CALCUTTA JUTE MANUFACTURING COMPANY, LIMITED.

Notice is hereby given that an Extraordinary General Meeting of the above Company will be held at the Registered Office of the Company, at No. 3, Tarachand Dutt Street, Calcutta, on Monday, the 12th April, 1943, at 3 p.m., for the purpose of considering and if thought fit passing with or without amendment the following resolutions the first two being proposed additional articles in the existing Articles of Association of the Company.

42-A

New Article. (Special Resolution.)

The Company in general meeting may resolve that any moneys, investments, or other assets forming part of the undivided profits (including profits arising from realisation or appreciation in value of capital assets for the time being of the Company) standing to the credit of the Reserve Fund (of the Company) or any other fund of the Company or otherwise in the hands of the Company and available for dividend, or representing premiums received on the issue of shares and standing to the credit of the share-premium account be capitalised—

(a) By distribution among the members or any class of them or any of them on the footing that they become entitled thereto as capital in accordance with their respective rights and interests and in proportion to the amounts paid or credited as paid thereon.

(b) By crediting shares of the Company which may have been issued and are not fully paid up in proportion to the amount paid or credited as paid thereon respectively with the whole or any part of the sums remaining unpaid thereon.

Such capitalisation by distribution or payment as aforesaid shall not, however, be made unless recommended by the Directors and if so recommended, such distribution and payment shall be accepted by the shareholders in full satisfaction of their interest in the said capital.

42-B

New Article. (Special Resolution.)

"If owing to inequality in the number of new shares to be issued and the number of shares held by members entitled to have the offer of such new shares, any difficulty shall arise in the apportionment of such new shares or any of them amongst the members, such difficulties shall in the absence of any direction in the resolution creating the shares or by the Company in general meeting be determined by the Directors."

Ordinary Resolution.

That the authorised capital of the Company be increased to Rs. 15,00,000 by the creation of new additional shares of Rs. 5,00,000 which shall rank for dividend and in all other respects pari passu with the existing shares of the Company.

Ordinary Resolution.

Whereas it is desirable to capitalise a sum of Rs. 1,00,000 being part of the undivided profits of the Company standing to the credit of its Reserve Fund, it is resolved that the said sum of Rs. 1,00,000 be capitalised and distributed among the members on the footing that they become entitled thereto as capital in pursuance of Article 42-A of the Articles of Association of the Company and that the said capital sum be applied on behalf of the persons entitled thereto on the 12th day of April, 1943, be registered holders of the existing 40,000 ordinary shares of Rs. 10 each of the Company in payment in full for 10,000 Additional Ordinary shares of Rs. 10 each, the allotment of such 10,000 Additional Ordinary shares credited as fully paid to be made on the basis that each member receive one of such 10,000 Additional Ordinary shares for four of the said 40,000 issued Ordinary shares held by him and registered in the books of the Company on the 12th day of April 1943 and further, such Additional Ordinary shares to be in lieu of any dividend that might otherwise be declared by the Company or its directors on the share-capital of the Company for the year ending 31st day of December, 1942. The Additional shares so distributed will be treated as bonus shares and shall rank for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder.

That pursuant to the above resolution and in satisfaction of the said capitalised sum the Directors be and they are hereby directed to allot and distribute 10,000 Additional (bonus) shares credited as fully paid among the persons who were on the 12th day of April, 1943, holders of the issued Ordinary shares of the Company in proportion as set out in the above resolution to the issued Ordinary shares held by them respectively, with full powers to the Directors to make such provision by the issue of fractional certificates or otherwise as they think expedient in case of fractions.

By Order of the Board,
Dayaram & Sons,
Managing Agents.

3, Tarachand Dutt Street,
Calcutta, the 12th March, 1943.

THE MODERN MILLS, LIMITED

NOTICE IS HEREBY GIVEN that the NINTH ORDINARY GENERAL MEETING of the shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Monday, the 19th April, 1943 at 1 p.m. (S. T.). (1) To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1942. (2) To declare a dividend and bonus. (3) To re-elect Mr. Maneklal Premchand, who retires under Article 103 of the Articles of Association, as a Director of the Company. TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of 3 months' Government of India Treasury Bills were opened on Tuesday, March 23, 1943. Total amount offered was Rs. 11,04,00,000 (Rupees eleven crores and four lacs) Tenders of Rs. 99-11-9% and above were accepted in full and those at Rs. 99-11-6 were allotted approximately 71%. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 1-1-10 (Rupee one anna one and pies ten %) per annum.

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of three months' Government of India Treasury Bills will be received on Tuesday, March 30, 1943, in Bombay up to 11 a.m. (S. T.) and up to the close of business on Monday, March 29, 1943, at other centres. Successful tenderers should make payment on Friday April 2, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from March 24 to March 29, 1943 at Rs. 99-12-0% subject to the conditions previously announced (*viz.* sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from March 17 to March 22, 1943, amounted to Rs. 75,25,000 (Rupees seventy-five lacs and twenty-five thousand).

During the week ended March 19, 1943. Government of India Treasury Bills for Rs. 3,33,50,000 (Rupees three crores thirty-three lacs and fifty thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

THE Prime Minister's broadcast has certainly restored tone to all London markets without giving undue cause for optimism elsewhere. The steady rise in gold shares is presumably governed by South African buying, impelled by a belief in the future of gold. Exchange and discount rates remain unaltered, and there is so far no question of unsettlement of rates by agreement until the war ends. The City correspondents' views on inter-Allied plans have been duly published without causing any excitement except among holders of gold shares. The irregular movement in oil shares is more than offset by a firmer tendency in giltedged and industrials. The reduced support for Home Rails is of less significance than the striking advance in E.M.I. shares. The 10 sh. shares rose to 24 sh. 3d. this week and it is quite likely that New York, described as opening firm on most days, has again manifested interest in the radio-gramophone industry. The British film industry is not the only one that has captured the attention of U. S. investors. The inactive conditions in the foreign bond market may be an effect of mixed war news, rather than profit-taking after a temporary rise. The renewed support to rayon shares has raised the quotation for British Celanese to the vicinity of par while Courtaulds has turned firmer. Since the success of the campaign that brought the equivalent of Rs. 195 crores to the Treasury there has been no outstanding development in the money market. The regular weekly borrowing goes on as before, and the changes in tea and rubber shares cause little concern to banks. The big banks last year were ready supporters of Government's loans, and any change in terms that may follow the Budget next month will favour the Treasury rather than the investor. Giltedged industrials like Imperial Chemicals and Imperial Tobacco should, therefore, be maintained at present levels.

From the U.S.A. comes the curt report that the Senate has disagreed with the President on the question of a maximum salary of $25,000. The disagreement cannot have consequences except for individuals permitted to enjoy larger incomes in the war period. Congressional attitude to Labour is of more importance and the plan to outlaw strikes may force Mr. Lewis, re-elected President of the United Mineworkers Union, to show his hand. The plans for manpower taking off 3.2 millions for new jobs, war production etc., are of little interest as compared with a plan to render the Unions harmless and labour news rather than proposals for spending or saving should be important for some time because half a million men may soon go idle on Mr. Lewis' orders. It is again a question of wages. The rise in war expenditure in the U.S.A. is directly related to an increase in war production under both aircraft and munitions in the three months ending February. Winter definitely did not cause any slackening either in the shipbuilding or aircraft industry and an estimated expenditure of $1,000 million a month going by the estimate of £253 millions on war equipment alone shows how production outstrips estimates. If the price of silver is not fixed on some days at 44¾ cents an ounce, it means nothing in terms of war production. An increase in wages ordered in Britain with engineering trades, may give one and a quarter million workers a chance to increase their savings. As in Australia, there are Street savings groups in Britain and the Prime Minister's promise of many freedoms, more of social insurance, but limited liability for the State, is meant more for the working class, and included also a guarantee against post-war inflations. Peace aims have been defined duly after war aims, and the U.S.A. is expected to take note of the strong stand for democracy without any suspicion of socialism.

During the past week, the only sensation has been the Government's acquisition of the shares of Short Bros. (Rochester). The company became a public one only in 1937 and the reported decision of Sir S. Cripps to buy up the Company has not been explained. How the Company will work directly under the M.A.P. has not been indicated, but the capital cannot be large and the decision may be due to disputes among the Directors. This rather than the rise in Blackburn Aircraft shares will put investors off their feed, for the decision may be applied to all companies making military aircraft, and the reactionary tendency in Internationals will spread to aircraft shares also. The smaller companies had a bad spell after formation, and many investors had occasion to regret in 1936-37 their choice of aircraft shares in a rising market. The late recovery has not affected the general estimate that aircraft shares are not particularly safe or lucrative whatever be the investment status of Fairey Aviation or Bristol Aeroplane shares.

The acquisition of one company may lead to a demand for nationalisation of the whole industry. In the case of a holding company like Vickers Limited, there will be naturally some difficulty and unscrambling of companies consolidated like Hawker in recent years should present problems. Probably, the industry will remain as it was in spite of the Government buying up Short Bros. as a going concern. It is clear that liquidation is not the object in view but more efficient operation of the enterprise.

The announcement that General Tojo has selected an advisory council of seven big businessmen to reinforce the military leaders is likely to cause some surprise, but is proof of an alliance that is bent on exploitation. Names are not known, but the Mitsui and Mitsubishi chiefs are sure to find a place on account of the plan to step up war production. The visit of Tojo to Nanking showed that exploitation of North China is part of a set policy. The Japanese reckon clearly on using the exports of rice and rubber, coal and tin from Indo-China in addition to what may be had from the N.E.I. The position of France has been taken by Japan in regard to Indo-China and Thailand, with this difference to-day that the British are out of Malaya. No wonder the Japs are able to start banks and introduce the military yen in all the territories. The new banks started last year are independent agencies for exploitation and the results obtained so far encourage the Japanese to go ahead. The alliance with big business destroys the hope of liberalism reviving in the Prussia of the East. Japan is now set on the task of taking out quickly as much as possible. Shipbuilding will be one of the main tasks and the lavish use of timber may make good the losses in a year of warfare. There is also the possibility that Tojo has compromised with capitalists and destroyed the national socialism rampant among young officers. The restoration of the partnership between Big Business and the Fighting Services renders it unnecessary to ask if the Diet or any other institution will assert itself against the clique that declared war on the democracies. Japan is not going to change her policy after getting hold of Burma and the Dutch East Indies. The expropriation of the Chinese inhabitants in Thailand and Malaya in a year of occupation, should have given the Japanese many advantages besides depriving the Allies of essential materials. The large exports of the U.S.A. in the past gave Japan the power to wage war continuously since 1937. Though restoration of the colonial empires of the past is out of the question, the losses of foreign interests may be made good in part by a new type of international investment trust. That banks and insurance agencies will get back to work quickly is not doubted any more than that tin mines would resume working. Their opportunities will be limited only by the slow revival of foreign trade. Present diversion can only increase Japan's difficulties as also of the reconquered territories, a inter-Allied agreements which envisage multi-lateral clearing arrangements perhaps do not contemplate the resumption of trade in old proportions. Amsterdam cannot depend on the colonial trade to add to its income in the future, apart from the colonies, claiming a new deal.

Indian Banking Journal

The Anniversary number of the INDIAN BANKING JOURNAL contains a number of interesting articles regarding banking development in 1942, the various problems affecting currency, price inflation, etc. The complete discussion of topical questions should be very helpful to the general public. The INDIAN BANKING JOURNAL is the only one of its kind in India and its Editor, Mr. K. Bonnerjee is to be congratulated on his enterprise.

(A copy of this prospectus has been duly filed with the Registrar of Joint Stock Companies, Bengal, as required under Indian Companies Act.)

The Subscription List will open on 5th April 1943, and will close on 19th April 1943, or earlier at the discretion of the Directors.

NATH BANK LIMITED

(Incorporated In British India under the Indian Companies Act, 1913)

Authorised Capital - - - Rs. 25,00,000 **Subscribed Capital - - - Rs. 16,00,800**

Divided into 1,00,000 shares of Rs. 25 each. **In shares of 64,032.**

Paid-up Capital as on 11th March, 1943 (Including calls in advance) - - - Rs. 12,72,244 14 6

PRESENT OFFER

Of the 1,00,000 shares being the authorised capital of the Bank, 65,000 and odd shares have been subscribed upto 11th March. The present offer is 28,000 shares, which are being offered to the public at Rs. 30, of which Rs. 25 is the nominal value of the share and Rs. 5 is the premium. An admission fee of Re. 1 is payable with each application for shares.

Payment in respect of each share will be as follows:—

Rs. 8-2-0 on application.
„ 3-2-0 within sixty days from the date of notice of allotment.
„ 3-2-0 on first call; Rs. 3-2 on second call; Rs. 3-2 on third call; Rs. 3-2 on fourth call; Rs. 3-2 on fifth call; and Rs. 3-2 on the last call—provided the interval between such calls shall not be less than thirty days.

PROSPECTS

The present offer of capital is made so as to secure a better proportion of paid-up capital and reserves to the Bank's rapidly increasing deposits.

In the year ended December 31, 1942, the deposits of the Bank expanded by over Rs. 60 lakhs; and, despite considerable reduction in the interest rates offered on deposits, the upward trend continues to be strongly manifest. In relation to the greater liabilities thus incurred and in relation to the larger and more diversified business which such increased resources make possible, the Directors have decided that it is necessary to offer the balance of unsubscribed shares to the public.

Till recently, the shares were being sold at a premium of Rs. 2-8-0. In respect of the present offer, the premium has been fixed at Rs. 5 on and from the 29th March, 1943.

With reference to the 8 per cent dividend payable for 1942, as recommended by the Directors, the yield on the shares on the basis of Rs. 30 for a share of Rs. 25 works out to 6 2/3 per cent, which must be considered satisfactory in the light of the present low interest rates. This war has been correctly described as a three per cent war, as, for the first time in world history, the Government have been able to raise defence loans on a three per cent basis. This has naturally caused corresponding lowering in the whole structure of interest rates. In such circumstances, a yield of 6 2/3 per cent on the shares of a bank with Nath Bank's standing and present and prospective position should be greatly prized by investors.

The Bank has althrough scrupulously adhered to the soundest canons of banking. Firstly, it has consistently refused to coax deposits except at reasonable and economic rates. Despite an increase of over 40 per cent in deposits during 1942, the interest paid by the Bank to depositors was Rs. 3,01,566-5-8 in 1942 as compared with Rs. 3,09,290-9-2 in 1941.

Secondly, the constant aim of the Bank has been to maintain the highest liquidity possible. Against deposit liabilities of Rs. 2.06 crores as on December 31, 1942, the Bank held cash for Rs. 58.21 lakhs and giltedged securities for Rs. 66.57 lakhs. Thus, the liquid position of the Bank was over 60 per cent; and, in this regard, the Bank compares favourably with old-established banks.

Thirdly, the Bank pursues a careful and watchful investment policy. Of the advances made by the Bank, over 85 per cent is fully secured.

Fourthly, the Directors are alert all the time to make sure that the progress of the Bank is healthy, well-balanced and on scientific lines. Below is given the Bank's chart of progress during the past seven years:—

Year.	Deposits etc.	Capital and Reserve Fund.	Cash and Bank Balances, Govt. securities etc.	Dividend (subject to income-tax)
1936 ..	29,23,225	2,65,281	22,71,375	7½%
1937 ..	50,19,223	5,71,534	27,60,153	7½%
1938 ..	1,03,89,519	7,86,745	39,68,442	7½%
1939 ..	1,17,68,339	9,35,528	45,83,560	7½%
1940 ..	1,34,94,261	10,52,946	64,23,621	7½%
1941 ..	1,43,04,328	12,17,407	67,77,204	6¼%
1942 ..	2,06,21,445	13,50,765	1,29,39,432	8% (recommended)

From the beginning, the Bank has been paying dividend on the shares; and it has attained its present position without recourse to amalgamation or other short-cuts. It has a shrewdly laid-out network of branches extending over Bengal, Bihar, Assam, United Provinces and Delhi. Besides the Head Office, there are 26 branches in all; and these have been greatly helpful in enabling the Bank to get its share of the vastly expanding bank deposits and the steadily rising bank profits. In the last twelve months, banks belonging to the Reserve Bank's schedule increased their deposits by nearly Rs. 250 crores; and 1942 bank profits make good showing. The prospects ahead for banks are distinctly favourable; and Nath Bank has the necessary organisation and status to participate in such bright prospects.

Nath Bank is a member of the Calcutta Clearing Banks' Association as also of the Clearing at Delhi, Lucknow and Cawnpore. It was the first among Bengalee Banks to be represented on the Executive Committee of the Clearing Banks' Association in Calcutta.

Commission for selling shares will not exceed 5% on the face value of the shares. The minimum subscription on which shares were first allotted was 500 shares of Rs. 12,500.

12,258 shares were offered and allotted within the preceding two years upto 11th March, 1943 and Rs. 2,44,784-6-0 was paid in respect of these shares and Rs. 9,789-9-0 was paid as commission during that period.

No fully or partly paid-up shares or debentures were issued or agreed to be issued for consideration otherwise than in cash. Nothing has been or will be paid to any promoters.

Below is given the report of the Bank's auditors as required by the Companies Act.

S. C. DUTT, B.A., B.Com. (Bom.), G.D.A.,
Registered Accountant.

REPORT OF THE AUDITOR OF THE NATH BANK LIMITED

as required under Section 93(IA) and 93(IB).

Profit and Loss Account of NATH BANK LTD. for the three years ending 31st December, 1940, 31st December, 1941 and 31st December, 1942.

Total ..	7,18,440 15 0	7,62,962 4 0	8,62,611 1 5

Pursuant to Sec. 93(IA) I beg to report the net profits of the Bank for the years ending 31st December, 1940, 31st December, 1941 and 31st December, 1942 were Rs. 88,082-6-2, Rs. 63,827-1-3 and Rs. 1,15,301-13-9 respectively including all charges and after providing depreciation and writing off Bad-debts but before providing for Income-tax, Dividend at the rate of 7½% subject to Income-tax on paid-up capital on ordinary shares (there is only one class of shares) was declared for 1940 and 1941 and the said Dividend was paid out of divisible profit. The accounts have been made up to a date within three months of the date of the Prospectus. I further certify that in accordance with Section 93(IB) of the Indian Companies Act that the above is the trading results of the Company for the three years ending 31st December, 1940, 31st December, 1941 and 31st December, 1942.

(Sd.) S. C. DUTT,
B.A., B.Com. (Bom.), G.D.A., R.A.,
REGISTERED ACCOUNTANT.

Dated the 10th March, 1943.
98-4, Clive Street,
Calcutta.

The Company entered into an agreement with the Managing Director on the 4th March, 1938 in terms of Art. 60 of the Articles of Association and the copy of the same may be inspected at the Head Office during business hours with 3 days' previous notice.

The following restrictions have been imposed on members in respect of meetings and transfer of shares:—

Where any call or other sum shall be due and payable to the Company in respect of any of the shares of a member he shall not be entitled to be present or to vote at any general meeting either personally or by proxy or by attorney or as a proxy or attorney for any other member or be reckoned in a quorum (Vide Art. 56).

The right of a member to transfer shares is subject to first and paramount lien of the Company in respect of his debts, liabilities and engagements solely or jointly with any other person to or with the Company and which lien further extends to dividend due and accruing on the shares so subjected (Vide Arts. 24, 29 and 108(d) of the Articles of Association).

On a show of hands every member present in person shall have one vote and at a poll every member present in person or by proxy or attorney shall have one vote for every share held by him up to 10 shares and one vote for every five shares above 10 shares.

The qualification of every Director shall be his holding not less than 200 shares in his own name.

The Directors shall have power from time to time and at any time co-opt not more than 2 members as Directors in addition to their number as provided in Art. 60. In case of such co-option Art. 62 will not apply.

The fees of a Director for attending a Meeting are fixed at Rs. 16, for each sitting.

APPLICATION FOR SHARES

Application for shares should be made on the form accompanying this prospectus or which may be obtained at the Registered Office of the Bank or its branches or from the Bank's Bankers or their branches and sent to the Bank or its Bankers together with a remittance of the amount payable on application. Where no allotments are made, the deposit will be returned in full; where the number of shares allotted is less than the number of shares applied for, the balance of the deposit after providing for payment in full on the shares allotted will be returned.

BROKERAGE

The Directors have decided to pay a brokerage of two and a half per cent of the nominal value of each share on allotment made in respect of applications bearing the stamp of any recognised firm of brokers.

DOCUMENTS

Copies of the Memorandum and Articles of Association of the Company and the agreement referred to above can be inspected at the Registered Office of the Bank.

Copies of the Prospectus and forms of application for shares may be obtained from the Registered Office of the Bank or its branches or from the Bank's Bankers or their branches.

Jute Trade Prospects

In any review of the recent progress of the jute industry, one of the first impressions must be the astonishing vitality and resilience of the industry in the face of adverse circumstances, and the justification of the industry's abounding faith in itself as an essential factor in world economy, even in a world economy rationalised to war conditions. One by one, it has seen important markets completely cut off, and communications with others severely restricted owing to shortage of shipping, until not so many months ago, it was told by high authority that the time had come for the industry to rationalise itself to conform to a maximum world absorption of some 55,000 tons of jute goods per month. But the jute trade is not so easily suppressed. It not only protested in the strongest terms, against such a direction, but has also proved to the hilt the correctness of its views by continuing to produce, and disposing of and actually despatching to consumers, an average of nearly 1,00,000 tons of goods per month. His Majesty's Government were recently constrained to admit that their 'minimum' requirements of jute goods from India ran to well over 60,000 tons per month, quite apart from what the rest of the world needed, and those markets, which are still open, Australia, North and South Africa and North and South America, continue to demonstrate their dependence on India for at least a large proportion of the containers they need. For, while under the stress of war conditions, the jute industry in India has turned to the production of numerous fabrics and articles which they would never previously have troubled to look at, and succeeded in producing them satisfactorily too, it can still be said with certainty that the basis of the industry is, and will continue to be, the production of bags and more bags, and of cloth for making bags. Some of the articles made as experiments during the war may well be continued after the war as a useful side-line, but it should never be forgotten that jute established its supremacy as the world's cheapest wrapping material, and it is still on that basis, that its future prosperity will most certainly have to be maintained.

In this connection it is perhaps opportune to sound a note of warning. The jute industry has in the past been prone to look on its products as a virtual monopoly to India, but it has whenever occasion arose discovered to its (usually temporary only), embarrassment that its monopoly is conditioned by price to an even greater extent than monopolies theoretically are. That is to say, as long as jute fabrics are reasonably cheap and competitive with other similar fabrics in world markets, these markets will absorb all the jute goods India can produce. But there are limits beyond which the world is not prepared to pay for jute goods. It is not possible to lay down arbitrary figures as to what these limits are. They not only depend on the prices of competitive fabrics or materials, but these also have to be at a reasonable relation to the cost of what they are to serve as containers. At the present time prices of jute and jute goods are high, perhaps not too high considering the inevitable inflationary tendencies which war invariably brings in its train. But price is a factor which requires to be watched. It is one thing to urge that in a certain set of conditions, there is scope for increase in price. It is quite another to assume that prices can be forced up without limit. The political importance of all measures for the benefit of jute-growers increases this danger. It is necessary therefore to utter a warning against the facile assumption that wider margins of profit can always be secured, whether by natural forces during a boom or by manipulation of the crop during times of slack demand. At current levels, jute is probably one of the most profitable cash crops we have. State policy in regard to such a commodity must beware of the danger of playing fast and loose with the foreign markets and yielding advantages to its competitors which would otherwise have no hope of making headway against jute.

In fact, it has often been urged that a necessary corollary to any system of crop regulation is a parallel system of price regulation. The primary object of the regulation of the jute crop was to prevent the price falling below an economic level. But it must be recognised that when attempts are made to regulate prices, there should be clear idea of the range within which they can be allowed to move. Normally, prices vary with world trade conditions and with the prices of competitive fibres and fabrics. The statistical department of the Indian Central Jute Committee has carried out various investigations into the price movements of jute, but it is not known if in these enquiries an attempt has been made to correlate these price movements with those of competitive fibres and fabrics and to find their bearing on the world demand for jute and jute goods. Such a line of enquiry might provide valuable data which could be profitably used as a guide for any policy of jute crop regulation; for it seems like that policy is to become a regular feature of Provincial administration. It must be based on some less fallible principle than that of opportunism or cupidity on behalf of the cultivators. And what must never be lost sight of in any such context is that the prosperity of the jute industry depends almost exclusively on its capacity to produce the world's cheapest container—a container so cheap that its second-hand value can be ignored by the consumer.

In this connection, there seems no valid reason why the Government of Bengal, in consultation with the jute industry, should not anticipate Lord Keynes's scheme for stabilising international commodity prices. That idea provides for the establishment of international commodity pools which would buy up surplus supplies during gluts and liquidate during shortages. It is unlikely that jute will be among the first to engage the attention of international financiers, but that is no reason why the question should not be tackled here locally. The Government of Bengal have established a precedent in the matter of buying up the surplus on their own initiative with a view to stabilising prices. If this were done in conjunction with the industry, for which also precedent is avalable it could be made a very potent factor in stabilising prices within agreed minimum and maximum limits. The immense storing capacity of the mills—practically the only storing space available—would render collaboration between the local Government and the industry essential for the success of any such scheme, and there is much to be said in favour of the idea, if only as a counterbalance to the admittedly empirical method of season-to-season adjustment by crop regulation, which is liable to miss the mark owing to weather conditions on the one hand and unforeseen developments in world trade conditions on the other.

Much is being said and written at present about problems of post-war reconstruction and rehabilitation in the occupied countries. But not enough thought, and certainly no visible preparation, appears to have been devoted to the part the jute industry may well be called upon to play, perhaps at short notice, in such rehabilitation. A message from Washington stated that plans are already under way for a conference between the United Nations on food production and distribution to all populations of the world in the period following the end of the war. The key word there, so far as the Jute industry is concerned, is "distribution"; even if immense quantities of food-stuffs are ready and waiting for, to be taken to these starving populations, how are these supplies to be distributed without immense quantities of containers, in other words, of jute bags? Practically every harbour on the European seaboard has had, and will continue to have, its installations hammered to rubble by the Allied Air Forces so that, for a long time after the war, all cargoes will have to be handled manually. And handling of cargoes at ports, as well as internal distribution over the wrecked countries, means immense numbers of bags. We should like to see some preparation being made for this task, for it is one in which the Indian jute industry can, and must, play an all-important part. The war may last for another year or more, but it is not too early to start the building up of a reserve "pool" of jute bags, and their transfer, as opportunity may offer, to the points of supply of the food-stuffs, so that the distribution of these essential supplies may not be held up a moment longer than is necessary, when the signal goes for their movement to start. The foodstuffs may be on one side of the world and the containers may have to come from the other, before distribution can start, and plans to that end should be cut-and-dried beforehand if distressing delays are to be avoided.

Transport has been, and will continue to be, one of the crucial problems facing the industry. So far as overseas transport is concerned, it may be said to have been fairly lucky during the past months. From the beginning of this season on 1st July, 1942 up to the end of February, 1943, mills have produced over 765,000 tons of jute goods and have actually despatched not only this total quantity to consumers, but 5,000 tons more. For mill stocks of goods are less at the end of February by 5,000 tons than they were on July 1st. It may be hoped that the industry will be equally fortunate in the matter of freight in the months to come. In regard to inland transport for the supply of raw material to the mills, the position is not so happy, and inroads have had to be made on mill and bazar stocks, both of which are now reduced to uncomfortably small dimensions. And the supplies coming forward month by month are not sufficient to prevent this drain. Mills have recently had temporarily to increase their productive capacity to meet an urgent order for the United States, which will necessarily render their raw jute stock position still more acute. There are only two possible solutions. Either more tonnage and towing power must be placed at the disposal of the River Transport Companies and more wagons sanctioned for jute on the Railways, or mills will be forced before very long to curtail working hours. The second alternative, as we have shown from the offtake of manufactured goods, would be a most unfortunate one, so it is to be hoped that means will be found to implement the first.

But there is another problem which must be causing much anxiety, and that is in regard to available supplies of essential stores. Many items previously imported, can be, and are being made in the country. But we need only mention pickers, for which no satisfactory substitute for the imported article has been found. Many types of spares for electrically-driven Mills are also scarce and practically unobtainable. It is probable that one shipload of stores and spares appropriately selected would keep the whole industry going for another year. But the question is, can such a shipment be arranged?

Finally, there is the problem of jute supplies out of the coming crop. Higher authority was ultimately persuaded to sanction the licensing of an area for jute which would just keep the industry going at or about its present rate of production. But the persistent scarcity and high price of rice are bound the make the jute-grower waver in his loyalty to the golden fibre. No price for jute, however high, can adequately compensate the grower for the trouble and expense of getting rice in conditions of famine.

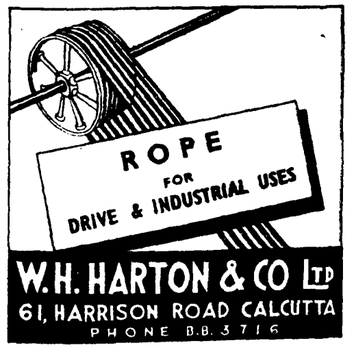
A VIEW OF THE WIRE-DRAWING MILL



We regret that we cannot supply all your needs and perhaps we ought to have told you more about what we are doing. But we have been and are exceedingly busy Every hour of every day our Works are turning out our products and we have beaten all our previous records. This tremendous effort is being made so that the country's defence does not suffer. But when Victory comes we shall be equipped and ready to supply all our many thousands of customers who have stood by us so nobly with their requirements whatever they may be.

Guide to Statistics

Bearing a close resemblance to the Stationery Office's guide to official statistics an official publication issued recently indicates to the ordinary citizen of India where he has to look for information or figures relating to crops and cattle, factories and changes in the price level. The Indian publication is clearly meant to be more than an index of publications, even if its completeness is doubted. The first volume issued recently deals with production. The various statistical publications and their contents (along with limitations) are indicated and the value of supplementary figures, e.g., those prepared by the Indian Tea Licensing Committee is also indicated. It may be said that the guide is meant to familiarise the user of the statistical abstract with its contents and show also where more recent figures are embedded. India's statistics are either lacking or confusing, but in regard to industry, etc., the non-publication is enforced by the war. Notes on regular reports and bulletins are furnished in order to indicate that the value of the authorities are quoted in discussion. It is noteworthy that the Central Government still issues reviews relating to forests, irrigation, etc. in charge of the Provinces, and the variations between two sets of figures in regard to forests in India are cited so as to indicate where the annual return is more reliable. According to available figures the N.-W.F.D. is the least importance in respect of forest area and Coorg the most important. Sind, too, has little forest like Ajmer-Merwara and Bihar, yet the exclusion of states like Mysore and Kashmir detracts from the value of such figures as may be had as regards revenue, minor produce and progress in afforestation. The deviation from accuracy in the case of crop forecasts is fairly large and regular and appendices illustrate the fact that the trade estimates seldom accord with official estimates. It is only in the case of cotton and castorseed that the forecasts cover the entire area under cultivation, and classification by varieties is a feature of the cotton forecast which shows how long-staple cotton cultivation is gaining ground and short-staple is going down because the export markets are closed.

Another Surplus

Apart from Bombay and the Punjab, there is another Province, where a surplus is expected. In the U.P. the budget total is over Rs. 20 crores, suggesting that the Provincial revenue is still growing. Total expenditure for 1943-44 at Rs. 20.18 crores is below the estimated revenue of Rs. 20.26 crores. Total expenditure last year was Rs. 20 crores against a gross revenue of Rs. 20.11 crores. Irrigation remains a big source of revenue, and further improvement in receipts is expected, as cane cultivation has increased since 1942. The total revenue may again surpass expectations as the share of income-tax may increase and excise revenue may go up as the output of local distilleries and breweries should continue to increase. Power alcohol is a new source of excise revenue while temperance has been officially given up. The last year yielded a surplus like the current year, and the U. P. like the Punjab, is obviously adding to its reserves. There will be obviously no need to borrow even if money conditions are favourable, and the United Provinces' saving in 1942-43 was effected by means of a transfer of Rs. 90 lakhs to the Revenue Reserve Fund. Last year's emergency loss or expenditure in regard to Government property has been practically cancelled out by the collective fines collected. The similiarity with Bengal lies in respect of provision for the purchase and storage of food grains. The U. P. Government has a scheme for complete control of prices and civil supplies acceptable to traders and the sum of Rs. 73 lakhs has been allotted for the purpose. At the end of 1943-44 the Provincial debt will be Rs. 39.55 crores equal to hardly two years revenue. Post-war borrowing may be unlikely as the balances held are large but any scheme to help soldiers to settle on the soil will demand special grants from the Revenue Reserve.

Tea Control

The speech of Mr. J. Jones left no doubt as to the tea industry's views on the necessity for control. Restriction of exports in accordance with the quota for the duration and two years thereafter is desired in Britain as well as in India and the Tea Control Act of 1933, is to be renewed. The Assembly has been asked to consider the short Bill and the opponents who merely asked for circulation referred to the rise in the price of tea, the low level of wages in the industry, while Mr. T. S. Pillay said in reply that producers wanted control which would anyway leave India enough tea for her own consumption. Mr. Griffiths supported the official mover of the Bill by pointing out that India had 147 million lbs. of tea for internal consumption against an estimate of 130 million lbs. and control had not produced any shortage. At the tea sales this year, the price trend has been reactionary and the danger of shortage seems non-existent. The reduction in the export cess last year, was desired by the industry and duly provided by an amending Act. The continuance of control of both export and crop is also desired by the industry, and in spite of Dr. Ambedkar's arguments for an enquiry into labour conditions at some time, the case for ensuring prosperity that will support the concessions demanded by Mr. Joshi and others appears strong. It may be urged here that for a long period the jute industry restricted output and protected its profits. Since tea control in

GOVERNMENT OF COCHIN 5% LOAN, 1943-53

NOTICE OF REPAYMENT

The Government of Cochin have published the following notification in the Cochin Government Gazette, dated 13th March, 1943 :—

"Under the terms of the Government of Cochin 5 per cent loan 1943-53, the Government of Cochin have the right to redeem the whole of the 5 per cent loan, 1943-53, or any part of it, at par, on or after the 1st of October, 1942, on giving six months notice in the Cochin Government Gazette. The Government of Cochin notify accordingly that the whole of the 5 per cent loan, 1943-53 will be repaid at par on the 1st of October, 1943, with all interest due up to date. Interest will not accrue on the loan from and after the 1st of October, 1943."

(By order of the Government of Cochin),

Agencies in all important cities of India.

India is really the concern of the main consumer, the U.K., and the U.K. is long committed to the principle of control, it does not seem profitable to ask further questions as to the value of control. The improvement of labour conditions on the estate can be undertaken befre the control comes to an end, and an assurance of stability may be desired for that reason as well as the need to raise both output and exports because the N.E.I. are occupied by Japan.

New World's Surplus

A plan to add 10 million acres to the cultivated area in the U.S.A. is the true measure of the abnormal food requirements of the New World. The Canadian Bank of Commerce some months ago in its letter, drew attention to the scarcity in Europe and the war demands of the United Nations on Canada. Food is now very much a weapon of war and changes in the direction of trade require immediate readjustment of production. The last harvest in Canada was good, and the usual export surplus and internal reesrve were available. Farm income rose by 20 per cent as compared with 1941, and the aggregate value of $1,000 millions if below expectations showed that the Prairie harvest, in spite of a reduced acreage, was exceptionally good. At the end of the season cattle feed was plentiful, and the hay crop was 22 per cent larger than in 1941. Larger harvests of oats and barley point to the shift of Canadian agriculture in wartime. If potato and tomato crops did not answer previous expectations an increase was noted in regard to sugar beets in the Prairie Provinces, though not in Ontario. One result of an abundance of food grains in 1942, was an increase in livestock. Canada's population of cattle, sheep, poultry and hogs showed a large increase and the extension of mixed farming in the West was described as a remarkable change. The subnormal feed crops of 1941, have been apparently corrected and results of a large enterprise showed that slaughtering of cattle, sheep and hogs had increased steadily up to 1942 in direct response to war demands. Exports of cattle on the hoof fell in the 12 months ended August, 1942, and the year's exports of bacon and ham were equal to the quantity of 600 million lbs. contracted for. Large scale retention of stock for fattening was anticipated, and this year should see an advance in Canada's meat exports. The progress of dairying in the Dominion is attested by an increase of 8 per cent in sales of fluid milk in the last summer as also a large increase in the output of butter and cheese, particularly, in the Maritime Provinces. Most important to note here is that Canadian farmers' income rose though costs also were higher up to the end of June. Returns from meat, eggs, dairying, wool, etc., were higher than in 1941, and the decline in the purchasing power of the Canadian power was quite moderate. The Canadian record is better than that of the U.S.A. where an increase of only 6 per cent in agricultural production through an addition of 8 million acres to cultivation was sought in 1942. Difficulties were anticipated as regards labour, machinery and fertiliser and transport shortage; yet it was noted in October that the U.S.A. too would aim at larger and more diversified production this year as well in order to increase exports and supply the armed forces. It was argued that the Federal Government would draw up an ambitious programme, and the threat of scarcity referred to by some of late, appeared remote. Official guidance of the grow more food plans was taken as assured, and British experience was regarded as illuminating. It was obvious the New World was not content with the increase recorded in 1942 in respect of both food and commercial crops. The stimulus to agriculture has been retained in the form of higher prices, and what should impress India most, is the plan for effective utilisation by the U.S. Government of the land and labour. The New Deal is presumably granted in reserve to put agriculture up as Industry No. 1.

Paper Production Plans

The initial defeat in the Assembly explains the decision to reserve 30 per cent of Indian paper production for civilian consumption. Since requests for a larger quota continue to appear there is some justification for a reference to the recent debate in the Council of State as to paper production and rationing. Mr. N. R. Pillai indeed announced that output in 1943-44 would be higher by 15 per cent. It is not generally known that output in 1942 fell away and the probable increase is mainly in the nature of a recovery. The decline in home production compelled curtailment of exports to the point that commercial exports constituted only ½ per cent of Indian output in 1942-43. The 30% quota owing to the anticipated increase in output should give some satisfaction. Government has reduced its own takings and the resolution of Mr. Hossain Imam was withdrawn after the assurance that Government would carry out the objects and purposes outlined in the Paper Control Order of 1942. The increase in output in 1943-44 is to be secured by giving facilities to paper mills as regards transport of materials, chemicals, though shortage of bleaching powder will force mills to make more unbleached paper. Here too standard varieties will be the rule. Writing paper is to be produced in quantity and producing capacity of 12 out of 17 mills in India has been examined for the purpose of enlarging output of 6 or 7 standard varieties. It is only in the U.P. that a fair increase in handmade paper is expected. Machinery is to be installed so as to increase the output of handmade paper on the basis of results obtained. Other provincial governments are expected to increase output after learning how the U. P. experiment goes. Restrictions on paper consumption are to be tightened. The industry is to have a voice in framing such regulations so as to give consumers their opportunity. The assurance that Government exports have been cut down in recent months like commercial exports is satisfactory but Indian paper-makers will probably require assurances as to prices payable for 70 per cent of their production by Government. A strong revival in paper mill shares has followed the debate but it is noteworthy that more interest has been manifest in Mysore shares owing to the market's belief that the mill is exempt from the Control order and the investor's prospects are better for that reason.

Coffee Control Amendment

The Coffee Control Act is to be amended by legislation during the budget session. A sustained advance in prices followed by a sharp break last month indicated the need for a more comprehensive control scheme. The enlargement of internal supplies is needed in view of what has been said frequently as to the need to give brain workers the coffee they need at reasonable prices. Under the amendment proposed the entire crop will be taken by the Control Board and planters, assured of remunerative prices for supplies made to the pool, will scarcely fail to give support to a scheme that puts an end to competition. Control is in operation in Kenya, Tanganyika and other countries. Fixation of prices for export is common, and if the Government which has seen prices rise by 100 per cent in a year intervenes hereafter in favour of the consumer, the producer will have the satisfaction that the middlemen do not combine to spoil permanently, the prospects of larger consumption. Since export demand has taken off 2,200 tons out of 14,000 tons of coffee available from the 1942 crop, which suffered from heavy, unseasonable rain and pool holdings have disappeared, the maintenance of prices at a reasonalbe level is a task devolving on the Board. The Middle East may be a keener buyer, if prices are held, and the restriction scheme launched in 1940 has to be modified in any case. The disappearance of a free market should not be wholly displeasing to planters whose profits are not necessarily dependent on the control and the least of the effects of the extension of the control will be a mild setback in the prices of certain plantation shares which seem top-heavy in view of the chequered

career of the coffee industry. Undertakings as to breaking price advances given in connection with tea last year, will, probably, be acceptable to the Coffee Expansion Board in view of its definite preference for increased consumption instead of a steadily rising pricelevel.

Phosphates for the Allies

North Africa's resources are available to the Allies but not to Vichy owing to the former's alliance with Giraud. The benefits to British agriculture should be substantial as phosphates can be had in quantity. Mr. Norman Crump in a recent discussion of French North Africa's potential value stated that North Africa, like the U.S.A. and Russia, accounts for 25 per cent of the world's total output of phosphates. European agriculture should suffer from the cutting off of African supplies. Though Tunisia shipped more phosphates to Britain than either Algeria or Morocco in normal years, the Axis has little chance of getting North African phosphates in the current year. Reserves cannot be large as the Germans must have counted on Vichy keeping the overseas possessions. As important as phosphates is iron ore. If Germany has Swedish ore at call, one important source has passed out of her hand. Ore shipments from Sweden cannot be large or constant as air attack is a handicap like the winter. Mr. Norman Crump noted also that grain, oilseeds and other vital products were obtained by Germany through North African ports. The loss of African oilseeds will be a particular source of embarrassment to the Axis in view of the food position of German-controlled Europe. Answering the question to the United Nations' gains, Mr. Crump declared that ships will obtain return cargoes explaining that colliers taking coal to North Africa will be able to obtain phosphates or iron ore. Lease-lend supplies will procure from Africa the surplus of oilseeds. Mr. Crump noted that Algeria shipped 1¼ million tons of iron ore, Tunisia 700,000 tons and Morocco 25,000 tons of iron ore to the U. K. before the war. The recovery of another source should help the iron and steel producers in Britain whose requirements of scrap have been reduced last year, by arrangement, but they may be readier to take ore for that reason at present.

U-boat Campaign

The U-boat campaign of the spring is not a serious threat to Allied plans. Mr. Alexander's last speech as to the Royal Navy's performance removes misapprehensions as to Nazi claims. The North African operations have not been affected by the U-boat of November-December and bad weather was not the only factor that has hindered the U-boats. More efficient protection for convoys has been provided in winter and the biggest improvement so far recorded is the determined attack of the R.A.F. on French Channel Ports. Lorient and St. Nazaire must be unusable and slower submarines with fewer supplies can hope for little even if crews can be secured by any means. Recent improvement in the shipping position produced a demand that figures as to losses should be provided as in 1940-41. The assurance that faster ships are being produced in spite of the demands of naval construction is sufficient. The ocean-going submarine is not much faster than the average cargo liner but tankers are generally slower, and for Britain, it is the tanker which matters most. That Britain is turning out vessels able to go faster is good news for shipping companies which can depend on replacements being better than anticipated. The future of British shipping in the Orient is hardly discussed anywhere but it is clear that when Japan's substantial losses are taken into account, and China's trade arrangements are restored, the British shipping companies stand to gain most. The U.S.A. may however prove a rival but the U.S.A. may concentrate on air transport and leave the carriage of goods to British shipping. Dominion companies concentrating on naval constructions can hope for little in comparison. India may well hope for improved mail services to Europe and Africa but the faster services may entail an increase in freights and rates to which the absence of Italian or other competition should make a contribution. Post-war tonnage for Britain cannot be smaller even if German ships are not taken as part of reparations but the reduction of foreign trade may be an obstacle in the way of restoring British shipping to its former position as a source of national income.

LET THE FLAME OF FAITH BURN BRIGHTLY

*

In history 'Finis' can never be set at the end of the page nor at the close of a year. The end of one chapter tells the beginning of another, the close of the old year the opening of a new. Standing within the threshold of 1943, the challenge is of the ages, a call for courage amid toil and trial and sacrifice. We look back upon a year of cloud and pain, hallowed by the death of heroes. Their valour is ransom for our future, and has opened for us the vista of triumph now stretching ahead. Let us not lose what they have bought. As we press on to victory, let the flame of our faith burn brightly. With gratitude for the past, with courage for the present, with faith for the future, let us reconsecrate ourselves to our task . . . to the end that torment may be lifted from men's hearts and peace come for all nations and peoples.

Strain In Germany

Before Hitler's proclamation there appeared many reports to suggest that total mobilisation in Germany was to be extended, immediately. Children are to be used for war work according to recent reports which refer also to Quisling's readiness to send out workers from Norway for German factories. The extinction of the middle class is considered the certain result of the drive for concentration. The manpower shortage provides the explanation but a distinctive factor is the reduction in war output. Though Nazi economic imperialism secured one half, if not four fifths, of production in many of the European industries for German war effort it is now apparent that transport and other difficulties have reduced both production and trade. Perhaps the major cause is the inability of France to give up war supplies to Germany on the scale of 1941. Moreover, the inflow of foreign workers and discontent in factories demand a flow of new blood. Reorganisation and concentration marked Nazi industrial policy before 1942 but civilian production was kept up in a large measure. The latter is to be cut and registration of four-fifths of shopkeepers is a direct result of the threatened reduction of goods. Mr. Charles Foley, writing in the Daily Express, estimated that two and a half million people will go into war work by March 15.

That conversion and concentration of industry was attempted in co-operation is not doubted by U. S. observers but the effects on a low standard of living must be ignored. The selective operation of both armament and civilian industry is not peculiar to Germany nor is the diversion of manpower to Government factories. What is brought out by the decrees, arising largely from reverses in Russia, is that the limit of rationalisation carried out since 1940 in Germany, has been reached. The peak of war production and taxable capacity was passed in 1942 in spite of Dr. Funk. The destruction of all amenities will strengthen the distaste for work in a country forced to labour twelve hours a day. The new decrees point to the absence of co-operation from industry which strove to keep up the nucleus factories and closed down non-essential plant. That more men are needed for fewer factories points certainly to a fall in war output as compared with 1941. But it is also a pointer to the withdrawal of workers for service in Russia and the insufficiency of foreign workers. Whether the dilution on the scale contemplated will be endured by the Labour Front, need not be asked but it is obvious that raw recruits for the army of industry will help little though total mobilisation (attempted in Italy already) will cut off the supply of non-essential goods and secure unavailing austerity.

Future of Lease-Lend

The discussions in Committee did not affect the U.S. Administration's main case that lease-lend must remain. The statute passed two years ago is sure of acceptance by the 78th Congress in which the Democrats are less strong than two years ago. Even after the unanimous testimony of officials as to the value of lease-lend supplies, to India among other countries, there has been a disposition to fetter Presidential discretion. The House may not accept the Committee's views as to the appropriate clauses on the issue of reciprocity now or later; or else Congress may claim a voice in deciding what is the proper settlement for present assistance. The treaty-making power of the Senate appears to justify the demand that may be made in amendments proposed in Congress. The more important amendment envisaged is that demanding for China a fixed percentage of supplies. Instead of separate agreements for credits, the U.S.A. will have to bind itself to give 10 per cent of supplies to China. Madame Chiang recently asked the U.S. Congress not to underrate the Japs who had obtained additional resources through their conquests in Asia. To show that China deserves more aid at present, the Congress may lay down conditions which will mean that less will go to Russia and more to China. There is also a possibility of the short title of the enactment being changed to that of a war supply bill, because the U.S. Congress makes the appropriations and the Director of the Budget oversees the entire expenditure. Grants, subsidies or any other name would do well for lease-lend because the U.S.A. is getting no full or immediate equivalent though receiving reciprocal facilities. Congress may be ready to insist that the tax-payer should be notified of what is being done for the Allies by the Republic. In any event, the U.S.A. may get back only a fraction now or later on. And U.S. superiority in the matter of war expenditure alone justifies the probable demand for a change in title. The U.S.A. by announcing that no direct return is expected from her Allies may secure a better position in relation to the post-war settlement. The British tax-payer's burden has up till now been greater and the removal of liability to repay after the war by turning the lease-lend act of 1941 into just an appropriation act passed for special purposes, will be appreciated by Britain where the promise of post-war benefits to the people under the Beveridge Plan has been modified by calculations as to the probable cost. If nothing is due to the U.S.A. the British Government can undertake fresh liabilities, and to that extent, the amendments will not be unwelcome.

That's because in quality and price they compare favourably with the better varieties of imported boards. Made in required sizes and thicknesses, their colours and finish are so good as to make an ideal choice for making boxes, files, envelopes, invitation cards, photomounts, etc. Besides special finishing, packing, binding and baling, the boards are carefully tested in a well-equipped laboratory for quality and strength.

J. K. Glazed Boards, Mill Boards and also corrugated pulp boards represent another step forward in J. K.'s contribution to the Indian Industry.

I had intended to discuss in the manner appropriate to this column the proposals made by Britain and Lord Keynes for the regulation of international finance in the post-war period. But economic discussion even like charity begins at home; and space in these columns is taken up by the following article from an esteemed contributor:

* * * * *

"INFLATION"

By SIR TRACY GAVIN JONES

There is a great deal of confusion of thought on this subject, and I hope that the following remarks and suggestions may help to clarify the present position in India.

The Hon'ble the Finance Member in his Budget speech said very much the same thing as the Hon'ble the Commerce Member said, namely, that high prices are not due to Currency Inflation, but to shortage of commodities, and to the hoarding of goods.

* * * *

This lead given by the Government has been followed by articles in the press and a pamphlet by Mr. Birla substantially supporting this view.

I assume that this attitude has been taken up by Government in order to maintain confidence in the Currency of the country, and to counteract alarmist statements, which they consider may create panic and further depreciate the value of the currency. Superficially this would appear to be a laudable objective, but I am of the opinion that an increased rise in the price level will be far more alarming to the public than anything that may be said about it.

I am aware that the Hon'ble the Finance Member is not ignorant of the actual situation—a man of his experience and attainments, could not be ignorant of the fact that the tendency to Inflation is on the increase. I was glad to note that in a reply to Pandit Kunzru in the Council of State, he frankly admitted his anxiety in regard to the position, and vigorously contended that Government were not complacent about the matter.

* * * * *

It seems that the Government have let it be known that the term "Currency Expansion" should be used instead of "Inflation". This evades a plain statement of the real position, and I do not think that the Government are wise in adopting such methods. The public should be taken into their confidence, and an endeavour made to obtain the co-operation of the people to combat inflation. To deny its existence makes it more difficult to put through measures to control inflation.

Mr. Birla in his pamphlet urges that there is no inflation of currency, but that prices have risen because of a scarcity of goods. He says that in war time expansion of currency is inevitable, and that the remedy is more production.

The assertion that there is only expansion of currency and not inflation, is not correct when it is considered that the price level has risen simultaneously with the expansion of currency. Expansion of Currency and/or Bank Credit, is inflation if it is accompanied by a rise in prices, for it indicates that purchasing power has been created without a corresponding increase in production, hence the scarcity of goods and rising prices.

A substantial rise in the price level, especially if the rise is not effectively controlled, upsets the lives and standard of living of the ordinary man; involves all producers, traders, and Government Departments; and creates an atmosphere of extravagance among all classes; together with an inducement to expand existing industries, and to introduce new industrial undertakings, which are not necessary for the prosecution of the War. In fact, a violent speculative tendency is engendered, which aggravates the scarcity of goods, causing higher prices, and consequent, expansion of currency and/or Bank Credit, followed by still higher prices, a vicious circle.

* * *

An example of this vicious process is the dear food allowance to industrial and transport workers. The arrangement is that, as prices rise, the dear food allowance is raised in the same ratio. When workers complain to their suppliers of higher prices, they are told by their suppliers not to worry about it, and that the factories will compensate them. The Employer goes on raising the allowances, 70 per cent of which in reality comes out of the pocket of Government, as it is a revenue charge and comes off the Excess Profits-tax, and so the vicious circle mounts up. Some system should be initiated by Government to stop all further dear food allowances, and make good to the workers any rise in prices by a payment in kind, in the shape of the supply of cheap food and cloth.

* * * * *

It is true that a certain degree of Inflation is almost impossible to avoid in war time, owing to the sudden increase in demand for the Defence Services. It is economically possible, to avoid any inflation if the economy of the country is handled drastically, but it is politically difficult to do so. If Britain had adopted Lord Keynes' proposal of compulsory saving by all classes, there need not have been any inflation in Britain, but the politicians thought that the people would not stand for it. Britain has succeeded, however, in keeping inflation under control, by methods described in my speech at the Annual Meeting of the Upper India Chamber of Commerce. There is no evidence that India is making any effective effort

LAKELITE

for the same purpose, and I consider it a delusion and a snare to say that there is no inflation, to accumulate sterling balances in London, and to imagine as some economists in India appear to do, that because there is ample metallic cover in Gold and Silver for the Note issue, there can be no inflation.

If the Note issue were entirely covered by Gold, or were covered twice over, it would have no effect on the inflationary position one way or the other. The accumulation of sterling balances in England tends to increase inflation in India, when rupees have to be issued in India against these accumulations.

Metallic cover for Note issue is of value only when the Government undertakes to supply Silver against rupee Notes. This is no longer guaranteed and the silver rupee has gone out of circulation, the token rupee has taken its place which is valuable only as a medium of exchange. The Note issue is based on the credit of the Nation, and is not convertible into any metal, and therefore requires no metallic backing.

* * * *

Mr. Birla's remedy is to increase production. This is easy to say, but impossible to attain during war time, with continually increasing demands for the Defence Services. Of course, if production could be increased rapidly enough to balance the increased issue of purchasing power, then there would be no scarcity or rise in prices; in other words no inflation.

I do not mean to infer that the Finance Department has issued more currency Notes than were necessary when the demand arose, for Notes must be issued to carry on the trade and business of the country. But I do blame the Government as a whole for not organising the country, as far as possible, for total war, and for not controlling the inflationary tendency by compelling the people to reduce expenditure to compensate for the extraordinary expenditure on the Defence Services; for not utilising the sterling balances to reduce inflation in India; for not encouraging increased effective production especially of agricultural products; (by effective production I mean production that comes into the market for consumption and is not hoarded); and for not broadening the basis of taxation, both direct and indirect, so that all classes will bear the burden of the Defence expenditure. The Budget is ordinary, conservative, and unimaginative.

Inflation is simply an expansion of Currency and/or Bank Credit, that is, purchasing power, beyond the effective capacity to produce goods. This is due to war demands, to extravagance and speculation by the general public, to increased expenditure on capital goods as well as consumption goods and to hoarding of goods, thereby reducing effective prduction. In brief, what is necessary is to balance purchasing power with productive capacity, by increased production, and or decreased expenditure, on purposes not ncessary for war or the ordinary life of the people.

* * * *

The concrete proposals I have made are briefly as follows:—

(1) To increase the acreage of food crops by means of subsidies or other methods.

(2) To give the villagers something to hoard instead of grain, which he will hoard if he cannot get anything else that he values, and thereby increase effective production. Silver seems the obvious commodity, it is just as useful buried by the villagers as buried in Government vaults.

(3) The exchange of controlled commodities, such as salt, matches, kerosene oil, and standard cloth, for food grains by means of coupons for the purchase of these commodities against deliveries of grain, and thereby increase effective production.

(4) By direct taxation of the agricultural classes, who are now very prosperous, as well as the commercial classes and the fixed income classes.

(5) Taxation of the masses who are now prosperous due to higher prices of crops and higher wages, by means of an increase in the salt tax.

(6) The control of all industries, Government Departments, Corporations, Municipalities and individuals, to prevent capital expenditure except for such purposes as are necessary for the prosecution of the war.

(7) Control of all manufacturing industries when there is a distinct shortage of supply of their products.

(8) The utilisation of sterling balances for the shipment of Silver to India to relieve the inflationary situation.

* * * *

If India is capable of controlling the inflationary tendency, and still accumulate sterling balances for post-war purposes, then it is obvious that India is not bearing her fair share, financially, for the prosecution of the war, and should finance all the Armies in India and Burma now defending the country.

Borrowing is a method on which the Government of India relies very greatly for balancing the Budget, and relieving the inflationary situation. All genuine savings by the public is a great help, but borrowing by means of Bank-created credit may help to balance the Budget, but actually increases purchasing power and aggravates the inflationary tendency. It also piles up interest bearing debt for which there is no real saving, but which is created by the Bank by mere book entries based on the credit of the Nation.

In India it must be borne in mind that the rural population, who form the great majority of the people of India, and are the people who in the mass produce most of the wealth of India, have not acquired the Banking habit, and have their own methods of accumulating their savings, principally in goods and precious metals, so that the people who invest in Government Loans are limited.

It would seem when discussing purely monetary methods, that the obvious cure for inflation is deflation, by the familiar banking technique of the withdrawal of loans and currency restrictions, but this is impossible in war time, and the only cure is increased production coupled with decreased expenditure, on purposes not required for the prosecution of the War and for maintaining the life of the people.

In the past few months, there has been a crop of new bank issues; and the offer of Capital by these banks has met with a particularly favourable response from the public. Analysing the preferences of investors by their attitude to new issues, plantation shares and bank shares must be said to engage their special affections and activities. So far as plantation shares are concerned, the Capital issues are new issues only in the sense that the Companies formed for the purpose are new. But the enterprise as such pertains to a plantation already in existence and already in an advanced productive stage. With regard to recent issues of bank shares, however, investors have been asked to participate in the Capital of a bank which is hereafter to be formed and organised. Such is not the case with the offer of additional shares made by Nath Bank. It follows that investors who showed keen interest in shares, of banks which are to be planned and organised from the beginning will evince all the keener interest in the shares of Nath Bank which, over a period of sixteen years, has advanced from strength to strength, developing and expanding banking business on scientific and sound lines. The investors in this case are assured of a dividend right from the start. And the yield offered on the present issue price of shares is 6 2/3 per cent. It is hardly necessary to stress that such a yield must be reckoned exceptionally attractive in relation to the war-time structure of interest rates and even more so in relation to post-war interest rates which, one may hazard the guess, will go down still lower, thanks to the marvellous improvement which is being effected in monetary technique.

A recent visit I paid to the factory of Pravati Textiles Limited was a great eye-opener to me in many ways. It showed how enterprise combined with technical efficiency can, in a large measure, overcome the handicap of shortage of capital. Mr. Biswas, to whom and to whom alone the entire credit for this enterprise goes, put his hand to this undertaking after a wide technical training and intimate practical experience in the United States. And the Yankee touch is discernible in every detail. It has not so far been my pleasure to visit in India a factory as neatly and so nattily kept as Pravati. As modern factories go, Pravati is petty; but it is pretty. And the products it turns out are wonderfully pretty. Pravati specialises in the higher quality of goods; and, while the margin of profit is much greater, the demand also is so great that the output is sold before it is produced. To eliminate the middleman, Pravati retail shops have been opened. And it is now clear that there is great scope for further expansion of the plant. Which, of course, means more capital. But Mr. Biswas should have no difficulty in securing all the capital he needs: for he has a really good and profitable enterprise to commend to investors, who, in present conditions, have a definite fancy for textile shares.

Accustomed to report increase in deposits, advances and profits year after year, the Central Bank of India is, perhaps, the best example of what has been done by Indians for India in the field of finance. That large claim is certainly supported by the statement of progress in 1942—made available to the readers of Indian Finance. The balance-sheet is no formal document but a detailed analysis of changes that have again put the Central Bank a long way ahead of other banks. A comparison with the position at the end of 1941 suggests at once that the bonus added to the dividend is not the only true measure of the year's achievements. Deposits have risen by over Rs. 18 crores in spite of a small fall under time liabilities. The increase in 1941 was Rs. 9 crores; in the next year the increase is Rs. 18 crores. The usual anticipations have been proved correct in regard to profits as well. Net profit for the year is up from Rs. 41 lakhs to Rs. 49 lakhs in spite of a large increase in cash and a fall under Advances. The total under Advances is Rs. 17 crores as

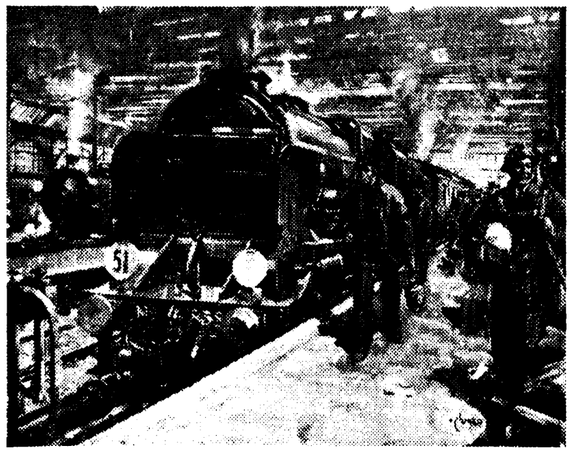
EAST INDIAN RAILWAY

TENDER NOTICE

Special Items Costing Over Rs. 8,000
Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, upto 12 noon on the 17th May, 1943.

Tender No. S/Gb2/Lamps/B for the supply of 2,425 Hand Signal Lamps, 78 Nos. Brake Van Lamps, 10,000 Wick holders ⅜ ins. and 2,500 Burner and reservoirs with reflector for hand signal lamps.



Tender forms with full particulars can be had from the office of the Controller of Stores, on payment of Rs. 2 per copy, drawing No. Gb2/PL.388A and C & W 7156 Fig: 22 from Deputy Chief Mechanical Engineer, Lillooah at Re. 1-8 per copy and E. I. Railway (s) Drg: No. A-2844 from Chief Engineer, E. I. Railway, Allahabad at Re. 1 per copy on production of Treasurer's receipt.

The above amounts should be paid to the Treasurer, E. I. Railway, Calcutta, and on production of his receipt, documents will be issued from the above respective offices. No refund is permissible after payment.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender box outside the Deputy General Manager's (Works) room by the Tenderer or his representative.

R. E. MARRIOTT,
General Manager.

Aspects of an Industry No. 11

JOURNEY'S END

A TYPICAL scene today in any of Britain's great railway stations: soldiers, sailors and munition workers coming off the train that has brought them safely to their journey's end. It never occurs to the passenger, in India or in Britain, to doubt the dependability of their railways. How often, for example, do you hear of a locomotive breaking down? It just doesn't happen, even in time of war when the strains and loads and wear and tear are all hugely increased. Have you ever thought of all the care and ingenuity which contribute to the unfailing precision of the railway engine? Its water supply alone. You know what happens to a kettle: how soon it gets furred — and so takes longer to heat. Locomotive boilers are liable to the same trouble, which, if neglected, would lead to inefficient running with inability to run to schedule, and would add thousands of pounds to the railways' working costs. To prevent this—to improve the engine's performance and ensure your convenience—is one of the functions of the water treatment service given by the British chemical industry. But it is only one of the tasks, for the prevention of scale in boilers is as vital to Production as to Transportation. Mills and factories all depend upon water for their plant and engines, and supplies are drawn from sources which almost always contain impurities. It is one of the wide range of activities of the British chemical industry to ensure that the wheels of production are kept turning efficiently by giving technical advice and assistance for the maintenance of pure supplies of water. Many billions of gallons of locomotive and industrial boiler water are treated annually by methods evolved in British laboratories and applied by British chemists.

Olympus

(From Our Correspondent).
New Delhi, March 23.

THE close of the Assembly session has brought up the political question again. Two different reports are in the air- one hinting that the Viceroy may not for the present fill up the vacancies in his Council and the other foreshadowing complete Indianisation of the Council. There is nothing here to indicate that the authorities are in a mod to revise their present policy towards the Congress, but apparently they feel that this negative policy is no satisfactory way of dealing with the situation. If one thing has been plain in the discussions on the Finance Bill, it is the fact that other political parties and groups in the Central Legislature are getting increasingly restive. It was from the Muslim League's spokesman that the demand came: "You say that Congressmen are rebels and outside the pale of citizenship. But what are you doing to enlist the co-operation and suport of other parties like the Muslim League who are anxious to promote the successful prosecution of the war?" Lobby comments in the Central Legislature have been making particular reference to the growingly hostile attitude of the Muslim League party—not only did they take the lead in voting against the Finance Bill but they have gone further and refused to allow any of their members to sit in committees connected with the war Departments. And it was none other than Sir Vithal Chandavarkar, the Bombay industrialist, who asked all parties to combine and form a National Opposition to bring pressure on the Government.

* * * *

Within the next few days a deputation of those who recently gathered at the Bombay Conference is expected to meet the Vicroy. It is not difficult to predict what the Viceroy's answer will be, but whatever may be the Government's attitude towards the Congress, it is becoming increasingly clear that the Government will have to initiate certain positive measures to satisfy at least other groups particularly the large group of industrialists and businessmen who are fully alive to the dangers of a prolonged political stalemate. The coming summer months may well see another political gesture—a gesture which this time may not be directly addressed to the Congress and other main political parties but may be nothing more than an offer to reconstitute the Government at the Centre on the basis of complete Indianisation. It is well-known that when recently the Viceroy summoned a number of Provincial Governors for consultation one of the points discussed was the feasibility of complete Indianisation by the transfer of the Home and Finance portfolios to Indian Members. A number of Governors are understood to have favoured the proposal. How long this will take one cannot say, but if a new Viceroy is to take charge in October next, these changes cannot long be delayed. Though the general interpretation placed on the extension given to Sir Reginald Maxwell, is that no question of complete Indianisation arises for the present, there are still many optimists who think that circumstances themselves will force the authorities to go forward and agree to transfer both the Home and Finance Departments to Indian Members.

* * * *

Why should not an Indian be appointed the Governor of the Reserve Bank? This question also is greatly agitating Assembly circles who fully realise the undoubted importance of this institution from the point of view of wartime and post-war finance and economy. There is on one side the narrow official view that as the Governorship was formerly held by an I.C.S. officer, the vacancy should go to a senior Finance official of the I.C.S. like Sir Jeremy Raisman himself or Mr. C. E. Jones. On the other, there are also powerful interests favouring the appointment of an "expert" from England or some one connected with European banking in this country. Among the many names mentioned is that also of Sir T. E. Gregory, the Economic Adviser. Still no one can possibly say that there are not non-official Indians available who can worthily fill this post. It was a Director of the Reserve Bank itself who at an Assembly social function suggested a couple of names—Sir Purushotamdas Thakurdas whose experience, ability and competence to hold this position cannot be questioned, and Sir V. T. Krishnamachari who has similarly a high reputation. Other names can also be mentioned, but the question is whether the authorities are prepared to think of an Indian at all for this post. As the Reserve Bank can play an effective part in shaping the Government's currency policies after the war, there is a keen desire among Assembly members that this opportunity should not be lost for having an Indian at the head of the Bank.

* * * *

At long last an official announcement was made on Wednesday last by the Finance Member regarding the Government's plans for post-war reconstruction. No details of the organisation have yet been given, but it has been announced that like the War Resources Committee a committee of the Viceroy's Council is to be set up with the Viceroy as President to deal with this urgent matter. The committees set up by the Commerce Department are to continue as before but this new committee of the Viceroy's Council will, it is stated, appoint a number of subcommittees presided by Government Members in charge of the subjects most directly affected. In connection with these sub-committees the question of associating non-officials, says the Finance Member, "will naturally arise." It cannot be claimed that this announcement has caused any great enthusiasm in Assembly circles. Even the idea of having a separate department has for the present been ruled out on the ground that as the work of reconstruction is one for all Departments of Government the best way to deal with the problem is the appointment of a committee of this kind. That, however, is hardly a satisfactory explantation. Postwar reconstruction is so urgent and important that it may require the attention of a full-time Member for its efficient functioning. If at least a separate Department had been created, there would be several ways open to the Legislature to exercise its influence and get information, but if it is to be merely a Governor General's Committee with a separate Secretariat of its own—though it may be bigger in size than an actual Department—the experience of the War Resources Committee may be repeated so far as the public is concerned. Its activities may be

INDIA'S
THIRD
DEFENCE LOAN

Ask Your Banker

(Space donated by Imperial Bank of India)

more or less a sealed book to the public—hardly right in view of its immense importance to the public. There is also some dissatisfaction that an Indian is not being appointed as Secretary of this committee. When last year a retired General was chosen by the Viceroy as Secretary of the War Resources Committee, there was a good deal of complaint. It is now said that the same Army man and Sir T. E. Gregory are being appointed as Secretaries of the Postwar Reconstruction Committee? One has a right to ask whether there are no Indian economists available for taking up the Secretaryship.

* * * *

With reference to postwar requirements and purchases the Finance Member announced also that the Government will shortly call a meeting of the Reconstruction Committee on Public Works with a view to preliminary discussion of the capital goods requirements in Provinces and States. He explained that the segregation of part of our sterling assets into a separate fund to be used for reconstruction purposes, while it would serve a useful purpose of making quite clear what the Government's intentions were and perhaps also make it less easy to divert funds to other purposes, was not an absolutely necessary feature of the scheme, for he added: "I would not hesitate to abandon the idea of a segregated fund if that were to be misunderstood. It was not necessarily my idea that a part of the sterling balances should be removed from the Issue Department of the Reserve Bank."

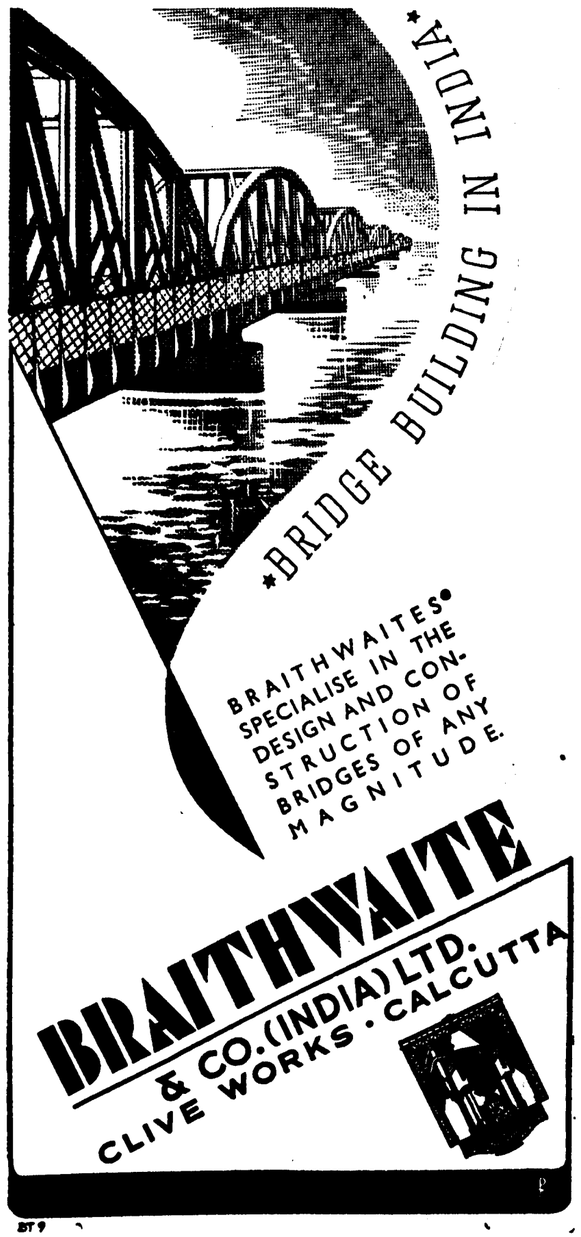
Resume of Commodity Markets

Early in the week rather quiet conditions were noticeable in the several commodity markets, both in Bombay and Calcutta. With the sharp fall in prices in the Bombay raw cotton market there was a decline in values even in the gold and silver markets In the jute manufactures market, rather quiet conditions were prevalent. Some selling was in evidence with the continued absence of enquiry and the anxiety of secondhand dealers to liquidate holdings. The jute market remained firm. If there was a suggestion of quietness towards the close, it was only in sympathy with the hessian market. Reports regarding the early arrival of substantial supplies of rice, sugar and wheat into the Calcutta area have had no effect on retail prices. Only with the actual flooding of supplies will there be a decline in prices. Even then, if it was not made sure that there would be a continuity of supplies, there could not be any appreciable reduction in prices.

* * *

The Finance Member's warning that speculative buying of cotton will be penalised has had the desired effect. There has been a decline of nearly 80 points from the highest levels touched last week. Even at the time of last writing, we pointed out that the rise in prices had been overdone and that it would not be possible to look forward to any improvement in values. We also pointed to the need for a revision in the contract as undue speculative activity had to be checked and a proper basis had to be provided for trading. The recent abrupt rise in prices for Jharilla cotton has been mainly due to the scarcity of long-staple varieties and the appreciation in prices for this particular quality must not be taken to mean that there has been a general increase in prices for cotton varieties. It was feared early in the week that some restrictions in forward trading would be placed but so far no measures to this effect have been brought into force.

* * *



The International Tea Agreement, which was due to expire on March 31, has been extended for the period of hostilities and for two financial years thereafter. There was some opposition to the extension of this Agreement on the plea that consumers' interests were not given adequate consideration. On the assurance by the Government that everything was being done to protect their interests, the Bill was passed. Several amendments have been made to overcome difficulties in administration. It is generally recognised that the industry has considerably benefited by the Agreement and that the continuance of the same will prove to be helpful.

With the increase in price for rubber to 1s. 6d., from 1s. 1¼d., by the U.K. Rubber Controller, the maximum prices for Indian rubber also have been increased. It will be remembered that Indian planters have been agitating for an increase in the maximum prices and that they resented the differentiation between Ceylon and Indian rubber. The latest increase in prices, though not quite up to expectations of the trade, should satisfy the interests to a certain extent.

* * * *

The position in regard to rice, sugar and wheat is rather serious in Calcutta and the adjoining areas. In recent weeks there has been an abnormal rise in prices for these commodities and at the present prices it is almost impossible for the average consumer to live. It is reported that efforts are being made to bring in substantial quantities of rice, sugar and wheat into this province and that on receipt of these supplies, it will be possible to bring down prices. The announcements in this regard have not had any effect on prices so far. It has been suggested that rationing should be introduced in Calcutta also. A scheme is under preparation for this purpose. If it can only be made sure that the individual consumer will get his legitimate requirements at fair prices, there cannot possibly be any objection to rationing. Rather, the delay in the introduction of such a scheme would prolong the hardship of many.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, March 25.

As we briefly recorded last week, mill production for the month of February was returned as 92,436 tons, which, considering that February was a short month, and further that a larger proportion of the production than usual represented hessian, indicates that working conditions in the mills have very nearly returned to normal. In January, production dropped to 78,687 tons due to the exodus of labour at the time of the Christmas raids. This has now either returned for the most part, or been replaced. The average production for the previous six months July to December was 99,000 tons per month. The effect of the recent cancellation of Government orders is reflected in the proportion of goods produced on military account, which in February amounted only to 8.23 per cent against 12.5 per cent the previous month and against over 20 per cent at times during the previous six months. Total hessian production on all accounts amounted to 11.94 crores of yards while sacking goods totalled 13.10 crores.

Revised stock figures as at the end of February show an increase of 10,579 tons over January, but as the total stocks at the end of February are 5,000 tons less than they were at the beginning of the season, on 1st July, 1942, this is a matter for small concern. The stock and production figures taken together indicate that during February, when shipping conditions were by no means so favourable as they had been in some previous months, 82,000 tons of goods had been despatched to consumers by the mills. In the circumstances this can only be considered quite satisfactory.

Total mill production for the eight months, July to February now amounts to 765,349 tons which represents a consumption of 43,55,000 bales of jute. To this should be added 9,17,000 bales exported up to the end of February, and probably another 2 lakhs of bales taken by mills outside the Association. Apart from domestic consumption therefore, 54,72,000 bales of jute have gone into consumption since the beginning of the season, and during the same period only 44,34,000 bales have arrived into Calcutta. It follows therefore that reserve stocks in mill godowns, bazar and press-houses have been reduced during these eight months by some 10½ lakhs of bales. Probably 4 lakhs of that amount has come out of the bazar and press-houses, with mill godown stocks reduced by some 6½ lakhs of bales. As mills entered the season with little more than 21 lakhs of bales in their godowns, their stocks must now be reduced to around 14½ lakhs of bales, well under three months requirements at the present rate of consumption and a far from comfortable position to be in.

Mill shipments are certainly now receiving priority over press-houses and bazar consignments at all river stations, and data have been furnished to the transport authorities to enable them to specify preferential allotment of space to long outstanding contracts, the delivery of which would clear the air in more than one respect. Efforts are also being made to arrive at somewhat similar arrangements with the railways if possible. One of the main difficulties with regard to rail transport is that wagons seem to be available at unimportant wayside stations where little or no jute is normally offered for carriage, while at the same time large and important stations, where thousands of bales are stored awaiting shipment, are completely starved of wagons. The wagons at the wayside stations are not wasted, they are loaded by carted consignments from the bigger stations. But all this entails delay, not to mention expense, and in view of the much advertised exhortations of the railways that the most economical use should be made of transport by quick loading and turnround, it is to be hoped that they themselves will assist by placing the wagons at the upcountry stations where they are most needed and where they can be most rapidly loaded and despatched.

Reports from the Districts indicate that jute sowings are inclined to lag. Weather conditions have been on the whole quite favourable and seedlings already in the ground are reported to be doing well. But on the whole the cultivators do not seem disposed to commit themselves till the last possible moment to the decision whether to plant jute or paddy. At relative current prices there can be little doubt that paddy is the more attractive proportion, with the additional consideration that the family food supply is thereby secured. Against this may be placed two factors. In many districts paddy seed is in short supply—possibly because it has been eaten, or sold for food. Again there is the ingrained distrust of the average cultivator in what his neighbour may do, and he is in somewhat of a quandary as to which crop offers the most hopeful prospect at the time of harvest. If there were any sense of co-operation amongst the cultivators, this question might easily be solved, but unfortunately the co-operative disposition is almost completely undeveloped, as witness the lack of success of practically every attempt to inculcate it under official aegis. Much depends on what happens during the next two weeks, but present indications suggest that it is unlikely that the eight anna licensed area will be fully sown under jute, though what the extent of the short-fall is likely to be, it is yet too early for any attempt at an estimate.

The export jute market has been featureless with almost nothing going on. Early in the week Dundee Daisee 2/3 was reported at Rs. 78 for shipment, but since then practically nothing. Mills have bought to a small extent but have found offerings scanty, and not likely to increase if shipments to the bazar are to be curtailed. Business was reported in Firsts with mills at Rs. 82 and in Lightnings at Rs. 76, also Dundee Daisee at Rs. 81. Cuttings have sold again at Rs. 37 for N. C. and at Rs. 36 for M. C. with Rs. 46 paid for better class Cuttings.

In the Loose Jute market there has been a steady business going on, but the quantities on offer have been limited and sellers pretty shy to commit themselves. European packing is sparingly offered and small lots sold at Rs. 16-12 to Rs. 17 for Middles, Rs. 13-12 to Rs. 14 for Bottoms and Rs. 12-4 to Rs. 12-8 for X grade. Supervised Jat has been keenly snapped up when offered at from Rs. 16 and Rs. 13 for Middles and Bottoms to four annas higher. Tossa has been in steady demand and Indian Jat Tossa sold from Rs. 16 and Rs. 13 Middles and Bottoms to four annas higher, Indian District Tossa at from Rs. 15-8 and Rs. 12-8 to Rs. 16 and Rs. 13, while for Jungli Tossa from Rs. 15 to Rs. 15-8 was paid for Middles and from Rs. 12 to Rs. 12-8 for Bottoms.

Mofussil markets have ruled firm with imports scanty, as is usual at this time of year, and buyers generally keen to pick-up what they can. Progress with sowings is referred to elsewhere.

The effervescence has disappeared from the hessian market and business has been on a much more restricted scale though the tone remains generally steady but with quiet intervals. 7½ ounce and 10 ounce seem scarce and have been commanding a premium, with business done in the former at Rs. 19-8 March and Rs. 19-4 April, and in 10 ounce at Rs. 24-14 to Rs. 25 March and April. Eleven porters for July-September sold at Rs. 24-4 and Rs. 24-8. Closing quotations are Rs. 18-14 and Rs. 24-14 March, Rs. 19 and Rs. 25 April-June and Rs. 18-12 and Rs 24-8 July-September.

Heavy goods experienced a spell of weakness, but registered some recovery towards the close. Comparatively few sales of any importance have been recorded. March Liverpools sold up to Rs. 64, but dropped back to Rs. 59 and close at Rs. 59-8. April-June quotes Rs. 58-8 and July-September Rs. 57-8. Near "B" Twills have varied in price from Rs. 59-8 to Rs. 56-12 and back to Rs. 57-8, April-June from Rs. 58-8 to Rs. 56 to Rs. 57-8 and July-September from Rs. 57-8 to Rs. 55 to Rs. 55-8. Some July-September business was reported at the bottom rate of Rs. 55. Cornsacks have similarly wavered without any business reported and close lower on the week at Rs. 58-8 March, Rs. 57-8 April-June and Rs. 56-8 July-September. 6 x 8 Sugars were reported at Rs. 74 March, at Rs. 70 April and at Rs. 63-8 July-September.

(*Continued from page 537*)

against Rs. 18.85 crores a year ago so that the increase under Investments from Rs. 20.77 crores to Rs. 33.72 crores is the direct major consequence of an unprecedented increase in Deposits.

The increase in the Central Bank's resources and business was supported by an addition to the number of pay offices and sub-branch offices. As the cash ratio is more than ever large and a new item listed in the balance-sheet is the holding of treasury bills. The Bank held Rs. 1.85 crores in treasury bills, and a steady increase hereafter may be anticipated since the tender rate is high and the weekly offer large while other employment for bank funds is not available. The fall under bills reported again is a symptom of slacker money conditions, but what impresses the public most is the increase in the balance-sheet total in a single year from Rs. 50.12 crores to Rs. 68.16 crores. The increase in profits is directly related to the growth of investments which must be helpful to the Government in sterilising free purchasing power and as setting its loan programme. It is noteworthy that the Central Bank of India's holding of loans repayable after 1953 has increased to the same extent as the holding of short-term loans. The Bank's support given to the giltedged market over the last year may be cited in favour of improved tone in giltedged this year. The disposition of profits also suggests that Government is getting its own share through the enhanced provision for taxation. The regular annual addition to reserves is raised by one lakh and the increase in the staff bonus is a graceful admission of the part the Bank's staff, headed by Mr. H. C. Captain, have played in a year that has been marked by more than satisfactory progress.

'EAVESDROPPER'

JUTE

Calcutta, March 25.

The raw jute market has continued steady and business passing has been fairly satisfactory. Towards the close, however, slightly easier conditions have been noticeable with the weakness of the hessian market and the reports regarding the possibility of an increase in arrivals in the next few weeks. Sellers, however, are rather reserved and are not prepared to discount rates substantially. Mills are buying up all quantities offering. And as there has been a considerable reduction in stocks, it cannot be expected that there will be any appreciable decline in values. As pointed out last week, the outlook for jute remains bright so far as the immediate future is concerned. The problem is one of adequate supplies and transport. The present consumption of mills is over six lakhs bales per month. It is estimated that the short-fall on account of arrivals over consumption since the beginning of the season is over 8 lakhs bales.

In the loose jute section, business passing has been quite satisfactory. During the last two days there has been a slight falling off in the amount of actual business transacted. Quotations are only slightly below the highest levels for the week. Supervised Jat Middles were done at Rs. 16-4 per maund while European Packing Middles, Bottoms and Cross Bottoms were done at Rs. 16-12, Rs. 13-12 and Rs. 12-4 per maund respectively.

In the Pucca bales section business has been done for export in Dundee Daisee 2/3 at Rs. 78 per bale. Mills also purchased Dundee Daisee 2/3 at Rs. 81 per bale and Short Group at Rs. 84 per bale. Cuttings N.C. and M.C. were done at Rs. 37 and Rs. 36 per bale respectively.

JUTE MANUFACTURES

Calcutta, March 25.

The jute manufactures market was rather quiet and the quotation for 9 porters was marked down from Rs. 19-2 to Rs. 18-8. After the recent bout of buying secondhand sellers were rather keen to dispose of their holdings as there was not much of overseas enquiries and it was generally felt that there would not be any appreciable rise in prices. It was also given out that the U.S. Government might try to place their orders to the Indian Jute Mills Association direct and thus avoid an artificial rise in prices. Towards the close, however, there has been some buying and most of the lost ground has been recovered. 9 porters Ready are quoting Rs. 18-15, April-June Rs. 18-14 and July-September Rs. 18-10. 11 porters Ready are Rs. 24-14, April-June Rs. 24-14 and July-September Rs. 24-8.

In the Heavy Goods section business passing has not been satisfactory and quotations have been barely maintained, Liverpool Twills being sold on the basis of Rs. 59-8 and Cornsacks Rs. 58-8 for March delivery. Some business was reported in "B" twills at Rs. 57-4 for the same position.

Production figures for the month of February, now available, show that mills are now working normally, and that there is no difficulty in regard to labour. The total figure at 92,436 tons compares with the figure of for January of 78,687 tons. There has been a further decline in production on Government account to 8.2 per cent from 12.5 per cent in January. The average for a long time was around 20 per cent.

GOLD

Calcutta, March 25.

The Bombay gold market was inclined to be firmer in midweek on speculative buying and on the discussions regarding the future status of gold. There has been a reaction in prices towards the close and closing quotations are not very much changed on balance. After being higher at Rs. 71-4. Gold Ready are now quoting Rs. 70-4 and First Settlement Rs. 70-2. Quotations at the end of last week were Rs. 71-2 and Rs. 71-3 respectively. It is significant to note that First Settlement is now quoting at a discount over ready. Sovereigns are now quoting Rs. 50-2.

In the local market rather quiet conditions have been noticeable and closing quotations are at the lowest levels for the week. Gold Ready are quoting Rs. 69-10.

SILVER

Calcutta, March 25.

In sympathy with the weakness in the cotton market the Bombay silver market has been rather quiet and quotations are two to three points lower on balance. Silver Ready closed at Rs. 108-14 after being higher at Rs. 110-6, and First Settlement at Rs. 108-10 after being higher at Rs. 109-14. There has been no change in the London market and the quotation for both Spot and Forward is 23½d. The undertone is quiet.

COTTON

Calcutta, March 25.

The warning by the Finance Member that speculative activity in the raw cotton market would be penalised resulted in a sharp fall in values in Bombay earlier in the week. As a result of the warning it was feared that there would be some restrictions regarding forward trading in the market, but so far no action has been taken by the Committee of the East India Cotton Association. On reports regarding large sales of piecegoods by mills and firmer Karachi advices, there was a rally towards the close though it has not been well maintained. Closing quotations are substantially lower on balance, Jharilla March being Rs. 548 against Rs. 610 at the end of last week, May Rs. 543 against Rs. 607 and July Rs. 547 against Rs. 614. The undertone is steady and it appears that for some time at least, quotations will be fluctuating around the present levels. There is a general tendency to await fresh developments.

PIECEGOODS

Calcutta, March 25.

The piecegoods market has been rather firm and a further rise in prices has been recorded. Demand is unsatisfied. Despite the efforts made by some mills to sell coarser qualities at cheap rates, there is no sign of an abatement in demand so far as dealers are concerned. It is feared that the ban on the export of yarn from the Madras Presidency might have a detrimental effect on the local market. Some of the mills are dependent on imported yarn and if no fresh supplies of yarn are available at cheap rates, cloth prices will necessarily be higher.

Economy
IN KEROSINE

THE LANTERN
Much valuable kerosine could be saved if every user of hurricane lanterns—of whom it is estimated there are more than fifty million in India—observed the following simple rules:

(a) Clean the glass chimney every day. A dirty chimney means that you need a larger flame than necessary.
(b) Regularly trim the wick so that it shall burn evenly.
(c) Set the wick as low as possible—about 1/8" is quite sufficient for normal purposes.
(d) Always see that the cap of your kerosine container is tightly shut, otherwise evaporation will be considerable.

Also be careful not to spill when filling, and above all
DON'T LIGHT YOUR LAMP UNLESS YOU REALLY NEED IT
BURMAH-SHELL

Stock Markets to-day and to-morrow

BENGAL PAPER RESULTS

THE reaction in prices on the stock exchanges in Calcutta and Bombay in the early days of this week came rather as a surprise to both investors and operators. It was generally expected that, with the continued advance in prices and the general support accorded by investors, the upward trend would continue to be in evidence and that there would not be any appreciable setback in prices. It cannot be said that the setback in prices was entirely unjustified. The reports regarding the possibility of freezing or limitation of dividends had a restraining influence. News from the several theatres of war also has not been quite encouraging. The resumption of bombing attacks in N. E. India following the withdrawal of the British on the Arakan Front, together with the reverses in the southern sector of the Russian front, have been disheartening. The advance of the 8th Army in Tunisia, however, had an encouraging effect and most of the lost ground was regained. There was a reaction again on Thursday evening on reports regarding the attack on Chittagong. In Friday's session, operators have chosen to ignore this news and quotations are very near the levels registered on Wednesday. There is not much give in the markets and if only the present conditions continue to prevail it can be expected that the upward trend will be resumed.

* * * * *

The proposal regarding the limitation of dividends is not anything new to the market. It will be remembered that prior to the announcement of the budget proposals for 1943-44, there was considerable speculation regarding the possibility of Government action on these lines and considerable relief was expressed when it was known that there was to be no restriction regarding the payment of dividends by companies. The revival of this proposal at the present stage cannot be of any great significance to the market though the Finance Member's reply in the Assembly recently suggests that the Government of India might possibly consider some action in this regard at a future date. It cannot be anticipated as to how Government will proceed in this matter as it is very difficult to evolve a common principle which will not affect unduly the interests of the shareholders. The suggestion to pay an increase in dividends by way of Defence Savings Certificates or Income-Stock Certificates, to enforce compulsory saving, is quite a possibility though in its administration, a lot of clerical work will be involved and it will not be possible to issue income or defence certificates for small amounts to small shareholders. The best solution can perhaps be found in an increase in the rate of Excess Profits Tax with a provision for repayment of a certain portion of the tax amount after the cessation of hostilities, bearing interest on a low basis. This would provide the Government with sufficient funds and also make it compulsory on the part of certain companies to put in money for rehabilitation purposes in the postwar period.

Whatever the line of action may be, limitation or the freezing of dividends cannot be regarded as a bearish factor for investors as such a policy will only be aimed at preventing a liberal distribution of profits to shareholders and not result in additional tax payment to the Government. In so far as the profits earned are retained with the company, the long-term investor has nothing to be worried about as in lean times it will be possible to distribute dividends out of the accumulated earnings.

* * * * *

The balance sheet of the *Bengal Paper Mills Company, Limited* for the half-year ended December, 1942, has been published. It shows that the Company has made further progress inspite of the difficulties regarding production and the further increase in costs. The net profit, before providing for taxation and depreciation, is Rs. 16,94,760 against Rs. 14,83,609 for the previous six months. The amount set aside for depreciation is higher at Rs. 2,18,032 against Rs. 1,90,344. The provision for taxation is Rs. 9,87,346 (Rs. 8,35,494). The amount of Rs. 1 lakh is again transferred to Raw Materials and Stores Reserve while the General Reserve gets Rs. 1 lakh (Rs. 50,000). The Reserve for Indian Workers Pensions and Gratuities is considerably higher at Rs. 61,400 against Rs. 32,200. The dividend on ordinary shares has been maintained at 12½ per cent and the bonus at 10 per cent. The amount carried forward is Rs. 1,27,773 against Rs. 1,23,290 brought in.

There has been a steady rise in the quotation for the shares recently. At the present moment there are no sellers even at Rs. 180. The yield on the share is substantial being over 6.5 per cent tax-free. It should be said that among paper shares, Bengal Paper ordinaries are easily the best.

* * * * *

British Ceylon Corporation Limited has just declared an interim dividend of 8 per cent on ordinary shares and 6 per cent on preference shares in respect of the year ending October, 1943. This is in accordance with the policy of the directors pursued in regard to the distribution of earnings for 1941-42. As there has been no deterioration in trading conditions so far as this Corporation is concerned, it can be safely expected that the total ordinary dividend in respect of the current year will not be less than that of 1941-42. The accounts for the year ended October, 1942, published recently, show that the Corporation was able to make a net profit, before providing for taxation and depreciation, of Rs. 19,86,675 against only Rs. 4,00,215 for the previous year. After writing off Rs. 1,00,679 (Rs. 91,912) for depreciation, transferring Rs. 1 lakh (nil) to a Special Reserve for Renewals for plant and machinery, Rs. 10,000 (same) to Passage Reserve, Rs. 67,500 to Dividend Equalisation Reserve and Rs. 7,81,670 (Rs. 35,000) to Taxation Reserve, final dividends of 8 per cent on ordinary shares and 6 per cent on preference shares making the total dividends to 32 per cent on the ordinary and 24 per cent on the preference shares for the whole year have been paid.

The amount carried forward is Rs. 30,344 against Rs. 3,517 brought in. The sum of Rs. 45,000 was transferred from the Dividend Equalisation Fund on the last occasion.

At Rs. 18 cum-dividend the return on the basis of the latest dividend is over 13 per cent tax-free.

* * * * *

Steel Products, Limited is to issue preference shares of Rs. 10 each carrying interest at five per cent per annum for Rs. 3 lakhs at par. The additional capital is required for expanding the capacity of the works. The Company is at present very busy on war orders. As earnings at the present moment cover many times the interest on the preference shares the offer of the share at par is attractive for the investor.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Mar. 26.

RATHER irregular conditions have been noticeable on the Calcutta Stock Exchange during the past week. The volume of business transacted is not very much lower and quotations for investment securities have not been very much affected, but the wide fluctuation in prices for the popular speculative counters like Indian Irons and Steel Corporations have given rise to the suggestion that at least for the time being, the highest levels have been touched and that, without any further favourable developments, it will not be possible to look forward to any substantial improvement in values. The resumption of bombing attacks by the Japanese in South-east Bengal have been mainly responsible for the irregular condition of markets during the past few days. For a time, the report regarding the successful assault by the 8th Army on the Mareth Line defences had an encouraging effect and Indian Irons were marked higher at Rs. 35-8 from Rs. 34-8 the lowest level touched earlier in the week. Towards the close on Thursday, however, on the receipt of news regarding the air attack on Chittagong quotations were easier, Indian Irons being around Rs. 35-2.

Very little business has been passing in the giltedged securities section though quotations have been fully maintained. Except for the counters for which the Reserve Bank are sellers, there are no offerings of terminable loans. 3½ per cent paper is sticky round Rs. 94 and 3 per cent Paper at Rs. 81-2. Among terminable loans, there were buyers of 3 per cent 1946 at Rs. 103-1 and 3 per cent 1949-52 at Rs. 100-7. 3 per cent 1963-65 were dealt with in at Rs. 95-14. No transactions have been recorded in provincial loans.

With the scarcity of offerings of giltedged securities and public bodies' debentures, greater attention has naturally been paid to first-class preference shares for which also sellers are scarce. Among first-class jute mill preference shares, *Delta* were noted at Rs. 140, *Hastings* at Rs. 146, *Lansdowne* at Rs. 144, *Howrah* 'A' preference at Rs. 152 and *Howrah* 7 per cent preferences at Rs. 168 (small lot), *Dalmia Cement* 6 per cent preferences were crossed at Rs. 135 while *Steel Corporation* changed at the higher level of Rs. 125. *Dunlop Rubber* Second Preferences were done at Rs. 113 and *Muir Mills* at Rs. 80 ex-dividend.

Only a few transactions were recorded in bank shares. *Central Bank* were Rs. 62 ex-dividend and *Reserve Bank* Rs. 106-8.

Cotton shares have not been very much affected though *Bengal-Nagpur* were slightly lower at Rs. 32-12, *Dunbar* at Rs. 284 and *Bowreah* at Rs. 500. After being lower at Rs. 400, *Muir Mills* recovered to Rs. 410. *Cawnpore Textiles* were not very much changed at Rs. 19-4, *Elgin Mills* at Rs. 53-8 and *New Victoria* at Rs. 8-3. A number of transactions were recorded in *Jiyajeerao Cotton* at Rs. 125 and *Kesoram* at Rs. 18-7.

In the Coal section, rather quiet conditions were noticeable though there was no appreciable change in rates. *Amalgamated* were done at Rs. 35-3, *Bengal* at Rs. 441, *Bengal-Nagpur* at Rs. 34-12, *Burrakur* at Rs. 14, *Dhemo Main* at Rs. 13-6, *Equitable* at Rs. 35-6, *Hurriladih* at Rs. 16-14 and *Standard* at Rs. 21. *New Beerbhoom* were slightly higher at Rs. 17-14 and *New Bansdeopur* at Rs. 29-4.

In the Jute section, after the recent advance in prices, there was some profit-taking. *Adamjee* were Rs. 30-12, *Bally* Rs. 299, *Champdany* Rs. 203, *Chitavalsah* Rs. 20-5, *Ganges* Rs. 415, *Howrah* Rs. 61, *Kamarhatty* Rs. 550 and *Kanknarrah* Rs. 444. *Nellimarla* were steady at Rs. 21 and *Nuddea* at Rs. 86-4. *Soorah* were absorbed at Rs. 14-10. On the announcement of the bonus proposals, *Calcutta Jute* are higher at Rs. 39-4.

In the Engineering section, Indian Irons and Steel Corporations have been fluctuating within rather wide limits. Early in the week they were marked down as low as Rs. 34-8 and Rs. 24-8 respectively. On Wednesday there was a recovery to Rs. 35-8 and Rs. 25-8 but there was a reaction on Thursday afternoon to Rs. 34-14 and Rs. 24-14 respectively. *Bhartia Electric Steel* were recorded at Rs. 16-11, *B. I. Construction* at Rs. 12-3 and *Braithwaite* at Rs. 9-2. *Indian Steel & Wire Products* deferreds were Rs. 33-2 and *Kumurdhubi Engineering* Rs. 7-9. *Marshalls* and *National Iron* were a shade easier at Rs. 7-8 and Rs. 3-9 respectively. *Jessop* were higher at Rs. 22-6 while *Indian Galvanizing* were not very much changed at Rs. 39-11. *Arthur Butler* have been noted at Rs. 14-12. A dividend of 10 per cent has been declared for the year ended October 1942.

Sugar shares were firm with *Bharat* at Rs. 16-2 and *Carew* at Rs. 16-10. *Cawnpore* were rather neglected at Rs. 31-8. *Champarun* were steady at Rs. 28-2 and *New Savan* at Rs. 14-8. *Purtabpore* and *Samastipore* were higher at Rs. 14-12 and Rs. 15 respectively. There has been a further rise in the quotation for *U. P. Sugar* at Rs. 19-7 ex-dividend.

Tea shares continued firm with *Hasimara* marked higher at Rs. 56-4 and *Lackatoorah* at Rs. 27. *Bishnauth* were quiet at Rs. 34-12 and *Hattikhira* at Rs. 30-4. *New Savan* were done at Rs. 35-4, *Hantapara* at Rs. 14-4 and *Tezpore* at Rs. 14-8. *Banarhat* changed hands earlier in the week at Rs. 808 and *Dufflaghur* at Rs. 18-5.

In the Miscellaneous section, *B. I. Corporation* were lower at Rs. 213, while *Indian Copper* were steady at Rs. 2-5. *B.I.C.* were uninteresting at Rs. 6 with sellers for *B. Ceylon Corporation* at Rs. 18. *Calcutta Tramways* changed hands at Rs. 15-12 and *Dunlop Rubber* at Rs. 49-8. *Ganges Rope* were Rs. 405 and *Great Eastern Hotel* Rs. 240. *Indian National Airways* preferred ordinaries changed hands at Rs. 12-8 and *National Insulated Cables* at Rs. 11-5. *Assam Saws* were steady at Rs. 4-8 on expectations of a higher dividend. *Midnapore Zemindary* were Rs. 77 and *Humayan Properties* ordinary Rs. 9-12. *Alkali and Chemical* were very firm at Rs. 34-8. *Bengal Chemical* had buyers at Rs. 415. Among Paper shares, *India Paper Pulp* were unchanged at Rs. 177-8, while *Mysore Paper* were well held at Rs. 24. *Star Paper* were done at Rs. 20 and *Titaghur* Rs. 24.

BOMBAY STOCK EXCHANGE

(From Our Correspondent).

Bombay, Mar. 25.

The local stock exchange has passed through another week of easy conditions. Though the Budget proposals did not affect the markets adversely, the observations regarding the limitation of dividends by the Finance Member in the course of the debate on the Finance Bill seem to have nullified the effect of the budget proposals. Further, the news from the Arakan front is indifferent. Again, there has been a renewal of enemy air attacks on one or two places in South-East Bengal. It may be remembered that last week cotton speculators were severely reprimanded for their action in unduly raising cotton prices and that prices of almost all shares went down with the relapse in the cotton market. There was a slight rally in mid-week but the close has again been irregular.

3½ per cent Government Paper were unchanged at Rs. 94.

Mill shares recorded a further decline in prices consequent on the Finance Member's reference to restriction of dividends and on the rather unfavourable news from the Arakan front. *Ahmedabad Advance* were Rs. 495 (Rs. 530-4). *Bombay Dyeing* have gone down by nearly 110 points to Rs. 1,870 as against Rs. 1,982-8 on last Thursday; *Central India* were Rs. 465 (Rs. 487); *Century* Rs. 755 (Rs. 796); *Colaba Land* Rs. 244-8 (Rs. 261); *Gokak* Rs. 390 (Rs. 408); *Indian Bleaching* Rs. 256 (Rs. 258); *Kohinoor* Rs. 735 (Rs. 794); *Phoneix* Rs. 850 (Rs. 875); *Simplex* Rs. 302 (Rs. 313); and *Swadeshi* Rs. 597 (Rs. 607).

Steel shares were also marked lower. *Tata* Deferreds were lower at Rs. 1,827-8 (Rs. 1,847-8) and *Tata* ordinaries Rs. 371 (Rs. 381). *Indian Iron* were Rs. 35-6.

COMPANY REPORTS

ARRAH-SASARAM LIGHT RAILWAY COMPANY, LIMITED

Audited Accounts for the half-year ended 30th September, 1942:—

Gross Earnings.—Gross Earnings for the half-year were Rs. 2,05,211, which is Rs. 60,619 less than the earnings of the corresponding period ended 30th September, 1941. There is a decrease of Rs. 5,176 or 2.90% under Coaching and of Rs. 55,369 or 64.25% under Goods. The decrease in Coaching is due to 33,537 less passengers travelling, and in Goods to a reduction in Coal and Jagree traffic coupled with heavy Railway Clearing Accounts Office debit adjustments on through traffic account.

Working Expenses.—The Working Expenses for the half-year were Rs. 1,32,698 *plus* Rs. 25,000 set aside to Renewal Reserve, making a total of Rs. 1,57,698, which is Rs. 3,844 less than the figure for the corresponding period ended 30th September, 1941.

Nett Earnings.—The Nett Earnings for the half-year were Rs. 47,513 a decrease on the figure for the corresponding period ended 30th September, 1941, of Rs. 56,775.

Development Reserve Account.—A sum of Rs. 15,000 has been transferred back to Net Revenue Account at the 30th September, 1942, reducing the balance of the Reserve to Rs. 2,00,000.

Available Balance.—The balance available for distribution is:—

	Rs.
Net profit for the half-year	24,941
Balance brought forward	29,221
Total	54,162

Dividend.—The Directors recommend that the available balance be disposed of as follows:—

	Rs.
Payment of a dividend for the half-year ended 30th September, 1942, at the rate of 4% p.a. less Income-Tax costing	33,217
Balance to be carried forward	20,945
Total	54,162

Managing Agents.—Messrs. Martin & Co.

BUKHTIARPUR-BIHAR LIGHT RAILWAY COMPANY, LIMITED

Audited Accounts for the half-year ended 30th September, 1942:—

Gross Earnings.—Gross Earnings for the half-year were Rs. 1,69,495 which is Rs. 45,086 more than the earnings of the corresponding period ended 30th September, 1941. There is an increase of Rs. 60,244 or 81.11% under Coaching and a decrease of Rs. 15,308 or 30.87% under Goods. The increase under Coaching is due to the Rajgir Mela.

Working Expenses.—The Working Expenses for the half-year were Rs. 85,200 *plus* Rs. 13,539 set aside to Renewal Reserve, making a total of Rs. 98,739 which is Rs. 2,389 less than the figure for the corresponding period ended 30th September, 1941.

Nett Earnings.—For the half-year were Rs. 70,756 or Rs. 47,475 more than the figures for 1941.

Available Balance.—The balance available for distribution is:—

	Rs.
Net Profit for the half-year	30,349
Balance brought forward	27,526
Total	57,875
Less—Transferred to Development Reserve Account	18,000
Total	39,875

Dividend.—The Directors recommend that the available balance be disposed of as follows:—

	Rs.
Payment of a Dividend for the half-year ended 30th September, 1942, at the rate of 3% per annum *less* Income-Tax costing	13,781
Balance to be carried forward	26,094
Total	39,875

Managing Agents.—Messrs. Martin & Co.

(Half-yearly meeting, held on 18th March, 1943 at 10-35 a.m.)

CHAPARMUKH-SILGHAT RAILWAY COMPANY, LIMITED

Audited Accounts for the half-year ended 30th September, 1942:—

Length of Line.—The route mileage of line open for traffic at the end of the half-year was 50.81 miles.

Mileage opened for traffic during the half-year .. .. .. *Nil.*

Gauge .. .. .. 3 ft. 3⅜ ins.

Date of first opening for traffic .. 30th March, 1920

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 33,84,401.

The Capital Expenditure during the half-year was *nil.*

Earnings.—The amounts and statistics of earnings incorporated in these accounts are as advised by the Bengal and Assam Railway and are qualified by their remarks that "Owing to non- and late receipt of station returns due to abnormal conditions now prevailing on the A. B. Zone, the actual traffic for the half-year ended 30th September, 1942, could not be fully included in the accounts. The figures shown in the statement actually represent the earnings of the first five months as far as the returns of these months were received. The traffic will, however, be incorporated fully in the annual accounts."

(*a*) *Gross Earnings.*—The Gross Earnings during the half-year were Rs. 38,376. During the corresponding period in 1941 they were Rs. 93,407.

The decrease was Rs. 55,031 or 58.90%.

Expenditure.—The Working Expenses are, as usual, 50% of the Gross Earnings.

Net Earnings.— The Net Earnings were therefore Rs. 19,188 against Rs. 46,703 in 1941, exclusive of interest on loans.

Availalbe Balance.—The balance available for distribution is:—

	Rs.
Net Profit	37,789
Balance brought forward	17,652
Total ..	55,441

As in previous years the guaranteed profits of the Company are reduced by the amount of Super-Tax paid and thus do not permit of payment in full of a dividend at the rate of 3½% per annum.

Dividend and Balance.—The Directors recommend that the available balance be disposed of as follows:—

Payment of a net dividend of Rs. 36,449 as under:—

	Rs.	Rs.
3½% on Share Capital Rs. 31,00,000 for the half-year		54,250
Less—Company Super-Tax ..	5,086	
Company Income-Tax ..	12,715	
		17,801
Net Amount for distribution ..		36,449
Balance to be carried forward ..		18,992
Total ..		55,441

The dividend, if sanctioned at the General Meeting, will be paid on receipt of the amount due from the Government of India.

The dividends paid for the two preceding half-years were at the rate of 3½% per annum, *less* tax.

Managing Agents.—Messrs. Martin & Co.

Authorised Capital—Rs. 33,00,000; *Issued and Subscribed—Rs.* 31,00,000 *in* 31,000 *shares of Rs.* 100 *each fully paid up.*

Synopsis of the balance sheet as at 30th September, 1942.

THE MAHALAXMI COTTON MILLS, LIMITED.

NOTICE

is hereby given that the Annual General Meeting of the above Company for the year ending 30th June, 1942 will be held at 15, Clive Street (2nd floor), Calcutta, the registered office of the Company on Thursday, the 15th April, 1943 at 2 p.m. to transact the following business:—

1. To receive, consider and adopt the Directors' report and the audited accounts and Balance Sheet for the above-mentioned year.
2. To declare dividend.
3. To elect Directors.
4. To appoint auditors and fix their remuneration.
5. Miscellaneous.

NOTICE is hereby given that an extraordinary general meeting of Mahalaxmi Cotton Mills Limited will be held at its registered office at No. 15, Clive Street, in the town of Calcutta on Thursday the 15th day of April, 1943 at 3 p.m. in the afternoon for the purpose of considering and if thought fit passing the following resolutions which will be proposed as special resolutions:—

"1. Resolved that the appointment of Messrs. H. Datta & Sons Limited as the Managing Agents of the Company for a period of 20 years on and from the 16th day of March 1943 on the remuneration and terms, and conditions set forth in the draft agreement submitted to the meeting and subscribed for the purpose of indentification by the chairman thereof be approved and the directors do forthwith carry the same into effect".

"2. Resolved that the regulations contained in the printed documents submitted to the meeting and for the purpose of indentification subscribed by the chairman thereof be approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all the existing articles thereof".

"3. Resolved that the Capital of the Company is Rs. 20 lakhs divided 80,000 shares of Rs. 25 each".

H. Datta & Sons Ltd.
Managing Agents.

15, Clive Street, Calcutta.

Dated the 16th day of March, 1943.

THE MODERN MILLS, LIMITED.

NOTICE is hereby given that a General Meeting of the holders of debentures of the abovenamed Company secured by a Trust Deed, dated the 30th day of November, 1935, and made between the said Company of the one part and Dattatraya Narayan Sirur and Pingle Venkat Rama Reddy as Trustees of the other part will be held at the Regisered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Monday the 19th day of April, 1943, at 1-15 p.m. (S.T.) for the purpose of considering and if thought fit passing the subjoined Resolution as Extraordinary Resolution in accordance with provisions contained in the Fifth Schedule to the said Trust Deed.

RESOLUTION.

"That this meeting of the holders of the debentures of the Modern Mills, Ltd. secured by a Trust Deed, dated the 30th day of November, 1935, hereby assents to, approves and sanctions the modification of the rights of the holders of the said debentures and of the provisions of the said Trust Deed and the debentures (a) by agreeing that the rate of interest on the principal monies payable under the said debentures secured by the said Trust Deed shall as from the first day of May 1943 be 5 per cent per annum, in lieu of 6½ per cent per annum; (b) by extending the date for repayment of the said debentures from the first day of November, 1947, to the first day of November, 1952, and (c) by accepting a modification of the Company's right to redeem all or any of the debentures under Clause 29 of the Trust Deed so that the first date on which such opinion can be exercised shall be the first day of November, 1947, in lieu of the first day of May 1942, such modifications having been proposed by the Company and assented to by the present Trustees and hereby authorises such Trustees to concur with the Company in executing an agreement for effecting the above and other purposes in the form of the draft submitted to the Meeting and for the purpose of identification subscribed by the Chairman thereon with such variations or additions, if any, as may be deemed requisite or expedient and may be approved by the present Trustees".

A copy of the proposed draft Agreement may at any time during business hours before the Meeting be inspected at the Office of the Company.

By Order of the Board,
N. SIRUR & CO., LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay, 12th March, 1943.

N.B.—Holders of Bearer Debentures proposing to attend the Meeting must bring with them all their Bearer Debenture Bonds.

STEEL PRODUCTS LIMITED

NOTICE

Notice is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the Company will be held at the registered office of the Company at 9, Clive Street, Calcutta on Tuesday the 6th day of April 1943 at 2-30 p.m. to consider and if thought fit to pass with or without modification the following Resolutions as "special Resolutions":—

I. (i) "That the Capital of the Company be increased by Rs. 3,00,000/- by the creation of 30,000 new shares of Rs. 10/- each.

(ii) That such new shares be called "Preference Shares" and that the holders thereof be entitled to a fixed cumulative preferential dividend, at the rate of 5% per annum tax free on the capital paid up thereon respectively.

(iii) That the Company is to be at liberty from time to time to create and issue further Preference Shares ranking in all respects **Pari Passu** with the said Preference Shares.

(iv) That the Preference Shares shall not confer any right of voting at any General Meeting of the Company unless a resolution is proposed affecting the rights and privileges of the holders of the Preference Shares.

(v) That in the event of the Company being wound up, the holders of the said Preference Shares and of any other shares entitled to rank **Pari Passu** with them, shall be entitled to have the surplus assets of the Company applied in the first place in repaying to them the amount paid up on the Preference Shares held by them respectively and any arrears of dividend up to the commencement of the winding up whether declared or not, but shall not be entitled to any other participation in any surplus assets.

(vi) The Directors be and are hereby authorised to issue the said shares to such persons to be paid up by such instalments or otherwise as the Directors may think fit, without being bound to offer the same or any of them to the existing members of the Company."

II. The Directors will be at liberty to pay such commission brokerage, etc. as may be paid in accordance with the provisions in that behalf in the Articles of Association of the Company.

For STEEL PRODUCTS LIMITED,

K. L. Khaitan,

GENERAL MANAGER.

Calcutta, 2nd March, 1943.

9, CLIVE STREET.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is no change to report in the short loan market, interbank call money being nominally quoted ½ per cent in Calcutta and ¼ per cent in Bombay. A somewhat different state of affairs is suggested by this week's treasury bill results. While the offer of tender treasury bills was Rs. 8 crores as in the past few weeks, applications received on March 30 came to the surprisingly small total of Rs. 1,80¼ lakhs. Thus, the actual tenders put in were less than 25 per cent of the amount offered. There is no reason to infer from this that any sudden stringency has developed in the money market. For, the fact of the matter is, as we have pointed out on more than one occasion in the past, that demand for each week's offer of treasury bills is more dependent upon the amount of treasury bill maturities of that week than on the state of the money market. Between March 23 and April 4, total treasury bill maturities are of the order of only Rs. 3¾ crores. During a period when the inflow of funds from treasury bill maturities is but a thin stream, we cannot expect a heady flood to feed treasury bills. Moreover, support from special quarters was unlikely this week as, during the last week, the Imperial Bank seems to have taken a big slice of additional treasury bills as is shown by the increase in the Bank's investments from Rs. 123.30 crores to Rs. 127.98 crores. Against Rs. 1,80¼ lakhs tendered, the Reserve Bank accepted applications for Rs. 1,63¼ lakhs, rejecting the balance as unsuitable. This selectiveness has resulted in the maintenance of the average rate of accepted tenders at Rs. 1-1-11 per cent per annum. The amount offered for next week's treasury bills tender day is Rs. 8 crores; and, as maturities in the first half of April are somewhat on the small side, the auction on April 6 may not also evoke much keen bidding. This is all the more reason why the Reserve Bank should reject unsuitable tenders and make it clear to the market that no increase in the treasury bill rate can be tolerated, particularly at the fag-end of the busy season. Tap bills sold between March 24 and March 29 amounted to Rs. 64 lakhs. Sales of three months intermediates will continue at the unchanged rate of Rs. 99-12.

The returns of the Reserve Bank for the week ended March 26 disclose appreciable and important changes. Payments made by the British and Allied Governments to the Indian Government appear to be about Rs. 25 crores. Such a large payment has been utilised for strengthening sterling securities in the issue department and for reducing rupee securities in the issue department. Sterling securities in the issue department are higher by Rs. 24.95 crores, while rupee securities have declined by Rs. 19.95 crores. There has thus been a net currency expansion of Rs. 5 crores against sterling securities. Active note circulation is up by Rs. 4.25 crores. In spite of utilising Rs. 19.95 crores for the cancellation of "ad hoc" treasury bills now withdrawn from the Reserve Bank, the deposits of the Central Government with the Reserve Bank are higher at Rs. 2¼ crores. This lends support to our conclusion that India must have received Rs. 25 crores on account of inter-governmental transactions in the last week. Such a large payment is, probably, due to settlements made in preparation for finalising the year-end accounts. Balances of provincial governments with the Reserve Bank also show a sharp rise of Rs. 3.64 crores. On the other hand, deposits of member banks have sunk sharply by Rs. 8 crores. A good part of this shrinkage in the deposits of banks is connected with the fall in the Imperial Bank's cash balance from Rs. 32.10 crores to Rs. 27.96 crores.

A most noteworthy point that needs to be stressed here is that, while a considerable amount of sterling securities was withdrawn from the Reserve Bank in the first week of January for utilisation towards the repayment of the 3½ per cent India sterling stock and further small amounts were taken in connection with other sterling obligations, all this loss has been more than made up by the last week of the quarter. In the last week's issue, we referred to the weekly average of sterling payments received by the Reserve Bank and of the increase in active note circulation. The receipt of Rs. 25 crores in sterling in the week ended March 26 has the effect of sharply pulling up the weekly average for sterling receipts. No appreciable change has been made in the weekly average of active note circulation as only a small part of last week's sterling receipts was utilised for currency expansion, the balance being the plus against the minus caused by the withdrawal of rupee securities.

The exchange market has been steady, with business on a small scale.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are sellers of T.T. New York Ready at Rs. 332⅜.

Banks are buyers of T.T. New York Ready at Rs. 329½. (For the correction noted in the rate, we are indebted to an esteemed official of the Chartered Bank.)

Interbank call money remains unchanged at ½ per cent in Calcutta and ¼ per cent in Bombay, lenders.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, March 30, 1943. Total amount offered was Rs. 1,80,25,000. Tenders at Rs. 99-11-6% and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 1 crore 63 lacs 25 thousand, the average rate of accepted tenders being Rs. 1-1-11% p.a.

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of three months' Government of India Treasury Bills will be received on Tuesday, April 6, 1943 in Bombay up to 11 a.m. (ST) and up to the close of business on Monday, April 5, 1943 at other centres. Successful tenderers should make payment on Friday, April 9, 1943. Other conditions are as usual.

Three months Intermediates will be sold from March 31 to April 5, 1943 at Rs. 99-12-0%, subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from March 24 to March 29, 1943 amounted to Rs. 64,00,000.

During the week ended March 26, 1943, Government of India Treasury Bills for Rs. 22,92,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

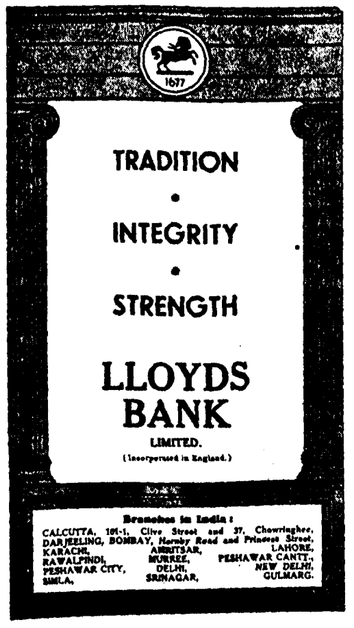
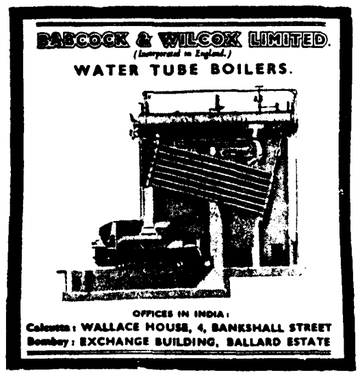
Finance Abroad

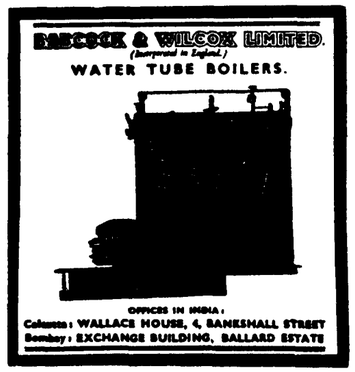


Thursday Morning.



CHANGES in rates are hardly to be expected when control is pervisive. Restoration of equilibrium may be difficult, but stability is more than temporary. The London money market remains easy, the borrowers count on the usual supply of funds and the Government's revenue position must be improving. By the end of November 57.61 per cent of the estimated revenue had been realised. Non-tax revenue in 1942-43 showed a tendency to rise fast. On the basis of the returns available total tax revenue for the year should be over £2,800 millions. Most significant is the share borne by indirect taxation. Customs and excise may have yielded 10 per cent more than the estimate because the average revenue per day was £2.41 million against the estimate of £2.21 million per day. Expenditure, including that on war, up to end-November, was put at £14.6 million per day against the estimate of £14.68 million made by the Chancellor. The proportion of borrowing to taxation in Britain has, naturally, risen, but borrowing has been supported by the steady increase in note circulation Public deposits may rise or fall, but bankers' deposits with the Bank of England reflect the growth of deposits. The Bank has added to its Government securities during recent weeks, just as the Federal Reserve Board has added to its not-so-large holding. The increase in British bank resources is of direct assistance to the Treasury which has spent less than Germany and has, therefore, a margin still left to draw upon. In its usual report on conditions in December, the Trust of Insurance shares calls our attention to the disparity in war expenditure. It quotes an estimate of Mr. Ernest Stein as to total war outlay by the spring. The Axis will have spent £41.3 billion and Germany alone would have spent £29.8 billion. Owing to their larger resources, the United Nations would have spent £57.2 billion of which Britain alone would have spent £15.04 billion. Conversion into the same terms proves that the United Nations having spent 38 per cent more have a definite lead. The strain on Germany is indicated by the same figures. Obviously the figure of £15.04 billion for the U.K. exceeds the net addition to the National Debt in three and a half-years of war, and the real cost is derived in part from the increase in straight taxation. That German war effort in the first two years was greater was shown by the calculations of all economists, but the U.S.A.'s war bill is still growing as plans for shipping, agriculture, etc., undergo modifications. The Senate's rejection of a proposal to collect revenue in advance, makes no difference to plans for a bigger army, able to organise invasion. The Allies' problem is not finance because totalitarian control is in force. As between June 1942 and March 1943 there has been little or no change in the prices quoted for British Funds. Home Industrials have recently shaped better and in the case of Electrical and Mechanical Industries, the rise is more or less continuous since the annual meeting. Reference was made recently to a drop in aircraft shares as Government Control is extending. Rubber shares have weakened since last week and the easier tone in tea shares seems difficult to explain after the note on the renewal of the restriction agreements. Steady advance in the quotations for rayon shares is similar to the rise in other textile shares in London. War news alone cannot have led to this improvement, but the outstanding feature is the recovery in oil shares.

The renewed attention paid to gold is due to the comment on the Keynes plan. Gold is keeping its fundamental position and the ultimate agreement as to the conservation or distribution is not impossible. The lending arrangements of the future have been referred to. Transfer of gold for monetary reconstruction is not ruled out, and the recovery in the world output to over 40 million ounces per annum, is indicated: ergo South Africa would remain prosperous. Developing mines are, therefore, in the limelight. Right through February and March, gold shares have risen because it is recognised that gold will not depreciate. The value of gold shares quoted in London was put at 700 million in 1939, and a sharp fall arose on account of uncertainty. That uncertainty is at an end; so Indian bullion market operators are among the beneficiaries of the inter-Allied plan for exchange stability. The U.S.A. holding about three quarters of the worlds gold is interested in keeping the price at the familiar level of $35 to the ounce which means that the London price will stand at 8 guineas to the ounce. The modified gold standard could be worked according to the old rules if inflation in the Allied countries is strictly controlled; and gold mining deserves the stimulus of the present premium after the war depression. That is the aim and end. Gold mining shares are not likely to be sold even on the best advice because they will pay their keep. In fact, revival after the war is ensured in the case of both Australian and Canadian mines, and the longer working of the old Kolar mines is also secured by an Allied assurance.



The little that has appeared in the press supports the hope that the other governments will endorse the main British proposals. The Treasury plan is to appear next week, and other governments are likely to pick points. Doubts as to the future of sterling and the possible appreciation of the rupee, should recede into the background. Less will be heard about the ways of using India's sterling balances and the Keynes plan will serve to choke discussion about the need for India to get gold at once. The bullion market has been quiet rather than firm, since cotton has been dropping steadily and the share market has shied violently at the suggestion of dividend limitation cum-forced-saving. The impulse to buy bullion has died out after the pronounced reaction in commodity markets, though it is clear that rates will not come down because official ceilings can never apply to bullion. The restoration of world trade after the war, should increase the absorption of precious metals after the war, and pent-up demand may be a cure for postwar inflation. Large-scale buying of precious metals may have a real deflationary effect and should be helpful to mining companies after the war when the demand for base metals may fall away.

Among the *communiques* of recent weeks was one dealing with exit permits. Attention is drawn to the sale of permits by the Nazis through neutrals in return for foreign exchange. The Nazis are clearly at their wits' end and are trying to make money out of the eagerness of people to get out of Occupied countries. In spite of real sympathy for the fugitives, actual and intending, the Allied Governments regard the payment of large sums, as high as £5,000 per head, as coming within the scope of trading with the enemy, and describe payment in a neutral currency as reprehensible. The enemy has organised a new kind of slave traffic from which the Nazi war-chest benefits. The persons engaged in furthering the traffic will be notified and penalties including prosecution will apply in British India to those who interest themselves in the emigration of people from Germany or occupied countries. Obviously, the Germans cannot get neutral currencies for goods. Exports cannot be provided as before, and the enemy has recourse to unusual methods through its agents. Even if those for whose benefit the money is paid are aggrieved the Allies including India, cannot countenance the enemy's traffic in exit permits. Who will be affected, and how, can be readily conjectured; and exchange restrictions here will, doubtless, be tightened in order to prevent acquisition of foreign currency for non-commercial purposes. Another notification dealing with Japanese occupied areas may be mentioned here. The N.E.I., Borneo and Malaya are covered by the trading with the enemy regulations for over a year. The Cocoskeeling islands alone of the Straits Settlements, are excepted but not Sarawak or Lanuan. The late recognition of enemy occupation is not due to the continuance of trade, since the Indian trade returns for many months, show no entries against the countries mentioned. The most important, however, of recent notification, is one giving permission to all persons for import of mineral oils from Iran, Iraq, Bahrein, Koweit and the States of the Trucial Chiefs of Oman under the Open General License. Mineral oil imports in bulk in tankers into India should increase hereafter and it is quite possible that large exports of silver may be permitted as the Middle East, in spite of being in the sterling area, is wholly partial to metallic coin. There is no reference to Saudi Arabia and the main result may be that the U.S. oil producers may be at a slight disadvantage as against British oil companies.

Editorial Comments

The Place of Gold

The future of gold has once again come to the forefront of public discussion. While the outbreak of war and the exigencies of national finance during wartime had till recently shifted attention from the position and prospects of gold, the general feeling that the war is nearing its end has speeded up those who have been engaged in the study of the economic problems of the post-war period. The publication of some of the proposals put forward by Britain for the regulation of international finance has had the effect of stimulating interest in the future of gold. The suggestion that the international bank, which will be left in charge of the work of regulating international financial relations, should maintain its accounts in terms of a fictitious unit called bancor and that national currencies should be linked to the bancor has raised doubts as to whether the position of gold will be the same after the war as it was before it. It is true that some of the commentators on the British proposals have described them as a charter for gold. But the fact remains that the position of gold in international exchange is meant in the British proposals to be different from what it was in the past. As we pointed out in our comments on this subject a fortnight ago, the British proposals contemplate a position for gold, in which creditor countries will not be free to demand payment in gold, while countries in possession of gold are not only free to utilise their gold for purchases abroad, but are cordially invited to do so. Since the value of a monetary metal, as of any commodity, depends not on its absolute scarcity but relatively to demand, the proposal restricting the right of a nation to demand gold in payment of its dues will, it is apprehended, detract from the value of gold in the future.

Obviously, the future of gold will depend to a large extent on its place in the system of international exchanges in the post-war period. And on this question, any assumptions about the intentions of Britain would be premature. Mr. Churchill's speech on the British proposals is due in a week; and it may be reasonably hoped that it will not be long before American comments thereon will be made known to the world. Only the end of the war will show the progress of thought on these momentous proposals and the form in which they will be adopted. Meanwhile, it is necessary that public opinion in this country should be appraised of the broad issues in connection with gold and the position that this country occupies in relation to the international gold problem. Generally speaking, scepticism about the future of gold cannot make easy progress. More than two millenia of tradition and probably ingrained traits of individual and national psychology are strongly in favour of the continuance of the position of gold as a monetary metal.

But such scepticism can easily be carried too far. One must realise that, from whatever standpoint we may regard it, the position of gold has not been the same throughout history. From the standpoint of human psychology, the withdrawal of gold from circulation has weakened the appeal of gold to human cupidity. Of the brightness and sheen of gold, of which we read in text-books of economics, the average man today knows nothing. Gold lies in the vaults of the central banking institutions and it means no more to him than the share scrips and title-deeds of a Hindu millionaire to a junior member of his family. It should be possible now after exactly half a century after the demonetisation of silver that the undivided power of gold in international finance, far from strengthening it, might well prove to be its undoing. So long as silver enjoyed the status of a monetary metal, changes in the monetary stocks of gold did not have their full impact on international trade or the international exchanges. Their force was spent, to some extent, in altering the relative value of silver and gold. But the demonetisation of silver left international finance with one consul instead of two. International trade became sharply sensitive to changes in the stocks of gold and their distribution among the nations. It became enormously important that the 3 per cent addition to gold stocks which Gustav Cassel reckoned as necessary for maintaining the normal rate of activity in world trade and economy should continue to be made. And the nations had to be asked to economise in the use of gold through the adoption of the gold exchange standard. The scarcity of gold stocks was followed soon after by the accentuation of their maldistribution. The machinery which had been instituted to ensure economy in gold was serviceable for doing without gold as far as possible.

Developments in the political sphere, too, have all the time been in the same direction. The totalitarian nations have found it as easy politically as economically, to carry on their trade relations with their neighbours in such ways as to minimise their need for gold. In this, as in other respects, the totalitarian countries signify only an exaggeration of tendencies which are common to many countries. For, other nations, too, had been learning to do without gold in contexts in which formerly lack of gold would have been wholly paralysing. The increasing vogue of bilateral trade, which was the arresting feature of the decade since the great depression is a direct challenge to the position of gold. While, no doubt, bilateral trade is by no means a satisfactory mode of trading with foreign countries and is bound to be changed out of recognition, if not altogether discarded, the lessons that have been learned in putting checks on the absolutism of gold in international trade will not be easily forgotten. Thus confidence in the future of gold may easily be overdone.

It will be seen from what we have said already that the place of gold in national and international finance has been undergoing considerable changes and that these changes hold the distinct threat that gold may be deprived of its position in international finance if gold does not, to put it crudely, behave itself. We have said that the extent to which the psychology of the average individual can prove an obstacle to the elimination of gold can be, and is often, exaggerated. The attitude of the individual can impede such a revolutionary change only when two conditions are satisfied; firstly, that his attitude to gold is such that his reactions to any change in the position of gold are extreme and violent, secondly, that the economic and political framework in which he lives enables him to act effectively against any such change. Neither of these conditions is satisfied. On the other hand, there have been, broadly speaking, three trends of developments, which are interconnected but which are nevertheless distinguishable. First there are the changes in the political sphere. In countries which are totalitarian or inclined towards totalitarianism the control of the State over economic life is complete. In the others, the general recognition of the need for co-ordination of economic activities and the insistence that the State shall accept and discharge its responsibilities for the economic security of its citizens has brought about a frame of mind in the public in which it will hardly grumble if the position of gold is altered on the ground that it is a disturber of economic peace. Freedom of economic life is not as closely bound up with gold as it is often thought to be.

In the economic sphere, one may usefully make the distinction between the financial and the broadly economic. In the sphere of internal finance, the technique of dispensing with gold or reducing the requirements of gold to a minimum has been well-nigh perfected. It is necessary to make special mention of this because the perfection of this technique has nothing to do with the nature of the economic or political organisation. Quite apart from the question whether a Government is democratic or not, or how far public opinion is prepared to go in the matter of restriction on freedom of private enterprise, it has been recognised that there is no such thing as an automatically working machinery of currency and credit, that a degree of management is inevitable and indispensable in currency affairs and that it is far better to accept it frankly and provide for complete management than go in for the insecurity of spasmodic and reluctant management.

Gold, then, does not derive its strength from its indispensability for internal trade. But international trade may continue to be its stronghold. Here, it must be noted, that the perfection of the management of internal currency carries with it a degree of ability to manage the financial relations with the rest of the world. But as long as the nations have a right to be paid in gold, gold must continue to be prized by each nation for this purpose; and the only inroad that can be made into it is the reduction of the amount of gold that may be needed by depreciation of the national currency. Of such inroads, there have been only too many in recent history. They have not, however, sufficed to check the flow of gold to U.S.

Today the problem of gold is thought of in relation to the two important facts relating to the position of gold, viz. one, the present maldistribution of gold stocks and, two, the need for gold for the settlement of international balances. The proposals so far published refer almost exclusively to the latter and it is hoped that by limiting the right of nations to be paid in gold and providing for a machinery of consultation whenever serious disequilibrium arises, the problem can be solved. While maldistribution is like an inflammation which has to be locally treated, the avoidance of dangerous one-sided movements of gold can be obtained only by ensuring the equilibrium of trade among the nations. Such equilibrium, while it is, theoretically, possible as a long-term result of free trade, can in a practical view be obtained only by ensuring a proper distribution of productive activity among the nations and by thus balancing the international exchange of goods and services. But economists of the eminence of Lord Keynes are however, diverting their energies to find the best way of circumventing Britain's shortage of gold or the difficulties in the way of her maintaining her export trade on the old scale. That, however, is not relevant to the question of the future of gold, except in so far as it shows that there is not only the impulse to impair the position of gold but also that the conditions in which gold can function smoothly as a medium of international payments are most difficult to obtain.

So far as India is concerned, there are only a few facts to be noted. Generally, it may be said that she is as well educated as any country in the world in matter of economy in the use of gold, though the social custom of prizing gold jewellery still leaves large scope for improvement. India has for a long time disgorged a considerable part of her gold resources and she is now in a position to look on the fate of gold with equanimity. Strictly speaking, the international division of productive activity, which post-war policies may bring about or allow, is far more important to India than what the great Powers and their experts may decide about the place of gold in international finance.

INDIAN CUSTOMERS AND SUPPLIES

Vast changes in the foreign trade of India caused by the war have not escaped general notice. The introduction of import control and export licensing followed the adoption of exchange control. The entry of privileged quasi-official bodies was a subsequent development, reflected in the growth of trade with Iran and Russia during 1942. The publication of the seaborne trade returns for December makes it possible to describe the changes of the third year of war in the value and direction of trade. The outstanding feature is necessarily the shrinkage of imports, corresponding to the reluctance of overseas suppliers to meet India's needs. After her entry into the war the U.S.A. has not encouraged exports and has certainly restricted imports. The disturbing series of restrictions are not independent of shipping shortage, and the scope for improvement is once again dependent on changes in the war position. If trade with Africa has increased, while trade with Europe has practically disappeared in 1941, the reason is not far to seek. The African colonies deprived of European goods are looking to India. The formal dissolution of the Eastern Group Council does not imply that East African colonies or the Union will lose interest in Indian manufactures. The success of Indian goods in Colonial markets described in the reports of Trade Commissioners has made it plain that India is viewed there as also in the Middle East as a permanent source of manufactures in place of Japan.

The loss of Burma has caused a great change in regard to imports as well as exports. If Indian piecegoods command other markets readily India's supply of rice has been diminished and the changes in regard to supply of copra, cocoanut oil, rubber and shellac are in effect, more important than loss of quinine to the war. If supplies of mineral oils from Iran have increased steadily through 1942 the disapperance of imports from Burma has caused a major difficulty in regard to kerosene. Internal trade is subject to price control and transport restrictions. These restrictions are, in part, caused by changes in the import trade. The application of Control orders to various chemicals and metals last year is the result of a shortage of these essential materials.

That India's trade has steadily shrunk in 1942 is not surprising. Markets in the Far East were lost and India's second biggest market in Burma disappeared. The value of imports from Burma in 1941 was Rs. 32.13 crores while the value in 1942 was Rs. 6 crores only. The Timber control order and the enormous rise in the price of wood are directly related to the cessation of imports from Burma, while the rise in tea exports is as much due to the loss of the N.E.I. as the quota decision. If Hawaii continues to figure as a market for India's exports in the usual tables it is otherwise with the Philippines. Trade with China fell away at the same time as trade with Japan ended after July 1941. There is no entry in most months of 1942 against Borneo, Thailand and Indo-China because they are in the hands of the enemy. Trade has followed the flag, or rather retreated with the flag last year and the only change of consequence is the increase in shipments from Canada last year in spite of special restrictions on all imports from the Dominion and Newfoundland which are outside the sterling area.

The network of Indian trade has been torn in various places. Patching up is a prolonged process, and restriction of cotton acreage or the area under oilseeds is likely to continue while the area under all food crops must continue to increase because imports of foodstuffs have fallen steadily through 1942. That the U. K. was more or less able to maintain its trade in regard to value must not obscure the fact that imports of all manufactures have fallen. Against imports of liquor, machinery, chemicals, paper, etc. in 1942, one can note the great decrease leading necessarily to a pressure on the limited Indian porduction. The contraction indeed supports the argument that

the rise in Indian prices is far removed from the additions to the note issue. If the exports of coffee have risen in 1942, owing to disappearance of Java as a rival the fall in imports of betelnuts has produced here another price problem. The rise in Indian cotton prices is in part due to the reduction of imports from Kenya. The total for Kenya's exports to India fell from Rs. 6.91 crores in 1941 to Rs. 3.61 crores in 1942. The disappearance of various Empire markets like Hongkong has reduced the volume of miscellaneous imports without leading to an increase in home production. The steady fall in imports from U.S.A. accounts for a reduction from Rs. 37.26 crores to Rs. 20.46 crores in 1942. India's balance of trade with the U.S.A. rose appreciably as toal exports in 1942, were valued at Rs. 33.06 crores. The possibility of acquiring either gold or dollars in return for goods will, therefore, be discussed afresh in the light of the renewal of enquiry for jute manufactures. That trade with Latin America fell during 1942, is not surprising because of the shipping difficulties. But a desire in Argentina to convert frozen sterling into rupees for buying Indian goods has been referred to in a recent cable from Buenos Aires, and one may, therefore, expect that a recovery will follow. Since Cuba and other countries are anxious to reduce their buying of jute manufactures the U.S.A. alone matters for India. The possibility of a new clearing arrangement through New York with adjustments for trade with the West Indies, etc., can only be mentioned here. If the shipping difficulty is alleviated in any way the U.S.A. may find it advantageous to encourage exports from India to Latin America. Since Lancashire has devoted attention to South and West Africa last year, the Latin American markets may be worth cultivation by India which was a buyer of cotton from Brazil and Peru and may turn to them again if supplies from Africa are difficult. But these must be reckoned possible rather than probable as inter-American trade is growing and Latin America is short of shipping facilities.

That India's trade has undergone the same change as world trade in the war period will be grasped readily. The decline in India's exports of foodstuffs is a result of the war like the growth of manufactured exports. That trade with Iraq has grown rapidly in 1942, is largely due to the increase in trade with the Middle East. Exports to Basra, probably, are destined for Syria, Turkey and Iran as well as the kingdom of Iraq. The U.K.C.C.'s activities should account for further increase in 1942. The Corporation has certainly caused a diversion of trade; but the increase in shipments from India to Ceylon, must be due to the island's food imports. If these are reduced to any extent after the breakdown of negotiations concerning immigration, there will be no regrets because there have been repeated objections to food exports to any country. The substantial increase in exports to South Africa and Australia last year, from India is proof of the Union's prosperity and Australia's resolute war effort. Import control has not affected India's share largely because the Union has difficulty in obtaining imports from Britain and the U.S.A. at present. Judged by value alone, the biggest-customer at all times, is the U.K. which took Rs. 63.46 crores worth of Indian exports and sold Rs. 33.89 crores. The accumulation of sterling balances can be readily explained because India has a more favourable balance of trade in merchandise and has reduced its invisible imports at the same time. That exports to non-Empire countries in 1942, accounted for Rs. 48.69 crores as against Rs. 130.7 crores to Empire countries, must be described as another result of the war. Trade follows the flag in another sense and Empire economic unity comes. Among the foreign countries, the U.S.A. comes first, Iraq second and the Middle East third. Europe is hardly represented in the trade returns and the reduced importance of neutrals is probably due to other reasons. That export trade in 1942, staged a mild recovery may be deduced from the December returns, as of preceding months, but the chief items, for instance cotton, jute and jute manufactures are losing their importance. That is as big a change as any produced by the war which has put tea and cotton piecegoods among India's principal exports and reduced the importance of most other goods because markets were cut off. That a fall in imports of manufactures and raw materials limits the exports of Indian manufactures will be understood from the setback in exports of yarn and piecegoods. India is no longer free to sell even when the oversea markets are ready to buy. That shipments of sugar, flour etc. last year have fallen is largely due to the fall in production. If foreign trade is to increase, it is essential the production of Indian agriculture must increase. That is a lesson enforced by experience in the last year. The influence of changes in the foreign trade on the level of prices cannot be ignored. It is enough to say that the enlargement of Governmental demand is a consequence of a fall in imports of goods like electrical equipment, rubber manufactures and paints and colours. The fiscal changes have also played their part, though the 20 percent surcharge was only a means to the discouragement of imports. Satisfaction with the gradual recovery in exports of oilseeds must be tempered by an analysis of changes in prices. The volume can only be guessed; but the sharp rise in average value is certainly a factor in the rise in prices and the cost of living here. It has been said that a large export trade is a disadvantage because it promotes inflation and India must increase consumption so as to reduce shipments and fight inflation by plenty. The argument has certainly not lost its force after an assurance as to the use of India's sterling balances, and a fall in exports, even if it is provoked by a fall in imports, and may give satisfaction to those who have urged that the duty of protected industries like the cotton mill industry is to the Indian consumer who has paid for their development over a long period. That markets in the Middle East can be regarded as permanent will be an argument addressed by those who may urge that Japan, Germany and Russia will have no place in the trade of either Iran or Iraq when the war ends while India will be dependent on these countries for liquid fuel, and presumably cotton for a long time. But trade with Egypt has fallen off in 1942 without any ill effects, and the Middle East is not important like the Empire, unless it be urged that India must help in keeping the entire area safe and contented. The changes recorded in 1942 may continue into the present year, in which case, no change in fiscal policy or late dispatch of of trade missions can secure immediate advantages. If imports continue to fall in 1943 protected industries like iron and steel are assured of many advantages for a fairly long time, and the fall in capital expenditure in the defence budget cannot have serious effects on earnings and on the same reckoning an increase in direct taxation to-day cannot press heavily on the textile or other major industries. The view prevailing on the stock exchange in its rating of industrials at present supports the conclusion following from a study of trade figures with this important difference that shares of companies with interests in Burma cannot share in the boom that has been temporarily arrested by the German recapture of Kharkov.

Editorial Notes

Better Response

It was noted that subscriptions to Defence Loans in January showed marked improvement, and sales of rupee counterparts of sterling securities also recorded an increase. The expansion of investment is not unconnected with the slacker money conditions of the month and the dullness of the stock exchanges. It is noteworthy that air raids had the effect of checking the flow of subscriptions from Bengal. Out of Rs. 5.83 crores subscribed, Bombay accounts for Rs. 4.17 crores and the January total must be therefore considered Bombay's rather than India's. Up to the end of January Bombay had put up Rs. 57.78 crores for the 3 per cent loans and Bengal had raised Rs. 47.86 crores. The total for the States and Central Treasuries remained negligible as in the past. In regard to interest-free loans also the lead is held by Bombay, and it is only in regard to defence certificates that the Punjab comes near Bombay or Bengal. The fact that many banks with Head Offices in Bombay are large buyers and the securities market there is more active can be cited to show that Bombay's total apparently includes the money sent by other places. The total investments, up to the end of January, in interest-free loans, amounted to Rs. 3.03 crores and the net total for defence certificates amounted to Rs. 5.11 crores. The response to the latter for 32 months does not seem adequate, and the introduction of special measures to encourage buying of tax-free defence savings certificates has been approved. The sale through bookstalls on railway platforms may be regarded as feasible in view of what has been done by W. H. Smith & Son to promote the sale of National Savings Certificates in Britain. The January total at Rs. 130 crores indicates that progress of defence loans in 1942 has not been large, and the investments in defence loans have evidently claimed only a small part of the addition to money in circulation. Since the borrowing programme for 1943, is intended to secure Rs. 40 crores, a definite advance on 1942 is indicated at present. The savings drive contemplated in 1941 has hardly materialised so far and the appeal to the saver in India has not provoked the results desired—the curtailment of private spending and the development of thrift.

Copper Production

The Manchester Guardian's estimate of larger copper output in 1943 receives support from a report of plans to develop mineral production in the African Colonies. According to a cable received last week by the Associated Chambers plans for extensions in the Rhokana Corporation's Nchanga Copper Mine have been completed. Metal production from North Rhodesia must develop even as it does in the Congo. At Broken Hill in Rhodesia, a new sulphur plant is being supplied for the manufacure of vanadium. Steel production is likely to increase substantially. Besides the Rhodesian projects there is vigorous prospecting in West Africa by Anglo-American agency to locate sources of wolfram and molybdenum. The mineral mission is to work from Nigeria, but it will explore the possibilities in the French Cameroons, Liberia and Portugese Angola. It is generally known that Gold Coast manganese has acquired real importance after the loss of the Ukraine, and West Africa rather than South Africa is going to figure in the development of Africa in the near future. On the other side Kenya is expected to provide mica soon from deposits prospected recently. Deposits of mica and graphite in British East Africa are to be examined. It is believed that Tanganyika alone can give 12,000 tons monthly. Bauxite the source of aluminium from Nyasaland represents an addition to the Empire's mineral resources. Samples of the ore have been sent to the U.K. for analysis. It is known that rubber can be obtained like tin from the mandated territory which produces gold and diamonds in small quantities in addition to mica.

Drafting Boys

According to cabled reports Germany is now drafting her boys for war work. The Von Unruh plan of taking off all factory workers for service in the Army created a problem for which the solution has to be found at home since French and Dutch workers are not enthusiastic. The total mobilisation plan has led to the mobilisation of 15 year-old boys for anti-aircraft duties according to a German paper. The paper admitted that scientific and political potentials would suffer from such diversion but called for sacrifices in the inerests of conquest. Shops and shopping must have been changed by the mobilisation plans this month but the raw materials problem will remain. Italy's olive oil is about the only thing that Germany can count upon when the fats ration is threatened by a shortage of vegetable oils. According to a recent estimate Germany needs 200,000 tons of edible oil every year, but imports of soyabeans from the Far East are cut off by the war in Russia. Hitler hoped to get vegetable oil from the Ukraine, Crimea and northwest Caucasus but the prospects are now worse than dim. Palm kernels and groundnuts from French West Africa by way of Tunis certainly are beyond the reach of Hitler after the Allied occupation of North Africa. The large imports procured through French ports must have disappeared and shortage of soap will not be the only consequence of the lack of vegetable oils. Copper, rubber, cotton, silk may be replaced by substitutes but vegetable fats cannot be replaced by anything made by German chemists, and the only raw material of which an abundance is presumed is tobacco. The Germans have decided on monopoly control of the tobacco industry of Greece. This may reduce takings from Turkey but can confer no other advantages on the conquerer who had decided to take over the olive oil, silk, coal and fuel trades in Greece so as to secure everything worthwhile in the occupied country. Italy naturally gets nothing though admitted formally to a share in Yugoslavia.

Timber In Wartime

Britain's own forests have been developed in wartime in order to make good the loss of Scandinavian supplies. The stoppage of timber imports brought control and much else. Native woodlands had to provide wood formerly shipped from the Baltic. Roy Duffell in a broadcast to Finland last year explained how one part of England's soil was being utilised to maximum advantage. In order to develop the lumber industry at home trained woodmen were brought from Newfoundland and British Honduras. Workers were obtained from Australian, New Zealand and Canadian detachments for the job of felling and sawing trees. British forestry companies have been organised so as to mix military training with sawmilling. Though Britain can draw much Empire forests can give little owing to the shipping difficulty and the amount of home-produced timber is therefore being raised. Only two per cent was assigned for civilian demand and the trade was virtually dead on account of the war. The steady reduction in the number of trees at home implies also a big demand after the war from Britain for timber from all countries including Finland. Because of the needs of construction it is taken for certain that the import of timber would revive immediately after victory. If German exploitation has reduced Norway's resources, the demand for Finland's timber should be larger, and Finland's dairy produce also should be in demand, if Denmark and Holland have lost heavily in cattle owing to the German occupation.

R.I.N. Expansion

The R.I.N.'s part in the Arakan fighting has been overlooked so far. Its expansion has elicited equal attention. Not only the Dominions but India has embarked upon naval building, and evacuat-

ed staff including pilots has been added to the personnel in addition to officers drawn from the merchant service. In 1941-42 new branches e.g. the accountant branch and the electrical branch were formed and special training in gunnery and anti-submarine work was arranged for. In order to stimulate recruitment to the Navy the pay of ratings was increased and a junior training school at Karachi was set up. Co-operation with other branches of defence distinguishes the R.I.N. and the mercantile marine is still being helped in many ways. The expansion programme is reflected in naval construction. In the second half of 1941-42 two vessels a month on an average were added to the R.I.N. apart from ships built abroad. Many vessels are on the stocks and shipyards are working to capacity on naval craft. Repairs to merchant vessels are carried out in private yards, and warships too have been repaired in the past year. Indian dockyard facilities have been utilised by the Royal Navy and their value has increased since the loss of Singapore. Along with imports of machinery for refitting, much local equipment is in use and progress in manufacture of machinery has been reported. According to an authoritative account India is making propelling machinery for ships. It is known that patrol vessels, minesweepers, motor launches etc., form the bulk of new construction. Since the Grady Mission reported on the need to extend facilities for repairs the new Directorate has devoted much attention to ship repairs. The expansion programme has obviously added to the number of ships and men in the young navy, and India's foreign trade has received material ssistance from protection given by the growing Navy. There has been an increase in the Reserve as well as the permanent commissioned ranks. Recruits for the navy are not drawn only from the Punjab and Bengal. Central India and Rajputana have been visited by naval officers in order to encourage the recruitment of seamen in the war period. The three years of war have given India a navy that has performed valuable work in the Burma campaign by bringing back under escort ships with evacuees while its losses were limited to two ships only.

Siberia and Beyond

Russia's territory in Africa is enormous, as Miss Violet Connolly noted in a recent Oxford pamphlet. There are many republics and their resources have been augmented by redistribution of plants. Chrome, nickel, copper, lead, gold and platinum are among the minerals from Soviet Asia. Round the Kuznetsk coalfield most metallurgical industries have been developed rapidly; since the Donetz basin was lost they are more important. Of Siberia's industrial towns Sverdlovsk is the biggest to-day. But Siberia is also a big farming region, and timber is still important for stockbreeders and others. In Buriat Mongolia a big tungsten mine was opened, and tin deposits at Lake Gusinec have been exploited with success. Locomotives and cars are produced at Ulan-Ude for the Trans-Siberian railway. It is known that Central Siberia supplied the Far Eastern provinces with metals etc., but the latter are now being developed independently. Yet in spite of great progress they are young industries and climate is a handicap in most cases.

Perso-American Cotton

Direct reference to the scheme for extension and distribution of Perso-American cotton in the U.P. is made in the Upper India Chamber's proceedings. The scheme is meant to enlarge the supply of cotton seed and extend cultivation over suitable areas in the Bulandshahr, Aligarh and parts of Etah, Muttra and Meerut districts and to organise the sale of Perso-American cotton through co-operative societies. The scheme got going in May 1942 after the Indian Central Cotton Committee sanctioned funds and the local Govt. decided on a contribution last year. Six demonstration farms were set up and in the final stage the area under Perso-American cotton is expected to be over 199,000 acres. A departmental note stated that the area under Perso-American cotton in 8 districts was 8,683 acres but conditions were indifferent and half the crop perished. The rest has been purchased officially in order to secure pure seed. The limited results obtained induced the Chamber to put questions as to crop damage estimated outturn and possibility of irrigation facilities as there was a mention of poor germination. The Agriculture Dept. replied that the Irrigation Dept. had been consulted in advance but its reply suggested that crop damage was the result of water logging and the outturn per acre was estimated at only 80 lbs. of lint per acre owing to unfavourable conditions. The areas selected for trials were described as suitable and subsequently it was stated that next year 14,000 to 15,000 acres would be under Perso-American cotton and about 3,500 bales could be obtained while 20,000 to 30,000 bale could be had in four or five years if the scheme turned out well. Special efforts are to be made to extend cultivation of Perso-American cotton. The long staple variety is expected to acquire some importance in the future, naturally at the expense of **Deshi** cotton. The U.P. Agriculture Dept. has since been informed that the Chamber is interested in the experiment and wants that cultivation of Perso-American cotton in the West U.P. must be extended by every means. Cawnpore wants to encourage local cotton —just as Bengal does.

Trade With The Levant

The assurance that Turkey will get more defence supplies and everything will be done to make her armed neutrality complete has led to little besides the appearance of a general note on the growth of Anglo-Turkish trade and the importance of chrome ore which is not available to Germany. The U.K.C.C.'s concern with the import trade of Turkey has not been featured as it was last year, but the general assumption that the Corporation will remain supreme in the Near and Middle East has been strengthened by Dalton's reply as to its retention after the war. The U.K.C.C. will probably function as a late successor to the Levant Company which was formed in the 16th century and took the place of Venetian merchants. For a century English trade with the Levant was conducted by factors who obtained for England the goods of Turkey and Iran in return for English cloths. Privileges were obtained from the Sultan, and armed merchantmen usually carried the cargoes across the Mediterranean. The merchants in London were represented by factors in Aleppo and other cities. The goods

brought home included drugs for physicians and farriers, raisins, currants and other dry fruit, raw silk, carpets and fine fabrics from abroad. Naval protection was provided when necessary, and this branch of overseas trade was nourished by the eagerness of London merchants to get imports from Turkey. The letter-books of Aleppo factors were referred to by G.P. Ambrose in an account of the Levant Company. Red cloth wanted for for caps in Syria and beyond was most in demand and coloured fabrics only were demanded of English manufacturers. Shipments to Alexandretta (Scanderoon) were the rule then and the marine factor passed the news to Aleppo by pigeon post. The caravans took them to Aleppo which was the distributing centre for Asia Minor as well as Iran. The English factors relied on Jewish and Armenian brokers to whom they gave West Country cloth for sale. The isolated community of factors lived a life corresponding to that of the East India Company's representatives in India as portrayed in the Diary of William Hedges to the factors in Aleppo. The Levant Company sent out books and life in Aleppo had some compensations as the French traders invited frequently to concert were more or less friendly. There was of course no connection between the khans in which the factors lived and the inhabitants of Syria. The trade based on Smyrna was not of less importance than that centred on Aleppo from which the caravan trade radiated. The Ottoman empire like the Levant Company long served as a link between Europe and Asia. Its successor holds the same place.

Visit To Washington

Promoting an understanding with Russia is the first task of Mr. Eden who has gone to Washington to settle war and peace aims. The Vice-President has anticipated the visit of Mr. Eden by indicating the necessity for a compromise with Marxism. Democracy has been partially restored in Russia in 1936 but Russia's institutions are still different, and Herr Hitler is the person who is most anxious to pull them down. Reluctance to announce Allied contributions to victory may be explained in many ways but Admiral Standley by his reference to Russia's attempts to show that successes were entirely her own has forced the U.S.A. to reconsider her position. Since Admiral Standley's remarks do not produce any amendment to the Lease-Lend Act no harm has followed but the Polish and other governments have grievances of their own and these must loom large in Washington at any time. To secure Russia's full support for a peace settlement on her own terms as to frontiers must be necessary. The demand should be respected but the argument will not win general acceptance. The Axis satellites if they are to be detached before Germany is defeated will require guarantees against Russia and the case of Finland will have to be treated as a special one. Russia by denouncing the Colonel's regime in Polland has created more difficulties. The conservative aristocrats cannot be displaced readily and modification of either Poland's government or her frontiers cannot be undertaken by Britain alone. Mr. Eden perhaps expects that Polish claims for the Ukraine would be modified if the U.S.A. does not countenance Sikorski. The Times has since 1941 changed its views as to Russia's security. It claims what may be called a free hand for Russia in the East because of the Treaty of May 1942 but Russia is not an ally against Japan, and the U.S.A. may be wholly uneasy for that reason.

Production Trends

In the November trade returns a fall in imports was the counterpart of the fall in exports. The adverse effects of war on exports were made apparent through the great fall in exports of cotton and jute manufactures. Total exports in eight months showed a fall of Rs. 30.94 crores as compared with 1941 and this decline was caused by the fall under jute, oilseeds, cotton and hides and skins. The fall was least under unclassified exports and most striking under cotton which had lost its markets abroad. The fall certainly indicates that supplies for shipment like freight space were not very large, and the decline in imports was having its own effect on India's exports. At the same time, the increase in home demand for oilseeds etc. was increasing. The fall under imports was necessarily greater. The only item under which an increase was noticed was mineral oils. Striking changes were manifest owing to the operation of import control and the loss of customary sources of supply. The decrease in yarns and fabrics being most conspicuous, the fall in home textile output after August, became a decisive factor in the advance of cloth prices. The fall in exports has not given any relief. From the production figures relating to jute and manufactures in 1942 one may well infer that curtailment of working hours influenced the fall reported; and expansion of output is to be secured this year again by an increase in working hours. The fall in paper and stationery imports explains the shortage and its direct consequences, namely, the Paper Control Order. The reservation of 30 per cent of production means, on an average, 35,000 cwt. of paper for civilian need. As compared with 1941-42 paper production is lower in view of the difficulties relating to fuel, chemicals etc., reported by paper mills. Another industry in which production difficulties are conspicuous is the milling industry. Up to October, flour mills crushed smaller quantities of wheat and produced less flour than in 1941-42. The dominant factor has reduced industrial production as compared with 1941-42 and the inland trade figures supported in this case by figures relating to wagon loads also support the conclusion that scarcity is the major factor in the rise in prices although increased movement under jute and jute manufactures can be traced to the increase in the 1942 jute crop.

Textile Production Analysed

Textile production up to the end of 1941-42 showed a progressive increase. Figures published by the Millowners Association recently support conclusions derived from the annual mill statement. In respect of yarn production, all provinces reported an increase in 1941-42 but in Bengal the increase was just a million lbs. as against 12 million lbs. shown for Madras and 150 million lbs. for Bombay. It is noteworthy that Bengal's yarn production showed an increase only under counts below 10, while a fall was disclosed under counts between 30 and 40.

Production difficulties and deficiency in raw cotton may be cited as obstacles in the way of a larger output. As for British India as a whole the year was good as yarn output rose by 200 million lbs., and the Indian States reported an increase of 28.5 million lbs. The increase in production of finer yarn is not limited to Bombay only, since Madras also reported a striking increase in the production of yarn above 40 counts as also Bengal. There was an increase of over 12 million lbs. under yarn between 30 and 40's but of 2.3 million lbs. only under yarns above 40. The rate of increase should be less this year owing to the enhancement of the cotton import duty and the many difficulties in the way of importing cotton. Only recently has special licensing procedure been introduced to reduce raw cotton imports. The Tariff Boards recommended extension and diversification of production, increase of weaving etc. In regard to the latter there has been a setback, at least in certain lines. War demand has caused a definite fall in the production of dhoties and chaddars while the production of drills, yarns and tent-cloth rose in Bengal as in other provinces. That the Government buying and production difficulties underlie the shortage of cloth is made plain by the fall in cloth output in Bengal. As for India as a whole the total production in 1941-42 discloses an increase of about 40 million lbs. equal to 180 million yards in respect of coloured goods and smaller increases under grey and white goods. The fall in the production of mixtures is explained by the failure of imports of silk and wool. The end of trade with Japan has been a definite advantage for hosiery-makers, particularly, in Bengal. Production rose by 1.5 million lbs. to 5.085 million lbs. as compared with an increase of 200,000 lbs. in the U. P. The Punjab reported a fall in the production of hosiery as well as mixed goods; but Delhi reported an increase under hosiery like Ajmer-Merwara. It is noteworthy that in spite of continued reliance on imported yarn, the hosiery industry in Bengal has developed vigorously so as to support the conclusions drawn in a departmental monograph.

Tea Supplies

Tea production in North India in the last year, according to the latest available figures, recorded a large increase. Production in April-December 1941 was 415.36 million lbs.; production in the eight months April-November 1942 was stated to be 466 million lbs. as against 406 million lbs. in the same period of 1941. The increase was not accompanied by an increase in exports which amounted to 166 million lbs. as against 199 million lbs. in 1941. That is the main reason for the fall in the value of exports by 7.94 crores as compared with the value of exports in April-November 1941. Tea, however, remains the single largest export after jute manufactures, and the recovery in exports during September was followed by a rise in prices at the auctions in Calcutta. The most pronounced increase in tea prices took place in November when the rates for all grades rose. The figures relating to South Indian production are not known, but it cannot be less than 100 million lbs. and the total Indian production cannot be far short of 600 million lbs. It may be noted that such a quantity would be equal to half the world production (with China excluded as usual) and restriction of output is more or less nominal since the 125 per cent quota is in force. The increase reported in 1941 has been surpassed in the next year, and a strong rise in sales and profits is to be noticed in the statements of tea companies, many of which provided for interim dividends towards the end of last year. The restriction of output has not reduced exports since 1937 after which year the exports have been 350 million lbs. If exports top 400 million lbs. in 1942 as seems likely the margin left for internal consumption should be fairly large, and this perhaps is the chief point to consider in any defence of restriction by agreement.

Postal Traffic

The increase in postal traffic in India has been one of the direct results of the war. The department's own statistics show that the increase in the usual course is associated with the increase in parcels, telegrams and money orders handled. The figures for the five months ending August, 1942 prove that the number of registered parcels increased as a consequence of restricted railway facilities. More significant is the large increase up to August in the number of inland telegrams. It was only in August that a small decline occurred owing to various interruptions to communications. In most months of 1942-43 there was an increase in registered letters. The large increase in foreign telegrams is, presumably, due to the presence of troops in India, just as the increase in foreign money orders issued and paid in 1940-41 was caused by the war. The number of unregistered parcels might have declined after the decrease noted in 1939-40 but telegrams and money orders must have increased after April 1942. In the year 1940-41 there was a slight fall in the number of inland telegrams despatched, while the number of foreign telegrams rose again. The increase in correspondence during 1941-42 should have continued into 1942-43. The year ended March 1942 indeed saw a striking increase in the number of postcards since postcards alone were not subject to the increase in rates. The later figures relating to letters and cards show that in regard to traffic the Department has benefited as much as the railways, and the only branch of revenue which has suffered is that obtained from books and pattern parcels.

Sugar Supplies

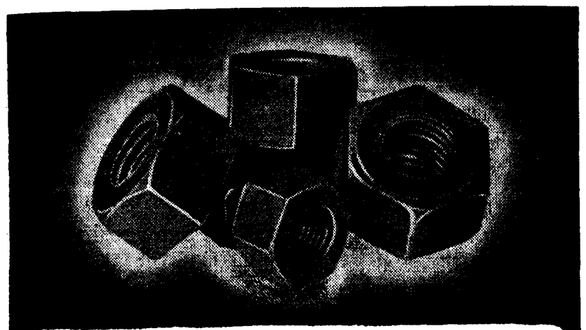
The rise in sugar shares serves as a reminder of the improved outlook for the industry. The most important factor in such improvement is the increase in the sugarcane crop of 1942-43. The final memorandum estimates the area under cane in India at 3.59 million acres, showing an increase of 2 per cent on the total area in 1941-42. Outturn of sugar is put at 5.69 million tons which is 30 per cent over that of 1941-42 because the average yield is distinctly higher. The progress of cane-growing in the Punjab stands out in the acreage returns. About 11.6 per cent of the area under cane in India is claimed by the Punjab which is expected to produce 4.3 million tons of cane. In spite of the reduced yield in Bihar the cane supplies ensure an increase in sugar production in Northern India. The late start of the crushing season, the higher cane prices etc. may militate against the growth of profits; but the increased outturn of cane should help to make sugar relatively abundant this year. Total imports for six months of 1942-43 having fallen to 560 tons, the need for increased production is obvious. It is only in Bengal that a sharp decline in cane production is anticipated. Bengal's reduced acreage and smaller outturn constitute disadvantages for the sugar companies, but in the Bombay Deccan the crop is reported to be as good as ever. The crop in Mysore is said to have suffered from lack of rain and a reduced outturn of cane is probable in Hyderabad also. Though the area under cane in India has not increased to the extent anticipated last year the larger area under improved varieties in the U.P. should give satisfaction like the increase in cane cultivation in Bihar by 4½ per cent. Cane cultivation has recovered quickly to the 1940-41 level in terms of yield, and the increase in 1941-42 reported by Europe (excluding Russia) need not be regarded as unique. Cuba however remains the world's biggest producer with an output of over 4 million tons though it has been said that the production may fall in the current year. The U.S.A., in spite of the early advent of rationing, can reckon on larger home supplies and the increased output of Porto Rico. The main changes produced by the war are the fall in Queensland's output and the advance

(Continued on page 581)

TO DROP a piece of paper into the wastepaper basket unused is an act of sabotage.

To throw away an envelope when it could be used again with an economy slip, is treason.

That's how bad the paper position is.



So let's face up to it. The services need paper for munitions. Government needs it for administration. We, the business community come last.

We must preserve our present stocks — treat them as irreplaceable. We must plan smaller letter-heads, thinner envelopes, two sided invoices, and so on. We must cut out unnecessary publicity. We must above all, educate our staffs in paper economy and penalise offenders. When we have done all these things, THEN we can start blaming the Government.

THIS IS WHAT GOVERNMENT IS DOING..

1. Government has imposed a drastic cut of 5,000 tons on Civil Departments during the last 6 months.
2. Additionally, writing paper supplies have been cut 50%; envelopes 50% and blotting paper 33⅓.
3. Government has restricted the variety of papers available to Departments in order to increase production.

CPU 202

The whole output of our works is being used for vital defence purposes. We cannot, therefore, supply the host of our customers who supported us so well before the war. In the national interest their requirements have to take second place. But when victory is won we will once again serve them with the added experience of the intense effort of working night and day to produce the maximum for the country's defence.

JUPITER GENERAL'S RAPID ADVANCE

Successful operations, year after year, proclaim the Jupiter General's stability, efficiency and progress. The Company's expert management, profitable and safe investments and huge paid-up capital inspire confidence amongst its policyholders. There are many attractive policies to meet every individual's requirements. LIFE BUSINESS figures of the last three years are more than encouraging.

Here are the Figures :—

		Business Proposed Rs.	Business Completed Rs.
1940		25,79,500	20,86,000
1941		54,30,075	44,82,875
1942	over	82,00,000	65,50,000

The Company wishes to convey its sincere thanks to its policyholders, agents and staff everywhere for their continued support and assistance.

ALLOYS (India) Ltd.
Post Box 2093 Calcutta

The first thought about this week's session of the Federation of Indian Chambers of Commerce and Industry is that it has suffered grievously from lack of adequate publicity, due to the shortage of newsprint and the consequent need to prune news items too close. The dailies have been unable to devote more than a couple of columns to the deliberations of this All-India commercial organisation. It is somewhat difficult either to form a mental picture of the general atmosphere in which the Federation met and transacted its business, or to determine the care and wisdom with which the present economic problems of the time have been treated by our commercial leaders. It should be remembered that this year's session is unique in the number of weighty problems that the Federation has to consider in its annual session. Normally, the Federation would be hard put to it to find topics on which its leading lights can make a safe, but striking, display of their nationalist sentiment and their forensic skill. Time was when the Federation was hardly distinguishable from the body which gave birth to it, namely, the Currency League. The ratio resolution was for long the hardy annual of the Federation and when finally the ratio question faded out on account of the abandonment of the gold standard, it left good working substitutes behind in the shape of the link with sterling and the exports of gold. The last few years are perhaps a dull patch. But this year the Committee of the Federation might well have felt that there are more questions to consider and pronounce judgment on than are necessary to keep the Federation going. And the problems too have a highly embarrassing variety, ranging, as they do, from the ponderous questions of post-war reconstruction to, shall I say, the activities of the U.K.C.C.

* * *

I am sure that some at least in the Federation will take umbrage at my putting the U.K.C.C. so low in the scale of importance. I am afraid that the agitation over the activities of the U.K.C.C. was somewhat over-wrought. The last time I was at Delhi, I took pains to ascertain the extent of the danger signified by a specially privileged British commercial corporation, operating in India in the present war period. For, the official statements about the U.K.C.C. bear a high degree of plausibility. And when the Government of India can hardly be said to starve you of points for legitimate grievance, I am loathe to attach any value to a spurious addition. But the consensus of opinion amongst the people I consulted—and it is only fair to say they do not belong to the ranks of the Federation—seems to be that, while so far there has been little in the activities of the U.K.C.C. which would justify the agitation, it is wrong to cavil at the agitators; for it is quite conceivable that the U.K.C.C. might have developed into a real danger to Indian commercial interests if it had not been held up before public opinion as a serious portent. There, I think, it should have been left. For, to criticise the U.K.C.C. and the government's policy thereto, more detailed information and more irrefutable proofs of charges would be necessary than one can expect to command.

* * * * *

As I said, there is a long list of very momentous problems on which the Federation has to clarify its position. Perhaps, it can be truthfully said that all the problems with which the Federation dealt in this year's session are the direct results of the war. Post-war reconstruction, sterling balances, defence expenditure, food situation, U.K.C.C. all these questions arise from the situation created by the war. Nevertheless, all these questions have to be thought of in relation to the permanent interests of India's national economy rather than as mere exigencies of a situation that might, conceivably, pass in a year or two. Mr. G. L. Mehta, the retiring President of the Federation has shown himself aware of the need to consider the position of the national economy as a whole and think of the various topical problems in relation to India's capacity after the war to meet the economic needs and aspirations of the Indian people. Particularly striking, though to his friends it would hardly come as a surprise, is his appeal to the Federation not "to rest content with being a custodian of sectional interest in a country where sectionalism thrives", but to strive to be "the exponent of a sane and creative body of opinion in the economic sphere."

* * * * *

As may be expected, the retiring President of the Federation has given a lead on all the available questions. It is the President's duty to speak the mind of the Federation on problems of international importance. The resolutions on the political situation and India's participation in international conferences were appropriately moved from the chair. Leaving the resolution of the political situation aside, the Federation's view on India's participation in international conferences has been one of direct opposition to the Government of India's policy of sending non-Indians or Indians wholly amenable to the influence of the British Government, to represent India in international conferences. There is unfortunately a tendency to regard the demand for representative Indians in the Indian delegation at international conferences as of a piece with the demand for Indianisation of this department or that. While India can afford to have quite a large number of foreigners in her administrative services and pay for them on the liberal scale of even the Lee Commission, India cannot, nor, for the matter of that, can any country, afford to leave large questions of policy affecting the future in the hands of foreigners who cannot appreciate the true interests of the country. While formerly, such non-representative delegations could not have done much harm, the time is come when India cannot allow anyone but a thoroughly representative Indian to speak in her name at international conferences.

* * * *

By all tokens, the stage of serious consideration of measures of post-war economic reconstruction is very near. President Roosevelt has referred to various committes at work. Britain and America have formulated tentative proposals for the regulation of international finance in the post-war period. Commercial organisations in Britain like the London Chamber of Commerce have already published memoranda on this subject. In the United States of America, leading politicians and businessmen are considering whether, in return for the lease-lend aid that they have provided for the United Nations, they cannot secure compensation by getting them committed to sound principles of international economic and financial regulation. The peculiar position, which India occupies makes the task of the Indian delegation in all these conferences particularly delicate and difficult. It has been my firm opinion for long that, though the economists and statesmen in the West have been talking a great deal for the last ten years and more of the regulation of world economy, they have hardly tried to conjure up a picture of world economic conditions as they would like them to be. Instead of trying to think out principles which will apply in common to all nations, they are prone to assume that there is nothing intrinsically wrong in having one fiscal policy for themselves and recommending another for adoption by others. The United States for its part has a kind of Platonic love for free trade. Great Britain always favours free trade, provided free trade is in her favour. When these two leading nations dominate world economic conferences, there is either a pious expression of faith or a real danger to the interests of undeveloped countries like India. The fact that the first question to come into prominence in connection with world economic reconstruction is free access to raw materials shows that world

economy is being thought of only in relation to the interests of industry in the west. There is reason to think that the economic conferences of the post-war period, will be more powerful than the previous ones and may be able to influence economic policy. The post-war conferences will also have a degree of political authority since they will comprise representatives of the victorious nations. It is necessary, therefore, that at these conferences the Indian delegation should be truly representative of the Indian nation. Mr. Mehta has been careful not to tone down the demand of the Federation in this regard by being content only with mere representation for this commercial body along with other elements.

* * * *

On the work of the Federation in the session, I must, I believe, postpone comment. For, as I said, the problems dealt with are both vast and intricate and every phrase in the text of the various resolutions is important. The dailies are not in a position to publish the full text of the resolutions; and the Secretariat of the Federation has not, I am sorry to say, taken care to send all the necessary papers even to the financial journals. It would appear, however, that the Federation has somewhat outgrown the stage in which it considered itself a petitioning and protesting body. There is a sense of the importance which must attach to the representatives of the trade and industry of a country which, in spite of all its backwardness and shortcomings, is still a great trading nation and takes the tenth rank among the leading industrial nations of the world.

* * * *

Mr. Satyamurti, who died early this week shortly after his release from detention on medical grounds, is best described by the "Hindu" as the tribune of the people. To the last moment of his life, he belonged to the people, in spite of a fitful and wistful longing to be among the topdogs of political and social life, which is often unkindly emphasised by his opponents. The disappointments, which he so unjustly suffered in this regard, never soured his outlook, or dulled his keenness for work in the cause of the nation. In a country in which a professional politician is very near a hireling, Mr. Satyamurti remained a whole time worker for the Congress; and his tongue did more for Indian nationalism than all the speeches and writings of other Congressmen. Speech was, in his case, a gift which he treasured and developed into the most potent weapon in the cause of the Congress. At the height of his glory as a speaker in English, commanding demand for speeches in Tamil. It was at the Madras Provincial Congress meeting at Tinnevelly, more than two decades ago. Men like the Rt. Hon V. S. Srinivasa Sastri, Sir C. P. Ramaswami Iyer and Mr. Satyamurti were compelled by crowd that was probably attending its first political meeting to speak in the vernacular. The leaders gave in to the popular demand. And I can never forget the way with which Mr. Satyamurti [illegible] his own former performance. Mr. Satyamurti had the most [illegible] sum of personal accomplishments, an ardent lover of music, an amateur actor of distinction, a scholar in Sanskrit with wide and extremely appreciative reading wide-ly travelled, with a mind that can take in the best in the life abroad, Mr. Satyamurti typified first the lines on which one would like Indian culture to grow and develop.

in Mexican production. The jump in beet sugar production in the U.S.A. can be traced to the loss of the Philippines and the labour difficulties in Hawaii.

Terror in Shanghai

According to the China Information Bulletin living conditions in Shanghai have been made unbearable by the Japanese. The Japanese terror has destroyed both commerce and industry, and famine stalks in the city. The Chinese who escaped to Chungking have described the decay of the great City, and Hsu Wei-nan, a noted writer, gave an idea of the horrors under Japanese rule. Shanghai is terror-stricken, and the people there can be subjected to all kinds of humiliations and inconveniences. The Japs occupied the International Settlement and French concession on December 8, 1941 and a reign of terror followed. The Japs frequently blockade certain districts or sections of the city in which they call a campaign to purge Shanghai of Chungking elements. These blockades were clamped on the Yangtsepoo district, and were later extended to such sections as the famous Nanking road and Avenue Edward VII. Those who had no food owing to the blockade were forced to starve. The state of siege did not touch the staff of the Wing on department store in the Nanking road area, as it did when the blockade was applied to the Yangtsepoo area in which there was a branch. In another blockade, a young Chinese in a neat foreign suit attempted to jump over the barricades. Arrest followed, and the Japs punished him by making him kneel down on the road in the sun for a whole day, his hands and feet being bound by ropes. Sham air raid alarms and mock defence drill are penalties of the Japanese regime in Shanghai. The city is in the grip of poverty. Rationing is general, and a picul of rice sells for 1050 C.R.B. dollars equal to 2,100 Chungking dollars. A tin of vegetable oil sells for 800 Nanking (C.R.B.) dollars. Inflation has not spared taxifares and rickshaw hire. All trams and buses are crowded, said the fortunate fugitive, and none but the very strong can get in. The mortality rate had gone up; so had burial charges and doctors' fees. Twelve corpses to a coffin were not unknown according to the firsthand account. The famine has left the Chinese merchants in a desperate position. Contrary to the supposition that they could do business and prosper as in the past, they find returns limited to a minimum, and there are times when there is nothing to sell. The Japanese monopolise available goods, and limited quotas have to be secured by Chinese traders. Everything must be sold at a price fixed by the enemy. Hsu-Wei-nan concluded that Shanghai is passing through the darkest period in its history, but the people remain undismayed knowing that 'the dawn will come soon'.

Canadian Exports

The Dominion of Canada was described in 1940 as Britain's most important ally. Its industrial and mineral production then were such as to make it more important than the U.S.A. in regard to war supplies. The subsequent entry of the U.S.A. into the war has put the Dominion third only after Britain in the production of export surpluses of munitions and war equipment. Manufacturing industries made real progress in 1942 so as to help the war effort; war production reached 2,500 million dollars in value according to a recent report which puts the total value of raw materials and foodstuffs produced by Canada for the Allies at 800 million dollars. Export surpluses were largely due to large shipments to the theatres of war. Total value of Canada's exports at 2,385 million dollars showed a large increase on the value of 1,641 million dollars declared in 1941. Fully half of Canada's production in 1942 was devoted to war purposes and 55 per cent of industrial machinery was engaged on war jobs.

Enquiries from Africa

Because other sources of supply cannot be reached, East Africa turns readily to India for various manufactures, and safety matches are among the goods now asked for though the fall in India's own production should impede exports. In the last report of the Indian Trade Commissioner at Mombasa, reference is made to local enquiries for buttons and perambulators. A European firm in Lushota (Tanganyika) asked for the names of shippers of goods as diverse as pith hats, woollen blankets, readymade clothing, soap, toothbrushes and furnishing fabrics. Shoemaking materials formed the subject of an enquiry from Dar-es-Salam and Turkish caps, and materials for their local manufacture, were wanted by another firm. Import control has not choked off the demand for Indian goods in colonial markets. Mombasa firms want crockery, lamps, bakelite and leather goods from India and the opportunities for Indian exporters do not seem limited to textiles, exports of which have declined since July 1942. The increase in local production and prices is likely to stimulate African demand for all imported goods but licensing is the rule, and relaxation, permitted in Nigeria, may not seem desirable to the authorities in East Africa. The enquiries should serve to indicate how the post-war opportunities can be turned to account by Indian traders.

War Maps

The events of three years can only be understood in relation to many recent territorial changes. The Oxford War Atlas makes such understanding easy, and the volume of 136 pages priced Rs. 2 has the further advantage of adequate explanatory letter-press. The German conquests and campaigns can thus be followed like the Allied recovery in Africa. The Atlas brings the war in Asia and that in Europe together and provides much essential information regarding the blockade and war resources. The history of the war can be read even in the brief commentary that supports the maps; and it is noteworthy that there is mention of Ajaccio as a naval base. The maps are drawn to scale; the lines of advance are clearly demarcated and symbols conveniently placed where commercial geography has to be indicated as in the case of Russia's resources or Britain's oil supplies. In regard to oil the development in Alberta is not ignored and it is suggested that the value of Roumania to the Axis is really greater than imagined. It is stated that the output in 1939 rose to 6½ million tons though transport facilities are such as can allow Germany to get only about 2 million tons in a year. Italy's position in regard to oil is worse than Germany's as she has no synthetic oil production (German output in 1937 was 2½ million tons and has risen since) because she has no coal. The British problem is essentially one of tankers though she had in 1940 a fleet of 5.8 million gross tons. The map of the Mediterranean shows that Terranova in Sardinia supplements Cagliari while Beirut is now a naval base serving Britain like Famagusta in Cyprus.

IT'S A FACT—

that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

YOU HAVE BEEN WARNED

Water-Divining

The dowser's art is not a branch of forgotten wizardry, but one part of applied science in which machinery play sa part. A paper of Mr. N. G. Apte in Indian Farming recalls the antiquity of an art that has been supplemented by geological investigation in recent times. The location of water supply is a subject that has claimed in India, the attention of astrologers as well as engineers. Ancient Hindu scientists went by vegetation and fauna as a guide to the presence of underground water. Water divining is best described as a branch of geology in the field and the gift is not confined to any class. Mr. Apte refers to a beggar girl who indicated the best spot, when he was working with the automatic water finder in the Satara District. Yet divining offers no guarantee of success, and his own experience is cited. Mr. Apte considers that a pain in his calf often indicates the presence of water below. But he concludes that many favourable factors must co-exist with divining powers inherent or acquired so as to obtain really good results and greater reliance must be placed on the practical geologist. The latter must have sound local knowledge, and go by the water-finder. The machine is susceptible to moisture, electricity, etc. and readings are not possible on cloudy days. Working time could be taken as 1½ hours to 2 hours per day and the reliability of readings was determined by soil temperature. Both Mansfield and Schmidt water-finders have been used by Mr. Apte and the theory of vertical earth-currents receives support from his experience. Reference is made to the importance of the geologist who uses the machine rather than the machine itself. Its value will remain great in the non-alluvial tracts where well irrigation is a very important problem as scores of dry wells prove. Mr. Apte while outlining conclusions based on experience, asks for further study of the subject so as to bring the benefits within reach of the poor cultivators.

Australian Plans

Co-operation between Australia and America resulted last year in the transfer of whole factories and many technicians across the Pacific. It has gone further, as a mission to develop Commonwealth production of war minerals has reached out; tin, tantalite wolfram and alumina are to be examined. The mission is also interested in long-range aspects of development and mining projects looking to the increased output of minerals. An agricultural expert attached to the mission is to assist the Australian Government in canning and dehydration schemes. Plans in rain output of vegetables are well to the fore. Large increases in factory employment have led to the growth of earnings. The aggregate wages paid out are estimaeted at £160 millions pnr annum. A single company paid out £1.6 million in wages and £1.25 millions for goods and services, most of it local. The increase in the wage bill will be related to the advance in construction work. The Allied Works Council embarked on a programme costing £65 millions in its first year. It included graving docks and warships berths, loans and anti-submarine defences, aerodromes, oil storage installations, barracks, etc. Meanwhile plans to take off manpower are being applied and 500 branches are to be closed by Austrailan banks. By agreement 200 branches had been closed, and Mr. Dedman said more would be closed. Central Australia's minerals are acquiring prominence. A deposit of phlogopite mica has been reported. Known deposits in Canada and Madagascar do not reduce the importance of a mineral needed for making spark plugs for aero engines. An engineer form Burma has been assigned for the work of developing the deposit located many years ago and ascertained since to be different from ordinary muscovite. The Swedish Bofors gun is being produced by Australia for anti-aircraft defence. The local Bofors plant delies on unskilled labour largely, and Australia's own steel plants provide the forgings for the barrels made of nickel-

Defeat in Denmark

A peaceful reverse for the Nazis is even more important today than defeat in the field. Denmark in voting for the King's candidates to the Lower House, has chosen to ignore the Nazis' supporters and her electors have voted for a national union bloc. There is little doubt that King Christian X dominates the situation with five parties behind him, and the German Minister Renthe-Fink and his adherent Frits Clausen must be disappointed by the popular choice. The elections have given the King's Friends 140 out of 143 seats in the Folketing, said a Reuter message last week. Since the long rule of the Socialist Premier Hr. Th. Stauning ended, the King is definitely master of the internal situation, in spite of the police passing under the Germans' tool, Jacobsen. Adult suffrage has given Denmark a secure position among the minor democracies which the German occupation has hardly touched; and even the vagaries of P.R. have not produced results favourable to the Nazis who may find that the support of aristocratic landlords is not enough to keep up the Danish Nazis' prestige as the spokesmen of the peasants. The results announced last week show that the dissolution of the Communist party in 1941 has not been

W. G. GROUNDWATER, General Manager.

enough. The Liberals and Conservatives should be the biggest parties in the list approved by the King because Christmas Moller who came out against German control openly in 1941 was a Conservative: like the Premier he did not encourage the Nazis' attempts to use Denmark for war purposes. Control of the Danish press by the German attache, Meissner, for obvious reasons, has not made public opinion tolerant of the occupation. The election must be called as much a defeat for Erik Scavenius as for the Germans. Only last October, fresh attempts were made to play up to the ideal of Nordic unity after the customs union proposal fell through to the disappointment of both Scavenius and the Germans. The election results may be taken as proving that King Christian's illness has not shaken his hold on the people of what has been called Germany's model protectorate. In the elections of 1939, the Danish Nazis (a noisy, negligible minority) pulled 81,000 votes and got 6 seats (divided between two parties). The election due in the Spring of 1941 was postponed, but two years after, the people of Denmark, led by their King, have shown how they feel about the Nazis and their protegees. Whatever be the Germans' strength in North Slesvig, their stock has clearly fallen in Denmark, compelled to part with her fleet but with else. It is clear that Denmark is bucking against the New Order.

TO PUSH BACK THE JAPS

WITH the roar of glowing furnaces, and the hiss of superheated steam, India's Railways carry on with their enormous war work against the enemy.

And what is the part they play in India's struggle?

Listen.

Every day 3,408 coal wagons are loaded.

Every day 20,546 wagons of all kinds reach their destination carrying vital supplies to our armies and factories.

Every day seventy-six million ton-miles are run on 40,000-mile lines of communication.

Every day 3,965 passenger trains are run.

Every day 17,07,047 passengers are carried swiftly and safely to their destination.

We, the travelling public, can help by travelling only when we must—by making room in time—track and rolling stock are required for those implements of war which will finally crush the Japanese.

THE RAILWAYS HAVE A JOB TO DO

make way for munitions

BUILD THE NATIONAL WAR FRONT

M65

Gateway of India

(From Our Correspondent)

Bombay, March 30.

THE Finance Member who was termed the "senior partner" of the textile industry some time ago, has to be presented in a new light to Bombay business interests. His threat to "mobilise the whole of government's resources to defeat and crush the speculators of the Bombay cotton market" following his description of the action of speculators as "economic sabotage of the war effort" has been strongly deprecated by the cotton interests. The view prevailing in responsible cotton circles is that the speculative activity in the market is not so heavy as it is made out to be by the Finance Member, though the charge that the rise in cotton prices will lead to the growing of cotton in preference to food crops, thereby affecting food production, is not denied. Cotton prices have risen by Rs. 200 per candy during the past month. Though opinion may be divided on the necessity for such a rise in cotton prices, the position of Indian cotton to-day is held to be statistically sound. It is pointed out that since cloth prices have reached almost the peak levels of the last war, mills have ample profit margin, they can afford to buy raw cotton even at rising rates. According to Sir Purshottamdas Thakurdas, Chairman of the East India Cotton Association, the rise in prices can by no stretch of imagination be called speculative. He pointed out in the formal rejoinder to the official charges that, until very lately, the cotton-grower was not getting a reasonable return for his labours and that it would be unfair if the Government were to scoop down and deprive him of his share of war prosperity just when cotton prices were moving up in line with the prices of both yarn and cloth. Were not the Government of India silent spectators of the enormous margin of profit available to the textile industry when yarn and cloth prices were soaring because such a rise brought the Government substantial amounts by way of excess profits tax? What did the Government do to support the cotton grower when prices were down to Rs. 150 up to last year, except purchasing some 20,000 bales of short staple cotton at bottom prices? These questions have been addressed to the Finance Member.

No one will deny that strong measures are necessary to make the poor man's cloth available at economic prices and to increase food production. But the view of the cotton trade is that such measures should point at other directions than that of the cotton grower who is entitled to an increased return proportionate to the increased buying margin now available to the textile industry. Two alternatives have been suggested by the trade, namely, a ceiling for cotton piecegoods prices and the subsidising of food production. The former has the drawback that it will affect the receipts from the Excess Profits Tax. Sir Purshottamdas Thakurdas has left for New Delhi on the invitation of the Finance Member to discuss the problem of cotton prices, and cotton interests are awaiting the outcome of the visit with confidence.

Arrangements in connection with rationing here are going on apace. Whereas originally it was learnt that rationing will commence from April 1, we are now told that the date has been altered to April 15. But this little delay will be overlooked by the public since Bombay has gained a reputation for never letting the grass grow under its feet. It may be remembered that Bombay took interest in A.R.P. months before war was declared and the Parsi community actually distributed gas-masks some time in May 1939. Public enthusiasm certainly prods the authorities into swift action in Bombay at any rate.

Action has been taken against the circumventing of the order limiting feasts and entertainments, social or religious, to less than 50 persons. An amendment to the original Notification declares it unlawful for hosts to distribute dinners or meals to 50 or more persons by sending out the food to the residence of each guest. Foodstuffs that have been specified as rationed articles are, Rice, Bajra, Jowar, Wheat; flour made of each of these items; Suji, Rawa, Maida and Atta; bran and bakers' bread or loaf. 137 Government grain shops in the city and 347 private distributors' shops have been selected at present for the registration of holders of ration-cards and registration has already commenced. Mr. R. N. Samarth, Controller of Rationing, in the course of a broadcast from the Bombay Station, sought to explain to the public the procedure laid down for food through the rationing system. The problem of the authorities is to obtain the requisite supplies of foodstuffs. The citizens of Bombay have received with immense relief the assurance given by Mr. A. D. Gorwala, Civil Supplies Commissioner to the Committee of the Indian Merchants' Chamber, Bombay, during the discussions last Tuesday evening that the Government of Bombay would do their best to augment supplies of foodstuffs so as to ensure the maintenance of the proposed basic quota of ration.

On Wednesday, March 24, the Rt. Hon. Sir John Colville, the new Governor of Bombay, took the oath of office. The Chief Secretary read the warrant of appointment, the oath of allegiance and the oath for the due execution of office of Governor being administered by Sir John Beaumont, the Chief Justice of Bombay. Sir Roger Lumley, the retiring Governor and Lady Lumley bade farewell to Bombay on Wednesday morning.

In reviewing the work of Sir Roger Lumley during his tenure of office as Governor of Bombay, it has to be remembered that he took over charge at a time which marked the real beginning of provincial autonomy. Though Congress Ministry was formed in Lord Brabourne's time, to Sir Roger Lumley fell the task of piloting provincial autonomy through its fateful early days. To him fell the unenviable lot of carrying on an "autocratic" government for three and a half-years after his ministers tendered their resignation on November 4, 1939. It must be said to his credit that he continued the policy of Prohibition launched by Congress Ministers, though with some modification. In the field of administration, grants for education were increased as also grants for medical relief, public health and agriculture. His relations with the Press have been most happy. Lady Lumley played her part in war work with remarkable ability and her capacity for organisation found due scope as will be seen from the establishment of Lady Lumley's canteens to cater for troops both British and Indian.

The two lectures on "War Finance and Taxation" delivered by Prof. K. T. Shah at the Bombay Stock Exchange deserve mention. Among a number of issues discussed by Prof. K. T. Shah, the mounting spiral of inflation and the unknown commitments of the mutual aid under the lease-lend system, as applied to India, have been selected for special comment by a local nationalist daily. The paper claims for Prof. Shah that he was among the first to raise his voice against inflation, when the fact was officially sought to be denied by coining other names. According to Prof. Shah, if a real check was to be applied to the process of inflation, it might be necessary to add still more to direct tax burdens, to control more thoroughly the whole field of production as well as distribution, to ration more rigidly all kinds of consumption, to restrict profits and fix the maximum limit to all forms of income, organise compulsory savings and enforced investment. But the lecturer recognised that it would not be easy for a foreign bureaucracy not possessing the confidence of the Indian people to adopt these measures. Prof. Shah also uttered a timely warning against experiments like the gradual raising of the rupee-sterling ratio. Such an experiment, it may be pointed out, during the last war, culminated in the sales of Reverse Councils.

A high officer of the Indian Air Force held a Press Conference here on Friday last in the course of which he urged that Indians, both men and women, should join the I.A.F. in much greater numbers though the present pace of recruitment was quite satisfactory from the point of view of defending India and winning the war. He argued that India was bound to assume greater importance after the war and people trained in aviation were assured of excellent prospects. He also pointed out that if men and women in India did not join now and form the entire personnel of the I.A.F., other countries would step in and put in their own personnel. That would mean that the development of business connected with aviation would get into foreign hands and profits will go into foreign pockets. He assured the women personnel that they would not be left in the lurch after the war. There were heaps of jobs they could do after the war in the several departments of the I.A.F. as telephone operators, clerks and store-keepers. To such faint hearts as might feel that there were risks in aviation, his retort was that there was no mode of travelling ever yet discovered that did not contain an element of risk.

The following information was provided in answers to questions put by local journalists present. There is no discrimination as between recruits from one Province and another in respect of rations or amenities. Promotions even to the highest ranks are based on sheer merit. Bengal and the Punjab are at present leading in the matter of recruitment but the pace is said to indicate that other provinces would soon fall into line with the two. If a recruit is found to be not qualified for one branch of work, he is not discharged forthwith but is tried on other branches of work. It was only in respect of a query as to why the deeds of the R.A.F. alone figured in the press and the I.A.F. did not find any mention that the officer had no ready answer but had to fumble for one. It was because, he said, all air force men were under one Command. He assured the journalist that he would make a note of the query and forward it to the proper quarters.

Resume of Commodity Markets

THERE were no important developments in the commodity markets during the past week. The jute and jute manufactures markets were steadier while the raw cotton market showed a tendency to recover after earlier weakness. The bullion markets have been more active with a quieter tone in the stock exchanges.

* * *

Difficulties in regard to ready supplies of raw jute are as great as ever and unless arrangements are made for the speedy despatch of the raw material from the mofussil stations, it cannot possibly be expected that mill demands will be satisfied. Recent buying by mills is reported to have covered the additional production in respect of the new order from the U.S. but unless deliveries in respect of these purchases are effected in time, it will not be possible to keep mills going even 54 hours per week. That is the reason why emphasis has been laid on the necessity for speeding up despatches of jute, and giving priority to long-standing contracts. The efforts of the authorities in this regard have not been reflected in an increase in arrivals. It is only to be hoped that before long there will be a substantial improvement in the rate of arrivals. The anxiety of mills to buy up as much jute as possible is clearly reflected in their readiness to buy whatever ready jute available. It is even feared that there will be a shortage of the raw material in the coming season as the tendency at the present moment is to grow food crops which afford a greater return.

* * *

Efforts to induce ryots to grow food crops instead of cotton, which policy resulted in a substantial increase in food crops last season, will not be relaxed in the coming years. The Indian Central Cotton Committee is satisfied that the present output of cotton is sufficient for the requirements of the industry, and that there need not be any anxiety in this regard. It is not surprising, therefore, that with the recent warning by the Finance Member to speculators in the cotton market and the slump in yarn prices, Jharilla May was quoted as low as Rs. 517 early in the wee; and only on short covering and recovery in yarn prices, there has been a rise in quotation towards the close to Rs. 532. It is also to be remembered in this connection that the rise in Jharilla cotton was mainly due to special factors, there being an acute shortage in long staple varieties. There is plenty of short staple cotton available and mills cannot possibly experience any difficulty in regard to supplies of this quality. The revision of the new contract, which has been in operation for over one year, is necessary, as the one-sided movement in prices for Jharilla cotton does not give any idea of the general trend in cotton values.

* * * *

It appears that large quantities of rice have arrived into Bengal recently, and that the Provincial Government has arranged for considerable quantities of rice to be distributed through controlled and approved markets. There has been a slight increase in retail price with the arrival of supplies from the Central Government. It should be said, however, that even the increased prices are considerably below black market rates. It is said that the Orissa Government is arranging for despatches of large quantities of rice and that the Central Government also will continue to send in supplies till a satisfactory reduction in prices has been achieved.

* * * *

In this conenction, the details of a plan for food grains purchase and storage by the Central Government are worth recording. An announcement to this effect is shortly expected. It is pointed out that the Government will come into the market whenever prices fall below a fair level, thus assuring the grower of a guarantee of a minimum return on his outturn. The assurance regarding the continuity of values will, it is hoped, enable the ryot to dispose of his crop then and there, and prevent hoarding. It is reported that substantial purchases have been made by the Central Government recently, and that it is in a position to supply freely to the deficit areas.

* * * *

The position in regard to wheat is getting easier, thanks to the large purchases from the surplus provinces of Sind and the Punjab. It is also reported that heavy arrivals of wheat have come into this country from Australia and that, further substantial shipments are expected in the near future. More wheat is available now for the consuming public in Bengal though it has not been possible to resume large-scale retail selling.

* * * *

At the auctions of tea for consumption held this week, there is a further decline in prices with certain exceptions. Fairly clean broken tea and fannings were lower by one to two annas, but common and medium liquoring descriptions declined by as much as 3 to 4 annas. Leafy grades with tip were firmer and sometimes dearer. Only small quantities of green tea were on offer. Prices, however, declined by 3 to 4 annas. Better quality dusts were lower by 1 to 2 annas while other descriptions declined by as much as 4 annas. The downward trend became pronounced as the sale progressed. There were many sellers for the export quota and the quotation dropped to as low as ½ pie per lb. All quantities were cleared at this rate. The market is now closed. There was no demand for internal quota.

* * * * *

Indian linseed prices are higher than Argentine parity prices. In recent weeks the British Government have made substantial purchases of Argentine linseed and it is pointed out that unless there is an appreciable decline in Indian prices the British Government might not care to get their requirements from this country. Owing to the increased use for linseed oil and its products, sellers are very firm in their ideas. Unless substantial supplies of the new crop are received it is very unlikely that there is any appreciable decline in the prices.

* * * *

As we go to press it is reported that the Government of India have announced their intention regarding the control of cloth and yarn prices and also the necessity for a revision in the hedge contract in the cotton market in Bombay to prevent undue speculative activity. It is pointed out that the revision of hedge contract will not in any way affect the interests of the grower, and that the authorities will as far a spossible ensure that a fair price is paid for cotton.

The control of cloth and yarn prices and production by the Central Government, following the action taken by the Madras Government recently in regard to the output of yarn in that Province, has not come altogether as a surprise to the market. For, earlier in the week on fears regarding some action in this regard, there was a slump in yarn prices and it was only later that a slight rally was recorded. The control of yarn prices cannot be assured without the control of cloth prices. As was pointed out by the yarn interests, any action on the part of the Government in regard to one section of the industry would adversely affect yarn interests. The delay in putting into effect the yarn scheme by the Bombay Government was mainly due to the objections raised by the yarn interests in this regard. Now that it has been decided that there should be control of both yarn and cloth prices, it can be expected that undue speculative activity will be discouraged and consumers' interests will be more carefully protected.

THE UNION BANK OF INDIA, LTD.

Established in 1919.

It is notified for the information of the general public that with effect from 1st April, 1943, six monthly and 18 days Rail-cum-Road return tickets to Srinagar (Kashmir) via Rawalpindi and back will be issued for first, second, inter and third class passengers from the following stations:—Lahore, Delhi, Karachi Cantt., Hyderabad (Sind), Multan Cantt., Meerut Cantt., Ambala Cantt., Sukkur, Ferozepore Cantt., Saharanpur, Peshawar Cantt., Jullundur Cantt., and Lyallpur. 18 days tickets will be issued from all these stations except Karachi Cantt., Hyderabad (Sind) and Sukkur. For further particulars, apply Station Masters. Lahore. General Manager.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 1st April.

SOME time ago we mentioned a proposed new scheme for the grading of Loose Jute which was being evolved by a special Sub-Committee of the Indian Central Jute Committee. The tentative scheme has now been issued for comment and criticism to the various Jute Associations and it is much on the lines which we forecast. That is to stay, it suggests the sub-division of the Top and Middle grades into three sub-grades according to the amount of cuttings and the presence of faults. The Top 1 grade would be sound fibre of good colour and free from all faults with not more than 20 per cent of Cuttings. The Top 2 would be sound fibre of good colour with few or moderate faults and not more than 40 per cent Cuttings. The Top 3 would be sound fibre of good colour with few or moderate faults and not more than 60 per cent Cuttings. Similarly the Middle 1 would be sound fibre of average or dark colour, free from all faults and with not more than 20 per cent Cuttings. The Middle 2 would be sound fibre of average or dark colour with few or moderate faults and not more than 40 per cent Cuttings. The Middle 3 would be sound fibre of average or dark colour with few or moderate faults and not more than 60 per cent Cuttings. The Bottoms would comprise all jute, irrespective of colour, which has more than 60 per cent Cuttings, as well as all jute of unsound fibre or which contains heavy faults irrespective of colour or percentage of cuttings.

There would thus be 7 grades apart from the tangled or habi-jabi Cross grade in place of only 3 grades as at present. But this fact does not imply that the job of the up-country loose jute dealer or seller is to be more onerous. In fact, in some respects it might be made easier by the adoption of this scheme, and the idea rather favours the Seller than the Buyer, for it makes definite provision for jute which, except for heavy cutting would qualify for Top grade, but which under the existing system must be de-graded to the Bottom by reason of the heavy cuttings. We do not imagine for a moment that such jute escapes the eagle eye of someone in the Mill Batching house, and it may be taken for granted that all sound jute of good colour finds its way, after cutting, into the Hessian Batch. The adoption of this proposed scheme will undoubtedly deprive Mills of their "pickings" from the present Bottom grade.

As we have suggested, the scheme offers no serious difficulties to the up-country Baler. A little education of the assorters to the new idea, and they should grasp it and work it quite easily. Again, it may be of advantage to the Mills to have their jute thus graded and the facilities it would offer in regulating the supplies to the Batch might be sufficient to recompense them for the loss of any "surprise packets" in the Bottom grade.

One point however on which the scheme is so far silent is the question of price margins between the grades and sub-grades. Is a Top 3 for instance of greater value to a Mill than a Middle 1 or is it the other way about? We can imagine that what might evolve with the adoption of this scheme would be that sales would be made on the basis of the Top 2 and the Middle 2 and that there would be an understanding that equal proportions of the 1 and 3 sub-grades would be tenderable at the contract price for the intermediate sub-grade. That is to say, a Mill might buy on a contract 50 per cent Top 2s and 50 per cent Middle 2s at say Rs. 12 and Rs. 10 respectively. Against the Top portion of the contract it would be permissible for the Seller to deliver 20 per cent Top 1s, 60 per cent Top 2s and 20 per cent Top 3s, all invoiced at Rs. 12, and against the Middle portion of the contract he might deliver 30 per cent Middle 1s, 40 per cent Middle 2s and 30 per cent Middle 3s, all invoiced at Rs. 10. Some such convention would do away to a large extent with the necessity for arbitrary price margins between the sub-grades, but not altogether. And price margin would have to be subject to periodical review, if arbitrarily fixed, for the basis would depend to a great extent on the market value of Cuttings which is a notoriously variable factor. Whether this question of difference in values between the grades and sub-grades was considered by the Sub-Committee which evolved the scheme is not vouchsafed, but it will almost certainly have to be elucidated, at least on broad lines, before the scheme will be acceptable. But if Mills prove to be favourably disposed towards the idea, we see no reason why objection should be anticipated from the up-country side of the trade, which seems to be favoured by the scheme rather than otherwise.

The March Bulletin of the Indian Central Jute Committee is not without its usual quota of "warnings." Further particulars of the scheme to develop a fibre in Cuba for the manufacture of Sugar and other bags are given. Normally Cuba requires 30 million bags annually for the packaging of Sugar, Rice and Coffee and these bags in the past have been almost exclusively jute. The Malva Blanca fibre which is now being experimented with, is claimed to be in some respects, such as resistance to water and dampness, superior to jute, and two crops a year can be raised. Arrangements are so far advanced that not only is it expected to have 9,000 acres under the fibre this Spring but a factory with a capacity to produce 6 million bags is also to be ready. In the Argentine, the requirements of bags for the coming harvest will only be covered to the extent of 50 per cent, including both old and new bags, and large scale growers have been warned to make preparations to store at least half their crops. The consumption of bags in the Argentine amounts to more than 150 million per annum and already a factory is in course of erection for the manufacture of bags from locally grown cotton. An interesting feature of this project is that it has been started by the Government with the view to ultimately handing over the concern to the producers themselves, organized into to Co-operative Company, or worked jointly with the State. The factory is designed exclusively for the production of yarns and fabrics for bags, and the ultimate capacity is expected to reach 30 to 40 million. The projected Jute Mill in Egypt is apparently taking shape for a Company has been formed for the purpose. It is unquestionable that the Indian Jute Industry will find plenty of opposition in post-war days and despite the development of new uses for the fibre, it cannot be too often or too strongly emphasised that the foundation of the trade will always be the production of bags and more bags and still more bags at prices to meet competition in any part of the world.

There has been little of interest to record in the Export Jute market. Business has been mainly inter-baler. Short Group Dundee Daisee 2/3 sold at Rs. 85 and Long Group at Rs. 78 while Outport Daisee was reported at Rs. 68. Mill interest has not been extensive, Firsts being reported up to Rs. 83 and Dundee Daisee 2/3 at Rs. 81 and Rs. 80, Sellers for the latter grade showing more anxiety to sell. There was a large turn over in Loose Jute at the end of last week, European packing being recorded at Rs. 7, Rs. 14 and Rs. 12-8 to four annas more. Supervised Jat found buyers at from Rs. 16-12 and Rs. 13-12 to even money. Good Indian Jat marks sold at from Rs. 16-8 and Rs. 13-8 to Rs. 17 and Rs. 14. Indian hard District was taken at Rs. 16 and Rs. 13 and Northern quality at four annas less. Buyers are now pausing and little has been reported latterly but offerings are limited and sellers showing no inclination to discount prices.

Estimated arrivals of Jute into Calcutta during March amount only to 4,28,000 Bales bringing the total for 9 months since July to 48,62,000 bales against 52,68,000 bales for the same period last year.

Mofussil markets continue firm with imports small and held for full rates. Sowings are only proceeding slowly and are generally well behind last year at this time, though weather conditions have been generally favourable. The Lowland sowings are complete but the extent to which the higher lands will be sown in jute is still doubtful, the only favourable factor being the relative cheapness of jute seeds as compared with paddy seed.

The Fabrics market has ruled generally firm and prices have hardened all round, but on sentiment rather than on the volume of business proceeding. Mills have met any demand pretty openly and sold nine porters at Rs. 19 for May, at Rs. 19-4 for May/June and at Rs. 18-12 for October/December. Mills also sold eleven porters at Rs. 25 for April/June and July/September. The turnover in the Heavy Goods section has been restricted to small dimensions but prices have been marked up eight annas to a rupee all round. The usual transactions in ready "B" Twills were recorded around Rs. 58 with April/June reported at Rs. 56-4 and July/September at Rs. 54-8 but the closing rates for these two positions are Rs. 57 and Rs. 56. Cornsacks sold for July/September at Rs. 55-8 but now quote Rs. 57. D. W. Flours for April sold at Rs. 71.

JUTE

Calcutta, April 1.

The raw jute market has been quite firm during the past week with the great anxiety on the part of mills to buy up as much jute as possible. Quite a large amount of business has been done at advancing rates. Sellers continue to be reserved. With the present rate of arrivals, it will not be possible to prevent a further rise in values, if measures are not taken in time to speed up despatches. It is generally felt that the crop prospects for the next season are not quite satisfactory, and that sowings may not come up to the total licensed area. Mills are anxious to lay in as much stock of jute as possible out of the current season's crop, and are prepared even to enter into commitments for the new crop, if there are any sellers offering. Stocks with mills at the present moment are enough for the next three months though the unequal distribution might possibly affect certain mills adversely. If fresh purchases do not cover up entirely all the new production, it will not be very long before certain mills are forced out of production or, in the alternative, compelled to reduce the rate of production. Something further has to be done in this regard.

In the loose jute section, European and Supervised Jat Middles were done at Rs. 17 per maund and Bottoms at Rs. 14 per maund. Indian District Tossa Middles were done at Rs. 16-4 per maund. Sellers were asking for higher prices towards the close.

Not much of business has been done in the Pucca Bales section for export. Shippers bought in small quantities long and short crop Daisee at Rs. 78 and Rs. 85 per bale. Mills bought Dundee Daisee 2/3 at Rs. 81 per bale and Firsts at Rs. 83 per bale. Cuttings N. C. & M. C. were much higher at Rs. 39 and Rs. 38 per bale respectively.

JUTE MANUFACTURES

Calcutta, April 1.

The jute manufactures market has been firmer on account of some North American buying and the reports that the freight position is much easier and that there was good demand for near deliveries. Mills were anxious sellers and as most of the business passed through the bazar, quotations were marked higher. The closing rates are at the highest levels for the week. 9 porters Ready were noted at Rs. 19-10 against Rs. 18-15 at the end of last week; April/June Rs. 19-8 against Rs. 18-14; and July/September Rs. 19 against Rs. 18-10. 11 porters Ready were Rs. 25-3 against Rs. 24-14; April/June Rs. 25-5 against Rs. 24-14; and July/September Rs. 24-14 against Rs. 24-8. It will be seen that the appreciation in rates has been more pronounced in the near positions. In fact, demand has been confined mostly to near positions and quotations for distant positions are only sympathetically higher.

In the *Heavy Goods* section business passing is on a very small scale and rates are more or less unchanged. B. twills for March delivery sold on the basis of Rs. 58, Liverpool twills at Rs. 60-8 for the same position and Cornsacks at Rs. 59.

GOLD

Calcutta, April 1.

The gold market has been firm on speculative buying and the diversion of investment buying. The abrupt fall in prices in the cotton market and the anxiety regarding the future of dividends, so far as equities are concerned, have been responsible for the diversion of investment buying in the bullion market. Gold Ready are quoting Rs. 71-12 and First Settlement Rs. 71-6. The quotation at the end of last week was Rs. 70-4 for Ready and Rs. 70-2 for First Settlement. It will be seen that there has been a widening in the premium for Ready over First Settlement.

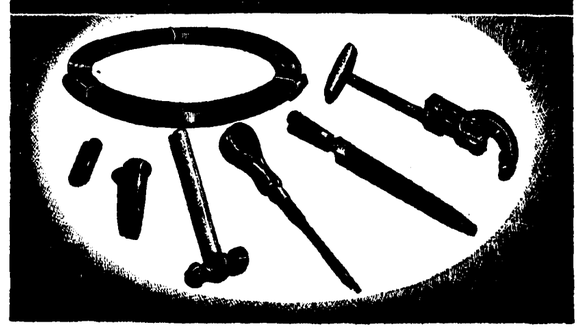
SILVER

Calcutta, April 1.

The silver market also has been firmer in sympathy with the gold market and the quotation for Ready is higher by nearly two and a half points on balance. Silver Ready closed at Rs. 111-4 and First Settlement Rs. 110-8. As in the gold market, there has been a widening in the premium for Ready in the silver market. There is no change, however, in the London market and the quotation is 23½d. for both Spot and Forward. The undertone is quiet.

COTTON

Calcutta, April 1.



With the fears that there will be control over yarn output in the Bombay Presidency too, there was a slump in prices in the yarn market. This slump, however, has had a depressing effect on the cotton market and there was a general tendency on the part of mills to await further developments and speculators were afraid of a further decline in values over raw cotton. Jharilla March came down to as low as Rs. 517 earlier in the week. Only the recovery in the yarn market and short covering, resulted in a rally and some of the lost ground was regained Closing quotations were considerably lower than the levels at the end of last week. Jharilla May closed at Rs. 530 and July at Rs. 537 against Rs. 543 and Rs. 547 in the previous week.

PIECEGOODS

Calcutta, April 1.

The *piecegoods* market was slightly easier in sympathy with the weakness of the Bombay raw cotton market and the yarn market. There was no tendency on the part of dealers, however, to part freely with their holdings. Supplies are short and unless it is definitely pointed out that there will be a control of cloth prices too, it is very unlikely that there will be a substantial decline in this direction. It is given out that so far mills have produced 10 million yards of standard cloth and these have been distributed to the dealers in the various provinces. The marketing of standard cloth varieties has not had any effect on cloth prices so far.

J.K. BALING HOOPS and STEEL TOOLS

The "J. K." baling hoops, steel tools and other products represent a high degree of excellence in manufacture and workmanship.

In temper, tensile strength and durability Electric Steel as used by "J. K." for making baling hoops and tools is ideal. No ordinary steel could have the enduring strength required for these products. Electric Steel is rolled and then heat-treated to ensure the uniformity so essential for this exacting service.

Other products from this factory include steel bars, iron and steel castings and hardware such as hammers, pipe-cutters, chisels, screw-drivers, anvils, etc.

Stock Markets to-day and to-morrow

MARKETS DEFINITELY EASIER

STOCK markets, both in Calcutta and Bombay, were inclined to be rather quiet in the early days of the week under review. The abrupt decline in prices in the raw cotton market had a depressing effect on share values in the Western centre while the fears regarding the possibility of fresh air attacks in Eastern India and the publication of the report in the press declaring Bengal as a "Red" area, had a chilling effect on prices in the Calcutta market. There was, however, no appreciable decline in the quotations. Indian Iron and Steel Corporations fluctuated within narrow limits. The volume of business was on a definitely smaller scale, and both operators and investors alike were inclined to await further developments. In Friday's session rather heavy selling was noticeable in the first hour, on the reports that the Government of India have decided to control prices of both cloth and yarn. The Bombay market reacted rather severely on hearing this news though, operators were anticipating some sort of control so far as the cotton textile industry was concerned. Tatas deferreds came down to Rs. 1,780, Indian Irons to Rs. 34-11 and Steel Corporations to Rs. 24-12. Some covering at the lower levels has resulted in a slight recovery towards the close, but the undertone is definitely quiet and it appears that there will not be any appreciable increase in activity for some time to come.

* * * * *

In normal circumstances, the brilliant victory of the 8th Army would have resulted in an appreciable improvement in values in the stock exchanges. During the past few days, however, developments within the country have been given greater prominence. It might be that in the absence of the encouraging reports from the Tunisian sector, prices would have been marked down further.

* * * *

The report that the Government of India have decided to control prices for both cloth and yarn could not have come as a complete surprise to the market for, it was generally expected that, following the action taken by the Madras Government recently in regard to the output of yarn in that province, control would be extended to other provinces as well and that control regarding prices, distribution and production could not be confined to yarn only. It is pointed out that the Central Government have decided to control prices and production of both cloth and yarn so that the consumer might get his requirements at fair prices. While this decision will certainly result in a substantial decline in prices for piecegoods or at least prevent a further improvement in values, it could not be taken to mean that company's earnings will be affected unduly and that the distribution to shareholders will be affected thereby. Production at the moment is running at very high levels and even at the rates offered by the Government there is a substantial margin of profit. As the cotton industry experienced very difficult conditions in the years just before the outbreak of war, the improvement in earnings during the last three years has been advantageous to a greater extent to the Government. The liability in regard to Excess Profits Tax is heavier in the case of cotton mills and the greater portion of improved earnings has accrued to the State. A reduction in earnings will certainly result in a reduction in the disposable surplus, but as the dividends were covered many times, there is no fear of any decrease in the distribution to ordinary shareholders. It may not be possible to effect any increase in dividends. Shares of popular counters yielding a return of over 6 per cent tax-free on the basis of the last dividends cannot be said to be over-valued.

* * * * *

Early this week it was reported that *Cawnpore Textiles Limited* might possibly issue bonus shares to shareholders. On these reports there was a sharp rise in the quotation from Rs. 19-4 to Rs. 23. In sympathy with the weakness in the other sections there has been a decline in the quotation to Rs. 22-4 on Friday. What exactly is the nature of the bonus proposals is not definitely known. The Company is in a position to distribute liberally bonus shares, the financial position being very sound. It should not also be forgotten that there was capital reduction on two occasions. In September, 1927, the authorised capital of the Company was reduced from Rs. 30 lakhs to Rs. 22½ lakhs by reducing the nominal value of the shares from Rs. 10 per share to Rs. 7-8. In 1934 again, the authorised capital of the Company was reduced from Rs. 22.5 lakhs to Rs. 7.5 lakhs and the issued capital from Rs. 19.06 lakhs to Rs. 6.35 lakhs by reducing the nominal value of each share from Rs. 7-8 per share to Rs. 2-8. In July 1939, the issued and subscribed capital of the company was increased to its present figure by the issue of 45,838 shares of Rs. 2-8 each fully paid at a premium of Re. 1 per share.

* * * * *

At the Annual General Meeting of the *British India Corporation, Limited*, Mr. R. Menzies, Chairman of the Board of Directors, referred to the important part played by the company in the country's war effort. Nearly 80 to 90 per cent of the company's output is taken up by the Government. The large increase in production since the beginning of the war will be evident from the sales figure for the last four years. The pre-war level of sales was in the vicinity of Rs. 2½ crores though in some years sales were less than that figure. In the year 1939, the year in which war started, sales rose to Rs. 258 lakhs, in 1940 they rose to Rs. 594 lakhs and this growth was continued in 1941 when the sales were Rs. 692 lakhs. In 1942 sales exceeded Rs. 828 lakhs. The increase in the price of raw materials has naturally resulted in a certain inflation in the value of sales but, as the Chairman pointed out, in regard to production, with the equipment as at present, it is impossible to increase to any appreciable scale the present rate of production not to speak of the difficulties about raw materials. The Chairman has again justified the Company's dividend policy, the ordinary dividend to shareholders being maintained only at 25 per cent. The same emphasis on the need for strengthening the company's resources has been laid. It might be said that having regard to the sacrifices in the past, the ordinary shareholders are entitled to a more liberal policy regarding dividend distribution. But in so far as the money is retained with the company, the directors might possibly be in a position to consider bonus distribution at a later stage.

* * * *

Even with the great increase in the production costs it has been only possible for the *Orient Paper Mills, Limited* to maintain the dividend on the ordinary shares at 12 annas per share. After meeting all expenses, Rs. 2.5 lakhs to depreciation, setting aside Rs. 7.25 lakhs to taxation, the amount available for disposal at credit of profit and loss account is Rs. 5,58,413 including Rs. 2,01,242

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 2.

RATHER quiet conditions have been noticeable in the Calcutta Stock Exchange during the past week and quotations have been fluctuating in very narrow limits. The volume of business transacted also has shown a tendency to decline, and developments during the past few days have not been quite satisfactory, from the market point of view. Though, it can be said that spectacular success of the 8th Army in Tunisia has more than offset the adverse effects of other developments, Operators, however, seem to be concerned more about the developments nearer home. The frequent attacks by the Japanese in South-east Bengal and the latest reports regarding the control of yarn prices, have necessarily had a depressing effect; but for the offsetting influence on account of the 8th Army's advances and the general hopeful outlook of operators regarding the future outlook, the decline in prices would, perhaps, have been more pronounced. The undertone in the several sections is quietly steady.

In the Giltedged Securities section not much of business has been passing, and quotations are more or less unchanged with 3½ per cent Paper quoting around Rs. 94-2. Business in terminable loans have been few and far between; 3 per cent 1946 defence bonds being noted at Rs. 105-1 and 3 per cent 1949-52 second defence bonds at Rs. 106. 3 per cent 1963-65 were noted at Rs. 95-14, 3½ per cent 1947-50 Rs. 103-14. No transactions have been again recorded in Provincial loans.

Among Industrial Debentures, 5 per cent *India General Navigation* changed hands at Rs. 100-1, and 5¼ per cent *Rohtas Industries* at Rs. 104-12.

Among Public Bodies' Debentures, 3¼ per cent *Howrah Bridge* was noted at Rs. 97-8.

Bank shares were a bit steadier with *Imperial Bank* fully paids at Rs. 1,741 and the Contributories at Rs. 431. *Reserve Bank* was a shade easier at Rs. 105-8.

In the Cotton section the outstanding features are the rises in *Cawnpore Textiles* and *Elgin Mills*. The sudden rise in *Cawnpore Textiles* from Rs. 19-6 to Rs. 23 was due to the possibilities regarding the issue of bonus shares. *Elgin Mills* also have been marked higher in sympathy from Rs. 54 to Rs. 58. *Bengal Nagpurs* were unchanged at Rs. 32-12, and *Bowreahs* at Rs. 502, *Dunbars* at Rs. 284, *Kesorams* were uninteresting around Rs. 18-4, *Mahalakshmi* were steady at Rs. 33-12 and *New Victoria* at Rs. 8-6.

In the Coal section, *Amalgamated* were Rs. 35-2, *Bengal* Rs. 440, *Equitable* Rs. 34-13, *New Bansdeopur* Rs. 30, *West Jamuria* Rs. 33-12. *Burra Dhemo* Rs. 6-5, *Nazira* Rs. 9-8, and *Talcher* Rs. 3-2.

Jute shares are a shade easier with *Adamjee* at Rs. 30-10, *Agarpara* Rs. 27-8, *Anglo-India* Rs. 308, and *Champdany* Rs. 189. *Howrahs* were lower at Rs. 59-12, *Hukumchand* Rs. 23-12 after being higher at Rs. 24-14, and *India* at Rs. 511. *Kamarhatty* were not very much changed at Rs. 545, and *Nationals* were lower at Rs. 25-4. *Nellimarla* Rs. 21-4, and *Reliance* Rs. 61-12. *Soorah* were Rs. 14-10 and *Waverley* Rs. 3-12.

In the Engineering section, *Indian Irons* have been fluctuating in very narrow limits and speculative activity has been conspicuous by its absence. It is rather surprising to note that there is very little speculation regarding the interim dividend in respect of the year ended March 1943, which is due to be announced any moment. Quotation for the most part has been fluctuating around Rs. 35-4, *Steel Corporation* also have been moving around Rs. 25-4. *Bhartia Electric Steel* were sharply lower at Rs. 14-12 while *Braithwaite* were sticky around Rs. 9-1. *Burn & Co.*, were unchanged at Rs. 380 while some transactions in *Indian Maleable Castings* (ordinary) were done at Rs. 8-12. *Indian Standard Wagon* were Rs. 62, and *National Iron and Steel* Rs. 12-2. *Steel Products* were Rs. 8-2.

Sugar shares have been firmer in an otherwise quiet market. *Belsund* sugar being higher at Rs. 9-11, and *Carew & Co.*, Rs. 16-12. *Cawnpore* were Rs. 32 and *Ryam* Rs. 31-12. *Champaran* were put through at Rs. 29, *Murree Brewery* were unchanged at Rs. 19-8. *Dyer Meakin* were considerably higher at Rs. 15. *Samastipore* were Rs. 14-12 and *U. P. Sugar* Rs. 19-8 ex. dividend.

There is nothing of importance to be recorded in tea shares and business passing has been on a smaller scale. *Bishnauths* were Rs. 34-6, *Hantapara* Rs. 558, *Hattikhira* Rs. 30-4, *New Samanbagh* Rs. 35-4, *Testa Valley* Rs. 33-4, and *Tezpore* Rs. 14.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were unchanged at Rs. 213 and Rs. 2-6 while *Alkali* and *Chemical* were well held at Rs. 34-8, *Aluminium Corporation* Rs. 19-6 and *Assam Bengal Cement* Rs. 13-4. *British Ceylon Corporation* were higher on the disclosure of an interim dividend for the year ending October 1943 at Rs. 18-12, while *B. I. Corporation* were lower at Rs. 5-11 ex. dividend, *Great Eastern Hotel* were crossed at Rs. 240, *Indian Cables* were quiet around Rs. 27-11 and *Publicity Society* Rs. 12 ex. dividend.

Among Paper shares, *India Paper Pulp* were Rs. 176, *Star* Rs. 20 and *Titaghur* Rs. 24-4. *Midnapore Zemindary* were unchanged at Rs. 77 and *Calcutta Ice* Rs. 11-4. *Calcutta Trams* were done earlier in the week up to Rs. 19, but towards the close the quotation was lower at Rs. 18.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, March 31.

CONDITIONS in the local stock exchange have become almost normal. Fears regarding official interference at an early date in the matter of distribution of dividends having proved baseless after publication of the full report of the Finance Member's speech share prices have steadied up and a slight upward trend was noticed. In the meantime news from Calcutta is rather discouraging. The recovery that was shared by both textile shares and steels was confined thereafter only to textiles. Whereas local mill shares have strengthened in sympathy with the steadiness of the cotton market. Steels have derived little encouragement. If technical factors are common to both groups Steels have the disadvantage of having their works not far from the war zone. Textile shares have resumed their upward trend while steels are still around levels prevailing last week. The stock exchange opened weak on Wednesday, but rallied towards the close with Textiles to the forc.

Giltedged securities were steady with 3½ per cent Government Paper quoting Rs. 94. 3 per cent Defence Bonds (1946) were done at Rs. 102-15; 3½ per cent Loan (1947-50) at Rs. 103-15; 3 per cent (1951-54) at Rs. 99-14; and 2¾ per cent (1948-52) at Rs. 99-2.

Mill shares staged a recovery when fears regarding an early announcement in connection with limitation of dividends were set at naught. Though appreciation cannot by no means be described as spectacular it is not negligible. *Bombay Dyeing* have not only regained their lost ground, but are actually in the neighbourhood of the peak level touched some time ago. The rise is shared by others in this group also. *Ahmedabad Advance* are slightly lower at Rs. 475 (Rs. 495); *Bombay Dyeing* are Rs. 1,925 (Rs. 1,870); *Central India* are Rs. 474 (Rs. 465); *Century* Rs. 782 (Rs. 755); *Colaba Land* Rs. 247 (Rs. 244-8); *Gokak* Rs. 384 (Rs. 390); *Indian Bleaching* Rs. 250 (Rs. 256); *Kohinoor* Rs. 754 (Rs. 735); *Phoenix* Rs. 313 (Rs. 302); and *Svadeshi* Rs. 597 (Rs. 597).

Steels which showed a tendency to move up on Tuesday have declined on the discouraging news from Calcutta. *Tata* Deferreds which closed at Rs. 1,832-8 on Tuesday were lower at Rs. 1,822-8; *Tata* Ordinaries were Rs. 377 (Rs. 371); and *Indian Iron* were Rs. 35-8 (Rs. 35-8).

(Continued from previous page)

brought in from the previous account. It is proposed to allocate to general reserve the sum of Rs. 2 lakhs after the payment of the ordinary and preference dividends. The amount carried forward is lower at Rs. 1,46,101.

* * * * *

The issue of capital by the *Devkaran Nanjee Investment Company, Limited* has been considerably oversubscribed and the list has been closed. It will be remembered that the prospectus of this company was published in the issue of *Indian Finance*, March 20, 1943, and that, out of the authorised capital of Rs. 2 crores, the directors issued one lakh shares of Rs. 100 each of the nominal value of Rs. 1 crore. The entire issue was underwritten by Messrs. Devkaran Nanjee Banking Company, Limited, Bombay. The confidence of the underwriters in the complete subscription to the issue needless to say has been fully justified.

WATCH-DOG.

THE KELVIN JUTE COMPANY, LIMITED

NOTICE is hereby given that dividends at the rate of 7 per cent per annum on the Preference Shares, and of 40 per cent per annum on the Ordinary Shares for the half-year ended 31st December, 1942, have been declared payable at once to the Registered Shareholders. Warrants may be had on application to the undersigned. Where standing instructions as to the disposal of Dividends have already been registered, Warrants will be sent accordingly.

McLEOD & CO., LTD.
Managing Agents.

28, Dalhousie Square.
Calcutta, 31st March, 1943.

*Includes Bonus.

(Half-yearly General Meeting, on 12th April, 1943 at 12 noon).

Audited accounts for the half-year ended 31st December, 1942:—

	Rs.	A.	P.
The profit for the half-year, after providing for Debenture Interest, Depreciation and Taxation, was	4,89,382	6	4
To which is added the balance brought forward of ..	1,23,290	1	8
Total ..	6,12,672	8	0

Out of the total of Rs. 6,12,672-8-0 the Directors have set aside the following amounts:—

General Reserve	1,00,000	0	0
Raw Materials and Stores Reserve	1,00,000	0	0
Reserve for Indian Workers' Pensions and Gratuities	61,400	0	0
Total ..	2,61,400	0	0

This leaves a balance of Rs. 3,51,272-8-0 available for distribution, which the Directors recommend be dealt with as follows:—

Dividend on Cumulative Preference shares at 7 per cent per annum, free of income-tax ..	7,000	0	0
Dividend on "A" Cumulative Preference shares at 7 per cent per annum, free of income-tax ..	14,000	0	0
Dividend on Ordinary shares at 25 per cent per annum, free of income-tax	1,12,500	0	0
Bonus of Rs. 2-8 per share on Ordinary shares, free of income-tax	90,000	0	0
Balance carried forward	1,27,772	8	0
Total ..	3,51,272	8	0

In spite of the increasing difficulties experienced in connection with the supply of raw materials, chemicals and stores, the mill was kept on full production throughout the period with satisfactory results.

As formerly the major portion of the output was absorbed by Central and Provincial Governments and the Defence Services. As from 5th November, 1942, when the Government Control Order was promulgated, 90 per cent of all the production was brought under Government control.

The cost of materials used in manufacture continues to rise. This has now become particularly noticeable in the case of indigenous materials and the Directors have considered it necessary to strengthen the Raw Materials and Stores Reserve which now stands at Rs. 5,00,000.

Work on the new hospital, which was interrupted for lack of materials, has now been resumed.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ld.

Authorised Capital—Rs. 18,00,000. Issued and Subscribed—Rs. 15,00,000 in 36,000 Ordy. of Rs. 25 each, 4,000 Cum. Pref. of Rs. 50 each and 4,000 "A" Cum. Pref. of Rs. 100 each, all fully paid-up.

Synopsis of the balance sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.

		Total Liquid Assets ..	70,67,868

ORIENT PAPER MILLS, LIMITED

Audited accounts for the half-year ended 30th September, 1942:—

After payment of interest, Debenture interest, Managing Agents' remuneration and commission, setting aside depreciation on Block, providing for taxation and taking into account the balance of the previous half-year, the combined Revenue and Profit and Loss Account shows a net surplus of Rs. 5,58,413-5-6, which the Directors propose to dispose of as under:—

	Rs.	A.	P.
General Reserve	2,00,000	0	0
Dividend on 20,000 Preference shares at 5½ per cent per annum, free of tax ..	55,000	0	0
Dividend on 2,09,750 Ordinary shares each fully paid at Re. 0-12-0 per share, free of tax ..	1,57,312	8	0
Balance to be carried forward	1,46,100	13	6

In spite of the difficulties with regard to the supply of materials due to the war conditions the Directors are glad to be able to report a satisfactory working of the mills so far, though it is difficult to visualize the future.

In November last the Government of India issued an order under the Defence of India Rules requiring all Paper Mills to reserve 90 per cent of their production for Government Demands. This drastic order limiting the consumption of paper for civil requirements to only 10 per cent of production was most unjustified particularly as the Government of India have shipped considerable supplies of paper overseas. The matter was represented to the Government of India and it is now understood that the Government propose to release 30 per cent of the mill production for Non-Government requirements from the beginning of April 1943. Even this quota is inadequate to meet the minimum needs of public and further representations are being made.

Managing Agents.—Messrs. Birla Brothers, Ltd.

Authorised Capital—Rs. 1,00,00,000. Issued and Subscribed—Rs. 40,97,500 in 2,09,750 Ordy. of Rs. 10 and 20,000, 5½ per cent redeemable Cum. Pref. of Rs. 100, both fully paid-up.

*For five years from 1929 to 1933.

(Annual General Meeting, on 12th April, 1943 at 11 a.m.)

Audited accounts for the year ended 31st December, 1942:—

	Rs.	A.	P.
The Revenue Profit for Season 1942 is	67,824	7	6
The Profit on Unsold Tea of Season 1941 is ..	124	15	11
Total ..	67,949	7	5
Out of this sum the Directors have:—			
Cleared off the Balance at debit of Profit and Loss Account on 31st December, 1941	16,450	5	10
Paid Interest	3,339	14	0
Made Provision for Taxation	15,000	0	0
Written off for Depreciation	16,000	0	0
Total ..	50,790	3	10
Leaving an available balance of	17,159	3	7
Total ..	67,949	7	5

The Directors recommend that the available balance should be dealt with as follows:—

Pay Arrears of Cumulative Preference Dividends at the rate of 6 per cent per annum (free of income-tax), for 5 years from 1st January, 1929 to 31st December, 1933	12,000	0	0
Carry forward to next account	5,159	3	7
Total ..	17,159	3	7

Labour.—The total labour force on the 31st December, 1942, was 539 an average of 1.3 labourers per acre.

Estimates.—The estimates for 1943 provide for a crop of 2,80,000 lbs. at a cost in Cachar of Rs. 1,19,000. The Calcutta Expenditure is estimated at Rs. 20,000.

Managing Agents.—Messrs. George Henderson & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 2,00,000 in 1,600 Ordy. and 400, 6 per cent Cum. Pref. both of Rs. 100 each fully paid-up.

Synopsis of the balance sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	2,00,000	Total Capital Outlay	2,14,503

		Total Liquid Assets ..	1,18,759

OUCHTERLONY VALLEY ESTATES (1938), LIMITED

Audited accounts for the year ended 31st October, 1942:—

	Rs.	A.	P.
Accounts.—Balance from last year	99,195	0	0
Profit for 1941-42	3,47,282	0	0
Total ..	4,46,477	0	0
Less—Taxation Reserve ..	37,000	0	0
Debenture Redemption Reserve	1,00,000	0	0
Reserve for Dearness Allowance to Staff and Labour ..	60,000	0	0
	1,97,000	0	0
Leaving	2,49,477	0	0
Out of which the Directors recommend the payment of a dividend of 30 per cent, free of income-tax	1,02,420	0	0
Leaving a balance of	1,47,057	0	0

which the Directors propose to carry forward.

The net profit for the year, Rs. 3,47,282 (last year's figures Rs. 1,45,493), is exceptionally good and is due to a bumper coffee crop, increased tea crop, and excellent prices for both products.

A further Rs. 1,00,000 has been transferred to Debenture Redemption Reserve bringing this up to Rs. 3,00,000, and it is hoped to increase the Investments (face value Rs. 2,00,000) to the same figure In addition, the Company has now purchased and redeemed Debenture stock to the value of Rs. 93,600.

The first compulsory redemption of Debenture stock falls due on 31st December, 1943.

A new reserve, Dearness Allowance for Subordinate Staff and Labour, has been created, and Rs. 60,000 (the estimated expenditure for 1942-43), is set aside for this purpose.

Acreage.—The approximate acreage figures are:—

	O. V. Company Acres.	Outside Interests Acres.	Total Acres.
To Reserve .. 50,000 50,000			
Coffee in bearing	2,062.50	392.50	2,455.00
Tea in bearing	985.50	67.50	1,053.00
Cardamoms—party bearing ..	100.00	—	100.00
Reserve, Waste and Abandoned ..	14,874.45	173.74	15,048.19
Total ..	18,022.45	633.74	18,656.19

Tea.—Crop for 1940-41 .. .. .. 4,51,117½ lbs.
Crop for 1941-42 .. .. .. 4,94,283 „
Estimated crop for 1942-43 .. .. 4,54,500 „

The crop was harvested at a cost of 38.88 cents per lb. f.o.b. and realised an average net price (excluding income from sale of quota) of 66.86 cents per lb. as compared with 67.24 cents per lb. last year.

The unsold stock of tea has been valued at 60 cents per lb. for export teas and 40 cents per lb. for local sales.

Coffee—Crop for 1940-41 .. .. .. 6,510 cwts.
Crop for 1941-42 .. .. .. 10,733 „
Revised estimated crop for 1942-43 .. 4,090 „

The coffee crop harvested during the year under review was one of the largest so far obtained by the Company but, as is so often the case with coffee, the following crop, 1942-43, will be small. Furthermore adverse weather conditions have forced us to revise even the low original estimate.

Under the Coffee Control Scheme 60 per cent of the crop was taken over by the Indian Coffee Market Expansion Board for what is known as the Surplus Pool and sold by them, and 40 per cent was left for Owners to sell. In 1942-43 the Surplus Pool will take 90 per cent of the Crop leaving only 10 per cent for Owners to sell.

Cardamoms.—A crou of 2,312 lbs. was harvested and realised Rs. 3,035 against cultivation expenses of Rs. 1,087.

Buildings.—A sum of Rs. 5,283 was spent during the year on new buildings and every effort made to maintain existing buildings in good condition.

Managing Agents.—Messrs. Peirce, Leslie & Co., Ltd.

Authorised Capital—Rs. 10,00,000. Issued—Rs. 5,00,000. Subscribed—Rs. 3,41,400 in 1,70,700 shares of Rs. 2, fully paid-up.

Synopsis of the balance sheet as at 31st October, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	3,41,400	Fixed Capital Expenditure ..	10,03,024
Debentures ..	5,06,400	Stores & Spare Parts, etc. ..	38,576
Reserves and other funds ..	3,61,943	Stock-in-Trade ..	3,74,735
Current debts including taxation ..	5,78,384	Outstandings ..	18,162
Carry forward ..	1,47,057	Investments ..	1,95,351
		Cash balances ..	3,05,336
Total ..	19,35,184	Total ..	19,35,184
		Total Liquid Assets ..	9,32,160

SARUGAON TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1942:—

After providing for depreciation, the season's working resulted in a profit of Rs. 1,48,574-14-10. After making sundry adjustments, providing Rs. 30,000 for taxation, and placing Rs. 30,000 to Reserve there remains a balance of Rs. 1,14,826-4-8 at credit of Profit and Loss Account. From this there falls to be deducted the interim dividend of As. 8 per share paid on 1st December, 1942, and the Directors now recommend the payment of a final dividend of Rs. 2 per share absorbing Rs. 69,280 leaving a balance of Rs. 28,226-4-8 to be carried forward.

A total crop of 5,253 maunds was secured of which 2,377 maunds have been sold for export at an average price of As. 11-8 per lb. and 1,166 maunds have been sold for internal consumption at an average price of Re. 1-2-9 per lb. Of the balance 892 maunds are under contract to the Ministry of Food.

Rainfall for the year amounted to 97.53 ins. as compared with an average of 123.62 ins. for the previous seven years. Early in the season the garden was visited by a storm accompanied by hail which caused some loss of crop.

Estimates for the current season have been framed for a crop of 5,500 maunds to cost Rs. 2,16,419.

Secretaries.—Messrs. Andrew Yule & Co., Ltd.

Authorised Capital—Rs. 4,50,000. *Issued and Subscribed*—*Rs. 3,46,400 in 34,640 shares of Rs. 10 each, fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	3,46,400	Gross Block ..	5,70,492
Reserves and other funds ..	1,12,500	Depreciation ..	2,21,784
		Net Block ..	3,48,708
Current debts including taxation ..	1,58,182	Stores ..	54,241
Carry forward ..	28,226	Stock-in-Trade ..	1,32,518
		Outstandings ..	39,972
		Investments ..	11,076
		Cash balances ..	58,793
Total ..	6,45,308	Total ..	6,45,308
		Total Liquid Assets ..	2,96,600

TUMSONG TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1942:—

The gross profit for the year is Rs. 22,046-5-11, and after allowing for the reserves shown, there is a nett profit of Rs. 14,655-8-5, and a final balance on this Account of Rs. 27,206-4-7, which will be dealt with as follows:—

	Rs.	A.	P.
Pay the Preference Dividend for 1942 ..	7,000	0	0
Pay a Dividend of 5 per cent on the Ordinary shares	6,250	0	0
Carry forward to 1943	13,956	4	7
Total ..	27,206	4	7

Estimates for 1943 have been based on a crop of 1,600 maunds at a total cost of Rs. 1,12,949.

Crop.—A high degree of quota releases for the year was made in order to avoid any restriction on total production, and it has since been decided to allow the voluntary internal regulation scheme to lapse on the 31st March, 1943. The favourable conditions of the previous season were not experienced and the crop harvested was 120,400 lbs. against 129,840 lbs. in 1941. The Government of the United Kingdom took over the purchase of all export teas from the 15th September, 1942; and the estate contracted with the Tea Controller for India to supply in all 84,585 lbs.

	1942. Annas.	1941. Annas.
Gross average export sale price ..	16.59	16.68
Gross average internal sale price ..	17.26	7.25
Total nett average sale price	16.85	14.30
Total working cost per pound of tea produced	14.26	11.08

Substantial allowances had to be made to help labour and establishment meet the serious increase in the cost of living; tea chests and other stores increased greatly in cost; and heavy expenditure was incurred on the compulsory Government Schemes of War Risks Insurance on tea stocks and estate buildings and equipment. These increased costs of production were partly met by an additional allowance for this purpose on the Government Contracts.

Managing Agents.—Messrs. Davenport & Co., Ltd.

Authorised Capital—Rs. 2,50,000. *Issued and Subscribed*—*Rs. 2,25,000 in 12,500 Ordy. of Rs. 10 and 1,000, 7 per cent Cum. Pref. of Rs. 100 both fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	2,25,000	Fixed Capital Expenditure ..	2,25,000
Reserves and other funds ..	1,37,576	Stores and Supplies ..	29,907
		Unsold Stocks ..	7,767
Current debts including taxation ..	26,245	Investments ..	85,430
Carry forward ..	13,956	Outstandings ..	30,604
		Cash balances ..	24,069
Total ..	4,02,777	Total ..	4,02,777
		Total Liquid Assets ..	1,77,777

SWADESHI COTTON MILLS COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1942:—

After providing a bonus to Employees there is a profit of Rs. 1,50,05,534-1-0 of which a sum of Rs. 1,10,00,000 has been set aside for estimated taxation and Rs. 6,00,000 for Depreciation, leaving a balance of Rs. 34,05,534-1-0. Adding to this the amount brought forward from 1941, *viz.* Rs. 11,27,620-12-2, there is a sum of Rs. 45,33,154-13-2, available which the Directors propose to deal with as follows:—

	Rs.	A.	P.
Dividend on 17,500 Preference shares 6 per cent, free of income-tax	1,05,000	0	0
Dividend on 17,500 Ordinary shares 120 per cent, free of income-tax	21,00,000	0	0
To be carried forward	23,28,154	13	2
Total ..	45,33,154	13	2

The demand for cloth and yarn has been good and prices are higher than for some considerable time. A large proportion of the Company's output has been again concentrated on supplies for the Defence Services.

In accordance with decisions of the Employers' Association of Northern India further War Dear Food Allowances were granted to Labour during the year.

Secretary.—E. J. W. Plummer, Esq.

Authorised, Issued and Subscribed Capital—*Rs. 35,00,000 in 17,500 Ordy. and 17,500, 6 per cent Cum. Pref. both of Rs. 100 each fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1942:—

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits have been more usable; and rates for interbank call money in Madras and Bombay have moved up. The Southern capital in fact reports good borrowing by exchange banks. The present rates are ½ percent in Calcutta ½ percent in Bombay and ¾ percent in Madras. There is no reason to think that the present steady conditions in the money market are more than a temporary phase. Most crop seasons are drawing to a close, excepting in the South where demand may be expected to continue for another two months. Banks in Madras are now prepared to accept seasonal deposits at what must be considered attractive rates in relation to rates we have known for a long time. But this does not affect the general monetary situation, the main governing factor of which is that we are now at the threshold of the slack season.

Such demand for short credits as was experienced in the past few days may be attributed to the accelerated turnover of funds incidental to the end of the financial year and to the last burst of payment of taxes in the final quarter. Partly for this reason and partly because of the relatively small volume of treasury bills maturities, applications for tender bills on April 6, were again smaller than the amount offered. By the same token, sales of intermediate treasury bills make poor showing. Against Rs. 8 crores of tender bills on offer, applications came to Rs. 5.71 crores. The total amount accepted is Rs. 5,31½ lakhs, the average rate of accepted tenders being Rs. 1-2, showing a small rise of 1 pie over last week. Sales of intermediate bills in the past week came to only Rs. 14½ lakhs.

The offer of tender bills for next week remains unchanged at Rs. 8 crores; and three months intermediates will also continue to be sold at the unchanged rate of Rs. 99-12. Considering that the pressure accounted with the close of the financial year is now past, and considering that treasury bills maturities in the remaining days of April are Rs. 30.31 crores, we may hazard the view that there will be heavier applications for the next week's treasury bills auction. In this context we may point out that, in the last two weeks, there has been a rise in the treasury bills discount rate of 1 pie in each week. This rise in itself is of trivial import. But we must impress upon the authorities that this is not the time of the year when any rising tendency of this kind should be tolerated. On the other hand, as we pointed out some weeks ago, the time is opportune for reconsideration of the discount rate suitable to the coming slack season.

The returns of the Reserve Bank for the week ended April 2, show a further large transfer of sterling securities to the issue department amounting to Rs. 25.95 crores; and this follows another larger transfer of Rs. 24.95 crores in the week ended March 26. That transfers of sterling securities for such large amounts to the issue department have now been made, is a reflection on the large payments that the Indian Government must have received from the British Government on account of the year-end adjustments. These payments have meant such substantial replenishment of the Central Government's cash balances that it has been found possible to cancel large parcels of 'ad hoc' treasury bills originally issued to the Reserve Bank. In the week ended March 26, 'ad hoc' treasury bills for Rs. 19.95 crores were cancelled; and in the week ended April 2, a like amount has been withdrawn. Thus, in a fortnight's time, the Central Government have made adjustments in respect of nearly half of the rupee finance that was created in connection with repatriation of sterling obligations.

Attention may also be drawn to the fact that this process of transferring sterling securities to the issue department and withdrawing rupee securities therefrom has the effect of keeping currency expansion in a drastic check. In the week ended March 26, with sterling securities being strengthened to the extent of Rs. 24.95 crores and rupee securities reduced by Rs. 19.95 crores, the net result is currency expansion for Rs. 5 crores. In the following week, there has been currency expansion for Rs. 6 crores.

With the figures for the week ended April 2, now available, it is useful to study the changes that have taken place in the last quarter of the financial year 1942-43. Between January 1 and April 2, sterling securities in the issue department have risen by Rs. 34.82 crores from Rs. 412.84 crores to Rs. 447.66 crores. In the same period, foreign balances held in the banking department have increased by Rs. 17.58 crores from Rs. 66.61 crores to Rs. 84.19 crores. It may be added that, during this period, the Reserve Bank provided sterling assets for Rs. 78 crores in connection with the redemption of 3½ percent India sterling stock and the scheme regarding sterling railway annuities. That is to say, the actual acquisition of sterling by the Reserve Bank between January and March is approximately Rs. 130 crores. As there have been thirteen weeks in this quarter, this gives the average of Rs. 10 crores per week for additional sterling acquired by the Reserve Bank.

Active note circulation rose by Rs. 53.13 crores from Rs. 578.25 crores on January 1, to Rs. 631.38 crores on April 2. The increase in active note circulation is thus Rs. 4.1 crores per week. So far as rupee securities in the issue department are concerned, the position is that they have

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, April 6, 1943. Total amount offered was Rs. 5,71,00,000. Tenders at Rs. 99-11-6% and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 5 crores. 31 lacs, 50 thousand, the average rate of accepted tenders being Re. 1-2-0 (Rupee one and as. two) % per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, April 13, 1943 in Bombay up to 11 a.m. and up to the close of business on Monday, April 12, 1943 at other centres. Successful tenderers should make payment on Friday, April 16, 1943. Other conditions are as usual.

Three month Intermediates will be sold from April 7 to April 12, 1943 at Rs. 99-12-0% subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from March 31 to April 5, 1943 amounted to Rs. 14,50,000.

During the week ended April 2, 1943 Government of India Treasury Bills for Rs. 2,53,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

The amount passed through the Calcutta Clearing House for the week ending 2nd April, 1943 was Rs. 37,77,92,911-1-7 and the Number of Cheques 1,06,620.

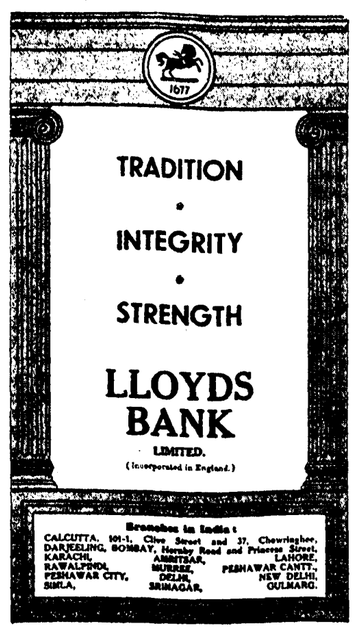
Finance Abroad

Thursday Morning.

THE publication of two distinctive proposals as to post-war stabilisation of currency and exchange makes the week memorable. Mr. Morgenthau has asked for special consideration by the U. S. Senate of his plans for international clearing and the task of bridging the differences will be undertaken by the two governments most interested. It is quite likely that the Governments of Belgium and Holland alike will readily endorse what is placed before them. Immediate and significant result of the appearance of reports that the dollar may depreciate at some time in order to secure an exchange agreement was the rise on Wall Street. The boomlet has been described in a cable that noted the appreciation of the leaders up to two points. U. S. Steel opened at $58⅝ on Wednesday. Firmness rather than quietness marked the opening on preceding days and the sensational rise is attributed to the prospects of an agreement on the future of gold, the adjustment of costs and prices and a breakaway from international cartels and exchange control alike. The definite encouragement given to Wall Street to look for full employment and better trade is supported by hope of inflation and the continuance of high prices. The jump in the Indian bullion markets is largely due to the hopes of a bright future for the precious metals. If the governments have to buy gold for delivery to the new Stabilisation Fund, the holders count on reduced cover for various currencies. The South African mining companies expect to do better when regular buying of gold to meet debts is resumed, and the rise in gold mining has been a feature of London in recent weeks. The Indian share, Nundydroog also has improved to 21/6. There is also the recovery in heavy industrials like Vickers and A.P.C. Last week-end pointed attention was drawn to the jump in British Celanese shares. The company's record is modified by the reconstruction scheme drawn up last year. Noteworthy, for several reasons, is the further rise in Electrical and Musical industries. The Chairman's statement was well received in January and the prospects for both television and radio are reckoned good while bicycle making must be quite important for some time. It is known that Sir A. Aikman has joined the Board of the famous company whose 10 shilling shares have a big market in New York. Nickel has freshened up latterly owing to the rise on Wall Street and the general steadiness is to be attributed to the Prime Minister's review of the Tunisian operations. The control between India and London will not escape notice. The uncertain tone is governed by apprehensions as to cotton and cloth prices. The fall in speculative shares has not affected giltedged so far, and Indian markets are like London in one respect at least. Home Rails have definitely strengthened after publication of gross revenue figures and the only new feature described in the cables is the rise in copper shares. If the talks in Spanish Morocco lead to anything positive, there should be a rise in Rio Tinto shares which have hardly shown themselves sensitive to the reports of the Allied General's meeting with General Orgaz.



The Spanish amnesty should help a part of the foreign bond market. Increased takings from the clearing banks by way of deposits and a swift drop in the Treasury Bill quota last week or this week are hardly important enough to merit mention. But recent improvement in tea shares has a lesson for India since tea has better post-war prospects than gold or diamonds which have been fancied strongly according to a cable published on Wednesday. There has been no striking feature in the oil share market, but international co-operation and greater freedom of trade are advantages for oil companies. The Bolivian Cabinet's reported decision (not confirmed in Washington as yet) is likely to raise the price of certain tin-mining shares. It may even raise the price of tin in New York and the Bolivian currency, apart from the familiar increase in currency reserves and such assistance as was given by the Export-Import Bank may harden if the export duties on minerals yield more revenue. Washington expects Bolivia to join the United Nations. Bank deposits were growing in Bolivia like all South American countries, and the depreciation of the boliviano noted in 1941 clearly belongs to the past. During that year Bolivia had shortages and difficulties which must have passed, but money was not easy in 1942 as the bank rate stood at 6 per cent and the cost of living was going up in the same way as in other republics. The national currency unit, the boliviano quoted at 2.15 cents in most months of 1942. Professor E. W. Kemmerer reformed the Bolivian currency system and gave the republic a Central Bank at La Paz. The original value of the boliviano was 36.5 cents but the country, which produces both gold and silver, has experienced plenty of troubles. The free use of paper has produced substantial depreciation of the currency in and after September 1931, followed by delinking from gold in September, 1932 and the London rate has moved far away from the old nominal rate of 13.33 bolivianos to the pound. What Bolivia does in regard to foreign policy will interest others besides Peru but the proposed U. S.—Bolivian trade treaty should be an accomplished fact before long. The country is a source of both tin and rubber; she is more important to the U.S.A. in war than in peace, and her main exports are not competitive like those of Argentina.

The fall in gold production in 1942 induced the Manchester Guardian to comment on the decline in S. African output noted after August. For the first time since 1932 it was remarked that gold output fell and mining companies reduced dividends. But the industry hoped for better things and their workshops were making munitions. It was admitted there were supply difficulties but the fall of about 2 per cent in output as compared with 1941, should be offset by the new charter for gold. The promised recovery of monetary equilibrium after the discussion ceases should, however, limit the rise in the price of gold in India, and the reaction, when it comes after April, will have a salutary effect.

* * * * *

The recent notification relating to rouble notes indicatec again that financial assistance to Russia is centralised. Perhaps there is really no place for the rouble in the foreign exchange regulations, having regard to the Soviet's financial policy in the past, and the Government by absolute prohibition of import and export has simplified the position for all concerned. But Indians who bought rouble notes after the Revolution in order to speculate get a raw deal. It may be recalled that after Russia became an Ally representations were made concerning encashment at some rate, even if it were arbitrary, of notes held for 20 years or more on the off chance of conversion into local currency. The facility for such conversion is withheld perhaps because of a fear that a lot of notes may come in from German-ocupied territory or through Iran and the rouble having depreciated very substantially owing to the war could not be treated like other currencies. What is obvious in spite of the report that large quantities of goods go from Karachi to Russia is that independent trade relations are not desired. The possibility of overland traffic through Afghanistan in smuggled notes cannot be ruled out, and the main purpose of prohibition may be to prevent the entry of rouble notes through any private channel. Government wants to deal with another Government, to the exclusion of private persons, and the Anglo-Russian clearing is the only desirable means, since a black market may soon emerge and notes may go to Sinkiang or Turkestan and create difficulties for Russia. The inferences drawn from the notification may not be supported by experience, but it is well to indicate that the rouble has no precise or fixed value at present, and the Indian Government has protected banks and others by the ban on the import of notes even if it is through Turkey or any neutral. It is doubtful if the regular dealers in foreign exchange hold any quantity of Russian currency, and those who had acquired by legitimate means will doubtless be protected. The strict limitations imposed, even on the import of British banknotes, can be again cited to support the action taken, but those who held Russian currency would have declared and been compensated long ago. The possibility of Russian notes being bought up by Armenian or other speculators for disposal in India cannot be ignored, and the prohibition may be wholly due to the Russian Government's suggestion.

(Continued from page 609)

risen by Rs. 32.17 crores from Rs. 122.36 crores on January 1, to Rs. 154.53 crores on April 2. In the second week of January, there was an increase of Rs. 72 crores due to the issue of 'ad hoc' treasury bills by the Government. Over Rs. 40 crores of these bills have now been cancelled. There now remains Rs. 32.17 crores of rupee finance connected with repatriation of sterling debt.

The statement of the Imperial Bank for the week ended April 2, shows a sharp decline in deposits from Rs. 179.88 crores to Rs. 176.13 crores, thanks to the year-end withdrawals and the usual beginning-of-the-month disbursements. There is also a sharp increase in bills from Rs. 2.88 crores to Rs. 7.26 crores. This must, presumably, refer to the rediscounting of treasury bills; and, therefore, a considerable reduction in this figure may be expected early. Imperial Bank's cash shows a sharp decline from Rs. 27.96 crores to Rs. 19.21 crores; but this loss must soon be made up with the maturities of the bills now discounted. The deposits of member banks with the Reserve Bank have fallen by Rs. 5.93 crores; and this fall is accounted for by the shrinkage in Imperial Bank's cash.

The exchange market has been steady, without any change in business sentiment. Slightly more business has been in evidence.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

(Continued from page 622)

made in the development of suitable lubricants. The Council took the view that if vegetable oils were used for all purposes for which they were suitable, in place of mineral oils, the annual offtake would be 46,000 tons. It was stated that the railways consumed annually 8,000 tons of castor oil and 1,500 tons of blown-rape oil. The annual consumption by the ginning factories, sugar, oil, rice and other mills represents 6,000 tons. For axle lubrication of railway carriages and wagons and for compounded marine engine oils, blends of mineral oil and blown rape oil are now being widely used. Blends of mineral and groundnut oil can be used as lubricants for compressors, looms and gas engines. Coconut oil is also used for looms. 8,000 tons of castor and blown-rape oils have been sustained during 1941 for mineral axle oils in the Indian railways. Tests have proved that various blends of castor and rape oils could be used as lubricants for gearings and bearings and as cylinder oils for steam engines. It is learnt that the petroleum companies are considering the possibility of marketing mixed blends of vegetable and mineral oils. The growing difficulty of obtaining supplies of mineral oils from the U.S.A. must inevitably lead to the use of indigenous vegetable oils as lubricants and as substitutes for imported mineral oils.

U. S. & British Proposals

The U.S. proposals regarding international finance in the post-war period have been announced by Mr. Henry Morgenthau: and our readers will hardly feel surprised at the differences between the British and the American proposals. It is inevitable that striking difference in the ways that Britain and the U.S.A. regard the problem of international finance should lead to important differences between the British and the American plans. It is too soon to say whether the differences will prove difficult to get over or whether they will be narrowed sufficiently to enable the two countries to present to the world an agreed scheme for the regulation of international finance. In momentous problems of this kind, each nation not only recapitulates the relevant experiences of the recent past, but also tries to foresee its position and its special needs in the years following the war. The proposals are governed by such estimates. And, it must be remembered, too, that though Britain and America pulling together can have international policy shaped to their liking, the interests of the majority of nations and the demands which they may make cannot fail to make themselves felt. It is necessary, therefore, that to appraise the proposals put forward by Britain and the U.S.A., one must attempt to examine the special needs of these two countries and to survey international financial relations as they have been in the recent past and as they may be in the immediate post-war years.

The special needs of Britain in regard to the regulation of international finance have been touched on in these columns more than once in the past. Suffice it to say here that the economic position of Great Britain after this war may be expected to have all the features of the last post-war period in a far more aggravated form. The last post-war period was marked by the decline in the export trade of Great Britain and in her balances of payments, a weaker grip on international finance and a state of chronic unemployment in the great export industries. Though London's importance as an international financial centre was revived sooner than many dared to hope at the end of the last war, the weakness of the pound and the deterioration in the position of the national economy, which was behind it, persisted. The abandonment of the gold standard and the perfection of the technique of manipulating the exchanges, while they certainly relieved the authorities of a great deal of worry, did comparatively little to cure the fundamental weaknesses. The persistent flow of gold to America was a constant threat to the stability of international finance; and the difficulties of the export trade, which improved to some extent with inter-Imperial and bilateral trade pacts, precluded the chances of the maldistribution of gold being corrected by the improvement in trade balances.

So far as one can see now, the position after the present war will show even greater deterioration. The loss of Britain's overseas investments and the accentuation of economic self-sufficiency through the developments in industrial technique, which have taken place during the course of this war, will force Britain to shift the basis of her national economic life from a vast and wide interchange of goods with foreign nations, regardless of whether such shifting involves or does not involve a reduction in her standard of living. Thus the economic position of Britain after this war will be marked chiefly by a shortage of gold and what is closely connected with it but must however be treated apart from it, the need to maintain a large volume of foreign trade.

The position of the U.S.A. is in many ways diametrically opposite to that of Britain. While Britain had an efflux of gold, the U.S. was experiencing a persistent influx of it. While Britain is anxious to maintain a large volume of imports of foodstuffs and raw materials, the U.S. is anxious that the security of internal productive activity should not be endangered by the competition of cheaper wares from abroad. As the possessor of by far the larger part of the world's monetary stocks of gold, the U.S. is anxious that nothing should be done to impair the position of gold in international finance; while Britain, alive to the tendency of gold in conditions similar to those of the last decade to move towards the U.S., is eager to reduce the handicaps in international trade of the countries which have no comparable gold resources.

In spite of these differences Britain and the U.S. are both anxious that international finance should in the future be both free and better regulated. The chief evils of international finance, apart from the two basic issues, of the position of gold and disequilibria of foreign trade relations, have been the excessiveness of exchange controls and competition in currency depreciation. It is important to note that neither exchange control nor competitive currency depreciation is unconnected with foreign trade. Nor for the matter of that is the shortage or plethora of gold. When a country is denuded of its gold or when it is unable to acquire gold from abroad, it only means that the balance of payments is against that country and that the country has no favourable balances with which to acquire gold for itself. The troubles of international finance, as we are never weary of pointing out, have their origin in the disequilibria of international trade, which in their turn are to be traced to serious faults in the international division of productive activity. Schemes of regulation of international finance may enable the great powers for a time to stave off crisis and obtain short-term advantages through their greater power for manipulation born of expertness and larger resources. But if international finance is to be the handmaid of world economy and world trade, more radical treatment is called for than the provision of machinery for international clearing.

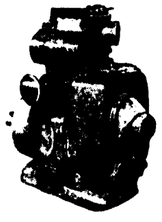
Nevertheless, problems of international finance have to be dealt with as such without going too far towards their roots in world economy. Both the British and the American proposals agree that there should be no revival of competitive currency depreciation through the facility of unilateral action. But Britain does not go as far as the U.S. in banning exchange control or in surrendering national sovereignty in the matter of exchanges. The Keynes plan, therefore, provides for international consultation when the debits of the debtor countries exceed the limits of the overdraft granted by the International Bank. Opinion in Britain is inclined to the view that, if surrender of national sovereignty is to be complete, then the International Bank must be truly international. It is pointed out that "this question of a Fund's constitution is most important". Britain demurs, therefore, to the U.S. proposal that member countries' quotas should be based on a combination of gold holdings, balances of payments and national incomes. This contrasts with the Keynes proposal to base the quota only on the pre-war trade balances. It is also significant that, while Britain aims at international clearing, such as can apply the brake to the flow of gold to creditor countries, the U.S. favours an international bank which by removing exchange control will provide smooth clearing. It will thus be seen that, even when problems of international finance are dealt with in separation from the wider economic problems, differences are inevitable between countries so differently placed. The atmosphere of goodwill which is necessitated by the war facilitates a lighter emphasis on these differences, particularly as the two nations are still in the stage of preliminary proposals.

NO CHANGE IN POLICY

The U.S.A. stands committed to a policy of peace by economics. In the wake of reports as to stabilisation of world currencies by agreement (a matter in which the U.S.A. is developing exceptional interest since framing independent proposals) there has appeared a message indicating that Mr. Roosevelt, or rather his government, clings to the foreign trade policy of the New Deal period. The reciprocal trade pact programme is to be maintained because the Administration wants the modified free trade possible under treaty arrangements. The U.S.A. apart from the important treaties with Canada and Britain made in 1938 has concluded altogether 30 pacts providing for a relaxation of tariff restrictions. The pacts cover the New World as well as the Old and three more pacts are under way. The trade pact programme antedates lease-lend; but the programme is required in some cases to secure the recovery of any part of the supplies under lease-lend. The general aim of lowering tariffs was associated with the desire to get at frozen assets, as in Brazil, or to stimulate a comprehensive, co-operative policy with Latin America as in the pacts with Central American republics.

The Hull programme began in 1937 when the shadow of neutrality lay across the New World. That it has not been given up and the Administration again wants the authority to make more pacts with newly-independent Iceland, and with the Allies' newest ward, Iran, only proves that the U.S.A. wants to promote economic appeasement even at the expense of the high-tariff interests in the U.S.A. The Democrats in their request for extension of the Act to procure more reciprocal trade pacts naturally look beyond the war period to the election of 1944. To anticipate a Republican victory and a possible change in foreign trade policy is the object of an Administration that has suffered in the last Congressional elections largely owing to the electors' apathy. That the trade pact policy will be linked with the Atlantic Charter at this stage is only to be expected. The U.S.A. is convinced that what is good for the Republic is good for the whole world and the State Department's missionary zeal in the matter of trade pacts is, in part, based on the desire to build up a large area corresponding to the British Empire trading in accordance with the Ottawa agreements of 1932. The U.S.A. developed views relatively far away from the high tariff view only when U.S. trade with Canada declined but it is somewhat surprising to find the U.S. Administration adhering so strictly to pre-war views.

The absence of a change is presumably due to the fact that foreign trade (except for the farmers) is unimportant and it is more important to get certain materials for protected home industries than to win a share in world markets. The high-cost, high-wages industries have paradoxically an interest in assured supplies at reasonable prices; cheap imports go with high prices at home. It is quite likely that the trade agreement with Bolivia is a result of greater interest in Bolivian tin than in the past. The loss of other sources of supply makes Bolivia's tin and rubber, apart from her tungsten and other minerals, extremely important. Bolivia's tin goes to the U.S.A. instead of Britain owing to the war and the erection of new smelters in the U.S.A. Bolivia ranks after China only as a producer of antimony and it was known that her oilfields are not negligible when the development of wells in the Chaco Oriental was undertaken by the Standard Oil interests. In the past the U.K. was the chief buyer of Bolivia's exports; the U.S.A. must have since acquired that position owing to obvious reasons; and the trade pact, contemplated at present with Bolivia, is meant to preserve wartime advantages. The treaties with Iceland and Iran are meant to get for the U.S.A. a position equal to that of Britain. It has been suggested that Iceland might enter the British Commonwealth after the war as the union with Denmark has been dissolved. The independence of Iceland will be affirmed in the proposed treaty; and the U.S.A. in spite of the great distance may come to occupy soon the position previously held by Denmark in the foreign trade of Iceland. The fact that Iceland's chief customer in the past was Spain may deserve notice in view of the talks proceeding in Spanish Morocco and Colonel Juan Beigbader's mission to Washington. The trade arragements of Iran in which the U.K.C.C. is naturally dominant may be a matter in which the U.S.A. is interested owing to Iran lying on the route to Russia. The countries in which the U.S.A. is manifesting special interest at present are countries in which Britain has distinct and considerable interests. To lessen or modify them may be one of the direct purposes of the trade treaty technique and the move of Mr. Hull will be hailed by some as a preliminary to general tariff revision in countries affected by monopolies like Iran. It may also help to reduce the demand for Indian goods.



If it is far-fetched to discern rivalry between Britain and the U.S.A., there is the fact that the Willingdon Mission toured South America in 1940. Even now British interests are conspicuous in Bolivia's tin mining industry. While it is not possible to say that the master agreement evolved after lease-lend has removed all causes of friction, the anxiety of the Administration to obtain powers to negotiate for favoured-nation treatment is independent of the need to develop U.S. exports after the war on the needs of Europe for reconstruction. It may be conditioned by a desire to impose liberal doctrines on all countries bound by treaty with the U.S.A. and demonstrate (to the Opposition particularly) that a sound, workable policy had taken shape before the war and essential continuity is maintained. A further purpose, to secure for the U.S.A. the leadership in post-war economic reconstruction has been mentioned, and Congress will be duly invited to pronounce on the merits of the policy pursued for six years before it gives its sanction to the Executive's programme. It is not difficult to connect changes in production in the U.S.A. with the need to promote trade treaties. An assured position as creditor implies an acceptance of a policy that is different from that of 1920-30. The low tariff can be [illegible] by trade treaties because the U.S.A. by accepting the principle of collaboration and assistance for maintaining each country's balance of payments accepts more or less completely the guiding principles of British policy. Under the Hull programme U.S. tariffs were lowered to suit individual countries and Britain was persuaded to accept partially the U.S. view against the Tory doctrine of Empire economic unity. More important in the U.S. view is to prepare for after-war recovery by export trade and oversea investment, mainly for the avoidance of a slump—a cardinal doctrine in Anglo-American policy to-day.

No Fall In Exports

In every note on India's trade in 1942 little stands out against the fall in imports procured by a higher tariff, licensing and other restrictions. The value of imports in the last year on an average was about half the value of exports, and the reduction in the total under exports had ceased to cause much anxiety when shortages of various kinds appeared. But no special efforts, apart from licenses desired in the case of certain goods, have been made to check exports. The Dominions have curtailed exports. India has done little in this direction and Rs. 67 crores returned as the favourable balance of trade for nine months therefore gives little satisfaction. A complete change in export policy is desired by many besides those alarmed by the growth of sterling balances for sufficient reasons. The growth of textile exports has not been checked any more than the expansion of tanned hides and leather. The fact that exports of manufactures in December, 1942 were nearly equal in value to exports in December 1941 will cause some apprehension; but the fall under hardware, glass, paper etc. proves that home demand is being satisfied to some extent at the expense of export markets. Imports of manufactures in nine months fell from Rs. 77.53 crores to Rs. 41.73 crores. The fall surpasses expectations but it is disquieting to find that exports of manufactures have declined only slightly from Rs. 77.23 crores to Rs. 71.78 crores. In the April/December period, exports of cotton yarn and goods rose by Rs. 12¼ crores to Rs. 35 crores whereas, exports of jute manufactures fell by Rs. 12 crores. That cloth rather than cotton, is the chief export, may be advantageous to Indian mills but when prices have risen to an alarming extent, a total ban on cloth and yarn exports appears desirable. That India's silk is now a very valuable item in foreign trade may not be deduced from an increase of barely Rs. 8 lakhs in the value of exports accompanied by a rise of Rs. 3.86 lakhs in the value of raw silk. Another war material exports of which are falling, is rubber. Shipments of rubber and rubber goods alike have fallen through 1942 in spite of higher prices: but the Indian rubber manufacturer to-day has to meet special demands and conservation of available supplies by rationing is the chief consideration. That raw jute exports went down to a smaller extent than jute manufactures, may be due to various reasons but the decline in exports of goods was caused by recovering shipping difficulties and the decline in trade with the U.S.A. as well as South America. Exports to the U.S.A. in nine months were about half the value of 1941 and increased exports to Russia and Turkey can make little difference to the jute mills. The fact that exports of tea, jute, jute manufactures and oilseeds in 1942, show a fall as compared with 1941 indicates that shipping is still the main factor. The discouragement given to exports of metals did not extend to cloth last year. That exports can raise prices has been proved in the case of sugar last year when exports of spices and sugar showed exceptional increases owing to the loss of the Dutch East Indies.

More Criticism

At the annual meeting of the Indian Chamber of Commerce on Friday last Mr. R. L. Nopany made a reference to the forced resignation of Mr. Huq as a feature of the unfortunate situation in India. The former President did not stop with reiterating familiar objections to defence expenditure. He asked for Indianisation and national control of defence. He deprecates the official formula for the allocation of war expenditure as between India and Britain. The possibility of a new arrangement has definitely receded and criticism heard last year seems to have little purpose at present. The entire financial policy, even the proposal for a postwar reconstruction fund made in the latest budget, does not seem acceptable to the unrelenting nationalists in the commercial community which objects to the official sale of silver as much as the export of gold in the past. All pronouncements on policy have a common feature. Pre-occupation with the future forces immediately a reference to lease-lend, India's liabilities and handicaps including the safeguards provided for British commercial interests. There is also anxiety about the food position. Arranging the policy of unlimited exports and price control at home, Mr. Nopany referred to the new policy of purchase and distribution of grains. The Indian Chamber has distinguished itself by asking the members to open cost price grain shops for workers. Over 100,000 workers are benefited by the arrangements devised but he complained that the organisation has been handicapped by inadequate co-operation on the part of the Government. The most satisfactory feature is the recognition of members, new and old, of the work the Chamber has been doing in regard to food supply and transport priorities. The Indian Chamber's President in measuring the Chambers growth of influence referred to the increase in membership, the increase in entrance fees etc. The younger Chamber has done well in most years and Mr. Nopany in his full account of his year of office, described the delay in construction of the Chamber's own premises in Royal Exchange Place.

Coal Prospects

Reduction in dividends furnishes a clue to the situation in the Indian coal industry where an increase in output is not always an index of prosperity. Since raising costs have increased, higher prices have been inevitable, but so far the industry has derived little benefit. The picture drawn by Mr. H. K. Nag in his speech to the Indian Mining Federation is not bright. The improvement in labour's morale secured by controlled distribution of food supplied is considerable; and permission to use women for underground work is sought in the interests of some small collieries. The Central Government has given only recently an assurance, such as that demanded by Mr. Mealing about three months ago in regard to food supplies for mining labour. The industry has to pay a higher proportion of wages in relation to net product than any other industry, and ordinary incentives to efficiency have to be provided in the form of wage rates and guaranteed food supplies. Labour is short owing to the competition of Government as an employer said Mr. Nag in his review of 1942. Wagon shortage is a hardy annual, but the reference to wire ropes etc., is another indication of difficulties experienced by coal-mining interests in the past year. Mr. Nag made a suggestion for increasing the capacity of wagons by 2½ per cent so as to increase coal supplies to the public. The refusal to enhance the rate by 4 annas per ton for railway tenders was mentioned by Mr. Nag who said that the splitting up of the tender period into two halves, represents a concession. Fuel economy and special research are desired by mining interests in view of the fact that India's annual production of coal comes to 30 million tons. The joint consultation procedure has brought latterly the Mining Association nearer to Indian coal interests. Mr. Nag described this habit of co-operation as the bright feature in a depressing situation. Whatever be the advantages available under the conditions of improved industrial demand for coal the fall in exports remains a measure of the difficulties created by the war for India's coal mining industry. Sections of the industry, as Mr. Nag fully confessed, will remain permanently depressed, and cannot undertake sand-stowing and other improvements. Special relief in regard to Excess Profits Tax may well appear desirable in the view of many, and suggestions to collieries to make full use of small coal and coal powder receive their justification from the need in India to conserve good-class coal.

Tea Control Act

In explaining the provisions of the Tea Control Act Amendment Bill last month, the Joint Secretary of the Commerce Department, described the need to keep the international agreement alive for the duration and two financial years thereafter. The inter-governmental agreement suggested may not soon take shape but the statutory regulation will continue, and India will have no disadvantage as compared with other tea producers. Concessions have been offered to small growers who are empowered to extend the validity of export quotas from one year to another. Power to revise the crop basis is also vested in the Licensing Committee which is authorised to deal with hard cases on application. The Government can suspend the Act in part or in whole. That the Control Act is accepted by the industry was recalled by Mr. T. S. Pillay who quoted the views placed before the Commerce Member in 1941. It is known that 92 percent of the industry unanimously accepted the proposal to extend the control act for another period, and the minority, too, did not object to control. A conference in November 1943 resulted in an agreement as to the need for the renewal of the Control Act. The conference also put up proposals for giving new estates the right to obtain export quotas. Having regard to the fact that six years' time had been given it was decided by Government that there was no need to go beyond the Licensing Committee. The conference asked for the right to extend acreage by 1 percent under permission. It has been made known that Clause 20 of the new Amending Act gives India the right to extend tea plantation by 1½ percent. A promise to revise the crop basis in certain cases is to be implemented by consultation with Indian tea interests at Calcutta. Mr. Pillay's calculation that 75 percent of India's tea must be exported is the main reason for the maintenance of the scheme. Internal consumption accounts for a quarter of the 500 million lbs produced. Actually the quota increase has secured larger suplies for internal consumption as well as exports, and the subordination of the Committee to the Government is a principle partly based on the fact that 918,354 workers are employed in the tea industry to quote an authorisation estimate. It is clear that in regard to employment as well as capital the tea industry is ahead of all other industries in India.

Help From Farmers

British farmers have done a good job in wartime and the proportion of imports to home produced food has been reversed. Mr R. S. Hudson, according to a special cable received by the Associated Chambers, emphasised the need for additional home production in order to save shipping space. Preliminary returns showed that cultivated area in Britain would increase by three-fourth million acres in 1943. He estimated that in three years, food production from the soil had increased by 70 percent, an increase achieved mainly by an increase of 60 percent in output by all engaged in the industry. The large increase in food production has not meant a diversion of man-power in Britain. Mr. Hudson contrasted the increase in German output by 5 per cent with the large increase achieved in Britain where individual output surpasses even that of the Americans. Casual labour during harvest which is recruited under special terms is not a big problem and public school boys are not the only class helping. According to Mr. Hudson plans for gathering the autumn harvest are going ahead in all big towns and cities. Thousands of Londoners have offered to spend their holidays helping on farms and many firms are arranging their holiday rotas to suit the needs of farmers. It is expected that many hundreds of thousands of voluntary helpers will work on farms during the summer and autumn. Imports of food from the Dominions and America are likely to fall further and the reduction may have an important effect on world prices for wheat and all grains. That rationing has been accompanied by a substantial increase in home production of food is not unexpected, because the war programme was one of bringing as much land as possible under the plough. The direct benefit to grass land must be considerable even if Britain's livestock has been reduced in numbers owing to the difficulty in getting special feed.

Argentina's Difficulty.

In the Jute Committee's bulletin appears a rather late report on Argentina's trade. The contraction in both imports and exports recorded in 1942 is a consequence of the war, for the neutral republic. The Government has been forced to seek markets for raw materials and supplies for local industries at the same time. Spain made an agreement to take wheat (1 million tons); tobacco (3,500 tons); and other commodities in return for 30,000 tons of iron and steel, two cargo steamers and a destroyer for the Argentina's closer relations with Spain are as much the result of neutrality as of Spain's food problem. The trade agreement must have helped in the maintenance of official minimum prices in spite of the increase in the area under food crops in 1942. The area under wheat was said to be up by 100,000 hectares and the condition was said to be fair to good. Potatoes, cotton and groundnuts are crops which are getting more important in Argentina, where the maize crop again promises to be large. The large crops of wheat and linseed imply a bigger demand for jute. But there was and is a jute famine and Argentina has been forced to set up a factory for making cotton bags. Ten million pesos have been invested by the Government in the factory which is expected to start work by the middle of this year. Home demand is put at 150 million bags in a year but the factory could give 30 to 40 million bags; so the demand for Indian jute manufactures cannot fade out. The return of used cotton bags is to be produced through special regulations as in the past; and cotton bags have been tested for various purposes in order to make good the shortage of jute manufactures. Cuba is keen on developing a local fibre and Argentina like the U.S.A. is turning to cotton for making bags for flour, grain and cement. The not-so-negligible rivals may displace jute and the danger of losing another market is underlined by the report that Egypt is to have a jute mill with a capital of £150,000 while Queensland is bent on encouraging the urena lobata, initial experiments being deemed satisfactory.

Tobacco in India

Since the new tobacco excise will be an important source of revenue for the Central Government information as to the large Indian crop values at Rs. 18 to Rs. 20 crores per annum, is again welcomed. Madras, Guzerat, North Bengal and Bihar are the main producing areas in this country which is second only to the U.S.A. as a producer of tobacco. About 14 million acres being under tobacco in a year the cash value is large with an outturn of 1,030 lbs. per acre in British India. According to 1936-37 figures Bengal contains over 21 per cent of the area and Madras 19.5 per cent of the area but the superior variety predominates in areas south of a line drawn from Karachi to Calcutta. In spite of the large home production, India imported about Rs. 1 crore worth of tobacco including manufactures and the value of India's exports at Rs. 1 crore was nearly equal to that of the imports. The Virginia variety was in demand and the growth of cigarette-smoking was of material importance to the extension of cultivation. India was among the suppliers of Japan and Holland in the past, but the only market now left is Aden and Dependencies which took both bidis and smoking mixtures. Imperial preference has helped tobacco and cigarette leaf is well established in the U.K. market since 1934-35. Two different species and twenty different varieties of tobacco are recognised in India. Defects in grading are to be rectified by the special development scheme provided in the Excise Act passed by the Central Legislature. Tobacco is dependent on water transport largely and Bengal is the principal importer as Calcutta has a large import trade. About 80 per cent of her imports comes from Bihar and 16 per cent from Madras. Bengal supplies Assam and Orissa with tobacco. The growth of the tobacco industry in India has been rapid. Total value of manufactured tobacco was put at Rs. 47 crores in the marketing report. Annual production of cigarettes was put at 7,500 million valued at Rs. 6 crores. There were in 1935 as many as 22 factories of which four employed 4,600 persons on an average a day and 18 employed about 3,400 persons. About 75 per cent of the trade in cigarettes is handled by the great Imperial Tobacco Company of India. Uniformity and stability of prices is a distinctive feature of the trade arising presumably from the concentration referred to. About 22 per cent of the area under tobacco in India belongs to the States. Until this year, tobacco was only subject to octroi and town duties, but Cochin and other States had chosen tobacco for special taxation; and the new Indian tax has the advantages claimed for it in addition to being fully productive. The nationalisation of the tobacco industry in Japan is different from the heavy taxation resorted to in Britain where the Imperial Tobacco Company accounts for 80 per cent of the imports.

The Office of the Indian Steel & Wire Products Limited remained closed on Thursday, the 8th inst., as a mark of respect to the memory of Sir Chhajuram Chowdhry, the Chairman of the Company.

High Pressure **EFFORT**

Wartime production throughout India demands high pressure effort by the industrial worker. That means a greater strain on his working capacity and thus an increased proneness to fatigue; but he need no longer dread the dead points of declining energy because he knows they will disappear the moment he drinks his cup of tea. Tea is a storehouse of living energy and is, therefore, the best corrective to workers' fatigue. Get concentrated work from your operatives by giving them tea during mid-work fatigue spells.

TEA relieves the strain of war-level output

At this hour the entire resources of India's industry is mobilised in a supreme effort to win the War. We are working twentyfour hours a day so that not a minute is lost in speeding vital supplies to the Defence Services. We have not forgotten our civilian customers but it is impossible at this time to supply the many thousands of our clients.

When the War is won there will again be unrestricted supplies of our products for all requirements.

"A soldier of peace, the scientist fights for the freedom to mould a better destiny both for the individual and for the race. Let our swords be mighty; and mighty indeed will be our ploughshares." Thus, let me say in the manner of epic poets, Dr. Charles M. S. Stine, the Adviser in Research and Development of E. I. du Pont Nemours, in a recent meeting of the American Chemical Society.

* * *

Dr. Stine raises visions of Utopian conditions of living in the post-war world both for the classes and the masses; that is, such of them as will survive the present war. It is strange, to say the least of it—and at the worst, it is the most powerful agent of widespread and deep-rooted cynicism and pessimism—this juxtaposition of Utopia well at hand and a war that threatens the human race with very near extinction. It suggests that the story of Tantalus is allegorical of the human race and that mankind as a whole may realise the poignancy of the slip between the cup and the lip. This war, which was dreaded more sincerely than ever war was, and which is being waged more whole-heartedly than any previous one, is, however, the first to indicate Utopian conditions of living as a practical possibility. If only this war would come to an end before it carries destruction too far, Man might well take sweet revenge on the Gods that chained Prometheus to the rocks. Or, if you prefer to be less blasphemous, the curse of Adam will be lifted, once this war draws to an end leaving a measure of goodwill among the nations and a reasonable number of people in this planet to exhibit and to profit by it. For then, the race can draw fat dividends from the vast investment in blood and treasure which it has been making during the last three years. Dr. Stine, looking back upon the results of research, hardly seems to regret the blight that has descended upon mankind. "The results which are certain to accrue," says Dr. Stine, "may ultimately outweigh by many times even the staggering losses of this world-wide conflagration." In a similar attitude, but with far less knowledge of the exact achievements of research in war-time, I wrote in the course of the leading article in our Eastern Group Supplement in 1940.

"The saving grace of war as an institution lies in the fact that progress in the methods of warfare has always had a notable contribution to make to the progress of productive tchnique. Old Tubal Cain set up the cry for beating swords into ploughshares; but he could hardly have thought of it unless swords and ploughshares come out of the same anvil. In Nature, as in the mind of the human child, the difference between destruction and construction seems to wear thin. . . . . It is largely true that swords and ploughshares come out of the same anvil. Much as backward countries would like to devote all the anvils they have to the production of ploughshares, the instruments of peaceful prosperity seem to follow, and not precede, the instruments of destruction. . . . . The basic essentials of economic development in the future are also the essentials of military preparedness."

* * * * *

What I said with special reference to India, Dr. Stine says of the whole human race. For, the direct result of this global war is that the proverbial mother of invention is present in every country and is, perforce, most prolific. Even in India, backward as she is in industrial technique and starved of facilities for research, Necessity has a few young hopefuls to show to the public. How many-sided, fruitful and epoch-making should be the discoveries and inventions of war research in countries like the U.S.A.? It were hard to list them, particularly for one whose curricula of studies at various stages never allotted a large place to science. But one thing is clear to me, that if there should be another war, *economic* needs will have little or no share of the blame for it. The psychological causes will in all probability continue; but in so far as economic satisfaction can contribute to the weakening of those causes, the position after this war will be better. Reparations and war debt were, after the last war, a Midas' touch, of a sort, to the victors. But the fear of economic scarcity which urged the nations to draft the Treaty of Versailles in the way they did was not a less powerful motive than the passion for revenge. Science, according to Dr. Stine has done enough to remove that fear.

* * * * *

If the long history of mankind is the history of Man's attempts to overcome his physical environment, the achievements of science during the present war will rank as the most splendid. For now, as never before, the nations are called on to produce goods to which they have been used, without the materials from which they have till now been producing them. This task is easily the most exacting that science has been summoned to accomplish; and it has so accomplished it that mankind can look upon economic scarcity as altogether a thing of the past. The war has compressed into the space of months developments which might have taken half a century to realise. Dr. Stine adds, 'the inconceivables of only two years ago are today's realities'.

* * * *

Now these developments are not of significance only to the war. At any rate, their importance to the future should be measured only in terms of their contribution to human welfare. The basic needs

LAC-PLASTIC *Moulding powder!*
- Manufactured by Lac Products Ltd., Namkum, Ranchi.
- Formulated under the direction of Dr. H. K. Sen, M.A., P.R.S. (Cal.), D.I.C., D.Sc. (Lond.), F.N.I., Director, The Indian Lac Research Institute, Namkum.
- Successfully used for manufacture of electrical switches, ceiling roses, fuse cut-outs, plugs, fan regulator boards, telephone parts, morse key-boards, lamp holders, insulating components for radio receivers, trays, screw threaded caps and plugs, etc. etc.

"VISHNU BRAND" Lakelite Powder: Suitable for manufacture of Electro-technical goods and general utility articles.

of human life are the primary physical needs of the individual, such as food, housing, health, clothing etc., and the needs of social life such as transport. But both these are met by progress in such spheres as metallurgy. To take housing first, hear what Dr. Stine has to say:

"Better housing is coming because there is no better way to put into worthwhile service the abundance of materials suitable for building. The engineer, the chemist, the production expert are alert to an opportunity, and will become productively interested the moment the war releases their service. . . .Pre-fabricated sections, which can be easily handled by two men, will permit flexibility in architectural designs. New insulating materials, making possible light walls that will be several times as efficient as heavy masonry ones, will allow the use of revolutionary structural principle. Plywood, plastics, rustless steels, non-ferrous alloys, various types of composition board, fire-resistant woods, ceramics, and synthetic finishes of lasting durability will be employed in profusion."

About the food of the future, Dr. Stine says:

"More popular training in the chemistry of food and its digestion has been crammed into the past two years than was given in the preceding two centuries. The knowledge of food's real values to the body, that is flowing from sound scientific studies of broad scope, is accumulating means of incalculable power to prolong life."

* * * *

Again in regard to public health:

"This war spreading over all zones and into all climates, presents a challenge to medicine that is without precedent. That challenge is being met by a mobilisation of all the sciences that likewise is without precedent in man's fight against disease."

* * * *

The quotations given above should suffice to give an idea of how much the prospects of plenty have been brought near. The developments in the sphere of industry, as I said, cannot be listed. A sample should suffice:

"By the end of 1943 our production of aluminium will be at a rate almost seven times greater than was attained in 1939 after 50 years of intensive development. And scientific processes will be recovering from brine, sea water and other sources approximately 100 times the amount of magnesium that was produced in 1939, when the magnesium industry in America was 24 years old. The U.S. aviation industry is establishing facilities for the manufacture in one year of almost double the number of planes it produced throughout the 37 years of its history, beginning, with the Wright brothers. For the first time in history a structural metal is being obtained from the sea by a chemical process. Huge pumps force 300,000,000 gallons of sea water daily through intricate apparatus. At present, magnesium and bromine are the only products precipitated, but potentially the water contains traces of every element found on land. Is a new field of chemistry opening up, far more bizarre than any of the imaginings of fictionists? Nobody knows as yet. The future promises glass that is unbreakable and glass that will float, wood, that will not burn, and laminations of plastics and wood that will compete with the structural metals. Hosiery derived from air, water and coal, a wonder of prewar days, are but the forerunners of many innovations from the same source, ranging from shoes that contain no leather and window screens that contain no wire, to machinery bearings that contain no metal."

* * * *

Strictly speaking, these developments of science date from before the war. The potentialities of plastics, the possibility of introducing in a country like the U.S.A. a five day week and a five hour day without any fall in the standard of living, the obsoleteness of many forms of competition which were not merely wasteful but destructive of human values, all these were features of modern science and industry even before the war broke out. But the war has speeded up and emphasised those developments in a way that the dullest minds cannot miss them. But the question is: Will those who survive the war, victors and vanquished, belligerents and neutrals, hearten to the call of science to banish ill-will, now that it has made it possible for all to be happy. Time was when affluence for the few was possible only through the deprivation of the many; and the only form of wealth that was free from this taint was the wealth that comes of renunciation. The comfort of the saint was thus offered as the solace of the poor; and it was on this basis that the plan for goodwill was made. Sentiment was easily overpowered by the realities of life. There were a few who flew in the face of facts and waited for the kingdom of Heaven to descend upon Earth. But the majority, their necks wearying with looking up into the skies for the promised kingdom of Heaven remained frankly cynical; and on the fertile soil of cynicism, ill-will and war grew like the bay tree. But will the substitution of plenty in place of scarcity make a difference? Will the great Powers desist from the spoliation of the weak peoples, from the demand for markets, free trade and equality of opportunity, and the like, now that they know that the most barren soils can grow food in plenty, that sea water can yield more minerals than the richest veins in the bowels of the earth, that the humblest and the lowliest can also be housed and fed adequately? It is still too soon to say. For, man has always included other men in the hostile environment which he has to conquer and subdue. And that explains why with every fresh triumph over the physical environment, the goodwill among men suffers deterioration. That is why every advancement of science, while it increases man's powers over nature, increases the power and the will to work destruction among his own kind. Some day, sooner than we dare suppose in the midst of this holocaust, science will turn its attention to man himself, Man the unknown as Alexis Carrell has aptly termed it. Meanwhile, we must be prepared for the extension of the war into peacetime, the resumption of the sickening diplomatic game, the mad hunt for markets and the cannibalistic eating up of weak peoples. But it is time we gave up the old habit of pointing to science as the villain of the peace.

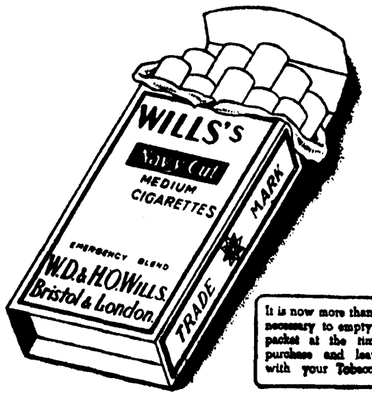
* * * *

After gingering up the Federation's office from Calcutta Mr. G. L. Mehta celebrated his departure from office by a politico-economic oration which is as much a personal testament as a public document. It is certainly in tune with his statements and speeches for Mr. Mehta was an intellectual in office, the philosopher who had become King and made his brief reign memorable by forays into public questions, as far removed from the Factories Act or the Payment of Wages Act as may be imagined. Not merely goahead in the conventional sense, G. L. Mehta brought the world-outlook for which one is entitled to ask because India's future is now mixed up with the post-war settlement and much else. Preoccupation with the future has been the distinctive feature of every word that Mr. Mehta uttered in office, and one may turn from his spirited request for the release of Gandhiji in February to his formal enunciation of India's requirements in an argument that lost nothing by being long. The blend of reasoning and fact is unusual. No criticism can take away from Mr. Mehta the credit of having put India's case squarely whether it be in regard to lease-lend, the division of defence expenditure, the commercial safeguards of 1935 or the handicaps arising from the war. The youngest President matched his skill against Government's spokesmen in regard to the discussion of long-term consequences for India and his final plea for fair play receives its justification from the stagnation and distress that stand out as the biggest thing in India to-day. Calcutta has provided in the past many Presidents of the Federation but Mr. Mehta alone has gone with exceptional reputation from the Indian Chamber; and the try-out here indeed made for signal success. The student for once had the advantage of millowners and bankers but in one branch Mr. Mehta as the spokesman of Indian shipping was at a disadvantage because control is pervasive but he grasped a chance to deprecate requisitioning, procedure which is just now a sore point with owners of air conditioners, of all people.

* * * *

It is not surprising that a man of mark made a mark in distant Delhi as in Bombay and Calcutta. It is his successor that has to make good, but given the advantages the Kumararaja of Chettinad enjoys, real success, swift, striking and sudden, awaits him in his term of office. The Southern India Chamber of Commerce has hardly been conspicuous in the councils of the Federation till now. It is for the Kumararaja to make it an organisation (scratch in another sense) and I for one who hailed six years ago his election as V. P. rejoice to find that he has been honoured early in life. His experience of politics is far greater than Mr. Mehta's and his membership of the National Defence Council gives him a knowledge of war industry denied to others. If his career has been strictly orthodox, he has been a familiar figure in the organisation, and he may turn away as I fancy from politics to big business which is his metier. The biggest and best companies in Madras are among those with which the Kumararaja has been associated. The ability to grasp the European point of view is vouchsafed to him, exceptionally and I imagine that a rapprochement with the Associated Chambers is possible under his guidance. That kind of compromise for which he stands will not be unwelcome when India is a Dominion, and the Kumararaja's term if it means a breach with stern, unfruitful nationalism will have been more than valuable to the Federation. It is not for me to see in this election a promise of a subtle reorientation of policy, but he should be able to withstand the many currents in the Committee and strike out for himself in a way that will increase the power and influence of the Federation in and after 1943.

* * * *



I understand that at a meeting of the Central Board of the Reserve Bank the selection of the Governor was considered, and that the majority was found to be against the proposal to appoint Sir William Lamond as successor to Sir James Taylor. The question has, for the present, been postponed. It is indeed strange that while in the case of Sir James Taylor, the Deputy Governor was deemed to be the obvious choice for the place vacated by Sir Osborne Smith, similar consideration is not shown to the claims of Mr. C. D. Deshmukh. Neither in point of experience, of which he had enough during the last few years, nor in point of standing in his Service, can Mr. Deshmukh be said to compare unfavourably. And I trust the authorities will not pass over the claims of the present Deputy Governor. If, however, non-officials should be preferred, there are names which readily suggest themselves—those of Mr. N. R. Sarker whose exit from the Central Cabinet can be called opportune and Mr. A. D. Shroff whose business experience and capacity for academic study present a combination none too common in this country.

'EAVESDROPPER'

(*Continued from page* 611)

That the U.K.C.C. has shipped £50 million worth of civilian supplies to Russia proves that it is active beyond the Near and Middle East. Ceylon's rubber and Cornish tin have gone through the hands of the Corporation which is the opposite number of Arcos or any Russian trade organisation. The export of Indian textiles to Russia has been mentioned for the first time. That the U.K.C.C. still excites acute suspicion need not be mentioned in order to show that the Indian trader has no chance of getting any part of the trade with Russia after the war. It is obvious that much trouble is saved for the Indian trader but at the same time, the Corporation, assured of indefinite continuance after the war, is going to get its share of Russian reconstruction contracts to the exclusion of Indian interests.

(*From Our Correspondent*)

Bombay, April 6.

AFTER duly weighing expressions of public opinion on the subject of cotton prices, the Government of India have issued a communique outlining Government's policy towards the cotton trade. The communique envisages imposition of a scheme of control covering both yarn and cloth with a view to increase food production and ensure fair prices for cloth consumers. All possibility of direct control over cotton in the primary wholesale market in the near future has been disavowed clearly. It is the cotton speculators, who now shed crocodile tears over the lot of the cotton-grower, that have been singled out for punishment. Their worst apprehensions have come true. Effective steps are going to be taken to prevent trading in new crop through hedge contracts. Action is also contemplated in regard to hedge contracts covering the present crop. Operators in these contracts are to take due note. Measures designed in accordance with the proposed scheme will be such as to ensure a reasonable return to the cotton grower. To sum up, the elimination of the speculative element, fair prices for both mills and the consumer of cloth and cotton-grower too are desirable objectives. Success, as the Government admits in the communique, depends largely on the co-operation of the industry and the general public. Firm action has greater chances of success when reinforced by sweet reason.

The reporters of the Bombay High Court gave a party in honour of the outgoing Chief Justice, Sir John Beaumont. Sir John was highly complimentary about the reporting profession. His reference to the exercise of individual judgment in reporting cases in court deserves mention. Reporting is a useful calling and one that neither seeks nor gets into the limelight. The people who appreciate the responsibilities of the profession are usually the reporters themselves. Judges are naturally great sticklers for correct versions and Sir John's praise of Bombay reporters went down very well. The reporter is indebted to Sir John for many facilities such as a furnished room for his exclusive use.

The first official function for the new Governor of Bombay was on March 29, when His Excellency inaugurated the Bombay Provincial Rural Reconstruction Board. So much stress has been laid on his connection with industry that a speech indicating real interest and experience of rural affairs is most welcome. While occupying the offices of Under-Secretary and Secretary for Scotland, Sir John Colville had opportunities to learn much about agriculture, education, public health and housing in the countryside. His Excellency himself pointed out that experience should serve him well in dealing with problems in Bombay. His Excellency also recognised the need for careful planning for the settlement of returned soldiers on the land after the war.

The Board met on Monday and Tuesday last to discuss the Government's proposals to intensify the "Grow More Food" campaign. Proposals for renewed propaganda among cultivators, concessions in the price of seed supplied to cultivators, transport facilities, takkavi advances and subsidies for taluka development associations, fuller utilisation of irrigation water in canals, wells and tanks were all approved by the Board. The supply of seed is estimated to cost the Government Rs. 10 lakhs. The Board urged that the Government should ascertain if the provision of Rs. 10 lakhs was adequate and provide more funds if need be. The Board suggested also that the reclamation of "khar" lands should be taken in hand. The Indian Central Cotton Committee's resolution advocating measures to restrict the acreage under cotton in the coming season and a guarantee of fair prices for food grains so as to induce agriculturists to grow food crops met with the Board's approval.

It is learnt that detailed schemes will be worked out for adopting measures to ensure greater utilisation of irrigation water in the light of the recommendations of the B.P.R.D. Board. Investigation will be speedily carried out by agricultural research stations. The extension of mixed farming in the Deccan will claim special attention. Establishment of an irrigator's co-operative association for each major canal system will be encouraged. In tracts liable to frequent famines, sub-soil water surveys are to be instituted. In this respect, however, the official admission that such surveys are to be on a modest scale is disappointing in view of the incidence of famine in several districts. A reduction of water charges for the use of "pazar" water in "nalas" and for the use of bit water in canal-irrigated tracts is anticipated. If fluctuating scales of water-charges based on crop prices at harvest time could be framed, the growing of crops approved by government should be easier.

Famine continues to afflict the districts of Bijapur, Dharwar, Belgaum and Sholapur. Scarcity is general and prices remain high. In Dharwar and Sholapur distress is comparatively less and relief measures are said to be adequate. Emigration is in progress in Belgaum and the authorities continue to grapple with the problem in Bijapur. In the distressed areas generally and in Bijapur particularly, scarcity of food, fodder, drinking and irrigation water is increasingly acute. Conditions are not half so bad in Gujerat and the Konkan where the harvest of *rabi* crops is in progress. It is stated that fodder and water are sufficient and the condition of cattle is reported to be satisfactory.

The cloth trade has something to talk about if not to deride. It will be remembered that according to the arrangement arrived at between the Hon. Mr. N. R. Sarker, then Commerce Member and representatives of the cotton textile industry, the industry agreed to allot 60 per cent of its total productive capacity for the manufacture of cloth suited for government purchase plans. In accordance with this agreement it was understood that the Government ordered 50 million yards for delivery in mid-April. Apart from this, as a result of the provisional arrangements, it was stated that 15 million yards of standard cloth would be on sale in various parts of India by the middle of March. Out of this total Bombay was allotted 2.4 million yards. It is now learnt that the quota of standard cloth according to the provisional arrangement of November last has arrived and supplies have been made available to most of the Districts. Supplies are said to be inadequate for the minimum demands of the poor in the rural areas. Belgaum has received its first quarterly quota of sarees and shirtings. 53 bales of standard cloth have been received in Bijapur district and Dharwar and Thana have also received their quota. The marketing arrangements are nowhere complete and the feeling in all the districts that have received supplies is that the quota is hopelessly inadequate. The cheap cloth scheme in Ahmedabad introduced by the Millowners' Association stands out in vivid contrast. Government cloth scheme in that city has been eclipsed for the reason that the cloth supplied by the Association is bleached and of several varieties whereas the Government's cloth is grey and of only one variety. Moreover, Government's supply of standard cloth in Ahmedabad is restricted to persons earning less than Rs. 20 per mensem.

The Transport Advisory Council, at its last meeting in Bombay, surveyed the progress

NATH BANK LIMITED

Issue of 28,000 shares of Rs. 25 each at a premium of Rs. 5 per share.

★ In reply to enquiries we have received, we have to inform the public that copies of the prospectus and application form are available at all important branches of the Imperial Bank of India, the Central Bank of India Ltd. and Nath Bank Ltd.

★ We may add that the application form appended to the prospectus published in the papers in the last week of March may be used where the branch of the Imperial Bank or the Central Bank or Nath Bank is not in a position to supply prospectus and application forms.

★ The list is due to be closed on 19th April; but the directors may close the list earlier in case of oversubscription. Applications received in the first three days exceed half the present issue.

For NATH BANK LTD.
K. N. DALAL,
Managing Director.

9th April 1943.

Resume of Commodity Markets

Commodity markets have been quietly steady during the past few days. The only outstanding feature of interest is the sharp increase in prices for gold. The jute and jute manufactures markets have remained steady though earlier in the week a quieter tone was noticeable. With the publication of the encouraging stock figures, and the reports that sowings in the mofussil are proceeding rather slowly, prices have firmed up and sellers are rather reserved. The Bombay cotton market was quiet earlier on the announcement by the Government of India that trading in new crop will be forbidden by the Government and that measures will be taken to check speculative trading. On later considerations that there would be an increase in demand for cotton without a large increase in the area, there was a rally. If the closing prices were slightly lower it was only in sympathy with the other markets.

* * * *

The strength of the bullion markets for two weeks in succession can be said to be due to the proposals for the creation of an international stabilisation fund. It has to be noted that the rise in prices is pronounced only in the case of gold and that silver prices are only sympathetically higher. If the discussions at present going on result ultimately in the formulation of a plan giving importance to gold as an international monetary unit, there may be a further improvement in prices for the yellow metal. But whether exactly the rise will be sustained cannot be said as the post-war price for gold, as has been pointed out on more than one occasion in these columns, ultimately depends on the basic value of currencies and the level of the rupee in relation to other currencies.

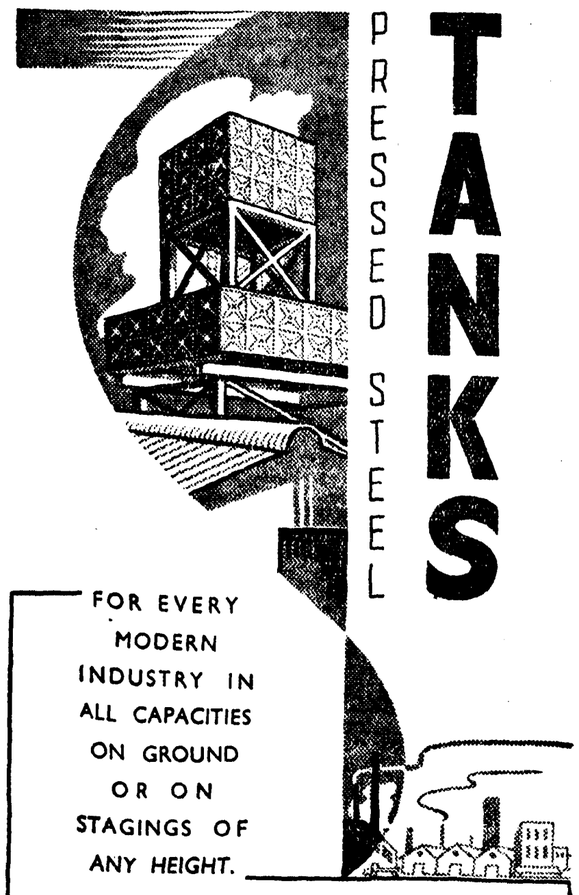
* * * *

Reports that there has been a substantial increase in arrivals of rice and wheat into Bengal is good news for the citizens of this province. As a result of the substantial arrivals of rice it has been decided to relax conditions regarding the movement of rice in Bengal. It has been decided to create three zones in which free trade can be conducted. Any surplus available within these three zones, will be purchased by the Government at agreed rates.

* * * *

As for wheat, Government have decided to prohibit export of wheat from five districts except under license. Exemption will be allowed for consignments not exceeding two and a half maunds. Government are prepared to buy at agreed prices any quantities of this crop that may be offered for sale.

* * * *



At the auctions of tea held for consumption in India there was a further decline in prices. Fairly clean brokens and Fannings were lower by one to two annas but common and medium liquoring descriptions declined by three to four annas. Stalky types were down by two annas. Leaf grades and teas with tip were in great request and higher prices were offered. As for dusts, best qualities were lower by 2 annas while other descriptions declined by as much as three to four annas.

* * * *

It is reported that consignments of standard cloth have reached some dealers and that they will be shortly distributed. Efforts are being made to increase the production of standard cloth and distribute them on a larger scale to the poorer and lower middle classes. The prices at which the standard cloth qualities are offered for sale should be considered rather cheap having regard to the prices in the piecegoods market. Without any large-scale production and distribution of standard cloth it cannot be said that the relief afforded will be widespread.

* * * *

Reference has been made in these columns to the decision of the Government of Madras to requisition supplies of yarn from cotton mills in the province and prohibit export except under license under the Defence of India Rules. It is now reported that some agreement has been reached with the Government and producers by which mills will supply yarn at panel rates to the Government. Thus unnecessary government interference has been avoided. The mills have expressed the hope that they should have some proportion of their production to be disposed of freely.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, April 8.

STOCKS of goods in Mill godowns showed an increase of over 5,000 tons at the end of March as compared with the end of February. There was a sharp rise of practically 5 crores yards of Sacking goods on commercial account over the previous month, accounting for an increased weight of over 20,000 tons. Offsetting this, commercial Hessians were lower by almost 14,000 tons or 472 lakhs of yards. Goods on military account showed little variation, being less by 1,000 tons than the previous month. The only item in this category to show an increase was Hessian cloth, bags and canvas, but it was more than offset by decreases in Sandbags and other descriptions. In the aggregate therefore Hessians were lower by 523 lakhs yards or almost 14,500 tons while Sacking goods were higher by some 491 lakhs yards or 19,600 tons. The increase in stocks of Heavy Goods is partially accounted for by the internal markets being glutted with such goods, but considering that the Mills were working longer hours for half the month, the position cannot be considered in any way disquieting. In fact the overhead off-take must have been quite satisfactory.

The suggested new grading for Loose Jute which we described in these columns last week cannot be said to have been received with any enthusiasm by up-country balers, either Indian or European. Their attitude seems to be to let well alone—that the current system of grading is working satisfactorily and is apparently acceptable to Mills, and should not be interfered with. But it should not be forgotten that current deliveries have little relation to the specification laid down for the grades, baling having been so generally profitable for the last couple of years that dealers have been in a position to be on the safe side with their tenders by giving something away. Naturally Mills have in consequence had little to complain of in the deliveries they have received. But there might be a different story to tell in a closer cut market when, as has often happened in the past, the Dealer's margin of profit largely, if not entirely, disappears. He is then not in a position to give anything away and would have to conform much more closely to the specifications laid down. And it would be in such circumstances that the suggested new grading appears to be to the advantage of the baler, enabling him to take more out of his imports by closer assortment. In actual practice, most balers already work more than the three standard grades, introducing "dotana" and "burra" and "cota" marks to suit their own convenience. So there would be neither hardship nor difficulty in training assorters to the new suggested system and changed market conditions might well induce balers to look more favourably on the idea. Meanwhile it is still the subject of discussion and no decision will be arrived at till all relevant opinions have been fully considered. There can be no disputing the fact that the present system of Loose Jute assortment, whether that laid down in the Book or that which is actually being worked, is a rather hit-or-miss affair, very suitable no doubt to the handling of a large crop in a hurry. But with a shorter crop in view in the coming season and transport facilities not likely to show much, if any improvement, if there is to be any experimenting in finer assorting it would appear that this would be a favourable opportunity to try it out. A moderate quantity of jute to be handled over the full twelve months of the year to conform with available shipping facilities, would provide the necessary time for training the press-house labour to the closer selection in circumstances which another year and a larger crop might not permit so easily.

It is understood that representatives of the various sections of the trade are to meet next week to discuss the opinions elicited by the circulation of the proposals for dealing with moisture in Loose Jute, and it will be interesting to learn the general reactions to the proposals. Whether it will be possible to instal, under war conditions, the necessary number of drying ovens is a moot question. And the introduction of the scheme in any piecemeal fashion would be of very doubtful utility. Unless the scheme is capable of universal application, it would seem desirable to delay its introduction till such time as it can be universally applied. But the delay need not necessarily be time wasted. We suggest that tests, both practical and laboratory, should be continued with a view to arriving at a definitely acceptable and established figure of moisture content, or standard regain, in jute so that the proposed "tolerance" may be eliminated. Because, if the standard condition can be accurately defined, then in practise the tolerance will only work one way, for it is not to be expected that in any normal circumstances, jute can be delivered in a condition more than one per cent drier than it should be. Therefore the careful baler who in his endeavours to deliver jute always in proper condition, may on occasion get slightly below the standard figure, would be penalised by failing to recover anything under the "tolerance", while the less careful baler, so long as he keeps within the upper tolerance one per cent, gets away with it. Further we suggst that it would be eminently desirable to have the standard figure settled once and for all rather than risk dissatisfaction at some later date by deciding that the "tolerance" margin was redundant and should be withdrawn.

The Department of Agriculture, Bengal, has issued a Consolidated Supplementary Review of the 1942 Jute Crop which, in view of the paper shortage and the constant exhortations not to waste paper, might well have been cut out, or its contents merely issued in a Press Note. The aggregate revised figure of yield in bales is 1,235 bales greater than that issued in the Final Forecast, not a variation of world-shaking importance in an out-turn of over 90 lakhs of bales, though perhaps a tribute to the accuracy of the original estimate.

New Crop sowings continue to lag and in most districts are well behind the postion at this time last year. Lack of rain is to some extent the cause, for most districts could do with a good shower to enable sowings to proceed on the Mid and High Lands. It is still impossible to make any estimate as to what extent the cultivator will take advantage of the licensed area for jute, for it is on the Mid and High lands that any variation will take place. But the general impression seems to be that sowings may be short of the licensed area by 3 or 4 annas, that is, calculating last year as 16 annas, some 13 annas was licensed, but not more than 10 annas is likely to be sown. Shortage in Bengal may of course be made up to some extent in outside Provinces where licensing is not in force.

Export Jute has not been an active market, about the only transactions reported being inter-baler- such as Dundee Daisee 2/3 at Rs. 78, Outport Tossa 2/3 at Rs. 76 and Outport Daisee 2/3 at Rs. 68. Mills have taken up a fair quantity, but mainly private marks of better quality at somewhat above standard quotations. Lightnings were reported at Rs. 78 while for Dundee Lightnings and Hearts, Rs. 105 and Rs. 95 respectively were paid. Cuttings have now touched Rs. 41.

After a pause at the end of last week, Mill interest in Loose Jute revived and a fair business was put through early this week, but again Buyers are holding off. European packing was reported at Rs. 17-4, Rs. 14-4 and Rs. 12-4 for Mids, Bottoms and Cross, while Cross alone sold at Rs. 12. It will be noticed that a margin of Rs. 2 has been more or less established between Bottom and Cross. Supervised Jat sold at Rs. 17 and Rs. 14 with buyers over.

NORTH WESTERN RAILWAY
SUBORDINATE SERVICE COMMISSION
LAHORE

Applications are invited from Anglo-Indian and Domiciled European candidates only for appointment as a temporary Assistant Mistress in St. Andrews School Lahore. Applications must be on prescribed form which is available at a cost of Re. 1 from Station Superintendents/Masters of large stations on N. W. Railway. Qualifications:—Trained and certificated Mistress from one of the following Institutions:—(i) All Saints' College, Nainital, (ii) St. Bedes' College, Simla, (iii) St. Dennys' College, Murree, (iv) St. Marys' College, Poona. Candidates from other Institutions may also be considered if the Commission is satisfied that the Institution is of a proper standing and empowered to train and certify Mistresses. The Commission will be the sole judge of this. Preference will be given to one who has had a Kindergarten training and experience of teaching in a Kindergarten. Pay:—Rs. 120—5—150 plus dearness allowance as admissible under the rules. Age limit:—Above 18 years on 25-5-1943. Applications on the prescribed form together with attested copies of testimonials should reach the Chairman on or before 4th May, 1943.

JUTE

Calcutta, April 8.

RATHER steady conditions have been noticeable in the raw jute market during the past week, though it should be said that not quite the same volume of business has been passing. In the earlier days of the week, a definitely easier tendency was noticeable owing to the withdrawal of buyers from the market and sellers showed a disposition to do business even at a slight discount in rates. During the past two days, however, firmer conditions have been noticeable due to the strength of upcountry markets and the unwillingness of balers to commit themselves to any large extent. In spite of the favourable weather conditions, sowings have been rather slow and it is generally felt that the total area under the crop will not come up to 8 annas. For a time it was feared that there might be a large diversion of the area under the crop for food grains. It is now pointed out that with the higher prices for seeds for food crops, the cultivator might ultimately be forced to grow jute. The present prices offering for the crop should be considered satisfactory.

In the Loose jute section European Packing Middles and Bottoms were done at Rs. 17 and Rs. 14 per maund and Supervised Jat at the same level. Indian Jat Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 and Cross Bottoms at Rs. 10-8 per maund. Sellers were firm in their ideas towards the close and were asking for an increase of 4 annas per maund over last prices.

In the Pucca bales section, only a small amount of business was done for lexport in Dundee Daisee 2/3 at Rs. 78 per bale. Mills bought Firsts 2/3 and Lightnings at Rs. 83 and Rs. 78 per bale and Dundee Daisee 2/3 at Rs. 82. Dundee Tossa 4's were Rs. 81 per bale. There was good demand for Cuttings N.C. and M.C. at Rs. 39 and Rs. 38 per bale respectively.

JUTE MANUFACTURES

Calcutta, April 8,

THE jute manufactures market has firmed up on the publication of satisfactory local stock figures for the month of March. It was generally expected that there would be a decline in local stocks with the reports regarding an increase in shipments during March. The decline in stocks would have been more pronounced but for the increase in production on account of the increase in the number of working hours to 60 per week from 54 per week with 10 per cent of the looms sealed, as from March 15, 1943. Earlier in the week a slightly easier tendency was noticeable in sympathy with the jute market. Overseas enquiry also was poor. Demand is confined only to near positions and a good premium is offered for positions up to June. Mills are not free sellers and most of the business passing has been only on account of special fabrics. Standard supplies are available only from the bazar. 9 porters Ready are quoting Rs. 19-12, April Rs. 19-12, May-June Rs. 19-10 and July-September Rs. 19-4. 11 porters Ready are quoting Rs. 25-2, April Rs. 25-4, May-June Rs. 25-2 and July-September Rs. 25.

In the Heavy Goods section not much of business was passing but rates have been well maintained. The sharp increase in sacking stocks has not had any adverse effect on values. "B" twills for ready delivery sold on the basis of Rs. 58 and Liverpool for May-June at Rs. 81. "B" twills for April delivery were Rs. 58, Liverpool for the same position Rs. 61 and Cornsacks Rs. 58-8.

The local stock figures for the month of March, 1943 show that there has been a decline in hessian stocks, cloth and bags, on civil account from 26.05 crore yards to 21.29 crore yards. There is a slight decline in stocks on military account from 35.66 crore yards to 35.2 crore yards. It is clear, therefore, that the increase in the production on account of war orders has been fully absorbed and it has been possible also to effect a decrease in accumulated stocks. The decline of over 4.4 crore yards of stock on civil account should be considered satisfactory. Sacking stocks on civil account are nearly 5 crore yards higher at 24.89 crore yards and on military account slightly lower at 2.21 crore yards. The increase in sacking cloth on civil account has not come as a surprise as there is a seasonal increase in stocks in the earlier months of the year. The increase is also due to the higher level of production.

GOLD

Calcutta, April 8.

There has been a further improvement in prices in the bullion markets during the past few days and new high levels for the war period have been touched. At present, there is no sign of abatement in demand both on speculative and investment account. As was pointed out last week, the rise in prices is not quite understandable and is to be attributed only to the proposals now under consideration to restore gold to its former position as an international monetary medium. Gold ready was quoted as high as Rs. 73-15. There was some selling at higher levels and the quotation has come down to Rs. 73-10. Gold Ready quoted Rs. 73-9 against Rs. 71-6 at the end of last week. The premium for Ready over First Settlement is unchanged at 6 annas.

SILVER

Calcutta, April 8.

The rise in the silver market is not quite so pronounced. Quotations have been marked higher only in sympathy with the gold market. Silver Ready closed at Rs. 112 against Rs. 111-4 last week and First Settlement at Rs. 111-12 against Rs. 110-8. There has been a slight narrowing in the premium for Ready over First Settlement.

COTTON

Calcutta, April 8.

The proposal to prevent trading in hedge contracts in new crop has not had any great adverse effect on the Bombay raw cotton market. There was a slight decline in prices but immediately bears rushed to cover their positions. It was pointed out that the efforts to increase production of cloth and yarn would result in a substantial rise in the consumption of cotton. As there cannot possibly be any large increase in the area under the cotton crop with the efforts to grow more food grains, there cannot be any appreciable decline in prices. In midweek, there was some selling by tired bulls on unfavourable reports regarding the Far Eastern situation. Jharilla May closed at Rs. 536-8 after being higher at Rs. 547 and July at Rs. 546-8 after being higher at Rs. 555. The quotations at the end of last week were Rs. 530 and Rs. 537.

PIECEGOODS

Calcutta, April 8.

The piecegoods market has been quiet and the volume of business has not been on a large scale. Reports regarding the arrival of standard cloth in Bengal have had a discouraging effect. Fears regarding the control of cloth and yarn prices also has considerably checked speculative activity. There is a tendency on the part of consumers to postpone buying their requirements as it is generally felt that with the efforts to increase production and controlled prices, it will be possible to get one's requirements at much lower rates. Business passing has been confined only to immediate requirements.

HARVEST HOME

HERE is a typical harvest scene in Britain, the last load from the harvest field as the sun sinks to rest. Never before perhaps in history has so much depended on the harvest home. Never before has the world so much needed the fruits of its fields and meadows, orchards and gardens. In this pressing task the chemist plays a vital part by helping the farmer first to grow larger crops, and secondly to protect these from seed time to harvest home. The chemist has shown that if the soil is to yield its best, it must be given additional supplies of the elements necessary for plant life and has made these available in the range of inorganic fertilisers. He is also constantly seeking new means of defence against the diseases, pests and vermin which attack plant life. Mercurial seed dressings increase corn yields by thousands of tons yearly by preventing seed-borne disease. Sprays effectively protect farm and market garden crops from blight and mildew, and a barrage of dusts and winter washes ensure the health of trees and fruit. Better weapons against the host of insect pests are continually being found. British research has gone a step further, by reproducing the factors which control growth within the plant itself. Hormones which stimulate the formation of roots are actually procurable in tablet form. Thus does the British chemist help the farmer to reap a bumper harvest. Faced today with a similar necessity to their counterparts in Britain, the great agricultural communities of India may reap the benefit of the discoveries of British laboratories made available to them by the British Chemical Industry.

DUNLOP RUBBER INCREASES ORDINARY DIVIDEND

IRREGULAR conditions have been noticeable in the stock exchanges both in Calcutta and Bombay during the past few days. The successful attacks of the Allied Armies in Tunisia had a tonic effect on prices early in the week. Operators and investors alike ignored the announcement regarding the control of cloth and yarn prices. The fears about the possibility of the limitation of dividends also had disappeared. But, in mid-week, the reports regarding the withdrawal of troops from the Mayu Peninsula caused heavy selling in both centres and the ground gained was more than lost. It is now felt, that the earlier fears were exaggerated and that, in any case, it would have been necessary for the Allied troops to withdraw from the Arakan front with the approach of the monsoon. The continued successes of the Allies in the Tunisian sector have, therefore, resulted in a recovery during the last two days. Quotations are again at the former levels. There is considerable resistance to selling pressure at the decline. As a matter of fact, with the difficulty in regard to deliveries in certain scrips, there cannot possibly be any appreciable decline in values.

* * * *

Cotton shares have again been in the limelight. There is some enquiry for the lower-priced issues. New Victorias, especially, have recorded a rise of two points during the past two days. Elgins were in good request with the smart rise in prices for Cawnpore Textiles. No interest, however, has been shown in Calcutta shares.

* * * * *

The accounts of the *Dunlop Rubber Company (India) Limited* for the year ended December, 1942, have been published. For the sixth year in succession it has been possible to report a substantial improvement in earnings, the net profit before providing for taxation and depreciation for the year 1942 Rs. 87,06,166 being eleven times the earnings for the year 1937. Since the outbreak of war in 1939, earnings have trebled. Following the very satisfactory earnings figures for 1941, it was not expected that it would be possible for the Company to report yet further improvement in earnings, especially as there was considerable difficulty in regard to raw materials. With the substantial improvement in earnings the directors have naturally decided to increase the ordinary dividend from 20 per cent to 25 per cent.

Out of the net profit, before providing for taxation and depreciation of Rs. 87,06,166 (Rs. 73,16,582) the amount set aside for depreciation is Rs. 6,31,993 (Rs. 600,616). There is also provision for special depreciation of plant and machinery to the extent of Rs. 2.75 lakhs (nil). The transfer to Reserve for Contingency is lower at Rs. 5 lakhs against Rs. 11.5 lakhs, while the allocation to General Reserve is Rs. 3 lakhs (Rs. 3.2 lakhs). Provision for taxation is naturally higher at Rs. 52,14,958 (38,36,651). After paying dividend on the ordinary shares, 25 per cent (20 per cent), the amount carried forward is substantially higher at Rs. 464,940 against Rs. 288,193 brought in.

* * * * *

The balance-sheet shows a very strong position. Considerable additions to plant have been made during the year. There is an increase in reserves by Rs. 9.77 lakhs and a decrease in current liabilities and provisions by Rs. 6.2 lakhs. The charge on account of taxation represents an increase of Rs. 13,78,274 over the preceding year due to the higher profits and an increased level of taxation. Estimated tax liability on the 1942 results represents 68 per cent of the total profits earned.

The present quotation for the ordinary shares is around Rs. 50 and on the basis of the latest dividend the yield is more than 5 per cent taxfree. In view of the high level of earnings, the strong financial postion and the possibility of a further improvement in profits, it can now be said that the shares have scope for further appreciation.

* * * * *

Another company to increase the dividend for the year ended December, 1942, is the *Indian Galvanising Company (1926) Limited.* Thanks to the substantial additions to plant capacity in recent years and the large volume of war orders, the Company has been making good progress since 1939. The dividend now declared is the highest since the Company was reconstructed in 1926. The net profit, before providing for taxation and depreciation, is Rs. 8,30,801. Provision for taxation is as much as Rs. 5,64,046. The amount set aside for depreciation is 84,598. After transferring Rs. 25,000 to reserve and Rs. 50,000 to Stock Reserve, the dividend on the ordinary shares has been increased to 25 per cent from 20 per cent. In anticipation of an increase in the dividend there was a rise in the quotation from Rs. 32 to Rs. 40 recently. Even at the present level, the shares afford a return of over 6.3 per cent. tax free.

* * * * *

The net profit for the *Alliance Jute Mills Company, Limited* for the half-year ended January, 1942, is higher at Rs. 10,03,455 (Rs. 8,92,767). After providing Rs. 1 lakh for depreciation and Rs. 6,85,703 (Rs. 5,75,000) to taxation, the allocation to reserve is Rs. 50,000 (Rs. 1,00,000). The dividend has been maintained at Rs. 7-8 per share. The amount carried forward is Rs. 36,363 against Rs. 26,111 brought in.

* * * *

The accounts of the *Ramnugger Cane and Sugar Company, Limited* for the year ended August, 1942, are not quite up to market expectations. But for the large income from the Zemindary, it would not have been possible for the company to provide even for depreciation. There was an actual loss of Rs. 4,979 on account of the year's working so far as the sugar factory was concerned. The directors point out that the disappointing results for the year were due to the very poor quality of cane and the higher costs of production. The fixation of maximum prices under the Sugar Control Order was actually lower than the cost price of Bengal mills. Only after the representation of the mills in Bengal, the Sugar Controller authorised the collection of a surcharge of ten annas per maund over the control price. In the determination of the profit for the year, the revenue from this surcharge has not been credited to profit and loss account. The allocation of the receipts from this surcharge has not as yet been decided upon. A sum of Rs. 69,248 has been shown as liability in the balance-sheet. In regard to the current year also representations have been made to the Central Government for an increase in the control rates and it is expected that some favourable decision will be reached. In view of the foregoing developments it might be possible for the company to earn larger profits for the current year, though such an increase would not allow of a payment of dividend on ordinary shares. The arrears of preference dividend from March 1, 1938 to August 31, 1941 is 4,84,000; another 24,000 has to be added for 1941-42. The preference shares carry the right to a 6 per cent cumulative tax-free dividend. With the present quotation around Rs. 138 the shares should be considered attractive.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 9.

RATHER steady conditions were noticeable on the Calcutta Stock Exchange early in the week. The reports regarding fresh successful attacks by the 8th Army had an encouraging effect and Indian Irons and Steel Corporation were done up to Rs. 35-10 and Rs. 25-10 respectively. During the past three days, however, a definitely quieter tendency has been noticeable on the news of the withdrawal of the Allied troops from the Arakan front. On Wednesday afternoon there was heavy selling and the popular speculative counters were marked sharply lower, Indian Irons being noted at Rs. 34-10 and Steel Corporations Rs. 24-10. But for the satisfactory technical position of the market, the decline in prices would perhaps have been more pronounced. Business passing in the several sections has been on a smaller scale, in the latter half of the week under review and quotations for most of the counters are sympathetically lower. There has been a slight recovery from the low levels and if there are no adverse developments in the East, it can be expected that the upward trend will be resumed again. Otherwise there can be no appreciable change in prices.

The giltedged securities section has been uninteresting and quotations for the most part have remained unchanged. Business passing is on a very restricted scale though it is reported that there are some buyers for the medium-dated and provincial loans. 3½ per cent Paper was unchanged at Rs. 94-2, 3 per cent Defence Bonds were slightly easier at Rs. 103-2, while 3 per cent 1963-65 were quoting Rs. 95-12, 3½ per cent 1954-59 Rs. 103-15, 3½ per cent 1947-50 Rs. 103-10, 4 per cent 1960-70 Rs. 110-4 and 4½ per cent 1955-60 Rs. 113-11. 5 per cent 1945-55 were Rs. 108-4.

Among public body debentures, transactions have been few and far between. 3 per cent *Calcutta Municipal Debentures* changed hands at Rs. 93-10 and 3¼ *Howrah Bridge Debentures* were Rs. 97. The only transaction in industrial debentures was in 5½ per cent *Carew & Co.,* at Rs. 107-12.

Bank shares have remained firm with *Imperial Bank* fully paids at Rs. 1,730 and contributories at Rs. 432. *Reserve Bank* were Rs. 106 and Bank of India Rs. 164-8.

Coal shares were quiet with the publication of discouraging earnings reports though, on the announcement of a capital reduction scheme, *Burra Dhemo were* marked higher at Rs. 7-8 and only with some selling at the higher levels, the quotation came down to Rs. 6-12. *Bengal* were steady at Rs. 440, *Bokaro and Ramghur* at Rs. 19-12, *Equitable* were quiet at Rs. 34-4 and *Hurriladih* at Rs. 16-1. *New Beerbhoom* were Rs. 18-8 and *Rewa* Rs. 35-8. *West Jamuria* were unchanged at Rs. 33-12.

In cotton shares, the feature of the week was the rise in *Elgin* and *New Victoria.* It will be remembered that, last week, on reports of the possibility of a bonus issue, there was a spectacular rise in the quotations for *Cawnpore Textiles* to Rs. 23-4. With profit-taking at the higher levels, there was a setback to Rs. 22-4. The quotation has again at the time of writing improved to Rs. 22-14. *Elgin Mills* have, in sympathy with Cawnpore Textiles, improved from Rs. 58 to Rs. 63. As it was generally felt that, among Cawnpore shares, *New Victoria* were relatively undervalued, there was some buying and the quotation has improved from Rs. 8-6 to Rs. 9-14 during the course of the week. *Dunbar* and *Bowreah* are lower at Rs. 272 and Rs. 500 respectively. The decline in the quotation for *Muir Mills* to Rs. 386 is not quite understandable.

In the Jute section rather quiet conditions have been noticeable, *Anglo-India* quoting Rs. 376-8, *Bally* Rs. 286, *Howrah* Rs. 59-8, *Hukumchand* Rs. 22-14, *Kamarhatty* Rs. 535, *Kanknarrah* Rs. 429, *National* Rs. 25 and *Reliance* Rs. 61. *Nellimarla* were unchanged at Rs. 20 ex-dividend *Naskarpara* at Rs. 25.

In the Engineering section, as pointed out above, *Indian Iron* were done up to Rs. 35-10. Earlier in the week there was a setback in the quotation to Rs. 34-7 in mid-week. The quotation is again higher at Rs. 35-2 at the present moment. *Steel Corporation,* likewise, were fluctuating between Rs. 24-10 to Rs. 25-8. The quotation is now Rs. 25-2 ex-dividend. *Bhartia Electric Steel* were lower at Rs. 15-2. *Burn & Co.,* were unchanged at Rs. 379. *Indian Malleable deferreds* were a shade easier at Rs. 2-15 while *Indian Standard Wagon* were well held at Rs. 63. *Kumardhubi Engineering* were uninteresting at Rs. 7-8 while *Marshalls* were steady at Rs. 3-12. *National Iron and Steel* were rather quiet at Rs. 11-14. *Saran Engineering* were in good request at Rs. 7-4.

Among Sugar shares, *Carew* were steady at Rs. 17 while *Purtabpore* were marked higher at Rs. 17. *Champarun* were Rs. 29-8, *Murree Brewery* Rs. 85, *New Saran* Rs. 14-12 and *U. P. Sugar* Rs. 18-12.

Among Tea shares, business has been restricted and quotations are slightly lower, *Bishnauth* being Rs. 33-14, *Hattikhira* Rs. 29-8, *Teliapara* Rs. 526, *Tengpani* Rs. 57-8, *Tezpore* Rs. 12-12, *Tumsong* Rs. 12-8 and *Sapoi* Rs. 16-4.

In the Miscellaneous section, *Burma Corporation* were further lower at Rs. 2-10, with *Indian Copper* unchanged at Rs. 2-4. *Alkali & Chemical* were easier at Rs. 32 while *British Ceylon Corporation* were steady at Rs. 18-12. *Assam Saw* were steady at Rs. 4-12, *B. I. Corporation* were Rs. 5-12 ex-dividend. *Calcutta Trams* were lower at Rs. 18-2. On the declaration of a higher dividend by the *Dunlop Rubber Co.,* there has been no appreciable rise in the shares which are now quoting at Rs. 49-12. *Midnapore Zemindary* were Rs. 77-8, *Publicity Society* Rs. 11-13 and *Rohtas Industries* Rs. 29-13.

Among Paper shares, *India Paper Pulp* were Rs. 175, *Star* Rs. 20-10 and *Titaghur Paper* Rs. 24-4.

BOMBAY STOCK EXCHANGE

(From Our Correspondent).

Bombay, April 8.

RATHER easy conditions were noticed on the local stock exchange towards the close though the opening had been firm. The extremely favourable news from the Middle East was responsible for the optimism that prevailed in the early part of this week. But in mid-week reports regarding government control of prices of cotton yarn and manufactures again were being discussed with the result that there was some selling. The announcement by the government did not have any great depressing effect as it was pointed out that with the efforts to increase production and the possibility of an effective control of cotton prices earnings would not be very much affected.

Mill shares opened firm but eased towards the close on reports regarding Government control. *Ahmedabad Advance* after reaching Rs. 480 closed at Rs. 475; *Bombay Dycing* were Rs. 1,880 ex-div. (1925); *Central India* were Rs. 475 (474); *Century* were lower on balance at Rs. 775 (782); *Colaba Land* were higher at Rs. 267-8 (247); *Gokak* were Rs. 388 (384); *Indian Bleaching* were done at Rs. 255 (250); *Kohinoor* were slightly lower at Rs. 751 (754); while *Phoenix* were steady at Rs. 860; *Simplex* were better at Rs. 322 (313-8). *Svadeshi* were Rs. 591.

Steel shares were firmer in the earlier part of the week under review but they declined towards the close in sympathy with Textiles. *Tata Deferreds* after gaining nearly 50 points (Rs. 1,892-8) closed at Rs. 1,840. *Tata Ordinary* were done at Rs. 377-8 (376); *Indian Iron* were lower at Rs. 34-14.

The Miscellaneous section has been relatively steady during the period under review. Selected scrips have registered some gains. *Alcock Ashdown* were higher at Rs. 753-12 (737-8); *Belapur Sugar* were slightly higher at Rs. 232-8 (229); *B. E. S. T.* were Rs. 150; *A. C. C.* Rs. 221-12 and *Premier Construction* Rs. 167.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED.

The Share Registers of the Company will be closed from 28th April 1943 to 7th May 1943 both days inclusive.

By Order
Imperial Chemical Industries (India) Ltd.,
Secretaries.

Calcutta, 20th April, 1943.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 1st April, to 7th April, 1943 both days inclusive)

Bank of India:—(7th) 163-8, 164-8.
Imperial Bank (Fully paid):—(1st) 1,720; (7th) 1,725 (1,732 s.o.l.).
Imperial Bank (Conty.):—(2nd) 429-8, 430.
Reserve Bank:—(1st) 105-8, 106; (5th) 106 C.T., 105-8, 106; (6th) 105-8; (7th) 105-8, 106.

DEBENTURES:

3 per cent (1936-66) Calcutta Municipal:—(6th) 93-10.
3¼ per cent (1956-66) Howrah Bridge:—(6th) 97 s.o.l.; (7th) 97 s.l.
5½ per cent (1941-50) Carew & Co.:—(2nd Mortgage):—(7th) 103-8, 103-12.

RAILWAYS:

Arrah-Sasaram:—(5th) 67-8, 68 ex-div.
Darjeeling-Himalayan (Pref.):—(7th) 98, 99.

COALS:

Baraboni:—(2nd) As. 10.
Bengal:—(1st) 437-8 s.l.; (2nd) 435 s.l., 437, 438; (6th) 438.
Bhalgora:—(2nd) 6-10; (5th) 6-12; (7th) 6-12.
Bokaro and Ramgur:—(2nd) 19-2.
Borrea:—(7th) 20-4.
Burra Dhemo:—(1st) 6-4, 6-8 C.T.; (2nd) 6-3; (5th) 6-4, 6-5, 6-6; (6th) 6-11, 7-7, 7-1, 7-2, 7-3, 6-15, 7; (7th) 6-12.
Burrakur:—(1st) 14-4; (2nd) 14; (5th) 14; (7th) 13-15.
Deoli:—(2nd) 9-6.
Dhemo Main:—(1st) 13-1, 13-2; (2nd) 12-14, 13, 13-2; (5th) 13; (6th) 13-2.
Equitable:—(5th) 34-3, 34-4.
Ghusick and Muslia:—(1st) 7, 6-14, 6-15 ex-div.; (2nd) 6-14, 6-15; (5th) 6-15; (6th) 6-14, 6-15; (7th) 6-14, 6-15.
Hurriladih:—(1st) 16-4; (2nd) 16-1, 16-3, 16-2.
Khas Kajora:—(7th) 9.
Kuardi:—(2nd) 5-10; (5th) 5-11; (7th) 5-14.
Mundalpore:—(2nd) 10-14.
New Beerbhoom:—(1st) 18-6, 18-8.
North-West (Fully paid):—(2nd) 22-1.
North-West (Conty.):—(7th) 7-10 p.m.
Parasea:—(5th) 1-14, 1-15.
Pure Sitalpur:—(6th) 15-12, 16; (7th) 16-5.
Rewa:—(2nd) 35-8; (5th) 35-3, 35-4.
Satpukuria and Asansol:—(7th) 1-5, 1-6.
Seebpore:—(5th) 25 prem.; (7th) 24-12 prem.
Standard:—(5th) 21-10.
Talcher:—(2nd) 3-2, 2-15, 3, 3-1; (5th) 2-15, 3; (7th) 3.
West Jamuria:—(6th) 33-4 (33-12 s.l.).

COTTONS:

Basanti:—(1st) 9-12, 9-13; (7th) 9-1, 9-2, 9-8.
Bengal-Nagpur:—(1st) 33; (6th) 32-10; (7th) 32-12.
Bengal Luxmi:—(1st) 82.
Benares:—(1st) 11, 11-1, 11-2; (2nd) 10-4 s.o.l., 10-12 (11-4 s.l.); (5th) 10-14, 10-15; (6th) 10-15, 11-4, 11-2.
Cawnpore Textiles:—(1st) 22-11, 23 C.T.; (2nd) 22-2, 22-4, 22-6, 22-8; (5th) 22-2, 22-6, 22-8 C.T., 22-8; (6th) 22-5, 22-6, 22-10, 22-14; (7th) 22-12, 22-14, 23, 23-2.
Dhakeswari:—(2nd) 22.
Dunbar:—(5th) 272; (6th) 272.
Elgin Mills:—(2nd) 55-12, 56, 55-8, 56-4; (5th) 57-4 C.T.; (7th) 58-8, 60-8, 60-12, 61, 61-8, 61-8 C.T.
Kesoram (Ordy.):—(1st) 18-2; (5th) 17-9, 17-10; (7th) 18-4.
Muir Mills:—(1st) 392, 400; (7th) 386-8.
New Victoria (Ordy.):—(1st) 8-5, 8-7; (2nd) 8-4, 8-5; (5th) 8-7, 8-8, 8-9; (6th) 8-9, 8-10, 8-11; (7th) 8-12, 8-13, 8-14.

ELECTRIC:

Benares:—(5th) 16-4.
Mirzapur:—(6th) 5-15, 6, 6-2.
Upper Ganges:—(1st) 13-6.

ENGINEERINGS:

Bhartia Elec. Steel:—(1st) 16-4; (5th) 15-10, 15-12, 15-13; (6th) 15-10, 15-12, 15-14, 15-15; (7th) 16, 15-12.
Britannia Building and Iron:—(2nd) 12-12; (6th) 13-1.
Britannia:—(1st) 14-9.
British India Elec. Cons.:—(1st) 12-8; (2nd) 12-10 C.T.; (5th) 12-10, 12-11; (7th) 12-12, 12-14, 12-15, 13.
Burn & Co. (Ordy.):—(1st) 377, 378 s.l.; (2nd) 378; (5th) 376 s.l.; (6th) 379.
Indian Galvanizing:—(5th) 38-10.
Indian Iron and Steel:—(1st) 35-6, 35-7, 35-8, 35-5, 35-2; (2nd) 34-15, 34-13, 35, 34-12; (5th) 35-3, 35-5, 35-4 (35-7, 35-5 s.ls.), 35-6 C.T., 35-2, 35-4; (6th) 35-3, 35-4 (35-2 s.o.l.), 35-5; (7th) 35-6, 35-8, 35-4, 35-5.
India Machinery:—(1st) 11-4; (2nd) 11-2 c.div.; (5th) 10-9, 10-8, 10-10 ex-div.; (7th) 10-11.

RAMNUGGER CANE & SUGAR COMPANY, LIMITED.

Audited Accounts for the year ended 31st August, 1942:—

The nett result of the year's working shows a loss of Rs. 4,978-9-8, but by reason of the Managing Agents having, in order to assist the Company, again agreed to forego their commission amounting to Rs. 21,227, this has been turned into a profit of Rs. 16,248-6-4. In arriving at this figure, however, had it not been for the fact that the sum of Rs. 1,36,339-4-6, representing credits derived from the Zemindary section of the business was taken into account, the result would have been a loss of Rs. 1,20,090-14-2.

The position, however, is as follows:—

	Rs.	A.	P.
The Profit and Loss Account, after deducting all working charges, commissions, etc., shows a profit of	1,77,066	1	0
From this is to be deducted the amount of depreciation	1,60,817	10	8
Leaving a credit balance of	16,248	6	4
To which must be added the amount brought forward from the previous year	27,716	2	1
Total ..	43,964	8	5

In view of the present conditions the Directors recommend that this amount should be dealt with as follows:—

To writing off:—	Rs.	A.	P.
Part expenses of issue of Convertible Notes ..	5,000	0	0
To be carried forward	38,964	8	5
Total ..	43,964	8	5

The Mill started to work on the 15th December, 1941, and continued until the 23rd April, 1942, during which period it crushed 17,33,802 maunds of cane with a recovery of 8.28 per cent. as compared with 8.7 per cent. last year and 9.6 per cent. the previous year. This low recovery was due to the poor quality of the variety of cane known as C0.213 which forms the bulk of the crop in this Province and which has definitely deteriorated due to disease and other factors. This question of recovery is a very important one so far as the Sugar Industry in Bengal is concerned, for until this C0.213 variety is entirely eliminated and replaced by other varieties which are known to contain a much higher sucrose content, the Mills in this Province cannot possibly hope to produce sugar as cheaply as other Provinces. Those Mills which have their own plantations are already taking steps in this direction and we are glad to say that so far as the Company is concerned this variety is no longer under cultivation. Little or nothing, however, is being done towards assisting the cultivators in this direction and as their cane constitutes by far the major portion of the cane crushed in this Province, it is essential that the Government of Bengal should take the matter in hand with a view to providing the cultivators with adequate seed of suitable varieties.

In spite, however, of this low recovery the outlook at the beginning of the season was exceptionally bright and in ordinary circumstances the Company could have looked forward to very profitable year. The whole position changed however when the Government of India promulgated the Sugar Control Order on the 14th of April, 1942, under which sugar prices were controlled and fixed, according to grades, for the whole of India. The prices, unfortunately, were not only below production costs in this Province due to the low recovery already referred to but by the establishment of uniform prices throughout India the Bengal Mills were deprived of the advantage in freight which they would ordinarily have enjoyed by reason of their close proximity to the consuming markets in this Province, for it must be borne in mind that the major portion of the sugar consumed in Bengal has to be imported from other Provinces. Joint representations with other Mills were made to the Government of India, the Sugar Controller and the Government of Bengal, the outcome of which was that the Mills in Bengal were authorised to make a surcharge of 10 annas per maund over the controlled prices which was to be retained by them until it had been decided how the money was to be allocated.

Prospects for 1942-43 Season.—The Mill started to crush on the 19th January, but it is feared that, like most other Mills in Bengal, a very short season will be experienced. In the district a considerable quantity of cane has been lost partly through floods but chiefly as a result of the recent severe cyclone.

So far as sugar prices are concerned, although the Controller has recently revised his prices they are still below manufacturing costs due to the higher prices to be paid for cane, stores and War Risk Insurance, etc. However, further representations have been made to the Government of India and a delegation representing the newly formed Bengal Sugar Mills Association of which the Company is a member, was recently received by the Commerce Member of the Government of India at New Delhi. At the time of writing this Report, the result of the discussions which took place was not known. But some measure of relief for the Bengal Sugar Mills will be forthcoming.

Managing Agents.—Anderson, Wright & Co.

Authorised Capital—Rs. 50,00,000. Issued and Subscribed—Rs. 14,00,000 in 1,00,000 Ordy. of Rs. 10 and 4,000, 6 per cent. Cum. Pref of Rs. 100, both fully paid up.

Synopsis of the balance sheet as at 31st August, 1942:—

(Annual General Meeting on the 15th April, 1943 at 12 noon.)

Audited Accounts for the year ended 30th September, 1942:—

	Rs.	A.	P.
Show a profit for the year of	43,604	10	1
From which has been deducted, Provision for Taxation	34,000	0	0
Leaving a balance of	9,604	10	1
Which falls to be deducted from the debit balance brought forward from last year of ..	99,108	15	4
Cr an amount at debit of Profit and Loss Account to be carried forward of	89,504	5	3

Depreciation on Block amounting to Rs. 1,13,262-9-3 has been charged in the accounts.

As was stated in the report for season 1940-41, it was not possible then for the Company's liability for excess profits tax and income-tax to be determined. The standard profits of the Company have now been determined by the Central Board of Revenue and the liability of the Company for excess profits tax and income-tax for the last two years can now be estimated. The provision of Rs. 34,000-0-0 made in the accounts is considered to be sufficient to meet the Company's liabilities for taxation for these two years.

During the season 9,06,615 maunds of cane were crushed, the percentage recovery of sugar from cane being 10.85 or 98,386 maunds of sugar. Of this, 44 maunds have been lost in crushing and re-bagging and 95,218 maunds have been sold up to 31st December, 1942, at an average price of Rs. 11-15-1.3 per maund. The sugar remaining unsold as on that date has been valued for the purposes of the accounts at Rs. 14-4-0 per maund. The average cost of cane at the Factory was 9.14 annas per maund.

Yeast Extract.—During the year under review experiments were carried out at the Company's Factory with a view to determining the possibilities of producing Yeast Extract. A pilot plant was erected and the expenditure incurred on this item up to 30th September, 1942, amounted to Rs. 25,258-0-0. These experiments are continuing and it is hoped to make a start with full-scale production during the current year. The Government of India are interested in the project and they will have first call on the Company's production.

Serious civil disturbances took place in the Factory locality in August, 1942, but happily none of the Company's employees were injured and no serious loss of property occurred. The Directors desire to place on record their deep appreciation of the loyal service given by the staff during this time.

Managing Agents.—James Finlay & Co., Ltd.

Authorised Capital—Rs. 21,30,000. *Issued—Rs.* 10,50,000. *Subscribed—Rs.* 10,49,925 *in* 1,39,990 *shares of Rs.* 7-8 *each fully paid up.*

(Annual General Meeting, held on 29th March, 1943).
*Includes Bad debts written off.

Audited Accounts for the year ended 30th November, 1942:—

	Rs.	A.	P.
The Accounts show that the profit for the year after deducting depreciation of Rs. 15,530-3-5 is	8,09,157	12	7
From this amount the Directors have set aside:—			
For provision for Taxation ..	5,03,307	15	6
„ Equalisation of Dividends Reserve Account ..	35,000	0	0
„ Bonus Fund ..	8,050	12	9
„ Bamankua Mine purchase Account	9,500	0	0
	5,55,858	11	6
	2,53,299	1	1
Add—Balance brought forward from last year ..	3,954	3	6
Making a balance available for disposal of ..	2,57,253	4	7
From this sum the Directors recommend:—			
Payment of a Dividend for the year ended 30-11-1942 at the rate of Rs. 4-12-0 per share free of Income-tax	2,49,375	0	0
Leaving to be carried forward to next year's accounts	7,878	4	7

The enquiries from America, which came into evidence towards the close of the Company's last financial year and resulted in business to the extent of some 13,250 tons, increased in volume during the year ended 30th November, 1942 and no less than 66,925 tons of Guzerat Grade I Ore were sold to that country during that period. A substantial proportion of these sales has been despatched with the result that, notwithstanding the fact that the Company recommenced mining in February of last year, stocks have been considerably reduced.

The Directors, being confident that it would assist sales of "Shivrajpur" Ore if C. P. Ore could be offered in conjunction with it, decided to make purchases of the latter quality and, in fact, did purchase some 6,800 tons. The whole of this quantity was subsequently sold to America but, unfortunately, owing to the restricted supply of Railway wagons, only some 3,630 tons, so far, have been railed to Bombay, the bulk of which has since been shipped. It is hoped that it will be possible to rail the balance of these purchases to Bombay in the near future.

As mentioned last year, the payment of £14,000/- "on account" obtained from the French Mission in January, 1942, against the Company's claim for the f. a. s. value of ore shipped by the s. s. "Archangelos" in 1940 amounting to Rs. 1,90,070-0-3, has been credited to the Profit and Loss Account for the year. A favourable final settlement of the balance of this amount and other charges totalling in all £1,751-1-11 is anticipated and it is hoped that this sum will be received in the near future.

At the time the last Report was presented, indemnities in respect of certain shipments of ore including that per s. s. "Archangelos" had been given to the French Mission in London in consideration of payments made by them. In consequence of these indemnities and remote contingnt liabilities arising thereunder, a note was made on the face of the Balance Sheet as at 30-11-1941. Although it has since been learnt that it is unlikely that any liabilities under these indemnities will arise in the future, the Directors consider it advisable that a similar note should appear on the face of this and future Balance Sheets until such time as no contingent liabilities exist.

Managing Agents.—Messrs. Killick, Nixon & Co.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

As foreshadowed in this column, the slightly more usable conditions for short credits which prevailed in the earlier two weeks have proved a temporary phase. Interbank call money is again in plentiful supply; and the nominal rate in Calcutta is ½ percent. It is also noteworthy that treasury bill results, as announced this week, make much better showing. It must be added, however, that the better showing of treasury bill results is independent of the state of the money market in the first half of April; rather, it is connected with the question of treasury bill maturities. We have more than once emphasised in this column that treasury bill sales of each week are, in the present conditions, mainly dependent upon the maturities of bills in that particular week. This view receives significant confirmation from the poor sales of treasury bills in the first half of April when treasury bill maturities were on the poor side, and from the definitely better results of this week on account of heavier maturities. Against Rs. 8 crores of treasury bills offered on April 13, applications came to Rs. 9.01 crores. The average rate of accepted tenders is Rs. 1-2 percent per annum, which is the same as last week. In this context, we may draw pointed attention to the fact that this discount rate of Rs. 1-2 percent per annum prevailed while applications for treasury bills came only to Rs. 5.71 crores last week, and also during this week when applications exceeded Rs. 9 crores. The average discount rate has thus little relevance to the applications received. The offer of tender bills for next week remains unchanged at Rs. 8 crores. Sales of intermediate bills in the last week came to Rs. 2.24¾ lakhs. Sales of tap bills will continue at the unchanged rate of Rs. 99-12 percent. Considering that treasury bill maturities in the second half of April amount to Rs. 20 crores and in May to Rs. 42 crores there is every reason to think that the Central Government would be able to secure their short-term accommodation in the coming weeks without experiencing the kind of adverse development which marked the past two weeks.

The returns of the Reserve Bank and the Imperial Bank for the week ended April 9, have not reached our hands at the time of writing. We have therefore to defer our statement on any of these returns for the next week. The space thus released may be usefully devoted to a brief consideration of the situation that has been created for banks on account of the rapidly swelling deposits. Most banks have reported record increases in their deposits during 1942; and our enquiries go to show that the rising trend is aggressively manifest in the current year also. Some of the banks find that, as a result of the persistent rise in deposits, the balance between the paid-up capital and reserves on the one hand and deposit liabilities on the other, is being seriously disturbed. This seems to be true of the smaller Indian banks as well as of the bigger Indian banks. So far as the banks in Bengal are concerned, we are informed that there is a constant addition to the capital by the process of sales of additional shares across the counter. The Nath Bank which made an offer of additional shares to the public last week, has achieved good results for its issue. Amongst the bigger banks which will have seriously to consider the problem of increasing capital, the most notable is the Central Bank of India. The deposits of the Central Bank, as disclosed in their fortnightly statement, are now nearly Rs. 65 crores. To sustain this weight of deposits, the capital of the bank is Rs. 1.68 crores. The reserve and contingency fund is Rs. 1.08 crores. The total is thus Rs. 2¾ crores. The time has certainly arrived for the Central Bank to widen and strengthen its capital basis. Before any increase of capital is contemplated, it will be necessary to take the necessary legal steps to raise the limit of the authorised capital from the present figure of Rs. 7 crores to, say, Rs. 15 crores. Once this is done, the next step is the offer of new shares to the existing shareholders on the basis of one new share for two old shares and on the basis of a premium of at least Rs. 25 for a share of the nominal value of Rs. 25. After the new shares are issued on this basis, the paid-up capital of the Bank will be raised from the present level of Rs. 1.68 crores to just over Rs. 2½ crores. The Reserve fund will be increased from just over Rs. 1 crore to nearly Rs. 2 crores. In other words, after this capital expansion, the Central Bank will have nearly Rs. 4½ crores paid-up capital plus reserves. We may also add that, with regard to most of the investments, the market value is much in excess of the book value. This excess is Rs. 1.13 lakhs in respect of bullion; Rs. 73,000 in respect of non-terminable Government securities; Rs. 4.36 lakhs in respect of sterling securities; and Rs. 56.16 lakhs in respect of preference and ordinary shares. The total appreciation in this regard is Rs. 97 lakhs. With this inner reserve and with the additional capital which, we propose, should be raised, the Central Bank will be adjusting its capital plan for the assured prospect of its deposits reaching the Rs. 100 crore mark. 'En passant' we may point out that the Central Bank is the only banking institution in India which has deliberately pursued a policy of providing a hedge against Government securities. On the eve of the war, the general view was that there would be a big landslide in giltedged values. The Central Bank forearmed itself against such a contingency; and the bank's holdings in ordinary and preference shares are of the present value of Rs. 3 crores. The bank is in the fortunate position of benefiting from the appreciation both in giltedged and equities.

The exchange market has been dull but steady.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d. and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

TREASURY BILLS

India

Tenders for Rs. 8,00.00,000 of three months' Government of India Treasury Bills were opened on Tuesday April 13, 1943. Total amount offered was Rs. 9,01,00,000. Tenders at Rs. 99-11-9 per cent were accepted in full and those at Rs. 99-11-6 were allotted approximately 99 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 1-2 per cent per annum.

Tenders for Rs. 8.00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, April 20, 1943, in Bombay up to 11 a.m. and up to the close of business on Monday, April 19, 1943 at other centres. Successful tenderers should make payment on Thursday April 22, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from April 14 to April 19, 1943 at Rs. 99-12 per cent, subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from April 7 to April 12, 1943, amounted to Rs. 2,24,75,000.

During the week ended April 9, 1943, Government of India Treasury Bills for Rs. 39,98,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

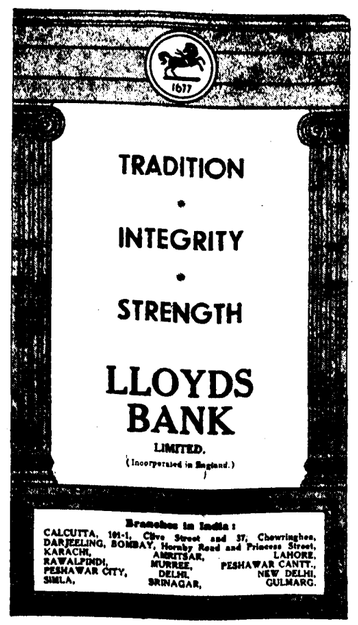
Finance Abroad

Thursday Morning.

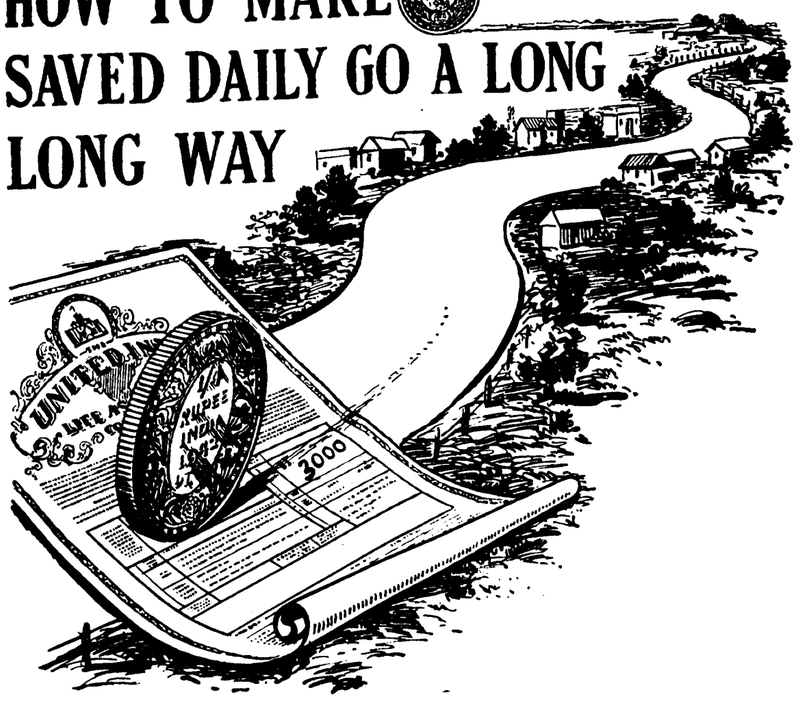


PRESIDENT'S ROOSEVELT'S failure to convince the Senate that a ceiling on salaries is desirable cannot be regarded as a defeat for the anti-inflation programme. The programme will go through as M. Morgenthau has outlined big plans for collecting $13 billions in subscriptions to war bonds. Besides the steady expansion of borrowing from the market after May last, there is the U. S. Treasury's plan to take off more and more savings—away from the stock market and the banks. The prices on the New York stock market have fallen rather abruptly this week, and the decline cannot be attributed to war news which remains wholly encouraging. In December, the Treasury got more than the $10 billions it sought in war bonds; in April it should get more though fears of unemployment in the near future may restrain some workers from buying war bonds. The Administration is ready to work for expansion of foreign trade which must react on U. S. manufacturing activity.

Trade agreements, like the one made with Persia last week, are desired, and the sop to private business offered by Mr. Jesse Jones should not be ignored. The agreements are to be made, and private business is to be encouraged. The U.S.A. will not stick to lease-lend for all time, and the present programme is one meant to placate those afraid of inroads by Government into trade. The export drive may be assisted by stablisation measures under which the gold content of the dollar may be lowered. That promise is in the background for the White Plan is just a plan. The difference between British and American views on stabilisation—ultimate rather than imminent—may be reduced by discussion, but the U.S.A. looks like winning—at least to those who fancy gold shares. There has been a smart rise in gold minings after the British budget was presented. Three months ago there was doubt because the big Rand houses reduced dividends and complained of troubles. There is no longer any question as to what the future holds, and a heavy share like Crown Mines has gone ahead. Nothing is known as to what the Bourses think of Kaffirs at present. After the Allied landing in Africa the Bourses woke up, and Nazis found that a flight from the Mark could develop abroad as well as at home. Special restrictions were devised, but these must be inoperative and the Italians' eagerness to sell lire for Portugese or other currency, at present can be related to fears of rout in Tunisia and the formal occupation of Italy by the Nazis.

The great rise in the Nazis' war expenditure has put Germany in fear of a crushing burden after the war. Nine milliards of marks may not seem small to a nation that has lived through 10 years of imposed privation. There may be no fear of acute food shortage as the 1942-43 harvest is gathered in but the Nazis may find it hard to borrow when production is falling. They did not have that difficulty before, and their control methods may not prove successful. One can only guess that a special levy on wages or profits may be added to bring up subscriptions. Far different is the readiness evinced in Britain to accept fresh taxation. An increase in the purchase tax on luxuries is regarded as necessary, because big retail expenditure means reduction in savings—more than ever necessary as the war will cost over £15 millions a day. The London stock exchange has been more than tolerant of the budget. Even tobacco shares have held up. Increases in the cost of cigarettes and tobacco, reduction in the Empire preference etc., are of no consequence to manufacturers, and there has been no sign of weakness in the group. The Excess Profits Tax concessions may help industrials which have shown signs this week of previous firmness. An increase in the cost of cinema tickets may hold up recovery but British film enterprise can always reckon on being bought up by U.S. rivals. The resort to higher indirect taxation to the tune of £102 million is not unusual. The prosperous old industries are untouched when the tax is going to be shifted at once to the consumer and the State can take its share of superfluous purchasing power at source. All M.P's like the Budget; they like taxation, and do not criticise borrowing. In December, it was said that some Labourites were critical of the Treasury Bill borrowing and objected to paying out interest to banks. Some wanted an elaborate enquiry into banks but they were answered sufficiently by Mr. Reginald McKenna in the Bankers' Magazine.

The fall in the Funds on Tuesday may be independent of selling. The more speculative oil section was hardly touched by the Budget, and one result was a limited recovery in Home Rails. The estimated increase in National Debt may temporarily depress the Funds but the rate for new borrowing will be the same as before. Though much of the cost of war comes out of taxation, the announcement that the war has cost till now £15.6 million, may cause anxiety as to the ability to pay for social services on the optimum scale. Small savers were called upon by Sir H. K. Wood to make a special effort. Rich men had lent £55 million free of interest. Some had regarded patriotism as enough. The increase of £470 million in expenditure is due to operations in Burma as well as North Africa. The increase in note circulation has perhaps raised the cost in some measure. No increase in encounters or Excess Profits Tax has been attempted, and the concessions to sterling mining companies may help shareholders of Attock Oil and Indian Copper because rising costs and wasting assets would be given consideration. The net war outlay is put at £13 millions equal perhaps to two years' national income and much lower than the U.S.A.'s war expenditure in a single year. The differences in population and potential must, however, be considered and the major inference possible to-day is that the budget will claim over half the national income for the State in taxes and the revenue in 1943-44 at any rate would be over £3,000 millions. It is assumed that over half the war bill will come out of taxation, and the complaints from the New Poor in America will have no counterpart in Britain because all are agreed that taxation, rationing etc., must remain. At the end of December 1932, the National Debt topped £16 billions; it was in fact more than double the prewar total. A further increase, perhaps of £3,000 millions in 1943-44 is looked for but borrowing is easy and the cost of new Treasury borrowing is well below 2 per cent. The National Debt should be about £17,000 millions since addition to debt is put at £8,667 millions at present in which case taxation in 3½ years would have provided about half the cost and borrowing the other half. The way in which the proportion is maintained has been noted abroad, and Canada's proposed gift is recognition of financial austerity. Unlike Lord Simon the present Chancellor has never been called lenient. His budget has satisfied the Opposition most of all.



The remarkable jump in bullion prices can be explained only in terms of local panic. The speculator forced to leave commodities alone has turned readily to bullion and a flare-up has followed. There is no change in New York or London but silver starts to rise in Bombay. The share markets' weakness paradoxically induces strength in the bullion market, and what must seem a very unusual situation has followed in spite of poor demand from the mofussil. The bullion market may misread the signs of the future. No gold may be bought for international monetary reserves; redistribution may be effected by the U. S. Treasury of its own accord, and national currencies, linked only formally to gold points, may be adjusted to the dollar. The new exchange accounts may avoid all trading in gold, and the revival of international lending may put an end to gold movements. Perhaps eagerness to hoard rather than to export is the cause of the fantastic rise in Indian bullion markets. The prices are clearly out of line with prices elsewhere, and a limited supply may be relied upon rather than calculations of complete stoppage of treasure imports. But if the Allied plans go through, and balances of payments are discharged in gold or gold certificates, India can reckon on getting gold, and the present level of prices cannot obtain. The possibility that the U. S. plans would give India a fairly big exchange reserve in gold has not been considered. The rise cannot be due to fears of requisitioning or a general inflationary movement in all markets. The abrupt rise in silver when silver is likely to be quite plentiful after the war, can only be put as freakish behaviour. Every rise will tempt hoarders to sell, and speculators may find the boom is broken without official intervention. The rise may soon induce profit-taking to cover up losses in cotton or shares; and that must be considered more certain than anything else. The rise in gold shares

is independent of the jump because direct shipments of gold, as in the past from Australia are ruled out. Indian gold mining companies, however, stand to gain, and the Kolar group may attract support from many South Indian investors. The 10sh shares of Nundydroog have gone over 23sh and the 1942 reports should lever up interest in the other shares.

The Allied Generals' talks with Spanish representatives have not caused any change in the rate for the peseta. The currency confusion in Tangier might be got over but the Allies should find it hard to put either Spanish Morocco or Tangier into the dollar-sterling area. It is obvious that the war must have destroyed the power of Algerian and French notes to compete with the notes issued by the State Bank of Morocco. The peseta, too, must be stronger, in Tangier at least. The Spanish zone exports eggs, livestock, fish and agricultural products on which Spain may have prior claims. But adjustment is possible since the French Zone cannot look to France or Algeria for supplies, and joint defence measures may be undertaken by Spain for reasons which may not appear on the surface. The Moroccan franc was treated as equal to the franc, but its value must have altered after the occupation of France. It might have latterly strengthened like sterling in neutral centres like Lisbon and money-changing should have developed as a gainful occupation in view of Spanish control measures and the influx of occupation notes following the Allied invasion.

HOW TO MAKE SAVED DAILY GO A LONG LONG WAY

Yes every four annas saved daily towards your Life Insurance can buy for you an immediate estate of Rs. 3,000/-. Just think of it! Even with such small sum saved regularly, you can really afford to carry ample Life Insurance Protection for you and your family.

Write to us for details and we shall help you with suitable plans.

Economists on Inflation

The problem of inflation in India has again been forced to the attention of the Government and the public by the joint statement issued by a number of India's leading economists. Though it is more than a year since currency expansion in India assumed alarming proportions, public interest in the question has not been in proportion to the gravity of the issue. Even the Indian commercial public, which is rarely slow to excite itself over matters of importance to the commercial community, has not reacted either quickly or strongly to the evil of inflation which is now rampant in the country. For our part, we have never missed an opportunity to bring up the seriousness of the problem of inflation; and more than once have we pleaded for a campaign aimed at compelling the Government to yield to the popular viewpoint on this question. We are glad, therefore, to find academic opinion ranging itself against inflation. It is only to be expected that the views expressed by the economists are generally in agreement with those propounded by men like Professor Vakil who have made careful and thoughtful contribution to the elucidation of the problem.

It may be said generally that, on the question of remedies to be adopted to combat the inflationary forces at work, it is idle to expect either complete unanimity of opinion or complete agreement in regard to details even where agreement is found. Discussions on the phenomenon of war inflation in India have reached the point at which it is clearly recognised by non-official opinion in India that inflation has been caused by the policy adopted by the Government of India in regard to the financing of foreign governments' purchases in this country. Doubtless, there are other forces operating in the present situation, the most notable of which is the deficits incurred by the Government of India during the period of the war. And it will also be recognised that the utmost orthodoxy in financial policies will not avail in a period of war to avoid inflation altogether. It is necessary, therefore, that while considering the question of inflation, one must appraise the phenomena with a proper sense of proportion. No one would grumble if, as a result of the increased employment, which even the prevalence of a world war, not to speak of India's belligerence, must cause, a larger volume of purchasing power is created in the country and exerts an upward pressure on prices. But the same cannot be said of the Government deficits which can easily be prevented from causing inflation in the country, since there is a great deal of surplus capital ready for investment in government loans if the Government would only offer the necessary inducements to the country, financial and other.

But the problem of inflation in India to-day does not centre round either the inevitable additions to employment which were so caused or even the deficits of the Central Government. The question of deficits affords room for difference of opinion. The authors of the manifesto under discussion are inclined to the view that steep increases in direct taxation will have the double advantage of restricting the flow of money into current consumption and of enabling the Government to avoid inflationary borrowing in order to meet its deficits. Our readers are aware of our reluctance to support higher levels of taxation, particularly if they affect the low income groups. And we have expressed the view on former occasions that the higher income groups do not press as heavily on our limited stocks of goods and services as is generally supposed. While, therefore, every taxation of higher income groups can be supported on various other grounds, their importance to the question of inflation may be easily exaggerated. However, as we said earlier, the problem of inflation centres round the policy adopted by the Government of allowing foreign governments to pay for their purchases from India in sterling and themselves tackling the problem of utilising our sterling balances leisurely and in consultation of other interests than India's. This position has been aptly emphasised by the Indian economists:

> The unprecedented expansion of currency since the war began is due chiefly to the system adopted for financing the large British and other allied purchases in India, under which the Government of India accepts payments in sterling and provides rupees in exchange. For all these purchases, India acquires, under present arrangements, sterling assets in London and against these there occurs an expansion of currency in India.
>
> The provision of internal finance in India for these purchases is a necessary concomitant of this accumulation of sterling assets in London and the responsibility for this financing falls on the Indian Government in the same manner as that for any part of the expenditure included in its regular budget. The failure of the Government of India to recognise this fundamental and essential fact has prevented it from taking the proper view of the economic and financial situation in the country.
>
> The Government seems to act as if it is enough for it to take care of its own budget deficit while meeting the needs of the British Government by printing more notes. This is a grave misreading of the whole situation and has resulted in an ever increasing expansion of currency unrelated to the needs of internal production and trade. As a result, the inflationary spiral is already at work in India.

Since the greater part of the ill effects of this policy has been already wrought, a change in this policy does not suffice as a solution of the problem of inflation. One can well understand, therefore, why the inflation problem has to be regarded in its practical aspect as one of a wise utilisation of the sterling resources of India. In so far as the sterling securities are behind the huge volume of currency expansion that has already been effected, the reduction in the volume of circulation can be effected only by a policy which begins with a proper utilisation of sterling, on the one hand, and ends, at the other, with the withdrawal of rupees from circulation. We are, indeed, surprised that while the manifesto puts the emphasis on financing of foreign purchases as the cause of inflation, it turns, so far as remedies are concerned, to such measures as increased taxation and borrowing. The signatories observe:

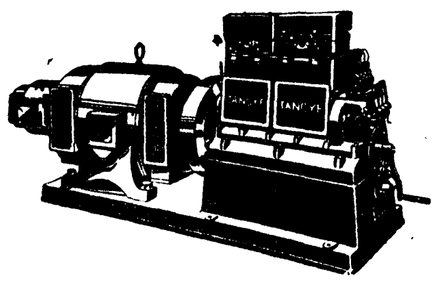
> We earnestly feel that immediate and drastic measures to check inflation are called for. In this connection we urge on the Government of India the primary necessity of closing the "gap" by increased taxation and borrowing. Taxation, in our opinion, should be raised to the highest practicable pitch, adjusted to shoulders that can best bear it. We suggest a much steeper progression in income-tax rates, the laying of a maximum limit to individual consumption income and absorption of all profits above a limit either to tax revenue or to be impounded into special loan contributions. To increase the volume of borrowings to the required level, it is necessary to institute a comprehensive scheme of compulsory savings as well as a rigid control of all investment outlets.
>
> This programme should be brought into effect with great rapidity. However, it will take some time before the inflationary gap is completely closed and the total currency in circulation is to-day already greatly redundant even at the existing high prices. To tie up this vagrant purchasing power we propose the immediate initial step of a blanket control of all prices followed by a strict examination of all later allowable increases.

We should expect academic opinion in India to voice its protest against any manner of utilising sterling balances which will not lead to an automatic and corresponding contraction of rupee circulation in India. Neither the constitution of an industrial reconstruction fund nor the payment of the British Government in advance of our future liabilities in regard to pensions can be said to answer this test of a corresponding

withdrawal of rupees from circulation. Even the payment of the Government of India sterling loans is not, in the special conditions of political antipathy in India, a step which leads to withdrawal of rupees. Thus the sale of British investments in India to Indians is almost the only measure that will on one side call for payments in sterling from our sterling resources, and, on the other, payments from the investing public in rupees to the Reserve Bank in India. The Government has not naturally shown itself favourable to such a natural means of repaying foreign indebtedness: and it is surprising that in the manifesto published by the Indian economists on the question of inflation there is little mention of this.

Apparently, the economists have been anxious to treat of inflation as a purely currency, and not as a transfer, problem. They are more concerned with the general disorganisation that has been already effected by the huge additions to currency and the suggestions they have made are directed towards correcting such disorganisation. They urge:

> In order to make this price control measure effective, a policy of centralised supervision and direction of productive effort will be necessary. This will in its turn involve equally strict regulation of transport and distributive machinery on a national scale. A rationing of the essential necessities of life should be undertaken to as large an extent as possible. An effective control of prices will involve a wage stop but this will mean no hardship as long as the price rise is stayed. An equally strict profit stop is indicated as a corollary of this policy as well as independently on account of financial considerations.



We regret that we are unable to sympathise with the way our academicians have bracketed the problem of price control with the problem of inflation. In a country in which inflation has been caused, not by the exigencies of its war finance, but by the unjust accommodation which the Government has shown to foreign purchasers of our goods and services, there is every reason why the effects of inflation on prices should be distinguished from the effects on prices of economic factors such as disequilibrium of demand and supply. In time of war, differences between supply and demand are not easily adjusted by natural changes, as the economic system loses much of its resilience. And to the extent there is such loss of resilience and social stability requires stability of prices, price control is necessary and justifiable. But the picture of supply and demand has been wholly put out of perspective by the interference of violently inflationary forces. To confuse the one for the other or to accept this picture in its distorted state and propound remedies of price control in indifference to the more important question of contraction of currency is probably exactly the result sought for by those who are accommodating the foreign governments at the expense of this country. The primary need, then, is to ask the Government of India to abandon those proposals for the utilisation of sterling balances, which will not lead to contraction of rupee circulation, and adopt such measures as transfer of British investments to Indians, which will automatically bring about a contraction of currency. The problem of price control in India arises firstly, from the fear that there is no limit to currency expansion and, therefore, to prices, secondly that shortages of supply are accentuated by hoarding and by bad distribution, and thirdly, by the utter failure of the Government to stimulate production even in times of such persistent demand. The first cause will be removed only by contraction of currency; and the second and the third are largely administrative problems which will be easier of solution once the nightmare of unlimited inflation has passed.

EXPANSION AND ECONOMY

The continuous expansion of the armed forces of the Crown in India finds a close parallel in the expansion of the civil departments. The cardinal fact is not the expansion of the Executive Council, but of the war departments. New branches of the Government spring into existence as regulative functions are diversified and only this week a department of industry and civil supplies has come into existence, almost unexpectedly, in order to look after industrial developments and supplies, other than food. It has been said that the Supply Department existed in embryo before the outbreak of war but the 'ad hoc' departments like Civil Defence and Food are born of wartime stringency while the War Transport department marks an advance in a different direction—of unification and control. All this expansion does not signify any fundamental change in regard to quality of administration. The Constitution, too, is unaffected but the most obvious of conclusions drawn to-day in India is that the machinery of Government after the war will not be that of 1939. Extension of Central authority into the Provinces is so common as to escape notice. The Central Services with a larger secretariat will dominate, and the problem of demobilisation too will emerge. The question is not merely one of public expenditure, but of the perpetuation of what a former generation called the Servile State. The Servile State represents only a small danger to the evolution of Dominion status as against disagreement between the major parties, but the attitude of hostility to official authority may develop as a consequence of the bureaucratic growth. Questions are asked as to the communal proportion maintained in new branches of Government. Over and above that little concern is felt as to the implicit danger arising from the unchecked growth of authority arising from a presumed addition of 30 per cent to the staff. A desire to retain controls of various sorts may well be nourished by a desire to keep up the establishments. The growth of Central authority may, in turn, increase the dangerous fascination of all Government employment. While this expansion constitutes a partial solution of middle class unemployment in India its unchecked growth means a permanent increase of expenditure which India in the view of many can hardly afford. It has been recorded that the Civil Service in Britain has increased from 371,000 in 1939 to 637,000 in April 1942 by as much as 72 per cent, and some concern was caused by this terrific expansion.

The promise of all controls remaining after the war is viewed in part as a desire to keep together the employees of the new departments. In India, where all departments influence policy the distrust is not merely latent. Comments on requisitioning argue to-day a lack of confidence in the vision, efficiency and integrity of the public departments to which the anti-corruption drive cannot be opposed as independently remedial.

The further growth of the departments is presaged by arguments in favour of food rationing. Hostility to imported experts is more or less traditional; hostility to the home-grown civil servant, wholly in the interest of public economy, has hardly developed. Yet a deep suspicion would be justified in this case.

INDIA & BURMA
93, CLIVE STREET, CALCUTTA
Established in Calcutta 1788

(A copy of this Prospectus has duly been filed with the Registrar of Joint Stock Companies, Bengal as required under the Indian Companies Act).

The subscription list will open on 10th May, 1943 and will close on 17th May, 1943 or earlier at the discretion of the Directors.

NATIONAL IRON & STEEL COMPANY, LIMITED

(Incorporated under the Indian Companies Act, 1913)

AUTHORISED & ISSUED CAPITAL - Rs. 50,00,000
Divided into 5,00,000 shares of Rs 10 each.

SUBSCRIBED & PAID-UP CAPITAL - Rs. 25,00,000
Divided into 2,50,000 shares of Rs. 10 each.

PRESENT OFFER (THE UN-ISSUED CAPITAL): Rs. 25,00,000

Divided into 2,50,000 shares of Rs. 10 each at a premium of Rs. 2 per share, payable as to Rs. 7 per share on application and Rs. 5 per share on allotment.

The Board of Directors of the Company have decided to offer to the existing shareholders the entire further issue of 2,50,000 shares at a premium of Rs. 2 per share in the proportion of one share for every share held by them. Shareholders standing in the books of the Company as on the date of the issue of this prospectus shall be entitled to receive this offer and exercise their option of accepting or declining same. The offer will remain open till the 9th May, 1943 whereafter the Directors will be at liberty to dispose of the shares, not applied for within the aforesaid date by the existing shareholders in any manner beneficial to the Company.

The Directors, the Managing Agents and their friends have agreed to take up 1,50,000 shares of the face value of Rs. 15,00,000 the issue price and these will be allotted to them out of the shares not applied for by the existing shareholders. No commission or brokerage of any kind will be incurred by the Company on the aforesaid shares of the face value of Rs. 15,00,000. Public may apply for the shares subject to the proviso that their applications will be considered only in the event of any shares being left for disposal by the Directors. All moneys received along with the applications will be refunded in case no allotment is made. The last date for receiving applications from the public is 9th May, 1943.

Brokers:

MESSRS. G. K. KHEMKA & CO., 8, Lyons Range, Calcutta.

OBJECTS.

The Company has been formed to carry out the several objects stated in the Memorandum of Association and more particularly to manufacture Iron and Steel Materials.

OBJECTS OF THE PRESENT ISSUE.

Since the outbreak of war, the Company visualised a great prospect for development of Steel Industry in this country. It started it extra programme and feels happy that in its humble way it has helped the war efforts to an appreciable measure; the Company's workshop has been enlarged, a well-equipped machine shop has also been put up and above all it launched upon the scheme of constructing an "Open-hearth Furnace." All this means a heavy capital outlay. Out of the present issue a substantial portion of the capital would be utilised in the enlargement of the block. With this considerable expansion of the Company's activities a bigger amount would be required as running capital. The Directors think that the present issue of the capital will sufficiently meet the Company's requirements. Although nothing can be said about the future but after the completion of the "Open-hearth" the Company can reasonably expect not only to strengthen its position in post war period but to make good profits. Subject to the trading conditions the Directors hope that the future of the Company at least for some time will be secured. The Company at present is principally engaged in war work.

MANAGING AGENTS

Messrs. Nursing & Co. have been appointed as the Managing Agents of the Company and shall hold the office until the 25th September, 1956. They shall be entitled to a remuneration equivalent to one and one-half per cent of the paid-up capital for the time being per annum in addition to a commission of ten per cent of the annual net profits. They shall be entitled to nominate two ex-officio Directors one of whom shall be the Chairman of the Board.

MINIMUM SUBSCRIPTION.

The minimum subscription was fixed at 100 shares of Rs. 10 each which were duly allotted.

COMMISSION ON SALE OF SHARES.

The commission on sale of shares shall not exceed 2½ per cent of their face value.

CONTRACT.

An agreement dated 26th September, 1936, between the Company and Messrs. Nursing & Co. appointing the latter as the Managing Agents of the Company may be inspected at the Registered Office of the Company during business hours.

VOTING RIGHTS AND TRANSFER OF SHARES, ETC.

Where any call or other sum shall be due and payable to the Company in respect of any of the shares of a member he shall not be entitled to be present or to vote at any General Meeting either personally or by proxy or by attorney or as a proxy or attorney for any other member or be reckoned in a quorum.

The right of a member to transfer shares is subject to first and paramount lien of the Company in respect of his debts, liabilities and engagement solely or jointly with any other person and which lien further extends to dividend due and accruing on the shares so subjected. The Directors may at their discretion decline to register or acknowledge any transfer of shares.

On a show of hands every member present in person shall have one vote and at a poll every member present in person or by proxy or attorney shall have one vote for every share held.

(P.T.O.)

While the establishment of a new branch of the Geological Survey, of the creation of a Department of Industrial and Scientific Research may excite due approval it is open to suggest that civil servants of new grades swollen by ex-servicemen clamouring for nomination in accordance with promises made will present a problem for any responsible government in the future. The competition system of the future may be modified to suit any demobilisation plan hatched for the benefit of temporary civil servants. Private interests taking back men who volunteered for service will be on a different footing, but the departments may prepare to defend themselves by acting as an employment registry. There is, of course, a possibility that the higher branches of the Supply Department may give Indian industry a directorate more qualified than any managing agency firm can provide. The immediate return of temporary civil servants to Boards may conceivably make for energetic conduct of big enterprises while for those in or out of permanent service, new enterprises may create a real career open to talent. As to what part the Government should play in placing its own ex-employees in private jobs it is not for us to speak. The desire to maintain the volume of employment on the ground of planning for something at some time may not be absent; but the Legislature will rightly view with suspicion the plans to retain technical training schemes etc. for the sake of keeping up the former volume of State employment.

To a responsible government wartime expansion will seem all wrong since it is not lasting and adds nothing to total production and the enormous diversion of skilled labour for war industry has excited legitimate distrust. The retention of State trading corporations by Britain may involve the maintenance of corresponding agencies in India, and foreign trade, banking etc., may be exposed to various pulls owing to the continuance of an expanded civil service. The large-scale expansion may involve the foisting of temporary men on the Provinces. Without Ministers to question or advise the threat is no idle one. There is, of course, a chance that the professions may claim a minority of the temporary servants of the Government but the framers of reconstruction will take a larger proportion. Official emphasis on postwar reconstruction indeed suggests that to retain a part of its new labour force (with a further increase in pensionary charges at some time) is one of the peace aims of the Government The task of settling soldiers on the land means the maintenance of liaison officers and special agricultural advisers. What good will come out of a scheme to put soldiers on the soil as agriculturists cannot be calculated, but the Army has been prepared for agriculture; and industry's offtake of ex-soldiers need not be limited to commissionaires. The inevitable putting up of wages may have an influence of its own on civilian workers, and a large measure of improvement in labour conditions may even follow the absorption of war service personnel in spite of Provincial Reconstruction Funds. The agency will necessarily be Central and the Secretariat will continue to dominate. Economists impressed by the flow of war profits into Government's coffers will not hesitate to say that full employment under the Government's auspices is not compatible with a depression after the war. The Central Government may be able to avert unemployment by a promise of security. the deflation of activity which is sure to follow peace will not be due to a reduction in Government jobs. Retrenchment is ruled out. The public servants and their disposition in new jobs may form part of a social security programme for which India will have to pay in a certain measure. But the consequences for the Indian taxpayer cannot be rated as serious. when the public debt has been reduced substantially; and the authoritarian impulse may be tolerated on grounds of social justice. for even those who stand and wait may claim to serve. Settlement in the Colonies or through special development schemes on reclaimed land, may be undertaken for the ex-soldiers—a million or more—but for the airmen and sailors the scope must be found in the rapid development of communications. The exact proportion of new civilian to war expenditure is hardly known, but when war outlay continues to fall, as in 1942-43, the misgivings as to liability cannot be acute.

Editorial Notes

Food Plans in Assam

The presence of large bodies of troops is a real stimulus to agriculture in Assam. The grow-more-food campaign there has been intensified by the demand of the garrisons for local food supplies. Vegetables, root and other, are sent from Shillong. The Agricultural Department is interested in increasing the supply of both grains and vegetables and helped the military authorities by buying a large number of goats. Interest in livestock indeed extends to sheep. China has imported through Assam from New Zealand 140 sheep of Merino, Corriedale, Lincoln and Romney Marsh breeds. The trip via Lhasa to Northwest China will take a year says an official account appearing in Indian Farming. The sheep reached Shillong in April last and were kept there till August. The sheep are destined for the Chinese Industrial Co-operatives for improving the breeds in Northwest China. A new crop introduced into Assam is pyrethrum. Since Dalmatian supplies are cut off India too is trying cultivation of the plant. Two experimental farms in Assam are at present growing the flowering plant. The Assam Government wants the Khasis and hill tribes to grow pyrethrum using the seed from the Government farms. Certain tracts in Assam are suited to the cultivation of the crop since the pyrethrum content of 1.28 to 1.4 per cent is probably the highest reported in India. Last year Assam also embarked on the reclamation of a part of two million acres of fallow. By putting 20 per cent of the area under the plough, Assam could hope for small relief but she hoped for much out of irrigation schemes meant to secure water for paddy cultivation. The result of the efforts was an increase in paddy outturn by 50,000 tons. Potatoes also were in larger supply in 1942. The winter paddy crop was expected to raise supply by 50,000 tons. Seed distribution schemes for rabi crops were under way and special plans for adding further to the supply of hill potatoes were drawn up. In spite of the slump noticed last season in Assam potato-growing is to be encouraged. Good demand for potatoes in Lakhimpur encouraged the Marketing staff to go on with plans for the distribution of seed. The transport difficulty last year was responsible for low prices. Considerable improvement followed the special efforts made to provide the Calcutta market with Shillong potatoes. The seed potatoes in the Khasi and Jaintia Hills are wanted in all parts of India but Assam intends to put local requirements first.

Tisco's Rationing Scheme

Full details appeared only last month in regard to the Tata Iron and Steel Company's scheme for distribution of food supply to its workers. A circular issued by Mr. Ghandy at the end of February, formally gave an assurance that 10 seers of rice, 1 seer of dal and 1 seer of sugar or gur per week would be available to each employee of the Company. Those paid by the month were to have fortnightly rations. The rationing plan provided for registration at one of 16 shops or stores in Jamshedpur listed in a special circular. The Company prepared the coupons for a week or fortnight in advance for issue on specified days, and fixed supplies only on presentation of the coupons formed a feature of the scheme which provided for showing identity checks when the purchases were made. No refunds ordinarily for coupons issued were to be granted, but sales of foodstuffs were to be made later, in case the goods were not available on a particular date. The Controller of Accounts of the Company was mentioned as the authority in charge of coupons to be issued from eight places and allied matters. The value of coupons issued was to be deducted from the wages due. Special permission was obtained from the Government for making such deductions. Foodstuffs were to be made available at prices ruling on October 1, 1942—the date on which an increase in dearness allowance was ordered. The difference between the current prices and the prices recoverable from employees was to be borne by the Company. Employees were instructed to give their consent in writing to the scheme. The main result would be the freezing of dearness allowance. The Company agreed to give rice. wheat dal, sugar at October prices. The concession in regard to prices appears enough, and the Company thus drew up its plan for keeping up price control alongside of its private rationing plan. Other employers have been told already that one way of avoiding inflation is to pay any dearness allowance in kind. The Company raised at the same time the prices charged in the Works Hotel which was always cheaper than the eating houses in the town. A promise of reduction in rates for food supplies the Works Hotel prices and dearness allowance, should the cost of living index drop, was given in the circular. The rationing plan is perhaps different from other experiments reported. for instance from Bangalore; but its value to the workpeople puts it above question.

Shortages and Solutions

Until the beginning of last year the Allies had a surplus of all war materials. Since the losses in the Pacific, the operations are influenced by shortages and the shortages may lead as in the case of rubber, to the development of synthetics. Mr. Donald Nelson has been reported as saying that 55 per cent of the buna wanted must be in production by the middle of July, 1943. He aims at getting 435,000 tons if the plant is ready according to plan. Europe is short of more materials than Britain or the U.S.A. but the latter have to work for fuller production owing to the war. Stocks were built up in the case of tin and rubber but the U.S.A. was soon at war, and problems of scarcity appeared. Special measures like the substitution of plastics for metals and changes in composition followed. The chemical industry has helped greatly, and the expansion reported in the case of aluminium or magnesium came to be the feature of the plastics industry. The abrupt changes in production may lead to a reduction of demand for natural products like rubber after the war. The U.S.A. may cease to be the world's largest importer even if the automobile industry is re-started and shifts in demand may affect both silk and wool. The supply of many natural commodities like tea and rubber may not be in pre-war proportions but future demand will be inadequate in view of the position acquired by substitutes. And restriction agreements under such conditions will have their value. The German occupation will keep down European buying to the minimum, even after liberation, and changes in regard to mineral production in South America and Africa may lead to the displacement of minor producers like India whose mica may be displaced by Australian mica quite soon. Total demand will be greatly reduced by peace for goods like copra and sugar. The development of beet sugar in North America will appear ominous to some and the substitutes that are taking the place of jute under official encouragement are likely to keep their place in the U.S. market. The changes in demand during the war inevitably will affect demand for everything but food, particularly, when the work of reconstruction is over. The crop restriction programme adopted in India in relation to cotton and groundnuts will have to be maintained, and none can count on a complete restoration of production or markets, so that temporary changes will have to be treated as permanent and foreign trade assigned a secondary place.

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

Agencies in all important cities of India.

Not a Warning

In view of the remarks addressed to the Government by the Central Board of the Reserve Bank recently, there is likely to be some apprehension as to the future of new banking companies. There is nothing to indicate that the new flotations have inherent defects, if they do not conform to the pattern approved of by the Board of the Reserve Bank. Some of the flotations are admitted already to the schedule, and the belated suggestions for regulation and reform do not wholly accord with the admission to the second schedule. The Central Board, of course, made its suggestion directly to the Government which was credited with an intention of amending the Companies Act so as to define the functions of banking companies. The Central Board was anticipated more than intelligently by Professor Davar who asked his association to be careful in looking at new ventures but he did not care to say anything more about the control by directors, capitalisation or any of the things hinted as disadvantageous to shareholders in new banks. The warning, if it was one, was by no means original, and the duty devolving on the investor is not one to be discharged vicariously by the Reserve Bank or by the Government. That the new flotations cannot be lumped together as undesirable or superfluous is recognised by Sir Homi Mody whose speech at the 32nd Ordinary Geneeral meeting of the Central Bank of India contains a reference to the Indian investor's whole duty. Sir Homi Mody recalled the banking failures of the past, the slow growth of most Indian banks, and the usual conditions for success. Sir Homi Mody, at the same time, admitted that for a country like India, banking facilities available at present are not adequate. The scope for sound new banks is, to that extent, recognised and the experience after the post-war boom has no specific bearing on the present position when the new banks are set up for more or less special reasons. The fact that demand for bank funds is not large cannot be cited as against the need to promote thrift and mobilise funds for industrial development. The remarks of Sir Homi Mody need not be described as a warning to all and sundry but as a plea for discriminating support. It may be noted that the new banks, great and small, are established entirely in accordance with law and those which have already made a successful beginning cannot be described as redundant.

Reduced Insurance Rates

Frequent revision of marine insurance rates supports the belief that the war situation is changing so rapidly as to defeat prediction. Occasional reference to reduced rates has followed the recovery in India's overseas trade after the contraction reported last summer. The rates have been lowered again in March and this, rather than the politicians' statements, will promote optimism. There is, however, an important point. Rates for coastal voyages, generally between India and Ceylon, remain unchanged. The scheduled rates from Australia and New Zealand, to and from India, have been lowered. Rates from India to the Persian Gulf have also been reduced, and it is only for ports east of Chittagong that the rates are unchanged. Changes in rates between India and the Red Sea ports are more substantial, and rates from the Mediterranean ports east of Alexandria are also reduced by the Institute of Underwriters. The cuts vary from 25 per cent to 50 per cent in the case of cargoes from Turkey, Cyprus and Palestine. Cargoes by ships sailing to Africa will be subject to slightly lower rates as the rate to B.E.A. is reduced from 6 to 5 per cent. The other change is the reduction of marine risk rates from 17½ per cent to 15 per cent for goods in vessels from the U.K. to the eastern ports of India by the Cape route. Rates for Ceylon and Western ports were previously lower in comparison with rates to Eastern ports. Most important is the revision in the schedule for cargoes for American ports. Yet it must be noted that the war risks peculiar to the Atlantic have disappeared from the Indian ocean, although the rates from South Africa, Madagascar and Portugese East Africa as well as West Africa are higher than the rates to and from British East Africa.

C.P. Budget Surplus

The latest budget of the C.P. and Berar discloses a small surplus in spite of a fall in revenue as compared with the Revised Estimates for 1942-43. The surplus is primarily due to the growth of taxes on income other than Corporation tax and land revenue. In the C.P. Budget land revenue is the principal source of revenue accounting for Rs. 2.6 crores out of a total revenue of Rs. 6.39 crores. As in other Provinces, which have gone back on Prohibition, excise receipts are expected to be higher; but prospect of recovery to the average of 1927-32 appears remote. Stamp revenue is declining; one proof of prosperity is necessarily missing. Forest revenue after the increase reported in 1942-43 is expected to be lower at Rs. 109.47 lakhs. The budget statement shows that total expenditure after the strong increase noted in 1942-43 is expected to be more or less stationary. The reduction under grants-in-aid except for public health and expenditure on civil works, is explained by the need to postpone construction. Total Provincial expenditure at Rs. 6.32 crores is below the estimated revenue of Rs. 6.39 crores. The budget memorandum refers to a big increase in the demand for timber last year from the Supply Department but demand on a reduced scale is expected to reduce revenue by Rs. 32.82 lakhs with a corresponding reduction in expenditure. The C.P.'s revenue from miscellaneous duties on entertainments, sales of motor spirit, tobacco etc., is estimated at Rs. 9.36 lakhs against Rs. 7.94 lakhs last year. The C.P.'s annual income from interest is Rs. 4.04 lakhs while the interest charges come to Rs. 21 lakhs. Provision is made in the budget for a sizeable increase in the sum allotted for repayment of loans—the sum provided being Rs. 40.27 lakhs against Rs. 21.56 lakhs shown in the Revised Estimates. The C.P. has decided to allocate any excess of land and forest revenue over estimates to a fund for reduction or avoidance of debt. The really important feature this year is a small increase in the expenditure on education, agriculture and medical relief while public health charges are lower after the increase recorded in 1942-43. The C.P. Budget provides for an outlay of Rs. 16.86 lakhs on civil defence as against Rs. 4 lakhs provided in the last budget and a revised estimate of Rs. 20.18 lakhs. The Central Government defrays part of this branch of expenditure by arrangement. The dismantlement of the Raipur Forest tramway constructed at a cost of Rs. 18.62 lakhs and long run at a loss has given the C.P. Government Rs. 9.82 lakhs and is expected to give Rs. 1.87 lakhs more. The C.P.'s improving revenue position is reflected in the large balances larger after the addition of two successive surpluses, raising the opening balance for 1942-43 to Rs. 1.15 crores. Net liabilities of the Province are shown at Rs. 2.82 crores but the proportion of Berar's debt is not indicated in the usual communique in the same way as the share of revenue and expenditure are shown.

Tea for Workers

Confidence as to tea supplies in the war period from India and Ceylon explains the maintenance of the restriction scheme in its integrity. There is, however, some fear as to what may come when N.E.I. production revives. The influence of rationing on the level of consumption may also be considerable. At the half-yearly meeting of the I.T.M.E.B. last month, Mr. J. S. Graham argued that the tea industry must concentrate through propaganda on ensuring that the tea consumed now shall go as far as humanly possible and that the effects of rationing in reducing per capita consumption will be noticed as little as can be arranged. Tea for the Army, war workers and A.R.P. staff will be provided as they are likely to become habitual drinkers. Tea for the civilians will not, however, be lacking as the Board hopes to revive consumer propaganda as soon as the war is over. In the interval, the Board is agreed on maintaining propaganda here and abroad. Because war workers are keen on tea, the factory canteen is more important than ever. The Chairman said that work among industrial workers held out special prospects and it was intended to reduce other campaigns. Notwithstanding the increase in the cost of tea Indian workers are looking to tea as a restorer, and the Board's part in war production today will be appreciated like the tea car service maintained and extended for troops.

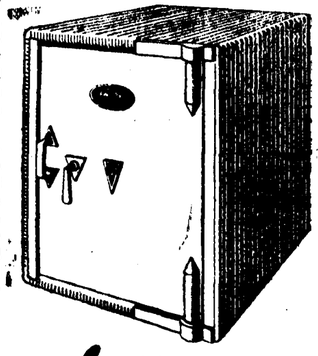
Colonial Development

Colonial development plans cover the West Indies. The British Treasury has made a grant for a factory in Jamaica meant to produce a new food from yeast derived from sugar or molasses. The factory will help to deal with the local sugar surplus and help also to give concentrated food when the relief of occupied countries becomes a problem for the Allies. The plans to extend pyrethrum cultivation in Kenya have been supplemented by an offer of the Ministry of Supply to take 7,000 tons in 1943 and 9,000 tons in 1944. The crop satisfied the local demand for insecticides and the extension of cultivation has been followed by an increase in exports from 970 tons in 1937 to 6,360 tons in 1941. British Guiana's ambition to extend rice cultivation with the help of machinery imported from the U.S.A. has excited attention in India. The colony aims at shipping 40,000 tons to the B.W.I. An expert from Canada, says a recent cable received by the Associated Chambers, is to advise on milling problems. From West Africa come many minerals, but Nigeria is expected to provide silk as well. The U.K. takes all the silk for making parachutes. Other African colonies e.g. Kenya are developing flax production. The Gold Coast is developing local production of honey and beeswax—the latter is wanted for war production. African colonies and the Rhodesias are expected to give more ores like copper, mica, graphite and bauxite in the future. The French colonies, too, may be tapped for minerals when French unity is fully established.

SAFE-BURGLARS *Baffled..*

EVIDENTLY, the culprits of this daring theft did not know what they were up against when they carried this Godrej Safe away, with over Rs 6,000/- cash and important documents inside it! Perhaps they were deceived by the small size of the safe. But, to quote from the District Agricultural Inspector's letter of appreciation, "the burglars, though successful in securing its possession for full 24 hours, could not open it in spite of their efforts. They did try their best, but it remained intact..". And this safe is the least strong of the famous Godrej range of safes!

This is just another of innumerable instances which testify to the invulnerability of Godrej Safes against burglars and deceits. Remember, the unique protective features (against Safe-breakers as well as Fires) you get in Godrej Safes are unobtainable in any other make of safe.



From Our Own Correspondents
Bara Banki

SAFE STOLEN FROM GOVT. OFFICE

A daring theft was committed recently in the District Agricultural Office when the iron safe, containing over Rs.6,000 in cash and important official documents, was taken away.

The matter was immediately reported to the police, and Mr. Sabir Ali Khan, City Kotwal, recovered the safe intact the same evening at a distance of about 10 miles from the police station and arrested the culprits.

PRESENT ISSUE :

Rs. 7,50,000 (Rs. Seven Lacs Fifty Thousand) only.

DIVIDED INTO:

500	**Preference Shares of**	**Rs. 100 each.**
27,000	**Ordinary Shares of**	**Rs. 25 ,,**
10,000	**Deferred Shares of**	**Rs. 2-8 ,,**

The Company has been carrying on business with an Authorised Capital of Rs. 5 lacs which has been fully subscribed. The enormous and ever increasing demand of the products and opening of some most profitable lines of manufacture have necessitated, the Company to expand the factories and mines for working on larger scale to the best advantage and interests of the Shareholders. Hence the increment and present issue.

Holders of the present issue shall be entitled to participate in the dividend from due date of full payment.

TERMS OF PAYMENT

With application 10%
On allotment 10%
Balance within 1st July, 1943.

Payment may be made in full in advance on allotment or anytime thereafter. Interest at the rate of 6 per cent per annum, which the Company will forward by a separate Cheque, will be allowed on prepayments.

An Admission Fee of Re. 1 only should accompany each Application.

Giridih and Calcutta.

OBJECTS:

The Company has been formed for the purpose and with the object as setforth in the Memorandum of Association of the Company and in particular for carrying on the business as manufacturer of Mica and micanites of all varieties and forms, Condensers for Radio and other Electrical machineries, Black and Yellow adhesive Tapes, Empire Cloth and tubes and as micamine owners and dealers in all the above commodities.

MICA:

Its Importance and Chief Uses.

"In a very real sense our vast electrical development is a monument to mica, the one indispensable di-electric. The history of the intensive electrification that has been in progress during the last three decades is the history of modern mica industry."

In the late nineties it was some what tentatively predicted that the day would come when current may be transmitted at 10,000 volts if a proper insulating medium could be developed. To-day power is sent over from Boulder Dam to Los Angles at a tension of 287,000 volts with a minimum of loss, and it is possible to reach and employ this enormous pressure only in transformers insultated with Mica.

Mica is an essential component in the construction of a large number of important electrical apparatus. Its chief function is that of a thin, flexible, heatproof and waterproof electrical insulator. Among the appliances Mica is most largely used in electrical generators and their power distributing agents—transformers and motors. Built up Mica Board or Micanite from which are cut patterns and shapes, used in electrical appliances and it serves adequately most of the requirements of large natural sheet Mica where transparency extreme thinness and very high heat resistance and di-electric strength are required.

Sheet Mica may be considerd indispensable in the electrical industry and is used in commutator or segments for motors and generators. The automobile industry of the United States alone may account for 230,000,000 small mica segments. The construction of cummutator "V" rings involves another important use for mica. Mica insulation plays a very important part in the structure of a generator or motor armature.

Transformers, sparking plugs, radio tubes (Annual production 78,000,000 in the United States), radio condensers and telephones furnish an example of the strenous duty performed by insulations.

Other uses of sheet mica or built up mica are for various domestic and industrial appliances, e.g., electrical flat irons cooking apparatus stove windows, lantern chimneys, furnace peephole covers, goggles and protection screen, neon lights, washers, tubes, etc.

Scrap or waste mica are exported to foreign markets where it is utilised in important quantities for extensive use in lubricants, annealing, concrete and foundry facings, pipeline enamel, pipe and boiler laggings, fire-proof paints, patent roofing material, decorative medium for fancy papers, ornamental tiles and specialities. It is also used in fairly large quantities in moving picture studios, and also in rubber industries.

Besides, it is indispensable and considered a key-product for the manufacture of arms and ammunitions.

At the Mica Conference held at Delhi, in January, 1940, Lieut.-Colonel E. Wood, Secretary, Department of Supply, said "All present were well known how vital the question of mica is for the modern Aeroplane, Submarine, Tank, and Wireless. So much so that it may well be one of the instruments by which decisive advantage may be gained or lost by the combatants."

The quarterly report of the India Government's Trade Commissioner New York, for April-June, 1940 shows that mica is among the 14 commodities considered "Strategic" by U. S. Army and Navy Munitions Board.

From the above statement it will be clear, what a vital importance is attached to mica for its utility and keen demand at all times whether in war or at peace.

STRATEGICAL IMPORTANCE OF INDIA IN SUPPLY OF MICA TO THE WORLD.

It is gratifying to note and a matter of pride that the source of the mica supply upon which depends the whole structure of the industrialised world, is to a large extent concentrated in one country, India alone, which accounts for 80 per cent of the world's output.

PROSPECT.

India has such possibilities and facilities in favour of successful establishment of an important manufacturing line like manufacturing of micanite products as are not possible in any way for any other country to enjoy. India has abundant supply of raw materials of her own necessary for manufacture of mica and micanite products by her own labour force which may be considered as the cheapest in the world. Naturally India is in unique position to build up a manufacturing line that can lead the whole world and as such will capture all the external markets at such rates as are impossible for any other country to compete with.

ACTIVITIES.

Manufacturing of Micanites.

The Company has been manufacturing micanites and mica condensers, etc. of all varieties and forms in its well equipped factory in Calcutta which are finding ready market with high appreciation from their consumers who are mostly the Government of India, Railways and the biggest industrial concerns like Tata Iron and Steel Co., Ltd., etc.

It is really a matter of great pride that the products of the Company have attracted the eyes of the importers of foreign countries who are eager to take up the agencies for their countries. This is mainly due to price and quality being such as to stand any competition. The Company has negotiations with the foreign business magnates which are expected to mature at an early date.

MICA FACTORY.

The mica factory of the company at Giridih is one of the biggest factories for the manufacture of Block-Mica Condensers and splittings of all varieties wherefrom huge quantity of mica is being supplied to Joint Mica Mission, which has recently been set up by the Government of U.S.A. and U.K. with which is associated the Government of India.

MINES.

In addition to the existing mines under work the Company has arranged to secure some of the best mica fields in Bihar and Rajputana under the guidance of eminent Geologists of India, for working on larger scale, to cope with the ever increasing demand.

BLACK TAPE.

Imports of Black tapes and other insulating materials necessary for electrical and other industries have fallen to such a low level as to entail a dire necessity in favour of successful establishment of this line of manufacture. The company has availed of the opportune moment and has started this new line of manufacture which has immense possibilities and scope. This is the most profitable line ever established in this country and as such it is sure to bring in enormous profit to the shareholders.

TECHNICAL STAFF.

The company has been able to secure the services of a batch of experts, particularly qualified with sound knowledge in their lines and with the help of the efficient technical staff the company has been able, within such short period of time, to achieve such a remarkable success. Their services may be considered as valuable assets towards the enhancement of prosperity of the Company day by day.

It will be of great interest to the investing public to note that this is the only concern which is engaged in manufacture of all departments of mica from mining to the manufacture of finished products and as such its position is unique and thus the prospect of the Company is as bright at peace as in war.

DIVIDEND.

The company has been paying regular dividends to its shareholder from the first year of working under the present management and has paid a total dividend of 22½ per cent on ordinary and 14 per cent on preference shares, within last two years keeping a decent amount in the Reserve fund. Similar dividend is expected this year too.

CAPITAL APPRECIATION OF THE SHARES.

In view of the decent profit yielding capacity of the shares and the company having paid decent dividend regularly to its shareholders the shares of the company will within no time command a strong demand and popularity in the Share Market and consequently there will be a sharp appreciation in value of the shares which will be all for the original shareholders to enjoy.

MANAGEMENT.

The Management of the company has been entrusted to Guha, Chatterji and Sircar Ltd., which consists of industrialists and businessmen of all India repute. Under their efficient management the company has been paying regular dividends.

APPLICATION FOR SHARES.

Application forms for share can be had of and submitted to the Registered office of the company or to any of the branches of the Central Bank of India, Ltd., and the Pioneer Bank Ltd.

FORM OF APPLICATION FOR SHARES.

JUPITER GENERAL'S RAPID ADVANCE

Successful operations, year after year, proclaim the Jupiter General's stability, efficiency and progress. The Company's expert management, profitable and safe investments and huge paid-up capital inspire confidence amongst its policyholders. There are many attractive policies to meet every individual's requirements. LIFE BUSINESS figures of the last three years are more than encouraging.

Here are the Figures :—

		Business Proposed Rs.	Business Completed Rs.
1940		25,79,500	20,86,000
1941		54,30,075	44,82,875
1942	over	82,00,000	65,50,000

The Company wishes to convey its sincere thanks to its policyholders, agents and staff everywhere for their continued support and assistance.

THE JUPITER GENERAL
INSURANCE COMPANY, LIMITED
(Incorporated in India in 1919)
Fort, BOMBAY

Calcutta Commercial Bank Ltd.

Executes LETTERS OF GUARANTEE on behalf of contractors, suppliers and clearing agents, in lieu of cash deposit, acceptable by the Indian Custom and Tatas.

Furnishes INDEMNITY BONDS for issue of duplicates for lost share scrips, insurance policies, etc.

Undertakes CLEARING and FORWARDING work at Ports.

Collects Bills, Cheques and Hundies, Insurance Premia, etc., at competitive charges through sixty branches in India; specially reduced rate on exclusive arrangement.

Supplies regularly silver and coins to Collieries, Tea Gardens, Mills, etc., on nominal commissions.

Discounts approved Bills, makes investments against approved collaterals, Tea Quotas, Insurance Policies, etc.

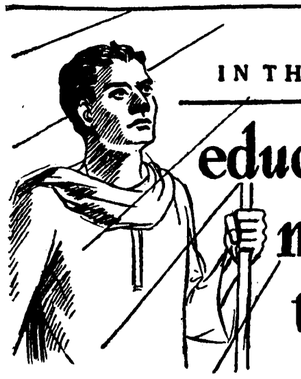
Germany's Difficulties

A lurid light is thrown on the manpower shortage in Germany by a report that five million foreigners, including prisoners of war are working for the Axis war effort. The estimate made by the Office of War Information is important as showing that non-citizens are forced to toil like slaves for Germany. According to a recently cabled summary of the report, the foreign civilians and prisoners are underpaid, worked up to 72 hours per week and are herded together in draughty makeshift barracks. More important in view of the demands of war is the preponderance of women among workers. The present German labour force is estimated at 29½ million consisting of 15½ million women and 14 million men. The ratio of workers to German troops serving in the field is less than normal in view of the requirements of total war. That a permanent and serious handicap has not been removed either by total mobilisation or the influx of foreign workers can be inferred from the figures. The persistent difficulty over men as well as materials is proved by the fact that the German working population has declined by 8 million and foreign labour has made up only part of the deficit. The eestimate of 5 million does not cover the workers in Occupied countries working to the Germans' orders or the workers shifted from their homeland to other parts of Europe. The O.W.I. report assumes with reason that at least one out of every seven workers in Germany to-day is a foreigner. Inability to produce for export is a major consequence of war damage and labour shortage. A Swiss bank examining German trade trends recently concluded that suppliers have accumulated credits and cannot obtain goods in exchange. The debts due by Germany are placed at ten milliard marks, equal to twice the value of Germany's prewar exports in a year. Germany's unwilling creditors are noted as averse to supply goods. The changes in the war situation have influenced their attitude and their reluctance to supply vital war materials may prove a factor in the hastening of defeat.

Expansionist Forces

Mr. Phillip Murray's fear that war production would mount at such a pace that unemployment would follow furious expansion is presumably based on due knowledge of industrial trends. Reluctance to accept official direction alone need not underlie this frightening caution to U. S. labour by its chief. The demands of relief and reconstruction in Europe may be postponed on present indications alone, and the check given to U. S. export trade by the war may cause a real slackening of demand. There is, however, nothing to suggest that the fighting services will not absorb later on the erstwhile war workers. America's economy is still expansionist. Production has risen substantially, while consumption has fallen slightly; if the latter were restored to the 1941 level the question of unemployment may not emerge at all. American war production, as Raymond Gram Swing claimed, is providing one of the major surprises of the war. The surprise is that American war production is not the outcome of a process of subtraction. We are not taking away much from the civilians or eating into our capital but are simply producing that much more and this reveals an elasticity in the potential of expansion that had not been anticipated.

In spite of the prolonged experience of depression the U.S.A. has not been really forced to reduce consumption. Though the war effort claims as much out of the national income as in Britain consumption has fallen by 1½ per cent only because increased use of labour and materials has added to the national income and the U.S.A. has also continued to add to its capital, not as much as before, but somewhere about 8½ per cent instead of 11½ per cent. Expansion has been greater in the States than in Britain because the black-out and the blitz are not limiting factors. The British were compelled to cut consumption because of the familiar dependence on imports. The U.S.A. is largely independent of imports, and consumption has not been affected by the introduction of rationing. Except for motoring peacetime activity has hardly suffered, and motoring has suffered not because automobile production has been suspended, but because of the rubber shortage. Mr. Crowther argued that war effort in Britain led to an all-round sacrifice. Mr. Swing assured Britain that the war was taking a very light toll of consumption because America was self-sufficient. The U.S.A. has no need to look at imports, merely from the angle of shipping shortage. Production changes are inconsiderable, and consumption of cotton cloth has hardly been affected though tailors and outfitters have made men's shirts shorter.



Doubts Over Arakan

The New York Herald-Tribune referred recently to Chinese impatience. The impatience is directly related to the qualified failure in Arakan. It has long been recognised that the Japanese conquest of Burma means the isolation of China. The Japanese have not exploited it but the more they despair of a strategy openly united with Germany's, and the more they are frustrated in the S.W. Pacific, the more they may be tempted to do so. In February, indeed they began a large-scale offensive in the Yangste valley and that is why the reconquest of Burma—useful as a base against Indo-China and Malaya as well—is viewed as an urgent task for the Allies. The Hearst paper is almost indiscreet in asking for a major sea-borne effort in the next winter at the earliest; but its view would be endorsed by those who confess to disappointment over the preliminary move. The difficulties encountered in four months have been explained. While it is not difficult to see that an effort against Assam is ruled out, the enemy's air attacks on the Chittagong area have produced the impression that Akyab has not been neutralised as hoped for. The Chinese have been deprived of the Burma Road for a whole year; and India has been deprived of Burma's oil for over a year. The public in India, if it is reassured as to the cost of operations in Arakan, is naturally rather anxious over the limited results obtained. The withdrawal up the Mayu Peninsula does not correspond to the withdrawal from Lower Burma, but the Japanese have been aable to retain their hold on Arakan and the Calcutta share market's view of the retreat finds some support in the critical attitude of the New York Herald-Tribune. The actual experience gained in Arakan may be valuable, but the next move clearly is the enemy's and the attacks on bases in Upper Burma may not tie down the enemy indefinitely.

Loss from Disturbances

There has been no precise calculation of the cost of the August disturbances Sir Edward Benthall put the Indian Railways total losses at Rs. 1 crore sometime ago. An official narrative, issued recently, estimates the damage at half a crore of rupees in addition to the damage to goods in transit and a very large loss of earnings. It has been estimated that replacements and reconstruction on the B. and N.W. Railways will cost over Rs. 14 lakhs and on the E.I. Railway over Rs. 12 lakhs. The M.S.M. and B.A. Railways suffered to a smaller extent but derail-

IN THE NEW INDIA

educated men must lead the way

Knowledge, more than politics, is the power that builds nations. Educated people must make themselves responsible for abolishing ignorance and conservatism in the villages. And today this implies a very urgent duty.

Perhaps you have relations or friends connected with the land. If so, *get in touch with them about the country's need for Food.* Preach this Five-Point Plan that will give ample food to the towns and cities this year :

1. **Stop growing cash crops for which there is now no export market; change over to *food crops*;**
2. **Repair old irrigation works and build new ones;**
3. **Use only the best seed;**
4. **Cultivate every foot of waste soil;**
5. **Dispose of surplus cattle which are a burden on the land.**

Now is our chance to ensure that the soil of India is made to yield not only enough food for our war-time needs, but a permanent *abundance of food* so that all our people may always have enough to eat.

help the farmer to grow more food for you

GOOD INVESTMENT

Today, with an unlimited demand for food crops guaranteed by the needs of a world starved and ruined by war, investment in wells, tanks, *bundhs*, and all other aids to irrigation, will pay a handsome dividend. Government is committed to the policy of ensuring worth while prices to the cultivator.

BAD INVESTMENT

Grain hoarded in the villages or elsewhere is a bad investment now, for Government is going to smash speculators and hoarders. The effect of hoarding has been to force prices up beyond what the consumer can afford. Reasonable and quick profits is the wise farmer or middle man's policy today.

I still dwell in the delectable Utopia of Dr. Stine's imagination on which I wrote last week. The more actual conditions of life deteriorate, the more is the temptation to contemplate ideal conditions. When the price of rice goes up, when bread queues lengthen and when the acrimony of partisan politics is accentuated, instead of being assuaged, by fear of economic scarcity, then is probably the time when, instead of striving for small improvements, the mind seeks the bliss that comes of imagining social perfection. I am not sure that such was the impulse behind Sir Thomas More. But whatever it was, his work, which I own I have not read and which, I am loath to believe, anybody has, has become a by-word for day dreaming in the sphere of social reconstruction. Cheap realism, smug and uninformed, has fashioned with the title of Sir Thomas More's work, a deadly missile to hurl at the head of those who dare think of better social conditions. The word, "Utopian" has done, more than anything else to keep progressive social ideas at a permanent and heavy discount. "Impatient idealism" is another such; and in Indian politics, the most realistic of nationalist politicians were often disabled for action by the employment of this phrase to criticise their views. It is, indeed, significant that words, which signify adverse comment on progressive ideas, are more powerful than words which bestow praise on them. The human mind reacts more readily to abuse of idealism than to its commendation. There is a deep-rooted scepticism of the possibility of perfection, which almost borders on abhorrence of it. Whether man has a sneaking fondness for his woes or whether he is on guard against hopes which, he knows, will prove to be vain, it is certain he lays a heavy handicap on the protagonists of progressive ideas. This bias against progress is at the root of all our social evils. You have only to propound a new idea in a casually collected company to watch the turbid reactions of the average man, his thoughtless, tenacious clinging to what is, with all its inexplicably sweet miseries. It is this bias that queers the pitch alike for Gandhiji's non-violence and Roosevelt's New Deal, not to speak of a communist or socialist commonwealth. And the success of all attempts to secure progress depends on the way this bias is tackled; for the average man is largely unconscious of it; and it is the more dangerous for that.

* * * * *

For my part, I believe that this bias is only a shield against disappointment. There has been little to persuade the average man that better and decisively progressive conditions of life are possible. All the inherited traits of man's psychology militate against the popularity of progressive ideas. Just as the commonest dream of the human child of to-day is falling off from a higher level to a lower, even though the child may be sleeping on the floor, the adult mind bears indelible impress of the race-old struggle for life. The former is the legacy of our anthropoid ancestors, the latter of less remote ones. Social man is still too crudely biological to comprehend really social ideas. And strange as it may sound, individualism which blossoms only in the soil of sane and healthy social conditions, is understood alike by the classes and masses only in terms of a low, animal scramble for physical sustenance. The place of co-operation in Nature, which is at least as large as the place which she assigns to competition, is wholly ignored. Evolution is equated to heedless weeding out of certain forms of life; and a century of wilful, persistent misunderstanding of Darwin has led to a misunderstanding of individualism and its relation to social life. Man lives on in more or less utter ignorance of the extent of his conquest over Nature. He wrought more than he dared dream. And while the change in environmental conditions enables the evolution of a better type of individual and society and the achievement of better living, man continues to hug the old and refuses to think of the new or the better.

* * * *

It is the unscientific character of former Utopias that perhaps loads the scales against the scientific Utopias of our time. Throughout history, the poetic mind has turned away in disgust from the obnoxious realities of life to the portraiture of the idea. Valmiki's Ramarajya or Plato's Republic, it is all an idealised picture, which the learned enjoy as good poetry, but which the uneducated disregard as practically useless. But poetry and fiction do not antagonise the average man who considers the fond imaginings of the writer utterly innocuous. When ideas of a better world are embodied in purposive social treatises, passions are aroused. That is why More's writings led to the coining of the term, "Utopian." And the more ardent the advocacy of utopian ideals, the more violent are the passions aroused. For at the base of them all there is a sloppy sentimentality which disgusts the hard-headed man of goodwill and enrages the selfish.

* * * *

Not till the better social order could be presented as a practical possibility could the average human being be persuaded to consider it calmly and readjust his attitude. But what are the conditions of its being a practical possibility? Obviously, there are three, a better type of human individual, a better form of social organisation and greater control over the environmental conditions. When Utopia was a poetic dream, its advocates laid the emphasis on the individual. They hardly thought of society as a reality in itself, as something more than the sum of its component individuals. Their appeal was to each man to better himself in order that all may be bettered. The approach was almost a religious one, in

that it presupposed a dose of original sin and pleaded for its expiation. Such an appeal left people cold. But the position was hardly better when socialist thought outgrew the stage of christian appeal. Marxism was scientific only in comparison with the earlier phase of socialist thought. Marx almost ignored the individual. Though he was keenly aware of the psychological inertness and ineptitude of the individual, he assumed that all that could be steam-rollered by the dynamic of social development. He assigned to the dictatorship of the proletariat the task of hammering the individual psyche into some measure of accord with the Communist State or rather the State-less society which he believed to be inevitable. Marx, then, put the emphasis on the dynamic of social life which included those developments of science and of productive technique which are comprised in the term "environmental conditions." I do not believe that the logical soundness of Marxism as a philosophy or as a social doctrine can be easily refuted. But it is equally difficult for me to believe that Marxism has improved the chances of a better social order by making the average individual more receptive to the idea. On the other hand, it has put up the back of the ruling classes all over the world. It has increased their apprehensions for their own safety; while it has done little to convert the common man. It has thus made progress more of an uphill task than it need be. As I said, Marx did not overlook the importance of the individual or of the environment. But by making social changes all-important, he created a class which was most obtusely set against all progressive ideas. The power of science to transform all the three factors, the individual, society and the environment of Nature, was overlooked and then forgotten. The importance of effecting appropriate changes in the mental make-up of the individual as a condition precedent to a better social order was wholly ignored. Thus it is that the dynamic of social life acts in furtherance of a world war, and the individual, while he is more and more helpful to the recurrence if not perpetuation, of war, is extremely impervious to ideas of social progress. Only the environment, in the narrow sense of man's power to control physical Nature, has changed in the right direction. As I said last week, science is capable of teaching man how to fashion himself into a better being. Medicine, Hygiene, Eugenics, Psychology, Education, all the sciences, which have a direct bearing on man as an individual and as a member of society, are yet in their infancy. Strangely enough, the oldest science is the one that deals with the remotest objects. Man comes last in his search for knowledge.

* * * *

Perhaps, there is a cosmic purpose in this order of priorities. For, Man's knowledge of himself will avail him little when his knowledge of Nature is insufficient for control of Nature. After all, man is part of Nature; and so long as Nature, as it concerns man directly, is red in tooth and claw, Nature makes man after her own image, and it is idle for man to strive to be an angel. It is only when men are released from the necessity for scramble that they can envisage better social relations and better types of men. That is the task for Science. But in achieving it, Science has increased man's power for evil. It is up to every man to cease to think of other men as part of the environment which he has to subdue, at any rate to discriminate between men and things, while he wields the weapons which science has invented for the control of the environment. Science may yet teach us how to strengthen our moral volition. But it is foolish to decry science for the mixed character of its gifts. The Puranic story of the churning of the oceans is most illuminatingly allegorical.

The first step then towards a practical utopia is to realise that Nature as she has been tamed by Man through the centuries, no longer decries the struggle for life, that she permits man to lift himself above the plane of scramble for a living and that in the future he need no more despoil his fellowmen than he need walk on all fours or look to tree-tops or caves for shelter.

* * * *

Men can be mentally and morally, as he has been physically, vertebrate. He need no longer look for Empires and "markets." This realisation cannot, however, be in the same form for the classes and for the masses. For the masses must perforce apply the test of results. But the classes have to envisage the possibilities, work out the plans and produce concrete results. The plenty which science makes possible must be produced for all to see and to enjoy. And once scarcity is seen to be a thing of the past, man's power to mould the mental being of the average individual will have increased vastly. But, has not man got to change before he can realise the economics of plenty? Ah, there's the rub. But we can live in hope that once the war is over, the world will begin to produce in order to construct.

Dissatisfaction with accepted facts and settled policies is certainly a healthy sign and the Sanibarer Baithak by providing a forum for economists and businessmen to meet and talk over matters of importance has performed a real service. Impatience with the slow progress of regulated trade, price control and food planning characterised most utterances. The tone was definitely critical and I think bankers will find much to comment on in Mr. K. N. Dalal's survey of Indian banking with its obvious emphasis on the shortcomings. Perhaps the most remarkable part of his survey deals with the Reserve Bank Board's representation against new banking flotations. It was a qualified warning but Mr. Dalal holds strong views. There are not enough banks to serve a large country; financial facilities are limited, and new banks meet

a real, long-standing event. The recently-started banks thus have the blessing of Mr. Dalal. After September, 1933 he claimed that 38 banking companies have been floated, and it is only recently that the big ventures have made a beginning of the kind he likes. The banks with large capital are expected to help India in full measure when the war ends. The increase in bank deposits provides an essential advantage but Mr. Dalal is not too much impressed by the increase in deposits. Looking at the total deposits of all banks in March, 1943 amounting to Rs. 382.42 crores he argues that it is only a sixth of the national income in a year and comparisons with other countries only underline the poor growth of savings in this country. The main problem is to develop thrift. Small savers have to be encouraged, and greater facilities to depositors in order to keep up even small accounts seem necessary. These views are decidedly original and should go down well with those who ask for a special savings drive, not merely for increasing the subscriptions to Defence Loans. An inducement in the offer of better rates of interest is not ruled out, and Mr. Dalal's argument in favour of special schemes like Provident Fund account and Cash Certificates must impress all but the ultra-conservatives.

* * * * *

In ranging over the familiar field of industrial finance Mr. Dalal invited criticism, but his independent outlook has compelled him to draw comparisons. Germany has done unusual things for industry through her banks. Agriculture too has obtained long-term credit. Experience affords a positive argument in favour of permanent financing agencies and India's business magnates have been asked to do something for the promotion of industrial banks. This recommendation is unusual, but industry in Bengal is regarded as backward, and our bankers are called upon to do their bit. They can—once they come to accept the subordination of Advances to other means of using deposits.

* * * * *

The divergence from narrow orthodox views illustrates the independence and vigour of Mr. Dalal's views. It is not likely that professional bankers will endorse his views, but the citizen will not hesitate to follow his arguments. Of the limitations of existing agencies including land mortgage banks none is more conscious than Mr. Dalal whose plea for using provident fund and pension deposits outside the giltedged markets will cause shaking of the head. The Reserve Bank's reluctance to encourage the land mortgage banks and the bill market alike has provoked some dissatisfaction to judge from one banker's observations.

* * * *

The main argument of the banker looking beyond his business is for a bolder policy in which vision and integrity will be compounded for the benefit of the nation, not only the shareholders or officials of any bank. The social function must be accepted, and the remedy may well lie in the nationalisation which is approved in principle. It is perhaps necessary to call attention to the preliminary criticism of certain amendments to company law recommended by the Reserve Bank. It is important as showing that many experienced bankers like Mr. Dalal do not share the misgivings of the Central Board. They have no cause to expect failures or even retardation of banking progress at any time. A steady growth of savings makes for the extension of the banking habit, and the striking recovery from the 1938 crisis may well be cited to support the arguments in favour of more branches, if not banks. It is a view that has not been ignored by Sir Rustom Masani in a speech outlining the scope and functions of banks in India. There is no place for suspicion, even less for vague apprehensions, and the vision of a post-war slump conjured up by impenitent pessimists is less related to banking in India than imagined. Formal reasoning and analysis are not required at present in this case to show that banks with ample funds and enlightened policy can do much to retain prosperity. A breach with the past may not come about, but there are certain departures warranted by circumstances. Of these Mr. Dalal has spoken, and that is one reason why his immediate audience was specially fortunate.

(From Our Correspondent).

New Delhi, April 12.

A PARTICULARLY busy week has begun for New Delhi—the strain on the Secretariat being all the greater as four portfolios are still without Members. Almost the first problem to which the Viceroy has been obliged to give his immediate attention after his arrival on Wednesday last, is the situation created in Natal by the hurried introduction of the Segregation Bill in the Union Parliament. In its representations to South Africa the Government of India opposed both the Union Government's proposals—the proposal to extend the Interim Act in Transval for another three years and the proposal to enforce similar legislation in Natal to prevent further acquisition of property by Indians in the "predominantly European areas" of Durban. What has particularly surprised the authorities here is the refusal of the Union Government even to await the comments of the Government of India before introducing legislation. The short *communique* issued by the Overseas Department on Thursday has served to reiterate the Government of India's policy. It is opposed to any kind of statutory segregation, but the Indian community has always been prepared to cooperate in formulating and working a gentleman's agreement which will take into consideration the respective claims of the communities and remove existing causes for racial conflict. It is pointed out that the Indian community is not anxious to penetrate unduly into European areas, but the Indian community claims the right to be provided with decent housing facilities, opportunities for sound investment, and all necessary amenities for their development. A compromise on these lines is possible, but the Union Government seems determined to go ahead with discriminatory legislation regardless of the protests from the Government of India.

* * * *

There is reason to think that the Viceroy deeply sympathises with Indian sentiment in the matter and has been taking a strong line in this matter. Unfortunately his efforts have so far failed. If the Bill is finally passed, it will undoubtedly create an unpleasant situation. Both the Indian community in South Africa and public opinion in this country have urged the recall of the High Commissioner from South Africa as a gesture of protest. So long as there was the desire on the part of the Union authorities to honour the Cape Town Agreement, the presence of the Government of India's representative served some purpose, but at present he is neither in a position to command respectful attention from the Union authorities nor protect effectively the interests of the Indian community. His recall will at least serve the purpose of demonstrating to the world generally, and the Union Government in particular, how strongly the Government and people of the country resent the enactment of legislation of this kind. There is no reason to think that the Viceroy will object to this form of protest. If a meeting of the Standing Emigration Committee is called, it will very likely recommend the recall of the High Commissioner and also consider the possibility of invoking the powers available under the newly-passed Reciprocity Bill. In this matter of vindicating Indian claims in South Africa, the Overseas Department seems to be completely at one with Indian opinion in this country.

A three-day meeting of the National Defence Council begins to-day. It is expected that the Commander-in-Chief will communicate to the members the full story of the Arakan operations now drawing to a close. They have not been as successful as one had expected, for there is little doubt that public opinion in this country looked forward to the retaking of Akyab as an essential objective. Still military authorities claim that the operations have very largely accomplished the limited objective which they had in view—the neutralisation of Akyab as an offensive base, the prevention of any possible attempt on the part of the enemy to use the Arakan area as a springboard for attacking India by air or sea and the Allied design to keep enemy forces fully occupied in this area and counteract their infiltration tactics. As there has been a good deal of misunderstanding in the public mind, the Commander-in-Chief may take this opportunity to sum up the objects and results of the winter operations in Burma. Of no less importance is the discussion on the food supply situation which the National Defence Council will now have. The new Food Department which Mr. N. R. Sarker inaugurated a few months ago as the Government of India's first Food Member, is now in its full swing. And before the end of the month the six regional Food Commissioners will also be functioning in their respective areas. There is a good deal of complaint about the way in which these posts of Food Commissionership are being filled. Instead of reserving all these posts for Indians, official or non-official who can claim close association with the people and understand their difficulties, the Government of India have, it is learnt, selected among others a retired Admiral, an ex-Judge from Burma and an Army General. Had Mr. N. R. Sarker continued in office, one could have looked forward to him to make more popular appointments. There is also some dissatisfaction that in selecting the personnel for the International Food Conference which will meet next month in the United States, the Government of India have not cared to include even a single non-official—not even a representative of the Indian commercial community. Could not the Government of India have asked Mr. N. R. Sarker, the former Food Member, or Mr. G. L. Mehta, the retiring President of the Federation of Indian Chambers of Commerce, to join the delegation owing to the importance of the issues coming before it and the great interest which the Indian public has taken in this proposed international conference for discussing postwar food and agricultural questions. Only two delegates are to go from India—Mr. Kharegat, the Vice-Chairman of the Imperial Council of Agricultural Research and Dr. Aykroyd of Coonoor.

* * * *

In this connection a word will not be out of place on the way in which appointments are still being made in the Government of India in disregard of Indian claims. It has always been a standing complaint that the number of Indian Secretaries in the Government of India is deplorably low—at present only four out of a total of over twenty. There is certainly justification for demanding that whenever a Secretary's place falls vacant or is newly created it should go to an Indian when available. Both the Secretaryships of the newly created Food Department have gone to non-Indians. Even the officiating post of Secretary of the Supply Department during the period of the absence in England of Mr. Jenkins has gone to a non-Indian from the United Provinces though there are a number of Indian Joint-Secretaries in the Supply Department. The newly created Joint-Secretaryship of the War Transport Department has also gone to a non-Indian. And now we are told that when Mr. Kharegat proceeds to Washington his place will not go to his Indian Secretary or to a senior Indian official of the Department like Mr. Vishvanath, the Director of the Imperial Agricultural Research Institute but to Dr. Burns, the Agricultural Commissioner. Even for the post of Establishment Officer which fell vacant on the appointment of Mr. Holdsworth as Food Secretary, the retiring Commerce Secretary, Sir Alan Lloyd was appointed. The selection of Indians for big posts in the Government of India like Secretaryships and those of Departmental Heads is still more the exception than the rule though there is no dearth of available Indians.

* * * *

The Government of India do not appear to have made up their minds yet about the Governorship of the Reserve Bank. The strong stand taken by the Central Board is in full accord with the opinion prevalent in Indian business circles that on this occasion at least an Indian should be appointed Governor. It is generally believed that though the Central Board may not have actually sent up his name, they have made it clear that if the present Deputy Governor, Mr. Deshmukh is promoted to the Governorship they will gladly accept the choice. Other Indian names can easily be mentioned, but if the Government of India are still unwilling to have an Indian public man as the head of the Reserve Bank, what objection can they have to an Indian I.C.S. official who as Deputy Governor has been an admitted success? The Government of India would be putting themselves completely in the wrong if they seek to foist a non-Indian outsider on the Reserve Bank as Governor against the wishes of the Central Board.

(From Our Correspondent)

Bombay, April 13.

PROMINENT businessmen have laid great stress of late on the need for preparing from now on for the tasks of post-war reconstruction. Mr. J. M. B. Gibbons, the outgoing President of the Bombay Chamber of Commerce, and his successor alike referred to the urgent need for raising the standard of living of the masses. The Governor of Bombay has given indications of official co-ordination in working out the idea by urging immediate preparation for post-war reconstruction with special reference to speedy re-employment of demobilised soldiers. The City and the industrial districts will have to provide opportunities on a much wider scale for the man looking for work. Sir H. P. Mody, the Chairman of the Central Bank of India, viewed the matter from th angle appropriate to the banker. He pointed out that the material resources acquired by the country through the war time demands for our agricultural and industrial products should be carefully conserved in the interests of post-war reconstruction.

The construction of roads should form a vital part of any plan of reconstruction inasmuch as road construction brings the city to the village and is the surest means of bringing greater prosperity to both. As Mr. V. F. Noel Paton, the chairman of the Bombay branch of the Indian Roads and Transport Development Association, observed, there are now thousands of military vehicles rolling off the assembly lines which will one day be used for civilian purposes. Their utility will not end with the war. But the roads built for strategic purposes along which they are now driven will hardly suit the needs of peace and the tasks of facing post-war transport problems devolves on others besides the road transport interests. Another point that claims immediate consideration is the relation of road development to the future plans of the railways. A few years ago, the problem of the railways was not shortage of wagons but lack of traffic. That the present boom in railway earnings is adventitious will be evident when it is remembered that the contribution of the Railways to the Central Government was only Rs. 137 lakhs in 1938-39 as against an estimated contribution of Rs. 27 crores in the current financial year. It is urged that both means of transport are vital to the country and in peace-time the railways will have to be fed by roads if the earnings of railways are to be kept up at a reasonable level. The country must be on its guard against a revival of the unprofitable road-rail controversy.

Ameliorative action has now been taken by the Government of Bombay more or less on the lines envisaged in furtherance of the "Grow More Food" campaign and as a measure of relief to the famine stricken districts. 50 per cent of the water assessment on lands irrigated by *bandharas* will be remitted in cases where the owners grow food crops on the lands under irrigation. Collectors have instructions to warn the owners of pumping plants that crude oil for working oil engines will not be supplied except to those who grow food crops on the area under irrigation. In forest areas settlers who put their entire plots under cultivation of food crops will not have to pay the usual nominal assessment varying from Re. 1 to 8 annas per acre.

The cotton trade might well shout in utter confusion of thought like the Irishman that "single misfortunes never come alone." The Government of Bombay notified on Monday, April 5, 1943 that every occupier of a godown or storage accommodation having a floor area of not less than 6,000 square feet and situated in Bombay City and the Suburban District should on or before April 15, furnish to the Food Controller, Bombay, information regarding the full name and address of the godown or storage accommodation, exact location of the godown, present occupier together with description and quantity of the contents of the godown. Godowns occupied by the Defence Services or any department of the Central or Provincial Government or any railway administration or those used for the purposes of a factory falling under the Factories Act engaged in manufacturing articles required for the purposes of war are, however, exempt from this order. The cotton trade is naturally perturbed over the likelihood of the godowns being peremptorily requisitioned for storing food grains. About 250,000 bales of cotton are lying on the open ground while further supplies of cotton are arriving in the city. All this cotton will have to be stored in godowns before the middle of May owing to the imminence of the monsoon.

It is no longer news that the War Services Exhibition is going to be staged shortly in Bombay. The Exhibition is particularly welcome for the reason that it will move into the limelight one of the forces that have been actively and profitably engaged in the war effort, to wit, the Indian Merchant Navy. The layman who observes the ceaseless activity that is going on at the docks and harbours of the country connects it vaguely with the war but he will have to be told that India's merchant navy is the main cause of such activity. Although a full account of the extent and magnitude of the merchant navy's endeavour can only appear after the war, it can now be stated that its foremost task has been the provision of the requisite number of trained men for the transport of cargoes to ports where they are most needed. The Dufferin, the Indian Mercantile Marine Training Ship has been, and is still engaged, in training hundreds of Indian youths as officers for ships that are engaged in transport of war-time cargoes. It is learnt that there will be a separate Mercantile Marine Stall at the Exhibition and that a selected number of citizens will be taken on a free visit to the Dufferin. Behind the silent service of the Indian merchant navy lies a part of the strength of the self-governing India of the future. It is encouraging to find that young Indians should be taken to the Dufferin and have opened before them the vista of possibilities that the merchant navy offers to the youth of the country.

Mr. E. W. Fairbrass of the Bombay Presidency Trades Association was elected President of the Federation of Indian Trades Associations at its meeting held at Bangalore on April 10. Mr. A. T. Luker, the outgoing President, who was unavoidably absent, sent a message in which he expressed concern over the rapid rise in prices and stressed the advisability of Government and other bodies consulting the members of the Trades Associations in dealing with such problems. The seriousness of the transport situation and the need for more public roads and the advisability of spreading war orders over as big an area as possible were among the subjects dealt with in his message. Among a number of resolutions adopted at the meeting, the one that protested against the Madras Government's recent action in subsidising a certain newspaper (connected with the National War Front) in competition with established newspapers is remarkable as revealing the range of subjects in which the Federation is interested. Another resolution urged the government to improve and revise the present system of control of imports into India with a view to removing the serious hindrances to trade. A third resolution urged that the Trades Federation should be represented on the Standing Labour Committee of the Government of India.

Resume of Commodity Markets

THE feature of the week in the commodity markets is the substantial improvement in prices in the Bombay bullion market.

It was pointed out last week that there was a possibility of a further improvement in values, though such a rise in prices could not be justified. The recent rise in prices, as has been pointed out on more than one occasion in these columns, has been mainly due to the reports regarding negotiations between the U.S. and British Governments for the formulation of an international currency unit with gold as its backing. As the U.S. Government was inclined to lay emphasis on the utility of gold as an international medium, it was generally felt that there would be a scramble for the yellow metal in the post-war period and that a sharp appreciation in prices would be recorded. It is forgotten, however, by many that, given normal conditions, in any agreed scheme the quotation for gold cannot be divorced from the basic value for a currency. As it cannot be expected that in the post-war period the rupee will remain depreciated at the level at which the present gold prices would suggest, it stands to reason that ultimately prices should come down. The recent activity in the markets, therefore, has to be attributed only to the shortage of supplies and speculative buying.

* * * *

Among other markets, the jute and jute manufactures markets have been very firm. With the arrivals of jute still behind mill consumption and the unsatisfactory reports regarding the progress of sowings in the districts, there has been a further improvement in prices. Unless there is a substantial increase in arrivals and sowings, Calcutta prices might not possibly show any appreciable decline for some time to come.

* * * *

Thanks to the increase in shipments in the last few weeks and the greater enquiry for sacking during the past few days, values in the jute manufactures market also have recorded a rise. There are reports of the possibility of a further improvement in the shipping position in the near future. While mills are well sold for the next few months they are not quite keen sellers for the far forward positions owing to the uncertainty regarding supplies of raw materials.

* * * *

The Bombay raw cotton market has not been very interesting and quotations are around last week's levels. It is now believed that the fears about the possibility of Government intervention regarding trading in the current season's crop were exaggerated though the Government of India had addressed the East India Cotton Association about the necessity of liquidating hedge contracts in 1941-42 crop. The East India Cotton Association has replied to the Government saying that speculative activity would be effectively checked if trading in options were continued, and that if the 'futures' market were closed down, the ryot would be deprived of the possibility of a higher return on his produce. In their note to the Government they point out, "the real defect, if any, is that trading in options in connection with "futures" contracts is being indulged in on a large scale. In spite of the repeated requests of this Association over a period of years, the Government have been unable to control trading in options. If the Government can still take the simpler course of prohibiting it altogether, in an effective manner, the Board of the E. I. C. A. definitely feel that there will be no need to interfere with forward trading in cotton in hedge contracts which is indispensable if the grower's crop is to be marketed in an orderly manner". It will be remembered that on earlier occasions the Bombay Government placed restrictions on trading in options and that while the restrictions were in force it was possible to prevent an undue rise in prices as a result of speculative activity. If a similar procedure were adopted at the present moment it would be possible to ensure a fair level of prices for both the primary producer and the manufacturer alike.

* * * *

At the auctions of tea for consumption in India held this week there was a good demand though prices were again lower. Medium liquoring brokens and most broken Orange Pekoes and Fannings with tip declined by 2 annas while other teas were only about one anna lower. Poor and common varieties were firm and as the sale progressed they even became dearer. Small quantities of green teas offered for sale were disposed of at higher rates. Dusts declined by one to two annas for good qualities. Low medium and common descriptions, however, were steady at last rates.

* * * *

It is reported that substantial supplies of Chinese teas are being brought into India to be exported to Russia and the U. S. This has had a salutary effect on tea prices for internal consumption.

* * * *

It appears that the efforts of the Bengal Government to ease the food situation has borne fruit. It is reported that further supplies of rice wheat and sugar have been received and that the efforts to market these supplies through retail dealers on an increasing scale at controlled rates would gradually bring prices down. The struggle for the control of rice prices is still continuing. Quite apart from the trade, the Directorate of Civil Supplies has distributed more than 12.6 lakhs of maunds of rice and 4.5 lakhs of maunds of paddy to Calcutta and districts. No less than 238 wagons have arrived in Calcutta between March 27 and April 1. 31,600 tons of sugar from outside mills have been passed into the province by the Directorate and 28 important wholesale dealers have been put out of business for malpractices. A powerful coal ring has been broken and standard cloth is now coming into Bengal in sizeable quantities. Large wheat supplies are assured for the future.

THE NEW BURTON WOOLLEN MILLS, DHARIWAL, PUNJAB
(BRANCH OF THE BIRLA INDIA CORPORATION LTD.)

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, April 15.

TOTAL mill production for the month of March is returned as 111,858 tons, an increase of over 19,000 tons above the previous month's figures. This is accounted for, of course, partly by March covering more working days and also by the fact that for half of March, mills were working increased hours to meet an urgent American order for Hessian cloth. The current month, during the whole of which the longer hours will continue, will certainly show still higher production figures. The yardages of Hessian and Sacking produced were remarkably similar, 1,524 lakhs yards of the former as compared with 1,526½ lakhs yards of the latter. The tonnage of Sacking goods was, of course, almost half as great again as that of hessian. The proportion of goods manufactured on Government account was slightly higher than the previous month at 8.6 per cent compared with 8.2, per cent, but still a very much lower proportion than in some previous months and clear proof that commercial demand is quite sufficient to keep the mills working quite apart from Government requirements.

Mill stocks of manufactured goods in godowns having increased during March by only 5,173 tons, it is apparent that during the month mills must have despatched to consumers not less than 106,685 tons of jute goods, a very satisfying total, particularly as March was not considered a good month for shipment of Heavy Goods. It is reported that these descriptions are moving off well this month, so it may be anticipated that, despite the expected heavy production in April, shipment figures will again prove to be satisfactory.

To turn to the jute consumption side, the following tabulation will show the position:—

Mill production for March ..	111,858	tons
Total Mill production, July to March	877,207	,,
Equal to a consumption of jute in round figures of ..	50,00,000	bales
Approximate Exports, July to March	10,00,000	,,
Total quantity of jute gone into consumption , July to March	60,00,000	,,
Total arrivals of jute into Calcutta, July to March ..	48,62,000	,,
Shortage, consumed ex-Mill and Bazar stocks ..	11,38,000	,,

It will be observed that the shortfall in arrivals compared with consumption has increased by just three lakhs of bales since we presented figures as at the end of February, a position which cannot but be causing mills no little disquiet. Arrivals of jute for the first half of April are estimated at 2,48,000 B/s which shows some slight improvement.

On the subject of inland transport, the arrangement arrived at with the steamer companies appears to be working satisfactorily, and quite a quantity of the backlog of old contracts is being cleared off. It is to be regretted that the Railway cannot find it possible to adopt a similar course, but figures have been supplied to them showing the quantities awaiting despatch at most of the important shipping stations and it is to be hoped that these figures will at least be useful as a guide for the allotment of wagons to the stations where they are most wanted.

It is understood that not much in the way of concrete conclusions was arrived at in the meeting between various sections of the trade to discuss the proposals put forward by the Research Department of the I.J.M.A. for the more accurate assessment of moisture in loose jute deliveries. Mofussil baling interests seemed to consider that too great a responsibility was proposed to be thrown on their shoulders, against which they had no adequate protection in present conditions in the mofussil. There is no shadow of disagreement as to the desirability of eliminating excess moisture from jute, but the difficulty lies in fixing the onus and the penalty where it belongs. And if it be true, as is alleged, that jute passed as dry by hand test will still show excessive moisture by oven test, then the mofussil baler feels he stands to be shot at from both sides. We have never heard it alleged that additional water was added to the jute by the baler. It is in an earlier stage of the marketing that this happens and the difficulty will be to trace the misdemeanour back to its origin, and still more difficult to get any satisfaction out of the misdemeanant, if and when found. It is all very well to say that the baler's best protection is to refuse to buy wet jute. But there are often market conditions which compel the baler to buy whatever jute he can get to protect his own pocket, and if there is no dry jute available to cover a short position, he is in no position to stop and argue who put the water in the jute he has to buy. In the course of the discussion it emerged that there was little probability of it being possible to equip more than a limited number of mills with test ovens inside a year from now, and a suggestion which was tentatively accepted was, that such mills as could be equipped would carry out tests on all doubtful parcels for the period of a year, and report the results of the tests to the sellers for their information and guidance, while the method of establishing actual claims for excess moisture would remain as at present. It was also agreed that it would be advantageous for sellers to be permitted to inspect parcels on which test reports were made so that they could satisfy themselves by comparison of the test result with the "feel" of the parcel. It was also agreed that, before the system could be brought into universal application, it would be necessary to have an independent Test House to which disputed parcels could be referred, in much the same way as a Licensed Measurers weighment is accepted in a disputed weight. One regrettable feature is that the I.J.M.A. would appear to have definitely abandoned the principle of using the proposed system as a means of arriving at the "correct invoice weight." Larger mill groups maintain that it would be physically impossible for them to test every parcel arriving in the mill. This argument is not easy to follow. If a small mill can, and does, test every arrival, a larger mill could, by increasing or multiplying its equipment, do the same. Admittedly the present time, with its multiplicity of small deliveries, when a single wagon is thankfully accepted as better than no jute, is not the time to start such a scheme. But the Committee which has propounded the scheme makes much of the fact that it is in line with the practice in all other branches of textile industry to use the oven-dry weight as the basis for "standard regain". If the Jute Industry in Bengal is to be called upon to depart from its long established practice of working on an admittedly arbitrary figure of "moisture content" in order that it may come into line with standard textile practice, why not go the whole hog and stick to the principle of "correct invoice weight", which is also part of the standard practice, and carry the system to its logical conclusion?

Almost nothing has been reported from the Export Jute market during the week. Mills have bought to a limited extent on the basis of Firsts at from Rs. 85 to Rs. 87, Lightnings at Rs. 81, Hearts at Rs. 76 and Dundee Daisee offering sparingly. In Loose Jute there has been a steady moderate demand with sellers at Rs. 84, but Balers are reserved and only firm in their ideas and only limited quantities on offer. European packing was reported on the basis of Rs. 17-8 for Middles, but there are now no sellers under Rs. 17-12 and even Rs. 18 would probably be paid for a reasonably high assortment. Supervised Jat sold at Rs. 17-4 basis Middles and is now held for an advance. Northern District Tossa was in request at Rs. 16-8 and Rs. 13-8 for Middles and Bottoms, but sellers now ask four to eight annas higher. Jungli Habi-jabi Cross sold at Rs. 10-8 to Rs. 11. Mofussil markets rule firm with imports small. Sowings are proceeding more freely after fairly general rain. In many districts the mid-lands are now completed and only the high-lands remain to be sown. Conditions are generally satisfactory, but it is still doubtful if the licensed area will be attained.

After a period of inactivity, the Heavy Goods section of the Fabrics market has staged a recovery, due partly to renewed demand from the Punjab and partly to buying for cover for early shipping space which has become available. "B" Twills have reacted sharply from Rs. 58 to Rs. 62 for near with business done also at Rs. 60 to Rs. 61-8 April-June, at Rs. 60 July-September and at Rs. 59-8 October-December. Liverpools have sold at from Rs. 62 to Rs. 64 for April, Heavy Cees at Rs. 59 May-June, 3¼ lb. Grains at Rs. 91 April and Salts at Rs. 51 for the same delivery. Hessians have ruled quiet but steady with ready 7½ oz. done at from Rs. 19-12 to Rs. 20 and near 10 oz. up to Rs. 25-4 basis. Mills have met the forward demand for elevens at Rs. 25-4 July-September and at Rs. 25 October-December.

(*Continued from page 636*)

ments and other incidents were reported from other railways. Trade and commerce suffered naturally, and traffic on the B. and N.W. Railway was only 75 per cent of normal at the end of October. The railways are said to have lost Rs. 18 lakhs through damage to rolling stock. Damage to track is estimated at over Rs. 9 lakhs, to station buildings at Rs. 8½ lakhs and to ancillary equipment at Rs. 6¼ lakhs. It is known that damage involved the death of some police officers. The recent account puts Chimur in the Chanda District in the U.P. This small divergence from fact does not detract from the value of estimates of losses or conclusions as to unshaken morale. The P. and T. Department also reported losses through attacks by mobs. 895 offices were raided up to the end of December. Loss of cash and valuables amounted to nearly Rs. 2 lakhs and furniture and equipment destroyed was valued at Rs. 1 lakh. There is, however, no estimate as to losses suffered by public utility companies. Reference is made to the citizens being deprived of electricity and other facilities; but no figures appear as to the losses then suffered by tram and bus companies. Nor is there any reference to insurance claims arising from civil commotion. These must be an element in the bill paid by India for the disturbances. Facts as to decline in production and trade can be illustrated by reference to figures, but the further effects on the revenue cannot be measured at present, and what relief is available to the taxpayer in the current year cannot even be conjectured.

Rice Supplies

The final General Memorandum on the rice crop of 1942-43 makes it clear that the Indian crop is smaller in spite of a slight increase in acreage. Total estimated yield for 74.9 million acres under rice is 24.5 million tons. The average yield is estimated to be lower than in 1941-42. The figures may show no startling change on the previous forecasts but they are an antidote to optimism, particularly, in Bengal. The main or winter crop in West Bengal has suffered from cyclone, fungus disease and pests. The total outturn in Bengal where the crop accounts for 28.8 per cent of the area under rice in India is put at 5.02 million tons against 7.39 million tons in 1941-42. The summer crop is expected to give 203,000 tons this year but can give little relief. The fact of scarcity in Bengal is established like the urgent need for imports and even more necessary of dis-hoarding. In Bihar, a crop above the average is expected, but the Madras crop is expected to be 80,000 tons below that of 1941-42. The increase in the U. P. and Bombay can have little value for the deficit provinces. It is essential to remember that Orissa's usual surplus has beeen reduced by flood and drought. The extension of rice cultivation under irrigation canals in the Punjab is only to be expected. The States in which the rice crop is expected to show a considerable increase are Hyderabad, Baroda and Bhopal. Main result will be a decline in foreign exports from Bengal and Madras. The total in 1941 was returned as 303,600 tons of which Bengal's share was 82,600. It is noteworthy that in 1940 and 1941 alike the margin for exports was diminishing in the case of Bengal and Orissa. The complete cessation of maritime exports may result in more shipping space for jute or hessian. A short crop thus has its advantages though a fall of 2.37 million tons should affect the consumption of gunny cloth in Beengal. A shorter crop implies a scarcity of fodder, and the condition of livestock may deteriorate.

Offer to Shareholders

To finance plant extension primarily the putting up of an open hearth furnace and secure larger working capital the National Iron and Steel Co., Ltd., is offering, in the first instance to its shareholders, new ordinary shares of Rs. 10 at Rs. 12 each. The Company has paid a dividend of 10 per cent in 1942. Its need for new paid-up capital arises from the demand for its products which are mostly taken by Government. The prospectus published to-day gives the shareholders the opportunity to take up shares before May 9. The outside public will have its chance after May 10th with such shares as have not been allotted. The Board and Managing Agents have arranged to take the greater part of the new issue. The Company's fortunes have been stabilised in the war period. Its Belur works have been increasingly active as is shown in the wages and charges of Rs. 9.12 lakhs in balancesheet and accounts issued last year. The offer of ordinary shares with an estimated yield of over 8 per cent free of tax in an established Company whose earnings have risen steadily since 1939-40 redounds to the advantage of the investor. The shareholders doubtless will appreciate the fact that the present premium is lower than what it might have been in this case. There is no prior charge and ordinary shareholders should be duly impressed by the advance in earnings between 1940 and 1942. The maintenance of dividends at a wholly satisfactory level is ensured by the proposed addition to paid-up capital. By raising the paid-up capital to the limit authorised the Company will be helping the shareholders to increas their holdings as well as income. In view of the firmness of iron and steel shares at present the success of the issue may be regarded as a foregone conclusion.

Mica Mining and Trading Co. of India

India as a producer of mica has a growing export trade. A company bent on developing the manufacture of condensers, tape and insulating materials can reckon on outstanding advantages. An established concern which has paid dividends for 2 years is offering its shares to the public in accordance with the terms outlined in a prospectus appearing here. The three classes of the present issue have inherent attraction for investors in mineral enterprises. The prospectus gives details of the Company's mining and trading activity through control of the factories at Giridih and Calcutta. Commanding the services of a qualified, technical staff the Mica Mining and Trading Co., Ltd has two full years of successful working to its credit. Its position has been assuredly strengthened by the fall in imports and the war production demands of the U.S.A. The shares available at par up to May 5 are hardly those of a new flotation. The initial success is there, and the addition to capital now should strengthen their profit-earning capacity as expected. The war-time importance of mica is admittedly one consideration in favour of the shares which are known to afford a high return to the investor. The other merits e.g. anticipated appreciation of shares and right to dividend from date of subscription are described in to-day's prospectus. They should not be ignored at present when the yield on securities and shares alike shows no signs of improving. The convenience of payment by instalments is available to intending shareholders for whom a form of application is provided.

JUTE

Calcutta, Thursday, April 14.

THE raw jute market has been firm during the past week. Though there has been no substantial improvement in business prices are higher in sympathy with the jute manufactures market. Reports regarding weather conditions in the jute growing districts have not been quite satisfactory. It was pointed out last week that there was every possibility of sowings being considerably lower than the licensed area for 1942-43 season. Owing to the uncertainty regarding the size of the crop for the next season, mills are keen on buying up any quantities of jute that are offering. Sellers naturally have been rather reserved and are not freely parting with their stocks. Mofussil markets, too, are firmer with imports coming in only in small quantities. Buyers are very active.

In the Loose jute section mills have bought whatever small quantities that were offering at slightly higher rates. European packings Middles and Bottoms were done at Rs. 17-8 and Rs. 14-8 per maund with Cross Bottoms Rs. 2 lower. Supervised Jat Middles and Bottom also were sold at the same price. Indian District Tossa Middles and Bottoms were done at Rs. 16-8 and Rs. 13-8 per maund.

In the Pucca bales section not much of business has been done for export but firmer conditions have been noticeable in sympathy with the Loose jute section. Balers have not been free sellers. Mills are reported to have bought Ropes at Rs. 57 and Firsts 2/3 for June delivery at Rs. 87 per bale. Business was also reported in Dundee Lightnings at Rs. 105 and Hearts at Rs. 95 per bale. Cuttings were Rs. 41 per bale.

JUTE MANUFACTURES

Calcutta, Thursday, April 14.

THE jute manufactures market has been rather firm during the latter part of the period under review. Even with the publication of the local stock figures for March, a definitely firmer tendency was noticeable. The production figures for March, now available, show that the increase in sacking stocks was due to the high level of production with normal labour conditions and the larger number of working hours. It also confirms the conclusion made last week that shipments of hessian in March have been very satisfactory. It is now reported that the prospects for sacking shipment also for the current month are satisfactory and that there might not be any appreciable rise in sacking stocks at the end of the month.

During the past two or three days there has been a good demand for "B" twills and quotations have been marked sharply higher. Business in hessian for the forward positions has not been on a large scale. Demand is still confined mainly to near deliveries for which mills have no production left to sell. Closing quotations are at the highest levels for the week. 9 porters Ready were Rs. 20-2, April Rs. 20-1, May-June Rs. 19-4 and July-September Rs. 19-8. 11 porters Ready quoted Rs. 25-4, April Rs. 25-6, May-June Rs. 25-4 and July-September Rs. 25-2.

In the Heavy Goods section, as pointed out above, a greater volume of business has been passing and there would have been a sharp rise in quotations but for the unsatisfactory showing made by the stock figures last month. "B" twills for Ready delivery were done on the basis of Rs. 61, May-June Rs. 60. "B" twills for April delivery were done at Rs. 60-2, Liverpool twill at Rs. 64 and Cornsacks at Rs. 61. Quotations at the end of last week were Rs. 58, Rs. 61 and Rs. 58-8 respectively.

N.B.—The procedure hitherto has been to furnish only the actual stock figures received at time of issue, to reduce the previous month's figures so that a similar basis for comparison would exist, and then later to issue a supplementary sheet giving the actuals.

In the interests of paper economy and also to avoid a confusion to which that foregoing procedure can lead if care is not exercised, that system has been abolished. The new procedure will be to include in the particular month's figures the subject of report, an estimate of the stocks of those mills which at the time of issue of the statement have not been received in this office and to compare that with the actuals of the previous month. No supplementary sheet will be issued but at the time of reporting the succeeding month's figures, opportunity will be taken to correct the previous month's figures to represent actuals.

Accordingly for March the figures now given include the returns of Gagalbhai but contain only an estimate of the stocks of Calcutta Jute, Kedarnath, Katihar and Maheswari Devi whose returns are still outstanding. Against these are shown the total actual stocks of members and Gagalbhai for the month of February. When the April stock figures are issued, the correct figures for March will then be given.

COTTON

Calcutta, Thursday, April 14.

THE Bombay raw cotton market has been fluctuating in narrow limits during the past week and quotations are not very much changed. Earlier in the week there was some speculative selling on reports that the Government of India had asked the East India Cotton Association to liquidate hedge contracts in the present crop. On fears of Government intervention there was naturally some selling. On later consideration it was pointed out that the Government demand for liquidation of hedge contracts in the current year's crop was a "bull" point and there was a rally. Quotations have been fluctuating in narrow limits since then. It is reported that the East India Cotton Association has replied to the Government in connection with their demand for the liquidation of hedge contracts in the current crop, and has pointed out that it would be a far simpler procedure if trading in options was suspended and transactions in futures markets were allowed to continue. According to the Association, in the absence of any "futures" trading, the interest of the grower would be adversely affected and that it would not be possible to get a fair price for his crop. In a separate note to the Government they have also pointed out that, in the absence of any scheme which would ensure a fair price to the grower, it was not advisable to prohibit "futures" trading. Jharilla May close at Rs. 539 and July at Rs. 548-8 after being higher at Rs. 547 and Rs. 556 respectively earlier in the week. At the end of last week the quotations were Rs. 536-8 and Rs. 546-8 respectively.

PIECEGOODS

Calcutta, Thursday, April 14.

THE marketing of standard cloth has not had any effect on prices in the piecegoods market and the recent supplies have not satisfied even a very small proportion of total demand. There has been no decline in prices even for the coarser varieties. Business has been rather brisk during the past few days. As the demanded rates were conceded, mills entered into contracts for near deliveries. Business has again been on account of local mills, Bombay mills effecting only small sales in Grey varieties. Stocks with dealers are at a very low level. Unless adequate supplies are received in time, it is feared, that it would not be possible to prevent a further increase in prices.

GOLD

Calcutta, Thursday, April 14.

THERE has been a further substantial rise in prices in the gold market on account of speculative and investment buying. As there was a shortage of supplies in the Bombay market and there was no suggestion of a decrease in demand holders were naturally inclined to put up prices. Gold Ready touched a level as high as Rs. 80 and only towards the close there was a setback on account of profit-taking and selling. Gold Ready closed at Rs. 77-6 and First Settlement at Rs. 76-14. Even at the lower levels they are considerably higher on balance, quotations at the end of last week being Rs. 73-15 for Ready and Rs. 73-9 for First Settlement. The undertone is quiet. Sovereigns have improved from Rs. 52-8 to Rs. 55-8. There has been no setback in the quotation for sovereigns in the last two days though metal prices have declined. This is due to the scarcity of coins.

SILVER

Calcutta, Thursday, April 14.

THE silver market was quite firm. Quotations were marked higher only in sympathy. Closing prices are lower than the highest levels for the week though higher on balance. After being quoted as high as Rs. 116 Silver Ready closed at Rs. 114-4 and First Settlement at Rs. 114 after being Rs. 115-12. There is no change in the quotation in the London market the same being 23½d. for both Spot and Forward. There was a slight increase in the amount of business reported.

Stock Markets to-day and to-morrow

SMART RALLY IN MARKETS

Quietly steady conditions were noticeable in the stock markets in the important centres in the early days of the period under review. There was not much fluctuation in prices. Business passing was also on a moderate scale. While the reports regarding the progress of the Allied armies in North Africa were encouraging, developments in the Far East were not quite satisfactory from the Allied point of view. Operators and investors were, therefore, not inclined to take full advantage of the Allied successes in the North African war theatre. On re-opening after the holidays, however, a definitely firmer tendency is noticeable in Friday's session. With a larger amount of buying quotations have been marked higher all round. Indian Irons are quoting Rs. 36 and Steel Corporations Rs. 26. The technical position of the market is quite sound and, as has been pointed out in these columns on more than one occasion, if there are no adverse developments in the Far East in the next few weeks, it can be expected that the upward movement will be resumed.

* * * * *

The feature of the week is the strength of sugar shares. Nearly all the counters have participated in the rise. *Cawnpore Sugar* have improved from Rs. 31-12 to Rs. 36, *Champaran* from Rs. 29-8 to Rs. 34, *Samastipore Central* from Rs. 14-10 to Rs. 15-8 and *New Savan* from Rs. 14-4 to Rs. 15-12. *Carew & Co.* have jumped from Rs. 16-12 to Rs. 19. There has been good investment buying of shares belonging to the Begg Sutherland group. It is generally felt that, with the recent increase in controlled rates for sugar, and the increase in the volume of production, it will be possible for sugar companies to report a good rise in earnings for the current season. As the important period for crushing for the 1942-43 season is over, it is possible to take a more definite view regarding the prospects for 1942-43. About the demand for sugar, there is no question. As regards despatches efforts are being made to rail sugar as early as possible to the consuming centres.

Evidence of the improved conditions in the industry is provided by the declaration of an interim dividend by the Purtabpore Sugar Company, Limited for the year ending October, 1943 payable on April 21, 1943. The ordinary shareholders are to receive a dividend of 8 annas per share. It will be remembered that owing to the acute shortage of cane supplies, it was not possible for this Company to declare any dividend on ordinary shares for the year ended October 1942.

The results of the Macneill group of coal companies for the half-year ended December 1942 should be considered satisfactory if the acute difficulties on account of wagon supplies were taken into consideration. Two companies have been very badly affected, Dhemo Main Collieries in particular. The aggregate profit for the group is not very much lower at Rs. 9,26,363 against Rs. 10,04,247 for the previous six months. The decline in the net profit is due only to the poor showing made by the Dhemo Main Collieries, Limited and the Equitable Coal Company, Limited. The other three companies of the group have reported an improvement in the net profit. The rise in earnings of the Mundulpoor Coal Company, Limited is very striking though the shareholders have not been able to derive any advantage out of the higher level of earnings. The dividends on the ordinary shares have been maintained in the case of Equitable, Mundulpoor and Hurriladih Coal Companies while the West Jamuria Coal Company, in spite of the slight improvement in profits, has been obliged to reduce the dividend from 10 to 7½ per cent on account of the larger provision for taxation. Dhemo Main Collieries have not been able to pay any dividend as against 1¼ per cent for the previous half-year.

The net profit of the *Equitable Coal Company, Limited* for the half-year, after providing for taxation and depreciation, is Rs. 5,54,408 against Rs. 6,55,176 for the previous six months. The amount set aside to depreciation is not very much changed at Rs. 1,61,478 (Rs. 1,61,271). The amount set aside to General Reserve is lower at Rs. 1 lakh (Rs. 1.5 lakhs); provision in respect of taxation is Rs. 1.6 lakhs (Rs. 1.8 lakhs). The dividend on the ordinary shares has been maintained at 5 percent. The amount carried forward is lower at Rs. 167,275 against Rs. 194,493 brought in.

* * * *

In spite of the higher level of earnings, the *West Jamuria Coal Company, Limited* has been obliged to reduce its dividend from 10 per cent to 7½ per cent. The net profit, before providing for taxation and depreciation, is Rs. 2,06,008 against Rs. 1,81,710 for the previous six months. The amount set aside to depreciation is Rs. 13,156 (Rs. 12,647). There is no allocation to General Reserve against Rs. 30,000 formerly. Provision for taxation is Rs. 1,80,000 (Rs. 70,000). After payment of the lower dividend, the amount carried forward is higher at Rs. 28,577 against Rs. 13,225 brought in.

* * * * *

Western India Match Company, Limited has made rapid progress in recent years. As an important producer of matches in this country it is not surprising that there has been a further improvement in earnings in the year 1942, which are at the highest levels for some years. After setting aside Rs. 5,65,462 for depreciation, and providing Rs. 40 lakhs for taxation and meeting all other expenses, there is a net profit of Rs. 17.46 lakhs. The depreciation in respect of 1941 was Rs. 3.97 lakhs and provision for taxation Rs. 26.8 lakhs. The transfer to General Reserve is unchanged at Rs. 4 lakhs. A sum of Rs. 2.5 lakhs has been set aside as Special Reserve for the Port Blair factory. Allocations to other funds out of the earnings for 1941 was Rs. 2 lakhs. The dividend has been maintained at 7 per cent with the bonus of 5 per cent, total distribution for the year thus being 12 per cent (same). The amount carried forward is lower at Rs. 64,535 against Rs. 1,27,415 brought in.

The shareholders are to receive bonus shares. It is proposed to capitalise Rs. 8 lakhs out of the reserves and create 8,000 ordinary shares fully paid. These new shares will be distributed among the shareholders in the proportion of one share for every 10 shares held. There has naturally been a sharp rise in the quotation to Rs. 375 cum-rights.

* * * *

In the last week's issue of "Investors Supplement", commenting on the results of the *Ramnugger Cane and Sugar Company, Limited* for the year ended August 1942, it was mistakenly given that the arrears in respect of the preference shares for the period March 1, 1938 to August 31, 1941 amounted to Rs. 4,84,000; the correct figure should be only Rs. 84,000.

"Watch-Dog."

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 16.

RATHER uninteresting conditions have been noticeable on the Calcutta Stock Exchange during the past week, which is short of two working days on account of Wednesday and Thursday being holidays for the Bengalee New Year's day, and 'Sri Ram Navami'. During the short period in which markets have remained open rather uninteresting conditions have been noticeable with quotations fluctuating in very narrow limits. Business passing has been on a smaller scale. The undertone in the several sections is steady and quotations towards the close were mostly unchanged on balance. Operators and investors alike are awaiting further developments.

In the giltedged securities section business has been very restricted there being not many sellers for the medium-dated and short-dated loans. Provincial loans are well held. 3½ per cent Paper was unchanged at Rs. 94. Among terminable loans, 3 per cent Defence Bonds 1946 were Rs. 103, 3 per cent Second Defence Bonds 1949-52 Rs. 108 and 3 per cent 1951-54 Rs. 99-12. 3 per cent 1963-65 were slightly better at Rs. 95-10, 4 per cent 1960-70 at Rs. 110-6, 4½ per cent 1955-60 at Rs. 113-10 and 5 per cent 1945-55 at Rs. 108. Among Provincial Loans, 3 per cent *Punjab* Bonds 1958 were done at Rs. 96-8.

There are no interesting features in the Coal section, a rather quiet tendency being noticeable with the publication of discouraging reports by the Macneill group for the half-year ended December, 1942. *Amalgamated* were Rs. 35-4, *Bengal* Rs. 440, *Bokaro and Ramgur* Rs. 19-2, *Burra Dhemo* Rs. 6-13, *Equitable* Rs. 34-4, *Hurriladih* Rs. 16-9 cum-dividend, *New Beerbhoom* Rs. 18-8, *Satpukuria and Asansol* Re. 1-9, *Sendra* Rs. 14-4, and *Union* Rs. 31-14, ex-dividend.

In the Cotton section, the recent high levels have been fully maintained though business passing has been on a slightly restricted scale. *Bengal-Nagpur* were around Rs. 33-4 while *Benares* came in for some attention at Rs. 12-5. *Cawnpore Textiles* were further higher at Rs. 24, with *Elgins* not very much changed at Rs. 60-12. *Kesoram* were Rs. 14-2 ex-rights, *Muir Mills* were unchanged at Rs. 396 while *New Victoria* were around Rs. 9-14.

Business transacted in the Jute section has been rather restricted even though the jute manufactures market has been quite firm. *Anglo-India* quoted Rs. 324, *Birla* Rs. 32-4 ex-rights, *Clive* Rs. 25-4, *Fort Gloster* Rs. 593, *Howrah* Rs. 59-8 and *Hukumchand* Rs. 23-4. *India* were Rs. 516, *Kamarhatty* Rs. 531, *Nellimarla* Rs. 20, *National* Rs. 25-8 and *Presidency* Rs. 6. *Soorah* were dealt in at Rs. 14-11 and *Union* at Rs. 327.

In the Engineering section, Indian Irons and Steel Corporations were fluctuating within very narrow limits and the quotations for the most part of the week were around Rs. 35-6 and Rs. 25-6 respectively. Towards the close a slightly firmer tendency was noticeable and Indian Irons and Steel Corporations were quoted at Rs. 35-10 and Rs. 25-10 respectively. *Bhartia Electric* Steel were uninteresting at Rs. 16-2 while *Indian Galvanizing* were easier at Rs. 39 cum-dividend. *Indian Malleable Castings* ordinaries were better at Rs. 9-2 with deferreds at Rs. 2-15. *Indian Standard Wagon* were Rs. 64 and *Marshalls* Rs. 3-9. On the announcement of an issue of additional capital, *National Iron and Steel* are slightly easier at Rs. 12-5. *Saran Engineering* were steady at Rs. 7-8.

Sugar shares have been very firm and there are good buyers for all the popular counters. With the possibility of a large increase in production for the current season, and the better arrangements for immediate despatch of sugar to the consuming centres and the increase in the supply of chemicals for refining, it is believed, there will be a substantially higher level of earnings for the current season. That is the reason why the quotations for almost all the popular shares have been marked higher. Carew & Co., were 8 annas better at Rs. 17-8, *Cawnpore* nearly two and a half points higher at Rs. 33-12, and *Champarun* two and a half points higher at Rs. 32-14. *Purtabpore* were Rs. 16-12, and *Ryam* Rs. 32-8. *Samastipore Central* have improved from Rs. 14-11 to Rs. 15-10. *U. P. Sugar* have been steady at Rs. 19-3. It is reported that *Purtabpore* have paid an interim dividend in respect of the year ending October, 1943.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper* have remained unchanged at Rs. 3-13 and Rs. 2-6 respectively. *Alkali and Chemical* were a shade better at Rs. 32-8 with *B. I. Corporation* at Rs. 5-14. *Assam Bengal Cement* were Rs. 13-2, and *Bengal Aerating Gas* Rs. 18-2. *British Ceylon Corporation* were steady at Rs. 18-12 and *Calcutta Trams* Rs. 18-2. *Indian Cable* were Rs. 28 and *Indian Rubber Manufacturers* Rs. 28-10. *Ivan Jones* have been marked higher at Rs. 3-5 on publication of an encouraging report while *Midnapore Zemindary* were Rs. 77, *Publicity Society* were Rs. 12 ex-dividend and *Reliance Firebrick* Rs. 16-2.

Among Paper shares, *India Paper Pulp* were unchanged at Rs. 176. *Titaghur Paper* were higher at Rs. 24-12, *Orient Paper* at Rs. 26-11 ex-dividend and *Star Paper* at Rs. 21-1. *Titaghur Paper* preferred ordinary were Rs. 5-6.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 15.

The local stock exchange opened rather quiet but rallied towards the close. On Saturday last there was a substantial improvement in prices, especially, of Textile shares on reports regarding the current year's purchases of the Supply Department from the mills. In sympathy with mill shares steels and most miscellaneous shares recorded gains. When the market opened on Monday it was found that enthusiasm was short-lived. A quiet session ended with the majority of the shares showing substantial losses. The stock exchange, however, was not entirely depressed. A bright spot was provided by Belapur Sugar which was the only share that showed sign of improvement. Of Tuesday much the same story must be told, with the bigger shares remaining stagnant though certain other shares recorded a slight advance. The prices to-day have steadied up under the influence of encouraging war news. News from the Tunisian Front especially is too good to be ignored. The significance of the Allied victory in this theatre of war has encouraged bulls to lend support to equities generally and in particular to mill shares. There was limited enquiry for the Steel shares. On Thursday, after three days of drooping, the stock exchange ruled steady and prices at close to-day are somewhat higher on balance compared with prices ruling last week-end.

Government securities were steady with 3½ per cent Government Paper at Rs. 94.

Mill shares opened quiet but improved towards the close on bull support consequent on encouraging war news. Almost all shares were higher on balance. *Bombay Dyeing* were slightly higher at Rs. 1,895; *Ahmedabad Advance* were done at Rs. 480; *Central India* after being lower at Rs. 467 at the opening improved to Rs. 479 at the close of dealings to-day; *Century* were Rs. 765; *Colaba Land* Rs. 271; *Gokak* were higher at Rs. 392; *Indian Bleaching* changed hands at Rs. 259; *Kohinoor* were Rs. 755; *Simplex* were done at Rs. 325; and *Svadeshi* at Rs. 598.

Steel shares were quiet in the early part of the week in the absence of definite support; but prices steadied towards the close on buying enquiry following favourable war news. *Tata Steel* Deferreds gained nearly 30 points closing at Rs. 1,892-8 (Rs. 1,862-8); *Tata* Ordinaries were also higher at Rs. 385-8 (Rs. 380-8) while *Indian Irons* were higher by 6 annas at Rs. 35-8.

In Miscellaneous section *Belapur Sugar* is the only one that took an upward path when none of the other shares moved up. This particular share recorded an increase of 10 points from Rs. 236 to Rs. 246. Operators and investors alike found it difficult to ignore it when upcountry sugar shares were going up. Otherwise this section behaved in exactly the same way as the other groups. *Alcock Ashdown* were Rs. 755; *Bombay Steam* were higher at Rs. 582-8; *Bombay-Burmah* (Old) were unchanged at Rs. 310; *Bombay-Burmah* (New) were also lower at Rs. 105; *B.E.S.T.* were done at Rs. 151-6; *Shivrajpur* were quoted at Rs. 66; *A.C.C.* were Rs. 221-12; *Andhra Valley* were Rs. 1,825 x.d.; *Tata Power* Rs. 1,782-8 and *Tata Hydro* Rs. 189; and *Premier Construction* Rs. 171.

THE DACCA ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 30th day of April, 1943, at 3-30 p.m., for the following purposes:—

(1) To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st December 1942.
(2) To declare a dividend on the Preference Share Capital of the Company for the year 1942.
(3) To elect a Director in place of the retiring Director.
(4) To elect Auditors for the ensuing year, and to fix their remuneration.
(5) To transact any other business that may be brought forward.

The Share Registers of the Company will be closed from 24th to 30th April 1943, both days inclusive.

OCTAVIUS STEEL & CO., LTD.,
Managing Agents

Calcutta, 12th April, 1943.

Note:—In accordance with the Government of India Notification No. 1564 OR/42 dated 7th September, 1942 the Directors' Report and the Account will not be published.

(Half-yearly General Meeting held on 16th April, 1943.)

Audited Accounts for the half-year ended 31st December, 1942:—

After providing Rs. 30,252-0-0 for Depreciation the Accounts show a sum of Rs. 7,945-14-10 at credit of Profit and Loss Account including Rs. 18,273-3-1 brought forward from last half-year. The Directors recommend that this should be carried forward.

Stocks totalled 2,043 tons on 31st December, 1942.

Colliery.—The Company's Colliery has been maintained in good order.

Sand is now being supplied to the Colliery and stowing operations have begun.

This will mitigate the mining difficulties which have been recently experienced and which are partly responsible for the serious drop in raisings but the stowing is largely a safety measure and not one which can be expected for some time to show any return to the Company.

General.—There has been no change in the general situation.

There is still a great shortage of wagons and despatches are more and more closely controlled.

The shortage of wagons sets a severe limit to the extent to which raisings can be increased and advantage taken of the large demand for coal which now exists.

As there is therefore in effect no free market for coal, prices continue to lag behind steadily increasing costs.

Actual restriction of output has been avoided, but raisings would have been higher had it not been for scarcity of labour.

Managing Agents.—Messrs. MacNeill & Co.

Authorised, Issued and Subscribed Capital—Rs. 16,00,000 *in* 1,60,000 *Shares of Rs.* 10 *each, fully paid up.*

(Half-yearly meeting held on 16th April, 1943.)

Audited Accounts for the half-year ended 31st December, 1942:—

After providing Rs. 1,61,437-14-6 for Depreciation, Rs. 1,60,000-0-0 for Taxes and Cesses and transferring Rs. 1,00,000-0-0 to General Development Reserve the Accounts show a sum of Rs. 3,27,462-9-11 at credit of Profit and Loss Account including Rs. 1,94,492-11-10 brought forward from last half-year. The Directors recommend that this should be allocated as follows:—

	Rs.	A.	P.
To payment of a dividend on the Preference Capital at the rate of 6 per cent per annum, free of Income-Tax, for the half-year ended 31st December, 1942	12,000	0	0
To payment of a dividend on the Ordinary Capital at the rate of 10 per cent per annum, free of Income-Tax, for the half-year ended 31st December, 1042	1,48,188	0	0
Leaving to carry forward	1,67,274	9	11
Total ..	3,27,462	9	11

Stocks stood at 43,652 tons at the close of the half-year including coal at Depots in India and abroad.

Collieries.—The Company's Collieries have been maintained in good order.

The scheme for supplying sand to the Dishergarh Seam Collieries is now complete and sand is being put into stock. Unfortunately the difficulty in obtaining material for the underground arrangements at the Collieries means that there will still be some delay before actual stowing operations can start.

The new Shafts at Bhanora have reached the Poniati Seam. Development is proceeding.

Two new Shafts are being sunk to 16 Seam in Bhutgoria property.

Managing Agents.—Messrs. MacNeill & Co.

*Includes provision for taxes and cesses of Rs. 3,80,398.

PUSSIMBING TEA COMPANY, LIMITED

Audited Accounts for the year ended 31st December, 1942:—

Profit and Loss Account.—The gross profit for the year is Rs. 60,171-7-4, and after allowing for the reserves shown, there is a nett profit of Rs. 42,714-14-4 and a final balance on this Account of Rs. 62,775-4-3, which the Directors propose to deal with as follows:—

	Rs.	A.	P.
Pay the Preference Dividend for 1942 ..	14,350	0	0
Pay a Dividend of 10 per cent on the Ordinary Shares	20,500	0	0
Transfer to General Reserve (bringing this up to Rs. 1,12,500)	7,500	0	0
Carry forward to 1943	20,425	4	3
Total ..	62,775	4	3

Crop.—A high degree of quota releases for the year was made in order to avoid any restriction on total production, and it has since been decided to allow the voluntary internal regulation scheme to lapse on the 31st March, 1943. Weather conditions were generally favourable and a crop of 172,380 lbs. was made. The Government of the United Kingdom took over the purchase of all export teas from the 15th September, 1942, and the estate contracted with the Tea Controller for India to supply in all 135,970 lbs.

	1942	1941
	As.	As.
Gross average export sale price	16.24	16.79
Gross average internal sale price	17.38	8.68
Total nett average sale price	16.33	15.60
Total working cost per pound of tea produced ..	10.89	10.15

Allowances had to be made to help labour and establishment meet the serious increase in the cost of living; tea chests, and other stores increased greatly in cost; and substantial expenditure was incurred on the compulsory Government Schemes of War Risks Insurance on tea stocks and estate buildings and equipment. These increased costs of production were partly met by an additional allowance for this purpose on the Government Contracts.

Estimates for 1943 have been based on a crop of 2,000 maunds at a total cost of Rs. 1,32,059.

Managing Agents.—Davenport & Co., Ld.

Authorised, Issued and Subscribed Capital—*Rs.* 4,10,000 *in* 2,050, *7 per cent Cum. Pref. shares of Rs.* 100 *each and* 20,500 *Ordy. shares of Rs.* 10 *each, both fully paid up.*

Synopsis of the Balance Sheet as at 31st December, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	4,10,000	Fixed Capital Expenditure ..	4,10,000
Reserves and other funds	1,63,438*	Stores ..	31,249

		Total Liquid Assets ..	19,86,154

INDIAN GALVANIZING COMPANY (1926) LIMITED.

Audited Accounts for the year ended 31st December, 1942:—

	Rs.	A.	P.
The profit for the year, after providing for Depreciation and Taxation, was	1,82,157	0	7
To which is added the balance brought forward of	40,164	1	4
Total ..	2,22,321	1	11

Out of the total of Rs. 2,22,321-1-11 the Directors have set aside the following amounts:—

	Rs.	A.	P.
Reserve	25,000	0	0
Reserve for Stock	50,000	0	0
Total ..	75,000	0	0

This leaves a balance of Rs. 1,47,321-1-11 available for distribution, which the Directors recommend be dealt with as follows:—

	Rs.	A.	P.
Dividend at 25 per cent per annum, free of Income-Tax	1,02,627	8	0
Balance carried forward	44.693	9	11
Total ..	1,47,321	1	11

The Workshops were fully employed throughout the year and the orders now in hand ensure a continuance of these active conditions during the current year.

Managing Agents.—Balmer Lawrie & Co., Ltd.

Indian Finance

ISSUED WEEKLY

Vol. XXXI. No. 19 SATURDAY, APRIL 24, 1943 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy conditions have prevailed in the money market during the past week with inter-bank call money unchanged at ½ per cent in Calcutta, ¼ per cent in Bombay and 1 per cent in Madras. That the recent demand for funds is over and that funds are returning back to banks is borne out by the return of Scheduled banks for the week ended April 9, 1943. It is surprising, however, to note that the Government of India have not been able to get their requirements of treasury bills in full at the auctions held this week. The total amount of applications was only Rs. 7,64.25 lakhs against Rs. 9,01 lakhs in the previous week against the offer of Rs. 8 crores. The amount accepted this week was Rs. 7.58 crores; the average discount rate is unchanged at rupee one and annas two per cent per annum. It is reported that there has been slightly more demand for funds against sugar stocks but this demand by itself could not have been responsible for the decline in the amount of applications for treasury bills.

The view has been expressed in these columns on more than one occasion that treasury bills sales will be limited by the amount of maturities in any particular week. If it is noted that sales of intermediates in the period April 14 to April 19 have been as much as Rs. 2,29.25 lakhs it will be readily agreed that monetary stringency has not been the reason for the decline in applications. Sales of treasury bills and intermediates during the week amounted to Rs. 9,87.25 lakhs against total maturities of Rs. 10,44.5 lakhs. As the ways and means position of the Government is comfortable it will be enough if treasury bills sales equalled maturities at least for some time.

The returns of the Reserve Bank for the week ended April 9, show that there has been a further expansion of currency against sterling securities. Total notes issued are Rs. 11.27 crores higher at Rs. 671.97 crores and notes in circulation Rs. 11.82 crores higher at Rs. 663.2 crores. Rupee coin are higher at Rs. 14.37 crores against Rs. 14.09 crores and there is a suggestion that there has been a return of rupee coin from circulation. Sterling securities in the issue department are Rs. 19.98 crores higher at Rs. 467.64 crores. In the short space of three weeks sterling securities have thus increased from Rs. 396.77 crores to Rs. 467.64 crores. In the same period rupee securities have come down to Rs. 145.54 crores from Rs. 194.42 crores. The cancellation of "ad hoc" securities to the extent of Rs. 40 crores has been possible only with the substantial receipts of sterling from the British Government to the credit of the Indian Government.

In the Banking department, after two weeks, government deposits are below Rs. 19 crores, the decline over the figure for the previous week being Rs. 4.98 crores. This decrease in deposits is perhaps in connection with payments for war orders and for which substantial payments have been received in recent weeks from the United Nations. The prevalence of easy conditions in the money market is reflected by the increase in bank deposits from Rs. 41.07 crores to Rs. 47.00 crores. Foreign balances are lower by Rs. 3.29 crores but if the transfer to the issue department of Rs. 19.98 crores is taken into consideration there has been a net receipt of Rs. 16.69 crores. Ways and means advances are higher at Rs. 58 lakhs.

The return of the Imperial Bank for the same week shows an increase in deposits by Rs. 90 lakhs to Rs. 179.52 crores. The rise in advances is more than the improvement in deposits, total advances being Rs. 36.45 crores against Rs. 35.04 crores. Investments are slightly higher at Rs. 128.11 crores. Cash balances, as a result, show a decline of Rs. 43 lakhs to Rs. 24.89 crores. The increase in deposits with the Reserve Bank has, therefore, been mainly on account of other banks.

Stock markets have been very firm during the past week and there has been good buying especially of Cotton and Sugar shares. The reports that there will be no control of prices for yarn and cloth has resulted in an abrupt rise in prices and quotations for most of the cotton shares are at the highest levels for the war period. Sugar shares have been well held as it is pointed out that with the higher level of production and higher controlled rates, sugar companies might be able to report the best earnings in the last decade.

Bullion markets have been very active and a rise of several points has been recorded in a few days. The abrupt rise in prices is on account of buying, both on speculative and investment account. The market is short of supplies and there is as yet no sign of a check to the rise in prices. There was a talk of the imposition of a 'ceiling' for both gold and silver in mid-week but how it is possible to check prices without Government appearing in the market as a seller it is difficult to say.

The exchange market has been dull but steady.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d. and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

TREASURY BILLS

Indi

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, April 20, 1943. Total amount offered was Rs. 7,64,25,000. Tenders at Rs. 99-11-6 per cent and above were accepted in full. Lower tenders were rejected total amount accepted was Rs. 7 crores and 58 lakhs, the average rate of accepted tenders being Re. 1-2 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, April 27, 1943, in Bombay up to 11 a.m. and up to the close of business on Monday, April 26, 1943, at other centres. Successful tenderers should make payment on Friday, April 30, 1943. Other conditions are as usual.

Three months Intermediates will be sold from April 21 to April 26, 1943, at Rs. 99-12 per cent, subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from April 14 to April 19, 1943, amounted to Rs. 2,29,25,000.

During the week ended April 16, 1943, Government of India Treasury Bills for Rs. 11,77,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

The amount passed through the Calcutta Clearing House for the week ended April 16, 1943, was Rs. 24,39,04,241. The number of cheques—93,834.

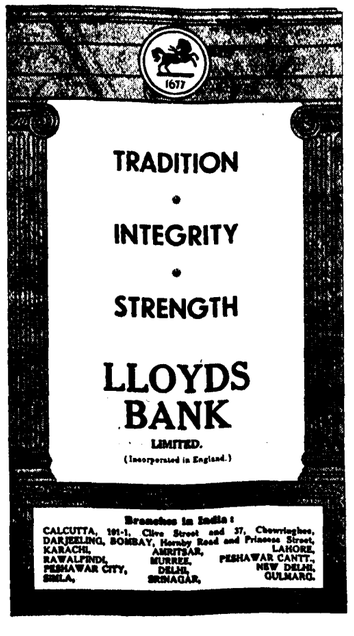
Finance Abroad

Thursday Morning.



Trouble between the Senate and the President as regards power to devalue the dollar at discretion is to be regarded as a very important development following the Republican party's decision to watch over the President's exercise of special powers granted by Congress. The Stabilisation Fund is likely to continue for two years, but Mr. Morgenthau has already accepted the Senate Committee's view as to what the President can do in regard to the dollar's value. The U.S. Treasury is keen only on its Exchange fund and the President can have no chance to reduce the value of the dollar by offering more dollars for an ounce of gold. The news from the U.S.A. is of great importance to the bullion market. The President cannot do anything about bringing the dollar-sterling rate back to its old level of 4.86 by use of his special powers. Congress has decided that when a decision has to be taken at any time, it must be consulted. The Treasury will have the $2 billion fund it wants. The dollar will not depreciate in the exchanges. The Stabilisation fund is a part of the Treasury's gold holding, and on present reckoning alone, is as large as what Britain had in the Exchange Equalisation Account at the best of times. It is large compared with what other countries have at their disposal, and after the repatriation of neutral funds, before and during the war, is large enough to keep the dollar safe from depreciation. The dollar may even harden in terms of South American currencies, but that means nothing so far as the London and Bombay rates for dollars are concerned. What is important to note is that the U.S.A. will start again with a useful nucleus for any projected international clearing-house. The Exchange Stabilisation Fund might be assigned for the U.S. share of any Unitas required for a post-war currency plan. Other countries won't have the same advantage but Mr. Morgenthau by getting the Committee's approval for the maintenance of the Fund, has not ensured inter-Allied plans going through. As for the bullion market it will not miss the ultimate significance of the Committee's decision. If the President cannot devalue the dollar a second time, there won't be any rise in gold prices abroad. Silver, too, will be left untouched, and some time a fall in Indian bullion prices must come. Gold and silver touched unprecedented levels on the calculation of speculators that the pre-war dollar-sterling rate is not going to be restored at all. Devaluation, of course, will be advantageous for London holders of internationals but for none else. If the dollar price of gold is going to stay as it is the justification for a gold boom here is absent. That the sale of bullion engenders feverish speculation, in the share markets, can well be believed in view of what is happening to-day. The absence of ceilings has induced frenzied speculation in gold and silver but as part of the selling is really due to distress as in 1933-34 the gain is not entirely the middleman's. The U.S. Treasury Secretary has of course helped the rise by his utterances in the past but it cannot be assumed that the Treasury is going to buy gold in a big way by the offer of dollars, which may help the Allies; and the influx of gold in the U.S.A. checked decisively by the war is going to help India's exports even if the Stabilisation Fund may not subsequently be used to supply gold when it is wanted; as the U.S.A. may not start to use the Stabilisation Fund to keep gold out and not to attract it—as an official statement indicates.

The full import of the Committee's decision cannot be understood for some weeks. It is true that the U.S.A. is sticking to gold for international settlements but that is not a new bull point for gold. Replenishment of the Fund to the tune of 401 millions taken out is not going to boost gold prices. Nor is the Senate's refusal to give the President former powers a guarantee that the Senate or House can do anything beyond withholding the powers desired. But Congress has fewer Democrats in it and the President is on tour. For 9 years the U.S. Treasury has maintained gold at $35 per ounce. To help the Allies, it may keep the price after June 30, at the same level. The continuation of the Stabilisation Fund is mere routine and the Senate's refusal to grant previous powers does not count. It is known that in regard to foreign policy after the war the Senate does not pull with the President and recorded its view recently against commitments—an action disapproved by President N. M. Butler of Columbia. The Third Term has produced many diversions in the U.S.A. but the revival of Isolationism (of a new type) does not accord with Mr. Landon's support in principle of the President's plan to give under-privileged nations their rights.

The exchange value of the riyal may not change after the assurance that lease-lend aid is to be made available to Saudi Arabia. The decision may be governed by a desire to develop oil production on behalf of U.S. enterprise. The Saudi riyal may have weakened, and treasure exports being not of the question, lease-lend may be called desirable. What is important to note here is that Saudi Arabia is on the same footing as Turkey and its being out of the Saadabad pact does not make any difference to the United Nations. After the fall of Tobruk, the Axis tried to work up feeling in the Middle East against the Allies. That is made impossible forever by the decision of Washington. One more claimant for U. S. aid means an addition to the total bill but Mr. Stettinius has been told that Saudi Arabia is friendly and deserves the help given to Allies. North Africa has received much coal from Britain and many other goods from the U.S.A. worth $50 millions up to June 30. Lease-lend has made ordinary trade unnecessary but the war materials available from Africa should be of some value to the U.S.A.

The increase in the Treasury's short-term borrowing in London apart from increase in Treasury Deposits is due to the bigger expenditure anticipated in the Budget. Treasury bill offers of £85 millions a week should not make difference to the market in which applications greatly exceed the tender amount though the rate obtained is hardly higher. The behaviour of the Funds has been called satisfactory; slight falls in quotations this week reflect the renewal of support for Home Rails with the majority of stocks higher on Tuesday and oils too. The Venezuelan share Ultramar has become prominent once again, and the bigger V.O.C. at 35 shillings shows a handsome premium like other leading oil shares. Fears of higher taxation have apparently died out. Mexican Eagle has appreciated slightly. The tendency in Home Industrials remain firm and a notable feature is the rise in Cable and Wireless. The war should be increasing the Company's traffic and a larger dividend for the Holding Company is quite likely as losses due to war have been written off last year. Taxation has not made for much change in either brewery or tobacco shares but textile issues after sustained improvement have tended to quieten. War news should help to increase investment activity and the increase in savings promised by a curtailment of consumption is good for the stock exchange. By comparison Wall Street has been featureless. The boomlet ran out and the trouble over manpower may affect common stocks. The earnings of corporate enterprise have fallen owing to taxation and right through the year the New York Stock Exchange has been featureless. London has been buying internationals, gold minings etc. Most gold mining shares have been fancied as strongly as in the last month and West African shares have received some attention lately and a good feature developed also in copper minings after an assurance as to E.P.T. assessment. The cables say little about rubber and tea shares, but a steadier tone is to be discerned.

The U.S. Treasury Secretary's statement on gold and the stabilisation fund are hardly such as to support the extravagant hopes of Indian bullion operators. The limited supplies and the discouragement of forward dealings in the commodity markets seem to be the chief cause of the advance by forced marches. The air raid panic did not lead to such a big rise as the one noted in the past two weeks and the rush to buy bullion may be put down to the vague fears induced by most statements as to currency inflation in India. The authorities need hardly curb the rise if it is caused by temporary fears

as to what will come after the Japs limited success in the Arakan. There is, however, reason to urge that the fear of ceilings promotes speculation but a statement as to what is to be done cannot help much as against an offer to sell silver to the public as in the past. But silver is wanted in Britain of Canada as well as U.S.A. for many industrial purposes as tin is scarce and the saving on coinage here does not seem to have added much to Government stocks though Government's profit on coinage has risen. It is clear that the rise in bullion, if it is a surprise, is not at an end.

The Japanese Government has undergone many changes. The new members do not obviously bring in the moderate element wanted to secure the full support of business interests and there is a possibility that more vigorous exploitation of the conquered territories will follow. Forced labour in Thailand is by no means the limit of Japanese ingenuity. The currency muddle in North China has been exploited and the relief that is to be given to China will not help the Occupied provinces. Two big British banks have opened branches at Chungking this year and they may help the Stabilisation Board to keep the Nanking dollar down. The Chungking Government is known to have promulgated orders for compulsory subscription to war loans by the well-to-do and this bit of self-help will help to produce the impression that China is doing much for herself.

Postwar International Economic Policies

Commercial circles in India have of late shown not a little concern over the nature of international economic policies in the post-war period. Such indications as there have been already of the policies, which great Powers like Britain and the U.S.A. may present to other nations for their acceptance with more or less political and economic pressure, are not calculated to reassure weak nations like India that they will not be called upon to subordinate the interests of their own national economy to the needs of economic nationalism. While it may be said that the dangers of international economic policies to the needs of our national development should not be altogether overlooked, the need to foresee the policies, in so far as they can be foreseen, and appraise their bearing on our national economic policies in the future can hardly be denied. Obviously, it is no easy task to foresee beforehand the shape which these policies will take. The task can be simplified only on the assumption that the views of dominant political parties in Britain and U.S.A. will be free almost exclusively to shape the economic policies that the various nations of the world will have to consider and support.

Such an assumption, it will be seen on a little reflection, would be wholly invalid and erroneous. In the first place, the views that are now prevalent in Britain and America as to the needs of their own national economies and those of world economy have been formulated before the ravages of the war on their economic systems can be fully assessed. Secondly, the cry that the war is for freedom and democracy has enabled the facile assumption that international trade is one of those ideals, which are now shrieking under the Nazi heel for the grant of freedom by the English-speaking peoples. Thirdly, there is no reason to believe that either the British or the American Government have fully considered the changes in the economic structure which will be required by the development of productive technique during the course of the war and by the peremptory demand that the masses will make for governments addressing themselves directly to the problem of their welfare, instead of sidetracking the issue in the name of economic internationalism. Another circumstance to be considered is that other nations will not be wholly powerless to resist the imposition on themselves of undue concern for international trade. The economic systems of the nations have advanced too far on the path that leads away from free trade to be able to effect the changes that Britain and America may at present be deemed to contemplate. These nations, too, have been obliged by a variety of forces starting with the last great war to remodel the economic systems to conditions in which the old interdependence of the various countries had been greatly minimised.

It will be seen, therefore, that far more will go to the making of economic policies in the post-war period than the theoretical and doctrinal preferences of leading politicians and academicians in Great Britain and the U.S.A. Of these factors and forces, one may make special mention here of the vast development of productive technique, the immensity of the problem, in each belligerent country, of repairing the ravages of war, a problem that will be extremely difficult to solve except on the basis of an essentially national plan; and lastly, the greater need than ever before for governments to address themselves to meeting the economic needs of the masses. It may be added here that the significance of this need to secure the well being of the masses lies in the obligation which the governments will feel to put a lighter emphasis on economic policies which, through securing large markets for exports in foreign countries, will seek to sustain the profits of the upper classes. It is difficult to foresee the relative strength of these factors. But there can be no doubt that the ultimate effect will be to preclude a retracing of the steps that have been taken by the nations towards the organisation of the economic life on a national, as distinct from an international, basis.

Nevertheless, the importance of these factors should not be exaggerated. For, once the war is over, there is bound to be an emotional exuberance in favour of treating the world as one and of combating the tendency to exaggerate the economic importance of political frontiers. Britain and the U.S.A. will feel called upon to inaugurate a drive for a better co-ordination of world economy through greater freedom of trade and better regulation of international finance. When the problem of world economy is viewed mainly as a problem of securing better economic relations among the countries, the two questions that emerge into view are trade relations and financial relations. Readers of these columns would hardly need to be told that the better regulation of international finance can be achieved only against the background of better trading relations, which in turn depend on a more rational distribution of productive activity among the nations than has obtained during the last century and more. The proposals that Britain and the U.S.A. have so far made for the regulation of international finance in the post-war period have shown that these proposals ultimately come up against the problem of trade relations.

Agreement between the two English-speaking nations on the question of trade relations is still difficult to hope for. For the fact remains that, economically, Britain and the U.S.A. are differently placed. While the former is still obliged by the nature of her resources to work for the maintenance of a large export trade and the safeguarding of immense export markets, the U.S. will be more concerned to protect her indigenous producers from the competition of cheaper wares from abroad. Nothing that can possibly happen during the course of the war will change this difference in the economic position of the two countries. On the other hand, in so far as Britain will witness after the present war all the effects of the last war in a more aggravated form, the difference may be even wider.

All the same, in view of the commitments of American opinion in respect of international free trade and in view also of the fact that on the question of regulation of international finance, there are a number of points of agreement, it may be presumed that, soon after the war, Britain and America will succeed in inaugurating a drive for greater freedom of commercial relations. Taking first the question of international finance, it is safe to assume that a scheme will be formulated which will provide for (1) international consultation so as to prevent competitive currency depreciation, (2) credits for weaker nations at the international bank with a view to facilitate the removal of exchange controls and (3) the regulation of capital movements so as to eliminate frequent or serious upsets in the international exchanges. Such a scheme will doubtless give the English-speaking peoples a means of effective persuasion of other nations to grant comparatively greater freedom of trade. The grant of big international loans, the provision of facilities in the day-to-day working of the

international exchanges and accommodation in the matter of gold payments will serve as incentives towards readier compliance with the demand for adjustments of tariffs.

But such adjustments can be effected only where the interests of the great staple industries and the well being of large masses of workers are not involved. For here public opinion and the practical difficulties, which will always weigh with governments, would alike argue against such accommodation being shown to the demands of the great Powers. We may take it, therefore, that nothing that Britain and the U.S.A. may do in the cause of free trade can avail to take away the emphasis from the development of internal resources or to detract from the principle that the development of the national economy is a national responsibility.

CROPS AND PRICES

Since the Food Grains Control order, followed by a series of detailed regulations as to disposal, transport etc. appeared last year, there has been little doubt as to the fact of a shortage of food supplies in India. Other things, too, derived from the soil e.g. long-staple cotton have been deficient in relation to demand, constantly growing on account of the war, and the failure of imports. The effect on the price level is seen as more important than that on the volume of consumption in a country where the normal growth of population tends to outstrip the production. Facts as to the food supply are familiar; the prospects last year were rated good, owing to the food production drive, but actual results do not bear out the optimistic views expressed unquestioningly last year. If jute supplies have tended to be large, the fall in rice production, particularly in Bengal, must be reckoned ominous. The best that can be hoped from the many new arrangements proposed is the early arrival of supplies rather than a lowering of prices. Decontrol has been atttempted to check hoarding but crop figures for 1942-43 in the case of rice and probably wheat as well are such as to suggest that improved distribution cannot by itself help to lower prices. A reduction in the actual or estimated volume of consumption by rationing can hardly be attempted for the effects on an ill-nourished population may be both severe and permanent. The improvements in administrative machinery can bring little advantage in regard to the individual's estimated quota but the quota framed for the present provisionally in a few cities may not correspond to that required for normal health and efficiency. A larger supply of edible oilseeds may, however, confer an advantage on those who can modify their food habits. An increase in groundnut supplies has been followed by a sharp rise in prices. The demands of oil-crushers may enlarge the local supply of oilcake for cattle or the soil; but it can help little to put groundnuts at once in the place of dal in the Indian dietary.

A reading of crop forecasts for the year 1942-43, indeed suggests that as against a known shortage of imports of both copra and cocoanut oil, and an increase in overseas demand for oilseeds modified perhaps in the future by African supplies there is only a small increase under sesamum and groundnuts. The area under sesamum for 1942-43 is returned as 4,181,000 acres showing an increase of 5 per cent on the previous year and the probable outturn is 451,000 tons against 415,000 tons in 1941-42. In the case of groundnuts the area is returned at 7,431,000 acres showing a rise of 5 per cent on 1941-42 and the estimated outturn is higher by 4 per cent at 2,714,000 tons. The increase in regard to most commercial crops is not noted either under linseed or under cotton, but the acreage figures available indicate that the Grow More Food drive did not lead to a large increase in food crops; but produced increases under cash crops like castorseed owing to the belief not unwarranted that better profits would be available to the cultivators owing to export revival. It is, however, noteworthy that the crop forecasts do not cover the millets. Their importance must have increased greatly since official appeals to use millet in place of wheat or rice appeared, but millets are not important in the two Provinces which nominally had a surplus of rice and have none at present. The maladjustment is likely to continue pending any plan for subsidy to cultivators and the lack of any details as to wheat crop of 1942-43 apart from the increase of 6 per cent in the area to 34.3 million acres can be cited to support the view that the surplus in the Punjab and the U. P. this year may be less important for Bombay and Bengal than the assurance of supplies from Australia. The creation of a food reserve out of the sterling assets acquired in the war period by reduced imports and larger exports has been scarcely suggested as purchases from the bigger crops in Canada and Argentina are not feasible in view of shipping and exchange difficulties. Imports from Australia alone are possible, and the Middle East is still an importer, dependent on Australia rather than America. Relief may be expected only when the Mediterranean is open to shipping, and the buyer of bread may well learn how war affects the food habits of millions and how regular, plentiful supplies for the Army leave less for civilians.

The outstanding features of the 1942-43 season are the increase in jute supplies and the fall under cotton. No review of crops and prices can pass over the fall in cotton cultivation, which must have duly enlarged the supply of millets in Bombay and the C. P. The gain to the two Provinces is offset by the drought in many parts of Bombay and the dependence of Rajputana on the C. P. That wheat prices in India for a year are independent of world prices can scarcely be denied, and the large increase under winter oilseeds in the U. P. suggests that wheat may not be in abundance in one Province. The absence of any figures as to private hoards or stocks held in the course of trade makes it difficult to say anything about the total supplies of wheat or rice after allowing for the reduction in Defence purchases. The fall in exports, like the improvement in transport facilities, is a minor factor as compared with the fall under production of food crops, especially, rice. Competitive or supplementary grains have naturally been in greater demand and prices have risen as steeply as possible. The Calcutta wholesale price index was 272 in March, 1943 as compared with 100 in August, 1939. The rise in the index is caused by the fourfold increase in the cost of cereals and pulses. The increase in prices occurred after the declaration or food policy appeared, and specific assurances as to supplies were provided.

It is important to note that prices are largely uninfluenced by press notes or promises, and far more drastic measures in the direction of rationing seem necessary in the light of the jump in food prices. It is possible that a limited or retarded rise in the prices of some commercial crops like jute and sugar cane makes for a more pronounced rise in the case of food articles when demand is inelastic. But it would have been possible to raise the price of jute last year to limit the rise in the price of rice. The larger crop kept jute prices down and floods etc. caused a real shortage of rice. The change-over desired now may not come readily. But the situation as it developed could have been foreseen and the main improvement that would follow improvement in the price of cash crops is not one that we would approve of. Higher prices for cash crops may lead to a hoarding movement in the case of grains and the Government purchases alone cannot exercise a braking effect on prices. More heroic remedies may be propounded by some but the main line of advance is one of encouraging grain cultivation. The prices now ruling offer an incentive to the cultivator, but the return is not proportionately greater owing to the general advance in prices of all manufactured goods. The guarantee as to minimum prices for grains, will seem superfluous; some other guarantee is wanted in regard to cloth, manure, cattle-feed and most articles in use. Improvement of tenancy law or conditions of tenure, may be desirable, though productive of distant results, and such concessions as are available in regard to irrigation or second crop assessment in some provinces for over a year have not produced important advantages. While high prices may reduce the burden of land revenue, the cultivator must be induced to believe that inflation or scarcity in itself presents an opportunity to increase production. The means of improvement undoubtedly exist, and the scope for agricultural departments to-day remains great. It is well to recall that the soil demands more money and brains than has been given to it and Provincial Budgets which appear to make limited provision for agricultural development have erred again on the side of caution. A departure in policy in regard to purchase and storage can only be warranted by considerable additions to supplies and the Food Advisory Council's views on the subject have received insufficient attention, though the trend of agricultural production must have been apparent when the Budgets were being got ready.

Fall in Exports

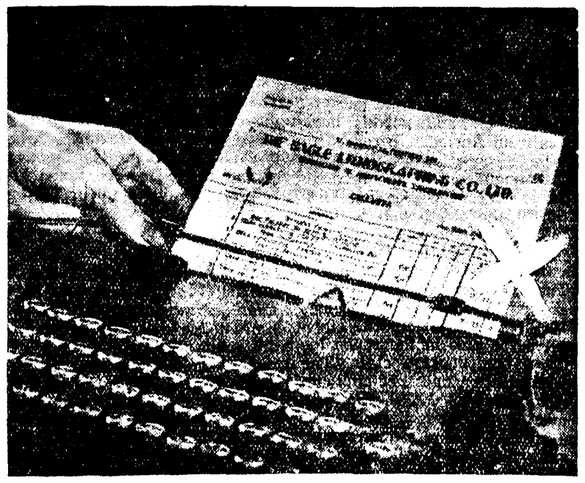
January was marked by a fall in India's exports. The monthly fluctuations in foreign trade are inevitable in wartime, but total merchandise exports in January valued at Rs. 12.30 crores are below the average for 1942-43. The increase in imports recorded during January is unusual but the normal export surplus remains. Total imports valued at Rs. 9.35 crores reduces the balance to Rs. 3.34 crores after allowing for re-exports. The increase in imports is largely due to a sudden revival in cotton imports. It may be welcomed for several reasons as fears as to the Uganda cotton crop having propelled Indian prices upward have been general. The trade returns show that India's foreign trade has shrunk in comparison with January last. It is not the shipping shortage or war purchases that account for the fall which is occasioned by larger offtake of most commodities at home. The contraction may be ascribed to Indian prices being out of tune with world prices but recent changes in regard to groundnuts only suggest that exports markets in most cases are willing to pay Indian prices. The decline in imports is the more important feature of India's trade. The limited increase under mineral oils points only to the dependence of India on Iran while the fall under food is long the chief factor in the rise in prices here. Total imports for ten months ended Jaanury are valued at Rs. 92.13 crores against Rs. 153.86 crores in the corresponding period of 1941-42. Exports have fallen in this period from Rs. 210.67 crores to Rs. 163.21 crores showing that affected both exports and imports. Exthe extension of the war to the East has ports trade in manufactured goods, with the exception of piecegoods, has fallen away, and the decline in the value of tea exports seems difficult to explain. The substantial fall under exports of jute manufactured shows that the fall in India's trade with the U.S.A. has affected the jute industry most. The increase in Indian exports to Australia is independent of import control in force and may be due to the intensification of war effort there.

New Taxes in India

The Finance Act of 1943 is a revenue measure of more than ordinary interest as it raises postal rates, income-tax, surcharges etc. The Act which received the Viceroy's assent on March 29, provides for the retention of the additional import duty on salt and the additional customs duties imposed last year, again for one year. The Excess Profits Tax of 1940 is also continued for one year. The rates on letters, book, pattern and sample packets, registered newspapers and parcels have been raised as from April 1. In regard to income-tax the incomes below Rs. 5,000 per annum are unaffected by the increase in rates. As for incomes over Rs. 5,000 up to Rs. 10,000 the third slab will be charged at 15 pies in the rupee and the surcharge will be hereafter 66 2/3 per cent. as in the case of incomes below Rs. 5,000. The surcharge rate is stabilised at 66 2/3 per cent. in the case of incomes over Rs. 15,000 per annum and the effective rate will be 50 pies in the rupee for the year 1943-44 on the top class. The principle of progression does not apply to supertax for the first Rs. 10,000 when the income is over Rs. 25,000 is liable to tax at one anna in the rupee plus a surcharge of one anna in the rupee while the next slab is liable to supertax of two annas in the rupee plus a surcharge of 1½ annas. In the case of incomes above Rs. 1,50,000 per annum plus the usual minimum of Rs. 25,000 for surtax the actual rate will be 10½ annas plus the income-tax of 4 1/6 annas—absorbing the greater part of the income of any individual, undivided Hindu family or unregistered firm liable to tax. The income-tax payable by joint-stock companies is enhanced to 2½ annas in the rupee and the surcharge is 1 2/3 annas. There is, besides, the supertax of 2 annas in the rupee. How far profits will suffer through the increase in companies income-tax, at a flat rate necessarily need not be asked but companies with a profit of Rs. 25,000 or over per annum will not be worse off than local authorities which will pay one annas surcharge plus tax. The schedule has made it plain that there is no surcharge on corporation tax but the increase in tax is admittedly large. In recent years the Government has received more than the shareholders out of divisible profits and splitting up into subsidiaries is hardly possible when the slab system is not applicable to companies' regular earnings. The tobacco excise duty is fixed at Rs. 1-12 per lb. for flue-cured Virginia intended for cigarette-making but is as low as 8 annas per lb. when there is no imported tobacco in the cigarettes made or 2 annas where the tobacco goes into cheroots. Tobacco intended for any other purpose say cigars pays Rs. 1-12 per lb. as excise. Country tobacco like air-cured tobacco pays 6 annas per lb. when it is used for biris and cigarettes. Tobacco imported from the Indian States is liable to tax at the rates listed last month and exports imply refunds. Tobacco stalks used as manure are exempt from excise. The principle of taxation according to use and value thus distinguishes the new excise from that on sugar and matches. The vanaspati duty is fixed at Rs. 5 per cwt. instead of Rs. 7 as proposed, and is payable by the factories who can get drawbacks on exports. Imports from the Indian States can be taxed at the same rate or prohibited under Section 7 of the new Act.

Provincial Budgets

Many Provincial budgets presented last month showed surpluses. Expenditure is limited for most Provinces and receipts are rising as shown in their Revised Estimates. The withdrawal of land revenue concessions in Madras is meant to secure additional revenue for new schemes involving an outlay of Rs. 66.26 lakhs. The budget deficit for 1942-43 is admittedly small and expenditure at Rs. 20.57 crores is below the revenue of Rs. 21.05 crores. The increase in prices is assigned as the reason for withdrawal of concessions as from July 1, but the season has been bad and Madras is in the grip of scarcity. The proposal to secure Rs. 27.53 lakhs in addition to the budget surplus for schemes that can be financed by borrowing e.g the new Road Fund or irrigation has been criticised already for various reasons. The last year resulted in a very small deficit and the Province's total expenditure in 1943-44 will be lower than the total shown for 1942-43 in the Revised Estimates. The increase in expenditure on nation-building departments is small as compared with that on general administration or civil defence which absorbed Rs. 1.87 crores last year. In order to secure a surplus of Rs. 10.05 lakhs, the concessions have been withdrawn and the last instance of financial purism has not been overlooked. The grants for village communications and education or the city water supply plans do not affect the view that supplementary expenditure may be large and balances lower. The increase in land revenue, income-tax and forest revenue will help Madras to obtain more revenue than anticipated and borrowing through treasury bills remains as easy as ever apart from the Province's large holding of bills. The biggest surplus of the year is that reported by Bihar. Total revenue for 1943-44 is estimated at Rs. 6.98 crores and total expenditure at Rs. 6.36 crores shows a decrease of Rs. 29 lakhs in comparison with the Revised Estimates. Revenue is expected to show a small fall, but the Province is not creating special funds for reconstruction or other purposes. The N.W.F.P. is not balancing its budget. The deficit of Rs. 7.73 lakhs is attributed to the temporary increase in defence charges. Total expenditure at Rs. 2.14 crores is



higher than the revenue of Rs. 2.07 crores. The deficit in Assam is Rs. 10.1 lakhs. The Finance Minister intends to draw on the Provincial balances in order to balance the expenditure of Rs. 10.73 crores with an estimated revenue of Rs. 10.4 crores. The agricultural income-tax has been left unchanged, and the tea industry stands to gains thereby. The deficit is not wholly due to the new motor transport organisation created for Assam which is expected to give Rs. 1.01 lakhs as additional revenue. The smallest deficit is that reported by Orissa. The revenue for 1943-44 is estimated at Rs. 2.12 crores available to meet a total expenditure of Rs. 2.16 crores. Both revenue and expenditure are lower in relation to the Revised Estimates which disclosed a deficit of Rs. 6.73 lakhs. The adjustments proposed will lead to a reduction in the anticipated deficit by over Rs. 2 lakhs to give a figure of Rs. 1.81 lakhs.

Labour's Needs

The imperfections of the wage system, the lack of uniformity of normal standards, the limited official interference at intervals are known to few but the leaders of Indian labour. The fixation of wages has so far not been attempted and industrial relations have become difficult. Professor Gadgil in the Benaili lectures at Patna in 1940 described the main problems of regulations and advocated the adoption of Trade Boards or other suitable machinery. Sweating is not absent in India when the Factories Act has been amended only recently. The best that can be hoped is improvement through the adoption of collective bargaining or the rough official awards in disputes. Quite a useful digest of awards may be made in order to indicate what lines of reform are available at present. Having had experience of courts of enquiry and inquiry committees, Mr. Gadgil (whose lectures are published by the Gokhale Institute, Poona, at Rs. 5) enters now and then a protest against public indifference to the needs of labour. The increase in the totality of employment has significantly enough brought no specific changes in the system of payment though it may be urged the restoration of former wage-cuts in the textile industry is due admission both of the needs of labour and its strength in a period of prosperity. State control might indeed make for a flexible wage policy with a strong trade union movement which might produce less rigidity than is apprehended. The adoption of the minimum wage has been often described as impossible. Variations in profits evidently exercise little or no effect on wage levels and the entrepreneur's share in India (which is not residual but fixed) alters as little as the wage-level and there is always a real case for raising wages only in an upward direction. The six lectures indicate that the old-fashioned approach to wage problems is no longer possible, and those judges who are asked to review industrial disputes in India might find that the regulation of wages under competition is not so much a task of adjustment but of promoting essential improvement as ages are depressed and the working class is weak. Interference is justified by the necessities of the situation and interference can never be called premature for labour in India has shed its prejudice against rationalisation and its growing efficiency deserves the additional stimulus of higher wages. Where social services are undeveloped as in India the interests of the worker require a pulling up of wage standards. The urban artisan is not by any means better off than the rural worker, and progressive improvement in working conditions will not altogether stabilise the income obtainable under conditions of relative freedom.

The Ingram Estate

An estate in S. E. Punjab where high farming obtains in spite of comparatively adverse climatic conditions was described by Mr. F. M. de Mello in Indian Farming recently. The Ingram Estate in Gurgaon, accepted the rural reconstruction preached by Mr. Brayne. The 18,000 acres are let to tenants. There are 30 villages and 1,600 holdings with a population of 16,000. From the U. P. side canal irrigation has helped the Estate. But its scrupulous conservation of manure has helped it even more. All water is rigorously saved up and irrigation channels are always in good condition. Wheat is the chief crop but the cultivation of barley is extending. Sugarcane is grown for gur-making and the distinctive feature is the encouragement given to fodder crops. Rural credit

Destroy the FIFTH COLUMN

Have your invoices got two separate 'amount' columns ? How often is it essential to use both ?

You can save as much as 25% of the paper on your invoice by destroying this fifth column.

Examine all your stationery, eliminate superfluous peace-time "frills" and help to save paper in the present emergency.

Every business concern, whether grocers' store, or industrial giant, needs paper to function smoothly.

Ensure that need now, by saving on existing stock.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :-

- Use the smallest sheet of paper for any purpose that will do the job.
- Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.
- Do not make copies except where absolutely necessary.
- Always type single spacing.
- In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.
- Reduce the size of labels on manufactured goods.
- Use the back of the letters received for the carbon copy of your replies.

Save paper

ISSUED BY THE TITAGHUR PAPER MILLS CO., LTD.

is no problem as the management looks after that. Housing, too, is the concern of the landlord. Ponds are clean and are being deepened by a system of rotation in use. Health and education services of the District Board are amplified by the Estate's assistance in welfare work. Interest in the tenant's welfare is reflected in its support to the Panchayat which recorded its view against the making of dungcakes from Holi to Diwali every year. A conservative sales society helps the tenants to sell the crops at Palwal, the nearest market town. A ghee sales society provides the tenant with another source of income. The Estate maintains a home farm which is concerned with crop experiments, seed distribution etc. It is now trying soya beans on unirrigated land. The cultivators on the Estate get other benefits like cheap rates for the hire of cane-crushers and seed potatoes from cold storage. Enlightened landlordism more than plays its part in agricultural improvement on the Estate which is as interesting as Gosaba.

The Middle Class' Handicaps

An enquiry into the economic and nutrition status of the middle class Guzaratees in Bombay was undertaken between 1941 and 1942 by the Guzarat Research Society. The investigation was launched in order to find out how the lower middle class lives, to ascertain what part income plays in diet and health and what means of improvement exists. The enquiry was restricted to 1,013 individuals in the City, but the sampling method adopted in this case gives the conclusions great value. The majority of individuals were literate, living by business or clerical employment, mostly private. If employment was regular only 3 per cent of the lower middle class had incomes over Rs. 151 per month. The average middle class family tends to be larger than the working class family and gainful employment is not possible to the women. The most important result relates to housing. The middle class pays more as rent and gets poorer quarters. Rent takes 19.5 per cent of the average family's expenditure while food accounts for 41.7 per cent. The working class has apparently some advantages and the enquirers found that 190 families whose circumstances were examined were well placed. Overcrowding was the rule since Bombay is more crowded than even London. High rents leave less money for food and make holidays in the country more or less essential. Only those with incomes over Rs. 150 per month are able to save regularly and voluntarily. Indebtedness is not large but the debt contracted by many is not for social ceremonies as presumed but for meeting current deficits. Resort to the professional moneylender is unusual. The diet of the middle class is drab and inadequate. There is not enough milk or green vegetables. Drs. Shah and Patel conclude that indifferent physique and health are due to defects in nutrition, particularly, vitamin deficiency. Only about one-third of the males could be called physically efficient according to the investigators. Since prices have risen steeply last year, the middle class must be worse off and the diet must be poorer and more limited. Handicapped by limited education the middle class has its own struggle for existence. The incidence of disease is marked in all groups, young, adolescent or middle-aged. The main remedy is an addition to income leading to a reform in diet. What is most obvious to Drs. Shah and Patel is the connection between income and nutrition and therefore health. The questionnaire adopted by the private investigators corresponds to that adopted for family budgets but the shift of emphasis to nutrition will be understood as being due to the fact that the lower middle class has peculiar disadvantages even though the cost of feeding an individual may be as low as Rs. 7-8 per month. Drs. Shah and Vakil have certainly blazed a new trail by publishing the handicaps of the lower middle class in Bombay. Remedial action may be delayed, but its necessity is unquestioned.

Cotton Mills' Prospects

Estimates of profits for the mill industry are not affected by the reports as to the revised prices for standard cloth, the quantity of piecegoods produced against Government orders and the decline in raw cotton prices reported since March 1. The speeches of Mr. Thackersey and Sir Vithal Chandavarkar this month point to two facts. The mill industry is genuinely anxious to help the consumer in regard to standard cloth. It is also ready to cut down exports abroad to the minimum. But standard cloth produced up to 300

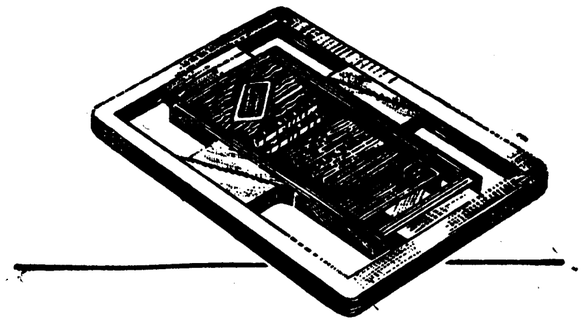
million yards or 340 million yards at the most will not have any specific effect on cloth prices. The industry's leaders argue that 1942 profits will hardly be maintained—in spite of higher taxation additions to wages, etc., the millowners have to make special efforts of their own to lower cloth prices after getting an increase on Government purchases. Their interest in the problem is limited perhaps to yarn control. The advisory panel system secured for the mills whatever they want about Government orders; but it is at the same time curtailing the growth of profits. Control of the mill industry is now so remote as to be called impossible and recovery in textile shares has certainly strengthened after Mr. Thackersey's arguments as to how and why mills will thrive in wartime. Limiting factors, however, are the quantum of war orders, and the limit on profits and new regulations as regards exports and yarn control or cloth control of some sort. To these must be added higher taxation and increased allowances for labour. British Indian mill companies do not seem to have the advantages of mills in the States at present. Suggestions as regards dividend limitation or welfare fund for Labour out of war profits, are not likely to be applied in the States which do not have E. P. T. either. Reduced purchases by the Supply Department will have little effect on prices paid for cloth and the millowners assured of adequate raw cotton supplies have few difficulties as regards labour. The big strike of 1940, has faded out of men's memory and the bullish feeling noted in Bombay last weekend may survive the caution given by Sir Vithal Chandavarkar as to the liabilities thrust on the mills though their prosperity is not permanent. The fact that depressed companies have been assisted greatly by the war should not blind one to the fact that long spells of depression have been experienced in the past and it is the war with Japan that has helped India most which means that 1942, in spite of thee strikes and shifts in production, is the best year reported by mills as is shown by most company reports issued in recent weeks.

Indian Mica

Indian mica is an important item in the exports trade, and a bulletin by Dr. Dunn of the Geological Survey, shows that in the electricity age the position of mica is fully secure. The world's demand for mica has increased in war time and Bihar is the source of 80 per cent of high grade sheet mica. Mica is obtainable from Madras and Rajputana in smaller quantities. The U.S.A. may take Brazilian mica in quantity as her own large output consists of scrap. India has, however, a duty to keep prices reasonably low so as to keep the export markets after the war and not lose any of them to Madagascar, Canada or other producers of mica. Substitutes like alsifilm may fail to make headway if mica is reasonably cheap. Mining methods are decided by primitive means and improvement is advised by Dr. Dunn. Larger capital goes with better methods and the small enterpreneur does not seem to have a place in the 10-year old industry. Micamining in Bihar has developed rapidly since 1919 and one firm alone supports about 10,000 workers at present. Total employment in the mines in the best season may be between 50,000 and 60,000 which means that mica is the most important mineral after coal. Mica



provides work for thousands of home-workers and Bihar has a definite interest in the conservation and development of the industry.

Fall in Pulp and Paper

The great increase in Canada's war expenditure is supported by every account of progress in industry in the third year of war. In August and Sepetmber alike Canadian manufacturers reported increased business in spite of a fall under foodstuffs. War expenditure absorbed over $2¼ billions as against $1 billion dollars in the year ended September 1941. Civilian trade and industry continued to expand until deliberately diverted. But conversion and diversion of resources followed an addition to manufacturing capacity by 20 per cent under the programme framed in 1940. The output of war industries rose by about 40 per cent in the year ended September 1942, and a further increase is expected on the basis of orders applied to curtail civilian output. Fully half this output of industry was earmarked for war purposes and Canada decided to curtail civilian industry's output. Shortage of material was noted and manpower shortage was experienced in the timber industry. Strange to say, timber became a critical material in Canada which is second to Russia in the production of soft wood. Special measures were adopted to give the timber industry its labour; higher prices and credit facilities were also afforded. More timber and less pulp became the rule, and newsprint production was forced down to a point below the prewar rating of 72.7 per cent of capacity. Newsprint shipments fell by half in 1942, and a further fall was anticipated as hydel power was diverted to armament plants. Newsprint exports to the U.S.A. rose only slightly and paper mills were called upon to make nitro-cellulose, etc., for war purposes. Workshops have been given over to making of parts for guns, ships, etc., and the industry is more active than the paper production figures indicate. In regard to wood products, Canadian production has fallen like pulp and paper. The Canadian newsprint industry, though it has strong inducement to raise output, has difficulties regarding soft wood, labour and shipping. The situation has to be related to the demand from importing countries, and the newspaper control amendments in India must be accepted as inevitable in view of Canadian production difficulties.

End in Tunisia

The Allied army's march towards Tunis has made the end of the campaign predictable. Diversion of Italian shipping from the Eastern part of the Mediteranean, proves that evacuation is contemplated. The last stand has hardly been attempted, but Eisenhower's mention of the progress of plans has indicated that a short time may be held long. The major disadvantage for the Axis is the loss of airfields for fighters. Those nearest in Sicily have been seriously damaged and the Axis can look only to Sardinia. The Italian navy may be called upon to do a job of work for once, and the repetition of Matapan, off Sicily this time, may have grave effects on Mussolini's regime. The dread of invasion is not absent in Italy. It must have been fostered by the failure in Tripoli and Tunis alike. The dictator's meeting must have turned on the failure, rather than any success either in Yuogslavia or Greece. The Axis army's strength in Tunisia was put at 250,000; but it must be reduced since then. The 1st and 8th Army have the advantage of French and American support. Its numerical strength has not been indicated but it has two advantages—all the ports except Bizerta are held by the Allies and it is stronger in the Air. General Arnold said in December that airpower would settle the African battles. The loss of tanks was a minor handicap for Rommel compared with the weakness in the air. The presumed diversion of German fighter strength under Kesselring to the Mediterranean is not giving the results sought, and the improved Messerschmitt was no match for the U. S. and British aircraft used in some cases for the first time. The U. S. bombing attacks on South Italy deprived the enemy of distant bases and those in Tunisia are out of their hands. Two or three lost and recovered may make no difference when the coast has been reached by the 1st Army. Continuous attacks have produced immunity for Malta as well as Egypt and much else. It has forced Italy to send out whole factories to Germany, adopt total mobilisation, even of boys, and keep to the defensive always. Claims on Morocco as the heir of the Ottoman Empire must seem ridiculous, to the Italians most of all. The strategic withdrawal has abolished an Empire and also Italy's peninsular security.

tell your printers to leave out the leads

That frame up above is a printer's forme, the forme, in fact, from which this advertisement was made.

Printers like to space lines, for ease of reading and elegance, and the strips of metal used for this purpose are called leads.

Tell your printers to leave them out. They waste paper—and paper is a munition of war, as well as of industry. In your notices, bill forms and other stationery tell your printers to set solid.

In doing so, you will be helping yourself and also your military chiefs who are now "set solid" for Victory.

* The last two paragraphs of this announcement are set solid. Not too difficult to read?

THIS IS WHAT GOVERNMENT IS DOING..

1. Government has imposed a drastic cut of 5,000 tons on Civil Departments during the last 6 months.
2. Additionally, writing paper supplies have been cut 50%; envelopes 50% and blotting paper 33%.
3. Government has restricted the variety of papers available to Departments in order to increase production.

(A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Bengal).

The subscription list will be opened on the 3rd May and will be closed as soon as the present issue is fully subscribed but in any case not later than the 18th May, 1943.

PROSPECTUS

OF

SANTINIKETAN ELECTRIC SUPPLY COMPANY, LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT 1913).

AUTHORISED CAPITAL - Rs. 2,00,000

DIVIDED INTO:

(a) 750 5 p.c. Cumulative Tax-free Preference Shares of Rs. 100 each - - -	Rs. 75,000
(b) 1,000 Ordinary Shares of Rs. 100 each - -	Rs. 1,00,000
(c) 2,500 Deferred Shares of Rs. 10 each - -	Rs. 25,000
Total ..	Rs. 2,00,000

SUBSCRIBED AND CALLED UP:

(a) 218 Preference Shares	Rs. 21,800
(b) 62 Ordinary Shares	Rs. 6,200
(c) 1,500 Deferred Shares	Rs. 15,000
Total ..	Rs. 43,000
PAID-UP - - -	**Rs. 41,030**

PRESENT ISSUE:

(a) 532 5% Cumulative Preference Shares of Rs. 100/- each at Rs. 105/- per share.

(b) 938 Ordinary Shares of Rs. 100/- each at par.

(c) 1,000 Deferred Shares of Rs. 10/- each at Rs. 12/- per share payable as follows:

	Preference.	Ordinary.	Deferred.
On Application	Rs. 15/-per share.	Rs. 10/-per share	Rs. 7/-per share
On Allotment	Rs. 30/- „	Rs. 15/- „	Rs. 5/- „

and the balance by calls not exceeding Rs. 30/- per each Preference Share and Rs. 25/- per each Ordinary Share, but no calls will be made before the expiry of three months between the calls.

An admissible fee of Re. 1/- is payable with each application.

Interest at the rate of 5 per cent per annum, will be paid on all deposit of calls in advance and the shares will be fully called up.

The Preference shares shall confer on the holders the right out of the profits of the Company to a fixed cumulative preferential dividend at the rate of 5 per cent per annum, free of income-tax on the Capital for time being paid up thereon respectively but shall not be entitled to any other rights in the assets or profits of the Company. The said preference shares will rank for dividend on and from the day of allotment on the Capital for the time being paid up thereon.

After making the provision for the above mentioned preference shares and in the manner stated above, the surplus profits, if any, shall be divided amongst the ordinary shareholders on the Capital for the time being paid up and if the amount thus available leaves any balance after paying dividend to ordinary shareholders at the rate of 6 per cent (income-tax free), then the said balance shall be divided amongst the Deferred shareholders.

SOLICITOR:

M. K. ROY CHOUDHURY, ESQ., M.A., B.L. (Attorney-at-Law), 7, Old Post Office Street, Calcutta.

PROSPECTS:

Under section 45B of the Defence of India Rules published in Government of India Notification No. 1564-OR/42 dated the 7th September, 1942, publication of all accounts, reports or other documents relating to operation of all electric supply undertakings have been prohibited; and the facts and figures published in this prospectus cannot, therefore, be as full as any prewar issue of such prospectus.

The Santiniketan Electric Supply was formed three years ago and the Company has been supplying power to consumers since autumn of 1941. Since the supply started there has been consistent expansion in demand. There are also assured prospects of considerable expansion in demand in the immediate future.

The Company has entered into an agreement with Visva-Bharati whereby the latter undertakes to take a minimum supply of power every year. This agreement is to be in force for 12 years in the first instance.

In addition, a large number of new buildings have been constructed in the Santiniketan colony; and the owners of these new buildings are mostly men of means. The demand for electric supply from the colony has been considerable.

The Government of Bengal have already paid Rs. 1½ lakhs for the water-works to be established in Sanitiniketan; and the Company has every reason to hope for a substantial demand of power for the water-works. For agricultural and industrial purposes also, there have been many applications for supplying power.

From every point of view, Santiniketan is one of the most remunerative places for an electric supply undertaking, that is to say, from the class of population and the growing nature of the town.

The Company has been formed for supplying electricity firstly in Santiniketan and Sriniketan—two institutions of Visva-Bharati in the District of Birbhum and secondly in the town of Bolpur.

Santiniketan is the meeting place of international culture and civilisation. It represents a harmony between the past and present ideals of India. It is here that the inspiration of Poet Tagore were sought to be first institutionalised and the foundation laid for nation-building services in the rural areas of Bengal. It is here that the amenities of city-life are being fruitfully utilised for the enrichment of rural Bengal. Electricity is one of those natural forces, which so long served only the city-areas and Santiniketan Electric Supply Co., Ltd., has been established, at Santiniketan, acting as a central station, unifying the electric powers at Santiniketan and Sriniketan, at the minimum cost with the policy of maximising social benefits.

Sriniketan represents the technical side of Tagore's philisophy of life. It is the birth-place of those institutions, which are wedded to the principle of ameliorating the condition of the people, socially and economically, and of utilising the rural resources for a productive purpose. Electricity is the force behind that purpose, which must be harnessed if the rate of progress is to be speeded up in this direction.

The plant and machinery so far installed were secured at prewar prices; and the capitalisation plan of the Company is, therefore, exceptionally favourable. The capital expenditure hitherto incurred has been found partly from share capital and partly from loans. *The objective of the present issue is for repayment of loans.*

The Company has been paying dividends from the start, the returns being 5 per cent free of tax for preference shares, 6 per cent free of tax for ordinary shares and 10 per cent free of tax for deferred shares. With the reduction of interest payable on loans, the dividend-paying capacity of the Company is automatically increased.

The present offer of shares to the public is with respect of 532 Preference shares; 938 Ordinary shares; and 1,000 Deferred shares. The ordinary shares are being issued at par while the Preference shares of Rs. 100 each are issued at Rs. 105 and Deferred shares of Rs. 10 each at Rs. 12.

Shares of public utility concerns like electric supply or telephone or railway are regarded by investors as next only to gilt-edged; and electric supply company's shares are prized by the genuine investors as combining safety of capital and regularity of dividend.

MANAGING DIRECTORS:

Messrs. J. C. Das and S. R. Das have been appointed as the Managing Directors of the Company and shall hold the Office for 20 years from the date of commencement of business of the Company.

The remuneration of Managing Directors is a commission at the rate of 12½ per cent on the net actual yearly profits of the Company together with an office allowance of Rs. 350 per month which will be Rs. 450 per month from the year for which the Company will declare dividend on ordinary shares and if no dividend is declared within 3 years from the commencement of business the remuneration will be increased to Rs. 400 per month after 3 years of the commencement of business.

AGREEMENTS:

An agreement dated the 20th day of March, 1940 between the Company and Messrs. J. C. Das and S. R. Das, appointing the latter as the Managing Directors of the Company for a period of 20 years from that day may be inspected at the Registered Office of the Company during business hours.

BROKERAGE FOR SHARES OR DEBENTURES:

The amount payable as commission for subscribing or procuring or agreeing to subscribe or procure subscription for any share in the Company did not exceed 10 per cent on the shares in each case. The Company has paid Rs. 3,921-13-0 as commission within the last two years previous to the date of this prospectus. This amount has been written off from profits.

The Company shall now pay a brokerage of 2½ per cent only on the face value of shares in respect of application received from recognised brokers and allotted by the Company.

RIGHTS OF SHAREHOLDERS:

On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every one share held by him.

No member shall be entitled to vote at any general meeting unless all calls or other sums presently payable by him in respect of the shares in the Company have been paid.

The Directors may refuse to register a transfer of shares upon which the Company has a lien and in the case of shares not fully paid up to a transferee of whom they do not approve.

APPLICATION FOR SHARES:

Application for shares in the annexed form should be sent to the Company at its registered office with a remittance of the amount payable on application.

When no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the payment of the allotment money.

A copy of the Memorandum and Articles of Association of the Company can be obtained at the Registered Office of the Company on payment Re. 1 for each copy.

Dye on the Border!

Do you throw away the borders when you discard old, torn sarees? Please don't, for saree borders are now worth their weight in gold. Why? Well, owing to the present war condition, there is an acute shortage of the dyes needed for producing such borders. Sarees are expensive to-day, but in the near future we may not be able to supply you with any bordered sarees at all—for lack of dyes. So take our advice and keep the borders of your discarded sarees. Stitch these borders on saree-width white material and you will have new sarees, when bordered sarees are no longer available. Of course, when the war is over, we will supply you any number of sarees with borders in lovely new designs and colours. But, until then—dear lady—salvage your old border.

Small Danger

The U-boat war provokes periodical discussion. The Nazi Navy Chief cannot hold out hopes of winning the war at sea because the bases have been badly knocked about. The Allies alarmed by the sinking of 27 vessels in March have no need to fear that the U-boat construction in Germany will increase soon. There are difficulties over material and manpower which must keep down U-boat building. The German press campaign for more and more U-boat indeed suggests that output is below the best, and the anti-submarine craft and devices on which Britain is known to concentrate will provide the answer. Colonel Knox dwelt on losses within one month, but soon after he has given details of U. S. naval construction that put fears as to German naval activity to flight. Since shipping losses after June 1941, can only be guessed it is clear that total losses before the North African campaign were comparatively light. The shipping losses in the Mediterranean are heavy, only for the Italians, and the end of the Italian Navy after its bases—Spezia, etc., have been shattered—is in sight. The assurance that naval construction and ordinary construction aims at speed—in excess of the German submarine's—is always there and the addition of escort vessels from Canada is important. It is significant that U-boat activity has not been reported from the Caribbean in recent months. The German submarine fleet is now on shorter cruises and aircraft support is hardly possible when the British and American fighters are out every day across the Channel. The greatest advantage is the loss of the Breton ports like Lorient; but even more important is the evacuation of ports like le Havre. The Nazis have to use other ports in place of those lost, and the Nazi submarine fleet is obviously out of the Mediterranean—not that it can cover an evacuation like a flotilla of destroyers. The Nazis are making a big attempt to build submarines inland and bring them to the ports. The engines are perhaps made elsewhere, but the big raid of October on Rostock has seriously impaired the ability to build more U-boat though claims to build faster ones have been made by German newspapers. After the return of the two capital ships to port, so little has been heard of the German navy that it is regarded as a paper fleet whose new chief has been mainly chosen for ability to use the submarines available. But the South Atlantic is safer for Allied navigation since Brazil entered the war and the North African ports came under Allied control. American underwritters are said to have reduced rates more than once this year and improvement in shipping is anticipated for other reasons. U.S. shipbuilding feats are not touched by stories of sabotage in the yards, meant to build up prestige for the F. B. I. most of all.

Threat to Australia

Below the Equator between 154 and 162 degrees of longitude, lie the Solomons. The last Japanese attempt on Guadalcanar was due to the fear that a single airfield might make all the difference for land-based bombers. The qualified success of the attempt does not mean that the Allies have allowed the enemy to get back. The victories of Admiral Halsey and Callaghan are not affected to any extent by the enemy's use of Bougaranville island. This part of Melanesia under Japanese control is not so important as New Guinea but the latter has been again deprived of reinforcements. The convoy to Wevak has come to grief and the cross-talk of Australia's leaders is seen to be a part of a campaign of misleading and careless talk. While the feeling of danger helps Australia to get the money for the Third Liberty Loan, the reiteration is hardly justified by the losses sustained by the Japanese navy so far. Buine, Faisa and Rekata Bay have been attacked vigorously and often so that a late attempt on Milne Bay means little to the Allies who have steadily moved across New Guinea to the Buna-Gone area and cut at the enemy's control of Lax and Salamua. The attacks on New Georgia by U. S. bombers are of more moment than the Jap recovery in the Aleutjans. The last and biggest convoy to New Guinea never got across, and it is surprising to find Gen. MacArthur adding his voice to Mr. Curtin's about the pressing damage from the North. The dread of invasion is natural perhaps to a large country with a scanty population. The stray raids on Port Darwin hardly can be called real warfare—any more than had the submarine attack in Sydney Harbour. But Australia is anxious as the Japanese have too many bases and keep a fleet ready for use against any that the U.S.A. has there. The critical attitude to Casablanca has not disappeared.

Trade with Europe

The foreign trade of India with Europe continues to fall. The December trade returns pointed to a steady fall in imports from neutrals right through 1942. The import tables contain no reference to Spain or Portugal though the growth of trade with Portuguese East Africa is indicated. The large increase in exports to Turkey has also been indicated; but Turkey evidently sells little to India. She is only buying Indian goods like Russia whose offtake has increased though it is doubtful if exports would reach the 1913 level. Import control affected India's trade with Sweden and Switzerland while exchange difficulties (reflected in the absence of quotations) cannot be ignored. The neutrals reduced their purchases of Indian goods. Exports to Switzerland in nine months amounted in value to Rs. 1,17,053 only. Trade must have been specially discouraged after the trade treaty was made by the Confederation with Germany. But the need for Swiss manufactures persisted, and imports in nine months were valued at Rs. 86.52 lakhs. The trade returns suggest that exports to Spain came to an end in 1942, while a mild recovery in exports to Sweden left this country with an active balance in the last year. The fall in imports of iron and steel, paper, etc., accounts for the fall in trade with Sweden though a real recovery was noticed in the foreign trade of Sweden after 1940. At one time, trade with Europe seemed vital for India, but the war has changed all that, and even after allowing for trade with Britain it will be found that the Empire and the Middle East buy more than Britain and Europe, while the percentage of European imports to total imports is hardly 33 per cent, just about the same as that for exports. Europe's share in world trade and India's trade as well has shrunk steadily. Whether postwar recovery will follow can hardly be indicated, even if the Allied aim is to restore world trade by suitable methods. Whatever may follow peace, the neutrals are not likely to get large benefits and their view of discussions for stabilisation of currency, etc., must be unusually interesting.

Britain and Her Markets

The decay of the older exports industries and the enforced reduction in exports in wartime naturally provoked discussion in Britain as to the future. Suggestions for the training of super-salesmen find favour like the plan to keep up the stability of sterling after the war. The need to export more in spite of the demands of reconstruction at home arises partly from the fall in overseas investment income and the difficulty of saving as much as before when the level of taxation and debt is higher owing to the war. It is also urged that Britain's hope lies in the modification of restrictions so as to acquire competitive power. Prosperity in Africa may produce some compensation for losses in Asia for it is apparent that Malaya with the highest per capita foreign trade can hardly hope to buy or sell on the same scale as in the past. The re-education of industrialists may proceed like the development of engineering trades in Lancashire which does not depend on cotton. No attempt has so far been made to measure the probable effects of concentration on the many miscellaneous trades. Not all hopes for restoration and recovery after the war. It is clear that the heavy industries active in the war period will become unsheltered industries and the major problem for Britain later on will be to keep them busy and avoid unemployment. The recovery of miscellaneous trades looking to export markets can make little difference when shipbuilding or coal is stricken. European rivals may be weaker, but the U.S.A. and the Dominions will cut into Britain's share of available trade, and the power to readily invest on a large scale will naturally influence the flow of trade. Britain's requirements from abroad will, naturally, be large, but export of capital goods may be difficult when the demand in neutral markets is small and the U.S.A. is a free lender. Only a policy of self-denial or acceptable division of labour can help Britain to make a brave showing. The anxiety to secure international collaboration in advance is governed as much by a desire to restore the standard of living at home as the need to develop the backward countries. If Britain looks mainly to the export of capital goods, it is clear that India cannot offer a large market as the major and secondary industries have developed under tariff protection. Britain's trade dilemma, reflected in the growth of oversea balances of Empire countries at present will not disappear through the assurance that conditions for recovery are not wanting, and a post-war boom in other countries will help her to a great extent to win back lost export trade. Even if no demand is made for a return for aid given by the U.S.A. export trade will not revive suddenly on account of Russian demand or China's purchases. What the U.S.A. does and how soon will settle these issues and the resurgence of Isolationism just when the reciprocal trade pact system is renewed indicates that the U.S.A. may impose limits on the share of Britain in the world's trade. Most encouraging factor for Britain is the disappearance of Japan from Colonial markets and the new ties with the French Empire.

GOODS AND PARCELS BY RAIL

When booking goods and parcels by rail, ensure that each package is properly addressed in English, showing destination, station and consignee's name. All old addresses must be obliterated and old labels removed. If this is not done, goods and parcels are liable to be lost.

YOU HAVE BEEN WARNED

CALCUTTA STOCK EXCHANGE

The Committee of the Calcutta Stock Exchange Association regrets to announce that all copies of the 1943 Edition of the *Calcutta Stock Exchange Official Year Book* having been sold out, no further copies are now available for sale. The Committee is sincerely sorry for the inconvenience that this will cause to many of its customers who did not book their copies in advance.

The Committee takes this opportunity of impressing upon its customers the advisability of booking their copies of the next year's edition sufficiently in advance of publication.

OFFICIAL REPORT & QUOTATIONS

The Committee also publishes the *Official Report & Quotations*, being a record of the rates at which transactions are officially done in the Calcutta Stock Exchange. It is issued on all working days of the Association. "I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

C. E. M. Joad writing in the "Sunday Express" on the Beveridge Plan expresses great concern over the impact of its benefits on the will to work. "If you give a man £2 a week," says Dr. Joad, "whether he works or not, you will take away the incentive to work, and freedom from want will, in fact, become freedom to idle." This observation must come as a great surprise to those who have known Dr. Joad through his writings; and the reflections, with which he subsequently consoles himself, do little to console the reader. It was only last week that I wrote of the uneasiness which men feel in mere contemplation of perfect social conditions. But I little thought that so eminent a philosopher as Dr. Joad will be the first to illustrate the truth of my observation. The fear that unemployment benefits might induce men to idle springs less from a reasoned anticipation of their effects—for Dr. Joad, when he reasons, comes to quite heartening conclusions—than from an unconscious antipathy to better social conditions.

* * * *

Few people have had the courage to examine the subject of idling dispassionately. Apart from Jerome K. Jerome, whose "Idle Thoughts" keeps many idlers idly busy, only Bertrand Russell has ventured to assess idling for what it is really worth. If I remember right, Russell equates idling to leisure and examines the question of how much leisure, the present economic organisation can and does allow to the average worker. The psychology and the economics alike of the will to work and the craving for rest have been persistently misunderstood; and more often than not, deliberately misrepresented. Bertrand Russell observes with his usual piquancy and incisiveness that the saying "Satan still some mischief finds for idle hands to do," is the Devil's own invention. In his anxiety to combat the false gospel of work, Russell, I am afraid, has gone to the other extreme.

* * * * *

But what, indeed, is idling? My claim to speak on idling is by no means of the ordinary kind. I am innocent of the charge of working frantically all the available time; and positively, my honours in the line of idling are not to be despised. I have had contests with an eminent scientist friend of mine, whose love for idling, I proved to his satisfaction, is of the Platonic kind. My love of idling is far more practical. But, again, what is idling? To my mind, idling is in regard to time, what waste is in regard to material resources. And waste, as you will agree, is not merely the failure to utilise a thing, but also to render it unfit for use. The most obvious instance of such waste is to leave considerable quantities of food on your plate. When you do so, you render it unfit for use by others. A potentially able worker, when he idles, denies himself and others the fruits of his work. And the waste he causes is not only irreparable, but has a chain of adverse consequences both for himself and the society of which he is a member. Time, once gone, is ever lost, which is more than you can say of matter. In so far as work is a means of self development and enriches both individual and society, waste of time is a double injury.

* * * *

But it does not follow from this that every minute that you spend out of office or factory is a waste of time. The creation of economic value is only one of the ways of utilising time; and if idling is just failure to utilise time, there is between idling at one end and work in the economic sense at the other, a wide variety of ways in which a sane and serious-minded individual is inclined to spend his time. The utmost confusion of thought prevails about the ethics and utility of these ways of spending time. The confusion may be attributed to the fact that, in this context, time has to be viewed both as a fund from which you expend on various objects and as a material which you utilise in the furtherance of definite objectives. Obviously, the former betokens a pronouncedly hedonistic view of life, one in which time ministers to one's sense of happiness, while the latter is what I may call, in contrast to the hedonistic, the heroic view of life. The hedonistic view puts the emphasis on the realisation of personal happiness, however cultured it may be, while the heroic presupposes ends outside of one's self and a degree of subordination of self to such ends. Life viewed as a whole, does not lend itself wholly either to hedonism or heroism. A completely sordid or selfish life is by no means conducive to a feeling of happiness, while a life completely consecrated to impersonal ends is too frantic to be regarded as sane, in the true sense of the word. There has to be a happy blend of hedonism and heroism in one's life, one's reason being a sort of tea-taster determining the proper proportion in which the two should be blended.

* * * *

Time, then, is both a fund of the common denominator of individual values and a none too plentiful material which has to be economically utilised if one is to produce the best results. In the life of the individual, the latter view has, at least chronologically, unquestionable priority. For the boy at school or the apprentice at a workshop, this view is far more important, while the idea that time is something to be expended in order to minister to one's own feeling of cultivated happiness may well prove dangerous. It

is well to teach him to accept the view that to spend time in ways, which are not demonstrably in furtherance of his immediate purposes, is time wasted and thrown away for good. This view, as I shall show presently, is not without its dangers. But it is on the whole far easier to give the corrective to it at the appropriate stage than to repair the ravages which the habit of indifference to time may work on the lives of men.

* * * * *

In economic discussions, particularly those with which Dr. Joad is concerned, it is not the juvenile use of time that is thought of, but the hours which the adult puts in factory and in office. It is work in the economic sense that is the chief concern. But strangely enough, though work is thought of in connection with output, it is not generally recognised that output must act as the limiting factor of work. Economists and businessmen do not readily concede that in conditions of full employment, the duration of the working day must fall with the increase in the effectiveness of labour. If scientific inventions enable the worker to double his output per hour then, "ceteris paribus" the working hours must be halved. But the businessman will not agree. He will get round the "ceteris paribus", he will argue about the scope for increased consumption and finally end with a peroration in favour of cutting costs and cheapening the goods for the consumer. But no one can deny that in conditions of full employment and optimum consumption, every increase in the effectiveness of labour must be followed by a corresponding cut in working hours, if we are not to burn up coffee. In such conditions, such a cut in working hours will mean that the day has been lengthened and that the average man has more of the fund of time to expend judiciously and usefully.

* * * * *

These conditions, let us remember, are not wholly chimerical. Even before the war, the technocrats in America calculated that the standard of life in America could be maintained with a five-hour day and a five-day week. The inventions of the war period have increased vastly the power of man to satisfy more and more of his material wants with less and less of labour. Not only in America, but even in undeveloped countries like India, less work will be needed to maintain prevalent standards of life. Of course, the standards of living in these countries leave a great deal to be desired. We may have to work harder, work longer hours, even consume less for a time in order that decent standards of living may be achieved for all. But some day, sooner in some countries, later in others, the stage will be reached when to insist on working hours as of old would be to create problems of superabundance, more ridiculous than the phenomenon of poverty amidst plenty. In other words, the world which has grappled with surpluses in so many different commodities will find itself up against the surplus of time for the average worker.

* * * *

The industrialists may well try to do what in the early years of the industrial revolution they blamed the workers for doing. For, then, the working classes, finding themselves thrown out of work by the new labour-saving devices, rose in rebellion against them and try to demolish the machines. But the economists and industrialists argued that, as the machines

helped to cut down costs and cheapen goods, the enlarged demand would ultimately lead to re-employment of more than those who had been thrown out of work. Now that labour-saving machines are more true to their name than in the earlier stages of their development, their virtues may have less appeal to employers than formerly, particularly because technical development calls for planned output of the various goods and services needed by society and such planning will lead to less working hours and little or no profits for the employers. The employers may then carry out a volte face and try to wreck the regime of labour-saving machinery.

* * * *

The incessant use of the term "idling" for every kind of break in economic work, regardless of the value of such break either to the individual or to society is due, in the main, to the feeling that such breaks affect the pockets of the propertied classes. Dr. Joad is, no doubt, free from undue concern for property. But I should have thought that a progressive thinker like him would feel called upon to correct the mental inhibitions which render men powerless to contemplate or strive for perfect social conditions, rather than to voice the unreasonable apprehension that unemployment benefits might kill the incentive to work.

* * * * *

Strictly speaking, the need for work as an obvious escape from boredom of which Dr. Joad speaks, is far greater in the case of the working classes than of the educated middle or upper classes. Dr. Joad emphasises that the unemployed, who are in receipt of the "dole," are generally eager to return to work, though materially the difference between employment and unemployment may be inconsiderable. This shows how big a place work has in any plan of happy living for the individual. For the ordinary man, work is a handy means of filling time, as attendance at school is for children. But for the educated, cultured man work is a medium of self-realisation. In neither case can it, however, absorb all the energy and attention of the individual. From the social point of view, work is the contribution of the individual to the total stock of economic values needed to sustain social and individual life. When the individual makes the contribution which is necessary for the sustenance of social life and which is a fair equivalent of what he may draw for himself from the society's stock of economic values, he must be deemed free to employ his surplus of time in ways of his own choice. Such surplus of time must be distinguished clearly from malingering in the economic front, which is idling, and must be dignified alike in its common appellation and in its effective utilisation by the term "leisure." Idling is purposeless vagrancy, while leisure is progress towards a goal. Idling is waste; while leisure is employment of time for self-development however conceived. In between there is the vague borderland which is rest, the time devoted to relaxation and recuperation.

* * * *

The false gospel of work has tarred all kinds of break in economic work with the same brush. The only improvement in this attitude to work is the recognition of the legitimacy of rest for manual workers, the agitation by the I.L.O. for holidays with pay. But the world is yet a long way from the conditions in which every worker will be assured not merely of rest during hours when he cannot be worked with profit or what is worse, when he can be worked only at great risk to man and machine, but also of leisure, of the mental and moral equipment that ensures the proper utilisation of surplus time in the development of the individual and the service of society. The problem of surplus time is at bottom a problem of education, of educating our new masters, not to prove amenable to the machinations of political parties, but to realise the dignity of man and to learn to acquire and enjoy the unbought graces of life. If science has rescued man from the scramble for material things, scarcity of which will be a thing of the past, it will also force him to realise his dignity or—go to his doom.

* * *

From the standpoint of economics, however, there are three questions of great importance arising from breaks in work. These breaks, as we have seen, may be caused by voluntary idling, or the involuntary idling which is called unemployment, or by the increase in the effectiveness of labour. When idling is voluntary, the trouble may be either economic or purely psychological. When the milieu of economic conditions is such that the fruits of work are quite inconsiderable, the individual can hardly be blamed if he prefers the starvation of worklessness to the semi-starvation which is all a hard day's work can give him. Such, indeed, are the conditions in this country where the return for additional work is too meagre to be an incentive to it. Where idling is due to purely psychological defects, one may well presume that education has been either non-existent or ineffective. Such idling is happily too rare to confront us with a special problem on its own account. Nearly all observers of the working of unemployment relief in Britain are agreed that unemployment benefits have not

(From Our Correspondent)

New Delhi, April 19.

LAST minute difficulties appear to have delayed the expected communique from the Viceroy's House announcing the names of the four new members of the Viceroy's Council. The difficulty is said to have been in connection with the Supply Membership. As this is one of the most important war portfolios, the authorities are naturally anxious to get a really suitable man—someone who has not only friendly connections with Indian businessmen and industrialists but is also acceptable to the authorities from the Government's point of view. Evidently the original intention was to bring back Sir Ramaswami Mudaliar to India and entrust him with the Supply portfolio, but as Sir Sultan Ahmed is unable, for reasons of health, to take Sir Ramaswami Mudaliar's place in the War Cabinet, no final arrangements could be made last week. Three or four names have been mentioned like Sir Cowasji Jehangir, Sir Homi Mehta, Sir Muthiah Chetti, Sir Biren Mukherji and Sir Shanmukham Chetti, but it appears that no name could be finally settled last week. Some of them were unwilling to accept office, while some others were not entirely acceptable to the authorities. It is possible that eventually Sir Firoze Khan Noon or some other member of the Viceroy's Council may have been, or may be prevailed upon to go to London for the War Cabinet, but it will take two or three months for the final reshuffling to be completed.

* * * *

According to original anticipations the communique about the changes in the Viceroy's Council was to have been out before the National Defence Council dispersed on Wednesday last. This has not been possible. And as the Viceroy left immediately for Dehra Dun and is not expected back before the end of the month, further delay became inevitable. The Viceroy has many other things to occupy his mind during this brief holiday visit to Dehra Dun—particularly the three day conference with Mr. Phillips which has been specially arranged for this week in order to enable the American Envoy to have full and final discussions with His Excellency before he leaves for Washington to submit his report on the Indian situation to President Roosevelt. Great political importance is attached to this visit of Mr. Phillips to the United States, for according to some of the Indian delegates to the Pacific Relations Conference who have returned, American opinion is anxious to help in securing an early settlement of the Indian question though obviously no active American intervention is considered possible or even desirable. As soon as the Viceroy is back in Delhi or if possible even earlier, the names of the new Members of the Viceroy's Council are likely to be announced. Talks in New Delhi in usually well-informed quarters forecast the following apointments—Sir A. K. Roy for Law, Sir Azizul Haque for Commerce which will also include both Food and Industries, and Dr. N. B. Khare for Indians Overseas. If Sir Firoze Khan Noon goes to London, Sir Sultan Ahmed may take up Defence and Sir Ramaswami Mudaliar may take up Supply or Information. One hears also the name of Sir R. Masani for information or some other. A good deal of doubt is being expressed about some of these appointments—in fact one has always to be prepared for eleventh hour changes in these plans for new appointments.

* * * * *

The suggestion has frequently found mention in "Indian Finance" that all the Central Government's activities in connection with scientific and industrial research, industrial development and such like, should be grouped together into one Department. As already foreshadowed in these columns, the first step in this direction has been taken in the formation of the Industries and Civil Supplies Department. As a matter of fact the regrouping is still incomplete and defective, for a number of research and utilisation activities are still scattered among various other Departments. Forest research, for instance, which has a good deal to do with the country's industrial development, continues to be part of the Education Department. There is also the important subject of mineral exploitation which, under the existing arrangements is being administered by the Labour Department. If the new Industries Department is to function effectively and usefully, it has to be reorganised on more comprehensive lines and placed under a separate Member—an experienced Indian businessman or industrialist who enjoys the country's confidence. Even formerly there was the widely expressed apprehension that the Commerce portfolio was far too large a portfolio for one Member. Under the newly —announced scheme the Commerce Member will have three big Departments under him, Commerce, Food and Industries and Civil Supplies. One of these can be safely added on to the portfolio of some other Indian Member who has comparatively little work, like the Member for Indians Overseas, or the Law Member even if it is not immediately possible to have a separate Industries Member.

* * * *

There is also a good deal of criticism about the way in which the Government of India is dealing with the question of post-war reconstruction. The procedure adopted by the Viceroy's Council in constituting sub-committees for dealing with special problems, is undoubtedly good, but it can never be be looked upon as a substitute for what can, and should be done through regularly organised Departments. According to the present arrangements, the War Resources Committee and the Post-war Reconstruction Committee are to be combined into one organisation under the Secretaryship of General Hutton and Sir T. E. Gregory. They are to have a separate Secretariat staff of which the administrative head will be the Civil Defence Member, Sir J. P. Srivastava, as the Vice-President of the Committee. Such criticism as I have heard is based mainly on four grounds—firstly, that it would be better to have a separate Department to deal with this all important question of post-war reconstruction, secondly, that at least one of the two Secretaries should be an Indian economist of eminence—analogous to the appointment of Sir S. S. Bhatnagar as the Director of Industrial Research, thirdly, that far more comprehensive measures should be taken to secure non-official advice and assistance, and fourthly, that as the list of subjects to be dealt with by policy and other committees mentioned in the official Press Note is not only far from exhaustive but seems to have been conceived from the narrower standpoint of war problems like demobilisation, disposal of surplus stores, contracts etc. the public has to be assured that bigger questions like social security, utilisation of sterling credits, post-war finance and currency policies would be dealt with from the national point of view. There is shortly to be a meeting of the Post-war Reconstruction Committee when the question of further arrangements to be made will be considered and decided. Sir J. P. Srivastava is also proceeding very soon on an all-India tour to consult Provincial and State Governments. It is the Central Government's proposal that each province and State should have its own Reconstruction Committee to formulate and work out plans for post-war reconstruction and ensure co-ordination in giving effect to all India policies.

* * * *

The meeting of the Princes Committee in Delhi coincided with the announcement of the Viceroy's decision regarding the merger of small States. Generally speaking, this decision of Lord Linlithgow, though it is somewhat belated and does not go far enough, has been well received. The proposed scheme for attaching small units to large States for administrative purposes, in the first instance, an area covering over 7,000 square miles with a population of 8 lakhs and an annual revenue of Rs. 70 lakhs. Explaining the scheme which is subject to review after seven years, the Crown Representative's communique states: "The States to which these small units are to be attached will also be required to admit the inhabitants of attached areas to the benefits of administrative amenities such as secondary and technical education and medical treatment on the same terms as their own subjects and to provide new hospitals, schools, roads and other amenities where these, though clearly required are beyond the present capacity of local resources." A special officer, Lt.-Col. Williams, has been appointed to give effect to the scheme.

* * * *

The plans for meeting the year's food requirements, both civil and military have been announced by Major General Wood on behalf of the Food Department. It is a seven point programme providing extensive organisation and well-integrated machinery for purchase and movement of foodstuffs. One important item of the programme is to ensure that the aggregate of all stocks at any time in their hands serves as a weapon to be used to establish and maintain an equilibrium of supplies and prices all over the country. It is also the intention of the Food Department to ensure that the surplus foodgrains are sold at prices related to what has been paid for them and to secure that the goods go into consumption and not into the black markets or hoarding.

(From Our Correspondent)

Bombay, April 21.

THE problems connected with putting into operation the scheme for rationing of foodgrains in the city loom as large as ever and the Government are therefore not in a position to fix a definite date for its introduction. It is learnt that as soon as the Government decides on the date of the introduction of the scheme, hints would be given to householders as to what they should do and what they should not. In many of the licensed grain shops rice is not available in sufficient quantities whereas wheat and jowar are nowhere available. On Thursday last, Mr. A. D. Gorwala held a press conference at the Secretariat when he announced that wheat would be distributed through the Government and other authorised grainshops when the rationing scheme got going. So, it appears that everything still hinges on the Government obtaining the requisite supplies. It is not likely that the Government of Bombay realised earlier that the operation of the scheme and its instructions to householders should follow and not precede the acquisition of supplies; so the earlier announcement assuring that the scheme would be in operation on April 15 is just another case of over-confidence. In the course of the press conference, the Civil Supplies Commissioner stated that the Civil Supplies Department had issued so far 540,000 cards allotting rations for people in the city, including 65,000 provisional cards issued to those who had not applied for cards in the first instance. The Government, it was stated, were also considering the question of changing the hours of supply at Government grainshops. It is learnt that instead of the present hours of supply between noon and 6 p.m. the time might be altered to 8 a.m. to noon and 2 or 3 p.m. to 6 or 7 p.m.

The Bijapur Flag Day for relief of famine in that district was celebrated in the city on April 12. The Women's Relief Committee, under the able guidance of Lady Rama Rao had charge of all the work. The Flag Day can be said to be a resounding success, not so much for the actual donations collected as for its publicity value in awakening the public to a sense of the situation. About 500 volunteers and 30 group leaders went the round of the city. Each seller of flags had a badge with the legend "Authorised Seller" and the instructions stated that the local donations should be given only to such sellers. But the need for help is vast and both public and Government have to be more than generous if relief operations are to be successful. It is learnt that about eight lakhs of people are affected besides tens of thousands of cattle. The Government has come in for strong criticism in the press. Government's communique issued recently stating that sixteen relief works have been started and promising more in the future gave no hint of the extent of relief so far given. Light has been thrown on this aspect by Mr. P. J. Gandhi, a member of the Bijapur Famine Relief Committee of which Mr. A. V. Thakkar is the President. According to Mr. Gandhi, the number of persons employed on relief works in the Bijapur district is ridiculously small. About 3,000 people have been employed on relief works in Bijapur whereas the number of workers similarly employed in the famine-stricken district of Bellary in Madras is already over a lakh. Mr. Gandhi says that there is something wrong with the administration of relief by the District Officers. According to him, there is insistent clamour for work everywhere and at least 50,000 persons could be immediately absorbed if sufficiently large relief works could be opened. It is now four months since famine was declared, the Government could not justifiably complain if serious apprehensions persisted in the minds of non-official workers.

An ingenious but not entirely unworkable idea crosses one's mind as one reads the announcement by the sub-committee of the Standard Cloth Advisory Panel of the proposed output of 100 million yards for the next quarter. Food famine and cloth famine noted today can be made to counteract each other. The poorer classes cannot spend as much on food as they would like if they were faced with scarcity of cloth as well. The proposed output is hopelessly inadequate as the prices of ordinary cloth have soared to such giddy heights leading to a demand for cheap, inferior cloth by the lower middle classes in addition to the millions of poor people. The Government would do well to recognise the utility of supplementary sources of cloth production by encouraging both hand-spinning and hand-weaving. Famine-stricken areas like Bijapur and Belgaum should provide unlimited scope for the encouragement of Khadi production.

Efforts are being made by representative bodies of Indian seamen to advertise various grievances and to seek remedies. A deputation of representatives of the National Seamen's Union, Bombay, saw Mr. T. S. Pillay, Joint Secretary, Commerce Department, Monday last here. The deputation desired that some sections of the Indian Merchant Shipping Act should be amended and the section relating to the system of licensed brokers should be abolished altogether. They pointed out that it was necessary to provide that, in case of shipwreck, the agreement of service should not be terminated as all ships were fully covered; also that when a seaman was reported sick, he should continue to receive his wages. The deputation further urged that provision should be made in the Act enabling a seaman, detained in an enemy country or at any port belonging to the Allies, to continue to receive his wages for the full period of such detention either during or after the war. It is reported that the Commerce Secretary replied that the Act could not be amended during the war unless the amendment was urgent and imperative. He is stated to have assured the deputationists that cases of late payment and immediate relief to rescued crews would be considered; promised that he would communicate with shipowners on the need for improvement in the accommodation given to Indian seamen on ships and that the question of revision of pensions would be sympathetically considered.

It is learnt in this connection that a conference of seamen and shipowners will be held in Delhi shortly to consider questions affecting seamen, arising from war conditions. It is understood that the conference aims at certain provisions being made in the Indian Merchant Shipping Act to safeguard the interests of seamen.

Talking of seamen, mention should be made of the opening, some time last month of a hostel and a club for Indian seamen in the very heart of the Merseyside. Mere Hall, Noctorum, Birkenhead, formerly the residence of Sir John Gray Hill, the eminent shipping lawyer of Liverpool is the place chosen. Arrangements and alterations have been made in Mere Hall which make possible accommodation providing all comforts for some 120 seamen. This is encouraging news and the plan for real homes on shore for seamen coming off should be ready for every port.

The Committee of Ministers of Indian States held a meeting recently at the Taj Mahal Hotel, Bombay. Sir V. T. Krishnamachari, Dewan of Baroda and Chairman of the Committee presided. The Committee discussed questions affecting Indian States such as defence problems, the excise duties recently imposed by the Government of India on tobacco and vanaspati, the food control policy of the Government and industrial development in the States. There was general agreement in the Committee and the recommendations made by the Committee were placed before the Standing Committee of Princes. The Committee recommends the acceptance by the States of the general principles of the scheme of food control enunciated by the Government of India. Likewise, with regard to the excise duties on tobacco and vanaspati the Committee supports co-operation with the Government of India for the duration of the war. It should be remembered in this connection that such a policy has already been adopted by the States in regard to the excise duty on matches. The States are, however, against any attempt by the Government of India, for any reason, to discourage the natural development of industries in the States. It is gathered that the Committee has requested His Highness the Chancellor to acquaint the Crown Representative with the States' attitude.

It is learnt that in the industrial shares of companies registered in Hyderabad there has recently been abnormal speculative activity. The extent and magnitude of such activity can be gleaned from the fact that the shares of newly-floated companies are quoted at a premium of 20 to 25 per cent even before actual allotment is made. The Nizam's Government takes the view that the unusual rise in prices of shares is wholly unjustified and engineered by profiteers who thrive at the expense of the investing public. It is true that industrial development in the State has received great impetus from the war but that is no explanation for this disproportionate rise. The Government have felt compelled to issue a communique warning speculators that strong action will be taken if the speculators persist in artificial boosting of prices. The Government have also advised the investing public in their own interest not to make purchases of shares at a premium before they are actually allotted to them and to insist on ready delivery on cash payment within 24 hours. It is to be hoped that the speculators will draw their lesson from the experience of cotton speculators and desist from anti-social activity.

Resume of Commodity Markets

Quite firm conditions have been noticeable in the several commodity markets during the past week and in nearly every section an improvement in prices is to be reported. The feature of the week is the sensational rise in prices for both gold and silver.

The raw jute market has been firm owing to the scarcity of supplies and the keenness of mills to buy up whatever quantities that are offering while the jute manufactures market has been very firm with good enquiry and the hopes regarding improvement in the freight position.

In the Bombay raw cotton market prices have been marked further higher in sympathy with the bullion markets and even the warning given by the Chairman of the East India Cotton Association to reduce commitments, has not resulted in any marking down in the quotations.

* * * *

The raw jute market has been firm during the past two weeks and quotations in the loose jute section are at the highest levels since the beginning of the season. A good return is offered to the ryots at the present rates. One would have expected that with the satisfactory reports regarding the progress of sowings in jute districts, sellers would have been more eager to do business. As was pointed out last week the immediate problem, however, is one of getting ready supplies and this is mainly dependent on the provision of adequate transport facilities and the willingness of holders to part with their stocks before the new crop arrives. There is a good portion of the crop still to be moved but at the present rate of arrivals it may not even be possible to move the old crop before the new crop arrives. That is the reason why mills are not free sellers for forward positions as with the low stock position and the difficulties in ensuring adequate supplies of jute against forward sales, there is no tendency to build up an oversold position. The efforts to increase supplies of jute during the past few weeks have borne fruit but the rate of arrivals is still below the rate of consumption and since October mills have been eating into their stocks. The position is, therefore, none too comfortable and unless it is corrected there is no possibility of a decline in prices.

* * * *

The jute manufactures market was very firm till Wednesday and quotations were marked substantially higher. During the last two days the fears regarding the possibility of wagon allotments affecting despatches resulted in a slight recession in prices. But it is pointed out that wagon allotments will, in the long run, ensure an adequate offtake and can only temporarily be interfered with by the priority in regard to food supplies. There is not much of production left unsold for near positions and with the difficulties in regard to jute supplies holders are naturally inclined to keep their stocks. Another favourable development for the jute manufactures market is the publication of satisfactory encouraging stock and consumption figures for the U.S.A. For the first time in several months, there has been a sharp increase in consumption. The appreciable increase in stocks afloat has given rise to the hopes that in future exports will be on a higher scale and that as a consequence consumption will be encouraged.

* * * *

The controversy regarding suspension of futures trading in the Bombay cotton market is still going on. So far no decision has been taken by the Government of India to put an end to futures trading in the cotton market. It was pointed out last week that the East India Cotton Association had sent a reply to the Government saying that in the absence of any definite scheme for buying up cotton the suspension of trading in the futures market might result in a further setback in prices.

The Association recommended that trading in options should be suspended. It has also been pointed out more than once that the improvement in the quotation of Jharilla should not be taken to mean that there has been a similar improvement in prices for short staple cotton. Jharilla cotton is of a finer variety and the whole crop is considerably short of mill requirements. In the absence of any imports there has naturally been great speculative activity. The aggressive rise in prices for Jharilla cotton has no doubt resulted in a diversion of demand to inferior varieties and prices being marked higher but if any comparison is made between cloth and yarn prices, it will be readily conceded that so far as the producer is concerned, there is still considerable scope for improvement in cotton prices. The anxiety of the Government to prevent an undue rise in cotton values is to make a success of the grow more food campaign. If the return on cotton sales proves to be higher than the return on food grains even at the present inflated levels for the latter the diversion of the acreage from cotton to food grains cannot be ensured in the coming years.

* * *

There appears to be no limit to the rise in prices in the bullion market and the improvement in the quotation for gold by several points cannot be satisfactorily explained. Silver prices also have improved in sympathy ; the rise is in part to be attributed to the operation of inflationary tendencies. Hitherto these tendencies have had their effect only on the bullion markets. There is no comparable boom in prices in the stock markets. That the unrestricted prices for bullion will be harmful from the country's point of view in the long run cannot be overemphasised. There were suggestions early in the week that the Government might take some measures for controlling prices, but how they propose to do it cannot be anticipated. So far no announcement has been made in this regard.

* * * *

Coffee prices are to be stabilised at lower levels and arrangements will be made for distributing supplies of raw coffee at fair prices to retailers and consumers. If the Indian Coffee Market Expansion Board fails in its efforts to check any further rise in prices it is anticipated that Government will step in and do the needful. It is pointed out the 1942-43 crop, estimated at 12,000 tons, will be sufficient to meet internal demand. No further exports of coffee will be permitted.

(By Our Jute Correspondent)

Calcutta, 20th April.

AMERICAN stock and consumption figures for the month of March both show a satisfactory recovery from the very depressing levels recently ruling. Consumption has increased to 450 lakhs yards in March as compared with 220 lakhs and 210 lakhs in January and February respectively, which is a heartening feature though the total is poor when compared with the figure of 650 lakhs yards in March last year. Naturally enough, spot stocks have shrunk to 560 lakhs yards, but afloat has increased to 1,480 lakhs, bringing the total in sight to 2,040 lakhs yards, the first time the combined spot and afloat stocks have topped the 2,000 lakhs mark since March last year, when the drastic decline in consumption in the U.S.A. may be said to have commenced. It is to be hoped, therefore, that the more ample supplies now in sight will be maintained and consumption thereby encouraged. Visible stocks at the end of March last year totalled 2,520 lakhs.

We briefly noted last week the arrivals of jute into Calcutta for the first half of April as estimated at 2,48,000 bales, a slight improvement on the recent rate of arrivals, indicating a total of around five lakhs of bales for the whole month. This, while satisfactory so far as it goes, is still running well behind the current rate of mill consumption of jute, so that the mill stock position in their raw material must continue to deteriorate for some time to come. The corresponding arrival figure for last year was 1,04,000 bales only, but the short crop was then nearing its end. Comparing the total arrivals for the two years, the 1942 figure for the season up to the middle of April amounted to 53,72,000 bales against 52,40,000 this year. So there is every probability that by the end of this month the two years arrivals will be just about level. But how the requisite quantity of jute is to reach Calcutta in the next few months to clear the balance of the current crop and to avoid the necessity of mills reducing working hours for lack of adequate stocks, is still a moot question.

Examination of the detailed March arrivals reveals that transport by Rail showed a gratifying increase from under 10 to nearly twelve and a half lakhs of maunds, the best total since December which it is to be hoped will be maintained. Shipments by Country Boats also showed a marked increase from 78,000 maunds in February to 3,89,000 maunds in March. On the other hand it is regrettable that shipments by Flats still show a declining tendency, being down by 1,60,000 maunds from the previous month and over 6 lakhs of maunds below the highest figure touched this season, in November. Lack of sufficient towing power still seems to be the handicap under which the steamer companies are struggling, causing both loaded and empty flats to be unduly held up at both ends of the trip.

While mills' prospects of receiving in sufficient jute out of the current crop to keep them going, are still in the balance, their prospects of a sufficient supply out of the coming crop are still equally so. A number of districts in the eastern part of Bengal report sowings as complete and, taking the current crop as a basis at 16 annas, the total sowings reported from these completed districts vary from eight to thirteen annas. The licensed acreage would work out to just under 13 annas of last year. so it is apparent that the high price of rice has influenced sowings markedly in some areas. There is still a possibility of improvement in some of the uncompleted districts, notably Mymensing, where sowings have been held up owing to excessive rain. The continued high price ruling for jute combined with the scarcity and expense of paddy seed, may influence more sowing of jute in such areas. Conditions generally have been very favourable so far and a sufficiency of rain has fallen almost everywhere to ensure satisfactory germination of the seed.

Comment was recently made in these columns on a proposed scheme for the improved grading of loose jute and, while the general feeling is that the suggested scheme is too complicated to be introduced *en bloc*, and would be liable to give rise to complications between the lowest sub-grade of one grade and the highest sub-grade of the grade below, some advance might well be made in the present grading system. The trouble nearly always arises with the lowest grade, largely because mills have a habit of demanding this grade when, in all ordinary circumstances, it is not actually available. The proposal has again been put forward that all dealings in the lowest grade should be prohibited till a specified date, or until such time as it can be definitely ascertained that dealers cannot conveniently pursue their business without disposing of accumulations of the lowest grade. It is further suggested that the lowest grade, the present "Cross" mark, should be strictly confined to tangled or habi-jabi jute, and that no straight morahed jute, such as at present constitutes 90 per cent of the grade, should be permitted under this mark. Straightforward co-operation between mills and balers would be absolutely necessary if this aim is to be achieved, for it is useless to bring in revised regulations year after year if these are only to be broken as soon as it suits the convenience of one side or the other. No baler should begin to be encumbered with an excess of habi-jabi before the month of October and both sales and deliveries could quite reasonably be prohibited before then. At the same time, particularly in some seasons, there might well be room before that date for the introduction of an intermediate straight morahed mark between the Bottom and the Cross, and it is therefore suggested that such a mark might be permitted if occasion required, but only if and when it should be considered necessary, and that the sale of such a mark should also be subject to restriction or entire prohibition in the early months of the season. Otherwise the general feeling is that the present system of Tops and Middles should not be interfered with, though some would not be averse to the option to sell Middles with a lower cutting guarantee against the standard specification. Everything points to the coming season being one of much narrower trading margins than for some years past, with balers compelled, if they are to make any profit at all, to stick much closer to the standard grade specifications than the generous deliveries they have been able to make during the past year or two. Mills may also realise that circumstances are changing and that if they expect to get quality jute they must buy a higher range of grades, and not look to make the basis of their hessian batch of what they can pick out of Bottoms. In this event it may be possible to arrive at a practical grading which will actually be what it is supposed to be and not something widely divorced from the specified standard.

In the Export Jute market somewhat more interest has been shown and business has been reported in Short Group Dundee Daisee 2/3 at Rs. 94 and Rs. 95 and in Long Group from Rs. 82 to Rs. 86. Business has also been recorded with mills at varying rates, Firsts at Rs. 89, Hearts at Rs. 79, Dundee Tossa 4s at Rs. 89 and Outport Tossa 4s at Rs. 79. Mills paid Rs. 84 for Dundee Daisee 2/3 when the shipment price was Rs. 82.

In Loose Jute the turnover has not been extensive, mainly on account of the paucity of offers of the type of jute wanted. European packing has scarcely been on offer but Supervised Jat has sold at from Rs. 18 and Rs. 15 Mids and Bots to eight annas higher, the higher rate being paid for a fairly high assortment. Indian Northern Bengal Jute sold from Rs. 16-8 and Rs. 13-8 Mids and Bots to Rs. 17 and Rs. 14. Tossa has again been in demand and up to Rs. 17 and Rs. 14 paid for Mids and Bots of good District quality, with sellers now asking an advance. Up to Rs. 18-12 and Rs. 17-12 is reported paid for District Tossa Tops and Middles. Jungli Tossa Mids and Bots fetched Rs. 16-8 and Rs. 13-8 and are now quoted higher. The fact that the price of jute has advanced much more rapidly of late than the price of manufactured goods may act as a brake on a further advance, for the margin of profit to Mills is now much reduced, calculating simultaneous prices, and the inducement to purchase raw material for other than urgent needs therefore less. Mofussil markets rule firm with imports only fed very discriminatingly at steadily advancing prices.

The Fabrics market has ruled firm, the principal support coming from a strong demand for "B" Twills from the Punjab, and all other descriptions are firmly held in sympathy. Mills are reserved and only selling sparingly. Nine porters have firmed up about four annas without much business reported and now quote Rs. 20-8 near, Rs. 20-4 May-June and Rs. 20 July-Septr. Eleven porters show a larger advance and close at Rs. 25-14 near and Rs. 26 May-Septr. Business was done for October-December at Rs. 25-8. The main feature of the Heavy Goods section has been "B" Twills which have hardened from Rs. 63 to Rs. 65 ready, Rs. 62-8 to Rs. 64-8 April, Rs. 61-8 to Rs. 64 May-June and Rs. 60 to Rs. 62-8 July-Septr., with a good turnover recorded. Liverpools have firmed up similarly and sales were reported at Rs. 66 July-Septr. and at Rs. 65 October-December. Near Liverpools now quote Rs. 67. Salts sold at Rs. 52 July-Septr. At the close the tone of the market is slightly quieter.

(*Continued from page* 715)

dulled the eagerness to return to work. On the other hand, it may, perhaps, be reasonably suggested that the provision of unemployment relief on a large scale has demoralised the ruling classes and deprived them of the incentive to effect that reorganisation of the economic system which will provide work for all. For, the ruling classes know that the provision of unemployment relief keeps the individual worker more or less above want and the rise of social discontent on a large scale is thus prevented. In this view, the ruling classes in modern democracies have more or less unwittingly adopted the Bread and Circuses policy of the Roman Emperors. Only, I prefer to think that the modern demos has not been demoralised to the same extent. The fact that unemployment benefits have not dulled the incentive to return to work shows that the modern worker has preserved intact his sense of self-respect. If he will only learn to resent the dole as an affront to him, he will learn to compel the Governments to effect that reconstruction of industry which will provide healthy employment for all.

* * * *

There are then, the economic problems arising from the increase in the leisure of the working classes. The first effect of leisure on the economic system is the stimulus to the amusement industries. The development of the cinema industry is the best illustration of such a demand. It is typical, too, in the sense that it shows the essential features of an amusement industry which, if it is to serve its purpose of filling the leisure of the workers, must have a broadly educational significance. Amusements, have, no doubt, to be frivolous. But only apparently, and up to a point; for, mere frivolity palls in no time and cannot engage the attention for long of serious workers. Frivolity then has to be a kind of attraction which will be followed by matters of more serious import. And it is no wonder that the cinema industry has lived down the stage of crude appeal to sex and sensation.

* * * *

What has been said of the cinema is true of popular journals and popular literature. The sixpennies of to-day are not the trash that they were a decade or two ago. The sensational success of the Penguins and Pelicans shows that an era of serious adult education on a mass scale is ahead of us. Private enterprise may yet justify itself by the alacrity with which it meets the needs that enlarged leisure gives rise to. But on whatever basis industry may be organised, it is certain that, as the development of productive technique reduces the toil needed for the production of our resources, more and more of our resources will flow into what may be symbolically termed the amusement industries. In the case of the individual, it is often said that the test of a rising standard of life is the decreasing proportion of expenditure on food, housing and clothing to total expenditure. When mankind as a whole devotes less and less man-hours to production of necessaries and more and more to the amusement industries and to meeting the enlightened needs of leisure, it will not only have emancipated itself from the struggle for life, but will have taken big strides forward to a higher life.

* * * * *

A public utility Company offering its shares to the public for subscription at present cannot provide the usual information as to load, costs and profits. But the Santiniketan Electric Supply Co., can point to the increase in sales of energy from the date of actual working and also to the agreement with the Visvabharati whereby a minimum load is assured. Santiniketan is growing into a garden city. That is a major advantage for the Company which expects demand for power from the waterworks for which Government has made a grant of Rs. 1½ lakhs. That the rural industries of Sriniketan will gain from the supply is an argument in support of providing electricity. The Company has incurred capital expenditure and the present issue will be applied to discharge loans. As incorporated enterprise in the distribution of electricity tends to be other than Indian the importance of supporting a cent per cent Bengali enterprise will be understood. Not many will overlook the details given in the prospectus as to the need for giving one essential amenity for the cultural centre and the town of Bolpur. The Company has finished its construction programme. It was done at pre-war cost, and the present issue of the bulk of ordinary shares implies that the assets behind the issue have a higher value than may be assumed. The Directors may well reckon on the investing public turning to shares of this Company which is already working; and the fact that the present issue is small and the usual instalment system obtains makes for success. The Santiniketan Electric Supply Co., emphasises in its way the connection between the old and the new in India, the urban and the rural. It is necessary to mention that the exodus from the cities in war-time is an advantage for small towns with a non-industrial aura though Santiniketan's work for rural reconstruction should benefit from the electric supply available. That is a consideration which should weigh with investors who measure all the advantages that are promised by the advent of electricity in a place still developing and already famous.

'EAVESDROPPER'

JUTE

Calcutta, April 22, 1943.

THE jute market has been very firm during the past week and a further substantial improvement in prices has been recorded. Even with the reports regarding the improvement in the rate of sowings in the mofussil districts, sellers have been rather reserved. The rise in prices for jute manufactures as well as the reports regarding a substantial improvement in the shipping position have been mainly responsible for the reserved attitude of sellers. Owing to the low level of stocks and the heavy forward sales, mills are naturally anxious to buy up as much jute as possible. The turnover during the week was restricted only by the availability of supplies. There has been a slight improvement in the rate of arrivals during the past few weeks, but the total of arrivals has not yet come up to the total of consumption by mills and producers are eating into their old stocks. After the sustained improvement in values a slightly quieter feeling is noticeable towards the close but there has been no recession in prices. Supervised Jat Middles and Bottoms were done at Rs. 18-8 and Rs. 15-8 per maund. Earlier in the week Indian District Tossa Tops Middles and Bottoms were done at Rs. 19, Rs. 18 and Rs. 15 respectively. There were not many sellers for European Packing Middles and Bottoms which were done at Rs. 19 and Rs. 16 per maund.

The Pucca bales section was also firm in sympathy with the loose jute section and shippers bought Dundee Daisee 2/3 at Rs. 85-8 per bale and an assortment of Short Group at Rs. 94 per bale. Mills are reported to have paid Rs. 2 higher.

JUTE MANUFACTURES

Calcutta, April 22, 1943.

EVEN at the end of last week the jute manufactures market was inclined to be firm with the publication of satisfactory local stock figures for March. In the early days of the week there was some business on account of overseas consumers and the possibility of an increase in shipments. The publication of satisfactory American stock and consumption figures was another favourable factor. There has been a rise in the consumption for March from 21 million yards to 45 million yards in February and 22 million yards in January 1943. The figure is the highest since May, 1942. Compared to the level of consumption for the corresponding month in 1942, however, there is a decline of 20 million yards. Stocks afloat are substantially higher at 148 million yards against 98 million yards while stocks spot are 56 million yards against 65 million yards. The figures are given below:

U. S. HESSIAN STOCK AND CONSUMPTION FIGURES.

Millions of yards.

	Stocks at the end of Month.				Consumption for Month.	
	Spot		Afloat			
	1943	1942	1943	1942	1943	1942
January ...	80	161	168	107	22	48
February ...	65	142	98	188	21	58
March ...	56	134	148	118	45	65
April ...		100	...	90	..	68
May ...	...	98	...	42	...	49
June ...	...	89	...	30	...	27
July ...	..	86		32	..	16
August ...	..	69	...	88	...	16
September	...	49	...	37	...	29
October ..	...	57	...	37	..	30
November	...	32	...	92	...	16
December ...	...	25	...	173	...	10

The highest levels for the week weer touched for 9 porters ready on Tuesday. With the withdrawal of buyers from the market there has been a slight recession in values and immediate requirements seem to have been satisfied at the moment. After being higher at Rs. 20-10, 9 porters ready are now quoting Rs. 20-6, April Rs. 20-6, May-June Rs. 20-4 and July-September Rs. 20. 11 porters are quoting Rs. 25-10, April Rs. 25-10, May-June, Rs. 25-12 and July-September Rs. 25-12. It is interesting to note that the premium for ready over forward positions has narrowed and that buying has been spread over a longer period.

In the Heavy Goods section, a good amount of business was done in the earlier days of the week. Towards the close quotations are a bit easier. "B" Twills for April delivery were done up to Rs. 64-8. Towards the close, however, the quotation came down to Rs. 63-3 for "B" Twills, Rs. 66-8 for Liverpools and Rs. 63-8 for Cornsacks. Prices at the end of last week were Rs. 60-2, Rs. 64 and Rs. 61 respectively.

GOLD

Calcutta, April 22, 1943.

THERE has been a continued rise in the bullion markets during the past week. The quotations at the time of writing are at new high levels for the war period. Rumours regarding the possibility of a 'ceiling' being fixed for both gold and silver prices, have not had any effect on prices. Speculative activity, and investment buying is still unsatisfied. In the earlier days of the week, there was some selling on account of mofussil hoarders but when it was known that there was a further improvement in values it disappeared. The spot position is very tight as is evident from the premiums offered for gold ready. Inflationary forces are at work and it is very difficult to say as to when and how the upward trend will be checked. Gold ready was quoting at Rs. 86 and First Settlement Rs. 85-8 and Second Settlement Rs. 84-12. Godl ready was higher, quoting Rs. 77-6 at the end of last week and First Settlement Rs. 76-14.

In the Calcutta market prices have been marked higher gold ready quoting Rs. 85. Sovereigns were Rs. 58-14 against Rs. 55-8.

SILVER

Calcutta, April 22, 1943.

THE silver market also has moved up higher in sympathy with the gold market. It will be again noted that the improvement in prices is not so pronounced as in the gold market. In spite of the feeling that there is a heavily overbought position in the silver market, the general sentiment is in favour of a further improvement in prices. Quotations are nearly six points higher on balance, Silver ready being Rs. 120-8 against Rs. 114-4 and First Settlement Rs. 120-4 against Rs. 114. Second Settlement was quoted Rs. 120-4.

In the London market there has been no change in the quotation for both Spot and Forward at 23½d.

COTTON

Calcutta, April 22, 1943.

THE Bombay raw cotton market has been very steady during the past week on reports that there is to be no control of prices and that efforts are being made to increase production. The strength of the bullion markets also has been helpful to a certain extent. It is now felt that with the representations made by the East Indian Cotton Association regarding trading in the 'futures' markets Government will not press for the liquidation of hedge contracts in the current crop. At the higher levels there has been some profit-taking and closing quotations are lower than the highest levels for the week. Jharilla May are quoting Rs. 555-12 against Rs. 539 last week and July Rs. 570 against Rs. 548-8. It is noteworthy that the premium for the July position has improved from nine points on the last occasion to as much as 15 points at the present moment.

PIECEGOODS

Calcutta, April 22, 1943.

THE piecegoods market has been very active and business passing has been on a larger scale. There is to be no immediate control of prices for yarn and cloth. It appears that the recent increase in prices offered to mills against Government contracts would satisfy mills and that they would be prepared to offer their production at these rates. Efforts are also being made to increase production by recruiting additional labour and simplifying the methods of production.

As regards standard cloth the first instalment of 12 million yards has not been enough to satisfy even a small proportion of the total demand. The balance of 3 million yards has not reached dealers yet. The arrangements connected with the distribution of standard cloth have not yet been completed in the case of certain provinces. It is reported that mills have undertaken to deliver another 20 million yards before the middle of next month and that it is proposed that 75 million yards should be produced for the quarter ending July, 1943. Even this increased quota of production will not in any way ease the position as the total annual demand is of the order of 1,500 million yards and for this total to be reached the rate of production should be substantially higher. Mills seem to have expressed their willingness to produce as much of standard cloth as needed provided the total requirements in respect of Government contracts and standard cloth do not exceed 60 per cent of the total output. The difficulties in the way of speedy manufacture of standard cloth appear to be the pressure on storage facilities and the necessity of giving priority to unfulfilled Government contracts.

Stock Markets to-day and to-morrow

SHARP RISE IN COTTON AND SUGAR SHARES

Stock markets in Calcutta and Bombay have been rather active. With a substantial improvement in prices a greater volume of business has been put through. Indian Irons and Steel Corporations, as usual, led the rise in prices, but in the last three days the attention of operators has been mainly confined to the Cotton and Sugar sections. The sustained interest in Cotton and Sugar shares is to be explained only by the optimistic view taken by operators regarding the encotraging prospects in the immediate future. That the general sentiment in the market is satisfactory will be evident from the fact that the reports regarding a further withdrawal by Allied troops in the Arakan front have not had any effect on the market. Closing prices are at the highest levels for some time.

* * * * *

Regarding the interim dividend of the *Indian Iron and Steel Company, Limited* for the year ended Maroh, 1943, it was given out earlier in the week that there was a possibility of a bigger dividend. So far, no announcement has been made. If market expectations prove correct there may be a further rise in prices.

* * *

The sensational rise in prices for cotton shares during the past two weeks will be evident from the table given below. Encouraging earnings reports, published since the beginning of the year, and the large dividend distributions have no doubt been responsible for the higher quotations. Only the fears regarding the possibility of government control interfering with earnings, had a restraining influence temporarily. With the reports that there was to be no actual control of prices and that government interference would be only aimed at increasing production and providing adequate transport facilities there was naturally a sharp rise in prices for shares of the established companies. If there is to be no control of prices and if there is to be a further increase in production it stands to reason that earnings will be further higher and dividends incidentally. I am inclined to think, however, that in the case of certain counters the rise in prices has been overdone.

	22.4.1943 Rs. a.	16.4.1943 Rs. a.	16.3.1943 Rs. a.
Cawnpore Textiles ..	29 2	24 4	19 12
Kesoram ..	17 7 x.r.	14 15 x.r.	18 12 c.r.
Elgin ..	77 8	61 8	53 0
Muir ..	445 0	407 0	398 0
New Victoria ..	12 10	10 2	8 12
Bengal-Nagpur	37 6	33 4	34 4

From another table given below it will be seen that the improvement in prices for sugar shares during the past few weeks is very pronounced. The efforts for all-out increase in production will, it is believed, result in a substantial increase in companies' earnings.

	22.4.1943 Rs. a.	16.4.1943 Rs. a.	16.3.1943 Rs. a.
Cawnpore ..	38 0	36 8	32 4
Purtabpore ..	18⅝ x.d.	16 6	13 0

Champarun ..	37 2	34 12	27 7

The results of the Bird and Heilgers group of coal companies for the half-year ended December, 1942, are rather discouraging. With the exception of the Burrakur Coal Company, Limited, it has not been possible for any company to report an increase in earnings or even to maintain earnings. Dividend distributions are naturally lower. Standard is paying a dividend on the ordinary shares of 1¼ per cent against 5 per cent, Sendra 1¼ per cent against 2½ per cent Bhulanbararee nil against 1¼ per cent, Borrea 5 per cent (same) and Churulia nil (3⅛).

* * * *

Even with an increase in earnings for the six months ended December, 1942, it has not been possible for the *Burrakur Coal Company, Limited* to pay a higher dividend on the ordinary shares as the provision for taxation has been very heavy. Earnings would have made better showing but for the difficulty in regard to labour and wagons supplies. The net profit, before providing for taxation and depreciation, is Rs. 4,42,942. After providing Rs. 1,32,355 (Rs. 1,25,340) for depreciation, the rovision on account of taxation is as much as Rs. 1,75,000. The dividend on the ordinary shares has been maintained at 1¼ per cent. The amount carried forward is not very much changed at Rs. 16,079.

313,137 tons were raised and 318,817 tons despatched during the half-year as compared with 373,196 tons raised and 340,071 tons despatched during the previous half-year. 32,328 tons of coke were manufactured and 39,648 tons despatched against 30,444 tons manufactured and 22,206 tons despatched the previous half-year.

* * * * *

Having regard to the difficult conditions early in 1942 following the rapid Japanese successes and the internal disturbances in the country later in the year, which affected the province of Bihar in particular, the progress made by the *Bank of Bihar Limited* in that year should be considered very satisfactory. Deposits at the end of the year at Rs. 1,54.93 lakhs show an increase of over Rs. 27 lakhs. If it had been possible to utilise effectively the increase in deposits it would have been possible to report a higher level of profits. It was not possible, however, to find remunerative channels of investment. As a result, cash balances are higher at Rs. 76.62 lakhs against Rs. 42.24 lakhs. Advances are lower at Rs. 60.4 lakhs against Rs. 84.03 lakhs. The directors express the hope that in the current half-year conditions and results will be better.

* * * *

That prosperous conditions exist in the various industries is borne out by the results of 50 companies published since the beginning of this year. The net profit, before providing for taxation and depreciation, is Rs. 9.71 crores against Rs. 7.05 crores for the same number of companies publishing their balance-sheets in 1941 and Rs. 4.13 crores in 1940. In spite of the heavier provision on account of taxation and depreciation, the amount paid by way of dividends is considerably higher at Rs. 4.79 crores against Rs. 3.03 crores.

* * * * *

Mahalaxmi Cotton Mills Limited paid a dividend of Rs. 2-8 per share in respect of the year ended June, 1942. I now understand that there is every possibility of an interim dividend of Re. 1-4 per share being paid in respect of the current year. Recently, there has been a rise in the quotation for the shares from Rs. 33 to Rs. 36. Mahalaxmi Cotton should be considered cheap even at the higher levels as it is one of the few dividend-paying shares quoting at a moderate premium over par.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 23.

It should be said that rather active conditions have been noticeable on the Calcutta Stock Exchange during the past few days and that a substantial rise in prices has been recorded in certain sections. There was greater activity in the popular speculative counters, Indian Irons and Steel Corporations being one and a half points higher at Rs. 37-6 and Rs. 26-8 respectively. But the features of the week are provided by the Sugar and Cotton sections. During the past two weeks there has been considerable activity in both these sections and the important counters have been marked substantially higher. The Sugar section has been firm throughout the week though the firming up in prices in the Cotton section was noticeable particularly in the latter half of the week. For a time there was a slight marking down in prices with the publication of reports regarding a further adjustment of positions in the Arakan front but the undertone towards the close was fully steady and quotations were at the highest levels for the week.

Giltedged securities have been quietly steady and most of the quotations are unchanged with business passing on a restricted scale. 3½ per cent Government Paper was unchanged at Rs. 94-1. Among terminable loans, 3 per cent Defence Bonds 1946 were Rs. 103, 3 per cent Second Defence loan 1949-52 Rs. 100-14, 3 per cent 1963-65 Rs. 95-10 and 4 per cent 1960-70 Rs. 110-5. 5 per cent 1945-55 were Rs. 108-4 and 3 per cent 1951-54 Rs. 99-14. Among provincial loans 5 per cent U. P. 1944 were Rs. 103.

No transactions have again been concluded in public bodies' debentures. There are no sellers for industrial debentures, and the only transactions recorded have been in 4 per cent. *Presidency Jute* at Rs. 101 and 5¼ per cent. *Rohtas Industries* at Rs. 105.

Business in preference shares also is difficult as there are a good many buyers for tax-free issues. Among first class jute mills preferences, *Adamjee* were Rs. 160-8 and *Auckland* Rs. 150-8. *Hastings* were further higher at Rs. 150 while *Hooghly* were Rs. 21-8. *Kelvin* were Rs. 175-8. Among others, *Dhunseri* were Rs. 5-8, *New Victoria* Rs. 13-12 and *Steel Corporation* Rs. 126.

Bank shares were steady with *Imperial Bank* fully paids at Rs. 1,730, contributories at Rs. 427-8 and *Reserve Bank* at Rs. 107.

Coal shares have not been interesting and not much improvement in prices has been recorded but a slightly greater volume of business has been passing in the last two days. *Amalgamated* were Rs. 35-12, *Bengal* Rs. 453, small lot, *Burrakur* Rs. 14-5, *Bokaro* and *Ramgur* Rs. 19-5, *Equitable* Rs. 35 ex-dividend, and *Hurriladih* Rs. 16-10 ex-dividend. *New Beerbhoom* were higher at Rs. 19-2. *New Bansdeopur* were Rs. 30, *Standard* Rs. 20 and *West Jamuria* Rs. 33-4 ex-dividend.

In the jute section, a slight rise in prices is to be reported but it has not been general. With the strength of the cotton section and the hessian market it may be that a further improvement in prices will be recorded. *Anglo-India* were 15 points higher at Rs. 390 while *Bally* were 18 points higher at Rs. 319. *Bengal* were Rs. 25-8, *Birla* Rs. 34 and *Champdany* Rs. 209. *Howrah* have improved from Rs. 59-8 to Rs. 62-4, *Kamarhatty* from Rs. 530 to Rs. 550 and *Kanknarrah* Rs. 430 to Rs. 445. *Nellimarla* were better at Rs. 22-12, *Nuddea* at Rs. 90-8, *Presidency* at Rs. 6-10 and *Reliance* at Rs. 64. *Soorah* were well held at Rs. 16.

In the Engineering section, Indian Irons sharply improved from Rs. 35-8 to Rs. 37-6 on bear covering and reports regarding a higher interim dividend. The reports regarding the progress of operations in Tunisia also had an encouraging effect. There was some selling at the higher levels and the quotation came down to Rs. 36-10 but the close has been steady at Rs. 37-2. *Steel Corporation* improved from Rs. 25-2 to Rs. 26-8. There was a recession to Rs. 25-10 only to recover to Rs. 26. *Burn & Co.* were Rs. 383, *Indian Malleable Castings* deferreds Rs. 3-2 and *National Iron and Steel* Rs. 12-9. *Indian Galvanizing* were Rs. 39-8 cum-dividend while *Jessop & Co.* were higher at Rs. 22-4 cum-dividend with the declaration of the interim dividend of Re. 1 per share for the year ended October, 1942. *Kumardhubi Engineering* were Rs. 7-6 and *Marshalls* Rs. 3-11. *Saran Engineering* were frequently dealt in around Rs. 7-9.

As pointed out above, Cotton shares have flared up in the last three days. With good buying the shares of established companies belonging to Cawnpore have been sharply marked higher. Owing to the high level of prices for the popular shares there has been some enquiry for the low-priced issues. *Cawnpore Textiles* have improved further from Rs. 24-14 to Rs. 29-2. *Elgin* have shot up to Rs. 77-8 from Rs. 61-8. *Dhakeswari* were Rs. 25-6 and *Mahalaxmi Cotton* Rs. 34-4. *Muir* were neglected in the early days but there has been a rise of 30 points towards the close to Rs. 440. *Dunbar* have registered a rise from Rs. 288 to Rs. 320 and *Kesoram* from Rs. 14-8 ex-rights to Rs. 17-8 ex-rights. *New Victoria* have encountered vigorous buying and the quotation is nearly three points higher at Rs. 12-7.

The Sugar section has gained strength and in all round buying prices have been pushed up further. *Balrampore* have improved from Rs. 13-9 to Rs. 14-8 while Carew & Co. have jumped to Rs. 19-12, the highest level for sometime. *Belsund* were Rs. 10-4 while *Cawnpore* showed a gain of four points at Rs. 39. *Champarun* were able to report a similar rise though the closing quotation was slightly lower at Rs. 37-14. *New Savan* also have been in good request being done up to Rs. 18-5. *Samastipore Central* were higher at Rs. 19-7 against Rs. 15-14. *U. P. Sugar* were in good favour with the quotation at Rs. 22-8. *Ramnugger Cane and Sugar* came in for some buying at Rs. 11-8 and *Sitalpore Sugar* at Rs. 14-4.

Transactions in the Tea section have been on a rather small scale and there are no important price changes to be recored. *Bishnauth* were Rs. 34-4, *Dufflaghur* Rs. 18-12, *Hasimara* Rs. 57 and *Hattikhira* Rs. 29-10.

In the Miscellaneous section, *Burma Corporation* were unchanged at Rs. 2-12 and *Indian Copper* at Rs. 2-8. *Alkali and Chemical* were better at Rs. 35-8. *B. I. Corporation* after being sticky around Rs. 5-14 for sometime were firmer at Rs. 6-6. *Calcutta Trams* were Rs. 19-7 and are being talked further higher. *Midnapore Zemindary* have improved from Rs. 77 to Rs. 84-8 in expectations of a higher dividend for the year ending April, 1943. *Assam Saw* were firm at Rs. 5. All the Paper shares were in request. *Orient Paper* were Rs. 28-8, *India Paper Pulp* Rs. 195 and *Bengal Paper* Rs. 214. *Titaghur Paper* were Rs. 26.

BOMBAY STOCK EXCHANGE

(From Our Correspondent).

Bombay, April 22.

Last week it was pointed out in these columns that the war news was taken full advantage of by the operators and investors alike and that prices tended to firm up towards the week-end. The upward tendency not only manifested itself in the succeeding two days, but continued throughout the four days of the week under review except for a slight setback in midweek. However, this brake failed to keep down prices for any appreciable time in the case of the majority of shares.

Some of the scrips in the Textile Group have touched the highest levels ever reached by them. *Bombay Dyeing*, for instance, have gone beyond the 2,000 mark and at the moment are quoting at Rs. 2,040. *Century* have gained 123 points in the past six days, and are quoting at Rs. 888 as against Rs. 765 last Thursday.

The Miscellaneous section is also firm with some of the shares quoting at substantially higher levels.

The giltedged section was steady with 3½ per cent Government Paper quoting Rs. 94.

The Textile section was very active for the best part of the period under review. The trend that was noticed last week-end continued this week also. There was, however, a set-back on Tuesday on rumours regarding control of gold and silver prices. But on Tuesday the upward course was resumed. To-day prices shot up on widespread buying. *Bombay Dyeing* are higher by 145 points at Rs. 2,040. The most impressive rise has been in the case of *Century* which has gained 123 points and is quoting at Rs. 888. *Simplex* are higher at Rs. 336-8. *Central India* are Rs. 514 (Rs. 479); *Colaba Land* Rs. 293 (Rs. 271); *Gokak* Rs. 415 (Rs. 392); *Kohinoor* Rs. 860 (Rs. 755); *Phoenix* Rs. 870; *Sholapur* Rs. 10,500; and *Svadeshi* Rs. 639 (Rs. 598).

In sympathy with the Textile section, steels have risen considerably. *Tata* Deferreds were done as high as Rs. 2,001-4 on Monday; but on Tuesday, they dropped to Rs. 1,976-8 owing to some rumours affecting silver and gold prices. There was not much change in the situation since then. There has been some buying enquiry; but profit-taking has intervened with the result that prices failed to keep pace with those in the other sections. *Tata* Deferreds are higher on balance at Rs. 1,972-8; *Tata* ordinary after being higher at Rs. 405-8 are at Rs. 399-8. *Indian Iron* are Rs. 37-2.

In the Miscellaneous section, *Bombay Steam, Premier Construction* and *Alcock Ashdown* were very prominent. There was good enquiry for *Bombay Steam* around Rs. 600. *Alcock Ashdown* have been steadily rising and they are quoted at Rs. 940 as against Rs. 755 last Thursday. *Premier Construction* have gained substantially to quote at

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, April 19.

THE local Stock Exchange was firm during the period under review. There was a large turn-over in both Textiles and plantings. While mill shares continued to move in an upward course plantings were hesitant.

There was a large turnover in the Textile section with keen enquiry for selected scrips. Cambodia was in good request at Rs. 40-8. Lakshmi (New) are considerably higher at Rs. 150 while Rajalaxmi were steady at Rs. 292-8. Both Janardhana and Sitaram were crossed at Rs. 188 and Rs. 180 respectively. Pankaja have not completely recovered the loss sustained recently, the present quotation being Rs. 325.

Though the turnover in the planting section has been considerable prices have not advanced much. Excepting a few shares others have been either steady or have declined. Nilgiri Neerungundi are lower at Rs. 32-12. Chembra Peaks have further declined to quote at Rs. 14-6. Vaikundom are better at Rs. 31, Nenmeny were crossed at Rs. 30 c.t.

NEW INDIA INVESTMENT CORPORATION LIMITED.

NOTICE is hereby given that the Sixth Ordinary General Meeting of the Shareholders of the New India Investment Corporation Limited will be held at the Registered Office of the Company, 145, Muktaram Babu Street, Calcutta, at 4 p.m., on 19th May, 1943, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 31st December, 1942, declaring the Dividend recommended by the Directors, and for transacting any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from 4th May to 19th May, 1943 both days inclusive.

By order of the Board,

RAMDUTT RAMKISSENDASS,
Secretaries.

145, Muktaram Babu Street,
Calcutta, 12th April, 1943.

N.B.—The Dividend, if passed in the General Meeting, will be paid to the Registered Shareholders, on application.

(*Half-yearly General Meeting on 7th May, 1943 at 10-50 a.m.*)

*After transferring Rs. 5,000 from Provision for Taxation and Rs. 5,000 from Reserve.

Audited Accounts for the half-year ended 31st December, 1942 :—

Accounts.—The Profit and Loss Account, after providing Rs. 24,713-8-6 for Depreciation and Writing off Rs. 1,000 from Prospecting, transferring Rs. 5,000 from Dividend Equalisation Fund and including Rs. 3,171-14-11 brought forward from last half-year, shows an available balance of Rs. 14,928-4-2, which the Directors propose to dispose of as follows :—

	Rs.	A.	P.
In paying a dividend at the rate of 2½ per cent per annum without any deduction for Income-Tax paid by the Company ..	10,000	0	0
In carrying forward	4,928	4	2
Total ..	14,928	4	2

Market.—There has been a steep rise in coal prices. The tendency has been apparent for the last year but the movement has been greatly accentuated during the last few months. The prices at which coal is tendered to the Railway Board may be taken as a fair indication of the market price at that particular time and a comparison between the prices at which coal was tendered in 1941 and 1942, will give some indication of the general rise. Certain Jherria coals were tendered to the Railway Board in 1941, for supply during 1942, at about Rs. 4 a ton. Towards the end of 1942, the tender price for similar coal to be supplied during 1943, was about Rs. 6-8-0 per ton. Many long term contracts have as their basis the price at which coal is purchased annually by the Railway Board and in 1942 costs and selling prices rose so steeply that the Railway purchase rates, based as they were on 1941 prices, were entirely out of equilibrium with market prices. Companies with such contracts therefore suffered severely in 1942.

The Railway purchases for 1943 represent six months' requirements only instead of the usual twelve months, and this will enable prices to be reconsidered at the end of six months, which is a more satisfactory arrangement in present circumstances.

Labour.—The supply of labour has fallen far short of demand throughout the half-year. Military and defence requirements have been responsible for increasing demands for labour and there is no doubt that labour prefer work in the open air to work below ground. Further, on work above ground a man may have his wife working with him, which he cannot do below ground. This has been a further inducement to labour to leave the collieries. The disturbances of August/September also unsettled the labour and caused a number of them to return to their villages after which they were frequently diverted to other work.

The difficulty of obtaining foodstuffs has also driven labour back to their villages. Generally speaking, Bihar is a deficit province for rice and the situation over rice supplies, depending as it does upon imports from other Provinces, is still far from satisfactory. The Company took early precautions to secure supplies of essential foodstuffs and this has been an invaluable factor in maintaining a calm atmosphere on the property.

Transport.—There has been no improvement in the wagon situation and supplies have included an increasingly large percentage of covered wagons, resulting in the partial immobilisation of the Company's mechanical loading devices. This has necessitated dumping the coal and loading from the ground by hand, causing a further increase in costs.

Colliery.—Owing to the abnormal monsoon, conditions have been unusually difficult and collieries in the Jherria Field during the period under review have been subjected to the greatest strain they have known for a decade. In the Jherria Field there are large areas of goaved surface land and the actual seams lie comparatively near the surface. The effect of the abnormal monsoon conditions in this field has therefore been particularly severe. Pumping plant, previously effective, was found insufficient to cope with the situation. The colliery, though affected, suffered no damage beyond the temporary loss of working districts due to flooding. Measures have now been taken, however, to increase the reserve pumping plant to meet a possible repetition of these abnormal conditions.

Sandstowing.—The whole future of this colliery is bound up with the efficiency of the sandstowing plant. There have been innumerable delays consequent upon the fact that some of the essential material for the installation had to be imported from America and Britain but towards the end of the year, the plant was in operation. Some time must elapse however, before the arrears of stowing can be overtaken.

(Annual General Meeting on 12th May 1943 at 12-15 p.m.)

Audited accounts for the year ended 31st December, 1942:—

Profit and Loss Account.—The gross profit for the year is Rs. 56,551-15-8 and after allowing for the reserve shown, there is a nett profit of Rs. 38,966-5-10, and a final balance on this Account of Rs. 54,357-14-7, which the Directors propose to deal with as follows:—

	Rs.	A.	P.
Pay the Preference Dividend for 1942 ..	12,000	0	0
Pay a Dividend of 10 per cent on the Ordinary Shares	20,000	0	0
Transfer to Reserve Account (bringing this up to Rs. 1,25,000)	4,950	0	0
Carry forward to 1943	17,407	14	7
Total ..	54,357	14	7

Crop.—A high degree of quota releases for the year was made in order to avoid and restriction on total production, and it has since been decided to allow the voluntary internal regulation scheme to lapse on the 31st March, 1943. Weather conditions were generally favourable and a crop of 198,614 lbs. was made. The Government of the United Kingdom took over the purchase of all export teas from the 15th September, 1942; and the estate contracted with the Tea Controller for India to supply in all 144,504 lbs.

Allowances had to be made to help labour and establishment meet the serious increase in the cost of living; tea chests and other stores increased greatly in cost; and substantial expenditure was incurred on, the compulsory Government Schemes of War Risks Insurance on tea stocks and estate buildings and equipment. These increased costs of production were partly met by an additional allowance for this purpose on the Government Contracts.

Secretaries.—Messrs. Davenport & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 4,00,000 in 20,000 Ordinary of Rs. 10 and 2,000, 6½ per cent Cum. Preference of Rs. 100 each both fully paid up.

(*Annual General Meeting on 12th May, 1943 at 2-30 p.m.*)
*Includes Bad debts, etc., written off.
§Accounts shown for 9 months.

Audited accounts for the year ended 31st December, 1942:—

The gross profit is Rs. 6,68,920-15-11, out of which the Directors have reserved Rs. 4,76,688-14-3 for taxation, including Excess Profits Tax, and set aside Rs. 48,000 for depreciation, thereby reducing the nett profit, including the balance carried forward from the previous year, to Rs. 1,77,743-12-1.

An interim dividend of 5 per cent on the Preferred Ordinary Shares, absorbing Rs. 10,510 was declared payable on the 10th September, 1942, and there remains a final balance of Rs. 1,67,233-12-1, which they recommend be dealt with as follows:—

	Rs.	A.	P.
On the Preferred Ordinary Shares a dividend at the rate of 10 per cent per annum (making the total payment 15 per cent per annum)	21,020	0	0
On the Ordinary Shares a dividend at the rate of 20 per cent per annum	42.040	0	0
To General Reserve thereby bringing it to Rs. 1,60,000	80.000	0	0
Carry forward	24,173	12	1
Total ..	1,67,233	12	1

The last Report of the Directors referred to the reduction in the supply of motor vehicles, the distribution of which has formed in the past the main part of the Company's business. Very few vehicles were received during the year, and from now onwards it is anticipated that no supplies at all will be made available.

It is hoped, however, to stimulate the Company's business in various other directions, and for the time being at any rate the Workshops have a satisfactory amount of work on hand.

In view, however, of the uncertain outlook for the future it was thought advisable to transfer the considerable sum of Rs. 80,000 to Reserve, and the Directors are confident that this policy of building up the Company's reserve will meet with the approval of the Shareholders.

Manager.—J. W. Ross, Esq.

WORLD OF INDIAN FINANCE

Friday Evening.

With April drawing to a close, the money market displays all the attributes and characteristics of the slack season. Short credits are in abundant supply; and there is a total absence of any demand. Inter-bank call money is quoted ¼ per cent in Calcutta and ½ per cent in Bombay, all lenders and no borrowers. The weekly sales of Treasury Bills have resumed their normal trend; applications for tender bills are again satisfactory; the Government are able to get the full quota of Rs. 8 crores for which tenders are invited; the average rate of accepted tenders is stable at rupee one annas two per cent per annum; and sales of intermediate treasury bills do not make bad showing. On April 27, the amount of tender bills on offer was Rs. 8 crores; and applications came to Rs. 12,54¼ lakhs. The average rate of accepted tenders was rupee one annas two per cent per annum. The offer of tender bills for next week is again Rs. 8 crores. Sales of tap bills between April 21 and April 26 amounted to Rs. 1.22 crores. Sales of intermediate bills will continue at the unchanged rate of Rs. 99-12-0. Now that the temporary pressure which was witnessed in the treasury bill market for some weeks has disappeared, and now that the slack season is firmly established, we should once again impress upon the Reserve Bank authorities that they could not continue to sell treasury bills at rates which are definitely based on money market conditions associated with the busy season. The transition from the discount rate of the busy season to the discount rate of the slack season may have to be tactfully adjusted; but this task of adjustment can no longer be shirked or postponed.

For over a month, the returns of the Reserve Bank which, once upon a time, used to reach us on Wednesday evening and which till recently were available on Friday morning, do not reach our hands till after we go to press. Our analysis of Reserve Bank returns is, therefore, not as up-to-date as we would like them to be. For our present study, we have only the Reserve Bank statement for the week ended April 16, while, in the ordinary course, we should have been able to offer our comments on the returns for the week ended April 23. Though the present study is thus belated, it is none the less exceptionally interesting, as disclosing changes of considerable magnitude and import. In the week ended April 16, sterling securities in the issue department have risen by Rs. 25.95 crores, we may conclude that sterling payments received in respect of inter-governmental transactions during the week under review are about Rs. 19 crores.

Between the middle of March and the middle of April, sterling has flowed to the Reserve Bank in a spate. For purposes of comparison, we may take the weeks ending March 12 and April 16. During this period, sterling securities held in the issue department have risen by Rs. 101.83 crores, while foreign balances in the banking department have fallen by Rs. 9.55 crores. This means that the sterling assets of the Reserve Bank, in the space of a month, have swollen by over Rs. 92 crores. This must be considered a record. Sterling payments received from the Allied governments have the effect of causing a corresponding replenishment in the cash position of the Central Government. These additions to cash have been properly utilised for the cancellation of the "ad hoc" treasury bills that were created in connection with the redemption of sterling obligations. "Ad hoc" treasury bills thus cancelled between March 12 and April 16 are Rs. 64.84 crores. Thus, while sterling securities have risen by Rs. 101.83 crores, rupee securities have shrunk by Rs. 64.84 crores, with the result that active note circulation has expanded only by Rs. 34.88 crores. The effect of the expansionist influence caused by addition of sterling securities has thus been considerably mitigated.

Thanks to this process of utilising sterling receipts for cancellation of "ad hoc" treasury bills, most of the rupee finance that was created in connection with the repayment of 3½ per cent India sterling stock and in connection with the scheme with regard to the sterling railway annuities has been liquidated. This rupee finance was responsible for increase in rupee securities from Rs. 122.36 crores on January 1 to Rs. 194.36 crores on January 8. Since then, in gradual stages, the rupee securities thus created have been liquidated. As on April 16, only Rs. 7 crores of rupee finance remains to be provided for. A remarkable feature about this liquidation of rupee finance is that this operation has been put through without any substantial help received from subscriptions to the defence loan. This is another way of saying that the debt position of India remains exceptionally strong.

The exchange market has been dull but sentiment has been firm. There has been little business either by way of bills or remittance.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d. and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329¼.

Banks are sellers of T.T. New York Ready at Rs. 332¼.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, April 27. Total amount offered was Rs. 12,54,50,000. Tenders at Rs. 99-11-9 per cent were accepted in full and those at Rs. 99-11-6 per cent were allotted approximately 66 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 1-2 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, May 4, in Bombay up to 11 a.m. (I.S.T.) and up to the close of business on Monday, May 3, at other centres. Successful tenderers should make payment on Friday, May 7. Other conditions are as usual.

Three months' Intermediates will be sold from April 28 to May 3 at Rs. 99-12 per cent subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from April 21 to April 26, amounted to Rs. 1,22,00,000.

During the week ended in April 23, Government of India Treasury Bills for Rs. 5,41,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

CALCUTTA CLEARING HOUSE

The amount passed through the Calcutta Clearing House for the period ending 22nd April, 1943 was Rs. 22,79,43,882-8-0. The number of cheques—85,375.

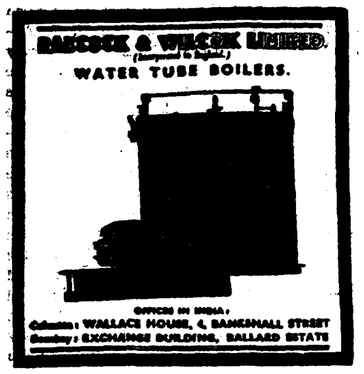
Finance Abroad

Thursday Morning.

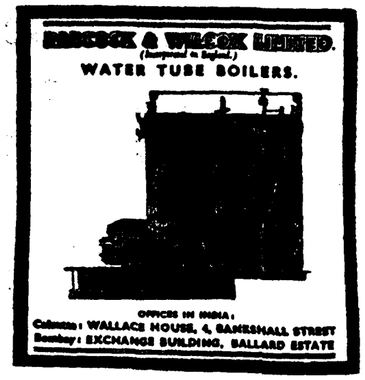
THE first shot in what may be called a bonus campaign has been fired by Mr. Patman of the 1936 Soldiers' bonus fame. It has definite adverse implications for the Federal Budget but compensation for concentration and modification of enterprise is perhaps necessary in the U.S.A. The Exserviceman there is to be helped to get his business back, and a more powerful pressure group than the Farm Bloc may emerge, after the war when seven and a half million men, of whom many will belong to the middle class, will clamour for assistance to get back their old business and incomes. Treasury grants are clearly indicated in Mr. Patman's programme. Conscription and selective service will not affect the claim for a soldiers' bonus and the next election may be fought on the simple issue of a Veterans' bonus with the Townshend Plan in the background.

A bigger deficit after the war means that reform by retrenchment will be difficult for the U. S. Government. The request for additional apropriations made only lately by the President shows that war expenditure is still rising. Lease-lend, too, is extending, and in spite of the rule as to no commitments in regard to food or refugees, the U.S.A. is clearly set on the road of bigger spending. The progress of the official Liberty Loan programme in April has not been indicated. Rationing in the face of bigger agricultural production at home is accepted, but the nation is exposed to new pulls. Congress is decidedly restive, and the small private committee which asks for specific assurances from Congress as to U. S. co-operation after the war, in line with the President's present foreign policy, is not having an easy task.

The House Committee went further than the Senate in the matter of the Stabilisation Fund. Clipping the Executive's wings is understood as part of any Committee's tactics but it must be said that it is largely a conflict over war and peace aims. Congress has not decided about the reciprocal trade pact programme, in spite of witnesses like Mr. Green taking the stand in favour of the renewal. The Republicans, in spite of Mr. Willkie may slip back into Isolationism because of an ingrained faith in tariffs, and Mr. Roosevelt's second tour, to look at the Army this time, looks like a mid-term campaign in order to build up a following among Southern Democrats. War news should help the President to put his ideas across. But the Victory tax of 5 per cent on all incomes like the ceilings for farm products may interfere with presumed success. Mr. Roosevelt is apparently having the same troubles as Mr. Wilson, with this difference that there is no Ohio Gang to stiffen Republican Opposition. The influence of U. S. politics on international finance must always be decisive. It is clear that the routine renewal of the Stabilisation Fund leaves the U. S. Treasury with little initiative. It cannot work out the White plan or seek compromise with Britain over the Keynes Plan. All plans have apparently taken the count. This explains the boom in bullion here. The *Times* has got its own explanation. Indian markets assume that Government will sell to the British Government after the war (in spite of the frenzied criticism heard in recent months) and India which imported less silver in 1942 cannot get Government to sell its silver to satisfy home demand. Another Pittman Act may resolve all difficulties but the Nevada politicians are standing out for higher prices right now. Mr. Roosevelt after his meeting with the Mexican President may have modified views on silver and the interview across the U. S. Border is not the least of the bull points for silver. Home-mined silver may be taken at a dollar an ounce, and Mexican silver at a higher price than 45 cents. It is known that silver prices in Mexico City jumped in advance of New York last year and the general Mexican price level like Federal expenditure, may be higher on account of the war so that a revision of silver prices is not improbable. The absence of regular dealings in Bombay does not affect the conclusion that only imports promoted directly by Government can arrest the rise in bullion this time. Government's inability to intervene explains the self-denying ordinance of the Bombay bullion exchange. It is noteworthy that small demand has forced up prices; and Calcutta rates have been higher than Bombay as usual. There is also a possibility that the London rate for gold may rise even if the dollar price is left unchanged. The inevitable depreciation of sterling now or later on sustains the bullion operators' faith in higher prices. The sale of the Reserve Bank's gold to push prices down is definitely ruled out. Government stopped selling silver last year, and the buyer of gold here to-day can reckon also on the fact that gold is apt to depreciate slightly as compared with other investments. Whatever else the Government may do, it cannot control bullion, and this fact is recognised by both the Government and the bullion market at present. The talk of a ceiling was just a fancy notion of the bears. Jap progress in Arakan, the deadlock, and Australia's anxieties are admittedly considerations that prevail with the bullion market as much as the defeat sustained by the U. S. Administration last week. It is not necessary to assume that hoarding has set in because goods are scarce or because the villager is taking notice of the inflation talk. The rise may be engineered by professionals and outsiders are likely to come in only when the indications of stability are not wanting. The U.S.A. having got the bulk of the world's gold is not anxious to part with it except on its own terms, and the post-war finance agreement is likely to be concluded on the U.S.A.'s terms only after Congress and Executive reach an agreement. It may well be that the coast-to-coast tour, without promoting a party purge of any type, may put heart into the Democrats and erase the differences between New Dealers and others. The New Dealers like Mr. Wagner, believe in gold and its uses. They may learn to yield as over the A.A.A. and not till then will the Treasury start showing its plans.



The increase in short-term borrowing in London by 3 months' bills is accompanied by a reduction in 6 months' deposits taken at 1⅛ per cent. The saving in interest is obvious, while British banks may have definite preference for bills at present owing to the chronic shortage of fine commercial paper. But the giltedged market is apparently vulnerable at the same time as private subscriptions to war loans are rising. In the wake of additions to the note issue. The selling of old stock to buy new explains the decline in old Consols. The rise in the Australian Loan puts it on a 4 per cent yield basis though Colonial loans generally may have declined in spite of good news from Tunisia.



The Home Industrial market in the ast week has not lacked strength. Cable and Wireless has again been a firm spot and Textiles have been more favoured than most. Prices have moved in favour of holders in the case of Dunlop and the leading tobacco issues. The agreement for joint purchase of tobacco by the principal manufacturers is certainly a point in favour of tobacco shares at present. The rise in gold-minings has not been interrupted and Nundydroog has advanced further. The return of Mexican Eagle into favour suggests active and firm conditions in the oil share market. The best feature of the week is, undoubtedly, the advance of Home Rails to levels almost incredible. In spite of Bank holidays at home, the unified railways are reaping the benefit of the improved traffic and L.P.T.B. 5 per cent stock is rated on a basis below 4 per cent for the stockholders. Wall Street has been sluggish in comparison and the droo in U. S. Steel is more significant to-day than the rise in General Motors on a long view U. S. war production achievements and shipping plans for the year are of less importance then the plan of Mr. Herbert Feis to build up international commodity pools. Southern Democrats may call the Administration's support a delicate compliment to farmers' prematurely worried over a post-war slump. Lease-lend ideas will, probably, be applied over again to the pool plans, with the C.C.C. doing the financial work. The British plan is said to be different but the implications for tea producers, tin-miners and perhaps hop-growers too are quite obvious.

LLOYDS BANK
LIMITED
(Incorporated in England)
1677

Adaptability

The experience of nearly two centuries of private and commercial banking, coupled with an efficient and world wide organisation and the highest reputation for thoroughness and financial stability, enables Lloyds Bank to adapt itself to every class of banking business, whether in times of peace or war.

Editorial Comments

Distribution of Cotton Goods

The problem of the distribution of cotton goods in India has, of late, been assuming all the features of our food problem. In cotton goods as in food, there is, on the one hand, a reduction in the available supplies due to the virtual cessation of imports and there is, on the other, the increse in demand on account of the war. In both, there is a comparatively small difference between supply and demand the adverse effects of which can be mitigated only by the adoption of an efficient system of distribution. It is natural that, in regard to both these necessaries of life, the various classes of consumers should be thought of according to a certain order of priority determined by their importance to the prosecution of the war and by broadly social considerations. At the outset, the Government was chiefly concerned to ensure that supplies for war purposes are satisfactorily made by the Indian cotton textile industry. But as soon as the difference between demand and supply brought out the conflict between ordinary civilian demand and the requirements of the Government on account of the war, the problem of adjusting the rival claims naturally arose. At the same time, the increasing hardships due to the war consequent on the rise in the price of foodstuffs, following food shortage and increase in the general cost of living, made it necessary to take special steps to ensure that the masses could obtain their requirements of cotton cloth at as low price as prevailing conditions will permit. It is now possible, therefore, to divide demands for cotton goods in India into three broad sections. First and foremost comes the supply on war account; secondly, there is the demand by the masses which can be symbolised by the term standard cloth and thirdly, there is what remains of the ordinary civilian demand in the country, which may again be sub-divided into the demand of the middle classes and that of the upper classes.

A comprehensive plan to meet these various needs is yet to be formulated. The Government have been concerned for reasons, which are not difficult to understand, solely with war demand and the production of standard cloth for the masses. Though at certain stages difficulties have been experienced by the authorities in the distribution of war orders among the various sections of the industry, the problems have been solved to the satisfaction of the Government. This is not a matter for surprise, considering that for more than a year and a half, a prominent cotton mill magnate was at the head of the Supply Department. But, while seeking to secure the supply of cotton goods for war purposes, the Government have been obliged also to press on the cotton textile industry the claims of the masses for special consideration. It must be confessed that it has not been an easy task for the cotton textile industry both to satisfy the war demand and to provide cloth for the masses at specially low rates. It has therefore resorted to the expedient of earmarking a part of its productive capacity for both these purposes lumped together, and leaving it to the Government to decide the exact apportionment as between the two. Consequent on the fall in production due to the disturbances of August last, war orders had to be given a larger quota of the ear-marked capacity and the production of standard cloth has fallen as a consequence. Since the authorities took an unconscionably long time in putting into force the scheme in regard to production and distribution of standard cloth, this cut in production has acted severely in the interest of the masses. There have been also other complications as, for instance, the refusal of the Madras Government to join the scheme for the production of standard cloth on the ground that Madras is interested in handloom weaving and that Madras mills have a surplus of yarn production to dispose of both to the weavers at home and to other provinces.

Meanwhile, the problems of price control got mixed up with the problems of production and distribution and it may be assumed that it is mainly to tackle these problems that the new department of industrial development has been constituted under Mr. Hydari. The cotton textile industry as a whole, and the Bombay section thereof particularly, has pronounced views on the question of control. It is felt in some quarters that the disribution of war orders in the stages in which they were most remunerative, was not on quite an equitable basis, while the mills are asked to refer to the claims of this section and that, when the general level of prices is such as to leave wide margins of profit for them. It would appear that the industry is definitely opposed to the control of prices of goods for general civil consumption and that this attitude cannot be considered unfair in as much as the industry has evinced a helpful spirit of co-operation where war orders and the requirements of the masses are concerned. While the mills are agreeable to supplying at prices fixed by the panel, and while they will not view with disfavour a system of control of cotton prices, they are definitely opposed to prices of goods for general civilian consumption being subjected to any system of control. A similar position has been also taken up by the Madras Government in regard to the sale of the Province's surplus production of yarn which has been requisitioned under the Defence of India Rules. The markets have been subjected to occasional unsettlement in the process of the Madras Government defining their attitude and policy. There are thus nice problems left for Mr. Hydari to solve, and it can only be hoped that it will not be long before the question of control and the problem of apportioning the ear-marked production capacity between war orders and standard cloth will be solved.

Even when these problems are solved, it will be realised that the problem of the general consumer in the country will remain to claim the attention of the mills. As we indicated at the start, the problem originates in the simple fact that there is a difference between total productive capacity and total demand which cannot be immediately bridged, and nothing more can be attempted under these circumstances than to mitigate the adverse consequences of this shortage by adopting a system of distribution whose interest of the various classes will not be very inequitable. The production of the country at the present stage cannot exceed 4,500 million yards per annum to which may be added about 1,000 million yards on account of handlooms in the country while total demand is well in excess of 6,000 million yards. No one will grudge the priority that has been so readily accorded to war orders and to standard cloth. Nevertheless, it will be wrong to assume that the middle classes in this country can be left to their fate without any special provision. Strictly speaking, a large part of what passes for a middle class in India has standards of living lower than those of the skilled workman and there is the additional disadvantage that the illusory social status confers on him and his class onerous obligations. It is obviously impossible for the mills to overcome these difficulties by even the most ingenious system of distribution. But since the ethics of the principle of charity beginning at home is unquestionable, the mills can regard their shareholders and their staff as typically constituting, so to say, the mill family and giving special consideration to their requirements. A happy lead in this direction has been given by the Mahalaxmi Cotton Mills which has during the week announced its decision to issue to every shareholder one pair of dhoti and/or saree at rates which are very considerably below the prevailing market rates. The step now taken by the Mahalaxmi Cotton Mills may thus be said both to meet an ordinary requirement of life of the shareholders, as well as to increase the value of the shareholders. Though, it would be too much to claim that the problem of cloth distribution can be solved by the Cotton Textile Industry as a whole, taking a leaf out of the Mahalaxmi. A practical significance of such step in mitigating the hardships in the present condition can hardly be exaggerated.

YIELDS AND THE INVESTOR

The war which has changed so much appears to have hardly touched interest rates. The general level before the war was low, it is now lower, and in this way runs counter to previous experience. There has been no change of consequence in India except perhaps the rise in the Treasury Bill rate (peculiar to the recent months) which suggests that this is anything but a 3 per cent war. The similarity between Britain and India in regard to abundance of funds, assisted by a rise in bank deposits, a fall in advances, and a slacker capital market, may well suggest to some that the investor should adjust his ideas as to yield, accept British views as to appropriate return on capital at present. The narrowing of the usual margin between giltedged and industrial yields since August 1942 in London following the boom in industries, finds a close parallel in India where the hunt for higher yields is at an end and investors are reconciled apparently to lower yields on prior charges as well as equities. The yield on the former is definitely below 5 per cent and may fall further.

The change furnishes a complete answer to those who urged that higher rates on defence loans alone would tempt Indian investors. The idea of borrowing at 5 per cent must be spurned by all. The change is in part inspired by the realisation that the outlook for Indian industry is more than fair but even more important factors may be discerned. In the course of the last year most banks reduced the rate payable on current deposits, abolished the difference in rates as between the busy season and the slack season, and generally made adjustments in line with the reduction in the trade demand for money. These alterations were an acknowledgment of established policy. The steady rise in deposits was reflected in large balances with the Reserve Bank and also in the absence of any movement in the short-term rates. Right through 1942 call money stood at ¼ per cent and it was only in the last month that there was anything like the familiar hardening of rates for term deposits but that too was more than usually tentative. The stability has made not for easy credit supporting inflationary tendencies but for a level of interest rate that has not been distributed by the price-trend. Whatever part might have been played by debt relief legislation, it is clear that an addition of Rs. 125 crores in total deposits of scheduled banks in the year 1942 has been the predominant factor in keeping down interest rates below the level of 1941. The larger cash balances with the Reserve Bank were a consequence of larger deposits and reduced demand for funds. The public or at least the investing part has not so far missed the significance of the inevitability and indefinite continuance of cheap money though the Reserve Bank rate remains unaltered at 3 per cent and has not been lowered to 2 per cent to fall in line with the Bank of England.

Without entering at all into the question of relations between official cheap money policy and inflation, latent or obvious, one may examine the general consequences for the investor the rise in prices notwithstanding. Every rise in share prices serves as a potent reminder of the process of adjustment that has spread from tea to preference shares then to jute and now to cotton and sugar shares. The fact that giltedged prices show little or no change in the fourth year of war, as compared with the prices on August 20, 1939, may be taken to mean that the yield of 3.6 per cent on Govt. Paper is acceptable while the risk of depreciation has lessened so that the chances of a rise are correspondingly less. A fundamental factor for the well-established industry in wartime is not reduced profit, but reduced risk which implies that profit margins can be lower. The investor has few risks; there is a guarantee of secure return in nearly all cases, and that reconciles him to the lower yield. Improved prospects may not be translated into larger dividends, but the level of interest rates will hereafter influence the attitude to investments. It is noteworthy that the only group in which capital appreciation of investments is absent in the war period, is the electric supply group. Public utility shares in all markets have lost their charm. Industrials offering a lower yield cast a powerful spell. It is not necessary to examine the movements of the Indian Finance share indices to support the statement. Between August 1939 and April 1943, electric and light railway shares (offering 3½ per cent in most cases) have hardly risen whereas rises have been recorded in jute, coal, engineering, paper, sugar and tea shares. The rise implies a reduced yield in nearly all cases though it may be suggested that higher dividends in some cases justify the appreciation. Bargain hunting possible in a depression for jobbers is impossible. The majority of jute shares do not offer over 5 per cent. A reading of the share list suggests that the average will be below 5 per cent as in the case of cotton mills. The consequences for the receiver of dividends cannot be great since the assurance of stability of dividends is not wanting. But the reduced yield may be cited against proposals to limit dividends. The upward trend in industrial profits supports the general presumption that industry apart from paying out more in taxation, is earning more, and the view that Government control in the form of a restriction of dividends is more remote than seemed possible makes for a further fall. The results of lower yields on industrials may be quite different from those generally presumed. The tendency to realise capital gains may be absent not only because special taxation is not in force, but reduced yields make for larger investment in the form of life insurance. It is not far-fetched to suggest that if low yields on investments affect bonus declarations by insurance companies, the compound interest offered to the policyholder by the insurance company is likely to be a powerful attraction. The lower yield on new investments may induce companies to look for safety of capital, rather than yield on the yields, and 5 per cent which is all that may be had on sound industrials at present prices will not seem large in relation to the yield on fixed deposits or that on first class debentures, investment trust shares etc. The advantage of ready realisation of investments is promoted by the simultaneous growth of savings and investment activity. That is enough for those who want liquidity at all times. The grounding of interest rates like the large surplus of funds that may be secured by sale of bullion, may force investors to accept the ideas current in Europe and America as to yield. It is not without interest to relate the limited number of new issues to the reduction in yield noticed since the beginning of the cold weather. The restraints on the capital market are few, but the openings for investors are also few. The steady rise in share values in the planting group, as in others, is not merely a flight from the rupee as imagined but the result of the re-adjustment of most investors' views as to a due return. Tea shares offering 6 per cent are not without their points. The limited increase in the public debt does not correspond to the increase in India's income or savings while permanent investment curtailing purchasing power is not to be deprecated. The transfer of British investments remains remote but it is suggestive that monetary control is likely to be retained in Britain and America alike and even the revival of international lending is not going to raise interest rates after the war or help private capitalism to invade new fields in order to obtain larger return. The Indian investor may, therefore,

conclude that present yields will remain much the same, and the tendency to take up shares on prospects will not lose its momentum. The conclusion is underlined by the unusual rise in chemical and tea shares this year. If it is suggested that improvement in share values follows the rise in commodity prices or is due to free lending by banks, it may be remarked that the supply of shares has been seldom short of demand. The demand may have broadened latterly in view of encouraging company statements particularly cotton mills in all centres, but it is clear that the increase in scheduled banks' deposits by Rs. 1¼ crores per week on an average is more than ever important. The demand for investments should develop as a result of the bullion boom for the most familiar medium is now beyond reach of the average investor, and in spite of reduced yield, the interest in joint stock enterprise must extend, more so for the older industries like paper and sugar as the essential guarantee of tariff advantages remains.

To the Shareholders

MAHALAXMI
COTTON MILLS LTD
15, CLIVE ST. CALCUTTA

Wherever I go, I see the general population in great distress owing to scarcity of foodstuffs and high prices of clothes. The Directors of Mahalaxmi and I have been thinking out plans to provide relief in regard to cloth.

Every day, we have been offering a limited number of dhoties and sarees at specially reduced rates; and it distresses me to see many in the long queues going away disappointed.

How can the poor people and the lower middle classes pay Rs.9/- and Rs.10/- for a pair of dhoties and Rs.12/- and over for a pair of sarees ?

The Mahalaxmi has decided that the best service it can do is to extend the facility of cheap prices to its entire body of shareholders whom it looks upon as members of the Mahalaxmi Family.

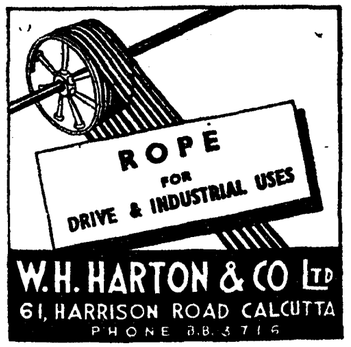
For the efficient rendering of this service, the following scheme is being given effect to:-

(1) To every shareholder on the list of the Company as on May 15, and for every share held by him or her, a pair of dhoties and/ or a pair of sarees will be offered at special rates

(2) The special prices will be:
(a) 1 pair of dhoties, 10 yds x 44" Rs.4-12-0
(b) 1 pair of dhoties, 9 yds x 44" Rs.4- 4-0
(c) 1 pair of sarees, 10 yds x 44" Rs.6- 0-0

(3) At these prices, the packet of clothes will be delivered post or rail-freight free to the address of the shareholder.

(4) Delivery coupons will be sent to the shareholders on or after 15th May; and shareholders will fill up the coupons and forward them to the Managing Agents, together with remittance on the basis of the special prices.



The Mahalaxmi Family consists of 12,000 shareholders; and it gives me genuine pleasure that the relief will be shared by so many.

If this kind of high prices should continue, I pray that Mahalaxmi will be able to offer similar facilities on the occasion of the Puja.

H. DATTA & SONS LTD
Managing Agents

27th April 1943.

Editorial Notes

War Risks Insurance

Since the rate for war risks insurance is maintained at 3 annas percent per month for this quarter it is clear that representations for reduction have been unsuccessful. It is known that the Upper India Chamber sought a reduction in the rate. The Associated Chambers' President was asked to note that the rate had been raised a year ago and the Upper India Chamber's Committee desired a reduction in the rate of premium in view of the improved war situation with particular reference to India. The Chamber based its case for reduction on the ground that collections by way of premiums up to September 30, 1942, totalled Rs. 3,97,11,923 and payments were nil. Since then it is known that only two claims have been lodged in regard to damage done by the April raids and the amount received as premium must be at present over Rs. 4 crores. The Government notified that total expenses of collection of premiums up to September 30, 1942, came to Rs. 7,13,883 only and the large surplus meant an addition to its current balances. The Associated Chambers was asked by the Upper India Chamber to put up a proposal for reduction in the second quarter if a majority of members favoured the reduction desired. The War Risks Insurance ordinance has been amended to cover cargoes on board vessels in port and also stocks less than Rs. 20,000 in value and the actual increase in collections this year must be greater than in any previous quarter. Since raids have not been reported except from Eastern India, there is little doubt that Indian commercial interests are in favour of a reduction in the present rate which is equal to 2½ percent of the value of goods covered by Government's compulsory insurance.

Reduced Traffic

The fall in goods earnings does not seem to affect the State Railways' usual surplus. Total receipts up to March 20 according to the most recent communique amounted to Rs. 143.87 crores revealing an increase of nearly Rs. 18.4 crores. The tabular statement as to Railway earnings shows that the increase in revenue was most pronounced on the G.I.P. Earnings of the N.W.R. also rose substantially in 1942-43 and the percentage increase in the case of most railways appears to be larger than in 1941-42. The usual figures as to working expenses are not available for comparison, but the communique shows that military traffic is again sustaining the Railways. The wagon-loading figures up to March 20, on both broad gauge and metre gauge show a fall of 13.7 percent and 12 percent respectively as compared with 1940-41. The decrease is reflected in the classified total which points either to a shortage of wagons or to a fall in the volume of goods available. The increase under miscellaneous full wagons on broad and metre gauge alike when other traffic has declined is traceable to the war. The fall of 15.9 percent in coal and coke can be said to illustrate the fuel shortage which has undergone modification since the Assembly received assurances as to what the Raiways are doing. It is however important to note that tonnage lifted on the Railways, excepting Mysore and Bikaner Railways, fell in 1942-43 (up to March 20) by 4.8 percent only as compared with 1941-42. More effective use of wagon space can be inferred as also the use of more wagons in the average goods train at present. The Railways' success in making the most of rolling stock is certainly proved by the limited fall under tonnage lifted. Traffic figures suggest that the rise in prices of cotton, oilseeds, and grain and pulse is in part due to the reduction in traffic reported by the Railways.

Dividend Limitation

Restriction of dividends accompanied by a provision for compulsory saving is not particularly welcome to the investing public in India. As the usual rumours have died down and a stock exchange boom is in progress, it is not necessary to recall the Finance Member's remarks made after Sir V. N. Chandavarkar made his suggestion. The plan for compulsory saving for the benefit of shareholders—mentioned in March after the Budget was presented—did not meet with the approval of many who urged that new companies would be unable to develop their business and distributions in the form of Government securities now or after the war, would be unacceptable to small investors. The fact that others would derive their income in cash while shareholders in jointstock company alone would be forced to wait for payment after the war was duly stressed. Since stock could be sold or pledged at all times it is clear that freezing would have to be adopted when dividends are paid out whereas other creditors of Government could sell or borrow upon their securities. Sale of securities given in place of dividend might reduce the flow of new savings into loans by depressing quotations. An invitation to companies to invest all reserves in defence loans is not open to such objections as were forcibly outlined by Sir C. H. Setalvad in a letter to the Bombay press. Higher taxation of Companies to the extent of nearly 50 per cent has already been introduced and dividend limitation is secured by the eagerness of companies to appropriate larger sums to depreciation and reserves. The Bombay Shareholders Association in this connexion recalls that in Britain and Australia alike, proposals to limit dividends have been dropped. There are differences between one company and another, and a flat rate on capital is unworkable in the case of mining companies. If return on giltedged is exempt from the limitation proposal, an adventitous advantage would be conferred on the holder of Government stocks. The Association apprehended that dividend limitation would produce immediately capital depreciation. This seems unlikely as companies with prospects are not rated by investors on the usual basis of yield. The Shareholders Association however drew attention to the fact that managing agents, contractors and merchants making money with or out of companies would retain their income even when dividends are limited. The further argument employed was one describing the relation of demands to profits. Taxation takes more than ever and only a part of the earnings comes to the proprietors of capital. The most important argument, however, rests on the recovery of the major Indian industries from depression. It is suggested that the return to the shareholder in the case of cotton mills on an average between 1927 and 1936 was only 1.76 percent. Where preference arrears are outstanding, there can be no restriction of payments for preference shares are cumulative invariably and compulsory investment would hit others. The Secretary referred to the possible migration of enterprise to the Indian States from British India if any proposal to restrict or reduce dividends came into effect; also to the retardation of industrial development in India in the war period. The limitation of dividends is not unknown in Europe but the circumstances of Indian industry is still growing slowly, and must be taken into account. In the case of coal, jute and sugar, the trend of profits last year has not been favourable and that may be described as another reason against the suggestion tentatively approved by the Finance Member as one of the cures for inflation.

Germany's Difficulties

The German manpower problem has been discussed frequently since the Russian winter offensive began. The total mobilisation decrees enforced in March have been the result of the growing shortage of labour. At the end of last year 500

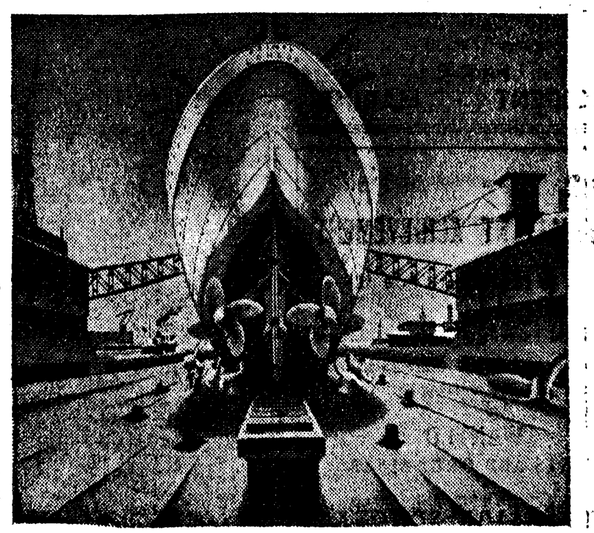
it was apparent that shortage of materials and expansion of German industry, the transference enforced by air raids, and the demands of a war on two fronts, made Germany look largely to the Occupied countries. From France come many reports of the press-gang at work. The impressment of young single women has been since reported and the transfer of many French factories has been followed by the enforced migration of French workers. The Montoire agreement has been given up for coercive collaboration and France is latterly reduced to the position of many other Occupied countries. The influx of new workers and draftees has created different problems for Germany. A cable received by the Associated Chambers refers to reports from Zurich about the confusion in German industry. Mobilisation has been carried through hurriedly, and without adequate planning. In some factories, mobilised women sit in the works all day sewing and knitting, awaiting their orders. The chief obstacle is lack of equipment. As the current demand for war materials puts such a strain on machine tools, makers cannot turn their attention to making more equipment for munition works; they are indeed so deluged with orders for new machines, that they decline to undertake deliveries for another twelve to eighteen months. The lengthening of the working day, the object of which was to raise the output per machine soon caused a reduction of the average output because workers became physically exhausted, and the wear and tear on machines caused breakdowns and made frequent repairs necessary. Ca'canny tactics and sabotage remain common, and foreign workers also evince eagerness to go back when their contracts expire. Germany's readiness to take out men from Italy's factories is independent of the transfer of much plant from Italy. The withdrawal of workers for the benefit of Germany creates a difficult problem for Italy. A Turin paper mentioned a recent order to the effect that men repatriated from Germany for wounds or on leave exceeding 15 days can be used as industrial workers. The three million sought for German factories among women, youths and foreigners may be had, but efficiency is highly dubious and German war industry's problem—one of aircraft and U-boats at present—cannot be solved particularly when R.A.F. raids are more violent and concentrated.

China's Silk Plans

Recent figures as to the world's silk production and trade are lacking. The entry of Japan into the war has certainly made silk a rare material, and attempts to develop silk production in India at present, in various ways, are independant of what the Tariff Board said in 1940. The only considerable producer of silk for the United Nations is China, where silk production has already been mobilised for war. According to a note in the China Information Bulletin the civilians at home and abroad must forego Chinese silk goods. Control was introduced in four Provinces by the Ministry of Finance in order to increase and conserve output. The new arrangement is expected to increase production which has suffered on account of the loss of silk-producing districts on the coast. The development programme for the south-west and north-west has not produced results and the Government has had to rely on Szechwan where sericulture was handicapped by lack of labour and capital. The Government's latest development plans cover other provinces besides Szechwan. The control system is to be worked so as to give Government the monopoly of improved and native silk. The Fooshing Trading Corporation under the Foreign Trade Commission is instructed to seek the co-operation of the Provincial Governments after the introduction of control. Representative committees are to work out prices and profits. Under the new system permits are required for shipping silk from controlled areas. For all exports special licenses are to be obtained from the Ministry of Finance.

Beating The Tax-dodger

The Income-tax Department collected Rs. 24½ crores (excluding Rs. 1½ crores as E.P.T.) in 1940-41. Its report reveals that direct revenue is vastly more important and without any increase in assessees, it added in a year Rs. 5½ crores to the Central revenues. As the report shows avoidance or evasion is a stubborn problem. The tax-dodger's devices were many. Double sets of accounts, false purchase figures, suppressed sales, omission of source of income such as branch business, house property, maintenance of accounts in fictitous names, debit of bogus expenses in regard to interest and salaries were among the many devices adopted to cheat the revenue. The report gives several instances of unsuccessful evasion. A dealer in hides and skins inflated the purchases to the extent of Rs. 2½ lakhs and credited the amount to his personal account. A cotton mill tried to exclude sales at its depot on another depot. The depot's remittances were not reflected in the entries showing despatches of goods from the head office. Profits from speculation were also suppressed in this case. A more skilful method was that of the printing and publishing firm which merely returned an income of 10 percent on the turnover. Scrutiny of the books disclosed that the income was about Rs. 10,000 instead of about Rs. 5,000 as shown in the return. A professional man warned of exposure after concealment of income filed a return showing more than double the highest figure ever returned in the past. Compounding of offences must have been profitable to the Department as cases of attempted evasion produced penalties and the full payment of tax. The total number of cases furnished under Section 28 (mainly for concealment of income) was 2,282 as against 535 in 1939-40, and 1,061 in 1938-39. The total collected as penalty by the Department was Rs. 12¾ lakhs as against Rs. 1½ lakhs and Rs. 2 lakhs in the two preceding years. The Department's watchfulness thus increased both the regular revenue and that from penalties. In the first few months of the E.P.T. introduced in March 1940 the Department was occupied with the preliminary and actual assessment, and did not commence till late in the year with the result that E.P.T. actually assessed up to March 1941 was about Rs. 56 lakhs.



Higher Taxation in South Africa

Increased taxation in South Africa is a consequence of rising defence outlay. The budget presented on February 24 referred to a revenue balance of £3¼ millions for 1942-43 which has been appropriated for additional defence expenditure. The Union's total expenditure in 1942-43 was stated to be £93.6 millions against a total revenue of £95.02 millions. The Union's surplus has also been appropriated for defence expenditure. Expenditure in the year 1943-44 is put at £100.2 millions and revenue on the basis of existing taxation at £91.02 millions. The anticipated deficit of £9.74 millions called for taxation. South Africa's Finance Minister proposed additional duties on spirits, beer, cut tobacco and cigarettes to yield £3.48 millions and also an increase in direct taxation. In spite of the buoyancy of gold shares at present, the mining industry reacted unfavourably to the Budget. Mr. Hofmeyr proposed increases in the companies tax, excess profits tax, the gold mines' special contribution, diamond mining companies' tax, foreign shareholders' tax added to an increase in the personal and savings levy, a surcharge on first and second class railway fares and a surcharge on income-tax and super-tax. The changes were expected to secure £5.03 millions only, and the Union Budget provided therefore for an increase in postal and telephone rates. In spite of this there would be a deficit of £549,500 in 1942-43 according to the Minister who said that it was negligible in relation to the proposed outlay of £100.2 millions. More important for the future is the reduction in the Union's external debt to £16.75 millions at the end of March. Total debt of £426.7 millions is largely internal, and small savers are becoming creditors of the State. The Union has repatriated £32 million of oversea debt and raiesd £78.39 millions at home by borrowing. Its last issue for defence purposes in February, 1943 was a 2½% loan repayable in 1949. It is interesting to note that the Union Railways' surplus is applied largely to the Rates Equalisation Fund (standing at £9 million) and its next surplus, too, is assigned to the Pension and Betterment Funds. There is no contribution to General Revenues from the State's railways and harbours. Since the Union's banks have large resources, and their deposits as well as cash balances are still rising, the Union's borrowing programme in the future should be easily put through. But Mr. Hofmeyr did not indicate the total to be raised by borrowing and he has made wartime prosperity support larger defence outlay by increasing taxation by over 10 per cent.

Shipbuilding Progress

Statements as to Allied losses at sea merely confuse the situation created by the concentration of the Nazis on U-boat warfare. It may well be supposed that U-boats are detailed for the prevention of an Allied landing on the coast of Europe. It may be that coastal defences in Holland are sound, but elsewhere they may be weak or at least require strengthening, and U-boats latterly assigned for coastal defence may not be attacking the ships on the Atlantic. The U. S. estimate of 12 million tons of shipping lost in a year has been called an over-estimate by the Navy Secretary and even then the total as regards new tonnage built in 1942, in the U.S.A. appears sufficient compensation. The total was over 8 million tons, and is likely to be doubled in 1943. According to the President of the Shipbuilders' Council 746 new ships were delivered by the shipyards and 12,000 vessels were repaired while 1,000 cargo vessels were converted. Colonel Knox corrected the U. S. Senator's statement as to Allied loss at sea at once, and his statement receives support from Mr. A. V. Alexander's previous assurance that during the last eight months, the new tonnage built by the Allies exceeded their losses by a good deal more than two million tons. There was the further assurance that more escort vessels are being built on both sides of the Atlantic. The Admiralty is intent on building faster merchant vessels and tankers. To-day the fuller protection of convoys is supplemented by air raids on enemy-occupied ports and submarines. Yet ascendancey over the submarine should be achieved by every means and the Liverpool Steamships Owners' Association in its annual report welcomed the building of faster vessels to improve the shipping position and asked for the fullest possible protection for convoys. Increase in British shipyards' output has been continuous, and the increased use of welding, in which the company has specialised for a long time, was mentioned by Sir

Aspects of an Industry No. 13

CORROSION

AN eminent British metallurgist estimated that every year in the world some 30 million tons of steel become unusable by corrosion, that is by rust. This figure must largely be guesswork, but it is an impressive reminder that, though modern skill and knowledge have enabled the builder and engineer of today to improve on the work of their fathers, their greatest achievements are still wasting assets. Steel and cement may replace wood and brick but for all their strength and hardness, they are not immune from decay. They need protecting from the effects of the atmosphere, from sun and wind and rain and sea water. It is one of the duties of the chemist to see that this protection is given in the shape of better and still better paints. Until recent years paints were simple materials, made from linseed oil or pigments such as white lead. Modern research has completely changed the picture. Today the discovery and production of new protective coverings is a highly scientific part of the British chemical industry, dealing with an ever-growing variety of chemical substances which provide the bases for new resins, lacquers, and finishes: paints specially designed to prevent rust, to stop decay in wood, to resist heat, to imitate stone; lacquers for metal work; dopes for aeroplane and balloon fabrics; finishes of every sort for every sort of article. If protection is in a sense the first requirement of a paint, decoration comes a close second. The demand for more and brighter colours has been steadily growing for years. It has been at once stimulated and satisfied by the happy collaboration between the paint chemist and his opposite number in the dyestuffs and pigment industries. Together they have enabled colour to be applied to a constantly increasing number of articles used in daily life. They contributed to a more gaily coloured world. In India, as over so much of the rest of the globe, War has temporarily shrouded their work, but when Peace comes again, they can be relied on to give still better colour worthy of the new world that will be.

Robert Johnson at the annual meeting of Cammell, Laird. The Company has used it for pre-fabrication up to the maximum degree possible in order to increase still more their output which last year was easily a record. There has been no mention so far of Allied submarine output but, this must be higher in relation to naval expansion. In the Pacific war submarines count in cutting up Japan's supply lines, and the ratio of Japanese losses at sea to Allied must increase before the expulsion of Japan from the Indies can begin.

Progress in Counting

The slower process of enumeration during the census of 1941 was not the only feature. The first census of 1871 was different in many ways from the last, which was more efficient and economical than the last owing to the substantial decrease in the quantity of paper used and the number of enumerators employed. The census of 1941 attracted public interest, and in Bengal, at any rate, some excitement was created. The under-estimate of 1931 has been rectified in the Province though the communal ratio has not been affected. Since the counting was spread over days, and inspection and checking was possible, the margin for mistakes was greatly reduced. Tabulating machines belonging to the Board of Revenue were used for the census only in the Delhi area. A permanent bureau of the census to help the citizen observe himself has been recommended by Mr. Yeatts in his general remarks on the census of 1941. Changes between the censuses have to be followed closely and the next count would be more easily carried out. It may well be urged tht the Economic Adviser should be the authority for preparations for the census, and studies in the tables should form part of the research carried out while vital statistics would be dealt with as usual by the Public Health Commissioner. The most encouraging feature of the 1941 Census is the increase in literacy in India. The great extension of the franchise has been accompanied by educational advance particularly in the Punjab where the literacy percentage was 13, not high as compared with 45 percent in Travancore and Cochin but well over the 8 percent reported in U. P. A further growth of India's population may be influenced by the reduction in infant mortality. The growth of literacy among females must influence this decrease, and the chances are greatly in favour of a total population exceeding 400 millions quite soon. The usual substantial reports with tables may not appear but in the case of Mysore a summing up of changes and an account of progress since 1931 has been provided by the Census Commissioner of the State whose report is more than a State Manual summarised.

Customs Revenue Down

The customs revenue figures for March point to a big fall under imports. The decline is not unexpected but it is clear at the same that the surcharge is not producing additional revenue. Customs revenue in March amounted to Rs. 2.69 crores as against Rs. 4.11 crores in February 1943 and Rs. 4.4 crores in March 1942. The total for Central Excises is better at Rs. 1.12 crores for March. Total revenue under sea and land customs and excises for 1942-43 was Rs. 47.29 crores against was Rs. 55 crores in the previous year. In 1942-43 import duties provided Rs. 31.55 crores in revenue; export duties Rs. 2.63 crores; Central excise Rs. 12.49 crores and land customs etc. Rs. 62 lakhs. New excises introduced this year should raise the total collected to over Rs.50 crores for 1943-44 while the fall under sea customs revenue should continue. A decline in imports of silver bullion and coin was recorded last year alongside of a fall in imports of merchandise like liquors, matches, silk and silk fabrics. Import duties naturally provided less revenue than in 1941-42 but an exception was that on mineral oils, tobacco and raw cotton. In the case of cotton and motor spirit higher rates of duty were in force while the growth of the cigarette industry accounts for the other increase.

Rubber in the War

A recent cable describing the need for economy in the use of rubber indicated that in Britain there was some reserve about the success of the U. S. synthetic rubber programme. The Parliamentary Secretary to the Ministry of Supply argued that synthetic rubber from the U.S.A. would come in experimental quantities, and the rubber situation in Britain would remain difficult as crude rubber stocks would be reduced steadily. About 70 per cent of available rubber is destined for tyre manufacture and according to official estimates the hopes of getting more rubber out of the Congo and Brazil or Tanganyika must not affect the conclusion that Britain like America is short of rubber and will remain so. The loss of the Dutch Indies and Malaya meant not only a loss of a valuable export item (securing dollars for goods), but an impediment to war production. The Axis holds the lead in synthetic production, and in 1938 Germany aimed at getting 20,000 tons of buna. Italy too has subsidised synthetic rubber production on a generous scale. The skins of tomatoes were noted to be a source of rubber by Dr. Mauri who calculated that 20,000 quintals of rubber could be secured therefrom. Synthetic rubber tyres came into vogue in 1937 when tests were made by the Italian Army. The U.S.A. has an ambitious programme to get rubber from

To

THE SHAREHOLDERS,

GENTLEMEN,

Your Directors have much pleasure in placing before you the duly audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1942.

The total net profit for the year under review, after writing off bad debts amounts to Rs. 1,32,232-8-5 including the previous year's surplus profit of Rs. 4,895-10-8. Out of this the Directors propose to transfer to Reserve a sum of Rs. 30,000 and set apart a sum of Rs. 12,733 for charity and bonus and recommend a dividend of 8 per cent per annum, subject to Income-tax leaving the balance to be carried forward. The balance sheet under report reflects a steady progress during the year.

Two of the Directors, Mr. R. G. Nath and Mr. S. K. Bhowmic, retire and being eligible offer themselves for re-election.

The Auditor, Mr. S. C. Dutt, retires but offers himself for re-election.

Three of the Directors, Messrs. S. M. Dutt, R. G. Nath and M. C. Mukherjee, being absent from the Meeting could not sign the Balance Sheet.

(P. T. O.)

both oil and coal. The leading rubber manufactures have evolved substitutes, and the U. S. Rubber Reserve Company and other agencies were ordered to arbitrarily limit the competition in progress. The U.S.A. can reckon on Mexican guayale as a source of rubber in addition to home-produced synthetics which came into production on a commercial basis in 1940. Russian dandelion as a source of rubber has since been sent out to Australia while Canada is backing the buna type of substitute Production is expected to start there at the end of the year in a plant expected to give 34,000 tons a year. Britain's fuel difficulties and dependence on oil imports must limit the development of synthetics. The U.S.A. obviously will not be able to give much in spite of the assurance that U. S. manufacturers of synthetics had received orders to keep to schedule. That is why the Ministry of Supply sent out a rubber mission to Ceylon and India. Prices have been adjusted in order to secure ruthless tapping of rubber plantations and rubber planters assume that after the war the demand for raw rubber will not be smaller than at present in spite of the development of synthetics. Mr. Eric Macfadyen's remarks on the outlook for rubber after the war support prevailing optimism as to the future of Indian plantations.

AUDITOR'S REPORT

I beg to report that I have audited the Balance Sheet as on 31st December, 1942, and Profit and Loss Account for the year ending 31st December, 1942, of "NATH BANK LIMITED" as above and in an attached sheet set for respectively with books accounts and returns of the Head Office and Branches and have obtained all the information and explanations, I have required.

In my opinion, the Balance Sheet and the Profit and Loss Account as referred to in this report are drawn up in conformity with the law and such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information and explanations given to me and as shown by the books and accounts as kept by the Bank as required under Section 130 of the Indian Companies Act VII of 1913 (as amended in 1936).

Dated the 12th March, 1943,
98-4, Clive Street,
Calcutta.

S. C. DUTT,
B.A., B.Com. (Bom.), G.D.A., R.A.,
Registered Accountant,
Auditor.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

In all these sixteen years since the inception of INDIAN FINANCE, I have rarely had an Editorial firman on the theme of the week's gossip. I had a charter as large as the wind. "But, now," says the Editor, "you have created a demand. You talked of more things than your readers dreamed of. While they were oppressed by thoughts of a post-war slump worse than war-time scarcity, you talked of a surplus of leisure, of scientific utopias, of men straining to fill their leisure. It is all so different from the common run of ideas that people naturally ask what it is all about. You have either to confess that it is all the creation of your imagination or you substantiate your position by saying more, and more fully, about the new economics." So the firman runs, and I, as in duty bound. . . .

* * * * *

The order is by no means galling. I had myself an idea that I had taken my comment on Dr. Joad's observations far beyond their original scope and opened to my readers a new vista, which, while it excites their interest and curiosity, reveals nothing distinctly. There is, unquestionably a new economics, the laws of which, I am convinced, will begin to operate in the post-war world, whether or not academic economists care to appraise them. But we must remember that economics, in spite of its shortcomings, is a science. It has a certain degree of universality of application. At any rate, it is not like a motor car, of which every year there can be a new model. But it is true that even in the case of the physical sciences, we speak of the new physics. There is a new physics, quite distinguishable from the old. But it is not as if, one fine morning, physicists woke up to find that Newton was a dud and that they had been lionising him for three centuries for nothing and that Newtonian laws were all of a sudden found to be inoperative in Nature, which started to be modern nearly five centuries after the invention of gun powder and the printing press. No, Newtonian physics is still as true as ever, though something more is needed to understand and explain the phenomena with which modern physicists are concerned. Something similar has been happening in the sphere of economics; only the shortcomings of economics have been more severe and serious. New economics, then, must be understood as an apparatus of thought which fits the needs of these times better than the old classical economics. There is no question of one being more true than the other and therefore tending to displace it.

Economics is unique among all subjects of scientific study for its disproportionate reliance on a priori reasoning; where it is empirical, it is also normative seeking to establish a normal or a standard rather than take facts as they are. Classical economics is just formal logic with which no one can quarrel. What it says is mostly like the old rhyme we have read in the primary class;

There was an old woman living on the hill
If she has not left the hill
She is there still.

* * * *

If you recall how often the economist uses the term ceteris paribus, you will realise that what I have said is true to the extent of a caricature. But it is no more than a caricature. It is an obvious exaggeration of an arresting feature; and we must regain our sense of proportion to get at the truth. The economist makes certain assumptions in order to discuss clearly the working of the principles and in order that he may state such laws of economics as he can formulate. But the assumptions are not wholly nor always true. Laboratory conditions, however, are never identical with the ideal. But while the physicist or the chemist can narrow the difference by improving the conditions of his experiment, the economist is up against the fact that there is for him neither experiment nor laboratory. Social sciences like politics or economics are radically different from the physical sciences in that the former are not and cannot be divorced from ends. The individual student may be disinterested. But the fact that in these studies Man is himself both subject and object makes a strictly scientific study impossible. Nor can history serve as a record of the results of adventitous experiment. The aim of all knowledge is the ability to alter facts to one's liking. The physical sciences aid engineering in all its spheres of activity. Biology helps hybridisation and the breeding of more serviceable species. Eugenics raises hopes of rearing a better human race, though what it should be like we have no idea of. But the social scientist can neither disavow, nor accept frankly or wholeheartedly, any utilitarian purpose. And disinterestedness in his case leads only to fragmentation of the field of enquiry which has proved as dangerous in scientific study as in Indian agriculture. What can the political impartiality of the economist mean except, at the least, indifference to the well being of the masses and, at the worst, opposition to better organisation of economic life? The dissociation of economics from politics as a study means that the economist shuts his eyes to those changes in social life which invalidate the assumptions on which he has raised the superstructure of economic laws and theories. And he regards the invalidation, not as a change in the facts of life which he should take due note of, but as a breach of the laws which he had

formulated on the assumption that there were no such breaches. Of tautology and arguing in a circle, the classical economist gives the best instances.

* * * *

It is no wonder that a science thus developed, propounded and preached should fail to fit the conditions and needs of an era that has been changing at break-neck speed. Let me give a few instances of the failure of the old economics to meet the needs of the present. Take first, the Great Depression. To this day, though it is more than a decade since, the economists are not agreed as to whether the depression was due to monetary or to economic causes. They had no suggestion for lifting the depression except the forlorn plea for revival of free trade, which they knew was well nigh impossible. Take again, all the economic phenomena of the present war. The classical economist would have predicted, that is, if he did not imbibe in some measure the spirit of the new economics, that this war would see the highest level of interest rates; and we all know only too well that the interest rates never rose to 3 per cent. The same, I think, will be true of the post-war period. The economist talks of the post-war slump. But the new economics indicates a boom in every branch of economic life.

* * * *

I can well imagine the economists' defence. It is summed up in one phrase, political interference. But who, I ask, guaranteed the economist an economic world free from political interference? Politics is as much a part of life as economics; if the political scientist formulated a law about the instinct of nationalism, he must be prepared to be confronted with the tenets of the Muslim League in India. He cannot consider that the intrusion of economic interest is adequate explanation of the "deviation." The truth is that the laws which govern the destinies of peoples and nations and of the human race can be discerned only through the utmost width of vision and depth of insight that we can possibly command. Shallowness has so far masqueraded under the garb of specialisation and the phenomena of history have been offered only the most puerile of explanations. Fragmentation of the field of study is not merely uneconomic, it leads to the destruction of the qualities of the soil, till we have reached a stage when neither economics nor politics can offer guidance to humanity. And progress is impossible unless every one of the social sciences reaches out a helping hand to every other. The place of the economic motive in politics, the strength that political power gives in economic competition, the change that productive technique works in the constitution of society and above all the sway that geographical features have over the fortunes of the inhabitants—all these have to be duly recognised. Not only have the frontiers of the social sciences to be redrawn and dimmed as well, but they have to sink their old antipathies and conform to a new and vitalising principle of federalism, if the human mind is to establish a new hegemony over human fortunes.

* * *

While the economist has too much of formal logic, the political scientist is too narrowly empirical. The economist can at least state a few laws of economics which, when they have the chance, do operate in the way the economist predicts. But the political scientist has not a single law to state. The ordinary text-book of political science is a hotch-potch of ancient history and modern constitutions. If you go higher, you have a good deal of mystical metaphysics thrown in about the relation between the State and the individual, the identity of right and duty and all the rest of it. And it ends up, in the old days, with an eulogy on the British constitution and, in these days, an elegy on democracy. Where in all this, I ask, is the science of politics? For the science, we will have to turn to geo-politics, to anthropology, to an enlightened re-writing of history in the light of these sciences, in other words, to that form in which History will be what Karl Marx called it, the only science. The political scientist, if he had formulated any laws, would be as much aghast at Hitler's Germany as the economist is aghast at a 3 per cent war.

* * * *

I am aware I have digressed. But my purpose is to show firstly what is meant by a new economics, secondly, how the need for it arises and thirdly, what is its essential nature. I believe I have shown that a new economics does not invalidate or disprove the old, but that it develops ideas more in conformity with the changing actuals. I have indicated, too, that the need arises from the fact that the forces operating in economic life are more complex than those assumed by the economists. And lastly, the essence of the new economics lies in providing for this complexity, in making politics and the political factor a sort of fourth dimension in economic reasoning; for, we cannot

Opening date on 21st May, 1943 up to 12 o'clock noon.

R. E. MARRIOTT,
General Manager.

appraise the economic life of the future if we stick to Newtonian physics and neglect the relativity of economics and politics.

* * * *

In what remains of the space allotted to me, I can do no more this week than indicate the lines on which I shall in the weeks following delineate this new economics. This new economics, I said, results from the addition of, so to say, a fourth dimension, namely society, that is social will and social power, acting in supercession of individual interest and calculation, which was the deciding factor in the old economics. All the fundamental concepts of economics, utility and value (with their gradations of free goods and the like), capital, labour, costs of production and the productivity of projects of public utility, all these concepts undergo considerable changes in the new economics, since they are seen from a perspective, in which profitability according to the point of view of the individual investor ceases to be the yardstick of values. Since society is the new and additional factor introduced into economic reasoning, reorganisation becomes even more important in the new economics than in the old. In the old economics, the assimilation of new production into the economic system is dependent to a large extent on time and the natural accommodativeness of the economic life, while, given a higher level of organisation, the very diversification of new productive activity and their consequent exchangeability ensure their easy assimilation, provided, of course, the currency and credit policy is not adverse to such progress. It will be seen on a little reflection of what I have said already that, in the new economics, capital will imply capital goods, the production of which alongside the production of consumers' goods will be ensured by adequate division of labour, and not the savings of individuals who are enabled to save by the fact of their being given more than they need. This is by far the most significant of the differences between the old economics and the new. For no longer can it be said, as Keynes observed in a trenchant article in the "New Statesman" a few years ago, that houses shall not be built because houses do not pay. The post-war world will be forced to adopt this new view of capital and productivity; and the implications of the new economics to the practical economic policies of the post-war world will then have to be explained. Too few of us realise that the methods, by which this war has been financed by quite orthodox financiers, will prove more revolutionary than the ideas of the reddest of Reds.

* * * * *

It is easy to see how the increase in deposits during 1942 (by over Rs. 63 lakhs in fact) supported the increase in profits reported by the Nath Bank, Limited. Formal comment on the balance-sheet and accounts is not required to show how the increase in dividends follows the increase in profits, the larger appropriation to Reserve, and the special grant for charity and bonus. The issue of new shares recently was a direct result of the very considerable progress made by the Nath Bank, and wholly demonstrable in the figures published now. Total deposits of over Rs. 206 lakhs constitute the main liability. The cash, bank balances and bullion, mentioned in the balance-sheet, represent a cash ratio of over 28 per cent in this case well above the general average for India's Scheduled Banks. It is noteworthy that in the balancesheet Advances totalling Rs. 96 lakhs exceed Investments totalling Rs. 71.19 lakhs; this is as it should be. The classification of Advances supports general anticipations. The audited figures show a gross profit of Rs. 8.76 lakhs, that is to say, more than double the interest paid on deposits. The net profit of Rs. 1,27,336-13-9 in spite of an increase in annual expenditure (pointing to a rise of over half a lakh over 1941) redounds to the credit of the management, while it will be agreed that the remarkable increase in deposits puts the Nath Bank ahead of most Bengalee banks. It is obvious that notable results in the field of branch expansion have assisted in the growth of a bank which serves five Provinces to-day. The latest balance-sheet shows a paid-up capital of Rs. 12.2 lakhs and a reserve of Rs. 1,30,400. Both these totals should show an increase in the next year's and the expansion in profits should be more than proportionate in the case of the Nath Bank as the demand for funds should be better than in the last year. While a sustained increase in Deposits will not only correspond to the universal trend, it will provide further evidence as to the sound and progressive management enjoyed by the Bank.

'EAVESDROPPER'

DIRECTORATE GENERAL OF MUNITIONS PRODUCTION DEPARTMENT OF SUPPLY, CALCUTTA

CRUCIBLES

The import of crucibles of the specifications given below from the United Kingdom will, henceforth, be regulated under the Panel Scheme. Importers of this class of goods for stock and resale are hereby requested to apply to the Director General, Munitions Production, Licensing Directorate, 6, Esplanade East, Calcutta, for particulars regarding the procedure to be followed and for a copy of the questionnaire in form W.S.B.—Import/Pan, which must be completed and returned, in duplicate, within three weeks of the date of appearance of this notice in the Press.

GROUP 10. CRUCIBLES manufactured from Graphite (Plumbago) and CARBORUNDUM

(a) Crucibles size No. 1 (2 lbs. brass capacity) to size No. 300 (600 lbs. brass capacity) for use in pit furnaces, oil or coke fired.

(b) Crucibles of 150 lbs. capacity (brass) to 2,240 lbs. capacity (brass) for use in oil or coke fired tilting furnaces.

(c) Accessories comprising:—
(i) Covers.
(ii) Muffle Rings.
(iii) Spout pieces.
(iv) Stands etc., etc.

OIL CAKES
CASTOR CAKE,
GROUNDNUT CAKE,
LINSEED CAKE,
MOWAH CAKE,
MUSTARD CAKE

New Delhi, April 27.

DELAY, still more delay—that is the sad story which one hears about the Viceroy's plan for filling the vacancies in his Council. His Excellency who has been away in Dehra Dun on a holiday is expected in Delhi today and may be able to make the final announcement within the next few days. A minor reason for the delay is, as already indicated, the difficulty in making suitable arrangements for Sir Ramaswami Mudaliar's return to this country, since the Viceroy is reported to be anxious to have him as his Supply Member. Another reason advanced is the desire of the authorities both here and in London to await the discussions of the Muslim League and see if they open out prospects of League participation at the Centre. More than one Muslim Member of the Viceroy's Council has told me that if Mr. Jinnah were prepared to revise his policy and let League members accept seats in the Viceroy's Council, they are ready to resign immediately. There is nothing, however, in the resolutions or the discussions of the League session to show that Mr. Jinnah is prepared to think in terms of co-operation at the Centre. There has so far been no move from the side of the Muslim League towards talks with the Viceroy or with other political parties for reconstructing the Government at the Centre. No other course presents itself before the Viceroy than to pursue the same old policy and try to find non-party men for filling the vacancies.

* * * *

New Delhi is bidding goodbye this week to Mr. Phillips, the American Envoy who is proceeding immediately to Washington. Few visitors to the Imperial Capital have been able to win the esteem and affection which Mr. Phillips enjoyed. All who have met him have been deeply impressed with his friendliness and earnestness. No one in fact could have worked harder to get into touch with every section of Indian opinion and understand all the details of the Indian problem. I can say that he is not leaving India as a pessimist. He fully realises the difficulties, but he feels, I believe, that an attempt can, and should, be made to resolve the political deadlock in India. As an official of the United States Government, his duty consists merely in reporting to President Roosevelt not only what he has seen and heard but also what in his opinion can be done to improve the political situation in India. The very fact that in spite of his personal request Mr. Phillips has not been able to get the Viceroy's permission to meet Mahatma Gandhi and other Congress leaders, shows only too plainly that it is by no means an easy matter for Mr. Phillips or even President Roosevelt to intervene directly, but there is certainly good reason to hope that the labours of the American Envoy will not go in vain.

* * * * *

I find from talks in New Delhi that if there is no early chanc of favourable political adjustments in this country Mr. Phillips may not care to return to this country—though in his farewell message to the Press on Sunday last, he expressed a desire to return within a few months. The delegates to the Pacific Relations Conference—all of whom I have had the opportunity to meet—have given us fairly full and frank accounts of the discussions on India—particularly the views expressed by delegates from other Empire and non-Empire countries. The impression which these accounts have left on my mind is that it will not be easy for the British Government to ignore the many constructive suggestions which have emanated from the conference. In New Delhi it is always the same anxious plaint which one hears: "Something has to be done. When will it be done?" Some who have recently returned from England, have been telling me of reports current there that Lord Linlithgow may vacate his office even earlier than October as he is anxious to be relieved as early as possible. Whoever may be the new Viceroy, it may not be possible for him to come out at once. For the interval it is likely that the present Governor of Madras, Sir Arthur Hope, may be requested to officiate as Viceroy. An influential group in England, friendly to Indian aspirations, has been exerting itself to see if it will not be possible to send Sir Stafford Cripps to this country as Viceroy. Nothing is yet known of Mr. Churchill's views in this matter.

* * * *

In a *communique* just issued the Government of India has protested against the Union Government's action in South Africa in imposing new stationery restrictions on the Indian community. There is little doubt that the Government of India did its best to voice Indian opinion in their protests to the South African Government, but it appears that the attitude of the Secretary of State, Mr. Amery, has not been sufficiently helpful. If he had only taken a strong line and impressed upon Mr. Churchill the disastrous consequences which legislation of this kind will have on the relations between the two countries, something could have been done even at this late stage to prevent these unhappy developments. The Government of India says that it cannot ignore the apprehensions aroused in Indian minds by the extension of the statutory restrictions. I understand that an early meeting of the Standing Emigration Committee is likely to be called. Both the suggestions made in the course of Indian protests—the recall of the High Commissioner as a gesture of protest and the application of certain sections of the Reciprocity Act. There is every reason to think that in this matter the Government of India is anxious to go as far as it can to vindicate Indian selfrespect.

* * * *

Mr. M. S. A. Hydari, the Secretary of the newly started Industries and Civil Supplies Department, took charge of his office last week and is now engaged in reorganising and extending his Departmental staff. His first anxiety is the problem of standard cloth production and distribution all not too well yet owing to various causes. Then there is the question of paper production upon which a big staff is already working in the Government of India. Mr. Bhargava's report has raised the question of newsprint manufacture for which adequate facilities exist in this country. All that is necessary is the import of machinery from America for starting a mill. At present shipping space has to be found for about 15,000 tons of newsprint every year. If a fifth of this space can be given for importing the required machinery, a mill big enough for the manufacture of the entire newsprint supplies needed for this country can be immediately started in India itself. It is hoped that Mr. Hydari's Department will take up this question and try to set up newsprint manufacture on a permanent basis in India. Another problem needing immediate attention is the control of drug production and distribution in the interests of the poorer sections of the public.

* * * *

I understand that the Government of India has been actively considering the situation created by the opening of several new banks in the country particularly with reference to the representation made by the Central Board of the Reserve Bank. It is expected that when the Central Legislature meets in July, the Finance Member will submit certain definite proposals for dealing with the problem. If the Government of India had, following Sir N. N. Sircar's legislation to consolidate improve and bring up to date the law relating to insurance and companies, brought in a Banking Bill for which there is real need, the present situation would not have arisen. Unfortunately the authorities thought it proper to postpone consideration of this very useful measure though a draft had already been prepared by the Reserve Bank. As an eminent lawyer, Sir A. K. Roy, is shortly to join the Government of India as Law Member, it is expected that he will follow the example of Sir N. N. Sircar and bring in comprehensive legislation.

Bombay, April 28.

WAR has always been an unmixed evil to insurance companies and this has proved no exception. It is, therefore, pleasing to report that the Empire of India Life Assurance Co., Ltd., has had another successful year of working. Presiding over the 46th annual general meeting, Mr. E. B. Ghasvala gave a brief review of the company's working and described the year's results. The cheerful note he struck finds its justification both in the revenue obtained by the company during the year ended December 31, 1942, and in the favourable atmosphere compared with the gloom and uncertainty that characterised the end of 1941. Mr. Ghasvala pointed out that the increase in new business secured by the Company was such as to offset to a considerable extent the loss of business resulting from the enemy's occupation of Burma. The company had contrived to keep the expenses of management at the moderate ratio of 22.5 per cent to premium income without any impairment of efficiency. Mortality experience was satisfactory and claims by death totalling Rs. 12.36 lakhs showed a considerable reduction on the figure for the previous year. The balance sheet as usual discloses a strong financial position. On December 31, 1942, the Life Insurance Fund stood at Rs. 5,40,83,000 and total funds amounted to Rs. 5,73,88,000. Total assets of the life insurance business were Rs. 591.72 lakhs. The Company had all its investments in government securities. The difference of over Rs. 95 lakhs in the company's favour between the redemption value and the book value of investments irrespective of the investment reserve of Rs. 28 lakhs goes to prove that the investment policy is an unqualified success. Interest earned on the life insurance fund was Rs. 5-2-5 per cent, though the return is reduced to Rs. 3-15-3 per cent after deduction of income and super-tax. The report and accounts adopted at the meeting showed that 6,543 proposals for Rs. 1,68,06,109 were received in 1942, resulting in the issue of 5,602 policies for Rs. 1,35,84,443 represented by an annual premium income of Rs. 6,71,605 and a sum of Rs. 2,64,146 by single payments. The meeting approved the directors' recommendations for paying a month's salary as bonus to its officers and staff. A dividend of Rs. 3-10 per share with a bonus of Rs. 2-6, both free of income-tax was declared, making a total of Rs. 6 per share.

The Government of Bombay has announced that food rationing will be introduced as from May 2 within the city area. Any person desirous of bringing into or taking out of the Municipal area any rationed article may not do so without a permit. For the time being the Bombay Suburban District has been excluded from the scheme but Government have opened extra grain shops and has increased supplies to existing ones so as to ameliorate scarcity in that area. It is learnt that the Government's position is strong in regard to wheat as 18,000 tons of wheat in good condition have arrived from Australia. The quantity of wheat intended for distribution to each person under rationing has consequently been doubled. Jowar is still not available and will not be supplied to the public. An adult person is allowed 2 units per week, a child between 2 and 12 one unit, no provision being made for children under 2. The proportion in which the different grants are allowed in a unit is: up to half in wheat; up to three-quarters in rice; or the whole in bajri.

At a public meeting convened by the Sheriff of Bombay at the Sunderbai Hall on Tuesday evening, the statutory segregation of Indians in Natal and the Transvaal contemplated by the Asiatic Bill came in for the severest condemnation. Sir Chimanlal Setalvad, the President said that he was amazed at the effrontery of the South African Government. When Indians are going to be subjected to this obnoxious piece of legislation in Africa, all the praise from Mr. Churchill and Generals in North Africa about the performance of Indian troops, said Sir Chimanlal, meant nothing. The main resolution which was moved by Dr. Jayakar stated that the action of the Union Government was reprehensible, emphasised the indignant attitude of the Bombay public and demanded equal rights of citizenship for Indians in South Africa. Sir H. P. Mody, Sir Rustom Masani, Sir B. Rama Rau, Lady Rama Rau and others who spoke agreed in describing the Bill as reprehensible. The main resolution and the second resolution moved by Sir P. Thakurdas expressing appreciation of the representation made by the Government of India to the Union Government, and asking for the whole-hearted support of the British Government to the Government of India in its efforts to get justice for our people in Natal and elsewhere were carried unanimously.

Under the auspices of nineteen women's organisations, a public meeting of Bombay women was held at the Sunderbai Hall, Bombay on Monday last. Lady Rama Rau presided. The meeting gave its whole-hearted support to the Bill recommended by the Rau Committee to amend and codify the Hindu Law of intestate succession and now before the Central Legislature. It was urged that the Select Committee should invite representatives of women's organisations from all over the country to give evidence. Such enthusiastic support from Bombay women can be taken as a sure indication of women's attitude in regard to legal reform and the argument of reactionary Hindus that women are indifferent to the Bill will no longer count. There were certain rights which the women of Bombay province had already acquired and which the Bill in its present form seeks to deny them on the plea of uniformity. The meeting rightly drew the attention of the Select Committee that there were other ways of levelling than levelling down and that uniformity can be achieved best by raising the level of the so-called backward Provinces to that of Bombay. The ameliorative aspects, both social and legal, of the Bill were explained by the Rt. Hon. Dr. M. R. Jayakar and Raja Bahadur Govindlal Shivlal Motilal. Under the reforms envisaged by the Bill the Hindu widow, sons and daughters all would get shares of property, the widow getting one share, if more than one widow one share between them all, the sons getting one share each and the daughters half a share each. A radical change that the Bill seeks to introduce is the one that permits Hindu girls to marry outside their community, recognising the right of offspring of such unions to full rights of inheritance. But the legal change cannot have wide application so long as Hindu parents cling to traditions and continue to think that Manu settled everything for ever.

The Esplanade Maidan was crowded to choking on Tuesday afternoon last when people from all parts of the city flocked to witness the opening of the War Services Exhibition. Prominent among those present were two Advisers to the Governor of Bombay. Brigadier C. E. R. G. Alban made an opening speech explaining the objects of the exhibition. The burden of the speech and the concluding words were appropriately the battle-cry of the United Nations, men, more men, and still more men to fight the war.

Equipment and weapons with which the Royal Indian Navy, the Indian Army and the Indian Air Force are armed to-day were displayed in a magnificent setting. German and Italian equipment captured in the Middle East as also Japanese equipment captured in the East made an interesting variation. A feature of the exhibition that distinguishes it from the one held in Delhi earlier, is the Merchant Navy Stall and a stall representing docks and transportation units—an item in keeping with Bombay's maritime associations. A replica of the upper dock of a naval vessel complete with bridge, mast and guns "which sank a 10,000-ton Japanese raider armed with six much larger guns and torpedoes" loomed large among the naval exhibits. The Labour Department had on display a model workshop, showing the different aspects of the technical training scheme. The Supply Department, the National War Front, Red Cross and organisations assisting in the war effort were also well represented. There were demonstrations of fire-fighting by the Fire Brigade and mock-battles by the Army which made the Maidan resound with real gunfire. The exhibition open to the public for a fortnight is likely to remain popular as admission is gratis.

Ice manufacturers of Bombay have enforced from April 1, a collective increase in the price of ice amounting to no less than 300 per cent of the price ruling before that date. Various reasons have been advanced by the manufacturers to justify this increase. The cost of ammonia and calcium have gone up by eight to ten times; wages and transport charges are said to involve more outlay; and last but not least, there has been a reduction in output consequent upon the closing of one factory producing 40 tons a day whereas the demand has increased this year. All these excellent reasons, however, give small consolation to the consumers who find that this rise has created difficulties in the supply and transport of fish to and from the city involving an increase of 25 per cent in the price of fish. The possibility of an increase in the price of cold drinks served in restaurants is not envisaged by the consumers with any more equanimity. Suggestions have found their way into the press for Government control of the price of ice, a solution, by the way, that has not always proved happy. Many forget that ice added to aerated waters or for refrigeration of tea or coffee is not separately charged for.

The Government of Bombay has sanctioned the grant of interest-free loans of Rs. 1,00,000 and Rs. 10,000 to the Sholapur and Pandharpur Municipalities respectively to enable them to build up reserves of food grains for their new fair-price grain shops. With effect from April 11, 1943, the Government has imposed a ban on the export of tea by rail, road or sea from any place within the limits of the province of Bombay to any place in India outside the limits of the Province except under a license granted by Government. It it announced that such license will not be required for quantities up to 5 lbs. carried by a *bona fide* traveller as part of his personal luggage. Bombay clearly wants to retain its imports. It is not anxious to build up a re-export trade.

Resume of Commodity Markets

After earlier firmness a rather quiet tone is noticeable in some commodity markets. The jute market, however, is very firm and, with the continuance of present conditions, it does not appear that there will be any appreciable setback in prices. The feature of the week is again the further improvement in prices for the precious metals. In spite of the fact that there was very little justification for an abrupt rise in prices for gold and silver speculative buying was heavy. The technical position of the market also was healthy. In the absence of any measures by the Government to restrict the uncontrolled rise in prices, speculators have had their own way. The *Times* City Editor has tated that quotations in the Bombay market are now standing at an artificially high level, and that speculators have been successful in rigging up values owing to the completely insular position of the Indian market. It has been suggested that Government should relax the restrictions in regard to imports from the U.S.A. Even if there was a suggestion that it would be possible to bring in supplies from other countries abroad it might prove to be an effective check on prices. What exactly the Government propose to do in this connection remains to be seen.

As has been pointed out elsewhere the problem of control of bullion prices presents many difficulties. If the Government propose to relax restrictions they will have to think twice before taking any action. In the absence of any measures in this regard, it cannot be ensured that prices will be kept at proper levels. A collapse in bullion prices at a later stage might spell ruin to mofussil hoarders. It is satisfactory to note that there has been a recession in prices in the last two days, the suspension of forward trading in the Bombay market having been slightly responsible for the reaction in values. Quotations, however, are substantially higher on balance. The decision of the Board of Directors and the Merchants Committee of the Bullion Exchange to suspend business for July and the subsequent settlements until further notice, was due to over-trading in the Bombay bullion market. This action was considered necessary as a precautionary measure and in view of the abnormal fluctuations and the very high prices for both the precious metals. In spite of the suspension of forward trading, quotations opened a little higher on Monday this week. Only during the last two days prices have been marked lower on profit-taking and selling.

* * * *

Speculators in the Bombay raw cotton market seem to have a very short memory. Only recently, after the warning uttered by the Government regarding excessive speculative activity in the cotton market and the proposal to terminate hedge contracts in the current season's crop, there was a setback in the quotation to Rs. 540. The representation by the East India Cotton Association to the Government and the absence of any positive action in regard to the current season's trading have encouraged the hopes that business in the current crop can be continued unrestricted. The higher prices in the bullion markets naturally provided an opportunity to push up prices again and Jharilla May was as high as Rs. 602. Only towards the close on some selling pressure there was a recession in prices to Rs. 592.

The reports that the Government of India have been able to arrange for imports of Egyptian and East African cotton have not had any effect so far on the market and it appears that operators will not be prepared to change their views unless actual supplies are landed in this country. Earlier in the week Karachi operators were reported to be bulls. The renewed rise in prices naturally gave rise to the rumours regarding control of prices; so far, however, no action has been taken.

* * * *

The recent order for 116 crore yards of hessian must give the mills in Bengal some hard thinking as it will accentuate the difficulties in regard to the supplies of the raw material. The order by itself cannot materially affect production as it is spread over several months, and the proposed rate of delivery is slightly over 10 per cent of the monthly output. It was given out earlier in the week that it would not be necessary to continue 60 hours per week, but it is now given out that it will not be possible for some mills to complete the first American order by May 15, 1943. With the well-sold position it will even be difficult to get some members to take up the quota on account of the latest order without additional working hours. But difficulties in this regard to the supply of the raw material and coal prevent the working of mills for any hours longer than is absolutely essential. It remains, therefore, to be seen as to how the Indian Jute Mills Association propose to solve the many problems confronting the industry. It is not definitely known as to whether the latest order is in regard to the U. K. or the U.S.A. There is a suggestion that it is on behalf of the latter. If it is so, it confirms the earlier anticipations that all future orders on behalf of the U.S.A. might come through official channels. It will be remembered that before the last order was placed with the I. J. M. A. an effort was made to get some ready supplies from the market and that this action resulted in an undue rise in prices. This perhaps explains the drop in the quotation for 9 porters and 11 porters from Rs. 22 and Rs. 28 to Rs. 21-4 and Rs. 27-2 respectively. Mills are unwilling sellers for forward positions.

* * * *

Vigorous efforts are being made to ease the food situation in Bengal. The new Ministry seems to have proceeded with the task in right earnest. There has been no appreciable setback in prices for rice and sugar, even with the reports that large supplies of rice, wheat and sugar have arrived into this province. To control sugar prices and to eliminate the black markets a new order has been passed by which intermediaries will be completely ruled out and all supplies will be given to approved dealers at controlled rates. The dealers in their turn will have to give it to approved retailers at approved rates. The retailers are not allowed to sell more than one seer at a time to an individual consumer.

* * * *

The coal problem has come again to the forefront. Coal prices are now very high and factories are reported to have very small supplies; at times there was not even coal enough for half a day's consumption. The position is very difficult particularly in the case of the jute industry.

GOODS

forwarded and cleared to and from railway stations and ports. Deliveries received at Calcutta, on cash payment of customer's purchases and subsequent despatches arranged to suit outstation clientele.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, April 29.

Markets have been enjoying, or suffering from, according to the point of view, an orgy of speculation during the past week. An interesting feature which has emerged and about which not much was known previously, was the existence of an active Fatka market in Delhi, dealing mainly in "B" twills, and which had no little influence in forcing the prices of this fabric to the fantastic level they temporarily reached. The Finance Member was pretty severe recently in his strictures on the gambling in Cotton Futures in Bombay. It is to be presumed therefore that, when the Jute Industry in Calcutta had successfully disencumbered itself of Fatka markets some time back and set its face firmly against their resuscitation, it can look with confidence to the Delhi authorities taking the necessary steps to scotch this attempt to establish the venue of operations in that centre. It is rumoured that the crash which has ensued on the recent wild gambling has already resulted in more or less effectively closing this bucket-shop. And it is to be sincerely hoped that no more will be heard of it—unless its obsequies.

Up to the end of last week there had been pretty strong speculative buying, mainly of "B" Twills, reputedly on Punjab demand, and to which the undoubtedly large requirements of bags for the movement of foodgrains lent some solid support. There was also, of course, the inevitable over-trading, particularly in the forward positions. What caused the final furious effervescence, however, was the placing of a Government order for some 16 crores of Hessians with the Calcutta mills for delivery over June to December. The effect of this, coming on an already pretty hot market, was certainly hectic, but proportionately short-lived. Mills did not neglect the opportunity to take orders at the enhanced rates and were only deterred from doing more by their restricted ability to purchase jute. It is to be noted that, though this order was only for hessians, the most marked price effect was on Heavy Goods, particularly "B" Twills, which goes to confirm the evil effect which a Fatka market, even as distant as Delhi, can have on commodity prices.

In respect of this order, two other points have to be remarked. First that the Bazar apparently had the information before many, or any, of the mills whose chief concern it was. Second, that the price at which the order has been fixed has not yet been revealed, if the price has indeed yet been fixed. In justice to the mills it is to be hoped that the price is a more generous one than that of some past Government orders. For it has been thrust upon mills when in a distinctly bare jute position. The total weight of the order was in the region of 10 lakhs of maunds and practically the whole of this was covered by jute either the same day or the next. Mills had no alternative, even though by buying they forced the market up against themselves. They had to pay top prices for the raw material and it must be remembered that raw jute prices have of late been advancing at a greater speed than the prices of the manufactures. Margins of profit are therefore very much curtailed. In fact, calculating simultaneously for forward sales of goods, margins have almost reached vanishing point. It has to be remembered that to carry jute for say six months at current prices, involves very heavy charges for interest and insurance, to which has now to be added war-risk insurance. Costs of manufacture have also risen rapidly and severely. It is probably not generally realised that the loss to a mill on providing its labour force with foodstuffs at controlled prices may amount to as much as Rs. 20 per ton of goods produced, and there is little sign of this figure being reduced, if indeed it may not increase. We are all in favour of control if control is to be universally and equitably exercised. But there seems no adequate reason why the jute mills should be selected as the only suitable subject for the demonstration of controlled if control is to be universally and equitably exercised. But there seems no adequate reason why the Jute Mills should be selected as the only suitable subject for the demonstration of controlled prices on their manufacutres so far as Government orders are concerned, when practically every other industry is permitted to run loose, not excepting the jute mills raw material market.

While on this subject of control, it may not be out of place to air a point of view which does not always occur to the inhabitant of this country. One of the favourite arguments is that, since other commodities are permitted to run loose and to be forced to fancy prices by speculative operations without let or hindrance, there is no good reason why jute and Jute Goods should not be permitted a free run also. So far as many of her commodities are concerned, India is practically self-contained at the present time—she only produces what she consumes, or *vice versa*, only consumes what she produces. Thus, uncontrolled speculative operations, however unsocial they may often prove to be, react mainly, if not wholly, on herself. But jute goods to a very large extent are an exported commodity, and exported mainly to markets where control does obtain and has been maintained since the outbreak of hostilities. Therefore if the cost of jute goods is forced to unduly high levels, not only will they meet with competition from other controlled fabrics and fibres, but the fact that India is apparently trying to do itself well out of the war situation will certainly arouse resentment in overseas markets which have submitted to control of their domestic commodities. The invitation to such an attitude is, to say the least, unfortunate, more particularly in India's present political situation, when sympathy rather than resentment is the emotion she desires to elicit. It is common knowledge all over the world that India has already done herself very well, to the extent of a favourable change-over in her indebted position by some seven hundred million pounds sterling. The present level of prices to which jute goods have been forced leaves Bengal open to the suggestion that she wants to do herself pretty well out of her jute industry also. The U.S.A. is first and last and always, Bengal's best customer for hessians. Cotton prices in the U.S.A. are strictly controlled and ceiling prices have been fixed for jute goods in relation to the costs of cotton goods. Current prices for

hessians are already well above the U.S.A. ceiling prices and maintenance of anything like the present price levels will undoubtedly tend to alienate not only the trade, but also the sympathy of the U.S.A. We do not suppose for a moment that the speculative operators, whose God is the Almighty Rupee, will ponder this aspect, but it is only right that it should be publicly voiced, even if it only "gets the air." There is no manner of doubt that the price levels of both jute goods and their raw material have reached unhealthy levels, and it would be a blessing undisguised to the Industry if something happened to set them back sharply.

The Export jute market has been distinguished by its sedateness while all its neighbours have been out of hand. A limited business in Dundee Daisee at Rs. 93 and in Dundee Tossa 4s at Rs. 95 being all that has been reported. The mill market on the other hand almost qualified on Monday for a week's run at the Garrison Theatre as the local "Crazy Gang." In Pucca bales practically everything on offer was cleaned up. Firsts at Rs. 96 to over Rs. 100, Lightnings at Rs. 91 to Rs. 95, Hearts at Rs. 86 to Rs. 90, Dundee Daisee at Rs. 91 to Rs. 95, Dundee Tossa 4s at Rs. 94 to Rs. 97, Outport Tossa 4s at Rs. 84 and Rs. 85, N. C. Cuttings at Rs. 46 and Rs. 47 with M. C. and T. C. at a rupee less and Ropes and Habi Jabi at various rates. Balers subsequently raised all their prices, but in the absence of further demand have again reduced them to the top rates paid without attracting further custom. Loose jute offerings were similarly cleared, starting with Supervised Jat at Rs. 19 and Rs. 16 for Middles and Bottoms to eight annas higher with Rs. 20 paid for high assortment, Supervised District at Rs. 18 basis Middles to Rs. 18-8, Indian Jat Bottoms and Cross at Rs. 15-8 and Rs. 14 to eight annas more, District and Northern Bottoms at Rs. 15 to Rs. 15-8, District Tossa at Rs. 19 and Rs. 16 Middles and Bottoms, while for Jungli jute Rs. 18 and Rs. 15 was paid for Tossa and Rs. 17 and Rs. 14 for white. Sellers of Loose Jute also raised their rates, but with demand fading except for really good quality, the tone is somewhat easier again. Mofussil markets naturally followed the lead of Calcutta and imports have been difficult to procure even at advanced prices. Possibly a slight setback might show more clearly what balance is still there to be marketed. Sowings are well on towards completion and weather conditions generally have been good. It is still indicated from most districts that the licensed area is not likely to be fully sown.

We have already commented on the violent fluctuations to which the Fabrics market has been subject. The nearer positions, in which mills have little to sell, were the plaything of the speculator, near eleven porters jumping from Rs. 25-12 to Rs. 28-8 before relapsing to Rs. 26-14, and near "B" Twills rocketting from Rs. 64-4 to Rs. 72 then falling to Rs. 65 again. The principal sales by Mills were in eleven porter hessians at Rs. 27-8 for the October-December positions and in "B" Twills for October-March at Rs. 65. Other sales reported included Liverpool Twills at Rs. 71 October-December, Salts at Rs. 56 April-September, D. W. Flours at Rs. 77 May-June and later, Rs. 83 July-September, and Woolpacks at Rs. 3 for June, and later Rs. 3-1 October. Having been marked back from the high levels touched to within a rupee or less of the rates ruling a week ago, the market shows an uncertain tone without any clear indication whether a further decline is pending or if another upward turn is to be looked for.

JUTE

Calcutta, April 29.

FIRM conditions have continued to prevail in the raw jute market during the past week and prices have been marked further higher with the anxiety of mills more than ever before to buy up all quantities of jute offering. The announcement of a new order for 12.5 crores yards to be delivered in equal quantities from June to December 1943 had also an encouraging effect. At first it was suspected that mills would decide on the continuance of the 60-hour week, but it is now pointed out that the receipt of the new order will not in any way affect the decision of the Indian Jute Mills Association to revert to 54-hour week as from the middle of next month. The difficulties in the way of longer working hours have been pointed out in these columns on more than one occasion. If it were possible to ensure adequate supplies of the raw material in time and at fair prices, mills probably would decide to work a longer week. The announcement of the new order naturally means greater consumption, the quantity involved every month in respect of this order alone being 3.5 crores yards of hessian or more than 10 per cent of the total production. However, as it has been decided to stick to the original programme so far as the jute market is concerned, it may be said that the order has no great significance except for the fact that it assures a high level of consumption for the next season. About this there is no doubt whatever. However, if shipments continue at the present level, mills cannot possibly afford to work a 54-hour week for long and the mere hopes of an increase in the number of working hours at a later date might possibly result in a further rise in values. The efforts to bring in longer quantities of jute are bearing fruit and it is hoped that a more effective turnround of country boats will materially help the situation. The position in this regard is to be watched during the next few weeks.

In the loose jute section very firm conditions have been noticeable with very little jute offering. Mills have been keen buyers. Indian Jat Middles and Bottoms were nominally quoted at Rs. 19-8 and Rs. 16-8 per maund with no business done. European packings were not available; in fact, there is almost a famine for the higher quality grades and recent arrivals have shown a greater proportion of low grades.

In the Pucca bales section a moderate amount of business has been done Sellers are reserved and very firm in thir ideas. Dundee Daisee 2/3 and *Tossa 4's for export* were done at Rs. 93 and Rs. 95 respectively. The quotation at the end of last week for Dundee Daisee 2/3 was Rs. 85-8 per bale. Mills have again paid Rs. 2 higher. Firsts, Lightnings and Hearts were done earlier in the week at Rs. 96, Rs. 91 and Rs. 86 per bale respectively.

JUTE MANUFACTURES

Calcutta, April 29.

IN the jute manufactures market there was an abrupt rise in prices in the early days of the week on the receipt of a new order for 12.5 cores yards to be delivered in equal instalments between June and December 1943. As it was given out that there would be no increase in working hours or rather that mills would reduce the number of working hours as originally proposed from 60 hours per week to 54 hours as from May 15, 1943, speculators and investors were very active and 9 porters ready improved sharply to Rs. 22 and 11 porters ready to Rs. 28, from Rs. 20-12 and Rs. 26 respectively over the week-end. As it was felt that the rise in prices was overdone and that in future American buying might be regulated through official channels, there was some selling and the quotations at the time of writing are lower at Rs. 21-4 and Rs. 27-2 though higher on balance. 9 porters ready were quoting Rs. 20-6 and 11 porters ready Rs. 25-10 at the end of last week. 9 porters ready for May are Rs. 21-4, June Rs. 21-4 and July-September Rs. 21-4. 11 porters ready for May are Rs. 27-5, June Rs. 27-8 and July-September Rs. 27-8.

In the Heavy Goods section there was great activity earlier in the week. Good business was reported done in "B" twills for Punjab and Delhi with the quotation at Rs. 72-8 ready. In sympathy with the fall in the hessian prices quotations towards the close are lower at Rs. 69-8 for "B" twills, Rs. 71 for Liverpool twills and Rs. 67 for Cornsacks. At the end of last week "B" twills were Rs. 63-8 for April delivery Rs. 66-8 for Liverpool and Rs. 63-8 for Cornsacks.

GOLD

Calcutta, April 29.

T 585 has been a further sharp rise in prices in the Bombay buillion market. Gold ready touched a new all-time high level as Rs. 85-8. The decision of the Bombay Bullion Brokers Association to suspend forward trading in futures in the bullion market, did not have any appreciable effect. There was an acute shortage of stocks. Speculative and investment buying was unsatisfied. Only the fears regarding the possibility of some manner of Government interference have resulted in a decline in prices during the last two days. Gold ready is quoting Rs. 89-12 and First Settlemen tRs. 88-12. No business is possible in Second Settlement. The quotations at the time of last writing were Rs. 86 and Rs. 85-8 respectively. Sovereigns are quoted Rs. 65 against Rs. 58-14 last week; the highest level for the week being Rs. 69-4. In the Calcutta market active conditions were witnessed and gold ready was at one time as high as Rs. 104, and sovereigns Rs. 69. Only towards the close quotations are lower at Rs. 94-8 and Rs. 86 respectively.

SILVER

Calcutta, April 29.

THE silver market also was firm in sympathy with the gold market. The rise in quotation was not so pronounced as in the case of the yellow metal. Silver ready touched a level as high as Rs. 136-8, but there has been a slump towards the close to Rs. 128-12. First settlement are Rs. 126-4 after being higher at Rs. 129. It is interesting to note that the difference between forward and ready was as much as five points at one stage. The quotation at the end of last week was Rs. 120-8 and Rs. 124 respectively. In the London market there has been no change in prices, the quotation for both Spot and Ready remaining unchanged at 23½d.

COTTON

Calcutta, April 29.

IN sympathy with the strength of the bullion markets the Bombay raw cotton market was very active and jobbers bought freely. The quotation at one time for Jharilla May was as much as Rs. 603. As there was a considerably oversold position bears rushed to cover earlier in the week. There have been no fresh reports regarding Government control of cotton prices. The decline in prices towards the close was only in sympathy with the bullion market. There is also some selling by bears who want to recoup their earlier losses. The weakness of the other commodity markets also was helpful. Jharilla closed at Rs. 576 and July Rs. 592-8. The highest quotations were Rs. 602 and Rs. 612-8 respectively. Jharilla May closed last week at Rs. 555-12 and July Rs. 570.

JHARRILLA COTTON—

May—(21st) 555-12; (22nd) 571-8; (24th) 603-0; (26th) 597-8; (27th) 579-0; (28th) 576-0.

July—(21st) 570-12; (22nd) 583-8; (24th) 617-0; (26th) 612-8; (27th) 596-8; (28th) 592-8.

PIECEGOODS

Calcutta, April 29.

THE piecegoods market has continued firm though not much of business has been passing. With the recent sharp increases in the quotations, there is a general tendency to await further developments. In view of the scarcity of supplies dealers are not very anxious to do business. Actual transactions have been confined to small lots. Mills have shown greater willingness to do business though there has been no discounting in prices.

INDIAN IRON PAYS A LOWER INTERIM DIVIDEND

A SURPRISING, rather shocking, development of the week is the declaration of a lower interim dividend by the Indian Iron and Steel Company, Limited for the year ended March 1943, of 8 annas per share against 12 annas per share paid on former occasions. It was generally expected that it would be possible for the Managing Agents to maintain at least the interim dividend, not to speak of paying a higher dividend, as there were reports that the Company was progressing very satisfactorily and that earnings were running very high. In the accounts for the year ended March 1942, the directors were rather optimistic regarding the prospects for the current year and even suggested that the company would be able to report a higher level of earnings. It was in anticipation of a higher interim dividend that there was a sharp rise in prices in the early days of the week.

In unofficial trading, with heavy speculative buying mostly on jobbers account, the quotation for the shares was rushed up from Rs. 36-4 to over Rs. 39. On Tuesday morning the price was quoting around Rs. 38-12 and till late in the afternoon, there was no suggestion of weakness, it being confidently expected that the dividend would not be lower than 12 annas per share. Just before the market closed it was announced that the interim dividend was only 8 annas per share. There was heavy selling immediately and the quotation was brought down to Rs. 36 in a very short time. Even after the market had closed, selling persisted and the lowest level of Rs. 35 for the week was touched. Steel Corporation also suffered a decline having been marked higher earlier in the week at Rs. 27 in sympathy with Indian Irons. During the last two days these two popular speculative counters have been fluctuating in narrow limits though at the time of writing on Friday, quotations are slightly better than the lowest levels for the week.

It is to be noted that, unlike on former occasions, the drop in prices for the speculative counters has not had any unfavourable effect on prices in other sections and that, even with the quieter tone of Indian Irons, some favourite shares have been in the forefront. The undertone is very steady in all the sections. With the present frame of mind of the operators even if the Managing Agents of the Indian Iron and Steel Company, Limited had only maintained the interim dividend at 12 annas per share the upward movement in prices would have continued. There was a feeling that Indian Irons were relatively undervalued and that with the assured prospects for the Company and the very sound financial position, the shares could be quoted considerably higher.

No satisfactory explanation can be offered for the decision of the directors to lower the interim dividend for 1942-43. If the Managing Agents had the limitation of dividends in view, in accordance with the wishes of the Government of India, there was certainly no case for a reduction in the dividend what time other important companies were increasing their dividends. It cannot be said that earnings were at a lower level though it is difficult to be definite in this regard. It might be that the finances of the Company had to be conserved for further capital expenditure. If only a statement had been made along with the announcement of a lower interim dividend, the market would have been spared such wild fluctuations in prices.

* * * *

It is perhaps time that greater attention was paid to the merits of jute shares. In recent weeks, there has been a sharp improvement in prices for both jute and jute manufactures though it might be pointed out that the rise in prices for jute has been more than in proportion to the rise in manufactured goods. Mills are working 60 hours per week. Only this week another order for 16 crore yards of hessian cloth has been received. But for the difficulties on account of supplies of raw jute and coal, mills would have decided on the continuance of 60 hours per week after May 15, 1943. The shipping position is showing signs of improvement. Recently there has been a large increase in exports. If the present conditions continue to prevail, it will not be surprising if jute mills report a substantial improvement in earnings. Even at the present moment the results of certain important companies for the half-year ended March 1943, make a fairly satisfactory showing.

The *Bally Jute Company, Limited* has been able to pay a higher dividend while *Fort William* and *Fort Gloster* have maintained their dividends at the former levels.

It should be remembered in this connection that mills experienced during the six months ended March 1943, considerable difficulty in regard to labour. Following the air raids on the Calcutta area there was a large exodus of labour. The loss in production in December and January meant a loss in earnings to a certain extent. The increase in production costs also resulted in a narrower margin of profits.

Against this background the results of the two companies in the Kettlewell Bullen group should be considered very satisfactory. The net profit of *Fort Gloster Jute Company, Limited* for the six months ended March, 1943, before providing for taxation and depreciation, is Rs. 18,18,054 against Rs. 20,13,911. The amount set aside for depreciation is Rs. 2.5 lakhs (same) while the Reserve for taxation and provision in respect of deposits under section 10(1) of Finance Act 1942 is at Rs. 13.25 lakhs against Rs. 15.75 lakhs. The ordinary dividend has been maintained at Rs. 15 per share while the amount carried forward is slightly lower at Rs. 53,859 against Rs. 69,814 brought in.

The net profit of *Fort William Jute Company, Limited* for the same half-year is slightly higher at Rs. 6,57,597 against Rs. 6,28,960. The amount set aside to depreciation is unchanged at Rs. 1 lakh while the reserve for taxation and provision in respect of deposits under section 10(1) of the Finance Act 1942, is not very much higher at Rs. 4.65 lakhs (Rs. 4.6 lakhs). The dividend has been maintained at Rs. 5 per share. The amount carried forward is Rs. 56,738 against Rs. 69,141 brought in.

Assam Saw Mills and Timber Company, Limited has made further progress in the year ended September, 1942. Thanks to the substantial increase in sales it has been possible to report a higher level of earnings and pay a higher dividend to shareholders. Since 1939 there has been a successive increase in the amount of dividends paid to shareholders. For a Company of such small dimensions the progress made since 1937 is something remarkable. Total sales in 1936-37 were Rs. 6.86 lakhs. In 1941-42 they were as much as Rs. 28.99 lakhs.

The net profit, before providing for taxation and depreciation, is as much as Rs. 7,16,332. Of this amount provision for Excess Profits Tax and Income-tax is Rs. 4,30,000. The amount set aside to depreciation is Rs. 1,01,071 (Rs. 98,472) while the transfer to Debenture Redemption Fund is Rs. 40,000 (Rs. 60,000). The dividend is

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, April 30.

QUITE active conditions were noticeable on the Calcutta Stock Exchange in the early days of the week under review. The sharp improvement in prices for Indian Irons and Steel Corporations, in anticipation of a higher interim dividend for the former, had an encouraging effect on other sections. With an increase in the volume of business quotations were marked higher all round. The highest quotation touched by Indian Irons early in the week was Rs. 39 and Steel Corpo.ations Rs. 27-2. Developments in the war situation also were satisfactory from the market point of view. The announcement of a lower interim dividend by the Indian Iron and Steel Company, Limited for the year ended March, 1943, however, came as a shock to the market and there was immediately heavy selling. The quotation came down to Rs. 35. Steel Corporations also were marked lower at Rs. 25-4. There has since been a recovery in the quotations to Rs. 36 and Rs. 26 respectively. But for the disappointment in regard to the interim dividend of the Indian Iron and Steel Company it should be said that the undertone in the several sections is steady.

The giltedged securities section has been quietly steady and business, as usual, has been on a restricted scale. 3½ per cent Paper was steady at Rs. 94. Among terminable loans, 3 per cent Defence Bonds 1946 were noted at Rs. 102-15. 3 per cent *Second Defence Loan* 1949-52 were Rs. 99-14 and 3½ per cent 1947-50 Rs. 103-14. 5 per cent 1945-55 were Rs. 108-2 and 4½ per cent 1955-60 Rs. 114-2.

Jute Mills preference shares have been in request with *Alliance* noted at Rs. 137, *Hastings* at Rs. 150, *Lansdowne* at Rs. 149 and *Lawrence* at Rs. 150. *Reliance* were Rs. 173. *Steel Corporation* were a shade easier at Rs. 124. *Titaghur Paper* Second preferences were crossed at Rs. 112. *Alkali Chemical* were done at Rs. 125-8, *Carew & Co.* at Rs. 137 and *Associated Hotels* at Rs. 102.

Coal shares have been better during the last two days. The reports regarding the possibility of a substantial increase in despatches at an early date have been mainly responsible for the improved enquiry. *Amalgamated* were Rs. 35-6 while *Bengal* were 20 points higher Rs. 472. *Bokaro and Ramgur* were Rs. 20-2, *Equitable* one point higher at Rs. 36 with *Burra Dhemo* at Rs. 7-15. *New Beerbhoom* came in for some attention and were done upto Rs. 20-4. *North Damuda* were Rs. 7-14 and *West Jamuria* Rs. 33-8.

Jute shares have been firmer in sympathy with the other sections and the strength of the hessian market. *Bally* have been marked higher sharply with the declaration of the higher dividend for the half-year ended March, 1943. *Anglo-India* were marked higher at Rs. 406 but the quotation towards the close is slightly lower at Rs. 398. *Auckland* were Rs. 212, *Champdany* Rs. 212, *Chitavalsah* Rs. 21-8, *Howrah* Rs. 63-12, *India* Rs. 588 and *Kanknarrah* Rs. 450. *Megna* were Rs. 84, *Nellimarla* Rs. 23-4 and *Soorah* Rs. 16-8.

In the Engineering section, as pointed out above, in anticipation of a higher interim dividend by the Indian Iron and Steel Company Limited for 1942-43 there was a sharp rise in the quotation to Rs. 39-2. Most of the rise in prices took place in unofficial trading during the Easter holidays. The dividend of eight annas per share against twelve annas per share was announced on Tuesday afternoon. There was immediately heavy selling and the quotation slumped to Rs. 35. There has since been a recovery in the quotation to Rs. 36 though at the time of writing it is slightly easier at Rs. 35-12. *Steel Corporation* were marked higher at Rs. 25-2 in sympathy with *Indian Irons* but there has been a setback to Rs. 25-2. The quotation is now Rs. 25-4. *Braithwaite & Co.* were Rs. 9, *Britannia Building and Iron* Rs. 14 and *Burn & Co.* Rs. 388. *Jessop & Co.* were better at Rs. 22 with *Marshalls* unchanged at Rs. 3-12.

Sugar shares have remained quietly steady at last levels. Investment buying appears to have been satisfied at least for the time being *Balrampore* were Rs. 14-2, *Belsund* Rs. 10-11, *Carew & Co.* Rs. 19-12, and *Champarun* Rs. 36-8. *Murree Brewery* were Rs. 20-10, *Raza* and *Buland* Rs. 43-8 and *Purtabpore* Rs. 18-2 ex-dividend. *Samastipore Central* were Rs. 18-14 and *U. P. Sugar* Rs. 22.

In the Cotton section, a further rise in prices has been recorded, *Basanti* and *Mahaluxmi Cotton* providing the features for the week. *Basanti* were Rs. 14-14. Earlier in the week they were quotated around Rs. 12-12. *Bengal-Nagpur* were Rs. 36-15 ex-dividend, *New Victoria* were slightly easier at Rs. 11-11 after being higher at Rs. 12-6. *Muir Mills* have improved further to Rs. 482. *Cawnpore Textiles* were Rs. 29-8, *Elgin Mills* were very strong at Rs. 81. *Kesoram* were noted at Rs. 17-4. *Mahaluxmi Cotton* have recorded a rise of twelve points to Rs. 47.

In the Miscellaneous section, *Indian Copper* were a shade better at Rs. 2-9, *Dalmia Cement* were Rs. 17-12, and *Alkali and Chemical* Rs. 36-8. *B. I. C.* were in good request being done upto Rs. 7. *Calcutta Trams* were further higher at Rs. 21-6, *Indian National Airways ordinaries* were Rs. 15-8 and *New India Investment* Rs. 72-8. *Rohtas Industries* were firmer at Rs. 31-8. Among Paper shares, *India Paper Pulp* were Rs. 198, and *Titaghur Paper* Rs. 26-5. *Orient Paper* are two points up at Rs. 29-10 and *Shree Gopal Paper* at Rs. 23-10.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 29.

Active conditions prevailed on the local stock exchange during the greater part of the period under review. For the past two days, however, the stock exchange has been comparatively dull with the majority of the scrips moving within narrow limits. Upto the close of transactions on Tuesday the steady rise perceived last week was maintained except for a brief setback on Monday due to profit-taking.

During the week-end there were rumours that Indian Iron would be declaring a higher dividend and there was heavy buying both by Calcutta and local operators. Steel shares were marked higher. But on Wednesday came the news that, contrary to expectations, Indian Iron had declared a lower interim dividend than last year. Immediately there was a decline in the Iron and Steel sections. Indian Iron were done up to Rs. 38-10, while Tata Deferreds and Tata Ordinaries were quoted Rs. 2,030 and Rs. 410 respectively. Today they are lower at Rs. 35-0; Rs. 1,960; and Rs. 397 respectively.

The gilt-edged section remained steady with 3½ per cent Govt. Paper quoting Rs. 94.

Among Bank shares, *Imperial Bank* (F. P.) were done at Rs. 1,755, and partly paid at Rs. 435; *Bank of India* at Rs. 167-8. *Central Bank* shares were wanted upto Rs. 64-4. *Reserve Bank* were Rs. 110.

Mill shares are still the favourite counters. Speculative activity was on the increase. *Bombay Dyeing* were done at one time as high as Rs. 2,115. Later, profit-taking resulted in a lower quotation. The latest quotation is around Rs. 2,087, an advance of nearly 45 points over last Thursday. Another scrip that has been keenly bought is *Century* which is quoting at Rs. 929 (Rs. 888).

Yet another share that is still fancied by buyers is *Kohinoor* which is done at Rs. 898 (Rs. 860). *Central India Spg. and Wvg.* are Rs. 519 (Rs. 514); *Colaba Land* are 8 points lower at Rs. 285. *Gokak* are also lower by 10 points at Rs. 405; *Phoenix* are slightly higher at Rs. 875 (Rs. 870).

THE CENTRAL KURKEND COAL COMPANY, LIMITED

NOTICE is hereby given pursuant to Article 3 (a) of the Company's Articles of Association that 500—6% Cumulative Redeemable Preference Shares of Rs. 100 each (out of the total issue of 2,850 such Shares) will be redeemed at a premium of Rs. 6 per Share on the 30th June, 1943.

The particular Shares to be redeemed will be determined by means of a drawing which will be conducted by the Directors at the Registered Office of the Company, No. 7, Wellesley Place, Calcutta, in the presence of a Notary Public and in the presence also of such of the holders of the 6% Cumulative Redeemable Preference Shares who care to attend, at 11 a.m. on the 9th June, 1943.

Shareholders whose Redeemable Preference Shares are drawn for redemption will be required to present the scrip for their Shares at the Registered Office of the Company on or before the 30th June, 1943. No dividend will accrue on any of the Shares so drawn after the 30th June, 1943, and Shares in respect of which the scrip is presented after that date will not carry any further dividend or interest in respect of the period between that date and the date upon which the scrip is presented.

Shareholders who, in addition to the Shares drawn for redemption, hold undrawn 6% Cumulative Redeemable Preference Shares will receive balance share certificates for the undrawn Shares.

By Order of the Board,
ANDERSON, WRIGHT & CO.,
Managing Agents.

7, Wellesley Place.
Calcutta, 24th April, 1943.

THE NUDDEA MILLS COMPANY, LIMITED

NOTICE is here by given that the Half-yearly General Meeting of Shareholders will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 21st May, 1943, at 12-5 p.m., for the following purposes:—

(1) To receive and consider the Directors' Report and the Accounts for the half-year ended 31st March, 1943.
(2) To declare a Dividend.
(3) To elect a Director.
(4) To appoint Auditors and fix their remuneration.
(5) To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 8th to 21st May, 1943, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividend, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send their Shares for registration as soon as possible and not later than the 7th May, 1943.

By Order of the Directors,
BARRY & CO.,
Managing Agents,
The Nuddea Mills Co., Ltd.

Calcutta, 26th April, 1943.

THE GOUREPORE COMPANY, LIMITED

	Rs.	A.	P.
The accounts show an amount at credit, after making provision for Taxation, appropriations to Reserves, etc., of	39,143	8	5
Add—Balance brought forward from last a/c. ..	4,619	9	9
Making a total of	43,763	2	2
which is disposed of as follows:—			
In payment of a Dividend of 10% per annum (free of Income-Tax), absorbing	40,000	0	0
Leaving a balance at credit of .. .. to be carried forward to next account.	3,763	2	2

Tea was again supplied to the British Government both under the original 1942 contract and under the scheme for the block purchase of the season's exportable balance. The contract price received was, as last year, 1s./5.15d.—*i.e.* As. 15-3 per lb. This was however increased during the Season by 1½d. per lb. in respect of deliveries in excess of 35% of the quantity tendered under the original contract. The balance of the company's crop was sold on the Calcutta market, the prices obtained averaging Rs. 1-3-1 per lb. for teas sold with Export Rights and Rs. 1-1-9 per lb. for teas sold for consumption in India. The average price realised for the whole crop was Rs. 1-0-10 per lb.

With a view to reducing running costs in the future and partly also on account of the shortage of fuel oil, it was decided during the year to install electric power drive in the factory and to take a supply of current from the Darjeeling Municipality's system. The installation has now been completed and the factory will operate on electric power during Season 1943. An amount has been placed to a special Reserve to cover the cost of this installation.

(Annual General Meeting on 20th May, 1943 at 3 p.m.)

Audited accounts for the year ended 31st December, 1942:—

The season's working resulted in a profit of Rs. 42,548-15-0 after providing Rs. 2,527 for depreciation. After bringing in the balance from last year, making sundry adjustments, providing for taxation and transferring Rs. 5,000 to Hail Insurance Reserve, there remains a balance of Rs. 44,022-3-0 at the credit of Profit and Loss Account. The Directors recommend the payment of a dividend of Rs. 17-8-0 per share absorbing Rs. 27,825 and leaving Rs. 16,197-3-0 to be carried forward.

A total crop of 1,678 maunds was secured of which 1,222 maunds have been sold for export at an average price of Rs. 1-1-9 per lb. and 381 maunds have been sold for internal consumption at an average price of 1-4-4 per lb. The balance of 75 maunds is under contract to the Ministry of Food.

The planted area remains as before at 445½ acres. Estimates for the current season have been framed for a crop of 1,800 maunds to cost Rs. 1,15,476.

Tea was again supplied to the British Government both under the original 1942 contract and under the scheme for the block purchase of the season's exportable balance. The contract price received was, as last year, 11.73d.—i.e. As. 10-5 per lb. This was however increased during the Season by 1½d. per lb. in respect of deliveries in excess of 35% of the quantity tendered under the original contract. The balance of the company's crop was sold on the Calcutta market, the prices obtained averaging Rs. 1-2-2 per lb. for teas sold with Export Rights and Rs. 15-2 per lb. for teas sold for consumption in India. The average price realised for the whole crop was As. 13-2 per lb.

(Annual General Meeting on 19th May, 1943 at 3-45 p.m.)

Audited accounts for the year ended 31st December, 1942:—

Profit and Loss Account.—The gross profit for the year is Rs. 1,81,223-7-3 and after allowing for the reserves shown there is a nett profit of Rs. 1,14,357-4-9. An interim dividend of 5 per cent, absorbing Rs. 16,000, was declared payable on the 15th December, 1942, and there remains a final balance on this Account of Rs. 1,36,889-13-9 which the Directors propose to deal with as follows:—

	Rs.	A.	P.
Pay a Final Dividend of 22½ per cent (making 27½ per cent for the year)	72,000	0	0
Transfer to General Reserve (bringing this up to Rs. 2,75,000)	15,000	0	0
Carry forward to 1943	49,889	13	9
Total ..	1,36,889	13	9

Crop.—A high degree of quota releases for the year was made in order to avoid any restriction on total production, and it was decided to allow the voluntary internal regulation scheme to lapse on the 31st March, 1943. Very favourable weather conditions allowed a record crop of 404,933 lbs. to be made. The Government of the United Kingdom took over the purchase of all export teas from the 15th September, 1942, and the estate contracted with the Tea Controller for India to supply in all 248,418 lbs.

Estimates for 1943 have been based on a crop of 4,500 maunds at a total cost of Rs. 2,07,569.

Secretaries.—Messrs. Davenport & Co., Ltd.

(Half-yearly General Meeting on 7th May, 1943 at 11-25 a.m.)

Audited Accounts for the half-year ended 31st December, 1942:—

Accounts.—The Profit and Loss Account after providing Rs. 1,32,355-4-9 for Depreciation and Rs. 1,75,000 for Taxation and including Rs. 17,814-12-9 brought forward from last half-year, shows an available balance of Rs. 1,53,400-2-10 which the Directors propose to dispose of as follows:—

	Rs.	A.	P.
In paying a dividend on the Preference Shares of 7 per cent per annum without any deduction for Income-Tax paid by the Company ..	80,493	0	0
In paying a dividend on the Ordinary Shares at the rate of 2½ per cent per annum without any deduction for Income-Tax paid by the Company	56,828	0	0
In carrying forward	16,079	2	10
Total ..	1,53,400	2	10

The profits of Subsidiary Companies were credited to the Profit and Loss Account of Burrakur Coal Co., Ltd., to the extent of dividends received.

Market.—There has been a steep rise in coal prices. The tendency has been apparent for the last year but the movement has been greatly accentuated during the last few months. The prices at which coal is tendered to the Railway Board may be taken as a fair indication of the market price at that particular time and a comparison between the prices at which coal was tendered in 1941 and 1942 will give some indication of the general rise. Certain Jherria coals were tendered to the Railway Board in 1941 for supply during 1942 at about Rs. 4 per ton. Towards the end of 1942 the tender price for similar coal to be supplied during 1943 was about Rs. 6-8 per ton. Many long-term contracts have as their basis the price at which coal is purchased annually by the Railway Board and in 1942 costs and selling prices rose so steeply that the Railway purchase rates, based as they were on 1941 prices, were entirely out of equilibrium with market prices. Companies with such contracts therefore suffered severely in 1942.

The Railway purchases for 1943 represent six months' requirements only instead of the usual twelve months, and this will enable prices to be reconsidered at the end of six months, which is a more satisfactory arrangement in present circumstances.

Labour.—The supply of labour has fallen far short of demand throughout the half-year. Military and defence requirements have been responsible for increasing demands for labour and there is no doubt that labour prefer work in the open air to work below ground. Further, on work above ground a man may have his wife working with him, which he cannot do below ground. This has been a further inducement to labour to leave the collieries. The disturbances of August/September also unsettled the labour and caused a number of them to return to their villages after which they were frequently diverted to other work.

The difficulty of obtaining foodstuffs has also driven labour back to their villages. Generally speaking, Bihar is a deficit Province for rice and the situation over rice supplies, depending as it does upon imports from other Provinces, is still far from satisfactory. The Company took early precautions to secure supplies of essential foodstuffs and this has been an invaluable factor in maintaining a calm atmosphere on the properties.

Transport.—There has been no improvement in the wagon situation and supplies have included an increasingly large percentage of covered wagons, resulting in the partial immobilisation of the Company's mechanical loading devices. This has necessitated dumping the coal and loading from the ground by hand, causing a further increase in costs.

Collieries.—Owing to the abnormal monsoon, conditions have been unusually difficult and collieries in the Jherria Field during the period under review have been subjected to the greatest strain they have known for a decade. In the Jherria Field there are large areas of goaved surface land and the actual seams lie comparatively near the surface. The effect of the abnormal monsoon conditions in this Field has therefore been particularly severe. Pumping plant, previously effective, was found insufficient to cope with the situation. The collieries, though affected, suffered no damage beyond the temporary loss of working districts due to flooding. Measures have been taken, however, to increase the reserve pumping plant to meet a possible repetition of these abnormal conditions.

Loyabad Coke Plant.—During the half-year 32,328 tons of coke were manufactured and 39,648 tons despatched as against 30,444 tons manufactured and 22,206 tons despatched the previous half-year.

The Company has been able to resume full production of coke but the shortage of basic chemicals has led to a considerable drop in the output of Bye-Products.

Taxation.—Due to delays over which the Company had no control, the appeal against the Excess Profits Tax Assessment has not been heard in time to enable the effect, if any, of the decisions to be incorporated in the Accounts and the better trading results have been almost completely offset by the high incidence of this taxation.

TATA MILLS, LIMITED

Audited Accounts for the year ended 31st December, 1942:—

The accounts show a sum of Rs. 21,26,122, available for payment of Debenture Interest and other disbursements in accordance with the Scheme of Arrangement of 28th December, 1934, and the modification to Sub-clause (*e*) of Clause 5 of that Scheme as passed by the Debenture-holders on 17th October, 1941, without taking depreciation into account but after making a provision of Rs. 17,20,000 for taxation.

In terms of the above-said Scheme of Arrangement and the modification to Sub-clause (*e*) of Clause 5 of that Scheme, the following allocations have been made:—

	Rs.	A.	P.
Debenture Interest for the year ended 31st December, 1942	1,84,688	0	0
Payment of Interest on loan of Messrs. Tata Sons, Ltd.	21,000	0	0
Renewal and Replacement of Machinery, and addition to Block Account	50,000	0	0
Payment of Commission to the Managing Agents Messrs. Tata Sons, Ltd.	1,87,043	0	0
Renewal and Replacement of Machinery Account	50,000	0	0
Surplus available for payment to the Debenture Trustees	16,33,391	0	0

To the above sum of Rs. 16,33,391 is to be added the undistributed balance of Rs. 3,275 as at 31st December, 1941, making a total of Rs. 16,36,666 available for payment to the Debenture-holders against their outstanding balance as on 31st December, 1942 of Rs. 59,30,000.

The Directors have, however, under consideration a scheme for the total redemption of the Debentures with the assistance of a further issue of capital. The details of this scheme are at present under examination and if it materializes the above sum of Rs. 16,36,666 will be disposed of in accordance with its terms.

Night shift work at the mill continued throughout the year under report and the Company participated in the prosperity enjoyed by the textile industry last year.

(*Continued from page 768*).

The Iron and Steel section was very active till Tuesday this week on rumours regarding a higher interim dividend by Indian Iron. There was persistent enquiry from Calcutta for these shares and prices went up. The Tata group also registered some gains. But later when it was known that Indian Iron had declared a lower dividend than was anticipated prices automatically declined. *Indian Iron* are now quoted at Rs. 35-6; *Tata Deferreds* at Rs. 1,960; and *Tata* ordinary at Rs. 397.

The most spectacular rise was witnessed in the case of *Alcock Ashdown* in the miscellaneous section. The price went up to Rs. 1,010 on Saturday. There has been a decline since. Rs. 950. *Belapur Sugar* have shed seven points to quote at Rs. 214; *Bombay Steam* are lower at Rs. 592-8; *B. E. S. T.* are further higher at Rs. 158-12. *Indian Copper* after being higher at Rs. 2-10 are now at Rs. 2-8-6. *Scindia Steam* are Rs. 34-8; *Shivrajpur* Rs. 70 and *Premier Construction* Rs. 175.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras April 29.

Firm conditions prevailed in the local Stock Exchange during the period under review which covers transactions up to the close on the 22nd. The market remained closed from 23rd April to 26th April (both days inclusive) owing to the Easter Holidays. Mill shares continued to be in the forefront while Plantings also were fairly active. Turn over in both the sections was large.

Mill shares have recorded further gains, the Coimbatore group being particularly prominent. *Coimbatore Spinning* changed hands at Rs. 347-8; *Coimbatore Cotton* were done at Rs. 335 while *Coimbatore Murugan* were at Rs. 315. *Mettur Industries* which were steady at Rs. 292-8 have shot up by 25 points to quote at Rs. 317-7. *Radhakrishna* were higher at Rs. 450 (Rs. 421). *Madura* were quoted around Rs. 66-8.

There was a large turnover in the Plantings section. Both old and new shares were freely bought and sold. *Thirumbadi* have recorded a further rise to quote at Rs. 5-3-6. *Nelliampathy Hills* were done at Rs. 9. *Nilgiri Neerungundi* were at Rs. 13-14. *Kallas* changed hands at Rs. 2-15. *Periakaramalai* are better at Rs. 36-8.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE is hereby given that an Interim Dividend of Eight Annas per share on the Ordinary shares of the Company ranking for dividend for the year ended 31st March, 1943, has been sanctioned by the Board. The Transfer Books of the Company will be closed from 12th to 26th May, 1943, both days inclusive. Payment will be made on and after the 2nd June, 1943, to those Members or their Mandatees whose names appear in the Registers on the 11th May, 1943.

By Order of the Board.
BURN & CO.,
Managing Agents.

Calcutta, 27th April, 1943.

(*Continued from page 767*).

higher at 7 annas per share against 6 annas formerly.

There has been a rise in the quotation from Rs. 4-8 to Rs. 5 per share cum-dividend. At the latter level, it should be said, that the shares are correctly valued. The directors point out that the prospects for the current year also are satisfactory.

* * * *

Since I wrote last week there has been a rise in the quotation for *Mahalaxmi Cotton* shares from Rs. 35 to Rs. 47. The abrupt rise in prices for the popular shares has no doubt been responsible for the diversion of attention in the past few days to lower-priced issues. It can be said without exaggeration that among the latter class of shares Mahalaxmi Cottons are relatively undervalued if it is remembered that *Basanti Cotton* have improved by over four points to Rs. 14-14, *New Victoria* by three points to Rs. 12 and *Benares Cotton* by four points to Rs. 16. Even on the basis of the last dividend there is a return of over 5 per cent at the present level for Mahalaxmi Cottons. It might very well be that the total distribution for the current year proves to be much higher.

In this connection it is very interesting to note that the Managing Agents have announced this week a proposal to offer a pair of dhotis and/or sarees at cheap rates for every share held, at cheap rates. The benefit of this offer cannot be easily ascertained but having regard to the difference between the market prices and the rates at which it is proposed to offer clothes to Mahalaxmi shareholders, the margin can be anything over Rs. 5 per pair. This facility, it is pointed out, if conditions permit, will be repeated during the *Pujas* also. The Company has recently been offering a limited quantity of clothes at cheap rates to the public through its retail shop in Calcutta. The demand has been so great that it was thought desirable to extend this facility to the shareholders as well. If this procedure were adopted by other mills as well it would go a long way in solving problems in regard to supplies of cloth at fair prices.

* * * *

The improvement in the earnings of the *Mundulpoor Coal Company Limited* for the same half-year is due the higher level of despatches, net raisings during the half-year being 55,681 tons against 58,164 tons and despatches 70,551 against 46,856 tons. The net profit, before providing for depreciation and taxation, is Rs. 91,921 against Rs. 28,225 for the previous accounting period. After setting aside Rs. 12,390 (Rs. 11,654) for depreciation the sum of Rs. 10,000 (Rs. 500) is to be placed to General Reserve. Provision for taxation is as high as Rs. 60,000 against only Rs. 5,100 on the former occasion. As a result of the heavy incidence of taxation, it has been possible to maintain only the dividend at 2½ per cent; the sum carried forward is lower at Rs. 12,433 against Rs. 17,046.

* * * *

Arthur Butler & Company (Muzaffarpore), Limited has made very good progress in the year ended October, 1942. In spite of the improvement in earnings, however, there is to be no increase in the dividend. The net profit, before providing for taxation and depreciation, is Rs. 2,58,096 against Rs. 2,27,278. The amount set aside to depreciation is lower at Rs. 50,053 (Rs. 64,665), while the provision for income-tax and super-tax is Rs. 80,000 (Rs. 61,645). On the last occasion provision for bad and doubtful debts to the extent of Rs. 29,000 was made. The amount carried forward is higher at Rs. 25,222 against Rs. 16,279 brought in.

The workshop continues to be fully employed, and it is pointed out that the current year's earnings will be as satisfactory as those for 1941-42.

WATCH DOG.

NOTICE

It is hereby notified that the Share Registers of the Bank will be closed and the registration of transfers suspended from the 11th June, 1943 to the 3rd July, 1943 (both days inclusive).

C. D. DESHMUKH,
Deputy Governor.

RESERVE BANK OF INDIA,
Central Office,

Central Debt (Claims) Section,
BOMBAY.
26th April, 1943.

THE SONAKUNDA BALING COMPANY, LIMITED

NOTICE is hereby given that the Annual Ordinary General Meeting of The Sonakunda Baling Company, Limited, will be held at the Office of the Company, Chartered Bank Buildings, Calcutta, at 12 noon, on Saturday, the 29th day of May, 1943, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 28th February, 1943, declaring the Dividends recommended by the Directors, electing Directors and Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from 19th to 29th May, 1943, both days included.

BIRD &CO.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 28th April, 1943.

NORTH-WESTERN RAILWAY

The public is informed that the wagon position on the N.-W. Railway has now eased considerably and stock is available for the movement of all descriptions of goods traffic in full wagon loads. Traders and others are, therefore, strongly advised to take advantage of the situation to build their stocks.

GENERAL MANAGER.

Indian Finance

ISSUED WEEKLY

Vol. XXXI. No. 21 SATURDAY, MAY 8, 1943 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Friday Evening.

SHORT credits have been in plethoric supply; and inter-bank call money is nominally quoted at ½ per cent in Calcutta and ¼ per cent in Bombay. This week's treasury bill results disclose the trends to be expected at the threshold of the slack season. Applications for tender bills are substantial; the Government have been able to secure their full quota; the average discount rate shows further decline; and sales of tap bills make good showing. Against Rs. 8 crores of tender bills on offer on May 4, applications came to Rs. 15.12 crores. The average rate of accepted tenders is rupee one anna one and pies nine per cent as against rupee one annas two last week. The offer of tender bills for next week remains unchanged at Rs. 8 crores. Sales of intermediate treasury bills between April 28 and May 3 amounted to Rs. 4.44 crores, comparing with Rs. 1.22 crores in the corresponding period last week. Sales of three months' tap bills will continue at the unchanged rate of Rs. 99-12. We hope and expect to see further rapid fall in the average rate of tender bills.

As though in response to the airing of our grievances in last week's issue with regard to the belated delivery of Reserve Bank returns, we have been favoured this week with the latest bank statements in time for this issue. We have, therefore, to review the returns of two weeks. The statements for the week ended April 23 do not disclose any important changes except for the continued rise in active note circulation. Active note circulation has risen by over Rs. 4 crores from Rs. 669.37 crores to Rs. 673.43 crores. This increase is mainly connected with the expansion in the holdings of rupee coin from Rs. 13.56 crores to Rs. 16.29 crores. So large an increase in rupee coin cannot be due to return of coin from circulation. It may also be added that the theory of coin returning from circulation is hardly tenable in the light of the experience of the past many months. We may, therefore, infer that the Reserve Bank has again taken delivery of rupee coin from the Government. Similar addition to the Reserve Bank's holdings of coins was effected in the week ended March 12. Coin in the issue department on March 12 was Rs. 15.53 crores as against Rs. 12.20 crores in the previous week. During the week ended April 23, foreign balances held in the banking department rose from Rs. 74.47 crores to Rs. 80.17 crores. The Reserve Bank return as at the end of April discloses a net expansion of currency for Rs. 6 crores. Sterling securities in the issue department are higher by Rs. 7.90 crores, while rupee securities are lower by Rs. 1.90 crores. In the result, active note circulation has gone up by Rs. 4.18 crores. Foreign balances in the banking department are up by Rs. 89.17 lakhs.

There have been persistent rumours, since Wednesday, that the Finance Member will shortly announce proposals for the restriction of dividends. Curiously enough, the argument advanced by those who pose as being in the know of things is that freezing of dividends is one of the methods for contracting currency. It may be straightaway pointed out that any restrictions that may be imposed upon dividends will have as much effect on the heavily swollen currency situation in the country as a tola of asafoetida on the floods in the Ganges. The Investor's Supplement attached to "Indian Finance" publishes every week a statement of cumulative results of companies according to groups; and a study of this statement is recommended to those who have exaggerated ideas about the relationship of dividends on the one hand and inflation on the other. Between January 1 and May 1, sixty-one companies have issued reports of their earnings. These show that sixty-one companies made, between January 1, 1943 and May 1, 1943, a net profit of Rs. 9.90 crores as against Rs. 7.26 crores in the corresponding period in 1942 and Rs. 4.35 crores in the corresponding period in 1941. That is to say, the net profit in 1943 shows an increase of Rs. 5.55 crores. The amounts distributed as dividends in this period were Rs. 2.31 crores in 1943 as against Rs. 1.75 crores in 1941. That is to say, the increase in the amounts distributed as dividend is only Rs. 56 lakhs. In other words, a bare ten per cent of the increased net profit has been utilised for additional dividends. On the other hand, the appropriations which the companies have made for depreciation, various kinds of reserve and taxation are on an extravagantly generous scale. The provision for depreciation and reserves is Rs. 2.52 crores in 1943 as against Rs. 1.87 crores in 1942 and Rs. 1.22 crores in 1941. The provision for taxation is Rs. 4.8 crores in 1943 as against Rs. 3.11 crores in 1942 and Rs. 1.52 crores in 1941.

Far from the figures indicating any extravagant policy on the part of company managements in regard to dividend distribution, they justify complaints by the general body of shareholders that, while managing agents have been greatly benefited by war prosperity in regard to their remuneration and while the Government also have benefited very substantially from tax collections out of these profits, only a trivial proportion of this profit has been allowed to pass on to shareholders. We are against any interference with dividends firstly because no case has been made out that companies have hitherto adopted any extravagant policy in this record; secondly, because the amount involved in this restriction will be a flea-bite in relation to the problem of mounting circulation and gathering inflation; thirdly because it is not a practicable proposition to evolve an equitable principle of dividend restriction; fourthly because it is extremely unfair to single out shareholders for sacrifice while managing agents continue to derive full benefits; and fifthly because it will be the kind of interference which will throw cold water on industrial enterprise.

The Government of India have decided to make a re-issue of 3 per cent 1946 defence bonds. These bonds were the first defence loan; and the current market price is Rs. 102-14. The present re-issue is for a total of Rs. 20 crores to be sold by the Reserve Bank through the tap. The tap rate in force for the time being is Rs. 102-15. The Reserve Bank has done well to maintain the tap rate at a level slightly higher than the market rate. This is in accord with the policy recurrently insisted upon in these columns with regard to the issue of new loans. The significance of this issue is that the government will be raising a three-year loan at 2 per cent. We congratulate Sir Jeremy Raisman and Mr. C. D. Deshmukh on the achievement of a two per cent borrowing rate.

The exchange market has been dull but sentiment has been steady. There has been little business either by way of bills or remittance.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D. A. bills on London at 1s. 6 9/32d. and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 332.1/4

Inter-bank call money is quoting at ¼ per cent lenders.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on May 4, 1943. Total amount offered was Rs. 15,12,00,000. Tenders at Rs. 99-11-9% and above were accepted in full and those at Rs. 99-11-6% were allotted approximately 46%. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 1-1-9% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on May 11, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on May 10, 1943, at other centres. Successful tenderers should make payment on May 14, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from May 5 to May 10, 1943, at Rs. 99-12-0% subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from April 28 to May 3, 1943, amounted to Rs. 4,44,00,000.

During the week ended April 30, 1943, Government of India Treasury Bills for Rs. 2,35,50,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

WHILE London comment on the bullion boom in India does not ignore the depreciation, actual and probable, of sterling, there is little to show that international agreement is prejudiced by Congressional action over the future use of the U. S. Stabilisation Fund. It is noteworthy that talk of commodity pools appeared at the same time as the proposal for renewal of the Fund for 2 years and the suggestion that the exchange controls favoured by Britain could be adjusted to procure an international exchange equalisation account for which each country should provide gold. Since Congress does not want the President to use the existing fund for any purpose it must be due to a fear that gold lost by the Fund earlier cannot be replaced. Such a presumed and possible fear would, indeed, supports the Indian bullion market's present valuation of gold and silver. The rise in prices and wages admitted by Mr. Brown openly has a natural effect on gold. There is the further consideration that gold production has fallen owing to the war even in the U.S.A. and gold mining companies if they secure a price better than $35 per ounce from the Treasury would acquire a vested interest in keeping up the price of gold thereafter. There would be a gold bloc along with a silver bloc. It is not unsafe to surmise that the gold mining companies expect the Treasury to buy gold in quantities and keep it in storage; also to buy more gold for the U. S. balances with the clearing house of the future. The Treasury Secretary apart from discussing the collection of 16½ billions in 3 weeks for his Loan has said little about what is planned by the Allies. Even countries like Poland may not start from scratch in regard to a clearing arrangement, but many others will have to buy gold, by borrowing if need be from the U.S.A. Fears of depreciation of gold seem even more unfounded than in 1937. Larger demand and reduced supplies augur well for gold and the currency confusion in Europe if it is to end after costs and prices are adjusted by agreement means not only redistribution of gold but also large buying for reserves. Latin American countries may try the actual bullion standard instead of going on with paper currency and the place of Latin America in the arrangements contemplated by the Allies, has not been indicated adequately. Existing regulations in regard to exchange and remittances cannot give satisfaction even to British nationals with investments and income in South America whose oversea holdings have been requisitioned last year. The notion of others having large exchange funds and obtaining stability under conditions of freer trade may not excite admiring approval and the U. S. Senate Committee may have wanted to prevent appreciation of Latin American currencies against the dollar. Any diversion of the Exchange Fund's resources would make the dollar softer and put up the price of imported minerals. The budget figures and inflation at home do not make for the former strength of the dollar in the exchanges. In March war production rose; so did war expenditure. The monthly war bill was over $7 billions according to Mr. Don Nelson who spoke of five ships a day and 6,500 planes in a month of difficulties as regards munitions output in the first quarter.

There is also the fact that Congress wants to have a hand in settling Allied policy. In spite of the Separation of Powers, the Houses claim to have a voice in financial policy. That Mr. Roosevelt yielded must be due largely to the apprehensions over the tax bill meant to secure anticipatory payment of federal income-tax. The fiscal measure must be deemed more important and previous deduction of 20 per cent of assessable income from July along with the clause wiping out tax liabilities (affecting 90 per cent of U. S. taxpayers) is likely to bring in more money than anything that may be got from undivided control of the Stabilisation Fund. The House passed the bill which is different from the September Revenue Act because it provides for collection at source of 20 per cent of income leaving the assessee free to pay the balance later or in tax-anticipation notes. The Federal income-tax is not old and anything like extension or increase excites aversion; hence the bitter party struggle referred to in a Reuter cable on Wednesday. The monthly war bill keeps rising; the need for larger revenue is obvious. Tax bills must come before appropriations and there is no national coalition in the U. S. Congress or a part of it does not like the new appointments. The Republicans are holding a small-scale Convention to decide about what form the post-war plans should take. The President has returned from the second tour to find a national strike on, and he has merely stayed it by accepting the sixday week. The President cannot put his plans into operation because Mr. Lewis stands for provisional, limited compromise. Th coal mines have to be run by Mr. Ickes and the favourable effect on war expenditure obviously will be upset by the reduced production of many industries. The U. S. Republicans are suspicious of a Fourth Term in the making and the currency agreement the Treasury would like is not easy to secure when the War Labour Board has got its job cut out. The miners are obviously independent of AFL and CIO which are pledged to support the war effort. They are non-violent and are not likely to accept wages offered simply because the Government has taken over most mines. The Republicans are framing their own programme for use after the war. They are clearly preparing for the Presidential election of 1944 and want that the postwar plans should be theirs in part at least. The U.S.A. with a big share of world trade has no regular trade deficits to meet. It can get on without any international clearing-house for buying off creditors. As for gold there is no need to ship gold and the continuance of imports of gold would not be unwelcome. To exclude neutrals from an agreement meant to dispose of adverse trade balances and avoid fluctuations, particularly, when the British bancor plan implies striking off deficits against surpluses by loans seems unusual. If the U.S.A. is not against international lending, she will perhaps argue that gold can come in as before while demand for a return for Lease-Lend aid will not take precedence over future investment.

The strike news caused less unrest on Wall Street than imagined. The holders of shares should be pleased as prices have gone up and industrial shares have been affected little by the late truce or the fears regarding steel output. The stock market last week seemed dull; it is distinctly livelier this week and most noteworthy change so far is the jump in General Motors. The firmness in Wall Street like that of London may be due to war news. The increased borrowing of the British Government for shortterms like the higher taxation introduced has little effect on industrials. Giltedged prices have been maintained and good features have developed in the oil shares market. Further firmness in Home Rails accords with expectations. The advance of Cable and Wireless will attract more attention than a rise in Lever or Imperial Tobacco. General Franco's visit to Huelva has hardly touched the London quotation for Rio Tinto. The gloom caused by the U. S. coal strike has been transient; dollar shares are steadier. Moreover the stock exchange is firmer after the Polish Government's dropping the enquiry into the war graves.

The more important reason for improvement lies in the belief that adjustments of exchange rates in favour of Britain so as to help her win back her large trade and position as a great creditor nation are in the making. Post-war prospects for British industry are regarded as better than before and the fact that a financial agreement has not matured rapidly weighs little as against other considerations. Agreement in French North Africa seems more distant than ever as the essential interview has not taken place. Yet the U. S. Army has set up a factory to produce war supplies in Algeria to help the French and this means that temporary investment of U. S. capital may continue. Plans to clo he Africa are taking shape and British textile manufacturers count on African business apart from colonial buying. A country that stands to gain even more is Egypt where import control has not affected war prosperity. The oil industry must be very active and the cotton surplus cannot be a big problem. Food plans have gone into effect with happy results. Secondary industry is being developed in view of the shortage of imported goods and there has been no cabinet crisis corresponding to that noted last year when the Finance Minister resigned from the Wafd. The Alexandria bourse is said to be active and firm of late but nothing has been recorded about Egypt's foreign debt fairly old and not large. London bondholders who have not been cheered up either by Mexican proposals or Chile's arrangements for payment of interest, will find anything coming from Egypt agreeable than the reverse.

LLOYDS BANK
LIMITED
(Incorporated in England.)

Adaptability

The experience of nearly two centuries of private and commercial banking, coupled with an efficient and world wide organisation and the highest reputation for thoroughness and financial stability, enables Lloyds Bank to adapt itself to every class of banking business, whether in times of peace or war.

Boom in Bullion

The boom in the Bombay bullion market is another of those familiar phenomena of India's war economy which cloud the issues of the time, distract public attention and help eventually to wipe out the profits which this country makes during a period of war. The rise in the price of silver and gold, the apparent insistence of the demand for the precious metals and the need to meet it by special import of silver, regardless of the present high level of prices or the certainty of a steep fall after the war, these are features which the present war period shares in common with the last. The propensity of history to repeat itself is more evident in the economic than in the political sphere. Not only in the matter of the periodicity of boom and depression, but also in respect of India's foreign trade, foreign balances and currency and exchange, history would seem to have a ready made matrix with which new types are cast every time there is the opportunity. While this circumstance may be welcomed by the Government and foreign interests none too friendly to India, it ought to serve as a warning to public opinion in this country that it should not allow itself to be taken off its feet by the apparent exigencies of the moment. If the boom in the Bullion market seems to give rise to certain problems of an urgent kind, the least we can do is to recall the fact that in the last war too there were similar exigencies, deference to which led to colossal losses for the nation.

It would be palpably incorrect to suggest that there is a complete parallelism between the silver situation during the last war and the position of the precious metals to-day. There are obvious differences which strike even the casual observer. But the similarities are as striking and even more important. The rise in the price of silver is held to connote an insistent demand for the white metal, whether for hoarding or for other purposes. It is said that demand cannot be met by normal methods and that special arrangements must be made to meet it, Lease-lend facilities taking the place of the Pittman Act. And above all, it is contended that the import of silver would serve as a means of effecting the much needed contraction of currency. It is no psychological illusion then if we see in all this a repetition of the incidents of the last war. One has only to remind oneself that there is little or no change in the intrinsic position of silver to maintain its value in the post-war period in order to realise that, on this occasion too, silver may provide a principal means of draining away India's war profits. Comments from abroad make it clear that the boom in the bullion market is welcomed as a means of clouding the issues connected with inflation and providing a solution for it, which is more acceptable to foreign interests than any solution favoured by Indian public opinion.

In these circumstances, it is necessary to examine the issues raised by the rise in bullion prices. The following table gives the prices of gold and silver during the last three weeks:

		May 6	April 30	April 23	April 16
		Rs. A.	Rs. A.	Rs. A.	Rs. A.
Gold—					
Ready	...	94-2	90-2	94-0	79-12
Ist settlement	...	93-10	89-12	93-0	79-4
Silver—					
Ready	...	136-10	128-14	128-12	116-12
1st settlement	...	134-10	127-6	128-0	116-4

There is no denying the fact that the rise is of the most impressive kind and that it has affected both silver and gold though not equally. But the question is not whether the rise is negligible, but whether the rise creates problems for which immediate solution has to be found regardless of other considerations. In the first place, the extent of the rise may be easily exaggerated if the pervasive nature of the present inflationary trends are overlooked. What is more important than the presence of inflation is the advent of inflationary psychology in the masses. Not only have certain classes more surplus money in their pockets and in the banks, but there is in addition, that most dangerous combination of adverse circumstances, the paucity of outlets for new investment and the certainty of further inflationary rise in prices. At the same time, a demand for bullion which now makes itself felt in steep rises in the price of gold and silver may consist in part of deferred demand, due to the price rise since the war. Such a demand when it manifests against a background of inflation and inflationary psychology and in conditions in which additional supplies cannot be procured by normal means must certainly lead to alarming increases in the prices of the precious metals.

But does it follow from this that this demand must be met by special measures which experience and reasoning alike must teach us are bound to lead to loss of a large part of our war profits? The importance of gold and silver to the people at large is due firstly, to the need for them for marriage and other social purposes and secondly, for purposes of hoarding which are made more insistent by the unbridled inflation of the present. But neither of these will justify the Indian public lending any support to the suggestion that silver ought to be procured from America on lease-lend basis in order that the Indian demand may be satisfied. The advantages of such a course to Britain will become apparent on a little reflection. The emphasis on lease-lend is inspired by the anxiety that the dollar balances over which Britain has control should not suffer dimunition on this account. Though the rise in the bullion market has affected gold as much as silver, suggestions are made only for meeting the demand for silver and gold is carefully left out of consideration. The provision of silver by special arrangement with America is favoured for the additional reason that the sale of silver to the Indian public will bring about to some extent a contraction of currency and appease the agitation against inflation, which, so far as Britain is concerned, is the only means of financing her war purchases in India which will leave her investments in this country unaffected. But it is interesting to note that the proposal is made on the top of comments that suggest that the provision of silver is wholly in the interests of the Indian people. It is said in the first place that the demand for bullion dates from the publication of the British and American proposals for the regulation of post-war international finance, proposals which assure the world of the position of gold after the war. The suggestion is that in going all out for such bullion as can be obtained India is running no risk of loss. Secondly, not a little sympathy is evinced for the average Indian who has more money in his pockets and less goods to spend them on. And lastly, the contention is made that this will be a partial solution of the problem of inflation which is insoluble owing to the peculiar political situation in this country. The motive behind the solution is thus clear; and we should be surprised to say the least of it to find support for it in any section of the public especially as there are no similar proposals for gold and purchase of silver by these special methods has been invariably followed by losses. After all, the Indian demand for bullion is not a laudable feature of our national economic life; and though something may be said for pondering over it in normal times special measures to meet it in these extraordinary times are wholly indefensible.

We should deprecate with special emphasis the attempt to mix up the problem of the bullion market with the problem of currency and the problem of transferring our war profits from abroad to this country. We have emphasised again and again in these columns that the straightest and simplest and in many other ways the most satisfactory solution of the problem is the transfer of British investments in India to Indian hands. It is the most natural solution and we believe that it is bound to be resorted to sooner or later. It is a solution at once of the transfer problem and the currency problem. But if the authorities are unwilling to adopt it, the least they can do to this counry is not to resort to measures which are bound to land us in serious loss in the future. For our part, we are certain that the future of gold, not to speak of silver, is not so secure that India must prefer gold to the reclamation by the nationals of Indian industry and other interests which are now in foreign hands. If the bullion market reveals a large demand for gold and silver which cannot be met except by special measures, there is no national danger in allowing it to suffer the shrinkage which high prices must inevitably bring about.

INDIA'S TRADE IN HIDES

The decline in India's exports of hides and skins in the war period does not detract from the importance of suggestions meant to raise the quality and enlarge the export trade in hides or improve the supplies available for the leather industry. The reorganisation of marketing is, however, likely to be a slow process and such success as has followed the adoptions of the Agmark for hides must be deemed unimportant in relation to the main problem. India is a long way behind Argentina and Brazil as a shipper of hides though her cattle population (which has risen by 13 percent between 1920 and 1935) is larger. The reasons for the decline in exports (in volume as well as prices) will be found in the chronic inattention to quality. A large, scattered industry in the hands of the lowest classes can be hardly developed and the marketing enquiry into hides merely draws attention to the generally unsatisfactory conditions obtaining. There is, however, the fact that hides of prime quality are available for the tanners and the saddlery factory of the Government and the producers of raw hides to-day have a standard to prescribe or work up to as one views it.

Defective flaying and primitive methods of curing underlie the lack of progress noted in spite of an increasing proportion of kills to fallen hides. Improvement must originate from the merchants who deal in hides or ship hides abroad. The revival of exports to Europe after the war anyhow must find India prepared to get a share of the U.S. market and also of the U.K. where India has to meet with the competition of South Africa as well as Argentina. Though the tanning industry's development here will limit the growth of exports when the war ends there is always a possibility that Argentina may displace India in regard to the first place as an exporter.

The trade in Kips is not particularly brisk to-day, but the restoration of prewar conditions should be expected. Since Bengal and Madras are the chief producers of Kips with a fair percentage of slaughtered in the total production they have a special interest in the reform of marketing methods. A more urgent consideration is that arising from the fall in imports of raw hides and skins in 1938-39 and afterwards. As raw hides are almost equal in number to the number of tanned hides shipped from India, the case for the improvement outlined in the recent report is established, particularly, in view of the reduction in average value of exported hides after the last war. Though India's trade in hides and leather with Iraq will be stable like that with Britain, we are confronted with the fact that the value of exports of hides has fallen from over Rs. 8 crores to less than Rs. 4 crores in the period between the two wars. The decline is in part due to the neglect of suggestions made by a committee of the Imperial Institute. What the export markets want is better preparation of hides for the market in regard to flaying and curing alike, the removal of malpractices and a study of the conditions of demand. As an annual production of 25.7 million hides valued at Rs. 6 crores per annum demands the maintenance of exports reorganisation is obviously necessary. Though the export trade is brisk in the first three months of the year, the supply of hides increases only after the monsoon when cattle mortality goes up. As the chief supplier of light hides India's connection with the U.K. and Germany has always been close but the problem to-day is not necessarily one of recovery of lost markets. The percentage of damaged hides accounts for indifferent tanning, and curing entailing the use of 6 to 17½ lbs. of salt per kip is even more important than grading and baling.

Estimates of leather consumption in the report acquire a special interest. In agriculture too leather is wanted for water buckets and ropes. More than half the leather produced is used in India. The remarkable progress of tanning in the war period has not led to standardisation and marking. The merchants, however, are keen and well-organised and the regional classification is independent of that based on cures. The exporters usually go by the Hamburg classification applicable to air-dried and dry-salted hides. The use of motor transport for the carriage of hides must have suffered since the marketing enquiry was conducted; but it is known that lorry transport was cheaper and hides did not suffer from contact with steel used for railway wagons (used in the case of long distances only). As the report shows the cost of transport is rather high and the time taken is considerable. Shipments in bales are common in Karachi but convenience of storage is available in all the terminal markets, where merchants have pucca godowns and stocks carried vary from 10,000 to 75,000 pieces. Since merchants complain of defects in hides and skins and seldom of difficulties in finding buyers at present the production end is more important. The lack of uniform quality is not the only charge that can be proved. The confusing organisation of the trade is another. There is, however, little doubt that Calcutta should give the lead. The annual value of the city's trade in hides is estimated at over Rs. 2 crores and Dacca ranks among the most important markets. A trade association bent on improvement can secure the elimination of salting. The chief requirement appears to be an inspectorate at the main terminal markets assisted by a committee for purposes of arbitration. Regulated markets, of course, are an adjunct to the grading system. What is not secured by a multitude of middlemen at present can be secured by reorganisation. As the report insists India would face the possibility of losing important markets but for the war. Government can do little without the leather trades' assistance though the cost of supervision at the main markets would be negligible, namely, 1 anna per half a dozen hides handled and graded in a proper manner instead of depending on the jackhandar's casual methods. It is, however, recognised by all that flaying stands in need of improvement and a modification of the system of piece rates is called for. Instructions to flayers, the adoption of machines at abattoirs are obvious methods of raising standards. The report notes curing calls for improvement in certain directions and leather chemists have been asked to help. Certification of hides exported is necessary in view of the import regulations enforced by South Africa. Research on the warble fly and other animal pests is not the less necessary in regard to the improvement of hides. Chittagong and Kharagpur are apparently important trade centres though Calcutta and Dacca take precedence over all others. The long list of tanners and merchants gives us a glimpse of the importance and concentration of the trade which has received little attention since the Hides Cess Enquiry Committee reported.

Editorial Notes

Australia's Food Plans

Australia's austerity programme shows little change from month to month. Cabled reports agree about the fall in civilian consumption desired by the Government, the curtailment of travel and of retail trade. Food supplies for the Army are naturally taking precedence over civilian requirements. Because of higher taxation all civilian spending will be restricted and rationing of foodstuffs for consumers is likely. As in Canada, the adoption of rationing in a country with a big export surplus will seem surprising, but recent reports suggest that the War cabinet is going to cut down civilian consumption by control of foodstuffs. The Supply Minister has predicted consumer rationing. Official mention of control of meat consumption has indeed preceded the mention of other rationing plans. Australia's present job is to feed her fighting forces, the U.S. Army in the South Pacific, the civil population in Australia, certain native populations in the S.W. Pacific and to make large and vital contributions to Britain and Empire. The chief difficulties are the depletion of rural manpower, shortage of suitable fertilisers and lack of mechanical equipment. Conservation of food supplies and avoidance of waste follow from the demands and difficulties. A departure in Australia's agricultural production is the development of rice-growing in N.S.W. Though it is the only State to grow rice and systematic cultivation began only 18 years ago the yields are high. A Ceylon official has referred to the rice exports of Australia and the ability to satisfy her rice requirements. Each grower is allowed to cultivate up to 80 acres and mechanical equipment has helped cultivation of fairly large areas. Food production is not, however, based on irrigation or rice yields. Mr. Scully claimed that it is based on organisation for efficiency. Australia has one of the biggest wheat surpluses in history this year. Butter and cheese production exceeds that of the previous year. Vegetable output is expanding and potato production is immeasurably greater. The rice crop is the biggest ever produced and is meant for the Pacific islands. Dehydrated meat (claimed to keep well up to two years in tins) is being produced. Australia has four plants to process meat and seven more are to be set up. The canning programme has developed beyond expectations. Vegetables, too, are being dehydrated and thirty plants have been erected or in the course of erection. Though New Zealand supplements Australia's exports of food about the responsibility of feeding the armies in the Pacific, an Australian Minister, Mr. Beasley declared that the forces had never complained nor had the Allies. The requests of India, Britain and the Middle East had not been refused. Australia fed her army as well as the population because agriculture is getting more efficient. To save labour Australia's vegetable growers will get machinery from the U.S.A. A pool will place tractors etc. at the disposal of the farmers. The efficiency of the farmer should increase, and a growing interest in nutrition will support such increase.

Good News From Africa

The progress of the First Army towards Bizerta has removed doubts as to the outcome of operations in Tunisia. The natural defences are not enough, and the Germans' failure to provide reinforcements by air underlines the view that a second Dunkirk is ruled out. The 8th Army is moving up from the South. All the ports of Tunisia, Sfax, Gabes and La Goulette are in Allied hands, and General Eisenhower's estimate of prospects appears unduly cautious when the air superiority is decisive. If Bizerta were isolated from Tunis, the defence would be rendered more difficult. R.A.F raids on Italy have increased after the tempo of war in Tunisia was pushed up. Laval's formal adherence to Germany and his hostility to the Free French must be modified by the Italian claim for Nice. The movements of Rommel from Africa have not obscured the difficulty the Axis finds in keeping up the defence from San Sabastian to Salonika. The Italian fleet is still idle in port, and that is a mark of Italy's real indifference to what happens. The Germans' real problem is not the defence of Italy, but the maintenance of the attacks on shipping. Submarine bases and production alike have suffered this year, and the shipping losses of the Allies have ceased to cause concern. The only German expeditionary force is facing disaster in Africa and within a year of the loss of Tobruk, the Allies have all Africa in the hands. The uses of Africa are many though the Allies are far from absolute control of the Mediterranean. Malta is ever more useful than Gibraltar; but the combined exercises in Cyprus point to the true strategic function of the island, which may remain partial to the idea of union with Greece but is certainly ready to work as a base for the Allies. The Ankara reports ignore the peace offensives and dwell only on the failure of the German envoys there. The Nazis are finding the Southern offensive in Russia a serious danger and it is suggestive there has been no mention so far of what Hitler is preparing for the spring. In April 1942 he was ready to go on from Smolensk into the Volga Valley. This year he is back to his bases and has not forgotten the Dieppe raid. Unrest in France is too obvious to be ignored, and the prospect of an agreement between Giraud and de Gaulle is less remote than it seemed.

British Aircraft Production

It is surprising to find that in spite of the slump in aircraft shares, aircraft production is the largest industry in Britain. The aircraft share boom belongs to 1936 but the industry's great progress since 1940 is reflected in output and employment alike. Sir Stafford Cripps is now the controller of the biggest industry and in the case of one company recently he has made changes in the Board. Progress of aircraft production was described by the Minister recently. If one took the structure weight per person employed in aircraft manufacture and compared such a figure—March 1942 with March 1943—there had been an overall increase of one-third in the first quarter of the year —actually 36 percent in weight per person engaged. Total output of complete aircraft in the first quarter of 1943 shows an increase of 55 percent on the first quarter of 1942. The increase in output is largest in the case of bombers the production having risen by three and a half times as compared with 1942. The number of women workers has also risen. Sir S. Cripps said that women constituted at present 40 percent of the workers in the industry. Progress in Britain is evidently helped by the co-ordination of aluminium supplies and the consultation obtaining between workers and management. The resurgence of interest in civil aviation, leading to a transport command, owes something to the growth of aircraft production in Britain. But what is really important is that the Bomber Command's operations will not slacken even if the cost of a 1000-bomber raid is unduly high. Attacks on the Ruhr have been repeated and ports as distant as Stettin have been visited by the R.A.F. If the U.S.A. seems to produce more planes—6,500 in March alone—Britain is producing as many as she can, and provides also the essential bases for U.S. Air Forces. The R.A.F. claims the fastest fighter plane in the world in addition to heavy bombers like the Lancaster and Sterling. The growth of aircraft manufacture is probably the result of industrial concentration and diversion of production in the motor industry. The shadow factories scheme is giving results, rather late but quite substantial. There can be no discussion of the disposal or concentration of the industry but the virtual end of regular air attack has helped aircraft manufacturers in Britain to put up a remarkable performance. The Dominions eg. Canada and Australia produce only a few types and the Empire still looks to Britain for aircraft. Many should realise that the advance in production last year helps India's defence as aircraft keeps the enemy at bay in Burma.

U. S. Army's Helpers

The Service of Supply is an important part of the U.S. Army. Its career is described in an article on the U.S. forces in India in Current Affairs. The U.S. Army has its ground force and its air force but as important is the S.O.S which deals with the procurement, storage and transport of materials, construction of roads, camps etc. General Raymond B. Wheeler looks after the supply side of the U.S. forces in India, Burma and China. His major achievement is the saving of half the tonnage needed by developing local sources. An individual soldier requires half a ton of supplies on an estimate and the U.S. Army by reducing its own imports has released shipping space for Lease-Lend supplies. The authoritative account now available states that except for a specialised items the food consumed by U.S. troops is obtained in India. The clothing comes from Indian mills. Some medical supplies too are local. As for housing, the material of course is Indian and the building work as well as the manufacture of many items falls to Indians. Supplies to China under Lease-Lend are dealt with by the U.S. Supply Service. The headquarters is at New Delhi and there are two main bases—at west coast and east coast ports. In order to maintain communications between the bases and Delhi—Washington radio stations are set up. The S.O.S. maintains hospitals; finance offices are set up, and the S.O.S. runs a post office. Agencies in all important cities of India.

S.O.S. goes by its own motto, "Find it. Furnish it and Fix it". More in the public eye is the 10th Air Force originating in February 1942. It took shape in May 1942 after the retreat from Burma. Earlier, the heavy bombers served as transport carrying soldiers out to Burma and bringing back civilian refugees. The first base was Karachi and the first mission was to bomb a part of the Jap fleet in the Andamans. When the enemy fleet was presumed to be in the Indian Ocean, the 10th Air Force stuck to Karachi but was soon moved east and began attacks on the Burma bases of the Japs. The Air Force took over aircraft from Pan-American Airways for its India-China air ferry service. The absorption of the A.V.G. gave the airforce more pilots of its own. Operations began in late June and Jap airfields in Upper Burma and enemy communications suffered. Reorganisation in October followed expansion of the combat forces and the U.S. air force is carrying on the war against Japan up to Bangkok. The ferry service, too, has expanded, and the definite increase in air activity over Burma in April attests the improvement secured in the cold weather. Reports of increased activity of the R.A.F. beyond Arakan today contain a reference to the Bristol Beaufighter. But the U.S. Air Force's communiques mention no names but P 40s. The 10th Air Force's success in beating off raiders from October to February indicates that it has fighters in abundance.

Fall In Re-exports

The steady fall in India's imports in 1942-43 is reflected in the reduction shown under re-exports. For most months of the year, the average value has been under a crore and the percentage of retained imports is necessarily higher. It is clear that re-exports of sugar, piecegoods etc. have fallen after the sale of stocks. The middlemen who lived by re-exports are not the only persons affected. The countries that depended on imports by land from India are also affected, and the difficulty of getting supplies from any country other than India, is most obvious in the case of Afghanistan. Since India's own exports fluctuate the proportion of goods exported to those produced must decrease in view of the war demand and higher prices. It is clear that those deprived of foreign goods by the war can hope for little from India. A study of the trade returns suggests that there was a large trade in sugar. Imports of Java and Mauritius sugar went to satisfy the demand of other markets. In ten months ended January India shipped 92.77 lakhs worth of sugar. The shortage in India was probably accentuated by the re-exports, but it is clear that non-Indian agencies will have little scope as the trade has lost its importance. There has been hardly any re-export of grains and flour since India's own imports in ten months showed a fall of over Rs. 13.2 crores in value as compared with 1941-42. Re-exports of tobacco have fallen while re-exports of tea have increased. The latter is explained by the increased takings of Chinese tea. Re-exports of hides and skins show a large fall owing to the loss of Burma. The re-export of metallic ores has also suffered. A striking development is the increase in re-exports of silk. India's imports have fallen but re-exports of silk as well as silk yarn and goods have increased because of the war. It is clear that Free China is the source of the raw silk. Imports of raw wool, however, have declined in the same way as imports of raw wool. The export control in force makes for a reduction in re-exports of chemicals, machinery, paper, electrical goods, metals and vehicles; while prevailing transport difficulties must hamper re-exports. The increase in textile re-exports is not confined to silk. A big increase in woollen yarn and manufactures was recorded in 1942-43. The fall in re-exports of cotton goods is a measure of the decline in India's imports of textile manufactures last year. Re-exports in ten months of 1942-43 showed falls under raw materials as well as manufactures owing to the fall in imports of all kinds from Britain, the U.S.A. and the Dominions. Revival in any branch is out of the question though the African colonies and the Middle East may look to India for many things at present.

Out Of Africa

The evacuation of Italians from East Africa forms a separate chapter of the war. With the exception of a few hundreds who have chosen to remain all Italians are out of Ethiopia. Lord Rennell of Rodd described this operation in a broadcast to Italy. Removal of civilians from Assab to a camp in Kenya was independent of the creation of camps in Ethiopia. The women were intended for Italy and the men of military age to camps from Southern Rhodesia to Uganda. The British military administration
