrality towards Britain, and Hindu nationalists alike, is perhaps its chief defect and Mr. Karim's objections are grounded in the faith of a Muslim supporter of Congress. The Lahore resolution has been ratified, affirmed, and reiterated. Opposition by the Azad Muslim conference in 1940 has been hardly effective. That secular movements cannot employ the religious issue is perhaps the chief argument of one who argues that Turkey, Egypt and Iraq are Muslim States and are not anxious to set up a religious test for citizenship. In the light of the April session of the League much that has been written about the class-conscious League may require modification. The League's President has cut the ties between the spontaneous Khaksar movement for more than one reason, but that hardly affects the conclusion that mass contact has succeeded. As to the elements in Muslim culture today there can be no two opinions while Mr. Karim uses the historical approach more than once to prove that separatism is the result of alien interference. The author does not try to pierce the constitutional tangle but is positive that Pakistan is a cry produced by the claim for a constituent assembly. Since the latter has been conceded in some form in the Cripps offer, the justification for the League's policy is not lacking. The League has swung over to the ideal of independence for Pakistan, if not for India, but Mr. Karim's main argument is fashioned on a consideration of certain broad facts while his plea for unity rings deep and true as usual. Mr. Karim's excursions into journalism are the results of certain convictions expressed well. If Congress non-co-operation and League neutrality make compromise difficult, there is always the possibility of agreement being forced from without.

Research for Industry

How the Department of Scientific and Industrial Research helps manufacturers' own research organisations in Britain was explained by Sir S. S. Bhatnagar to Indian Chemical manufacturers recently at Bombay. He gave the names of 23 associations organised on a co-operative basis to advance research and exchange information. A levy on profits has been proposed in place of contributions and achievements mentioned included fuel economy in the iron and steel trades. It was stated that scientific research in India has received very little notice in the form of donations for research, and much more must be attempted by industries independently. What science can do for industry was described by Sir Harold Hartley on behalf of the F. B. I. in a specially prepared booklet. The advice tendered by Sir Harold was that Britain's scientists are ready to do as much as American or German scientists for industry and more money is urgently required for industry. Adequate endowments in universities and technical colleges were demanded as much in the interests of export revival as the development of knowledge. Radio location was

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications are invited from Anglo-Indians and Domiciled Europeans only to fill a permanent vacancy (appointments to be on a temporary basis for the duration of war) of Assistant Mistress in St. Andrews School, Lahore. *Applications must be made on the prescribed form,* available at a cost of Re. 1 from large stations on N.-W. Railway. Qualifications:—Trained and certificated Mistress from one of the following Institutions: (*i*) All Saints' College, Nainital, (*ii*) St. Bedes' College, Simla, (*iii*) St. Dennys' College, Murree, (*iv*) St. Marys' College, Poona. Candidates from other Institutions may also be considered if the Commission is satisfied that the Institution is of a proper standing and empowered to train and certify Mistresses. The Commission will be the sole judge of this. Preference will be given to one who has had a Kindergarten training and experience of teaching in a Kindergarten. Pay:—Rs. 120—5—150 plus dearness allowance admissible under the rules. Grant of a higher initial rate of pay may be considered according to qualifications in a specially deserving case. Age limit:—Above 18 years on 21st December, 1943. Applications on the prescribed form together with attested copies of testimonials and proof of Nationality should reach the Chairman on or before 10th December, 1943.

devised and used as a purely scientific device without any idea of practical application. In the war science has answered many calls for help and the F. B. I.'s pamphlet asked industrialists to note that the science that directs the efforts of British craftsmen will be more than ever important. As to the dividend paid by research Sir Harold pointed out that the gas-filled lamp developed by Langmuir represents on annual saving in the cost of domestic lighting in Britain alone of £50 million. The improvement in the efficiency of the petrol engine due to lead ethyl saves over 2,000 million gallons of petrol a year. The use of accelerators for vulcanising rubber has saved capital outlay on moulds estimated at £16 millions. Research on motor tyres has increased their average life from 3,000 to 20,000 miles. These vast savings have made for profits in the case of firms responsible for technical advances. Supporting the plea in favour of more money for more research for industry, Sir Ernest Simon pointed out that the U.S.A. spent ten times more on research than Britain in 1940. American universities derived large sums for research and Britain could not show as much as America and Russia. Manchester University has invited industrialists and scientists to help the university to render services to industry equivalent to those rendered by leading universities in America. The larger grants from industry desired in the case of Manchester may be considered as a reinforcement of the plea that the chemical industry in India should subsidise the Calcutta University.

Faced in 1939 with the production problem that he is today solving, the average Works Manager would have said 'Utterly impossible'. Everyday throughout India industrial concerns are achieving output far in excess of their normal capacity. Indian tea has played its part in this great achievement. Tea is known throughout the world as a harmless yet valuable stimulant and today, in hundreds of factories in India, it is being served to workers on the job, giving them new energy, greater concentration and thus helping to keep output at a steady high level.

Help To Skilled Workmen

Employment exchanges are to be set up in many places including Jamshedpur. The plan is in advance of industrial demobilisation after the war. National Service Tribunals are expected to help the new voluntary exchanges. A note in the Indian Labour Gazette describes the objects and methods of the exchanges. Both employers and applicants are to be assisted, and the file of would-be employees is to be used for placing trained persons in jobs. The exchanges will not fix either pay or terms of service which is a matter for the employer and the employee. Only persons covered by the National Service Ordinance and drawing more than 1 rupee per day when last employed are eligible for the registration facilities. The managerial grades for technical personnel will not be covered by the arrangement. Unemployed will be encouraged to register but registration is not compulsory. Employers are required to notify exchanges about vacancies and to show how they were filled. In case a person sent up by an exchange is rejected reasons will have to be furnished. In the event of discharge employers have to endorse cards. The manager of the proposed exchange may be the technical inspector of the N. S. Tribunal. The Army is to be in touch with the labour exchange and the exchange is to be supported by an Employment Committee to advise it locally. The Labour Department intends to have a central exchange to advise the exchanges. Ex-service men are to be helped. But the exchange is in reality an opportunity board for a class of skilled workmen it is not a part of assistance to the unemployed. The radical distinction will not be overlooked by those who look to social insurance making a great change for the better.

Today's Prospectus

A rupee company to take over flourishing coffee properties in Coorg is admittedly a striking departure even in the light of many financial changes in the war period. Indeed the opportunity given to the Indian investor by such arrangements as those described in the prospectus of the Consolidated Coffee Estates (1943) Ltd., is exceptional merely for the reason that various other crops are grown on the estates and a large area is held. The greater part of the estates (area 7640.64 acres) is under cultivation and the essential continuity of management is vouchsafed for the new Company which has a ragi farm with its own reserve acreage.

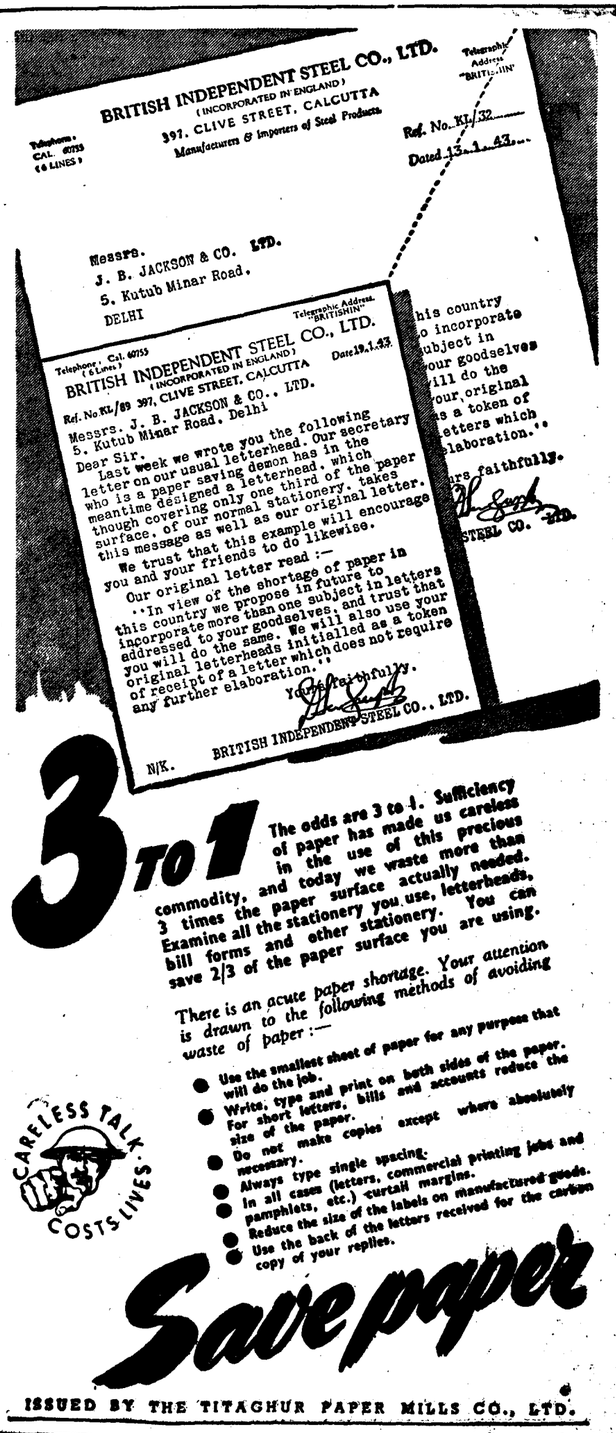
By Special Cable.

WHEAT BOOM GOES ON

Special for "Indian Finance".



Montreal, Nov. 23.

Wheat prices on the Chicago Board of Trade on Monday touched the highest levels since 1924, as grain speculators prepared for another festive orgy, anticipating continued soaring quotations, if Congress legislates forbidding payment of Government subsidies to flour manufacturers and food processors. Despite wartime controls local commodity experts believe a prolonged runaway wheat market in the United States would have marked repercussions on India, Argentina, Australia and Canada. There seems little chance that the steady rise in wheat and other grains will be halted unless there is a setback in the present anti-subsidy trend in Congress.

Milling interests, distillers and buyers of feed led the recent wheat buying activity which was stimulated by reports that twice as much alcohol will be produced next year from grain as from black strap molasses. Nevertheless, the chief factor in the markets rise has been the pending Congressional legislation, designed to forbid payment of Government food subsidies after Mr. Fred M. Vinson. Director of Economic Stabilisation, announced last week that it will be necessary either to spend one hundred million dollars in subsidies to flour millers or to authorise increased bread prices. There is every indication at present that payment of such a bounty will be forbidden and flour prices will be permitted to rise.

The original price control law of 1942 did not affect farm prices. But eight months later, at Mr. Roosevelt's insistence the U. S. Congress provided limited controls But even these allowed substantial advances in most major commodities by the provision that no commodity should be subject to ceilings until they reached the highest level from our prices firstly the average of 1919-1929; secondly, the price of 1st October 1942; thirdly, the price of 15th December 1942 and fourthly the parity price. Soon thereafter Government imposed a ceiling on flour prices but wheat which sold at sixty-eight cents per bushel when the war started continued to rise and on Monday hard winter wheat sold at 1.67 dollars per busnel, almost a 150 per cent increase since 1939. Hence flour-millers have been squeezed between the fixed price for flour and skyrocketing wheat prices.

Government's solution of this problem is to continue the flour ceiling, maintained through subsidies. Congress is manifestly and predominantly against subsidy payments and agreeable to an uninterrupted price. If flour ceilings were lifted, there is no apparent limit to the advance in wheat. It is another endless chain in the progressive development of inflation in the U.S.A.

PROSPECTUS

THE CONSOLIDATED COFFEE ESTATES (1943) LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT VII OF 1913.)

REGISTERED ON THE 19TH DAY OF NOVEMBER, 1943 UNDER THE INDIAN COMPANIES ACT.

AUTHORISED CAPITAL - Rs. 60,00,000

Divided into: 4,00,000 Ordinary Shares of Rs. 10 each and 80,000 6% Tax free Cumulative Preference Shares of Rs. 25 each.

PRESENT ISSUE - - Rs. 39,00,000

Divided into: 2,65,000 Ordinary Shares of Rs. 10 each 50,000 6% Tax free Cumulative Preference Shares of Rs. 25 each.

PAYABLE AS FOLLOWS:

Ordinary Shares:	**On application**	**-**	**Rs. 5**	**per share.**
	On allotment	**-**	**„ 5**	**„**
Preference Shares:	**On application**	**-**	**„ 12-8**	**„**
	On allotment	**-**	**„ 12-8**	**„**

with 5% Tax free Debentures of Rs. 100 each for Rs. 7,50,000 .... the full face value payable on application.

The sale of the properties of the Consolidated Coffee Estates Ltd., and of Jumboor and Kibberi Betta Estates is effective as from the 1st July 1943, and therefore the entire coffee crop for the 1942-44 season together with all standing crops as on the 1st July 1943 will accrue to the benefit of all shareholders.

The Preference Shares confer on the holder the right as from 1st July 1943, to a fixed cumulative preferential dividend at the rate of 6% per annum free of British Indian Income Tax on the Capital for the time being paid up thereon and the right in a winding up to payment of capital, and arrears of dividend, whether declared or not, in priority to the Ordinary Shares, but do not confer any right to participate further in the profits of assets.

ALLOTMENT.

Of the above issued capital 1,45,000 Ordinary Shares and 17,900 Preference Shares have been or will be subscribed to by the Vendors, the signatories to the Memorandum of Association, the Directors and their friends.

The balance 1,20,000 Ordinary Shares and 32,100 Preference Shares are now offered to the public for subscription.

In addition the vendors have agreed to underwrite capital to the extent of Rs. 19,97,500 in Preference and Ordinary Shares and Debentures.

Preference will be given when allotment is made to applicants who apply for both Preference and Ordinary Shares and in any case no application will be considered for quantities of less than 50 Ordinary Shares or 20 Preference Shares. In the case of over-subscription and the need for partial allotment the number of shares allotted in each denomination will be in units of not less than 50 Ordinary Shares or 20 Preference Shares.

5% TAX FREE 1945-53 DEBENTURES

The vendors have agreed to subscribe to Rs. 1,00,000 of the Debenture Issue and the balance of Rs. 6,50,000 is offered to the public at par on the following terms:—

1. The full amount shall be payable on application.
2. Applications for less than Rs. 500 will be rejected and allotment will be made in units of Rs. 500 and multiples thereof.
3. The debenture offered is a First Mortgage Debenture carrying interest at 5% free of British India Income Tax.
4. The Debentures are non-redeemable until the 30th June 1945, after which date they are redeemable at the option of the Company in drawings by lot, subject to three months' notice on the following terms:—
   During the financial year ending 30th June 1946 at 103%
   Do. do. do. 1947 at 102%
   Do. do. do. 1948 at 101%
   and thereafter at par.
5. The first payment of interest will be made on the 30th day of June, 1944 calculated from the date of allotment and thence-forward half-yearly on the 31st day of December and 30th day of June. The Debentures will be secured as a first charge on the immovable properties of the Company under a Trust Deed to be executed by the Company in favour of the Trustees named below and are also subject to the other terms and conditions contained in the said Trust Deed, a draft copy of which may be seen at the Registered Office of the Company and the certified copy at the office of their Legal Advisers in Madras. No further issue of debentures will be made ranking in priority to or *pari passu* with the present issue of Rs. 7,50,000.
6. Transfers of Debentures will be made only for Rs. 500 or full multiples thereof.

BOARD OF DIRECTORS AND MANAGEMENT

The benefits of continuity of management are assured as Mr. Ivor Bull will continue to act as General Manager of the Company. He will have the assitance of a strong Board of successful coffee planters and businessmen. It is to be noted that there are no Managing Agents, and consequently the usual expenditure by way of fees, allowances, commission and/or participation in profits will not be incurred.

OBJECTS

The Company has been formed for the purposes set out in the Memorandum of Association (copy of which, together with the signatories thereto, is annexed to and forms part of the Prospectus) and primarily with the object of acquiring the freehold and leasehold rights and other property in Coorg, S. India of the Consolidated Coffee Estate Ltd, of 71, George Street, Edinburgh, and the Estates known as Jumboor and Kibberi Betta in Coorg, South India from the proprietors.

CONTRACTS.

The following contracts have been or are intended to be entered into forthwith:—

1. Between the Consolidated Coffee Estates Ltd., and the Company for the purchase of freehold and leasehold rights and other property in Coorg, South India as on and from the 1st July, 1943 for a sum of Rs. 32,00,000.
2. Between the proprietors of Jumboor and Kibberi Betta Estates and the Company for the purchase of the freehold and leasehold rights and other property in Coorg, South India as on and from the 1st July, 1943 for a sum of Rs. 7,95,000.

ACREAGE OF ESTATES.

The following is a detailed acreage analysis of the estates:—

Particulars.	Consolidated Coffee Estates Ltd.	Jumboor & Kibberi Betta Estates.	Total.

	Acres.		Acres.
Area of Freehold Farm	521.31	Area cultivated under Ragi and other crops	200
Land leased from villagers	133.58	Area cleared for cultivation	150
Total ..	654.89		

DESCRIPTION OF ESTATES.

These Estates are all situated in the small hill Province of Coorg which produces nearly one-fourth of the Indian Coffee crop. They are evenly distributed throughout the chief coffee zones of North, Mid and South Coorg. This distribution is a great advantage, for it assists to even out fluctuations of crop due to inconsistent blossom showers. The bulk of the Arabica is situated in North and Mid Coorg and almost the whole of the robusta in South Coorg. Pepper, which provides a major revenue item is produced mostly in South Coorg.

On the Consolidated Coffee Estates, from 1926 onwards a major programme of transferring the lower yielding arabica areas, nearly all in the Pollibetta district, to robusta has been carried out, together with a programme of regenerating many of the older arabica fields. Some 700 acres of arabica have been transferred in this way to robusta and 246 acres of arabica have been collar pruned or replanted. The result of this policy is that yields are now steadily rising in spite of the fact that the arabica crop now comes from a much smaller area, 288 acres of which are still immature. The robusta crop is naturally rising steeply, although 317 acres are immature, and a further 150 acres are not yet in full bearing.

The Jumboor crop for the decade 1929-30 to 1938-39 averaged 4½ cwts. an acre. For the last four years the average was 3 cwts., a heavy borer attack and unfavourable showers being chiefly responsible for the decrease. The coming season's crop is estimated at 2½ cwts. an acre, but there is a vigorous flush over most of the coffee and next season's prospects are excellent. Jumboor has not been sprayed and it is anticipated that with spraying the fine record of 1929-30—1938-39 will not only be reached but will be passed.

The pepper crop is also rising steadily, and, as the estates are full of young vines, this progress should be maintained. The small crop this season is a reaction from last season's record crop.

Buildings:—The accommodation both for staff and for labour is adequate, the list of pucca buildings being as follows:—

Particulars.	Consolidated Coffee Estates Ltd. No. of Buildings.	Jumboor & Kibberi Betta No. of Buildings.	Grand Total.
Dispensary	1	1	2
Managers bungalows	10	3	13
Overseers quarters	33	3	36
Outhouses	17	2	19
Lines (1940-41) (6 roomed)	3	..	3
„ 1941-42	20	..	20
„ 1942-43 (2 roomed)	100	..	100
Old Lines	64	43	107
Paddy Stores	18	3	21
Stores	2	1	3
Cattle sheds	8	..	8
Shops	3	..	3

A considerable rebuilding programme has been undertaken on the Consolidated Coffee Estates in the last two years, nearly one and a half lakhs having been spent for this purpose.

Equipment:—The Estates are satisfactorily equipped as regards pulping machinery and pulphouses to deal with their crops.

Oranges:—These are a new crop, but 67 acres have been planted in the last eight years, and the first fields are just coming into bearing. A further 100 acres have been planted out this season in the areas sown with ragi in the estates. As these were only planted during the south-west monsoon, they have been omitted from the orange areas this season. Coorg oranges are famous throughout India, and these areas should bring a valuable and increasing return to the Company.

Cardamoms:—These are another new crop, which should also bring an increasing income to the Company. There are approximately 150 acres of ravines suitable for cardamoms, and of these only 30 acres have been planted to date, nearly all within the last three years, whilst there are 46 acres interplanted through second class arabica.

Wet Lands:—The Company will own 440 acres of wet lands, over 400 of which are under crop this season, three quarters of the quarters of this area being cultivated by the estate, and one quarter being leased to tenants. By next season it is expected to complete the programme of opening up the abandoned wet lands, a programme which has been under way for eight years, with a sharp acceleration over the last three years. A considerable amount of money has been spent on these lands in recent years and many new tanks and water channels have been constructed.

Ragi Cultivation:—About one hundred acres of ragi interplanted with oranges have been opened on the estates, and the crop has grown well. In addition waste land was acquired last year near Fraserpt in the centre of the ragi growing zone on the east side of Coorg, 521.31 acres have been acquired from Government, 133.58 acres have been leased from villagers, the total area of the farm at present being 654.89 acres. A further area of 800 acres is being obtained from Government adjoining this block of land. 200 acres of ragi and other dry crops have been planted this season, and it is expected to have 500 acres under crop in 1944.

CAPITALISATION.

The purchase price of the estates is Rs. 39,95,000 and the capitalisation on the basis works out as follows:—

		Rs.
Arabica 3,199 acres Robusta 1,054 acres 4,253	at Rs. 850=36,15,050 taken as ..	36,13,700
Mixed arabica and robusta 52 acres at Rs. 500		26,000
Mixed arabica and cardamom 47 acres at Rs. 300		14,100
Pepper 105 acres at Rs. 200		21,000
Oranges 68 acres at Rs. 400		27,200
Cardamom 30 acres at Rs. 400		12,000
Paddy 440 acres taken as 425 acres at Rs. 600 (includes standing crops and rentals valued at over Rs. 50,000).		2,55,000
Ragi and oranges 100 acres at Rs. 100		10,000
Ragi and gram 200 acres at Rs. 80		16,000
Total ..		39,95,000

No value has been placed on the very large reserve area of 2,646 acres, most of which is eminently suitable for coffee, and the capitalisation given above also includes the many buildings which go with the Estates, together with the necessary working plant, tools and equipment.

CROP PARTICULARS.

Year	Consolidated Coffee Estates Ltd. Arabica T.	Cwt.	Robusta T.	Cwt.	Total T.	Cwt.	Jumboor and Kibberi Betta Arabica T.	Cwt.	Grand Coffee Total T.	Cwt.	Pepper T.	Cwt.

1941 42	657	6	197	9	855	15	147		793	15	68	18
1942 43	238	9	121	12	360	1	122		482	1	102	12
Estimated:												
1943 44:	449		240		689		100		789		35	

PROSPECTS.

Estimates for the current season are for a total of 789 tons of coffee and 35 tons of pepper. The estimated profit on the coffee crop is taken at the very conservative figure of Rs. 35 per cwt. and that of pepper at Rs. 55 per cwt. On the above basis the results of the season's working after allowing for all expenditure and overhead charges will be as follows:—

	Rs.	Rs.
Profit on 789 tons of Coffee at Rs. 35 per cwt. ..		5,52,300
Profit on 35 tons of Pepper at Rs. 55 per cwt. ..		38,500
Net Miscellaneous profits from paddy, cardamoms, oranges, ragi, etc.		34,000
		6,24,800
Less yearly interest on Debenture Loan ..	37,500	
Dividend on the 6% Cumulative Preference Shares	75,000	1,12,500
Leaving available for distribution to the Ordinary Shareholders		5,12,300

representing approximately 19% on the issued Ordinary Capital.

The expected steady rise in yield from older fields together with increased crops from the large immature areas, which will come into bearing at the rate of approximately 80 acres per year over the next 6 years, provides a guarantee of a steady increase in crops and earning capacity of the Company.

THE CONSOLIDATED COFFEE ESTATES (1943) LIMITED, PROSPECTUS—Contd.

PAYMENT TO VENDORS AND DISPOSAL OF CAPITAL MONIES.

The proposed allocation of the issued and subscribed capital and debentures amounting in all to Rs. 46,50,000 is as follows:—

		Rs.
1.	Purchase consideration to be paid to the Consolidated Coffee Estates Ltd.	32,00,000
	Payable as under:—	
	1,16,000 Ordinary Shares of Rs. 10 each	11,60,000
	14,400 Preference Shares of Rs. 25 each	3,60,000
	800 Debentures of Rs. 100 each	80,000
	In Cash	16,00,000
	Total ..	32,00,000
2.	Purchase consideration to be paid to the Proprietors of Jumboor and Kibberi Betta Estates	7,95,000
	Payable as under:—	
	29,000 Ordinary Shares of Rs. 10 each	2,90,000
	3,500 Preference Shares of Rs. 25 each	87,500
	200 Debentures of Rs. 100 each ..	20,000
	In Cash	3,97,500
	Total ..	7,95,000
3.	For Preliminary Expenses including payment of Stamp duty on the Conveyance, Underwriting charges and all other fees and legal expenses ..	1,30,000
4.	Purchase of additional live and dead stock including valuable stocks of fertilisers, tools, spraying machinery, hose and materials, grains, building materials and including sundry debtors and development at Andanipura Ragi Farm (Rs. 14,000)	2,90,000
	A detailed statement of stocks to be taken over can be seen at the offices of the Solicitors and Brokers of the Company.	
5.	For Working Expenses	2,35,000
	Total ..	46,50,000

BROKERAGE AND UNDERWRITING

The vendors have agreed to take Shares and Debentures in the Company to the extent of Rs. 19,97,500. The balance of this present issue namely Rs. 26,52,500 has been underwritten as follows:—

(a) By the vendors to the extent of Rs. 19,97,500 for a commission of 1%.

(b) By Messrs. Maconochie & Co., Madras to the extent of Rs. 6,55,000 for a commission of 3%.

The underwriters have agreed to pay out of their underwriting commission a brokerage of 1% to recognised Brokers in respect of applications submitted through them to the Company. The Directors are of the opinion that the resources of the above mentioned underwriters are sufficient to discharge their underwriting obligations.

VOTING RIGHTS.

On a show every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him. Provided that the holders of Preference shares shall have no right to receive notice of or to be present or to vote either in person or by proxy at any General Meeting by virtue or in respect of their holdings of Preference shares unless the Preferential dividend shall remain unpaid for six months after any half-yearly date fixed for payment thereof, or unless a resolution is proposed affecting the rights or privileges of the holders of Preference shares.

DIRECTORS' INTERESTS.

Mr. Ivor Bull is interested as the General Manager in India of the Consolidated Coffee Estates Ltd., and as the attorney for sale to the Company. He will continue as General Manager of the Consolidated Coffee Estates (1943) Ltd. No other director has any interest, other than as a shareholder, in the promotion of the Company.

DIRECTORS' QUALIFICATIONS AND REMUNERATION.

The qualifications of a Director shall be the holding of any shares of the face or nominal value of Rs. 3,000. The Articles provide that each director shall be paid out of the funds of the Company a remuneration at the rate of Rs. 1,500 per annum. Each director will also be entitled to receive reasonable travelling expenses incurred in attending meetings of the Directors and when otherwise travelling in the interests of the Company. If any director is appointed to advise the Company as an expert or is called upon to perform any special services in the interests of the Company the Board of Directors may especially remunerate him as it shall think fit.

INSPECTION OF DOCUMENTS.

Copies of the following documents are open to inspection during the usual office hours at the Registered Office of the Company and at the offices of their Brokers and Legal Advisers:—

1. Memorandum and Articles of Association of the Company.
2. Agreement for sale by the Consolidated Coffee Estates Ltd., 71, George Street, Edinburgh in favour of Consolidated Coffee Estates (1943) Ltd., Pollibetta.
3. Agreement for sale by Mr. C. L. J. Humphreys, Attorney for the Proprietors of Jumboor and Kibberi Betta Estates in favour of the Consolidated Coffee Estates (1943) Ltd., Pollibetta.

GENERAL:

The minimum subscription on which the Directors will proceed to allotment is 60% of the Issued Capital or Rs. 23,40,000.

Application Forms for shares and debentures are appended hereto and additional forms and copies of the full prospectus may be obtained from the Registered Office of the Company, its Bankers, Brokers and Solicitors. Each application for shares and debentures should be accompnied by a remittance for the full amount payable on application for each share or debenture applied for, and forwarded either to Messrs. Maconochie & Co., Madras or the Mercantile Bank of India Ltd., First Line Beach, Madras.

The Directors, however, reserve to themselves the right to reject any application without assigning any reason therefor. In cases where no allotment is made the deposit received will be returned in full. In cases where the number allotted is less than the number applied for the surplus deposit will be adjusted towards the amount due on allotment.

The Directors desire is to be distinctly understood that, in giving its consent under Defence of India Rule No. 94-A to the promotion of this Company and the issue of this prospectus, the Government of India does not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

THE CONSOLIDATED COFFEE ESTATES (1943) LIMITED.

TRACTOR OR TANK ?

What is the ultimate destiny of this glowing plate, wending its way through the multiple processes required of flawless steel?

Will it in time emerge to the world as a tank, conserving water in a torrid desert; will it go into the making of a tractor to till the fertile soil of the Gangetic Valley?

Whatever be its final mission, it will contribute to the growth of indigenous industry now, and in the days to come.

Always, everywhere **STEEL** *for strength*

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

A correspondent, who is apparently a regular reader of this as well as other financial journals, complains that he sees less in the press about inflation than a few months ago, and adds, "the topical in journalism is like fashions in dress, in part originality, in part conformity to a prevalent vogue. What has passed out of vogue is not easily revived! But God knows, and man not less, that currency circulation is scaling new heights from which to view the havoc it is causing. Those new heights enable it to escape the ingenious attempts of economists to catch it and control it. It seems to my lay mind that the remedies that have been hitherto recommended are no longer adequate cure for the present virulence of the disease. If foreign Governments are compelled to raise rupee loans in India instead of paying sterling to the Reserve Bank in London, it may prevent a further aggravation. But will it be a remedy against the inflation that has already taken place? If British investments should be transferred to Indian hands, there may be a reduction in the notes issued. But will such reduction suffice? Besides, is contraction of currency the only remedy for inflation? Are we to believe that India will get on better in the future with the pre-war level of currency circulation than with substantial additions to it?". The questions are legion; but their purport is simple, an appeal for a reconsideration of the whole question of inflation de novo, instead of bringing old ideas up-to-date.

* * * * *

There is indeed, a great deal to be said for considering the question of inflation with a fresh mind instead of allowing the brain to move on the tracks of a dead controversy. The reasons for it are not far to seek. Firstly, inflation itself and the attitude of the Government towards inflation and the problems raised by it seem to have entered a new phase. Secondly, the size of our sterling securities and the varied purposes for their utilisation suggested alike by the Government of India and the authors of schemes of post-war international finance indicate that, so far at least as sterling securities are concerned, there is need for a fresh approach. Thirdly, as it is not unreasonable to presume that the end of the war is drawing near, the problem of inflation should be discussed in relation to the post-war problems and developments rather than as an emergent matter during the pendency of the war.

* * * *

If the assumption underlying it is not wrong, the last mentioned should be sufficient reason for reconsideration. But the importance of the first two should not be underrated. It is a matter of not a little significance that the bulk of the pamphlets on inflation were written when the note issue stood at or about Rs. 500 crores. Today, according to the latest statement of the Reserve Bank the note issue is well over Rs. 840 crores. Sterling securities have risen at the sametime to Rs. 800.

* * * *

crores. And the rise will be kept up as the war continues. The British Government will not come into the market as a borrower; nor are the chances of British investments in India changing hands very considerable. In fact, the latter may not be adequate as a remedy for inflation. Besides our sterling securities, big as they are, must be considered not so much as a fountain head of the inflationary flow of currency, which ought to be dried up, but as our holdings of foreign currency which ought to be reduced, enlarged or apportioned among various alternative uses on the merits of the question. There are three distinct demands on these resources, the prospects of which we can ill afford to overlook. Firstly, we need some provision against the contingency of adverse developments in our balance of trade position in the post-war years. Secondly, a certain amount of foreign currency should be earmarked, though not in the way the Government have proposed, for the import of large-scale capital goods for the industrial development of the country after the war is over. Thirdly, India will have to meet a number of international obligations like the International Bank of the U.N.R.R.A.; and it would be wise not to let these obligations cut across the normal financial and commercial transactions between India and the rest of the world. The old attitude to sterling securities was influenced in the main by the notion that since it was on the strength of such securities that additions to currency were being effected in India, the natural cure for inflation must be sought in so utilising the sterling securities as to lead to a contraction of currency in India. Now such utilisation was naturally thought of as a means of transferring our wealth stationed abroad to our own shores. Rupee loans to foreign countries and purchase of foreign investments were al

Mr. J. C. CHAKRABORTY

conceived towards that end. The reasons for trying out a new line of thought are gaining in weight and number. On the one hand, we shall need a good amount of sterling securities to serve as foreign currency in the post-war years. On the other, not all the sterling that we have is capable of being transferred to our shores. And it is a question for consideration whether the two problems of inflation and sterling securities should not be treated apart. As I have pointed out more than once in these columns, though as a matter of historical fact inflation and sterling securities are closely connected, it is wrong to think that sterling securities are essential as a support for large increases in the note issue. If we should use a large part of our sterling reserves and still deem it necessary or advisable to maintain a large note issue, it would be supported by a revaluation of our gold bullion.

* * * *

There is thus good ground for separating the two questions and thinking out each on its merits. Such a separation will enable us to consider the implications of our holding a large volume of foreign securities and the problems raised thereby, as also to ask ourselves as we have not done till now, what is the volume of note issue which would be appropriate to the conditions of India in the post-war period? We may also ask ourselves, what is the limit to which a policy of contraction of currency can be carried, that is, starting from the present point of over Rs. 800 crores of notes issued? Hitherto, discussions of the problem of inflation have been carried on on the basis that, if the Government desist from adopting artificial measures and allow the normal modes of international transactions to prevail, currency would be maintained at its natural level. That no doubt, is a sound view. But, given the present position in which the note issue has risen to 4 times the pre-war figure, the question as to what is the reasonable amount for the note issue calls for separate consideration. If we accept the remedies that are propounded, it will mean that whatever currency circulation we may be left with after executing these measures must be deemed to be appropriate to the real needs of the country. If you reduce the present figure by the value of Britain's financial obligations to India, then it is hardly an exaggeration to say you will have to contemplate an intolerable tightening of the monetary screw.

* * * * *

The need for reconsidering the inflation question in a wider setting is also suggested by the Government's feelings towards it. There was a time when the Government were hardly disposed to admit the fact of inflation. And in this country pamphleteers are not wanting, that would toe the Government line, and advance all manner of arguments to explain away the simple fact that additions to the volume of circulation had been made and had exerted their baneful effect on prices. It was only when the Government thought of the ordinances to increase payments on account of excess profits and to institute control over new issues that they saw some advantage in acknowledging the fact of inflation. But the acknowledgment made little difference to practical policies for combating the effects of inflation. The Economic Adviser to the Government of India was either out of India or did not feel called upon to advise the Government as to how to safeguard the economic life of the country from the effects of large scale additions of currency. In Britain, schemes to that end were formulated at quite an early stage of the war and are now universally recognised to be an impressive success in actual working. But in India not only was no such scheme forthcoming, but the Government of India appointed a Special Officer of dubious competence to recommend deflationary measures. The best comment on what has been happening in India was made not only by Mr. Pethick-Lawrence who attributed the food crisis in large measure to inflation but also Sir John Anderson, who pleaded lack of experience for the Government of India in tackling the problem of inflation. Today, however, the Government of India's acknowledgment of the need for anti-inflationary measures is made more or less indirectly in the acceptance of the suggestion of the Food Policy Committee that the cultivator must be provided with more consumer's goods as an incentive to part with his grain, and in the statement of the Finance Member that the Home Front needs to be strengthened. The obvious need to grow more food not only as an emergent measure of the war period, but also to close the gap between food and numbers, and the Government's anxiety to strengthen the Home Front in other respects as well suggest that the present is the opportune moment for inaugurating an anti-inflationary programme.

* * * * *

But more important than all this is the need to remember that the interval between now and the end of the war may not prove to be as long as it might be thought. Even if the war should last for another two years, there would still be little time left for clearing up the litter of wartime inflation and laying down the monetary policy which should be the foundation for post-war development. Perhaps, I should be on guard against being misunderstood. It is not as if I am sure of an early end to the war or that I have compromised my old position in regard to inflation. Placed as we are in India, we often find ourselves compelled to choose between sticking to a forlorn cry for the best and modifying our demands in the hope of better chances of acceptance by the Government. Such a compromise seems to be a necessity of our mental existence. There can be no doubt that if the policies advocated in these columns and by the economists had been adopted at every stage, there would today be no serious problem. But those policies have not been. And the Government has had its way for what might well prove to be nearly the whole of the war period, with the result that we have a note issue and sterling securities of over 800 crores. Prices have soared to new heights, except where official control is effective. The approaching end of the war, the internal economic situation at the present moment and the economic aspirations which we still tenaciously cling to for the future in the face of the most disheartening experiences, all alike call for a reconsideration of the whole problem of currency and foreign exchange in relation to the position and prospects of the national economy.

* * * *

If we adopt this point of view, then we shall recognise that to transfer our assets in London to our shores is less important than to ensure their security and their proper utilisation at a later stage. We shall recognise, too, that in combating inflation, some attempt to grow to a higher level of currency circulation than the pre-war level is more important than mopping up redundant currency. This attempt to grow to a higher level of currency is related in the very nature of things to the economic development of the country in the post-war period. The Government, for their part, are only thinking in terms of a larger supply of consumer's goods irrespective of how they are got. The present emergency may be such that any addition to consumable goods must be welcome, not only from the point of view of combating inflation but also as relief to the average Indian who feels himself hard pressed in many ways. But imports as the only possible means of abating the inflationary pressure on prices must be regarded as the starting point of a policy that might ultimately end in large import surpluses and the liquidation of our foreign assets. It was not long ago that Lord Linlithgow asked India, on the strength of her position as a creditor country, to be prepared for a normal import surplus. The Food Policy Committee under the Chairmanship of Dr. Gregory also recommended an increase in the supply of consumer's goods. There have also been more than one news report pressing a considerably larger inflow of imports. It is not therefore unreasonable to apprehend that the Government are thinking of a larger volume of imports as the only means of adding to the goods available for consumption. But, with the food situation as it is, there is, in the sphere of foodstuffs at least, large scope for augmenting consumer's goods from domestic sources. Not the least of the evil effects of inflation is that the enlarged purchasing power has been concentrated on the urban population and that the rural population benefit by it only indirectly and in very small measure. The evils of higher prices far outweigh such indirect benefits. That the production of standard cloth has not been consumed in full is proof that rural India is still lacking its proper share of purchasing power. The idea of the Madras Government that standard cloth should be produced by the handloom weavers instead

(From Our Correspondent)

New Delhi, Nov. 22.

THE five-day food debate in the Assembly had a disappointing end. The various groups due to sharp political differences were unable to arrive at an agreement as to the form the proposed famine enquiry should take. The Government taking full advantage of this refused to hold any kind of enquiry in the immediate future. All the three non-official amendments were lost. The Government gave no indication as to their plans except for the emphatic statement by the Food Member that the Central Government will use its overriding powers to introduce rationing in surplus areas, if the Provincial Governments concerned are still reluctant to do it. Lobby comment was extremely critical of the Government's lack of a bold and adequate policy. The opposition case was convincingly put forth by the party leaders on the concluding day of the debate. Both Mr. Jinnah and Mr. Abdul Qaiyum held the Central Government entirely responsible for the disaster. For all the measures that could have averted the tragedy—stoppage of exports, imports from overseas, ending of inflation and provision of adequate internal transport—could only have been enforced by the Centre.

* * * *

All the provincial Governors were here during the last week-end to confer with the new Viceroy on the famine situation which still remains serious. The aim of the conference was to co-ordinate provincial food policies. Plans were also discussed for an economic drive aimed at raising the standard of living in the country. No concrete details are however available of the Government's plans. The Viceroy seems to be personally interested in the matter.

* * * * *

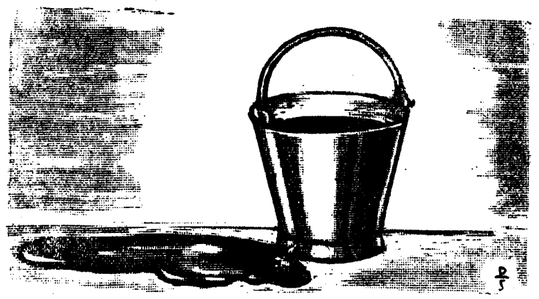
While the British and American Governments are taking active steps to ensure their position in post-war shipping, the Government of India still fight shy to define their policy. It is stated that the Government have received a full report of the recent statement made in the Commons by the Joint Parliamentary Secretary to the Ministry of War Transport on British post-war shipping policy. Further information and clarification on certain points has been asked for and on receipt of this "consideration will be given to post-war shipping problems as part of the wider question of post-war trade and industrial policy". It is feared that these vague statements only hide a desire to meekly follow the policy dictated by British shipping interests. The Government otherwise ought to have formulated concrete plans of their own to undertake a large scale expansion of the Indian merchant navy to ensure the carriage of India's maritime trade by Indian ships. It is stated that the scheme to develop merchant ship-building by an Indian concern had to be "abandoned temporarily" owing to circumstances over which the Government held no control. Several ocean-going vessels will be however built in India during 1943, utilising the country's present capacity for constructing such vessels.

* * * *

Surprise and resentment are being expressed here at the refusal of the United Nations Relief and Rehabilitation Association to consider relief plans for the famine areas in Bengal. At the same time plans are being drafted according to which India's share in financing post-war relief schemes may come to over Rs. 10 crores. An official assurance has now been given that this financial contribution will be subject to approval by the Central Legislature. It is stated that India's contribution will mostly be in the form of textile goods for the Middle East and Balkan countries, and burlap which will be extensively used as a covering material for relief packages.

* * * *

There has been an alarming fall in India's production of coal during recent months. It was revealed last week that coal production fell slightly year by year since 1940, which was the peak year. The decrease in output assumed serious proportions only from June 1943. Production fell by over a million tons during the three months from June to August, while September recorded a decrease of about 300,000 tons. It is now becoming increasingly plain that the present out-put is not sufficient to meet the increased demands for coal made by essential consumers such as war industries and railways and for important military projects. It is stated that even to meet rationed demands, the Government have to ensure a supply of 25.64 million tons. This is a larger quantity than has ever been produced before and so the Government propose to take urgent measures to increase production. More wagons are now provided to take away coal from the Bengal and Bihar coalfields. Attempts are being made to ensure prompt delivery of colliery stores and machinery and increase the quantity of consumer goods available at collieries. Action is also being taken to prevent any military interference with colliery labour. Shortage of labour, it is stated, is the principal reason for the decline in output and the measures now taken should attract more labour to the coalfields.



* * * *

It is stated that the target aimed at in British India during the current year under the "grow-more-food" schemes is an increase of area by millets and 5 lakh acres for wheat and gram over the acreage of the three pre-war years 1936-39. The increase in the area under paddy in Bengal is expected to be 2.5 million acres compared to the corresponding figures for previous year. The area under rice is likely to reach the record figure of 26.2 million acres in the three pre-war years. It is stated that there was no shortage of seed for growing paddy during the current year. The area under jute in Bengal has also increased by about 200,000 acres during the war years.

* * * *

It is understood that while the total imports of foodstuffs into India from April to October this year amounted to 100,000 tons, The total production of foodgrains in 1942-43 was 52.1 million tons, the country's needs being 53.9 million tons. The quantity required for military consumption is about 65,000 tons of all foodgrains.

(FROM OUR CORRESPONDENT)

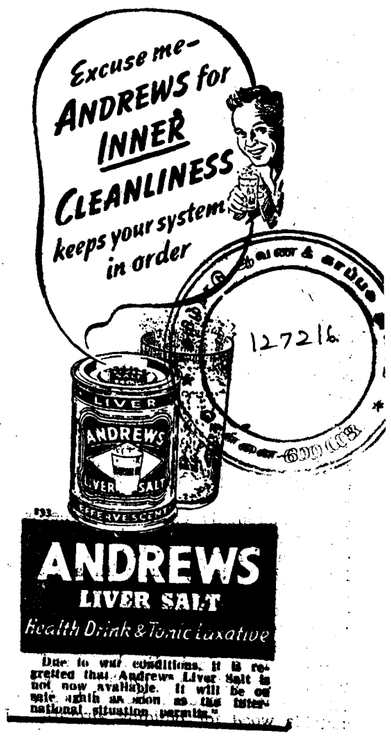
Bombay, November 23.

THE press note on cotton prices and Government's plan to take up cotton if prices declined has been without any definite effect on the cotton market. Maxima and minima make no difference to the cotton outlook. Government as buyer may not be able to dominate the market in the way the Japanese shipper could and did. Further, the crop this year is of varying quality and traders are in a mood to pick and choose. The mills are in no hurry to buy for the downtrend is still pronounced, and heavy arrivals must lower prices. This week too fluctuations have been common, and there is no chance of the ceilings being touched. Since outsiders are not participants daily variations reflect the trade's view as to the proper level.

The main commodity markets have left the boom behind and no one can say that anti-inflationary operations won't leave a mark on cotton prices this season. Since the press note, offering protection to the grower, appeared, there is a disposition to let prices slide and see how and when the Government intervenes. There will be problems of storage at the ports and questions as to disposal. Government could conceivably trade cotton for the cloth required for war orders. The mills of course would buy at the lower levels and the Government may never be able to exercise its option. That is apparent to the trade but when the crop is coming on the market, the average view is bearish and the jute market depression is not without effect on cotton mills' view of the chances of getting their raw material at lower prices.

Rural propaganda has been started by the Government in the Sholapur District. The publicity campaign is connected with rural reconstruction, food and rationing. The vans used for publicity enter the towns and the Sholapur experiment is already called a big success. Sound films sent by the Central Government were used for the food campaign and the Collector used the loud-speakers for speeches against hoarding. Village audiences reached by the films are likely to appreciate the value of the hints on grow more food and Bombay's departure in publicity may evoke imitation by Local Boards. The Corporation here may take to intensive publicity and the official 'shorts' may be guaranteed audiences different from those in the typical cinema in the towns.

The Government of Bombay issued a statement defining the scope of crop purchase: compulsion will not be applied. Purchase direct from the cultivator does not involve acquisition at low prices for the benefit of rationed towns. Various rumours have been contradicted by a press note indicating that Government must buy at reasonable prices, but the villagers would not be forced to help the towns. The Government intends to import from surplus provinces. There is a plan to get rice, wheat and millet for Ahmedabad and a consignment of nearly 10,000 tons is expected from outside the Province. According to the press note the Government is keen on securing equitable distribution and check profiteering. There is reference to a delicate balance between price control and supply arrangements, and the greatest factor always is public confidence in the fairness of administrative measures.



The Madras Government's decision to end Prohibition excites little comment here. Politicians protest; but the revenue must be augmented; and the hope of Prohibition being restored remains. Bombay city is partially dry and will remain so. There are pleas for a change in policy and toddy's food value is being described afresh. Liquor consumption is going up. The city is getting bigger and richer; and the Trade gets its share of new wealth. Monthly consumption is put at 8,000 to 9,000 cases of liquor as compared with the pre-Prohibition total of 5,000 cases. Imports are down. That fully explains it, and what is really dangerous today is that the consumption of beer is down while country-made foreign liquor sales are soaring. The Nasik distillery cannot deal with the orders for liquor. There is larger excise receipts and the growth of consumption stimulates illicit manufacture. Punishments after long trials turn out to be inadequate and the evil is admitted. The Government here may not care to upset the decision of the Ministry because the Corporation may raise objections and the landlords may ask for tax reduction at once. Since excise revenue is up, there is no real cause for letting country liquor in, and the rising cost of living is a big factor today in keeping out one item of consumption.

The Ordinances have not lowered prices. Imported goods are dear and scarce and if books are cheaper of late, everything else is up. There is an assurance of cheaper medicines in the near future, and a Deputy Controller is expected here to enforce the latest ordinance. The trade got Mr. Desai's views as to prices and profits and profiteering in the big towns is to be wedded out by special measures. The Drugs Control Order is to take effect soon. Chemists have to publish the prices for the customers' sake. Complaints are invited and special markings to protect the buyer are to be put on packages from Jan. 15. The book trade has defined its obligations and the buyer of whisky has been told that early relief is not to be expected. Mr. J. H. Cama expressed the view that after the war too there will be a shortage of Scotch whisky and rationing is necessary for civilians today and hereafter. This might be called a bull point for Indian manufacturers at present and the share market in Calcutta may put its own interpretation on the letter detailing the myth of imports, the stoppage of distillation in Scotland, and the expansion of demand in India.

Cricket has returned and inter-Provincial fixtures are arranged. The Pentangular matches will claim more attention from this week. Delay in marketing the arrangements has been criticised and the only good ground available here will be engaged most days. That is not so bad from the view of those who want non-stop cricket but the Kathiawar States are not showing much interest this year. Last year the cricket tourney was given up for political reasons and revival at this stage surprises many. Famine relief or some charity may be affixed, and the organisers are back in business.

The work of the School of Architecture here has been mentioned as a proof of India's interest in post-war townplanning. The older Indian towns were designed by rulers and the only complaint against more recent planning is that housing has been neglected. A new use for military hutments has been suggested. They are wanted for rehousing the slum-dweller in the event of clearance. They are convenient and would cost nothing. The Viceroy is expected to help municipalities to get the areas and also to provide the transport for industrial workers. The property-owner may have some objections but proximity of the poor cannot hurt any one and the big thing is to get young architects ready for the jobs mentioned by the Viceroy in his message to the Public Health Commission. Sir R. D. Dalal asks for a Ministry of Health to let the Centre have its say in health and matters municipal. A ground plan for organisation was offered in a letter to the *Times of India* last week. Four Sections helped by cognate Departments are wanted and the inquiry now under way is expected to cover both economics and health. Prof. Hill of Cambridge may give advice on research for reconstruction but the concrete proposals made by Sir R. D. Dalal should not be lost sight of.

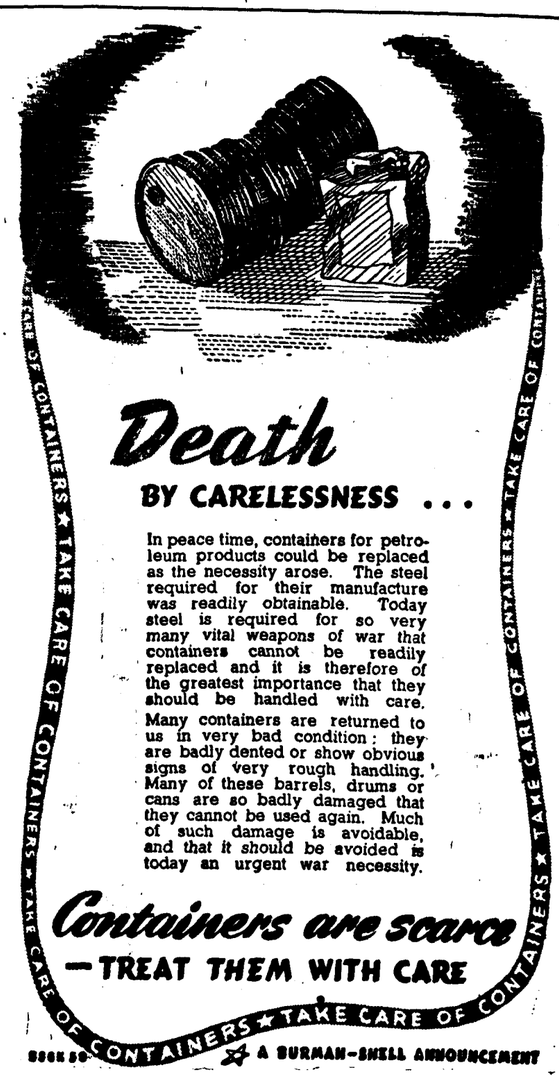
South India



(From Our Correspondent)

Madras, November 24, 1943.

The shortage of quinine assumed all-India importance after the loss of the Netherlands East Indies and the necessity to allocate the existing resources became acute. The stocks were distributed according to the real requirements of the Provinces and the States. Actually about 75% of the normal consumption was met under the distribution plan and Madras received her quota of the drug which was rationed to different districts. The Government of Madras in a recent Press Note state that adequate arrangements have been made for making quinine sulphate available to the medical practitioners, to the different institutions and to the members of the public at the rate of Rs. 39-6-0 per lb. The public are allowed to purchase quinine upto 100 grains of powder or tablets at any time from the Post Offices, licensed dealers, or private medical practitioners. Still there is a thriving black market in this drug where the prices offered are exhorbitant. Evidently the public demand is not satisfactorily met under the present arrangement and so the Government have proposed to license more dealers in Madras City and in the moffusil. Dealers will be licensed even in small towns with a population of less than 5,000 and, in order to encourage the free flow of quinine to large number of medical practitioners, the Government have ordered that these practitioners need not maintain accounts of the sales as hitherto. It is hoped that the new arrangement would help in the quick and easy distribution of this much needed drug to the suffering people in urban and rural areas alike.

The firewood situation in the city continues to give anxiety. The Collector of Madras has made arrangements for taking charge of the firewood arriving in the city eliminating the numerous middlemen in the trade. The firewood is distributed to the Provincial Marketing Society which distributes it to the public through its depots. The National War Front depots are also distributing firewood to the citizens in different areas of the city. This scheme, it is understood, will be in force till firewood rationing is introduced. The Government have further deputed four forest officers to study the problem of fuel supply in Madras. In view of the fact that both coal and firewood are very scarce in large areas in the Province, it is expected that these officers would draw up a scheme of long-term forest policy which would aid agriculture, increase the supply of raw materials for our industries and also assure regular and adequate quantities of fuel to the ever-increasing civilian needs. We hope these officers would thoroughly examine the needs of this province and its forest resources and outline a plan not only to meet the pressing needs of today but with a view to developing new industries in future. India should be made independent of imports in the matter of forest products. Under the stress of war conditions attempts were successfully made in Bombay Presidency to do away with teak imports. Recently attempts were made in Bengal to find out suitable wood for building aircraft. In Madras a paper expert recently surveyed the possibilities of developing hand-made paper from forest grass and wood pulp. If an exhaustive study of the forests are undertaken by these four forest officers we believe that useful information can be made available to the industrialists for exploiting them for the economic betterment of India. Though their immediate problem is fuel, the opportunity of conducting a comprehensive survey should not be missed.

Speaking on the food crisis at the annual dinner of the Hyderabad Chamber of Commerce, Sir Purshottamdas disproved the contention that India's food shortage is due to the rise in population. According to him there are four main reasons for the national distress. First, the absence of reliable and up-to-date statistics of any sort to measure the magnitude of the food crisis and grasp the real trends in our national life. It is well known that absence of statistics is a great stumbling block to economic studies in this country. Quack explanations, interested interpretations, wrong understanding of the situation can thrive only in an atmosphere of statistical black-out. The nationalists in India have often felt it a despair to prove the misleading statements of the powers-that-be. An efficient machinery for the collection of economic data is a prime requisite for democratic progress. Sir Purushottamdas has indeed done well in emphasising the supreme importance of statistics in the formulation of correct policies. Secondly, the progress of industries have been definitely arrested in India and the excessive pressure on land can hardly look to industries for relief. Thirdly, the question of ensuring adequate return to the growers of raw materials has been neglected by the Government of India. Fourthly, the productivity of Indian agriculture has been allowed to be extremely low. These factors, according to him, have worked up to cause a tremendous crisis in the land and, if the Bengal tragedy is not to be repeated elsewhere, a bold long-term agricultural policy is to be chalked out without any more delay.

Resume of Commodity Markets

The important feature of the week is the announcement by the Government of India regarding their determination to buy in the market unlimited quantities of cotton at floor prices if necessary. As there were reports regarding the inability of Government to purchase cotton in any large quantities, if there was a decline in prices to below the 'floor', this announcement has come about timely. The jute market has been distinctly firmer while the jute manufactures market has been slightly easier. Bullion markets have been uninteresting.

It was pointed out last week that the easier tone of the jute manufactures market should have resulted in a firmer jute market. Sellers were then inclined to await further developments. During the past few days steadier conditions have been noticeable and a good rise in prices has been recorded with an increase in the volume of business passing. The strength of the market will continue to be in evidence for sometime as it is said that there is every likelihood of mills working a larger number of hours even in December. On an earlier occasion we pointed out that jute prices would be maintained if the rate of arrivals were maintained. An increase in the number of working hours to sixty a week would take up consumption to above the rate of arrivals and the problem of storing jute will not therefore be acute. There is no confirmation of the reports regarding an increase in working hours. It is presumed that the I. J. M. A. will decide on the increase in the number of working hours only if it were made sure that the increased production would be consumed as fast as it was produced.

* * * * *

Towards the close of last week the Government of India announced floor and ceiling prices for a wide range of descriptions and stated that the list will be extended at a later date. The note added: "The Government of India intend to buy new crop 1943-44 season cotton by whomsoever offered in Bombay, Karachi or upcountry at the floor prices or their upcountry equivalents except that Government will not buy any cotton unless the Indian Cotton Contract in the market of the East India Cotton Association in Bombay is quoted at the floor price of Rs. 400 per candy and then Government will buy basic Jarilla Khandesh ¾" staple at the floor price of Rs. 400 per candy and other styles at the floor prices named above or at the market for those styles whichever is lower. Government intend to carry through their policy with the utmost determination regardless of the quantity of cotton offered."

The initial reaction to the announcement was favourable as the market was awaiting the declaration of policy by the Government. In the ready market also quotations were lower than the parity announced in the Government communique and there was therefore a rise in the quotation for styles other than Jarilla. The initial rise in prices, however, has not been maintained. With a good hedge against selling, bears have not been anxious to cover their positions. Mills also have been waiting for a slight decline in prices. With the reports regarding bad weather conditions in the cotton-growing tracts there is a tendency to await further developments.

The immediate effect of the announcement has not been quite favourable. But with the level of consumption of Indian cotton by mills at a high level, there must be a rise in prices before long. Also, nearer the floor prices there will be greater resistance to selling pressure. One important point to be noted is that the Government have agreed to purchase other styles at the floor prices or at the market prices whenever Jarilla touches Rs. 400 per candy. The decision of the Government to buy at floor prices or at market rates, whichever is lower, provides for a greater freedom of price movement so far as basis differentials are concerned. Otherwise, in the event of prices being marked down below floor prices the range of prices as fixed by the Government would be in force throughout the season.

* * *

At the auctions of tea held for consumption in India there was a strong demand for dusts and prices were higher by six pies per lb.

* * * * *

The decline in prices for rice to Rs. 19 per maund has to be welcomed. It is reported that fairly large quantities of rice are available in the mofussil markets and that the harvest of the 'Aman' crop has been quite satisfactory. The Government of Bengal has declared that as a result of the scheme for acquiring the 'Aman' crop quite a substantial reduction in prices would be achieved. It is satisfactory to note that after the lapse of many months the situation is getting under contro Whether the decline in prices would prov to be permanent cannot be definitely saic The importance of a low level of price for the staple commodity cannot be over emphasised as in recent weeks pric fluctuations in other markets have beer mainly determined by the prices for rice

* * * *

Cabled reports received during the week point to the sharp increase in prices for wheat in the United States. With the growing opposition to the Governmen in respect of the Farm policy wheat price have sky-rocketed. The freer inter national movement of wheat will, it is feared, accelerate the rise in prices. So far, the Canadian and Australian markets have not been affected. As large imports of wheat are being received in this country from overseas any rise in prices will therefore, be at our expense.

The Central Government have not formulated any postwar social security plans for India on the lines of the Beveridge Plan. It is stated that the Government soon hope to implement the resolution of the Tripartite Labour Conference held in September last. The Conference had asked the Central Government, in co-operation with Provincial and State Governments, to set up a machinery to investigate questions of wages and earnings, employment and housing and social conditions generally and, on receipt of the required date, to set up a united committee to formulate social security plans.

* * * *

There have been recent public complaints about the rapid depletion of India's livestock adversely affecting the country's agriculture and milk supply. It is now officially stated that necessary restrictions have already been imposed preventing the slaughter of useful cattle (cows in milk or working cattle) for supplying beef to defence services. It is stated that import of livestock at present is impracticable due to lack of specially fitted ships for the purpose and of facilities for storing frozen meat. It is also explained that two-thirds of the military requirements of beef are being met by imports of tinned bully beef.

* * * *

It is understood that 320 gross tons of liquor and 781 gross tons of toilet goods were imported into India during the two famine months of September and October. It is officially explained that these imports of luxury goods only occupied a fraction of the shipping space used for importing food and were mostly shipped from areas in which foodgrains were not available.

* * * *

It is reported that the Indian bank might be issuing fresh capital on advantageous terms to shareholders.

The monthly accounts of the Central Government for August show that in the first five months of the current financial year expenditure exceeded revenue by Rs. 49 2/3 crores against Rs. 53½ crores in the corresponding period in 1942-43.

Revenue receipts were higher by Rs. 24¾ crores during this period while defence expenditure increased by about Rs. 8½ crores to Rs. 86½ crores and civil expenditure by Rs. 2¼ crores. The contributions from Railways and Post and Telegraphs amounted to Rs. 26¼ crores and Rs. 1 2/3 crores respectively. The addition to permanent debt was Rs. 95 crores. HILL-BIRD.

(*Continued from page* 999)

of by the mills affords an illuminating instance of what may be done, if the Government will learn to think in terms of the rural masses. While the Central Government are prepared to lend crores to Bengal after she has been stricken by famine, they make no effort to see how economic production in rural India can be stimulated by appropriate public expenditure. When the note issue has risen to Rs. 800 crores, there should be less compunction than ever before to spend a few tens of crores on measures that can raise productivity of cultivators and village artisans. Such expenditure, inflationary as it may seem, can do more to combat inflation than measures of taxation which invite evasion.

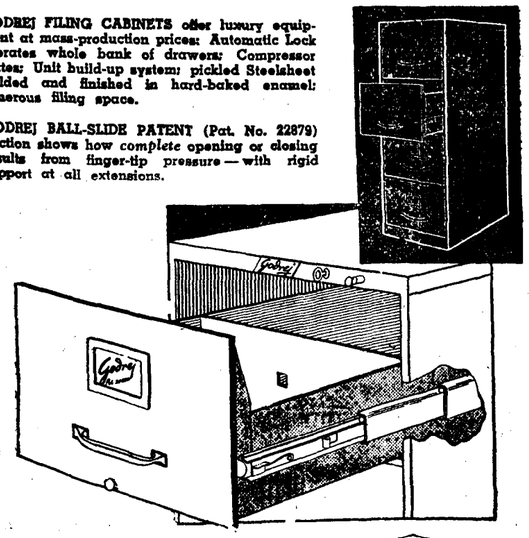
A distinguished career in industry rounded off the late Mr. Durga Prasad Khaitan's success in the law. He belonged to a well-known family which is the poorer by his premature death at the age of 51. To inherited acumen he added knowledge of many kinds and his acknowledged position as solicitor and later as initiator of enterprises was due to the play of a lively curiosity and eager instinct. He represented the Indian Chamber of which he was Vice-President more than once on many Committees and Boards. Long familiarity with business affairs tempered his judgment of men, events and enterprise. The science of business administration indeed claimed all the attention he could give, but his social gifts were remarkable alike in range and constant exercise. To his family the loss must be personal, but to his community too, the loss must be equally so. The younger Indian businessmen of Calcutta certainly will miss a leader whose mind moved with the times as his varied interests proved to the satisfaction of many. His career, like that of his brother, has justly proved that the legal profession in Calcutta is the forging house for many great careers in business, and I should only wish that Mr. Durga Prasad's had been longer. "EAVESDROPPER".

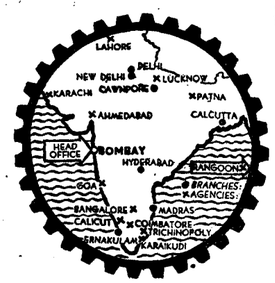


FINGER-TIP FILING

by Godrej

Every document at your finger tips—from a letter to a large scale map or drawing; and in drawers that run in and out at the touch of your little finger!

GODREJ FILING CABINETS offer luxury equipment at mass-production prices: Automatic Lock operates whole bank of drawers; Compressor Flutes; Unit build-up system; pickled Steelsheet welded and finished in hard-baked enamel; generous filing space.



GODREJ BALL-SLIDE PATENT (Pat. No. 22879) Section shows how *complete* opening or closing results from finger-tip pressure — with rigid support at all extensions.

GODREJ CARD-INDEX CABINETS are made in different card sizes, in units of single, double, quadruple or more drawers.

VISADEX — the Godrej solution to the problem of instantaneously visible accounting and statistical or other record-keeping—with hinged cards.

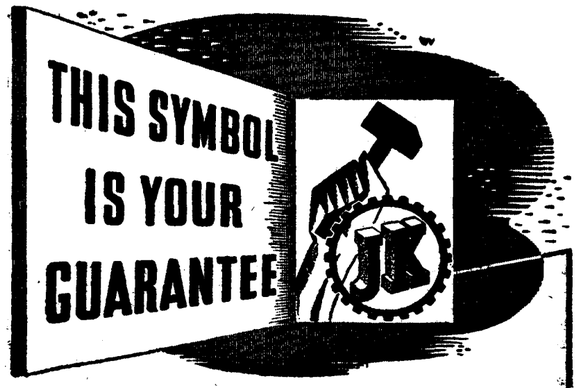
Coorg is the province where coffee (the pepper vine, too) flourishes best; and details in the prospectus afford an assurance as to condition and crop prospects. Larger crops are expected and the recovery in the Indian coffee market supports the calculations as to profits. The estimated return is 19 per cent on the ordinary capital, and betterment is possible when immature areas come into bearing. Capitalisation per acre for the area under coffee at Rs. 850 only per acre is not high compared with prewar figures, and this certainly deserves emphasis, for the new company acquires assets at a conservative valuation; and the annual return should suffice for development and the extinction of the debentures issued by the company. While the prior charges will naturally merit great attention for obvious reasons investors should note the impresive earnings of coffee plantations in recent years even without going into the virtues of control by Ordinance.

The vendors take part of the consideration in shares of the Company as well as a part of the debentures. The Board is one of experienced planters in addition to Dewan Bahadur Shanmuga Mudaliar who is a Director of the Imperial Bank of India. The prospectus is fully informative and it is hardly necessary to relate the vastly improved outlook for Indian coffee, at home and abroad, to this planting issue which is considerable enough to merit the attention of many investors outside Madras. While some stress should be laid on the fact that the Company is British Indian, it is necessary to draw attention to the expectations of improved outturn of both coffee and pepper, the latter too scarce today owing to the loss of the East Indies.

(*Continued from page* 989)

where the partly paid up shares of the Imperial Bank shares may be said to be under-valued. It may also be stated that the published results do not appear to disclose the full earnings of the bank. Even assuming that the greater part of the additional deposits is earning only the rate available on treasury bills, there mut be substantial improvement in the annual earnings of the bank.

The Exchange market has been steady but far from active. There was a sprinkling of export bills. Some business in T.T. was reported in both directions. The closing rates are:—



Banks are sellers of T.T. at 1s. 5 31|32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on Lonodon at 1s. 6 9|32d., and four months bills at 1s. 6 11|32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

This symbol distinguishes the products of 32 manufacturing and trading companies that form the J. K. Group of Industries. It represents service to the public and to the country. To the public, because it is their guarantee of quality and sterling value; to the country, because it stands for prosperity through rapid industrialisation.

The J. K. Industries today have a working capital of millions of rupees, employ thousands of workers and have a country-wide network of agencies and distributing offices.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, November 25.

COAL again takes pride of place as the dominant factor in the Jute Industry. We uttered a warning last week that although the situation appeared more favourable then, there was no guarantee that the mills were yet out of the wood so far as coal supplies were concerned. And the current week has shown that the more favourable situation was very short lived. The average arrivals this week have only been in the region of 30 waggons per day—less than half requirements or the promised quota. Certainly the current week has been an "off" week under the agreed schedule and only those coal consuming mills which had time to make up, have been working. But this constitutes practically the whole of the coal consuming mills. And even so, few of them have been able to take full advantage of the concession. Complaints regarding quality of the coal are also again rife, Aberdeen granite, iron ore and discarded tar-macadam road surfacing being amongst the components reported in recent alleged coal arrivals.

Though the 60 hours per week rumour which was current last week was again revived this week, it had a short currency in face of the short coal arrivals. Even the most optimistic Bear can scarcely impress with a tale of 60-hour working when it is only too apparent that even the current 54 hours cannot be maintained regularly.

The mills recently earmarked for requisitioning, have now received their notices to vacate and with very little consideration regarding the length of notice given. Those in authority do not seem to realise that valuable machinery which has been bedded in for the best part of a generation, cannot just be pushed aside, and, if it is to retain any ultimate value, must be carefully dismantled and systematically stored for future re-erection. So it is to be hoped that reasonable discrimination will be exercised by those taking possession, no matter what their urgency for occupation may be. After all, many weeks have elapsed since the question of requisitioning first arose, so a few more are not likely to make so much difference.

We remarked some time ago on the suggestion that dealings in a "X" mark in jute should now be permitted. The proposed date of introduction was the 15th of November, but opinions in the trade regarding the manner in which dealings in the "X" mark should be authorised, were so sharply divided that considerable delay has resulted and as no basis of agreement seems likely to emerge, it is understood that the Jute Mills Committee have had to undertake the responsibility of laying down the law governing transactions in the "X" mark. Their view appears to be to some extent coloured by political considerations. It is understandable that, with the time approaching when the quota sowings for next season's jute crop must be considered, the mills have no desire to provide the recalcitrants in the local Assembly with a weapon which may be used against them when it comes to endeavouring to assure an adequate supply of raw material for the industry. And the competing claims of "Grow-More-Food" are likely to be strong enough. Any suggestion of a lower mark at a lower price than those now current in the market would be likely to provide such a weapon, regardless of the fact that the mark would only cover a grade of jute intrinsically inferior to any now quoted. So it is believed that the action taken by the mills committee will only permit the tender of a proportion, probably 10 per cent, of a "X" mark, which may be either straight morahed or habi-jabi, along with any sales of Bottom grade after the date of the notification. As there are both buyers anxious to buy and sellers anxious to sell this lower grade, it is to be hoped that the notification will not be long delayed. Whether the 10 per cent suggested will be sufficient to clear dealers' hands of this "throw-out" grade is a moot point. It is believed that there are considerable stocks of this type of jute in some hands which has been carried forward for several seasons. What is almost inevitable if this scheme is promulgated is, two prices for Bottom grade, one price for a Bottom guaranteed free from "X" and another lower price for a Bottom with which the sellers wishes to exercise his option to deliver the percentage of "X". And it is difficult to see how this situation can be overcome even though it may be, in effect, a breach in spirit of the decree of the I.J.M.A.

It is regrettable to record that no steps appear yet to have been taken by those in authority to quash the Fatka markets which have recently raised their heads in the trade. Fortunately so far they are somewhat diminished heads, but even that is no reason why they should be allowed the opportunity to develop. The sooner they are still further diminished to extinction, the better all the more stable elements in the trade will be pleased. It is believed that further representations were recently made both to the local Government and to the Centre in this connection and it is to be hoped that action from either one direction or the other, if not from both, will not be long delayed. It is perhaps worthy of note that, at the moment, the only two descriptions of fabrics which are quoted under ceiling prices are the counters in the gunny Fatka, 10 oz. hessian and "B" twills. Protagonists of Fatka must have difficulty in even convincing themselves that Fatka is therefore a truer indication of the market than the market itself.

There is one respect in which many mills would like to see a revisoin of the celling rates and that is with regard to the basis on which most of the standard sacking fabrics have been fixed. Few, if any mills for instance, will attempt to maintain that Cornsacks can be manufactured at the same price as a "B" twill, though both bags are of the same weight. But the Cornsack is made from narrower cloth and higher shotted, consequently slower in production, while it is also an eight porter fabric as compared with the six porter of the "B". The consequence is that when Cornsacks and "B" twills are equally in demand, mills will always prefer to sell "B" twills to selling Cornsacks at the same rate. This is probably one reason why "B" twills have gone to a discount on a quiet market while fabrics like Cornsacks and Liverpools have remained at full ceiling rates. But it is reported that Australia and South African markets have both complained recently that their requirementts were not obtainable when "B" twills were competing at the same price. A slight modification is all that is required to avoid this anomalous situaton and there seems no adequate reason why it should not be made.

Interest shown in the Export jute market has been comparatively light and mainly confined to Dundee Daisee in which business in Long Group was exported from Rs. 69-8 up to Rs. 73 and in Short Group from Rs. 76 to Rs. 79. Dundee Tossa 4s were reported for shipment at Rs. 74. Sellers are reserved in view of the advance in the prices of loose jute. The nominal quotation for Firsts is Rs. 77. Mills have not been reported buyers to any extent in the pucca bale market except for Cuttings in which business was done at Rs. 32 N.C. and Rs. 31 M.C.

In Loose Jute a considerable further turnover has to be recorded and at advancing prices. European packing sold up to Rs. 15-8 and Rs. 12-8 Middles and Bottoms and is now held for four to eight annas more. Supervised Jat sold to considerable extent at Rs. 15 and Rs. 12 and later at four annas more. Bengali Jat marks were recorded at the same rates and Marwarri Jat up to Rs. 15 and Rs. 12. Supervised District sold to a lesser extent at Rs. 14-12 and Rs. 11-12 Middles and Bottoms and sellers now ask four annas more. A considerable quantity of Tossa also changed hands both to mills and balers, the latter having paid as high as Rs. 17 for European Jat Middles. Mills bought at varying rates up to Rs. 15-4 and Rs. 12-4 for Indian District Tossa and up to Rs. 15 and Rs. 12 for Jungli. Sellers are now reserved and offering little or nothing owing to the scarcity of imports into mofussil markets. Up-country business is handicapped by the departure of labour for the paddy harvest and also by the prevalence of malaria in epidemic form. Even if imports were available it would be difficult to handle them at present.

The Fabrics section has been a fluctuating market during the week, and influenced not a little by the movements of Fatka. Of the two counters, eleven porters have varied from Rs. 27-12 to Rs. 27-8 and back to Rs. 27-12 near, with January-March at Rs. 27-7 to Rs. 27-10, while "B" Twills for December have fluctuated between Rs. 66-8 and Rs. 65-8 and January-March between Rs. 66 and Rs. 65-4. Business to shippers was recorded in 10 oz. at Rs. 27-11 P.D.O. January Liverpools sold to shippers at Rs. 75 and Rs. 74 with January-March also reported at Rs. 75. Cornsacks and D. W. Flours for January-March sold at ceiling rates and January Cubans a Rs. 81.

JUTE

Calcutta, November 25.

DEFINITELY firmer conditions have been noticeable in the raw jute market during the past week. The increased arrivals of coal and the larger number of mills working have been mainly responsible for the improved tone of the market. Mills also have been buying jute on a larger scale. Quotations, as such, are appreciably higher on balance. It is felt that with the continuance of the present conditions there may be yet further rise in prices. However, the decline in the Hessian market on the fears of a larger production, and the increasing control of foodgrains, might be considered as a bearish factor for a further improvement in jute prices. Having regard to the essentially sound statistical position of the commodity the present tendency should continue to be upward, with the prospect of an increase in production unless it is definitely known that the supplies for the next season will be on an appreciably large scale. The recent improvement in Calcutta prices has enabled the dealers to operate more freely in the mofussil centres. It can now be said that the disparity between mofussil and Calcutta prices has to a certain extent been eliminated.

In the loose jute section, as pointed out above, a greater volume of business has been passing. European Middles and Bottoms were done at Rs. 15-8 and Rs. 12-8 per md., while supervised Jat were Rs. 15 and Rs. 12 per md. Indian Jat Tossa sold at Rs. 15-4 and Rs. 12-4 per md. and Jungly Tossa at Rs. 14-4 and Rs. 11-4 per md. Balers are still interested in Tossa varieties and a good premium is demanded by sellers.

In the pucca bales section there is not anything of importance to be reported, but higher prices have been paid by both shippers and mills. A good premium is demanded for forward deliveries. Dundee Daisee 2/3 were two points higher at Rs. 71 per bale and Short Group at Rs. 79. Mills bought earlier in the week Lightnings at Rs. 70 per bale. Cuttings Mc's and Nc's were sold at Rs. 32 and Rs. 31 per bale.

JUTE MANUFACTURES

Calcutta, November 25.

THE strength of the jute market necessarily means the weakness of the jute manufactures market under the present conditions. For, it is on the prospect of an increase in production that jute prices have been marked higher recently, and it need not be said that the prospect of an increase in production of jute manufactures is a bearish factor, particularly for the Hessian market. There has been no heavy selling however, and quotations are only a shade easier alround, it being realised that mills are in arrears of deliveries and that any increase in production in the coming months will be only enough to overcome the deficit, in regard to earlier production. The undertone is quietly steady and it is generally felt that there may not be any appreciable decline in prices. 9 Porters are quoting Rs. 21 for all positions against Rs. 21-4 at the end of last week. 11 Porters for November delivery were Rs. 27-10, December Rs. 27-8 and January/March Rs. 27-8.

In the heavy goods section, after earlier weakness slightly steadier conditions have been noticeable towards the close. There has been some buying at the lower levels. It appears that the prospect of a large increase in the demand for containers for the transport of grains will sustain prices. Mills are not anxious to do business. B. twills were easier at Rs. 66 but Liverpool Twills were steady at Rs. 75 and Cornsacks at Rs. 67-12.

COTTON

Calcutta, November 25.

THE announcement this week by the Government of India regarding their intention to buy stocks of cotton at certain given prices has set at rest the fears regarding Government intervention if there was an undue decline in prices for cotton. The floor price for certain varieties of cotton is actually higher than market expectations and as such there has been a certain readjustment of values in the ready market. In the last two days the sharp rise in prices for the new delivery contract of new NT and 289F resulted in a general rally, but some selling at the higher levels caused prices to close below the best levels for the week. January closed at Rs. 441-12, the same as last week. March were Rs. 445 against Rs. 443 and May Rs. 458 against Rs. 446-12. It will be noted that tnere has been a return of confidence in the market and that higher premiums are demanded for the forward positions. The *communique* published by the Government of India is given below for the information of our readers. It will be noted that the Government of India have fixed selling prices for Indian cotton and have declared their intention of maintaining these prices. The Government of India propose to buy new cotton 1943-44 season and sell it in relation to the interest of growers and conditions of markets.

"It is now considered desirable that the widest publicity should be given to the means by which the Government of India intend to maintain the price of Indian cotton between the floor of Rs. 400 per candy and the ceiling of Rs. 550 in terms of the Indian Cotton Contract.

The following floor prices have been accepted for the descriptions mentioned below. Floor and ceilings for descriptions tenderable against the Indian Cotton Contract and not included in this table will be announced at a later date:—

Jharrilla (1 staple) Rs. 400 per candy of 784 lbs. Bengal (Deshi) Rs. 165 per candy of 315 lbs. Oomra (Deshi) Rs. 225 per candy of 375 lbs. 4F Rs. 450 per candy of 600 lbs. Western farm Rs. 510 per candy of 660 lbs. Tinnevelli Rs. 485 per candy of 635 lbs. Karunganny Rs. 505 per candy of 655 lbs. Sind N.T. Rs. 575 per candy of 725 lbs. Surat Rs. 600 per candy of 750 lbs. Gaorani Rs. 675 per candy of 725 lbs.; Nangyal Rs. 535 per candy of 685 lbs. Compta Rs. 590 per candy of 740 lbs; Cambodia Rs. 610 per candy of 784 lbs; Punjab (American) 289F Rs. 610 per candy of 760 lbs. The ceiling price for all varieties is Rs. 550 per candy of 784 lbs. excepting Cambodia and Punjab (American) which is Rs. 760 per candy of 784 lbs. for each.

The above prices are Bombay delivery, new mill terms and will not be changed during the 1943-44 season. The basis on which the Government will buy cotton is, however, laid down below.

The Government of India intend to buy new crop 1943-44 season cotton by whomsoever offered in Bombay, Karachi or up-country at the floor prices or their upcountry equivalents except that the Government will not buy any cotton unless the Indian Cotton Contract in the market of the East India Cotton Association in Bombay is quoted at the floor price of Rs. 400 per candy and then the Government will buy basic Jarilla Khandesh 3/4 staple at the floor price of Rs. 400 per candy, and other styles at the floor prices named above or at the market rate for those styles whichever is lower.

In the event of cotton reaching the ceiling prices, the Government will requisition such cotton as required by mills. The requisition price may be either the ceiling price or any price down to 5% below that ceiling price at the discretion of the Government.

Stocks of cotton acquired under the Government's undertaking to buy will be sold only in relation to the interests of growers and the condition of markets."

Letters OF GUARANTEE

A variety of Letters of Guarantee, which are useful for eliminating use of cash and supplementing credit, are issued by us:

1. Guarantee on behalf of Suppliers, Contractors to the Govt., Municipalities and allied bodies and to bonafide firms, in lieu of cash deposit.

2. Guarantee to Customs in lieu of security deposit of clearing and forwarding agents.

3. Guarantee to limited companies in respect of lost share scrips or policies whose duplicates are to be issued.

A Scheduled Bank Guarantee adds to the goodwill

A Progressive Indian Scheduled Bank

PIECEGOODS

Calcutta, November 25.

THE Piecegoods market has been quite active during the last week but business passing has been only in respect of immediate requirements. The strength of the cotton market has been helpful to a certain extent, but it is generally realised that with the prospect of larger arrivals in the next few weeks there cannot be any speculative rise in prices. Forward business has been on a very small scale. There is a tendency to await the announcement by the Textile Control Board regarding the new ceiling prices.

Demand for winter styles is very satisfactory and with the limited supplies in the market good prices have been fetched. It is encouraging to know, however, that arrangements have been made for the import of goods from abroad and that the scarcity in regard to these lines may not be so acute as at present.

GOLD

Calcutta, November 25.

THE uncertainty regarding the selling policy of the Government of India in respect of gold and the reports during the last two days that gold prices in the Middle East are much higher than Indian prices and that official policy in that territory also is not quite clear have been mainly responsible for the irregular tone of the gold market in the past week. Thre is practically very little change in prices to be recorded. The refusal of the Finance Member to disclose the source of supply in respect of the sales of gold by the Reserve Bank has also added to the confusion in the market. There is a tendency to await further developments. As the stock position is rather tight closing quotations are even slightly higher on balance. Gold ready closed at Rs. 77 against Rs. 76-12 at the time of last writing and forward at Rs. 76-11 against Rs. 77-5. It will be noted that there has been a narrowing in the premium for ready over forward.

In the Calcutta market, gold sold at Rs. 77-12 and sovereigns at Rs. 53-14 against Rs. 53-11.

SILVER

Calcutta, November 25.

THE uncertain tone of the gold market has resulted in a rise in price in the Silver market. It should be said that the improvement in Silver price is even more pronounced. No specific reason can be found for the strength of silver except the hope that official policy will not have anything to do with silver, and that any decline in price will be only in sympathy with the gold market. Silver ready closed at Rs. 124-2 and forward at Rs. 123-12.

In Calcutta, silver quoted Rs. 121-12 against Rs. 119-12 last week.

There is no change in the conditions in the London market and the quotation for both forward and spot is unchanged at 23½ pence.

Stock Markets to-day and to-morrow:

SUDDEN ACCESSION OF STRENGTH TO MARKETS

THE Calcutta Stock Exchange has warmed up to activity as the week progressed. At the time of writing there is no suggestion of the weakness that was in evidence last week. Rather, the suggestion at the present moment is one of extreme strength in every section. There has been some buying from outside centres and professional operators have taken advantage of the position to mark prices higher alround. There are some favourable developments during the past few days, among them being the reports regarding the possibility of the Government of India granting a liberal depreciation allowance for the Cotton Textile Industry and the relaxation in the basis of assessment of E.P.T., for the coal industry. On these reports there was some selective buying of Cotton shares early in the week, New Victoria in particular being done up to Rs. 11-12. After Wednesday this week, however, Coal shares have been prominent and the smaller-priced shares especially have come in for good buying. It cannot be said that operators have shown any great consideration for the individual merits of shares as it cannot by any stretch of imagination be expected that Talcher will be able to justify a quotation of Rs. 6-10 or for the matter of that, Samla a quotation of Rs. 6-2. Also reports during the past week regarding production have not been quite encouraging, it being pointed out that the drop in production since June this year is as much as 1.3 million tons. It can certainly be expected that with the efforts of the government authorities to improve raisings a higher level of production will be achieved, but whether the increase in raisings would enable the payment of dividends on a level to justify the present market quotations cannot be said.

* * *

As for Jute, the strength of the popular counters has been due mainly to the reports regarding the possibility of an early increase in the number of working hours by mills. So far there is no confirmation of the reports in this regard. Knowledgeable quarters are inclined to place no faith on these reports as confidence regarding the rate of supplies of coal for the industry is absent and in the 'closed' week, from Monday this week, all the coal mills have not been able to make up lost production. With conditions in the industry as they are, it is therefore too early to take an optimistic view of the immediate future. The hardship of steam-driven mills will be evident from the figures of the Bird-Heilgers group of jute mills for the half-year ended September, 1943. Two mills in the group, *Auckland* and *Clive*, have not been in any way affected by the difficult conditions in the industry. In spite of the loss in production to a certain extent in September, owing to the operation of the restricted plan of working, the net profit of the *Clive Mills Company Limited*, for the half-year before providing for taxation and depreciation, is Rs. 8,29,083 against Rs. 6,60,848 for the previous six months. The increase in earnings has been fully taken up by the provision for taxation, Rs. 4,75,000 against Rs. 3,14,719, while the amount set aside to depreciation is Rs. 59,132 against Rs. 60,897. In view of the confused outlook, however, the Directors have been cautious in their recommendation of the dividend on the ordinary shares. Out of the disposable profit a sum of Rs. 43,944 is placed to Welfare Reserve and Rs. 1.25 lakhs to the War Contingency reserve. There were no transfers to these reserves in the previous half-year. The dividend is naturally lower at six annas per share against eight annas per share on the former occasion. The amount carried forward is Rs. 28,471 against Rs. 14,464 brought in.

* * * *

Auckland Jute Company Limited, for the same half-year has been able to maintain barely earnings at the level of the previous six months, the net profit, before providing for depreciation and taxation, being Rs. 5,61,330 (5,82,135). The provision for taxation is Rs. 2,90,994 (64,033) while the amount set aside to depreciation is Rs. 1,13,833 (1,23,024). The Welfare Reserve gets Rs. 15,230 (19,328) while the Contingency Reserve receives Rs. 50,000 (Rs. 2 lakhs). The dividend on the ordinary shares is lower at Rs. 4 per share against Rs. 5 per share formerly.

All the other companies in the group report a big decline in earnings. *Dalhousie* pays a dividend of Rs. 4 per share against Rs. 6 per share, *Standard* Rs. 3 per share against Rs. 4-8 per share, *Naihati* Rs. 5 per share against Rs. 6 per share, *Northbrook* six annas per share against ten annas per share, *Lansdowne* Rs. 1-8 per share against Rs. 3 per share, *Union* Rs. 7-8 per share against Rs. 10 per share, and *Kinnison* Rs. 7 per share against Rs. 9 per share.

* * * * *

That production difficulties are the main concern of the coal companies at the present moment is evident from the results of the *Pench Valley Coal Company Limited*, for the half-year ended August, 1943. With the higher costs of production even a slight decline in the amount of raisings is enough to cause an appreciable drop in earnings. The net profit, before providing for taxation and depreciation, for the half-year is thus appreciably lower at Rs. 1,24,759 against Rs. 1,62,188 for the previous half-year. The earnings would have been further lower but for the inclusion of profit on sale of investments for Rs. 10,000. It has been possible, however, to maintain the dividend at the previous level of 10 per cent for the half-year, the provision for taxation being appreciably lower at Rs. 31,000 (Rs. 64,071). The charge on account of depreciation is Rs. 10,616 (Rs. 18,765).

* * * *

Considerable attention is now being paid to the merits of bank shares. It is reported that there are not very many sellers of *Central Bank* shares. *Imperial Bank* contributaries also are in great request and it is reported that the bank authorities might decide on a further call on these shares. If the decision is made to make up the contributaries Rs. 250 paid up, the scope for appreciation in the value of these shares is as much as Rs. 300 per share. With the deposits of the Imperial Bank over Rs. 200 crores mark it is quite likely that some decision will be made in this regard at an early date.

There are persistent reports that the Central Bank will be issuing shortly fresh capital on bonus terms to existing shareholders. In this connection I would draw the attention of my readers to the remarks I made sometime back regarding the need for increasing the capital of the Central Bank to bring the figure more in line with deposits. It would be interesting to reproduce here the details of the scheme put forward by me as early as April this year.

"Amongst the bigger banks which will have seriously to consider the problem of increasing capital, the most notable is the Central Bank of India. The deposits of the Central Bank, as disclosed in their fortnightly statement, are now nearly Rs. 65 crores. To sustain this weight of deposits, the capital of the Bank is Rs. 1.68 crores. The reserve and contingency fund is Rs. 1.08 crores. The total is thus Rs. 2¾ crores. The time has certainly arrived for the Central Bank to widen and strengthen its capital basis. Before any increase of capital is contemplated, it will be neces-

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 26.

THE quieter tone in evidence on the Calcutta Stock Exchange at the time of last writing has been only short-lived. In the latter half of the week under report definitely firmer conditions have been noticeable. In the Coal section a further rise in prices has been recorded on the reports that there might be a revision in the basis of assessment for E. P. T. so far as the Coal industry is concerned. The flare-up in prices in the Jute section has been on hopes of an increase in the number of working hours with the improved position in regard to coal supplies. The cotton section has not been very interesting but in the Engineering section a general rise in prices has been recorded. The undertone is generally steady. With the possibility of an increase in investment interest the upward trend might be sustained.

The giltedged securities section has been steadier during the past few days though there has not been any large increase in the volume of business passing. 3½ per cent Paper was marked higher at Rs. 99-7, but the quotation is not very much higher at the time of writing at Rs. 97-4. Among terminable loans, 3 per cent Defence Bonds 1946 were Rs. 102-4, 3 per cent 1963-65 Rs. 98-4, 3½ per cent 1947-50 Rs. 103-7, 4 per cent 1960-70 Rs. 112-4 and 5 per cent 1945-55 Rs. 106-4. No transactions were recorded in provincial loans. Easy money conditions have prevailed in the market and there has been a sharp decline in the average discount rate to thirteen annas per cent per annum from thirteen annas and eight pies per cent per annum last week.

Only one transaction has been recorded in public bodies' debentures, in 5 per cent *Calcutta Port Trust* debentures 1957-87 at Rs. 117-8. Among industrial debentures, 4½ per cent *Soorah Jute* debentures were Rs. 102-8. 4¾ per cent *Hukumchand* third mortgage debentures Rs. 102 and 5¼ per cent *Rohtas Industries* debentures Rs. 105.

Among preference shares, there was a good demand for jute preferences with not many sellers offering. *Dalhousie* were done at Rs. 177, *Gourepore* at Rs. 158 and *Hastings* at Rs. 149-8. *Howrah* first preferences were higher at Rs. 180-8. In other sections, *New Victoria,* after being higher at Rs. 16-4 are now quoting Rs. 15-12. *Kumardhubi Engineering* were Rs. 317, *Dalmia Cement* Rs. 140 and *Lister Antiseptics* Rs. 130.

Bank shares have remained firm and business is difficult owing to the scarcity of sellers. *United Commercial Bank,* however, continued quiet around Rs. 21-8 premium. *Reserve Bank* were steady at Rs. 125-8 and *Calcutta National Bank* at Rs. 13-12. There is good demand for *Imperial Bank* contributories which have been done upto Rs. 476.

In the Cotton section, there is nothing of importance to be reported. Earlier in the week there was a smart rise in *New Victoria* to Rs. 11-12 on Cawnpore buying but selling at the higher levels has brought down the quotation towards the close to Rs. 10-14. *Cawnpore Textiles* also improved from Rs. 14-8 to Rs. 15-2 but have turned easier to Rs. 14-14. *Basanti* were Rs. 13-12, *Elgin* Rs. 98 and *Kesoram* Rs. 16-2. The accounts of Cawnpore Textiles and Elgin Mills are eagerly awaited.

In the Coal section, a further sharp rise in prices has been recorded for the popular counters. There has been good buying especially of the smaller priced shares. Thursday's session has been lively. *Amalgamated* are higher at Rs. 44 against Rs. 43, *Bengal* Rs. 540 against Rs. 512 and *Burrakur* Rs. 25-14 against Rs. 25-2. *Central Kurkend* were not very much changed at Rs. 20-6 while *Equitable* were more than a point higher at Rs. 46-12. *Bhalgora* were a good feature with a rise in the quotation from Rs. 11-10 to Rs. 13-2. *Baraboni* improved further to Rs. 3-8. *Hurriladih* were Rs. 21-12, and *Mundulpoor* Rs. 16. *Katras Jherriah* were sharply higher at Rs. 55-8, and *New Beerbhoom* at Rs. 29-3. *Samla* were Rs. 6-4, *Talcher* Rs. 6-9 and *South Karanpura* Rs. 9-9.

In the Jute section also firmer conditions have been noticeable on the reports that mills were considering the possibility of an increase in the number of working hours. *Anglo-India* were Rs. 407, *Champdany* Rs. 227-8, *Clive* Rs. 29-14, *Gourepore* Rs. 808 cum-dividend and *Kamarhatty* Rs. 563. *Howrah* were done upto Rs. 67-2 while *Hukumchand* were in keen demand at Rs. 30. *National* were Rs. 29 and *Nellimarla* Rs. 25-8. *Presidency* were popular around Rs. 7-2, with *Rameshwara* at Rs. 15-8 and *Soorah* at Rs. 15-12. *Nuddea* were Rs. 112 cum-divdend.

In the Engineering section, there has been some buying of Indian Iron and a sharp rise has been recorded. Markets are very firm at the time of writing. *Indian Iron* have been done upto Rs. 36-8. *Steel Corporation* also are higher at Rs. 28-8. *Burn & Co.* were Rs. 400. *Bhartia Electric Steel* have risen by one point to Rs. 17-8. *Arthur Butler* were Rs. 17 while *Braithwaite* were Rs. 9-4. *Britannia Building and Iron* were in good request at Rs. 17, *Kumardhubi Engineering* at Rs. 8-10 and *National Iron and Steel* Rs. 14-2. *Marshalls* were firm at Rs. 5.

The Sugar section has not provided any new features and quotations have been fluctuating around last levels. *Balrampore* were Rs. 17-3, *Champarun* Rs. 45-3 and *Purtabpore* Rs. 23. *Ramnugger Cane and Sugar* were Rs. 13-14. *Carew* were slightly easier at Rs. 27-9. *Samastipore Central* changed hands at Rs. 20 and *U. P. Sugar* at Rs. 34-1.

In the Tea section, business passing has been restricted and quotations are even lower. *Bishnauth* were Rs. 38, *Central Cachar* Rs. 101-8, *Sapoi* Rs. 20-4, and *Tezpore* Rs. 16-12.

In the Miscellaneous section, *Burma Corporation* were steady at Rs. 3-12 while *Indian Copper* were further higher at Rs. 2-12. *Assam Saws* were very firm at Rs. 5-7. *B. I. Corporation* continued in good request at Rs. 6-13 while *Bararee Coke* put on two points to Rs. 33. *Indian National Airways* preferred ordinary were Rs. 28 and *Dunlop Rubber* Rs. 57. *India Paper Pulp* were Rs. 213-8 and *Titaghur Paper* Rs. 27-2. *Midnapore Zemindary* were sharply higher at Rs. 120. *I. G. N.* were further higher at Rs. 136.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, November 25.

Firm conditions prevailed on the local stock exchange during the period under review. Rumours regarding the possibility of a Government decision favourable to the cotton textile industry in the matter of a greater allowance for block depreciation have once again excited speculation. There was a marked change for the better and there was brisk trading in Textiles and Steels and some select scrips from the miscellaneous group. Hesitancy gave place to keen bidding and prices showed substantial improvement. Judging from the interest evinced by both operators and investors in outside shares in recent weeks and concerns inspite of the general shifting of emphasis from wartime industries to peacetime concerns, one must conclude that the transactions on the local shock exchange this week presage not only return of confidence but point to firmer conditions in the weeks to come.

The giltedged securities market remained steady with 3½% Govt. paper quoting around Rs. 97-6. 4% Loan (1960-70) were Rs. 111-15.

Though there was no sign of weakness in the Textile section, last week, the market was not at all healthy. The firmness noticed was more artificial than real. But this week there was keen healthy buying enquiry without any sign of hesitation. Consequently prices showed substantial improvement. But for the intervention of profit-taking, closing rates would have been even higher. Bombay Dyeing as usual attracted much attention with a relative increase in the quotations and after being higher at Rs. 1,982-8 on Tuesday closed at Rs. 1978-12. Century were Rs. 942. Gokak have gained nearly 10 points to close at Rs. 353. Kohinoor were Rs. 639; and Svadeshi Rs. 613.

There was considerable turnover in Steels also. Tata Steel Deferreds have made considerable progress with the latest quotation some 30 points above last week's closing rate. Tata ordinary were Rs. 397-8 as against Rs. 394-8. Indian Iron were up by 2 annas at Rs. 36.

Among Bank shares Central Bank were Rs. 87-12. While Imperial Bank fully paids were done upto Rs. 1882-8, the partly paids were wanted upto Rs. 468-12. Reserve Banks were Rs. 128-8 and Bank of India were Rs. 200.

Among Miscellaneous shares Premier Construction were again the feature of the section with the quotation as high as Rs. 232. Rumours of a higher dividend and a bonus issue have pushed up the price by another 12 points.

Bombay Steam have again registered a sharp increase by more than a dozen points to close at Rs. 702-8. Another share which was much fancied was Shivrajpur Syndicate which were done upto Rs. 80-8. A.C.C. were Rs. 222. Alcock Ashdown were better at Rs. 570 while Belapur Sugar were almost unchanged at Rs. 263. Both Andhra Valley and Tata Power recorded some useful gains and are quoting at Rs. 1,860 and Rs. 1,890 respectively. Tata Hydro however remained almost unchanged at Rs. 200.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

Shree Luchminarain:—(20th) 18-12 c.t.
Orient:—(18th) 213; (23rd) 216.
Soorah:—(19th) 14-4, 14-6, 14-8; (20th) 14-10, 14-12; (22nd) 14-12, 15; (24th) 15-6, 15-10, 15-11.
Presidency:—(18th) 6-10, 6-11; (19th) 6-8, 6-10; (20th) 6-11, 6-12, 6-12 c.t.; (22nd) 6-10, 6-11; (23rd) 6-14, 6-15, 7, -71; (24th) 6-14, 6-15, 7, 7-1, 7-2.
Rameshwara:—(18th) 14-2; (19th) 14, 14-3, 14-4; (22nd) 14-2, 14-3, 14-4; (23rd) 15-6 s.l., 15-7, 15-8, 15-9, 15-10, 15-11, 15-12; (24th) 15-6, 15-7, 15-8, 15-10.
Rameshwara (Pref.):—(18th) 13-12.
Reliance:—(19th) 61-8; (22nd) 62-8; (23rd) 62-2, 63-8 c.t.; (24th) 62-8 s.l.
Reliance (Pref.):—(19th) 179-8, 180.
Waverley:—(18th) 5-6, 5-7, 5-9; (19th) 5-7, 5-9; (22nd) 5-10; (23rd) 6-2; (24th) 6-1, 6-2, 6-3, 6-4, 6-6, 6-7.
Standard:—(23rd) 234, 238.
Union:—(19th) 380; (20th) 384; (22nd) 385, 387; (23rd) 390 s.o.l.; (24th) 400.

MININGS:

Bisra Stone Lime:—(23rd) 118.
Burma Corpn.:—(18th) 3-9, 3-10; (19th) 3-9 3-10, (20th) 3-11, 3-12; (22nd) 3-11, 3-12; (23rd) 3-10, 3-11; (24th) 3-11.
Consolidated Tin:—(20th) 2-8; (23rd) 2-8.
Indian Copper:—(18th) 2-9, 2-10; (19th) 2-9, 2-10; (20th) 2-10; (22nd) 2-9, 2-10; (23rd) 2-10, 2-11; (24th) 2-10.
Karanpura Development:—(18th) 16-2; (19th) 16-6; (22nd) 16-8; (23rd) 16-6, 16-10, 16-12; (24th) 16-6, 16-12, 17-2.
Orissa Minerals:—(18th) 12-8; (19th) 13, 13-8; (20th) 14, 14-8; (22nd) 15; (24th) 18, 18-2.
Rhodesia Copper:—(22nd) 2-1; (24th) 2-1.

CHEMICALS:

Bengal Aerating Gas:—(19th) 112, 114 x.d.
Smith Stanistreet (Ord.):—(19th) 5.

CEMENTS:

Assam Bengal:—(18th) 13-10; (19th) 13-9; (22nd) 13-12; (23rd) 13-12 c.t., 13-10; (24th) 13-12 c.t.
Assam Bengal (Defd.):—(18th) 3-2; (19th) 3-1; (20th) 3-2; (22nd) 3-2; (23rd) 3-3 c.t., 3-2, 3-3; (24th) 3-2 (3-3 c.t.) 3-4 c.t., 3-2, 3-3.
Dalmia (Defd.):—(18th) 4-1; (20th) 4; (23rd) 4-1.
Dalmia (Ord.):—(19th) 17-14, 17-15 (17-14 s.o.l.) 18, 18-2; (22nd) 17-12, 18-2, 18-4; (23rd) 17-12 s.l., 17-10 s.o.l., 17-14, 18-1, 18-2; (24th) 18-5.
Dalmia (Pref.):—(18th) 143.
Bengal Potteries:—(24th) 25-2, 25-3.
Reliance Firebricks:—(18th) 18-8, 18-12; (20th) 18-6; (22nd) 18-6, 18-8, 18-10, 18-12; (23rd) 18-13

ENGINEERINGS:

Arthur Butler:—(18th) 16-10; (23rd) 17-6 c.t.
British India Electric Construction:—(18th) 16-8, 16-12; (20th) 17-10, 17-12; (22nd) 17-12; (24th) 18.
Britannia:—(19th) 15, 15-2, 15-4; (20th) 14-4 s.o.l.; (23rd) 15-4, 15-5.
Britannia Building & Iron:—(18th) 14-8; (20th) 14-4; (24th) 14-8, 14-12, 14-13.
Burn & Co. (Ord.):—(24th) 397-8.
Braithwaite:—(20th) 9, 9-4; (22nd) 9-4.
Bhartia Elec. Steel:—(18th) 16-2, 16-3, 16-4; (19th) 16-2, 16-4, 16-5 (16-4 s.o.l.) 16-6, 16-7, 16-8, 16-9, 16-10, 16-12, 16-12 16-13; (20th) 16-11, 16-12, 16-13, 16-15; (22nd) 16-12, 16-15, 16-14; (23rd) 17-2, 17, 17-1; (24th) 17-3 c.t., 17-2, 17-3, 17-5, 17-4, 17-6.
India Malleable Casting (Defd.):—(18th) 3-8, 3-9, 3-10; (22nd) 3-8; (23rd) 3-6; (24th) 3-5.
Indian St. Wagon (Ord.):—(20th) 67-12.
Indian Iron & Steel:—(18th) 35-7, 35-8, (35-11 s.l.), 35-9; (19th) 35-9, 35-10, 35-11; (22nd) 35-10, 35-13, 35-15, 35-11, 35-12; (23rd) 35-15, 36, 35-10, 35-14; (24th) 35-14 (36 c.t., s.l.,) 35-12, 35-13, 35-11.
Indian Galvanizing:—(24th) 43-4.
India Machinery:—(24th) 10-10.
Indian Steel & Wire Products (Ord.):—(19th) 51, 51-2; (24th) 51.
Jessop & Co.:—(19th) 20; (20th) 21, 21-2; (22nd) 21-5, 21; (23rd) 21-1, 21-2, 21-4; (24th) 21, 21-1, 21-2, 21-4.
Kumardhubi:—(18th) 7-12 s.o.l., 8-5 c.t.; (20th) 8-5; (22nd) 8-7, 8-6; (23rd) 8-10, 8-11; (24th) 8-8, 8-9, 8-10, 8-11.
Marshalls:—(18th) 4-5, 4-6, 4-7 (4-8 c.t.); (19th) 4-4, 4-5, 4-6; (20th) 4-6, 4-7, 4-8; (22nd) 4-9, 4-10, 4-11, 4-12, 4-13; (23rd) 4-12, 4-13, 4-14, 4-15, 4-15 c.t.; (24th) 4-15, 5-1, 4-14, 5, 5-2.
National Iron:—(18th) 13-1; (19th) 13-2, 13-3; (20th) 13-2; (22nd) 13-1, 13-2, 13-3, 13-4, 13-4 c.t.; (23rd) 13-2, 13-3, 13-4 (13-9 s.l.) 13-5, 13-8; (24th) 13-14 s.l., 13-5, 13-6, 13-8, 13-12, 13-10, 13-13.
National Screw & Wire:—(22nd) 13-5; (23rd) 13-6; (24th) 13-3, 13-5.
Saran Engineering:—(18th) 9-6, 9-8; (20th) 9-6, 9-7, 9-8; (22nd) 9-6, 9-7, 9-8; (24th) 9-5, 9-4, 9-6.
Steel Corporation:—(18th) 27-8, 27-10, 27-9, 27-12, 27-13, 27-7; (19th) 27-12, 27-11, 27-9, 27-10; (20th) 27-11, 27-12, 27-13; (22nd) 27-13, 27-14, 27-15, 28, 28-1; (23rd) 28-3, 28-1, 28-4, 28-5, 27-15, 27-14, 28, 28-2; (24th) 27-15, 28, 28-1.
Steel Corporation (Pref.):—(19th) 127-8; (23rd) 128, 129.

ELECTRIC:

Mozaffarpore:—(22nd) 13-7.
Jubbulpore:—(18th) 17-4.
Rawalpindi:—(23rd) 31-8.
Bareilly:—(19th) 16-2; (24th) 16-4 c.div.
Benares:—(19th) 16-12.
Mirzapore:—(19th) 6.
U. P.:—(19th) 224-8, 222 s.ls.; (23rd) 220 s.o.l., 221, 222.

SHIPPING:

Bengal Assam Steam:—(20th) 277; (22nd) 279-8 c.t., 278-8.
Calcutta Landing & Shipping:—(19th) 26-6; (23rd) 28-2.
India General Navigation:—(18th) 125, 125-8, 126; (19th) 129-8, 131 c.t., 132, 132-8, 133, 133-8, 134, 134-8; (20th) 134-8, 135, 135-8; (22nd) 135-8, 135, 136, 136-8; (24th) 133, 134, 136.
Scindia Steam Navigation:—(23rd) 37-12 c.t.
Port Shipping:—(20th) 23-6; (23rd) 23-6, 23-8.
Fraser & Co.:—(23rd) 19, 19-1.

FLOUR MILLS:

Bengal:—(18th) 25-12, 25-14; (22nd) 25-12; (24th) 26.
Hooghly:—(22nd) 23.
Delhi:—(19th) 23; (20th) 23-4, 23-6.
United Flour:—(20th) 30-2; (24th) 30-4.

PAPER MILLS:

Bengal:—(18th) 216.
India Paper Pulp:—(18th) 210-8 s.l.; (19th) 210; (20th) 208-8; (22nd) 210; (23rd) 210, 211-8, 212; (24th) 211, 212.
Orient:—(18th) 28-8; (20th) 28-14, 29 s.l., 29-2; (24th) 30-1.
Titaghur:—(18th) 27 s.l., 27; (19th) 26-14, 27, 27-15; (22nd) 26-14, 27-2, 27-2 c.t.; (23rd) 27-4, 27; (24th) 27-10 c.t., 27-3, 27-6.
Titaghur (2nd Pref.):—(18th) 118; (22nd) 118.
Shree Gopal:—(18th) 24-8; (20th) 23-15, 24, 24-4 (22nd) 24; (24th) 24, 24-4.
Star:—(18th) 23-4, 23-8, 23-9; (19th) 23-4, 23-8, 23-10, 23-12; (23rd) 23-12; (24th) 23-3.
Upper India Couper:—(20th) 350.

SAW MILLS:

Assam Saws:—(18th) 4-15, 5; (19th) 4-15; (20th) 4-15, 5, 5-1; (22nd) 5-1, 5-2, 5-3, 5-4; (23rd) 5-4, 5-5, 5-6; (24th) 5-5, 5-4, 5-6.

OIL:

Indo-Burma Petroleum:—(19th) 60-12, 61; (20th) 61 c.t.
B. B. P.:—(20th) 3-2; (22nd) 2-15 s.l., 3-2, 3-3.
Tide Water:—(18th) 23-15, 24; (19th) 23-3, 23-8, 23-10; (20th) 23-12.
Northern India:—(19th) 21-9.

REAL PROPERTIES:

Humayan Properties:—(18th) 13-2, 13-3, 13-4
Humayan Properties (Defd.):—(24th) 3-6, 3-7.
Midnapore Zemindary:—(18th) 103 s.l., 105-8, 106, 106-8, 107-8, 108, 108-8, 109;

SUGARS:

Balrampur:—(19th) 16-10; (20th) 16-8, 16-10, 16-11; (22nd) 16-15, 17-2, 17-4; (23rd) 17-4, 17-5.
Bharat:—(18th) 25; (22nd) 24-14.
Belsund:—(18th) 12-13; (19th) 12-13, 12-14, 12-15; (20th) 12-12; (23rd) 13-2; (24th) 12-13.
Buland:—(18th) 42-6 c.t., 42-4; (20th) 41-14, 42, 42-8; (22nd) 42-2, 42-4 s.l.
Cawnpore:—(18th) 45-2, 45-3, 45-4, 45-8; (19th) 45-4 s.l., 45-4 c.t., 46-2, 46 (46 s.o.l.); (22nd) 46-4; (24th) 45-10, 46-4.
Carew & Co.:—(18th) 28, 27-13, 27-12, 27-14; (19th) 27-12, 27-13, 27-14, 27-15, 28, 28-4 c.t.; (20th) 27-9, 27-10, 27-11, 27-12, 27-13, 27-14, 27-15; (22nd) 27-11, 27-13, 27-14, 27-15, 28; (23rd) 27-10, 27-12; (24th) 27-9, 27-11, 27-12, 27-14.
Champarun:—(18th) 44-2, 44-4; (19th) 44-6, 44-8, 44-12; (22nd) 44-4 s.l., 45, 45-4; (23rd) 45-4; (24th) 45-2, 45-4.

In payment of a dividend of 8 annas per share for the year ended 30th June, 1943				1,40,000	0	0
Carry forward ..				66,937	2	1

The Company's Balrampur Factory commenced crushing on the 14th December, 1942 and continued until the 1st April, 1943, while the Tulsipur Factory commenced crushing on the 25th January, 1943, and continued until the 21st March, 1943.

The season was remarkable for almost ideal climatic conditions in the areas serving the Company's Factories, with rainfall abundant and well distributed. The incidence of disease was notably lower than in previous seasons, indicating that the measures of control carried out by the Company's staff had achieved results. The sugar value of the cane treated was fully maintained, the figure for recovery being very satisfactory.

The Industry in the Provinces of the U. P. and Bihar was directed by Government to treat all the cane which might be available, as stocks of sugar in the country had been greatly reduced, and a season of 120 days working was confidently expected by Government. This estimate has proved to be much too optimistic and very few factories in the two Provinces have recorded a season of this duration. One of the chief causes of this miscalculation on the part of Government was the severe competition experienced from the manufacture of Gur, prices for which had risen to fantistic levels, coupled with the fact that Government had not raised the minimum price for cane from 8 annas to 10 annas per maund until the end of December, 1942. The late announcement of the enhanced price for cane also had the unfortunate effect of diverting considerable areas to grain crops for which most attractive prices were ruling, with the result that a very large proportion of next season's crop will be represented by ratoons, which is very undesirable as this means a much reduced yield per acre and tend to carry on disease from year to year. Prices for sugar were raised by Rs. 2-5-0 per maund as from January, 1943, which would have represented adequate compensation for the increased cost of raw material if a factory could have worked for 120 days with reasonable efficiency. In the case of the Company's Factories, however, the enhanced price obtained for sugar has not covered the extra price paid for cane and the higher cost of production on a much curtailed season.

As regards Government Control measures, these would seem to be working more smoothly, but there still remains the question of transport difficulties. Sugar deliveries, since the introduction of the system of permits by the Sugar Controller for India, have been satisfactory. At the time of issuing this Report, about 88 per cent of 1942-43 season's sugar has been disposed of and the balance is expected to be cleared before the commencement of next season.

For the coming season, Government's policy is aimed at a maximum of sugar production, but it is doubtful whether factories will be able to obtain all the cane that may be available as facilities for the transport of cane may be even less than during the last season.

Governmen has not yet declared a cane rate for season 1943-44, nor indicated any policy as regards season 1944-45, and the directors fear that this delay on the part of Government in declaring their intentions may have an adverse effect on plantings for season 1944-45.

Stocks of sugar have been valued at Government Control prices. The Company's property has been maintained, as usual, in good repair.

(Annual General Meeting held on 23rd October, 1943. Dividend payable on or after 1st November, 1943).

Audited accounts for the year ended 30th June, 1943:—

The accounts show a net profit of Rs. 7,02,014-14-5 after setting apart the sums needed for Depreciation, and provision for Income and Super-Tax and allotting Rs. 5,000 to Workmen's Compensation Fund. If to this is added the balance of Rs. 73,683-10-7 brought forward from the last year's Profit and Loss Account, the total comes to Rs. 7,75,698-9-0. The directors propose to dispose of this amount as follows:—

	Rs.	A.	P.
To declare a Dividend of 10% together with a Bonus of 10%, free of Income-tax ..	4,35,856	0	0
To Reserve Fund	2,50,000	0	0
To carry forward	89,842	9	0
Total ..	7,75,698	9	0

The Factory commenced crushing of cane on 19th August, 1942 and continued milling till the 30th June, 1943 when it was closed down for the annual overhaul. There was a short shut down for a week during April, 1943 owing to an outbreak of Cholera in the Sugar Colony at Mandya.

The quantity of Cane crushed during the year was 1,63,212 tons and that of Sugar produced was 15,666 tons.

The Distillery at Mandya continued to work steadily and satisfactorily. The Duplicate Alcohol Plant referred to in the last year's report has been fabricated satisfactorily and has been put into regular operation.

Secretary.—Mr. D. C. Subbarayappa.

The Directors, in creating a Reserve of Rs. 1,36,000 from the profits of the half-year as represented by the Excess Profits Tax Deposit, consider that this suitably covers the amount which would ordinarily be reserved for Contingencies Account.

The Mills worked 60 hours per week up to the 15th May. In view of the stock position and other factors working time was then reduced to 54 hours and 10 per cent of the looms sealed. These conditions pertained until the 12th June after which the sealed looms were released and production continued on a 54 hours basis with a full complement of looms.

Results for the half-year have been adversely affected by an acute shortage of Coal as a result of whch work was suspended for several weeks, in conformity with an agreement subscribed to by all Association Mills. To meet the situation it was decided to shut down No. 1 Mill, which is steam driven, and work up to the same capacity by means of a multiple shift in the electrically driven No. 2 Mill. The change over was effected on the 6th September.

The Company's land at Sibpur, occupied by the Ganges Rope Co., Ltd., as also the adjacent plot with the Cooly huts thereon, being of no further use to the Company, has been sold to the Rope Company for the sum of Rs. 3 Lacs.

Managing Agents.—Messrs. Macneill & Co.

The Directors, in creating a Reserve of Rs. 1,17,000 from the profits of the half-year, as represented by the Excess Profits Tax Deposit, consider that this suitably covers the amount which would ordinarily be reserved for Depreciation.

The Company purchased from the Ganges Manufacturing Co., Ltd., the land upon which the Factory is situated as also the adjacent land and the Coolie Huts situated thereon at a price of Rs. 3 lakhs only. The strip of land as also the Trolley Line running from the Foreshore Road entrance of the Factory down to the Railway Line was also purchased from the Port Commissioners at a cost of Rs. 5,116-1-9.

Machinery and Buildings have been maintained in a thorough state of repair.

Borrowing Powers.—The Directors may not at present borrow on behalf of the Company more than Rs. 5,00,000 without referring to the shareholders in General Meeting. Owing to the large turnover which the Company has had during recent years this restriction on borrowing of Rs. 5,00,000 has proved inconvenient and the resolution referred to in item 5 of the agenda in the notice of meet- is put forward with a view to this limit being abolished.

Managing Agents.—Messrs. Macneill & Co.

SPENCE'S HOTEL LIMITED

Audited accounts for the half-year ended 30th June, 1943:—

The directors have to report that the working for the half-year has resulted in a loss of Rs. 16,509-12-9.

After providing for insurance, Directors' fees, entertainment, bad debts and income-tax on the one hand and bringing into account sundry items of dividends earned, interest, income-tax refund and share transfer fees on the other, the net loss for the period is Rs. 17,029-2-9. In the result, the balance standing to credit of Profit and Loss Account at the 31st December, 1942, Rs 5,957-7-7, is now converted into a debit balance of Rs. 11,071-11-2.

This unfavourable aspect of the result of the half-year in question, however, is subject to considerable relief when it is realized that the period during which the Hotel has actually traded during the half-year has been limited to three months. Although the Company was possessed of these premises in the month of January, it was not until the 1st of April, 1942, that a fresh beginning could be made. Repairs, renovations and replacements rendered necessary by the Military occupation provided a problem which required time and a vast amount of work for its solution. And even after the premises were available for business, some further time was necessary before normal conditions could be attained.

On the whole, business during the restricted period mentioned has been very encouraging. The arrangements with the Military Authorities were carried into effect and the relationship which arose thereout between the Company and its military guests has been most cordial and encouraging.

The Company's claim against the Government for compensation in regard to the requisitioning of its premises has been formulated and placed before Government. And it is hoped that a settlement of the claim will be effected during the current half-year.

Managing Director.—Mr. H. Hobbs.

DALMIA CEMENT, LIMITED

Audited accounts for the year ended 31st December, 1942:—

After paying all overhead charges and interest charges the revenue profit amounts to Rs. 13,13,997-14-8. After making provision for depreciation as per details given in the Balance Sheet there remains a sum of Rs. 7,25,121-14-8 to which is added Rs. 16,127-14-0 being the last year's balance making Rs. 7,41,249-12-8 available for distribution for which the Directors make the following proposal:—

	Rs.	A.	P.
Payment of final dividend on or after the 20th October, 1943 to those shareholders whose names appear in the books of the Company on 30th September, 1943:—			
On 35,000 Preference Shares at Rs. 6 per share	2,10,000	0	0
On 6,00,000 Ordinary Shares at As. 10 per share	3,75,000	0	0
Reserve for Taxations	1,00,000	0	0
General Reserve	50,000	0	0

The balance of Rs. 6,249-12-8 is to be carried forward.

In the year under report, the cement industry was entirely commandeered by the Government of India. It was considered in the beginning that the Government would take increased percentage than the usual, but large quantities would be available for sale to the public. The industry wanted to be most considerate to the Government and they tendered them very low prices considering that only the reserve production capacity would be utilised by the Government. After practically 100% commandeering, manufacturing cost has gone tremendously high, specially due to very heavy increase in the cost of gunnies, coal, general stores and very large amounts paid as dearness allowance.

In view of these abnormal circumstances, representations were made to the Government but they have not resulted in any benefit uptill now. Negotiations are still proceeding. The directors have received numerous representations from the shareholders in this respect. It is due to this reason that sufficient profits could not be made.

The prospects of the current year depend entirely upon the course of the negotiations that will take between the industry and the Government of India, Supply Department. The present contract is in continuation for a considerable part of the current year also. The difficulty in availability of spare parts has further increased.

The cement industry has rendered immense service to the war efforts without getting any benefit out of it like other industries, textiles, steel, etc.

THE TATA IRON AND STEEL COMPANY, LIMITED.

NOTICE

Pursuant to condition 2 of the conditions endorsed on the Bearer Deposit Certificates of the Tata Iron and Steel Company, Limited, notice is hereby given that 14th December, 1943 is fixed as the date for payment of the principal moneys under the Certificates. Along with the principal sum interest at 3% per annum (less income-tax) will be paid for the period, 10th August to 14th December 1943 from which date interest will cease to run.

For facilitating payment on the notified date as aforesaid, holders of these Certificates are requested to lodge the Certificates with the Company as early as possible along with unused Interest Coupons. At the same time they should intimate to the Company the name of the person in whose favour the income-tax deduction certificate is to be prepared.

By Order of the Directors,
TATA SONS, LIMITED.
Managing Agents.
A. R. DALAL.
Director.

Bombay, 18th November, 1943.

(Continued from page 1009)

sary to take the necessary legal steps to raise the limit of the authorised capital from the present figure of Rs. 7 crores to, say, Rs. 15 crores. Once this is done, the next step is the offer of new shares to the existing shareholders on the basis of one new share for two old shares and on the basis of a premium of at least Rs. 25 for a share of the nominal value of Rs. 25. After the new shares are issued on this basis, the paid-up capital of the Bank will be raised from the present level of Rs. 1.68 crores to just over Rs. 2½ crores. The Reserve fund will be increased from just over Rs. 1 crore to nearly Rs 2 crores. In other words, after this capital expansion, the Central Bank will have nearly Rs. 4¾ crores paid-up capital plus reserves. We may also add that, with regard to most of the investments, the market value is much in excess of the book value. With the additional capital which, we propose, should be raised, the Central Bank will be adjusting its capital plan for the assured prospect of its deposit reaching the Rs. 100 crore mark."

The quotation for the shares was then around Rs. 60, it is now over Rs. 85 with not many sellers.

* * * * *

Transactions in *Dehri Oil Refinery* shares have already begun. The ordinaries are quoting Rs. 3 premium and the preferences Rs. 10 premium. The preference shares are being talked further higher.

The list for preference shares of *India Oil Plastics Limited* has been heavily oversubscribed and it is said that applicants will get only partial allotment.

It is reported that the final dividend of Mahalaxmi Cotton Mills Limited for the year ended June, 1943 will be Rs. 1-8 per share, making the total distribution for the year, with the interim of Rs. 1-8 per share, Rs. 3 per share. In this connection, attention should be drawn to the fact that shareholders derived considerable benefit from the distribution of sarees and dhoties to shareholders on two occasions. If cloth prices continue to be dear it can be expected that similar offers would be made to shareholders in future. Around Rs. 44-8 the shares should be considered rather undervalued.

WATCH-DOG.

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE is hereby given that the Forty-fiirst Ordinary General Meeting of the Champdany Jute Company, Limited, will be held at the Registered Office of the Company, 1, Clive Street, Calcutta, on Friday, 17th December, 1943, at 12-30 p.m. for the following purposes:—

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

THERE is no change to report in the conditions prevailing in the short-loan market, inter-bank call money quoting nominally half per cent in Calcutta and quarter per cent in Bombay. The deposits of the Imperial Bank as at the end of November 26, create another record at Rs. 206.84 crores. The Central Government's deposits with the Reserve Bank are at the high altitude of Rs. 62.40 crores. The deposits of member banks with the central banking institution have continued to swell and are now at the record figure of Rs. 84.08 crores. On the weekly treasury bill tender day, against Rs. 6 crores on offer, applications came to Rs. 11.13 crores compared with Rs. 10.71 crores on November 23. The average rate of accepted tenders is one pie lower at Re. 0-12-11 per cent per annum. The offer of tender bills for next week remains unchanged at Rs. 6 crores.

That the Government are continuing to sell treasury bills even though their balances with the Reserve Bank are now as high as Rs. 62½ crores, suggests that there is a purpose for which cash is thus being piled up. Can it be that this is an indication of the imminent execution of the scheme for the funding of sterling pensions? From the point of view of the ways and means position of the Government, present conditions are favourable for putting into effect this proposal. It should be possible to utilise as much as Rs. 50 crores from the cash balances of the Central Government. Considering that the rupee securities held in the issue department on November 26 were only Rs. 58.32 crores as against Rs. 194.36 crores on January 8, it may be argued that rupee finance for anything like Rs. 135 crores can be secured by means of issuing *ad hoc* treasury bills to the Reserve Bank. A further Rs. 15 crores can be arranged with the Reserve Bank as loan on ways and means account. Thus, it should be possible to make up Rs. 200 crores, which is possibly the maximum rupee finance that may be required against the funding of sterling pensions.

In thus analysing the financial position from the point of view of the funding of sterling pensions and in showing that the rupee finance required for this purpose can be raised without much difficulty, we should not be understood as lending support to the scheme as such. From the beginning, we have been opposed to the proposal. Indian public opinion has condemned it in the most categorical terms. If the Government of India persist in this proposal, it must be clearly understood that they are carrying it out without the backing of Indian support. To make out that this operation is necessary as a part solution of the problem of accumulating sterling balances, can carry no conviction. The simple fact of the matter is that the real solution for the piling sterling assets is the discovery of a plan whereby the purchases and commitments of the British Government in India will have the minimum effect on the currency reserve. That is to say, the intervention of the Government of India in these transactions must be reduced to a minimum. As far as possible, the finance required for the Allied commitments in India must be raised directly in the Indian market. The responsibility for raising finance in India and for finding exchange in the future at the time of repayment must not be that of the Indian Government but of the British Government. We cannot help feeling that, for reasons not easily understandable, the Governments of Britain and of India are putting off the obvious solution, which is for the British Treasury to come out as borrower in the market.

It may well be that there is some apprehension in the mind of the British authorities that Britain may not be able to raise short-term bills and loans in India on rates comparable to those at which the Indian Government are able to secure their accommodation. In other words, if the British Government are obliged to pay higher rates than the Indian Government in the Indian market, this will be derogatory to the prestige of Britain. For our part, we believe that Britain will be able to secure her requirements on the same rates as the Indian Government. In any case, even if a slightly higher rate be found necessary, it only means that, while each country can borrow on the best terms possible in the domestic market, a foreign Government borrowing in that market must necessarily pay slightly higher rates. There is no question of prestige in this matter. Even if there is, the horror of the many evils which have followed inflation in India is of graver import than a minor matter like prestige in regard to Britain borrowing in India.

The returns of the Reserve Bank for the week ended November 26, show no change of any importance in the issue department. In the banking department, the Central Government's deposits are higher by Rs. 6.23 crores, while those of the provincial governments are lower by Rs. 88.55 lakhs. The deposits of member banks have gone up by Rs. 3.86 crores. Foreign balances have advanced by Rs. 8.87 crores.

In the week ended November 26, the deposits of the Imperial Bank stood at Rs. 206.84 crores as against Rs. 202.58 crores on November 19. Investments are higher by Rs. 1½ crores at Rs. 130.60 crores. Thanks to rediscounting of treasury bills, the bill portfolio has expanded from Rs. 2.88 crores to Rs. 4.68 crores. In the result, cash at Rs. 47.91 crores compares with Rs. 46.69 crores.

The exchange market has been mildly active, but fully steady.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on Lonodon at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329⅜.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

Finance Abroad

Thursday Evening.

Speculation connected with von Papen's visit to Rome has been without any considerable effect on markets abroad. The rumours have been scotched undoubtedly by Mr. Hull's instructions to pressmen in Washington to refute all surmises and suppositions. The actual effect on the New York market of peace rumours has been small, though leading issues have lost ground but that may be due to the President's trip abroad or the quarrel between Mr. Wallace and Mr. Butler. The Cairo announcement had apparently little effect on London markets and the main change to be looked for at present is a hardening of Chinese Bonds comparable to rise in Brazilian issues on various hopes. But that would not correct the irregularity in Home Industrials which make a slow recovery to judge from the movement in prices on Wednesday. The appointments to Commissions, the deputation of Staff Officers and consultations on a grand scale leave little mark on markets. Oil shares have, however, responded in a striking manner to recent speculation concerning an alliance with Saudi Arabia. Emir Feisal's interview to Reuter has been a good talking point for Eastern oil shares as much as the news that international interests are getting together for developing oil in the Middle East and putting up a new pipeline at a cost of £10 millions. Saudi Arabia's gold was mentioned as calling for development with external assistance. The Hedjaz has long favoured old coinage; but the Nejd dynasty has brought silver into vogue. Saudi Arabia's independence goes back to the treaty of 1927 but the main factor in the future would be the rapid growth of British influence. From Aden British influence has undoubtedly spread inland and the Saudi Sultan's interest in Arab Union may bring corresponding advantages. For the present, the jump in Anglo-Iranian stock will attract more notice than the comments in the News of the World. Naturally, Shell and Burmah being partners in Anglo-Iranian stand to benefit, and the improvement in the quotations is understandable. It has been suggested that Standard Oil's plans have been turned down by the State Department instead of the Company having rejected the idea of being helped by the U.S. Government, but one may suspect that Standard's foreign policy is again distinguishable from that of Washington, and any check to the former is viewed probably as favourable to the British oil companies, though it may be urged that in the plans under discussion in London Standard controlling over one quarter of the world's petroleum, will not be the least noise. The inferences as to the forthcoming discussions with Mr. Eden will certainly attract attention of others besides the Muslim pilgrims who were disappointed by the Indian Government's decision not to let steamers run to Jaddah. The Wahabi dynasty's interest in the development of the desert will open up prospects for Indian exporters in territories wholly familiar with the Indian rupee. All over the coast of Arabia, the silver rupee has been current for a long period and it is known that even in Iraq after the currency law of 1931 the rupee did not lose ground. Indian banks may choose to tread in the footsteps of the Netherlands Trading Society.

The conference to come in Teheran may stimulate Eastern oil shares again and this might pull up Attock oil shares as well. For the present, no change in Burma mining shares can be predicted though the announcement from Cairo will direct attention to the actual working of the S.E. Asia Command. Action against Japan is promised in support of China. To help China's republic back to the Empire of the Manchus is the object of the Anglo-American entente and a recovery in Japanese bonds is highly unlikely, for the reason that Japan after defeat will be a tight, little island.

There has been a hint of slacker money conditions in London in view of the decision to borrow more from the Banks. It is suggested that interest paid on war loan will be mopped up by taking more Treasury deposits, but the main relief to banks is the assurance of borrowing at 1 1/8 percent on a scale similar to other short-term borrowing at 1 percent. Rates have been anchored so firmly that no change can be seen in the daily quotations for a long while. Industrial shares move up and down; post-war prospects are canvassed, and some changes in dividends take place while State encroachment on industry after the affair of Short Bros. is severely limited.

The brightening up of the market on Wednesday may be viewed as a guide to reactions in India to the Allied leaders' conference. Since the London comments on gold sales are discussed elsewhere, it is not necessary to say why Portugal has not put the gold bullion standard into effect.

In the light of reports as to the meeting between Allied leaders at Tabriz, the markets abroad can show little change. The Lebanese muddle has been apparently straightened out, but arrests in Algiers will require some explaining. The French, like the Italians, have plenty of quarrels among their own leaders and the Advisory Commission in London will have a great job composing differenles and planning decisions to be placed before the War Cabinet.

These developments should not threaten the new exchange rates imposed by the Allies and the general belief that rates ruling in August will be those adopted under any inter—Allied agreement means that the position of the franc and lira has been settled, more or less in advance. The liberated countries may or may not get gold, but their trade is of direct interest, during and after the relief operations, decided upon by the Allies last week. How the goods meant for relief will go and when are admittedly questions for exporters as well as Governments and the best that can be hoped for is that a composite buying agency will be set up, and that will be put on later to dealing with commodity surpluses and deficits after the operations. If a world bank materialised (Canada has a plan for that) the financing agency will be there and short-term financing for wheat and wool would keep the price levels in producing countries stable and also keep up purchasing power.

It is singular that forecasts of world boom and slump after the war do not appear with the same frequency as in the past year because it is believed that some kind of financial agreement would be soon reached. America's interest in Latin America has made it clear that the Export-Import Bank and other U. S. agencies will be retained and normal practice will not be reverted to. In the war period banking expansion in all countries has been substantial and the problem for banks will be largely one of competition with new agencies provided with funds by Governments. Guarantees instead of bills will obviously be the instruments used in international trade, and the main advantage that Indian banks may count upon, if and when they expand, abroad will be the use of English rather than complete familiarity with foreign exchange. There is already an indication that Indian banking will move forward confidently in African colonies, and the Indian trader will receive full support. If such an assurance is lacking in the Middle East, the Muslim League experts chosen to examine the economic issues of Pakistan may formulate proposals for a bank that will serve Muslim countries in the Near and Middle East.

The unusual conditions that will favour British expansion may be the post-war value of sterling between $4 and $5 rather than any plan to give gold in return for goods. Once the fear as to likely depreciation of sterling disappears, overseas balances in London will be kept as before and the maintenance of cheap money will be a simple problem. While Mr. Churchill has the Four Year Plan for adoption at home, there has been no mention of what the Government wants in respect of industrial and financial controls after the war. Admittedly, full employment will secure the export revival; and a general appreciation in the U.S.A. of what the tariffs on either side stand for, may lead to a joint export policy. It is not difficult to see that after German export dumping is fully eliminated, the problem of selling U.S. or British goods in any country is simplified.

Gold Sales

The Reserve Bank's sales of gold in Bombay, long a matter of surmise or conjecture, are now an unquestioned fact. It has not been disputed, in spite of affirmations in influential sections of the press both here and Britain, that sales have been at or about 30,000 tolas a day. Neither the place of these sales in the Government's financial and currency policy nor their immediate repercussions on the country can be easily determined. The Finance Member declined to answer questions in the Assembly on this subject. And these transactions are outside the scope of the published figures of the Reserve Bank. But sales of gold under official auspices in modern times are by themselves a notable phenomenon. And as such phenomenon has occurred in war time, when not only the possession of gold is highly valued, but one should expect a conservation of the metal against future schemes of international financial regulation, public interest both here and abroad has been greatly excited. The London "Financial News" considers it mainly from the point of view of its effects on public psychology and on inflation as also of its applicability to Western countries in their present position. Needless to say, the "Financial News" regards the sales as a gesture of reassurance to the public about the soundness of the currency position and considers similar action in the West as useless and impracticable. It concludes that the policy aims at producing a psychological, not material, effect and that it can produce no appreciable effect on the public's surplus purchasing power. It adds, "Most European countries after the war will have the problem of procuring enough gold for their international requirements. Very few countries will be able to spare gold for their internal requirements and even they would think twice before using their gold reserves for that purpose."

While the gesture aspect of these sales may deprive them of importance in the eye of foreign countries, India will find it difficult to adopt a similar indifference to the actions of the Government in this regard. The silence of the authorities is both a cause for disquiet and an invitation for public protest. But the absence of authoritative information is a handicap to those who are particular about their protests being based on indisputable facts. As we have mentioned already, the Finance Member has declined to answer questions and the Reserve Bank has not felt called upon to issue even those cryptic statements which official bodies revel in issuing to an agitated public. In these circumstances, one has to be content with analysing the present position laying bare the basis of the apprehensions that are felt by the public. Generally speaking, financial transactions of this kind, in the setting of the war and with the problems of inflation and sterling balances still outstanding, are suspect in the eyes of the public. Such suspicion, when it is not removed by prompt and convincing explanations from the Government side, are apt to draw strength from the experiences of the past. The unwillingness of the Government to solve the inflation problem and the problem of abnormal sterling balances by policies, which not only appeal to the public in India but also have the sanction of international usage, has led many to expect that at some suitable opportunity the immense credits built up by India will be allowed to suffer serious inroads. The purchase of silver on India's account during the last war at the highest prices for decades and on the eve of the most drastic decline had its part in the attenuation and eventual wiping off of India's war profits. "Is it gold now in place of silver during the last war?"—is a question that one hears here and there.

One can attach no importance to such questions except as an index of the general apprehension of the public mind. There is no parallel between the place of silver in the last war and that of gold in this. Silver was more or less a commodity whose price lent itself to specultive machinations. But gold is the metal to which all the currencies of the world are moored; and however much they may move away from the moorings, there is no danger that gold will meet with a fate similar to that of silver after the last war. Nevertheless, the future of gold is not a subject on which one can be cocksure or dogmatic. We have more than once expressed our view in these columns that the position of gold has been impaired by many of the recent trends in world trade and finance. The demonetisation of silver, far from strengthening the position of gold, has only provoked the attempts to reduce the dependence of world trade and national economics on an inexorable natural factor like the stocks and new production of gold. Likewise, the consistent flow of gold towards the U.S.A. and the difficulty of getting it back, thanks to the trade relations of that country with the rest of the world, has led to ways of circumventing the need for gold to some extent. What the trade relations of the nations will be in the post-war world or the demand for gold, it would be unwise to try to predict. But substantial contraction of national currencies from the highly inflated levels of the war period is inevitable. And to that extent a fall in the price of gold in terms of national currencies must be expected, though that does not mean a fall in the value of gold in terms of goods and services. The chances, if anything, are that the purchasing power of gold may increase rather than decrease. The element of doubt may, however, be held by some against the sales of gold to the Indian public at present prices.

What matters at the present stage is that the policy of selling gold to the public has no apparent value in the solution of the big problems of the present. It has been assumed that one of the main purposes of these sales is to absorb redundant money and relieve the inflationary pressure on prices. On the basis of available reports of the volume and pace of sales, it is possible to expect that nearly Rs. 3 crores a month will be reclaimed from the public. Though this amount may not be inconsiderable, it is idle to think that the inflationary pressure will have been reduced so far as prices are concerned. For one thing, it is only over a long period that such sales can rope in any large amounts; and one does not know whether one can be sure of the persistence of such sales. But the more important consideration is that the money that will flow into the purchase of this gold is money that, in the absence of such gold sales, would have remained idle either in hoards or in the banks and would not in any case come into the market for ordinary consumer's goods. The inflationary pressure, so far as prices of consumer's goods are concerned, comes from the increased incomes of classes which cannot be expected to buy gold at the first opportunity provided by official policy. Silver may perhaps fit their needs better, though it is to be doubted whether the incomes of these classes leave any margin at current costs of living for investment in gold. If the aim is to relieve the inflationary pressure on prices, nothing can be more inappropriate than gold, except perhaps Rolls Royces. The idea that by selling gold the agriculturist is offered something more appealing than inflated paper currency and that thereby he may be induced to part with his surplus is a chimerical one that can be entertained only by those who have no idea of income groups in this country. Sales of gold therefore can help neither the solution of the inflation problems nor remove practical difficulties of procurement of foodgrains.

The policy, therefore, should for this reason be deemed even more puzzling than it would otherwise be. Lack of relation to big problems on hand combined with the silence of the authorities can only help to deepen popular suspicion. For our part, we could see no objection to the policy of gold sales if the terms and conditions thereof are made clear. The public is utterly in the dark as to the principals on whose account the sales are effected. It does make a great deal of difference whetner the benefits of the high Indian rate are reaped by the Government of India or the Reserve Bank, or whether some foreign nation is helped to profit by it. The danger of loss through post-war revision of currency values may be exaggerated. But it would be legitimate to demand that gold should be obtained by the authorities in India on the same terms as the British, so that the profits such as they are, should go to India. In any case, a clearing up of the position is urgently called for.

CHEMICAL INDUSTRIES' PROGRESS

The promise of price control in regard to drugs and medicines after January 15, 1944 is a measure of protection mainly for the consumer. The Indian manufacturer's view as to the justification of control was given recently at the annual meeting of the Indian Chemical Manufacturers' Association when Dr. Ghosh reviewed the progress made and the prospects before the industry. We are aware that the control of drugs is essentially different from price control under the provisions of the new Ordinance. The manufacturer's view must nevertheless command attention. Dr. Ghosh observed that the manufacturers cannot determine prices since the cost of most of the drugs and medicines that are manufactured in this country mainly depends upon, and is determined, by the prices of basic chemicals. He added that owing to inadequate arrangements for imports basic chemicals are scarcely available or have to be obtained at exorbitant rates. He concluded that so far as Indian manufacturers are concerned, official control of the prices of drugs of Indian manufacture is unnecessary and would hamper the industry. He argued in this context that the interests of the consumers would be served better if the Government gave greater facilities to manufacturers for their supp.ies of basic chemicals at reasonable rates when the manufacturers will see that the consumers get their requirements at reasonable prices. He referred also to the differences in excise duties between the various Provinces. He urged that the black market had not been checked and recalled that experience of consumers in respect of essential goods in which controls have been enforced has been discouraging. He summed up the case by drawing attention to the difficulties and complications and asked for careful consideration before control was enforced.

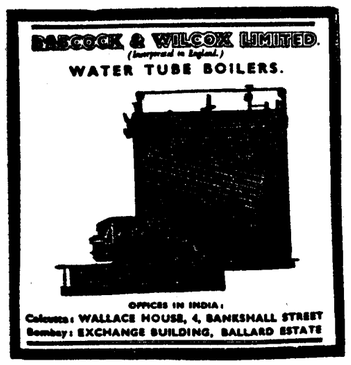
Since it has been announced that control is to come soon, the observations of Dr. Ghosh attract little interest, but all manufacturers will certainly ponder over the reference to the appearance of new, small manufacturing concerns in India with small resources and the likelihood of their being unable to stand up to European or American competition after the war. He asked that Indian manufacturers must protect the investor by prevention of price cutting, and he also asked for preparation to raise competitive ability. His own suggestion was that instead of diffusing energy and resources in so many units, existing concerns should combine and their strength would ensure their future. He asked Indian chemical manufacturers to examine the suggestion. The other suggestion which he advanced was to the medical profession in India. He asked the profession to note that manufacturers were making their best efforts to manufacture good quality substitutes for many imported drugs and the profession should show its appreciation of the efforts of Indian manufactures. He observed that it was one of the responsibilities of the profession to encourage the industry so as to make India independent in respect of her requirements of medicines. In his words the time has come when the old prejudice and apprehension regarding the quality of the indigenous manufactured drugs may be set aside so that indigenous industry may prove that the confidence asked for is justified.

Whether the programme of the Department of Civil Supplies in regard to imported medicines is applied or not, there is a certainty of drugs being soon subject to control. Local governments have been instructed to prepare for price control and the arguments addressed last month have evidently been ineffectual. For us the main interest lies undoubtedly in the description of the achievements of Indian manufacturers in spite of the difficulty mentioned. The fine chemical and pharmaceutical industries are entirely dependent on the supply of basic chemicals imported to feed the existing industries in India. In Dr. Ghosh's phrase the nutrition of the industry is in foreign hands. He therefore asked the Indian manufacturers to plan precisely for the starting of basic chemical industries, on which depends the future, not only of the pharmaceutical industry, but also agricultural development and industrial progress. Consultation and conference has yielded agreement as to the necessity for the simultaneous growth of basic chemical industries.

Reviewing the progress made in this field over a limited period Dr. Ghosh pointed out that existing chemical companies had almost solved the problem of the supply of alkali products. The production of sulphuric acid also is increasing through the efforts of certain industrial concerns which are trying to utilise iron pyrites. The effective utilisation of pyrites and gypsum will, it is honed, solve in the near future the problem of the supply of sulphuric acid. The immediate programme for India's chemical manufacturers covers coal distillation. India, with an unlimited supply of cheap coal, is held to have special advantages, and Indian manufacturers have been asked to draw up plans so that the Government aid in import of the requisite plant could be sought. It was mentioned by Dr. Ghosh that attempts to interest Indian financiers and industrialists to undertake coal distillation had met with such encouraging response that if a workable plan were evolved, there would be immediate and active co-operation on their part. We may relate this assurance to the advice frequently tendered to the coal industry that by-products are as important as fuel, and the coal-mining industry in India must be prepared to further all attempts to bring coal into direct relationship with the industry. In this case prospects are improved by the chemical manufacturer's concern for progress in a new direction. Dr. Ghosh added there should be no misapprehension that India has not industrially advanced enough to utilise all the by-products of a big and profitable unit and that the present shortage is due to increased wartime requirements of the country. In fact, the demand of the civilian population for products, the manufacture of which is dependent upon by-products of coal tar distillation has increased to such an extent that a ready market would be available even after the war.

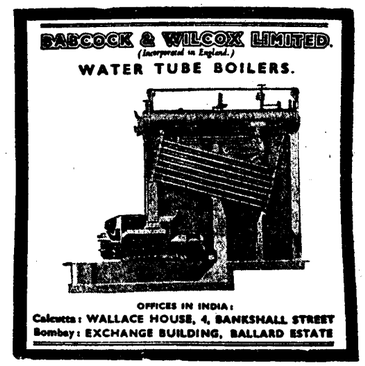
Since reports as to State assistance for fertiliser production have been common of late, the chemical manufacturer's view deserves notice. India before the war used about 100,000 tons of fertilisers. The target set before the country, in the interests of larger food production in the immediate future, is 350 000 tons per annum while certain exports put the total requirements of progressive and efficient agriculture at one million tons per annum. The observations of Dr. Ghosh only indicate the urgency of the problem. There is only one synthetic ammonia plant with a small output. It is also known that the ammonium sulphate units of some tar-producing plants have ceased operations. It was therefore argued that special measures to encourage the production of cheap ammonia are called for.

The picture of progress in the Indian chemical industry can be complete only if the figures cited by Sir S. S. Bhatnagar at Bombay are taken into consideration. Progress in this field is to be measured by annual output figures; about 80,000 tons of sulphuric acid; about 45.000 tons of caustic soda; about 56,000 tons of soda ash; about 2,600 tons of chlorine; about 15 tons of chlorosulphonic acid and about 60 tons of formaldehyde. Sir S. S. Bhatnagar declared that the production of coal tar in India



has risen to 80,000 tons of which nearly 40,000 tons a year are distilled and such constituents as anthracene, benzene, toluene and phenol are recovered. Progress in another direction was reported since the B.S.I.R. investigation into dyestuffs possibilities concluded. It is reported that Shalimar Tar Products have decided to embark on the production of phthalic anhydride and have approved the results of the pilot plant which was constructed in the laboratories of the Council of Scientific and Industrial Research. Messrs. Parry & Company, are fast on the way to produce acetic acid according to Sir S. S. Bhatnagar.

The figures suggest that progress has been greater or more rapid than presumed and the estimates of prospects for many Indian industries must be related to the expansion reported in the chemical industry. Admittedly, such progress would have a bearing on the postwar future of most industries, and whatever has been said about peace risks for Indian enterprise, must be modified by calculations as to future progress in the chemical industry. Since official statistics of production are lacking we must assume that the figures cited by Sir S. S. Bhatnagar are complete and correct in respect of the last fiscal year, but whatever be the difficulties lately described opportunities have been grasped by the large enterprises which came into being before the war, and the position as regards basic chemicals has improved under the system of controls in force.



THE
FOURTH
DEFENCE
LOAN
1953-1955
3%
now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Editorial Notes

The Tax Burden

Following the Indian Chamber of Commerce's memorandum on the burden of taxation in India, the Federation of Indian Chambers has made a representation to the Government of India asking for scientific examination of the basis of taxation. The Federation argues that the present method of taxing industry would prove injurious to their development in the postwar period. The Federation states that the question of taxation of British industry, with a view to strengthen competitive capacity in the postwar period is coming up for review, and asks for a similar enquiry in India. The representation dwells on the obsolescence of plant after the war. Replacements would be necessary and existing allowances for depreciation are regarded as inadequate. The Committee raise also the question of losses entailed by the change from war to peace. It is urged that industry is entitled to an assurance that steps will be taken to see that all such expenses would be treated as of a revenue nature, and would be allowed as a deduction in computing the liability of industry to tax. A further assurance that the question of expenses connected with the restoration of dispersed units of factories would be considered is also sought. The representation asks for such expenses being set off against E.P.T. collected if it should happen that the E.P.T. ends before the changeover to peace conditions has taken place.

The Government of India is also notified that the depreciation of stocks must be allowed for as industry cannot bear the loss. It may well be necessary to make such provisions in the Income-tax Act and also relate the depreciation of stocks to the E.P.T. period and refund the tax already collected. Lenient treatment of undistributed profits has been demanded. Reserves play an important part in the financing of industry. The committee therefore express the view that the methods by which profits are set aside for employment in the further growth of business, should be fostered and encouraged instead of being subjected to penal taxation and this can be done only by discriminating in favour of undistributed profits as is done in the U.S.A. Indian industrialists also raise the question of allowance for expenditure on Research. The Federation suggests that income-tax authorities should allow very liberal deductions for the cost of research. A general enquiry into taxation policy after the war is demanded in the interests of postwar reconstruction.

The strain thrown on profits by taxation in the war period has made the Government the senior partner in most enterprises. Whether the position can be maintained after the war is not a problem for the Central Government alone, Provincial taxation, as in the case of the tea industry, may make inroads on profits but the existence of excises, when tariffs have ceased to help, may well be regarded as unnecessary. There is some excuse for the belief that profits in India tend to run high because taxation is high and the differential referred to in connection with the gross profits of Indian concerns or industries, is in reality the consequence of taxation. Some would ascribe the existence of the burden to the managing agency system, but they must not overlook the fact that the affiliates of foreign concerns almost without exception adopt the system. The income-tax enquiry preceding the amendment of the Act was undertaken mainly in the interests of the revenue. It was not like the Colwyn Committee's investigation about taxable capacity and the optimum burden. Assuming that a fall in prices and ergo in profits is desirable, the case for the reduction of taxation is established. Depreciation on an enhanced scale for extra wear and tear during the war period, has been allowed in one or two industries but the principles to be applied after the war have not been yet enunciated. The whole issue of taxation after the war may come up during the next Budget and the assurance, at least as to the removal of the surcharges, may be unanmously demanded before the investigation begins.

Electricity and Industrialisation

The Labour Member in his speech on postwar electric development in India dwelt on the need to import machinery from abroad. It was pointed out that India could register her orders for tools and plants and try to obtain priority for her imports. Three difficulties were mentioned in connection with imports. The Provinces must make up the list of requirements. Machinery wanted would be different if the source of power were water or steam. Uncertainty as to the attitude of Governments of the future was cited as a third difficulty. Indian electricity policy goes back to a circular of 1905 but it began only after the Industrial Commission's report. The Electrical Adviser produced reports but electricity became a Provincial subject, and the Central Government, till recently, had no data as to the production, distribution and administration of electricity. The Labour Member put down before the Reconstruction Committee (Policy) questions of ownership, the limits of control and the need for an Inter-provincial Board to advise and co-ordinate. He insisted that India wants an assured supply of power, cheap power, and abundant power. He asked for opinions as to the need for a Central Power Supply Department and Research Bureau and training of technical experts.

The Labour Member mentioned electrical development as a means to an end, namely, industrialisation. He gave as his opinion that food production was short, that agriculture had failed, and the growth of numbers demands today the growth of industry. The Labour Member spoke of reconstruction in terms of industrialisation entirely. It is perhaps necessary to dissociate the speeches of both the Labour Member and Supply Member (who spoke of cheap fertilisers obtained through cheap power) from Mr. H. M. Matthews' estimate of possibilities in India. Mr. Matthews spoke of the possibility of schemes totalling about 700,000 kilowatts of generating capacity as ranking for serious consideration in the immediate postwar programme. He outlined the functions of the advisory organisation indicating that it could collate statistics, lay down model conditions to deal with the finances of all utility companies and provide engineering advice in connection with power schemes. A Central institute to deal with the requirements of the electric supply industry was recommended. The idea of a central advisory body is said to have found favour. Essentially, the organisation will be comparable to that of Irrigation in which the Central Government's interest remains close and real. Schemes for managerial training abroad and for refresher courses for electrical engineers were favoured by the delegates who met last month in Delhi.

Technical Training Schemes

Some light on the progress of technical training scheme is shed by a note in the Indian Labour Gazette. During the month of September six small and uneconomic centres were closed down and at the end of the month, the Central Government was running 301 centres where 35,275 persons were under training. The number of candidates who had passed out on that date is known to be 54,167. Of this total, the Army received 47,630; the ordnance factories 2,799; the Indian Air

force 1,348 and civil industry 2,390. In a statement provided to sum up progress it is shown that the largest single class of technicians continues to be fitters. As many as 4,546 electricians were trained. The I.A.F. was provided with 1,348 mechanics and the majority of turners passed into the Army; and only 57 went into the Navy. It is perhaps surprising to note that bricklayers too are wanted for the Army along with welders, and strange to say, plumbers. The variety of trades taught may surprise many who are told of the shortage of trained men.

The total of 54,167 skilled artisans may make a real difference to postwar industrial development. The training centres now at work are distributed over 14 provinces and 22 Indian States. Madras has 62 centres able to train 9,676 candidates as against the 41 centres with 6 027 trainees claimed by Bengal. The actual number of trainees at the 301 centres at present are, namely, 35 275 which is short of the estimated capacity of 45,252. What would be the peace-time possibilities through the proposed labour exchanges for the trained technicians can only be guessed, but it is certain that trained men will be readily available to industry, especially, the engineering trades, and the shortage dealt with by the National Service Tribunals will have been forgotten. The Navy draws its artificers from the new technical centre at Pilani where 198 candidates undergo training. The total is said to be up by 138 percent as compared with June. The offer to train men now extends to clerks and there are 17 centres for training 4,650 clerks per year. According to the progress statement 100 clerks have passed out for service in the armed forces and the new proposal is to increase the supply of clerks. At the end of September 11,134 candidates for training as clerks had been accepted, and the vacancies at the training centres were very limited. The employers' own contribution to technical training through apprenticeship or other facilities may not be large, but attention may be drawn to the instructions given in Britain to employers to train new entrants; and offer of encouragement by advice and other means to train within the industry instead of at the Government centres.

S.E. Groupings

An article on the Stock Exchange in the Indian Institute of Banker's Journal contains an account of the New York stock exchange. The difference between brokers and dealers obtains there too and among brokers there are commission brokers and two-dollar brokers. The former act for clients and live on the brokerage fixed there according to scale. They have offices near the exchange. Such brokers do business on their own account, but one with a good connection need never deal on his own account. The two-dollar brokers differ from the commission brokers because they act on brokers' instructions only, usually commission houses. When a firm of brokers has many simultaneous orders to execute, two-dollar brokers are employed. The title is derived from the fact that the brokers charged two dollars for every hundred shares bought or sold through them. The rate, of course, differs now, but the name remains. As intermediaries between the market and brokers, they enjoy a safe position because they have nothing to do with outsiders. The

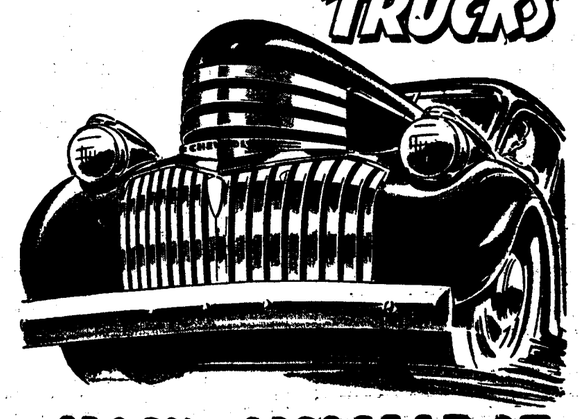
two-dollar man's commission is invariably included in the commission of the broker. But a client cannot be charged more on the ground that the broker has employed an intermediary. When the volume of business is above the average the two-dollar man really comes into his own. The public certainly benefits as orders go through promptly without any cost. Apart from the dealers, the two-dollar man have a regular place in the market and as an old dictionary states "A great many stockbrokers although owning seats may wire to employ others to buy or sell securities and consequently employ brokers to whom they pay a reduced commission amounting usually to $2 per hundred shares." There are exceptions to the rate for the commission is less for stocks selling below certain fixed prices. Brokers acting in such capacity for others are known as two-dollar men (or brokers). Brokers acting one for the other as above, must be members of the same exchange. The parallel to this type of broker undoubtedly exists in India; and the division into brokers and dealers in New York is certainly known in India where floor traders fall into more or less well-defined groups, just as India, too, is familiar with the 'bond crowd' with whom only brokers or dealers engage in business.

Inflation Past and Present

Charts appearing in the League of Nations statistical bulletin again support the view that currency expansion is universal and the original connection between the supply of money and the price level is seldom countered by the interposition of controls. Wartime experience in every country points to an expansion of purchasig power and a scarcity of materials which is duly reflected in the cost of living. The charts bring out the well-known fact that inflation during the last war was even more pronounced, if discussion as to its nature and consequences was more restrained. But neutrals in the last war, eg., Denmark fared relatively better than the belligerents then and Holland during the last war derived very real advantages in spite of a rise in prices and cost of living because bank deposits grew more rapidly than the additions to the note issue.



The success of Britain in holding down prices and the cost of living between 1939 and 1942 is as notable as the complete flattening out of wholesale prices in Germany. It is noteworthy that sight deposits of Banks have increased to a greater extent than the note issue in Britain whereas in Germany the deposits have grown less than expected in spite of the fact that the big German banks have been given unusual opportunities abroad. This retarded growth well may explain the rise in industrial shares in Germany throughout 1942 and afterwards. The experience of France is not dissimilar from that of other Occupied countries, but in regard to inflation, the experience of the last war has obviously brought about a mitigation of the worst effects. The chart connected with India's currency and prices in the years 1939-42 establishes the view that her experience is not far removed from that of non-belligerent Iraq in the same period.

The charts suggest that rationing and controls have been attended with greater success in Switzerland and Sweden during the present war as the enlarged supply of money has produced a moderate ascent of prices and that too only in 1941. It is not easy to say if the larger supply of money is an index of difficulties or of prosperity, but what has been said of Portugal in regard to the gold reserves acquired and actual use of the gold coinage (planned in 1931) resorted to may be taken as proof of war prosperity. In Palestine war prosperity has propelled prices upwards to the extent as in India. The more important conclusion always for all is that every war forces prices upwards, and neutrality is no protection, for it is known that prices have moved up along with the note issue in Turkey as in Iran. The changes admittedly conform to the pattern observed in the last war, and neutrals have again shared the disturbing influence of the nations at war.

Air Training Results

Sir Stafford Cripps and Sir A. Sinclair dwelt last week on the achievements of the R.A.F. and promised greater and swifter results in the near future. While the assurance that a bomber bigger than the Lancaster is on the way will satisfy many, the main cause of satisfaction will naturally be the reduction in Allied air losses. The supply of pilots ensured by the Empire Air Training scheme is, on any reckoning, as important as the progress in aircraft production. Immediately after the outbreak of war, the training scheme went into effect. The aim was then to have 20,000 pilots and 30,000 air crews in a year. The scheme was meant to attract volunteers and U. S. citizens took advantage of the opportunity available in Canada. The air training scheme has dealt with thousands of recruits for the R.A.F. and other forces. India had her own project, but Indians could, and did, benefit by the scheme which has put 200,000 Canadians and 100,000 Australians into Air Force blue. By 1942 the number of training centres had increased from 1600 in 1941 to 3,300. The number of trainer craft needed and used can only be guessed. Allied pilots too, have been

trained at the Canadian centres and the success of the scheme in providing a supply of fully trained pilots who undergo a course of seven months instead of the six months originally fixed is borne out by the totals in respect of Dominion pilots on service. Instead of the original estimate of £190 million for 3 years the cost of the scheme has increased greatly. The main result has been the supply airmen for a force that has beaten the German air force built up surreptitiously.

China's Monopolies

Four commodities are provided by State monopolies in China and the China Information Bulletin recently gave an account of their profits. The four existing monopolies dealing with salt, sugar, tobacco and matches earned nearly $2,000 million (Chinese) in profits during the ten months ended June 1943. Profits for the first half of 1943 ran to $1,139,076,362 well above the average for the year 1942. The Chinese monopolies are not distinguishable from other state monopolies elsewhere. It is unusual to find sugar included but tobacco, matches and salt are monopolised by the State in many countries. The salt monopoly in China was set up only in January, 1942. Its profits for ten months ended June, 1943 amounted to $1,159,407,948 proving that salt is a big revenue-producer everywhere. More than $347 millions came from the sugar monopoly and more than $336 million from the tobacco monopoly. The sugar monopoly provided over $39 million as profit to the State enterprise. The tobacco monopoly was inaugurated in Szechwan, Sikang and Western Hupeh on July 1, 1942 and was extended to the whole of Free China. The sugar monopoly functions in seven Provinces, having been progressively extended last year. The match monopoly was worked in five Provinces and extended to nine more Provinces in October 1942. The salt and tobacco monopolies are in force over the whole of China.

The total profits from the four monopolies rank after direct taxation and the land tax. as the most important source of China's revenue. It is easy to infer that the loss of the maritime customs—at one time the principal source of China's revenue—accounts for the resort to monopolies. In the past the Chinese republic taxed salt, rolled tobacco and levied internal customs duties as well up to 1931. These have been evidently displaced by the new monopolies. Their yield in the first year suggests that they may rise to the first place, and if and when the customs revenue is recovered, there may be a clash between the interests of the import trade and the State monopolies, for example, in respect of tobacco. It is generally known that British-American Tobacco occupied a strong position in the Chinese market. That may not be duly recovered in view of the special consideration may be shown to the Monopoly after the war.

Mines Act Amended

Towards the end of last week appeared a notification stating that former prohibition of female labour underground in the Bihar and Bengal coalfields was at an end. The share market anticipated the notification because it was presumed that special measures to raise output would include the relaxation of statutory regulations. The Indian Mines Act as amended in 1935 empowered the prohibition of female labour underground as from July 1939. Earlier the C. P. Government was credited with a desire to withdraw the prohibition, and there was immediately some discussion of the merits of the decision. Women's organisations naturally saw a threat to progress in any change designed to bring women back into the mines. The original prohibition decided upon in 1929 took nearly ten years to go into effect, and the fact that the number of workers employed underground is invariably larger than those engaged on the surface was not overlooked in comments. The Mines Act provides for a working week of 54 hours and a maximum working day of 11 hours.

The Government of India's decision to permit the employment of women is, perhaps, a temporary one meant to alleviate the shortage of coal, for the Government accepted in the Mines Act of 1935 the principles embodied in the recommendations of the International Labour Conference of 1931 and the Draft Convention on hours of work in coal mines. The change in mining regulations is again by exemption of specified areas and it is not only in Bengal and Bihar that women will be employed underground. Equal pay for equal work is conceded to women and special welfare arrangements are promised. It is reported that the Labour Member and Mr. R. S. Nimbkar, too, are to visit the mining areas to examine both the production and labour aspects on the coalfields.

Shortage of coal in wartime is not limited to India, and so far as is known, the Indian coal mining industry in the past year has experienced little labour trouble. The Mines Maternity Benefits Act of 1941 and other measures presumably remain in force, and female labour may, perhaps, be limited as far as possible to open workings. Actually, the change may not represent a large addition to employment. In 1941 the mines in Bengal employed 65,431 workers (on the basis of daily averages) while the mines in Bihar employed 200,577 workers. The total number employed in mines in India in 1941 was 347,018 and the change permitted by notification may not lead to any large changes in totals. Over a long period the number of workers benefited by the Indian Mines Act has steadily increased, and one may assume that basic wage rates per week will, in effect, show the effects of the rise in coal prices this year. What is perhaps important at present, is that conditions of recruitment must be altered, by the employers even more than the Government. Fortunately, it is the Central rather than the local governments which deal with mines and mining labour, and Dr. Ambedkar's projected visit may procure the safeguards required in advance of increased output.

U.S. Steel Output Bigger

The U.S. steel industry's progress up to the end of 1942 is reviewed in an article appearing in the Martin-Burn magazine. Under the pressure of wartime needs many new processes have been developed which have not only increased productive capacity, but have facilitated and improved the actual methods involved. From the beginning of 1940 to the end of 1942 the steel industry expanded its net annual capacity by 8,673,164 tons equal to a 10.6 percent increase on 1940. The increase

alone exceeds Japan's rated output of 7.2 million tons in 1941. Productive capacity was raised by 1.1 million tons in the second half of 1942 and capacity at end 1942 stood at 90,292,660 net tons per annum. Blast furnaces' capacity increased by over 3.5 million tons in 1942. The three-year expansion in pigiron capacity amounts to over 8.2 million tons. The W.P.B. has planned for a further increase of 7 million tons of steel and 8 million tons of pigiron although blast furnace capacity has increased enormously. More pigiron and more scrap are needed and although capacity for producing open hearth steel and electric furnace steel showed a corresponding increase, more furnaces are needed to produce ingot steel. The addition to electric furnace capacity spells and increase in armour-plate output and numerous alloys. Open hearth furnaces, too, are being used to make high quality alloys, which, it was once thought, could be produced only in electric furnaces. Simultaneously, a new technique for pre-melting scrap instead of using it cold is expected to raise output of speciality steel. Metallurgists have developed new alloys. Research has yielded a formula for a tough alloy that uses less than a third of the nickel formerly called for, and tests have proved that it has better welding properties. Steel consumption for non-essential purposes in the U.S.A. has been cut in the interests of arms production. Steel production has moved westwards and Henry J. Kaiser put up a new 1,000-acre plant at Fontana (Cal.) on the basis of ore only 300 miles away, local limestone and manganese, and coal from Utah. The plant's annual ingot capacity is rated at 675,000 tons and the new rolling mills was expected to give 300,000 tons of plates, enough for 120 Liberty ships.

ALCHEMY OF THE DEEP

The magic of words lies in an infinite variation in combining the twenty-six letters of the alphabet; it results in hundreds of thousands of words. Alter but one letter in a word and the entire image changes. A similar magic, even wider in its sweep, is worked by changing the combination of the ninety-two elements of Nature.

Nature is the great alchemist and holds the key to astounding secrets; but Man has learnt to turn the key. The chemist can give the world a plenitude of new substances for the uses of Man.

The waters of the seas that lap our shores can be made to yield many of the chemicals required for our needs. These are the alkalis—'the germ-cells of industry'. Indian industry can no more advance today without chemicals than it could have a generation back without steel.

But yesterday, these chemicals were carried to India thousands of leagues upon the very element from which they are produced. Now, Mithapur, once a sandy spot on the shores of Kathiawar, adds the riches of the sea to India's natural wealth to fertilise her soil and to feed, house, clothe, and serve her people in innumerable ways.

And so Tatas have placed another milestone on the highway of India's industrial progress.

Tatas' many-sided interests include :

Iron and Steel . Textiles . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Soaps and Glycerine . Industrial Investments . Hotels . Cement . Engineering . Scientific Research.

TATA SONS LIMITED

THIS IS NOT A PROSPECTUS *Telegrams :—PLANTERS, CALICUT*

LAKSHMI PLANTING CO., LTD.

Incorporated in British India, under the Indian Companies Act VII of 1913 as No. 3 of 1943-44 of Calicut on the 11th of May, 1943. Liability of members is limited.

AUTHORISED CAPITAL - - Rs. 5,00,000

DIVIDED INTO:

40,000 6¼% Preference Shares of Rs. 5/- each - Rs. 2,00,000

1,50,000 Ordinary Shares of Rs. 2/- each - „ 3,00,000

The Preference Shares shall entitle the holders thereof to a fixed cumulative dividend of 6¼ per cent per annum, free from British Indian Income-tax on the amount paid up thereon and such shares shall rank, as regards return of capital, in priority to the Ordinary Shares, but the holders thereof shall not have the right to any further participation in the profits or assets of the company; and upon an increase of capital the Company shall be at liberty to issue any privileges or conditions attached thereto.

CONSENT OF THE CETNRAL GOVERNMENT HAS BEEN OBTAINED TO THIS ISSUE UNDER DEFENCE OF INDIA RULE 94-A. It must be distinctly understood that in giving this consent, the Government of India do not undertake any responsibility for the financial soundness of any schemes or for the correctness of any statements made or opinions expressed with regard to them.

PAYABLE IN FULL ON APPLICATION

(Application will be made to the Madras Stock Exchange Association for these shares).

Bankers:

THE CENTRAL BANK OF INDIA, LTD.

Managing Agents:

PLANTERS' SUPPLY & AGENCY COMPANY.

Registered Office:

Court Road, Calicut, South Malabar.

NELLIYALAM TEA ESTATE: This issue is now made by the Company to acquire on a 96 years' lease the Nelliyalam Tea Estate, Mango Range, P. O., Nilgiri Wynaad. The estate belongs to SRI RAJA SHANKAR ROYAL, YESHWANTA BAHADUR, RAJA OF NELLIYALAM, NELLIYALAM PALACE, MANGO RANGE, P. O. (now residing at "Sri Bhujangeswara Prasada", 960, Lakshmipuram, Mysore City). The total area of the estate is 168.87 acres out of which 118.70 acres are planted with yielding tea of good Assam jat. The reserve area of 50.17 acres is quite suitable for expansion of the estate with other plantations, viz. coffee, orange, etc. The fact that this area claims over 6,400 acres under tea plantation by European planting companies is an indication that the soil, elevation, climatic conditions, etc., are ideal for profitable tea planting. Neighbouring estates are 'Attikunna', 'Caroline', 'Richmond', 'Rockwood', etc., all belonging to European planting companies. Of these 'Attikunna' claims to have the highest tea crop in the District (about 740 lbs. per acre per year) and she is our nearest neighbour. Nelliyalam Tea Estate is only about 20 miles from 'Colerie' Estate, the main property of this Company and is connected by the Calicut-Ootacamund Main Trunk Road. There is a motor road running through the estate. The estate needs pruning and slight repairs.

TEA FACTORY: There is a small tea factory with machinery which, if renovated, will be sufficient to handle the crop of the estate. This is now situated on the Palace premises and the Company proposes to shift the machinery to the estate for efficient working. There are no staff quarters or coolie lines on the estate. This is due to the fact that local labour is available throughout the year at reasonable wages. They bring their own rice supply as Gudalur taluk is a paddy growing area too. The Company proposes to construct the necessary buildings as soon as possible and these can be had at reasonable cost. Use of some buildings on other Palace lands adjacent to the tea estate has been kindly permitted by the Raja Sahib till the Company's buildings are ready for habitation.

The general health of the area is good. There is a local fund dispensary not far away from the estate and it is anticipated that this dispensary will be shifted to a building specially constructed for this purpose by the late Rani of Nelliyalam, on the Palace land, next to the Tea Estate.

LEASE AGREEMENT: Agreement with the Raja Sahib offers the Company two alternatives.

I. Single payment of Rs. 1,25,000 for rental, etc., towards the first 48 years and on expiry of this period the lease may be renewed on payment of a premium of Rs. 1,700, annual rental of Rs. 650 and avagasam (rights) of Rs. 650 every 12th year thereafter.

OR

II. Annual payment of Rs. 6,500 to be paid in advance in half-yearly instalments. Avagasam of Rs. 2,000 to be paid every 12th year. On the expiry of the 48th year the lease may be renewed for another term of 48 years on payment of another premium of Rs. 2,000 and annual rental, avagasam, etc., as stated before.

The Company has paid to the Raja Sahib an earnest money of Rs. 2,000 which amount will be adjusted towards payment of the first premium on executing the pucca lease agreements.

The Company proposes to have the first arrangement, if sufficient capital could be raised now. The Company has also the option to convert a lease by annual payment to one of a single payment within 3 years from the date of the commencement of the lease. During the period of the lease the Company has full right over all income and privileges from the estate, viz., tea quota, planting rights, etc., but not the mining or prospecting rights which the Raja Sahib has reserved for himself. This document may be inspected at the office of the Managing Agents at Calicut on any working day during business hours.

For some years past the estate was not worked and, therefore, the basic quota issued by the Indian Tea Licensing Committee is only 26,901 lbs. per year. It is, however, hoped that by working the estate the Company will be able to raise the quota to the full. Income from the sale of tea quota alone has been, on an average, Rs. 7,000 per year since 1935.

APPROPRIATION OF MONEY: Of the sum of Rs. 1,50,000 to be collected by this issue a sum of Rs. 1,25,000 has to be paid to the Raja Sahib for rental, etc., for the first 48 years of the lease. The Company has already paid an earnest money amounting to Rs. 2,000 which will be adjusted towards the first payment of premium. It is estimated that a sum of Rs. 5,000 will be required for legal expenses, commission for sale of shares, etc., and Rs. 18,000 for working capital.

ESTIMATE: The following estimate of the annual net income, based on the crops procurable from the estate, is considered moderate:

	Rs.	A.	P.
59,300 lb. of made tea (on the basis of 500 lb. of made tea per acre per year. It should be noted that 'Attikunna' which is within half a mile from this estate is getting about 740 lb. per acre per year) at As. 7 per lb.	25,943	12	0
Sale of tea quota of 26,901 lb. at As. 2½ per lb.	4,203	4	6
Total net income ..	30,147	0	6

Deducting from the above a sum of Rs. 1,080 being the Managing Agents' allowance and Rs. 1,507 being their commission, the net return from the estate will be Rs. 27,560. This works out at nearly 18 per cent on the investment of Rs. 1,50,000.

BROKERAGE: No part of the issue has been or is proposed to be underwritten, but the Articles of Association provide for commission being paid in respect of subscriptions, provided it does not exceed 5 per cent of the nominal value of the shares. The Company proposes to allow 2 per cent commission on all shares allotted in pursuance of application bearing the seal of all recognised brokers and approved bankers.

THIS SUBSCRIPTION LIST WILL CLOSE ON 17TH DECEMBER, 1943.

GENERAL: By the addition of 'Nelliyalam' Tea Estate to the properties under the Company, we shall be in a position to minimise the management expenses per planted acre and also increase the yielding acreage under the Company to:

	Acres.
Tea in full bearing	138.70
Black Pepper in full bearing interplanted with Robusta Coffee	95.00
Rubber in yield	15.00
Rubber—new clearing	60.00
Young Orange	10.00
Paddy	50.00
Reserve forest for exploitation of timber and new planting of rubber, coffee, orange and cinchona	416.61
Total area ..	785.31

The Company has more prospects at Nelliyalam, viz., the leasing of the Nelliyalam Orange Plantations, adjacent to the tea estate and consisting of about 2,500 Coorg loose jacket orange trees which should be bearing during the next crop season. Much progress has been made on our 'Colerie' Estate in the new cultivation of rubber, coffee and orange.

These shares will rank *pari passu* with the old ones in every respect in the profits and dividends of the Company. ON ALLOTMENT PREFERENCE WILL BE GIVEN TO APPLICATIONS FROM EXISTING SHAREHOLDERS OF THE COMPANY.

The attached application form should be filled in and sent to the Managing Agents of the Company at Calicut, with the requisite remittance. Spare application forms are not available and investors may use typewritten forms.

PREVENTING SLUMPS—A NEW PLAN

Special for "Indian Finance"

It is rumoured in the whole City that a new group including "some well-known names" will shortly address to the British public a novel post-war scheme for abolishing slumps, while retaining private ownership and control of industry.

The new scheme of "Government stock-purchasing" allegedly proposes, in the event of a slump (seen to be approaching) that Government—instead of starting up public works which take a long time to get organised and always have a slow effect on unemployment—should place enormous orders with those factories and mills whose declining order-books show that they must soon lay off workers.

According to the version circulating in the City, Government should not differentiate between firms making capital goods such as steel rails, machinery, bricks and cement, and firms making consumer's goods such as food, clothing and household furnishings. According to the theory underlying the scheme, these orders would distribute so much fresh purchasing power that the threatened slump would not develop.

What Government would do with the immense stocks thus acquired is seemingly not clear except that somehow they should be sold leisurely at prices, presumably without undercutting existing prices.

Perhaps the chief interest in the scheme, at this stage, is as an indication of lively interest shown by industrial and financial circles in the problem of preventing such a slump after the war as might drive the public to enbrace nationalisation of industry as a solution of recurring crisis.

There have been a number of solutions proposed, notably one sponsored by "120 leading industrialists," while the Federation of British Industries, Unilevers Limited and the rayon magnate Mr. Samuel Courtauld have all attracted attention by detailed proposals designed to solve the problem of cyclical crisis within the established order.

Both the "120 leading industrialists" and the F.B.I. plead for the better organisation of industry on cartel lines with representation for workers and consumers; but Unilevers, who stress control of investment as the solution, express the opinion that the public must not permit further cartelisation of British Industry.

Curiously enough, there is much more active discussion visible in the Right Wing groups than in the Left Wing. Neither the Labour Party nor the Trade Union Congress have yet offered any post-war plan, though Labour Party nominally is pledged for years to the nationalisation of banks, mines and transport.

Lakshmi Planting Co., Ltd.

Particulars relating to a South Indian planting issue offering both preference and ordinary shares for public subscription will be found in this journal. The large reserve area and the permission obtained to plant rubber up to 350 acres should be regarded as advantages like the payment of part in shares to the vendors of the estate. Ricegrowing on the estate should be viewed as a contribution to the labour problem now noted in planting districts. As the Wynaad estate grows many crops at present, the capitalisation per acre cannot be indicated precisely but figures relating to earlier valuation are furnished. The prospectus states that a return of 17 per cent on the sum paid to the vendors is to be reckoned upon at present.

The price appearing in estimates of returns from the estate may not be high in relation to the current prices of rubber, pepper and paddy. There will be working capital of Rs. 30,000 for the development of the reserve area of 366 acres of high virgin forest containing, according to the valuer, much rich timber. The sales of timber presumably will augment the capital available to the company which probably expects to retain through the excess of subscriptions over the sums payable to vendors, for preliminary expenses and working capital the money required for developing the entire reserve, described as suitable for crops including rubber. The popularity of two-rupee planting shares for a long while explains the form in which the issue appears after sanction under Defence Rule 94(A).

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

What I said last week about our having to begin post-war reconstruction right now, instead of waiting for peace, has received unexpected support from official quarters. The report that a questionnaire has been prepared and sent to industrial associations is a sign that the Government are prepared to guard against the danger of their efforts being belated. The danger of being stigmatised as over-optimistic about the end of the war should not lead us to postpone the planning of post-war reconstruction. The action of the Government is, no doubt, to be welcomed. But I pleaded for something more than that. I urged that, quite apart from the prospects or otherwise of early peace, our economic problems have got to the point when they cannot be dealt with only as problems of an emergent kind during the war period. Such solutions as we may devise will fail of their purpose and may even prove dangerous in the future if they are not thought of in relation to our economic development in the post-war period. It is not alone the concern for our economic fortunes in the long post-war period. It is not as if there is the danger of the long-term needs being subordinated to the urgencies of the moment. However narrowly we may look at each problem, we shall find that even immediate relief cannot be had, unless the remedies of the moment have some recognisable relation to the long-term treatment of our economic ills after the war is over.

* * * * *

The problem of inflation is only one instance of it, though by far the most important instance. The food problem is another. Even in the matter of the control of the cotton textile industry, the various measures that the control may adopt must be considered in the light of the broad lines of post-war economic development. I referred last week to the decision of the Madras Government to have its standard cloth produced by the handlooms rather than by the mills. That decision points to the need for some broad demarcation of spheres between the handlooms and the mills. I do not suggest that the Madras Government has solved this vexatious question of competition between cottage and large-scale industry. But it does show that urgent questions are better solved with a wide outlook than with a blinkered vision. In the case of the cement industry which now caters so little for civilian demand, there will be need to think out ways of reliable increase of civilian consumption to replace the decline in the demand on war account.

* * * * *

There is not much in common between the inflation problem and the problem of the cement industry if and when war demand takes the downward curve. But they all show that what remains of the present war period cannot be torn apart from what has gone before and what will come after it. In the case of the problem of inflation, both official and non-official minds think in terms of ad hoc and temporary measures, the former in terms of weak palliatives, and the latter of too drastic cures. But remember that, while there is no sharp cleavage between the war period and the immediate post-war period, the pre-war period is dead. Not only the floodgates of inflation have been opened, but our economic landscape has been inundated. A level of prices has been attained from which there can be a return to the old level only at the price of widespread misery. What we can justly aim at is to rob the price structure of its inflationary character. A higher level of prices does not necessarily connote inflation. By planning for an increased production and wider margins of profit for primary producers, we shall not only be robbing inflation of its worst horrors, but we shall also be laying the foundation for future economic development.

* * * * *

The food situation brings out such potentialities most clearly. It illustrates also what conflict there is between the near view and the long view. It illustrates, too, the differences between what may be called the administrative point of view and the wider economic point of view. Men in power are apt to be indifferent to public suffering up to a point and thereafter to make up for it by excessive interference. That, indeed, has been the case with the authorities in India so far as the food problem is concerned. It is not as if food shortage suddenly and unexpectedly made itself felt. The Government themselves had had, for quite sound reasons, to carry out measures which would reduce the available stocks of demand. They were aware that the natural tendencies to hoarding and profiteering would add to the hardships of shortage. But they were content to carry on in a routine way with an ill-conceived system of control, till famine stalked the land and there was a world-wide outcry against the apathy and inaction of the authorities.

* * * * *

Now, however, the pendulum has swung to the other extreme. Control and rationing are thought of not as means to an end but as ends in themselves. There has been a persistent fall in the price of rice in the mofussil. Nature in cruel caprice has followed famine with a bumper crop. With the decline in numbers, and the increase in yield, prices have come down. This is probably the best time to consider how normal conditions can be restored with safeguards against a possible relapse into the abnormality of the last few months. But now the official mind refuses to consider such a possibility. Control and rationing have during this period acquired magic properties. The whole paraphernalia of the control must be preserved for the duration of the war. The drop in prices, it said, has not removed the danger of cornering and giddy rises at a later stage. The bumper crop does not make up for the shortage of supplies. There is need for help from outside; and the benefactors insist on the kind of good behaviour signified by control and rationing. Government buying must be continued; but must be minimis-

ed in order that the mofussil may not take fright. And if the Government of Bengal is to minimise its purchases of wheat, then the Government of India must take upon itself the responsibility of feeding Calcutta. Thus goes the long chain of reasoning, every link of which is a weak one.

* * * *

Of the various contentions made in support of control and rationing, the suggestion that they are a condition attached to outside help is the weakest and the most insulting. India is not so placed nor is outside help so considerable that conditions can be attached to it. The worst phase of the food problem can be said to have been left behind; though, of course, the Government have it in their hands to prove this reading of the event, wrong if they are so minded. But given a reasonably sound policy and energy in executing it, India can easily provide against the repetition of this disaster. While thus India is not so placed that she must accept help from abroad with the liability to adopt measures of far-reaching consequences, those who afford such help have by no means acquired the moral rights to impose such conditions. To the extent that the shortage is due to the pressure of allied armies in India and the exports on war account, import of foodgrains into India is no act of altruism. As for the rest of it, surely food is not given to India as a gift; and if the provision of shipping seems to call for sacrifice of more vital needs, not only can the Indian people claim to their credit similar heroic sacrifices for the war, but the shipping was provided only when the element of sacrifice was reduced to the very minimum. Mr. Amery in his speech in the House of Commons made it quite clear that food was not rushed to save Indian lives because shipping was needed to shorten the war and save British lives. Of course, you cannot, quarrel with that view. Self interest is a legitimate pre-occupation. But it is a different matter if the despatch of food to India is thought to carry with it the right of insisting on control and rationing, when both our immediate and long-term interests require that we should work for restoration of normal conditions.

I should perhaps state more categorically than I have done hitherto why Indian policy should work towards sweeping aside control and rationing as early as possible. There is in the first place the simple, incontrovertible fact that in a vast agricultural country like India adequate control is an administrative impossibility and rationing can be applied only to the bigger towns which comprise an infinitesmal fraction of the total population. While thus they are no great help in solving the problem, if it were really a problem—when it was a problem, it was not solved, not even an attempt was made to solve it—their introduction might well be the cause of embitterment between various sections of the population. The idea of buying up, on the strength of governmental power, the food production of the agriculturists is a far more revolutionary idea than has ever entered the heads of any Leftist in the democratic countries. Lenin, the greatest and the most thorough-going of revolutionaries, had to abandon it after giving it a short and determined trial. In this country, where the relation between the Government and the people are by no means all that one would desire and, what is worse, where inter class goodwill is on a low level, policies of control may have more far-reaching social consequences than lovers of ordered progress would like to contemplate. Control and rationing have their inevitable counterpart in black markets and favouritism. To which is to be added the honest inefficiency of the administration. If things go wrong, the orderly succuming of tens of thousands to the pangs of hunger and want, the kind we have witnessed till now, might well become a thing of the past.

* * * *

Even if control and rationing should work smoothly within the limits set for them by administrative expediency, their very presence would be a hindrance to attempts to expand food production. They would also prevent the revival of the normal channels of trade; and the chances of revival will be more remote, the longer the period of official control. Few people in government circles seem to have thought of the psychological factors needed to make the grow more food campaign a success. That the campaign was for a long time nothing more than doling of advertisements is only too well-known. But the progress made in recent times through the expert enquiries of Sir William Stampe is by no means considerable. Claims have been made that, as a result of the campaign, eight to ten million acres have been added to the area under foodcrops. One might well wonder from the insistence on control whether it is food or fodder that is grown in these additional acres. If the Government were to undertake largescale farming as a State concern, it is of course a different matter. But if food production is to be increased by hundreds of thousands of new cultivators, then surely, a background of general economic conditions is needed. And whatever the positive aids may be, the continuance of control and the obligation to sell to Government is certainly a hindrance.

* * * * *

One has only to compare the food administration with the achievements of the Ministry of Food in Britain to realise how inherently unsuitable the present measures are to the conditions in India. The British Ministry has a great advantage in that the bulk of Britain's food requirements is imported. Though this turns into a serious difficulty when former sources of supply are cut off or when shipping is in shortage, it enables the authorities to gain a grip over the problem, which is wellnigh impossible in the conditions of India. But the natural advantage is nothing compared to what the administration was able to achieve by its vision, its energy and its thoroughness. Lord Woolton, Minister of Food till recently, was a stark realist imbued with the loftiest ideals of service to the country in a crisis like this. He knew the limits within which he had to work. But he knew also the purposes he had to serve. If Britain cannot live to eat, he realised, they cannot eat either just to live. They have to eat in order to fight the war and survive as a powerful nation. "It is not the tastes of the people," he said "but their needs that I am here to satisfy." The result is that rationing does not signify a cut in consumption but was worked to produce the highest efficiency. Food articles there are which have been kept on the unrationed list. Some show an increase in consumption rather than

decrease as a result of rationing. Innumerable communal kitchens are provided to enable people to eat off the ration. Manufacturers of food products are brought together in giant combines, their products are standardised, their methods rationalised. Tastes have perforce to be interfered with. But propaganda effects the conversion and the demonstrable nutritional qualities of the new foods retain the allegiance of the converts.

* * * * *

Is such a thing possible in India? We have the worst of both worlds. Not only is ours a vast agricultural country, but we have no rich cousins across the seas to rush us food in moments of dire need. More than that, the people have lived for a century on inadequate nutrition; and there is for them a food problem far bigger than the one which the authorities can recognise as an urgent problem of the war period. We have, therefore, to fix our attention on that larger problem. We have to take care that in meeting what appears to be the immediate imperative need, we are not complicating the position for the future.

* * * * *

In these circumstances, it is necessary that public opinion should insist that from now no economic measures should be taken without careful appraisal of their relation to postwar economic development. In the case of the food problem, it may be said that a wise solution of it may solve other problems besides itself. Measures for increasing food production in India have necessarily wider significance. They have to include considerable expenditure of State money on projects of agricultural reclamation and improvement. They involve the stimulation of production of fertilisers and agricultural implements. Road development is always an integral part of agricultural reconstruction. And there are on the side of distribution measures for the maintenance of prices and agricultural purchasing power, the stimulation of production of consumer's goods in rural areas. Such a programme will be found to provide very considerable relief in our efforts to solve the problem of inflation. But nothing can be done if we are to dwell mentally in the atmosphere of shortage of foodstuffs, ostentatious but meagre imports from abroad and control and rationing. With a bumper crop in Bengal, the position is definitely easier, and the start has been afforded for a speedy, if by no means immediate, return to normality. If there is a store of wheat and other foodgrains kept in reserve, together with powers to deal with hoarding and profiteering, the rice trade can well be allowed to resume its normal functions, while efforts are made, such as have indeed been proposed by the Bengal Government, to increase food production. But the authorities prefer to meet inflation with imports of razor blades and solve the food problem with rationing in the cities!

"EAVESDROPPER".

Olympus

(From Our Correspondent)

New Delhi, Nov. 30.

THE long-drawn-out food debate in the Council of State had as poor an end as in the Assembly with an ineffective resolution demanding an enquiry at 'suitable time' by a Royal Commission or some other body like that. The surprising anxiety not to mix up hunger and politics (as if a famine can have no political causes) was reflected in the terms of the resolution which wanted the personnel of the enquiry commission to be 'entirely outside the field of Indian politics'. The one obvious fact which emerged out of the debate was the Government's fear of facing any public enquiry at present, having reasonably anticipated the inevitable results of such an investigation. The Food Member's speech was as barren as his previous performances. His vehement assertion that "we shall not be thwarted by the recalcitrancy of vested interests" was rather pointless for who ever asked the Government to be thwarted by such considerations. The only new Government announcement was their determination to extend rationing to all big urban centres including Delhi. The Food Member also gave assurances regarding rehabilitation of distress areas in Bengal and legislation to restore land to those who were forced to undertake distress sales. The Central Government's assumption of responsibility to feed Greater Calcutta is generally welcomed here.

* * * *

The effect of the rigorous press censorship in Bengal in aggravating the famine situation was clearly brought out by Pandit H. N. Kunzru in the Council of State during an interesting debate. "Everyone here will realize", he said "that had the British public been informed of the true facts regarding the severity of the disaster that Bengal has faced measures would have been taken much earlier to relieve the sufferings of the people, to send foodgrains to India and to bring about that co-operation between the military and the civil authorities which has already led to a substantial improvement in the situation in Bengal". Pandit Kunzru pointed out half a dozen cases where censorship powers had been blatantly misused. The Government's lame reply to the charges that they could not deal with "cases of individual orders passed in the provinces in the light of local conditions and of the attitude of the local Press" was quite unconvincing.

* * * *

I understand that Mr. C. D. Deshmukh, Governor of the Reserve Bank of India, will be leaving for Washington early next year to participate in the Allied Monetary Conference. Sir Theodore Gregory, Economic Adviser to the Government of India, is also expected to be one of the Indian delegates to the Conference. It is surprising that while Britain and U.S.A. formulated their post-war currency plans long ago, the Government of India have given no indication of their attitude. Fears are entertained that instead of safeguarding India's post-war industrial development and a proper utilisation of her sterling assets, the Government of India may simply be forced to toe the British line. Meanwhile latest reports from Washington show that big financial interests in the U.S.A. are already clamouring for a scrapping of both the Keynes and White plans for post-war international exchange stabilisation. These interests do not relish the new fangled ideas and would like a return to the happy individualism of the period between the wars. If they prevail, which is quite likely, they won't grudge large credits to Britain enabling her to liquidate gradually her huge short-term indebtedness to India and the Dominions. How far India is able to assert herself in all these post-war arrangements which will mean so much to her economic future still remains a mystery.

* * *

I learn that a considerable quantity of gold has recently been imported from U.S.A. under the lease-lend arrangements. The recent sales of gold by the Reserve Bank as a part of the anti-inflation drive have been out of the lease-lend receipts and not from the bank's own reserves.

* * * *

The Central Exchequer returns for the first six months of the financial year 1943-44 are now available and they show that both revenue and expenditure were very much underestimated with the result that in spite of a big increase in revenue (Rs. 30 crores compared to the corresponding period of the previous year), the net deficit for the six months still comes to Rs. 60 crores. All the revenue heads except salt show appreciable increases and customs returns which have improved to the extent of Rs. 3 crores in the first half-year are expected to be still better in the coming months due to larger imports of consumer goods. The defence expenditure at present comes to Rs. 18 crores a month and the total war expenses for the year will be about Rs. 200 crores. Even if there are no unforeseen expenses in connection with war or famine, the deficit will exceed the budgeted figure of 97 crores by a considerable sum. Meanwhile railway earnings still show an upward trend and the total returns for the first seven months show an increase of Rs. 15 crores over the corresponding period of last year. Contributions from railways are expected to exceed the budgeted sum of 27 crores.

More information is now available on the tentative decisions on post-war economic reconstruction reached at the Governors' Conference here. It is understood that while the Government intend to leave the establishment of basic and expansion of other industries to the resources and initiative of the industrialists they want to devote their attention mainly to stepping up and modernising agricultural production to increase the general standard of living of the rural masses. The Government want to initiate big hydro-electric and irrigation projects to make cheap power available to the villages and to bring a large percentage of the uncultivated land under cultivation and to undertake large-scale plans of improving communication. It is realised that commodity prices must be stabilised at a higher level than the pre-war rates if the cultivators are to have the means to improve their production methods. Scientific agriculture needs engineering industries and a big fertiliser industry. And the Government cannot remain indifferent to the development of basic industries if they really mean business. It is considered that it will take quite a long time—perhaps a year—before the economic plan takes concrete form.

* * * *

There is again talk of the creation of a separate portfolio for post-war reconstruction here. Anyway some changes in the Executive Council seem to be impending. Sir Reginald Maxwell is expected to go in April and a new Home Member has to be found. There is the possibility of Sir Feroze Khan Noon going to Britain as the Indian Member of the War Cabinet. Sir Ramaswami Mudaliar is expected to get another extension as Supply Member. Meanwhile Sir Archibald Rowlands, new Adviser to the Viceroy on War Administration, has arrived in New Delhi.

(FROM OUR CORRESPONDENT)

Bombay, December 1.

RAZOR blades at reduced prices, canned goods at concession rates, and radio sets at controlled rates are offered to citizens by tradesmen here. It may be proof either of inflation having failed to rise to its usual climax or of better shipping facilities and larger imports. But the papers here show that prices of former foreign imports stay up. Secondhand cars sell at fancy prices despite the threat of requisitioning. In many cases, prices are left to negotiation, and one may conclude that the buyer has the worst of the bargain. Baby cars five-years-old in certain cases sell at three times the pre-war landed price and the secondhand car market here is certainly booming. Quite soon, taxis may be off the road into showrooms. It is known that the car market is reckoning on the certainty that the U. S. car industry cannot slip into reverse gear all at once. Motor cycles, too, sell at extremely high prices, and what the salesman gets, what the dealer makes, and what the seller actually gets must be left to the calculation of the incometax people. Big cars, apparently, sell very well in spite of petrol trouble. But there is a little doubt that new wealth is flaunted in the old ways and the city can show many peacock alleys at present. The Civil Supplies Department can hardly check the trade in used articles and it may be soon a fashionable device to clear goods through auction rooms instead of shops at any rate for imports. It would not be hard for an importer to get an auctioneer to take his goods off at control prices; and then ask the buyer, namely, the autioneer, to sell the same things at prices which the traffic can bear. It would not be a novel development for the black market which is resourceful and vigilant, The prosperity of auction rooms beats all belief and it is not as though the owners are all trying to realise movable property and retire from the city.

An announcement in the paper relating to the Zenith Assurance Company promises a very interesting merger. Sir H. M. Mehta is Chairman of both B. I. G. and Zenith and the transfer of Zenith's life business as on January 1, 1943 alone will give a new department to the B. I. G. The High Court has to consider the scheme but Zenith's capital is untouched by the proposals and policy-holders are protected by the plan for a separate deposit by B. I. G. in respect of business taken over. The advertisement issued in this connection makes it clear that the Court's sanction is essential; and the costs of the application are to be shared by the two companies concerned.

The land development plans for Bijapur to be hardly out of the famine yet, can only be guessed from the demand for seed drills, hoes, pickaxes and other implements. Bulk purchase is evidently connected with some plan of distribution of implements to cultivators in the Bombay Deccan. Thousands are asked for, and how and where the wood and steel will come from can be left to conjecture. Anyway, the programme for soil conservation and extension of cultivation appears to have started in earnest. The emphasis is still on millets, and the Deccan's prospects are deemed good after the plan to cut down cotton-growing. The crop and season reports point out to convalescence in Bijapur and Dharwar. Guzerat is said to be better off than the Karnatak. Advances for soil bunding are being made in Bijapur and cultivators are getting Lagai advances. Grain prices remain high but fodder scarcity is at an end and the Gazette is more or less optimistic. Free kitchens survive the improvement recorded, but public health is said to be better in the affected districts.

Cases under the Defence Rules are still coming before the High Court and Wadia Weston JJ decided that a shroff keeping a lot of change was well within his rights. A magistrate in Nasik convicted a shroff and moneylender who filed an appeal. It was mentioned by the counsel that the appellant had a capital of Rs. 10,000 to Rs. 15,000 for shroffing and his possession of Rs. 293 in small coin was not detrimental to the public interest. The Allahabad case which defined the conditions of the offence of hoarding was cited in argument, and the subsequent amendment of the Defence Rule 90 (2) was mentioned because the Nasik case began before the amendment. The Nasik moneylender was, in the High Court's opinion wrongly convicted because his business required the possession of small coin in large quantities, and the protection given by the decision to all moneylenders should be considered the direct result of the successful appeal in which Mr. E. B. Ghasvala represented the appellant against the Crown.

Gold prices in Bombay are subject to the influence of both local sales and of called reports from Egypt. There has been speculation as to the source of gold and the Allied Governments' views as to the way to beat Inflation in the East. The silver market has steadied up but the gold market is the prey of apprehension through the large sales of Reserve Bank of late. Offtake has been improving, and stocks are not large. Any shake-out merely because of active selling by the Bank is considered unlikely, since really good shares are still high, and the crop reports along with the recovery in cotton prices here produce the feeling that agriculturists will invest in the precious metals, particularly, as the war is not likely to end soon. The banks are not likely to discourage investments in gold since their own advances may increase if purchases are larger and the buying of gold may lead to larger supplies of foodstuffs which is one reason why the bullion market is distinctly averse to predicting a sudden reversal of trends.

From Gwalior comes a report that the Marathi stage's centenary has been celebrated. The Maharaja Scindia helped the celebrations in the outpost of Marathi culture and Gwalior's part in fostering Marathi spirit and culture was mentioned by His Highness. Ujjain, the old fount of Sanskrit culture, is in Gwalior State as the Prince reminded those who deplored the decay of the drama in Maharashtra. The rivalry of the screen was described as a cause of the drama's decay and Marathi playwrights who were very busy in the 'twenties have been told that the Maharaja deeply regrets the present state of the drama. There was a flourishing and vital drama that copied the West in Naturalism but it has now become feeble and how Gwalior shapes its renaissance will interest many outside Maharashtra.

Dr. Mahajani, a Liberal in the forgotten Legislative Council, has his own plan for ending the deadlock. He quotes C. R. in favour of Ministries meant to displace Advisers, and recalls that moves to revive Ministries outside Orissa have failed. The India Act has not been broken by Congress resignations and the restoration of autonomy is desired. The Provinces have to get their own Ministries and Congress must be neutral. A new agreement with minorities, a composite executive on the Swiss model and tacit agreements are aproved but Dr. Mahajani has said nothing about the rigour mortis at the Centre. His own view is that the Congress ministries vacated office and created the deadlock. It is not known if the Assemblies will be given life to bring ministries into existence, (and more important) if the Government will interpret Congress acquiescence in ministry-making as equal to overt revision of the August resolution.

The Exchange Bank of India and Africa Ltd.

Scheduled under the Reserve Bank of India Act, 1934
Commenced Banking Business on 5-3-1943
Head Office :
Sir Pherozeshah Mehta Road, Fort, BOMBAY
Branches at :
Zaveri Bazar, and Mandvi, BOMBAY, Maskati Market and Manekchowk, AHMEDABAD and Jawahar Road, AMRAOTI (Berar).

CURRENT DEPOSIT ACCOUNTS—Interest on daily balances from Rs. 300 to Rs. 1,00,000 will be allowed at quarter per cent. per annum, and no sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

FIXED DEPOSITS—Received for long or short periods. Terms on application.

LOANS, OVERDRAFTS AND CASH CREDITS—The Bank grants accommodation and undertakes on behalf of its constituents the Safe Custody of Shares and Securities and the collection of dividends and interest thereon; it also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

SAVINGS BANK—Deposits received and interest allowed at 1 per cent. per annum.

SAVINGS BANK DEPOSIT ACCOUNTS—Sums of Rs. 300 and over accepted at 1 per cent. per annum by transfers from Savings Bank accounts, subject to three months' Notice of withdrawal. Rules on application.

W. G. GROUNDWATER, General Manager

Airway Port

(From Our Own Correspondent)

Karachi, November 29.

As the question of enforcing rationing in all large towns is still under the consideration of the Government of India, the date of introduction of rationing in Karachi, for which almost all preparations were complete, has been postponed at the eleventh hour after protracted ministerial discussions and consultations with the Governor. There has been considerable opposition both from commercial and political bodies and the controversy culminated in the sudden resignation of one of the pillars of the Muslim League, Sheikh Abdul Majid. In the course of a statement, Sheikh Majid declared that piecemeal introduction of rationing and control of prices of foodgrains on provincial basis without any similar control in respect of other essential commodities required by India's millions, and without tackling other problems connected therewith on All-India basis, would never solve the food problem of India, but, on the contrary, create complications, confusion and clashes.

The rationing staff will be utilised by the Government for supervision, sale and distribution of the controlled articles such as oran and charcoal and also for helping the central authorities in their crusade against profiteers and hoarders.

The Government of India's direction to the Sind Government not to revise the prices of foodgrains in the province without the previous consent of the former, is welcomed in local circles although it has upset the profiteering plans of certain highly placed persons weilding considerable influence in official circles. Profiteering by the Government attracted the attention of certain members of the Central Assembly too who were asking why Sind should get a subvention of nearly a crore of rupees a year from the Central Government when she is selling food to the distressed provinces at a big margin of profit. It was disclosed on the floor of the Assembly that the Sind Government was making these profits with the connivance of the Delhi authorities. If this policy is to continue, if is argued, the Sind Government would be ill-advised to make repeated protests against the Government of India on the recent restrictive order from Delhi. Sind, in its own financial interests, should be in the good books of the Government of India, who had shown commendable latitude to their price control policy.

The Controller-General of Civil Supplies, Mr. C. C. Desai, paid a four-day visit to Karachi during which he had talks with both commercial bodies and local officials regarding the ways and means of enforcing the ordinance to check hoarding and profiteering. In the course of a press conference, Mr. Desai declared: "The anti-hoarding and anti-profiteering ordinance is now the law of the land, and the Government will neither dilute nor modify it. The law has been placed in the hands of the consumers and it is upto them to make the best use of it". Mr. Desai observed that action was being taken to bring as many shops as possible to mark prices on goods, but the real remedy against profiteering lay in the purchasers demanding a cash memo from dealers with specific price and quantity clearly written in it. Generally it could be assumed, he said, that if the consumers were charged double the pre-war price of any article, they were mulcted. When asked about the proposal for fixing of ceiling prices, he said that it would be tried. As regards making more supplies available as a set-off against black market, Mr. Desai referred to difficulties of securing shipping.

In reply to the representation made by the Karachi Indian Merchants' Association and other mercantile bodies on the main issues arising from the ordinance, Mr. Dessai said that the ordinance would be amended shortly so as to provide ex-factory price in place of cost of production and also to rope in raw materials exempted under clause 5 and 7 of the ordinance. He said that the invoice price of goods purchased from reliable agents and offices would be considered as the cost on which normal margin of profit could be charged by the dealer. The Provincial Government had been advised to set up provincial boards to fix ceiling prices of such articles as might be deemed necessary. The ordinance applied to ghee and spices as well but not to articles which were already under control.

An interesting point arose as to whether profiteering by Provincial Governments came within the purview of the ordinance, but the Controller-General was of the opinion that it was futile to discuss it. In reply to other questions, Mr. Desai said that if the Government had given time for disposal of goods within a prescribed date there would have been a spate of speculation. Regarding frustrated cargo, he said that when it was purchased, Government had undertaken no obligation to see that merchants would make money on it. Merchants did not share their profits with the Government, he added, but he gave the assurance that there was no intention to introduce any new profit margin.

That the recent drug control order promulgated by the Government of India would permit legal profiteering in a number of drugs of 100 to 400 per cent even under the existing rates is the opinion of those medical practitioners in Karachi who are frequent users of drugs and as such in constant touch with the ruling prices. They feel after comparing the prices permitted by the recent order with the prevalent market prices that the Government order places selling prices from 400 to 1,000 per cent higher than the existing rates for many of the drugs. The only justification for the order could be to check the rampant illegal profiteering that is going on in the drug market, but the effect of the order would be to make profiteering legal on an enhanced scale. Unless the oddities and loopholes in the Government control order which appears to have been drafted and brought into force in haste, are set aright, the public would be more inconvenienced than in the past. Import of drugs on a vast scale is held urgent and necessary here.

The existing political stalemate and distressful economic conditions have exercised the attention of merchants here and the Karachi Indian Merchants Association in a communication addressed to His Excellency Lord Wavell, the Viceroy, drawing his attention to the deplorable state of affairs, states that when the appointment was announced about six months ago, high expectations were raised in the public mind and hopes centred round His Excellency that with the advent of his Viceroyalty, Government would take a bold initiative towards the resolving the present deadlock. While His Excellency had not disappointed popular expectations in the matter of rushing to the rescue of the famished people of Bengal, the memorandum says that no effort has yet been made to end the political deadlock. India has still to play a vital part in beating the enemy in the East, adds the appeal, and peaceful conditions in the country are essential for the achievement of this object. All problems crying for solution, to be settled satisfactorily, necessitate the utmost co-operation between the Government and the people. The appeal concludes with the hope that his Excellency would soon release all politicals and detenus not convicted for violence or sabotage and also restore representative governments in the Provinces and thus pave the way for negotiations for establishment of a representative national government at the Centre.

Preparations for the forthcoming session of the All-India Muslim League to be held during Christmas here are in full swing.

(*Continued from page* 1052)

the Government point out the danger of grievously injuring the industrial development of the country if the taxation of industry is not revised on a scientific basis. It is pointed out that Britain has already undertaken the first step towards such a revision in order to strengthen the competitive capacity of her industries in the post-war period. The wholesale scrapping of obsolete plant due to technological developments and technical losses incurred in changing over from war to peace-time production will necessitate huge expenditure and funds set apart for such necessary changes and expansion should be encouraged rather than penalised by heavy taxation. It is also suggested that adjustments should be made in refunds of E.P.T. due to inevitable post-war stock depreciation.

The desperate and reactionary measure of reintroducing under ground women labourers in the coalfields of Bihar and Bengal to step up production again testify to the lack of foresight on the part of the Central Government. The alarming fall in coal production has not been a sudden phenomenon and industries all over the country have been complaining for a long time of lack of adequate supplies of coal. The Government attribute the fall in production mainly to labour shortage. But the labour shortage was obviously due to the terrible rise in the cost of living. The Government have now assured cheap food supplies and other common consumer goods to the coal miners. They could have done all this much earlier. More up-to-date machinery such as Britain recently imported from U.S.A. should have been purchased to speed up production. The Anglo-U. S. Combined Production Board has emphasised the need for increasing exports of coal from India for war purposes and the Government is silent on the point.

HILL-BIRD.

DAILY PAPER

IN India, as in many other countries in a world at War, the scarcity of newsprint has caused daily newspapers to shrink. Compare the paper of to-day with the one you bought say in 1940, let alone 1939. The difference in size and bulk is astonishing. The fact that we are still well served with papers and magazines is a tribute to the efficiency of the newspaper industry and to the paper-makers. They have shown how with care and resource a little may be made to go a very long way. But behind their efforts stands the skill of the research chemist and the strength of the British chemical industry. The chemist has not only improved the yield of paper from such normal raw material as is still available, but has discovered highly satisfactory methods of recovering newspaper from old. The greatly increased use of re-fashioned paper brings with it a host of subsidiary problems, such as the provision of suitable printing-inks, sizing material, and "loaders". These are all matters demanding skilled chemical research, often of a surprisingly intricate kind. Colour-printing sets even stiffer tasks, which the British chemical industry has solved by the production of remarkable new pigments with a wide flexibility. Shortage of tin and other [illegible]als needed for printers' type is another poser for the chemist. You can rely upon him finding a satisfactory answer to this as to the other problems inseparable from the regular appearance of your daily paper in time of War.

G. BASU & CO. R.A. (INDIA), INCORPORATED ACCOUNTANTS (LONDON).
4, HASTINGS STREET, CALCUTTA.

BROKERS:
PLACE SIDDONS & GOUGH, CALCUTTA.
BATLIVALA & KARANI, BOMBAY.
BAGLA & COMPANY, CALCUTTA.

The authorised capital is Rs. 50 lakhs; and the issued capital Rs. 16 lakhs in 80,000 shares of Rs. 20 each.

Each share of Rs. 20 is being issued at a premium of Rs. 5—Rs. 10 being payable on application and Rs. 5 on allotment. The balance of Rs. 10 will not be called up for the time being. The paid-up capital will thus be Rs. 8,00,000; and the premium reserve will be Rs. 4,00,000.

80,000 shares comprise the present issue. 70,000 shares have been taken up by directors and their friends. The balance of 10,000 shares is now offered to the public.

The capital plan adopted by the Standard Assurance Company is unique of its kind in the annals of insurance in India. The paid-up capital of the Company from the outset will be Rs. 8 lakhs. At the same time, by the issue of the twenty-rupee shares at a premium of Rs. 5 per share, the Company starts with an initial reserve of Rs. 4 lakhs. It is proposed that, out of this reserve of Rs. 4 lakhs, Rs. 2 lakhs will be credited to the additional reserve in the Fire Department, Rs. 1 lakh to the additional reserve in the Marine Department, and Rs. 1 lakh to the additional reserve in the Accident Department.

The common practice of general insurance companies is to provide, from the current year's income, a minimum reserve of 40 percent of the premium income as reserve for unexpired risks. In addition, general insurance companies build up further reserves by appropriations from surplus over and above the minimum 40 percent. The Standard Assurance Company will, by the creation from the start of additional reserves in each department, enjoy a proportion of strength of reserves which will be comparable to that of long-established companies. That the reserves for unexpired risks in each of the three sections now proposed to be opened will be considerably in excess of the minimum of 40 percent, is a factor which will, on the one hand, inspire confidence in the mind of prospective constituents and, on the other, enable the Company to fix up reinsurance treaty arrangements on most favourable terms.

Through the interest of the directors in large industrial and business undertakings, the Standard Assurance Company may count upon a substantial volume of good business right from its inception.

The share list will open on December 6, 1943 and close on the same day.

A copy of the Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal. Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

This is not an invitation for shares but only an announcement. Copies of the Memorandum and Articles of Association can be inspected at the Registered Office of the Company. Copies of the Prospectus and Application Forms can be had on application.

Jute and Jute Manufactures

(By Our Jute Correspondent)
Special To "Indian Finance"
Calcutta, 2nd December.

The coal position shows still further deterioration this week, the average arrivals not reaching 30 waggons per day. This quantity of course is scarcely more than sufficient for maintenance and processing purposes with no balance available for running the main plants. Several mills have been idle this week though it is a "working" week for all according to schedule. Many others are hoping to be able to see the week out but have grave doubts as to whether they will be able to start up next week. The whole situation is most unsatisfactory and the fluctuations in supplies difficult to understand, if, as we have been assured, there is no shortage of waggons. To improve raisings, Government has relaxed the embargo on women working underground in coal mines and it remains to be seen whether this step will result in any improvement. From a social point of view it is a retrograde step, but in the interests of the war effort, there is no help for it if supplies of coal are to be maintained at the requisite level. The insufficient supplies of coal coming forward has had its inevitable effect on the markets, tending to keep the manufactured end firm, while restraining mills from adding anything to their stocks of raw material.

As we forecast last week, the I.J.M.A. Committee has issued its decree with regard to dealings in the "X" grade. It must not be sold separately, but against contracts for "Bottom" grade entered into on and after 1st December. 7½% of "X" may be tendered at the contract price of Bottoms. The "X" can be either tangled or straight and it should be packed in separate bales and plainly marked "X" and must not carry the word "Bottom" on the bale ticket. On the face of it this is, in a way, a favourable arrangement for Sellers, inasmuch as they will get the price of Bottoms for their "X". On the other hand, 7½% with sales of Bottoms may not be sufficient to enable sellers to clear their hands of accumulations of this lower grade, or of the larger quantities of this type of jute which normally come into the market towards the end of the season. Again the 7½% limit will in all probability not provide mills with the quantity of low sacking weft which they look to this grade to provide, nor will they be particularly pleased to have to pay the price of Bottoms for a definitely lower grade of jute. It is of course humanly impossible to please everybody and the I.J.M.A. Committee doubtless had very good reasons for their decision, as we suggested last week. Whether the decree will be observed in the spirit as well as in the letter remains to be seen, and it is not our function to suggest means whereby the decree can be got round.

The report of the Bonus-distribution ceremony of the Belakoba Co-operative Multipurpose (Jute Sale) Society Ltd. (a resounding title indeed for a concern with a capital of Rs. 805/-!) at Jalpaiguri, quoted in the November Bulletin of the Indian Central Jute Committee, is not by any means an encouraging document. Unfortunately the co-operative principle never seems to have caught on in Bengal and the present experiments do not hold out any great hope for the future. The membership of this Society it was reported had increased from 324 to 404 during the year, but what exactly constitutes membership is not very clear. For the report goes on to state that, of the inconsiderable quantity of 3367 maunds of jute purchased by the Society last year, 1680 maunds were supplied by 36 members. The presumption we were left with is that the remaining 360 odd members supplied nothing at all, as only these 36 were rewarded in the bonus distribution. It does not say much for the interest of the membership if only 10 per cent of them offer the Society jute for sale. Unless the balance of the members are interested only in some of the other "multipurposes" of the Society, but the report deals only with the subject of jute and leaves the impression that jute is, meantime at least, the one and only purpose of the Society. Incidentally it was only by the generosity of the I.C.J.C. that the Society was able to show a profit or to distribute a bonus at all, for the I.C.J.C. paid the management expenses of the Society amounting to Rs. 2,212/-. Otherwise the working would have shown a loss of Rs. 972. It seems questionable whether the subsidising of concerns of this description is likely to be of any real value in improving the lot of the cultivator. The cost in this case is certainly not large, but the quantity of jute handled by the Society is so infinitesimal relative to the total crop, and the interest apparently shown by 90 per cent of the membership so lackadaisical, that the year's operations reported on cannot by any stretch of the imagination be described as a success.

The bulletin contains quite a lot of information regarding the development of domestic fibres in Central and South America for the purpose of manufacturing bags required for handling their domestic commodities, bags which used to be supplied almost wholly by India, but owing to war conditions are no longer obtainable from that source. The threat to India, and to Bengal in particular, is not to be ignored, for practically every country in that quarter seems to produce a serviceable fibre, if not several alternative descriptions, and once industries to develop and manufacture these are established, the various countries will certainly endeavour to preserve them after the war, by high tariff walls if necessary. A telegram from Buenos Aires in the end of last month reported that the Argentine Government had decided to devote 300,000 pesos, approximately 2¾ lakhs of rupees, to encourage the cultivation of jute, as recent experiments offered prospects of developing a new agricultural industry in the country. It is said that in Brazil, two crops of jute per year can be harvested. El Salvador, after providing its own requirements of sacks for coffee and other crops has a substantial excess quantity of bags for export to other neighbouring countries. Columbia, with an annual consumption of more than 40 lakhs of bags, has already become virtually independent of outside supplies. Brazil expects to cover from two-thirds to three-fourths of her fibre requirements from domestic sources this year. Peru is reported to have produced jute of good quality and colour with a yield of 5½ bales per acre as compared with Bengal's average of well under three bales. It must be remembered too that all these countries have comparatively cheap labour, both for the agricultural and the manufacturing sides of the industry, so the danger that these markets may be lost to the Bengal Jute Industry is a very real one.

The Export demand for Jute has been light and beyond a few sales of Dundee Daisee at Rs. 73/- for long Group and at Rs. 81/- for Short Group, very little has been recorded. Sellers have been reserved and the above quotations are no longer workable. Mills are reported to have paid Rs. 71/- for Lights and Rs. 74/- for Dundee Daisee, but at the close quotations for Daisee are not under Rs. 75/- and for Firsts, Rs. 78/-.

2, OLD COURT HOUSE CORNER, CALCUTTA.

After the recent short spell of activity, the week has been practically idle so far as Loose Jute is concerned. The deterioration in the coal position has deterred mills from making any further purchases and has certainly not encouraged them to pay the higher range of prices asked. Nothing higher than Rs. 15-8 and Rs. 12-8 has been recorded for European packing Mds and Bots and at the close it is reported that Rs. 15/- and Rs. 12/- has again been accepted for Supervised Jat. Sellers have not been pressing for business as not only are imports scarce and mofussil prices above Calcutta parity, but labour for assorting, baling and loading is extremely scanty, partly due to epidemic sickness and partly to the exodus for the Paddy harvest. It would indeed be impossible to handle any quantity of imports even if these were obtainable. Balers have been rather keen buyers of Tossa to cover recent American orders and have paid as high as Rs. 17-4 and Rs. 14-4 for European packed Jat Tossa and four annas less for District.

Standard General Assurance Company

An announcement on p. 1056 will be noted with interest by investors who are informed that the Standard General Assurance Co.'s shares are offered for sale. The conditions of sale at a premium are not unusual as seven-eighths of the issue of Rs. 16 lakhs has been taken up by the Company's Directors and their friends. Only a small part of the issue for which the lists open on December 6 is available and Rs. 10 on application and Rs. 5 on allotment is called for, the balance being callable later. There is no question as to the amount being obtained at once. The Company will start its career with a reserve of Rs. 4 lakhs distributed as Reserves for the three departments of the company to which the underwriting surpluses will be added in due course. The decision to begin work with substantial reserves has been explained in the light of approved and established practice. The sponsors of the new company have varied and substantial interests so that prospects for a new entrant into the insurance field may be taken as assured. The investor should be aware of the exceptional standing of insurance shares in India as semi-giltedged investments. That alone should produce a strong demand for prospectuses (and shares) in response to the announcement. As only 10,000 shares are offered to the public the response may well prove a record in over-subscription.

The beginning to an end

A child's first lesson is an important milestone on the road of life. Fond hopes for the future of his child are cherished by the father on the important day that marks the beginning of the youngster's education.

But hopes are not enough. A practical beginning must be made in order to ensure a successful end to a child's education.

Have you guaranteed that the necessary money will be available to your child for the completion of his education even if you do not survive to see it through ?

New India's Educational Annuity Policy can do this for you. It guarantees the full benefit of the assured sum to your son even if your demise occurs after paying the first premium only.

JUTE

Calcutta, December 2.

THE raw jute market has been quietly steady in the past few days and business passing has not been on a very large scale. The enthusiasm, noticeable last week, regarding the possibility of mills increasing the number of working hours has died out, and there is a tendency to await further developments. It is, however, felt that the outlook for jute has distinctly improved and that mills will be able to consume all available jute and that holders can press for higher rates. That is the reason why there has been no break in prices and the quotations at the time of writing are around the levels touched at the end of last week.

In the loose jute section Indian Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund with Supervised Jat 4 annas higher. Balers are still interested in Tossa varieties with not much quantity offering. Upcountry markets have remained firmer as owing to all available labour being busy on harvesting the paddy crop, arrivals into the mofussil markets have been rather restricted.

In the pucca bales section, shippers have not been keen buyers. Owing to the reserve of balers, higher prices had to be paid. Dundee Daisee 2/3 were noted at Rs. 72 per bale and Short Group Daisee at Rs. 81 per bale. Mills are reported to have purchased Lightnings and Daisee at Rs. 71 and Rs. 74 per bale respectively.

JUTE MANUFACTURES

Calcutta, December 2.

THE jute manufactures market has continued quiet and a further slight decline in prices has to be recorded. It is generally felt that the efforts of mills to increase production might succeed, and that eventually a larger volume of supplies will be available to the bazar. This will keep market prices much below the ceiling levels. It is surprsing, however, to note that peace prospects have not resulted in any steadying in prices in the last two days and that operators are inclined to await actual developments. 9 porters are quoting Rs. 21-2 for all positions while 11 porters Ready are quoting Rs. 27-15, December Rs. 27-13 and January-March Rs. 27-12.

In the Heavy Goods section, prices for Liverpool twills and Cornsacks have been fully maintained but with the easier supply position, "B" twills are at a discount over Cornsacks, the quotation for December delivery being Rs. 66-8. Liverpool twills were nominally quoted at the ceiling prices of Rs. 75 and Cornsack Rs. 67-12.

GOLD

Calcutta, December 2.

THE gold market was inclined to be steady in the early days of the week and prices were fluctuating in narrow limits. The larger selling by the Reserve Bank induced fears that there might be an appreciable drop in prices, but the refusal of the Reserve Bank to sell below certain prices encouraged bears. There was also some buying at the lower levels. In the last two days, however, a sharp decline in prices has been recorded and quotations are at the lowest levels for some time. The easier tone of the market is mainly due to the reports regarding the prospects of an early peace. Gold ready closed at Rs. 76-1 against Rs. 77 and forward at Rs. 75-1 against Rs. 76-11. It is interesting to note that the discount for forward over ready has widened from 5 annas to 11 anans indicating some nervousness regarding the immediate trend of the markets. Sovereigns quoted Rs. 52 against Rs. 52-12.

SILVER

Calcutta, December 2.

THE silver market also remained steady till Tuesday this week and the quotations for ready and forward were almost unchanged at Rs. 124-12 and Rs. 124-8 respectively. In sympathy with the drop in gold prices silver prices also have reacted towards the close and both ready and forward are quoting at Rs. 121-15.

There has been no change in the conditions in the London market and the quotation for both Spot and forward is 23½d.

COTTON

Calcutta, December 2.

THE raw cotton market remained firm in the early days of the week. The continued buying by mills new NT and 289F. resulted in an appreciation in prices for Jharilla. There was also some covering by bears, but at the higher levels bears started selling with the reports regarding the peace prospects which were considered as an adverse factor for the cotton trade. It was later, however, pointed out that with the assured consumption of cotton by mills, and the possibility of a substantial increase in exports, with the termination of hostilities, there was really no reason for any pessimistic view regarding the trend of cotton prices. In yesterday's session there was some covering and the whole of the lost ground was recovered. Closing quotations are at the highest levels for the week, Jharilla January being Rs. 458-8, March Rs. 459-4 and May Rs. 464 against Rs. 446-4, Rs. 449 and Rs. 45¼ respectively at the end of last week.

PIECEGOODS

Calcutta, December 2.

IN the piecegoods market there is nothing of interest to be recorded. There is, however, considerable anxiety regarding the revised ceiling prices decided upon by the Textile Control Board. An announcement to that effect was due to have been made this week, but so far nothing has been forthcoming. With the fears regarding the possibility of a further decline in prices, there is no tendency to enter into forward commitments and buying, at the present moment, is confined only to immediate requirements. In this connection it is interesting to note that Government authorities have provided transport facilities for immediate despatch of all outstanding deliveries and that the Calcutta market in particular will receive plentiful supplies of cloth. As a matter of fact the supply position has been definitely easier in the last three weeks. The scarcity of stocks in this centre will thus disappear.

Stock Markets to-day and to-morrow:

RECORD EARNINGS OF BULAND AND RAZA

THE easier tone of the markets on fears of an early peace has proved only temporary. In the last two days definitely stronger conditions have been noticeable and most of the losses have been regained. It also appears that peace prospects do not seem to have any terror for both operators and investors as it is generally felt that, war or no war, Indian industries will continue to be busy for some time after the conclusion of hostilities and that there is no need to worry about future prospects at the present moment. The developments after the meeting of the "Big Three" can constitute a favourable factor for the markets.

The feature of the week is the strength of selected coal shares. Equitables' have recorded a rise of over three points, Kalapahari two points and Katras Jherriah two points. The view is held that the bigger collieries have greater scope for an increase in earnings as with the concentration of production in certain mines, it is hoped that there will be greater utilisation of transport and labour. The absence of any appreciable improvement in the quotation for Bengal Coal, however, does not seem to support this view. It is still too early to take any definite view of the prospects for the coal industry and, as pointed out last week, unless actual results are obtained, one cannot be justified in taking a very optimistic view of the future outlook.

* * * *

The issue of bonus shares to the shareholders of Buland and Raza, early this year, has not in any way affected the distribution to the shareholders. The profits of these two companies under the managing agency of Govan Brothers (Rampur) Limited, are the highest since their inception. The larger earnings have been due to the increased supplies of cane though, one would add, that the results would have made a much better showing if it were possible to maintain recovery at the level of the previous year.

* * * *

The net profit of the *Buland Sugar Company Limited*, for the year ended May, 1943 is Rs. 10,25,569 against Rs. 8,64,843 for 1941-42. The amount set aside to depreciation is Rs. 1,05,455 (Rs. 1,10,116) while the transfer to the Reserve Fund is even higher at Rs. 2.5 lakhs (Rs. 2 lakhs). The Dividend Equalisation Fund receives Rs. 50,000 (Rs. 1 lakh) and other funds Rs. 62,500 against Rs. 47,500. Even with the increased allocations to funds, it has been possible to maintain both the dividend and bonus at 22½ per cent. The amount carried forward is Rs. 71,786 against Rs. 71,671 brought in.

This company has been more fortunate in getting larger supplies of cane, the total quantity of cane crushed being 31,14,582 against 26,66,137. The quantity of sugar manufactured was 3,09,790 mds. against 2,74,922 mds. The decline in the percentage recovery was more pronounced in the case of Buland, the recovery percentage for 1942-43 being only 10.01 percent against 10.33 percent for 1941-42.

The paid-up capital at the end of May 1943 was Rs. 23.87 lakhs against Rs. 18 lakhs at the end of May 1942. At the present quotation of around Rs. 42 cum-dividend, the shares should be considered good for investment purposes.

* * * *

Raza Sugar Company Limited, for the same year, has been able to report, a net profit before providing for taxation and depreciation, of Rs. 8,74,308 against Rs. 7,49,692. The amount set aside to depreciation is Rs. 87,945 (Rs. 91,780) while the transfer to Reserve Fund is Rs. 2.5 lakhs (Rs. 1.5 lakhs) and to other funds Rs. 62,500 (Rs. 97,500). The dividend and bonus have been maintained on the increased capital at 22½ per cent. The amount carried forward is Rs. 1,40,653 against Rs. 1,34,289 brought in.

The total quantity of cane crushed was 27,83,377 mds. against 26,85,000 mds., the total of sugar manufactured being 263,743 mds. against 259,806 mds. The lower rate of recovery has thus resulted only in a slight increase in the total quantity of sugar manufactured.

The paid-up capital at the end of May, 1943 was Rs. 19,98,340 against Rs. 15 lakhs.

* * * *

The first annual report of the *Rampur Maize Products Limited*, makes very satisfactory showing. The factory was working for only 8 months in the year under report and the products manufactured by the company have been found satisfctory. Against the paid-up capital of Rs. 6 lakhs the total profit is as much as Rs. 18,11,404. Of this sum, provision for depreciation is Rs. 87,997. Rs. 9 lakhs is transferred to General Reserve, Rs. 1 lakh for the creation of a charitable Trust and Rs. 50,000 to staff, labour bonus and welfare fund. The preliminary expenses have been written off in full. The final dividend of Rs. 5 per share makes with the interim dividend of Rs. 5 per share, Rs. 10 per share for the whole year, that is 100 percent.

The erection of a glucose plant attached to the main factory is making good progress and the manufacture of various by-products is being developed.

* * * *

It is understood that *Carew & Company Limited*, is paying a dividend of Rs. 1-4 per share on the ordinary shares for the year ended June, 1943. As dividend is in accordance with market expectations there has been no decrease in the market quotation for the shares.

* * * *

My remark in last week's issue that "if the decision is made to make up the contributories Rs. 250 paid up, the scope for appreciation in the value of these shares is as much as Rs. 300 per share" seem to have set the market aflame. Imperial Bank (Conty.) rose since to as high as Rs. 545 and have suffered a sharp reaction. The speculative horse has apparently taken the bit between its teeth and raced up to the pointed goal. It is well that it has slowed down a bit, seeing that the increased value of the share is conditioned by such a decision by the Bank. That the suggestion is so conveniently reasonable as to make it inevitable cannot make it a fact before it is accomplished. All the same, the later reaction may as easily be overdone as the earlier rise.

* * * *

The accounts of *Burn & Company Limited*, for the year ended April, 1943, should be considered rather disappointing, though the Company is not in any way responsible for the decline in profits that has taken place in the last accounting period. Apart from the difficulties in regard to imported supplies, the inadequate receipt of coal was not conducive to continued and intensive working. That is the reason why there has been a large increase in the volume of works-in-progress and the same is shown in the books at Rs. 1.65 crores against Rs. 1.17 crores at the end of the previous year.

Total sales were only Rs. 1.54 crores against Rs. 2.11 crores in 1941-42. With a smaller turnover and the increase in working expenses, due to the supply of cheap grain to labour, the profit, before providing for taxation and depreciation, is appreciably lower at Rs. 15,54,527 against Rs. 26,54,527 for the previous year. After setting aside Rs. 3,12,800 against Rs. 3,31,815 for depreciation, the provision for taxation is considerably lower at Rs. 7,80,000 against Rs. 14.25 lakhs. Even the reduced dividend of Rs. 17-8 per share (Rs. 20 per share) on the ordinary shares could be paid only by the transfer of Rs. 4.2

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 3.

After earlier firmness slightly easier conditions were noticeable on the Calcutta Stock Exchange during the past week. The earlier strength of the markets was due to general buying on hopes of improved earnings for Coal and Jute companies and some concessions to the cotton textile industry. As business showed signs of broadening there were reports regarding the early termination of hostilities. The prospects of an early peace and the news of the meeting of the 'Big Three' caused some selling at the higher levels and prices were marked down lower in all the sections. There was, however, no appreciable decline and such setback in values as occurred during the week, was only of a precautionary nature. This will be evident from the slight recovery in Thursday and Friday's sessions. At the time of writing, quotations for most of the popular counters are lower on balance but some of the losses have been regained. The undertone is quite steady though there is a tendency to await further developments.

With the continuance of easy money conditions the giltedged securities section has been definitely firmer and 3½ per cent Paper recovered to Rs. 97-12 after the recent bout of selling. The technical position of the market has now been corrected and there are not many sellers of the rupee counterparts that were, till recently, available on tap. 3½ per cent paper is now quoting Rs. 97-10 and 3 per cent paper Rs. 84-13. Among terminable loans, 3 per cent 1951-54 were Rs. 100, 3 per cent 1963-65 Rs. 98-12, 4 per cent 1960-70 Rs. 112-4, 5 per cent 1945-55 Rs. 106-8 and 3½ per cent 1947-50 Rs. 103-9. No transactions were reported in provincial loans.

Among Public Bodies' Debentures the only transaction recorded was in 3¼ per cent *Howrah Bridge Loan* at Rs. 99. Among Industrial Debentures, 4½ per cent *Soorah Jute* were Rs. 102-8, 4¾ per cent *Hukumchand Jute* Rs. 102, and 5½ per cent *Basanti Cotton* Rs. 106. Preference shares have been well held and transactions were freely possibly only at the higher levels.

Among jute mill preferences, *Albion* were Rs. 178, *Lawrence* Rs. 171, and *Waverley* Rs. 82-8. *New Victoria* were higher at Rs. 15-8 in sympathy with the rise in ordinary shares. *Kumardhubi Engineering* were quoted Rs. 305, *Dalmia Cement* Rs. 144, and *Indo-Burma Petroleum* Rs. 114. *Alkali and Chemical* were done at Rs. 129.

In the Banking section, there was a sensational rise in prices for *Imperial Bank* contributaries on rumours of the possibility of the Bank authorities making a further call on the shares. From a quotation of Rs. 476 there was a rise to Rs. 540. There has been some realisation at the higher levels but the quotation at the time of writing is not very much lower at Rs. 515. *Imperial Bank* fully paids also were marked higher in sympathy at Rs. 1,975. *Reserve Bank* were firmer at Rs. 127.

In the Cotton section there was nothing of interest to be recorded except for the strength shown by *Elgin* around Rs. 100 and the small rise in *Mahalaxmi* at Rs. 47. *Cawnpore Textiles* were not very much changed at Rs. 14-10 while *Dunbars* were noted at Rs. 276 and *Muirs* at Rs. 470. *Sree Radheshyam* were further higher at Rs. 18-12, *Bengal-Nagpur* at Rs. 35-8, *Kesoram* at Rs. 16-2 and *Pravati Textiles* at Rs. 11-2.

In the Coal section, there is nothing of importance to be noted. As a matter of fact, some selling was encountered for the smaller-priced shares as it was generally felt that the recent rise in prices had been overdone. But the shares of well-established companies were steadier around last levels. Actually, Equitable, Kalapahari, Katras Jherriah and Amalgamated were marked further higher, the rise in Equitable being particularly pronounced. At the tme of writing the quotation for Equitable is around Rs. 49-8, *Katras Jherriah* Rs. 56-8 and *Kalapahari* Rs. 29-2. *Bhalgora* were easier at Rs. 12-4 as also *Bengal* at Rs. 557. *Central Kurkend* quoted Rs. 20-4, *Dhemo Main* Rs. 17, *New Beerbhoom* Rs. 28-14, *Raneegunge* Rs. 32-2, *Samla* Rs. 5-9, *Satpukuria and Asansol* Rs. 3-12 and *South Karanpura* Rs. 9-2.

In the Jute section, uninteresting conditions have been noticeable and quotations have been barely maintained around last levels. *Howrah* quoted Rs. 67-2 and *Auckland* Rs. 257, *Champdany* changed hands at Rs. 221 *Chitavalsah* at Rs. 24-12, *Clive* at Rs. 30 and *Kamarhatty* at Rs. 562. *Kanknarrah* were very firm at Rs. 304 and *National* at Rs. 28-14. *Nuddea* were easier at Rs. 108-8, *Presidency* at Rs. 6-13 and *Soorah* at Rs. 15-8. The decline in prices would have been more pronounced, as reports have been received that the coal situation has not improved, but for the hopes that an early termination of hostilities might bring about a large demand for jute manufactures.

In the Engineering section, *Indian Iron* were lower at Rs. 35-12 and *Steel Corporation* at Rs. 27-14 against Rs. 36-10 and Rs. 28-8 at the end of last week. At the time of writing the quotation is little better at Rs. 36 for Indian Iron and Rs. 28 for Steel Corporation. The reduction in the dividend of *Burn & Company* has not affected very much the quotation for the shares which are around Rs. 400 cum-dividend. *Britannia Building and Iron* provided the feature of the week with a rise to Rs. 17-4. *Bhartia Electric* were steadier at Rs. 16-14, *Jessop & Co.* at Rs. 21-4 and *Kumardhubi Engineering* at Rs. 8-10. *Marshalls* were easier at Rs. 4-11 as also *National Iron and Steel* at Rs. 13-10.

The interest in the Sugar section has faded out and not many transactions are reported. *Buland* and *Raza* were noted at Rs. 42, *Balrampore* at Rs. 17-3, *New Savan* at Rs. 19-7 and *U. P. Sugar* at Rs. 33-12.

Tea shares were unchanged with *Hantapara* at Rs. 738, *Tezpore* at Rs. 16-12, *Hasimara* at Rs. 72, *Patrakola* at Rs. 1,105 ex-dividend and *Bishnauth* at Rs. 78.

In the Miscellaneous section, *Burma Corporation* were higher at Rs. 3-14 and *Indian Copper* at Rs. 2-12. *Karanpura Development* were very firm at Rs. 17-12, *Assam Saw Mills* came in for attention at Rs. 5-2, while *Dalmia Cement* were put through at Rs. 18-4. *Reliance Firebricks* were further higher at Rs. 19-7. *Dunlop Rubber* were one point higher at Rs. 58 while *Indian Cable,* on expectations of a higher dividend for March 1943, were marked up to Rs. 32-10. *Ivan Jones* were steady at Rs. 4-4, *Spencer & Co.,* were firm at Rs. 12-8 and *Rohtas Industries* at Rs. 33-8. *India Paper Pulp* preference were unchanged at Rs. 212 and *Titaghur Paper* at Rs. 27-8. There has been some good buying of *Mysore Paper* on the publication of an excellent report for the year ended September 30, 1943 and the quotation has been marked up to Rs. 30. *Midnapore Zemindary* were steady around last levels. Among shipping companies, *India General Navigation* were steady at Rs. 134 while *Port Shipping* were further higher at Rs. 25-4.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, December 2.

Report regarding the "Big Three" meeting and rumours of peace proposals by Germany were the main factors that were responsible for the easy conditions noticed on the opening day of this week on the market. The easiness in the commodities market was an additional adverse factor. Textiles were the worst sufferer. Steel shares also recorded a big drop but the subsequent decline was not so prominent as in the case of Textiles. *Bombay Dyeing* which closed at Rs. 1,978-12 last week-end were quoting at Rs. 1,942-8 at close of transactions to-day. *Tata Steel* deferreds on the other hand were nearly 40 points above last week's quotation (Rs. 1,947-8) though at one time the quotation was as high as Rs. 2,005. Though the market opened easy it has since begun to show signs of recovery.

Mill shares were in disfavour from the opening day itself. Persistent rumours regarding the "Big Three" meetings initiated a downward course in prices. Except *Century* and *Phœnix* almost all others recorded some decline. However, there was a welcome break in the trend to-day with scrips regaining part of their lost ground.

Bombay Dyeing after declining to Rs. 1,937-8 on Wednesday recovered to close at Rs. 1,942-8. *Central India* were Rs. 469. *Century* were considerably higher at Rs. 963 on steady support. *Colaba Land* were not very much lower at Rs. 249-8; while *Phœnix* were 5 points higher at Rs. 710. *Svadeshi* were Rs. 599.

Steel shares also opened easy in sympathy with Textiles but towards the week-end showed a better tendency. The closing prices were however better on balance though *Tata Steel* deferred at one time in the week were quoting around Rs. 2,000. *Tata* deferreds were Rs. 1,985. After being higher at Rs. 401, *Tata* ordinaries closed at Rs. 399. *Indian Iron* closed at Rs. 36.

Among Hydro-electrics, *Andhra Valley* were Rs. 1,900 whch is nearly 40 points higher than last week's quotation. *Tata Power* were nearly 36 points higher at Rs. 1,926-8 and *Tata Hydro* were Rs. 203.

Engineering shares continue to attract attention. *Alcock Ashdown* have gained more than 15 poits to close at Rs. 585 (Rs. 570). *Premier Construction* which touched the highest level yet on Monday (Rs. 246) soon began to lose ground to close at Rs. 237 (Rs. 232).

Among Mining shares *Indian Copper* which were quoting at one time around Rs. 3 failed

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 25th Nov., to 1st Dec., 1943 both days inclusive)

GOVERNMENT SECURITIES:

3 per cent Defence Bonds (1946):—(25th) 102-6 s.l., 102-6, 102-6-6; (26th) 102-6 s.l.

*After taking into credit Rs. 60,000 Account E. P. T. excess provided in previous accounts.

(Half-yearly General Meeting on 4th December, 1943 at 11-20 a.m.)

Audited Accounts for the half-year ended 30th September, 1943:

The accounts show a profit of Rs. 5,61,330-5-9. After providing Rs. 2,90,994-0-0 for taxation (including Excess Profits Tax), Rs. 1,13,833-0-0 for depreciation and placing Rs. 15,230-0-0 to Welfare Reserve and Rs. 50,000-0-0 to War Contingency Reserve, there is an available balance at credit of Profit and Loss Account of Rs. 1,35,382-4-8 which includes Rs. 44,108-14-11 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

	Rs.	A.	P.
In paying a Dividend on the Preference Shares at the rate of Rs. 7 per cent per annum without any deduction for Income Tax paid by the Company	35,000	0	0
In paying a Dividend on the Ordinary Shares of Rs. 4 per share, without any deduction for Income Tax paid by the Company ..	80,000	0	0
In carrying forward	20,382	4	8
Total ..	1,35,382	4	8

Stocks of jute have been taken at or under cost price and manufactured goods at contract rates.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 60 hours a week until the 17th May, when working time was reduced to 54 hours a week with 10 per cent. of the total looms closed down. On the 15th June the closed looms were restarted.

In July, however, owing to transport difficulties accentuated by breaches of the railways due to floods, a shortage of coal occurred, which prevented many mills, especially those depending on steam power, from continuing to work in a normal manner. The Indian Jute Mills Association arranged that all mills should close at certain times in order to conserve fuel; and eventually a supplementary working time agreement was entered into whereby all mills were to remain closed during 5 specified weeks between 1st September and 31st December, with the provision that steam-driven mills, which might be in a position to do so, could make up during those weeks time previously lost owing to coal shortage. As a result of these stoppages, the mills lost during the period under review 202 working hours which, in accordance with the working time agreement of the Indian Jute Mills Association, cannot be made up in future. The position with regard to coal supplies is still critical and full working is not expected in the near future.

During the early part of the half-year, business in hessian was more or less normal, but on receipt of an order for more than 16 crores of yards of hessian on account of the U. K. Government, prices rose considerably. Later it was announced that all private imports of hessian into the U.S.A. would cease, and that future business would be concentrated in the hands of the Defence Supplies Corporation, which immediately placed an order for 70 crores of yards of hessian for delivery from July, 1943, to March, 1944. These two orders represent a very large part of the total production of the mills and have made it difficult for them to sell further hessian except for deliveries a long time ahead.

Th sacking market has been more or less firm throughout the period, with a strong demand from most consuming centres. The position at present is that mills are generally unable to meet the demand owing to uncertainty regarding coal supplies.

As a measure of control maximum fixed selling prices for manufactured goods have been introduced and have proved of value in preventing an undue rise. In order to give mills an opportunity to buy their requirements of raw material for the large Government orders accepted by them, maximum prices for jute were fixed by the Indian Jute Mills Association. These maximum rates remain in force, but owing to reduced production due to shortage of fuel, mills have bought less jute than usual out of the new crop, and prices have fallen considerably below the maximum. The position with regard to the transport of jute from up-country remains difficult, but no immediate anxiety on this account is felt by the Directors.

The labour position in the mills is not entirely satisfactory owing to the demand for workers for various Government undertakings and war industries, which has resulted in a number of skilled workers leaving the mills. The Company has continued to cater for the supply of essential foodstuffs for all workers at prices approved by the Indian Jute Mills Association. Moreover, when the mills have been closed owing to shortage of coal, compensation has been paid to the workers at the rate of Rs. 3 a week, in addition to the existing amenity allowance of Re. 1-4 a week. The expenses thus incurred have greatly reduced profits.

A further deferred bonus equal to one week's basic wages has been credited to every worker other than those employed only temporarily. The bonus has been debited to Welfare Reserve.

Managing Agents.—Messrs. Bird & Co.

(*Annual General Meeting, held on 20th November,* 1943).

Audited Accounts for the year ended 31st August, 1943:—

	Rs.	A. P.
The Net Profit after making provision for Income Tax, Super Tax and Excess Profits Tax, payable thereon, amounted to ..	3,89,891	12 4
To which is to be added the amount brought forward from last year	30,027	7 10
Together ..	4,19,919	4 2
Hereout an Interim Dividend of 5% was paid in June 1943	60,000	0 0
Leaving for Disposal ..	3,59,919	4 2
The Directors recommend that such balance be disposed of as follows:—	Rs.	A. P.
Payment of a Final Dividend of 10%, Free of Income Tax, making 15% for the year ..	1,20,000	0 0
Payment of a Bonus at the rate 5% Free of Income Tax ..	60,000	0 0
Allotment to Special Depreciation	80,000	0 0
Transfer of Dividend Equalisation Reserve	60,000	0 0
	3,20,000	0 0
Leaving to be carried forward, subject to payment of Bonus to Staff	39,919	4 2

Throughout the year supplies of beer to the Military, have continued and the available supplies to the Civil Trade have fallen far short of the demand.

In the Distillery, progress has been satisfactory. There has been an ever-increasing demand for the Company's products.

Secretary.—Mr. E. D. Dignasse.

(*Annual General Meeting, held on 28th October,* 1943).

Audited Accounts for the year ended 31st October, 1942:—

The Manufacturing Profit for the year was Rs. 8,60,459-6-1 After deducting the following:

(1) Rs. 6,29,627-9-0 paid for Excise Duty.
(2) Rs. 56,271-6-0 paid for Cane Cess Duty.
(3) Rs. 46,399-9-6 paid for Insurance charges including Wa Risks.
(4) Rs. 39,539-5-6 paid for interest.
(5) Rs. 50,962-10-1 provided for depreciation, the balanc available amounts to Rs. 37,658-14-10. Adding the carry forward last year of Rs. 20,979-2-2 the directors have a total of Rs. 58,638-1- A sum of Rs. 50,000-0-0 is transferred from the Reserv Fund and a sum of Rs. 25,000-0-0 from the Reserve for Bad an Doubtful Debts (as nearly Rs. 30,000/- has since been raised out the amount privided for in the year 1939-40 for Bad and Doubtf Debts). These sums together with the balance of Rs. 58,638-1- amount to Rs. 133,638-1-0 out of which it is recommended th payment of the following dividend:

	Rs.	A.
(1) Payment of Dividend at the rate of Rs. 9/- per Preference share 9%	45,000	0
(2) Payment of Dividend at the rate of Re. 1/- per Ordinary share at the rate of 10% ..	65,000	0
(3) Payment of Dividend at the rate of As. 4 per Deferred Share at the rate of 10% ..	17,500	0
Total ..	1,27,500	0

leaving a balance of Rs. 6,138-1-0 to be carried forward.

The year under report has been a bad one for the compan owing to shortage of cane supplies which resulted in interrupte working which was uneconomical. The August disturbances Bihta and the high costs of living and increase in price of store have all contributed to increased manufacturing costs. The nex season 1942-43 also has been a bad one as cane shortage continue as most of the cane was converted into Gur. Gur prices have bee very high equalling white sugar prices with the result tha Gur has competed greatly with supplies of cane to the factor Conditions for the coming season 1943-44 look more hopeful as Gur Control Order has been promulgated by Government and it expected that supplies of cane to the Factory shall be adequate th season as cane plantations in the neighbourhood are sufficient and

Gur manufacturing is controlled, the company shall have an adequacy of cane. The Direcors have had to open subsidised grain-shop for the employees as costs of grains at Bihta have gone up out of all proportions. Other costs, dearness allowances etc., stores, have all gone up but if the Factory obtains full supplies of sugarcane the results for the coming year should be fair.

The Confectionery Plant has again been restarted as arrangements for supplies of raw materials have been since made and this branch is making fair progress.

As the Company has a large Reserve out of past profits the Directors feel justified in recommending the transfer of Rs. 50,000/- from the General Reserve in order to continue the regular payment of Dividends.

(Meeting, held on 3rd December, 1943).

Audited Accounts for the half-year ended 31st August, 1943:—

	Rs.	A. P.
The balance available for appropriation after the inclusion of the amount brought forward from the previous half-year is	9,624	1 3
Out of which it is recommended the payment of a Dividend at the rate of 2½% per annum, free of Income Tax, absorbing	9,353	0 0
Leaving to be carried forward	271	1 3

Sales.—The output of the Colliery is insufficient to meet demands.

Owing to the continued shortage of labour and the difficulty in obtaining adequate supplies of timber, raisings have been seriously affected. Representations have been made to Government with a view to securing their assistance in maintaining the labour force at the Colliery, and ther help has been requested for the provision of adequate supplies of foodstuffs and timber; the outcome of these representations is now awaited.

For the period under review it will be noted that nothing has been allowed for depreciation, and owing to the conditions described above the Company has now reached a stage where it will clearly be unable to earn a dividend until such time as raisings improve.

Managing Agents.—Messrs. Shaw Wallace & Co.

Managing Agents.

Rampur (State, U.P.),
24th November, 1943.

to retain the gains and at the time of writing is quoting around Rs. 2-13.

As the time for the announcement of dividend drew near *A.C.C.* were pushed up to Rs. 226-8 but on the announcement of the dividend (Rs. 7 per share) declined to close at Rs. 224. *Bombay Steam* were rather easy around Rs. 695, and *Scindia Steam* were Rs. 37-15. *Shivrajpur Syndicate* after being higher at Rs. 83 closed at Rs. 80-8 (Rs. 80-8). *Bombay Burma Corporation* (old) were better at Rs. 430 while *Belapur Sugar* were almost unchanged at Rs. 262.

The giltedged market was fairly active and prices ruled steady throughout the period under review. 3½ per cent Government Paper were steady around Rs. 97-7. 3 per cent (1946) Defence Bonds were Rs. 102-5. Among long dated loans 3 per cent (1966-68) were done upto Rs. 98-1; 4 per cent Loan (1960-70) were Rs. 111-15.

The Banking section was very firm. Almost all shares in this section came in for business but Imperial Bank (fully paids) were the star feature with the latest quotation around Rs. 1,975. The partly paid shares though higher on balance at Rs. 507-8, were quoted at Rs. 522-8 earlier in the week. Central Banks were Rs. 88-8, Reserve Bank Rs. 132 and Bank of India Rs. 220.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, November 30.

FIRM conditions prevailed on the local stock exchange during the period under review. While all kinds of shares were in good request, Bank shares and Government securities came in for especial attention.

The giltedged market met with considerable investment support. 3½ per cent Govt. Paper were done up to Rs. 97-13 in small lots. Among others 3 per cent (1951-54) Loan and 3 per cent (1963-65) Loan were respectively Rs. 100-3 and Rs. 98-6.

Bank shares were also in good request. Reserve Bank were Rs. 124. Indian (F. P.) were Rs. 290; Indian (Conty.) Rs. 79-4.

Though Textile shares have recorded substantial improvement, the upward movement was by no means general. The reason may be found in the care shown by buyers while entering into commitments.. Sitaram Spinning were Rs. 228-8, while Rangavilas were a strong feature at Rs. 230. Radhakrishnas and Rajalaxmis were Rs. 436 and Rs. 298 respectively. Dhanalaxmis were still going strong around Rs. 576. After a long space of almost dull conditions the plantings section developed signs of active conditions and soon there was brisk activity with scrips reaching new heights. Chembra Peaks were Rs. 12-10; Cochin Malabars Rs. 18-4 and Pullangodes Rs. 3 and Travancore Rubbers Rs. 27-12.

Among paper shares Mysore Paper were very much in request especially after the dividend announcement. They were done at Rs. 29-8 cum-dividend.

(Continued from page 1061)

lakhs from the Divdend Adjustment Account. The amount carried forward is Rs. 50,759 against Rs. 77,229 brought in.

The confidence of the Directors in regard to the current year's working is evident from the anxiety to avoid a sharp decrease in the dividend to the shareholders by transferring a large sum from the Dividend Adjustment Account. It is also hoped that, with the active cooperation of the Government of India, the difficulties experienced by the Company might be greatly overcome in the current year. It may not therefore be a surprise if earnings for the current year show an appreciable improvement over those for 1942-43.

At the current quotation of around Rs. 400, the prospects of a higher level of earnings in 1943-44 seem to have been discounted to a certain extent.

* * *

In common with other sugar companies the *Belapur Company Limited*, has been able to report a higher level of earnings for the year ended September, 1943, though it, is to be pointed that the increase in earnings would have been more pronounced but for the difficulty in regard to labour on the company's farms and the loss in sucrose content of cane owing to inadequate transport facilities. The net profit, before providing for taxation and depreciation, is Rs. 15,09,471 against Rs. 9,15,785 for the twelve months ended September, 1942. The amount set aside to depreciation is Rs. 2,27,071 against Rs. 1,95,219 while the provision for taxation is Rs. 2,50,000 against Rs. 75,000. The General Reserve gets Rs. 1.25 lakhs against Rs. 1 lakh while the other funds get Rs. 1.75 lakh (nil). The dividend has been increased to Rs. 9 per share from Rs. 6 per share. The amount carried forward is Rs. 2,27,295 against Rs. 5,659 brought in.

The prospects for the current year are satisfactory as the standing crop is in good condition. It is feared, however, that the difficulties in regard to labour and transport might interfere with the regular supplies of cane to the Mills and thus affect the output. The Directors are, therefore, not inclined to take any definite view regarding the working for the current year.

Having regard to the fact that only a small portion of the increase in earnings of 1942-43 has been passed on to shareholders there is is every reason to believe that the Directors might decide upon payment of a higher dividend for the current year. If so, it need hardly be said that a popular share like Belapur afford good scope for appreciation, the rating being on the basis of 3.5 per cent.

* * *

Both *India* and *Megna* report a decline in earnings for the half-year ended September, 1943. The decrease in the dividend in the case of Megna is more pronounced than in the case of India, the ordinary dividend of the former being 2½ per cent for the half-year against 5 per cent on the previous occasion. The latter is paying a dividend of 2½ per cent on the Deferred Share and a similar dividend on the Ordinary Share against 3 per cent on the Deferred Share and 5 per cent on Ordinary Shares.

India Jute Company Limited, has been able to report a net profit of Rs. 13,61,789 for the half-year, of which Rs. 91,267 is set aside to depreciation and Rs. 9,25,307 as provision for taxation. The sum of Rs. 1.2 lakhs is placed to Contingency Suspense including provision for deposit under Section 2 of the E.P.T. Ordinance 1943. After these allocations an ordinary dividend of 2½ per cent is to be paid on the ordinary shares and a similar dividend on the Deferred shares. The amount carried forward is Rs. 45,743 against Rs. 36,778 brought in.

* * * *

The net profit of the *Megna Mills Company Limited*, is Rs. 9,63,649. The provision in respect of depreciation is Rs. 1,27,594 and that in respect of taxation Rs. 5,46,066. The transfer to Contingency Suspense, including provision in respect of deposit under Section 2 of E.P.T. Ordinance 1943, is Rs. 2.25 lakhs. The ordinary dividend has been reduced to 2½ per cent from 5 per cent. The amount carried forward is slightly higher at Rs. 56,591 against Rs. 52,842 brought in.

* * *

The accounts of the *Coimbatore Spinning and Weaving Company Limited*, for the year ended June, 1943 should be considered satisfactory though the shareholders might not derive any comfort from the increase in earnings, the ordinary dividend having been maintained only at the level of the previous year of 50%. Nearly the whole of the increase in earnings has been taken up by additional provision for taxation. The net profit, before providing for taxation and depreciation, is Rs. 42,76,819 against Rs. 17,24,675. The charge on account of depreciation is Rs. 32,36,000 (11 lakhs). A sum of Rs. 5.64 lakhs (1.5 lakhs) has been placed to reserve. The dividend, as pointed out above, has been maintained at 50 per cent.

BRANCHES TO BE OPENED SHORTLY IN IMPORTANT COMMERCIAL CENTRES.
Clearing arrangement in Co-operation with the United Commercial Bank Ltd., Calcutta.

Advertisements usually pay.

But this one won't.

Because we are only advertising the fact that we cannot manufacture sufficient cables to satisfy the presentday demands.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Judging by the usual money market indices, the current month may be July instead of December. There is not even a speck of a shadow of the coming event of the business season. In fact, the busy season should, ordinarily speaking, not only have come by now, but been working up to the crescendo. As it is, there does not seem to be any prospect of a busy season; and it is doubtful if we shall experience anything like steady monetary conditions even during the last working day or two of this year. The deposits of banks are swelling in a spate; and the cash maintained by member banks with the central banking institution is Rs. 94½ crores. Though there has been a substantial outgo on Government account, the deposits of the Central Treasury with the Reserve Bank are at the high figure of Rs. 47¾ crores. On the weekly treasury bill tender day, against Rs. 6 crores on offer, applications came to Rs. 13.74 crores. Not only were tenders on the large side, but bidding, too, has been keener, resulting in the decline of the average discount rate from Rs. -/12/11 to Rs. -/12/3 per cent per annum. The offer of tender bills for next week remains unchanged at Rs. 6 crores.

The Assam Government, who came on the market for three months accommodation for Rs. 2 crores, have been fortunate in being able to get their requirements at Rs. -/13/- per cent per annum, which is only 9 pies higher than the Central Treasury rate.

The returns of the Reserve Bank for the week ended December 3 reveal an increase in active note circulation of Rs. 10.06 crores. This is mostly due to expansion of currency against sterling securities for Rs. 8 crores. Rupee coin is lower by Rs. 86.61 lakhs. Notes held in the banking department are lower by Rs. 2.88 crores. Active note circulation is now above the Rs. 800 crores mark, and sterling securities held in the issue department are nearing the Rs. 700 crores mark. Taking the banking and issue departments together, the total sterling assets are now over Rs. 850 crores. Are we to understand that the sky is the only ceiling both for active note circulation and for sterling securities in our currency reserve? In the banking department, the deposits of the Central Government show a sharp and substantial decline of Rs. 14.68 crores. The net sterling payment during the week would appear to be Rs. 4½ crores. This payment has the effect of augmenting Government's cash balances. In other words, the payments made out by the Central Government in the week under review are over Rs. 18 crores. It is true that the month-early disbursements would account for some portion of this expenditure. Even so, there is a substantial proportion of this week's payments for which no explanation can be offered except on the basis of the meeting of some extraordinary commitment or other. The deposits of scheduled banks have gone up by Rs. 10.32 crores. But all this increase is linked with the rise in the Imperial Bank's cash from Rs. 47.91 crores to Rs. 58.23 crores. Not for a long time has the Imperial Bank maintained such large idle cash balances. There is every indication that Imperial's cash will pile up as treasury bill maturities in the coming weeks must needs exceed fresh sales of bills. The deposits of the Imperial Bank are nearly Rs. 209 crores.

Till a few months ago, the Government were scrupulously avoiding the use of the word "inflation"; and those who spoke of inflation were considered alarmists. Furthermore, we were told that our very discussion of this question would inspire and accentuate inflation. Now that the Government have admitted the fact of inflation, we are entitled to know what is being done about the root cause of inflation. As we have repeatedly pointed out, the present scheme for financing Britain's commitments in India is the fountain and source of inflation more than any other factor. Surely, the Government cannot postpone taking the public into confidence as to what is going to be done about this scheme.

The exchange market has been steady, with slightly more business in bills and remittance.

Banks are sellers of T.T. at 1s. 5 31|32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on Lonodon at 1s. 6 9|32d., and four months bills at 1s. 6 11|32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

Finance Abroad

Thursday Evening.

So little has been said of Russian intentions as to post-war trade and exchange that a professor's demand for a return to the gold standard may be viewed as just a part of the Russian enigma. The demand must be regarded as official though the question is, what the Russians will make of the enormous depreciation of the rouble in two years of war. The Soviet Union's championship of the gold standard may make things easier for the U.S. plans in the now dilute form of Mr. White's second draft. The Soviet Union, as the second producer of gold in the world, may embark on real coinage and gold exports too when the balance of trade is adverse, but others cannot, and the Soviet plea is certainly going to be turned down without hesitation when most countries object to gold quotas and think only of clearing balances, not at all of gold points. The Soviet Union perhaps has turned orthodox suddenly after the experience of the latest crisis of the rouble. Rationing and barter may have made the Russians ask for the pre-war gold standard to show that they are ready to help with their own ideas today, the 32 nations who are said to have agreed on the need to agree. What the working class in Russia at war with Nazi heretics wants must be only conjectured but the mention of Russia's interest in the restoration and repair of the whole world's economy must be taken as more important than a professor's recommendation against the stabilisation fund or an international bank.

Events abroad point to no decisive change in market sentiment. Statement after statement supports hopes of early victory and the new line-up in the Eastern Mediterranean may have welcome effects outside the Balkans. Hope of full victory may stimulate selling of South African gold in Bombay but the market has not favoured the sellers. Gold prices in India did not move up promptly after the daylight raid on Calcutta, and the small difference between Calcutta and Bombay prices this week proves that there has been no disturbance of any market in India owing to the facts being known at once. Outside the oil share market everything appears to be quiet in London though hope of peace by 1945 supports the small rise in textiles. The steady rise in Anglo-Iranian oil shares over a week will certainly be ascribed to the Allied guarantee to Iran. What the riyal is worth in relation to the rupee and neighbouring currencies may soon be independent of the inflation to which the Allied leaders' statement from Teheran bore witness. Post-war development of Iran under guarantee is promised and what part Indian enterprise will play must be settled soon. The Ottoman Bank's interests extend into Iran but there is no other English bank and many well say that a Muslim bank will enjoy unusual opportunities if trade between Iran and India continues to grow as it has done in the war period. There has been an enquiry into trade openings in Iran but the main chance still seems to be with banks which can start off from Basra. As the Three-Power guarantee is in force the U.S.A. may play a strong hand and the 'open door' in Iran may be widely interpreted as a mitigation of Anglo-Russian ascendancy after the war. The Turkish delegation to Cairo may have received assurances concerning the Allied stake in Iran now and after the war, and what is promised under the Atlantic Charter may make the Mejliss respond by resolution to the guarantee displacing the 1941 Treaty. The immediate result is the strengthening of the popular belief that the oil of the Middle East is to be developed confidently and this will naturally help the holders of Anglo-Iranian stock incuding the major oil companies. The shares have more than recovered their dividend already. This may be viewed as more important than the drop in giltedged prices. Evidently, new money is not going into the old stocks but into the new tap issue, and the Treasury gains. The presumption is that the year-end will see no rush for funds merely to put more money into balances and the significant development of the year—the extinction of uncalled liability in the case of certain insurance shares or even the issue of bonus to put an end to it—may call for notice. Certain banks still have partly paid-up shares but they have not moved in the direction of increasing the capital. Though deposits grow, investments grow at a greater pace and the security of the depositor really is that of any creditor of the Government. The procedure of borrowing for short term from the banks is retained, and the expansion of currency and deposits is reflected in the increase in the treasury bills offer. Control keeps the rate down though it will be surprising to many that the average rate in India is invariably lower than in London at present.

The Turkish President's visit to Cairo follows the Russian outline of requirements in the Balkans. The Yugoslav insurgents' action certainly complicates the position of those who look to recovery of assets in enemy-occupied territory. Turkey is less neutral by inference, and the change is important, for it means that German trade in S.E. Europe after the war will shrink steadily. The next step in the Balkans may lead to a flare-up and pacification in which Russia should play a part. The assistance that Russia may or may not give to the restoration will be a cardinal factor as Turkish interests have been defined in advance. That Turkey has moved a long way from the Lausanne treaty will be readily understood; but the main question will be economic. As lease-lend aid is to continue Turkey will get her share and the fact that Russia's aims are mainly political will not be overlooked. It is the U.S.A. and Britain which will take Turkish goods and supply Turkey with arms and other things. If Turkey is not entering the war on the Allied side, there may be an agreement over Cyprus or the Dodecanese and the details of the bargain struck at Cairo may have large effects on the Greeks in Alexandria as well as the French who cling to the Mandate in Syria.

General Smuts' forecast of heavy tasks after the war will neutralise the optimism produced by his assurance that next year will be decisive for victory. Industrials with post-war prospects should naturally go up after the assurance offered in Cairo, and the Indian markets may develop some irregularity for the same reason. If there is a drop in gold prices in Egypt the effect may be communicated to India but gold-mining shares would go up on the hope that after the war taxation in South Africa would be less onerous.

It is rather difficult to describe the main effects of the conferences. The exchange rates are firmly anchored and the promise of assistance to one country or another by the Allies is certainly a routine affair. The Soviet Union is not likely to appear as an exporter in the East and Soviet monopolies may have little to offer to countries which are harnessed to Anglo-American oil interests. Clearly the oil share outlook must improve and the various ties between the leading companies will lead to a general rise. Oil shares quoted in India may not share in the improvement, but operations in the Marshalls may have later on an effect on Royal Dutch shares which have been stagnant for a while. There has been no recovery in rubber shares, comparable to that noted in August-September, because the war in S.E. Asia is yet to begin and the taste of reprisals will certainly repress enthusiasm in regard to Burma shares generally.

The request to Congress for an appropriation for the U.N.R.R.A. may lead to a full examination of the aims and objects by a legislature which is not friendly to the Administration. India's part has been defined by a press note which indicates that the Central Assembly will be able to decide what India should pay and for what purposes under a shadowy promise of reciprocity.

Another republic has decided on war. Bolivia's dictator, General Penaranda, favoured war with Germany and the decision of the Government announced this week will put more minerals at the disposal of the U.S.A. and export duties.

The Fraser Plan

By far the most clear-cut proposal for the regulation of world trade and finance in the post-war years is that of Mr. Leon Fraser, which has been outlined by our Washington Correspondent in his cable published elsewhere in this issue. Not only is Mr. Fraser's proposal said to commend itself to American business circles more than the projects of Lord Keynes or the American Treasury, it has also met with the serious consideration of the British Press. One undeniable advantage, Mr. Fraser's proposal has over the latter, is that Mr. Fraser recommends the continuance in the post-war years of the machinery now existing for the distribution of world trade, together with the grant of an American credit to Britain to help her to restore the balance of her foreign trade and finance. Such a proposal has the merit of allowing time for a study of post-war conditions and of helping, where possible, the growth of systems which have their roots in the conditions of the present, while the plans sponsored by Lord Keynes and the American Treasury have the forbidding look of "blue prints" drawn up in accordance with abstract principles. It is only to be expected that Mr. Fraser's plan has met with a warm welcome whereas the official was received with cold frigidity. That the Fraser plan provides for a natural growth instead of being a superimposition like the Keynes Plan is an advantage that can well improve its chances of its ultimate adoption in some form. The continuance of the present machinery of distribution is a step that provides a valuable respite from a number of problems to which the Governments of the nations will have no time to devote once the armistice is declared. For Britain to continue to buy all the tea and all the beef that her allies will require is simple enough, though the problems from which it affords an escape will have to be faced before long. The influence and importance of the time factor are not easily assessed. Britain may conceivably be anxious to settle some of her economic problems of the post-war period well ahead of the signing of the Peace Treaties. But the U.S.A. has a far wider range of problems and heavier burdens to consider before she can signify her assent to British proposals. The next Presidential elections and the need felt by all politicians to reckon with a possible relapse of isolationism only aggravates her difficulties in this regard.

Nevertheless, one can reasonably expect the U.S.A. to accept the Fraser Plan in some form as an avowedly stop-gap arrangement for the immediate post-war years. For, it may be relied on to meet the very dangers which seem to the American mind to be the most formidable. The worst of the dangers that threaten international trade after the signing of peace is the orgy of competitive buying by various countries, the mad rush for the more important currencies ending in a stampede for dollars. This danger, the continuance of the present machinery can well guard against. Next in the order is the possibility of the dis-equilibrium of British trade and finance, particularly that part of it which is due to the foreign obligations created during the war, leading to some crisis of confidence. Mr. Fraser's provision for such a danger is his suggestion that Britain should be given the right of drawing on American gold up to a limit, on condition that the U. S. and Britain will desist from competitive currency depreciation. It is expected that knowledge of such an arrangement should suffice to obviate the need for drawing on that gold credit. If these dangers are guarded against, one might well expect the transition of world trade from a wartime to a peace basis to be smooth; and it is by no means impossible that such transition will be fruitful of suggestions for the better regulation of world trade and finance. At present, there is no reliable basis on which to estimate future trends and tendencies. But within a year of peace, the abnormalities of the war period will have revealed their respective strength and weakness. Some of the fears now entertained about the future will have been proved illusory or, at least, exaggerated; while hopes might be strengthened or leave place to disillusionment. Altogether, it will be easier then than now to formulate plans which are not open to the reproach of being the blueprints of academic economists.

But British opinion is bound to view it differently from American. For the considerations which weigh with her are not those which oppress the American mind. The extreme sensitiveness displayed in the House of Commons to General Smuts' suggestion that post-war Britain may be materially poor holds the key to Britain's attitude to these problems. For Britain, the problem is to ward off this danger of post-war poverty, to ensure markets for her exports, to overcome the shortage of gold and to make possible the continuance of her large import trade. The obstacles to these aims are, economic nationalism in countries which were markets for British exports and the place of gold in the international balance of payments and of the dollar in international finance. These obstacles, Britain seeks to overcome by the Plan for a Clearing Union and various measures of international scope which will establish an Anglo-Saxon hegemony over world economy and modify the position of the dollar in international finance. Britain, therefore, has to work for American acceptance of an import surplus and of a financial plan which will enable her to continue her import trade without frequent tally with her balance of payments. The Fraser Plan does not lend itself as the Keynes Plan does to the pursuit of these objectives. While it provides for the continuance of the present wartime machinery, Britain would probably prefer the resumption of competitive export trade as soon as hostilities cease. While Britain wants America to accept the principle that large favourable balances which cannot be easily settled is as much culpable disequilibrium as an unfavourable one, Mr. Fraser asks her to be content with the provision of a gold credit. Britain's solid interest, no less than self-respect, would counsel the rejection of such proposals, the more so, if there is reason to apprehend that the trends of the transitional period would not be favourable to her plans.

While Britain's interests and inclinations may thus be out of accord with the Fraser Plan, she may well have to take into account a number of facts which suggest that no such plan as the Keynes Plan is likely to be brought into force immediately after the war. Of the three great powers which will order the post-war settlement, Russia seems to favour some form of an international gold standard which can be depended upon to work automatically rather the highly artificial creations of Lord Keynes or the American Treasury. It is true that when Mr. Cordell Hull left Moscow, he claimed Russia's co-operation in international financial arrangements as one of the gains of the Moscow Conference. But Soviet Russia is sure not to entangle herself in a system designed primarily in the interests of capitalist countries working for foreign markets. Of America, we in India might well feel surprised that the American Treasury should be impatient about post-war schemes, when it cannot envisage even vaguely the repercussions on American economy of the vast international obligations which the U.S.A. will have to take on herself in the post-war period. British prescience may well be equal to foreseeing the weak

spots of Britain's national economy especially as they have been revealing themselves ever since the last Great War. But the pace and scale of American development in the last thirty years and the responsibilities which the dialectic of world politics is thrusting on her shoulders are such that she can ill-afford to tie her hands with international instruments which might prove more a handicap to herself than a help to the world. Britain's export trade and the implications of America's creditor status do not exhaust the crucial problems of world economy. When the overthrow of Japan in the East is undertaken, the economic problems of S.-E. Asia and the reconstruction of the economy of these countries and its integration with world economy will be seen to present more intractable problems.

PLANNING AND ENTERPRISE

(CONTRIBUTED)

All economic questions in India, problems of population, food, industrial and fiscal policy are invariably treated as problems for the planner, and demands have been put forth from many quarters for a Reconstruction Department primarily concerned with the plans for the transition to peace. The demand may not be without justification in the light of promises and achievements, but there are certain points to consider. One is necessarily as to the capital required for this purpose or that and the other is regarding the conflict of interests, local or foreign, that may arise in the wake of planning. While the food problem has been examined in detail by the Policy Committee whose recommendations have gone into effect, one by one, there may be little advantage in examining the requirements of the future. If the Dominions were to become regular exporters of food to India, the problem of advancing industry at the expense of agriculture is virtually solved for us. Agricultural protection has never been an issue in India. Since there is every indication that Indian economic policy after the war will be shaped by Empire requirements as much as her own needs, the tendency to wait on events may well be justified. It has, of course, been pointed out that the investigation of resources and possibilities must go on, that taxation must be adjusted to industry's ability and the national income and the immediate after-war requirements of capital goods defined. In regard to the last action has certainly anticipated the discussion and the issue of a questionnaire to many industries and interests is the indication of an intention to take note of local experience and immediate requirements.

Since the main question relates to the growth of secondary industries, the procedure adopted may not call for special notice. The Dominions, especially Australia, desire that war babies in the industrial field should survive, and the same feeling may be noted in India. Those new industries which have been set up under direct guarantee of fiscal advantage would be in a special position. But we may do well to remember that two major industries derive no assistance from tariffs and are certainly looking to export revival to restore prosperity. While a case for nationalisation of coal-mining may be made out by a priori planners the jungle of interests will be hard to pierce, and royalty-owners may, in any event enter a decisive caveat against such planning as may be applied. It is obviously open to the Government to reorganise the Railway collieries and develop distillation or a by-products industry on its own, but private interests, influenced by the hope of a post-war boom in exports, will view unkindly the proposals other than those connected with labour welfare. While the jute mill industry may have surplus capacity as before, it has always considered rationalisation a separate issue for itself and has consistently given evidence of its ability to adjust itself to changes in supply and demand and to adjust the manufacturer's interests to those of the jute-grower. If two major industries are distinctly removed from the scope of planning to-day, the application of controls through commissions and authorities to other industries may be made difficult. If certain deductions are warranted in regard to direction and co-ordination of power supply, the only important industries served by power, e.g., gold-mining and aluminium production, are located outside British India. The question of jurisdiction apart, there is little value in asking for a Central Electricity Board unless and until the new generation and distribution systems are in existence. From the investor's angle alone, there may be little justification for Government interference with power supply or tariffs, and the very limited development of municipal enterprise so far in the field makes for caution as to the scope or value of co-ordination which may be officially approved at present.

What exactly may be the value of planning applied to industries like steel or sugar? Where autonomous unitary organisation on the lines of the cement industry develops there is admittedly no place for planning. It is perhaps little known that location of industry in India has followed definite lines, and to-day when export outlets are getting important as never before, there may be no place for forcible interference in respect of cotton textiles or the leather industry. Without expressing doubts as to the scope for the development it may well be urged that the efficient, older industries which have proved themselves in the war effort must be treated as a class by themselves. How far profits go to augment the supply of new capital and sustain a budget of abnormal proportions at present, may not occur to all minds but the chief consideration must be the maintenance of the incentive to save. If all new investment is assigned to the State, which takes over the risk, the growth of a formidable rentier class, distinct from the investor of to-day, may follow. That class may be a danger of a new, unforeseen type to sponsors of social or economic change. Never is it more necessary to hasten slowly than in the period after the war. New, vast projects may make employment, but they may force on us cataclysmic changes and retard recuperation. Slow growth may be dictated by the inherent dependence on the foreign investor in the case of most industries. Substantial changes may be undesirable when the intention is to displace foreign capital gradually.

There are the plantation industries which are undergoing a transformation in regard to ownership. If planning were interposed without due regard to prior international obligations the results may be unfortunate from the view of export trade. In a sense, the further development of manufactured exports in the light of wartime experience can only be secured by subordinating local requirements to the needs of the future. If India's dominance in South-east Asia demands a regular outflow of manufactured goods from India in return for raw materials, the old Indo-Burma trade treaty must be restored and Indo-China's rice admitted without a tariff. While planners, as a rule, approve subsidies, the new demands for tax relief or adjustment will have to be met at the same time. The absence of any notable success outside the field of ordnance production will compel the attention of many being drawn to the value of private enterprise. Whether it is shipbuilding or repairing, lorrybuilding or armourplate manufacture, the success recorded so far is that of private enterprise. The point admittedly deserves emphasis in any review of the possibilities of relating planning to private development. The absolute growth of bank deposits and the additions to life insurance companies' revenue may be duly enlarged by the control of capital issues. Established enterprise may count on the further advantage of such control surviving the war, for none can envisage such projects as are necessary to large-scale development until industrial efficiency and technological advance in India can support them. The human factor is more uncertain than the adequacy of resources, and if India is to be divided into two parts, the whole scheme of planning will require very drastic modification. It is perhaps unwise to assume that partition will create new problems but pleas for the nationalisation of shipping have been put forth, yet such a question as the Haj traffic may acquire unusual significance if Pakistan were established. There is perhaps no issue of going back to pre-war conditions but leaps in the dark, such as are favoured by planners, would be more dangerous if the confusion extends to overseas transport. While the supply of consumer's goods, for instance cloth and sugar, is essentially the field for private enterprise, the mere fact that State intervention has not augmented supply in a period of scarcity may be accounted decisive. It may be objected that economic controls applied in the war period are distinct from planning for such a purpose as the doubling of the national income, but many will be unable to imagine any system different in structure or purpose after the war. Whether a deliberate diversion of resources to public works construction would be called for is a moot point. Private building has been held up for lack of materials, and any scheme meant merely to sustain the existing price-level after the war will be self-condemned. In a country where the standard of living has been lowered by the war, the normal after-war deflation may prove dangerous, but plans for demobilised soldiers for settlement on the land have been outlined to the I.C.A.R. The addition to food supply on the basis of mechanisation is more important than the schemes for aircraft manufacture or automobile making. Given the assumption of lasting peace, the requirements in regard to national defence may

be far less than those desired by planners; and such returns as may be desirable for British assistance during the war, may well be assigned priority over new expenditure. If Britain has expanded aircraft manufacture to the position of the foremost industry of the day, it would be more desirable to get imports than set up local plants. The same argument may well apply to shipbuilding or motor manufacture, and whatever ideas may have held the field in 1938 require complete revision when it comes to relating objectives to resources. Industrial handicaps have certainly been shown up but these handicaps may well be described as permanent barriers to advance. While it is fashionable to speak of gold hoards as a reserve of capital awaiting utilisation under planning, it is wholly necessary to recall that gold fulfils a separate function in India and the return of gold through any means to India cannot be reckoned an addition to investible capital. India's peculiar handicaps may warrant a re-examination of fundamentals. It is known that rapid development of industry is no guarantee of security. Belgium and Poland, like Denmark, went under. If the peace organisation is assured as seems likely in the declaration from Teheran as to the ultimate purpose and immediate aims of the Allies, the economic problem in India will not be one of rapid and revolutionary change but a return to the ways of pleasantness and the paths of peace.

THE

FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Sugar Outlook

In view of the current preference for sugar shares generally the sanctioned increase in the price of sugar and the Ordinance governing the excise have attracted less attention than usual though the announcement came on the eve of the crushing season. The former is meant to provide for a rise in cane prices and the only question that concerns most mills is the size and condition of the crop. The answer is contained in the second forecast which records an increase of 7 per cent in the Indian sugarcane crop in respect of total area under cane estimated at 3,938,000 acres this year. As 96 per cent of the area under cane in India is covered by the forecast, the statement that whether conditions have generally been favourable, and the present condition of the crop (based on reports up to the end of September) appears to be good on the whole. The main changes are the increase in sugarcane cultivation in the U. P. (including Rampur) which accounts for 51.7 per cent of the total cane area. The U. P. report said that rainfall was above normal, and no damage to the crop had been reported. It mentioned the outturn of 89 per cent (decennial average 81 per cent) and stated that the crop was healthy and expected to be rich in juice. In Rampur 33,000 acres (32,000 acres in 1942) are under cane and this may have a bearing on the prospects of one or two companies.

In the Punjab too a larger crop and unusually rich outturn are expected. It is only in Bihar that the average will be lower but in Bengal the area under cane is smaller, and the crop is described as below the average. Madras and Bombay report an increase in cane cultivation this year, and in the former, the production in terms of jaggery is expected to be appreciably higher. The cane acreage in Mysore and Hyderabad is lower this year. That the recovery in cane cultivation in India has continued into 1943 should not excite surprise in view of the fall in world sugar production since 1941. India had to pull up. The increase in sugar production to over one million tons in 1942-43 was based on the increase in the area under cane last year and a further increase will naturally encourage all to hope that a further increase in sugar production in 1943-44 will follow largely because action has been taken to limit "gur" production and prices in the interests of sugar producers. The second forecast supports the belief that the better crop may lead to a better recovery percentage, and sugar production will consequently be above the peak touched in 1937. From the investment angle today, the second forecast may be said to support hopes of dividends for 1943 being maintained at the 1942-43 level and the basis of valuation must be the dividends declared this year.

Increased Traffic

In his address to the I.R.C.A. on November 26, Sir Edward Benthall cited figures in addition to those given by Mr. Cordon as to how the growth of traffic is dealt with by the Railways. The Indian Railways are carrying more goods; from April 1 to October 20 on Class 1 Railways except the Bikaner and Mysore Railways 127,000 tons more have been lifted than in the corresponding period last year and coaching traffic has increased by 30 per cent while on the B. & A. Railway the latest returns, according to Sir Edward Benthall, show that traffic has increased as a whole on the Railway by no less than 78 per cent. In his address, he noted, that operational and earnings figures would seem to indicate that during the last four months, with traffic returns based on earnings running fairly consistently at a level of about 18 per cent above last year, we have more or less reached a point of saturation with the equipment at our disposal and clearly there must be a limit to the potentiality of any system. In the light of the figures obtained from the last Railway Board communique on earnings, it may be inferred that October saw an increase of traffic, reflected duly in earnings. The total approximate earnings from April 1 to October 31 amounted to Rs. 100.74 crores against Rs. 85.36 crores for the same period in 1942. The wagon-loading figures for October show a fall under both metre and broad gauges offset by a rise under tonnage lifted on the metre gauge though the tonnage figures for October point to a small fall. But it should be noted that totals for April to October 1943 show that there has been an increase of 1.15 per cent in tonnage lifted on broad gauge lines and 6.29 per cent under tonnage lifted on the metre gauge as compared with 1942. In terms of four-wheeled wagons loaded on both gauges, the increase is greater. The wagon loading details show that a small increase has taken place under coal and the only important decrease in traffic is under oilseeds. The famine clearly accounts for the increase of 15.9 per cent on the broad gauge noted in the case of grains and pulses carried by rail (10.7 per cent in the case of the metre gauge). Undoubtedly, the single largest item remains miscellaneous full wagons and the growth of military traffic explains the decline noted under miscellaneous smalls as well as home line stores and materials. The railways have carried less coal for their own use, and Sir Edward Benthall's appeal for fuel economy on the railways has received support from figures as to coal for home line on the B.N., E.I. and G.I.P. Railways.

After the War

Not long ago Dr. Dalton agreed with a questioner in the Commons that Empire economic unity was desirable, and trade policy after the war should be uniform in all parts of the Empire. The trade controls in the Empire would be retained to safeguard that unity and uniformity, and it was generally concluded that the British Government would stick to the policy laid down in 1932. More recently, Captain Waterhouse addressing a Conservative Association at Birmingham declared himself in favour of free trade in the Empire but added 'around it we should not endeavour to build a tariff wall so high as unduly to restrict the ready flow of goods throughout the world'. The whole argument rests on the need to recover export markets and lift trade above the level of 1939. The conditions of 1939 when the preferential arrangements were in force certainly are desired and over and above there is the desire for

markets with which British trade will be large and continuous.

It is not difficult to relate these aims to the plans for post-war relief, foreign investment and exchange stability. The Conservative Party, probably, accepts tariffs as desirable, and in spite of the reduction in food imports and invisible exports during the war period, to build up exports. The chances of conflict in neutral markets with Indian goods cannot be minimised in view of Captain Waterhouse's argument that markets chosen must be those which will develop a continuous appetite for British products. Egypt is obviously a meeting-ground for both British and Indian exports and the special attention devoted to all African markets generally this year indicates where competition is apprehended. Whether a new Indo-British trade pact in place of the one renewed will help to resolve such competition need not be asked. But Captain Waterhouse's argument undoubtedly, points to foreign markets and not Empire markets. If the latter are convenient, the foreign markets are more useful from the point of view of acquiring foreign exchange, and British trade policy after the war will be more influenced by the loss of gold and the disinvestment of the war period than by the Preference available in colonial markets. It may be inferred that a new economic conference like that of 1937 would be held after the war to support the Four-Year plan for Britain.

Though reference is frequently made to the immense demand for goods abroad, it is largely the need for avoidance of unemployment. As there are plans for Government to buy and store goods, there may be new agencies set up to hold markets for British goods against the Empire producer. The Dominions may be offered more important concessions in respect of food imported by Britain, so as to give Britain first choice of those markets where industrialisation has created prosperity. Coinciding with the expansion of British export trade after the war, there may be a shrinkage in Dominion exports, and adjustments would be called for. The major purpose of British policy has therefore been consistently indicated in order to prevent misunderstanding. Should there be any further discussion as to the bearing of India's fiscal autonomy on pleas to give more goods there will be naturally examination of the new argument concerned with permanent expansion of British export trade above the 1939 level. The Parliamentary Secretary spoke of the need to win markets offering greater scope than those more convenient or glamourous. The phrasing may well suggest that India lies outside the field to which British exports are to be directed but post-war industrial development in India may create the continuous appetite described, and that is obviously where the plea for Empire free trade comes in.

Recognition of Trade Unions

The Assembly has considered the bill to amend the Trade Unions Act of 1926. The employers' view as to compulsory recognition of trade unions was duly made known but the actual provisions of the bill were not discussed in detail. The bill introduced on November 8 amends the title, the preamble, and adds a new chapter to the Act of 1926. The purpose of the new chapter is to give the Central

Government the power to recognise unions of which 70 per cent are its own employees or railway and port employees and to set up Boards for recognising unions, such boards to consist of a Government representative, an employers' representative and a workers' representative. Applications from the executive of any union are to be made to the Board or else to the Registrar of Trade Unions. Section 28 D lays down the conditions for recognition, namely, that all the union members are workmen employed in one and the same industry, that it has been a registered union for twelve months and it has complied with the provisions of the Act, that it does not exclude members on communal or religious grounds, that its executive meets at least once a quarter, that it is a representative union and that it has applied for recognition to the employer not less than three months before applying to the Board. The Board or the Registrar are authorised to call for further information from the union to determine if it is entitled to recognition, and if it fails to give the information within the prescribed period, its application shall be deemed to have been withdrawn. The Board is to satisfy itself about the union's qualifications for recognition and recommend to the appropriate Government. Recognition can be withdrawn under Sec. 28F if a member or members of the union take part in an illegal strike or if members of the executive have advised or activity supported an illegal strike or any propaganda directed against the efficient prosecution of the war, Government after being advised of a union being either unrepresentative or unfit for any reason can, by notification, withdraw the recognition, provided the union is given an opportunity to state its case.

The rights of a recognised trade union (defined by Sec. 28G) include the right to negotiate with employers on matters of common interest but the employer is not required to write to the executive or give interviews regarding matters already decided, whether in agreement with the executive or not. An employer who fails to comply with the provisions is punishable under a new section with fine up to Rs. 500. The Royal Commission on labour in India urged that registered trade unions should be recognised. Statutory provision for recognition and the power to direct local Governments to set up boards of recognition are meant to encourage such unions as are qualified to obtain recognition by employers.

Mica in India

Mica possesses the unique combination of elasticity, toughness, flexibility, transparency, resistance to heat and sudden changes of temperature, high electric strength and the property of splitting into thin films. India's position as a major producer of mica, occupying a favoured position in the U.S. market, is independent of the war. An article on mica in India appearing in the October Issue of the Journal of Scientific and Industrial Research describes the distribution of mica deposits in India. Occurrences from Kulu to Travancore have been reported but only in Bihar and Madras are the deposits of economic importance. Bihar supplies about 80 per cent of India's production at present. The famous mica belt which is about 20 miles in width runs in an E.N.E. direction for a distance of about 90 miles from the Gaya District through Hazaribagh and Monghyr Districts to the Bhagalpur District. Occurrences in Manbhum and Palamau have also been noted and the Eastern States are known to contain deposits a small amount is being worked in Bamra State. Among the minerals of Udaipur State mica is one.

Mica deposits are worked in open cast quarries or surface workings. The mining methods have improved though most mines in Bihar and Nellore are still open quarries. According to Dr. Dunn a mica-bearing vein is first opened up, developed and blocked to its limits along the strike and dip by vertical shafts, drives and winzes. The mineral reserves left in different blocks are then removed by overhead stopping until the mine is worked out. Since physical perfections determine the value dressing and grading are important. The crude and sorted mica books are carried to the godowns and split before trimming. In Bihar the country-made sickle is used for trimming but in Madras the mica is cut by shears. Much of the large-sized blocks is exported as block mica but splittings are also made. Women and children using a large, sharp pointed knife split the mica into thin films. The splittings are used in the manufactures of micanite. A large amount of scrap mica goes to waste. In other countries the mica is ground either by wet or by dry grinding methods to produce mica powder which is used for a number of purposes.

Mica is the hand-maid of electricity and the increase in Indian production is governed by the growth of the U.S. electrical industry. The automobile industry too finds a number of users for mica but 80 per cent of mica taken by the U.S.A. goes into the electrical industry. But for insulation generally micanite has acquired greater importance, and ruby mica enjoys special advantages in the international market. Art mica plate made of mica splittings in combination with pure shellac compound. Various substitutes for mica have appeared but the conclusion reached is that none of the substitutes seriously threaten natural

Death FROM UNNATURAL CAUSES
Every petroleum container is precious for the duration. It is therefore regrettable that many containers are returned to us in a state which makes them unfit for further use.
For example a barrel which has held molasses is thereafter useless for the storage of oil. Lubricating oil kept in a petrol can will make it useless for the further storage of petrol.
It is always difficult and often impossible to clean barrels, drums or cans which have held products other than those for which they are intended. It is therefore of great importance that containers should only be used to store the correct grade of oil.
Containers are scarce — TREAT THEM WITH CARE
TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS ★ TAKE CARE OF CONTAINERS
BSCH 61 A BURMAH-SHELL ANNOUNCEMENT

mica. Bihar and Madras are responsible for 96 per cent of mica production and in most years shipments appear to exceed reported production. As many grades and qualities figure in the trade—the middleman's rake-off is substantial and the prices in the pre-war period did not yield so much to the producer as to the brokers abroad. Consumption prospects are assured in the light of wartime experience. India has a virtual monopoly of good quality mica. But this must not engender complacency as Brazil, Russia and East Africa are known to be developing production and may become rivals. Reorganisation of the mica-mining industry is advocated by many and the claims of owners of large mines, able to employ economical methods, are supported in the interests of the future.

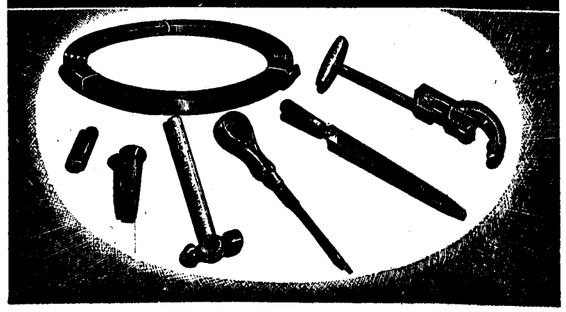
Nazi Shipbuilding Plans

Axis shipping losses explain the German plans to build more merchant vessels. Mr. A. J. McWhinnie commenting on the German plans to build new freighters in Germany, Finland, Denmark and Holland dwells on the change of opinion following Mussolini's belated decision to build merchant vessels. In the light of damage done to ports and shipyards time and again the decision may yield small results. Mr. McWhinne's own opinion is that it would be unwise for Allied peoples to translate this news into anything more than a belated realisation in Germany that you need ships of your own to win wars in addition to having U-boats and aircrafts to sink ships of your enemies. Germany's decision to go for mass production may be cited in support of the decision in the U.S.A. to aim at big totals without regard to speed or performance. The very late decision to imitate the U.S.A. and replace vessels lost in the war is an admission that Hitler's original war plan was faulty at the root. What remains of the prewar German tonnage must be small, but Germany's maritime communications today must be almost limited to the Baltic. The end of the African campaign, in a sense, released Germany from the anxiety as to shipping, for the foreign trade of Germany is now mainly of a coastal nature and river ports may be equipped with slipways for the construction of such craft as may be required.

The shipbuilding programme, according to the naval correspondent quoted, may affect the U-boat building programme. Round the clock bombing by Allied aircraft all round the German held coast, has cut down shipbuilding resources in machinery, manpower and materials. It is urged that Germany needs freighters of three classes-ships with a tonnage of 3,000. 5,000 and 10,000. The German shipbuilding programme is expected to cover these sizes and it was duly noted that the ships are to be called Hansa ships. The ships are to be driven by Lenz engines. Martial Law declared in certain parts of Denmark is meant to further the German ship-building programme and protect it from sabotage and hostile influences. It is assumed that yards producing Hansa ships would be subject to R.A.F. attack. In order to accentuate the shortage which inspired the German decision Allied attacks on German tonnage increased in November. Attacks by sea and air, from Norway down to the Bay of Biscay, from the south of France to the Adriatic and the Aegean, increased. An intensification of air attacks on vessels using inland waterways as well as ships running the dangers of coastal convoys is anticipated by Mr. McWhinnie.

German Army Strength

Since Mr. Churchill has spoken of 400 divisions and Lord Halifax has more than once alluded to 200 divisions in the East conjecture as to the German manpower problem has been stifled. The old familiar estimate that the German Army had 8 million men (some say 9 millions) and casualties have been offset by calling up older men certainly is not without value. Estimates of German losses in Russia are still difficult to accept as being hard to check. The known strength of the Army at the outbreak of war was 8 millions and the call-up of many younger men up to 1943 added over 2.8 millions. Drafts from industry this year have raised the total by half a million and the call-up of the over-aged in September is estimated to have given 1¼ millions. The aggregate total is put at 12,625,000 and the total is raised further by the troops of the Axis satellites. It is presumed that Rumania has sent 20 divisions numbering 75(V)00 men and Hungary has sent 9 divisions of 250 000 men. 'Volunteers' from various countries serving with the Germans are estimated at 320,000 and to the total forces under German control must be added the Finnish Army of 300 000. The gross total is over 14.2 millions but the losses in four years must be subtracted. The losses up to August 10 are put at 1,052 600 men in all the theatres but Germany has lost more in the East. German and satellite losses in Russia are estimated at 6 225 000 and the total losses therefore exceed 7.27 millions. If this total were deducted Germany's army (including the Hungarian and other troops) would be one of 6.96 millions. The thinning out of German divisions and battalions owing to the reverses is proved by the estimated strength of a German division as being only 17,400 men. While the checks met with in Russia are attributable to the Russian superiority in manpower the actual strength required for a super-second front can, and must, be very large in relation to the army of 7 million men or so at the Germans' disposal. The slow progress in Italy may suggest that absolute superiority in numbers, say by three to one, is still important but the Germans, harassed by heavy raids at home, may find reinforcement and training far more difficult than in the past. The ability to defend the 'fortress' is conditional on adequate air support, and in this field, British superiority is overwhelming. The defence of Germany is now almost entirely a question of fighter strength, and the diversion of aircraft to the West has not helped Germany. The softening-up by air attack goes on and this should determine the duration and effectiveness of resistance to invasion. It may perhaps be added that spectacular attempts made to reverse the trend of German vital statistics will have no effect on the replacement programme. The increase in the birth-rate since 1933 may help in a future war but not in this war and there is the possibility that conscripted veterans may introduce the leaven of discount among the most ardent Nazis in the ranks.



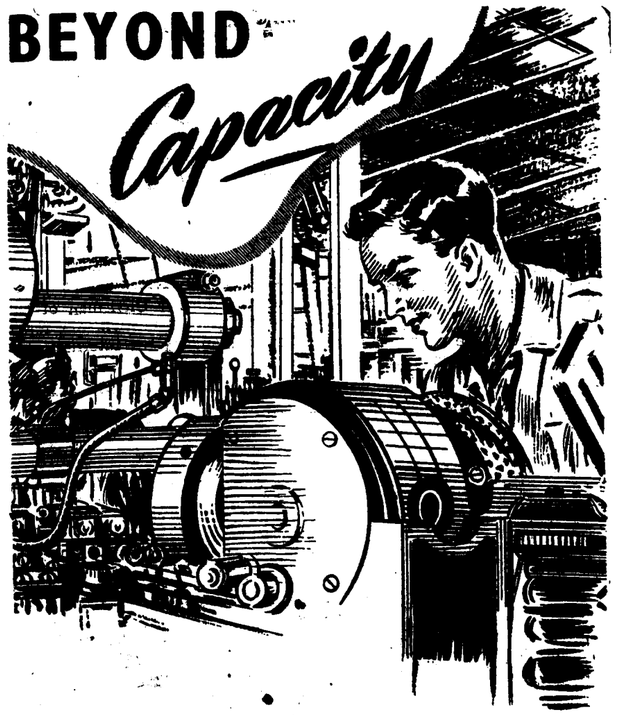
Progress in Baroda

Figures relating to companies and factories in Baroda indicate the growth of joint-stock enterprise in the State. The latest statistical abstract states that in 1941-42 there were 172 companies with an aggregate paid-up capital of Rs. 4.75 crores the total being almost unchanged on the preceding year. One seventh of the incorporated companies in Baroda were cotton mills and their total paid-up capital in 1941-42 stood at Rs. 171 lakhs. There was a woollen mill with a paid-up capital of Rs. 2.86 lakhs but other establishments were relatively small. The one industry which records an increase of capital since 1940-41 is chemicals but the biggest industry is still the cement. The three companies had a larger capital than the cotton mills of which 18 were at work in 1941-42. The 18 mills with a spindleage of 328,232 and a loomage of 6,932 had a total capital of Rs. 4.06 crores and employed 24,713 workers. The cotton mills in Baroda apparently experienced the same conditions as those in British India as the increases under yarn and cloth produced show. About half the textile production of the Baroda mills was in the form of grey goods. In 1941-42 there were 156 factories inspected under the Act and the total employed (including women and children) was 41 079. Industrial growth appears to be limited to Baroda rather than the Navsari, Mehsana and other divisions. Since the statistical abstract quotes the 1941 census figures it is possible to know how Baroda City and Okhamandal have progressed since 1931. The State's total population in 1941 was 2,855,010 as compared with 2,448,283 in 1931. There were 8 towns with a population exceeding 20,000 in 1941. The State revenue has more than recovered to the level of 1931 and Baroda has known only two small deficit from 1931 to 1941. The more significant lesson is that Baroda's expenditure since 1938-39 has increased only slightly, and the war period has not produced the crop of new taxes noted in British India.

(*Continued from page* 1093)

should yield more revenue to Bolivia. Tin, of course, is Bolivia's principal contribution to the Allied armoury but the republic produces tungsten, antimony, etc., which are scarce as China is cut off from the U.S.A. The chief export has been tin and there is British capital in the mining industry. There is oil in which U.S. interest is dominant, but Bolivia's chief market in the past was the U.K. Like other American republics, Bolivia, having known paper currency in excess, is now on the gold exchange standard, and the expansion of exports in 1942 (producing an increase in foreign assets) at the expense of imports conformed to expectations. Bolivia is said to have a balanced budget this year and the slight appreciation of the Boliviano worth 2.35 U.S. cents has only reflected the changes in trade though money was tight and bank deposits increased only moderately in Bolivia.

J.K. BALING HOOPS and STEEL TOOLS



The "J. K." baling hoops, steel tools and other products represent a high degree of excellence in manufacture and workmanship.

In temper, tensile strength and durability Electric Steel as used by "J. K." for making baling hoops and tools is ideal. No ordinary steel could have the enduring strength required for these products. Electric Steel is rolled and then heat-treated to ensure the uniformity so essential for this exacting service.

Other products from this factory include steel bars, iron and steel castings and hardware such as hammers, pipe-cutters, chisels, screw-drivers, anvils, etc.

J.K. IRON & STEEL CO., LTD.

A J.K. INDUSTRY

BEYOND Capacity

Greater output, and still greater, is the urgent need not only of India but of the United Nations. To meet this need factories throughout India are producing at a level far in excess of what, in peace time, was thought possible. Many factors contribute to this success, not the least important being the ability of the worker to maintain a steady high level of effort. It is here that Indian Tea plays a valuable part. Tea served to the worker, on the job, has been proved in many hundreds of factories to be a wonderful reviver of failing concentration.

POST-WAR EXCHANGE AND FOREIGN TRADE

CONTINUANCE OF PRESENT MACHINERY

THE FRASER PLAN

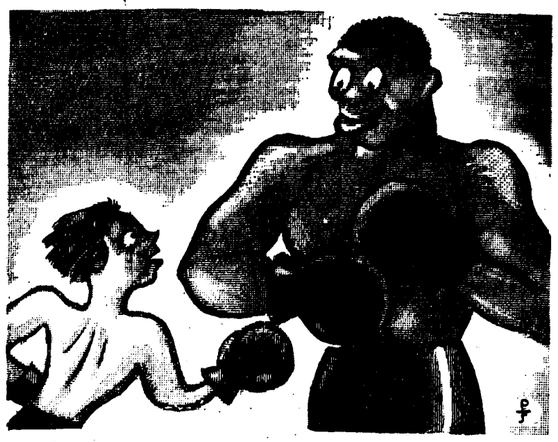
Special for "Indian Finance"

Montreal, Dec. 8.

The maintenance of the machinery existing in wartime for the distribution of foreign trade for a temporary period after the war, together with a modified form of the international currency stabilization pact proposed recently, was advocated here this week by some retiring members of the Roosevelt Administration who believe that the Treasury's stabilization plan and the accompanying ten milliard world bank have litt.e chance of acceptace by businessmen either in Britain or the United States unless provision is made for the proper allocation of world markets in the months immediately following the peace. These suggestions have gained such weight that it is considered probable they will receive strong political, congressional support. Both the Stabilization and World Bank drafts of the Treasury have been coldly received in Wall Street and in other financial circles. Here, as in London, warmer welcome has been given to a recent proposal by Mr. Leon Fraser, President of the National Bank of New York and former Chairman of the Bank for International Settlements, for a dollar sterling standard "as international money for to-morrow".

Business circles have particularly applauded Mr. Fraser's statement: "International Bank, we should have; but it should develop from the facts of the present state of world finance and trade, instead of from blueprints drawn in accordance with abstract principles."

The most important part of Mr. Fraser's plan would be a five milliard dollar credit to Britain in the form of a right to call on gold here, with the understanding that neither nation is to engage in competitive exchange depreciation. It is considered that the very knowledge that Britain has so much gold on call would induce British creditors to leave their money in Britain, thus creating easier financial situation abroad without the actual necessity of drawing upon this credit.



But industrialists, while they are in agreement with the bankers that the Fraser plan is more practicable than either Lord Keynes's or that of the Treasury project, are eager for a concurrent agreement that would avert the chaotic conditions of the immediate post-war years when Britain and the United States will have to petition to others for foreign markets. It is this desire that prompts the pressure for continuation of the present machinery whereby combined boards of representatives of Britain and the United States decide who should handle supplies for given sections of the globe.

By this agreement, Britain, for example, controls the purchase and distribution of all canned beef from Argentina. Similarly the United States has contracts for purchase of Indian production of burlap approximating 900 million yards, while Britain buys all the tea that the United Nations need.

If this system of allocation is continued after the war, it would be, admittedly only temporary, until ordinary trade channels could be restored satisfactorily. Even so, it will encounter opposition from exporters whose view is that continued current restrictions often deny United States shippers access to pre-war markets.

Guarantees to Iran

The U.S.A. has accepted responsibility in regard to Iran's economic future. Not only Britain and Russia which intervened with effect in 1941 are guarantors but the U.S.A. also has added its guarantee. What it means to the new dynasty, shaken by the events of 1941 can be easily guessed. From the market angle it is clear that the guarantee given to an ally by the Allies is the chief factor in the steady ascent of Anglo-Iranian stock. The Treaty of 1941 becomes a secondary instrument compared with the Three-Power declaration insisting on the independence, sovereignty and integrity of Iran. Allied assistance is promised to Iran which has functioned as the principal supply route to Russia for two years. Iran's economic difficulties are recognised and assistance compatible with Allied responsibilities in the war is assured. Iran has also been given an assurance of adequate economic assistance after the war. The future of the riyal in the sterling group is secured by such an assurance. While great interest naturally attaches to the U.S. Government entering the Middle East without limiting its interests to Latin America, many will regard the Allied guarantee as a conse-

Asking too much?

Not necessarily. In all the giant steel structures that we see around us, the "little chaps" are holding their own. We're talking about the nuts, bolts and rivets that link the girders—and take their full share of the strain, too: little heroes in their way! They've got to be accurate and immensely strong. Sounds a tall order? But that's our job.

quence of the Cabinet crisis and tribal unrest experienced by Iran in the last two years. The guarantee implies no difference in the status of Iran but the guarantee of 1943 is readily distinguished from the Anglo-Russian Convention of 1907.

The Allied guarantee to Iran makes no difference to India which must retain a strong position in the Gulf for many reasons. Whether the Arabian Coast also lies in the sphere of U.S. interests can only be guessed but oil politics may be said to explain one or all departures in foreign policy. Iran is allied with Egypt under the Saudabad pact and the only difference lies perhaps in there being no Canal and no Colony to abridge Iran's oil output for Allied purposes. In view of the increase in the value of India's mineral oil imports over the last year the further development of production may be of some value to India, as also to Iran, whose chief source of revenue is the royalties from oil. The offer to help Iran to realise the promises of the Atlantic Charter perhaps implies that Iran's oil will not be regarded as exclusively British, but it is difficult to put this interpretation in the light of the steady rise in the London quotation for Anglo-Iranian stock. The British Government certain-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

Three big conferences, all held in the Middle East, all hailed as momentous, all of them leading to key moves in the vast chess-board of the present world war are the most convincing evidence that the war has entered a new phase and the climax is not far. One would have thought that with all the great powers roped in and with the scale of hostilities reaching beyond the wildest imagination, diplomacy has lost most, if not all, of its old importance and that for an understanding the future one had only to follow the vicissitudes of the battle fronts. There had been much, indeed, in this war to encourage such a view. Neither the Balkans nor the Low Countries afforded scope for diplomatic tussles between the Axis and the Allies. The German army overran those countries with such overwhelming force that both the diplomacy of the Allies and their supporters in the respective countries had but short shrift. Only at the farthest ends of Europe, Sweden, Spain and Portugal and Turkey, not to speak of Switzerland in the heart of the continent, was there a semblance of peace and a chance of neutrality. In the Far East, Indo-China and Thailand were as easily swallowed up by Japan as Western Europe and the Balkans by her partner in the West. Diplomacy scored its last and greatest triumph when Ribbentrop concluded the pact with the Soviet; but when Hitler resolved to attack Russia, it was seen to be its last flicker. For more than two years, diplomacy has been directed more or less solely to keeping Spain and Turkey perched, however insecurely, on the crags of neutrality, and to minding such rifts as there may have been in the Allied lute. Neither, however, was vital to the course of the war. The solidarity of the Allies rested on the reality of the common danger. And the neutrals remained neutral because there was really nothing to choose in the available alternatives. That perhaps is not quite accurate, nor the whole truth. While Spain's neutrality may be explained by war-weariness, which is particularly strong when the war in question is a civil war, some credit should be due alike to Franco and Sir Samuel Hoare. Turkish neutrality is an even greater achievement which reflects no small credit on her Foreign Office and its diplomatic corps. Why the heavy heel of German militarism was not pressed on Turkey, when the Allies could have done little to prevent it, is a puzzle which will not be solved for the public for some years to come. Whatever that may be, there never was a time when the war-makers left so little for the wirepullers as now; and it was widely assumed that the fortunes of the world had to be wrought exclusively on the various battle-fronts.

* * * *

The conferences in the Middle East are important because they bring out the fact that diplomacy has ceased to be unimportant. That phase of the war in which there was little scope for diplomacy has been left behind. It is important firstly for bringing the Allies closer together for the supreme effort to shorten the war, secondly, to turn neutrality into active help and thirdly, to further understanding on post-war settlement partly for its own sake and even more for helping the first two purposes. All these questions arise because of the favourable turn of the war. If the Russians had not been as successful as they have been in pressing back the German armies, if Italy had wavered longer in her Axis affiliation, or if the bombing of German cities had been less severe, it would have been meaningless to talk of shortening the war and madness to work for it. The first sign of doubt in the German mind about a triumphant end to this war is the signal for the Allies to redouble their efforts. No longer can they be content with minding the rift in the Allied lute. They have to play on it the most harmonious and the most triumphant notes they can. Nor can they look on the neutrality of Turkey and Portugal as a satisfying state of affairs. They cannot afford to observe a discreet silence amongst themselves about the broad principles and outlines of post-war settlement, especially those which have stood in the way of closer co-operation among the Allies or of bringing in new active adherents to the cause.

* * * *

Allied statesmen have not, of course, been slow to read the signs. Even in the worst conditions, they had not neglected diplomacy altogether. The Allied drive in North Africa had its start in the deal with Darlan, a much misunderstood affair. But if the help which such diplomacy can give to military operations is remembered, then there would have been less grumbling. Likewise, once Africa was cleared of Axis forces, the deal with Badoglio was the logical next step. Italy's defection has given the Allies a footing on the Continent, which they would not have otherwise obtained except at great cost and sacrifice. With Russian pressure increasing and the Allies more than holding their ground in Italy, Germany indulges in a diversion into the Dodecanese; and her success in this points to the need for increasing the force and tempo of the offensive. The great conferences of recent times are a recognition of this need. The Moscow Conference covered much ground. But it was clearly a prelude to the Conference among the big three. What had been gladly postponed at Quebec and other places in the past had now to be impatiently hastened. The meeting between Chiang Kai-shek and Mr. Roosevelt and Mr. Churchill is naturally lacking in the importance

which attaches to the Teheran or the Cairo Conference. China offers no great problems of diplomacy. Her impatience for the big offensive against Japan calls for sympathy, she cannot demand deference. But with Stalin, there is hard reckoning. Russia has never wholly condoned delay in the opening of the second front. She has never felt quite at ease with Allies who had been enemies of the Russian revolution. She might well have had her doubts whether the post-war world will afford her the security she will need to repair the ravages of war and to take up the broken threads of her national development. These are differences which, while they could not prevent Allied help to Russia, certainly delayed the establishment of complete understanding and postponed the end of the war. The Teheran Conference could hardly afford to gloss over vital issues. The language of the joint announcement is necessarily vague. It contains no pointed reference to the various issues that doubtless have been discussed at the Conference. But the wording is such as to carry conviction to the most sceptic. The immediate issue of the second front and all other questions connected therewith are disposed of in the affirmation that "we have reached complete agreement as to the scope and timing of the operations which will be undertaken from the East, West and South." It is said that to the Russian soldier Stalin's signature on such a document is the surest guarantee that the burden on him will be quickly and appreciably lightened. Such understanding is inevitable. It is an inescapable dictate of the war as it has been and is still being fought by Nazi Germany. But the long standing issues are a different matter. Ideological differences, that bugbear of pre-war times, is given a decent burial when Mr. Roosevelt and Mr. Churchill implicitely agree that Stalinist Russia is to be counted among the democracies. The bogey of another war between America and Britain on the one hand, and Communist Russia on the other, which so many people like to plague themselves with, is now dispelled.

* * * *

No one can possibly have adequate warrant for asserting that the antagonism between the capitalist democracies and Communist Russia has been altogether burnt up in the fire of this world war. But it would be wrong to hold aloof in sullen scepticism, when the heads of the three great powers announce to the world that they are a family of peoples who have a common hatred of tyranny and would equally welcome other peoples, if they are like-minded, into their midst. Mr. Churchill's tirades against the foul baboonery of Bolshevism and the successive purges of Stalin's regime may alike be forgotten in a new mood of buoyant optimism, if the recent conferences offer some assurance, however vague, that the immediate post-war settlement in the political sphere will leave no room for heart-burning in the minds of the big powers and their smaller allies.

* * * * *

This assurance, it would seem reasonable to think, has been afforded by the Teheran conference. The presence of Dr. Benes in Teheran at the time, the terms of the various announcements made and the nature of the guarantees given by the three powers to Iran together with the understanding established between Soviet Russia and Turkey suggest that, so far at least as Europe is concerned, post-war political settlement has been agreed on in its broad outlines. It is significant of the new trends in international politics, that countries like Turkey and Iran, which formerly were to be content with a British monopoly of their friendship as of more material interests in their territories, should now have closer bonds of friendship with the United States of America and Soviet Russia. The historic antagonism between Soviet Russia and Turkey would now seem to have yielded place to an understanding, perhaps still vague and implicit, as to the lines on which the Balkans are to be reconstituted. It is not impossible that Soviet Russia considers concessions to Turkish claims not too high a price to pay

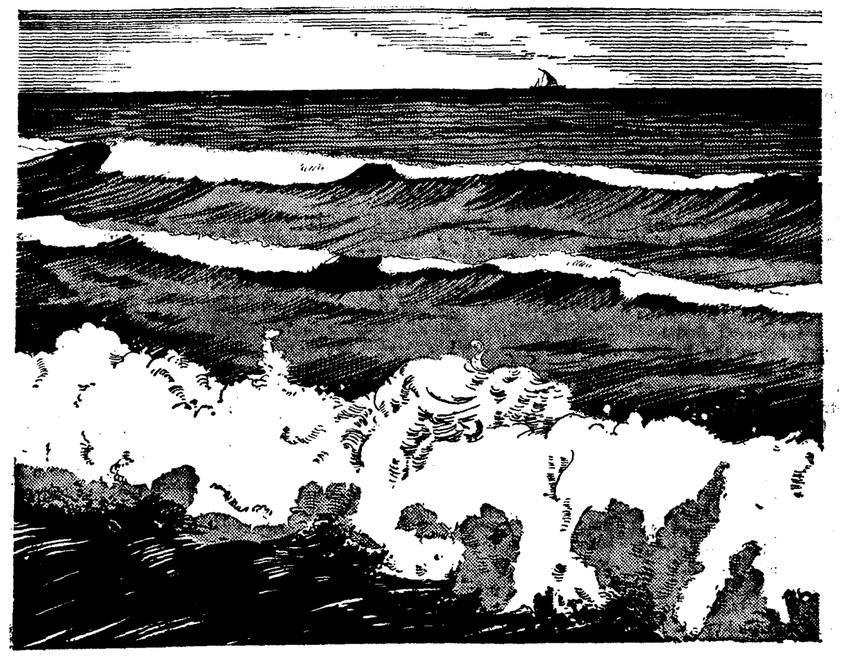
for her help in shortening the war. A short war and a quicker settlement of Central and Eastern Europe might by themselves confer advantages on Soviet Russia for any contingent dangers which she might see for herself in the future.



* * * *

It may be said therefore that from the standpoint of the course of the present war, the series of conferences in the Middle East have registered commendable progress. They are remarkable even more for the evidence they give of the expectation which is shared by all the three powers of an early collapse of German morale and solidarity, obviating the need for a fight to the finish. The terms that have to be offered to Germany have therefore figured a great deal in the discussions, though, doubtless, the military plans have not been influenced by such hopes. It is interesting to note that the distinction between Nazi and non-Nazi Germany, which was the favourite theme in Britain at the beginning of the war, was latterly given up. Britain, on the other hand, has of late been insisting that almost every German is a Nazi and that, therefore, all Germany must take the full consequences which the innate militarism of the people must bring upon her. In view of this disillusionment, it is interesting that Marshal Stalin should now revive this theory in a new form and should express the view that the German State should be allowed to survive, that the Soviet should not be exposed to German aggression and that a programme of re-educating German youth should be taken up.

* * * * *

One cannot but attach some importance to these points. When Stalin revives a

ALCHEMY OF THE DEEP

The magic of words lies in an infinite variation in combining the twenty-six letters of the alphabet; it results in hundreds of thousands of words. Alter but one letter in a word and the entire image changes. A similar magic, even wider in its sweep, is worked by changing the combination of the ninety-two elements of Nature.

Nature is the great alchemist and holds the key to astounding secrets; but Man has learnt to turn the key. The chemist can give the world a plenitude of new substances for the uses of Man.

The waters of the seas that lap our shores can be made to yield many of the chemicals required for our needs. These are the alkalis—'the germ-cells of industry'. Indian industry can no more advance today without chemicals than it could have a generation back without steel.

But yesterday, these chemicals were carried to India thousands of leagues upon the very element from which they are produced. Now, Mithapur, once a sandy spot on the shores of Kathiawar, adds the riches of the sea to India's natural wealth to fertilise her soil and to feed, house, clothe, and serve her people in innumerable ways.

And so Tatas have placed another milestone on the highway of India's industrial progress.

Tatas' many-sided interests include:

Iron and Steel . Textiles . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Soaps and Glycerine . Industrial Investments . Hotels . Cement . Engineering . Scientific Research.

TATA SONS LIMITED

Olympus

(From Our Correspondent)

New Delhi, Dec. 8.

Even two weeks after emphatic assurances in the Legislature, the Government have failed to enforce an all-India policy regarding statutory price control and rationing in urban areas. Mr. Hutchings, Food Secretary, was in Lahore for several days trying to persuade the Provincial Government to fall in line as regards food policy with the rest of the country, but there is no sign yet of any change in the Punjab's attitude. The earlier reports that the Punjab has after all agreed to price control have proved to be wrong. It is explained that the Punjab Government's acceptance of the principle of price control was not unconditional. They only said they will have no objection to a control of the prices of foodgrains, provided the prices of other common consumer goods, particularly those which the cultivator has to buy, come down substantially. As the Government's anti-profiteering ordinance has not proved very effective so far, the Punjab Government refuse to agree to force the agriculturist to part with his produce at a lower price than what he can obtain in the open market. The Government of India, I learn, do not desire to force the Punjab Government's hands just now. They will be contented even if the province agrees to have price control for the next 'rabi' crop. Meanwhile the Central Government seem to be already purchasing huge quantities of wheat flour at over Rs. 12 a maund in the open market which does not point to an early control. As regards rationing, the Government do not seem to be in any hurry, and even in centrally administered areas it will take several months before rationing is enforced.

* * * * *

There has been a spate of Government-inspired messages recently making it out that adequate quantities of food are reaching the famine areas and that the crisis is almost at an end. The daily reports in the Press about thousands of famine casualties and deaths due to cholera and malaria epidemics do not bear out the official claims. For the last two weeks there have been no food imports from overseas which again testifies to the niggardly amount of shipping released for the purpose. Meanwhile the categorical refusal of the U.N.R.R.A. to take any steps to afford relief to the famine areas in India while expecting that this country shall take a large part in post-war relief work in Europe and East Asia shows the paradoxical lengths to which the United Nations led by Britain can go in dealing with India.

* * * *

A study of the latest budget figures shows that the central expenditure has more than doubled during the war years. The total for the first five years of the war (from 1939-40 to 1943-44) is expected to come to Rs. 1,005 crores whereas the aggregate for the previous five years of peace amounted to only 426 crores. Out of this huge sum, war expenditure alone absorbed 715 crores (over 70 per cent)—an increase of Rs. 484 crores, the defence expenditure for the last five peace years being only Rs. 231 crores. In addition to this, huge sums have been spent by the British Government in this country which has contributed so largely to the unprecedented inflation here. According to the financial settlement (previously arranged by Sir Jeremy Raisman in London) the expenditure brought to account in the Government of India's books and chargeable to the British Government will amount to over Rs. 925 crores (rising from Rs. 4 crores in 1939-40 to an estimated total of Rs. 345 crores in 1943-44). While no exact estimates of the lease-lend aid received from U.S.A. are yet available in spite of persistent public demands, India's reciprocal aid has been put at Rs. 16 crores in 1942-43 and is estimated to come to about half of this sum in the current financial year. India's sterling debt has been practically wiped out in the process—falling from Rs. 460 crores to Rs. 57 crores. The total rupee debt has during the same period risen from Rs. 709 crores to Rs. 1,208 crores—the net increase in the national debt being thus Rs. 86 crores. On the revenue side, additional taxation has brought in over Rs. 300 crores during the five war years—E.P.T. contributing nearly two-thirds of this. The next biggest addition to the income has been from the Railways and Post and Telegraphs which together brought in Rs. 103 crores during the war years, whereas their normal contribution would have been only Rs. 7 crores. As the expenditure for the current year has already exceeded income by Rs. 60 crores in spite of a spectacular rise in revenue returns the deficit for the year is expected to be well over Rs. 100 crores. The Federation of Chambers of Commerce has argued in a recent memorandum that one cannot put additional burden on trade and industry without seriously compromising their post-war development and competitive capacity. It remains to be seen whether Sir Jeremy Raisman will solely resort to large-scale borrowing to meet his huge deficit.

* * * *

The Government have not yet taken any drastic action to enforce the anti-hoarding and profiteering ordinance and are still busy explaining and interpreting its provisions. The Government have now specified 23 articles of general or wide consumption as coming within the purview of the ordinance, regarding the limitation on quantity to be possessed at one time. These articles include many foodstuffs such as tinned provisions, cooking fats, and vegetable oil, salt and liquorous and agricultural implements, fertilisers, cement, leather goods, matches and timber. Consumers are prevented from stocking these articles above the "reasonable needs" of their family for three months. Apart from creating a general nervousness among traders, the ordinance has not yet succeeded in bringing down the prices of common consumer goods to the expected level. On the whole there has been a fall in prices ranging from 10 to 20 per cent.

* * * *

There is a lot of speculation here regarding the impending changes in the Viceroy's Executive Council. As both Sir Jeremy Raisman and Sir Reginald Maxwell are retiring in April next, new Finance and Home Members have to be appointed. Mr. N. R. Sarker's recent interview with the Viceroy has given rise to reports that perhaps he may again be asked to join the Executive Council and may be given the difficult Food portfolio. The Viceroy's interviews with Mr. K. M. Munshi and Pandit Hriday Nath Kunzru are also being interpreted in this light and it is thought that perhaps places may be found for them too in the reshuffled Council. It is now reported that Sir Azizul Haque may be sent to London as War Cabinet Member to take Sir Ramaswami Mudaliar's place.

* * *

It is reported here that income-tax appellate authority may be included among the new powers which may soon be conferred upon the Federal Court. At present income-tax tribunals refer their appeals to High Courts.

theory which the Allies had discarded more than a year ago, one is tempted to think that the Soviet Dictator has kept himself more closely in touch with Hitler's opponents within Germany than either Mr. Churchill or Mr. Roosevelt. At any rate, Stalin does not favour the wiping out of Germany and looks to some kind of Slavonic Union to act as a check on German aggression in the future. He looks to the transportation of German labour to rebuild what the German soldiery had destroyed in Russia. These points are important for the assurance that the peace treaties this time will be at once realistic and far-sighted. Wasn't there a report some time ago that the dining-car of Marshal Foch was destroyed in an air raid?

* * *

But a liberal peace depends to some extent on a German appeal for peace before she carries destruction very much farther than she has done. And may be, non-Nazi Germany, like non-Fascist Italy, will need a large-scale landing and a really big offensive if they are to prevail over Hitler and his minions. The value of the Cairo Conference lies in bringing the big offensive nearer. Turkish statements are still characterised by diplomatic caution. Von Papen has not yet thrown up the game of keeping Turkey out of the war. But there is no doubt that the international importance, which Turkey has managed to acquire during all these years of the war, will suffer a serious shrinkage if she does not elect to throw her weight on the winning side, in time to remove the reproach of too obvious opportunism. A neutral can have no place in the Peace Conference and will be there, if at all, on sufferance. Turkish Diplomacy is too shrewd to miss so valuable an opportunity.

* * * * *

Successful as are the Middle East Confences, they are but a part of the picture of World War No. 2. On its being the bigger part, there is no ready unanimity. To Mr. Churchill, the order of importance as between Germany and Japan is quite clear; and so likewise to Mr. Roosevelt is the wisdom of concurring. But thoughful observers insist that in the long view the more important is the issse with Japan. There is feebler dissent than ever from the view that with another year's Time for Ally, Japan would be invincible. And what is more, the problems of the Far East, especially of South East Asia, and not the Balkans, hold the key to the future. Here are huddled together the great Empires of western nations. Here are the great masses of the world's backward populations. Their problems are mixed up with the political and economic problems of the wide world. The cry for the Pacific Charter is heard now and again. Soon, there will have to be a big conference over the Far Eastern problems; and other countries besides Korea will have to be vouchsafed their independence. But the time is not yet.

* * * *

Last Sunday's air raid is in retrospect, not an unmixed evil. While the end of the monsoon season was widely acknowledged to have revived the danger of Japanese air raids on Calcutta, the civilian population was inclined to assume an immunity which surely did not exist. As the event shows, the defence forces, too, shared, to a degree, the civilian feeling of complacency, for which they had in their consciousness of strength an additional reason. The alertness, which the alert and the reality of the raid induced, is all to the good. But it would be better if all concerned hugged the lessons of the last air raid close. The "Statesman" showed a commendable outspokenness in referring to the week-end habit of the members of the services. But reference should also be made to the queer mentality of some among the civilian population who consider their role in such weekends as not the least heroic part of the war effort. The air raid has had a tonic effect; and, braced up, Calcutta is ready to face what may still remain of this threat.

"EAVESDROPPER".

South India

(From Our Correspondent)

Madras, Dec. 7.

His Excellency the Governor, Sir Arthur Hope, announced at a public meeting in Madura that rationing was an obvious necessity for all towns and cities during war time and that the moffusil towns in this Province would be under rice rationing within the next taree months. The acute shortage of food in India has already taken a heavy toll and public opinion demands that food crisis must be immediately solved on an all-India basis with the co-operation of all tne Provinces and States. Tne magnitude of total war effort that is being carried on all the world over to-day suggests unmistakably that even after the cessation of hostilities the world will be subjected to food shortage. His Excellency is right when he says that it is fruitless to expect imports from foreign countries. Self relp is the best and India must try to increase production of grains, and distribute them equitably. While the necessity to ration foodgrains—or the shortage of them—is widely appreciated one may not agree with the Governor that the total deficit of foodgrains in India was very light. It has been calculated by experts that even during peace time about 12 per cent of India's millions suffered dificiency in food. War has necessitated exports of foodgrains, galloping inflation, transport bottleneck, hoarding and a host of other factors which kept food beyond the reach of the poor in several parts. The basic factor which lead to the present plight is the lack of foresight on the part of the Government, and the absence of a bold agricultural plan for India. Madras, comparatively speaking, has done well in the matter of control of foodgrains and if conditions are to continue satisfactorily the surplus areas must realise the responsibility of willingly releasing stocks for the benefit of the needy in deficit areas.

All eyes are now turned towards post-war reconstruction, and the public are eager to know how Indian economy which has been strained too much, would be readjusted towards peace-time conditions. India served as a supply base for the Middle East, and the Far East but she has been denied the opportunity of starting key industries which could have laid the foundations of a prosperous future. The burden of war has weighed on India more heavily than anywhere else in the world. The Bengal Famine is significant enough. It is at least comforting to know that after the war India would prosper industrially, and be raised to a real status of importance in the comity of nations. Sir A. Ramaswami Mudaliar's speech on post-war reconstruction at Hyderabad must satisfy those who are eager to know what the Government of India is doing in this matter. He revealed that problems of demobilisation are engaging the attention of one of the Post-War Reconstruction Committees. Emphasising the enormous importance of cheap electric power for the development of industries and agriculture, the Supply Member urged all Provinces and States to prepare post-war hydro-electric schemes. road development, irrigation and other public utility schemes so that the skilled and unskilled labour could be easily employed. The sterling balances, which are practically blocked to-day for industrial development of India, can be used for importing machinery, etc., needed for the planned developments. To him the future is very promising as H.M.G. has laid down the goal for India, viz., Dominion Status within the British Commonwealth. Even those who have no hopes of political and economic advancement for India in post-war period would agree with him that our problem to-day is to come together.

The Provincial Andhra Medical conference at its concluding session on the 28th instant condemned the Madras Government for suspending prohibition in the 'dry' districts and requested them to withdraw the order. The Government ordinance controlling prices of drugs was welcomed but opinion was expressed that if the control is to be effective the distribution also must come within the purview of regulating ordinance. A protest against the alleged non-payment of overseas allowance to medical licentiates recruited to the Indian Army Medical Corps was also recorded.

With a view to organising the manufacture of caustic soda the Government of Madras have decided to conduct a preliminary survey of the alkaline earth deposits in the province. It is expected that a chemist, to be appointed to be in charge of the survey, would report in about a year. If the findings of this chemist prove to be encouraging further steps would be taken to organise the manufacture.

The Madras Government have appointed Mr. S. Y. Krishnaswamy, I.C.S., as Special Development Officer to deal with the preparation, and execution of schemes of post-war development of Madras. War has revealed certain defects in Madras economy as for instance her excessive dependence on outside sources for sugar, paper, chemicals, and foodstuffs. There has been a deficiency of 5 to 10% in rice, 10 to 30 per cent in millets and 50 per cent in pulses. The necessity to speed up production to fill up the gap is obvious. Irrigation schemes have to be carried out to increase the productivity of agriculture and every attempt has to be made to reclaim waste land so that the demobilised soldiers and those who have come back from Malaya, Burma, and Ceylon could be profitably employed in post-war years. The electrical power resources of this province are considerable and they must be conserved and properly utilised and distributed for starting industries at suitable centres. The inland fisheries, particularly on the West Coast, have been neglected for long and livestock allowed to deteriorate both in numbers and quality. The mineral wealth of this province has received, under the impetus of war conditions, some attention, and the recent findings of the Geological Survey have to be utilised for the economic development of this province. We should be fully prepared to face the peace-time conditions and it is hoped that this Special Development Officer would prepare comprehensive plans and pave the way of South India's progress.

The protector of a kingdom

To you your family is your kingdom. Your wife and children, the members of this family, look to you - the head of the family - as their protector. Their well-being and their future are your responsibility.

Life may not be too kind to you; the fatal hand of destiny may suddenly remove you from the kingdom of your dear ones. Have you thought of who will then give your wife and children the financial protection they are now enjoying from you, and who will provide funds for the livelihood of your family and the education of your children?

New India's Family Income Policy will assure your family of a regular income in the event of your premature demise until the period of your policy matures. And then in addition to this, the entire assured sum will be paid to them. If you survive, the full sum assured will be at your disposal.

TOTAL FUNDS - NEARLY RS.5 CRORES
TOTAL ASSETS - NEARLY RS.6 CRORES
TOTAL CLAIMS PAID EXCEED RS. 10 CRORES

THE New India ASSURANCE CO., LTD.

9, CLIVE STREET, CALCUTTA.

What New India's Family Income Policy affords

- In the event of your demise, your family is assured of an income the total of which is more than the total assured sum.
- There will be no investment risk for the widow - she is assured of a safe and remunerative investment.
- Should you survive, the entire assured sum will be yours - this will be most welcome to you in your old age.

For rates and other details post the coupon below.

Resume of Commodity Markets

There is nothing of importance to be recorded in the commodity markets during the past week. The jute market has turned slightly easier with the withdrawal of buying support of mills and the deterioration in the coal situation. A further decline in prices has been prevented only by the firmness of upcountry markets and the very small arrivals due to scarcity of labour. The jute manufactures market has been irregular with the raid by Japanese planes on Calcutta, but the hopes of an early termination of hostilities and the uncertainty regarding the level of production have prevented second-hand dealers from liquidating their holdings completely on the market and prices are only a shade lower on balance. The cotton market also was inclined to be irregular, but the higher level of production at the mills and the removal of uncertainty regarding the fixing of new ceiling prices have resulted in some buying. It is also now admitted that peace will result in a large increase in cotton exports and that the termination of war contracts might not necessarily result in lower prices for raw cotton.

* * * * *

The bullion market has been uninteresting and lower prices have been recorded with some selling. The confident statements of Allied leaders regarding an early victory have resulted in a smaller volume of business. The Reserve Bank was not prepared to sell at lower levels, but prominent choksey selling brought down prices and closing quotations are at the lowest levels for some time. But for the nervousness created by the Japanese raid in Calcutta a further decline in prices might perhaps have been recorded.

* * * * *

Only last week the Government announced that no further extension of time will be granted for the disposal of unstamped piecegoods beyond 31st December, 1943. This affects both wholesalers and retailers alike. As there is a large quantity of goods to be removed there is considerable anxiety regarding the disposal of these goods before the end of the year. It is even reported that retailers are not prepared to take delivery of earlier contracts. It will be an offence to keep unstamped goods after the end of the year.

* * * *

With greater facilities for the transport of supplies to the Calcutta market there should be a sharp drop in prices. Special shipping and rail facilities have been arranged by the Government of India in order to ensure that adequate quantities of cloth move into Bengal through ordinary trade channels. In addition to standard cloth, 10 wagons will be loaded every day in Bombay and a similar number in Ahmedabad for the purpose of transport to Howrah and Shalimar. In addition to these rail facilities arrangements have already been made for the transport by sea of 38,000 bales of cloth to Calcutta. These large supplies should naturally have a depressing effect on prices in the coming months.

* * *

At the meeting of the Hand-Loom Committee of the Textile Control Board in Madras towards the close of last week, at which representatives of Provincial Governments and States were present, various proposals relating to the development of the hand-loom industry were considered. It was agreed that everything possible should be done to help the hand-loom industry. Certain tentative decisions were reached but no official announcement has been made in this regard so far. The recommendations of the Hand-Loom Committee have been forwarded to the Government of India for approval. It is said that the price of yarn should be so fixed that hand-loom goods should be able to retain their place in the market as against the products of the weaving mills. The meeting considered a proposal for the constitution of a Central Hand-Loom Board and decided that Provincial Governments should be consulted as regards its constitution, powers and functions.

* * * * *

While steps have been taken to bring down prices of yarn, it is interesting to note that recently efforts have been made to bring down price of woollen goods as well. The problem however is more difficult though the quantity of woollen goods needed in this country is relatively very small. It is pointed out that under the anti-hoarding ordinance it will not be permissible to sell stocks of woollen goods at a profit of over 20 per cent. Arrangements have also been made for the import of foreign styles on a large scale; also the Government of India is taking efforts to utilise the surplus capacity of the woollen industry in India for the manufacture of goods for civilian consumption. With these efforts it is hoped that before long an appreciable decline in price will take place.

* * *

At a meeting of the Indian Rubber Production Board held at Ernakulam recently the difficulties of planters in regard to procurement of labour and food for labour were discussed and certain remedial measures were proposed. It was also pointed out that the compensation proposed by the Government of India for intensive tapping of rubber had not met with the expected response and that a committee of the Board should examine the scheme and suggest amendments to make it more acceptable to the estates. Regarding the question of increasing prices for rubber, however, the Rubber Controller pointed out that no scheme for an increase could be considered unless it was definitely proved that costs of production had increased to such an extent as to result in a substantial decline in the earnings of the rubber estates.

* * * * *

It will be remembered that, recently, the Government of India announced an increase in the selling price of sugar by thirteen annas per maund in order to enable the Provincial Governments fix higher minimum prices for sugar cane and thus encourage larger production of sugar. The increase in price of sugar was applicable only to new season sugar; a countervailing excise duty was imposed on old stocks of sugar.

It has now been decided by the Provincial Governments that the minimum price of sugar cane should be twelve annas a maund against ten annas for the last season, but the increase in the price of sugar cane is to be paid in the form of Defence Loans or Defence Savings Certificates. There has naturally been some protest from those interested in the trade as the increase in the price of sugar cane is not covered fully by the increase in the price of sugar. But it is pointed out that with the longer crushing season and greater facilities afforded by the Government, there would be a reduction in production costs. Nothing can be said in this connection at the present moment.

Regarding the efforts of Government authorities to maximise production of sugar one or two points have to be noted. Restrictions have been placed on the movement of gur and the price for gur at which the Government is prepared to purchase is based on a minimum price of ten annas per maund, that is, Rs. 8 per maund of gur. It will be noted that the Government's idea is to discourage production of gur. The prospect of a higher price for cane for the manufacture of sugar in the form of defence loans and defence savings certificates to the extent of two annas per maund will, it is believed, divert considerable quantities of sugar cane to the mills. How far the Government succeeds in its plan remains to be seen.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, December 8.

Coal arrivals continue erratic and on the average show no improvement in quantity. Today one solitary waggon was reported. Naturally there have been many mills at a standstill and, the Muslim labour at the mills having elected to observe Wednesday as their Id, some mills which started up on Monday will not be likely to run for more than two days. Next week is again a working week according to schedule and the following week a closed week. It is to be hoped that coal will arrive in sufficient quantity to justify some of those which have lost time, to work during the non-working week to make up. Otherwise production for the month is likely to be very poor.

Stocks of manufactured goods in mill godowns at the end of November show the substantial reduction of 8641 tons overhead. Shipments were reported to have been good, but it will not be possible to estimate how good till the mill production figures for the month of November are available. The reduction was wholly on the hessian side, aggregate stocks of this description showing a drop of 394 lakhs yards, or 12,219 tons. Heavy goods on the other hand recorded an increase of 104 lakhs yards as compared with 31st October, or 3578 tons. The increase in Heavy goods was entirely on the civil side, which showed an increase of 124 lakh yards, or 4504 tons. Government Heavy goods in stock decreased by 20 lakhs yards or 926 tons, Commercial hessians recorded a decrease of 372 lakhs yards or 11,171 tons, while Government Sandbags and Scrim cloth were both lower by a total of over 2500 tons. This was offset however by an increase in other hessian bags, cloth and canvas on Government account of 3500 tons. The total tonnage of goods in stock at 30th November was 222,059 as against 230,700 at 31st October.

Some time ago we mentioned certain anomalies in the ceiling prices fixed for standard Heavy Goods by the I.J.M.A. Sub-committee. It is understood that the Jute Fabrics Shippers have written to the I.J.M.A. Committee on this subject, drawing attention to the disadvantage caused to certain important markets, notably Australia for one, by these anomalies, and requesting their adjustment.

We have been assailed from certain quarters for our alleged hostility to Futures markets, and accused of hide-bound conservatism and lack of progressive ideas. We protest that we have never opposed a properly constituted "Futures" market in Jute, provided it was called for by the major elements in the industry. After all, by far the most important element in the whole jute trade of the world is the Calcutta Jute Mills and they have never evinced any desire for a Futures market. Perhaps they are old-fashioned in their methods of business, but if they find their present system satisfactory and remunerative, which a glance at their records will, we think, show to be the case, then who shall blame them for being reluctant to make any drastic change. What we do insist on however is, that any sort of Futures market in Jute, in which the Jute Mills do not participate, is bound to be a hollow mockery. The next big element in the trade is the Loose Jute Dealers, and while there are a few of them who have, in the past, and might again in the future, operate in a Jute Futures market, it is more often than not more as a gamble than as any true "hedge" transaction. Neither has there been any real demand amongst the important Loose Jute Dealers for the constitution of a Futures market. With these two elements either definitely non-cooperating or merely remaining neutral, we submit that no Futures market worthy of the name can function in the Jute trade. What we have strenuously opposed, and will continue to do so, is the attempt to resuscitate the old and discredited "Fatka" market in a revised medium of Loose Jute. The Fatka market has no faintest resemblance to a proper Futures market and it is obvious on the face of it that it is merely designed to provide a quasi-legal gambling medium for certain elements on the fringes of the Jute Industry, elements which we have no hesitation in describing as for the most part purely parasitical. That their influence is in no way favourable to the interests of the cultivator, as has been claimed in certain quarters, was we think clearly proved by the panic stricken drop in quotations immediately following last Sunday's Air-raid. The open market reflected no such sharp fluctuation, so it would appear that the interests of the cultivator are safer in hands of the genuine Jute Dealer than in those of the Fatka speculator. We have no hesitation in reiterating our view that the sooner this attempted revival of Fatka is quashed, the better for all concerned and the welfare of the trade in general.

It is understood that discussions have started on the question of the quota to be allotted for Jute sowings in the coming season. The ratio proposed by the Jute Mills is believed to be twelve annas of the standard recorded acreage, and in view of the possibility that the requirements of the U.N.R.R.A. may be called for within the next year, such a quota cannot be considered excessive. At the same time, unless mills can be assured of sufficient coal to enable them to work up to a schedule comparable to a consumption of this quantity, much of the raw material available might have to lie unused, while the U.N.R.R.A. would perforce have to go short of their necessary containers, and the miseries of the inhabitants of the occupied territories be indefinitely prolonged. Coal is a controlling factor in the situation and strenuous efforts must be made to ensure adequate supplies of this necessary prime requirement.

Little activity has to be recorded in the Export Jute market during the reporting period. Transactions have been confined to a few sales of Dundee Daisee at slightly declining rates, from Rs. 72 to Rs. 71 for the Long Group for near and December shipment. Short Group was reported at Rs. 80. Neither have Mills been offering any support except for small purchases of low grade stuff like straight-morahed Rejections, Ropes etc. Lightnings were reported at Rs. 71.

The Loose Jute market has also been more or less idle. Some resale of European packing was put through at Rs. 15-4 and Rs. 12-4 for Mids and Bots, marking a drop of four annas from previously recorded rates. Northern Bengal Bottoms were reported at Rs. 11. Sales of limited quantities of Jat and District Tossa Bottoms to mills were reported at Rs. 13-4 and Rs. 12-12 respectively. Balers have continued to show interest in good quality Tossa of any description and are willing to pay full prices for stuff which suits them. Jute arrivals for the month of November reflect the slackness in demand which characterised the market about then. Estimated arrivals are scarcely more than half what they were in November last year, the respective figures being 4,08,000 B/s in November 1943, compared with 7,97,000 B/s in November, 1942. The total arrivals for the season have now fallen behind last year's figures, the totals from July to November being respectively 25,31,000 bales in 1943 against 28,70,000 bales in 1942.

Very little trade has been passing in the Fabrics section, mills being unable to meet any near at hand demand and equally unable to find buyers for the forward positions they would risk selling. The Bazar counters continue to be dealt in, and eleven porters were recorded between Rs. 27-11 and Rs. 27-14 for December, with Jan/March about two annas less. "B" Twills firmed up from Rs. 65-12 December to Rs. 67-4 while Jan/March was reported at Rs. 65-8 and Rs. 65-12. Heavy Cees on the other hand sold for ready at Rs. 67-8, only four annas under the ceiling rate, because so few of this description are held by the Bazar. At the close the tone is again quieter with nine porters quoting Rs. 20-12 any position, elevens Rs. 27-11 near and Rs. 27-9 Jan/March and "B" Twills Rs. 66-8 December. Business negligible.

DEPARTMENT OF SUPPLY

DIRECTORATE-GENERAL OF MUNITIONS PRODUCTION

The attention of all importers of engineer stores is drawn to the Control Order which has been published under Supply Department. Notification No. 1351 dated the 26th November, 1943, in the Gazette of India dated the 11th December, 1943.

In exercise of the powers vested in him under the Control Order, the Director-General of Munitions Production has authorized the following officers to be the Controller for the various items noted against each of them:

1. THE DIRECTOR OF ELECTRICAL ENGINEERING,

8, Esplanade East, Calcutta.

Item No. 1 of the Schedule to the Control Order.

Electric Motors, Generators and Generating Sets with Prime Movers of any type or design A.C. or D.C. and irrespective of speed or type of enclosure, together with any associated Control Gear.

Item No. 2 of the Schedule to the Control Order.

Electric Cables, Insulated Wires, Flexible Cords and Winding Wires.

Item No. 3 of the Schedule to the Control Order.

Fans, Ceiling, Table and Exhaust.

Item No. 7(b) of the Schedule to the Control Order.

Portable Electric Tools.

Item No. 10 of the Schedule to the Control Order.

Electric Lamps of any type voltage and wattage.

Item No. 14 of the Schedule to the Control Order.

Wireless Valves of all types.

2. THE DIRECTOR OF CIVIL ENGINEERING,

8/1, Esplanade East, Calcutta.

Item No. 4 of the Schedule to the Control Order.

Anti-friction Bearings of all types.

Item No. 7(a) of the Schedule to the Control Order.

Pneumatic Tools.

Item No. 13 of the Schedule to the Control Order.

Compressors.

Compressors, air or gas, portable or stationary, but not being imported as an integral part of any spray painting, refrigerating or air conditioning equipment or as a component part of any engine.

3. THE DIRECTOR OF CIVIL ARMAMENTS PRODUCTION (TOOLS),

6, Esplanade East, Calcutta.

Item No. 5 of the Schedule to the Control Order.

METAL WORKING TOOLS.

(a) High Speed Steel Hacksaw Blades.
(b) Other Steel Hacksaw Blades.
(c) High Speed Steel Twist Drills.
(d) Carbon Steel Twist Drills.
(e) Milling, Slotting and Engraving Cutters.
(f) Reamers.
(g) Slitting Saws.
(h) Saw Inserts and Segments of all sizes, Circular Metal Cutting Saws and Metal Cutting Bandsaws.
(i) Taps.
(j) Hand Dies.
(k) Hand Chasers.
(l) Stocks and Dies.
(m) Machine Chasers.
(n) Machine Dies.
(o) High Speed Steel Solid Tools, Tipped Tools and Tips.
(p) Tungsten Carbide Solid Tools, Tipped Tools and Tips.
(q) Shear Blades.

Item No. 11 of the Schedule to the Control Order.

HAND TOOLS.

(a) Blades, *Hacksaw.*
(b) Cutters, glass.
(c) Dressers, Emery Wheel.
(d) Expanders, tube.
(e) Files.
(f) Rasps.,
(g) Pliers and Nippers.

Item No. 12 of the Schedule to the Control Order.

Grinding Wheels and Segments.

(a) GRINDING WHEELS.
(i) Straight sided.
(ii) Taper sided.
(iii) Cylinder Shaped
(iv) Straight Cup Shaped.
(v) Taper Cup Shaped.
(vi) Saucer Shaped

(b) GRINDING SEGMENTS USED ON THE FOLLOWING MACHINES.
(i) Snow.
(ii) Tasker.
(iii) Hulse.
(iv) Churchill.
(v) Rowland.
(vi) Blanchard.
(vii) Lumsden.
(viii) Lund.
(ix) Pratt & Whitney.
(x) Naxos Union.

Item No. 16 of the Schedule to the Control Order.

Workshop Measuring Tools.

(a) PRECISION TOOLS.
(i) Micrometer Heads.
(ii) Micrometers—Internal.
(iii) Micrometers—External.
(iv) Vernier Calipers.
(v) Vernier Depth Gauges.
(vi) Vernier Gear tooth Gauges.
(vii) Slip or Block Gauges and accessories.
(viii) Dial Gauges.
(ix) Vee-blocks.
(b) WORKSHOP TOOLS.
(i) Calipers—External.
(ii) Calipers—Internal.
(iii) Dividers.
(iv) Parallels.
(v) Rules—Steel.
(vi) Rules—Boxwood.
(vii) Measuring Tapes—Steel or Fabric.
(viii) Punches.

4. THE DEPUTY DIRECTOR (WELDING & PRESS WORK),

6, Esplanade East, Calcutta.

Item No. 6 of the Schedule to the Control Order.

(a) Electrodes for electric welding.
(b) Ferrous and non-ferrous welding rods for Oxy-acetylene welding.

5. THE DIRECTOR OF ENGINEERING (STRUCTURAL & MECHANICAL)

9, Esplanade East, Calcutta.

Item No. 9 of the Schedule to the Control Order.

Washers and Screws.

SCREWS.

(a) Woodscrews of iron, brass, steel bronze or any other metal or alloy.
(b) Screws (Machine, Set, Coach, Dowell, Coffin, Laying in, Gutter, Roofing, Plate, Band, Gallery, Cock, Tile, Grub and Cap) of Iron, Brass, Steel, bronze or any other metal or alloy.

WASHERS.

(a) Spring Washers, any number of coils and any cross section.
(b) Lock Washers any type.

6. THE DIRECTOR OF SAWMILLS, WOODWARE AND SAWMILLS DIRECTORATE, DIRECTORATE-GENERAL OF SUPPLY,

New Delhi.

Item No. 11 of the Schedule to the Control Order.

HAND TOOLS.

(g) Saws, Carpenters.

Item No. 15(a) of the Schedule to the Control Order.

Wood Working Tools.

CUTTERS.

(i) Planing Knives.
(ii) Tenon Cutters.
(iii) Shoulder Cutters.
(iv) Mould Cutters.
(v) Solid Cutters.

Item No. 15(b) of the Schedule to the Control Order.

Mortise Cutters (Power Driven).

(i) Internal Augers.
(ii) Holow Chisels.

Item No. 15(c) of the Schedule to the Control Order.

Saws.

(1) Circular Saws.
(a) Ripping.
(b) Cross-cut.
(c) Hollow Ground.
(2) Band Saws.
(3) Machine Frame Saws.
(4) Web Saws.
(5) Cross Cut Saws.
(6) Pit Saws.
(7) Saw files.

7. THE DIRECTOR OF METALS,

Esplanade Mansions, Esplanade East, Calcutta.

Item No. 8 of the Schedule to the Control Order.

Plumbago and Carborandum Crucibles and *Components.*

(a) Crucibles—all types and sizes.
(b) Stands.
(c) Rings.
(d) Covers.
(e) Spout Covers and Spout Pieces.
(f) Brazing Pans.
(g) Chlorine Crucibles and Chlorine Tubes.
(h) Muffles.
(i) Stirrers.
(j) Special refractory linings.

Importers of these items are advised to get in touch immediately with the respective Controllers.

They are hereby informed that any returns which they may have been submitting to the Director General, Munitions Production, American and Panel imports Directorate, 7/8, Ezra Mansions, Calcutta, under the standing Demand for Information served on them will be accepted as sufficient return under clause 5(b) of the Order. Items which are not covered by the returns under the standing Demand for Information will, however, need to be specifically declared as and when they arrive.

It should be noted, however, that complete stock returns are required for all items falling under clause 5(a) of the Control Order. It has been decided to make an exception in the following cases only:—

Items 1, 2, 5, 11 [(a) to (f) and (h)] and 12 of the Schedule to the Control Order.

Particular attention is drawn to the fact that with effect from the date on which the Control Order comes into force, no sales of items covered by the Control Order may be made by any importer whether before or after the arrival of the goods in this country except with the approval of the Controller concerned.

S. A. VENKATARAMAN,
Joint Secretary to the Govt. of India.

JUTE

Calcutta, December 9.

THE raw jute market has been absolutely uninteresting and even a slightly easier tone is noticeable in the loose jute section. With the continued difficulties regarding coal, jute mills have been buying only in small quantities. But for the firmness of upcountry markets, and the smallness of arrivals, a further decline in prices might have been recorded. At the moment, sellers are not very keen to do business with the rise in labour costs and the uncertainty regarding deliveries. Sunday's daylight raid on Calcutta had a slight unnerving effect but it was only temporary, and there is no anxiety to do any business at the moment.

In the loose jute section only a small amount of business has been done at slightly below last rates. Balers are still keen buyers of Tossa varieties and a good premium is offered. In mid-week, prices were marked lower with not much business passing but the close is again steadier. Indian Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund with Supervised Jat 4 annas higher.

In the pucca bales section also not much of business has been passing though prices have been fully maintained. Shippers bought Dundee Daisee 2/3 at Rs. 71-3 per bale for ready shipment and Short Group Daisee at Rs. 81 per bale. Balers are not anxious sellers as considerable difficulty is being experienced in regard to packing and the higher labour charges demanded do not permit of a satisfactory margin of profit with the present level of Calcutta prices. Mills are reported to have purchased Firsts at Rs. 75 per bale and Lightnings at Rs. 71 per bale.

JUTE MANUFACTURES

Calcutta, December 9.

THE jute manufactures market has been absolutely uninteresting and business has again been mostly between inter-bazar operators. Earlier in the week, there was some selling from second-hand dealers but with the soundness of the statistical position no important fluctuations in prices have been recorded. Towards the close, quotations are only slightly lower on balance. The publication of the stock figures for the month of November, 1943 has been favourably received by the market. 9 porters ready were Rs. 20-12 for all positions while 11 porters were Rs. 27-11 for Ready, Rs. 27-10 for December and Rs. 27-9 for January/March. The quotations at the end of last week were Rs. 21-1 for 9 porters for all positions, Rs. 27-12 for 11 porters for Ready, Rs. 27-13 for December and Rs. 27-12 for January/March.

In the Heavy Goods section, firmer conditions have been noticeable and B. twills have slightly improved, B. twills for December delivery being done at Rs. 67. Liverpool Twills were Rs. 75 and Cornsacks Rs. 67-12.

The local stock figures for the month of November, 1943 show a decline in hessian stocks cloth and bags by 3.95 crores yards to 48.73 crores yards. The decline in stocks is mostly on civil account, the figure at the end of October, 1943 being 22.79 crores yards against 19.07 crores yards at the end of November. Stocks, on military account, were 23 lakhs yards lower at 29.66 crores yards. As it was reported that production was at a higher level in the month of November there has evidently been an increase in the offtake, after the lapse of many months. Sacking stocks, on civil account, show an increase from 21.25 crore yards to 22.98 crores yards while, on military account, they are lower at 1.51 crore yards against 1.71 crore yards.

GOLD

Calcutta, December 9.

THE bullion market has been easier throughout the week though there was temporarily a rise in the quotation on the reports regarding the enemy raid on Calcutta. The easier tone of the market has been due to the higher selling on reports regarding the possibility of an early termination of hostilities. The undertone is quiet and a heavy discount is offered for the forward position. Given the continuance of present conditions it appears that gold prices will be on the downward trend for some time. Gold ready closed at Rs. 75-3 against Rs. 76-1 and forward at Rs. 74-6 against Rs. 75-1. Sovereigns are further lower at Rs. 51-10 against Rs. 52.

In the Calcutta market, gold ready closed at Rs. 75-11 and Sovereigns at Rs. 53.

SILVER

Calcutta, December 9.

THE silver market has not been very much affected though quotations are slightly easier in sympathy with the gold market. Buying has been restricted and prices have been maintained at higher levels only with the tightness of the spot position. Silver ready closed at Rs. 122-3 and forward at Rs. 121-7. It is interesting to note that ready is again commanding a premium over forward. The quotation for both spot and forward at the time of last writing was around Rs. 121-15.

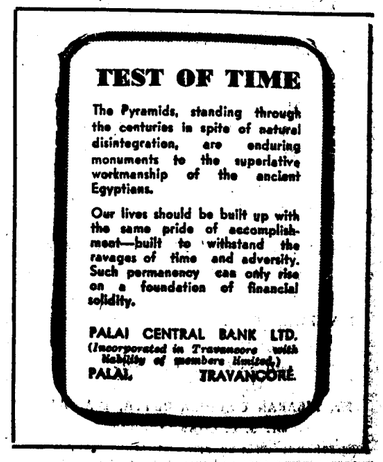
There has been no change in the conditions in the London market and the quotations for both spot and forward is unchanged at 23½d.

In the Calcutta market silver ready closed at Rs. 120.

COTTON

Calcutta, December 9.

AFTER earlier irregularity the raw cotton market has firmed up during the latter half of the period under review. It was feared that the peace prospects might have a detrimental influence on cotton prices. But on second thoughts, there was a rally, it being argued that the large increase in exports would prevent any appreciable fall in prices. This view is confirmed now. With the continued reports regarding the possibility of an early termination of hostilities, operators are looking forward to an early increase in the rate of exports. Mills also have been buying more liberally. With bear covering quotations have, therefore, been marked higher. Jharilla January closed at Rs. 467 against Rs. 458-8, March Rs. 464-4 against Rs. 459-4 and May Rs. 468 against Rs. 464. It will be noticed that the improvement in prices is more pronounced for the near positions.



PIECEGOODS

Calcutta, December 9.

THE piecegoods market has been dull and uninteresting. Business is at a standstill owing to the notification that all unstamped goods will be seized by the Government if they were found in the possession of dealers after the end of the year. Retailers are not taking delivery of earlier contracts. Consumers also are inclined to await further development as it is felt that with the transport facilities to the Calcutta market, larger arrivals will be coming in the next few weeks and there will be no scarcity of goods. Sellers are anxious to do business and are offering substantial discounts.

For cold weather styles also slightly lower prices are available though stocks are still on a small scale. The assurance of larger imports and the announcement recently made by the Government of India that surplus capacity of woollen mills would be utilised for goods for civilian consumption has had a salutory effect on prices. It can be said that the peak levels for this season have been seen. Unless supplies are actually received it cannot be expected that any appreciable decline in prices will be recorded.

Stock Markets to-day and to-morrow:

POST-RAID MARKETS

MARKETS were firm last week. But for the daylight raid on Calcutta there would perhaps have been no give in prices on the Calcutta Stock Exchange. In Monday's session there was some selling and leading speculative counters were marked lower by two or three points. It was generally expected that the enemy might make fresh attempts to raid the Calcutta area again but the absence of any raid so far has led to a slight recovery in prices. The holidys have not induced any selling. There has been no panicky liquidation and most of the selling was on professional account on the assumption that mofussil investors might be frightened by the fall in prices. Contrary to expectations, however, there has been no selling on the part of investors and bears have actually been obliged to cover their positions to a certain extent. The Bombay market seems to have been affected to a great extent and prices have been marked lower all round. Here, too, a late recovery is noticeable though closing prices are appreciably lower on balance.

Earlier in the week there were reports of a speedy end to the war. It is now said that there will be an intensification of the struggle in the West and that the war might end sometime in 1944. In the face of numerous reports, there is a tendency to await actual developments.

* * * *

The results of *Carew & Company Limited* for the year ended June, 1943 make very good showing and the dividend recommended to ordinary holders is in accordance with market expectations. The earnings for the year would, perhaps, have made much better showing but for the difficulties encountered by the distilleries in respect of transport and the short supplies of cane to the Darsana factory. The net profit, before providing for taxation and depreciation, is Rs. 16,53,970 against Rs. 8,81,549 for the year ended June 1942. Provision for depreciation is Rs. 3,62,243 (Rs. 3,44,910) while the amount written for Land Acquisition expenses is Rs. 70,811 (Rs. 10,116). Provision for taxation is the substantial amount of Rs. 8.5 lakhs (Rs. 2.5 lakhs). After transferring Rs. 2 lakhs (nil) to General Reserve a dividend of Rs. 1-4 per share is to be paid. This is the first dividend to be paid since 1938. The amount carried forward is Rs. 75,548 against Rs. 72,510 brought in.

The shares at Rs. 26-8 cum-dividend would appear to be fully valued but if consideration is paid to the old popularity of Carew shares it will be readily admitted that the fancy of the investing public is justified.

The directors seem to be optimistic regarding the prospects for the current year as with the three distilleries profitably working throughout the year and the possibility of both the sugar factories working at a profit, there should be a further increase in earnings.

Rosa sugar factory worked profitably with a crush of 12,544,780 mds. of cane. This crush was somewhat short of that expected. Darsana Sugar Factory did not start crushing until January 11. This very late start was brought about by the dilatoriness of the Government in coming to a decision in the matter of sugar prices for the Bengal mills. The very high prices being paid for Gur and the delay in starting the Mills induced cultivators to convert their cane into Gur and the Darsana Sugar Factory crushed only 6,75,779 mds., cane making a loss. Competition from Gur which at times was selling in Bengal at a price over twice that of white sugar, is still a factor to be reckoned with. Control measures introduced by the Government and the general fall in the prices of other foodstuffs should, however, bring down the price of Gur to a figure more in relation to that of sugar.

* * * *

The accounts of the *Elgin Mills Company Limited*, and *Cawnpore Textiles Limited*, are well upto market expectations. In regard to Elgin Mills, especially, market anticipations have been more than fulfilled. But for the weakness of the market following the daylight raid on Sunday, in Calcutta, quotations for the shares of both the Companies might have been marked higher.

With the continuance of prosperous conditions in the cotton textile industry there has naturally been a further increase in the earnings of the two companies. The net profit of the *Elgin Mills Company Limited*, for the half-year ended September, 1943 is Rs. 71,48,645 against Rs. 61,69,173 for the previous six months. After providing Rs. 2.5 lakhs, as before, for depreciation and Rs. 25,000 (same) to Debenture Sinking Fund, the allocation to General Reserve is Rs. 4,87,776 against Rs. 2,99,975 on the former occasion. Even after these increased allocations to funds, the dividend on the ordinary share has been increased to Rs. 4 per share from Rs. 3-2 per share. The provision in respect of Taxation Reserve is as much as Rs. 54 lakhs against Rs. 48,32,228. The amount carried forward is brought in at Rs. 3,41,521 against Rs. 2,39,652 brought in.

With the extremely strong financial position of the Company and the redemption of the 7 per cent mortgage bonds of Rs. 10 lakhs on 30th September, 1943, the Directors have thought it fit to recommend a capital bonus to shareholders in the form of 5 per cent cumulative tax-free preference shares. There were reports in the market to the effect that the Directors might decide on the payment of bonus shares to the ordinary shareholders and it was on these reports that the quotation was marked up to Rs. 100-8 from Rs. 82. It is now proposed that the capital of the Company should be increased from Rs. 32 lakhs to Rs. 56 lakhs by the creation of 1,40,000 additional ordinary shares of Rs. 10 each and 1 lakh additional 5 per cent 'B' cumulative preference shares of Rs. 10 each. Of this new capital it is proposed that the sum of Rs. 4.2 lakhs should be capitalised from reserves and that 42,000 'B' cumulative preference shares of Rs. 10 each should be created as fully paid-up. These shares will be issued free to ordinary shareholders, as capital bonus, which will rank for dividend with the existing shares as from the 1st of October 1943. The 'B' Preference shares rank for dividend after the 11,000 existing preference shares and in priority to the ordinary and vendors' shares for the time being of the Company and the right in a winding up to payment off of capital *pari passu* with the ordinary shares and vendors' shares.

* * * *

By this decision the shareholders thus get one new preference share of Rs. 10 each fully paid-up for every five ordinary shares held as on December 18, 1943. This means, that the shareholders are given the gift of a share which may have an ultimate market value of as much as Rs. 15 *plus* the higher ordinary dividend of Rs. 4 per share. The new issue cannot in any way affect the distribution to ordinary shareholders for the current half-year as the prior charge on account of the new preference capital is only Rs. 21,000 per annum. The saving against this on account of debenture interest is as much as Rs. 70,000. On the basis of 80 per cent per annum the ordinary shares quoting around Rs. 92-8 cum-rights cum-dividend should be considered rather cheap. With the yield over 10 per cent tax-free it should be

(*Continued on page* 1143)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 10.

AFTER earlier weakness the Calcutta Stock Exchange has shown signs of recvoery during the short period under review. The earlier weakness of the market was due to the nervousness regarding the first daylight raid on Calcutta. Selling in Monday's session, however, was not heavy and there was no panic in evidence. Quotations for the leading speculative counters were a few points lower. It was feared that there might be similar raids and that, with mofussil selling, prices might be marked down further lower. The anticipation of operators, however, did not come true; and in the absence of further raids investors are inclined to await further developments. There was a slight recovery in prices on Tuesday and Wednesday in spite of the holidays. The undertone is quietly steady.

The giltedged section has not in any way been affected and business passing has been on a smaller scale. Quotations are more or less unchanged. 3½ per cent paper quoted Rs. 97-8 while 3 per cent paper was done at Rs. 84-11. Among terminable loans, 3 per cent Defence Bonds 1946 were done at Rs. 102-5, 3 per cent 1951-54 at par and 3 per cent 1953-55 Rs. 99-12. 3 per cent 1963-65 were steady at Rs. 98-4 while 5 per cent 1945-55 changed hands at Rs. 106-2. There were no transactions in provincial loans. Money conditions have been absolutely easy with plenty of funds seeking investment. There has been a further decline in the average discount rate in treasury bills from 12 annas and 11 pies per cent per annum to 12 annas and 3 per cent per annum.

Among Public Bodies' Debentures, only two transactions were recorded; 6 per cent *Calcutta Municipal* Debentures 1934-49 at Rs. 114 and 3 per cent *Calcutta Port Trust* 1951 at Rs. 98.

Preference shares have been well held and not many transactions have been recorded. Among jute mill preference shares, *Anglo-India* were Rs. 177-8, *Auckland* Rs. 161-8, *Birla* Rs. 145-8 and *Dalhousie* Rs. 125 cum-dividend. *Kedernath* preferences were further higher at Rs. 157; *Alkali and Chemical* were unchanged at Rs. 129 but *New Victoria* were higher for a time at Rs. 15-9. *Dalmia Cement* were Rs. 144-12 and *Kumardhubi Engineering* Rs. 342.

Bank shares were lower in the absence of any definite announcements regarding the issue of fresh capital by leading banks. *Imperial Bank* Contributories encountered some selling and the quotation was lower at Rs. 498 against the high level touched last week of Rs. 545. But the fully paids were steady at Rs. 1,955. *Reserve Bank* were easier at Rs. 125 while the *Hind Bank* came in for attention at Rs. 9 premium. *United Commercial Bank* were around Rs. 21-8 premium.

In spite of satisfactory earnings reports, Cotton shares did not receive much attention. The reports regarding the raid led to some selling though later in the week there was some enquiry for Cawnpore shares. Prices however, are lower on balance. *Basanti* were Rs. 13 and *Benares Cotton* Rs. 14 after being lower at Rs. 13-10. *Cawnpore Textiles* came down from Rs. 14-7 to Rs. 13-4 but closed higher at Rs. 13-15. *Bengal-Nagpur* were Rs. 36-4 and *Dunbar* Rs. 263, a drop of 15 points from the highest level of last week. *Elgin Mills* shed 10 points to Rs. 90-8 but recovered to Rs. 95-8 towards the close. This company is paying a higher dividend of Rs. 4 per share on ordinary shares. The shareholders will also receive one preference share carrying interest at 5 per cent per annum tax-free, free, for every 5 shares held. *Kesoram* were Rs. 15 and *Mahalaxmi Cotton* Rs. 46-10. *New Victoria* came down to Rs. 10-2 but were higher towards the close at Rs. 10-15 on reports of a higher dividend for the year ended October, 1943.

Coal shares were easier but there has not been much decline in prices and losses have been regained to a certain extent. *Bengal* were Rs. 544 while *Bhalgora* were Rs. 12-15 against Rs. 13-8 at the end of last week. *Burra Dhemo* were Rs. 8-12 against Rs. 9-9 and *Burrakur* Rs. 24-12 against 25-11. *Equitable* came down to Rs. 47-8 but recovered to Rs. 48-4. The quotation at the end of last week was Rs. 50-8. *Churulia* were 3 annas lower at Rs. 3-5, *Kalapahari* one point lower at Rs. 28 and *New Beerbhoom* 1 point lower at Rs. 28-8. *North Damuda* were Rs. 8-13, *Satpukuria* and *Asansol* Rs. 3-11, *Samia* Rs. 5-2 and *Talcher* Rs. 6. *West Jamuria* were two points lower at Rs. 38-10.

In the Jute section the larger denomination shares have lost about 10 points while the smaller denomination shares are one or two points lower. *Howrah* were Rs. 63-8 ex-dividend while *Anglo-India* were 7 points lower at Rs. 389. *Champdany* were not very much changed at Rs. 220, as also *Clive* at Rs. 29-12. *Kamarhatty* were 18 points lower at Rs. 544 while *Naskarpara* were unchanged at Rs. 26-11 ex-dividend. *National* were one point lower at Rs. 27-10 and *Nuddea* 4 points lower at Rs. 106. *Presidency* were Rs. 3-10 against Rs. 7 at the end of last week.

In the Engineering section, *Indian Iron* were marked lower by two points to Rs. 34 but at the lower levels there was some buying and the quotation towards the close was Rs. 34-8 against Rs. 36. *Steel Corporation* also, after being lower at Rs. 26, recovered to Rs. 27 but the closing quotation last week was Rs. 28. *Bhartia Electric Steel* were rather steady at Rs. 16-14 while a small lot of *Indian Galvanizing* were done at Rs. 42-8. *Indian Standard Wagon* were Rs. 73, *Kumardhubi Engineering* were very firm at the end of last week at Rs. 9-10 but there was a drop to Rs. 8-10. The close is higher at Rs. 9. *Marshalls* were Rs. 4-6, *National Iron* Rs. 13 and *Jessop & Co.*, Rs. 20-8.

There is nothing of interest in the Sugar section, *Carew & Co.*, fluctuating in narrow limits around Rs. 26-8. *Cawnpore* were Rs. 43-12 and *Champarun* Rs. 43-8. *Darbhanga Sugar* were higher at Rs. 31-6 while *Murree Brewery* were Rs. 20-6 ex-dividend. *New Savan* did not show any change at Rs. 19-8 as also *Purtabpore* at Rs. 23-4. *Ramnugger Cane & Sugar* were Rs. 13, *U. P. Sugar* Rs. 32-15 and *Samastipur* Rs. 18-12 cum-dividend.

There is nothing of interest in the Tea section also and few transactions have been recorded in the last two days. *Hasimara* were Rs. 70-8, *Baitakhal* Rs. 12-12, *Killing Valley* Rs. 18-8, *Tilkah* Rs. 17-8 and *Teliapara* Rs. 565.

In the Miscellaneous section, *Burma Corporation* were steady at Rs. 3-12 while *Indian Copper Corporation* were Rs. 2-12. *B. I. Corporation* were steadier at Rs. 6-1 but recovered to Rs. 6-4. *British Ceylon Corporation* were unchanged at Rs. 17 with *Calcutta Trams* a shade easier at Rs. 24-12, *Alkali and Chemical* were also lower at Rs. 30-8. *Karanpura Development* were higher early in the week at Rs. 18-15 but the close was lower at Rs. 18-2. *Dalmia Cement* were Rs. 17-12; *Reliance Firebricks* were very firm at Rs. 20. *Assam Saw Mills* were Rs. 5 and *Bengal* Timber Rs. 222.

Among Paper shares, *India Paper Pulp* were steady at Rs. 210 while *Titaghur Paper* were easier at Rs. 26-2. The preferred ordinaries changed hands at Rs. 5-11, *Star Paper* were Rs. 23-8 and *Sree Gopal* Rs. 24-10 *Midnapore Zemindary* came down to Rs. 121 but closed at Rs. 124. *India General Navigation* were Rs. 131. *Indian National Airways* preferred ordinaries Rs. 28-4 and *Textile Machinery* Rs. 28-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Dec. 8.

Sunday's daylight raid on Calcutta area had some repercussions on the local stock exchange. Even last week signs of weakness were visible though there was no downward movement. Reports of the Allied Leaders' Conferences in the Middle East coupled with reports that new prices for cotton piecegoods would not allow much room for profit kept the market somewhat depressed. The latest Japanese raid on Calcutta area, therefore, has nothing much to do with the present state of affairs in the market beyond inducing a precautionary mood. When the market opened on Monday prices were, therefore, automatically marked lower; but there was no panic. While even Calcutta had taken the raid in as calm a manner as possible, there was no reason for any undue anxiety on the part of local operators and investors. Though prices are considerably lower the undertone is fairly steady, and it is idle to expect any extraordinary changes in prices for at least a few months to come.

Mill shares opened easy with prices marked down considerably. The news of the Japanese air raid on Calcutta area on Sunday morning was not the sole factor that was responsible for the present low prices. Even prior to the raid there was not much enthusiasm in this section in view of the new prices for cotton piecegoods. It was generally believed that with the prospect of the war ending soon, and the new prices for cotton piecegoods, the future for Mill shares was not as bright as it used to be. *Bombay Dyeing* have lost nearly 20 points on the opening day, but showed signs of improvement on the next day. But even that little gain was wiped out on profit-taking on the following day itself. The latest quotation is around Rs. 1,923-12. *Phoenix* were unchanged at Rs. 710. *Century* were Rs. 961, *Colaba Land* Rs. 245, and *Svadeshi* Rs. 586.

(Continued on page 1119)

BANGA SRI COTTON MILLS LTD.

CHAIRMAN'S SPEECH AT

ANNUAL GENERAL MEETING

(MR. D. N. CHOWDHURY, *Chairman.*)

Presiding at the Tenth Ordinary General Meeting of the Share-holders of the BANGA SRI COTTON MILLS LIMITED, held at the Mills premises, Sodepur, on Tuesday the 30th November last, Mr. D. N. Choudhuri, Managing Agent and Chairman of the Board of Directors, said:

"The Directors' Report, which has already been circulated to you, shows that your Company made a very satisfactory progress during the year 1942. The Company made a profit of Rs. 8,27,793-3-1, and after making substantial provisions for Income-Tax, Depreciation etc., your Directors have recommended the payment of 8% Dividend on Preference Shares and 16% (Free of Income-Tax) Dividend on Ordinary Shares. An ad-interim dividend of 3% will also be paid out of the profits of the current year, viz.: 1943.

"It will not be out of place to mention here that your Mill is fitted up with only 276 looms and 10,728 spindles. Judging from this angle the comparative profit has been very high. During the year under review the Mill worked without any disturbances and even during the period of enemy Air-raids we carried on smoothly. Your Mill Manager, Mr. C. Choudhuri, worked with tact and enthusiasm which greatly inspired the workers of the Mill. In order to keep up the morale of the workers he did not even allow his family members to get away from the Mill quarters during those panicky days. The workers of your Mill have always been provided with cheap rations besides the usual Dearness and other allowances.

"Another important factor is that inspite of various handicaps we have been able to maintain the high standard of our productions. For this reason our Dhuties and Saries are always in demand and fetch comparatively high prices from the customers. It is a very difficult job since it is almost impossible to obtain from the markets raw materials of good quality even by offering fancy prices.

"The year 1942 had nevertheless been a prosperous year for the Indian Cotton Industry due to stoppage of imports from Japan. The year 1943 is even better. But, frankly speaking, I do not welcome this sort of artificial prosperity. During the Great War of 1914—18, the Indian Industries had built up substantial reserves to help them during the rainy days which followed, but in the present war boom we cannot even build up sufficient reserves for the renovation of our plants and machineries which are rapidly wearing out owing to continuous production. I earnestly wish success of the Central Government's scheme for the reduction in the prices of piecegoods for the good of the community, and at the same time I appeal to them to increase the Depreciation allowances sufficiently so that the industry may not have to face disaster.

"I have received many letters from the Share-holders thanking me and the Board for the high dividend declared. I am not, however, fully satisfied. Your Company has got a paid-up capital of nearly Rs. 22,00,000 and such a big sum was raised on the expectation that we would be able to instal a full complement of 1,000 Looms. But war intervened, imports of machineries were suspended, and we had to work with only 276 looms.

"The existing plants and machineries could have been installed with less than half the capital which would have earned substantial dividends to our Share-holders. It is however, hoped that with the large funds at our disposal we shall be able to extend the factory as soon as the War situation will allow us to import new machineries.

I find that thousands of our Share-holders, numerous widows and orphans included, depend on the annual dividends for their livelihood and the prices of necessities have moved up to abnormally high levels due to currency inflation and other causes. I try my best to help them by raising the dividend as much as possible. Our first and foremost duty is to safeguard the legitimate interests of our Share-holders. If we fail to serve them properly they will naturally be shy to invest in our national concerns. For these reasons I have never allowed the forfeiture of shares for unpaid Calls in any of the concerns with which I am connected. At the ripe old age the call for service of my fellowmen, drew me from my retirement to the field of industry, and I shall try my best to serve my people to the last day of my life."

(Continued from page 1118)

Steel shares were the worst sufferers this time probably because of the proximity of the Tata Works to Calcutta area. The loss in Tata Deferreds is considerable. The latest quotation at Rs. 1,907-8 is nearly 80 points lower than the quotation last week at the same time. Tata ordinary were Rs. 390, and *Indian Iron* were nearly 1½ rupees lower at Rs. 34-7.

Among *Hydro Electrics, Andhra Valley* were unchanged at Rs. 1,900, while *Tata Power* were 15 points lower at Rs. 1,915. *Tata Hydro* were also unchanged at Rs. 203.

Alcock Ashdown continues to show improvement and at the time of writing is quoting nearly 5 points higher at Rs. 590.

Premier Construction on the otherhand has not only not failed to maintain the previous level, but actually has lost nearly 3 points to close at Rs. 234.

There is not much change in Mining shares with *Burma Corporation* at Rs. 3-12 and *Indian Copper* at Rs. 2-12.

Among miscellaneous shares A. C. C. continue to attract attention though the price sohws no change at Rs. 224-8. Both *Bombay Steam*, and *Shivrajpur Syndicate* are further easy at Rs. 670 and 78-8.

Another share to lose considerably is B.E.S.T. which has recorded a steep decline to quote at Rs. 148-8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, December 7.

News of the "Big Three" Conference and the subsequent talks at Cairo once again brought the possibility of an early peace to the forefront and the local stock exchange pronounced its judgment on the various peace rumours by marking down prices. The erstwhile firmness began slowly to melt. The daylight Japanese air raid on Calcutta area on Sunday morning worsened matters with the result that prices were considerably lower on balance, though the decline was not as steep as expected. Even before the news was received in the market, sellers predominated over buyers and the market when it opened on Monday was by no means cheerful. But one redeeming factor was that there was no panic selling, and the selling pressure that was felt was not the direct result of the raid but could be traced to as far back as last Wednesday.

Textiles were particularly depressed on account of the various peace rumours, and on account of the new prices to be fixed for cotton clothes. The enemy raid on Calcutta area was of course an additional adverse factor in an already gloomy market. It is needless to say that scrips recorded considerable loss. Dhanalashmis which were a strong feature at Rs. 577 lost nearly 7 points to quote around Rs. 570.

Sitarams were Rs. 220 and *Saradas* were Rs. 273-8. *Rangavilas* were slightly lower at Rs. 227 while *Buckinghams* were crossed at Rs. 305.

It was mentioned in the last report that the Planting section was rather brisk after long spell of almost dull conditions. But the enthusiasm for the shares in this section proved to be not only short-lived, but superficial. For the unfavourable news affected this section much more than the other sections with a sharp decline in prices.

Chembra Peaks were 6 annas lower at Rs. 12-4, while *Cochin Malabars* recorded even a bigger drop of nearly a rupee to quote around Rs. 17. *Vaikundoms* were Rs. 21-4; *Highland Produce* Rs. 47-8; *Pullangodes* were easy at Rs. 2-12 *Travancore Rubbers* were considerably lower at Rs. 26-8; *Kailas* were Rs. 2-8 and *Thirumbodies* Rs. 4-10.

Mysore Group of industries continued to be active with good demand and a large turnover. *Mysore Chemical* Manufacturing were Rs. 50-4, *Mysore Chemicals* and *Fertilisers* Rs. 33-4 cum dividend.

THE INDIAN CABLE CO., LTD.

NOTICE

The Twenty-fourth Ordinary General Meeting of the Shareholders of The Indian Cable Company, Limited, will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, at 9-30 a.m., on Wednesday, the 29th December, 1943, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1943.

(2) To declare Dividends.

(3) To elect a Director in place of Mr. B. A. Bilimoria.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To transact other (if any) competent business.

The Share Transfer Books of the Company will be closed from the 16th December to 29th December, 1943, both days inclusive.

By Order of the Board,
BRITISH INSULATED
CABLES LIMITED
Managing Agents.

Calcutta, 4th December, 1943.

(Half-yearly General Meeting held on 12th November, 1943)

Audited accounts for the half-year ended 30th June, 1943:—

	Rs.	A.	P.
The balance available for distribution after the inclusion of the amount brought forward from the Previous half-year is	1,70,952	12	1
	Rs.	A.	P.
Out of which the directors propose to place to General Reserve	30,000	0	0
And recommend the payment of a Dividend on the Preference Shares at the rate of 7% per annum, Free of Income Tax, absorbng ..	10,500	0	0
The directors also recommend the payment of a Dividend on the Ordinary Share at the rate of 25% per annum, free of Income Tax, absorbing	1,12,500	0	0
	1,53,000	0	0
Leaving to be carried forward	17,952	12	1

Trading Conditions.—During the half-year under review satisfactory conditions prevailed but clearance of goods became increasingly difficult owing to inadequate transport facilities. The introduction of the Cloth and Yarn Control Order in May brought about a general reduction in prices, and ceiling prices for both Cloth and Yarn have now been introduced. The outlook for the future is obscure as merchants are hesitant to take up goods as the working of certain Provisions of the Order requires clarification.

The appeal for the enhancement of E. P. T. standard profits, mentioned in the last report, has been decided to the advantage of the Company, but complications in unfinished assessments prevent the benefit gained being reflected in the present accounts.

Managing Agents.—Messrs. Shaw Wallace & Co.

(Annual General Meeting held on 20th November, 1943)

Audited accounts of the Company for the year ending 30th June, 1943:—

The year's trading after providing for interest and commission to Managing Agents resulted in a net profit of Rs. 43,14,045-6-10.

The following expenses have been written off in the Profit and Loss Account:—

	Rs.	A.	P.
(1) Depreciation of assets on the written down value	1,26,782	0	0
(2) Bonus to Operatives and Staff ..	37,226	10	0
	1,64,008	10	0
Net Profit ..	41,50,036	12	10
Add to this the previous year's balance brought forward	11,389	3	11
The balance of ..	41,61,426	0	9

is available for distribution.

The Directors recommend that this balance be dealt with as follows:—

	Rs.	A.	P.
To set part to Reserve	5,64,000	0	0
„ set apart to Income, Super and Excess Profits Taxes	32,36,000	0	0
„ Dividend to Share-holders at 50% free of Income-tax	3,46,150	0	0
„ Balance to be carried forward to next year	15,276	0	9
	41,61,426	0	9

The Directors are glad to be able to state that the goods of the Company have been great in demand and at attractive prices and the trading has been of a satsfactory character.

Since Ceiling Prices have been fixed for Cotton, Yarn, and Cloth, it is anticipated that the same amount of profits may not be derived during the coming year.

Chairman.—Mr. R. V. Lakshmaniah.

Authorised Capital—Rs. 14,00,000. *Issued and Subscribed—Rs.* 6,92,300 *in* 13,846 *shares of Rs.* 50 *each fully paid up.*

DELHI CLOTH & GENERAL MILLS COMPANY, LIMITED

Audited accounts for the year ended 30th June, 1943:—

Including the amount carried forward from the previous year, (Rs. 14,84,321-7-9) the total profits for the year after allowing Rs. 20,00,000 for depreciation, amounted to Rs. 2,24,45,947-12. It is proposed that out of this amount a sum of Rs. 1,70,00,000 should be provided for taxation, the balance being disposed of as follows:—

	Rs.	A.	P.
Interim Dividend on Ordinary shares at Rs. 1-4 per share of Rs. 25 and proportionately on other Ordinary shares, already paid	6,23,219	10	0
Final Dividend on Ordinary shares of the face value of Rs. 25 each at Rs. 1-4 per share, and Bonus at Rs. 1-8 per share, free of Income-tax .. (Making, in all a total Dividend and Bonus of Rs. 4 per share).	13,59,597	4	0
Proportionate final dividend and Bonus on Ordinary shares of Rs. 2-8 each, free of Income-tax ..	11,000	0	0
Proportionate final dividend and Bonus on partly paid up Ordinary shares, free of Income-tax	452	14	0
Dividend on Preference shares at 4½%, free of Income-tax	90,000	0	0
Charity	1,00,000	0	0
Reserve for fall in prices	15,00,000	0	0
Reserve for Dividend Equalization	10,00,000	0	0
General Reserve	6,00,000	0	0
Total ..	52,84,269	12	0
Carried forward ..	1,61,678	0	0
Grand Total ..	54,45,947	12	0

The work in the Mills, particularly at Delhi, was upset as a consequence of the then prevailing political conditions in the country. Attendance and production improved by October and full production had been reached for some months when work was again interrupted for over a fortnight in February, 1943, when Mahatma Gandhi entered his three weeks' fast. Although there were a few other strikes also in the year viz., at Daurala and at Lyallpur for a few days each, the directors are satisfied that their Labour is sensible of the interest that the Company takes in their welfare and the handsome manner in which they regulate their pay, wages and allowances.

As was only to be expected, as a result of continued hostilities, difficulties about stores and spare parts continued during this year also. Credit for conquering the difficulties should go to staff who showed resourcefulness in finding substitutes or by themselves making the things required or by effecting economy in consumptoin.

While the sugar and cotton mills worked satisfactorily during the year, the same cannot be said of all the units. The Chemicals Factory is slowly consolidating its position; so also the Confectionery Factory. The Plywood Factory at Daurala has still a long way to make up, but the directors are taking steps to improve it.

A factory for the manufacture of power alcohol was constructed during the year at Daurala. The factory has been completed and spirit drawn. It is a matter of pride that the entire plant was designed, fabricated and put up by the Company's own staff.

The policy of Government in regard to controls continued more or less the same throughout the year under report, but since the close of the year the Government have introduced a fairly comprehensive system of control over cloth. They have also subjected sugar products, in addition to sugar, to control.

The directors paid their cane farmers at As. 10 per maund for the whole of the 1942-43 season retrospectively of their own accord, even though the increased price was fixed only after the season had started. It is understood that the rate of As. 10 per maund has been fixed for the coming season also. In the directors' opinion, it is essential, if justice is to be done to the farmer, and at the same time, a sugar famine is to be averted in 1944-45, that the price paid for cane in the ensuing season must be very substantially raised above As. 10 a maund.

The prices of cotton cloth sold in the market rose rapidly during the year with the result that the Government announced their decision to control prices. As a consequence, prices fell rapidly during recent months The Government have since fixed "ceiling" prices for various types of cloth. These reductions in prices are welcome as much to the consumer as to the mills who have been largely playing the part of tax gatherers on behalf of Government in this respect.

The Employees' Benefit Fund Trust functioned satisfactorily during the year.

Agents.—Messrs. Shankar Lall Bharat Ram & Co.

(Half-yearly General Meeting held on 17th Dec., 1943 at 12-30 p.m.)

Audited Accounts of the Company for the half-year ended 30th September, 1943:—

	Rs.	A.	P.
The accounts show after providing Rs. 1,09,737 for Depreciation on Block and Rs. 3,20,000 for Taxation and deposit under Section 10 of the Finance Act, a profit for the half-year of	3,05,164	7	2
Add balance brought forward from last half-year	46,307	8	7
or an amount available of .. .. which the directors recommend should be dealt with as follows:—	3,51,471	15	9
Payment of Dividend of Rs. 5 per share ..	2,95,820	0	0
Leaving a balance to be carried forward of ..	55,561	15	9

Machinery and Electrical Machinery.—There were no additions under these heads during the hif-year.

Buildings.—These continue to be maintained in good order and condition so far as is possible in the circumstances, and are, as usual, fully covered by insurance.

Working Hours.—The following schedule has been adhered to in accordance with the recommendations of the Indian Jute Mills Association:—

From	To	Hours per week.
1-4-43	15-5-43	60
17-5-43	30-9-43	54 (with 10% looms sealed until 12-6-43).

During the above period a considerable number of loom hours have been lost as a result of coal shortage.

Jute.—The Company continues to maintain an adequate supply of raw material at an average price which compares favourably with current market rates.

Manufactured Goods.—Demand from most consuming centres continues to be relatively satisfactory and, in view of the introduction by the Indian Jute Mill Association of a system of maximum prices for goods, rates have been maintained within reasonable limits. Results have unfortunately been adversely affected by a considerable increase in working cost as a result of enforced stoppages at both mills due to shortage of coal supplies, particularly at Wellington, and the resultant compensation paid to workers. The loss incurred by the sale of foodstuffs to workers at rates considerably below current costs has also been a contributory factor.

Prospects for the current period are not very encouraging.

Managing Agents.—Messrs. James Finlay & Co., Ltd.

(Half-yearly Meeting, 14th December, 1943 at noon).

Audited accounts for the half-year ended 31st July, 1943:—

The Mill was requisitioned during the half-year by the Military Authorities and was taken over by them during May, 1943. All expenditure incurred since then until 31st July, 1943, has been incurred on account of the Military Authorities and has been charged to Government and not debited to Profit and Loss Account. A claim has also been made in respect of loss of profits since the date of requisitioning which has not been taken into the accounts for the half-year. The Company's claims, for expenditure and for loss of profits, for the half-year have been submitted to the Collector of 24-Parganas, from whom an on account payment of Rs. 4,00,000/- has been received; the Collector is being pressed to effect a settlement of the claim.

	Rs.	A.	P.
The profit disclosed by the accounts is, therefore in respect of the trading period from 1st February, 1943, to the date the Mill was requisitioned, and amounts to ..	2,16,713	14	6
to which has to be added the amount brought forward from last account ..	46,103	11	1
	2,62,817	9	7
From this there has been placed:—

*After taking into credit Rs. 4,20,000 transferred from Divdend Adjustment account.

(Annual General Meeting held on 11th Dec., 1943 at 11 A.M.)

Audited accounts for the year ended 30th April, 1943:—

After providing for all charges, including Depreciation and Taxation, and transferring to the credit of:— .. Rs. A. P.

	Rs.	A.	P.
The Profit and Loss Account the sum of Rs. 4,20,000-0-0 from Dividend Adjustment Account the profit for the year amounted to	8,89,529	10	0
To which has to be added the balance brought forward from last year of ..	77,229	1	10
	9,66,758	11	10
From this amount there has to be deducted the interest on the Preference Shares for the year to 30th April, 1943 amounting to ..	1,81,000	0	0
Leaving a Balance available of ..	7,85,758	11	10
The Directors recommend that this amount be dealt with as under—			
In payment of a dividend of Rs. 17-8-0 per share free of Indian Income Tax on 42,000 Ordinary Shares ..	7,35,000	0	0
To carry forward to next year's account ..	50,758	11	10
Total ..	7,85,758	11	10

The manufacturing facilities of the Works continue to be used almost entirely for the benefit of War production. Added to the difficulties mentioned in last year's report in obtaining imported and raw materials as and when required, the shortage of coal supply as well as other circumstances beyond the control has not contributed to steady and continuous production throughout the year in some of their Works. This largely accounts for the increase in the work in progress figures in comparison with the previous year. It is hoped with active co-operation of the Government of India, these difficulties may be greatly overcome.

The loyalty of labour has on the whole been satisfactory. In addition to dearness allowance, the Company continues to supply foodstuffs and other essential commodities to its labour force at concessional rates.

Managing Agents.—Messrs. Burn & Co.

(Annual General Meeting held on 17th Nov., 1943)

Audited accounts of the Company for the year ended 30th April, 1943:—

The Company made a net profit of Rs. 87,330-7-2 after allowing for Depreciation and other incidental charges. Adding Rs. 8,529-4-5 brought forward from last year the total amount of the net profit to the credit of the Profit and Loss Account is Rs. 95,859-11-7. Out of this sum, the directors recommend setting apart of a sum of Rs. 55,000/- as reserve for Income Tax etc. After deducting the said amount, a sum of Rs. 40,859-11-7 is available for distribution and they recommend that a dividend at the rate of Annas 10 per share be paid. This will absorb Rs. 31,250/- leaving a balance of Rs. 9,609-11-7 to be carried forward.

During the period the work was hampered for over two months due to air-raid near the Factory and increased dearness and other allowances were given to the operatives and staff. Credit must be given to the majority of the staff and operatives for their loyal behaviour and devotion.

Managing Agents.—Messrs. D. Khaitan & Sons, Ltd.

*After taking into credit Rs. 1,25,000 from Reserve Funds.

(Annual General Meeting on 20th Dec., 1943 at 4 P.M. at Bombay)

Audited accounts for the year ended 30th September, 1943:—The Accounts show a nett profit, after charging Rs. 2,42,071-9-3 for Depreciation, of Rs. 12,67,400-2-8 which, together with the balance brought forward from last year's Profit and Loss Account of Rs. 5,659-5-3 leaves an amount of Rs. 12,73,059-7-11, which the Directors propose to dispose of as follows:—

	Rs.	A.	P.
Dividend at Rs. 9 per share, free of income-tax, on the shares of the Company as at 24th November, 1943	6,76,764	0	0
Reserve for Crop Insurance Fund ..	25,000	0	0

Provision for Housing Scheme ..	1,00,000	0	0
Provision for Drainage Schemes ..	25,000	0	0
Donation to Staff Provident Fund ..	19,000	0	0
Balance to be carried forward to next year ..	27,295	7	11
Total ..	12,73,059	7	11

On the Estate side difficulties were again experienced, there being an acute shortage of labour, and also of facilities for carting cane: this resulted in short supplies of cane getting to the mill daily. At the commencement of the season there was a large area of carry-over cane to be crushed, and this gave a very poor return in sucrose. This carry-over was caused by the cane fires experienced during the previous season. There is still an acute shortage of labour all over the Deccan area and prospects in this regard are not very good for the 1943-44 harvesting season.

The Factory worked satisfactorily, but the general efficiency was considerably impaired due to cane supplies being short as a result of the scarcity of labour and transport.

The sugar manufactured by the Company was as usual of a satisfctory quality, being marketed under the Indian Sugar Standards in accordance with orders issued by the Sugar Controller. A small carry-over has again to be reported.

The area under cane on the 30th September, 1943, was 4,560 acres 30 gunthas. The growing crops generally are satisfactory, but considerable trouble in the early stages was experienced due to an acute shortage of water. The rainfall, however, has been good and has been well distributed over the Estate.

(Annual General Meeting held on 14th December, 1943 at 11 a.m. at Rampur)

Audited Accounts for the year ended 31st May, 1943:—The Revenue for the year was Rs. 16,64,342-15-9, and after providing Rs. 6,38,773-8-2 for Excise and Rs. 1,05,454-11-5 for Depreciation there remains a balance of Rs. 9,20,114-12-2. The carry forward from last year was Rs. 54,171-6-2 which, added to the balance for the current year, makes a total of Rs. 9,74,286-2-4 available. From this the directors have set aside the following:—

	Rs.	A.	P.
To Reserve Fund	2,50,000	0	0
To Dividend Equalisation Fund	50,000	0	0
To Labour Bonus Fund	45,000	0	0
To Employees' Welfare Fund	10,000	0	0
To Factory's Hospital Fund	7,500	0	0
Total ..	3,62,500	0	0

leaving Rs. 6,11,786-2-4 out of which the directors recommend a dividend at the rate of 20% per annum plus a bonus of 2½% which will absorb Rs. 5,40,000/-. This leaves a balance of Rs. 71,786-2-4 to be carried forward out of which the Directors recommend a donation of Rs. 12,500 to the Viceroy's War Purposes Fund and Rs. 5,000/- to the War Purposes Fund of Her Highness the Begum Sahiba of Rampur.

The Directors have resolved to invest another Rs. 1,00,000/- in Interest-Free Defence Loans and Rs. 2,00,000/- in Defence Loans.

Crushing operations commenced on 25th November, 1942, and terminated on 29th March, 1943, being 125 daps as against 104 days of last year. The amount of cane crushed ws 31.15 lacs maunds. Sugar contents in this year's cane was 0.6% less than last year. The average recovery of 10.01% as compared with 10.33% last year was, under the circumstances, satisfactory.

The cane farm contributed materially to the improved results of the year.

(Annual General Meeting held on 4th November, 1943)

Audited accounts and Balance Sheet for the year ending 28th February, 1943:—

Due to stoppage of imports of medicines from England, America and other foreign countries, the Company was faced with great difficulties in replenishing its stocks.

The prices in the local market soared very high and to maintain stocks the Comany had to make purchases mostly in the local market at enhanced prices. Notwithstanding the tendency in the market to increase the selling prices, this Company has maintained the policy of charging only a reasonable margin of profit as in the past. The fixation of the controlled prices have rigidly been observed. Satisfactory services in the Dispensing section have been maintained day and night.

The Directors report that the results of the Company for the period under review have been satisfactory. The sales during the year have increased and amounted to Rs. 15,70,067-10-8 as against the sales of last year amounting to Rs. 10,82,351-1-9.

	Rs.	A.	P.
Net profit for the year's working is ..	58,886	13	7
Balance brought forward from last year ..	12,672	1	4

(Annual General Meeting held on 10th December, 1943)

Audited accounts for the year ended May 31st, 1943:—The directors have carefully considered the financial situation of the Company, the doubtful assets in the Balance Sheet in relation to existing reserves and the possibility of recovery of and/or compensation for these assets, and they have come to the conclusion that it is possible to justify the payment of a dividend out of the year's earned profits. After providing for such expenditure as is necessary for maintenance of an organisation for Burma and Rs. 79,942-9-10 for Depreciation, there remains a sum of Rs. 8,24,215--7-10, which with the amount brought forward from last year makes a total of Rs. 15,88,724-11-8, and out of this the Directors recommend payment of a dividend at the rate of 6% per annum free of tax absorbing Rs. 5,67,000 as follows:—

Rs. 150/- per share on Original Shares of Rs. 2,500 each.
Rs. 7-8 per share on 40,000 Ordinary Shares of Rs. 125 each.
Rs. 3/- per share on 84,000 New Ordinary Shares of Rs. 125 each (Rs. 50/- paid).

This leaves a balance of Rs. 10,21,724-11-8 to be carried forward to the current year.

The situation in respect of the properties in enemy occupied countries remains unchanged, and the Directors are still unable to form any conclusion as to the present value of these assets and of the loss which may eventually be sustained. The value at which these assets stand in the Balance Sheet has been reduced over the year by Rs. 8,26,473-1-1 representing amounts collected from Government and others on account of timber, etc., supplies. There remain only a few amounts outstanding which it is hoped will be recovered before long.

Timber in India.—The extraction and milling of timber in India undertaken in connection with the Supply Department is proceeding but only in a small way.

Tea, etc.—The plantations in South India had a successful year. The acreage now stands at:—

Tea	5,220 Acres.
Cardamons	1,499 „
Cinchona	620 „

The Tea crop was a good one, a total of 36,50,225 lbs. being produced at a first cost of 6.3 annas per lb.

Still higher costs must be expected in future owing to increased dearness allowances and to the higher cost of materials, principally chests. The bulk of the crop was tendered to the Ministry of Supply, the remainder being sold for consumption in India at good prices.

A very fair Cardamom crop was harvested and sold at satisfactory prices.

A small amount of Cinchona bark was collected and sold to Government. A much larger quantity is expected this year. In response to the urgent need for quinine a further extension of 200 acres is being planted in the current year.

A sum of Rs. 2,41,958-0-4, representing the difference between the amount recovered from underwriters for the loss of Thoni Mudi factory, burnt down last year, and its depreciated valuation in the Balance Sheet, now written off, has been transferred to Fixed Property Reserve Account.

Bombay Burmah Plantations, Limited, of which all the issued Capital is held by the Company had a prosperous year and a dividend, including bonus, of 15% free of tax was paid for the year ended December 31st, 1942.

Income-tax.—Tax has still to be assessed on the profits of the year ended May 31st, 1941, but the amount in reserve is more than sufficient to cover the estimated liability. It is anticipated that there will be no liability to tax on the profits for the year ended 31st, 1943, which are for the most part agricultural, apart from the loss carried forward from the year ended May 31st, 1942, which has still to be ascertained.

Secretaries.—Messrs. Wallace & Co.

RAMPUR MAIZE PRODUCTS, LIMITED

First Annual Report and the Accounts of the Company for the year ended 31st July, 1943:—

After providing for Depreciation, the Accounts show a profit of Rs. 17,23,406-12-0, from which a sum of Rs. 3,00,000-0-0 has already been paid to shareholders by way of ad interim dividend, leaving a balance of Rs. 14,23,406-12-0 which the Board recommend should be disposed of as follows:—

	Rs.	A.	P.
To writing off the Preliminary Expenses ..	2,405	12	0
„ payment of final dividend of Rs. 5 per share	3,00,000	0	0
„ General Reserve	9,00,000	0	0
„ Staff and Labour Bonus & Welfare Fund	50,000	0	0
„ creation of a Charitable Trust ..	1,00,000	0	0
„ Donation to War Purposes Fund ..	50,000	0	0
„ Carry Forward	21,001	0	0
Total ..	14,23,406	12	0

The Directors have decided to invest Rs. 6,00,000-0-0 in Interest-free Defence Loans.

The construction of the factory, which was commenced in February, 1942, was pressed forward, and in spite of the tremendous obstacles owing to war conditions it was completed by December, 1942, and has operated for eight months during the year under review.

The Directors are glad to report that their starch has found ready acceptance in the market, being of very good quality.

The erection of a Glucose plant attached to the main factory is making good progress, and the manufacture of various by-products is being developed.

Managing Agents.—Messrs. Govan Bros., Ltd.

GUJERAT SAFE DEPOSIT COMPANY, LIMITED

Audited accounts for the year ended 30th September, 1943:—

After making a provision of Rs. 13,215-0-0 for depreciation on Building, Vault Equipment and furniture and after allowing for payment of Bonus to Staff equal to two months salary amounting to Rs. 1,065-2-8 which amount is included in the item "Salaries & Bonus" in the Profit & Loss A/c, the Company made a net profit of Rs. 24,572-8-7, during the year. To this has to be added the sum of Rs. 614-3-1 carried forward from the last year's account making a total of Rs. 25,186-11-8, available for distribution. Out of this the Directors have set apart Rs. 13,500/- for taxation leaving a balance of Rs. 11,686-11-8. The Directors recommend that out of this, a sum of Rs. 11,250/- be paid as dividend at the rate of 5 per cent i.e., Rs. 3-12-0 per share, free of Income-tax and that Rs. 436-11-8 be carried forward to next year's account.

Almost all the lockers continued to remain rented during the year under report, as was reported last year. The Company has risen to its full stature, and its financial position has been greatly strengthened. The Directors therefore hope to expand and improve upon the existing facilities in the vault as soon as possible.

NILGIRI NEERUGUNDI ESTATES COMPANY, LIMITED

Annual Report and Accounts for the year ended 30th June 1943:

Acreage.—The acreage of the properties is unchanged at:—

Coffee.		
Mature	622.06	acres
Tea.		
Mature	328.84	„
Reserve	462.28	„
Buildings etc.	12.07	„
Fuel clearing	8.68	„
	1,433.93	acres

	Rs.	A.	P.
Accounts.—Balance from last year ..	88,094	0	0
Less 15% Dividend on Ordinary Shares for 1941-42 paid on 21-12-1942	16,281	0	0
	71,813	0	0
Add—Net profit for 1942-43	1,86,103	0	0
	2,57,916	0	0
Less 7% Cumulative Preference Dividend for the year ended 30-6-1943 .. .. 10,500 0 0			
Transfer to Taxation Reserve .. 5,000 0 0			
„ „ Debenture Redemp-tion Reserve .. 50,000 0 0	65,500	0	0
Leaving a balance of	1,92,416	0	0
Out of which the Directors recommend payment of a dividend of 50%, free of Income-tax, on the Ordinary Shares absorbing ..	54,269	0	0
Leaving a balance of	1,38,147	0	0

which they propose to carry forward.

The net profit for the year, Rs. 1,86,103 against Rs. 46,954 last year, is satisfactory and is due to a bumper crop and the improved price of coffee.

A further sum of Rs. 50,000 has been transferred to Debenture Redemption Reserve bringing this up to Rs. 1,30,000.

Debentures.—During the year 80 Debentures were purchased leaving a balance of 1585 Debentures still to be redeemed. It is proposed to continue the purchase and redemption of Debentures as available. The first redemption of Debentures *at par* falls due in 1945.

Tea.—Export Rights have been sold as usual. All Internal Rights have been used and a further 31,990 lbs. purchased against a contract for the sale of Green Leaf. A total of 5,92,557 lbs. Green Leaf was sold realising Rs. 56,080-13-0 or 1.52 annas per lb.

The Company has allotted the following quota for 1942-43:—

Export ..	85.68%	1,55,247 lbs.
Internal ..	27%	48,922 „

The Internal Tea Sales Regulation Scheme has been abandoned as from 1st April, 1943.

The Company has been granted a provisional Export Quota of 50 per cent, or 9,597 lbs., for 1943-44.

Coffee—The Crop of Cwts. 2,823-3-0 was harvested at a cost of Rs. 15-14 per Cwt. f. o. b., and realised an average net price of Rs. 72.31 per Cwt. as compared to Rs. 43.28 per Cwt. in the previous year.

The estimated crop for 1943-44 is 60 tons and the estimated f. o. b. cost Rs. 57.71 per Cwt.

Managing Agents.—Messrs. Peirce, Leslie & Co., Ltd.

Authorised Capital—Rs. 3,10,000. *Issued and Subscribed—Rs.* 2,58,683 *in* 2,000, 7 *per cent Cum. Pref. of Rs.* 75 *each and* 54,269 *Ordy. of Rs.* 2 *each, both fully paid up.*

Synopsis of the Balance Sheet as at 30th June, 1943.

RAJAGIRI RUBBER & PRODUCE COMPANY, LIMITED

Audited accounts for the year ended 30th June, 1943:—

The nett profit for the year after providing for depreciation amounts to Rs. 2,19,611-3-8, which with the balance brought forward from last year amounts to Rs. 2,38,280-14-2. Out of this an interim dividend of 5 per cent amounting to Rs. 67,487-8-0 was paid on 20-12-1942 leaving a balance of Rs. 1,70,793-6-2, which the Directors recommend be disposed of as under:—

	Rs.	A.	P.
Payment of 7½% Final Dividend (making 12½% for the year)	1,01,250	0	0
Transfer to Staff Pension and Gratuity Fund	5,000	0	0
Transfer to General Reserve	30,000	0	0
Carry Forward	34,543	6	2
Total ..	1,70,793	6	2

Acreage: This is as under:—

Rubber in bearing (Budded) ..	877.35		
Rubber in bearing (Unbudded) ..	120.23		
Rubber not in bearing planted in 1940 (Budded)	52.42		
Rubber 1943 new planting (Budded) ..	100.00	1150.00	Acres
Cashew nut		103.00	„
Paddy		90.00	„
Reserve		102.36	„
Total ..		1445.36	Acres

Crop.—Against a crop of 5,00,000 lbs. at a cost of 18.89 cents estimated the actual crop harvested during the year was 4,57,005 lbs. at an F. O. B. cost of 20.73 cents per lb. The unusually heavy rains during the last quarter of the year prevented regular tapping during this period resulting in the shortfall in the estimated crop. The enhanced cost of materials, labour, foodstuffs, transport, etc., have put up the cost by 1.84 cents from that estimated.

Managing Agents.—Messrs. A. V. Thomas & Co., Ltd.

(*Continued from page* 1117)

said that peace risks have been more than fully provided for.

* * * *

As a result of the repayment of the 7 per cent debentures the amount at credit of the Debenture Sinking Fund for Rs. 10,32,204 has been released. With this sum the amount of goodwill for Rs. 5 lakhs has been completely written off and the balance transferred to General Reserve.

* * * *

Cawnpore Textiles Limited, for the same half-year,, has been able to report a further increase in earnings, the net profit, before providing for taxation and depreciation, being Rs. 28,70,616 against Rs. 25,26,773 for the previous six months. The provision for taxation is Rs. 21.5 lakhs against Rs. 18.25 lakhs. The charge on account of depreciation is unchanged at Rs. 1 lakh while the transfer to General Reserve is Rs. 2,49,686 against Rs. 3,98,901. The debenture sinking fund receives the usual allocation of Rs. 6,250. The ordinary dividend on the capital increased by the bonus issue is eight annas per share against ten annas per share. It will be remembered that early this year ordinary shareholders received one bonus share free for every ordinary share held. The present distribution of eight annas per share should therefore be considered an increase in the former dividend from annas 10 to Re. 1 per share. The return on the basis of the latest dividend works out to over 7.5 per cent tax-free.

Mysore Paper Mills Limited, has made very good progress in the year ended September 1943. The chairman's optimistic view of the prospects for 1942-43 at the last annual meeting has thus been more than justified. With the satsifactory working of the plant and the acute shortage of paper in the country there has been a large increase in sales and the net profit, before providing for taxation and depreciation, for the year is very much higher at Rs. 21,30,626 against Rs. 7,29,312 for 1941-42. The amount set aside for depreciation is Rs. 4 lakhs against Rs. 4,81,273. Full provision is also made for arrears of depreciation, Rs. 2,12,727 (nil). The provision for income tax and super tax is Rs. 5 lakhs (Rs. 92,000). The dividend on the ordinary shares is increased to ten annas per share from eight annas in 1941-42. A bonus of a like amount is also to be paid so that the total distribution for the year is 12½ percent against 5 per cent. The General Reserve receives Rs. 6 lakhs (nil) and the reserve for fluctuation in the value of raw material and stores Rs. 1 lakh (nil).

It will thus be seen that the amount needed for dividend purposes is only Rs. 3,12,500 out of the total earnings of over Rs. 21 lakhs. It is not surprising, therefore, that after the publication of the accounts there has been a sharp improvement in the quotation for the shares and there are not very many sellers even at the higher level of Rs. 30.

* * * *

Owing to the delay in the delivery of the plant and equipment for the Punjab Facotry, notwithstanding the utmost efforts, the *Alkali and Chemical Corporation of India Limited*, has not been able to report any substantial increase in the earnings for the year ended June, 1943. The accounts again relate to the working of the Calcutta Factory. The net profit for the year is even slightly lower at Rs. 4,73,153 against Rs. 4,96,823. The amount set aside to depreciation is Rs. 1,12,179 (Rs. 1,08,467); the provision for taxation is higher at Rs. 1,28,000 (Rs. 85,004). After the payment of the preference dividend the amount carried forward is higher at Rs. 2,66,059 against Rs. 1,88,085 brought in.

* * * *

Most of the plant and equipment of the Punjab Factory is now on site, but there are orders placed both in England and India still to be fulfilled and until they are completed, the Punjab Factory will not be able to start up. The starting-up party of technical specialists, employees of the Imperial Chemical Industries, England, the Company's technical advisors, have arrived in India and are assisting in the final stages of construction.

It does not appear, therefore, that the Company will derive any advantage from the Punjab Factory's working in respect of the current year. Even in 1944-45, difficulties relating to production in the early stage, would prevent the Company from taking full advantage of the situation. The ordinary dividend cannot therefore be expected to be paid before another two years.

* * * *

Hastings Mill Limited, has been working at a loss in the half-year ended August 1943, the loss in respect of revenue account being Rs. 67,449 against a net profit of Rs. 4,36,043 for the previous six months. The sum of Rs. 2 lakhs has been written back from taxation reserve. After providing Rs. 97,336 for depreciation the arrears of dividends on the preference shares for the half-year ended 31st August, 1941 is to be paid. The credit balance carried forward is lower at Rs. 1,02,139 against Rs. 1,77,139 brought in.

* * * *

The observations of Mr. D. N. Choudhri at the tenth annual meeting of the Bangasri Cotton Mills, Limited, point to the unusual prosperity promised by the war, and the management's sense of responsibility to workers and shareholders alike. The distribution on both preference and ordinary shares (16 per cent supported by an *ad interim* distribution of 3 per cent for 1943) will certainly be taken as a sign of earnings running at a satisfactory level at present. Factory extension is promised by the Chairman on the basis of capital available, and this should help to raise the complement of looms to 1,000. The non-forfeiture of shares for unpaid calls, and the decisoin to make available as much as possible to shareholders will certainly evoke satisfaction among shareholders who have been informed that the Company's chairman puts the shareholders' interests first.

WATCH-DOG.

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY CO. LTD.

NOTICE

The Twelfth Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House St., Calcutta, on Tuesday, the 21st day of December, 1943, at 3 P.M., for the following purposes:—

(1) To pass the Directors' Report and the audited Accounts for the year ended 31st March, 1943.
(2) To elect a Director in place of the retiring Director.
(3) To elect Auditors for the ensuing year, and to fix their remuneration.
(4) To transact any other business that may be brought forward.

The Share Register of the Company will be closed from 11th December 1943, to 21st December 1943, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
Managing Agents.

Calcutta, 3rd December, 1943.

Note:—In accordance with a Government of India Notification No. 1564—OR/42 dated 7th September 1942 the Directors' Report and the Accounts will not be published.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

WITH the money market in unseasonal affluence, with the interbank call money still quoting more or less nominal at half per cent in Calcutta and quarter per cent in Bombay with cash piling up in the hands of banks, and with central treasury bills limited to an offer of Rs. 6 crores per week while treasury bill maturities are larger, it is an opportunity for Provincial Governments to secure their full short-term requirements at comparatively favourable rates. In the last three weeks, the Governments of the United Provinces, Bengal and Assam have sold treasury bills for quite substantial amounts. The Bengal Government, for instance, asked for as much as Rs. 3 crores, and the Assam Government for Rs. 2 crores. The United Provinces, which secured Rs. 1½ crores at the end of November, are again inviting tenders for Rs. 1 crore on December 22. The deposits of member banks with the Reserve Bank approaching the Rs. 100 crore mark, the more provincial treasury bills, the more pleased the banks will be.

This is a factor which the Reserve Bank should make a careful note of. *Indian Finance* has, from the time the system of provincial treasury bills was inaugurated, been pleading for the disappearance of disparity in rates between central treasury bills and provincial treasury bills. In this context, we had quoted instances from the London market where municipal treasury bills had been placed at the same rates as the treasury bills of the British Government. The point to emphasise in this context is that, so far as visualising of the next three months is concerned, there can be no question of the credit of any provincial government being less than that of any other provincial government or less than that of the Central Government. It will be highly fanciful to suppose that any one particular provincial government will find itself in such financial difficulties in the course of the succeeding three months as to be unable to redeem the maturing bills. Where, then, is the justification for the still subsisting disparity between central treasury rates and the provincial treasury rates? We shall readily own that, in the last few months, this disparity has greatly narrowed down. This is a development in the right direction. We should like Mr. C. D. Deshmukh, Governor of the Reserve Bank, to make the start of his career memorable and auspicious by bringing about a complete disappearance of this disparity. The present disparity cannot be said to be inevitable or in the nature of things. If we may say so, it is a bank-made disparity. It is entirely within the power of the Reserve Bank to put an end to this bank-made disparity. If, in the beginning, the other banks are not prepared to co-operate, the Reserve Bank can itself take up the entire lot of the provincial treasury bills; and, if this is done in the case of two or three provincial governments, there need be no doubt that the banks will soon fall into line. This is a matter which we strongly commend to the notice of Mr. Deshmukh as we believe that the Reserve Bank will stand in more cordial relations with provincial governments after a friendly gesture of this kind.

Applications on December 14 for Rs. 6 crores of tender treasury bills came to Rs. 14.02 crores. The average rate of accepted tenders show a decline of 4 pies to annas eleven and pies eleven per cent per annum. The offer of tender bills for the next week is unchanged at Rs. 6 crores.

The returns of the Reserve Bank for the week ended December 10, disclose substantial and significant changes. Thanks to expansion of currency for Rs. 13 crores against sterling securities, active note circulation is higher by Rs. 11.20 crores at Rs. 815.62 crores. In the banking department, foreign balances are lower by Rs. 29.98 crores, of which Rs. 13 crores is accounted for by the increase in sterling securities held in the issue department. The remaining Rs. 17 crores is possibly connected with inter-governmental adjustments resulting in sale of sterling securities back to the British Government. This is also possibly responsible for the Central Government's deposits recording a sharp decrease of Rs. 27.71 crores. The deposits of provincial governments are lower by Rs. 1.33 crores, while the deposits of member banks are higher by Rs. 1.56 crores.

The statement of the Imperial Bank for the week ended December 10 shows deposits at Rs. 209.45 crores and cash at Rs. 57.33 crores. Bills at Rs. 4.05 crores are less by Rs. 1 crore, due to maturing of re-discounted treasury bills. Loans have risen from Rs. 13.19 crores to Rs. 15.71 crores. Cash credits are more or less unchanged.

This week's announcement of the Government's scheme of prize bonds recalls the suggestion advanced in these columns on August 21, when we wrote as follows:—

"We would also suggest a careful examination of the possibilities of the issue of premium bonds. Quite a considerable amount can be roped in by the offer of ½ per cent interest and by a reserve of 1 per cent for distribution as prizes. Premium bonds are not viewed with favour in conservative financial circles. But conservatism in finance is an anachronism today. The new monetary technique and the new monetary world justify the examination of the possibilities and prospects of premium bonds with an open mind".

That the Government of India have now put forward a scheme of prize bonds, is a sure sign and symbol of the official recognition of undue conservatism being an useless anachronism. The plan of the prize bonds has been worked out skilfully, and those who subscribe for the Rs. 10 bonds are assured of as many as 180 chances before the maturity of the bonds. It will be remembered that the sweep run by the Calcutta Race Club used to attrac tcolossal sums from all over the country and from foreign countries. In the case of the Calcutta Sweep, it was a question of handsome prizes for a dozen or

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, December 14, 1943. Total amount offered was Rs. 14,02,50,000. Tenders at Rs. 99-13-3 per cent were accepted in full and those at Rs. 99-13 per cent were allotted approximately 85 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-11-11 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, December 21, in Bombay upto 11 a.m. and upto the close of business on Monday, December 20 at other centres. Successful tenderers should make payment on Friday, December 24, or on Thursday, December 23, where Fridav. is a holiday. Other conditions are as usual.

During the week ended December 10, 1943, Government of India Treasury Bills for Rs. 1,34,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

U. P. TREASURY BILLS

Tenders for Rs. 1,00,00,000 of 3 months' U. P. Government Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta upto 11 a.m. on Wednesday, December 22.

Successful tenderers will be required to make payment and take up their bills on Friday, December 24.

Other conditions are as usual.

Finance Abroad

Thursday Evening.

From the Prime Minister's promise of work, food and homes for all, the British public has drifted into the discussion of the material effects of war on the standard of living and the national income. There was an Oxford pamphlet on the subject, but controversy has evidently continued and the *News Chronicle's* City Editor has affirmed that Britain will be poorer. More than two years ago Lord Keynes asked the British public not to worry about the loss caused by raids or the cost of reconstruction. But the public evidently refused to be comforted and the calculation of dis-investment, war damage and the destruction of shipping has begun. Mr. Oscar Hobson takes it that the last two items are equal to £400 millions and overseas disinvestment means a loss of £200 millions per year. But that may be set right by export revival. But export revival cannot proceed if reconstruction at home claims money and energy, and there is in the background the cost of new social security schemes. Professor Pigou in commenting on the Beveridge Plan argued that higher contributions for health insurance or plans would pile up the costs of manufacture, and competitive capacity would be lowered by the adoption of the plan of pensions and children's allowances.

Poverty itself might reduce efficiency and enhance costs and the creation of new sheltered industries might prejudice the expansion of world trade. Of course, Europe too would be poorer and compelled to accept relief. But that would be no great consolation when the U.S.A. has big plans to take over and a bigger share of sea and air traffic. This anxious pondering over prospects even before the war ends may be taken to mean that sterling would be weaker than before the war. But there is the assurance that rates ruling at present would be safeguarded by agreement. Perhaps, the prospect of poverty and the maintenance of controls is described rather early to insist on the retention of taxation at the wartime level. Investigations into British industry's resources and organisation may not yield any other conclusion than that wages should be adjusted after the war. During the war real wages in Britain have actually risen, and the familiar question may be asked as to wage policy after the war. It is true that borrowing has been successfully carried out at a low cost, and the rise in interest charges is small compared with the vast increase in debt after four years of war. But the discussion of losses, past and present, will raise questions as to what must be imported. A shrinkage in imports may be entailed by a drop in the national income, and Britain's position as the principal customer of the Empire countries may be altered by that single fact. The fear of poverty may raise no cry for reparations from one enemy to another, but it may well lead to a division of opinion as to what Britain can afford to pay out for relief of others. Rather early in the war Sir T. E. Gregory argued that Europe including Britain would be poorer on account of the war and the standard of living would fall. That harsh prophecy is certainly claiming general attention at present. Corrective influences certainly will not fail to emerge in time, and export industries, concentrated by Order, may find worthwhile opportunities when there is only one rival, handicapped by high costs to a greater extent.

If Britain is forced to devote more attention to shipbuilding and replacement of houses destroyed in the war, the chances are certainly in favour of industries abroad. This view will certainly lead to a radical modification of prevailing views as to the peace risks of industry in India and its ability to bear increased taxation. Whatever be the conclusion that may be officially reached, the stark fact of Britain's poverty may prove a great factor in British industry's ability to reach out to new markets. If the national income is lower, foreign assistance may be required for the restoration of assets and colonies regained may be subject to British control shared with other nations. All such considerations may warrant the assumption that Britain, eager for imports, may lower tariffs, give up Imperial preference, and liquidate obligations more slowly than presumed. But short-term creditors may find the whole discussion reassuring for the reason that Britain has begun to think of recovery earlier and is likely to make special efforts to build up the service to which others in the past looked in respect of insurance, loans and shipping. If world prices of all commodities are high after the war, the control of freight rates may prove unworkable, and Empire markets, practising import control by direction, may be called upon to relax. After the inclusion of the Belgian Congo in the sterling area, with the Congo's materials receiving Colonial preference, there may be no chance to refuse directions.

Manufacturers of internal combustion engines ask for cooperation in the Dominions and India in order to set up local plants or further local schemes of development. Having lost foreign subsidiaries, major British concerns may be eager to develop industries in the Empire itself. The export of men and machines is predicted, and local capital will probably play its due part in the erection of overseas plants. A cabled report as to a memorandum suggests that competition from the U.S.A. is to be met by erecting affiliates. While objections to cartels are general, one group of manufacturers wants to negotiate agreements with U.S. manufacturers, but the real difficulty may be as to controls to which U.K. manufacturers would be subject after the war, while their collaborators would probably not be faced with the same. If lease-lend survives the war, the U.S.A. may win more export markets. That is not a danger, in the common view, as the U.S.A. has spent over $15 millions for the purpose of helping its allies in 30 months. There have been talks in London as to these problems, and the chief participator, Mr. E. A. Johnston, is mentioned as a likely candidate for the U.S. Presidency in which case, many things can be left to the future without any concern over the shaping of policy between now and 1945.

The Chinese Stabilisation Board set up in 1941 before Japan entered the war has been dissolved, and foreign exchange dealings are not under the Government's control. Certain banks including the two British banks with branches in Chungking have been authorised to deal in foreign exchange. This implies no change in rates, and may be treated as a sign of less anxiety over the depreciation of the Chinese dollar which has been deserving important support for a long period from foreign credits. The leader of the Chinese goodwill mission stated in London on December 13, 1943 that capital and technical assistance are welcome to China. Following the abolition of extra territoriality China has decided to remove all restrictions relating to foreign investments. The way is now clear for full and equal partnership in the economic field. The Lord Mayor of London stated that the City would not be found wanting in cooperation when the time came. The assurance may support hope as to the primacy of Britain in the Chinese market after Japan is vanquished. There may be better openings for British shipping under a new treaty of navigation and the Chinese advance towards Hankow may support general optimism as to the future of British interests in the Orient.

No specific conclusions can be drawn from the last Bank return or a weekly cable referring to the allotment of treasury bills and the moderate tightness in the credit position. The latter may explain the drop in the Funds this week as well as Friday last. The feature (based naturally on General Smuts' calculations as to the duration of the war) is the rise in textile shares. Peace rather than war shares have firmed up as before. The resignation of Iran's cabinet has not lowered the price of Anglo-Iranian stock but has led to a small rise since the reason for the resignation has been given in advance. There is little change in the list of cabled quotations, but the difference between the London price for Barnagore Jute and the quotation in Calcutta will not be overlooked because the sterling quotation for Indian Iron is almost the same as the rupee price from day to day.

The steady decline in local gold prices may be regarded as the consequence of confident assurances as to the course of the war, the second front, ahd Allied determination to break both Germany and Japan. There has been a sharp drop in rates and the men who bought gold made available by South Africa or some other country would find that they have a depreciating investment. A fall in bullion may be a sign of successful counter-inflationary activity but the questions asked as to the nature and purpose of gold sales acquire additional significance. If prices are back to the 1942 level in spite of intermittent fears, as to air raids, the theory as to the falling rupee is undermined and this may create the psychological change wanted by those who have followed price movements in the war.

Imports and Inflation

The Federation of Indian Chambers of Commerce has done well to enter a formal protest against the Government's decision to increase imports of various kinds of consumer's goods regardless of their bearings on the wider aspects of our general economic policy. The Federation has based its protest not only on sound considerations of the national good, but also on the assurances which the Government have in the past given to Indian industry both implicitly and explicitly. The telegraphic account of the memorandum is probably a summary of it. But even the summary suffices to bring out the force of the argument. The Federation rightly argues that, if shipping which was not available for import of machinery urgently needed in the country or even for the vital necessity of food in a grave crisis should be suddenly found for the importation of various categories of consumer's goods, the action of the Government must necessarily be suspect in the eyes of the public. Suspicion gains strength when some of the goods are in competition with the products of newly established Indian industries. Electric fans and drugs are industries which can grow into maturity in the conditions of the war period, while the production of bicycles is in the field of industry a war baby. The imports of such goods must be preceded by careful precautions against all possible adverse effects on the indigenous industries concerned. It would appear that not only is this not the case, but there is the danger of imported bicycles being marketed at less than the price at which they are marketed in the country of production. That, it is admitted on all hands, is of the essence of dumping; and there can be little hesitation in affording the assurance which is demanded that no such dumping will be practised.

Quite apart from this danger of dumping, the policy of the Government in resorting to increased import of consumer's goods raises issues which affect not only the threatened industries, but also the stability of the national economy at present and its capacity for progress in the future. Ostensibly, the purpose of these imports is to increase the volume of purchasable goods in the country. And the increase is expected, in the first place, to overcome the reluctance of food-growers to part with their grain by providing them more of the good things of the earth and secondly, to reduce the pressure of inflation on prices. The Food Policy Committee presided over by Sir Theodore Gregory took the view that the food-grower cannot be expected to sell his produce to the Government when all that he can get for it in return is a paper currency with which there is little or nothing to buy. The Committee, therefore, recommended an increased supply of consumer's goods. The official mind is so incapable of thinking in terms of increased indigenous production, that imports are regarded as the only means of augmenting the supply of consumer's goods. But a little thought would have shown that the goods which are needed by the agriculturist and which the masses in this country will care for have long ceased to be imported from abroad. For the average cultivator, food, clothing and oil for lighting purposes cover almost his entire domestic budget, and none of these items offers any scope for increase through imports. The goods that are now to be imported in larger quantities are not the goods of mass consumption. They either cater to the needs of the higher classes or threaten the growth of young Indian industries. Imports of whisky, coming as they do after denial of adequate measure of shipping space for food in a crisis, must cause feelings of utmost embitterment in the popular mind, while imports of bicycles coming in the same sequence must cause grave resentment among industrialists. But whatever may be the reactions of various sections of the population, the fact remains that these imports will not achieve their avowed purpose, that they cast the stigma of hollowness on Government's pleas of shortage of shipping and that they deprive Government's assurances to industry of a great deal of their value. We should be surprised if any agriculturist were to sell his produce to the Government more cheerfully, or in larger quantities, in order that he may buy more of razor blades or smack his lips over some old vintage. On the other hand, more of sugar or of cotton cloth might be an inducement. The chance of rebuilding or expanding his little house or of effecting some lasting improvement in his farm may be relied on to persuade him to sell as much of his crop as he can. But razor blades and bicycles cannot help food to move from upcountry. In these circumstances, the new policy will seem in the eyes of the public not only to hamper the richer classes and favour foreign producers, but also to be directed against some of our new industries.

The Government's action has also to be considered in relation to the need to check the effects of inflation. It is necessary to ask ourselves, how far the imports of these articles may be depended upon to divert purchasing power from goods which experience the most of the present inflationary pressure. There is here an initial difficulty in that no quantitative estimates of the proposed imports are available. But such estimates are not necessary for making note of the fact that these goods meet the needs of a small fraction of the total population. The trouble about inflation, as it is being effected in India today, is that the increased money incomes are more or less concentrated in certain small sections of the population, while the rise in prices of necessaries of life and in conventional luxuries must be attributed more to the scarcity relatively to demand and less to the monetary factor. To tackle inflation from the goods end, as distinct from the money end, one must think in terms of the various economic classes and income groups comprising the whole population. It will then be clear that none of the measures which first find favour with the Government is at all likely to effect any appreciable reduction of the inflationary pressure on prices. Take the instance of gold sales. one of the objects of which is to draw away redundant money and relieve inflation. As we pointed out sometime ago, gold may be desired by the cultivators, but it is hardly a want in the sense in which the economist understands it. The money that flows into gold is to a large extent money that would have lain idle in the banks or, more likely, in hidden hoards. Likewise, the purchase of bicycles and fans and drugs cannot alleviate the pressure on food, clothing and the necessaries of life. From the point of view of the effects of inflation on the economic life of the country, the control of prices of cotton cloth and foodstuffs is a far worthier achievement than gold sales or increased imports. But price control is no solution of the problem of inflation. It is, at best, a palliative whose potency may any moment prove inadequate to meet the severity of the malady. Success in price control is always insecure when the system of control has to function in conditions of rank, unbridled inflation.

It is not a little significant that the remedy now suggested for inflation is the exact opposite of the right one. Considering that the rise in prices is due to the combined pressure of increased note issue and scarcity of goods relatively to demand, one must seek the remedy in the increase of capital investment and in increased indigenous production. By importing goods which threaten new industries, the Government seem almost to challenge the public to suggest a worse remedy. By denying shipping space alike to capital goods and to food in conditions of famine, they lend new strength to old suspicions. No one, who is free from prejudices of long standing, will doubt for a moment that the solution of inflation is to be sought, on the one hand, in stopping the springs of additional currency, and on the other, in increasing why, multiplying, many times the indigenous output of goods of current consumption. As "Eavesdropper" pointed out in his gossip a few weeks ago, the stage has been reached when routine methods of thought and action will be grossly inadequate and when attempts must be made to help India to grow to a much higher volume of currency circulation than the pre-war level. New methods of financing foreign government expenditure and a plan to increase the output of Indian agriculture and industry can alone take us out of the morass in which wartime inflation has landed us. And for this, we can ill afford to wait for the end of the war. Post-war economic reconstruction must in reality begin from now.

Security and Reforms

Territorial changes effected in the last two year. ..ake it clear to some that security is more important than constitutional reform in India. If the C-in-C's review of two years of war with Japan indicates that the Japanese threat of invasion has been rolled back, it is fairly obvious that the deadlock, without compromising the defence of India, has made the Indo-British partnership an illusion. It is to produce that reality that a constitutional declaration is sought. But the constitutional declaration in the view of Sir G. Schuster should avoid the question of internal structure and take into account only the question of creating a satisfactory framework of security in south-east Asia. Since little has been heard after March of the projected Council of Asia, there may be no little scepticism as to the intention to confer equality. But an external guarantee of empire is hardly likely, and Britain has been asked by Sir G. Schuster to provide a declaration that would prepare the conditions for constitutional development. It may be easy to pick holes in the argument outlined to the East India Association, but the general influence of the Indian view of the future of S.E. Asia stands out. If freedom in the region from the Bay of Bengal to the China Sea is viewed as the fruit of efficiency in defence, then the freedom must be derived from India's own security. The argument developed by Sardar Panikkar in his recent book from the reiterated promise of Dominion Status is that India must be prepared for advance. The grant of equality to the Dutch Indies by Queen Wilhelmina's proclamation has made undilute colonialism impossible. Sardar Panikkar has urged 'that the post-war policy in regard to South-east Asia has to be based on the freedom of colonial peoples, no doubt in different degrees, on the development of a non-colonial and balanced internal economy and on a collective security in which all Powers directly concerned share in responsibility'.

It is for the sharing of such responsibility immediately that Britain is asked to make a different approach to the Indian problem. There is to be a declaration defining India's responsibility for defence. Industrial development on the basis of India's own plans and desires is to follow in the shape of a ten-year programme. It may be remarked here that the plan is not meant to advance the Eastern Group or any group but merely India's own interests at the head of the Indian Ocean. Defence is the over-riding consideration today and the prospect of assuming responsibility for Further India need not deter one from working out a doctrine. Economic recovery in Japanese-Occupied territory is contingent on India's industrial development. India is likely to import rice after the war and may offer a limited market for sugar. But the war is certain to have taken away markets for tin, rubber and all Eastern produce, and the colonies may look to India rather than to Europe. If India is not likely to develop into a federation but into two unitary Dominions, tied by compact, there will be problems of security in the north-west and the north-east. A very powerful Russia and a renascent China, with territory enlarged by the war, will make full development of resources in relation to manpower—a logical necessity. Of that Sir George Schuster is probably convinced. Development is regarded as essential in Britain's own interests. The British stake in Indian industry is larger than believed and industrialisation is required in the future by the desire for a higher standard of living. A joint defence commission, independent of parties and politics in India has been advocated for the adjustment of interests as between Hindustan and Pakistan with Britain, of course, co-operating.

It is the scheme of co-operation in advance of peace that is recommended by Sir George Schuster who thinks that constitutional reform can be justifiably delayed if a practical programme making India jointly responsible for defence and foreign policy is drawn up. In the planning of industry for defence and in technical direction outside help will be required; but Sir George Schuster does not assign the same importance to the partition of India as to the development of industry. This welcome shift of emphasis will not be missed by those who hope to read the full text of the address to the East India Association. Perhaps the desire for development, according to national inclination, may be due to experience of the Ottawa experiment. Professor Hancock summing up experience has argued recently that the British Dominions have moved away from the doctrine of Ottawa which dwelt on Imperial self-sufficiency towards a new view of world inter-dependence at the same time as admitting the validity of each other's national protectionist systems. Since all effort must be directed towards 'the frontier of human welfare' (the phrase is Mr. Sumner Welles') the choice must be one of both international co-operation and national planning because it is not a choice of either autarky or "laissez faire". The means as well as the end has been prescribed by Sir George Schuster while leaving constitutional arrangements to the future presumably on the basis of local option. The fulfilment of the promises made in the Atlantic Charter are desired by Mr. Amery, and one issue has been settled in advance of the new programme. But the translation of the promise into actuality is dependent on autonomous Defence, and it is in this context that industrial development acquires vast significance. A single strategic unit—that is the Indian Ocean which Mr. Amery hoped would be dominated by India more than the African territories. Agreement as to the ten-years' programme is less the concern of official reconstructionists than of political leaders in India. A declaration from an India, able and willing to defend South-east Asia, as to the acceptance of responsibility may be the postscript to the Cripps' declaration. It may be more because it will give the argument for unity decisive importance. Perhaps the delay in outlining His Majesty's Government's intentions springs from a desire to let Indians decide what is to be done after victory in the Far East. It has been explained that except for oil, India wants little of the colonies awaiting liberation. The growth of local industry there will not be a challenge to the industrial system, while economic development in the colonies may well favour exports of Indian manufactures. If the war has disturbed trends (which were barely emerging in 1942), there are admittedly questions as to how the defence of Burma will be shouldered by India no less than China. Burma's oil is vital for India's defence and Indian settlers in Burma require safeguards which would depend ultimately on the degree of protection arising from proximity. Such conditions as may be imposed by defence, may create a free trade zone in South-east Asia—a co-prosperity sphere for India, in fact—because Indian capital as well as goods would be required in Burma and beyond.

The only substantial difference between the solution put forth by Sardar Panikkar and that of Sir George Schuster seems to lie in the former's assumption that India, in the event of British withdrawal from South-east Asia, would be forced to join either Russia or China and make Britain's position as a World Power untenable. The latter definitely ignores the possibility and lays greater stress on the sum of British achievement in India. If Sir George has not dwelt on the potentialities of South-east Asia but only on the opportunity created by the war for India, it is but just to recognise that Holland's decision to create a united kingdom on the basis of Indonesian equality has been described as the finite reversal of the old order. A political transformation in the East Indies may well make the colonial system worse than brittle and India's own interests in South-east Asia would find support. Since the Council for Asia has not come into being and the European advisory commission has its own problems to define and solve, the idea of creating a framework of security in the form of treaties between India and other countries is undeniably attractive. The treaties would limit alien interests in South-east Asia, and create also the conditions favouring an expansionist economy in India. If rehabilitation of the Japanese-occupied area claims more energy and expense than may be available, India only can further the work by taking more from South-east Asia and giving as much as possible in return, apart from assuming responsibilities for defence. To both Sir George and Sardar Panikkar the cardinal aspect is defence. If industry in the war period has not made adequate progress industry must be driven forward on the basis of large markets abroad. Whether British or other competition will be mitigated by such plans as have been described by Sir George is hardly a question demanding an answer at present. Admittedly defence outlay by itself should support industrial expansion and obviate the need for large-scale demobilisation of resources and equipment. Planning for self-sufficiency in defence may help the deconcentration of industry or relocation of enterprise but these are only parts of the plan which Sir George views as India's contribution to a continuous partnership with Britain.

INDIAN TEA LICENSING COMMITTEE

EXPORT QUOTA 1944-45

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, as amended, Tea Estates desiring to be allotted an export quota for the year 1st April 1944 to 31st March, 1945 are required to submit an application for such which must be filed with the INDIAN TEA LICENSING COMMITTEE not later than the 1st of Feb. 1944. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

W. D. BRYDEN,
Assistant Secretary.

(Continued from page 1147)

so and blank for thousands of others. In the case of the prize bonds now announced by the Government, there is no blank for anybody as each bond-holder will get his Rs. 10 back in 1949. Thus, the alternatives are a substantial prize every six months for five years or Rs. 10 back. Thus planned, if properly executed with the correct technique in propaganda and salesmanship, the prize bonds should certainly succeed in drawing considerable money, particularly from the lower and upper middle classes. This is a section of the population so far untouched by the anti-inflationary measures hitherto taken. For heaven's sake, let the propaganda to be devised for the prize bonds be entrusted to people who know Indian psychology and who have a knowledge of the economic reactions of the man in the street.

While we consider that the scheme of prize bonds is apt to prove valuable as an anti-inflationary measure, we are not so sure about the merits of the present policy of sales of gold in this regard. No official informatoin has been vouchsafed as to the source from which this gold has been secured. At the same time, we must admit that Sir Jeremy Raisman was quite right when he pleaded inability in public interest to satisfy the curiosity of the Assembly. Considering, however, that there has been a more or less simultaneous sale of gold under official auspices in Egypt, Persia and India, some guesswork is possible both with regard to the source of supply and the purpose of sale. In all these countries, inflation in a fairly disturbing style has been rampant. In all these countries, the Allied Governments have had to finance considerable commitments. In all these countries, the prevalent inflation has been causing concern not only to the domestic population but to the Allied Governments. It will, therefore, be in the interest of the Allied Governments to bring inflation under control. It is quite possible that the Allied Governments believe in the partial efficacy of gold sales as an anti-inflationary measure. From this point of view, we are inclined to infer that the sales of gold now being effected by the Reserve Bank are on the account of the Allied Governments. According to this interpretation, the full benefit of the high price at which gold is being sold goes to the Allied Governments. It is true that sale of gold by the Reserve Bank has effectively arrested the giddy flight of the price of gold; and that a substantial decline in the price of gold has followed these sales. The price at which the Reserve Bank started to sell gold Was Rs. 77½. This week's price is, we believe, Rs. 72. Meantime, the price of gold shot up following the enemy raid on Madras. It is quite possible that further raids of the enemy on Calcutta or any part of India may cause temporary spurts in the price of gold and thus negative the effect of the Reserve Bank's sales of gold. All the same, there are reasons to believe that the Reserve Bank is pursuing this policy with determination, strength, resources and the assurance born of the success that has attended this policy so far. We, therefore, think that the next few weeks should see a fairly drastic shake-out in the gold market. It is in the best interest of India that such a shake-out should take place.

We hope to discuss the present and prospective position of gold in the next issue of *Indian Finance;* but we may, in advance, indicate some of the conclusions that recent developments have led us to.

(1) Unless the war takes an unexpectedly unfavourable turn, the days of high price for gold are left behind;

(2) On the other hand, with war news definitely favourable and with the likelihood of even more favourable news in the coming months, the price of gold must steadily decline;

(3) This process must be helped greatly by the supplies which have been made available to the Reserve Bank by the Allied Governments for sale of gold in India;

(4) Whatever may be the status of gold in the postwar monetary plans, there can be no doubt that the rupee price of gold cannot be far higher than the price prevalent on the eve of the war in 1939; that is to say, the conclusion of peace must see gold back to far lower level than the present level;

(5) Those who are now buying gold must realise that they are buying in a declining market and with the more or less certain prospect of the present investment suffering serious shrinkage in rupee value at the end of the war;

(6) We, therefore, consider it an important task of the popular press in India to carry out a well-informed campaign advising the public of the true facts of the gold position warning them against buying gold at present prices except for such imperative social requirements as cannot be put off;

(7) Those who have bought gold in recent months for hoarding purposes and those who have surplus gold in their hands will be well advised to sell off all their gold at present prices as the future outlook of gold is definitely towards lower prices.

We have also to add that a good part of the purchases from the Reserve Bank has been by speculators. There is demand, no doubt, in provinces like the Punjab and the United Provinces where much profit has been made from war contracts. At the same time, there are definite signs that the mofussil, generally speaking, is selling gold rather than buying gold.

The exchange market has been steady, with some business on both sides of the account.

Banks are sellers of T.T. at 1s. 5 31|32d., for London Ready to six months forward.

Editorial Notes

Poverty and Kindred Problems

If there is little that is fresh about the treatment of our economic problem Professor P. A. Wadia and Mr. K. T. Merchant in their new book "Our Economic Problem" (published by the New Book Company, Bombay, Rs. 6-8) are fully conscious of India's main economic advantages and handicaps. They prefer planning for various reasons and are anxious for immediate and complete development of resources. There have been pleas for a solution on corporative lines along with conservation of institutions and practice instead of treading the new road of socialism. But those pleas are hardly echoed in the volume of Professor P. A. Wadia who likes to make the investigations of the National Planning Committee the starting-point for all advance. If the material provided in the work is similar to that available in all text books used in Indian colleges, it does not pay any attention to finance, private or public, and devotes itself mainly to an analysis of production and consumption. But the account of both is full and clear, and the new kind of book which deals with the real, original causes of shortages of all kinds is meant to create an interest in causes as well as consequences. In the 529 pages will be found a summary of the many blue books that call for notice in every book on Indian economics but the authors' real concern is with the instability of the whole economic structure. But a further growth of India's population is anticipated, and this alone makes the economic problem, admittedly one of development and re-organisation, both important and urgent.

While the description of existing resources and difficulties is full and accurate, the precise measures required are not described in detail with the same objectivity. That may be no defect in a book meant for students, but adult citizens anxious to know the reasons for scarcity will certainly find the comparative statistics rather poor nutriment. It is certainly not without significance that agriculture rather than fiscal policy claims most attention since the events of 1942-43 have made the soil the subject of diligent enquiry. The problem of low outturn is not due to external factors but is the real heart of the agricultural problem here and all measures following the food conference of April 6, 1942 are largely concerned with making India self-sufficient. There has recently been discussion of agricultural prices and profits and more than one suggestion has been made in favour of reforms of the land system so as to make peasant proprietorship the rule. The problems of Indian labour are discussed mainly with a view to indicate that the position is unsatisfactory. The appropriate remedies are indicated, but the authors are not wholly confident that average efficiency can be raised. But they have no doubt as to the value of future industrial development while agricultural progress is provided for by various methods. Because the one certain cure for poverty is employment, and additional employment can come only from industry. This reflects the fully popular view as to industry, but the question as to control is answered in the arguments against what is called finance capital. The pinknes of average academic opinion certainly colours much that is said, and the conclusions reached may not be generally endorsed. Yet Prof. A. P. Wadia and Mr. Merchant are entitled to thanks for a careful appraisal of trends and possibilities. Their concern with welfare rather than wealth bears direct witness to the influence of radical thinkers who have always insisted that life must be made more worth while for the many.

Progress in Plastics

The future of plastics is being decided in consultation with the industry in Britain and the progress made in the war period is expected to help plastics preserve their position. The anticipated shortage of most materials is expected to help plastics, and manufacturers, describing the resources and machinery available, are expected to help the controller to outline the position in the export field. A big increase in demand is foreseen and a recent survey of progress in plastics dwelt on the adaptability of plastics to new and varied uses. In the motor industry experiments have shown that plastics can be used for brake linings, generator and ignition parts, steering wheels, laminated gears, instrument panels and pump shafts. An improvement is a self-lubricating plastic which having been treated with a compound during manufacture has a permanently lubricated surface making possible a non-squeaking motorcar. Office furniture and business machines offer a wide field for plastics, for the main desire today is to cut down the weight of portable machines. Though the future is described as illimitable, plastics have certain limitations owing to the fact that the same resistance to heat and cold and acids etc. is not present in all plastics, and experiments have been carried out to ascertain what are the right uses for plastics. Since the peace will bring a revival of building activity, plastics are sure to find a place and prefabrication is expected to help the plastics manufacturer as well as the builder. Household appliances like refrigerators are expected to provide new uses for plastics, and already as many as 20 parts in American refrigerators are made of plastics. Changes in respect of window frames and bathroom fittings are expected to create fresh scope for plastics.

Laminated plastics are expected to be the material of the furniture manufacturer. Coloured materials are expected to have a big appeal and kitchen shelves etc. made of plastics are deemed certain. In the war, plastics once used for a number of familiar articles like ashtrays and telephones has taken the place of metals, and aircraft constructors may claim that plastics owes much to their encouragement. It has been said that a plane made wholly of plastics is possible if manufacturers took impregnated plywood and a synthetic resin. German planes have been known to contain parts made of plastics. The main purpose of using plastics is to save metals like brass and aluminium. In aircraft manufacture alone, the place of plastics or rather plastics with wood is assured. Simple plywood veneered with plastic materials

and bonded together under great pressure and heat by means of resin impregnation has definitely arrived. Propellers are made of laminated wood and blades for fans, motor coachwork, and jigs and tools made of a laminated wood have been made because they are found strong, light, non-corrosive and able to resist changes in temperature. As laminated wood is six times lighter than steel, it found its way into many workshops and woodworkers have regained employment through the adaptation of wood. Among wartime inventions based on plastics is the all-moulded vaporiser meant for producing anaesthetics which has made it unnecessary to carry metal cylinders. Supplied in a cabinet, it is said to weigh only 20 lbs., and the apparatus has proved its value in the theatres of war. Lord Nuffield is known to have donated 2000 sets to the Services.

Frost and Crops

Mr. H. B. Singh of the Delhi Institute of Agricultural Research has described the effects of frost on certain crops. Frost is common in Northern India, though in certain years it is not severe enough to cause any appreciable damage to crops. Agricultural officers in Poona and elsewhere have investigated the effects of frost. In the cold wave of January 1942 when the Delhi Institute recorded a temperature of 28.3F. degrees there was ice on local vegetation. The occasion was utilised to examine plants to frost. A few days after the frost it was noted that the foliage and succulent parts of frost-bitten plants had withered and turned brown. A peculiar feature of the damage was that it was patchy. Similar irregularity was noticed in the case of fruit trees and ornamental plants. This may be probably ascribed to the direction of the cold wave on frosty nights. Those plants which happened to be in the vicinity of windbreaks, such as buildings, trees and tall hedges, showed little or no injury. Nevertheless, it was noticed that certain plants, annuals as well as perennials, even though they were exposed to frost, resisted the frost in all localities. It is generally held that frost cases less damage to irrigated than it does to non-irrigated crops. A field of tobacco at the Institute which was irrigated just one day before the frost was, however, as severely damaged as another irrigated a fortnight earlier. It may be that when frost is heavy, deficit is the same irrespective of the frost. There was no long spell of cold before the frost, so that plants were not hardened previously. The results tabulated show that barley and oats showed less susceptibility to frost than wheat. Lentil was more resistant than other pulses and mustard alone was more resistant than other oilseeds. Of vegetables the onion and garlic were unaffected like cauliflower and cabbage while the potato, too, survived the frost. Citrus trees showed real resistance. Mr. Singh summarising the results points to the fact that sugarcane and chillies suffered like early wheat. Fruit trees other than citrus trees were severely damaged. Most flowering plants stood up well to frost but economic crops showed damage of some degree or other. In 1930 an agricultural officer computed the loss to tobacco growers in Bombay from frost in January 1929 at Rs. 150 per acre. Mr. Singh gives no estimates of cash losses, but he records the fact of damage in most cases, and confirms the

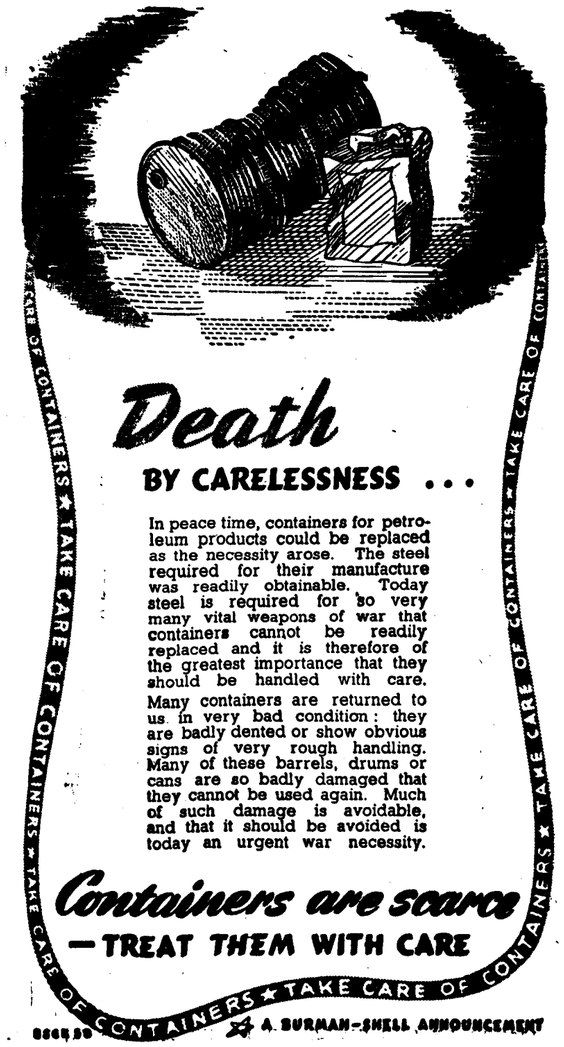
conclusions of other observers on the effect of frost which is an enemy of the farmer in temperate zones.

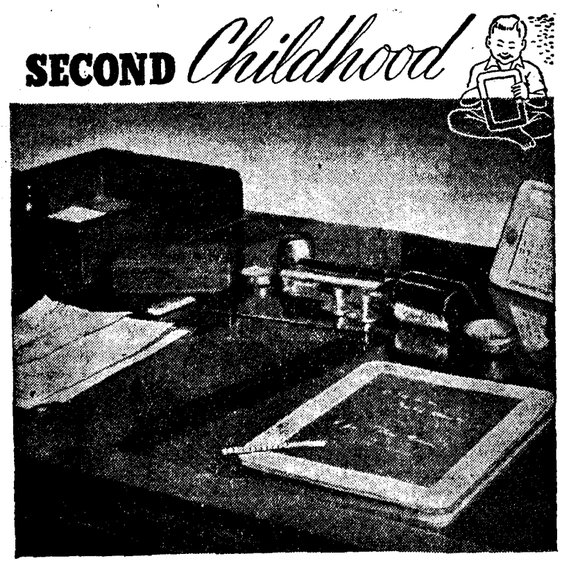
Jute for Ropes



The U.S.A. is asked to blend fibres for making cords and rope. The Indian Central Jute Committee's November Bulletin quotes an American source to indicate that fibre conservation as well as increased production demand the admixture of fibres. It is to be noted that the U.S. cordage industry itself has asked the Government to frame rules. It was proposed that standards be set up and two grades of blends established. One grade of sisal blend would contain istle and sisal tow. Experiments have suggested that the blend is satisfactory. The second grade of blend is sisal and jute or American hemp combined. Enough jute is available (said the Cordage Magazine in June) and hemp also is availble in small quantities. A greatly increased quantity of hemp is anticipated in 1944 after the 1943 crop is harvested and processed. Other methods suggested for increasing the supply of materials for rope-making in the U.S.A. including fabrication of Congo jute (and a soft fibre) on hard fibre machinery. There is some of the type of jute available; it was announced, and additional production could be realised, provided the mills had labour. Other methods suggested for increasing rope supplies, include the manufacture of rope made of raffia and rope made of coir yarn. The U.S.A. is said to have completed arrangements for the import of Mexican istle and other fibres so that both the cordage and brush industries would receive an adequate share of the suitable fibre. Suggestions have been made favouring the use of istle in the place of more critical fibres. Sisal cordage is subject to a Control Order but civilians can get small quantities for their use. Official instructions were issued to dealers to clear up doubts created by the order issued in March 1943. Dealers with stocks acquired before September 1942 are free to sell sisal cordage to civilian consumers without soliciting permission. The shortage of rope-making stuffs explains the manila hemp programme of the Raw Materials Board. New planting of Abaca is planned in Central America and up to July 3 there had been planting in many Republics besides Panama which has provided manila hemp for U.S. consumers according to Mr. W. L. Batt who said that quality was satisfactory. The United Fruit Co. is taking a hand in the plan to develop Central American fibres. But Mr. Batt confessed that 28 000 acres under manila hemp would give less than half the average pre-war imports and there would remain for the duration a shortage of hard fibres. This implies that blending, calling for the use of Indian jute, is logical and necessary, and the cordage industry's increased demand may well become permanent.

Food Facts

Certain figures given by Mr. B. R. Sen in the Council of State last month shows how vast are the deficits dealt with by the food procurement plans. The deficit declared by Travancore and Cochin was 517,000 tons of grain. Under the original plan, the States were allotted a quota of 473,000 tons. They received 143,000 tons up to July 15. The quota was revised as the available surplus declared by the Provinces was smaller, and Travancore-Cochin qualified for 79,000 tons, subsequently raised to 116,000 tons. Despatches of grain up to the end of October totalled 460,000 tons. Supplies for ten months ended October amounted to 190,000 tons against the declared deficit of 517,000 tons. Exports then have been short of their requirements. But the two States are to get more out of the kharif crop as the quota fixed is 133,000 tons against 120,000 tons for Bombay and 137,000 tons for Bengal. The two States are to receive more than the allotted quantity, as the estimate is 166,000 tons and there will be an allotment of wheat from imports.



It was said that import of 50,000 tons of wheat next year would not be an overestimate. There is also the possibility of Tranvancore and Cochin getting the shortfall in allotment up to October and obtaining a bigger allotment of the kharif crop but the total estimated exports of 246,000 tons will be well below the declared deficit. The figures etc. are likely to be revised in April and the whole business of supplies to deficit areas will be organised in May.

Mr. Sen gave also figures as to Army requirements. The Food Member has done it before, but the share of 2 millions in the total available supply must be noted. The Defence Services require 500,000 tons of wheat and 150,000 tons of rice equal to 1.2 per cent only of grains produced in India. Defence purchases are made through the usual agency and the same ceiling prices apply to military purchases as to civil. As in the case of purchases for deficit areas, the purchases for Defence Services are made in surplus areas only. The Gregory Committee's opinion as to the reserve held for the services was quoted to support the view that actual reserved are below the authorised reserve. Vegetable growing plans in the U. P. were described. The aim is to get 17,587 tons of vegetables for dehydration in two Government factories and many private factories. The dehydrated vegetables and meat (imported) are expected to leave more supplies for

the public.. Mr. Sen claimed that the Gregory Committee's recommendations in regard to prohibition of exports and arrangement with His Majesty's Government for imports, have gone into effect. Mention was made of the establishment of a central foodgrain reserve—the establishment of a shortage depot at Karachi. The Government is using river and road transport for the movement of foodgrains in Bengal and is discussing the question of setting up an advisory panel as well as the improvement in the form and administration of the Foodgrains Control Order. The adoption of rationing in many places was described and Mr. Sen stated that rationing is in force in Cochin, Travancore, Indore, Bhopal, Gwalior, Jumagadh, Dewas (Sr.) Bajna, Cutch, Rajkot and Vithalgarh States. Mysore intends to introduce rationing in both urban and rural areas. Of the Centrally administered areas, Quetta-Pishin is a rationed area and the administered areas of Bangalore City and C. & M. Station and Ajmer-Merwara. Mr. Sen declared that it is the intention of the Government of India to introduce rationing in Delhi City in the near future.

SECOND *Childhood*

Hard to believe, that this middle-aged executive has resuscitated his childhood friend—the slate !

Instead of simple sums, it now carries notes of telephone conversations, figures, and appointments. It saves daily paper of ten times its own surface.

Follow this lead back to second childhood—help to save paper—for essential uses only.

Revise all your stationery, forms and statements. You can save over 25% of the paper surface you are now using.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :—

- **Use the smallest sheet of paper for any purpose that will do the job.**
- **Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.**
- **Do not make copies except where absolutely necessary.**
- **Always type single spacing.**
- **In all cases (letters, commercial printing jobs and pamphlets. etc.) curtail margins.**
- **Reduce the size of labels on manufactured goods.**
- **Use the back of the letters received for the carbon copy of your replies.**

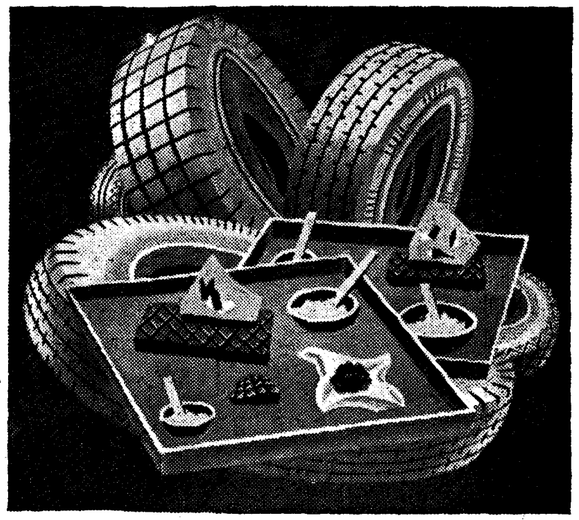
Cement Sans Sacks

An extract from a British journal appearing in the Indian Concrete Journal describes a new way of carrying cement without bags. In the eight months ended May, the Ministry of Works delivered 210,000 tons of cement for 34 jobs of aerodrome construction saving 400 tons of paper and much labour. Bulk handling displaced the jute sack used in place of paper and the Ministry of Works, unable to obtain plant for handling cement in bulk, started to use lorries equipped with steel tank-bodies. It was decided to put in a light steel body to remain permanently on the chassis and give up the idea of return loads. Special doors to obtain a fast but controlled discharge were prepared for the lorries. A receiving shed with brick bins holding 30 tons of cement was set up for shortage and there was a continuous flow from the bin to the concrete mixer. The lorry carried unloading chutes to be hooked to the doors, and the system led to the emptying of a lorry load in twenty minutes by four men. A change was made so that the lorry was run up a ramp and the cement went straight into the cement mixer. Valves were fitted to the tailboards of the lorry. Railway trucks sheeted and made cement-tight were also procured to carry cement. The steel wagon made for the carrying of chemical products was adapted to carry cement, and lorries were loaded straightaway by shovel from the railhead to which 50-ton trucks carried cement. The experiment described suggets that cement like grain can go from elevators and jute bags quite readily displaced if they are not available. The bulk transport was primarily enforced by the desire for speed so that it is not as though the idea is going to receive very extensive support when sacks or packing paper can be had for the public knows cement is dealt with in 1 cwt. bags.

The Chinese View

Apart from the Cairo Conference having procured for China a promise of all territories lost to Japan in the past, it produced an assurance of counter-offensives. The direct result of the talks between Mr. Roosevelt, Mr. Churchill and Marshal Chiang was a spectacular rise in Chinese bonds according to a Central News despatch. Following the announcement of the Conference Bonds of 1912 rose by 5½ points and Bonds of 1913 by 2½ points. The mark-up is attributed to the buyer's conviction that restoration of huge territories and other forms of restitution promised to China would bring greater prosperity to her in the post-war period. The China Information bulletin has quoted the Chinese Press' judgment of the Cairo Conference. The Central Daily News concludes that independence of Korea, restoration of the occupied territories to China, and the emancipation of the islands in the South Pacific and Mid-Pacific constitute the most important and concrete guarantee for peace and security in the Pacific and the Asiatic Continent. The Ta Kung Pao reviewing the results calls the decisions as outlining the most open-minded and rigorous policy for the disposal of Japan and the Far Eastern issue. The paper declared that in addition to the islands and territory mentioned in the declaration, Japan should be forced to return the Liukiu Islands and South Sakhalin to the U.S.S.R. The Ta Kung Pao said that Japan's territorial aggrandisement began with her annexation of the Liukiu Islands in 1879. These islands were formerly a Chinese dependency. Geographically, they constitute a springboard from Japan proper to Formosa and Fukien. Japan must be forced to disgorge them before peace in the Pacific could be safeguarded. The expression such as Manchuria, Formosa and the Pescadores in the Cairo declaration should include the Liukiu Islands, argued the paper. The Liukiu Islands, 55 in number, are generally included in Japan proper. The total area is said to be 921 square miles equal to 0.35 per cent of the full of Japan proper. It may be noted from the Chinese paper's comments that the Cairo Conference did not at all seek to unsettle the territorial arrangements following the Treaty of Portsmouth 1905. Other papers approved the declaration as an assurance of equal success in the Far East.



Preparing for 1944

The Republicans have evidently failed to secure a constitutional amendment to prohibit the President from standing again. But they have nearly succeeded in preserving the States' right to determine the franchise for soldiers. The plea for a uniform voting system for soldiers was turned down by the Senate, and the soldier's vote is expected to be unimportant in the 1944 elections. Though the conventions are a long way off, the discussion as to the Candidates has begun. The possibility of General Mac-Arthur standing as a Republican is enhanced by Mr. Stimson's ruling. Governor Stassen's name is also mentioned, and one other Governor, Mr. Bricker of Ohio has been fancied for some time. The latest name among the possibles is that of Mr. Eric Johnston who visited London this year to discuss postwar problems with chiefs of British industry and trade. Mr. Willkie's own chances are assessed moderately at present, for New York's Governor is strongly favoured by the party machine. Labour's now-diminished importance may not be the effect of the anti-strike law. But Mr. Willkie has begun his campaign in the Middle West starting from St. Louis and the election is rightly described as a strictly domestic affair for the U.S.A. Though Mr. Willkie's views as to postwar collaboration make him acceptable to foreigners, the analysts of U. S. news favour Mr. Dewey because he made the grade in the election for the Governorship of the most important State in the Union, The Governor must be in office for 4 years which perhaps explains Mr. Dewey's disclaimer that he will not be a candidate.

Republican divisions or indecision as to the most likely candidate may be said to improve Mr. Roosevelt's chances, but the certainty of a hostile Congress in 1945 must be reckoned with. Wall Street's own view as to the outcome of the 1944 contest is admittedly reflected in the moderate improvement recorded after the Administration's reverses dating from the spring. The Republicans, if they win, may not interfere with the trade pact programme or the plan to help the world on to its feet. Mr. Eric A. Johnston is certainly known to have views as to the U. S. tariff being a barrier to broad trade revival and if he figures as the 'compromise' candidate, of 1944 there is perhaps greater prospects of collaboration between U. S. and British manufacturers in regard to the allocation of markets etc. So it may be said that without exerting any influence on the electors or the elected, Britain has every chance of getting her own way. Since the inter-Allied trade and exchange arrangements must stand Congressional scrutiny at some stage in

(*Continued on page 1159*)

MEASURED TREAD

RUBBER is today a munition of war as well as a domestic necessity. It is as much an essential for air force or mechanised army as petrol, but no less than 90 per cent. of the world's supply of natural rubber is grown in countries now in Japanese hands. If the war effort of the United Nations is not to suffer, there must be the strictest economy in every use of rubber, from motor tyres to hot-water bottles. Old rubber must be collected as systematically as old iron. While we use our motor-car tyres carefully and send those worn hose-pipes to the salvage collector, we can be sure that the chemical industry is also working to help solve the rubber problem. First, the organic branch of the industry is engaged on the discovery, improvement and production of chemicals designed to improve the quality and lengthen the useful life of rubber. Secondly, the chemical industry is concentrated on developing the manufacture of synthetic rubbers of different types from common raw materials such as coal and oil. The Necessity of War will be the Mother of Invention. Research in the laboratory will enable chemical workers to produce a variety of synthetic rubbers, each having properties suited for one or more specific uses. May not the future of rubber lie in the laboratory and the factory as much as in the plantation ?

ICI

No. 4 in the "Services of an Industry" series issued by

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

THE FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

he future the election is very important n spite of the general belief that the uestion of collaboration after the war as been disposed off by the Connally esolution and the Executive's decision aken at one capital or another.' It is of ourse possible that Allied Victory before he election may put all relations wrong ut the odds are still against early victory n the East.

Russia's New Ally

The Czech-Soviet treaty signed on December 13, 1943 is the first of the treaties signed by the governments in exile specifically for post-war collaboration. The informal ban in London on all negotiations did not prevent Dr. Benes from negotiating a treaty meant to prevent German expansion at the expense of Slav peoples. The Czech National Socialist has accepted the Soviet view as to Europe. The way is thus open for Poland too, to negotiate, for Czechoslovakia's readiness to proceed beyond the Moscow declaration, affirming the independence of Austria, may influence the Polish National Committee. The fact that Czechs, the majority of whom are Roman Catholics, are ready to co-operate with Russia against the possible danger from Germany, may have an effect on Poland.

(Continued on page 1169)

TRACTOR OR TANK ?

What is the ultimate destiny of this glowing plate, wending its way through the multiple processes required of flawless steel?

Will it in time emerge to the world as a tank, conserving water in a torrid desert; will it go into the making of a tractor to till the fertile soil of the Gangetic Valley?

Whatever be its final mission, it will contribute to the growth of indigenous industry now, and in the days to come.

Always, everywhere **STEEL** *for strength*

CHAMPAGNES, WINES AND SCOTCH WHISKY ALWAYS AVAILABLE

That the U.S.A. is not feeling too easy or sure about the post-war world is what the average man in every country could easily guess. But whether the uneasiness is widely felt or whether it can lead to concrete results is a different question. And one cannot answer it without more knowledge of conditions in the States. One thing, however, is certain, that this time, the feeling will make itself felt both in the attitude of the public and in the foreign policy of the Government. To the foreigner, especially if he does not belong to any of the Western nations, it is difficult to understand how a nation which has borne the brunt of two world wars should find it so difficult to make up its mind about its role in peacetime: secondly, why America should suffer from any diffidence in her ability to secure a better world order. The two questions are to some extent interrelated. Diffidence in one's ability is often bound up with doubts about one's role. If the U. S. is late every time in coming into the world fray, the delay has in it the seeds of a hasty retreat from the responsibilities of peace. If America is not quite certain why she entered a world war, she cannot possibly be clear about the peace she should secure. But there are limits to monotonous repetition in the dialect of world events; and an American relapse into isolationism becomes impossible, the moment its consequences are seen to be worse than those of intervention. One need not follow American developments very closely to be able to say that, by the time this war draws to a close, America will have turned its back on isolationism.

* * * *

But that hardly means that the U. S. will have made up her mind about what to do with the world which she will have done the most to conquer for civilization. Internationalism is any day less positive and more hazy as foreign policy than isolationism. In party controversies, the latter has all the advantage of intelligibility on its side, and the battle against it has been won not by either of the great parties, but by the logic of events. But it still remains to give form and content to interventionism, so far as peace and peacetime are concerned. When American opinion is still uncertain about the real cause of the U. S. entry, it is too much to expect a clarification of peace aims.

* * * *

What is happening in the States, judging by the trickle of cables about press comments, is that the national mind is exercising itself on both the causes of the war and its aims. This exercise has results not all of which are pleasant to foreigners. Those, who find no satisfactory reason for American entry, have to attribute the event to British diplomacy and feel embittered. Others, who look on America as a crusader feel that she has little chance of wresting the Holy Land from the hands of the infidel, whosoever he may be only the other day, Mr. Heast was led to say that "Mr. Churchill ought to be content with getting us into the war." Mr. Demaree Bess has said probably in a mood of bitter disillusionment, that America is in the war, not to create a better world, but because she sees a threat to herself in the German and Japanese bid for Empire. Apart from the opinions of individuals, the inchoate mind of the U. S. is seen in the terms on which lease-lend aid is provided to anti-Facist countries. It is not true that there is no thought of quid pro quo. Nor is reciprocal lease-lend thought to be adequate recompense. America is content to leave the question open. All the time, many of her leaders of thought, inclusive of Mr. Willkie, are urging a frank and full acceptance of America's responsibility for the future of the world. Mr. Willkie once said "After this war, Berlin or Washington will be the capital of the world. I want it to be Washington." He has been writing in the same vein ever since.

* * * *

In this wide and hazy generalisation, the future of India is one of the few questions that have been placed with some clarity before the American public. Writers of the eminence of Pearl Buck, Edgar Snow and Louis Fischer have been carrying on a powerful, gratituous propaganda for the Congress, a propaganda which it will probably be part of the duties of Sir Srinivasa Sarma and Mr. H. G. Misra to combat. The advocacy of Indian freedom was based in the initial stages on America's devotion to democracy. Later, it was put forward as a necessary condition of success in the war against Japan. There are signs now that America will look on India as part of South East Asia, which will need to be reorganised, if a third in this series of world wars is to be avoided. But however presented, the Indian problem has not gripped American interest. In fact, none of the non-military problems of the war has yet been fully appraised or appreciated. The transition from isolationism to interventionism, outside the war, seems to have a phase of somnambulism.

* * * *

It is well that the U. S. has started looking seriously into her position vis-a-vis war and peace. The alternative to serious enquiry is prejudice or propaganda. If America fails to explain to herself her intervention in the two world wars, she has to believe one of two things, either that she has gone forth as a crusader for democracy or as the protector of her Anglo-Saxons across the Atlantic, or that she has been fooled into interventiion every time by astute British diplomacy. Neither belief is good for America or for the rest of the world. It is unfair both to Britain and the U.S.A. that the one should appear as a cheat and the other as a dupe. And as for crusade or kinship, it is all moonshine. Altruism is an idea which selfish man conceived of as the opposite of his true self. At any rate, the utmost that man in society is capable of is what is called enlightened self-interest. America's role in world politics can be understood or cast only in terms of such enlightened self-interest.

* * * *

One notable gain of recent months is that it is this view which is increasingly adopted. American altruism towards Europe is as much dead as its opposite, namely, isolationism. Gone is all that old talk of the new world redressing the wrongs of the old. There is an outburst of realism which recognises that the Munroe Doctrine was not a manifestation of the isolationist spirit; that it succeeded mainly because of implicit British backing, that there has been for nearly a century an Anglo-American alliance in the Atlantic; and that once the states stretch themselves to the two joint oceans, the Pacific will need safeguards as much as the Atlantic. These facts are slowly filtering into the national consciousness, even as in the past they had shaped the foreign policy of the U.S.A. The last war is now seen to be the result of the Atlantic Pact, which was an implicit understanding between the two great Anglo-Saxon nations resting on their common interest in the protection of the Atlantic from domination by any other power. Mutual suspicion and bickerings had but a short run. When Prussian militarism developed into oceanic ambitions, the U.S.A. instinctively drew closer to Britain, and consolidated all her outposts on the Atlantic seaboard generally and the Caribbean Sea in particular. The concord of Anglo-Japanese interests till recently and the fact that Japan was on the side of the Allies in the last war did not prevent America from an instinctive protection of her position in the Pacific. Isolationism, which was being fed by defaults on war debts and the growing confusion on the continent did not prevent the U.S.A. from planning for a two-ocean navy and preparing for global, instead of merely hemispherical, responsibilities. The whole trend, however, had naturally to take time to work itself out. A huge continent had to be settled in by a comparatively small colonial population and a thin stream of immigrants before their sense of possession of the whole of the New World or the consciousness of their interests in the two great oceans could be

clarified or strengthened. American history is but a recent and short chapter in the long story of the human race; and its interpretation in terms of facts as distinct from fantasies has taken time. Now America knows, as she did not till a few years ago why she found herself in the last war and why she is up to the neck in this.

* * * *

What, it may however be asked, does this somewhat materialistic interpretation of American history lead to? Does it suggest that the U.S.A. is no different from other nations so far as world wars are concerned, that she was indeed served right by the defaulters of war debts in the last war, that lease-lend is a case of making a virtue of necessity and that on the whole the moral authority of the U.S.A. is no higher than that of Britain now or France after the last war? Such a line of thought, I believe, does indeed occur to many minds in the States. I deduce it from the stuttering tones in which American leaders ask for the freedom of India, from the calmness with which Mr. Roosevelt acquiesced in Mr. Churchill's interpretation of the Atlantic Charter and in the defiant assertions of Mr. Churchill that he will not preside over the liquidation of the British Empire. Even France, fallen as she is, tried the game of the high hand in Lebanon and gave in to Britain rather than the U. S. The reaction from exaggerated notions of American altruism is now being definitely overdone.

* * * * *

It is a pity that American ideas of her place in the war should swing from one extreme to another. If it is not true that the U. S. entered the war in a purely missionary spirit, neither is it correct to say that she has no greater moral authority than France or Britain. The uniqueness of the U.S.A.'s position in the first world war and this lies in the obvious difference between her political and economic interests and those of Britain or France or Holland or even, for the matter of that, Soviet Russia or China. China and Russia are engaged in beating back a foreign invader who succeeded in occupying considerable parts of their territory at the first attempt. For Britain, France and Holland, large colonial possessions are at stake; and in the case of the last two, they are now in the deadly grip of the invader. No such thing can be said of the U.S.A. whose security is threatened only in the long view. Absence of immediate and obvious interest in the war is sufficient by itself to render the position of the U.S.A. unique. But to this has to be added the fact, that American economy has little to gain by exploiting foreign countries, in the bad sense of the term and, what is even more important, has little to lose by exploiting, in the good sense, the economy of the backward areas of the world or by helping to establish a balanced economy in other countries. In other words, not only has the U. S. no axe to grind, but she can afford to help others to whet all their implements of honest work. If the prime motive of entry into the war is self-interest, her subsequent actions are not determined by cold calculations of selfish gain. She has proferred help to one and all with a prodigal hand without no stipulations about return. It is not only disinterestedness, but also large-scale and alround benefactions that entitle her to a large voice in the ordering of the postwar world. And in ending the war, as in entering it, there is for the U.S.A. an appreciable self-interest. For whoever may call the Marxian tune, it is Uncle Sam that will have to pay the piper. There is thus at every stage that happy blend of self and general interest, which is the true foundation of constructive social work, not the blind missionary zeal which has no knowledge either of self or of non-self.

* * * *

But the question still remains: Is the U.S.A. conscious of its great purpose and its great opportunities? It is perhaps too soon to answer it. As I said, there is a general unrest in the national mind. It has shaken off the cramping disillusionment about Wilson's Fourteen Points. It has rejected the unctuous cant about America pouring her blood and treasure for other people's benefit. It is aware that Hitler and Tojo imply an infinitely greater threat than Kaiser Wilhelm. In this awareness it is prone to fight shy of possible sources of difference among the Allied powers. Neither the communism of Stalin nor the intransigent and obstreperous imperialism of Mr. Churchill quite sticks in American throats. And American accommodativeness and keeness to win the war as quickly as possible have almost obliterated all distinctions between donor and donee. Official policy lacks firmness in the support of good causes. And when it is unable to throw links to idealism, realism inevitably opens the door to cynicism. That probably is the present mood in America, both among the public and in the Administration. Political idealism is fitful and raises its head only where little or no resistance is apprehended. In the economic sphere, there is sentimental allegiance to food for all, cold planning for a Stabilisation Fund and acquiescence in the disingenuous plans of the British for bolstering up their export trade. The great problems of world economy, as affecting the welfare of the peoples or the prospects of peace in the future are yet to be posed before the American public or grasped by the American Administration. Only the leaders of thought now and then permit themselves to express their bitter sense of frustration. But it is impossible that the U.S.A. does not rise before the end of the war to as keen a realisation of her role in peace as in war.

* * * *

In the list of donors to the Bengal Relief Fund, the name of Imperial Chemical Industries (India) responsible for a gift of Rs. 50,000 stands out. This formal gift has been followed up by a donation of £5,000 to the Viceroy's Central Indian Relief Fund from the parent firm which forwarded the sum through the High Commissioner for India. The scale of gifts is in the proportion to the standing and resources of both I.C.I. and its associate. Monetary gifts of this order may mean much or little, but the real importance lies in the concern for the people's welfare. It has been freely accepted that European big business has grasped the nature and extent of the food crisis and, giving early and late, they have made it clear that India is with them more than a country to make their pile in. The export of capital for charity certainly receives its sanction in the opportunity, but many should remember that Indian famines have never passed without notice in the City whose tradition has been upheld by I.C.I. at Home and in India.

DEPARTMENT OF SUPPLY

DIRECTORATE-GENERAL OF MUNITIONS PRODUCTION

The attention of all importers of engineer stores is drawn to the Control Order which has been published under Supply Department. Notification No. 1351 dated the 26th November, 1943, in the Gazette of India dated the 11th December, 1943.

In exercise of the powers vested in him under the Control Order, the Director-General of Munitions Production has authorized the following officers to be the Controller for the various items noted against each of them:

1. THE DIRECTOR OF ELECTRICAL ENGINEERING,

8, Esplanade East, Calcutta.

Item No. 1 of the Schedule to the Control Order.

Electric Motors, Generators and Generating Sets with Prime Movers of any type or design A.C. or D.C. and irrespective of speed or type of enclosure, together with any associated Conrtol Gear.

Item No. 2 of the Schedule to the Control Order.

Electric Cables, Insulated Wires, Flexible Cords and Winding Wires.

Item No. 3 of the Schedule to the Control Order.

Fans, Ceiling, Table and Exhaust.

Item No. 7(b) of the Schedule to the Control Order.

Portable Electric Tools.

Item No. 10 of the Schedule to the Control Order.

Electric Lamps of any type voltage and wattage.

Item No. 14 of the Schedule to the Control Order.

Wireless Valves of all types.

2. THE DIRECTOR OF CIVIL ENGINEERING,

8/1, Esplanade East, Calcutta.

Item No. 4 of the Schedule to the Control Order.

Anti-friction Bearings of all types.

Item No. 7(a) of the Schedule to the Control Order.

Pneumatic Tools.

Item No. 13 of the Schedule to the Control Order.

Compressors.

Compressors, air or gas, portable or stationary, but not being imported as an integral part of any spray painting, refrigerating or air conditioning equipment or as a component part of any engine.

3. THE DIRECTOR OF CIVIL ARMAMENTS PRODUCTION (TOOLS),

6, Esplanade East, Calcutta.

Item No. 5 of the Schedule to the Control Order.

METAL WORKING TOOLS.

(a) High Speed Steel Hacksaw Blades.
(b) Other Steel Hacksaw Blades.
(c) High Speed Steel Twist Drills.
(d) Carbon Steel Twist Drills.
(e) Milling, Slotting and Engraving Cutters.
(f) Reamers.
(g) Slitting Saws.
(h) Saw Inserts and Segments of all sizes, Circular Metal Cutting Saws and Metal Cutting Bandsaws.
(i) Taps.
(j) Hand Dies.
(k) Hand Chasers.
(l) Stocks and Dies.
(m) Machine Chasers.
(n) Machine Dies.
(o) High Speed Steel Solid Tools, Tipped Tools and Tips.
(p) Tungsten Carbide Solid Tools, Tipped Tools and Tips.
(q) Shear Blades.

Item No. 11 of the Schedule to the Control Order.

HAND TOOLS.

(a) Blades, *Hacksaw.*
(b) Cutters, glass.
(c) Dressers, Emery Wheel.
(d) Expanders, tube.
(e) Files.
(f) Rasps.
(g) Pliers and Nippers.

Item No. 12 of the Schedule to the Control Order.

Grinding Wheels and Segments.

(a) GRINDING WHEELS,
(i) Straight sided.
(ii) Taper sided.
(iii) Cylinder Shaped.
(iv) Straight Cup Shaped.
(v) Taper Cup Shaped.
(vi) Saucer Shaped.

(b) GRINDING SEGMENTS USED ON THE FOLLOWING MACHINES.

(vi) Vernier Gear tooth Gauges.
(vii) Slip or Block Gauges and accessories.
(viii) Dial Gauges.
(ix) Vee-blocks.

(b) WORKSHOP TOOLS.
(i) Calipers—External.
(ii) Calipers—Internal.
(iii) Dividers.
(iv) Parallels.
(v) Rules—Steel.
(vi) Rules—Boxwood.
(vii) Measuring Tapes—Steel or Fabric.
(viii) Punches.

4. THE DEPUTY DIRECTOR (WELDING & PRESS WORK),

6, Esplanade East, Calcutta.

Item No. 6 of the Schedule to the Control Order.

(a) Electrodes for electric welding.
(b) Ferrous and non-ferrous welding rods for Oxy-acetylene welding.

5. THE DIRECTOR OF ENGINEERING (STRUCTURAL & MECHANICAL)

9, Esplanade East, Calcutta.

Item No. 9 of the Schedule to the Control Order.

Washers and Screws.

SCREWS.

(a) Woodscrews of iron, brass, steel bronze or any other metal or alloy.
(b) Screws (Machine, Set, Coach, Roofing, Plate, Band, Gallery, Cock, Tile, Grub and Cap) of Iron, Brass, Steel, bronze or any other metal or alloy.

WASHERS.

(a) Spring Washers, any number of coils and any cross section.
(b) Lock Washers any type.

6. THE DIRECTOR OF SAWMILLS, WOODWARE AND SAWMILLS DIRECTORATE, DIRECTORATE-GENERAL OF SUPPLY

New Delhi.

Item No. 11 of the Schedule to the Control Order.

HAND TOOLS.

(g) Saws, Carpenters.

Item No. 15(a) of the Schedule to the Control Order.

Wood Working Tools.

CUTTERS.

(i) Planning Knives.
(ii) Tenon Cutters.
(iii) Shoulder Cutters.
(iv) Mould Cutters.
(v) Solid Cutters.

Item No. 15(b) of the Schedule to the Control Order.

Mortise Cutters (Power Driven).
(i) Internal Augers.
(ii) Hollow Chisels.

Item No. 15(c) of the Schedule to the Control Order.

Saws.

(1) Circular Saws.
(a) Ripping.
(b) Cross-cut.
(c) Hollow Ground.
(2) Band Saws.
(3) Machine Frame Saws.
(4) Web Saws.
(5) Cross Cut Saws.
(6) Pit Saws.
(7) Saw files.

7. THE DIRECTOR OF METALS,

Esplanade Mansions, Esplanade East, Calcutta.

Item No. 8 of the Schedule to the Control Order.

Plumbago and Canborandum Crucibles and *Components.*

(a) Crucibles—all types and sizes.
(b) Stands.
(c) Rings.
(d) Covers.
(e) Spout Covers and Spout Pieces.
(f) Brazing Pans.
(g) Chlorine Crucibles and Chlorine Tubes.
(h) Muffles.
(i) Stirrers.
(j) Special refractory linings.

Importers of these items are advised to get in touch immediately with the respective Controllers.

They are hereby informed that any returns which they may have been submitting to the Director General, Munitions Production, American and Panel imports Directorate, 7/8, Ezra Mansions, Calcutta, under the standing Demand for Information served on them will be accepted as sufficient return under clause 5(b) of the Order. Items which are not covered by the returns under the standing Demand for Information will, however, need to be *specifically* declared as and when they arrive.

It should be noted, however, that complete stock returns are required for all items falling under clause 5(a) of the Control Order. It has been decided to make an exception in the following cases only:—

Items 1, 2, 5, 11 [(a) to (f) and (h)] and 12 of the Schedule to the Control Order.

Particular attention is drawn to the fact that with effect from the date on which the Control Order comes into force, no sales of items covered by the Control Order may be made by any importer whether before or after the arrival of the goods in this country except with the approval of the Controller concerned.

S. A. VENKATARAMAN,
Joint Secretary to the Govt. of India.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, Decr. 15.

THE main attraction is still cricket for the fans who are crowding at the gates of the Brabourne Stadium to see their favourites knock up a century or two. The Chiristians presented a purse to their best batsmen last week. One may think that Captain Melvyn Douglas stole the show away last week when youngsters went for the Metro star to get his autograph. It seems that Mr. Douglas is going to see many places and study the things he wants. A columnist found Mr. Douglas' visit copy before other people learnt of it. Racing is not a serious rival to cricket and the threat of a higher tax on the bets laid may displace the sport in the estimation of the public. The inter-provincial matches are on as soon as the Pentangular was finished and a new star has been found in K. M. Rangnekar. It is strange that communal cricket should be revived when the inter-provincial tournament is being played regularly, but organisers are satisfied with the daily take, and big cricket does seem to pay well. But cricket does not attract the politician so much as Mr. Rajagopalachari's pamphlet. The views put forth have been commended by the Times of India which evidently wants that Cripps offer should be revived by a straight request from the Indian side. The exercise of untrammelled judgment may not be easy for either Congressmen or for Muslim Leaguers. The Karachi session may review the situation, and stick to neutrality at any price. Agreement in India as to a reasonable settlement is required because the deadlock is regarded as damaging. What the official reaction is to such arguments cannot be determined, and Sir Homi Mehta, who crossed swords with Mr. Rajagopalachari may indicate once again that the public must disown the Congress before Congress disowns the August resolution and takes to a formula accepting the Cripps proposals with the reservation of defence.

Politics was thrown into the shade by the Red Cross appeal launched last week. There is an appeal for funds required next year and a strong committee has been set up to get ready for the week (January 30 to February 5). The Indian Red Cross looks for Rs. 3 crores and the money has to be raised because the good work is still expanding and the appeal is for Rs. 35 lakhs in place of Rs. 10 lakhs wanted in 1943 (when Sir Ness Wadia helped to get Rs. 30 lakhs) and money for the Provincial Red Cross as well. Bombay is called upon to raise Rs. 60 lakhs. The War Gifts Fund was, and is, the chief source, but more is wanted of the public. Sir Homi Mehta said that the people of Bombay must live up to their reputation of supporting all good causes. The Governor gave the estimates of reserves and sums required and described what is being done by the Central and Provincial organisations. The districts have been asked to help through the Collectors and racing may yield as usual money for the biggest organised charity for the Services and the prisoners of war who cannot be forgotten even if the Japanese are not at all responsive.

A notification of the Textile Commissioner draws attention to the fact that ceiling or retail prices will be stamped on mill goods and yarn price lists are to be prepared this month and the maximum prices of certain goods manufactured by well-known mills have been notified. Dhoties made by E. D. Sassoon mills 44 x 10-2 yards are to sell at Rs. 5-3 per pair and Finlay's bleached mercerised dobby b. dhoty 50 inches x 9 yards at Rs. 11-11 per pair. For Standard Mill dhoties 50 x 8 yards the price fixed is Rs. 9-2 per pair. The prices mentioned are the maximum retail prices. Prices for voiles and *poplins,* coating and shirting fabrics, coloured and white have also been notified to consumers who have been asked to take note of current prices. There must be a direct connection between this notice fixing prices from December 1, 1943 and the easier condition in the cloth market here. The despatch of standard cloth has made distant markets none to keen and transport difficulties also retard off-take. Unstamped goods are sure to go into consumption by some arrangement but export demand is slow. Rates have declined and the market is rather nervous after Leopard cloth quoted Rs. 2-1-6 or less. Since the cotton market firmed up, there is no question of raw material getting cheaper for the mills increased consumption of Indian cotton in 1942-43 warrants confidence as to the future of cotton prices. Since foodgrain prices are not likely to go down, there is perhaps justification for cotton being up.

The Bombay Uganda Trading Company is the creation of the Brothers Parikh who started business in 1918. With a capital of Rs. 50,000 they began as exporters of raw wool to Liverpool. The connection with Uganda began when African cotton found its way into the Indian mills. A number of gins were acquired in Uganda and the Parikhs began to import Egyptian growths as well. So they have helped the textile manufacturers to improve production. The acquisition of the Bombay-Uganda Company belongs to 1929 when it was taken over from Brady & Company because it was losing steadily. In five years the new agents got rid of the debit balance. Entering the cotton trade in a big way came in the wake of expansion in Africa. Parikhs' interests extend to Calcutta where the shipments of baled jute is their chief concern. The two mills controlled by the firm have regained prosperity after a long spell of depression. The Jupiter and Jaya Bharat Mills in Ahmedabad make goods for the export market and also for the shops controlled by the firm. A new departure is the Jaya Bharat Insurance Company with a large capital Parikh and Company have embarked on the manufacture of plywood in the south with a capital of Rs. 2 million. The silver jubilee celebrations at the Canna Institute last Friday received the support of Seth Mahatlal Gagalbhai who presided on the occasion when a silver casket was presented by the staff to the founders.

Industrial progress in Hyderabad received due recognition in the Mulki Exhibition arranged in the Public Gardens. The Nizam expressed interest in the growth of cottage industries and asked for measures to safeguard the interests of workers. Development of hydro-electric projects is favoured by the Nizam who spoke also of the need to win outside markets for manufactures. There was an address dealing with further development under the auspices of the Postwar Reconstruction Department. Many industrial concerns have been set up despite difficulties and their growth encourages the belief that more would be started. The E.P.T. Bill of July providing for 40 percent tax and 20 percent deposit for 3½ years has occasioned some anxiety, removed only recently by a notification promising relief in special cases and exemption for one half-year and modifying the rate to 30 per cent tax in some cases. Half payment only is required for 1 year and the tax payable is for 2½ years only.

Other places are badly off for coal, but Bombay's industries run on electricity. The city lamps go out at 10 p.m. because of gas rationing. Since exports to Ceylon continue by permission not all Indian coal is reserved for the home market. Somebody has written off the peril from thieves in the dark nights. The Labour Member when he was here said that the output would be increased by special measures, higher wages to miners, more goods, and more foods, too, to attract labour. A cess for labour welfare has been proposed and women labourers have been brought back. It has been explained that women are wanted only for carrying coal in baskets and if women take to the least dangerous forms of work, the miners' earnings will be higher. Relief in regard to stores has been promised but the mining companies have difficulties. Mines are wasting assets and E.P.T. seems a little harsh. Some adjustment of the tax burden is favoured and the Times of India spoke recently of mineowners not taking a selfish view at a time of national emergency but it is incumbent on the Finance Department of the Government of India to ease the situation for them.

The Commerce Member spoke last week of economic strain in India. He visited a local mill and opened a new shed for looms raising the total by 132 to 2,133 when he complimented the managing agents who had taken over the Sassoon interests. Rai Bahadur R. P. Bagla greeted the Commerce Member and spoke of the firm's desire to speed up production following the tradition, set up by Sir V. Sassoon and Sir Fred Stones.

KARACHI *(By Mail)*.

Karachi's war on social evils is in full swing. Public attention is concentrated on the proceedings being published in the local press of the special tribunal appointed by the Government of India to enquire into cases of alleged corruption in military contracts. The tribunal which consists of Rao Bahadur Din Dayal Dhawan, Lt.-Col. Clarke and Khan Bahadur Riyasat Ali Khan, began its examination of the Karachi cases early this week and the prosecution counsel, Mr. Clough, a barrister from Calcutta, has just concluded his address.

There are 12 accused including a director of Messrs. Herman and Mohatta, an engineer and an accountant of the same firm, two partners of the construction concern, Govind Moti Company, and some sub-divisional officers and overseers of the Military Engineering Service. The prosecution case is that there were seven contracts relating to the construction of military works in Karachi and its suburbs. Having had information of the prevalence of corruption regarding contracts, the Government of India appointed a special staff in Karachi to detect the alleged offences. In February 1942 the offices of Govind Moti was raided and certain documents were seized. These, it was alleged, contained particulars of payments of bribes to certain military engineering staff. It was also alleged that evidence was forthcoming that the timber used in certain construction was inferior to that contracted for.

Mr. Clough in the course of his address said that practically every employee of the M.E.S., in the Karachi area, top to bottom, connected with supervision of the contracted work was in receipt of illicit payments from the contractors. There are altogether 56 witnesses to be examined in one case alone. Major G. E. Swyne-Thomas, Garrison Engineer, C.R.E., Sind District, was the first witness examined, and the case is proceeding.

The other subject regarding social evils is the crop of prosecution cases launched under the provision of the ordinance against profiteering and hoarding. The Government of Sind, as a result of the visit to Karachi of Mr. C. C. Desai, Director-General of Civil Supplies, in the Government of India, have appointed a special officer to enforce the provisions and assist the central authorities. It is understood that the Government of India have passed orders asking dealers to show selling prices on articles for sale on the lines suggested by Mr. Desai. Mr. Evans of the Indian Police who is the enforcement officer, is now examining a pile of cash memos, forwarded by customers, to detect cases of profiteering. Collectors and district magistrates have been invested with powers to act similarly in districts, and although belated, these measures are bound to bring down prices of essential goods and curb profiteering and hoarding.

Notwithstanding the reported threat of resignation, the Government of India are reported to have refused to withdraw the directions issued to the Government of Sind under Sec. 126-A of the Government of India Act in the matter of price control. It is understood that the Viceroy is determined to enforce an all-India food policy adopted at the last food conference to the decisions of which the Sind Government was a party. It is interesting to recall that the Sind Premier, the Hon'ble Sir Ghulam Hussain Hidayatallah, strongly supported rationing and price control at the last session of the League Council. As for the Punjab, despite its claim of sticking to its guns, Punjab wheat is now selling in the neighbourhood of Rs. 10 per maund without price control and the ceiling price there is expected to be fixed at Rs. 9-4 a maund. Sind is expected to fall in line with the Punjab in regard to rationing as soon as the Hidayatullah ministry makes sure of its ground on the floor of the Sind Assembly in February budget session.

A new development in the investigations now proceeding into the murder of the former Premier of Sind, Mr. Allahbaksn is the arrest of a prominent zamindar of Upper Sind, Wadero Adam Khan, under the Frontier Regulations Act. This is the sixth arrest, the five others in custody being smaller fry. It may be recalled a special tribunal is already trying these five men and a statement made by one of the accused is alleged to implicate men in high places and when the disclosures are permitted to be published, the case is expected to create a sensation.

Indo-Australian trade prospects are sought to be explored by Mr. Leach, the Australian trade envoy who passed through Karachi en route to New Delhi early this week. Mr.

Resume of Commodity Markets

There is nothing of importance to be recorded in the commodity markets during the week. The raw jute market has been easier while the jute manufactures market has been steadier. The bullion market has turned suddenly easier, there being considerable selling from mofussil centres. The spot position has become lighter. The cotton market has been steady but in the Calcutta piecegoods market quiet conditions were noticeable and there was some panic in evidence regarding the disposal of unstamped goods.

* * * *

The easier tone of the raw jute market is only due to the reports regarding the possibility of a large increase in the acreage under the jute crop for the next season. It is pointed out that the Government of Bengal might agree to an increase in the acreage under crop for the next season. The Indian Jute Mills Association has suggested that, with the possibility of a large increase in the demand for jute manufactures on the termination of hostilities in the West, which might come any moment next year, the industry should be prepared for a step-up in production to any extent. It is pointed out, however, that while preparations have to be made from now on to increase the supply of the raw material, it should be ensured that all the raw material available is satisfactorily utilised. Without facilities for an increase in production it is no use increasing the supply of raw material. At the present moment, mills are not in a position to execute orders even with adequate supplies of raw jute; difficulties in regard to receipts of coal being the main reason. Unless it is made sure that it would be possible to cater to all needs, it is no use deciding on an increase in the acreage for the next season. It might be detrimental to the "Grow More Food" Campaign.

From the market point of view, therefore, no great importance can be attached to the reports regarding the increase in the acreage under the crop while no satisfactory solution is found for the supply of the fuel to the jute industry. But with the suggestion that there might be an increase, the coal problem being capable of adjustment at short notice if there is need, the prospect of an early rise of prices for the raw material are remote. The developments in the next few weeks have to be carefully watched.

* * * * *

The jute manufactures market has remained unchanged. Actually, a firmer tendency has been in evidence. Considerable interest is attached to the report regarding the possibility of a fresh scheme being devised by the Indian Jute Mills Association to improve production in the coming year. The coal problem does not seem to be capable of satisfactory adjustment and the present method of working electrically-driven mills smaller number of hours to satisfy the steam-driven mills does not meet with universal agreement. In the absence of an early improvement in the coal situation it is said that the production of jute goods cannot be kept at a very low level, from the national point of view, simply to satisfy the steam-driven mills. It cannot be denied that the demand for jute goods is far in excess of the present production of mills and that it would be a waste from the country's point of view if the demand remains unsatisfied. There is every possibility, therefore, that in the New Year electrically-driven mills might be asked to work more hours irrespective of the number of hours worked by the steam-driven mills and that a minimum quota in regard to production might be fixed. This should naturally mean some concentration of production at certain mills. This change in the hours of working is also advisable from the point of view of the ryot. Without an increase in production the prospect for the ryot in the next season will not be quite satisfactory. It would not also be possible in the absence of any appreciable imrovement in the coal situation to meet any large increase in demand that might come about after the termination of hostilities in the West.

* * * *

The decline in prices for bullion in mid-week has come about as a surprise, though not a complete one. Contrary to the experience of earlier weeks, there has been a large increase in selling from mofussil centres and the spot position has become considerably easier. With the off-take poor and the large arrivals from up-country centres prices have been lower even in the absence of any selling by the Reserve Bank. The confident assertion of an early victory and the anti-inflationary drive by the Government of India have perhaps been responsible for the change in the sentiment in the market. It is noteworthy that for the first time the fall in prices of silver is more pronounced than gold and this decline in prices has been looked forward to all these days. If the Reserve Bank lowers its selling price and there is no large demand for the yellow metal a further decline in prices cannot be prevented. Periodical air raids in Eastern India, however, might serve as temporary fillips to the market.

* * * * *

The cloth and yarn control order is giving a headache to many. With the need for disposing of unstamped goods before the end of the year, many are placed in an unenviable position. In the Bengal Presidency especially, trade has come to a standstill and retailers are unwilling to take delivery of their goods fearing their inability to dispose of them in time. A conference is being held for this purpose and it is expected that an announcement in regard to revised ceiling prices will be made. Those interested in the cotton trade in this part of India have suggested that there should be a further extension of the time limit for the disposal of unstamped goods, the sale of cotton goods being very difficult in the winter months. The Government of India has stated in very clear terms that there will be no further extension of the time limit. It remains to be seen, in view of the renewed protests from those interested in the trade, whether there will be a general extension.

* * * * *

At the auctions of tea held for consumption in India, an easier tone was noticeable. Low medium quality broken leaf grades and fannings were lower by half-an-anna while other types declined by one anna or more per lb. Medium qualities were about steady while Darjeeling teas were dearer. Dusts were barely steady. After an early decline price were firmer at the close.

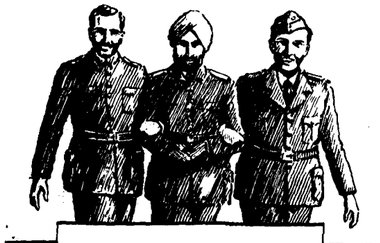
(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, December 16.

THE coal position is, if anything, worse than before. Arrivals are extremely erratic and average far below requirements, resulting in many mills being at a standstill and little prospect of any lost time being made up next week, which otherwise is a "closed" week under the schedule. It is reported that the Labour Member, Government of India, has had discussions with representatives of the Mine-Owners, as a result of which an increase in dearness allowance and other concessions are to be offered to the miners with a view to attracting them back to the mines. This is a curious reflection on the declared anti-inflation policy of the Government of India. First the military authorities are permitted to entice the labour away from the coal mines by the offer of higher wages and then the mines have to entice them back by the offer of still better terms. We do not suggest that the mine workers are even yet overpaid for the type of work they have to do, even though the scale of remuneration now offered is said to be 50 per cent above the pre-war level. But the whole procedure connotes a complete lack of co-ordination which is, to say the least, unfortunate. But there is no getting away from the fact that coal production and distribution is the prime factor at the moment so far as the Jute Industry is concerned. There seems little point in discussing such matters as a new working schedule to succeed the present one, which expires at the end of this month, or the question of what quota of sowings should be allotted for the new jute crop, when there is no guarantee that coal will be available either to work up to any schedule of hours which may be fixed, or to work up the jute available from the current crop, let alone the next one. Normally it is to be expected that the shortage of labour will be less acute by the end of the year, when the paddy harvesting is over, and it is to be hoped that this expectation will be realised, also that the better terms offered to the miners will really attract them back to their normal job. What would also seem to be desirable is some understanding with the military authorities regarding the "poaching" of essential labour.

Another labour problem which is having a detrimental effect on the production of jute goods is the re-employment of workers displaced by the requisitioning of jute mill premises by the military authorities. Unfortunately, in the case of the first mill so requisitioned, the agents, in a spirit of super-altruism, granted the workers six months pay and allowances as compensation for the loss of their jobs, without making any attempt to re-employ the displaced workers by working a double shift at a neighbouring unit. The workers in recently requisitioned mills have seized on this as a precedent, and although offered similar employment in another adjacent mill, have so far refused to accept it, and are demandnig compensation on the same lines as the unit mentioned above. Of course, six months pay and food at concession rates for doing nothing, does appeal to any class of worker, and there is little doubt that the trouble-makers who are always with us, have been working the idea for all it is worth. The Bengal Government, through the Minister in charge of the Labour Department, has issued a *communique* in an endeavour to solve the difficulty, but it is rather a milk-and-water pronouncement, though it states the position clearly enough. It might easily have stated much more firmly that there is a war on, and that this is no time for any worker offered employment to expect to be paid for sitting on his hunkers. The jute mill labour force has probably been as well looked after during the recent difficult times as any class of workers in India, and better than most, and this is all the thanks the employers get for it. It is credibly reported that the displaced labour has been actually abetted by the labour in the mills where it was proposed to introduce a double shift to provide the necessary extra employment. The workers in the unit still running objected to having their neighbouring workers coming in to work on the same machines on another shift! Such far-fetched objections could only have been suggested to them by trouble-making labour agitators. The attitude is a glaring commentary on the preparedness of Indian labour for any sort of Trades Union movement.



The General Working Agreement introduced five years ago, which has been largely instrumental in making the Indian Jute Mill Association the powerful and influential concern it is to-day, expires at the end of February next year, and it is understood that it is proposed that the Agreement should be renewed on the same lines for a further five years. At the present juncture, when co-ordinated effort in almost all directions is of paramount importance, there should be little, if any, objection to the renewal. The Agreement certainly binds the individual units pretty strictly with a view to ensuring that the greater good of the greater number should prevail. But it is improbable that, in existing circumstances, it would be to the ultimate benefit of any ndividual unit to break away from the parent body. In union there is strength, and the Associatoin requires all the strength of the combined individual units to meet the diverse problems with which it may still be faced during the war period, and no less during the early post-war period. In the shorter view, there is also the question of the working schedule for the next few months to be decided. As we have emphasised above, this is dependent greatly on the extent of the coal supply. But there is little doubt that the question will again be raised whether it is reasonable to curtail the working hours of those mills which draw their power from the public electric supply in order to bring them approximately into line with mills which are dependent upon coal supplies for their motive power. It has been demonstrated during the current schedule that, with the coal position as it is, there is no hope of arriving at even an approximate balance between the productive capacity of the electric mills and the coal consumers, and it is open to question whether it is altogether fair that units which were sufficiently far-sighted to introduce more propulsive methods should be penalised in order to temper the wind to their more conservative neighbours. It has been suggested that the stock position might become embarrassing if production were any greater than it has been of late. On the other hand there are indications that overseas orders have been held back on account of the general unwillingness of mills to sell, even in the forward positions. The possibilities of shipping have also to be kept in view. Altogether it is no simple matter to decide.

The Export Jute market has been featureless. There would appear still to be demand for private marks of Tossa quality, but enquiry for public marks of white jute has been nil and even for Daisee, very limited. Mills have shown some interest in low grade jute, presumably to take the place of the "X" grade which they are unable to buy in loose jute. Business was reported in Straightmorahed Rejections at Rs. 49 per bale and in Habi-jabi at Rs. 46. Some Cuttings were also reported at Rs. 33 N.C. and Rs. 32 M.C. but the quantities obtainable of any of these descriptions is extremely limited, partly due to the dearth of demand for the standard grades.

In Loose Jute enquiry has been scarce and only small quantities have changed hands. European packing, all districts, was reported at Rs. 15-4 and Rs. 12-4 Middles and Bottoms and later at Rs. 15 and Rs. 12. Supervised Jat was reported at Rs. 14-12 and Rs. 11-12 and District Bottoms alone at Rs. 11, Indian packing. As we predicted, there is a tendency for Buyers to indicate a lower rate for Bottoms if 7½ per cent "X" is to be tendered, than if the Bottom is guaranteed without "X". District Tossa, Indian packing, was done in low assortment at Rs. 15-4 and Rs. 12-4, but only in limited quantity as sellers generally want to dispose of a high percentage of Middles. The detailed Jute Import figures for November show a very heavy falling off in transport by rail, only 6,36,925 maunds against 11,46,151 maunds the previous month, over 13 lakhs and 14 lakhs in September and August respectviely and 15½ lakhs maunds in November of last year. Possibly the high priority for foodgrains may have had something to do with this falling off though one would have expected much of that to be upward traffic, whereas jute is downward. Shipments by river were better at 12.69 lakhs maunds against 10.87 lakhs maunds the previous month, but 16.35 lakhs maunds in November 1942. Labour shortage in the mofussil is still acute and insufficient to handle even the small imports which are coming into the markets.

The fabrics section has hardened in tone with mills very unwilling sellers for any position on account of the unsatisfactory coal arrivals. Heavy Goods of all descriptions now stand at ceiling rates—even "B" Twills which were at a discount for some time. Hessians have also firmed up to Rs. 21-4 nines and Rs. 28-2 elevens, any position, but business has been very limited.

BACK THEM UP —
as we do—to defend you

Where they need planes, tanks and guns they also need woollen clothing. Our entire plant is working for the war effort. Soon we hope we shall be able to manufacture for you again.

THE NEW EGERTON WOOLLEN MILLS

(*Continued from page* 1159)

particularly, as M. Stalin has pronounced already in favour of an independent and free Poland.

It has been noted by Reuter's diplomatic correspondent that Dr. Benes' visit to Moscow was primarily aiming at blocking any future eastward march by Germany and to the eventual adherence of neighbouring countries such as Poland. Since there is no contiguity at present, the exact limit of Soviet territory does not concern the Czechs. The Czech plan is obviously one of recreating the State set up in 1918 and recognised by the Treaty of Versailles. The instrument is one of restoration rather than a wide definition of new responsibilities for the Czechs. But many will argue that the Czechs by turning to the Soviet Union as the guarantor of their independence have denied the Munich Pact which virtually put an end to the nation which had won its independence. The notion of German living space is wholly denied and the promises of mutual aid and post-war collaboration between the Czechs and Russians may serve as a warning to Hungary, which is already threatened by the developments in the Balkans. The Catholic Croats may be influenced by Dr. Benes' action as much as the Serbs who have asserted their independence of the local dynasty by turning to Russia.●

(*Continued from page* 1166)

Gollon, the Australian Trade Commissioner at New Delhi, who was here in this connection, met the Secretary of the Karachi Indian Merchants' Association, and discussed with him the means of promoting better trade relations. Australia can export wheat into India now under the grip of famine, and India, cotton to Australia. The shipping difficulty is still unsurmounted and local commercial circles feel that unless priority of shipping is given to food imports from Australia, no substantial progress in trade talks is possible.

Mr. Leach, it is incidentally revealed, made a record flight to Colombo from Sydney in about 27 hours non-stop and thence to Karachi in another 14 hours. It is stated that American companies are advertising in papers about regular Indo-American air service after the war at prices comparably cheaper and tourist traffic is thus bound to have a big boom.

The beginning to an end

A child's first lesson is an important milestone on the road of life. Fond hopes for the future of his child are cherished by the father on the important day that marks the beginning of the youngster's education.

But hopes are not enough. A practical beginning must be made in order to ensure a successful end to a child's education.

Have you guaranteed that the necessary money will be available to your child for the completion of his education even if you do not survive to see it through ?

New India's Educational Annuity Policy can do this for you. It guarantees the full benefit of the assured sum to your son even if your demise occurs after paying the first premium only.

Agriculture in Europe

Farming in Europe is in a bad way according to Sir John Russell who summed up in a broadcast talk the main needs of agriculture after the war. He said that the Germans have cleared out the Occupied countries very thoroughly, and are very good hands at that game. The people of some of the Occupied countries are getting only about two-thirds the proper food requirements, many of them are half starved, and there is much disease due to under-feeding. Acute forms of tuberculosis are spreading, malaria, typhus and other diseases are lurking in all sorts of places. Most serious is the danger that Occupied countries will be unable to help themselves to recovery. Their farms have been plundered of livestock; they have not been able to get implements repaired or replaced or to obtain proper fertilisers or foodstuffs. Agriculture in Europe after the war will have to aim at recovery of wealth of the people. He declared that it is no good thinking that we can at once establish a beautifully complete scientific system of agriculture in Europe; the task will be much more prosaic and restricted.

Bread, potatoes and vegetables will be certainly wanted in abundance. Sufficient seed to enable land to be sown as quickly as it is recovered must be ensured. The lowest safe estimate is well over a million tons of seed to be brought in from outside the Occupied countries. They will want about half a million tons of grain nearly, nalf a million tons of seed potatoes besides vegetable seed and seed for fodder crops. The estimate indicates what part the U.N.R.R.A. has to play in Europe. The agricultural expert states that plans are advanced for dealing with postwar requirements. Europe's farms are described as small; a great lot of them are less than 100 acres; quite a number are below 50 acres. So they don't use tractors much, but horses or oxen. But the Germans have taken most of the horses that are any good and will comb out the rest before the war is over; there won't be much in the way of working animals left. Cultivation is going to be pretty difficult. Europe was pretty well off in respect of livestock. Now the numbers are much less. Animals, too, will be required for Europe's farms.

As regards policy Sir John Russell said that before the war most countries aimed at producing all the food they needed so as to be independent of outside countries; and they learned to go without what they could not grow themselves. So they did without a lot of the wheat, butter and meat which they would have liked to have had, and which they could have bought, and Canada and Australia could have sold to them. But instead, they piled up munitions, they had to, because Germany set the pace. Since there is agreement to the defensive organisation of peace in over higher standards of nutrition, there is a desire for importation of grain, butter and meat from the great producing countries because their own farmers cannot produce enough. This is something of great importance to people in the exporting countries, here is a chance of an expanding market—300 million folks in the middle of Europe. There is the problem of having new exports to pay for the new imports, but Sir John regards the prospect as hopeful. Agrarian organisation must change, to Sir John who said that Eastern Europe must give up the ancient system of scattered strips for one of individual holdings. But peasant farming, helped by co-operative organisation, is expected to acquire the advantages of the big farm. The main feature will be the increase in Europe's food imports. Since India is not an exporter at present changes abroad may have little significance; but the Dominions, faced by the growth of food production in Britain, have other markets to look to after what Sir John called the 'ambulance period' for European farming. A permanent increase of demand may remove the danger of surpluses, and the anticipated increase i European demand may have a decisiv effect on the price-level in India. It h been frequently urged of late that pric must be in relation to costs; and th anticipated increase of demand in Euro may have its own effect on prices in Ind whose small occasional deficits may be no interest to the Dominions which wa permanent markets to promote the r covery of their agriculture to peacetim proportions.

Masula boats are stitched . . .

Battleships are rivetted . . . . No matter how you do it, it's the seam that counts. Rivets in a battleship, nuts and bolts in a bridge, screws in a door-hinge or nails in a packingcase . . . . vibration, strain and pressure form a severe test which only the best can withstand.

For well over 20 years it has been our job to manufacture Wire Products of a high standard and quality which can be relied on.

INDIAN STEEL & WIRE PRODUCTS LIMITED

I.S.-12 TATANAGAR

JUTE

Calcutta, Dec. 16.

THE raw jute market has been quiet with not much of business passing. The continued difficulty regarding coal supplies and speculation regarding the level of production for the year 1944, coupled with the reports that the Government of Bengal might decide on a higher crop for the next season, have been mainly responsible for the easier tone of the markets. But for the firmness of upcountry centres, the decline in prices might perhaps have been more pronounced. Mills are not very eager buyers, and are at present purchasing their immediate requirements only. Balers, however, continue to be interested in Tossa varieties and full prices have been offered. Pending a clearer outlook and a new policy in regard to production by mills, it cannot be expected that the jute market would turn active.

In the loose jute section idle conditions have been noticeable and only a small amount of business was reported. European packings Middles and Bottoms were sold earlier in the week at Rs. 15-4 and Rs. 12-4 while Northern Bottoms were dealt in at Rs. 11. Balers are reported to have purchased Tossa varieties at varying rates.

In the pucca bales section not much of business has been done for export and quotations are slightly lower in sympathy with the loose jute section. Balers are not very keen to do business. Dundee Daisee 2/3 have come down to Rs. 70 from Rs. 71-8 per bale in the period under report. No business is to be reported by mills. There are buyers of cuttings towards the close.

JUTE MANUFACTURES

Calcutta, Dec. 16.

The jute manufactures market has been slightly better though no business of importance has been recorded. The publication of satisfactory stock figures for the month of November and the hopes regarding the increase in exports, have been mainly responsible for the firmer tone of the markets. But for the easier tendency in the jute market, quotations might have been marked higher. Thursday's raid on Calcutta has not had any effect on prices so far. There are reports that the Indian Jute Mills Association might decide on a different plan of working in the New Year as it is felt that there is no prospect of an early improvement in the coal situation. A different policy of working in regard to electrically-driven mills is called for and then only the position of the trade will improve. 9 porters ready are quoting 4 annas higher at Rs. 21-4 for all positions; 11 porters ready are Rs. 28-2, December Rs. 28-2 and January/March Rs. 28.

In the heavy goods section very steady conditions have been noticeable and there are no sellers even for B. twills below maximum rates. B twills for December delivery sold at Rs. 67-12, Liverpool twills Rs. 75 and Cornsacks Rs. 67-12.

COTTON

Calcutta, Decr. 16.

There is nothing of importance to be reported in the Bombay cotton market. A slightly firmer tone was noticeable in the earlier days of the period under review but towards the close the market has turned easier. Quotations are slightly higher on balance though lower than the highest levels for the week. Mills are buying only in small quantities and are inclined to await the results of the conference of representatives of States and Provinces to consider the question of the strict administration of the Cotton Cloth & Yarn Control Order and also of the announcement of the new maximum prices. Jharilla January closed at Rs. 469, March at Rs. 466 and May at Rs. 468 against Rs. 467, Rs. 464 and Rs. 468 respectively. There has thus been a firming up in prices for the nearer positions.

PIECEGOODS

Calcutta, Dec. 16.

The piecegoods market has been rather quiet in spite of the announcement by the Government in unambiguous terms that no further extension of time will be allowed for the disposal of unstamped goods. There is, a tendency to await further developments. A conference of representatives of the provinces and states is being held to consider ways and means for the strict administration of the Cotton Cloth & Yarn Control Order and also to announce maximum prices for all varieties of cloth and yarn. Buyers have been laying in some of their requirements but there is an inclination to await actual developments.

GOLD

Calcutta, Decr. 16.

The gold market has been quiet and a substantial decline in prices has been recorded. With the anti-inflationary drive in full force there has been some selling of mofussil gold in the Bombay market and a heavy premium is being demanded for carry forward facilities. The outlook is considered rather unfavourable for bulls especially as supplies in the silver market also have been coming in more freely in the last few days. The Reserve Bank has not been a seller at the lower levels and only the unwillingness of this prominent seller has resulted in the late recovery in prices on Wednesday. News of Thursday's raid might perhaps push up prices to a certain extent. After being lower at Rs. 72-4 gold ready closed at Rs. 74-4 in the Bombay market against Rs. 75-3 at the end of last week, The quotation for forward was Rs. 72 against the lowest level of Rs. 69-12 for the week; the quotation at the end of last week was Rs. 74-6. It will be noticed that the discount for forward over ready has widened to as much as Rs. 2-4 from only 13 annas last week. There is a suggestion that the market is overbought. The decline in prices for sovereigns is even more pronounced, the quotation being Rs. 49-12 against Rs. 52-10. In the Calcutta market gold closed at Rs. 73-11 against Rs. 75-11 and sovereigns Rs. 52-2 against Rs. 53.

SILVER

Calcutta, Dec. 16.

The break in silver prices is more pronounced the drop being as much as ten points. There is no report of any official or other bank selling but large supplies have been received during the week and there are more sellers than buyers in the market. The reason for the sudden decline in prices is not quite evident. The general tone of the market is bearish. Silver ready closed at Rs. 113-3, after being lower at Rs. 112-8, against the quotation of Rs. 122-2 at the end of last week. Forward closed at Rs. 110-11, around the lowest level for the week, against the quotation of Rs. 121-7. Covering operations at the lower levels have been responsible for the rally in prices for ready. It is significant that in the silver market also the discount for forward over ready has widened and is as much as Rs. 2-8 against only 12 as. last week.

In the Calcutta market also easier conditions have been noticeable in sympathy with the Bombay market though the decline is not so pronounced, the quotation for silver ready being Rs. 117 against Rs. 120.

There is no change in the London market, the quotation for both spot and forward is unchanged at 23½d.

Stock Markets to-day and to-morrow:

INDIAN IRON & STEEL 1942-43 ACCOUNTS

THE second daylight raid alert in Calcutta on Thursday has not had any effect on the Calcutta Stock Exchange. There was a slight marking down in prices in the afternoon after the all-clear was sounded; but the lost ground was completely regained and quotations at the close were around the levels at the end of last week. During the short period in which markets remained open, however, there is no important feature to be noted. Business, too, has been on a smaller scale. Both operators and investors have not shown any great interest in daily fluctuations. With the approaching Christmas and New Year holidays there is no tendency to enter into large commitments. But this has not led to any pre-holiday selling. It appears that genuine investors will not come on the market as sellers. After the holidays, the budget might have its influence on the markets. So that from now on till the end of February, it cannot be expected that there will be any widening of interest or any important fluctuation in prices.

Regarding the fears about air raids affecting company's earnings there can be no justification. As a matter of fact, it has never been for a moment seriously apprehended that air raids by the enemy will be on such a scale as to cause appreciable damage to industrial property and interrupt the smooth working of factories. As regards the budget, taxation may not be on a large scale. With the anti-inflationary policy of the Government, greater effort might perhaps be made to tap surplus purchasing power through a higher rate of taxation but such taxation will have its own concessions and the additional taxation might not prove to be a real burden. The outlook cannot, therefore, by any means be considered unsatisfactory though it has to be admitted that in the next six or eight weeks there will not be any important fluctuations in prices.

* * * *

The accounts of the *Indian Iron & Steel Company, Limited*, for the year ended March, 1943 are now available. In view of the fact that the dividends in respect of this accounting period have been already paid to the shareholders, the results disclosed now do not have any great significance from the market point of view. But as relating to the working of one of the most important companies in India, the accounts are worth studying. They also give an indication as to what is in store for the industry in the remaining years of the war period and in the immediate postwar years.

It should be said that the accounts make very good showing having regard to the difficult conditions under which the Company had to function. There is a reduction in the volume of sale due to factors beyond the control of the Managing Agents. There was an increase, on the other hand, in production costs due mainly to the supply of cheap grain to labour. The total of salaries and wages amounted to Rs. 101.16 lakhs against Rs. 89.68 lakhs in the previous year. But for the saving in freight and insurance amounting to nearly Rs. 15 lakhs, the net profit would perhaps have made a worse showing. On the income side, there is an increase of nearly Rs. 3 lakhs in the share of profit receivable from the Steel Corporation of Bengal. The income from investments also is higher by over Rs. 6½ lakhs. Thus the decline in the total of profits is not very pronounced, the net profit before providing for taxation and depreciation being Rs. 1,39,21,099 against Rs. 1,56,84,084. Total sales were Rs. 4.95 crores against Rs. 5.26 crores. The provision for repairs and renewals is higher at Rs. 10,79,114 (Rs. 6,78,828) while that for taxation is lower at Rs. 40 lakhs (53 lakhs). The transfer to Debenture Sinking Fund is Rs. 3,24,640 (3,12,027) while the charge on account of depreciation is unchanged at Rs. 25 lakhs. It was pointed out on the last occasion that the provision in regard to depreciation would have to be increased in future years, but the Directors have decided to keep this figure at last year's level owing to the greater provision for repairs and renewals.

* * * * *

War risk factory contingency fund receives Rs. 10 lakhs against Rs. 12 lakhs. The final dividend of Rs. 1-8 per share with the interim dividend of Rs. -/8/- per share brought up the total distribution for the year to Rs. 2 per share against Rs. 2-4 per share for 1941-42. The amount carried forward is Rs. 5,19,766 against Rs. 5,82,377 brought in.

Regarding the prospects for the current year, the Chairman has pointed as follows: "Whilst present demands do not absorb the total make from furnaces, this position will be rectified to a large extent when the new extensions now under construction at the Steel Corporation of Bengal's Works come into operation. As regards sales abroad, again this is beyond our control."

With the possibility of a larger income on the Company's investments and a larger share of profit from the Steel Corporation of Bengal, it is to be pointed out that the shares are relatively undervalued. Works-in-progress are appreciably higher at Rs. 128.31 lakhs against Rs. 113.22 lakhs.

The total of the Balance Sheet is lower at 8.35 crores against Rs. 8.74 crores, but such decline is mainly due to the reduction in the reserve for taxation from over a crore of rupees to Rs. 58 lakhs. There is no important change in the block account, the figure at the end of March, 1943 representing approximately the reduction in the block as a result of allocation to depreciation from the earnings for 1942-43.

* * * *

Lister Antiseptics & Dressing Co., (1928) Limited has made satisfactory progress in recent years. Total sales have increased from Rs. 13.69 lakhs in 1940-41 to Rs. 20.12 lakhs in 1942-43. The company is supplying the greater proportion of its production to the Government. The earnings in the last three years would have made better showing if the directors had not adhered to the policy of selling their products at Government controlled rates. The net profit, before providing for taxation and depreciation, for the year ended April 14, 1943 is Rs. 1,54,233. Of this sum, Rs. 34,122 is provided for depreciation and Rs. 7,304 for taxation. After providing the additional sum of Rs. 45,000 for Income-tax Reserve and transferring Rs. 15,000 to General Reserve, the ordinary shares receive 6 percent free of income-tax against 6 per cent taxable for 1941-42. The directors are optimistic regarding the prospects for the current year. With the increase in the activities of the company and the need for a larger working capital, the directors have under consideration the issue of additional capital to make up the total paid-up capital Rs. 10 lakhs. At the present moment, the paid-up capital of Rs. 8 lakhs is equally divided in ordinary and preference shares of Rs. 100 each. The preference shares carry the right to a cumulative taxfree dividend of 6 percent per annum. The proposed issue will consist of 1,000 preference shares of Rs. 100 each and 1,000 ordinary shares of Rs. 100 each. The preference shares are issued at a premium of Rs. 10 per share and the ordinary shares at par on the basis of one new preference share and/or one new ordi-

(*Continued on page* 1191)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 17.

DURING the short period under review quietly steady conditions have been noticeable on the Calcutta Stock Exchange. Business passing has been on a smaller scale with the undertone in most sections steady. The first daylight raid on the Calcutta area did not have any appreciable effect and the slight decline in prices was recovered to a great extent. Similarly, the daylight raid alert in Calcutta on Thursday did not have any effect on prices. Indian Irons were marked lower only six annas and the close was again firmer at Rs. 34-8. No drop in prices has been recorded in other sections. With the approach of the X'mas and New Year holidays and the fear of air raids it cannot be expected that any improvement in prices would take place. At the same time, in the absence of any raids causing large damage to material property there would be no disposition to mark down prices to any great extent.

The giltedged securities section has remained steady. With the announcement regarding revised minimum prices for giltedged securities and the continuance of easy money conditions quotations are higher in places. 3½ per cent Paper after being higher at Rs. 97-12 is now quoting Rs. 97-7 and 3 per cent Paper Rs. 84-8. Among terminable loans, 3 per cent 1949-52 were done at Rs. 100-11, 3 per cent 1951-54 Rs. 100, 3 per cent 1953-55 Rs. 99-14 and 3 per cent 1963-65 Rs. 98-8. A small lot of 5 per cent 1945-55 changed hands at Rs. 106. There has been a further decline in the average discount rate from twelve annas and three pies per cent per annum to eleven annas and eleven pies per cent per annum. No transactions have been recorded in provincial loans.

Among others, *New Victoria* were done at Rs. 15, *B. I. Corporatoin* at Rs. 211 and *Dunlop Rubber* second preferences at Rs. 121. *Steel Corporation* were higher at Rs. 130.

Banks shares have been uninteresting with *Imperial Bank* fully paids at Rs. 1,945. Contributories were higher at Rs. 503. *Reserve Bank* were Rs. 25-12 and *United Commercial Bank* Rs. 21-4 premium.

Coal shares have been uninteresting. The increase in the surcharge on coal freight and the higher level of wages granted to the miners cannot be regarded as bullish factors for the market. Considerable interest is attached to the measures taken by the Government to relieve the difficulties of coal mines but pending actual developments, there is no disposition to take an optimistic view. *Bengal* were Rs. 840, *Burrakur* Rs. 24-6, *Bhalgora* Rs. 12-4 and *Equitable* Rs. 48-4. *Hurriladih* were Rs. 21-12, *Kalapahari* Rs. 27-10, *New Beerbhoom* Rs. 27-14 and *Standard* Rs. 26-12. *West Jamuria* were not very much changed at Rs. 39-8 while *Sendra* were in request at Rs. 18-6. The smaller-priced shares were quiet, *Samla* being Rs. 5-3, *Talcher* Rs. 6 and *Burra Dhemo* Rs. 8-14.

Cotton shares have been fluctuating in narrow limits and there is nothing of importance to be reported. The publication of excellent earnings figures by Cawnpore mills has not had any effect on the market. *Basanti Cotton* were Rs. 12-14, *Benares Cotton* Rs. 14, *Cawnpore Textiles* Rs. 13-14 and *Elgin* Rs. 96. *Kesoram* were Rs. 14-12 and *New Victoria* Rs. 10-12. *Bengal-Nagpur* were steady around Rs. 35-12 and are being talked of further higher.

In the Jute section also transactions have been on a smaller scale with prices a shade easier. There is considerable speculation regarding the policy of the Indian Jute Mills Association about production for the next year and there is anxiety to know the details as it is felt that the decision of the Indian Jute Mills Association might vitally affect companies earnings. *Howrah* were Rs. 63-8 against Rs. 64 at the end of last week. *Anglo-India* changed hands at Rs. 386, *Barnagore* at Rs. 120 and *Champdany* at Rs. 220. *India* were dealt in at Rs. 545, *Kamarhatty* at Rs. 547, *Nuddea* at Rs. 104 and *Rameshwara* at Rs. 15-14.

In the Enginering section, *Indian Iron* were fluctuating around Rs. 34-8 and *Steel Corporation* around Rs. 27 for the most part of the week. On Thursday afternoon there was a slight recession in prices following the raid alert but the close was steadier. At the time of writing *Indian Iron* and *Steel Corporation* are quoting around Rs. 34-8 and Rs. 27-2 respectively. The accounts of *Indian Iron* for the year 1942-43 are now available. The reduction in the dividend for the accounting period was due to the increase in production costs and the smaller sales. Prospects for the current year are satisfactory. *Bhartia Steel* were 8 annas lower at Rs. 16-6 while *Britannia Building and Iron* were steadier at Rs. 17-4. *Indian Standard Wagon* were steady at Rs. 71 while *National Iron and Steel* were Rs. 13-4. *Kumardhubi Engineering* were done up to Rs. 9-10 and are quoting at the time of writing Rs. 9-4. *Marshalls* also had some good enquiry and are marked higher at Rs. 4-12.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were unchanged at Rs. 3-12 and Rs. 2-11 respectively. *Karanpura Development* were easier at Rs. 17-12, *B. I. Corporation* were higher at Rs. 6-11 but are easier at the time of writing at Rs. 6-6. *British Ceylon Corporation* were steady at Rs. 17. The Third Interim Dividend of 8 per cent for the year ended October, 1943 has just been declared. *Indian Wood Products* were firmer at Rs. 32-4, *Northern India Oil* were further higher at Rs. 21-10 while *Midnapore Zemindary* were unchanged at Rs. 124-8. *Assam Saw* were Rs. 5-1 and *Aluminium Corporation* Rs. 19-8.

Among Paper shares, *India Paper Pulp* were Rs. 207, *Titaghur Paper* Rs. 26-5 and *Star Paper* Rs. 22-13.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, December 16.

THE market was rather irregular during the period under review. The unsettled conditions in the commodity markets coupled with the news of enemy air activity near the Assam border brought about a situation closely resembling a stalemate. Though there was no panic in the market both operators and investors alike were not very anxious to enter into fresh commitments. In the absence of any fresh developments which may give a clue to the future prospects of industries, there was a tendency to pay more attention to the fluctuations in the commodity markets. Reports like a further expansion in note issue by the Reserve Bank were given exaggerated importance, and scrips recorded a slight increase. But the moment the news of the daylight alert in Calcutta to-day reached the market, prices were once again marked lower. In spite of these unsettled conditions the undertone is fairly steady.

Government securities were rather firm with 3½ per cent Government Paper higher at Rs. 97-8. *3 per cent Loan* (1940-52) were Rs. 100-11; *4 per cent* (1960-70) Rs. 111-14; and *5 per cent* (1945-55) Rs. 106-3.

Bank shares were in good request with *Imperial Bank* Contributories quoting around Rs. 502-8.

Mill shares were generally quiet though there was some activity now and then with prices fluctuating within narrow limits. The unsettled conditions in the commodity markets were exploited by some speculators to effect a similar fluctuation on the stock exchange also. *Bombay Dyeing* after being lower at Rs. 1,913 earlier in the week closed higher at Rs. 1,927-8, *Century* were better at Rs. 977, *Colaba Land* Rs. 242, *Gokak* Rs. 341-8, and *Svadeshi* Rs. 588.

Steel shares opened firm, but as reports of air raids on Assam and daylight alert in Calcutta were received share values began to decline. *Tata Steel Deferreds* were lower at Rs. 1,901-4, *Tata Ordinary* Rs. 388-8 and *Indian Iron* Rs. 34-6.

Among *Hydro-Electric, Andhra Valley* were easy at Rs. 1,875. *Tata Power* were further lower at Rs. 1,895, and *Tata Hydro* were 3 points lower at Rs. 200.

The Miscellaneous section was quiet in sympathy with the other sections. *Alcock Ashdown* were Rs. 575. *Belapur Sugar* were Rs. 255. *Premier Construction* were lower by 2 points at Rs. 232, *Bombay Steam* 10 points lower at Rs. 560, and *Shivrajpur Syndicate* easy around Rs. 77. *B. E. S. T.* were further lower at Rs. 144. The feature of the market was *A. C. C.* which met with good enquiry with the price as high as Rs. 238.

NOTICE

THE NATIONAL IRON & STEEL CO. LD.

NOTICE is hereby given that the Eighth Annual Ordinary General Meeting of the National Iron & Steel Co. Ld., will be held at the Registered Office of the Company at Stephen House, 4, Dalhousie Square, Calcutta, on Friday, the 31st December, 1943, at 11-15 A.M. for the purpose of :—

1. Receiving and passing the Directors' Report for the year ended 31st March, 1943.

The 7 per cent Mortgage Debenture Bonds of Rs. 10,00,000 matured on 30th September, 1943, and the amount at credit of Debenture Sinking Fund thereby released was Rs. 10,32,204-6-1. This sum the Directors have disposed of as follows, subject to confirmation in General Meeting:—

Written off Good-will ..	..	Rs. 5,00,000 0 0
Transferred to General Reserve	..	Rs. 5,32,204 6 1

The Directors recommend to the Shareholders that the Capital of the Company be increased from Rs. 32,00,000 to Rs. 56,00,000 by the creation of 1,40,000 additional Ordinary Shares of Rs. 10 each and 1,00,000 additional 5 per cent "B" Cumulative Preference Shares of Rs. 10 each.

They further recommend to the Shareholders that Rs. 4,20,000 of the amount transferred to General Reserve be capitalised by the issue of one fully paid up 5 per cent (free of income-tax) "B" Cumulative Preference Share of Rs. 10 for every five Ordinary or Vendors Shares held, as a Capital Bonus, which will rank for dividend with the existing shares as from 1st October, 1943. The consent of the Central Government has been obtained to this issue under Defence of India Rule 94A, and a Notice calling an Extraordinary General Meeting to consider and, if thought fit, pass the Resolutions necessary to carry this into effect is being issued forthwith.

Raw materials have been taken at cost and manufactured goods at/or under market value.

Managing Agents.—Messrs. Begg, Sutherland & Co., Ld.

HASTINGS MILL, LIMITED

Audited accounts for the half-year ended 31st August, 1943:—

After transferring Rs. 6,187 to Insurance Reserve, providing Rs. 94,871 for Depreciation and making sundry adjustments, the results for the half-year show a loss of Rs. 1,62,320-5-8.

After bringing forward the balance from the last account and transferring Rs. 2,00,000 from Taxation Reserve, there is a balance at the credit of the Profit and Loss Account of Rs. 1,77,139-3-5. From this the directors recommend payment of a dividend, for the half-year ending 31st August, 1941, on Preference Shares, at Rs. 3 per share absorbing Rs. 75,000, leaving a balance of Rs. 1,02,139-3-5 to be carried forward.

In accordance with the Indian Jute Mills Association agreement the mills worked 54 hours per week with 10 per cent of the total looms silent up to 13th March, 1943, 60 hours per week with all looms running up to 15th May, 1943, 54 hours per week with 10 per cent of the total looms silent up to 3rd July, 1943, and then with the full complement for the balance of the period under review. The mills were closed on 26th and 28th June, 1943, and from 16th July to 31st August, 1943, inclusive, owing to shortage of coal.

which it is proposed to deal with as follows:—						
To Prefer Dividend for the year already paid				52,000	0	0
To payment of Dividend on Ordinary Shares at Re. 1-4 per share				4,00,000	0	0
To carry forward to next account ..				75,548	1	11
Total ..				5,27,548	1	11

All three distilleries worked profitably throughout the year. Transport difficulties affected production at Asansol and Darsana Distilleries to a certain extent, but these difficulties have now largely disappeared and production at these distilleries should now proceed normally.

Rosa Sugar Factory worked profit with a crush of 12,54,780 maunds cane. This crush was somewhat short of that expected. Darsana Sugar Factory did not start crushing until 11th January. This very late start was brought about by the dilatoriness of Government in coming to a decision in the matter of sugar prices for the Bengal Mills. The very high prices being paid for Gur and the delay in starting the mills induced cultivators to convert their cane into Gur and Darsana Sugar Factory crushed only 6,75,779 maunds cane making a loss. Competition from Gur which at times was selling in Bengal at a price over twice that of white sugar, is still a factor to be reckoned with. Control measures introduced by Government and the general fall in the prices of other foodstuffs should, however, bring down the price of Gur to a figure more in relation to that of Sugar.

The Bengal Government has formed a Sugar Board to advise Government on the steps necessary to develop the Sugar Industry in the Province. Steps have already been taken to improve the varieties of cultivators' cane in Bengal and large quantities of new seed cane have been distributed.

(Annual General Meeting, 19th December, 1943)

Audited accounts for the year ended 30th September, 1943:—

The accounts for the year, after providing for depreciation for the current year, reveal a profit of Rs. 17,30,626-0-2. The following amounts, out of this sum have been charged off in the Profit and Loss Account:

	Rs.	A.	P.
1. Arrears of Depreciation for the year ended 30th September, 1940	2,12,727	3	0
2. Provision for Income-tax and Super-tax ..	5,00,000	0	0
Total ..	7,12,727	3	0

After making the above adjustments in the Profit and Loss Account, there will be a balance of Rs. 10,17,898-13-2. Adding the amount carried forward from the last year's accounts, *viz.*, Rs. 31,380-13-1, the total amounts to Rs. 10,49,279-10-3.

The directors propose to make the following appropriations:—

1. General Reserve	6,00,000	0	0
2. Reserve for fluctuatoins in the value of raw materials and stores	1,00,000	0	0
3. Dividend at 6¼ per cent and Bonus at 6¼ per cent on 2,50,000 Ordinary shares of Rs. 10 each, free of Mysome Income-tax	3,12,500	0	0
4. To carry forward to the next year ..	36,779	10	3

ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

(Meeting, held 14th December, 1943.)

Audited accounts for the year ended 30th June, 1943:—

	Rs.	A.	P.
After provision has been made for Depreciation the Accounts disclose a nett profit of	3,60,974	0	0
From which has to be deducted Income and Super-tax on the profits to 30th June, 1943 ..	1,28,000	0	0
Leaving a balance of	2,32,974	0	0
To which has to be added the balance of profits from last year	1,88,085	0	0
	4,21,059	0	0
Against this the Directors have allocated Preference Dividend for the year to 30th June, 1943 ..	1,55,000	0	0
Leaving an unappropriated balance of	2,66,059	0	0

The Directors recommend that this balance should be carried forward.

The Directors recommend payment of a dividend of 5 per cent per annum, free of British Indian Income-tax, on the Preference Shares in respect of the half-year ended 30th June, 1943. This dividend, if declared, will be paid early in January 1944. Provided that profits permit the Directors intend to declare early in January 1944, a further dividend of 5 per cent per annum, free of British Indian Income-tax, on the Preference Shares in respect of the half-year ended 31st December, 1943. If these proposals are carried into effect Members will receive at the same time in January 1944 preference dividends in respect of the whole calendar year 1943. It is hoped that it will be possible in future to pay preference dividends at an early date following the close of the half-year to which they relate.

The Calcutta Factory continued production throughout the year. Notwithstanding the utmost efforts which have been made to obtain the remainder of the plant and equipment for the Punjab Factory delays in delivery on account of the war have been inevitable and construction has not yet been completed. Most of the plant and equipment is now on site but there are orders placed both in England and in India still to be fulfilled and until they are completed the Punjab Factory will not be able to start up. The starting-up party of technical specialist employees of Imperial Chemical Industries Ltd., England, the Company's Technical Advisers, have arrived in India and are assisting in the final stages of construction.

Chairman.—Mr. F. B. Pratt.

THE TITAGHUR PAPER MILLS COMPANY LIMITED.

NOTICE is hereby given that the 122nd Half-yearly Ordinary General Meeting of Shareholders will be held at Chartered Bank Buildings, Calcutta, at 12 noon, on Tuesday, 11th January, 1944, for the following purposes:—

1. To receive the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 30th September, 1943.
2. To declare dividends.
3. As special business, to confirm the payment of a donation of Rs. 5,000/- to H. E. The Governor of Bengal's War Purposes Fund for the Indian Red Cross Society.
4. To transact any other business that may be brought before the meeting.

The Share Transfer Registers of the Company will be closed from the 23rd December, 1943, to the 11th January, 1944, both days inclusive.

By Order of the Directors,
F. W. HEILGERS & CO.,
Managing Agents.

Calcutta, 14th December, 1943.

KUMARDHUBI ENGINEERING WORKS, LIMITED.

Notice to Shareholders.

The attention of all shareholders is invited to the Circular issued to them dated 26th August, 1943, in which was outlined the proposed scheme for the Capital re-organisation of the Company. It is intended to proceed with the scheme in the near future. All persons holding shares in the Company, who are not registered as members, should apply for registration without delay and forward their scrip and transfer deeds duly stamped to Messrs. Bird & Co., Kurseong.

By Order of the Board,
BIRD & CO.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 14th December, 1943.

(Continued from page 1173)

nary share for every 8 shares held by the shareholders irrespective of class. Existing shareholders may apply for shares ordinary and/or preference in excess of their quota. Such application will be considered after alloting the regular quota. Those who are not at present shareholders may also apply for the present issue. The issue price in their case is for preference shares Rs. 120 per share and for ordinary shares Rs. 110 per share. The object of the new issue is to provide for the larger finance necessitated by the rapid increase in sales and by the larger volume of orders from the Government.

As the company is earning large profits the preference shares should be marked further higher. The quotation for first-class 6 percent shares is as much as Rs. 150. The ordinary shares also afford good scope for appreciation as the dividend for the current year may be very much higher.

WATCH-DOG.

THE INDIAN IRON & STEEL COMPANY, LIMITED

NOTICE

The Twenty-sixth Ordinary General Meeting of the Shareholders of the Indian Iron and Steel Company, Ltd., will be held on Tuesday, 11th January, 1944 at 11 a.m. at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1943.
(2) To confirm the payment of the ad-interim dividend which was paid on and after 8th November, 1943.
(3) To elect a Director in place of Mr. Kanai Lall Jatia who retires and is eligible for re-election.
(4) To elect a Director in place of Mr. Carl Bendix who retires and is eligible for re-election.
(5) To elect a Director in place of Mr. J. P. Thomas who retires and is eligible for re-election.
(6) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,

WORLD OF INDIAN FINANCE

Thursday Evening.

Inter-bank call money has been a drug in the market, the rate quoting nominally at half per cent in Calcutta and quarter per cent in Bombay. The auction of treasury bills on the 21st December was the last for this year. Applications amounted to Rs. 14.26 crores against Rs. 6 crores on offer. The average rate of accepted tenders was As. -/11/-, comparing with As. -/11/11 in the previous week. It may, therefore, be said that the decline recorded in the treasury bills discount rate is quite substantial this week. There are reasons to think that the bidding for treasury bills in the New Year will be considerably keener. The present total of treasury bills in the hands of the public is Rs. 98 crores. As the maturities in the remaining days of December amount to Rs. 16 crores and as there will be no further auction this month, the year-end total of treasury bills with the public will be Rs. 82 crores. In other words, the cash balances of banks will receive a corresponding replenishment. The deposits maintained by member banks as on December 17 were Rs. 98.16 crores, recording a rise of Rs. 2.19 crores over the previous week. Some reduction will be caused by the outflow into the treasury bills taken up by banks this week. Even so, it seems safe to infer that the banks will start the New Year with deposits with the Reserve Bank on a scale exceeding Rs. 110 crores. While it is needless to strees that this is a record figure, there are two points that have to be taken note of in this connection. Firstly, the establishment of a record for the bank balances of scheduled banks in January which is a peak month in the so-called busy season, is definitely untrue to form and a departure from the norm. Secondly, with such affluent cash resources, the banks should be keener than usual to bid for treasury bills. The offer of tender bills remains unchanged at Rs. 6 crores. For our part, we believe that the first week's auction in the New Year should witness a record figure for treasury bills tenders. The circumstances are also appropriate for further set-back in the treasury bills discount rate. It may, however, be added that the present level of As. -/11/- is on the low side and there will be greater and greater resistance to fall below this level.

The Bengal Government came on the market for Rs. 8 crores of three months bills last week-end. These bills did not excite much interest, applications exceeding the offer by only Rs. 70 lakhs. It was, therefore, not surprising that Bengal was obliged to pay as much as As. -/14/11 per cent per anuum. It would have been far better if the Bengal Government had been advised to desist from asking from the market an amount like Rs. 8 crores which, especially in the present plight of the province, may be construed as too heavy an amount for its financial status and resources. It would have been possible to secure this Rs. 8 crores in the course of two or three weeks. Meantime, the Reserve Bank could have helped the Bengal Government to meet their immediate requirements through ways and means loans. If this course had been adopted, the rate of the Bengal treasury bills might have been at least As. -/3/- cheaper.

The plausibility of this view is emphasised by the marked success which has attended the short-term borrowing of the United Provinces Government this week. The disparity between the U.P. treasury bill rate and the Central treasury rate is only a matter of a few pies. This result cularly gratifying to us as we would like achieved by the U.P. Government is partito regard it as a response to our appeal to the Reserve Bank authorities in the last week's issue.

The Reserve Bank returns for the week ended December 17 disclose currency expansion for Rs. 7 crores against sterling securities. Rupee coin continues to be withdrawn and records a decrease of Rs. 67.45 lakhs. Notes held in the banking department are higher by Rs. 1.39 crores. In the result, active not circulation has risen by Rs. 4.94 crores to Rs. 820.56 crores.

In the banking department, foreign balances are less by Rs. 1.03 crores. We may, therefore, infer that the net sterling payment received during the week under review in respect of inter-governmental transaction is Rs. 6 crores. The deposits of the Central Government maintained the downward trend of recent weeks and have declined by Rs. 1.45 crores to Rs. 18.57 crores. There has been a drastic depletion in Central Government's deposits in the course of December; and, as the treasury bill maturities are quite heavy in the closing weeks of December, the Central Treasury will close the year with sharply attenuated cash balances. Deposits of provincial governments with the Reserve Bank are also lower and record a fall of Rs. 50.73 lakhs, and this in spite of further ways and means advances for Rs. 1.08 crores. The deposits

Thursday Evening.

A very mild revival in giltedged in London may be due to the restoration of easy money conditions after temporary stringency. Short-term borrowing on the usual scale continues and the market faces the turn of the year with confidence. All rates remain unchanged. The only thing that has attracted attention is the rise in note circulation. Active circulation has increased as usual before Christmas, and retail trade statistics will probably show the effect of what is called an abnormal increase last week. This may have led to a drain of cash but not to a call-up by banks of very short loans as the Treasury intend to take £100 millions in deposits. So far the stock exchange remains quietly firm. The scarcity of goods has affected even pawnbrokers who are known to have become dealers in second-hand watches in a big way taking all American watches for sale as new watches are not available. Carefree spending by U.S. troops in Britain has excited the comment that inflation in Britain is small compared with that in the Near East and India.

This may support Mr. Pethick-Lawrence's views as to lapses in Indian policy and Sir John Anderson's lukewarm defence but the drain of goods and the surplus of cash after the gold cover for sterling disappeared has been noted only after four years of war. This increase may be comparable to the rise in circulation noted in India though the results may be different as between the two countries. For the present, there is only recognition of what follows a friendly invasion by big spenders. Evidently disturbing news from home does not affect the disposition to spend. U.S. troops may be more cheered by an assurance as to grants from 200 to 500 dollars on demobilisation than by strike fears. The President recommended an appropriation involving 3,000 to 4,000 million dollars and the Senate voted in its favour. There is, however, the strike threat. If the coal industry is reverting to peace, the railroad workers are keen on a strike. Negotiations have been barren and the President's desire that troops abroad should be cheered up by maintenance of railway services has been apparently ignored. The unions ask for higher pay and the majority of workers are against compromise. The Government is expected to take over the railways, but that may not encourage stock-holders. Quotations for railway stocks must fall, and the recent recovery on Wall Street should be checked. That would have very little effect on other markets because a strike threat may push up commodity prices in the U.S.A.

Mr. Roosevelt on his return has got a labour problem on his hands. There is no sign of Congress being ready for taxation and Mr. Morgenthau (according to Reuter) denounced the Senate for mutilating the Government's Tax Bill. The Senate approved provision by taxation for 2,100 million dollars and this provoked the criticism though it must be strange for the U.S. Senate (admittedly the most powerful part of the Constitution) to be denounced by a member of the President's Cabinet. The old Constitution is apparently unaffected by the war. Lobbyists are busy and quips about the confusion in Washington—the city that never sleeps—may be justified by reference to a cable concerning the War Contracts Renegotiation law meant to get back money for the Government from contractors.

The Administration's successes in foreign policy do not impress Congress and the problem of 1944—election year—looms large. In many ways U.S. Policy may be sicklied over by the thought as to Republican success and a news item as to General MacArthur's intentions after March may quicken apprehensions. Quite a number of U.S. Presidents have been soldiers including the first Roosevelt and the Republicans now have another likely candidate to pick. The railway strike like the General Strike in Britain may promote the cause of conservatism and this will not be ignored by those who look for the disappearance of the New Deal. If ex-President Hoover has written only of U.S. ambitions as to aviation the possibility that the foreign trade drive may be sharper and more comprehensive must be recognised.

For weeks there has been moderate firmness in share prices in London and buying has not fallen away though prices are high. Electrical and Musical industries are up and the small gains in leading issues like Courtaulds show that air raids cause little concern. Mr. Churchill's illness undoubtedly led to a quieter market, but there have been noteworthy rises, for instance, in Anglo-Iranian stock. At the annual meeting on September 21, it was noted that the 1942 results were excellent. The dividend for 1942 is 20 per cent and additions to Reserves have been made on a generous scale.

RUSSIA THROWS BOMB-SHELL

REVIVAL OF GOLD STANDARD?

(Special To "Indian Finance")
Montreal, Dec. 21.

In the United States, economic thought in recent weeks is abruptly focussed on a commodity comparatively neglected in the war for long—gold. This sudden revival of interest in the yellow metal is ascribable to two principal causes, first, the startling Soviet proposal that post-war Russian international trade be conducted on a gold basis, secondly, the realization that although the United States still holds about 70 per cent of the world's gold stocks, nevertheless, her domestic production is dwindling, while Latin American nations have been repatriating ear-marked gold deposited with Federal Reserve Banks.

The United States' gold output this year, curtailed by the War Production Board, will be the smallest since the Californian Gold Rush of 1849. Experts calculate that this year's production will be below 1.4 million ounces compared with the 1940 peak of over 6 million ounces. Meanwhile, little foreign gold has been coming to the United States recently, and the Nation's gold stock-pile has declined steadily since the record high of August, 1942. About 3 milliard dollars' worth of gold is reportedly still ear-marked with Federal Reserve Banks, but Latin America has been steadily withdrawing such stocks in the last few months to balance international payments. Since the Federal Reserve Board does not publish statistics of such movements during wartime the extent of withdrawal is unknown, but it is unquestionably large.

Close on the heels of these reports came a message from Cairo saying that Egyptian banks are now selling gold freely at a price for which the London equivalent is £16/10/6 per ounce as an anti-inflationary measure. This action is designed by the Egyptian Government to absorb a considerable amount of the note circulation, at least partially to eliminate hoarding. It is believed that if the hoarding instinct can be switched from commodities to gold it may result in releasing needed supplies to markets.

Almost coincidental with the Cairo announcement was the publication in the Soviet journal "War and the Working Class" of the argument "if Soviet trade with other countries could be conducted in gold currency, undoubtedly this circumstance would facilitate trade operations." This pronouncement amazed financial circles in the United States which had been speculating on post-war international trade in terms of bancor and unitas, the new currencies envisaged by Lord Keynes and Mr. Morgenthau in their stabilization plans.

The Russian proposal may actually cause a revolution in economic planning by so-called conservative nations and precipitate a return to greater reliance on the gold standard.

The "Wall Street Journal" reflected this attitude when it said editorially on the Soviet suggestion: "It lends support to the growing belief that Russian leadership's economic plans for development of

Better Mood of British Business

This year's session of the Associated Chambers of Commerce will be memorable for a long time for the evidence it bears of the anxiety of British commercial interests in India to align themselves, as far as may be with public opinion in this country. Though it is regrettable that Lord Wavell missed the opportunity of striking responsive chords in the public mind, the speech of Mr. Burder and the tenor of the more important resolutions will be welcomed throughout the country as a promise of greater concord. The Presidential address at the annual session of the Associated Chambers is usually a pean of praise for the official policy of repression or an apologia for the Government's record in the political field. The Chambers ventured to criticise the Government only on minor details of policy which affect adversely the interests of the constituent members. But Mr. Burder has now cut fresh and fertile ground by exposing the defects of the food policy, upholding the claims of education to priority in post-war reconstruction and emphasising the need to pull up the general standard of living as well as the dangers of disproportionate attention to industrial labour. Both in what it omits and in what it includes, the speech shows a judgment and a sense of proportion which the Indian public would be ill-advised to ignore. For our part, we appreciate the influential reinforcement of our view on the food problem which Mr. Burder affords when he says that the "Government have concentrated too much on control by edict with insufficient regard to the necessity of enforcing their will". We may say the same thing, too, of his observation that "if Government can nurse the simple agriculturist up to a higher standard of living that will be one of the greatest services that the Industrialist can ask of Government".

Agricultural development is not set up in opposition, or as an alternative, to the development of industry. Time was when the British Chambers of Commerce looked to agriculture as the most powerful war cry against the claims of Indian industry. This year's session it throws a bridge across the gulf between the Associated Chambers and the Federation of Indian Chambers. For the former has now asked for self-sufficiency in food, a programme of post-war reconstruction covering the entire social and economic field and a determined drive against poverty, illiteracy and disease. It insists that India's co-operation with other nations in the economic sphere shall be limited by the needs of orderly development of her resources. The resolutions are so worded as to secure support outside the ranks of the Associated Chambers. On one point, however, some difference of opinion is possible; but no one can deny that the buying up of foreign interests in India cannot serve the cause of our economic progress as well as the development of new fields, of which there is no dearth.

It is regrettable, as we have observed already, that this this new development in the attitude of British business was not buttressed by a Viceregal announcement of a change of British policy towards India. We can well believe that at present the intrinsic difficulties of the Indian political situation weigh with Lord Wavell more than the possible benefits of a few heartening sentences in his speech. But the Viceroy's speech indicates a disquieting preference of what is called good government to the more subjective appeal of the freedom that is associated with a political settlement. The dangers of this preference are by no means difficult to appreciate. It is questionable in the first place, whether there is such a clear-cut choice between the two; and one may ask whether the latter is not a condition rather a substitute of the former. Secondly, good government so often confronts the authorities with the need for a firm hand that it wellnigh defeats itself. In the case of the food problem, negotiations with the Punjab had probably to be firmed up before they could lead to the desired end. The Bengal Government have been given, in the words of a daily contemporary, a "directive" enjoining the introduction of rigid control and rationing. The Sind Government have been driven to an open breach with the Central Government; and an autonomous province is ruled in this matter by an ordinance of the Governor. There is so much common ground between good government and self-government that to distinguish between them to the point of exalting one above the other has its obvious dangers.

Not the least of the dangers inherent in the choice is the proneness to deny all value to the preferences of others. It is not a little significant that a sharp difference of opinion on so important a matter as education was witnessed on the opening day of the session between His Excellency and the President of the Associated Chambers of Commerce. No one who knows Lord Wavell through his writings and speeches will suspect him of attaching a low value to education. One can appreciate, too, the line of reasoning that lies behind his plea that a vast programme of educational development, such as Mr. Sargent has outlined, should not be undertaken before the material resources have been expanded. But in this as in other similar questions, not only the decisions but also the responsibility for the actual working must lie with those who are most concerned, namely, the people. And there is no known way of finding the will of the people or making itself felt other than the inauguration of a system of national self-government.

We prefer to believe that Lord Wavell has only desisted from a premature expression of opinion or undertaking and has preferred to dwell on post-war economic reconstruction, a theme more in accord with the setting of his first public utterance. The picture that his outlines conjure up must be agreed, on all hands, to be really heartening. It is obvious that the subject had enlisted Lord Wavell's interest even before he left British shores for assuming his new office. For, we are told:

> While recently in England I saw some of the leaders of British industry who are interested in India, and I found in them a spirit of most helpful cooperation towards India; there was certainly no desire to dominate or control Indian industry, but a desire to help on a basis of mutual advantage. I am sure that a visit by some of the leading Indian industrialists to the United Kingdom, in order to see the developments that have arisen during the war and to discuss India's problems with leading British representatives would be of the greatest possible advantage, and I hope that it may be arranged. The sooner the better; because other nations are already beginning to think about their postwar needs and to place orders for machinery and material.

It is, indeed, heartening to be told on high authority that India is no longer looked on merely as a source of raw materials and a market for manufactured products. The Associated Chambers, too, have advocated the import of consumer's goods only as a short-term policy and asked for the import of capital goods. The imperative need, on social, not less than humane, grounds, for an increase in the standard of living, the change in India's status from a debtor to a creditor and the transformation of other national economies and of the nature of international economic relations, all alike require that the attitude of other nations to India should be more or less radically changed. Lord Wavell shows a clear apprehension of these when he says:

> India will be a creditor country; she has suffered comparatively little in the greatest cataclysm in the history of humanity; and there is a great sympathy and will to help towards her, both in Great Britain and in America. There will be ample markets for her increased production, both at home and abroad. In fact, there is nothing to prevent India growing to be the strongest and most highly developed nation in the East, if she can solve her international problems and make a united contribution to peace and prosperity in the postwar world.

To such a happy consummation, many forces and factors have to contribute, not all of which rest in the hands of India's leaders. Even while the political future remains obscure, much may be done to clarify the plans for economic construction. The wisdom of sending Indian industrialists abroad as Lord Wavell has suggested is obvious, though the dangers of unsuitable personnel have to be provided against. The issues raised call for fuller treatment at a later opportunity. Suffice it here that there is today a consensus of opinion among the head of the Government, British commercial interests and Indian opinion, which can lead to great results, if made the most of.

MIXED FARE

The bread of our fathers may not be the bread of our children as we have reason to infer and today when mixtures and substitutes have invaded the whole field of human nutrition, there is undeniable importance in the examination of optimum proportions with wheat carried out by members of the staff of the Agricultural College at Lyallpur. As we know well wheat flour entered late-mixture was the rule in Britain. The investigation is apparently not independent of the shortage and high prices. If the current year's crop (put at 10,971,000 tons against 10,037,000 tons in 1942-43) is calculated to remove anxiety the necessity of imports for some time remains unquestioned. Since wheat yields in India are not likely to attain the level reached, for instance, in Denmark, and imports after the war may be affected by the European demand for outside supplies, there is perhaps little ground for discussing either the size of the export surplus in the four main exporting countries namely, the U.S.A., Canada, Argentina and Australia, or the agreement regulating supplies and prices reached this year.

Before the war, the wheat problem in India was regarded generally as a tariff question and the Punjab grower asked for both railway rebate and a duty on wheat brought from Australia. The wheat problem today is really one of making the Punjab's surplus replace the rice lost after the evacuation of Burma and substitution of millets in place of wheat as well as rice has been energetically recommended in both Bombay and Bengal. Only one grade of flour of one kind and absolute uniformity in milling practice are direct consequences of the war in Britain so that any changes following the shortage in India may be expected to reproduce those observed in Britain where the use of barley for ad mixture is openly favoured. For the question is mainly one of mixtures, and Germany's encouragement of rye for admixture even when home production of wheat for years before the war was increasing, has special significance for us. Since wheat is approved for many reasons besides the shortage of rice, noted over the past year, it is certainly useful to remember that wheat prices are not subject to control and wheat is dear (the Lyallpur price on December 2, was Rs. 10-6-6 per maund) in relation to the prices ruling before the war.

The enquiry has established the possibility of mixture of many grains with wheat. The agricultural officers have argued that pressure on wheat supplies will be intense because of inflation; the rising tide of fashion—wheat being preferred to other grains—curtailment of transport, hoarding etc., and defence requirements. So the larger home supply will be insufficient and available wheat must go further. As the article in Indian Farming points out 'a method devised to make available supplies go farther would be tantamount to increasing the supplies of wheat'. What has been done in this connection therefore demands attention, and our hope is that the experiments will receive general attention on the part of Food Departments as well as master bakers. It is noted that bajra, jowar, maize etc., are not at present milled for the manufacture of leavened bread, and most of them are rated interior in the consumer's eyes even for chapatti-making. But the authors insist that their findings can be properly used if the mixtures recommended are issued from the manufacturing sources where such mixing can be made compulsory and supervised instead of by merely giving information to the public, leaving the latter free to use or reject it.

The milling and baking laboratory attached to the College carried out the mixtures and determined the optimum proportions. Husked barley, bajra, jowar, rice grain and two other pulses were used to find out if they could be used for making leavened bread, having a more pleasant taste and higher nutritive value. Flour from a modern roller mill was used along with the flour of other grains prepared in the Laboratory mill and experiments were conducted in regard to baking of leavened bread as well as chapatti-making. The findings reached are that barley up to 10-15 percent can be mixed with wheat flour for making loaves without appreciably lowering the quality through the mixture. As for unleavened bread (chapattis) the result was satisfactory. The husk ordinarily present was not noticeable, and even when 25 percent of barley was present in the mixture, the colour 'darkened only a bit'. It is concluded from these tests that 15 to 25 percent barley can be mixed with wheat without appreciably lowering the acceptability of chapattis and without the latter being considered different from those made of pure wheat. As India produces annually two million tons of barley, the quantity needed for mixture may be had readily.

As for bajra additions from 5 to 25 percent of bajra flour to wheat raised the loaf volume, and the colour of the crust was not materially affected up to 15 percent of bajra in the mixture; but thereafter, the crust darkens and gets rugged instead of being smooth. The safe limit is described as 10 percent of bajra in the mixture. Experiments in chapatti-making led also to the finding that from a maund of wheat-bajra mixture more chapattis can be prepared than chapattis of equal weight from the same unit weight of wheat atta. From the commercial baker's point of view this will be regarded as an advantage, but the chapattis suffer in complexion. With increasing amounts of bajra, the colour becomes progressively greyish, but up to 15 percent the tinge was so light that the 'mixed' chapatti could easily pass for a pure wheat chapatti. As regards taste some improvement rather than deterioration was noticed in the taste of chapattis which were rather sweet and had a pleasing flavour. But chapattis made of 25 percent or more of bajra tasted flat and suggested mixture of bajra. An important point noted was that the dough kept for over half an hour kneading became runny and was hard to handle. The investigations suggest that 15 percent of bajra can be added to wheat without affecting the quality of chapattis made with the additional possibility of getting a product richer than pure wheat chapattis in certain nutritive elements like fat, mineral matter, iron and carotene. India is known to produce about 2¼ million tons of bajra in a year and the quantity must now be higher as dry farming means less cotton and more millets than before. The safe limit for jowar mixture is said to be 10 percent because the crumb gets grey. If a creamy or white grained jowar is used, the bread is almost identical in quality with that made from wheat flour. Jowar up to 15 percent can be mixed in the case of chapattis in the opinion of the investigators who note that jowar production in India runs to about 6½ million tons per annum. In the case of white maize used for mixture in loaves the safe limit is ascertained to be 10 percent and in the case of yellow maize it is found to be 7 percent. Chapattis made from the mixture (up to 25 percent of white maize is the approved limit) could pass for pure wheat chapattis, and there is the advantage that for a given quantity of flour more chapattis can be made. Maize is grown in India to the extent of 2 million tons per annum.

Experiments with rice led to the conclusion that only up to 5 percent can be used for baking loaves and rice clearly has no place as against the millets for admixture. The finding, however, is wholly in favour of grain for making bread. A mixture of 5 to 7 percent is approved, as quality is not lowered, judging by ordinary standards. Certain pulses are used with wheat flour for making pancakes of some kind. Both Mash (phaseolus munga) and Mung (phaseolus aureus) were employed in making bread. But the reached is that only up to 5 percent of mung can be added to flour for making bread without improving the taste as also in the case of mash where any admixture over 5 percent led to a perceptible flour and a deterioration in grain.

As the investigators' purpose was achieved through the experiments there was a formal presentation of the results last March to the Advisory Board of the I.C.A.R. last March. Their general argument runs in favour of mixture, and today when dependence on limited imports is manifest, there is everything in favour of changes in preparing atta and flour. Wholemeal is prepared from wheat as well as other grains and 'it should therefore be a straightforward and simple business for large-scale manufactures of atta to turn out mixtures containing wheat and the other grains in recommended proportions'. There is plenty of scope for such mixtures with the wheat used for chapatttis since the greater part of wheat is converted into atta and is used in the form of chapattis or similar unleavened bread. If it is desired to mix wheat with other grains for consumption in the form of unleavened bread, the preparation of fine may require some research and modification of technique on the part of large milling concerns. The writers feel that there is plenty of milling ingenuity in the country to overcome difficulties (those encountered in the laboratory mills are described in the article to which acknowledgement is made). The conclusion reached should certainly be regarded as most interesting and important for the present.

In the view of the authors wheat supplies can be made to go considerably farther if mixing (in accordance with a table of optimum proportions for both bread and chapattis) is done. It is suggested that in all cases where atta and flour can be manufactured under supervision eg. for supplies for the Army, it should be compulsory to mix with wheat in the proportions recommended other grains which may be plentiful and cheaper than wheat. Some form of control to secure such mixing may be possible in the case of mills catering for the public.

There is mention of a demonstration at Delhi in the footnote to the article but it seems to have received little attention. As for the recommendation of most millets in mixtures instead of in 'straight' flours there is much to be said for the current prejudice against millet as inferior grain used only by the lower castes or the working class can only be surmounted by the issue of mixed flour for direct use. When rationing is adopted extensively, we may well look for the adoption of expedients recommended; and the habit of mixture may even certainly be expected to outlive the emergency which led to the interesting experiments at Lyallpur which are related to the changes in the food equation as much as the need to extend the use of wheat in rice-eating regions.

THE

FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Additions to Control

A Notification dated December 4, brought imported engineer stores under the Department of Supply's control. The Director-General of Munitions Production has been vested with powers to direct owners and consignees to sell only by permission; and all consignees are required to furnish returns of imports and also stocks held. Licenses are required for sales of a wide variety of stores and the procedure already applied to mill stores and spares is extended to many tools and stores. The Schedule to the order contains entries relating to electrical equipment and appliances. Electric motors, generators and generating sets with prime-movers of any type or design, AC or DC, together with control gear as well as electric cables, insulated wires etc., are brought under control. Though import control regulates what is got from abroad, and who gets it, the assumption of authority over disposal is new. The war is the principal reason for the limitation of the importer's freedom to sell to whom he likes but the other reason, may be found in the anti-profiteering and anti-hoarding ordinance. The list of controlled items includes screws and washers and electric lamps of any type, voltage or wattage; as also hand tools like files and rasps. Power to exempt is reserved as usual under the terms of the Control Order but the main question that will interest civilian users of things like lamps and tools is whether control will lead to lower prices and more regular supplies. It may be assumed that Control will secure satisfactory results for consumers, and the fact that the Government has a direct interest in preventing imported goods from going into wrong hands will be grasped when the Civil Supplies Department is preparing to get down the prices of both imported and locally manufactured goods.

Sind Ministry Objects

Since the Punjab Ministry explained that it gave up its own plan in favour of price control and rationing recommended by the Central Government there was a general belief that uniformity was within reach. The expectation is belied by the news from Sind. The Sind Ministry adhere to the view that the price of rice must be raised in the interest of local growers. The Sind Premier notes that maximum prices have not been fixed in the Punjab while Sind has to stick to the distinct threat of a constitutional crisis in Sind but the Ministry has asked also that the Centre take over the Food department or let the Governor run it. The conditions for cooperation have been laid down. The Sind Ministry asks for a price of Rs. 12 per maund for both export and internal quotas. Sind is also prepared to take the prices offered for the kharif crop by the Central Government if they are lower than the prices fixed for the Punjab.

Reference has been made by the Premier to a mandate from the legislature and the possible effects on the Ministry's continuance in power. There was no mention of cotton prices or of the exemption of wheat from control. Neither of these crops count as compared with rice in the Premier's opinion; and the view opposed is in regard to the maintenance of Rs. 7 per maund for rice. The price fixed last year benefited the Sind Government more than the growers and the claim for revision receives its justification from two causes. First, the prices in Sind are low in relation to prices fixed in Bengal and second, the Sind supplies are more convenient to obtain for deficit, consuming markets. The view has been opposed by Mr. Hutchings who argues that prices are not too low anywhere. No mention has been made of the Sind grower's costs. Grain harvested from the irrigated tracts must be more expensive than the grain obtained from other areas but the plea is now for uniformity in regard to procurement, prices and rationing. The Punjab, it is urged, has been favoured on more than one count.

The Government communique from Lahore on December 12 merely dwelt on the Ministry having yielded to the Centre in regard to price control and rationing. It declared that requisitioning was ruled out, and the Punjab surplus must go to other markets, if goods were made available in place of currency. The Sind Government has not sought similar guarantees but asked only for higher prices. In the case of wheat, the harvest price obtained in 1942-43 was Rs. 9-6-10 per cwt in April-May in Larkana and Rs. 8-5-10 in Sukkur (prices lower than in the Punjab). The Punjab price was, and is, higher and the controlled prices in Bengal are also substantially higher. Since the development fund cannot be distributed to growers this year the Sind Ministry agitates for higher prices. The Ministers conference would, probably, examine the question of prices as the Sind Ministry is not authorised to fix prices for the kharif crop. The Provincial Ministry's view is merely against the continuance of the old prices meant to stimulate Government's own exports but the Centre's view is that prices are too high. Regard will be had to the Central Government's intention to bring rice under control and reduce variations but there is also the Sind grower's claim for higher prices. No reference to production costs or the incidence of land revenue is possible but the Sind farmer has to make known one of two things, that rice grown under the Lloyd Barrage is different from rice grown in the deltas and the Sind scale of assessment is different because it is recent and based on war rather than peace prices. The Sind Cabinet's attitude has been for higher prices. No claim has been made in regard to wheat and the Karachi quotations of Rs. 64 for 656 lbs including hag, is lower than the Lyallpur price of Rs. 10-8 per maund, allowing for the differences in quality, though it may be urged that the size of the new crop may lower prices in the Punjab in the future.

Cotton Statistics

Since gins and presses have to furnish statistics by law, the cotton press returns from week to week may yield no positive conclusions as to seasonal employment or production. But in the light of the latest statistics as to the ginning returns in India, it may be suggested, that supplies for mills will be larger. The increase

in Sind from 104,584 bales in 1942 to 124,857 bales in the period September 1 to December 3, 1943 may be viewed as favourable to textile manufacturers like the large increase noted in the case of Berar. It is, of course, the 1942-43 crop which is dealt with, and the main changes in the ginning statistics are the decreases noted under Bombay, Madras, the Punjab and the U.P. and the increases recorded under Bengal, Sind, Rajputana and Berar. The list of cotton pressing factories at work in 1942-43 in Bombay shows that many have been permanently closed or removed to adjacent States. Some are not working this season while a few have been removed from the list of existing factories by fire. The largest number of factories still is in Bombay and one at least in Surat appears to belong to a co-operative society as the title, Farmers Co-operative Cotton Ginning & Pressing Factory indicates.

The decrease in cotton cultivation in India after the reduction in exports may be said to justify the changes recorded in the ginning figures. But the decline in output in Bombay and the Bombay States may create difficulties for the cotton trade in the future apart from the familiar transport difficulty. Since many mills control gins and presses such problems may not arise for a considerable part of the industry, but the undeniable existence of excess capacity in what may be described as a part of the textile industry may be of interest to some who would like to study the economics of Indian cotton. It is only possible to note that the decline in output must inevitably affect rural employment though food production may claim more labour. Famine in Bijapur has led to the closure of only one pressing factory out of many in the District (the other figuring in the list is described as not existing) and strange as it may appear, more factories have been closed in Bombay, Ahmedabad and Sholapur than in the districts more distant from textile manufacturing centres. This may be explained in terms of transport shortage as much as the fact that locally grown cotton is insufficient for the presses near the mills. While the figures as to mills output and profits are conveniently expressed the seasonal production, earnings and profits of gins and factories have not been surveyed though the cotton market is assuredly familiar with the part played by figures as to ginnings in the U. S. cotton market, which follows the former as much as the crop forecasts from August to December.

War Risks Insurance

Insurance against war damage is a field reserved today for Government as underwriter and the factories in India compulsorily insured since May 1942 pay 4 per cent as premium. The extension of the scheme introduced in 1942 has been lately mooted and Indian commercial opinion has not been slow to express itself in favour of continuance for a year without a premium. Factories insured under the compulsory scheme up to March 1944 have paid Rs. 16 crores as premium and the net outgo is Rs. 7 lakhs, of which claims account for Rs. 1 lakh and expenses for Rs. 6 lakhs. The extension of cover without premium may be regarded as a 'no claim' bonus by some, but others would possibly point to the fact that interest payable on Rs. 16 crores

would be enough to meet such claims as may arise. The maintenance of the scheme for the duration is certainly favoured. It may be noted that confidence in enterprise and earning power revived strikingly last year only after the factories insurance scheme came into force, and from the investment angle alone, there is everything to be said in favour of keeping the scheme. Since Australia has dispensed with the premium payable, it has been urged that the Indian Government might continue the insurance scheme and give relief to industries especially after the increases in taxation this year. A lower rate of premium would probably be regarded as appropriate if inadequate recognition of Indian industry's service in the war. A reduction of liability under this head may benefit shareholders indirectly but Government's decision will be influenced by an estimation of danger in the east as well as the need to keep on adding to extra-budgetary funds in the war period. A reduction in the quarterly premium from March 1944 would certainly have a mild tonic effect on ordinary shares generally. While the reduction would naturally offset the new liability of employers for war injuries compensation defined by a new statute the complete abolition of premium would bring higher dividends within reach of shareholders and the recent discussion of what may follow the representations may stimulate interest in industrial shares generally providing immediately a due corrective for apprehensions nourished by reports or warnings as to air raids in one part or another of India.

Austria's Future

The Moscow conference realised readily the need to create an independent Austria. If there is no question of putting Otto on the throne or forcing the Socialists into power in the confusion the economic problems of an Austria divided from Germany will remain. The original Anschluss proposal preceded the Nazis rise to power, and it was prevented by the French more than anybody else. How to set Austria up as a going concern when the Danubian basin has not been disciplined may be viewed as a very difficult task facing the Allies, but the presumption is that Austria may revive if Vienna becomes a centre serving the Succession states. It may be recalled that Vienna as a financial centre enjoyed the support of other centres in the past and Vienna too was the point from which the whole of South Eastern Europe derived financial and trade support. Czechoslovakia may have a real interest in looking to Vienna. The old banking and financial relationships are not too difficult to restore if an Austria, free of the Nazi, is admitted to equality with the nations which have split off from the original stem of the Hapsburg Empire. If Austria is revived, and pursues an intelligent and coherent policy, the Balkans may imitate her. Austria and Czechoslovakia may work together and a free trade centre in Vienna is expected to create a market for Austria's industry as well as the products of less developed countries. Other financial centres may find real advantages in making Vienna the centre for all Dominion trade.

The suggestion may not be without value as the Allies contemplating restoration of Austrian independence must make certain that Vienna has something more than tourist receipts which may come from the enlarged Tyrol. It is quite possiblee that the transfer of Nazi industry to the east has created prosperity of a sort. The development of an old country after peremptory acquisition may have no parallel in history, but it may be widely suspected that Austria is not one of the occupied countries and any decision to let her have the plebiscite (vetoed by Hitler in March 1938) is meant to take advantage of the new situation created by the decline of the west. If Australia's minerals become more important than those of the Ruhr emancipation of Austria may be a measure designed to disarm economically Germany after the war. If Austria qualifies for assistance from the U.N.R.R.A there should be little surprise for the decline of Italy in and through the war will entail the restoration of industry in Austria.

BEYOND Capacity

Greater output, and still greater, is the urgent need not only of India but of the United Nations. To meet this need factories throughout India are producing at a level far in excess of what, in peace time, was thought possible. Many factors contribute to this success, not the least important being the ability of the worker to maintain a steady high level of effort. It is here that Indian Tea plays a valuable part. Tea served to the worker, on the job, has been proved in many hundreds of factories to be a wonderful reviver of failing concentration.

Fight Fatigue with
INDIAN TEA

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD IK 232

New Guinea Development

A new industry assisted by the war is flax growing. In the war period the area under flax rose from 2000 acres to 60,000 acres and the yield of fibre has risen from 150 tons per year to 100 tons per week. The development of a permanent industry which may eventually meet Australia's requirements is expected.

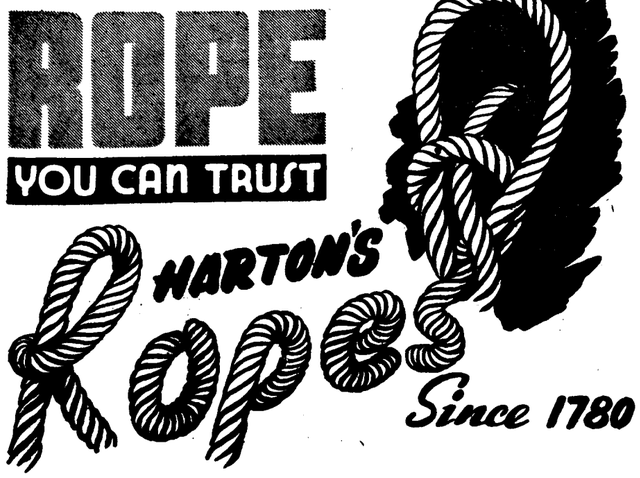
Industrial developments of significance are the reported diversion of munitions capacity to the manufacture of agricultural machinery, automobile spares, refrigerator equipment and greater production of steel and wood auxiliary crafts. The production of certain armaments and munitions is sufficient to meet the estimated requirements for some time, and one result will be the release of 2000 operatives for civilian work. Australia is making the seventeen pounder anti-tank gun, according to Mr. Makin, who said that the details must remain a secret, though the weapon had been proved more than a match for German tanks. Australia is looking afield, as Mr. Ward spoke of developing new industries in New Guinea. When the Army vacates New Guinea, civilian administration would take over. Mr Ward said he wanted to ensure that when the territory came back under civil administration, the natives were not exploited but were given opportunities as some measure of appreciation for the work they had done in saving the lives of Australian soldiers. But the strain imposed by the war is disappearing in Australia and the raceless Saturday has been abolished. The measure adopted to reduce public outlay on gambling has been operating for one year. It prohibited racing on the first Saturday of each month. The Cabinet has also decided to remove anomalies which have unfavourably affected country racing.

S. A. Railways' Work in War

South Africa's railways, run by the Union Government, have apparently the same problems as the Indian railways. According to the available reports, railways have been trying hard to obtain additional rolling stock and power owing to the pressure upon transport. It was known in July that the Union reckoned on getting 1,000 additional bogey vehicles from Canada, and next year probably, assistance with engine power and electric units from Britain. It was noted that the Administration may be able to obtain a further 1,000 bogey vehicles from North America. In spite of great activity in the railway workshops, South Africa's resources in vehicles and engine power have been strained to the utmost. Brigadier Hoffe, General Manager of the Railways, in a letter to the Press stated that the S. A. Railways have been called upon to move a large number of troops continually while their passenger traffic has increased with greater activity in the Union. In the suburban traffic areas, no less than a million more passengers a month are being carried, while the main line passenger traffic has been intensive. Special passenger trains for troops have claimed a tremendous amount of engine power. With regard to goods traffic, apart from war equipment, munitions etc, raw materials for the war industries have constantly absorbed a large proportion of available rolling stock and engines. In respect of goods traffic, it was noted that for the last 12 months, the increase in coal output for the combined Natal and Transvaal mines has been no less than 1.6 million tons. Actual coal shipments for the past twelve months have similarly been nearly three-fourths million tons above those for the previous 12 months. The consumption of coal by the railways in the year ended March 1943 was about 200,000 tons more than in the preceding year. Base minerals to the extent of more than 8,000 tons have been transported during the past 12 months. The tonnage of sugarcane, sugar and treacle transported in Natal during the 12 months ended March 1943 amounted to 3 million tons nearly showing an increase of half a million tons. The number of livestock carried in the year ended March 1943 was 6,150,000 as compared with the pre-war average of 4 million animals. Miscellaneous goods carried by rail in the year ended March 1943 record an increase of 500,000 tons over the tonnage carried in the period preceding the war.

The growth of traffic accounts for the rise in earnings. In spite of official injunctions to the public and strict rationing of goods traffic, the S.A. railways earnings show striking increase. The week ended July 3, 1943 produced the highest revenue known in the S.A. Railway history namely, £966,251 while the increase from goods traffic £554,076 was also a record. The average weekly earnings before the war was £626,926 so that earnings per week have risen by £350,000 nearly in the war period.

Changes In War Effort



Since the war effort has taken a very large part of Australia's population, plans for the re-diversion of manpower have begun. The Army Minister said recently that men will be released for the next ten months for rural industry. The subject was discussed at a conference between the Army and the manpower authorities. Mr. Forde indicated that most of the men would be taken from units in Australia as the efficiency of the units in the front line positions had to be preserved. It is known that 30,000 men have been put back and plans for sending out more are under way. The decision is supported by Sir W. T. Layton's reference at San Francisco to the manpower difficulties of the two Dominions. Sir Walter Layton's opinion as to industrial development for the war is recorded in the Australasian newsletter for November. Sir Walter said: "this country with its highly developed and efficient facilities for repair of ships, aircraft and other weapons of war, has base workshops which offensive operations on the modern scale demand. Not only has Australia created a complete and complicated industrial structure all in the short period of 25 years, but she possesses the tremendous advantage of having space in which to expand her growing industries after the war." While the Melbourne Chamber of Commerce asks for investigation to support planning the Commonwealth is still making decisions regarding local industry. The making of luxury furniture has been banned. An order prescribes the manufacture of utility furniture only in order to get artisans out for war work.

The White Plan II

Since Mr. Morgenthau started on his tour of the fronts, little has been said about the international currency plans while much has been said about U.S. commitments for relief after the war. Mr. Hull's announcement that Russia is ready to help in preparing an inter-Allied agreement has made it necessary to examine the revised proposals. The Treasury provided for dealing with abnormal balances, while prescribing new gold quotas. The text of the revised proposals is now available, and the U.S.O.W.I.'s summary describes the objects of the Stabilisation Fund in these terms (1) to help stabilise the foreign exchange rates of the currencies of member countries; (2) to reduce the use of such foreign exchange restrictions and discriminatory practices as hamper world trade; (3) to help to create conditions under which the smooth flow of foreign trade and of productive capital will be fostered. The Fund is to be set up from contributions. Each country is to pay 50 percent of its quota in gold and the remainder in local currency. A country with inadequate gold holdings may have its gold contribution reduced and a country may substitute some government securities (redeemable at par) for local currency. The Fund shall be used for the benefit of the member countries. The monetary unit is to be the Unitas Equal to 137.17 grains of fine gold=$10. No change in the gold value of the Unitas is to be made except with the approval of 85 percent of the member votes. The accounts are to be kept in Unitas and no change in exchange rates shall be permitted to alter the value of the assets of the Fund.

Initial rates of exchanges shall be based upon their value in dollars on July 1, 1943. If such a rate is inappropriate, the initial rate is to be determined by consultation between the country and the Fund. Changes in rates may be permitted with the approval of a three-fourths majority. The Stabilisation Fund may sell foreign exchange required to meet an adverse balance of payments predominantly on current account. One half of such exchange shall be paid for with gold or acceptable foreign exchange. A provision to secure foreign exchange for the Stabilisation Fund is that which orders a country to sell one-half of the gold and foreign exchange in excess of its official holdings at the time it joined the Fund. The Fund may buy blocked balances not exceeding in the aggregate 10 percent of the quotas. At the end of two years, the Stabilisation Fund shall propose a plan for the gradual further liquidation of blocked balances. The Fund is to deal only with Governments and their local agents and not intrude in the customary channels for conducting international commerce and finance. An executive of not less than 11 million dollar of its quota. No country is to be appointed by the Board representing the governments. Each country is to have 100 votes plus 1 vote for each shall cast more than one-fifth of the aggregate votes.

Member countries are called upon to maintain by appropriate action the exchange rates established by the Fund to abandon restrictions (except on capital transfers) over foreign exchange and not to impose additional restrictions without the approval of the Fund. Members are also to give consideration to the views of the Fund on any monetary or economic policy the effect of which would be to bring about a serious disequilibrium in the balance of payments of other countries. Because the revised plan calls for contributions in gold and puts creditors at an average, the British view is mostly unfavourable. It has been noted that because the new plan allows a change in the value of the Unitas (as desired in the Canadian plan) and provides also for the liquidation of abnormal balances, it is better than the earlier plan. The Canadian plan also provided for the purchase of balances from creditors for national currency or foreign exchange subject to certain conditions.

The ropes of rope-making only the oldest rope makers know. The ropes that will never fail, that can be trusted to stand the severest strain

Christmas, the season of mental exaltation through cheer and goodwill to all, now seems but a weary milestone in the long road to Peace. But the fifth Christmas since the outbreak of war is the first to give a glimpse of victory; and there is, doubtless, thanksgiving for such small mercies. Another season of goodwill, or even more, may have to be spent in subdued hatred of men who have turned themselves into beasts of prey and forced on others more than the bestiality which life on earth still obligates Man to preserve. But it is certain there is not more left of this war than we have seen already. When the aggressor is on the defensive and the defenders sally forth from their fortress, it is a sure sign that aggression is foiled. But, the question remains: will it be only for a time, or will aggression as such be for ever eliminated from the affairs of nations and peoples? There are many today in Europe and America, who fear that Germany may not fight this war to its bitter end, that one section of her leaders may foist the blame for aggression on others, put them aside and contrive to get terms of peace which will enable the Herrenvolk to make another and a better bid for world domination at a later time. Against such a danger the only precaution that suggests itself readily is to disable Germany completely for another disturbance of the world's peace. The remedy is axiomatic. Though the results of its employment in the past are not quite encouraging, it has in the instinct of vengeance a ready and powerful ally. The see-saw of Versailles and Munich is not destroyed with the dining car of Compeigne. Nevertheless, there are other forces beside the craving for vengeance which may well make themselves felt when the peace settlements will be made. The tragedy of the last war lay not so much in the widespread carnage as in the fact that, though the war was fought by a number of nations, France was left alone to dictate peace terms to her ancient enemy without a thought for a wider basis for its support. Peace this time may well be the handiwork of many expert hands. If chivalry to defeated Germany has its obvious risks, there is an urge to search for wider and more enduring basis for world peace than mandates and unilateral disarmament. That urge, if it is widely felt and powerfully supported, may lead to a peace that neither a Napoleon nor a paper hanger can easily destroy.

* * * *

That urge is of the very essence of the Christian spirit and the teaching of Christianity that God and Man are wrought in one mould and that all men are equally divine. Bertrand Russell has said that man created God in his own image rather than vice versa. Whatever it is, it is the likeness that matters, the equality of all men before God and the genuine human need for a common Godhead, which lie at the base of all religion, even religion in its most crudely institutional forms. The modern slump in religion is to be traced to the failure of religion to make the commonwealth of man a concrete reality. Even careful thinkers and observers miss the significant fact that opposition to religion is strongest in those who want to push this equality of man to the farthest limits. If religion is the opium of the people, the clergy carry on a lucrative trade in that drug. The place of conscious malevolence in the hapless history of man is as often exaggerated as it is underestimated. If no religion has yet made a reality of the brotherhood of men, the reason is to be sought in the conditions of life more than in the practices of the clergy. Religion, like all social institutions, has its roots in biological need, though its branches point to Heaven above. It is, to use a modern phrase, a quick-setting cement to build together a medley of tribes into a powerful people. But spiritually as well as secularly, it is jerry-building. A social structure that looks to religion for cement is either primitive or tends to develop serious cracks on the walls. On the other hand, peoples who have reduced the emphasis on religion are in the vanguard of progress. Religion has suffered both from the weakness of its supporters and the strength of its enemies. When progress seems to owe so much to freedom from the inhibitions and superstitions of religion, its supporters have to bear the taunt of reactionism, while its opponents can claim Truth and Reason as their allies. Nevertheless, the verdict on religion must be indefinitely postponed. There is a link between the world crisis and the present phase of religious sentiment, which must weaken the case against religion. The fervour of all political creeds, which have some achievement to their credit, is not unlike the religious fervour that in the past established new empires, or razed old ones to the ground. Communists, who are the bitterest opponents of religion, are infected by a not dissimilar virus. The essence of the religious sentiment is its capacity to draw the individual out of his narrow self and send his soul in quest of a noble communion. Even Nazism has that capacity, though it pushes individual Germans to ignoble ends. The record of nationalism is only slightly better. Socialism is like Indian nationalism, too keen on entering into the heritage of the old order to be truly creative. And communism has an emphasis on force which corrodes its evangelical zest. If religion has its vertical movement up to God and Heaven, it has also a horizontal movement of genuine kinship with all men. When God is in Heaven and all is not well with the world, the noblest religion is the brotherhood of man.

The unity of mankind is the teleological end of history. All the races have groped towards it, in that peculiar blend of blindness and vision which is called instinct. Every race that has mention in history has contributed to that development. Religion and irreligion, economics and politics all alike have taken the race forward towards that end. Totemism suffices to knit men into tribal kinship and improve the chances of racial survival, while religion raises men to higher levels of thought and feeling. But it is not sufficient, if the spirit is ennobled—matter has to be conquered. Man's conquest of Nature is the running thread of history. The task began far earlier than history, recorded or surmised, and will reach far into the future. It is yet unfinished. But one thing is certain, that not till Man is lord of this planet in the sense of overcoming not only want but the very possibility of it, can he feel at ease and overcome the fitful urge to fratricide. In the long tuzzle with Nature, Man has sustained a moral defeat. He, too, is red in tooth and claw. Each race looks upon other races as part of the environment to be conquered. Within each society the struggle for life is not only permitted but encouraged. All this, however, has a place in the conquest of Nature by the human race.

* * * *

In man's onslaught on Nature, the dominant races and the ruling classes therein form the spearhead of the attack. Diverse races have been in the vanguard at successive periods of history. The comforts and amenities of civilised communities have beckoned barbaric, but virile, races to a new destiny. Progress, whether we like it or not, has always been the ward of the dominant. The unassuming have their points. But it is the assertive that shape destiny. This is not to say that progress is bound up with a ruthless insistence that the weak must go to the wall. No civilised society, however undemocratic, makes it a law of its internal life. In the society of nations, too, similar limits to the struggle for life must grow up, even as they have grown up in the society of men. These limits are distinguishable alike from a sentimental weakness for the weak and a pharisaic adoration of equality. For the so-called weak are not without value to the life of the whole social organism, while equality is less a condition of progress than an equitable apportionment of its benefits. Neither within each society of men, nor in the society of nations as a whole, are conditions ripe for multi-phased equality. Progress still needs the spur of individual and racial distinction. Humanity has not quite outgrown the need for leadership; nor has leadership arisen above the inducement of more or less heavy rewards. But the gaps are closing fast. Society is less dependent on inspired leadership. Industrial progress does not wait on the brain waves of entrepreneurs or the moods of investors. Victory for civilisation will not be the exclusive achievement of any one race, though, doubtless, the place of leadership will be there for all to see. Altogether, the end of the war will be the best chance that history will have afforded to Man for a display of racial sanity. Let us hope in this season of universal goodwill that opportunity will not be thrown away.

BRITAIN AND PREMIUM BONDS

INTEREST IN INDIA'S EXAMPLE

Special for "Indian Finance"

London, Dec. 20.

Although the press has largely refrained from discussing the Indian lottery loan, financial circles here are distinctly interested in the New Delhi announcement which has revived private discussion as to whether or not Britain should resort to premium bonds as part of war financing.

There has always been a small, but vocal, minority of city experts who have argued that London's Puritanical attitude towards Continental lottery loans is pure hypocrisy and that Britain could easily mop up a larger proportion of the people's savings if the Government issued premium bonds —Government bonds paying a small interest, such as 2½ percent, with another ½ percent earmarked for prizes which would be distributed through quarterly drawings.

Sir John Wardlaw Milne M.P. formerly a Bombay magnate started an agitation in Parliament in August 1940 to persuade the Government to adopt premium bonds but the Front Bench frowned on the proposal on the ground that such a course was contrary to British traditions.

This same argument was adopted by the Government Commission last war when the agitation for premium bonds acquired considerable backing.

Actually there are solid vested interests opposed to any scheme which is likely to divert the British passion for gambling from the present channels. The total turnover of moneys allegedly 'wasted' on horse-racing, dog-racing, and football pools in Britain have been estimated at £200 to £300 million per annum. While these furnish a certain amount of recreation for the smaller fry of followers, it is contended that the desire, even the urgent need, for a substantial sum of money is the driving force which sustains these three big industries. According to these proponents, with premium bonds on offer the vast majority of people would quickly abandon their fruitless attempts to win money through book-makers if the same sum were invested safely in Government bonds which promised even larger winnings.

Government is seemingly sensitive of Church opinion regarding gambling. Government statistics, for example, were conspicuously withheld. The Home Office says that the number of licensed greyhound racing tracks was "between one hundred and one hundred fifty". The Church Commission on anti-gambling counted 120. Regarding football pools, the Post Office acknowledged that the public spent in the year 1938-39 the sum of £41,600,000 in the purchase of postal orders for football pools.

Some proponents of premium bonds believe that the City of London disapproves of such devices on the ground that it would drive small savers away from the Stock Exchange, but this argument was never openly advanced.

As far as is known the only place in the British Empire where lottery loans are used is Cyprus though Malta has a State lottery established in 1923 whose Saturday drawings are a popular event with all classes. It furnishes the Malta Government a revenue of £54,000 per annum.

Olympus

(From Our Correspondent)

New Delhi, December 20.

The new Viceroy has returned from Calcutta after making it quite clear in nis address to the Associated Chambers of Commerce that the political issues have for the duration of the war been put in cold storage. It is being pointed out in political circles here that Lord Wavell's appeal for cooperation from "anyone and anybody who can assist me" is rather meaningless as long as the biggest political party remains out of action, with most of its leaders in detention. The Viceroy's anxiety to set the economic home front—now in such a sorry state—in order can be understood but no drastic improvement here can take place as long as the general mass of the people remain politically discontented. There is some satisfaction, however, about the Viceroy's determination to enforce his food policy. He made it quite clear that the recalcitrance of certain provinces will not be allowed to stand in the way. "I am prepared," he said, "if necessary, to take the most drastic action in support of my policy."

The Central Government is again calling a Food conference early next month and it is expected that all the outstanding issues regarding statutory price control, urban rationing and procurement plans will be finally settled then. The Centre has already patched up its quarrel with the Punjab, postponing control of wheat prices to the next *rabi* harvest, i.e., May. The controversy with Sind over rice prices still remans unsettled and almost threatens to precipitate a constitutional crisis. As the *kharif* harvest is about to come into the market, the Sind Ministry is anxious to raise the statutory price already in force in the province, considering it too low compared to the rates prevailing in the neighbouring areas. New Delhi however is bent upon not allowing any revision of the prevailing price. The Sind Government's grievance against invidious treatment is not altogether unjustified and their demand to have a uniform internal and export price of Rs. 12 a maund for rice not quite unreasonable in the absence of an all-India control. As it is the Sind Premier seems to be determined to defy the Central Government, "We will not procure; we will have no price control; no rationing in Sind, if the Central Government persists in its present policy towards Sind," he says, and challenges the Governor to "dismiss us". The early institution of all-India price-control will automatically hush up all controversy. The Food Secretary's assurance that a final decision may be taken at the conference which is being convened in January may still avert a crisis.

The Central Government, I understand, have decided to allot Rs. 1½ crores as subsidies to the provinces for the Grow More Food campaign.

* * * *

The All-India results of the Grow More Food campaign during 1942-43 at least as far as the wheat crop is concerned have been rather poor. A study of the latest figures available shows that there was an increase of only 143,000 acres on a 34 million acre crop representing an increase of no more than .4 per cent over the previous year. Though the premier wheat producing province, the Punjab, was able to show an increase of over half a million in acreage, this gain was more than offset by the three next most important wheat producing provinces and their states—U. P., C. P. and Bombay—which together had a net decrease of over 800,000 acres in the area under wheat crop. The production results were however much better, the total being 10,938,000 tons—an increase of 9 per cent over the previous year. Even U. P. and C. P. were able to record gains in production in spite of the reduced areas under cultivation. The wheat crop contributed no less than 948,000 tons to reduce the desperate food deficit in the country.

* * *

A study of the possibility of a synthetic rubber industry in India by the Director of Scientific Research shows that the development of a carbide industry in the country is the first necessity. The question of the manufacture of carbide on a commercial scale is at present being examined. The establishment of a synthetic rubber industry is however a doubtful economic proposition in view of the availability of natural rubber produced by cheap labour in huge quantities in the post-war period. It is pointed out that that the cost of the plant required will be very heavy. From the experience available in other countries, an economic plant should have a minimum abnormal capacity of 25,000 tons and the cost of such a plant will be about £2,000,000. The technical skill required to work the plant is also not available in the country at present and necessary technical help shall have to be obtained from the United States. For the present however it is utmost necessity to India—a producer of plantation rubber—to keep abreast of developments at least as far as technology of natural rubber is concerned.

* * * *

The Government decision to import larger supplies of such consumer goods as bicycles and drugs has brought in a bitter protest from the Committee of the Federation of Indian Chambers of Commerce and Industry. The Committee accuses the Government of a "serious breach of faith with Indian industrialists who were encouraged to start new industries and expand existing ones with the assurance that they will be protected after the war." The Committee's plan which is quite justified is that the Government ought to import more plant to increase home production rather than import larger quantities of manufactured goods. The Government's policy will only assist British industries at the expense of nascent Indian industries.

* * * *

I understand that the first task of the new Controller of Shipping, Mr. Gholap, will be finally settle the compensations for ships requisitioned for war work. The question has been hanging fire for almost four years. Mr. Gholap will also collect data for post-war development plans for building up an adequate mercantile marine. For a long time Indian industrial and commercial interests have been agitating on the necessity of large merchant fleet for India but the Government has so far failed to take any concrete step in this direction.

* * * *

At a meeting of the Fishery Committee of the Imperial Institute of Agriculture Research it was decided to establish a Central Fishery Research institution to help in a vigorous development of fisheries. It is stated that India's present annual production amounts to only 650,000 tons and can easily be multiplied several times provided there are adequate facilities in the way of a larger fishing boat fleet and better cold storage and transport facilities. Such a development should help a good deal in easing the food shortage, particularly in the coastal and rice-eating areas.

(From Our Correspondent)

Bombay, Dec. 21.

While there has been a proposal to raise the tax on bets to 8 per cent from December 16, 1943 for the sake of projected expenditure on reconstruction there is little to say in favour of the belief that betting has increased. There is a proposal to increase the entertainments tax and this will hit Indian cinemas. Expenditure on both is regarded as a symptom of inflation and the official press note dwells smugly on the plan to spend about Rs. 75 lakhs on land development work next year and the supply of milk to school children in Bombay. The doubling of the tax might have no effects on bookmakers' incomes and the Turf Club's receipts because the winners will merely get less on their tickets. As for cinema prices, there may be no intention to raise prices for admission at once. The Corporation planning to buy out the Tramway Company may feel disappointed that the enhanced tax on entertainments does not help it, as it should. Gaiety here has suffered already through gas rationing, and the new taxation may affect renter's receipts and put film producers also in difficulties though it may be urged that Government provides 'shorts' for exhibition, and cinemas gain in one way, though they may lose in another. As Bombay has more cinemas than any other city, the less efficient are likely to suffer most, and this will not be without due effect on property values here.

There is still some doubt as to the heart specialist referred to by Mr. Amery in the commons. Mrs. Gandhi's health has certainly been the subject of discussion here before Parliamentary question began. The specialist in permanent attendance is certainly a figure of mystery to many here, for there has been a hint of professional eminence, as well as adaptability. The fact that incarceration in Mrs. Gandhi's case is voluntary is not lost sight of in connection with the requests for release, but she has evidently been given no choice as to treatment or release. The Government of India's decision or view was cited in the reply, again indicating that the India Office merely stands by the decision of the former. This may well provoke complaints in the Commons, and after Mrs. Gandhi is seen by her son and others, there may be more light as to the illness and the doctor too.

Ahmedabad's plan to ration food was made known, but shortly afterwards appeared a story as to famine in Surat. Surat town was apparently cut off from rural supplies and the situation has called for treatment similar to that given in Bengal. Bans on export, orders as to supplies from outside, and the whole farrago of control was thrown on a town facing shortage for over six months. Maladministration is not apparently confined to Bengal. Price-fixing led to the growth of a vigorous black market at once. Hoarding was a direct consequence, and growers, ordered to do this and that, soon refused to help Surat and preferred to sell only to those who came to them. The Surat public has laboured in ignorance, and there is no promise of rationing as yet. Apart from the fact that Surat has no stocks to support any scheme of rationing, the district as a whole is short of food. The crop and season report from week to week may not refer to that, but the failure of price control in Surat has been proved as a major contributory cause.

Premium bonds seem all right in the view of many. Smaller investors may risk buying interest-free bonds, if there is a chance of a prize. No forms to fill up and sales at many places is the rule. Anyway, next month's sales will show how the scheme works out. The new loan on tap as usual does not appeal to Sir V. N. Chandavarkar and Dr. John Mackenzie who remark that it is opposed to British and Indian tradition. They think it is not economically sound, and the City's qualified certificate needs to be noted. The majority in India is averse to gambling and the Government in the new plan to draw money openly pander to the gambling instinct. Serious and far-reaching effects are feared by the two who express misgivings.

Rumours as to Tramway shares have been followed by rumours as to New India Assurance. There was a big jump in the price last week because someone started a story as to cash bonus. Normally extinction of contingent liability would seem appropriate in the case of Insurance shares but the market which fancied Central Bank shares because of a possible issue of new capital and took up Imperial Bank shares on unsupported rumours has again fallen for it. Since gilt-edged is firming up and yields are falling the rise may be accounted for. Those who sell gold and silver may choose safe shares for many reasons and there is certainly a prospect of higher dividends on all bank shares for the half-year ending December as there has been no sign of strain in the banking system and deposits grow because there is a lot of new money knocking about.

Millowners in Ahmedabad want to cancel the dearness allowance. Inquiry as to the rights and wrongs of the action is futile. The millowners say the new Committee will decide what is to be paid and why. There is a fear that profits will be cut by the textile control order but the Ahmedabad Labour Association may take up a stiff attitude. A decision to stop payment due on December 10 was a real surprise as the cost of living in Ahmedabad is well over the 1926-27 level. What the Government would do if a strike takes place is rather hard to say. It takes more than a department to run a big mill and what has been done by the Australian Government has little meaning in India because the workers were steady to get back. The Industrial court ordered the retention of the allowance. Bombay mills fortunately are not likely to feel the shock.

South India

(From Our Correspondent)

Madras, December 20, 1943.

THE development of rural roads in this province has often been proposed but till now very little has been achieved. But the war has given a new impetus to road plans, and thanks to the troops movements, we are often hearing of improvement of roads and communications. While military needs necessitate greater and better roads at present, the cry for permanent road reform comes from those interested in the economic progress of our villages. At the Twenty-sixth Annual Session of the Madras Local and Municipal Engineers' Association held last week it was urged that the Government should take up the responsibility for the maintenance of inter-provincial, inter-ditrict, and important marketing roads leaving the inter-taluk and inter-village roads to the District Boards, and that the village roads should be entrusted to the care of the village panchayats. A thorough and comprehensive post-war road development programme was urged and a plea for teaching of road engineering in the Engineering College was also entered. Mr. Austin, Adviser to H. E. the Governor, addressing the session referred to financial difficulties. Our primary problem is to increase the resources of the local bodies. He admitted the necessity of drawing up a long-term programme for the development of rural roads. Mr. T. I. S. Mackay, Chief Engineer to the Government (Communications) suggested that a separate college course for Highway Engineering should be created. Madras has 40,000 miles of roads today, and in the coure of the coming ten years the surfaces of 5,000 miles could be improved even assuming the funds to be limited. According to him, waterbound macadamised roads should receive the greatest measure of attentoin. It is to be hoped that the defence forces when demobilised would be used for the construction of road communications so that our villagers would benefit by increased scope for marketing facilities and our untapped resources brought to use for social progress.

The question of supplying yarn at cheap rates to the handloom weavers was discussed at the Handloom Committee of the Textile Control Board which met here last week under the presidency of Sir Frederick Stones, Adviser to the Board. Representatives from several provinces and States attended the meeting. The formation of a central handloom board was suggested, and the problem of supplying adequate quantities of dyes, and chemicals to the handloom weavers was also taken up for discussion. The Committee also considered the question of limiting the quantity and the time permissible for holding handloom cloth by the dealers. The advisability of exempting certain power looms from the operation of the Textile Control Order was also examined. It appears that certain tentative decisions have been arrived at to afford a helping hand to the handloom industry in this province.

A deputation of the Working Committee of the Andhra Mahasabha under the leadership of Maharajkumar Sir Vijia of Vizianagaram met H. E. the Governor and pressed for early steps to be taken for the establishment of a separate province for the Andhras. Demand for a separate Budget for Andhra districts with a separate Secretariat, Revenue Board and High Court was reiterated. It was pointed out that the Telugu area yielded an annual surplus of one crore of rupees but did not profit by this amount. This surplus if properly utilised for solving the problem of protective irrigation in the Ceded Districts would have staved off the recent famines. The need for hurrying up the Tungabadra project, for rusuming the working of the Andhra Paper Mills, for affording relief to those who suffered from floods in North Vizagapatam District was emphasised. The establishment of a Co-operative Apex Bank for the Andhra area and a separate broadcasting station for Andhras have also featured in their demands. It appears that the Governor expressed sympathy with their demands and promised to do his best to assist the Andhras. It was however pointed out by him that the Tungabadra project could not materialise before the war ends.

The Madras Government have directed that a text-book on soil erosion with special reference to Madras should be prepared for the use of Departmental Officers and for teaching the subject in the Agricultural and Forest Colleges. There is ample material to be collected and if comprehensive and useful data are gathered this attempt would prove to be a good beginning for further studies on Madras soil and for improving the productivity of South India.

Mica Industry in Bihar

The enormous importance of mica in the war effort, while it has given fiillip to its mining, threatens to endanger a vital national asset which must be conserved and utilised for our post-war economic development. Under the stress of war demands feverish activity in mica mines has been generated even without adequate safeguards as to the efficient organisation of mining. While the necessity to extract the maximum quantity of mica within minimum possible time is understandable, there is nothing to be said for the haste that is grievous waste of national wealth. The Committee of the Marwari Chamber of Commerce, Calcutta, have done well to draw the attention of the Government of India to the frequent accidents in Bihar mica mines and the increase in mica thefts. Too many miners and dealers have been licensed with the result that the search for quick returns have resulted in gutting of deposits. 200 miners and 650 dealers have been licensed by the Government without adequate machinery to exercise proper control over their activities. In the Kodarma Reserved Forests, in particular, it is said, mining methods leave much to be desired. Mica thefts, particularly in the isolated places in thick forests, are said to be on the increase and often the miners are unable to control the situation. Unscrupulous dealers and inefficient miners not only undermine the established reputation of the rest but menace the abiding interests of the industry as a whole. The Marwari Chamber suggests that the sale of crude mica and Bima mica should be totally prohibited as it encourages thefts. The practice of subletting leases by miners should be prohibited or effectively regulated. The mica police force should be enlarged and mica inspectors increased in number so as to check piracy in mica. The Government should enlist the co-operation of Bihar mica interests and the Joint Mica Mission in rationalising Bihar mining industry on sound economic principles and in safeguarding this industry, which is of vital importance to the manufacture of electrical goods.

(*Continued from page* 1195)

maintained by member banks with the Reserve Bankh have gone up further by Rs. 2.19 crores.

In the last number of "Indian Finance", we briefly discussed the significance of the Reserve Bank's sales of gold and had promised a fuller treatment of the subject in a subsequent issue. We regret that it has not been possible to fulfil the promise this week. We hope to deal with the subject in the very near future and, meantime, wish to draw pointed attention to our New York cable which contains interesting revelations about the unexpected attitude of Russia with regard to the role of gold in post-war international trade and financial adjustments. As in most respects, Russia has been a 'dark horse' with regard to her production and holdings of gold. It may, however, be readily granted that Russia is now a substantial producer of gold and also owns considerable stocks of gold. On the other hand, America is rich in her holdings of gold but poor in her current production of gold. Britain has not much gold holdings and her stake in gold production is through South Africa. Thus, the status of these three members of the United Nations with respect to gold is different, one from the other. America's circumstances are caluculated to incline her to a currency plan which gives an important place to gold. Britain, however, has to express opposition to any such plan. Recent discussions between America and Britain have been designed to find a compromise. It is, however, likely that the chances of this compromise are greatly reduced by the unexpected alignment of Russia with the post-war status of gold. Thus reinforced with Russia's support, the U.S.A. is apt to revert to a stronger view about the role of gold in post-war plans.

The lesson of all this for India is that firstly we should insist on getting for ourselves the full benefit of such dollar exchange as may accrue in respect of the transactions between India and America and, secondly, we have to press our demand for our foreign payments being partly in sterling and partly in gold. The Reserve Bank's sale of gold to the public is a separate question by itself. We are concerned here with the acquisition of gold for our currency reserve. With active note circulation at such a high level, the need for strengthening the stocks of gold in the Reserve Bank has become imperative.

The exchange market has been steady, with some bills and more remittance enquiry.

Banks are sellers of T.T. at 1s. 5 31|32d., for London Ready to six months forward.

Banks are buyers of three months D.A. bills on Lonodon at 1s. 6 9|32d., and four months bills at 1s. 6 11|32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T. T. New York Ready at Rs. 332¼.

Interbank call money remains unchanged at ½ per cent.

Resume of Commodity Markets

There is again nothing interesting to be recorded in the commodity markets during the past week. The jute market has been quiet without any large buying on the part of mills and the uncertainty regarding the future outlook. The jute manufactures market was definitely easier with some selling by second-hand dealers on the fears that the level of production in the New Year might be higher. The bullion markets have been rather quiet. There has been a further decline in gold prices though in the silver market there is some resistance to selling pressure.

* * * * *

Speaking at the annual meeting of the East India Cotton Association Sir Purshottamdas Thakurdas referred to the negotiations that were carried on between the Association and the Government of India regarding the resumption of forward trading in cotton so as to enable the cotton grower to market his new crop at satisfactory prices. The restrictions that were placed on forward trading, which was resumed six weeks back, have not been approved by the Association and trading was resumed only after the Board of the Association had signified their protest. The ceiling and floor prices are considered rather low in relation to the prices for cotton cloth and yarn and without a readjustment of prices it cannot be said that the cotton grower has been accorded a fair deal. It remains to be seen whether this disparity between prices for the raw material and the finished product is ultimately removed in the course of the administration of the Cotton Cloth and Yarn Control Order. The Chairman also referred to the need for adequate supplies of coal to keep ginning factories going as otherwise orderly marketing of the crop would be prevented and mills engaged on war work might not be able to get enough supplies.

* * * *

The disposal of unstamped goods is giving headache to piecegoods merchants. After the end of the year unstamped goods are liable to be seized if found in the possession of any dealer. Naturally, there have been many representations. It is said that confiscation of stocks will ruin many and lead to the creation of black markets. It is suggested that in the absence of any legitimate means of trading and the refusal of retailers to accept unstamped goods the Government must take over undisposed stocks or in the alternative stamp these goods with ex-mill and retail prices. The decisions of the Government of India taken at the recent conference of representatives of provinces and States to consider this question are not yet known.

* * * * *

After the sharp decline in prices in the bullion markets last week rather quiet conditions have been noticeable in the past few days. The unwillingnese of the Reserve Bank to reduce further the selling price for gold led to a slight recovery in prices though there is still the fear that the Bank might come out as a prominent seller at further lower levels. It is the apprehension in regard to the selling policy of the Government that has been responsible for the wide disparity between ready and forward rates. It seems almost incredible that the discount for delivery contract, which covers a period of only three days, should be as much as Rs. 2 to Rs. 2-8 what time it would not normally exceed 4 annas. When the Reserve Bank is not a seller, holders can buy forward and sell ready thus taking advantage of the sure prospect of a gain in a short period. This buying and selling resulted in a narrowing of the discount. It would thus appear that holders are placed in a very strong position and that so long as the uncertainty regarding the selling policy of the Reserve Bank remains, they can keep on jobbing. It should not, however, be forgotten that all the time there is a one-sided movement, downward, of prices in the gold market, there is a certain depreciation in the value of holdings and therefore for the jobber to be continuously on the market in the face of a further decline in prices cannot be expected. The silver market has shown some resistance to selling pressure as arrivals have not been on a large scale and there has been some need for covering at the lower levels. That is the reason why in spite of the irregular tone of the gold market, silver prices are higher on balance.

* * * *

A survey of the sugar position of all producing areas for the week ended November 30, 1943 shows that production during the year totalled 10,74,752 tons; despatches in the week ended November 30, 1943 amounted to 2,674 tons making the progressive total of despatches for the year to 10,05,127 tons. Physical stocks were only 68,825 tons. Of this quantity, 1941-42 sugar totalled only 249 tons. The statement showing the movement of sugar from U.P. and Bihar factories into the quota areas during the year ended November 30, 1943 makes very satisfactory showing. Of the allotment from U.P. and Bihar factories of 729,829 tons, 761,214 tons were actually moved, that is 2.9 percent in excess of the total quota allotment. The excess of despatches over the allotted quota was possible with the reserve stocks.

* * * * *

The issue of a statement by the Sind Ministry protesting against the policy of the Government in regard to the price control discrimination might well have serious repercussions. The statement alleges that Sind has been unduly penalised and that a lower level of prices has been forced on the province while others have been allowed to dictate their own terms. A conference of the representatives of Provinces and States to consider the problems relating to food control and distribution is to be held early next month; and it is hoped that the opinions of the various provinces will be taken into consideration and a uniform policy evolved. Profiteering by individual provinces, dictation by surplus provinces and the problem of uniform prices or at least weighted prices for provincial centres are some of the important questions that have to be considered. It is indeed a great pity that after such a long time the controversy between the Centre and the Provinces should continue and that there should be so much of confusion about the evolution of an All-India policy.

In the making . . .

Whatever the job—a khaki shirt, a packingcase or a battleship—you can't make it all in one piece. And joints mean thread, nails, screws, nuts, bolts or rivets.

The Duni knows that if he uses poor thread the seams will soon come apart. We know that if poor quality nuts, bolts and rivets are used in steel structures these will be danger lurking in every joint—danger to human life in most cases. That is why Indian Steel & Wire Products are specified where reliability is needed.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, Dec. 22.

Arrivals of coal have shown some improvement during the past few days but the position is now complicated by a dearth of labour at the dump which is delaying distribution. This is of course an officially closed week under the working schedule and only such mills are running as have lost time to make up—provided always they have coal with which to run. It was reassuring to hear His Excellency the Viceroy's appreciation of the importance of the coal supply problem in his speech at the opening of the Associated Chambers of Commerce meeting. He said, "Coal is the essential food of industry and of the whole war effort, and we cannot allow either to suffer from starvation or malnutrition in coal." The Jute Mill industry can certainly be said to have suffered severely from malnutrition in respect of coal in recent months, and if the indecisive tone in which His Excellency condemned lethargy and inefficiency is any criterion, we may have reasonable hopes of some improvement in the position soon.

Despite the intermittence and irregularity of the coal supplies during November, the production figures for jute goods issued last week for that month are surprisingly good, amounting to 86,000 tons as compared with 69,739 tons in October and 55,544 tons in September. The increase amounts to 23 per cent in November following an increase of 25 per cent in October, which on the face of it is satisfactory enough, though the production figure reached last month is still something like 20 per cent below what could be attained with full and regular coal supplies. To analyse the figures, commercial hessians show an increase of 285 lakhs yards over the previous month, or around 7,000 tons. Commercial Sackings are up by 208 lakhs yards or 8,500 tons. Goods on Government account showed comparatively little variation and the total production on Government account dropped from 13 per cent in October to 10.75 per cent last month.

With a drop in stocks of 8,641 tons at 30th November added to the above production figures, Mills despatches of goods during November must have reached the quite substantial total of 94,645 tons, which is an encouraging feature in an otherwise rather bleak market.

The U.S.A. Hessian Stock and Consumption figures for November are also available and we quote them for what they are worth though we have not yet evolved any formula whereby they can be intelligibly interpreted. Consumption is quoted as 270 lakhs yards against 250 lakhs the previous month and 160 lakhs in November of last year. Spot stocks are quoted at 750 lakhs yards against 710 lakhs in October and only 320 lakhs in November 1942. Afloat stocks are stated to be NIL against 920 lakhs yards last November. It is mainly these "afloat" stock figures which constitute the mystery. During the last 4 months they have been quoted, 30 lakhs in August, 10 lakhs in September, 10 lakhs in October and now nothing whatever in November. With Spot stocks increased in the last 3 months by 140 lakhs of yards, it is difficult to understand where the stuff has come from. Unless it is that all current shipments are taken to be on Government account and not shown in the returns, while when the goods actually reach the U.S.A. a certain allotment is made from Government shipments for trade purposes and then shown in the Spot stock figures. That is about the only plausible explanation we can put forward at the moment.

It may be recollected that some considerable time ago the question of establishing Warehouses for the better accommodation of agricultural produce in Bengal was discussed. There has now been published a "Report on the investigations made in connection with the enquiry about the desirability and feasibility of establishing Warehouses for Agricultural produce in Bengal" by the Secretary to the Board of Economic Enquiry, Bengal. This investigation was apparently made in 1941 and some of the figures quoted apply to 1939. Truly the mills of Government grind exceedingly slow! But the Report is nevertheless not without interest. The basic idea is the feasibility of setting up pukka Godowns where a cultivator may deposit his produce, whether jute or rice or other, on payment of a consolidated monthly rent which would include insurance. The goods would be weighed into the Godown and a Receipt granted by the Warehousekeeper. This Warehouse Receipt would be negotiable by the holder either for the outright sale of the goods it covered, or for the purposes of an advance against the value, the primary object of any such scheme being to enable the cultivation to hold on to his produce for some time for the possibility of a better market and to avoid the necessity which is often forced upon him to market his crop as soon as it is harvested, possibly at a disadvantage to himself. Of course the ideal method for any such scheme would be the Co-operative one, but unfortunately this principle has never been able to overcome the ingrained distrust of each man for his neighbour which seems to pervade the Province. The general conclusions to be drawn from the enquiry seem to be that only Godowns established and administered by Government would inspire sufficient confidence either to induce the cultivator to deposit his goods or for the moneylender or Banker to advance money on their security. One feature of the greatest importance which is lacking in the report is any estimate of what rental would require to be charged to cover establishment and administrative expenses. Estimates are certainly given of the probable costs of erecting Godowns in certain districts, but these not only show very great variation in cost but are probably entirely misleading if present-day costs of materials are taken into account. In the circumstances it seems very unlikely that any further steps can, or will, be taken in the project at present or in the near future. Whether it is feasible at all is open to question. It must be remembered that jute for instance in its loose state, takes up very considerable space and in such a godown, each parcel would have to be kept separate and distinct. One only has to visualise a mofussil import godown with a number of different beparies' parcels stacked in it. It takes quite a large godown to hold so small a quantity as 2,000 maunds of jute in such circumstances. This fact would point to the necessary charges being so high as to render the scheme impracticable, and the whole idea is still so nebulous that the question of the desirability of grading deposited produce need scarcely be discussed at present. On one vital point the report gives sane advice, and that is, that extended credit should not be given to depositors of produce. A limit of 3 months is suggested and with this we are in entire agreement. The failure of the co-operative movement can be largely attributed to the extension of indefinite credit. In one respect the report expresses a surprising belief, that there is sufficient dormant money in the Province to care for the financing of quite an extended scheme of godowns as visualised, without requiring to have recourse to the larger Banking concerns. A fresh enquiry on similar lines might be usefully instituted after the War, but at the moment the subject cannot be of more than academic interest.

EAST INDIAN RAILWAY

ANNUAL CONTRACT ITEM COSTING OVER Rs. 5,000—CLASS I CONTRACT

Sealed tenders are invited for the following and will be received in the Controller of Stores Office, E. I. Railway, 105, Clive Street, Calcutta on the 17th January, 1944 before noon.

Tender No. S|GB2|374|B for the supply of 320 Nos. Lamps Brake Van Tail complete with burner and reservoir as per Railway Board's Drawing No. CA. 1601.

Tender forms with full particulars can be had from the Office of the Controller of Stores, E. I. Railway, 105, Clive Street, Calcutta on payment of Rs. 2 per copy to the Treasurer, E. I. Railway, 105, Clive Street, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may however remit the amount to the Controller of Stores, E. I. Railway, Calcutta direct by Money Order.

No refund is permissible after payment.

JUTE

Calcutta, December 22.

THE raw jute market has been absolutely dull and uninteresting with the volume of business on a very small scale. The approach of the holidays and the reserve of buyers have been responsible for the apathy of the markets in spite of the reports that the Indian Jute Mills Association might consider the possibility of an increase in the number of working hours or an increase in the total of production by a greater concentration in the electrically-driven mills. There has been no further rise in prices and the tendency is to await further developments. It is pointed out that the advantage of a higher level of production, as a result of the new scheme, might be nullified by the prospect of a larger crop for the next season. Quotations are nominally unchanged. Prices might, perhaps, have recorded a decline but for the smallness of arrivals in the mofussil centres due to scarcity of labour and the fear that any large buying might bring about a technical rise in prices. Sellers are not very keen to do business and are offering only sparingly.

In the loose jute section small quantities of Indian Jat Middles and Bottoms have been purchased by mills at Rs. 15-4 and Rs. 12-4 per maund. Balers are still interested in Tossa varieties and full rates are offered. Sellers have shown a disposition to offer a slight discount in prices for bottom grades containing a percentage of X mark.

In the pucca bales section, rather quiet conditions have been noticeable and shippers have not been very much interested in the market. Dundee Daisee 2/3 for ready delivery were relatively lower at Rs. 69 per bale, mills are reported to have purchased the same quality at Rs. 70 per bale. Towards the close of last week some business was reported in cuttings and business was restricted only by the scarcity of offerings. Cuttings N. C., and M.C., were sold at Rs. 33 and Rs. 32 per bale respectively.

JUTE MANUFACTURES

Calcutta, December 22.

The jute manufactures market also has been uninteresting. After earlier firmness rather quiet conditions have been noticeable. It is feared that some efforts might be made to increase production and that with the greater disposition of mills to accept contracts for forward deliveries, prices will be marked lower ultimately. The restrictions in regard to booking also have had a restraining influence on the market. Demand from up-country centres has not been quite satisfactory while export business has been very limited. 9 porters closed at Rs. 21 for all positions against Rs. 21-6 earlier in the week while 11 porters ready were Rs. 28-1; January/March were 1 anna lower at Rs. 28.

In the heavy goods section also there is nothing of importance to be recorded and business has been on a very small scale. Quotations, however, have been maintained for Liverpool twills and Cornsacks at Rs. 75 and Rs. 67-12. B. twills had some sellers at Rs. 66-12 for ready and Rs. 66 for January/March.

COTTON

Calcutta, December 22.

There is nothing of interest to be recorded in the Bombay raw cotton market and most of the business has been on account of bear covering. With the nearness of the January contract, buyers have been anxious to cover their positions. Straddle operations also have resulted in a firming up in prices for March position. Mills are buying only in small quantities as there is a tendency to await the statement by the Government of India regarding the decisoins taken at the recent conference of representatives of Provices ad States in regard to the disposal of unstamped goods. Jharilla January closed at Rs. 470 against Rs. 469 at the end of last week, March at Rs. 466 against the same level and May at Rs. 468-12 against Rs. 468. It will be seen that fluctuations have been confined to very narrow limits and speculative activity has not been very much in evidence.

PIECEGOODS

Calcutta, December 22.

In the piecegoods market also uninteresting conditions have been noticeable as there are barely a few days left for the final disposal of all unstamped goods. Business, is at a standstill, retailers being unwilling to take delivery of any unstamped goods. There is still some hope that something will be done by the Government of India to help traders in certain parts of the country to dispose of unstamped goods. Prices are unchanged. Pending further developments one cannot take any definite view. Business has been confined only to immediate requirements.

GOLD

Calcutta, December 22.

With the lowering in the selling price of gold by the Reserve Bank to Rs. 72, a rather sharp decline in prices was recorded in the Bombay gold market in the latter half of last week. The Reserve Bank was not a seller for two days, earlier in the period under review and prices tended to improve especially as operators showed a tendency to take advantage of the heavy discount for forward over ready. This selling for ready and buying for delivery on the part of holders narrowed the discount. Towards the close, however, the renewed selling by the Reserve Bank restricted these operations to a certain extent and the apprehension of a further lowering in prices prevented a further narrowing in the discount. It is pointed out that, with the position in the gold market under control, the tendency in the near future would be rather downward. Quotations at the end of last week for both ready and forward were Rs. 74-4 and Rs. 72 respectively. They came down to Rs. 71-8 and Rs. 69-4 thus causing a narrowing in the discount rate between ready and forward by 8 annas. There was a recovery to Rs. 72-4 and Rs. 69-14. The close was quiet, however, at Rs. 71-10 and Rs. 69-10. In the Calcutta market gold ready closed at Rs. 73-1 against Rs. 73-12 and sovereigns at Rs. 51-8 against Rs. 52-2.

SILVER

Calcutta, December 22.

Similar conditions were noticeable in the silver market with the jobbing by holders. The discount for forward over ready narrowed to Rs. 2-4 from Rs. 3 but as the spot position was rather tight, sellers had to cover immediately. Unlike the gold market, closing prices are higher on balance. Silver ready were Rs. 115-2 and forward Rs. 113-2 against Rs. 113-3 and Rs. 110-11 respectively at the end of last week. In the Calcutta market, silver closed at Rs. 117-4 against Rs. 117.

The London price is unchanged at 23½d for both Spot and Forward.

Stock Markets to-day and to-morrow:

STEADY CLOSE FOR THE YEAR

THERE were only three working days this week. On Wednesday evening the Calcutta Stock Exchange closed for the Christmas and New Year holidays and will reopen for business only on January 3, 1944. In the short week in which markets remained open business was on a restricted scale and there was no tendency to enter into any large fresh commitments. A generally quiet tone was noticeable in all the sections and there was little or no fluctuation in prices for Cotton, Jute or Engineering shares.

* * * *

The only feature of the week is provided by the Coal section. A rise in prices has been recorded for selected shares. Equitable were more than 2 points higher at Rs. 51-2 as also New Beerbhoom at Rs. 30-10. Churulia were marked sharply higher on reports that negotiations were going on for the sale of the property to another company. There is a significant rise in the quotation for Raneegunge to Rs. 36. The general strength of the Coal section is attributed to the remarks made by the Viceroy in the recent speech to the Associated Chambers of Commerce and his visit to the colliery centres on his way back to Delhi. It is also reported that arrivals of coal into Calcutta in the past week have been satisfactory. It is hoped that, with the improved labour position at the mining centres, coal raisings might improve. It cannot be said, however, whether the goal of 25½ million tons will be achieved as there has been considerable loss of production in recent months. If the reported Allied Command's demand for export of coal for 1¾ million tons is to be effected to the Middle East areas there should be a considerable stepping-up in production. There is an acute shortage of this important fuel in most of the industrial centres of this country and the rationing scheme, as suggested by the Government of India, might affect adversely certain industries.

It stands to reason, therefore, that an improvement in the conditions of the coal industry should be reflected in other industries. Production is being held up on account of the shortage of coal in the jute industry especially. But beyond the rise in prices for coal shares, there has been no activity either in the jute, cotton or sugar sections. While it might be said that there are other factors to to be taken into consideration in regard to the Sugar and Cotton industries, the jute industry stands to benefit directly from the increase in coal raisings though, it has to be borne in mind, that the authorities should agree to an increase in the allotment of coal for the jute industry to achieve a higher level of production.

The general undertone is quite steady. If there is a continuance of the present conditions the New Year may begin well though the conduct of business will continue to be influenced by the hopes and fears regarding the Central Budget.

* * *

The accounts of the *New Victoria Mills Company Limited* for the year ended October, 1943 make good reading, the net profit, before providing for taxation and depreciation being Rs. 78,66,975 against Rs. 32,88,314 for 1941-42. The amount set aside to depreciation is Rs. 1,86,658 against Rs. 1,90,208 while the provision for taxation is as much as Rs. 54 lakhs (Rs. 20 lakhs). No amount is transferred to General Reserve against Rs. 5.5 lakhs on the former occasion. This is perhaps due to the increase in the reserves of the Company during the year from Rs. 6.62 lakhs to Rs. 13 lakhs as a result of the fresh issue of capital to shareholders, to the extent of Rs. 15 lakhs, at a premium. The dividend on ordinary shares has been increased to 12 annas from 8 annas per share while that on the preference shares is higher at Rs. 1-2-10.34 pies against 13 annas & 8.62 pies for 1941-42. The dividend on the deferred shares is Rs. 1-8-7.36 pies against 10 annas & 1.9 pies per share for 1941-42. The amount carried forward is the substantial sum of Rs. 5,27,231 against Rs. 45,646 brought in.

During the year, the directors issued fresh capital amounting to 2,00,000 ordinary shares and 2,00,000 preference shares. This capital was offered to the existing shareholders at Rs. 6-8 per share for ordinary shares and Rs. 7-8 per share for preference shares. Out of the amount realised by the sale of these shares Rs. 15,00,000 has been invested in Defence Bonds. It is the intention of the directors that the renewals and replacement of the existing plant of the mills should be carried out with the help of this capital as soon as the war is over.

The new shares also have received a dividend out of the earnings for the last accounting period. The return for the shareholder is therefore, much more than the actual increase in the dividend amounts.

* * * * *

Shree Sitaram Sugar Company Limited has been able to report satisfactory working in the year ended August 1943, thanks to the larger supplies of cane during the season. The total quantity of 24,05,663 maunds was crushed against 14,16,139 maunds in the previous season. The recovery percentage was not very much lower at 10.4 percent against 10.625 percent. The net profit, before providing for taxation and depreciation, is Rs. 6,89,871 against Rs. 4,42,245 for 1941-42. After providing Rs. 77,179 against Rs. 95,519 for depreciation the sum transferred to funds is Rs. 1,65,000 against Rs. 1,32,981. The dividend and bonus on ordinary shares amount to Rs. 1-8 per share against Rs. 1-4 per share on the former occasion. The amount carried forward is Rs. 32,923 against Rs. 9,406 brought in.

* * * * *

The working of the *Calcutta Tramways Company Limited* for the year ended December, 1942 shows a further increase in traffic receipts by £32,108 largely due to the restriction in petrol supplies for buses and cars and the increased earnings of the working classes due to war conditions. Working expenses also have increased and are increasing. The supply of all materials and stores became more difficult and a further reserve of £10,000 for deferred repairs had therefore to be made.

The net revenue account, after charging an increased provision for British and Indian taxation, interest on the debenture issues and dividend on the preference shares, shows a credit balance of £75,436 including £28,131 brought forward from the last year. An interim dividend of 2½ per cent less income-tax was paid on the ordinary shares on November 28, 1942. The final dividend of 4 percent, less income-tax, makes the total distribution 6½ percent less income-tax for the whole year, leaving a balance of £29,936 to be carried forward.

During the year £76,850 was spent on Capital Account including the expenditure in

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Dec. 22.

QUIETLY steady conditions have been noticeable on the Calcutta Stock Exchange during the past week. The period under review is short of two working days as markets are closed from Thursday, December 23, 1943 to January 2, 1944, both days inclusive. During the short period of working no pre-holiday selling has been in evidence. Business was on a restricted scale. Prices, however, have been maintained. The feature of the week is provided by the Coal section. A substantial rise in prices has been recorded for almost all the counters on the renewed hopes that something might be done to increase raisings and that the possibility of export of coal from this country might result in an appreciable rise in the earnings of the companies. The Jute section surprisingly enough has not responded to the strength of the Coal section and prices have been fluctuating in narrow limits. In other sections also quotations are mostly around last levels. The undertone is steady.

Giltedged securities section has been very steady and only a limited business has been passing. Prices have been fully maintained. 3½ per cent paper is slightly better at Rs. 97-12; 3 per cent paper also at Rs. 95. 3 per cent Defence bonds 1946 were done at Rs. 102-4, 3 per cent 1949-52 at Rs. 100-10 and 3 per cent 1951-54 at par. 3 per cent 1963-65 were better at Rs. 99 while 5 per cent 1945-55 were easier at Rs. 105-9. 4 per cent 1960-70 were unchanged at Rs. 115-8. In Provincial loans, 3 per cent U. P. Loan 1961-66 changed hands at Rs. 98-5 and 5 per cent U. P. Loan 1944 at Rs. 101-15. Money conditions have remained easy and there has been a further decline in the average discount rate on treasury bills from 11 annas 11 pies per cent per annum last week to 11 annas per cent per annum this week.

Bank shares were steady with *Imperial Bank* fully paids at Rs. 1,945 and Contributories at Rs. 503. *Reserve* Bank were fluctuating around Rs. 126 while *United Commercial Bank* were higher at Rs. 23-8 premium. *Hind Bank* also came in for attention at Rs. 5-8 premium.

Among Public Bodies debentures no transactions were recorded while among *Industrial* debentures 5½ per cent *Ramnugger Cane and Sugar* were in request at Rs. 104-8.

Business in Preference shares was again difficult of execution and there were no sellers of first-class jute mill preference issues. *Delta* were Rs. 145, *Fort William* Rs. 160, *Hooghly* Rs. 22-5, *Northbrook* Rs. 157 and *Calcutta Jute* Rs. 145. Among others, *Kumardhubi Engineering* were Rs. 338, *B. I. Corporation* Rs. 212 and *Birds Investments* Rs. 103-8. *Steel Corporation* were steady at Rs. 130-8.

There is nothing of interest to be recorded in the Cotton section, quotations being for the most part unchanged. *Bengal-Nagpur* were Rs. 35-11, *Cawnpore Textiles* Rs. 13-13 and *Elgins* Rs. 94-12. *Mahalaxmi* were a shade better at Rs. 46-2 while *Muir Mills* were crossed at Rs. 450. *New Victoria* were unchanged at Rs. 11. The ordinary dividend for the year ended October, 1943 is 12 annas against 8 annas per share for 1941-42.

As pointed out above, there has been greater activity in the Coal section and an all round rise in prices has been recorded. *Amalgamated* were steady at Rs. 44, while *Bengal* were nearly 20 points higher at Rs. 565. *Bokaro and Ramgur* were Rs. 31-10 against Rs. 30 at the end of last week while *Central Kurkend* were Rs. 20 and *Dhemo Main* Rs. 18-4 against Rs. 17. *Equitable* improved from Rs. 48-8 to Rs. 51-2 while *Hurriladih* were Rs. 22-12 against Rs. 21-12. *Katras Jherriah* were 2 points higher at Rs. 56-8 while there was a sudden rise in *New Beerbhoom* from Rs. 27-12 to Rs. 30-6. *Raneegunge* also came in for good attention and were done up to Rs. 35-8 against Rs. 32-12 at the end of last week. *Samla* improved from Rs. 5-2 to Rs. 6, while *Sendra* were further higher at Rs. 18-12. *South Karanpura* were Rs. 9 and *Talcher* Rs. 6-3. *West Jamuria* were not very much higher at Rs. 40-4.

In the Jute section, quietly steady conditions were noticeable. *Agarpara* were Rs. 25, *Anglo-India* Rs. 385, *Champdany* Rs. 215, *Chitavalsah* Rs. 24-14, and *Gourepore* Rs. 777. *Howrah* were sticky around Rs. 63-12 with *Hukumchand* at Rs. 30-2. *India* were Rs. 535 ex-dividend, *Kamarhatty* Rs. 549, and *Nellimarla* Rs. 24-8. *National* were unchanged at Rs. 28, *Nuddea* were slightly better at Rs. 105-8 and *Presidency* at Rs. 6-13, *Rameshwara* were in request at Rs. 16 while *Reliance* were easier at Rs. 59-4.

In the Engineering section there was only a small rise in *Indian Iron* from Rs. 34-6 to Rs. 34-12. *Steel Corporation* also were 4 annas higher at Rs. 27-6. *Indian Galvanizing* were crossed at Rs. 44-4 while *Hooghly Docking* came in for attention at Rs. 80. *Jessop & Co.*, were Rs. 21-4, and *Kumardhubi Engineering* Rs. 9-7. *Marshalls* were Rs. 4-13 as also *National Iron* Rs. 13-6. *National Screws* were Rs. 13-7 and *Saran Engineering* Rs. 9-10.

In the Sugar section, *Darbhanga Sugar* were further higher at Rs. 34-12 while *Carew & Co.*, were a shade better at Rs. 41. *Cawnpore* were done at Rs. 44-8. *New Savan* were Rs. 19-4, *Purtabpore* Rs. 24 and *U. P. Sugar* Rs. 34-3.

Tea shares have been rather neglected with *Bishnauth* at Rs. 37-8 ex-dividend, *Sapoi* at Rs. 20-4, *Murphulani* (pref. ordinary) at Rs. 30-4 and *Banarhat* at Rs. 820.

In the Miscellaneous section, *Aluminium Corporation* were Rs. 19-12, and *B. I. Corporation* Rs. 6-6. *Burma Corporation* and *Indian Copper Corporation* were unchanged at Rs. 3-12 and Rs. 2-13 respectively. *Karanpura Development* were higher at Rs. 18-11. *Reliance Firebrick* were very firm at Rs. 20-9 while *Alkali* and *Chemical* were quiet at Rs. 30-8. *Indian National Airways* preferred ordinaries were Rs. 27-2 and *Spencer & Co.*, Rs. 12-12 after being higher at Rs. 13. *Indian Wood Products* were unchanged at Rs. 32-12 while *Indian Rubber Manufacturers* were done at Rs. 34-8. *Northern India Oil* were Rs. 22-1 while *Midnapore Zemindary* were in good request and were marked higher by 6 points at Rs. 131-8. *Assam Saw* improved by 6 annas to Rs. 5-6, *Borooah Timber* also were firm at Rs. 21-8. Among Paper shares *India Paper Pulp* were quiet at Rs. 205. *Titaghur Paper* were steady at Rs. 26-6.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, December 22.

BUT for the cheerful tone that developed early today, the local Stock Exchange was rather dull throughout the period under review. While the possibility of an early peace and the fear of air raids on Eastern India continue to influence the market, operators are not averse to exploit any news item that has a correlation, however remote it may be, to the future of all or any particular industry. Even the approach of the holidays has not made any difference to the revival of interest. Today the market was unexpectedly brisk with Textiles and Steels recording considerable progress.

Government Securities continued to be steady with 3½ per cent. *Government Paper* quoting at Rs. 97-9.

Bank shares were *steady*. *Imperial Bank* (F. P.) were Rs. 1,970; *Imperial* (Conty.) Rs. 498-12; *Bank of India* Rs. 224-8 and *Reserve Bank* Rs. 131.

Mill shares were dull and neglected till today. Inspite of the holidays there was much activity in this section and prices were marked sharply higher. *Bombay Dyeing* gained nearly 40 points to close at Rs. 1,972-8, *Century* were Rs. 961, *Gokak* Rs. 342-8, *Indian Bleaching* Rs. 230; *Kohinoor* Rs. 619, and *Svadeshi* Rs. 599.

Stee shares like Textiles were dull for the best part of the week under review. But today there was a better feeling with scrips making some advance though prices are still lower on balance. *Tata Steel Deferreds* were slightly lower at Rs. 1,897-8; *Tata Ordinary* at Rs. 389-8, and *Indian Iron* at Rs. 34-12.

Tata Power, among Hydro Electrics, show some improvement at Rs. 1,910, while *Andhra Valley* are lower at Rs. 1,875. *Tata Hydro* were Rs. 201-8.

The Miscellaneous section was generally quiet with prices quoting around previous levels. A. C. C., however, were easy around Rs. 225-8. *Shivrajpur Syndicate* were Rs. 78, *Bombay Steam* Rs. 658-12, *B. E. S. T.* Rs. 143 and *Premier Construction* Rs. 231-8.

(Annual General Meeting on 11th January, 1944 at 11 A.M.)

Audited accounts for the year ended 31st March, 1943:—

After providing for taxation, depreciation, debenture interest and sinking fund, labour benefit schemes and all other charges, the net profits amounted to Rs. 50,17,345 to which has to be added Rs. 5,82,377 brought forward from the previous year, making a total sum available for distribution of Rs. 55,99,722. From this amount there has to be deducted Rs. 12,69,989 being the amount of the first Interim Dividend of eight annas per share paid in June 1943 and Rs. 38,09,967 being the further Interim Dividend of Rupee One and Annas Eight only per share declared in September, 1943. The balance remaining at credit of the Profit and Loss Account is Rs. 5,19,766 which amount the Directors recommend to be carried forward.

In order to enable Shareholders to obtain their dividends as early as possible instead of waiting for the Annual General Meeting, the Board decided, in accordance with the practice of previous years and which has always met with the Directors' approval, to distribute in the form of a second Interim Dividend what would have been their recommendation for the Final Dividend.

Production and Sales.—The statutory restrictions prohibiting the publication of production and sales figures remain in force, but output in all departments, inclusive of Collieries, was satisfactory. Practically all of the Company's products are taken for purposes in connection with the war.

Labour.—All labour worked loyally during the year, and the Company continued to supply rice, atta, dal and other commodities at concessional rates. The general health of the station remained good.

Managing Agents.—Messrs. Burn & Co.

Audited accounts of the year ended 31st October, 1943:—

(Annual General Meeting on 31st December, 1943 at 8 A.M. at Cawnpur)

Audited accounts for the year ended 31st October, 1943:—

	Rs	A. P.		
The year's working shows a profit of .. .. (including a carry forward from last year of Rs. 45,645-10-3).				96,87,588 4 6
from which has to be deducted on account of Depreciation ..	1,90,768	0 0		
Bonus to Workers and Staff 1941, 1942 and 1943	4,20,921	3 0		
Directors' & Secretaries' Commission	13,64,046	0 0		
			19,75,735	3 0
leaving at credit of Profit & Loss a sum of ..			77,11,853	1 6
which the Directors recommend being disposed of as under:—.				
1. In payment of Rs. 1/2/10.34 per share dividend on Cumulative Preference shares ..			6,14,306	8 0
2. In payment of As. 12 per share dividend on Ordinary shares			6,86,964	12 0
3. In payment of Rs. 1/8/7.36 per share dividend on Deferred shares			4,73,360	5 0
4. In provision for E.P.T. and Income-tax ..			54,00,000	0 0
5. Carry Forward			5,37,221	8 6
			77,11,853	1 6

The year has been a prosperous one for the Company and resulted in substantially larger profits a good deal of which has, however, had to be earmarked for the payment of Government taxation including E.P.T.

During the year under Report the Directors issued fresh capital amounting to 2,00,000 Ordinary shares and 2,00,000 Preference shares. This capital was offered to the existing shareholders at Rs. 6-8 per share for the Ordinary shares and Rs. 7-8 per share for the Preference shares. Out of the amount realised by the sale of these shares Rs. 15,00,000 has been invested in Defence Bonds. As the shareholders are aware, it is the intention of the Directors that the renewals and replacement of the existing plant of your Mills should be carried out with the help of this capital as soon as the War is over.

Secretaries.—Messrs. J. P. Srivastava & Sons Ltd.

DEORIA SUGAR MILLS, LIMITED

Audited accounts for the year ended 31st August, 1943:—

During the season 1942-43 under review, the total cane crushed by the Mill was 21,13,921 maunds with crushing period of 124 days as against 10,03,254 maunds in 81 days in the year previous and an average of 112 days for all the U. P. Mills during the season under review. The incidence of disease was notably lower than in the previous years. The recovery percentage of the sugar contents of the cane crushed was fully maintained, the percentage being 10.53 as against 10.026 in the year previous and an average percentage of 10.15 for all the U. P. Mills during the season under review.

A price of As. 8 per maund of cane in addition to a cess of pies 9 per maund was fixed by the Government of U. P. and Bihar in November, 1942, but the same having been found to be inadequate the price was increased to As. 10 to have effect from the 30th December, 1942 for the remainder of the crushing season, exclusive of the cess at pies nine per maund. But for the late announcement of increased prices for cane and lack of adequate transport facilities as a result of emergent war condition, larger production would have been possible. The prices of sugar were also raised by Rs. 2-5 per maund as from January, 1943.

The working of the Company during the period under report after meeting the Manufacturing expenses, Sugar Excise duty, donations and subscriptions and selling and other expenses, shows a gross profit of Rs. 5,18,308-13-3. The accounts after allowing for interest on Debentures, Commissions, etc., and after providing Rs. 78,101-7-3 for depreciation show a net profit of Rs. 3,78,945-7-10. A sum of Rs. 2,40,000/- has been set aside for income-tax, super-tax and excess profits tax and Rs. 25,000/- for Debenture Redemption Fund, leaving a balance of Rs. 1,12,023-1-6 in the Profit & Loss

Account, including a sum of Rs. 7,549-9-8 brought forward from the last year, which the Directors propose to dispose of as follows:—

	Rs.	A.	P.
(i) To Dividend on Ordinary Shares at Re. 1/- per share for the year ended 31st August, 1943	59,925	0	0
(ii) To Reserve for Contingencies	50,000	0	0
(iii) To Carry Forward	2,098	1	6
Total ..	1,12,023	1	6

SHREE SITARAM SUGAR COMPANY, LIMITED

Audited accounts for the year ended 31st August, 1943:—

During the crushing season covered by the accounting year under review, the Mill crushed a quantity of 24,05,663 maunds of cane with crushing season lasting for 136 days, as against 14,16,139 maunds with 92 crushing days in the year previous and an average of 112 rrushing days for all the U. P. Factories during this season. Of the total cane crushed, only 2,26,000 maunds were railborne cane the rest being gate cane, indicating that our efforts to develop intensive cultivation in the zone attached to the factory, thus securing maximum supplies at the gate, are becoming fruitful. The recovery percentage was 10.4 as against 10.625 in the year previous and an average of recovery percentage of 10.15 for all the U. P. Mills for the current season. The result may be considered to be very satisfactory.

During the period under review, the Company made a gross profit of Rs. 7,53,832-3-11, after meeting the manufacturing expenses, sugar excise duties, donations and subscriptions and other expenses, as detailed in the Profit and Loss Account. After allowing for interest on Debentures, Commissions etc. and and providing Rs. 77,178-10-1 for depreciation and Rs. 2,75,000 as reserve for taxation, and Rs. 30,000 for Debenture Redemption Fund, the accounts show a net profit of Rs. 3,17,098-1-4, including a sum of Rs. 9,406-5 brought forward from the last year's account. The Directors propose to dispose of the same as follows:—

	Rs.	A.	P.
(i) To Dividend on Ordinary Shares at Re. 1 per share for the year ended 31st August, 1943	79,450	0	0
(ii) To Bonus on Ordinary Shares at As. 8 per share for the year ended 31st August, 1943	39,725	0	0
(iii) To Dividend Equalisatoin Fund ..	65,000	0	0
(iv) To Reserve for Contingencies ..	1,00,000	0	0
(v) To Carry Forward	32,923	1	4

LISTER ANTISEPTICS & DRESSINGS COMPANY (1925), LIMITED

Audited accounts for the year ended 14th April, 1943:—

Sales have moved from Rs. 19,06,161 of the previous year to Rs. 20,13,925. This year's activities show a net profit of Rs. 1,12,807 after making a provision for depreciation to the extent of Rs. 35,517.

The profits available for dividend including the unappropriated balance of the previous year amount to Rs. 1,14,355. The Directors have pleasure in recommending that dividend at the rate of 6 per cent free of income-tax on the Preference Shares and 6 per cent tax-free on Ordinary Shares for 1349 B.S. be paid and that a sum of Rs. 45,000 be transferred to Income Tax Reserve Rs. 15,000 to General Reserve and that the balance be carried forward to the next year. During the year though the Company had increased turnover difficulty of obtaining materials and enhanced wages did not permit our expectations to materialise. In the opinion of the Directors the prospects of the current year are encouraging.

Managing Agents.—Messrs. Chakraverti Brothers.

Authorised Capital—Rs. 10,00,000. *Issued and Subscribed—Rs.* 8,00,000 *in* 4,000 *Ord. and* 4,000 6 *per cent Cum. Pref. shares, both of Rs.* 100 *each fully pad up.*

KHARDAH COMPANY, LIMITED

Audited Accounts for the half-year ending 30th September, 1943:—

The Revenue Account, after deduction of Insurance, Commission to Staff, etc., shows a profit of				19,75,695	2 5
Adding the amount carried forward from last half-year ..	3,01,361	15	9		
Profit on sale of Motor Car ..	4,140	0	0		
The total is				3,05,501	15 9
From this sum there has to be deducted:—				22,81,197	2 2
Reserve for Taxation	13,60,000	0	0		
Amount written off Furniture, Cars and Lorries	733	0	0		
				13,60,733	0 0
Leaving an avaialble balance of ..				9,20,464	2 2

which the directors recommend should be dealt with as follows:—

For payment of the Dividend for the half-year on the Preference Shares at the rate of 6 per cent per annum, without any deduction in respect of Income Tax paid by the Company	27,000	0	0
For payment of a Dividend for the half-year on the Ordinary Shares of Rs. 15 per share, without any deduction in respect of Income Tax paid by the Company	5,40,000	0	0
To be carried forward ..	3,53,464	2	2
	9,20,464	2	2

Working hours at the Mill were maintained at 60 per week until 17th May from which date working hours were reduced to 54 per week with 10 per cent. of the total complement of looms silent under seal. As from 14th June, all looms were brought into commission, the weekly hours of work remaining at 54. As a result of shortage in coal supplies to the industry, all mills in Bengal were closed for the weeks ending 31st July and 7th August and in view of the prospect of a continued shortage in coal requirements the Indian Jute Mills Association decided that all member mills in Bengal with looms exceeding 220 should close down during the calendar weeks ending 4th September, 2nd October, 9th October, 27th November and 25th December, 1943. In compliance with this policy working hours at the Mill are being regulated accordingly.

Throughout the period covered by this report the workers at the Mill have continued to receive supplies of essential foodstuffs at reasonable prices from the Company's Labour Welfare Shop and, in the particularly difficult period of food shortage experienced throughout Bengal, this service has been appreciated by the mill labour force.

Managing Agents.—Messrs. Anderson, Wright & Co.

MIDLAND RUBBER & PRODUCE COMPANY, LIMITED

(*Meeting, 23rd December,* 1943 *at* 11 *A.M. at Alleppey*)

Audited accounts for the year ended 31st March, 1943:—

The nett profit for the year after writing off depreciation at 5 per cent on Buildings, Rs. 7,306-0-8; 10 per cent on Machinery, Rs. 6,021-12-10 and 10 per cent on Furniture, Rs. 373-3-5 and providing 5 per cent Commission to the Managing Agents Rs. 13,659-4-5, is Rs. 2,42,744-10-3 which together with Rs. 17,128-12-11 carried forward from last year, amounts to Rs. 2,59,83-7-2. From this a sum of Rs. 59,250 was appropriated for the 5 per cent First Interim Dividend. 1942-42 and Rs. 12, 500 for Debenture Redemption, leaving a balance of Rs. 1,88,123-7-2. A Second Interim Dividend of 7½ per cent amounting to Rs. 88,875 was palso aid. The balance of Rs. 99,248-7-2 now available is recommended be disposed of as under:—

	Rs.	A.	P.
Final dividend of 2½ per cent (making 15 per cent for the year) on both the old and new shares	67,500	0	0
Transfer to Staff Pension and Gratuity Fund ..	5,000	0	0
Transfer to General Reserve	15,000	0	0
Carry Forward	11,748	7	2
Total ..	99,248	7	2

	Acres.	Acres.
Acreage.—Rubber in bearing (seedling) ..	449.00	
Rubber in bearing (budded) ..	351.60	800.60
Tea in bearing		925.60
Other Produce		72.46
Reserves		1193.51
Total ..		2992.17

Crop.—The crop harvested for the year ended 31st March, 1943 is as under:—

Rubber	4,22,000 lbs.
Tea	2,12,883 ,,

The average F.O.B. cost of Rubber for the year is 26.79 cents per lb. and for Tea 44.70 cents per lb.

The rubber crop harvested during the year exceeded the estimate by 56,000 lbs. The tea crop fell short of expectations by 27,117 lbs. owing to adverse weather conditions.

Enhanced rates of wages to labourers, high cost of chemicals, packing materials and transport have put up F.O.B. costs per lb. by 8.91 cents for rubber and 5.83 cents for tea.

Estimates 1943-44.—The crops estimated for the year 1943-44 are as follows:—

Rubber.—2,50,000 lbs. at F.O.B. cost of 22.41 cents per lb. and *Tea.*—7,25,000 lbs. at F.O.B. cost of 55.77 cents per lb. including crop from Arnakal Tea Estate, for 9½ months which has since been purchased by the Company.

In accordance with the policy decided upon by the Directors to dispose of the isolated and distantly placed smaller units of the Company, the Manulam, Puthuthadom, Vilakuvattam, Pamala and Vellappara Estates, were sold at advantageous prices. The Company had also purchased during June 1943, the Arnakal Estate, from the Arnakal Tea Estates, Ltd., London, a first class tea estate in Peermade in a compact block of over 3,000 acres.

The revised acreage, therefore, of the Company will be as under:—

	Tea	Budded Rubber.	Nurseries, seed Bearers. Fuel cleanings, etc.	Reserve.	Total.
Arnakal	1,109.00	..	262.75	1,715.75	3,087.50

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Dec. 20.

EVER since the news of the daylight raid on Calcutta area was received, the local market is rather listless and business passing continues to be on a small scale. While air raids are not new to this city, the local market cannot by any means remain unaffected by events elsewhere. The approach of the holidays further reduced the volume of business on the market.

Government securities were firm on the announcement by Government of minimum prices for 3½ per cent Govt. Paper. Small lots of 3½ per cent Govt. Paper were done as high as Rs. 97-12 and the price is around Rs. 97-8. 3 per cent Defence Loan (1946) were Rs. 102-10. Among Provincial Loans, small lots of Madras Loan (1952) were done up to Rs. 98-11.

Bank shares continue to be active. The overwhelming interest in *Imperial Bank* shares has some what declined with the contributories quoting around Rs. 495. *Indian Bank* (F. P.) were Rs. 290 and *Reserve Bank Rs.* 124. The new issue of Rs. 100 (F. P.) at a premium of Rs. 137-8-0 at the rate of one share per every 5 shares of any of the three classes of shares now in force, by the Indian Bank seems almost certain now. This explains the reason why there is so much demand for all the three classes of shares of the Indian Bank at the moment.

Interest in mill shares has gradually declined and today there was very little turnover in this section. Though the undertone is fairly steady there are stray cases of tired selling with the prices marked lower. *Sitaram* were Rs. 216; *Ranga Vilas* Rs. 220; *Cambodias* Rs. 36-4; *Coimbatore Spinning* Rs. 260 and *Mettur Industries Rs.* 293.

Dull conditions prevailed in the planting section with prices quoting around previous levels. *Pullangode* were 2-11; *Chembra Peaks* Rs. 12-4; *Vaikundoms* Rs. 20-6; *Midlands* Rs. 16 c.d.; *Cochin Malabars* Rs. 17-8 and *Thirumbadis* Rs. 4-12.

Among Miscellaneous shares *Spencer & Co.* were Rs. 12-4; *Mettur Chemicals* (New) ordinaries Rs. 24-8, and the old were quoting around Rs. 25. There was good demand for *Bruntons* at Rs. 17-8.

connection with the New Howrah Bridge and the Ballygunge Extensions, the New Ballygunge Depot, additional transformer stations and additional Rolling Stock. To meet this expenditure and the cost of renewals, a further sum of £80,000 has been set aside to the old Depreciation Fund now more correctly included in the balance-sheet under the heading "General Reserve & Renewal Funds."

* * * *

The accounts of the *Bengal-Nagpur Cotton Mills Company Limited* for the half-year ended June, 1943, make very good showing. In common with other companies in the cotton textile industry, it has been possible to report a substantial increase in earnings for the half-year, the net profit before providing for taxation and depreciation, being Rs. 20,05,644 against Rs. 9,51,250 for the previous six months. The amount set aside to depreciation is slightly higher at Rs. 50,000 (Rs. 49,003) while the transfer to funds is Rs. 30,000 (Rs. 50,000). Provision for taxation is as much as Rs. 18.95 lakhs (Rs. 7.4 lakhs). The dividend on the ordinary shares is, therefore, only slightly higher at Rs. 1-4 per share against Rs. 1-2 per share. The amount carried forward is Rs. 17,953 against Rs. 10,308 brought in.

At Rs. 36 ex-dividend the shares afford a return of nearly 7 percent taxfree, a rather high yield for a share of this class. An important feature to be noted is that the appeal for the enhancement of E.P.T. standard profit has been decided in favour of the company but complications of unfinished assessments have prevented the benefit being reflected in the present accounts. It may very well be that a large portion of the amounts provided for taxation in recent half-years will be released and that a substantial dividend to shareholders can be paid from these released sums. It is pointed out in knowledgeable circles that there is good scope for appreciation in the value of the shares.

* * * * *

The increase in the earnings of the *Sholapur Spinning and Weaving Mills Company, Limited*, for the year ended March, 1943 cannot occasion any surprise as prosperous conditions were obtainable throughout the accounting period and this Company was in a position to take full advantage of the situation. The net profit, before providing for taxation and depreciation, is Rs. 91,05,338 against Rs. 34,80,821 for 1941-42. The bulk of the increase in earnings, however, has been taken up by additional provision for taxation, Rs. 70 lakhs (Rs. 13,62,057). The allocation to debenture sinking fund is unchanged at Rs. 2.12 lakhs while the charge on account of depreciation is slightly lower at Rs. 10 lakhs (12.12 lakhs). With the consent of the debenture holders the dividend on the ordinary shares for the year has been increased to 40% from 30%. The amount carried forward is Rs. 4,82,269 against Rs. 2,26,932 brought in.

Company Meting

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LTD.

REMARKS MADE BY THE CHAIRMAN, SIR BERNARD PRATT, AT THE ANNUAL MEETING OF THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LTD., HELD AT CALCUTTA ON THE 14TH DECEMBER, 1943.

The Calcutta Factory continued to work satisfactorily throughout the year in spite of difficulties in procuring raw materials and plant replacements, and restricted transport facilities.

The last few items of plant and equipment manufactured in England and some manufactured in India have still to arrive to complete the Punjab Works. Though no indication of any definite date for completion can be given at the moment it is hoped there will be no long delay.

Relations with staff and workpeople have been satisfactory.

Your Directors have continued their policy of supplying essential foodstuffs at cheap prices to workpeople and staff both at the Calcutta and Punjab Works. This has been a very real help to our employees in these difficult times and is appreciated by them, particularly those at the Calcutta Factory.

The Company made a profit of Rs. 3,60,974 on the year's trading after providing for depreciation. Your Directors have recommended payment of the preference dividend for the half-year ending 30th June, 1943. Provided that profits permit, your Directors intend to declare early in January, 1944, a further dividend at the rate of 5 per cent. per annum, free of British Indian Income Tax, on the Preference Shares in respect of the half-year ended 31st December, 1943. If these proposals are carried into effect, members will receive early in January, 1944, preference dividends in respect of the whole calendar year 1943. It is hoped to pay the half-yearly preference dividends in future at an early date following the close of the half-year to which they relate.

Auditors.—The Auditors, Messrs. Lovelock & Lewes, retire from Office and offer themselves for re-appointment.

Directors.—In accordance with the Company's Articles of Association Mr. John Gibb Nicholson and Sir Gerald Hodgson retire from Office and are recommended for re-election.

A letter from a shareholder has been placed on the table for the information of members, together with a copy of the Company's reply.

The following resolutions were passed unanimously.

1. That the Report of the Directors and the Balance Sheet and Profit and Loss Account of the Company as at 30th June, 1943, be adopted; and that the dividend on the preference capital of the Company at the rate of five per centum per annum, free of British Indian Income Tax, in respect of the half-year ended 31st December, 1942, paid on the 1st May, 1943, be confirmed; and that a dividend on the preference capital of the Company at the rate of five per centum per annum, free of British Indian Income Tax, be declared for the half-year ended 30th June, 1943, payable on the 7th January, 1944, to members on the Register on the 31st December, 1943.

2. That Mr. John Gibb Nicholson and Sir Gerald Hodgson, the retiring Directors, be and they are re-elected Directors of the Company.

3. That Messrs. Lovelock & Lewes be and they are hereby appointed the Company's Auditors for the current year at the same remuneration as was paid to them in respect of the year ending 30th June, 1943.

Editorial Comments

The Gold Policy

The decline in the price of gold to Rs. 71 from Rs. 78 a month ago is, at first sight, a measure of the success that has attended the offical policy in regard to gold. But where the objectives and methods, no less than the scale of operations, are a matter for surmise, it is permissible to doubt the value of this success. So far as one can understand, the aim of the official policy of gold sales is primarily to find finance for allied war expenditure in India and secondarily, to mop up redundant cash and reduce the inflationary pressure on prices. An inciental benefit which is expected to flow from the sale of gold is that the foodgrowers, who are supposed to be reluctant to sell their surplus in exchange for token rupees, will be more ready to aid the success of the present food policy. The decline in the price of gold, which has occurred already, is one that was not only expected but is even regarded as one of the aims of the policy. All these objectives, as they have been stated here, are necessarily a matter of surmise and have not been openly avowed by the authorities. But there is little reason to doubt the soundness of the basis of such surmise. Since the Reserve Bank has no reserve of gold of its own which it can use for such operations, and since such sales have been effected not only in India but in other countries such as Egypt, the Allied Governments are the only possible source of such sales; and they can have no other object than the finding of finance necessary for their expenditure in the countries concerned. The interest of the great powers in preventing the deterioration of financial conditions through further additions on a large scale to local currency is also too axiomatic to be doubted. War finance and anti-inflation are thus the prime motives of gold sales by the allied governments.

While these two motives are unexceptionable, they cannot be accepted by a country in the present position of India as the sole determinant of the official policy in regard to gold. The place of gold in the fight against inflation is a question which has been examined in these columns before and which we shall revert to at a later stage in this article. But what is more important is the resort to sale of gold at this stage of the war as a means of finding allied war expenditure in India. It seems an unkind mockery of public opinion on this question that sales of gold to the Indian public at the present high levels of prices should be taken at this late stage of the war as a means of financing allied expenditure and preventing inflation in this country. Even the man in the street knows that the greatest harm has been done to India's economic life by the allies paying for their expenditure in India in sterling and leaving the Indian Government with no alternative but to step-up sterling securities and rupee circulation without limit. It is, indeed, gratifying to learn that there is some point at which allied governments shrink from forcing further additions to Indian currency. But one would think that at that point Britain will take up the whole question of her obligations to India rather than tinker with it with sales of gold which are not without grave implications to the people of this country. If the motive behind such gold sales is to find rupee finance and avoid inflationary pressure, one might well ask how British conscience is so easy about the harm that has been already done to the economic life of this country.

That, however, may be considered too wide and too big a question to be taken up in the present context. But the same thing cannot be said of the terms on which gold is made available to the Indian public or the repercussions of such gold sales on the habits and outlook of the people or on the future of our Reserve Bank as one of the important central banking institutions of the world. The non-availability of gold during the last few years probably accounts for the general feeling that the present gold sales are a boon to the country. But it is easily overlooked that prices in what has been a virtually closed market can hardly be deemed to be the proper rates at which the Indian public should get its requirements of gold. It may be said that in the light of the present purchasing power of the rupee in terms of goods and services, the present price does not overlook the difference between the internal value of the rupee and its external value, as also the very material fact that the rise in prices in India is the direct result of foreign governments' failure to pay in rupees. It is like poking your finger into another man's eyes and asking him why his eyes are tearful. If the allied governments had not shirked their obligation to finance their rupee expenditure and if the markets in India were not hermetically sealed against all natural forces, then the price at which India could have obtained her requirements of gold would indeed have been far different. But what the foreign governments have done is to leave the forces of inflation to go unchecked for by far the greater part of the war period and then to take advantage of the high rupee price to sell gold to the Indian public. In both cases, they have chosen and dictated the mode of payment; and there is no reason to think that gold sales now serve Indian interests any better than sterling did then.

We recognise that these are not arguments for giving up the sales of gold and continuing the old policy of adding to sterling securities and rupee circulation. The limit of inflation has been far exceeded, undoubtedly. In such circumstances, the right course to adopt is for the allied governments to sell gold to the Reserve Bank of India at the British Treasury rates and for the Reserve Bank of India to make that gold available to the public at rates which are in consonance with the internal purchasing power of the rupee. The foreign government cannot legitimately take advantage of the rise in the price of gold in the closed Indian market. Nor has the individual Indian who wishes to buy gold any right to a rate which does not fully reflect the rise in prices. In the present position, the foreign governments, far from providing any compensation for the harm they have done to India, are profiting by it. And within the country, those who benefit by the lower price of gold are perhaps those who least deserve such relief. It stands to reason that the rush to buy gold should come first from those who, as current gossip goes, sleep on pillows stuffed with bank notes, because such money has to shun broad daylight. It is possible that gold is sold in small amounts too; but that may as well be a ruse on the part of the owners of such money—and they have need for such a ruse— as an index of demand from the lower classes. In any case, since the buyers of gold are a small class, there is an element of social injustice in making gold available to them at rates which have been brought down by an official policy of dubious wisdom.

The anxiety to sell gold to the public and to increase the sales by bringing down the price, if necessary, is attributable to a misconception of the place of gold sales in the anti-inflationary drive. Though we are not prepared to be dogmatic, we believe that it stands to reason that the bulk of the gold now offered should be taken up by fugitive money rather than by small consumers of gold. We believe, too, that there is little to be said for encouraging so late in the day the historic habit of hoarding in precious metals. We look forward to an

era of economic enlightenment among the masses in the country with which the old craving for gold can ill accord. If social habits are not easily cured, small amounts of gold may be made available to consumers at prices which involve no loss for the nation as a whole. Otherwise, public policy must be directed to the acquisition and conservation of gold by the country's central banking institution. We envisage a far bigger role for our Reserve Bank in the post-war regime of international finance than our authorities seem prepared to contemplate. And for such a role, the possession of gold of about Rs. 44 crores and of sterling securities, which, whatever their amount, will, in all probability, be largely blocked, can hardly suffice. Both the expansion of internal economic activity and the increase in India's importance in international finance will call for larger gold reserves; and we see no reason why the present opportunity to add to our bullion resources should be thrown away in the manner in which it is. The present gold policy has little in it to commend itself to the nation.

SHARING OPPORTUNITIES

(Contributed)

Discussion as to the place of foreign capital and enterprise in India has taken on a new urgency in the light of official assurances as to the utilisation of sterling assets. Indian views have been enunciated in this regard with clarity and precision, and some British concerns have certainly assisted in the process of partial dis-investment. If the Viceroy's recent invitation to Indian industrialists to get together with British industrialists has any meaning for us, it is only that acquisition of existing concerns must be hastened after the war by a process of sharing in new development schemes along with the transfer of existing interests to rupee companies. The familiar conclusions as to sterling assets as a reserve which would reduce India's liabilities for overseas payments, and to that extent, expand imports and reduce exports after the war, certainly have not been questioned by British opinion. Since fresh investment for development is virtually impossible it is necessary to look for new capital only at home. It may be that the fall in consumption helps the growth of savings in India (reflected in the subscriptions to Defence Loans and the Scheduled Banks' gross deposits at Rs. 653 crores) would favour home enterprise after the war, but the main condition would be the level of costs and wages after the war in India and the rate of profits obtainable on new investments in relation to that on older ones. It may perhaps be argued that in a period of cheap money indefinitely prolonged, the yield on all investments must fall; and comparisons with the past trend of profits are invalid for more than one reason. But the divergence in income from the old investments may lead to their realisation after appreciation, but such a tendency is not so far obvious except in regard to what has been made public as regards sale of Indian assets by some British concerns. The actual value of what has been transferred cannot be computed. The transfer does not involve any addition to existing employment and the retention of control is a mark of the hold that puts British enterprise ahead of Indian in so many fields that a reversal of roles is widely desired.

Since the managing agency system has developed to give foreign capital the stability that political arrangements alone cannot promote, there may be only a limited value in the appraisal of prospective reorganisation. Apprehension as to reorganisation is hardly in evidence here at present, for the annual session of the Associated Chambers did not examine the issues raised by some. Confidence in the 'status quo' remains an essential condition of the continuance but the points raised as to British participation in Indian industry after the war may raise questions as to the optimum proportion of foreign capital. Certainly it is the mark of a backward country to be overrun by alien capital and the removal of backwardness is likely to be commended as a modification of structural weakness. The theoretical justification for rigorous control was provided nearly twenty years ago by the External Capital Committee but its conclusions have little interest for us in the light of certain obvious principles stressed by Sir Alfred Watson in his enquiry as to the future position of British interests. During the Round Table discussions, and after, British capital was concerned largely with safeguards, and last year, too, entered a claim to be treated as an Indian minority holding the same position as other minorities. It is essential to remember the political background in this case since constitutional theory will largely determine what happens after the war in regard to delimitation of business and income.

If Indian manufacturers are concentrating on the outlines of new schemes calling for large-scale investment, the goods as well as a part of the money needed must be drawn from abroad, and the conversion of existing companies into Indian-managed concerns must be deferred as a very remote purpose. The transfer of managing agency in one group or other cannot be treated as an organic development for we have good reason to note that industrial control is associated with trade connections. The variety of services performed by the managing agent who is always more than the average entrepreneur should not be overlooked. If State trading concerns have emerged into prominence, they will hardly affect the British hold on India's export trade. The U.K. market is more than ever important and the shipping, banking and insurance facilities available always to British exporters promise a degree of stability more than equal to what may be obtained by a trade treaty. The conduct of trade may not support such a strain of reasoning but two other points have been put forth in the argument. The Indian investor's confidence in British enterprise requires no detailed description. The confidence may be due to more than one reason, but the uniform success of British enterprise in new industries like sugar and in old industries like coal may be taken as the single most important factor. Evidently, new and more risky ventures are to be treated as the special field of Indian industrialists after the war. The proposal not to share new opportunities will give only limited satisfaction. But the further point that Indian shareholders can, if necessary, displace managing agents, and let financial democracy work out its will, should not be overlooked. Under the Companies Act British, like Indian managing agents, hold office for a term, and removal is possible because the average managing agent does not control, by virtue of holdings of shares, but through competence and experience.

Since specific proposals have not appeared from this side, the whole argument seems to have been drawn up on the plane of theory. Indian investors' confidence and the regard manifested by British industrialists for labour welfare may be treated as hardly germane to the argument since a national government controlling all manifestations of enterprise can define obligations to investors and workers alike. Such an argument will be valid only in so far as British enterprise shares the same amenability to State intervention as Indian. The war years' record certainly suggests that no claim for privileges has been advanced hitherto though independent criticism as to control has not been absent. The acceptance of control may not enhance the claims advanced, but the main point made by Sir Alfred Watson that available capital must be reserved for new enterprise, not for new financial deals, should force itself into general acceptance. In the old industries, requiring a degree of rationalisation, the old controllers alone may be adequate. If Indian enterprise has to demonstrate that it is equal to its opportunities, it must be only in the field of providing additional employment. While some may argue that perpetuation of dependence is the aim, others will rightly recall that the organic link between industry and foreign trade was recognised in the Mody-Clare Lees Pact. British industry has a well-defined claim to state its claim against protection in any case; this may not be advanced if a just apportionment of interests follows. Perhaps the over-sharp definition of what is due to British enterprise may lead to closer consultations at this end as to what may be attempted in conjunction. Those endowed with responsibility at present may incline towards compromise, for there is already a real measure of agreement as to the consequences of monetary policy and Government interference to judge by resolutions accepted last week. There is no immediate issue, though it may be inferred that the outgoing President of the Associated Chambers is wholly convinced as to the value of the British connection in respect of industry and trade. Of the future there is little need to speak, except to stress the value of a reconstruction programme, independent of a political solution.

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Increased Imports and Revenue

A note on the Indian Customs Revenue in November suggests that imports by sea have increased considerably after the decision to encourage the inflow of goods required in India. The total gross revenue was Rs. 4.18 crores as compared with Rs. 2.88 crores in October and Rs. 2.51 crores in November 1942. Central excises collected on motor spirit, kerosene, sugar, matches etc., yielded Rs. 1.95 crores in November as compared with Rs. 1.84 crores in October and Rs. 96 lakhs in Novemwer 1942. The growth of customs and excise revenue this year is reflected also in the total for the eight months ended November. As against Rs. 30.62 crores in 1942 the total for April-November 1943 was Rs. 42.38 crores. The share of import duties in the April-November 1943 total was Rs. 24.63 crores; that of Central excises Rs. 15.5 crores; that of export duties Rs. 1.65 crores; land customs etc. gave Rs. 60 lakhs. On the basis of last year's figures there has been a reduction under revenue from the import duties on liquor, silver, metals other than iron and steel, iron and steel, motor vehicles, machinery, spices, cotton fabrics, paper and stationery. There has also been a fall in the export duty revenue from raw jute and rice and the excise on kerosene.

Larger revenue has resulted from the imports of motor spirit, tobacco, kerosene, batching, fuel and lubricating oils, dyes derived from coal-tar, raw cotton and the exports of jute manufactures. More significant for the present is the uniform increase in Central excise revenue arguing an increase in production. According to the returns issued last week, the excise duties on sugar, matches, motor spirit, tyres and steel ingots showed increases. The Government's income from the new excises may be of limited interest as against the growth of revenue from sugar before the additional excise was levied on old stocks held by sugar manufacturers. The consolidated statement of production and stocks invariably suggests that the increase in sugar production in 1942-43 accounts for the increase in stocks and despatches this year, while the increase in production, in advance of the season, may be described as a prelude to a further increase in production, though it may be suggested by many that the excise revenue figures in 1943-44 cannot be taken as a decisive pointer like the sugarcane forecast or the official memorandum on production.

Improved Cane Variety.

As the area under sugarcane in the Punjab has been increasing in recent years, the investigation into the possibility of growing both wheat and cane in one year is of special interest to cane-growers in the Punjab. The desi types still grown have been described as unnecessary when an extra early Coimbatore-bred variety is available. The variety Co. 396 resembles the indigenous types in thickness and general appearance but is undoubtedly a heavy yielder as proved by experiments from 1937-38. The difference in income per acre from year to year shows that Co. 396 is vastly more suitable and this type enables the raising of both cane and wheat in the same yield in one year. The variety can be crushed in October when nothing else is available. Field trials showed that cane planted late in March was ready for crushing in October and wheat was sown in November. The wheat harvest late in April gave two crops in 13/14 months and the gross income per acre in 3 years was Rs. 636, Rs. 715 and Rs. 574-11-3. An article in Indian Farming by agricultural officers indicates that the traditional rotation of cane-wheat-maize-senje can be adhered to in 2 years in place of 3 years.

The cane-wheat crop cycle is suited for farmers practising an intensive cultivation on small holdings. At two research stations trials in regard to manuring were also conducted and 140 lbs. of nitrogen per acre equivalent to 16 cartloads of well rolled farmyard manure—the quantity generally applied by cultivators was given. Manuring and ploughing practice generally in the trials carried out corresponded to that adopted by cultivators and the superiority of Co 396 was established. The Punjab experiments also proved that Co 396 provides cane for gur-making early in the season when gur prices are high. A further merit is that it is more resistant to pyrilla attack than Co 313 or the indigenous Katha. Being an early type it is regarded as valuable for factories wishing to start crushing early in the season. Though susceptible to top borer the Co 396 has proved that it resists fungal diseases, drought and frost. It the seedbed is moist, the slow germination of this improved type can be dealt with. After germination it requires no special attention, and the type is recommended because it has been found to stand the Punjab climate. The account of the trial with the new variety promises greater development of cane cultivation in the Punjab and a larger income per acre for the small farmer to whom the early ripening of cane means continuous cultivation of the field, with wheat following sugarcane.

Bihar's Potential

In the review of industrial progress and opportunities in Bihar provided by Mr. S. P. Jain at the 17th Annual Meeting of the Bihar Chamber of Commerre is to be found brief but particular mention of what is going to be done. Tube-well irrigation in South Bihar has been recommended officially. It has been made known that the Patna Electric Supply Company and Rohtas Industries have extended full co-operation to the Government by supplying electrical energy. Rohtas Industries Limited, has also willingly agreed to spend a further amount of Rs. 12 lakhs for installing the necessary power plant by purchasing them even at present prices in order to meet the demands of the Irrigation Department. The proposal is in accord with the plans to increase food production in Bihar which Mr. Jain described as a deficit province that could not produce exports. Since food is the chief problem of what has long been the most populous region of India, there was a reference to fertiliser production. It is the opinion of Mr. Jain that Bihar is well placed for the production of nitrogenous manures and superphosphates, provided Government assistance is available. Bihar's industrial lists, in Mr. Jain's opinion, are prepared to furnish the capital. A plentiful supply of bones is described as the foundation of superphosphate manufacture. The latter is expected to assist sugar production.

Some concern was expressed over the failure to persevere with the Bihar Grid scheme. The advantages held by Binar in regard to coal and potential demand were mentioned, and it was stated that the scheme should be pushed forward though elaboration would be possible only after the war. Since the additional excise and the revised prices of sugar are the direct results of the raising of cane prices it is noteworthy that one of the leaders of the industry thinks that present cane prices are too low. It is apprehended that the cultivator would not go in for sugarcane next year as the cost of cultivation is very high and production of foodgrains would be a better alternative. There is also the possibility that restrictions on the manufacture and marketing of gur would irritate the cultivators. The President of the Bihar Chamber therefore desires that cane prices should be raised further for this season.

Regional differences in the case of the sugar industry have been seldom described in detail. It is therefore encouraging to find that Mr. Jain distinguishes between the position of the older industry in North Bihar and that in the South. The South is more of a gur producing area where the recovery of sugar from cane is about 1.5 to 2 per cent less than in North Bihar. It is also about 5 per cent less than the Indian average. The period of crushing in Bihar is comparatively shorter, being about 15 to 20 days less than the All-India average. Besides, (said Mr. Jain) South Bihar is more industrialised than North Bihar with the result that the wages paid are higher than in North Bihar. In one factory alone, they are about 100 per cent more than the average taken by the Government for estimating the cost of production of sugar. It was stated that with the cane price raised by 2 annas per maund and the cess by one pie at present, the sugar industry has been put to a disadvantage to the extent of 10 annas per maund. As compared with the rest of the mills the sugar mills in South Bihar are in a worse position than before. As the Government has calculated a profit of 8 annas per maund the factories in South Bihar will definitely be losers. A claim for special consideration similar to that afforded to Bengal and Punjab mills last year was advanced duly. Cane development work in South Bihar has made limited progress in the opinion of Mr. Jain who asked for a revision of cane prices in the first instance, so as to ensure adequate supply of rice mills' raw materials. Since the Advisers' regimes are united in abandoning Prohibition, for one reason, or another, Mr. Jain, as an industrialist desirous of labour welfare, commented on the reversal of policy. Labour derived real advantages and he wants that Prohibition should be maintained and extended. He referred to the risk of savings being reduced by expenditure on liquor, and also to the possible charge that the present Government would be described as anti-Indian.

Workmen's Compensation

The review of the working of the Workmen's Compensation Act of 1923 in the year 1941 dwells on the decrease in industrial accidents at a time when general industrial activity rose. The number of accidents reported fell from 41.105 in 1940 to 38.908 in 1941. There was a corresponding decrease in the compensation paid by employers, the total for 1941 being Rs. 15,83,382 as against Rs. 19.38,368 in 1940. Out of the total of 38,908 accidents only 819 proved fatal and 2,270 only led to permanent disablement, the remainder resulting in temporary disablement. Under the Act payment of compensation is obligatory on all employers whose employees are covered by the Act. Seamen are also eligible for the benefits of legislation like the workers in warehouses in markets employing ten or more persons. Since the Employer's Liability Act of 1938 has added to the effectiveness of protection vouchsafed to workmen who, however, depend on the Provincial administration. The Labour Commissioner's hopes has been fulfilled. It may be mentioned that in the period 1924 to 1938 (14½ years) the total compensation amounted to over 1½ crores in over 280.000 cases arising under the Act. In effect, the increase over the average of 14½ years may be due to the effectiveness of protection or the greater readiness of employers to insure against claims.

In the year 1941 there was in Bombay an increase in the number of industrial accidents as also in the compensation paid; while the number of accidents and compensation paid in Bengal showed a fall. The number of accidents in Madras decreased while compensation paid (governed by the wages paid) was higher than in 1940. There was a slight decrease in the number of accidents on railways though the sum paid as compensation was lower. The average sum paid as compensation was Rs. 40.7 per case. There was no serious accident during the year. The lack of training in the case of low-paid employees explains the fact that they are most liable to accidents. It has been noted that 85 per cent of the workers in Bihar who sustained fatal accidents were drawing wages not exceeding Rs. 21 a month and in Sind the largest number of accidents involved the workers who were drawing between Rs. 10 and Rs. 15. There was not much support for claimants from trade unions though the Textile Labour Association in Ahmedabad took up 138 cases of which 95 resulted in the payment of compensation. In Bombay more than half the claims fell on insurance companies, and if more masters, especially small individual employers resorted to insurance claims would be more expeditiously settled. According to the report, in the colliery areas, the majority of owners readily admitted prima facie claims apart from the fact that the workers there knew of the Act and its provisions. In the C. P. it was evidently different and smaller employers who did not insure took advantage of the economic weakness of workmen or their dependents by prolonging court proceedings so as to secure a settlement out of court.

Out in the Blue

A popular account of the islands in the Pacific was needed as the war brings more and more place-names into the news as fighting spread from Guadalcanal to Bougainville. The former Governor of Fiji, Sir Harvy Luke in No. 64 of the Oxford pamphlets on world affairs tells the reader as much as he will care to remember about the islands of the Western Pacific. The Solomons because they are in the war are important. The islands live by copra but timber is a valuable prop of island economy. The Indians in

THE

CHANDPUR ELECTRIC SUPPLY

COMPANY, LIMITED

Registered Office : CHANDPUR (BENGAL)

***Calcutta Office :* P-311, SOUTHERN AVENUE, CALCUTTA**

Authorized Capital ... ... Rs. 3,00,000
(In 30,000 Ordinary Shares of Rs. 10 each)

Subscribed Capital ... ... Rs. 1,50,000
(In 15,000 Ordinary Shares of Rs. 10 each)

Paid-up Capital ... ... Rs. 1,30,000

PRESENT ISSUE :

The present issue consists of 15,000 ordinary shares issued at Rs. 10 per share, Rs. 5 being payable on application and Rs. 5 on allotment; on the basis of one new share for every share held by a shareholder.

Existing shareholders may apply for shares in excess of their quota. Such applications will be considered after alloting the regular quota.

Those who are not at present shareholders may also apply for the present issue. The issue price in their case is Rs. 11 per share, Rs. 6 being payable on application and Rs. 5 on allotment.

Applications from non-shareholders will be considered in respect of that portion of the present issue which is not subscribed for by the existing shareholders.

An admission fee of Re. 1 is payable in all cases with each application

The object of the present issue is mainly in connection with the repayment of loan. The total loan is about Rs. 80,000 bearing interest at the rate of 7 per cent per annum. The balance will be utilised for the installation of new machinery and for expansion of normal business. Plants and machinery that have been taken over by the Government for war purposes also require replacement.

Since its incorporation in the year 1935, the Company has been regularly paying dividends to its shareholders at the rate of 4 per cent, free of income-tax. The rate of payment of dividend can easily be increased if the loan be repaid from the present issue.

The offer will be open to existing shareholders whose names appear in the Company's register on the 31st December, 1943, upto the 15th January, 1944. If no application with remittance be received by the Company within that date, the offer hereby made will be deemed to have been declined.

Under defence of India Rules the Company cannot publish its Balance Sheet for the public and hence no detailed prospectus will be issued. But the receipt so far for the current year shows an increase and it is hoped that the dividend, subject to final audit, may be recommended at 6 per cent tax free.

Consent of the Central Government has been obtained to this issue under Defence or India Rules 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

This is not an invitation for shares but only an announcement as required under section 105c of the Indian Companies Act.

Copies of Artcicles and Memorandum of Association can be inspected at the registered office or at Calcutta office of the Company. Application forms and other particulars can be had on application in the above places.

Application will be made to the Calcutta Stock Exchange Association for an official quotation of the shares as soon as the shares are fully subscribed.

CHATTERJEE DAS & CO., LTD.
Managing Agents.

Fiji are a racial minority of whom there is a full account. Coming as indentured labourers in the last century they have stayed on. There is now a colony of about 100,000 men, women and children, most of them living directly or indirectly through the Colonial Sugar Refining Company which controls the important sugar industry of Fiji. Gold has been found in Fiji and the export of fruit is well established. The Suva Medical School is the centre for the Pacific. Fiji has a legislature of 32 in which 5 Indians (3 elected) have a place and indirect rule has survived the advent of representative institutions. Tonga in alliance with Britain is a more picturesque territory, described as a little Arcadia in this troubled world. The U.S.A. has real and growing interests in the Pacific because of new air routes and control. Canton and Enderbury are now shared by agreement between Britain and the U.S.A. At one time Germany tried to get into the Pacific after getting the Marianas from Spain, but German dreams were shattered when the Japanese joined the Allies in the last war for what they could get. Since the screen has made the the South Seas more familiar than geography books, and the global war has made air bases in the Pacific more important than battle fleets, many will enjoy the survey of Britain's little colonies in which the war effort has provided a reminder that the backward races today are not forgetful of the protection secured from the modified slavery of the Queensland plantations. The Colonial Office kept White Australia under control.

Wages in the 1st Year of War.

War has certainly raised wages and the comparison of rates ruling in 1940 with those in 1939 in perennial factories of nine groups, covered by the Payment of Wages Act, makes it clear that before the cost of living rose in India, the demand for labour had its own effect on wages. The tables appearing in the Indian Labour Gazette prove that except in the chemicals and dyes group, factory wages rose in 1940; the increase being most marked in the minerals and metals group. The survey of wages is obviously incomplete as the total number of operatives in 1940 was 12,85,100 but the number of textile operatives was 850,900 showing that in regard to textile wages, the movement is more or less indicative of the whole industry. The average wage of a textile operative in 1939 was Rs. 293.5 per annum and it rose to Rs. 302.9 per annum in 1940. The highest wages paid in India in 1940 were in the mints which employed 3,200 workers earning on an average Rs. 462.7 per annum as against Rs. 367.44 in 1939. It is noteworthy that in the case of industries dealing with wood, stone and glass the annual earnings per worker actually fell though the volume of employment rose. To judge from the movement in rates from 1939 to 1940, the wages in ordnance factories and engineering trades rose quickly on account of the war. The highest wages (average Rs. 491.5 per annum) were paid in factories dealing with minerals and metals showing that skilled labour derived important and immediate benefits. In the previous year also, the highest wages were paid in factories dealing with minerals and metals. War production explains the large increase in unemployment in ordnance factories to 49,900 in 1940 as well as the rise in average wages paid. The number of workers covered by the Act rose from 11,71,400 to 12,85,100 in 1940 and the increase of over 100.000 in the number of factory workers in the first year of the war indicates that civilian employment rose along with the increased recruitment to the forces. Wages in the paper and printing trades rose to the same extent as in other industries. If the increase in wages by 26 per cent in the mints followed the increase in the number of workers from 1,800 to 3,200 it may be inferred that production of small coin increased long before the shortage was noticed. The increase in the average wage for all factories from Rs. 287.5 to Rs. 307.7 proves that in the first year of war, wages rose to the same extent as prices, and the labour situation, despite the big strike in Bombay, was not worsening because the cost of living rose about 10 per cent between August 1939 and January 1941 in Bombay and the general price index rose in the same period by 14.5 points. Wages also rose indicating that something like equilibrium was maintained between wages and prices in the first year of war.

Supplementary Minerals.

If the location of new gold deposits in the Orange Free State indicates that the gold mines constitute the major industry in South Africa the Union's mineral resources, especially coal and copper, have acquired greater significance for the war effort. The gold-mining industry certainly produces munitions as well as gold, but the other minerals are of greater importance as the plans to set up shipbuilding yards, etc., depend on the progress of minerals extraction rather than gold output. The mandated territory of South-west Africa (formerly a German colony) is being prospected and the deposits located in the Kaokoaveld are expected to be more important for the future than the diamonds or hides and skins that are shipped. South Africa's interest in the South-west African deposits to-day has been indicated in a private motion for subsidies for mining operations. It has been stated that prospectors should have a fair chance in the territory rich in base minerals. Reference has been made to the discovery of tin in many places and the addition to the Union's former output must be considered important. The cessation of Far Eastern supplies has made wolfram important for the Allies and an Anglo-American survey began in West Africa for both wolfram and molybdenum. The survey was to continue from Nigeria down through Liberia and Angola. South-west Africa is known to produce wolframite and scheelite and the tinfields of South-west Africa are known to contain the two ores of tungsten. There are wolframite deposits in the Transvaal and Natal also and sheelite has been mined at Kochasib on the Orange River where there is an occurrence which promised well for scheelite as the chief ore, with gold and possibly silver as by-products. As the Union production statistics are not available, the increase in the Union's tungsten production can be inferred only from the statement that every effort is being made to locate and discover payable deposits of this essential mineral. It may be generally known that South-west Africa has been a producer of lead and tin ore for a long while and vanadaium has been an important mineral export from South-west Africa in the past. The mineral deposits in the north attracted attention after the alluvial diamonds led to a

ners' rush to the desert. Basing his ws on resources and problems the Union me Minister declared in August that rica is the Continent of the future. The w conception of common action and nmon interest is expected to promote velopment. Lord Harlech subscribed the view as to the development of rica. It is known that the foreign de-idencies are actively co-operating with Union and all parts of Africa are likely be extended after the war. The development of secondary industry should support the expansion, but for the present, more attention will be devoted to the increase in mineral exports from South-west Africa, from the Belgian Congo (allied to Britain by separate agreements) and more recently, North Africa whose chief contribution is iron ore and phosphates. The rest come from the south. While the ability of Africa to produce tin and rubber has been demonstrated over a year, the Union's desire to retain her first conquest of 1915 will be strengthened by any detailed estimate of mineral wealth.

THE BIHAR MICA INDUSTRY

Facts you should know

THE world's most important deposit of mica is in Bihar and gives direct employment to 1½ lakhs of workers, with a further 3½ lakhs of dependents.

Mica mining in Bihar is, therefore, one of India's most important industries, based on one of India's greatest national assets

The Bihar mica mining industry, which dates back to the 1870's, has not progressed as it should, due largely to an extensive and ever growing trade in illicit mica.

From time to time during the past 40 years the question has arisen of preserving the valuable Bihar micafield, and its important mica industry, from the ultimate destruction with which it is threa ened by the illicit mica trade. But nothing has been accomplished.

Whenever this question arises, it encounters strong opposition and causes great agitation amongst those who benefit directly from the trade in illicit mica. Irresponsible statements are then made in an effort to divert attention from the necessity to preserve this great national asset, and protect its deep mining industry for the benefit of its 5 lakhs of Bihari dependents.

The legitimate mica miners believe it to be their duty to make known to the people of Bihar the facts relating to this industry.

Recently, for example, handbills have been circulating in the micafield irresponsibly accusing members of the Kodarma Mica Mining Association of curtailing output in order to compel Government to impose "still more rigorous control over the industry", and of "threatening 50,000 Mica Majdoor with unemployment".

Both these statements are incorrect.

Output has been seriously affected by the exit from the deep mechanised mines, whence the bulk of the production normally comes, of a large volume of labour attracted by big profits in the illicit mica trade. Such labour is, of course, uneconomically employed, to the detriment both of the war effort and of the factory labour, which depends on mines output for employment, now and in the future.

The mica industry does not depend for its existence on mica dealers, but on mica producers. Anything that ensures the proper operation of the mines automatically means more and better employment for factory labour

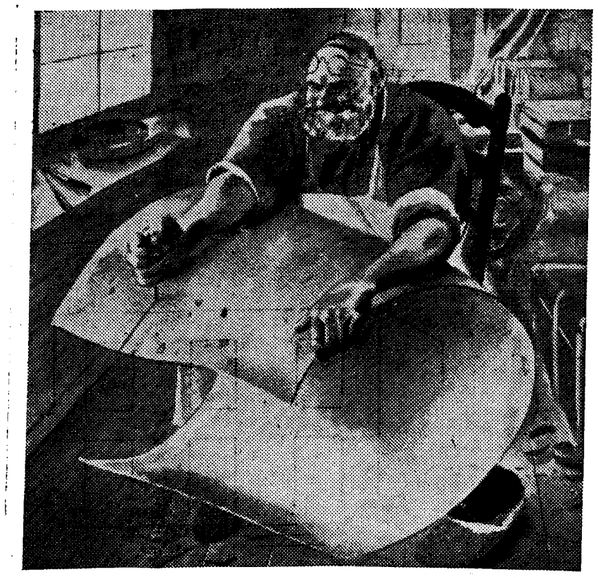
The responsible mica producers do not want, for its own sake, more Government control of the industry What they do seek, however, is the protection of their property and their elementary rights as traders, who, through good times and bad, have developed the industry to its present important place in the life of Bihar and the war effort of the United Nations

THIS ADVERTISEMENT IS INSERTED IN THE INTERESTS OF THE RESPONSIBLE MICA MINERS OF BIHAR

Japanese Inferiority

Since there is conjecture as to the kind, number and striking power of the formation used by the Japanese in the daylight raid of December 5, 1943 the enemy's own admission of inferiority in the air has real interest. A Japanese broadcast intercepted by the Chinese Ministry of Information dwelt mainly on the lack of planes in the S.W. Pacific. The U.S. landings on Bougainville were explained as being due to the limited garrison kept at Torokina. The U.S. forces built an airfield in Bougainville and the air range to the north was extended. The Jap broadcast admitted that the Navy could not dislodge the enemy after the surprise landing, and interference with supplies depended on air control which passed to the side that had the larger number of planes. Japanese officers have been quoted in order to show that the planes are wanting. The fact may explain the advance towards New Britain from the Solomons—New Guinea positions. Though fighting in both places is not at an end the initiative has clearly passed to the U.S. forces. The advance from Guadalcanal has continued over a year and this year's additions include the northern islands of the Solomons while interference with occupied territories in Gilberts, and more recently in the Marshalls, have acquired great significance. In spite of the resistance encountered in New Britain by the forces which have to neutralise the flow of assistance to New Guinea from Rabaul and build bases that would bring Rabaul within the field of continuous air attack it is certain that the biggest and oldest base is in danger. The last hope to what looks like the lost is land came this month when the southern tip of New Britain was invaded.

More Private Planning.



The Muslim League's latest manifestation of independence is in regard to planning. A resolution recommended by Mr. Jinnah describes such planning as a condition of independence. The Ministries subject to the League's direction are expected to promote economic and social uplift. The President has been authorised to appoint a committee to draw up a five-year programme for uplift, State industrialisation of Pakistan zones, for the reform of the land system. the improvement of agriculture and the control of money-lending. The Karachi resolution defines other objects also but the impact of the programme on the minorities will be understood. Mr. Tamizuddin Khan supporting the resolution referred to the liquidation of illiteracy as the first object of League planning. He referred also to nationalisation of essential industries. Since Pakistan's economic handicaps have not been investigated formally a plan for nationalisation may appear premature, but the President's views may shape the committee's conclusions. There is little doubt that postwar reconstruction is not the aim of the planning proposed but the creation of a durable economic foundation for the independence of Pakistan. The League's committee has been asked to get an interim report out within six months and the resolution, speaking of a gigantic drive for reconstruction and industrialisation, has made it plain that Pakistan is going to be created in spite of opposition.

The main question that arises is to the place of private non-Muslim enterprise when the plan for nationalisation and development is got ready. It must be noted that the resolution on planning is comprehensive; it assails landlordism in the permanently settled Provinces, and threatens also to set up industry in Pakistan zones which may be a danger to industry in the other parts of India. Since the complaint as to excess capacity is familiar, there may be less scope for industrialisation than presumed, but not many will overlook that the independent Plan will be independent of official consultations in regard to reconstruction. There may be no immediate need to ask here questions as to what industries will be set up in Pakistan, as to what industries will be nationalised, and as to what compensation will be available to old established enterprise. What is really important is that Pakistan when it takes shape will create difficulties as to raw materials and markets for industries already functioning outside Pakistan.

From the resolution it may be inferred that the League expects Ministries to carry out recommendations, approved by the President and the President has made known in April that the League wants to adopt a fully popular programme for mass uplift. The popularity of the plan may, however, be compromised by the stress laid on nationalisation. It may occur to many that the new State may decide to nationalise the jute mill industry in order to finance the rest of its programme or to create labour welfare arrangements in Bengal different from those obtaining in Bihar. The danger lies not merely in the threat to uniformity, but in the fact that key industries like heavy chemicals in Pakistan may pass under control of an authority that puts Pakistan's interests first. There may be real value in an experiment similar to that attempted by the Congress, but the fundamental assumption is the independence of Pakistan. It may be assumed that economic self-sufficiency is in this case associated with independence and how the Pakistan zones can be made economically self-sufficient will be naturally the main subject of investigation.

While the official reconstruction committees will discuss the transition to peace in India, the League Committee will be concerned only with the transition to independence. The resolution suggests that Pakistan will seek to be, economically independent of all countries, and may hold up the United Nations' programme of enlargement of trade opportunities. Questions as to the place of foreign capital in the event of nationalisation will naturally arise, and the emphasis may again be shifted to the safeguards under provincial autonomy. What can be accomplished in the way of rehabilitation in Bengal may perhaps be made clearer by the League Committee, but the resolution accepted by the League will certainly force on the public attention the economic consequences of planning for the partition of India. It is not hard to picture Pakistan trying to develop up sugarcane cultivation and setting up sugar mills outside the U. P. and Bihar in order to increase employment and sugar supplies locally and locking necessarily more to export markets than to the zones separated by regions of Hindustan. Under-development of Pakistan has been mentioned in the resolution, but inadequate utilisation of resources is not peculiar to Pakistan areas alone. The resolution may justify the renewed emphasis placed on India's unity by the Hindu Mahasabha, but the departures in inter-Provincial co-operation threatened by the League's own resolution may require formal elucidation by the opponents rather than supporters of Pakistan.

NOTHING LIKE LEATHER

CHEMICALLY this is not true. Leather is a protein and so are wool, silk, hair, nail and horn ! The manufacture of leather is a highly-skilled and complex craft which has developed slowly but surely through centuries of trial and error. The hides must go through many treatments before being tanned. Tanning converts the soft skin into durable leather, but it is not the end. The leather must be brought to the required degree of pliability and finally dyed or finished to obtain the wide range of effects, say, between an army boot and a bright bedroom slipper, a fancy handbag and a riding saddle. All these many and varied processes have been developed by the leather industry, but gradually, as the chemistry of leather has become better known, the chemist has been increasingly brought in, replacing the old agents for leather treatment, lime, animal excreta, eggs, offal and crude fats, with standard alkalis and sulphides, pancreatic enzymes, disinfectants, purified and analysed fats, the chrome tanning process and so on. Most of all, the chemist is helping the leather manufacturer to understand the principles of his processes, to speed them up and standardise them. The excellence of British leather is universally recognised, and British chemists are among the first in the field of leather research. Professor H. R. Procter, known affectionately as "the father of leather chemistry" led a pioneer school at Leeds University from 1890-1913 and the work he initiated has been pursued and developed all over the world.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

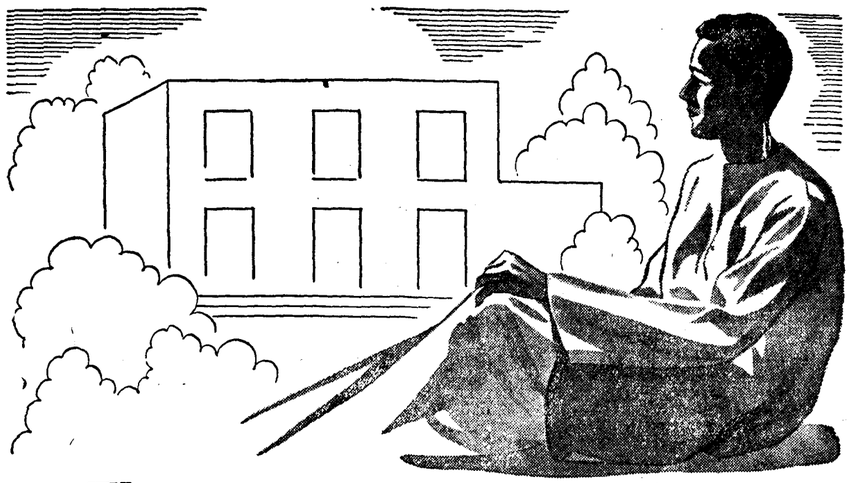
Help from China.

Air support in recent operations explains most Chinese successes, but the Chinese made the success possible through the construction of airfields for the 14th U. S. Airforce. While the Japanese air opposition has been mastered, air bases have been the means of delivering attacks on Bangkok which may be called the hub of the new Japanese overseas empire. The construction of the largest and finest airbase has been described as a remarkable feat performed by 1,000 Chinese workers with practically no equipment. The Chinese Information bulletin states that five months ago, the largest and finest air bases in China bore the remotest resemblance to an airfield with a runway hardly long enough for a bomber to take off or land. Walled on the four sides by trees and criss-crossed with small ditches, the airfield was a nightmare to airmen, who took off or came to land. To-day heavy bombers can take off with a section of the runway untouched and a few fighters take aloft abreast. Beginning work from July 15, more than the first 850 Chinese workers toiled for five months working from 7 a.m. to 6 p.m. without taking off the interval for lunch. A working week of 77 hours was accepted by the men, who built the airfield. Before daybreak 1,000 men wearing identity discs trooped on to the field. They had almost primitive tools—small hammers and shovels—but carried out the job, filled up ditches, grubbed up hills and smoothed the runway. The earth was carried away in bamboo baskets. When the ground was smooth horse-carts came along the bumpy roads. The foundation was laid piece by piece by human hands. Rollers drawn by some 100 workers each ran noiselessly, but laboriously over the runway. The Chinese workers saved indeed more than the plane space that would have been required to bring equipment. Major Lyman Lockwood pronounced that the airbase was fine. I would not even trade it with the Mitchell field in the U.S.A. Major Lockwood also declared that the Chinese were the hardest working people he has ever seen. Most of the workers were hired on wages of $15 to $20 per day by the Chinese Aeronautic Commission. Only 15 to 20 per cent of the builders of the airfield were paid by the American authorities. The 14 U. S. air force's raids on Hongkong from China have created confusion and made the Japs admit they have no oil for essential services because the island's gasoline installations have been destroyed. There may well be some doubt as to the efficiency of Hongkong as an air and shipping base after the raids which put the Japanese completely at the mercy of imports and made the Colony more than ever famine-stricken. The air war has created unusual conditions in which the Japanese in China have been forced to use their second string. The first, too, has stretched to the point of snapping in the South-West Pacific.

Shortening War

News from the U.S.A. speaking of the possible addition of two million men to the forces in 1944 and an indication of the preparation for an invasion of Europe planned from the west may excite fresh discussion as to the length of the war. Lord Wavell, it may be noted, hazarded no prediction as to the length of the war. General Smuts spoke of the last Christmas of the war after his return from London. Since the new Russian offensive in the north threatening Vitebsk at once has begun, and the Allied advance in Italy is gaining vigour, it may be proper to ask what would shorten the war in Europe. Since Europe is first on the agenda, and the Teheran conference merely settled the manner and degree of action in the west, the air war over Germany becomes the cardinal factor. The bombing on a big scale by night has been resumed and this may really effect the German home front. Propaganda without an ultimatum may yield larger results when the confusion produced by bombing is unalterable. The Occupied countries, notably Yugoslavia, have begun to act for themselves. Underground resistance may therefore play a greater part. The effects of three factories in combination must be reckoned important alongside of the efforts to get post-war frontiers settled by treaties. The Polish Government is said to be ready to examine the old causes of the break with Russia and the danger of an extension of war for any reason is removed well in advance.

Rommel's inspection of the German defences from Denmark to France may suggest that German resistance may be prolonged by the resolution and resources still available but the three things mentioned, as the bombing of central Germany together with the damage to war industries, the change in German opinion as to the Allies' ultimate purposes and the stir in the Occupied countries (without any specific direction from the Allies) may have vast results. The results inevitably must affect Allied plans for the next year. The German army has been halved by casualties according to current reckoning, and that may have distinct value for the assault. The Germans' acute need of a success near Kiev has been mentioned and failure again well may have larger effects at home than pretended. The surprising collapse of Italy before Sicily was completely occupied has lessons for any calculation as to what may be achieved in the next year. As for the East the changes in command unifying the air forces offer more than a guarantee of immunity to that part of India which is joined to the S.E. Asia Command at present. There is more than a hint of war again in the Arakan and the air offensive has been stepped up. Precautions ordered in certain cities of Japan may be taken as an admission before the conference of prefectural governors that Japan's rulers are nervous after the failure of the offensive in Hunan. Japan has not waged a defensive war as the Germans did in Flanders, and this alone may shorten the war in the East.



ESTABLISHED IN 1930

BHARATI CENTRAL BANK LIMITED

One of the Largest Nationalists' Bank in India

More than **30** Branches all over the country. This bank transacts all sorts of higher banking business on sound & scientific methods.

Head Office :—COMILLA
Central Office :—15, CLIVE ST., CALCUTTA

The protector of a kingdom

To you your family is your kingdom. Your wife and children, the members of this family, look to you - the head of the family - as their protector. Their well-being and their future are your responsibility.

Life may not be too kind to you ; the fatal hand of destiny may suddenly remove you from the kingdom of your dear ones. Have you thought of who will then give your wife and children the financial protection they are now enjoying from you, and who will provide funds for the livelihood of your family and the education of your children ?

New India's Family Income Policy will assure your family of a regular income in the event of your premature demise until the period of your policy matures. And then in addition to this, the entire assured sum will be paid to them. If you survive, the full sum assured will be at your disposal.

TOTAL FUNDS - NEARLY RS.5 CRORES
TOTAL ASSETS - NEARLY RS.6 CRORES
TOTAL CLAIMS PAID EXCEED RS. 10 CRORES

THE ***New India*** ASSURANCE CO., LTD.

9, CLIVE STREET, CALCUTTA.

What New India's Family Income Policy affords

- In the event of your demise, your family is assured of an income the total of which is more than the total assured sum.
- There will be no investment risk for the widow - she is assured of a safe and remunerative investment.
- Should you survive, the entire assured sum will be yours - this will be most welcome to you in your old age.

For rates and other details post the coupon below.

PENTRONE T

SURPASSES Any Other Level Dyeing & Welting Out Agent

Bleached and coloured fabrics owe their excellence to the perfect chemicals that are used in the bleaching and dyeing plants. PENTRONE T has proved its wetting and cleansing properties resulting not only in an improvement of the bleaching effect regarding time and evenness but also in a better white. In pre-treatment of yarns to be dyed or in machine dyeing PENTRONE T exhibits remarkable qualities which ensure better finish.

As a new synthetic washing and scouring agent of unequalled efficiency PENTRONE T is of great assistance in Kier Boiling.

What has 1944 in store for us? The old year has been so full with momentous and far-reaching developments, that it is not quite impossible to imagine the features of the unborn New Year. Wishes for the best are easily exchanged with fervent devotion. But nothing is gained by trying to overlook the severity of the trials which nearly every section of humanity will have to face during the coming years. To India, the old year was a year of distress and disappointment and, to the end, failed to reveal the glow of dawn. The future of India has come to rest with a multiplicity of world forces, at least in the sense that every one of the vital problems has been shelved to the postwar period. The war has for us more meaning and importance than for even the three great powers among the Allies. Prospect of lasting solution of our problems, as much as the instinctive pacifism of the average Indian bids him yearn for the end of the war. Whether 1944 will see a decisive triumph of Allied arms is still with many a moot problem. The experience of 1943 points to no definite answer. It has witnessed quite impressive achievements, impressive, when one compares them with the outlook of a year ago. It has seen North Africa cleared of Axis forces. It has brought Sicily and Southern Italy under Allied occupation. The greatest counter offensive of the German Army on the Russian front has been rolled back and the Red Army is on the eve of great triumphs. More than all, the first genuine signs of a Second Front, as the Russians understand them are now visible. General Eisenhower has been appointed to the Supreme Command and under him, significantly enough, is a British Chief. The slow progress of the Allies in Italy means little either to the relative strength of Germany and the Allies or to their strategic positions. In fact, one might even wonder whether in the grand strategy of the Allies, the fighting in Italy is not more than of a skirmish and a diversion than a key-move. Whatever may be the future of the Italian campaign and its prospects of mingling with the unrest in the Balkans to make a biggish conflagration for the enemy, there is little doubt that the hard core of German defence will have to be cracked between the Anglo-American offensive from the west and the onrush of the triumphant Red Army from the East. Dates are still hard to fix. Even the opening of the Second Front cannot be exactly timed ahead. But one thing is certain, that 1944 will not be well-advanced before it sees the climax of the war in Europe. The report that Marshall Rommel and Runstedt have met and discussed the problems of denfence is a confirmation, if such were needed, that the opening of the Second Front is not far off.

* * * *

It is difficult on the basis of ordinary commonsense understanding of things to see how Germany can survive the overwhelming forces that are now gathering round her. To say that is not to underrate any of the strong points of Nazi militarism. Nothing that may happen in the future can detract from the careful planning and energetic execution that lay behind the stupendous achievement of subduing a whole continent in the face of Anglo-American opposition in the west and Russian resistance in the east. But that by itself is no reason why one could expect Germany to withstand successfully the ceaseless and gigantic roll of men and metal across the seas into Western Europe, while the Russians are pounding their way to the heart of the Reich. The weak point of German militariam is its oversight, in sheer arrogance of its might, of the verities of life. No race, which plans on the assumption that it is master of this planet can have anything but failure as its ultimate lot. Those who admire without limit the perfection of German planning will do well to reflect how, and in how many respects, Hitler has had to suffer disappointments.

* * * * *

It is strange, if you look at it superficially, and extremely illuminating if you look into it deeply, that for the most fertile source of Hitler's errors lay in his ill-defined attitude to England. He thought Britain would not fight. He thought Britain would not continue the fight once France surrendered. He thought Britain would be cowed into surrender by bombing from the air. And his last desperate attempt was to buy off British opposition by turning against Russia. His relations with Britain before the outbreak of war showed a no less chaotic state of mind. On many an occasion after the surrender of France. Hitler must have rued the day he agreed to the limitation of German naval power. Hitler must have experienced every shade of feeling and passion, so far as Britain is concerned, varying from sincere friendliness to the most violent fits of hatred. Most critics are now agreed that the offers of peace he made to Britain at various stages of the war were sincere; which means that he never counted on, not to speak of providing for, the implacable opposition of the foremost of his opponents to the triumph of German militarism on the continent of Europe. What is there, then, to be said for the perfection of German planning? The fallibility of Hitler and his Nazi Chiefs is no longer a matter for argument or surmise, it is a fact. And those who think that German chances are not out pin their faith on the possession of secret weapons. On this question of secret weapons, it would be foolish to be dogmatic. But to me, it seems axiomatic that no race on earth has a monopoly of inventiveness. Nature does not weight the scales so heavily in favour of one or the other. What happens is that the faculty of invention is exercised by each race according to the incentives and necessities of the moment. The nation that prepared for war four years ago naturally has more of new devices in her armoury than the nations who waited for the war to break out. But the pressure of dire necessity is more than adequate compensation for the apparently late start. The efficiency of the war machine is being ceaselessly improved on both sides. To a new type of tank on the German side, the Russians answer with a new kind of rifle or gun. If the magnetic mine takes a heavy toll at one time, it is overpowered before long by another device. The fate of great wars are not tossed about on the brain waves of ingenious technicians.

* * * * *

The importance of 1944 in the history of the war is that it will be the last year in which the active part of the non-Nazi world

will be really ready to meet the challenge of Hitlerism. And for that reason, it may well prove the last year of the war in Europe. I said, "War in Europe", for the war in the East is not yet touched by the forces that are converging over the heads of Nazi Germany. The threat of Japanese imperialism in the East has very little in common with the menace of German militarism in the continent of Europe. The established habit of bracketing Japan with Germany is only a facile escape from complications of the problem in the East. The one advantage of Italy crossing the floor to the side of the Allies is to reduce all talks of Axis and Axis powers to an anachronism. It is now possible to hope that, once the Second Front is well under way, the Powers will be able to see the problem of the East in their true perspective. The most significant difference between Germany and Japan is that there are wide areas of the globe over which Japan can pose as a protector, while Hitler can by no manner of ingenuity masquerade in the garb of a liberator. Europe is a land which has tasted self-determination for a number of decades; while South-east Asia has not tasted even some of the material necessaries of life. To this must be added the other fact, that Japan possessed a vast Empire even before the outbreak of this war and gained soon after it vast areas which are different militarily and economically from the countries which the German Army has been in occupation during the last three or four years. With another year's time for ally, as I said some time ago, Japan will be a much harder nut to crack than the Allies will find Germany in the coming year. The prevalent notion that, once Germany is beaten, no matter whether it is to be in 1944 or 1945, Japan will sink to her knees more or less of her own accord. has dangers which will not be obvious for some time to come. Against this, the only advantage is what Lord Louis Mountbatten mentioned some time ago, that after the war in Europe the Allies' resources will be so great that the problem will be one of deployment.

* * * *

The difference between Europe and the Far East is even greater in respect of post-war reconstruction. In Europe, the problem will be food immediately after peace, and largely political in the more distant view. The fears and ambitions of great powers and the jealousies and vanities of small nations will in their interplay decide the various problems. But in the Far East, the powers especially Great Britain and the U.S.A., will have to deal with vast populations who have to be organised to attain their own wellbeing and the security of world peace. The term "South-east Asia" as denoting a region of special importance in world economy and international politics is only lately coming into frequent use. Those who remain sceptic of Japan being wiped out, instead of being merely defeated in this war, naturally lay stress on the need to transform India and the countries of South-east Asia into strong bulwarks of world peace. Whether this transformation is to be 'pari passu' with the rolling back of Japanese aggression or whether it is to follow the complete defeat of Japan is a question which does not afford much freedom of choice. It is tempting to exaggerate such freedom as, on a superficial view, there may seem to be. The war in Europe has revealed at various stages the need to overcome many a political prejudice. General Tito is raised to the rank of Marshal. Italy is more or less an ally, and not a defeated enemy. In the same way, when the Allies come to grips with the war in the East, similar expedients will have to be cheerfully accepted. It is more or less certain that Burmese sympathies will have to be

secured, as also of other peoples who have come under Japanese domination but have not yet learned to hate it.

* * *

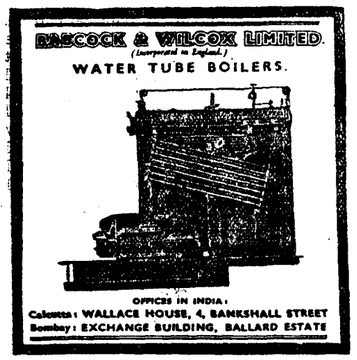
In the East, then, one would like to have not so much an impressive progress of the offensive against Japan—that is to come after the defeat of Germany—as an earnest of that radical reconstruction of the Far East which is an essential condition alike of the defeat of Japan and the security of world peace. How far can these likes be regarded as expectations? So far as India, is concerned, every hope is an invitation to disappointment. There were expectations of a X'mas present, when the Viceroy was to speak to the Associated Chambers. But the X'mas stocking contained nothing but razor blades and ration cards. Of a political settlement, there is still no sign. But the path to it has been blazened by Mr. C. Rajagopalachari in his little pamphlet "The Way Out". It is a masterful exposition of the views which have brought him so far only a political eclipse. The facts are incontrovertible and the reasoning powerful. The way out is no a narrow loophole but a high way for all to trod, if there were sufficient goodwil and understanding. If the New Year wil witness some firm steps towards that way out, it will prove by far the most eventfu year in the history of our times. 1944 wil in many ways be a trying year. But it wil also be the beginning of a new era.

"EAVESDROPPER."

PROBING NATURE'S SECRETS

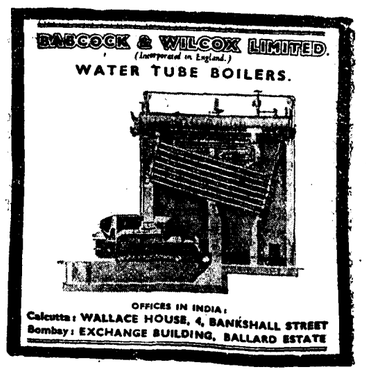
From the dawn of civilization, Man has been engaged in wresting from Nature her many secrets. The world can never adequately repay its debt to the countless men and women who have toiled in the field of scientific research, and whose courage and devotion have rendered possible the amazing advance in scientific knowledge and material comforts that has taken place.

It is one of Jamshedji Tata's many contributions to the enrichening of India's national life that he realised early the vital aid that scientific research could give to the industrial development and economic resurgence of India.



The Indian Institute of Science at Bangalore stands out as a monument to the Founder of the House of Tata, symbolic of his ideal of constructive philanthropy. Pledged to this ideal, Tatas have largely directed towards research the resources of the Charitable Trusts which they have endowed. The laboratories at Jamshedpur and Mithapur, the Cancer Hospital, the School of Social Work, and the recent donation towards the establishment of a National Chemical Laboratory demonstrate that the tradition established by the Founder still prevails.

Research as the handmaid of industry is the conception which pervades Tata enterprises, which today cover:—



Iron and Steel . Textiles . Hydro-Electric Power . Chemicals . Insurance . Air Transportation . Soaps and Glycerine . Industrial Investments . Hotels . Cement . Engineering . Scientific Research.

Resume of Commodity Markets

THERE is nothing of importance to be recorded in the jute and jute manufactures markets in the past week. With the intervention of holidays, business has been on a smaller scale. The jute market, however, has remained steady on the reports of larger arrivals of coal in the last two weeks. With the smallness of arrivals and the shortage of labour, prices have been fully maintained. There is good demand for Tossa varieties and certain grades are in short supply. The general opinion is that prices will continue to fluctuate around present levels. Any favourable developments should, therefore, be reflected in a higher level of prices. So far no decision regarding the size of the crop for the next season has been taken.

* * * *

The jute manufactures market has continued firm and quotations are even slightly higher for 9 porters. The increase in the offtake has given encouragement to second-hand sellers. It is pointed out that the increase in production will be taken up by delayed deliveries and that mills will not be in a position to sell freely to the bazar. The improvement in the transport situation also will have a stimulating effect on prices. 9 porters are quoting Rs. 21-4 for all positions while 11 porters are Rs. 28-1 for December, Rs. 28-1 for January and Rs. 28 for January/March. In the heavy goods section firm conditions have prevailed and quotations are around the maximum levels.

* * * * *

The cotton market has been fluctuating in narrow limits. In spite of the reports that the tender for January contract will be small, prices have been fully maintained. There is a disposition on the part of buyers to cover their open positions. Good business has been reported in ready cotton. The long-term view, however, appears to be rather bearish though, in view of the soundness of the technical position of the market and the delayed movement of the crop, there is no disposition to discount prices immediately. The third forecast figures are awaited with interest. Jharilla January closed at Rs. 468-8 against Rs. 469 at the end of last week; March at Rs. 467-8 against Rs. 466 and May at Rs. 470-8 against Rs. 468-12. It will be noticed that there has been a slight appreciation in the quotation for forward positions owing to the switchover of contracts from the nearer to the forward positions.

* * * * *

With the announcement regarding the disposal of unstamped goods firmer conditions have been noticeable in the piecegoods market. The revised ceiling prices have been well received by operators and with the larger buying on the part of consumers a further rise in prices is expected. The communique issued last week regarding the disposal of all unstamped goods after the end of the current year reads as follows: "Unstamped cloth and yarn found with a dealer after December 31, will be sealed. The dealer will be offered alternatives of letting the matter be decided in a court of law or getting the cloth or yarn stamped with a special distinguishing mark by the Provincial or State authorities on payment of a fee. This stamp will indicate the maximum retail price at which the cloth or yarn might be sold; this will be 10 per cent above the maximum ex-mill price. In addition, the dealer will have to pay as a stamping fee a sum equal to 10 per cent of the ex-mill price. The fees thus realised will be used by Provincial and State Governments to defray administrative expenses and to finance measures in relief of poor consumers of cloth". It was pointed out in these columns last week that the proposal for stamping of goods manufactured prior to August 1, 1943 should be seriously considered and that the Government of India must make arrangements for the early marketing of the large volume of hoarded stocks.

* * * * *

The bullion market was rather quiet for the most part of the week with some selling from upcountry centres and the offering by the Reserve Bank at lower rates. The discount for delivery contract over ready narrowed to Re. 1-2 at one time and the close is only slightly higher than the lowest levels for the week on some bear covering. The tendency is distinctly bearish. Gold ready closed at Rs. 71-12 and two days' delivery at Rs. 70 against Rs. 71-10 and Rs. 69-10 respectively at the end of last week. It will be noticed that the discount has narrowed to Re. 1-2 per tola from Rs. 2 at the end of last week owing to the selling by holders for ready and buying for delivery. The lowest levels touched during the week were Rs. 70-12 for ready and Rs. 68-12 for delivery.

The silver market is not very much lower but prices have been marked down in sympathy with the gold market and business passing has been on a restricted scale. There has been a late rally in prices. There is still a scarcity of ready supplies and the technical position of the market is sound. Silver ready closed at Rs. 114-8 and forward at Rs. 112-13 against the lowest levels for the week of Rs. 113-12 and Rs. 111-14. The quotations at the end of last week were Rs. 115-2 and Rs. 113-2 respectively.

The first All-India forecast figures, published on Wednesday, should have come as a great relief to many. It is estimated that the rice crop will be a record one exceeding 28.5 million tons as against the normal consumption figure of 27.5 million tons and the average production of 26 million tons. There is an increase in both the area and production in every porvince. The pride of place goes to Bengal, the area showing an increase of 16 per cent and the yield 45 per cent over last year. Assam comes next with 3 per cent in acreage and 10 per cent in production as against the all-India figures of 6 per cent and 16 per cent respectively. The rice crop of Bengal according to this forecast is estimated at 4.7 million tons, while it is expected that the final forecast may even show an aggregate of over 10 million tons. From one of shortage there will be plenty. If the forecast figures prove to be correct it is hoped that the several provinces would have solved their difficulties in regard to this staple food.

* * * *

The international rubber regulation agreement expires on December 31, 1943. The three signatory governments, the United Kingdom, Netherlands and India, are still available and they agree in desiring international co-operation and retention of adequate machinery for consultation on possible future international action to handle rubber's postwar problem including the interest and well-being of the inhabitants of the producing areas and feel that the existing committee is not appropriate for this purpose. It has, therefore, been decided to continue the existing agreement for a further period of four months. This extension does not involve any resumption of the rubber regulation. During the first two years export quotas were successfully raised to a level which removed any effective restriction of quotas. The new agreement, it is believed, would include all other countries that are substantially interested in rubber or rubber substitutes whether producers or consumers.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, 29th December...

We have to start this week with an apology. In commenting last week on His Excellency, the Viceroy's speech at the opening meeting of the Associated Chambers of Commerce, we remarked on the "incisive" tone in which His Excellency condemned lethargy and inefficiency. In a moment of malignant humour, the printer's devil altered "incisive" to "indecisive", than which no epithet could be less applicable to His Excellency' words, or we hope to his attentions.

Coal continues to come forward more satisfactorily but its distribution to individual mills continues to be hampered by lack of sufficient labour at the depot. As under present arrangements, each mill has to receive its correct percentage of the amount available during the week, the obvious remedy for the difficulty, to divert the wagons into convenient mill compounds for unloading, is not altogether appropriate, though it would be better to resort to this method rather than keep wagons unnecessarily under load. It is at least a hopeful sign that the coal is coming forward quicker than it can be handled for this might mean an early reversion to direct delivery to mill compounds which would effect a great saving in labour, expense and material.

No pronouncement has yet been made regarding a working schedule to follow that which expires at the end of this month. Possibly the Committee wish to wait and see how coal supplies come forward in the early part of next month before deciding whether it will be necessary to decree a non-working week per month again. They are probably well aware of the opposition which exists against this expedient amongst the mills which draw their power from public supplies. All mills are behind schedule with their orders for manufactured goods and recent experience has demonstrated that the scheme to equalise productive capacity between the coal consuming mills and those drawing their power from the public supply, has broken down. With the current stringency of goods in the market, it is considered unreasonable that mills which *can* run should be prohibited from doing so. Most probably it was in the mind of the Committee that the closure of the public power-supply mills equally with the coal consuming mills, would lighten the requirements of coal for the Power Supply Company. Some saving there probably is, but it can scarcely be proportionate to the load which is released by the stoppage of the electric power driven mills. In fact it can scarcely be economically sound for the Supply Company to carry the load of all these mills for three weeks of the month and to be relieved of it for the fourth week. If the load were staggered by the off-week being varied for different power-supply mills, so that the load were more or less constant for the Supply Company, there would be more to be said for it. Again there is the case of a number of units which produce their own power, either turbine or turbo-electric, which can show an economy equal to any of those drawing power from public supplies. Such units claim that any scheme of rationalisation based on consumption of coal per loom operating, would place them in a high priority grade for economy and that they should be entitled to benefit thereby, that their more modern and economical equipment justifies placing them at an advantage vis-a-vis their more conservative competitors. There is certainly something to be said for this argument, and as ideas of rationalisation are more likely to be pressed forward than to be abandoned, a survey of the standard of economy in the matter of coal consumption amongst the different units of the Mills Association seems to be called for. At least, if such a survey has taken place, we have heard nothing of it. It is believed also that the ratio of economy in the production of steam for process and other auxiliary purposes varies very widely from unit to unit. This point also should come under review.

It is satisfactory to hear that a fair start has been made with double shift working in some of the mills where such arrangements were made to accommodate labour displaced by requisitioning of other Mill premises. The full force displaced has not yet accepted the alternative employment, but now that a start has been made, the probability is that the absentees will gradually come to work. When it is fully realised that the alternative is "no work, no pay and no cheap food," attendances may be expected to improve.

With the intervention of holidays since our last report, there is not a great deal to be said about the markets, except that the tone generally shows a hardening tendency. Export jute has been again neglected so far as public marks are concerned though further orders appear to be coming forward from U.S.A. for Tossa grades. A resale of Dundee Daisee for shipment was reported at Rs. 69-8. Mills have shown little interest in the pucca bale market except for lower grades which are now in very short supply owing to the dearth of demand for the standard grades. Cuttings, Rejections and Habi-jabi are only the by-products of the assortment of higher grades. For Mill delivery Firsts quote nominally Rs. 76, Lightnings Rs. 69 and Hearts Rs. 62 with Dundee Daisee at Rs. 72. Exports of Baled Jute during November amounted to 1,34,000 bales bringing the total for the season July to November to 3,94,000 bales. A year ago the respective figures were 1,35,000 bales and 6,24,000 bales, while in the last pre-war season, up to November over 17 lakhs of bales had been exported.

In the loose jute market there has been a limited turnover, mainly in European packing, first at Rs. 15 and Rs. 12 for assortment, then at Rs. 12-4 for Bottoms alone and later at Rs. 15-4 and Rs. 12-4 for a low assortment of Mids and Bots, Rs. 15-8 and Rs. 12-8 has also been reported done for March shipment. Sellers generally are rather reserved and not prepared to discount prices. For Indian Jat Tossa Mids Balers have paid Rs. 16-8 and Rs. 16-12 for reliable marks. Mofussil markets are steady and the labour situation upcountry is still far from satisfactory.

The tone of the Fabrics market has been firm with sellers very scarce. Some Government orders are reported to have been placed with mills for Heavy Goods at rates well below the market, Rs. 59-8 for "B" Twills compared with the open market rate of Rs. 67-8, for Jan/May shipment. There are reported to be other orders pending and it is difficult to see where the goods are to come from, for the Bazar holdings are believed to be already oversold, and Mills well behind schedule. Nine porter hessians are now quoted at Rs. 21-4 and elevens at Rs. 28-4, while all descriptions of Heavy Goods are at, or over, ceiling prices, that is to say, they are only obtainable from Black Market, with the exception of "B" Twills which are still available at Rs. 67-4.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, Dec. 21, 1943. Total amount offered was Rs. 14,26,25,000. Tenders at Rs. 99-13-6% were accepted in full and those at Rs. 99-13-3% were allotted approximately 75%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being As. 0-11-0% per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, Jan. 4, 1944, in Bombay upto 11 a.m., (Standard Time) and upto the close of business on Monday, Jan. 3, 1944, at other centres. Successful tenderers should make payment on Thursday, Jan. 6, 1944, or on Saturday, Jan. 8, 1944, where Thursday is a holiday. Other conditions as usual.

During the week ended Dec. 17, 1943, Government of India Treasury Bills for Rs. 1,79,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

U. P. TREASURY BILLS

Tenders for Rs. 1,00,00,000 of three months' U. P. Government Treasury Bills were opened to-day. Total amount offered was Rs. 2,31,00,000. Tenders at Rs. 99-13-0% and above were accepted in full and those at Rs. 99-12-9% were allotted approximately 10%. Lower tenders were rejected. Total amount accepted was Rs. 1,00,00,000 the average rate of accepted tenders being Rs. 0-11-5% p.a.

Indian Finance

Investor's Supplement

Stock Markets to-day and to-morrow:

A. C. C. ACCOUNTS

THE Calcutta Stock Exchange remained closed during the past week and will not reopen for business before January 3, 1944. As was pointed out last week, the close for the year was quite steady and the fear of air raids did not have any effect on market values. The Bombay Stock Exchange also has been quite steady during the past week. With the satisfactory solution to the problems of the cotton textile industry, the immediate outlook is considered satisfactory. The New Year will thus open under very happy circumstances. It may well prove to be difficult to keep up the even tenor of markets in 1943. With the confident prediction of victory for the Allies in the war against Germany in 1944, there might perhaps be some difficulty in estimating the prospects for Indian industries and consequently of stock markets. But, as we have been pointing out before, with the intensification of operations in the war against Japan, there will not be any slackening in the war effort in this country and Indian industries will continue to be busy. It will be very interesting, therefore, to watch the developments of markets in the next twelve months.

* * * *

As for the past year, satisfactory conditions were noticed in regard to trading on the floor of the stock exchanges. This will be evident from the course of prices as reflected in the "Indian Finance" daily index of stocks and shares. Closing quotations for the year are substantially higher than those at the beginning of 1943, the All-Shares Index alone showing a rise on balance by nearly thirty points at 157.19 on December 8, 1943. Important among the rise in prices for particular groups are the Coal, Cotton and Sugar sections, the boom in coal shares coming after sugar and cotton. It should be said that the closing prices for cotton shares are below the highest levels for the year. The index for coal shares on December 8, 1943 was 180.26 against 132.03 on January 4, 1943; that for cotton (Calcutta) 333.44 against 176.18 and sugar 142.86 against 115.72. Jute shares are, in spite of the uncertain outlook, higher on balance. Engineering shares are firmer as also Tea and Paper shares. The giltedged market also was very firm thanks to the policy adopted by the Reserve Bank in regard to the sale of counterparts in the latter half of the year.

* * * *

Two important balance sheets have been published during the week. Both of them make very good showing in spite of the difficult conditions experienced by the two companies in the accounting periods.

The results of the *Associated Cement Companies, Limited* for the year ended July, 1943 would have made much better showing but for the sharp increase in production costs with the high prices for mill stores, coal, transport difficulties and the increase in salaries, wages and dearness allowances. The increase in production costs was to a certain extent compensated by the higher prices for cement. But for the difficulties in regard to transport, the total volume of sales might perhaps have been appreciably higher. The net profit, before providing for taxation and depreciation, for the year is Rs. 1,49,14,405 against Rs. 1,54,20,667 for the previous year. The total value of sales was actually higher at Rs. 4.37 crores against Rs. 4.1 crores. Against the increase in total sales of Rs. 16 lakhs, operational expenses were higher by Rs. 22 lakhs at Rs. 2.06 crores. The expenditure on repairs and maintenance was more than Rs. 2 lakhs higher at Rs. 13.54 lakhs, while the premium on war risk insurance had to be paid for the whole year, thus accounting for a rise in expenditure of nearly Rs. 6 lakhs. Apart from the increase in working expenses, the charge on account of taxation is very much higher, being Rs. 47.23 lakhs against Rs. 37.45 lakhs. The dividend of Rs. 7 per share could be paid only after the allocation of a smaller sum to the reserve fund, Rs. 7 lakhs (Rs. 10 lakhs). No amount has been placed to the Investment Depreciation Reserve against Rs. 2,86,879 on the former occasion. The amount written off expenditure in the purchase of rights, buildings, machinery, rolling stock, etc., was Rs. 2,42,782 against Rs. 50,064. Prospecting expenses written off was Rs. 1,68,423 (Rs. 2,23,450) and the expenditure on new works written off Rs. 78,864 (Rs. 1 lakh). The amount carried forward is Rs. 1,38,159 against Rs. 2,52,656 brought in.

The amount of dividend received on the company's holdings in the Patalia Cement Co., Ltd., was lower at 6 per cent per annum against 8 per cent per annum.

The factories were maintained in a high state of efficiency, and the workshops turned out to an increasing extent, equipment and articles which previously had to be imported.

The policy of improving and extending the works was continued during the year in spite of difficulties due to war conditions. In particular, notable improvements were carried out at the various workshops with a view to enable them to handle the manufacture not only of spares, but also of new machinery for extensions of plants.

At Rs. 223 cum-dividend, the shares would appear a little over-valued. Given the continuance of the present conditions and an improvement in transport facilities it can be expected that the accounts for the current year would make better showing.

* * * *

Titaghur Paper Mills Company, Limited has been able to report a higher level of earnings for the half-year ended September, 1943 in spite of the difficult conditions in regard to working. There was a further rise in prices for raw materials and considerable difficulty was experienced about coal supplies. With the rationing of coal supplies to the mills, it was found necessary to close down a paper-making machine at each mill and this resulted in a serious drop in the outturn of paper. Apart from the difficulty in coal supplies, it is feared that scarcity of raw materials would interfere with the rate of production.

The net profit, before providing for taxation and depreciation, for the half-year, is Rs. 75,20,680 against Rs. 73,18,958 for the previous six months. The provision in respect of taxation is not very much higher at Rs. 53.3 lakhs (Rs. 52.7 lakhs), while the amount set aside for depreciation is Rs. 3,52,395 (Rs. 3,63,071). The sum of Rs. 38,485 (Rs. 61,671) has been written off motor cars and lorries. The debenture redemption reserve receives the usual allocation of Rs. 2.5 lakhs, while other funds get Rs. 1.1 lakhs (same).

In order to provide the compulsory deposit under E.P.T. a sum of Rs. 12,03,951 has been placed to deferred mill renovations against Rs. 5,48,555 on the previous occasion. After these transfers the dividend on the 'A' and 'B' ordinary shares has been maintained at eight annas per share. The amount carried forward is Rs. 2,52,529 against Rs. 1,97,254 brought in. The sum of Rs. 4.5 lakhs being excess provision for taxation requirements in the earlier accounts has been transferred to the profit and loss account. A liberal provision for deferred mill renovations was thus possible. No credit has been taken in the accounts for amounts which will be repayable by Government from E.P.T. on account of the optional deposit made in 1942 or in respect of compulsory deposits to be made. This will provide a substantial secret reserve.

With the approval of the Government of India, further steps are being taken to improve the efficiency and scope of the Paper Control and Distribution Association because, as anticipated, it has been found that the quota of 30 per cent. of the total production of paper made in this country is inadequate for the civil demand. It is not yet clear whether or not the 30 per cent. quota will be maintained during the period of short production, which must ensue as a result of the reduction in the coal quota, but representations have already been submitted to Government with a view to securing a larger proportion of the total production of paper to meet the needs of war industries, education, the printing and publishing industry, and commerce and trade generally.

* * * *

The weekly statement of cumulative results according to groups, published every week in the "Investors Supplement" shows that 237 companies reporting in the year 1943 earned a substantially higher level of profits, being Rs. 31.57 crores against Rs. 27.17 crores for the same number of companies in 1942 and Rs. 19.75 crores in 1941. It would appear that the point of satiety has been reached in regard to production and that with the increase in working expenses the margin of profit has narrowed. This is the reason why the improvement in earnings, published in 1943, over 1942 is less pronounced than that for 1942 over 1941. Naturally, the greater portion of the increase in earnings has been absorbed by a larger provision for taxation, the aggregate sum in this respect in 1943 being Rs. 16.39 crores against Rs. 12.79 crores and Rs. 7.09 crores in 1941. Allocations to reserve and depreciation are only Rs. 42 lakhs higher at Rs. 7.09 crores. Shareholders have been able to derive some advantage out of the higher level of earnings through larger dividends, the total amount distributed being Rs. 7.76 crores against Rs. 7.19 crores. Undisposed profits were further higher at Rs. 1.99 crores against Rs. 1.55 crores. Almost the whole of the increase in profits has been due to the cotton textile industry though, it should be said, that sugar companies also have experienced a fairly satisfactory season in 1942-43. But for the decline in the profits by engineering companies, due to difficulties in regard to imported supplies and increase in working costs, the improvement in aggregate earnings would perhaps been more pronounced. Tea companies have continued to do well while jute companies, in spite of the uncertain conditions in 1943, maintained profits at a fairly high level.

* * * *

The Chandpur Electric Supply Company, Limited is issuing fresh capital for Rs. 1 5 lakhs. 15,000 new ordinary shares of Rs. 10 each are offered at par to existing shareholders in the proportion of one share for every share held. The additional capital is required for the repayment of the loan of Rs. 80,000 carrying interest at 7 per cent. It is also proposed to replace machinery taken over by government for war purposes. The dividend for the current year is expected to be higher at 6 per cent. The saving in interest charges alone will enable the payment of a higher dividend.

Existing shareholders may apply for shares in excess of their quota. Such applications will be considered after alloting the regular quota.

Those who are not at present shareholders may also apply for the present issue. The issue price in their case is Rs. 11 per share, Rs. 6 being payable on application and Rs. 5 on allotment.

The share of a public utility company affording a return of 6 per cent. tax-free is a good investment proposition indeed.

WATCH-DOG.

Opium Policy and Drug Industry.

India as the major producer of opium is not bound by any International Conventions to disallow the private manufacture of alkaloids. The existing supply is scanty but private manufacturers are at a disadvantage since a powerful rival to established manufacturers has emerged in the Government Medical Store Depots. The Indian drugs and pharmaceutical manufacturer, now exposed to price control and also the operation of scheduled prices for imports, may well reiterate the former demand that the manufacturing activity of the Depots should cease to be confidential. A great deal more than a desire for information is involved, for it has been made known that Government's monopoly of opium has been attended with disadvantages to the Indian manufacturer. The Ghazipur factory is invested with a monopoly. Its value appears dubious in the light of correspondence as to the supply of codene and morphine base for the company. The company had the State excise department's permit, but the main result of prolonged and occasionally bitter correspondence, was the receipt of five lbs. of one drug in place of the other wanted. It may be that the mills of government grind slow, but the late assurance as to expansion of alkaloid supplies next year may offer little comfort to Indian manufacturers.

Essential drugs derived from India are in short supply. The Central Board of Revenue is interposed as an obstacle in the correspondence relating to permits, supplies and prices between the Company and the Ghazipur factory. The steady decline in India's exports of opium reflects the decline in cultivation But the war calls for larger supplies of alkaloids and the demands of Indian manufacturers have naturally increased. In connection with codeine for which the Baroda Company requested there was a difference as to the quantity desired even after the decision to make available supplies to private manufacturers. The whole correspondence stretching over two years suggests that, if opium policy since 1911 has been correct, the appropriateness of a monopoly which denies the Indian manufacturer the essential supplies must be questioned; for, the Baroda firm had the support of the excise permits, etc., but did not get what it sought.

Production under supervision by approved manufacturers has been suggested without avail. but the fact that Australia has allowed private manufacture of alkaloid deserves notice. India's main advantage as an exporter passed after other countries took to poppy-growing. but the other advantages she may possess have been neutralised by excise administration. The conflict between taxation and industry is again apparent to the dismay of those who have in the past argued that the lack of uniformity made it almost impossible for Indian manufacturers to use ardent spirits in medicines. The inference that may be drawn is that Medical Stores were successful competitors for opium alkaloids whereas the independent manufacturer had to take his chance after waiting. But the other question as to letting manufacturers produce alkaloids under supervision assumes greater importance in view of the demand for restraint of what has been deemed unfair competition by Medical Stores Depots.

ATAL TEA COMPANY (1943) LTD.

NOTICE.

NOTICE is hereby given that an Interim Dividend of 5% for Season 1943 has been declared payable on or after the 20th January, 1944.

Warrants will be issued to Registered Shareholders whose names are in the Register on the 10th January, 1943, or in accordance with the instructions received from them.

The Share Register of the Company will be closed from 11th January 1944 to 20th January 1944, both days inclusive.

By Order of the Board,
GOENKA & COMPANY,
Managing Agents.

Kurseong,
23rd December, 1943.

HUMAYAN PROPERTIES, LIMITED.

NOTICE

NOTICE is hereby given that the Fifteenth Ordinary General Meeting of Humayan Properties Limited will be held at the New Empire Theatre, Calcutta, on Tuesday, 18th January, 1944, at 11 a.m., for the following purposes:—

(1) To receive the Directors's Report.
(2) To pass the Audited Accounts.
(3) To elect Directors under Article No. 118 in place of Mr. S. A. Basil and Mr. G. M. Gregory, who retire by rotation. (Mr. Basil and Mr. Gregory, being eligible, offer themselves for re-election.)
(4) To appoint Auditors.

By Order of the Board,
LOVELOCK & LEWES,
Secretaries.

1, Humayan Place,
Calcutta,
24th December, 1943.

(Annual General Meeting on 30th December, 1943 at 3-30 P.M. at Bombay).

Audited Accounts for the year ended 31st March, 1943:—

During the year under report, the profit earned by the Company amounts to Rs. 93,32,269-4-2 including the sum of Rs. 2,26,930-13-9 (the balance of Profit brought over from the last year's account viz., Rs. 15,88,987-8-9 less taxation paid upto 31st March, 1942 Rs. 13,62,056-11-0). Deducting therefrom, the sum of Rs. 2,10,000 for Sinking Fund at 3 per cent on the Debentures of Rs. 70,00,000 the balance left is Rs. 91,22,269-4-2.

2. From the sum of Rs. 91,22,269-4-2 the Directors have made provisions as under:—

	Rs.	A.	P.
Depreciation on Buildings	3,40,000	0	0
,, ,, Plant & Machinery including ,, Dyeing, Bleaching & Sprinklers	6,20,000	0	0
,, ,, Dead Stock	10,000	0	0
,, ,, Sholapur City Electrification Scheme	30,000	0	0
	10,00,000	0	0
Provision for taxation for 1942-43 ..	70,00,000	0	0
Total ..	80,00,000	0	0
Leaving a balance of Rs. 11,22,269-4-2 From this, the Directors recommend Dividend for 12 months ended 31st March 1943 at Rs. 400 per whole share & Rs. 200 per half share free of Income-tax ..	6,40,000	0	0
Balance to be carried forward	4,82,269	4	2
Total ..	11,22,269	4	2

The Directors are glad to mention that the Debentureholders of the Company at the adjourned meeting held on 3rd December, 1943, have agreed for the payment of dividend on the shares of the Company out of the profits for the year ended 31st March 1943, at the rate not exceeding 40 per cent.

The Directors are glad to report that the Appeal filed in the Privy Council by Messrs. Murarjee Goculdas & Co., the late Managing Agents of the Company, for damages of Rs. 50 Lacs has been dismissed in favour of the Company.

Chairman.—Mr. Vithaldas D. Govindjee.

Authorised, Issued and Subscribed Capital—Rs. 16,00,000 *in* 1590 *shares of Rs.* 1,000 *each and* 20 *half shares of Rs.* 500 *each, both fully paid up.*
