WORLD OF INDIAN FINANCE

Friday evening.

RATHER more demand for money has been noticeable, but short-credits have been in plenty and there was no change in the inter-bank call money rate, which was ½ per cent in Calcutta and ¼ per cent in Bombay. The months of November and December usually record an increase in trade advances. According to the statement of Scheduled banks there has been an increase in advances from Rs. 81.03 crores on November 11, 1942 to Rs. 92.33 crores on December 18, 1942. During the same period in 1941 advances showed a rise from Rs. 107.66 crores to Rs. 122.57 crores. Even with the increase in the amount of advances it will be noted that the figure is Rs. 30 crores lower than last year. And if it is remembered that bank deposits have increased by over Rs. 110 crores it will be readily conceded that there cannot be any change in money conditions.

The results at the treasury bills auctions last week might possibly suggest that there has been a hardening in money conditions. For the first time in several years the Government of India have not been able to get their requirements. Against the offer of Rs. 6 crores applications totalled only Rs. 2,55.75 lakhs. The amount accepted was Rs. 1,95.25 lakhs. The average discount rate was slightly lower at one rupee and nine pies per cent per annum. The Imperial Bank was perhaps the only tenderer. If it is remembered that the first air raid on Calcutta had taken place before the last tender date, December 21, 1942, the decline in applications will be understood. The amount of intermediates sold from 16th to 21st December, 1942 was also small at Rs. 1.24 crores. The treasury bills offer for next week has been maintained at Rs. 6 crores.

Banks did not take much interest at the last treasury bills auctions as they were afraid that there might be a greater demand for funds following the air raids. Reports go to show that there were heavier withdrawals but that banks had no difficulty in paying out cash. It will be recalled that at this time last year there was a run on banks with the Japanese entry into the war and that most of the Bengalee Banks were hard-pressed for funds.

The returns of the Reserve Bank for the week December 18, 1942 show that there has been a further expansion of currency against sterling securities. Notes in Circulation are higher at Rs. 563.18 crores against Rs. 558.27 crores. Total notes issued are Rs. 7.5 crores higher at Rs. 575.89 crores. Sterling securities in the issue department show a rise of Rs. 10 crores to Rs. 392.83 crores. For the second week in succession rupee coins show an increase at Rs. 16.26 crores. Rupee securities are lower by Rs. 5 crores at Rs. 122.38 crores. In the previous week rupee securities worth a similar amount were cancelled. The next three returns may show a further decline in rupee securities as the Government would like to prepare the way for the repatriation of 3½ per cent Sterling Paper.

In the Banking department, Central Government balances are at a fairly high level, being Rs. 19.52 crores against Rs. 18.28 crores. Bank deposits are about Rs. 3.5 crores lower at Rs. 50.87 crores. Foreign balances were Rs. 76.58 crores against Rs. 79.17 crores. If the transfer to the issue department is taken into consideration there has thus been a net receipt of Rs. 7.5 crores.

The statement of the Imperial Bank for the same week shows a decline in deposits by Rs. 90 lakhs to Rs. 160.03 crores. Investments are higher at Rs. 114.86 crores against Rs. 112.21 crores, the increase, perhaps, being entirely due to treasury bills. Advances were lower at Rs. 28.32 crores so that the decline in cash balances from Rs. 29.52 crores to Rs. 26.99 crores is entirely on account of investments.

The giltedged market has not been affected by the recent shake up in prices in the stock markets. 3½ per cent Paper is quoting only a few annas lower at Rs. 93-11 while the dated loans are almost unchanged. With the uncertainty regarding the immediate future of equities in this part of the country and the confused outlook for the precious metals more money should find its way into giltedged. The Government of India have not been able to attract any large amount of funds into defence loans owing to the lack of a firm policy in regard to loans and treasury bills.

The exchange market has been very steady during the week under review with a fair amount of business passing. Money is easy with interbank call money quoting ½ per cent nominal. Rates for firms' fixed deposits remain unchanged.

Banks are sellers on T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains unchanged at ½ per cent lenders.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rs. 6 crores of 3 months' Government of India Treasury Bills were opened on Tuesday, Dec. 22, 1942. Total amount offered was Rs. 2,55,75,000 (Rs. 2 crores 55 lakhs 75 thousand). Tenders at Rs. 99-11-9% and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 1 crore 95 lakhs 25 thousand, the average rate of accepted tenders being Rs. 1-0-9 (Re. one annas nil and pies nine%) per annum.

Tenders for Rs. 6,00,00,000 (Rs. 6 crores) of 3 months' Government of India Treasury Bills will be received on Tuesday, Jan. 5, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, Jan. 4, 1943, at other centres. Successful tenderers should make payment on Friday, Jan. 8, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from Dec. 23, 1942 to Jan. 4, 1943, at Rs. 99-12-0% subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from Dec. 16 to 21, 1942 amounted to Rs. 1,24,00,000 (Rs. 1 crore 24 lakhs).

During the week ended Dec. 18, 1942, Government of India Treasury Bills for Rs. 3,52,50,000 (3 crores 52 lakhs and 50 thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

A Progressive Indian Scheduled Bank

Finance Abroad

Thursday Morning.

IF the London money market in X'mas week showed traces of easiness with banks buying some bills forward, the rise in the Treasury bill rate before Friday showed that seasonal tightness had emerged to some extent. But the end of the year should show no change, for the Treasury is asking for a large sum in deposits and also for 75 million in 3 months bills this week. For the market, as distinct from the banks, treasury bills are more profitable at 1 per cent and over. The cost of borrowing for the Government for the whole year has been the same. Occasionally, the weekly issue has been enlarged, but the funds available for regular investment have been the same week after week. Treasury practice has shown no change, except for the adjustment in the terms of new war bonds still offered as a tap loan. Yet a significant change was reported by Xmas. There was a lift in gilt-edged prices with war loan rising to 104½. The operative factor in this case was the call-up of South African securities for £42 millions. South Africa like India has used her oversea assets for debt repatriation. The pattern was settled a year ago, and the actual decision was long foreseen.

The payment in London within the year is a substantial gain to the British Government which naturally counts on the old money going into new war. Victory Bonds in spite of the provision for annual drawing stand highest in the list of British Funds. Since Home Corporations cannot seek the new issue market, the Treasury enjoys a monopoly and a short-dated stock like Conversion Twos is well over par. By comparison Old Consols seem dull, but a point to bear in mind always is that the buying of new securities including savings certificates greatly exceeds the investment through the stock exchange.

A change of greater importance from the Indian view is the advance in tea shares. They apparently came back into favour before last week, to judge by the quotations over par in the case of both Assam Tea and Empire of India and Ceylon. The improvement in rubber shares referred to a fortnight ago seems mild in comparison. The rise in tea share prices has a lesson for India where tea shares have been overpowered by the gloom in all markets.

The declaration of Iberian neutrality has presumably helped South American issues, but it is the firmness of Wall Street that supports the continuous rise in Brazilian Traction (Tracies) referred to in many cables last month. A peculiar feature of the London list cabled by *Reuter* calls for notice here. The price of Barnagore Jute is constantly shown as £5. It has long been clear that the Calcutta price is not the equivalent of £5. The shares have been quoted over Rs. 100 and the discrepancy has probably attracted much notice in many quarters. As a regular dividend-paying concern Barnagore is fancied by some Indian investors who must be puzzled by the same price appearing day after day. It is clear that the London quotation as in the case of Indian Iron and Steel has very little value as a guide to the price ruling in Calcutta. It is certainly noteworthy that the price of Indian Iron did not go down in Calcutta on Wednesday as the drop from 50 to 48-9 might suggest though it may said the rupee price around Rs. 30 was well below the London quotation of 48-9 published on Thursday morning.

In spite of occasional irregularity Home industrials were moving up last week. Electrical and Musical Industries stand out in the list. The recovery stage in this case is long past, and one may properly suggest that New York has been supporting the shares more freely than in the past. Equally arresting is the rise in Pinchin Johnson shares. These are not international, but the rise indicates that whatever be the troubles of companies producing building materials British paintmakers are doing well and are expected to do better in the war period.

The rise in oil shares is not broken by the drop in Mexican Eagle. If Anglo-Iranian is still improving as a result of victories in Russia and North Africa, Anglo-Egyptian is known to have appreciated quite sharply in December and Trinidad issues have turned firmer.

The assurance that North Africa's raw materials will be reserved for the Allies has been given in Washington. Iron, lead and phosphate are among the minerals of French Africa and the early emergence of French unity under Giraud suggests that in regard to groundnuts the Allies will get Seinegal's crop in entirety. This will support the conclusion that the drop in Indian oilseed prices will continue. If West African produce comes to Britain the market for Indian groundnuts must naturally shrink. Prices cabled day after day point to no change but one must be prepared for a setback in Indian exports. If the Bombay seeds market is still steady, its outlook can only be called obscure. The linseed market is in a different position since neutral Argentina is not a strong rival.

The imminence of two Presidential messages does not heighten the value of stories relating to U.S. munitions output in November. An increase was generally expected but a rise of 46 points in the W.P.B.'s index for November must only be described as sensational. A doubling of munitions output in 1942 in the year that begins on Friday is anticipated by Mr. Don Nelson. War expenditure in 1943 is estimated at 90 billion dollars, pointing therefore to a budget of over 100 billions. Increased production of aircraft, particularly, fighters is the most hopeful feature of Mr. Nelson's survey. Since the U.S.A. will get manganese, cobalt ore and cork from North Africa many other industries besides steel should benefit in 1943. Of interest only to those guessing out the expansion of war production is the news that the 8-hour rule for workers on construction jobs under the War Department has been suspended. But others will note without surprise that the Victory Loan drive in December (up to 26th) did not produce more than 11.96 billion dollars. The December total will, however, be equal to a full year's takings since bonds appeared in May 1941. Even this success had made the Treasury keener on stimulating savings. Mr. Morgenthau does not approve the plan for deferred purchase of cars, radios and ice-boxes. He took the line that civilians should not steal a march over soldiers who could not at present arrange to get these luxuries after the war. The restraint of spending is the goal of the Administration. An order discouraging accumulation of stocks by stores and wholesalers is meant to ease the pressure on supplies. Weaker rivals are to be assisted by the W.P.B. under its order to limit stocks.

The Italian claim to Jibuti has been disposed of by the territory joining the Allies. A new Governor has taken over, and the corridor to Abyssinia is now in the hands of the Allies. After Italy was beaten in East Africa, it was obvious that Vichy could not control the colony, occupied in stages after 1884. The Colony is quite small and the population is hardly a lac. Besides immigrant Arabs there were Hindus. There is a fishing industry, but nothing to compare with that of the Qarib coast. The minerals are few, but inland trade has been growing. Salt is still a source of wealth. Gypsum, mica, sulphur and petrol are supposed to exist but only the salt mines are regularly worked. The 485 mile railway from Jibuti to Addis Abba is the chief asset. Jibuti is the port for Abyssinia, as may be inferred from the exports of coffee, ivory, hides and skins through the port.

The currency war in North China is not at an end. The military yen is said to be depreciating and puppet dollars are giving their holders much worry. It is not hard to connect this depreciation with the shakiness of the Nanking currency. The Japs have found their devices do not answer, for the troops of the puppet regime too are flying from the Japanese-sponsored dollars.. If the Japs have strengthed their hold on Indo-China since December under new treaty arrangements they are encountering unusual difficulties in North China. The Yen-bloc is apparently breaking up under its own weight. The puppet regimes stand exposed since their currency is unaccpetable to their own supporters. For the inflation perpetrated the Japs are clearly responsible, and their imitation of German methods in Norway and occupied France shows that co-prosperity is no longer a bait that can attract. A Reuter cable this week showed that the Nanking and other dollars were weakening; the Chungking dollar must have developed corresponding strength.

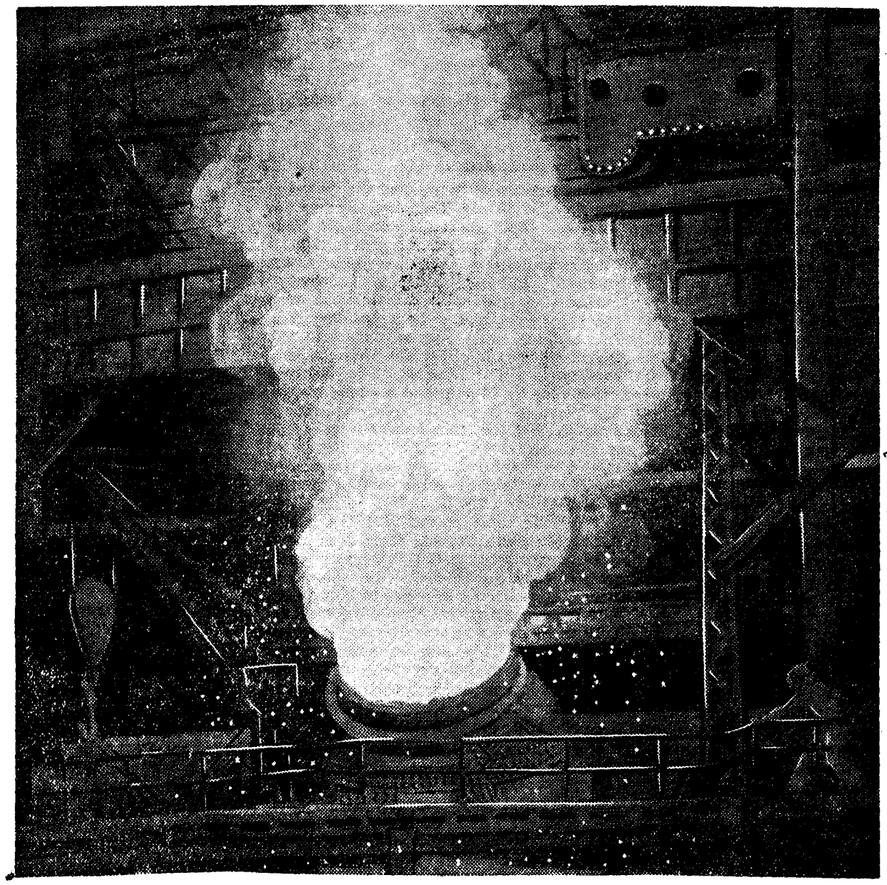
The New Year

The New Year has opened well. Calcutta has had a welcome disappointment in that Japan did not send it a new year gift of bombs. And probably no part of the country was subjected to unwelcome visitations of enemy planes on Thursday night. News, too, on Friday morning has been of the most heartening kind. The Russian advance has continued as far as Salsk. The encirclement of the German army in that area is now more certain than ever. In the Pacific, the Japs have been obliged to yield more ground to the allied forces. The position in N. Africa is increasingly sound. Intrinsically, and by contrast with this time last year, the position to-day gives solid ground for the hope and cheer that is appropriate to the season. It is not inappropriate to recall the outlook at the beginning of the old year. The war with Japan was less than a month old; but it had already cost a great deal to the allied nations in ships, positions of strategic importance and, last but not least, prestige. For the same reason, January 1942 was the eve of further disastrous losses, of Singapore, Malaya and Burma. The average man could see little or nothing then to sustain his faith in a speedy reversal of the tide of Japanese aggression. In fact, the only bright spot was the unexpected recovery of the Russian forces which took advantage of the winter to deal some heavy blows at the German armies in Russian territory.



In less than a year, the outlook has changed radically. There can be no doubt now that in the Pacific the Japs are finding themselves checked at every point. The U.S. forces have more than recovered from the stunning reverses of the opening of the war. Sir Archibald Wavell's plans for the recovery of Burma have already borne fruit in the significant march of Indian and British troops into Arakan; and the scale of preparations for the Burma offensive is obvious even to the man in the street. The campaign in Africa opened with resounding successes, and though the pace of advance has slowed down, all the ground gained has been thoroughly consolidated. The Russian advance which began just when Stalingrad was widely supposed to be on its last legs is in no sense a mere spurt or a flash in the pan. Many there are who compare it to the winter campaign of 1941-42 and imply thereby that the German army will resume its march in the spring or when the cold ceases to bite as hard as it is doing now. But there are certain obvious differences between the two campaigns which one can overlook only out of proneness to pessimism. The last campaign never reached the point of encircling German armies or even made a remote suggestion that the enemy forces would be compelled to surrender in large numbers. It was in the main a well-planned scheme of guerilla warfare rather than a campaign which the enemy would have to reckon with in his long term plans. Hitler, then, was well in a position to poo-pooh the claims made on behalf of the Russians. The ground yielded to the Red army consisted largely of small villages more or less uninhabited. And Hitler had little hesitation in telling the world what to expect when the snow melted. Far otherwise is the present position. The defence of Stalingrad which inflicted such severe losses on the invader was in itself clear proof that the Russian armies had gained parity with the Germans. While in the case of Moscow the Germans were prepared to put off their schedule, when they found that Moscow was not to be gained before winter, in the case of Stalingrad, they were straining every nerve to secure the city. The manner in which the defence was conducted showed that behind the city of the Man of Steel, there were huge reserves being trained and made ready and that the fight in the streets and houses of the beleaguered city were in fact a blind for more thorough preparations behind it. It is now well-known that Marshal Voroshiloff has succeeded in raising a virtually new army of millions, well-trained and well-equipped with the latest inventions of the Russian technicians. That there is no talk in Fascist circles of "Wait for the spring" similar to that of last year shows that the weight of the Russian blow is being felt. It is not wishful thinking to expect the Russian advance to gain in magnitude and momentum and to coincide as the spring comes with the great counter-offensive of the allied forces from the soft spots of Southern Europe.

The vital difference between 1942 and 1943 is that it is now possible for the first time to envisage the counter-offensive, of which Mr. Churchill was able to talk even in the dark days of Dunkirk. But, it may be asked now, how is the counter-offensive nearer, when the South African forces are just about to encounter stiff resistance and no significant successes have been scored against the Japs by the American forces? The answer is that we have seen enough to be persuaded that the major strategy of the allied nations is already in operation and that its initial successes in what they have so far attempted is quite encouraging. It is not as widely realised as it should be that the Russian advance is part of a major plan agreed upon between M. Stalin and Mr. Churchill at their last meeting. In fact, it has even been suggested that Stalin's bitter references to the failure of the Democracies to open a second front in Western Europe was part of an elaborate ruse with which to cover up Russian plans to inaugurate a new offensive and the British and American preparations in North Africa to regain command of the Mediterranean seaboard. Even if these suggestions may not be in strict agreement with facts, it is certain that the allied nations have closer understanding of how the Axis powers are to be forced to disgorge their ill-gotten gains and how final victory is to be won.

This understanding among the allied powers is in marked contrast to the lack of understanding among the partners of the Axis. More than ever before, Italy has now ceased to count in this world war; and the only chance of Italy regaining a semblance of importance lies in her making a separate peace with the Democracies. There are some who do not rule out this possibility. But the military advantage of Italy proving a turncoat to the Axis may be easily exaggerated; for Germany is bound to provide for the chances of Italian defection by further tightening her grip over that country. But be that as it may, there are only two powers left on the Axis side to reckon with, from the standpoint of the major strategy of the war. Though it is more than a year since Japan entered the war on the Axis side, there is nothing to suggest an effective common plan between these two powers. The grand idea of Japan and Germany joining hands across the Indian Ocean has shared the fate of all grand ideas. The stout defence of Stalingrad, the Russian advance since then, the discomfiture of Rommel in Africa and the organisation of the Burma offensive in India—these have driven the last nail into the coffin of this grand plan. It is now possible to speak of two wars, since Japan and Germany have been completely isolated.

With the defeat of this plan, the stage is set for steady progress. The losses suffered in the Battle for Britain and the Battle of the Atlantic are being more than made up. The allied nations are now in a position to equip their armies in every theatre of war and to invest them with indubitable superiority in land, sea and air. Diplomatically, too, the organisation of the Free French forces has gone ahead since the two-faced Darlan has been replaced by General Giraud. Once the African campaign registers a few more successes, one can expect the resurgence of Europe against Nazi tyranny and that active assistance which the allied forces can perhaps do without but would nonetheless find invaluable.

Indian Cotton Outlook

The cotton trade in 1942-43 will be exposed to various influences, not all of them making for stability. If the demand for cloth in India is large and acute the surplus of cotton presents a different problem. In the year 1941-42 the world produced 33 million bales as against 30 millions in 1940-41, says a recent report.

The production in the present year is expected to fall further, as the U.S.A. has a smaller crop again and is content to get rid of its stocks. But the material inference from such reduction in total world supplies is that the statistical position warrants a bullish feeling apart from the fact that Indian mill consumption will again top 4 million bales. But Mr. Niranjan Prasad in his speech at Karachi to the Cotton Association there declined to take a cheerful view. He referred to the loss of export markets and the carry-over of short staple cotton from 1941. He estimated 1941-42 supplies at 7.8 million bales. Domestic consumption was put at 4½ million bales and exports at 7 million bales. The carry-over in the current year was put at 2.3 million bales.

The estimate certainly accords with other estimates. But what is perplexing to-day is not the glut of cotton, but the shortage of cotton cloth in a country that has to make up for itself the cloth, amounting at the most to 1,000 million yards, previously imported. If cotton prices over the war period appear satisfactory, the persistence of sharp fluctuations puzzles those who urge that price stabilisation must be the aim of both Government and trade. The curtailment of cotton imports by tariff action was enforced last year by the excess of short staple. Since then the cotton trade in India has experienced transport difficulties and a scarcity of baling hoops. Government control has dealt with both questions, but the major question of holding up stocks curtailing output year after year has received little attention. Mr. Niranjan Prasad, claiming to speak for the trade, wanted better transport and many other things as well. If cotton prices in the last four months have kept step with the general advance in commodity prices Indian cotton is today in as precarious a position as jute. Of that Mr. Prasad is convinced, as he referered to the estimated production of 5.6 million bales, the carry-over of 2.3 million bales and average domestic consumption of 4 million bales while exports in his view, must shrink consistently. The I.C.C.C. will doubtless advocate a further reduction of cotton-growing in both the C.P. and U.P. and a change-over to food crops. That cotton cultivation should be linked up with the food policy appears obvious. The long-term outlook for Indian cotton is generally described as discouraging, but Bombay has so far pinned its faith to the Zonal supply scheme as a factor in keeping prices up.

Changes in August

Serious dislocation of business followed the arrests of the Congress leaders in August. Disturbances upset both trade and industry as the official review of business conditions in India has come to recognise. Bombay markets suspended business for the entire month, and most other markets had a long holiday. The Ahmedabad mills stopped work. The major, immediate effect was a rise in commodity prices in August. The Calcutta index rose by 10 points in a single month. The cost of living too rose except in Bombay and the share markets were idle if not depressed. If the production of cloth rose in July at the same rate as in previous months the total for four months of 1942-43 was only 10 million yards above that of the same period of 1941-42. The decline in cloth exports since June however supports the belief that export control is leading to a decline in shipments from India effected in order to help India. But total exports in April-July 1942 appear to be considerably larger than exports in 1941. The fall in cotton prices corresponded to the decline and late recovery in jute prices in August. The market malaise was in truth a projection of civil disturbances over a wide field.

Major changes in the foreign trade of India in August was an increase in pig iron shipments while the exports of iron and steel fell away further. It is, however, evident that India has reduced since 1941 the exports of pig iron as also of iron and steel in her own interests. The decline supports general conjecture as to a continuous increase in steel production within the country. Another change calling for notice is the steep decline in exports of coal as from February 1942. Coal imports in the same period showed a tendency to increase, but the prices of coal from June showed a tendency to rise. Of the changes in foreign trade the one of most enduring significance is the contraction in India's raw cotton shipments. Falls recorded under jute and jute manufactures in 1942 are presumably temporary, but it is noteworthy that the export staples including tea showed a fall of over 9¼ crores in value as compared with April-August 1941. The small recovery in oilseeds is of no consequence against the big fall in exports of other articles. But it must be again noted that the fall in question is largely determined by the loss of many markets since December 1941. Due weight should be necessarily given to the progressive reduction in India's imports. Except for mineral and other oils every item, including raw cotton, shows a reduction. The decline is invested with unusual significance as a contributory factor in the rise in the price-level in India.

The disturbances to trade in August were accompanied by a fall in railway wagon loadings. Even more suggestive of this fall in business activity during August is the drop in cheque clearances during August. There was a sharp drop in bank advances in the month though total deposits of scheduled banks rose by Rs. 15 crores in that month. Some interest attaches to the continuous decline in paper production in April-August 1942 as compared with 1941. The Control Order of December is to be viewed as a remedial measure caused by successive falls in output since March. Except for cotton textiles nearly all industries were reporting smaller output after April 1942 and the advance in prices is partly the result of a fall in output. It is also noteworthy that the declared values of goods entering into both the import and export trade of India showed a sharp increase after March 1942. That is the direct result, at once of limited supplies and growing demand.

All About Lac

Bulletin No. 49 of the Lac Research Institute is an account of lac by the Officiating Entomologist of the Namkum Institute. If it is the cultivator who is to benefit from the hints, it is all to the good that the catechism helps everyone to understand how and where lac, the source of shellac, helps industry. The lac insect gives four crops, but only two are available to the cultivator. The most useful hint is that about pruning of host trees so as to get good crops. Regular rest intervals for the trees are recommended after cropping. Palas and Ber trees are usually chosen for taking the brood lac. That the Baisakhi crop yields most lac is due to the preponderance of female insects. Lac is the secretion of the insect but the presence of wax is a guide to the fact that the insects are at work. Cross strains and crop rotation are important in lac culture. The ant is no enemy of the lac insect, contrary to the general belief, but is useful as a scavenger and destroyer of caterpillars and of enemy moths, both the white and blackish-grey kinds.

The answer to the last question is a summing up of the many hints for the cultivator. The most valuable hint is one for immersion of lac-encrusted sticks in running water for three to four days so as to destroy all insect enemies. The most important information contained is that Madras is at present embarking on trials with the lac insect in Salem and Madura. In Mysore and South India the host tree usually gives three crops in thirteen months, the first maturing in October, corresponding to the Katki crop in Bihar. Because the swarming periods have not been fixed as yet, Madras still lags behind as a producer. But it is clear that the Forest Utilisation branch in Madras is going to develop lac as a minor forest product. Imports from Indo-China and Malaya, stopped by the war at present, will cease to matter, if Madras becomes a producer of lac like Northern India. It is known that both Rangeeni and Kusmi crops can be obtained in South India in spite of climatic differences.

China's Industries

Free China, as distinct from the areas bled white by the Japs more particularly in the northeast, is developing resources for the war. Industrial production is increasing since 1941 and a survey of progress made by China Information Committee testified to a marked improvement in general industrial output. The production of power alcohol increased by 200,000 gallons despite a constant shortage of raw materials. The output of flour rose from 3,239,000 bags in 1940 to 4.510,000 bags in 1941. The production of both soap and matches showed increases, and a very large increase in China's leather production was also witnessed in 1941. The development of the interior provinces is proved by the factory registration figures. Many factories moved away from occupied or war areas, but a large number of the 1,310 units registered in 1941 were newly established. Most of the private factories received State aid and besides meeting the needs of the people helped the Government to control prices by increasing supplies in the interior. Eighty-seven mining and metallurgical works, 377 machine and metal works, and 44 electrical equipment factories were registered in 1941. As many as 34 chemical plants were distributed in the new registrations. Food processing and miscellaneous industrial establishments figured in the list of Free China's new industries.

Provincial Governments have manifested great interest in starting new industries. Direct participation is not unknown, and the Central Government has been aided generously in developing new production. A list of plants projected at the end of last year included 31 chemical works and 24 textile mills. Economic warfare has not been ignored and war area plants were set up or were in course of erection. The Central agency in the wartime development is the National Resources Commission of the Ministry of Economic affairs. Production of war materials like tungsten, tin and mercury is controlled by the Commission which leaves most other mining enterprises to the Provinces or private enterprise. The growth of monopolies is a symptom of industrial progress in China. Ninety-one monopolies were granted in 1941 for various industries. In the single province of Kwangtung progress in 1942 has been greatly accelerated by the war. After the loss of Hongkong eighty big factories were set up by the Kwangtung Development Corporation which expected to set up 15 more. A large factory produces machine tools, gas engines, and machine parts, Electric equipment, paper and printer's ink come from several new factories set up under the provincial plan. Drugs, fertilisers, cement and sugar are also derived from new enterprises launched in Kwangtung where industrialisation has been greatly stimulated by the loss of Hongkong as an outlet.

NORTH WESTERN RAILWAY

In Your Own Interest

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to them showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to book the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed.

Chief Commercial Manager,
Lahore.

Jute Consumption in 1941-42

An estimation of world consumption of jute in the year ended June 1942 has been prepared by the Economic Research subsection of the Central Jute Committee. The figures published in the December bulletin of the Committee point to an increase in the year over the preceding year. Extra-factory consumption is put at 6 lacs of bales instead of 3 lacs in previous estimates. In any event, an increase of 5 lacs of bales in 1941-42 is provisionally estimated. In regard to jute consumption 1940-41 was a bad year, and the recovery that followed in 1941-42 was necessary. Consumption was evidently stimulated in the third year of war, but the figure of 88 lacs of bales is considerably below the peacetime average of 110 lacs of bales. A fall of 20 per cent justifies the Bengal ministry's policy of crop regulation. Jute manufactures exported in 1941-42 were around the 1940-41 level but raw jute shipments showed a rise of about 2 lacs of bales, and mills held at the end of the year larger stocks owing to an increase of 6 lacs of bales in their carry-over at the end of June 1942.

It is inferred that purely Indian consumption including war orders accounted for 21 lacs of bales. In relation to the estimated total of 88 lacs of bales this seems small. Jute is, in the main, an export crop, and export demand always governs the prices of both jute and jute manufactures. The Committee reach the

conclusion that war demand in itself accounted for 11 lacs of bales in 194142, as is shown by the rise in total output by 169,000 tons in the fiscal year 1941-42. If this were excluded, the peacetime consumption of raw jute is just a million bales and the scope for increasing it in ordinary circumstances is not great. The jute market up to September reflected, in no uncertain manner, the twin influences of rising stocks and falling demand. The larger crop in 1942-43 still presents problems for which an absolute increase in exports may be a remedy, but partial, in that it cannot lead to the absorption of all the surplus.

Jute Industry's Opportunity

A recommendation to the jute industry to produce more twine, cord and rope has been made in a recent article of Mr. C. R. Nodder in the Jute Committee's monthly bulletin. The shortage of hemp etc., would certainly justify increased output of jute rope and twine for various purposes. Mr. Nodder suggests it would be worthwhile for the trade to pay more attention to jute twine, cord and small ropes. Small bales or spools of twine put on the market at a reasonable price should find a wide demand for tying parcels and other everyday uses. The material could be made attractive by dyeing one or more of the plys in bright colours. The total demand for twine in shops and bazars in India alone might be considerable, and there seems to be a potential larger market for twine and ropes for domestic purposes. Spinning machinery for finer yarns would be desirable, but probably much could be produced with machinery available at present. Finishing and polishing would add to the attractiveness and usefulness of the twine. In order to compete with twine made of cotton, sisal etc. only good tossa or deshi jute wuld appear suitable in Mr. Nodder's view. Partial bleaching would help in the production of dyed yarns. In this connexion, there seems to be a future for the new chlorite bleaching process which appears to give a material which is stronger in the wet state than ordinary hypochlorite bleaching. The post-war development of chlorite bleaching may be expected to reduce the cost of the chlorite (textone etc.).

Mr. Nodder refers to the miscellaneous uses in shops and the already established uses for twines, cords and ropes in India. Attention is drawn to experiments directed towards learning the twists which give maximum strength in ply yarns. The data available show that very good strength is obtained with a singles twist factor of about 14.0 and doubling twist per inch equal to the singles turn per inch divided by the square root of the number of plies, no extra forehand being applied in doubling. For a harder-twisted ply yarn which is likely to wear better (although not quite so strong initially) a singles twist with doubling twist calculated as above is suitable. The doubling twist gives a reasonably well-balanced ply yarn which does not twist up unduly when the two ends of 1½ yard length are brought together. Advice relating to rope made from ply-yarn is also given. The angle of long should be 35 degrees or 45 degrees if a hard-twisted rope is wanted. Mr. Nodder adds the caution that very high twists do not possess maximum strength. The extension of the range of jute manufacture should raise the demand for jute and help also all people who resort to shops and find packing more often indifferent than not.

Postwar Investment

Visions of the world after the war still grip the imagination. Investment prospects are still being discussed and the Economic Adviser to the U. S. State Department described not long ago what he considered would be the place of foreign investment. Mr. Feis indicated earlier how world trade etc. would move but in July he was content to write of future investment trends along with the postwar situation. He argued that the demands of reconstruction would be inevitably large in all countries and foreign capital would be welcomed. Creditors, of course, could not expect to get much out of the claimants for assistance, so that Governments, and not private capitalists, would be chiefly involved in the future movements of capital. In such circumstances the supply of capital would have to be in the way of subsidies. In Mr. Feis' words 'Peace may provide as compelling a justification as war for such a course—within the limits of the possible.' Lease-lend is thus viewed as appropriate after the war as during the war and the same conditions would be laid down. The U.S.A. clearly sets no limits to what it will have to do. Her leaders want to see ordered relationships, vastly different from those of the 19th century. But Mr. Feis expects even thereafter a substantial rebirth of foreign investment. Transactions, however, would be regulated and conducted by Governmental or semi-Governmental agencies. The investment cycle like the trade cycle would be ironed out by careful regulation by an international financial organisation.

But foreign debts would not be allowed to complicate trade and commerce as in the past. Co-operation would be the keynote, and Central Banks and Treasuries would make agreements concerning the exchanges and the movement of short-term foreign capital. The picture is not one of procuring fields for enterprise by rival nations and making sure of investment receipts to help any country with a surplus of imports. The American view is, in short, different from the traditional British view. The U.S.A. would lend freely after the war but under certain conditions according to Mr. Feis. Still the most interesting feature of Mr. Feis' suggestions is that relief has to be linked to investment. And the private investor, no more than the banker as such, is to have no place in the placing of new issues by foreign countries. Earlier Mr. Feis advocated annual appropriations by the U.S. Treasury of three to four billions for various countries for specified purposes, to be met in return by corresponding payments at a fixed rate of exchange by the countries receiving assistance. The arrangement would entail the cancellation of short-term debt at intervals. Reciprocity, as known under lease-lend, is to be projected into U.S. aid for reconstruction. The placing of credits would materially assist foreign trade. The pressure to export would not persist, and those in need of assistance would concentrate on domestic needs rather than try eagerly to recover their pre-war footing. Mr. Feis argued in 'Foreign Affairs' that development of backward countries after the war would help to maintain full employment in the post-war period in the United States. Essential enterprises would be promoted, and continuous development would be ensured by trade and foreign exchange agreements to get over previous difficulties in regard to annual interest

payments for such sums as are sanctioned or relief. The relief would of course, extend to the heavy industries at home which would be subsidised in a new sense by being assured of Governmental purchases on behalf of other countries. In a way the export industries would have to be subsidised everywhere but the U.S.A. by promising funds for relief would eliminate export dumping and artificial measures adopted to secure a bigger share of world trade by many countries.

Co-operative Colony

As a co-operative agricultural colony created entirely by the vision and enthusiasm of the late Sir D. M. Hamilton Gosaba in the Sunderbuns is widely known. The history and organisation of Gosaba is well explained by Mr. S. B. Majumdar in 'Indian Farming'. The estate was acquired on lease from Government in 1903. Four islands with a total area of 22,000 acres present a picture of high farming and ordered progress that goes to show how far co-operation can proceed, if well guided. Deforestation, reclamation and drainage came before cultivation on the estate. Colonisation went along with the extension of the estate which started to put rural life on a new basis. Sir Daniel dug tanks, made wells, built schools, opened dispensaries, and introduced shopkeepers on the estate. Only the money-lender was unwelcome. The improvement of agriculture went hand in hand with uplift in the accepted sense. Fruits and vegetables became part of the crops raised, but coconut plantations failed.

The expulsion of money-lenders from the estate is a landmark in Gosaba's history. The first co-operative society was launched in 1915 with capital provided wholly by Sir Daniel. There are now 24 societies of which one runs a rice mill. Paddy is still the main crop grown on the estate. A special, hardy type of paddy has been evolved on the model farm. On the estate as a whole the average outturn with the new improved strain is 10 maunds per bigha instead of 6 maunds in the days before the home farm revolutionised farming methods. English and Indian vegetables have been successfully introduced. Pulse is grown as a second crop and fodder crops are not unknown. Longstaple cotton has been tried in the high-lying lands. The Estate has backed the Grow More Food drive by giving prizes. Cattlebreeding has also contributed to progress in Gosaba. The Sindhi bulls have raised the quality of local stock. It has been suggested that ducks would pay well. Cottage industries are flourishing in Gosaba. Mr. Majumdar freely acknowledges the non-commercial virtues implanted by Sir Daniel Hamilton. That is why the percentage of literacy (25 in 1941) for Gosaba's 15,000 inhabitants is far above that for Bengal. The diversion of the educated unemployed was one of the objects of the new bigger Gosaba that Sir Daniel planned before he died. Practical farmers have been turned out by the Institute. A new type of pleasant farming with an optimum of holding of 25 bighas is the distinctive feature of Gosaba. Land grabbing and sub-tenancy have never appeared there because Gosaba is something more than a departure in high farming in a backward tract. It is a self–governing village community in which the patriarchal influence of Sir Daniel was not obtrusive, no more than the influence of Lady Hamilton who continues his good work.

South African Prosperity

The gold mining industry in South Africa reported lower outputs in August and September. The value as compared with September 1941 was lower as the tonnage crushed was less. Value too showed a fall as the yield per ton was less. The fall in group profits reflected merely the change in average daily output of the mines. The production for nine months ended September 1942 was over 10.7 million ounces valued over £90 millions. The diamond mining industry was said to be doing better in September as has been proved since by the increase in de Beer's dividend according to the announcement last month as also by the increase in wages ordered in September. The U. S. demand for diamonds was said to be improving, and satisfactory sales are referred to in the Standard Bank's monthly letter. The scarcity of maize and wheat crop damage in the Union have been referred to, but in September crop prospects underwent a change for the better.

Dehydration experiments with fruits and vegetables are reported from the Union. The wool clip in spite of higher prices was below expectations and the most interesting feature recorded is the note that wool prices in Durban are expected to be up by 20 per cent on those realised in 1941. If secondary industries in the Union particularly footwear and clothing, are busier than ever, there was a definite shortage of implements and agricultural machinery. The shopper was hit by the scarcity of soft goods as also the curtailed hours of business. Difficulties in regard to raw materials were reported by many South African industries. What stands out is the similarity in conditions as between India and South Africa where too the expansion of purchasing power was causing some anxiety in September. The S. A. Reserve Bank's holding of gold at the end of September showed an increase of over £43 millions and the commercial banks' deposits with the Reserve Bank reflected the growth of deposits from 147 millions to 176.3 millions in nine months. Advances had fallen during the period, suggesting that South African experience corresponds to that of India where the demand for funds throughout the so-called busy month of December has been singularly slack. The mining industry in Africa remains assured of prosperity. The Union's base metal industries including coal mining are on a stronger footing than gold mining on the Rand which is exposed to higher taxation, increased costs and inadequate

A MESSAGE FROM H. E. THE GOVERNOR OF BENGAL

supplies of equipment. In regard to farming some relief is promised by plans to produce 10,000 to 20,000 tons of farming implements within the Union. Large-scale preparations were said to be in the making. The development programme mentioned by the Union Controller in September last included the production of wire in three months. The Union had then formed plans to produce articles that could compete with imported machinery after the war.

The President's Difficulties

The resignation of Mr. Leon Henderson of his office as Price Administrator shows that the U. S. Administration is making heavy weather. It has been openly suggested that the President's opponents have forced him out of the post. Possibly consciousness of failure, even after restraining the ascent of the price level, impelled Mr. Henderson to give up his connection with the War Production Board. But the W. P. B. itself is now overshadowed by a new economic czar in Mr. Byrnes. It is the latter who is causing dismay among the Republicans. The happenings at the Republican convention at St. Louis last month indicated not only the death of isolationism but the resurgence of opposition to the President's autocracy. The last session of Congress was marked by filibustering tactics, said a recent report. Compromises in committee did not conceal the growth of sentiment hostile to the President.

The November election results provided a surprise for many. The independent Democrats scored, and the defeat of Governor Olson in California showed that a great State had again gone back to the Republican party. The "Times" published a cable from Washington indicating that the Solid South might soon unite with the Farm bloc. The antagonism of the farm bloc to price control is, so to say unconditional. The Solid South dislikes presumably the third term as well as price control. The Budget Message next week is not likely to go down as well with the New Congress as with the 77th Congress. The Message on the state of the Union may be anticipated by new party groupings, but Mr. Roosevelt will have a great advantage in having Mr. Rayburn as Speaker again. The Speaker is as much a floor-leader as any politician, and the peculiar position in which the Cabinet is going to enter into formal relations hereafter with Congress will demand the Speaker's guidance even more than his sanction. The ascending curve of war production, the plan for deferred purchase agreements and the new drive against the hoarding of goods are likely to figure in future controversy. One year after Pearl Harbour Mr. Roosevelt's position is not so secure as it seemed. That portends no ill to the Allies who have been made aware that domestic issues do not affect U. S. foreign policy. There is, however, little doubt that the State Department would adopt a cautious policy and lease-lend supplies, in spite of present plans, may alter in volume, if not in character as opposition develops, as is feared at present. The third term has been marked by more than one 'lame duck' session, but the January session will be exciting enough to judge by the initial victory scored by the President's antagonists.

Population Plans

South Africa needs inhabitants more than anything else. The Union is underpopulated according to the general view, and visitors are welcomed for precisely the same reason as settlers were invited to come under special schemes of assistance. This view found expression at the annual meeting of the Johanesburg Publicity association when Mr. P. A. Leen referred to the advance guard of immigration. A large number of skilled men of the professional and artisan types had taken up jobs in the Union and showed a desire to settle permanently. Mr. Leen stated that the desire should be fulfilled as the Union needed a larger population. The third year of war had witnessed an expansion in tourist traffic. Africa had sent the Union more tourists in order to compensate for the loss of traffic from Europe and America owing to the war. Thousands in Africa latterly looked south and visitors to the Union examined the possibilities of a permanent home. South Africa was also getting more attractive for settlers as a result of rapid industrial development according to many. It was also suggested that South Africa's industrial capacity was developing so that after the war it would exceed the needs of her own population. South Africa was taking all products and war materials which territories in Africa would supply. To stabilise the expansion a bigger home market, based on a larger population, was definitely needed.

Familiar, but not naive, is the view that the Union should get more settlers. The Union aspires to be the Good Neighbour and also hopes to raise the standards of life for natives in urban areas instead of sticking to the old policy of segregation all the time. The Greeks are already a minority of some importance to the Union, and South Africa will have to look largely to the Balkans for the additional population rather than to Britain or Holland. The old racial attitude may undergo a change if the Slavs continue to become prominent. Neither Indian nor Chinese labour is welcome in the South Africa of the present, and the only possible source of additional population is the Portuguese colonies which provide native labour not permanent white inhabitants such are wanted by the Union. In this connexion Lady Duncan declared that South Africa's allies are in crowded parts of Europe and she foresaw the time when many of them would turn to South Africa in the hope of making a home for themselves and their families.

Commercial Policy, Past and Present

The anaylsis of modern commercial policy presented by Dr. R. D. Tiwari in his book published by the New Book Co. of Bombay is peculiar in that it is not tariff history but enunciation of policy which is its main concern. It is to be distinguished however from orthodox polemical discussions of free trade. Dr. Tiwari, it may be premised, is an ardent Protectionist. For him as for most Indian economists commercial policy is only a tool for economic development in the broadest sense. Since it is meant for students something like encyclopaedic range characterises the latest book of Dr. Tiwari. If the work of the Import Duties Advisory Committee in Britain is reviewed in summary fashion, it is not at all implied that the departure in Britain policy has no significance for us. Britain as well as Australia furnish most instructive lessons for all who argue in favour of a comprehensive and coherent tariff policy for India at present. As the world is aware foreign trade has already grown out of bilateral pacts but the adequate substitute has not been discovered as yet. Discrimination, as practised in wartime, may persist, and the whole scheme of post-war trade may be radically altered by obligations arising from lease-lend. The entire set-up may, however, be dissolved by redistribution of the world's gold and newer forms of exchange agreements. But such changes should not affect the main case for effective utilisation of India's resources for her own benefit. To maintain the price level at home may become a finite object and protectionism in the future may wear an agrarian aspect. It is obvious that the wheat-grower and the cotton-grower in India may make themselves heard when Central responsibility is an actuality. Dr. Tiwari's account of departures in German policy over ten years is both lucid and compelling. It certainly provides abundant justification of the war-time controls in force in India. But it is permssible also to suggest that if controls stand the strain of war they should continue for some time. In demanding the abolition of Imperial preference (p. 455) Dr. Tiwari wants a definite break with the past. It may seem unjustified when India's biggest customer both in war and peace happens to be Britain. The changes of 1941 and 1942 in the field of foreign trade cannot be overlooked in any independent appraisal of the probable success of a policy of protection "pur sang". Dr. Tiwari has doubtless quite firm views on the ideal policy, but the practical is really what statesmen must aim at. And rigid doctrine must suffer the fate of unacceptable hypotheses at some time or other.

Higher-priced Sugar

The Department of Food has announced that the maximum ex-factory prices of D-24 sugar has been increased by two rupees and annas nine over the previous price to Rs. 14 per maund. The increase in the maximum price of sugar has been due to the decision to fix a higher minimum price for sugarcane and also to the higher costs of manufacture. Last season the minimum price for sugarcane was eight annas per maund. It was announced in November that there should be no change in the minimum price for sugarcane in the current season. But on later considerations, the need for giving additional inducement to the grower in view of the high level of prices for other commodities and the higher costs of production have been responsible for the higher maximum price for sugar.

With the possibility of a larger quantity of sugar being produced in the current season and with the higher costs of production compensated to a certain extent by the higher ex-factory price of sugar, mills are therefore in a much better position in the current season.

B.S.H. 201

The only Authoritative & Indispensable Annual Reference Book for the Indian Cotton Textile Industry

THE INDIAN COTTON TEXTILE INDUSTRY
(1942 ANNUAL)

Vol. VI

With a Foreword by

Sir CHUNILAL B. MEHTA, Kt.,

Ex-President, Federation of Indian Chambers of Commerce and Industry.

The Indian Cotton Textile Industry Annual, published by Messrs. Gandhi & Co., has come to stay as a useful work of reference, in which all the facts and figures relating to the cotton textile industry of the country and allied matters have been collected and presented in an intelligible form. Industrialists, merchants and students of current affairs will find the volume very handy and useful.

100 Pages: Rs. 3/- Foreign Edition: Sh. 9/-

CHIEF FEATURES:

- ★ Retrospects and Prospects of the Post-war Cotton Textile Industry, during the War-period.
- ★ Organisation of the Cotton Textile Directorate of the Supply Department of Government of India.
- ★ "The Cotton Industry at a Glance" giving 15 authoritative and up-to-date Statistical Tables relating to the Industry.
- ★ Latest Tariff on Piecegoods and Yarn.
- ★ Cultivation, Exports and Import of Raw Cotton.
- ★ Present Financial and Economic Position of the Industry.
- ★ Standard Cloth and Price Control.
- ★ Future of the Handloom Industry.
- ★ Scope of Exports of Piecegoods, during the war.
- ★ Complete and up-to-date list of Cotton Mills working in India, with names and addresses of Managing Agents, Number of Spindles, Looms, etc.
- ★ Contents and Bibliography.

Extracts from Reviews of 1941 *Annual* (Vol. V):

Indian Finance, Calcutta, 6th December, 1941.

"Many things have been laid under contribution in this Annual which certainly retains its title to be regarded as the complete vade-mecum for students of the cotton industry."

Capital, Calcutta, 12th February, 1942.

"This annual production contains as usual, a large volume of statistical and other information about the Indian Cotton Textile Industry. A long narrative survey of the vicissitudes of the industry during the last twenty years is provided....."

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

A fortnight ago, writing on the problem of our sterling balances I raised a number of questions which, I said, must be considered later when there is occasion. These questions refer in the main to what Britain may have to say about India's demands in respect of the utilisation of her sterling resources. Naturally, we in India think first of our interest and then, as a qualification of what that interest demands, of what others may have to say about it. With all the experience of the last war in our minds, we are naturally anxious that these foreign balances should not be exposed to the danger of being wiped out by mistakes of currency and exchange policy, or of being deprived of a large part of their value by depreciation of sterling, or being blocked, to more or less extent, by the controls which Britain may find herself obliged to institute in the post-war years. To avoid these dangers and to ensure the best utilisation of sterling as it accumulates, we suggest that the present policy of repatriation of our sterling debt should be continued, that repatriation should be extended to British securities in India, that a limit of Rs. 150 crores to Rs. 200 crores should be set to the sterling securities in the currency reserves and that the excess of foreign balances over this limit should be maintained in gold or in dollars. To a demand in these terms, I said, the Britisher is apt to react in ways which it is not difficult to anticipate. I observed in my gossip of December 18, 1942:

"Britain's reactions to this demand can be easily imagined. It would, of course, be said that India is trying to feather her nest while the storms are blowing on others'. It would be argued that sterling balances would be much less if Britain had not agreed to the allocation of military expenditure so far in force. It might even be suggested that, when India is made to bear her due share of military expenditure, there would not be much of a problem about sterling balances with which to excite ourselves and worry others. Well, every one of these conditions has a sound answer."

* * * *

The occasion for giving these sound answers has come, now that the City Editor of the "News Chronicle" has also examined this problem and tacked on to it a highly suggestive reference to the generosity displayed by Canada in apparently similar circumstances. It is too early to expect to have in full the observations of the "News Chronicle" on this question. All that we have is the following despatch published in the "Patrika" of December 28 from its London office:

"After pointing out that India's sterling holdings now amount to no less than £340,000,000, which is an increase by £143,000,000 on the figure a year ago, notwithstanding the repayment of some £70,000,000 debt in the meantime, the 'News Chronicle's' City Editor says that with the final extinction of Indian Government's sterling debt now impending, the financial relations between Britain and India will be entering a new phase which will present difficult and complex problems, viz., the question whether any steps should be taken towards mobilising £300,000,000 of British commercial investments in India.

He reminds us that a similar situation arose a year ago in respect of Canada which cut the gordian knot with signal generosity by pressing on the mother country a free gift of a billion dollars designed to cover her 1942/43 war deliveries though not quite sufficient for the purpose."

* * * *

It will be seen from the above that financial circles in London are no less aware of the problem than we are in India. They, too, think of it as, in the main, a problem of transfer; with the difference, however that they think of an alternative to transferring the money to India, viz., transferring it to Britain. The City Editor of the "News Chronicle" has made, as I have said already, a suggestive reference to the generosity of Canada; the exortation to India to emulate the example of the oldest of the Dominions is better implicit than stated in bald terms. There has been indicated to us one source of relief from the **embarras de richesse** which India is now supposed to suffer.

* * *

I say, **embarras de richesse,** because that is precisely how, I believe, the British view our mounting sterling. And what is more, they are likely to have in the back of their minds the idea that this wealth is made possible by Britain's generosity; from which it follows that when it comes to the point of the donee being affluent and the donor being hard-pressed, the relation may not inappropriately be reversed. I had counted on this attitude; and though I could have forestalled this view and answered it in advance, I think it on the whole better that this aspect of the question should be considered after the veiled hint of free gift has been made in the British press. Free gift has its precedent in the last war; and the official mind may not rule out the possibility of repeating it in this. Doubtless, there are some at least in the country who would seek in the generosity of the nation a compensation for uneasy feelings of personal selfishness. Before any such free gift could be made, it is necessary that the public should be fully apprised of the facts connected with the growth of our sterling balances and the ability of India to part with any big slice of them. I take it that Whitehall will not decide on the free gift and then leave it to India to decide for herself whether she will look surly or whether she will have her face wreathed in smiles of conscious benevolence.

* * *

Now, as I said, the suggestion of the free gift comes of the feeling that India's sterling assets are in the nature of a windfall and that this enormous piece of good luck may well be shared with others. Some among the British, if not all, would think that it has been made possible by British generosity in the allocation of military expenditure. And there may be some among us, too, who think of the sterling assets as a windfall, though they may not connect it with the allocation of military expenditure. It does not follow from either of these assumptions that India must make a free gift of a part of her sterling balances to Great Britain. At the same time, the question of free gift can be considered quite apart from the size and source of our sterling assets. In fact, the proper criterion for deciding this question is our capacity to make the gift, which should be considered at the end of the war rather than now; for no one can estimate beforehand the loss that India may have to sustain in what remains of the war period.

* * * *

For the present, however, I should be content for my part to make it clear that there is nothing in the nature of our sterling assets to warrant the suggestion that India should make a free gift of a large part of them to Britain. The terms on which military expenditure in India are allocated between the two countries are quite irrelevant to the issue. It is no more correct to say that India should incur a bigger share of the military expenditure because she has large sterling assets, than to say that she has large sterling realisations because she has a small share of military expenditure. Surely, it would be hard to contend that when the financial settlement of 1940 was made between India and His Majesty's Government, the latter meant to be unduly generous to India or that it did not assess India's capacity to pay. In this question of India's share of military expenditure, the hard fact, which Britain cannot get away from, is the poverty of India generally and, in particular, her utter incapacity to produce munitions and other necessaries of war.

For this state, Britain has none but herself to thank; and the bulk of the military expenditure for India and in India must of necessity be borne by her. If, however, a case can be made out for India shouldering a larger share of it, India must meet it. That is all. In any case, it is unconvincing to argue that a free gift must be made because of a dubious leniency in the matter of allocation of military expenditure.

* * * *

I may now turn to the question of the sources from which our sterling balances are derived, to determine whether they are in the nature of a windfall the benefits of which we may share in a spirit of good fellowship with others. Now, our sterling securities to-day stand at about Rs. 460 crores to which we may add Rs. 240 crores already utilised for the reduction of our sterling debt. Of this total of Rs. 700 crores, I take it that Rs. 30 to 40 crores may be attributed to transactions in treasure; and if we remember that our silver has been sold on none too advantageous terms, our sterling balances are to this extent the very reverse of a windfall. The next item of which we may be fairly certain even in the absence of official figures is the balances of trade for the last three financial years amounting to about Rs. 160 crores. It must be remembered, however, that there are also eight months of the current year which must have yielded over Rs. 50 crores of normal favourable balance of trade. And what is more important, the published trade figures do not cover important items of supply.

* * * *

The amounts, which are above any suggestion of other people's generosity, account for what has been devoted to the reduction of the sterling debt. It may readily be conceded that what remains is by far the bigger part. But I can say without fear of contradiction that every penny that India has in London to her credit has been earned not only by the sweat of Indian brow but also by even more serious privation than mere work. If our accounts have been credited with the expenditure on prisoners of war, it is because India has allowed her inadequate stocks of food to be cut into for the benefit of these prisoners. If transport has been provided for foreign troops in India or for the theatres of war in the middle east, it is only after subjecting trade and the travelling public in India to untold hardships. If India repairs His Majesty's vessels or performs other services, it is at the cost of increasing the strain on the dwindling resources of consumer's goods. Who then can say that our sterling assets are a windfall or that we have got them without deserving them? Now, whatever the case for or against a free gift, I for one should insist that the sterling assets which are the tangible form of the privations I have recounted should be available in the post-war period to provide compensation as well as we can for the sufferings of the masses during the war period.

WALFORDS

(From Our Correspondent)

Bombay, December 29.

ONE more demonstration of the unity of the Press left Bombay quite cold. The Editors' conference has quite recently blessed the idea of excluding certain news for the sake of asserting the rights of the Press, but it is increasingly clear that some papers will not accept the directions of the Standing Committee. An Editor cannot be told by anybody what he has to do, and the kind of retaliation proposed seems fatuous. The antics of our Editors seldom depress this city which has to get on with its own work. Markets are tired and drooping. Steel shares have fallen out of favour; and engineering issues are flat. Bombay registered pessimism even before Calcutta developed nerves. The result is the downturn in share prices that has put investors off their game. Current form has been a disappointing guide so far, and there is once again a partiality for bank shares and preferences, not unnatural in view of the many advantages offered at present.

* * * *

There is famine in the Bombay Deccan. Drought is the old enemy and Bijapur is the chief victim. Famine relief operations on a new basis had to be carried out in the District at short notice. The Collector has been praised for securing a supply of millet for the people when stocks had fallen very low. But Bijapur will have many troubles till the next harvest. She is dependent on outside supplies, and attempts to get rice in Sind and Orissa are linked to the food situation in Bijapur. Somebody has started collecting for the people of Bijapur who can do little for themselves even if a rise of 41 per cent in the rice crop elsewhere has been reported. Clothes and fodder have been asked for the 5 lakhs of people afflicted by famine at present.

* * * *

There have been disturbances in many places largely attributed to high prices and short supply. Kolhapur has been affected like British India and arson and other crimes have been reported. No special measures or tribunals have been adopted in the State whereas Bombay has got its full quota of special ordinances.

* * * *

The Indians Overseas Department is going to register claims against the Burma and Malayan authorities. There has been an unofficial registry at work but the transmission of claims can be secured only by a Government agency. Certain claims will have to be lodged with the Commercial Intelligence Department, but others relating to assets in Occupied territory, for insurance or other payments due from Government will go to the new Department.

* * * *

The Burma Government can be addressed direct, but claims as regards non-Empire countries have to be registered with the Commercial Intelligence Department. Among the territories included is the Channel Islands. The Government concerned in this case is the British and not any colonial Government as in Hongkong. When the Department gets to work something exact will be known by India as to the proportion of recoverable assets. It has been explained in advance that there is no guarantee of settlement of claims. A non-sovereign Government cannot coerce another, and the Colonial Office is never likely to encourage Indian claims for compensation. Meanwhile, the London correspondent of the *Times of India* asks what is Britain going to do with those who surrendered Singapore. Punishment will be delayed by the slackness in evidence. The U.S.A. dealt summarily with those responsible for the Pearl Harbour disaster, but Indians, who have lost enormously in Malaya, cannot say anything about what should be done about those who failed in defending British territory.

* * * * *

There is still discussion as to who is going to come as Viceroy next year. The London *Spectator's* regret over the further extension of term is justified by the stern, unyielding speech of Thursday last. It has been said in a local paper that another extension is possible because an adequate successor may not be available even six months hence. But it is said rather hurriedly that Sir Roger Lumley may be made Viceroy. There is no precedent, it will be agreed, for such promotion, but that is not the only objection. The *Times of India* correspondent says a man of top calibre is wanted, and the London press has said ditto much earlier. Mr. Ward Price has discussed the question of Sir Roger Lumley coming back as Viceroy after going Home for consultation. Sir John Loder Maffey (Lord Chelmsforld's private secretary) has been mentioned. He is in Dublin as the U.K. Government's representative but his age 63 is a disadvantage. The unexpected may, however happen, and if Mr. de Valera were to say that Sir John would make a good Viceroy of India, Mr. Churchill would regard it as decisive, and give the prize post, even to a promoted Civil Servant. After all there is little to choose between Sir John Maffey and Sir John Anderson, except perhaps that Sir John Maffey has governed the Sudan which is much bigger than Bengal.

While General Wavell's recent remarks on the improved defences of India have promoted satisfaction there are some who dwell on German powers of recovery and Japan's will to fight. Mr. Joseph Grew keeps on warning the U.S.A. that the Japs are not incompetent people who have embarked on national suicide. He has said again that morale will never crack in Japan. There is no opposition in Japan. She is solid and united as the Axis countries are not. Japan has prepared for this war in a big way a long way ahead, and the China war has never taxed her resources. But Japan has a far-flung line to look after, and her navy is weakening. But only reconquest of all lost possessions will give the Allies a chance to beat Japan decisively. An early victory is held improbable because the Japs have miscalculated less than most of us suppose.

* * * *

Bombay has not been very excited over Mr. Aney's assurance to a deputation that went up to Delhi to ask for protection of Indian trade interests in East Africa. The Colonial Governments there intend to set up a special agency to import textiles from India. This causes alarm because the livelihood of thousands is threatened. The Commerce Department has been warned about this development in Colonial trade but that will not help much when the Colonies decide that co-operation is good for East as for West African colonies. The bazaar trade needs to be organised, and if exports are going to be limited in the future, there is good reason for regulating trade and prices. The mill industry here has no set views on the subject of a Colonial trade corporation. The coffee and other industries in Kenya are under control, and as all imports are carefully adjusted in the war period, the move made in the African colonies does not seem indefensible in spite of previous protests. The public here is alarmed by a new order relating to typewriters. Imports are impossible and prices have soared, but Government wants to capture the available supply. Special permission is needed for buying typewriters. The trade is alarmed, and the supply of secondhand machines is even more limited than ever. The best that the public hoped for was an offer to buy at regular prices machines like cameras or fieldglasses. Instead of that, virtual commandeering has followed. Distributors are likely to feel sore about the way in which Government wants to choke off private buyers. The order has made many private offices nervous as it is feared that requisitioning, instead of purchase, may be resorted to. There is a big demand for all makes of old, serviceable machines and it is felt that Government has once again interfered rather unfairly.

Stock Markets to-day and to-morrow

LATE RECOVERY IN PRICES

It was fortunate in a sense that markets in Calcutta remained closed at the time enemy air raids took place. For, otherwise, the psychological reaction of operators and investors to the reports regarding raids would have made itself fully felt on stock exchange values. In the earlier stages the decline in prices was not quite pronounced. With the long Christmas and New Year holidays there was a tendency to lighten commitments. Further enemy air raids on the Calcutta area had an unnerving effect and after the fifth raid the quotation for Indian Irons was reported as low as Rs. 28-6. The confident statements regarding the City's defences and the small damage caused by the raids, however, caused some covering. Bear covering and some small buying have resulted in a recovery in prices to Rs. 30-2 from Rs. 28-6 and the quotation is reported to be around Rs. 29-10 at the time of writing. The recovery in prices so soon after the raids is an encouraging sign and it may very well be that the depression in the markets proves to be very short-lived. As was pointed out last week, so far the Japs have not shown any signs of their ability to attack in force and cause any material damage to property. With the talk of an Allied offensive in the East, not against Burma alone, it is unnecessary to point out that there cannot be prolonged depression in the market. Before the budget proposals are announced it will not be possible, however, to expect any appreciable recovery in prices. The month of March, 1943 may perhaps witness the beginning of a new major upward movement. If the developments in the war situation prove to be very encouraging from the market point of view, and there are signs that they will prove to be so, speculation regarding the Central budget proposals may not have any effect at all on the market. The behaviour of the stock exchanges in the first three weeks of January is, therefore, worth watching.

* * * * *

The Bombay market has remained closed on most days during the past ten days. There has been some selling and Tata deferreds were noted as low as Rs. 1,460, a drop of over 150 points on the last quotation. Textiles and other issues have been marked lower in sympathy. In sympathy with the Calcutta market closing quotations should have been higher in that centre also.

* * * *

The accounts of the *Hukumchand Jute Mills Limited* for the half-year ended September, 1942 should make encouraging reading. The arrears of dividend on the preference shares for two half-years ended September 30, 1940, are to be piad .

* * * *

That the fall in prices is mostly precautionary will be evident from the fact that there has not been any appreciable improvement in values in the bullion markets. Closing quotations are only a shade better. There is a general tendency to await further developments.

* * * * *

A report was published recently in the daily press that gold also might share the fate of silver after the war. The consistent decline in production in the Empire countries is pointed out as a reason. It is no use, however, to speculate regarding the future of gold at the present moment. And it will be too much to expect of the average investor to shake off his love for the yellow metal. One thing, however, is clear. That gold will not enjoy the same status as before and that in the race for depreciation, appreciation or realignment of currencies gold prices in the *free* market will be very much lower than those obtaining in the 'closed' markets. With every possibility of India emerging as a creditor nation after the war it need hardly be pointed out that the postwar rupee price of gold will be definitely lower. All of which points to the one conclusion that, given the stability of our currency, there is a good future for equities. There will be selective buying. Shares of companies which are not in the combat area will be in great favour. Cawnpore shares satisfy the demand of investors from every point of view.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been somewhat usable, but interbank call money rate is unchanged, and the year-end witnessed nothing like the demand that used to be the feature in earlier years. January definitely opened amidst money conditions which are untrue to form. While, from the point of view of demand and ruling rate in the short credits market, there cannot be said to be much difference between now and end of November, other money market indices augur a gradual hardening tendency in the monetary world. Firstly, applications for treasury bill tenders have, for two weeks in succession, fallen considerably short of the total amount offered. On December 22, against Rs. 6 crores for tender bills offered, applications came only to Rs. 2,55¾ lakhs, while tenders received on January 5 were also small at Rs. 3,70¼ lakhs. Not for a long day have we known treasury bill applications being only about half of the total amount offered. These two weeks are also remarkable for the Government giving effect to the policy (strenuously advocated by *Indian Finance*) of rejecting unsuitable tenders. Against Rs. 6 crores offered and Rs. 2,55¾ lakhs tendered on December 22, total amount accepted was only Rs. 1,95¼ lakhs. The average rate of accepted tenders was Re. 1-0-9 per cent per annum. In the current week, the amount on offer was Rs. 6 crores, the amount of applications Rs. 3,17¼ lakhs, and the amount accepted Rs. 2,46¾ lakhs. The average rate of accepted tenders in the current week was Re. 1-0-11 per cent per annum. It is thus clear that, on the one hand, the Government seem to have made it clear that the maximum rate which they are prepared to pay for three months bills is 1 1/16 per cent. Banks and other usual subscribers for treasury bills, on the other hand, have not been as gushing with their applications as they have been for these many months. The latter factor need not, however, be construed as a sudden drying up of funds usually available for short-term investment.

For one thing, in the second half of December, banks are generally none too keen on making any investment; this is the time of the year during which banks like to maintain as high a cash ratio as possible. It is, therefore, no matter for surprise that the last two treasury bill tenders met with only a lukewarm response. For another thing, there is reason to believe that the considerable shrinkage in the amount of treasury bill applications is largely connected for by the Imperial Bank choosing to remain more or less aloof. The reasons for this are made clear by a study of the Imperial Bank's returns. Between December 25 and January 1, deposits of the Imperial Bank declined from Rs. 161.07 crores to Rs. 159.44 crores. Advances have risen by over Rs. 4½ crores to Rs. 32.64 crores. It is noteworthy that the bulk of this increase is connected with the expansion of the Bank's bill portfolio from Rs. 2.34 crores to Rs. 6.22 crores. The significance of this is beyond doubt. For year-end adjustments, many of the banks have had recourse to the Imperial Bank for rediscount of their treasury bills. This increase in advances of the Imperial Bank is, from this point of view, purely temporary. It also follows that, though the bank might not have subscribed for treasury bill tenders in this period, it has made up for it by taking up nearly Rs. 4 crores of treasury bills from the market. Equally significant is the decline in the bank's cash from Rs. 27.58 crores to Rs. 20.96 crores. With the Imperial Bank thus obliged to rediscount treasury bills of other banks and with Bank's cash declining by Rs. 6½ crores, no support was forthcoming from this quarter for the weekly treasury bill auctions. In a week or two, the treasury bills now rediscounted by the Imperial Bank will attain their maturity, and the bank will once again be in a position to resume its interest in treasury bill sales.

Secondly, the deposits maintained by member banks with the Reserve Bank have been consistently declining throughout December. These deposits were Rs. 61.47 crores on November 27; and they had come down to Rs. 47.49 crores on the first of this year. It may, however, be added that almost all this decrease is accounted for by the fall in the Imperial Bank's cash balance from Rs. 36.26 crores on November 27 to Rs. 26.96 crores on January 1. In the same period, the Imperial Bank has increased its investment portfolio from Rs. 106.28 crores to Rs. 115.86 crores. With treasury bills outstandings at over Rs. 100 crores, the largest single support has been forthcoming from the Imperial Bank. One may hazard the guess that well over 50 per cent of the outstanding treasury bills is held by the Imperial Bank. In such circumstances, if support from this quarter is not forthcoming in any particular week, treasury bill tenders must necessarily make poor showing.

The Reserve Bank returns for the week ended January 1 show another big-sized currency expansion. From the point of view of expansion of currency, it is instructive to study the developments between the end of November and the first of January. Sterling securities held in the issue department have risen by Rs. 53 crores between November 27 and January 1. As against which rupee securities have declined by Rs. 10 crores to Rs. 122.36 crores. That is to say, there has been an expansion of currency against sterling securities for Rs. 53 crores, which has been offset to the extent of Rs. 10 crores by the cancellation of *ad hoc* treasury bills. The net currency expansion is thus Rs. 43 crores. Notes in circulation record a rise of nearly Rs. 38 crores to Rs. 578.25 crores. Rupee coin has declined from Rs. 15.31 crores to Rs. 12.17 crores. While sterling securities in the issue department have gone up by Rs. 53 crores, foreign balances in the banking department have declined from Rs. 87.29 crores to Rs. 66.61 crores. Thus, the total net increase in the sterling assets of the Reserve Bank during December is of the order of Rs. 32 crores. The expansion of currency recorded in December is the highest monetary expansion so far known.

There should be a substantial reduction recorded in the next week's Reserve Bank returns in the total sterling assets of the Bank. The 3½ per cent non-terminable India sterling stock has been paid off this week. While this will mean a reduction in the sterling assets, rupee securities in the issue department of the Bank must register a substantial increase. With various issues raised by this final repayment of India sterling stock and the consequential changes in the Reserve Bank's position, we hope to deal in the next issue.

The exchange market has been dull except for a few export bills and for a moderate

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees six crores) of 3 months' Government of India Treasury Bills were opened on Tuesday, January 5, 1943. Total amount offered was Rs. 3,17,25,000 (Rupees three crores seventeen lakhs twenty-five thousand). Tenders at Rs. 99-11-9% and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 2 crores 46 lakhs 75 thousand the average rate of accepted tenders being Rs. 1-0-11 (Rupee one annas nil and pies eleven%) per annum.

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills will be received on Tuesday, January 12, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, January 11, 1943 at other centres. Successful tenderers should make payment on Friday, January 15, 1943, at centres where Friday is a holiday. Other conditions are as usual.

Three months' Intermediates will be sold from January 6, 1943 to January 11, 1943, at Rs. 99-12-0% subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from December 23, 1942 to January 4, 1943 amounted to Rs. 1,77,00,000 (Rupees one crore seventy-seven lakhs).

During the fortnight ended January 1, 1943 Government of India Treasury Bills for Rs. 24,23,50,000 (Rupees twenty-four crores twenty-three lakhs and fifty thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

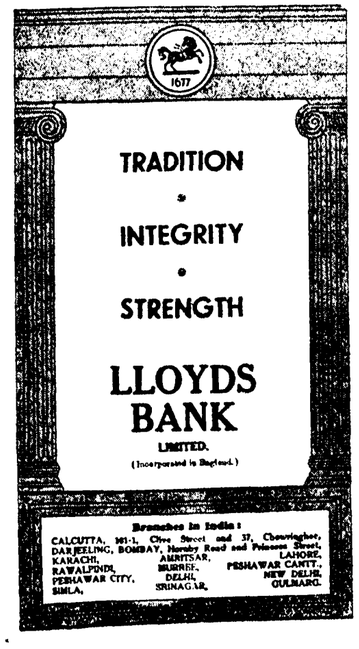
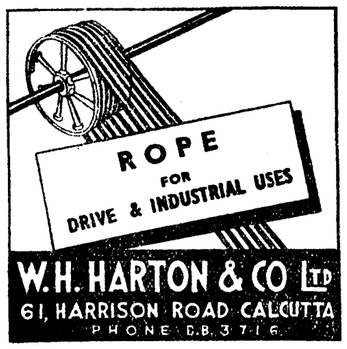
Finance Abroad

Thursday Morning.

THE London money market closed the year on a note of extremely slight strain. If the treasury bills rate rose by a penny, and the Bank had to help the market with cash, the market syndicate applied as usual for treasury bills. Banks were provided with funds by maturing of bills and Treasury deposits last week so that this week the response to short-term borrowing should be as good as ever. Anyway, Bankers' deposits had reached a record level last month. Moreover, the first quarter invariably brings more revenue and the higher output of industries should favour the Treasury in the usual manner. No estimate of Exchequer receipts and outgo has appeared apart from the statement that expenditure exceeds revenue by £2288 millions but it is certain that war outlay should be over £15 millions per diem at present. The advantage, however, lies with the Treasury still since taxation has reduced all civilian expenditure and the savings campaign is bringing results.



The firming up of the giltedged market towards the end of the year is also an auspicious sign. The market is fully reconciled to a yield of less than 2 per cent after tax and such protests as those made by the big insurance companies about the Beveridge Plan cannot upset giltedged. The big companies naturally referred to the necessity of retaining their industrial branch and objected to the extension of State insurance. But the objection based on their need to maintain overseas branches etc., cannot hold water and the Government may question it in regard to the expense ratio etc., and urge that the State would deal more fairly with the small payers of premiums. For the present, one must refer to the disappearance of 3½ per cent India stock in the daily list of quotations. East India loans are out of the jobber's reckoning and the only securities outside the list of Govt. Funds are Local Loans and Tithe Stock, both offering 3 per cent only. The firmness has raised the price of the Australian Commonwealth loan to 101¾. The rise is suggestive in spite of the Federal Treasurer's proposal to raise the level of taxtation at once in order to meet the increase in war expenditure. The rise of Old Consols to 33 on Wednesday is suggestive. The giltedged market has begun the year well; so has the Home Rail market, and every important group except perhaps gold mining shares. Attention may be drawn to the further rise in important industrial shares. Carreras A shares have shown some recovery, and Imperial Tobacco has again gone ahead. If there has been a setback in British Celanese, which went up rather sharply last week on dividend anticipations, there has been no fall in Courtaulds. Even a stock which has lost its former spell, like Associated Portland Cement has risen sharply, and the British investor has good reason to believe that the steady rise since August last in share prices will not suffer through war news. If Chilean stocks fell recently, the anticipated declaration against the Axis must help Lautaro and other active securities.



The most notable rise, however, is reported by oil shares. If Mexican Eagle is a bit under the weather, the news from Russia and Africa has helped Anglo-Iranian again. The rubber and tea share groups show no such rise if it is noted under Home Industrials, but the assurance that the ten-year old tea regulation scheme will be substantially renewed should help the tea share group, once the war situation to the east of India is cleared up.

The more important development of the week is the forecast relating to the Budget message to the U. S. Congress. An outlay of 100 billions is expected in the next fiscal year. That was guessed last month and the President's promise of pruning can be ignored. An increase of 22 billions on 1942-43 will come mainly out of the increase in national income. The pre-war estimate of 65 billion dollars is eclipsed by the most recent estimate of 135 billions. Tax revenue is put at 18 billions so that total available income will be 117 billions. But as the Treasury hopes to limit private consumption to 60 billions the prospects for the borrowing programme can be considered good. As is known, the December drive for the Victory loan in the U.S.A. produced 12.96 billions instead of the 9 billions expected by Mr. Morgenthau. Savings are going up, as consumption falls. That Soaking the Rich will be the unintended effect of the budget has been indicated in advance. The maximum private income of $25,000 a year will not help the fortunate classes. But it has been noted already that the U. S.A. will be better off than all countries at war. If the Treasury counts on raising $57 billions by borrowing and get $18 billions on its own present estimate from taxes, there will be a further gap of $25 billion. Since inflation is ruled out, only a curtailment of personal spending can produce the results required.

The new Congress will have to accept the big deficit and provide for a war effort equal to 55 per cent of the gross national income, at least to raise it to the British level. But the sacrifice will be largely a means of better distribution of wealth. Since borrowing at less than 2 per cent subject to tax raises no fear of the transfer of wealth the U. S. Treasury will go on its way. After the declaration that war is the outcome, not successfully averted, of others' aggression in the ten-years between Makdin and Pearl Harbour, here is no escape for the U. S. tax-payer. But the tax-payer will be satisfied by the assurance that U. S. war output with four ships a day in 1943 instead of three in 1942, will advance to the point at which it will be double that of the Axis Powers and exceed that of the rest of the world. The stock-pile position is said to be better and strategic material supplies are to be expanded in the next few months. Steel output is expected to rise by seven million tons this year since the U. S. Steel Corporation alone hopes to open six new plants in the first half of 1943. Wall street, however, shows no important change over a long while. The stock market, in spite of a firm opening on most days, is a depressed area. War production will mean bigger appropriations for lease-lend since the extension of the Act of 1941 is deemed certain. As the United Nations help the U. S. A. in proportion to their resources according to the Australian Minister of Supply, the new Congress can make no difficulties. Australia has tightened up import control again. Even mineral waters come under the new ban, and the best hope for an early victory is bigger supplies and more shipping, both from the U. S. A. necessarily. As to the last, the statement of Admiral Emory S. Land sustains hope. A total output of 14¾ million tons is expected in 1943. The U. S. A. will be the biggest power in regard to both navy and mercantile marine after the war. There will be no need for special subsidies if 20 million or even 18 million tons are added in a year. From May the shipping construction rate will be 5 ships a day, if materials are available. This has special interest for steel-makers and ship-builders alike in Britain where the shipping problem has remained acute even if more than 500 German submarines have been sunk in the war at sea.

Advance in U. S. mineral production supports the estimates of a big increase in war output. increased by 10 per cent in 1942 but Mr. Harold Icks is not satisfied; he wants more. Guatemala is to help with scrap rubber; and Brazil is going to help with mica and, rock crystal. A recent report said that Brazil is increasing her steel output and a new mill will produce 400,000 tons per annum. She will give the U. S. A. about 150,000 tons of rubber by 1944 by developing production in the Amazon Valley. Brazil has big plans to raise food exports after the Allied victory. Brazil incidentally gave up the milreis currency in November. From November 1, 1942 the unit is the Cruzeiro. Dr. Vargas, apart from reforming and stabilising the old currency, has established a new currency provided for by legislation in 1926. It was noted in October that new banknotes and coins will be issued, but for a time the new and old tender will be used concurrently. The milreis has not been demonetised. The date will be fixed later, said the M. G. in October, as the main purpose was to force out hoarded notes, many of which were believed to be in the hands of Axis agents. The new Cruzeiro currency according to decree was based as to 23 per cent on gold and bills of exchange. Brazil prepared plans to raise a war loan of 63 million contos (a conto is equal to 1,000 milreis) Brazil was and is on the exchange standard like many other countries before the war. But Brazil does not apparently know cheap money, as the war loan referred to was issued at 6 per cent, with redemption date to be fixed after the signing of peace.

The Food Problem

The facts of the food situation in India are slowly asserting themselves, despite the soothing talks with which official spokesmen have been endeavouring to give the people a sense of false security. As may be expected, Bombay was the first to feel the shortage of supplies. For one thing, it is an industrial province, and with industrial development there always goes a dependence on external sources for food supplies. While the wheat-eating province of the Punjab tightens its grip over its own stocks of wheat and stocks of rice in the rice-eating provinces of Bengal and Madras have not touched the bottom level, Bombay, which consumes both rice and wheat and produces but little of either, has begun to feel the lack of the latter very acutely. It is sometime now since the appearances of sufficiency ceased to be kept up. The queues in front of the Government grain shops were not only long but spread fanwise according to certain well-understood classifications of consumers. Even four months ago, there was talk in Bombay of arrangements being complete for the introduction of a system of rationing foodstuffs. And now the Government of Bombay have felt obliged to pass a freezing order, calling on all holders of stock of wheat to declare their holdings and forbidding them to dispose of the wheat without the Government's permission. It is now being freely said that within a short time rationing would be introduced into the Western City. And this, we may be sure, is only the first of the unwelcome signs and consequences of a shortage of foodstuffs.

If Bombay has been the first to pass a freezing order, it hardly means that other Provinces are in an altogether comfortable position. The task of treating Ceylon from our famished cupboard has fallen primarily on the Southern Presidency; and one of the Advisers is reported to have appealed to the people to eat less rice and more of other grains, though the Government of Madras claim to have bought large quantities of rice for distribution to the people at a proper price. In the Punjab, both the Provincial and the Central Governments are buyers of wheat at rates higher than the control prices. And in New Delhi the feeling seems to be prevalent that the co-operation of the surplus Provinces in securing an equitable distribution of foodstuffs all over the country leaves much to be desired. It can no longer be pretended that public apprehensions about the shortage of food stocks and the difficulties of consumers out of all proportion to the extent of the shortage are unfounded or exaggerated. A situation has been allowed to develop in which not only panicky individuals but also rival agencies of different governments and different governmental authorities are bidding for rice and wheat and increasing the confusion.

The first need in the present position is for the Government to make it clear (1) that they will not be deterred by any difficulty, administrative or otherwise, from getting full control of the food situation in the country; (2) that they will spare no pains in augmenting the available stocks firstly by imports from abroad with a view to relieve the immediate problems and secondly, by ensuring larger production within the country in the months to come; and (3) that they will allow no unfair or external demand to cut into our stocks of food. Such an assurance followed up, without loss of time, by a comprehensive scheme in regard to food production and distribution will go far to allay the prevalent panic and prepare the ground for the smooth functioning of the schemes that may be formulated. Considering the present position in the country, it is well that the Commerce Member has been touring over the country and utilising every opportunity not only to declare his eagerness to apply himself to the food problem but also to throw in a few hints about the action he is prepared to take. Mr. Sarker has hinted only recently that a ban on exports would be laid without hesitation or compunction. It is understood, too, that efforts are being made to procure wheat from Australia in order to relieve the pressure here. And it may be presumed that, since Mr. Sarker took charge of the newly constituted Food Department, he has been hammering at a new scheme for the control and distribution of rice and wheat. If the work of the Food Department warrants it, we would urge on Mr. Sarker the value and importance of an official statement setting out the position as it is, the measures that are being worked out or considered and the salient features of the scheme which the Food Department is now busy drawing up.

We trust that in drawing up its schemes of food control the Food Department will give due weight to the various factors in the present food situation. Officials, as a rule, are apt to indulge in one of two extremes, either an apathetic indifference to problems as they are assuming formidable proportions or undue reliance on the powers of the government to achieve whatever they set their minds on. Hitherto, in spite of the attempt made to control prices or to acquire stocks of grain or determine the volume and direction of movements of foodstuffs, it remains broadly true that the Government did not think of taking the food situation in hand and instituting a comprehensive system of control. They have trusted to measures like the "grow more food campaign" promulgation of anti-profiteering ordinances, announcement of control prices, spasmodic buying and despatch of quantities of grain to different places. Now, after more than a year of this policy, they are apt to swing to the other extreme of commandeering of production, complete control of stocks and rationing of foodstuffs in large areas. Greatly, the food problem to-day falls into two major divisions; one of augmenting the stocks and two, of utilising the available stocks to the best advantage. Without harping on the blunders of the past, we may examine the problem here with a view to deduce a few leading principles.

In regard to the augmentation of food stocks, we have already drawn the distinction between the near view and the distant. No elaborate analysis is needed to arrive at the conclusion that immediate relief is to be sought in imports from friendly neighbours. There can be no doubt that Australia can help us with her surplus of wheat; and so far as this commodity is concerned, the position can be radically changed with an import of, say, 500,000 tons from Australia. And as for the year ahead, there is no reason to think that any acute shortage will be felt even in the absence of imports. To some extent, the scarcity of the present is artificial. The knowledge that the Government are in a position to import wheat from Australia, should the need be felt, would suffice to check the hoarding movement or the reluctance of producers to part with their surplus. And, if in the course of the next two months, the machinery of food control gets into working order, and is widely recognised to be both efficient and benevolent, the wheat situation will offer no special problems.

It is slightly different with rice, in as much as we start with a cut in our available stocks and a biggish draft on our slender resources by Ceylon. The strain is felt more keenly because Ceylon has such poor claims on our generosity. Nevertheless, there are, according to the Commerce Member, certain past commitments which cannot be repudiated except with the fullest justification. Now that they have been met in the letter and very much more in the spirit than our relations with Ceylon warrant, these exports must cease. But the only source of immediate positive relief lies probably in the speedy success of the Burma offensive. And the Food Department cannot afford to make its plans on the probable results of campaigns and particularly on the time factor involved therein. It may be said, therefore, that in as much as there are no external sources of supply, relief for the rice situation is to be sought in an energetic drive for new production. If we are not mistaken, land for cultivation of rice is more easily improvised and over wider areas of the country than land for wheat. If the Irrigation Department and the Revenue Department work hand in hand for bringing more lands under rice or for raising a third crop wherever possible—and it is possible over wide areas in the South which are irrigated by canals—then the rice position will be distinctly brighter before present stocks run too low. In the case of rice then, the near view and the distant tend to become one.

We may now turn to the question of the utilisation of existing production. Here, we consider it extremely important that no section of the people should be frightened into antagonism. When the feeling of shortage is universal, the longing to cling to whatever one has in hand is a most natural impulse. Where the producer is himself a consumer of part of his produce, the demand for the sale of his output has the ugly look of forcibly taking the bread out of his mouth. The provincial governments would like to figure as the guardians of the cultivators and people of their province; though here it is extremely significant that, while the two self-governing provinces of Bengal and Punjab have been none too free with their rice and wheat, Madras which is under the Adviser regime has been generous to Ceylon. It would seem that some degree of supercession of provincial authority is a necessary element of all-India control of food supply. Likewise, trading in grain must be a government monopoly at least in principle, for which the State's ultimate ownership of all land provides a useful and instructive analogy. We say, trading in grain, because the right of the owners of the land and the labour engaged in cultivation to get their requirements from their own produce must be recognised. There is no reason why, otherwise, stocks, of grain should not be bought, controlled and distributed by the Central Government, that is, by its properly delegated authorities.

The other great danger in going all out for complete control is the fascination of the idea of rationing. The dangers of rationing may not be readily or widely recognised. But it must be granted that to advocate rationing of foodstuffs is to transfer to this country an idea borrowed from quite different conditions. The administrative difficulties are obvious. But the more serious part of it is that the introduction of rationing is bound to accentuate and exaggerate the fear of scarcity and to release all the forces which such fear usually engenders. In other words, rationing, while it has all the look of greasing the machinery of control at one point, will tend to clog it hopelessly at others. Public sentiment will find the idea of rationing in the oldest agricultural country altogether revolting. We believe the success of control lies in discouraging the idea of scarcity in the public mind and not advertising it by seeming to withhold things from the consumer. The Food Department must get a move on, if the situation is not to suffer further serious deterioration.

PLANTATION PROSPECTS

There appeared last week a cable suggesting that the ten-year old International Tea Agreement due for renewal in March is sure to be renewed soon. The Governments interested are said to favour a modified agreement but one accepting the principle of control in the interests of producers with consumers' interests being adequately protected by Government representatives. The cable indeed suggested that the agreement instead of obtaining for two years after the war might become a permanent feature of the world economic order. Since the 125 per cent quota in force at present involves no departure from the principle of control, many besides investors in Indian tea companies would do well to take note of what has been said last week as to the chances of a revised agreement in March 1943.

Experience is conclusively in favour of regulation of exports and the stabilisation of the tea industry's earnings at its present level is the main aim of any proposal directed to increase the quantity of tea without raising prices beyond the approved limit. It is singular that no comment has appeared so far on the important news which reached India last week. A pointer was indeed furnished by a cable describing the rise in tea shares in London and the average investor's definite partiality for a return of 7 per cent available on many sound tea shares. If the two news items are linked, as they should be, it might be said that 1943 is going to be the year for plantation industries. Since coffee prices have firmed up rapidly in South India of late it may be fairly argued that another branch of tropical agriculture reckons on undivided prosperity.

The usual statistics of acreage and output have little bearing on plantation prospects. In the year 1942 there have been vast and far-reaching changes in regard to both tea and rubber. They will persist after the war and the maintenance of international agreements without curtailment of production but definite expansion of output is not peculiar. The principle had been accepted far earlier in regard to tin and copper, and the extension of the quota above standard to both rubber and tea in the war period was simply an admission that world production falls short of demand. Since the British Government, representing the U.K., the principal consumer of tea, is to supervise arrangements under the regulation scheme, there is little risk of producers embarking on a mistaken policy of forcing up prices. But the direct recognition that the plantation industries have a future that must be safeguarded promotes them to the position of a sheltered branch of agriculture. It is on this view alone that one should proceed to evaluate prospects for the immediate future.

In the case of rubber restriction of output has been abandoned and the Ministry of Supply has expressed interest in developing production in India as in Ceylon. The Control order issued in December emphasised that the maintenance of prices was subsidiary to increase in output. The transformation of the Indian rubber outlook is admirably reflected by the new plantation prospectuses. New issues have gone at once to a premium, for rubber's improved prospects are not governed by the war but by the progress of Indian manufactures in the war period. The search for substitutes does not affect tea and it is only in the case of tea that share prices have moved less rapidly in response to the great changes. It might be said here that an agricultural income tax either in Madras or the States would affect the position of the producers to no greater extent than in Assam. Plantation labour is both docile and trained. Wages are relatively low, and if the sale prices have shaded off in December, it might be pointed out that the average for the 1942 season is far above that for 1941. In no branch of agriculture has the producer fewer difficulties. The market is assured; the price is guaranteed, and steps taken to conserve supplies for the home market in the case of tea as well as rubber. There can be no check to the expansion of consumption. The recent decrease in the tea export cess was merely an indication of larger exports to come and reduced expenditure for propaganda.

The certainty that the Tea Control Act of 1933 will be passed again in March 1943 indeed confers a degree of stability that makes all commercial crops unimportant as compared with Indian tea. It is true that some Indian planters dislike regulation of exports and regulation of crop under the agreement equally. They are apparently in favour of going back to the pre-restriction policy, since acreage has risen by ½ per cent only in ten years, and the country wants more tea for both internal consumption and export. This view is, however, that of the minority. It has been made clear that expansion of the acreage under tea is not called for even if the export quota for India is raised over 50 million lbs. within a year. The field for new enterprise is limited. Compared with rubber the tea industry is mature and the place for fresh entrants hardly exists.

The substantial merits of restriction indeed deserve to be studied against the pleas for extending tea cultivation. The Dutch East Indies may prove a rival as in the past, and China with her plans to make tea a big item in her export trade in wartime may compete with India in the U.S.A. The fact that estates have, in most cases, areas for fresh planting must be considered whenever arguments on behalf of small tea-growers, with an interest in any move away from restriction, are presented. There is as yet no certainty that Russia is going to depart from self-sufficiency and is going to become a large customer for Indian tea after the war. The major argument against fresh planting is that the capital cost and the period taken by an estate to come into bearing must be duly considered in relation to prospects. New planting can exert no influence on prices for years. And the control of prices based on the Food Ministry's contracts seems to work out better than presumed. It is only in this light that suggestions for new planting must be considered inexpedient. If older areas drop out, there is invariably a reserve acreage to fall upon. But that reserve can be developed without fresh capital going into the industry, and the main point to consider again is that existing producers must be guaranteed a due measure of protection by a promise that the threat of overproduction will

not materialise. The British Government, owing to dominance of British capital in the tea industry in India, may be said to have reached a view that cuts across all pleas for the extension of the area under tea.

It is, of course, arguable that tea is scarce and dear in many places, but the Indian Tea Association through the I.T.M.E.B. has pronounced in favour of moderate prices. It has not indicated as yet its views on the claim made that India should increase the area under tea. Both land and labour are limited, and there is the further point that both must be reserved for additional food production this year and even afterwards. Since tea in regard to acreage and capital is more important than the rubber industry, which is essentially a postwar development, the arguments against fresh planting have equal, if not greater force. In regard to rubber there are definite provisions in the Control order against undue extension of the area under rubber. It must be observed that the tropical islands are infinitely better placed in regard to both tea and rubber than India and such specialisation will reappear after the war. It is then to India's interest to make use of improved prospects without agitation against international agreements to which she must be a party, mainly on account of the British stake in both these plantation industries. There can be no Indian view as against the British view in either the tea industry or the rubber industry. Further, to utilise a carefully built up reserve for extension of acreage in either case would be less useful than the adoption of more scientific methods for raising the outturn per acre. The last certainly offers greater possibilities of advance and the investor's interests would be safer under a scheme of control prescribing an export quota. It is obvious that expansion in non-regulating African colonies cannot be adduced as an argument in favour of any departure in policy. Above all, there is the claim for the protection of existing investments by adherence to a policy that has pulled up prices from the low level of 1932 in the case of tea and rubber alike. The variations in quota from year to year have afforded due protection to the export trade. And for us the maintenance of tea exports at a high level regulation appears all the more necessary as cotton and jute have been displaced by tea as the single largest item in India's exports. The bulk purchase scheme and the ban on exports to out-markets, afford, in any case, a guarantee against profiteering. A third safeguard through extension of tea cultivation would seem superflous. In the postwar period India may have no assured prospects as at present, and the views of individual planters on this question must be deemed unimportant as compared with the views that will be put forth in the Central Assembly on the question of the continuance of control. It has been indicated that control is desirable, as in the past ten years and as the Government is in a position to skim off excessive profits and limit the rise in prices in the case of both tea and rubber, its views should prevail as against a minority which thinks only of India's temporary supremacy.

JUPITER GENERAL'S RAPID ADVANCE

Successful operations, year after year, proclaim the Jupiter General's stability, efficiency and progress. The Company's expert management, profitable and safe investments and huge paid-up capital inspire confidence amongst its policyholders. There are many attractive policies to meet every individual's requirements. LIFE BUSINESS figures of the last three years are more than encouraging.

Here are the Figures :—

	Business Proposed Rs.	Business Completed Rs.
1940	25,79,500	20,86,000
1941	54,30,075	44,82,875
1942	over 82,00,000	65,50,000

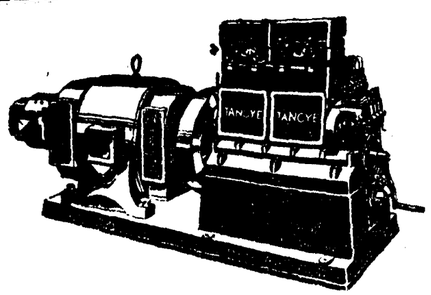
The Company wishes to convey its sincere thanks to its policyholders, agents and staff everywhere for their continued support and assistance.

THE JUPITER GENERAL
INSURANCE COMPANY, LIMITED
(Incorporated in India in 1919)
Fort, BOMBAY

Editorial Notes

India's Need Of Minerals

It has been made known recently that Sir Thomas Holland will report to the British Association on minerals. As the author of the Mineral Sanction, Sir Thomas might present new ideas. Equally new ideas have been presented by Mr. D. N. Wadia to the Indian Science Congress. The enormous use of minerals in the war certainly calls for post-war conservation measures. That is why he has asked for an International Directorate to work out a policy designed to promote satisfaction among countries unequally endowed by Nature with mineral wealth. Unequal distribution and limited access have produced friction in the past. To convert such unequal distribution into a means of co-operation should be the chief purpose of post-war planning, according to Mr. Wadia. Between the two world wars, the use of minerals has developed amazingly. Every future war would lead to the depletion of minerals. Mining enterprises thus have a greater stake in the maintenance of peace than imagined. A central world organisation would also help to convert war equipment for peacetime use. Wars have always had economic aims such as control of minerals. Since India's mineral industries have developed satisfactorily in the war period Mr. Wadia was satisfied, as also with the response of scientists to the call for war workers. India's resources have been described by Mr. Wadia as satisfactory in several respects. Mr. Wadia did not describe the expansion of mineral output in detail, but everybody must rejoice in Mr. Wadia's description of the war effort, undertaken without previous apprenticeship. He called the war effort the greatest event in the cultural life of the country even as research has developed and industry has progressed. The machine age has descended on an India prepared to work for herself. If the central world organisation provides India with essential minerals, hitherto not available, the position of Indian industries after the war should be better than currently imagined. Access to the Colonial raw materials is promised for Allied nations by the Atlantic Charter but India is not covered by the Charter. If the benefits of the war period are to be retained, India must have a share in African wealth, and much hope will be, therefore, excited by the report of a visit by a Belgian Mission from the Congo.



Postal Traffic

Figures relating to postal traffic in India have their own meaning for one of the revenue departments of the Central Government. The war period certainly has seen a steady growth of traffic, and consequently of revenue. The growth is as marked in relation to money orders as to letters. From 1937-38 more letters, postcards and packets have been carried and the biggest chance is again in regard to registered parcels and telegrams. Foreign telegrams have increased since 1940-41 like registered articles of the letter mail. The first quarter of 1942-43 witnessed a proportionate increase after the rise in traffic in 1941-42. The figures provided in the Monthly Review of Business Conditions in India establish the fact that higher rates do not lead to a decline in traffic. If the figures relating to unregistered parcels are not available, there is no doubt that the cold weather stimulates telegraphic communications. The peak however was touched in March, 1942 in regard to telegrams and registered parcels alike. In regard to ordinary postal traffic the cold weather of 1940-41 was exceptional in showing a small decline in the number of letters carried. The consistent increase in the number of registered newspapers carried by mail was apparently checked in 1940-41 but the succeeding year saw a recovery, well beyond anticipations. It is only in regard to books and pattern packets that a decline occurred in 1941-42. Both of them must be affected by the limited opportunities for both publishers and the makers of patterns. The total number of letters carried in 1941-42 exceeded 541½ millions. There was no fall in the number of postcards despatched and delivered, while more unregistered parcels went by post in the half-year ended March 1942 than in the preceding year.

The utility and reliability of the Indian postal system is duly reflected in the expansion of traffic in wartime. Further, it may be added that the war has stimulated correspondence owing to the despatch of Indian troops abroad, but it must be said that the development is largely the result of educational advance and economic development. One need not dwell on this proof of moral and material progress in order to show that the postal revenue keeps step with the increase in correspondence. Larger surpluses have been reported by the department in recent years since the Telegraph side ceased to show a loss but what share of the increase is really due to the advance in rates cannot be indicated. The increase in money orders, issued and paid can, however, be attributed to the increase in the note circulation. The volume and velocity of circulation cannot but affect the volume of remittances by post. That the number of foreign money orders issued in the war period has been more or less stationary can only be ascribed to the existence of many restrictions on the export of capital and payments abroad.

A New Rival Of Jute

Another Caribbean fibre is being encouraged at present by the U.S. Government. Experiments to determine the commercial possibilities of the malva blanca of Cuba for making sugar bags have been reported in November. Owing to reduced imports of jute and the concentration of purchases by the Defence Supplies Corporation. U.S. interests are encouraging the experiments to be conducted by a Cuban firm. The Board of Economic Warfare and the Defence Supplies Corporation have made a contract and the first crop from a 300-acre farm was expected in December. If the fibre answers expectations it is known that the farm will become a source of seed for extended operation next spring. Malva blanca, otherwise known as urena lobiata is akin to the Venezuelan plant malva real. The plant grows in both Cuba and Venezuela. It has been claimed that the fibre can be turned into bags for sugar, flour and coffee at a cost no greater than that of jute bags and that the bags in some respects, such as resistance to water, will be superior to jute bags. In this connection, it has been noted that Cuba needs thirty million bags in a year for rice, coffee and sugar. The malva blanca plant is said to yield about 2,000 lbs of fibre per acre and two crops in a year are possible. Slightly less than three pounds of fibre are needed to make a raw sugar bag to take 325 lbs. Senor Inerarity of the Cuban Agricultural Education Bureau believes that the experimental farm will give seed to plant 9,000 acres in 1943 which should give two crops. The Cuban Sugar Institute has arranged with Senor Joubert of Venezuela to set up a factory to use the malva blanca fibre for making bags in Cuba. The factory's estimated output is 6 million bags per year. The new fibre industry is expected to give employment to 60,000 to 70,000 Cubans in the fields,

according to Senor Inerarity. A note in the Jute Committee's bulletin adds that of all the countries in the New World the largest consumer of sacking gunny bags manufactured in India is Cuba. In fact, India has been the chief source of supply for Cuba. During the five years preceding the outbreak of war, the average annual export from India to Cuba was 19 million bags. The total value of Cuba's jute trade with India amounted to more than Rs. 50 lakhs per annum.

The Nation's Food

The Hindu Mahasabha, apart from recording its views on the food supply problem, asked that the commercial community's views should be considered from time to time. Considerable significance attaches to the Sabha proclaiming an interest in the supply and distribution of food supplies in India for the poorer classes. It is not 'mass contact' which is the principal aim, but a realisation of existing defects in both transport and distribution arrangements. The objection of commercial interests to exports abroad of food supplies was endorsed in the Cawnpore resolution. Reference was made to hardships in Bengal, but the hardships are not peculiar to this province. Acute scarcity has been reported from Bombay where food riots have taken place in one district. The problem is not absent in Madras where the import of rice is supervised as part of civil defence measures. The Mayor, however, had ordered a conference to discuss the shortage. What is clear is that the Food Department will have to curtail its takings. The civilian will have to be considered because morale has to be maintained. It is not surprising that assurances as regards food supply to-day and special measures to distribute stocks have followed the Calcutta air raids.

The Mahasabha resolution said nothing as to the bearing of food supplies on morale but it was implicit in its ready acceptance of the views of Indian commercial organisations. The problem of price control has now become subordinate to the graver question of supply. Rationing of rice is to be accepted in Bombay according to recommendations made by the Food Advisory Committee. The Punjab has declared its inability to give more than 20,000 tons of rice and millets to Bombay. The affirmation that exports must be covered by official permits and the purchases of the Central Government will not be interfered with does not obscure the fact that the Punjab surplus is small and food exports are generally frowned at. It has been reported that in Bombay many employers have been made aware of the food shortage by short strikes towards the end of the year. Cheap grain shops have reduced their supplies to millhands. Imports of rice and wheat have not materialised, and the problem in Bombay has evidently not been solved by the freezing of local stocks since December. Reports from Delhi last week suggested that wheat was universally scarce. Queues waited for hours to obtain little doles, said a newspaper despatch, which declared that between the profiteers and the subordinate railway staff in charge of wagons, the problem is assuming formidable proportions. The New Year has not started well, if one can go by the many reports of scarcity. The import of wheat from Canada or Australia may be advised, but shipping remains an obstacle. To the suggestion that lease-lend can be stretched to provide U. S. wheat for India, the same objection will be offered. The old gesture of encouragement of imports by abolishing the wheat duty cannot be repeated because the Dominions have reduced their normal surpluses in order to develop dairy farming at home. World agriculture has been transformed by the war and Argentina's large surplus is at present more remote than Australia's smaller crop.

Exchange Control

Exchange control in practice has varied effects on foreign trade as well as currency circulation. Britain has defended sterling by might and main since August 1939 and the story has been told again by the "Economist" which shows that all Empire currencies have been defended with equal success. The British Treasury, by centralising all dealings in foreign currencies through the Bank of England, provided an example. The sterling area did not include Hongkong until August 1941 but, within the large area, freedom was retained. The Defence (finance) regulations were supplemented by financial agreements. Registered Accounts came into operation and Special Accounts were also created. Payments were restricted in order to prevent depreciation of sterling in neutral centres. In March 1940, official orders were issued to secure full payment in foreign exchanges for specified exports. Indian jute, South African diamonds and Scotch whisky became specially important in the Treasury's eyes as sources of hard currency. All trade was directed to procure additional exchange just as holdings of foreign securities were commandeered to strengthen foreign exchanges. Non-residents were given a chance to maintain their sterling area accounts. Blocking of assets was however accepted as inevitable, but the blocking did not interfere with payments to be made for dependents, insurance premiums, donations etc. The export of capital was prohibited and as from November 1940 repatriation of capital by non-residents was also forbidden, except proceeds arising from sales of Savings Certificates, Defence Bonds and Treasury Bill maturities. The option to invest in British Government securities was given to holders of blocked accounts and interest payment was provided for.

The Weakening Axis

Estimates of economic warfare in 1943 necessarily dwell on the strain in Germany. According to a recent cable received by the Associated Chambers, the Swedish newspaper "Goteborg Handels Och Sjorfarts Tidning" does not believe Dr. Ley's claim that Germany has yet to reach the peak of her production in war industries. Indications have increased, says the paper, which make it appear that German war effort has reached, or has already passed its peak, and that a decline rather than an increase of war production can be expected in the future. There is a growing impression that the productivity of German workers has begun to decline owing to their tiredness. When wages were recently improved in the mining industry it was explicitly stated that this was due to the decline in production. The Germans do not seem to have expected the war to last longer than two years and all calculation were made on that basis. A colossal programme for the building of locomotives and wagons has, therefore, become necessary. All national stocks of war materials having been consumed, the Germans have extended to the production of substitutes which are now needed. German superiority in armaments is thus definitely a matter of the past. The view is endorsed by the distinguished Swedish economist, Tonnderf in his opinion that Germany has now consumed her material as well as psychological reserves and the fact that she started re-arming before other countries has therefore become a handicap to her as she had enjoyed the initial advantage. Britain's stand has enabled the United Nations to summon up a war effort at least three times that of their three opponents.

The German anxiety to drain Norway's resources by deliberate expropriation of the middle classes like the inablity to keep commandeered enterprises going is a pointer to increasing weakness. Reverses in Russia are ascribed to shortage of fuel caused by the failure of transport over the occupied territories. The fourth winter has also brought Italy to realise her weakness. The Trans-Ocean Agency has reported that civilian mobilisation hitherto applicable only to war industries and essential services, has been extended by a decree to all industrial establishments in Italy. The decree states that workers are considered mobilised and must not in future leave their work under any circumstances. The German News Agency also reported that janitors, hotel porters and personnel guarding industrial plants and warehouses were included in the decree and were under the same discipline as soldiers. It is clear that in spite of the Messagero's explanation, that the decree is needed for continuous and regular production, it was inspired by the fear that workers would flee for fear of the R.A.F. raids and leave machinery idle. The panic that followed the Genoa and Turin raids caused an almost complete shut-down of civilian as well as war industries.

Air War In 1943

The R.A.F.'s confidence in its offensive power is based on its big achievements of 1942. Italy too received for the first time the full weight of bombing operations and the sweeps over Occupied territory have been assited by U. S. aircraft. The last U. S. attack was on Lorient—the U-boat base in Britanny. From the operations at St. Nazaire to the smashing blow delivered by the Lancasters on le Creusot, the story is one of strict dealing with all German resourses in Occupied territory. The Philips factory at Eindhoven has been attacked in 1942 like the M.A.N. engine plant at Augsburg earlier in the year. The R.A.F. and the Air Ministry hope for even more after attaining full parity in the air. The addition of new aircraft like the Mosquito and Marauder, the Lockheed Lightning and the Curtiss Warhawk has given a new punch to the blows being delivered, but the main burden must fall on the heavy bombers always. Germany has no aircraft comparable to the Short Stirling and the Avro Lancaster. It is not only shareholders in Short Bros. (Rochester) and A. V. Roe who must feel proud of what the British aircraft industry has achieved. That aircraft output in 1942 rose steadily has been explained in every analysis of British war production. But the superiority in the air, attained only recently in the Mediterranean theatre is of greater consequence for the immediate future. That heavy bombers alone count in modern war has been proved once again by the raid of December 26-27 on Bangkok by U. S. aircraft. The naval dock area, the arsenal and the aerodrome were the chief targets. From China, Upper Burma has been attacked and the regular sequence of raids on Occupied airfields must be taken to mean that Washington's view of raids on Calcutta as insignificant is wholly correct. In the Pacific theatre, U. S. bombers have delivered a big blow at Wake Island, and the imminent expulsion of Japs from both New Guinea and the Solomons is the final measure of what has been secured by Allied superiority. It is still growing as may be inferred from the desultory raids on coastal towns by the Luftwaffe and the poor resistance shown in Crete where Heraklion and other towns have been attacked continuously. The air war from April has been a bombing war. Both bombs and aircraft count, and the Allies have more of both as has been proved by the small-scale reprisals in the winter which is wholly different from that of 1940 following the Battle of Britain.

The only Authoritative & Indispensable Annual Reference Book for the Indian Cotton Textile Industry

THE INDIAN COTTON TEXTILE INDUSTRY (1942 ANNUAL)

Vol. VI

With a Foreword by

Sir CHUNILAL B. MEHTA, Kt.,

Ex-President, Federation of Indian Chambers of Commerce and Industry.

The Indian Cotton Textile Industry Annual, published by Messrs. Gandhi & Co., has come to stay as a useful work of reference, in which all the facts and figures relating to the cotton textile industry of the country and allied matters have been collected and presented in an intelligible form. Industrialists, merchants and students of current affairs will find the volume very handy and useful.

100 Pages: Rs. 3/- Foreign Edition: Sh. 9/-

CHIEF FEATURES:

- ★ Retrospects and Prospects of the Post-war Cotton Textile Industry, during the War-period.
- ★ Organisation of the Cotton Textile Directorate of the Supply Department of Government of India.
- ★ "The Cotton Industry at a Glance" giving 15 authoritative and up-to-date Statistical Tables relating to the Industry.
- ★ Latest Tariff on Piecegoods and Yarn.
- ★ Cultivation, Exports and Import of Raw Cotton.
- ★ Present Financial and Economic Position of the Industry.
- ★ Standard Cloth and Price Control.
- ★ Future of the Handloom Industry.
- ★ Scope of Exports of Piecegoods, during the war.
- ★ Complete and up-to-date list of Cotton Mills working in India, with names and addresses of Managing Agents, Number of Spindles, Looms, etc.
- ★ Contents and Bibliography.

Extracts from Reviews of 1941 *Annual* (Vol. V):

Indian Finance, Calcutta, 6th December, 1941.

"Many things have been laid under contribution in this Annual which certainly retains its title to be regarded as the complete vade-mecum for students of the cotton industry."

Capital, Calcutta, 12th February, 1942.

"This annual production contains as usual, a large volume of statistical and other information about the Indian Cotton Textile Industry. A long narrative survey of the vicissitudes of the industry during the last twenty years is provided....."

To be had of:

GANDHI & CO. (Publishers),

Turkish Friendship

If Turkey has not departed from armed neutrality to non-belligerency, it has been made clear through the renewal of the Saadabad pact that she does not distinguish between Afghanistan and Iran where Allied control is supreme despite the recent disturbances in Teheran. The Turkish press is known to have asserted its independence by commenting freely on the war. The dismay of the German colony over the reverses in Russia has destroyed the importance of von Papen's mission. The Turks, however, have their troubles including profiteering. If the last can be dealt with sternly by sending off offenders to make roads, the last earthquake in Anatolia must upset a country which has to fight inflation, submit to rationing, and support higher taxation for defence. But Turkey is well protected on the Asiatic side and the renewal of the Saadabad pact has made her less anxious over the threat from Thrace. Bulgaria despite German control, is not in the war, and the main source of anxiety is the German control of Varna and Burgas. But if the Russians dispute successfully German control of the Euxine in the near future, Turkey may be prepared for a gesture, such as was predicted last month, of special friendship for Russia. The Russians have taken Mozdok and look like taking not only Rostov but Odessa. Russia may well seek to break out of the Black Sea, and the gesture that one may look for will probably be a relaxation of the Montreux Convention for the sake of Russia. It has been unofficially said that the Convention cannot operate against the Allies, but the Government has not indicated its view so far. It may be recalled that at the time of the Lausanne Conference in 1923 Russia opposed the opening of the Straits, while Britain favoured both the opening of the Straits and the relaxation of international control imposed when the Greeks were given Gallipoli. Since the Montreux Conference of 1936 gave full rights over the Straits to Turkey which has fortified the Straits, the Powers must respect Turkish rights. Under the Convention warships of belligerents are barred if Turkey is neutral, but warships can pass, if they enter by order of the League, or if entering under a pact of

(*Continued on page* 42.)

Progressive Purity . . .

ALWAYS EVERYWHERE STEEL FOR STRENGTH

Since the conception of crude steel in the dark ages and during its steady growth through the years, progress in purity as well as in strength was and is of paramount importance.

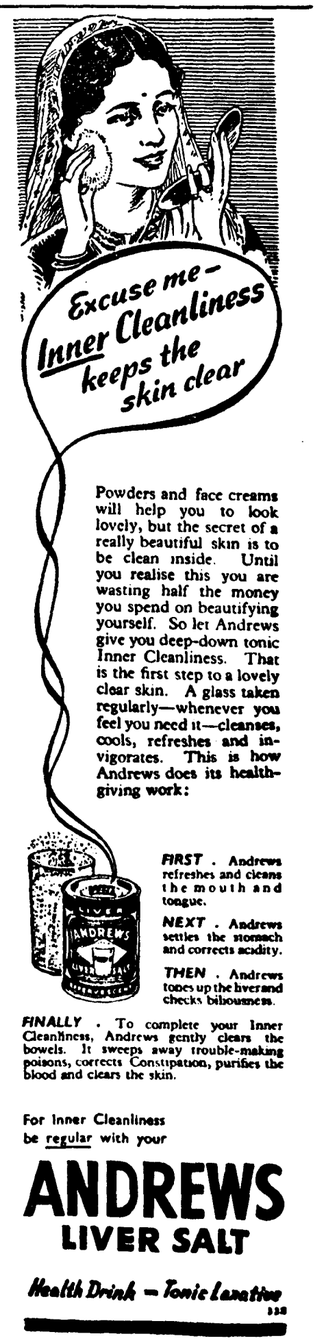
To-day's modern methods of intensive selection produce perfect steel, strong and pure, to meet the most exigeant demands of India's growing industries.

ISSUED BY THE TATA IRON & STEEL CO., LTD. HEAD SALES OFFICE: 102A, CLIVE STREET, CALCUTTA.

Progress in Australia

The report that Mr. Dedman wants to reorganise Australian industry so as to increase the war effort and Professor Copland wants a war effort, that will absorb 50 percent of the national income, appeared last week. Recent Australian developments throw some light on the ambition proclaimed by those in authority as to Australia's total war effort. More than 400,000 individuals subscribed for the Austerity Loan of £100 millions. The loan was oversubscribed by £2 milions and no money was provided by the Banks for a loan which attracted as many investors as the first five loans raised in this war. Subscriptions came even from the natives in New Guinea. £80 millions in new cash were provided by Australian investors. Other facets of the war effort are the plan to make a third type of aircraft and the making of the biggest machine tool for ship engines. The Bristol Beaufort is in regular production and the output in 1943 is expected to be double the 1942 average. Apart from the trainer planes produced after Empire Air Training came in, Australia will make three operational machines. In order to save cloth, Australia has announced austerity shirts. Pyjamas, shirts and collars are to be made simpler by order. Australia's production of civilian goods has fallen by £125 millions after Japan entered the war. There are more factories engaged on war work than in the entire range of secondary industries before the war. But the basic industry, agriculture, is well placed, as Australia has received £188½ millions for wool and £3.7 millions for sheepskins since Britain agreed to buy the entire clip after the war broke out.

As regards war effort in 1942, the Commonwealth statistician has issued figures which show that the factories at the end of August were 706,000 as against 542,000 before the war. The increase in employment was 30 percent. The numbers employed in munitions, aircraft and shipping industries at the end of August were 111,000 as against 71,000 in November 1941. The numbers employed in retail stores fell during the same period from 162,000 to 139,000. Female labour increased by 5½ percent in the nine months ended August whereas male labour showed a decrease of 23 percent. The building industry in the six capital cities was condemned to idleness as only 37 permits were issued in September as compared with 1,468 in September 1941. The total number of employees in industry, rural and domestic pursuits excepted, was 1,868,000 in August 1942 as compared with 1,727,000 in July 1939. The growth of new industry in the war period is again proved by the story of the Australian match industry. Mountain ash and pinus radiata were pronounced fit after the tests with 30 local timbers, and chemicals, previously imported from Japan, were made in Australia for match factories. Labour was secured and the industry is on a sound footing, according to the Australian Newsletter. Another industry fast developing is the woollen textile. Australian production has risen by 100 percent in the war period. Australia hopes to export after satisfying civilian needs. The industry is expected to show the same output after hostilities cease.



Russian Victories

Since the capture of Kotelnikovo and the taking of Velikeye Luki, the prospect in Russia is more cheerful than it appeared at any time in 1942. What appears specially encouraging is not the Russian success, but the indifferent powers of German resistance, presumably due to inadequate equipement. If the Don-Volga territory has been breached by the latest offensive in the south the German threat to the Caucasus has virtually ended with the capture of Ellista. Many have dissussed already the certainty of the Russians taking Rostov and directly menacing the German base of Novorosisk. Russian winter victories this time are openly interpreted as presaging the recapture of the Ukraine. Since Turkey has indicated that she stands by neutrality, and is interested only in the maintenance of Treaty relations, particularly those laid down under the Saadabad pact, it is obvious that Russia will receive no particular encouragement on the diplomatic side. But it must be noted that sentiment in Slav countries and the friendliness of the Polish Government constitute valuable advantages for Russia this year.

That Germany has shot her bolt is proved by the Russian move towards Smolensk. There is no threat to either Leningrad or Moscow and the Russians are dominating the main German lines of communication. The message of the King to M. Kalinin dwelt on these developments, so full of promise for eventual victory over the common foe. The success of the counter-offensive was referred to in the message. M. Kalinin has indeed given his own endorsement of the view that the German offensive of 1942 was limited and late because Nazi power reduced, and should have decreased further as a result of tremendous losses. The Russians have not expressed any views on the battles or absence of battles in North Africa. But Moscow has asserted officially the view that encirclement of German forces between the Don and Dnieper is the ultimate aim of the winter campaign. But Moscow has also reiterated its view that the Continent is one vital theatre where the enemy can be decisively defeated. The reference to the Second Front after the previous discussion of August is answered by the preparations in Africa for expelling Rommel.

Cape to Cairo

From the Cape to Cairo there exists direct road communication. The Great North Road starts from Capetown, with arteries from Durban, Port Elizabeth and East London, to go through Johannesburg and Pretoria on to the Limpopo, the northern boundary of the Union, which the road crosses at Beit Bridge, through the Rhodesias and Tanganyika to Nairobi. It is then possible to go to Alexandria in Egypt through the Sudan by car. It has been said that going is rough in many parts, but the whole stretch has been successfully negotiated several times before the war. The road has acquired a commercial value in the war period. According to a South African report, a motor caravan carrying exports from the Union reached Nairobi. The goods were originally consigned by rail from Port Elizabeth to Broken Hill in N. Rhodesia whence the road journey of at least 1,500 miles was undertaken. The first caravan journey was undertaken from the south by the Great North Road. It is the forerunner of many; it is hoped that as shipping space is hard to secure the road may appear desirable to traders as a safe if expensive alternative. In spite of the plans to develop trade by shipping on the western side in the Atlantic, the Union has a direct interest in road transport with the East African Colonies. One effect would be to reduce the importance of the Mashonaland Railway and another would be to diminish the importance of Beira. The Portuguese Ports in the east of Africa command a vast hinterland which can be reached by the northern highway, but if the Union builds many more than the eleven ships, which the Railway has at present, the Portugese colonies should benefit to some extent. But South Africa is short of rubber, and trade along the Great North Road really depends on the maximum utilisation of road vehicles and oil.

Powders and face creams will help you to look lovely, but the secret of a really beautiful skin is to be clean inside. Until you realise this you are wasting half the money you spend on beautifying yourself. So let Andrews give you deep-down tonic Inner Cleanliness. That is the first step to a lovely clear skin. A glass taken regularly—whenever you feel you need it—cleanses, cools, refreshes and invigorates. This is how Andrews does its health-giving work:

FIRST . Andrews refreshes and cleans the mouth and tongue.

NEXT . Andrews settles the stomach and corrects acidity.

THEN . Andrews tones up the liver and checks biliousness.

FINALLY . To complete your Inner Cleanliness, Andrews gently clears the bowels. It sweeps away trouble-making poisons, corrects Constipation, purifies the blood and clears the skin.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

So far as Calcutta is concerned, at any rate, not only New Year's eve, but the whole of the first week of the New Year has been free from the visitations of enemy planes. And life in this city is fast setting down to a new norm. I say new, because these are days when our ideals of the normal have to be adjusted to the changed circumstances. We cannot expect things to be just what they were before the war or before Japan overran the whole of Burma and started knocking at the gates of North-eastern India. Change is inevitable and the pace of change is set by world forces. All that we can hope for is that the process of adjustment will not prove too painful. As things are, this dreaded danger of Calcutta being bombed has approached the city by stages. When Rangoon was going through the ordeal of daylight raids, people here were straining their eyes on maps of the Indian Ocean and were figuring out the distance between Calcutta and the supposed air bases of Japan at the time. Imagination surmounted the obstacles which Japan found insuperable in the way of her bombing Calcutta.

The raids were antedated in thought by a year and the city started emptying itself out. The evacuees—some of them did like that appellation for themselves, I don't know why—stayed away for months and months; hoping all the time to hear news that could be both a sensation to their jaded ears and a subtle tribute to their prescience in quitting the threatened city in time to save their precious skin. The sensation was denied to them; and it was soon evident that it was not Calcutta but the livelihood of the deserters that was threatened. A slow trickle of ex-evacuees started; but, since the skies were by no means clear, those who returned may be deemed to have steeled their hearts against the dangers of bombing, at least upto a point. In other words, a good bit of weeding out of the chicken-hearted had been accomplished in the year before Calcutta had its first air raid. And now that there have been a few air raids, Calcutta has taken another long step forward in completing this selective process. Well, it is something of an advantage that the raids have come and they have been on none too big a scale. For there are two kinds of dangers both of which have to be removed, if Calcutta in common with the whole country and the Empire and the world is to weather this storm of a world war. There is firstly, the small knot of people who prop their courage with illusions and delusions. They tell themselves every kind of comfortable untruth which will close the door against fear. They believed—they no longer can—that Calcutta would never be raided from the air. The basis of this belief is different with different people. There are those who think or like to think that for some reason Japan—either because Subhas Bose is there with the enemy or that Japan wants to retain Indian goodwill against the absurd contingency—has a soft corner in her heart for India and Indians. At the other extreme was the equally absurd idea that Calcutta's defences are so strong that even the samurai would not think of the "harikari" of an air raid on this city. These absurd ideas serve no purpose except to increase the bitterness of disillusionment. The air raids of last month have dispelled them; and those who entertained them have had to face realities, which are happily not too grim.

* * * *

The air raids have come and gone, for the present at any rate. They have accomplished the immensely important task of correcting people's ideas. Now we know that the enemy is the enemy and that when he fights an enemy country, he cannot discriminate between rulers and ruled any more than in other countries they are able to discriminate between combatants and non-combatants. The distinction between them wears thin indeed. We are all in it. Likewise, we know now that no city's defences can provide complete immunity from air raids. With the best of fighters and pilots and with large numbers of them, enemy planes can and do sneak in to their targets and the bombs, once released, come down by the commonest of the laws of nature. We know it all now; and everyone has to clarify his attitude to the situation which he can no longer blind himself to.

* * * *

I take it that during the last one week and more nearly every Indian outside the fighting forces has carried out his own appraisement of the situation and in the light of it decided his own course of action. Those who do not consider their nerves equal to contemplating, not to speak of facing the dangers of bombing have shown the city a clean pair of heels so to say. They have taken the first train to miles away from this place. And I consider that is the first gain. Of those who have stayed behind, there are some who have done so with some mental reservation. That is, they contemplate conditions in which they might be obliged to leave, among these conditions being the extent of the risk and the conditions of life in the city. Those whose duty it is to see that civilian morale is kept up would be well advised to see that these conditions are satisfied as far as possible. Considering that in India this is our first experience of war for generations, I think it a great advantage that people who are in the city and are carrying on with their work the same as before the air raids, know their mind and are neither chicken-hearted nor unreliably heroic. I have talked to all classes of people; and in nearly all I find a sound commonsense approach to the problem. People have had their taste of the air-raid. They know not what it is. They have a fair idea of what it can be. They know, too, how foolish it is to exaggerate either the capacity of the raiders or the air-tightness of the defence. They know, too, that life cannot be the same in threatened as in safe cities. It is no use sighing for the old plenitude of amenities. One has to do with less servants or no servants. One has to put up with the change in the attitude of servants who have suddenly obtained and are conscious of a new scarcity value. And accepting these changes in the proper spirit and even projecting some of the visible lines to conjure up a picture of the invisible future, they stay on.

* * * *

It is in this sense I say, Calcutta is fast settling down to a new norm. The process of adjustment on the side of the people is fairly complete. What about the authorities? On their side, there was bad bungling, as newspapers like the "Statesman" did not hesitate to say, with a statement from Delhi which grossly misrepresented the position. If, as I said, it is an advantage that the timid have left this city, isn't it also an advantage to proclaim it rather than suppress it? Well that belongs to the dead past; and the question now is how to retain the advantages and improve on them. I have referred to the class of people who are staying on with mental reservations. And it is essential that every effort should be made to satisfy as far as possible the conditions they have in mind. After all, wherever one may be, and whatever one's state of mind, one has to live. Undue strain in finding the ordinary necessaries of life turns boredom into sickening disgust. If one wakes up to find that the restaurant which had been providing him food closed down the previous night, that while at office, it is a job to find even a few snacks by way of lunch, that the public conveyances stop plying before one can leave office—well, I for one, should find it hard to blame the poor man if he chucks up the job which at its best did no more than keep him alive and decides to go to his native village. For, after all, the village is a kind and indulgent mother to all her children. Infinite divisibility, which is, I think, a mathematical postulate is a reality to the countryfolk—one more mouth or a few more mouths to feed? The 'dal' and 'bhath' are watered to that extent; and rationing is no war-time innovation to our village folks. The clerk who finds his normal life thrown out of gear, balances the advantages of stay-

EAST INDIAN RAILWAY

ANNUAL CONTRACT ACT ITEMS COSTING OVER Rs. 5,000/-.

CLASS I CONTRACT.

Sealed tenders are invited for the following and will be received in the Controller of Stores Office, East Indian Railway, 105, Clive Street, Calcutta, up to 11 A.M. on February 8, 1943.

Tender No. S/Gb2/594/B for the supply of wick holders with socket 3/8" with 8" long wick for hand signal Lamps to E.I.R. (S) Drg. No.: A2844.

The tender form with full particulars can be had from the Office of the Controller of Stores, E. I. Rly., Calcutta, at the rate of Rs. 2/- per copy and drawing at the rate of -/8/- per copy is obtainable from the Chief Engineer (S) Allahabad on payment of above amounts to the Treasurer, E. I. Rly., Calcutta and on production of his receipt when applying for same.

No refund is permissible after payment.

CONTROLLER OF STORES.

ing here and going home and decides according to which scale weighs heavier. After all, isn't life a choice of evils? And who does not choose the lesser evil?

* * *

That is why there must be co-operative effort on a large scale to ensure that the ordinary man's patience or endurance is not unduly strained. The authorities, concerned with each aspect or each problem, I mean, should give thought and attention to the conditions in which the large mass of people in the city have to live their daily lives. And from this point of view, it is an extremely timely move that has now been taken to start popular canteens where wholesome food will be provided for all at the very modest rate of four annas per meal.

* * *

Now this is pure private enterprise, though it was inaugurated by the Member for Commerce, who is in charge of the newly constituted Department of Food Supply. Those who are behind it have only made a beginning. Their aim is to bring about a network of cheap restaurants spread all over the city. If the aim is to be realised and if the scheme is to work smoothly and efficiently, the authorities must recognise that these houses are given every facility they need for discharging their mission. No longer are such houses, or even, for the matter of that the various Indian hotels, a matter of private enterprise in which only the proprietors are interested. Why should it not be possible, I ask, to ensure that recognised hotels get their requirements of rice, wheat, dal, sugar and the like at the controlled rates and are not thrown back on the black market? For the ordinary man, life is dull enough, stale, unprofitable. Why should living be costly, too? Now that the city has a population, which is reasonably determined to stay on and stick to its job, it is for the authorities to arrest the deterioration in the conditions of life. We like to tell ourselves that despite the air raids, life in the city is normal. In a sense and to a certain extent, it is. But this normality may disappear if abnormalities are allowed to develop without reason in matters that affect the average man.

* * * *

There is, then, the next question of the threats that remain. I have said already, the city has learned to avoid the extremes which are the expression of stupid sensationalism. The city knows, too, that no one can say beforehand what the enemy may attempt. But one thing is certain. We cannot underrate the defences of the city. The raids have been confined to moonlit nights and the Japanese pilots apparently need a lot of moonshine to make their next attempt on the city. That shows that daylight raids are too dangerous and risky for them and dark nights have terrors of a different kind. The scale of the raids and the weapons they use are liable to variation. That is all. The people have the guts to stand them. But there is no gainsaying the value of another drive for improving the safety measures, of raising the quality of cover available for the ordinary man, of getting more public shelters in prominent places, so that the ordinary worker will know that his chances of survival in case of an air raid have been increased many times and that the A.R.P. measures are framed with as much concern for the ordinary man as for the well-to-do classes.

* * * *

Then there are the small pinpricks of life, which the authorities can well avoid with a little more of alertness and concern for the people. I have spoken before in these columns of the pice shortage. Not only is that shortage worse now than before, but there is also added to it the shortage of subsidiary coinage in general. For the last two days, this lack of change has been felt to be particularly acute. Wherever you go, you are faced with the inability of the shopman or the hotel-keeper to give back change. I suppose business for the small trader must have suffered appreciably as a result of this. Now, why should such a state of affairs be allowed to continue?—I shall not talk of its arising. In regard to this pice business, I heard an interesting story. I was told that some benevolent Tughlak in the Imperial capital thought that to starve the country of pice pieces would be one sure way of raising the standard of living. If you want to lift yourself, pull yourself by your bootstrap! That is by the way. This shortage of pice and small change is one of the worst annoyances of life in a busy city—the last straw is a notoriously light addition.

* * * *

The career of the millionaire-philanthropist always invites study, if not unqualified approval. As the principal architect of a great business house, the late Seth Bansidhar Jalan could be compared with Morgan the Magnificent or Lord Nuffield. But it is not only the firm of Soorajmull Nagarmull that has been deprived of his advice and assistance by his death last week. The Chambers of Commerce with which he was associated, the many new enterprises he launched, and the jute trade and industry as well should feel his absence keenly in the strenuous period that lies ahead. The great fortune he built up scrupulously (in more than one sense) will remain, and the generous bequests announced mean much for the causes that attracted his support. A romantic career like Seth Bansidhar's is sure to claim a biographer, but one may anticipate here by emphasising that the vast stake he obtained in the business of this city is distinctly a post-war creation. His career is a defence of liberal capitalism; it is, therefore, something more than a pattern cut to that of a worthy praised by Samuel Smiles. The acquisition of jute machinery disposed of by the jail authorities led to the foundation of a jute mill. When the Shree Hanuman was outside the I.J.M.A. it was generally known that restriction was hardly perfect. When the mill came in, and the working hours were adjusted, it was made known that one form of self-government in industry could be endured without detriment.

* * * *

The manifold industrial interests of his firm certainly have secured for Soorajmull Nagarmull a position equal to that of the older agency houses. The wholesome conservatism which distinguished Seth Jalan and his firm has been a distinct advantage from every point of view. The modesty that characterised Seth Bansidhar extended to the field of charity. But for the commemorative tablets that seize the eye, few would know how much the City's hospitals have benefited from his judicious generosity. The Bengal Jute Mill is not the latest addition to the jute industry, but what was said at the time the prospectus was issued in 1940 was borne out by the response of the investor to that issue. The initiation of a new oxygen and acetylene company since has shown that Seth Jalan could enter a field in which British enterprise was very strongly placed. The acquisition of engineering firms, the control of a rope factory, etc., proved that by displacing older British interests, industrialists could achieve economic Swaraj in a way that was efficient as well as spectacular. The departure in industrial pioneering as well as management of old-established enterprises proved, once for all, that Seth Jalan's vision was the keener for his years. That is indeed proved by the setting up of overseas branches that secured a place in both foreign and internal commerce for a firm that has proved that independence goes with integrity. It is perhaps necessary to relate his private virtues with the business acumen that raised a small trading firm to undisputed primacy in Burrabazar. Those virtues found expression in the creation of camps at Parbatipur and elsewhere for the thousands of hapless travellers from Burma. Official measures were supplemented in a manner that commanded Pandit Jawaharlal's approval, expressed, it may be added, after personal inspection. Judged by achievement alone, Seth Bansidhar has few equals even in a community that looks constantly to the now and hereafter in the same measure. But it is not the Marwari community alone that mourns one who exemplified the success that attends one who developed large views and practised so many virtues that reward by way of late eulogy may seem commonplace.

"EAVESDROPPER."

INDIAN TEA LICENSING COMMITTEE

NOTICE

A FINAL EXPORT QUOTA OF 5.68% MAKING a total of 85.68% of the crop basis for the year 1942/43 is now being issued.

Individual Tea Estates will be advised as to the amount of their final export quota as promptly as possible.

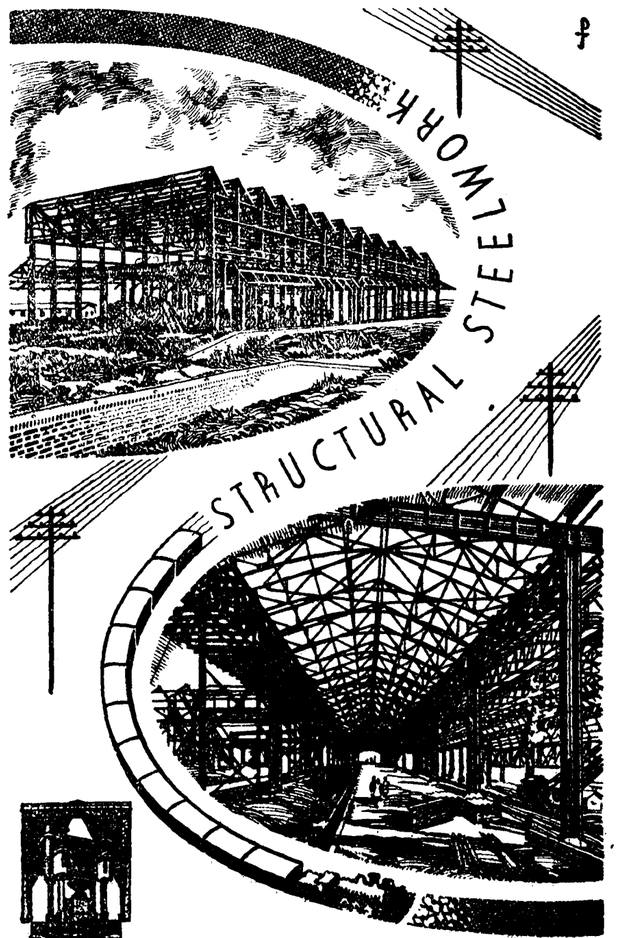
Joint Controller.

NORTH WESTERN RAILWAY



In Your Own Interest

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to them showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to book the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed.

(From Our Correspondent).

New Delhi, January 5.

THE New Year has brought a number of varied problems, though in a way they are all interconnected. Food shortage, increased cost of living, paper supply, Defence expenditure, taxation problems and many others directly arising from war conditions are now facing the Government Departments. The Viceroy is already back in New Delhi after his Christmas visit to Dehra Dun. In the next few days, the Governor of Bombay is also expected to be here to confer with the Viceroy on the food situation. And among the other important visitors who will be in New Delhi very soon is Mr. Phillips, the American President's representative. The full Council of the Viceroy will not, however, be able to assemble for a few days more, for important Members like Mr. N. R. Sarker, the Commerce and Food Member, are touring the Provinces to gain first hand knowledge of prevailing conditions. In the meantime the new Food Department is preparing the ground for initiating an all-India food policy to remove the existing difficulties. The reply given by the Food Secretary to the Federation of Indian Chambers of Commerce and Industry, which is the first official announcement in the New Year of the Government's measures, does not go very far, but it is welcomed as an indication of the Government's desire to approach the problem is a more active and constructive spirit than has been evident in the past.

* * * *

There has been a clear and insistent demand from the Indian commercial community that no further export of foodgrains out of India should be permitted. The only assurance so far given by the Government of India is to the effect that "the necessity for and the possibility of reducing even the small quantities now exported is under constant examination, and arrangements have recently been made for the diversion of a part of the demand elsewhere". There has undoubtedly been suspicion for some time in the country that without carefully studying the needs of the civil population the Government of India have entered into needless commitments and undertaken to permit exports of foodgrains to the Middle East and other areas. It may be that these exports constitute only a small fraction of India's production, but as there is already a serious shortage in the country, the Government of India cannot overlook the need for conserving all available stocks within the country. No details are yet available of the Government's plan to import wheat and certain other foodgrains from nearby countries like Australia, but if these stocks arrive in time, it would help to some extent to ease the situation. As regards provincial controls, the Government's contention is that these provincial controls are generally being administered in consultation with the Centre to secure fair distribution of the available food supplies over the country. Unfortunately the attempt to co-ordinate provincial controls cannot yet be said to have fully succeeded. The seriousness of the difficulties which even a favoured city like New Delhi is experiencing to-day, shows how much still remains to be done to secure fair and adequate distribution. It would also be far from correct to claim that the drive for the effective transport of food requirements has proved in itself adequate to meet the needs of the country. The task before the new Food Department, which can only be described as a belated attempt to solve a three year-old problem, is therefore no light one.

* * * *

Official anticipations appear to be that by April next the Food Department would be in a position to secure the necessary co-ordination and stabilise food supplies in all parts of the country. Let me turn to another question which though not quite so important as food supplies, is important enough—particularly in war-time when the need for keeping the people fully informed and sustaining their morale in every way is obvious. I am referring to the paper shortage question upon which numerous representations have already been made to the Government of India. Even in 1939-40 imports of paper into India were in the region of 1½ lakhs of tons. According to the information now available, the newsprint quota allowed for the latter half of 1942 was about 9,000 tons—at the rate of 1,500 tons per month. During the period, April to September last year, about 7,000 tons appear to have been received, but I understand that actually only about a thousand tons came into the hands of newspapers during the second half of 1942. As no official figures are available, the whole question is still enveloped in mystery, but certain questions do arise in this connection. Not only has the quota of newsprint allowed to this country been reduced so much that it is only a small fraction of what it was before the war but actually the newspaper industry in this country has found it difficult to get during the period even a tenth of the agreed quota. If the newspaper industry which is admittedly of vital importance both to the Government and to the people, is to be saved from extinction, certain measures are immediately necessary. So far as the allotment of shipping space is concerned, newsprint should be given a higher place in priorities than it now receives. Secondly, arrangements should be made to bring enough newsprint during the next few months to make up for the deficiency in 1942. So many are the competing claims from the point of view of war needs that it is not easy, one must admit, for the Government to find adequate shipping space. The difficulty this year has been increased owing to the urgent need for importing grain stocks, but as the very existence of a large number of important newspapers depends upon the immediate availability of newsprint supplies, the time has undoubtedly come for providing special facilities.

* * * *

One hears a good deal in New Delhi about the possibility of additional taxation proposals for the coming financial year. With each succeeding year one finds the increasing difficulty of estimating future revenue or expenditure. Any attempt to frame the Budget for the coming year has to take for granted a good deal which may or may not prove true. Certain indications are, however, clear. As the strength of India's Defence forces is now reaching the two million mark and will continue to increase at the rate of 75,000 per month, it may not be extravagant to assume that the daily war bill for India next year may be as much as a crore per day. The possibility of an early Allied offensive to retake Burma is also there, but as this will mean enormous additional expenditure, it is not likely that Indian revenues will be saddled with it. Any such major operation outside India, though Indian forces may play a prominent part in it, will have to be treated in the same way as the operations in the Middle East and other war theatres, for it would be hard enough for the Indian exchequer to find the money for the vastly extended Defence preparations now going on in the country. Even civil expenditure has practically doubled itself owing to the increase in the Government's war work, the creation of new Departments and the demands of essential requirements like Civil Defence. The position on the revenue side is certainly not so bad as one had expected, but it is certainly depressing. With the exception of income tax and new sources of revenue like the excess profits tax there has been a general fall in revenues—markedly in customs receipts. It is not unlikely that the Government's revenue estimates may be realised this year, but as expenditure has increased far beyond anticipations, this will not materially affect the resulting position. The cost to the Central Exchequer of dearness allowances and similar measures runs already to some crores. And as there is already a demand from the subordinate ranks of Government Services for increased pay owing to the steep rise in the cost of living, the Government of India may have soon to consider the question of an all-round increase in the salaries of those earning below a certain limit. Despite the satisfactory position revealed by Railway earnings which will to some extent help the general revenues, it is difficult to see how the country can avoid an unprecedentedly big deficit in the coming year's Budget.

* * * *

As this is the time of the year when the Government of India takes into consideration final proposals for additional taxation, there are a number of interesting reports now current in New Delhi. It is stated, for instance, that a further increase in Railway rates and fares and in Postal, Telegraph and Telephone charges will have to be expected—not only as a means of getting more revenue from classes which are in a position to pay but also a means of relieving the strain which these services have now to bear. As Sir Jeremy Raisman is a believer in social justice in taxation, he will probably prefer to raise the income tax and supertax surcharges rather than resort to increased duties on salt and similar commodities which touch the masses. Owing to the increase in the cost of living which in places like Delhi is already estimated to be 300 per cent more the question of imposing additional taxation has to be carefully considered. Nor can the Government ignore the possible deleterious effect on industrial production—so vital to the war effort—which any further increase in the excess profits tax and similar taxes may produce. The general belief is that the Finance Member will be content to raise another six to ten crores by additional taxation next year and try to find as much as possible of the rest from Defence loans and Savings schemes. As in the past, the present Finance Member has carefully tried to avoid unpopular taxes which may directly hit the poor, he will try this year also to confine his attention to "war wealth" and make his demands upon those who find themselves getting more income now as a result of the war.

* * * *

The latest report in connection with the vacant Information Membership is that Sir S. E. Ranganathan, now Advisor to the Secretary of State, may be appointed to it. If this materialises, the Advisership may be offered to a Scheduled Caste representative, Mr. Sivaraj, who is now a Member of the Central Assembly. No immediate decision is however expected.

HILLBIRD

Gateway of India

(From Our Correspondent)

Bombay, Jan. 5.

e cotton market is recovering fast. The w Year, therefore, begins well for Bombay. t not too well, as there is a threat of rcity which might produce rationing. The od Advisory Committee approves rationg from March. The chances of adequate ports of food grains are receding and ombay on short commons may not be a very heerful city. There is still discussion as to he correct length of Jarilla cotton. Delivery nder the January contract has to take place nd the E.I.C.A. is known to be considering modifications of the tender, if not now, after a full season. The outlook, however, is unaffected by the Calcutta raids. The dread of a surplus has almost vanished. The majority are long; few would care to be short after the recent striking recovery. When the prices of all commodities tend to move higher, there is no place for a prediction that Indian cotton will slump. The war news mostly helps bulls, and the lift in textile shares, after reports that the cloth market was nervous last week, keeps up the spirits. There is a belief that Punjab cotton, especially, American types, will be dearer than anticipated. It is suggested that mixture will not reduce the usual premium. If Bombay can count on a similar sustained recovery in silver, there will be much genuine optimism. But there is the news that lease-lend supplies of silver will be given by the U.S.A. to Britain. The Indian Government can resume selling here and peg down local prices. So the bullion market here is quiet, even if it is comforted by the rise in bullion prices here and on the other side of India as well.

* * * *

The Governor of Bombay intends to see the Viceroy about food. Not prices, but supplies seem the main issue. An influential deputation asked the Governor as much for immediate relief as for information. A Press Note issued in this connection states that the cost of living index for the city in December was 188. The mills have been forced to raise dearness allowance again. Workers have been placated, and official approval has followed, but millowners have a problem which is not resolved by the promise that the rice surplus of Kolaba District will be reserved for Government purchases. Sind has advertised her needs and put forth a claim for Rs. 50 lakhs from other Provinces by way of donations. Bombay can only hope to get the Central Government to abolish exports and alleviate local scarcity. The stories of shortage in Calcutta can be capped readily by the horrors already made known here. 100 per cent control is demanded here too and freezing orders have re-appeared. All wheat is to be moved only by direction, and that is about the only relief promised at present, apart from the Governor's promise to see what could be done by Delhi. The crop and season report refers again to the distress in Bijapur and withering crops in the Deccan.

* * * *

The Honours list appeared in one paper at least. Everybody knows that among the new Knights is Mr. R. P. Masani. Famous as a banker, he is equally famous as an educationist. His term as Vice-Chancellor was known anywhere, and it is rather strange that the official award mentions first his work for the National War Front. Mr. Masani is, of course, as good a Liberal as any here and different only in not being a non-party leader at present. The knighthood conferred on the Editor of the *Times of India* is regarded as a real compliment to the profession he adorns. The *Times of India* is the doyen of the Indian press and the Editor is a distinguished citizen of Bombay, an active Rotarian and a very earnest jouranlist. The G.B.E. conferred on the Prince of Berar puts one Indian in place of the late Sir Ibrahim Rahimtoolah.

* * * * *

A press note from Hyderabad has cleared up local misapprehensions about deposits. The Hyderabad State Bank is like any other jointstock bank at present. Its clients enjoy the same rights as those of others and the civil courts alone and not the revenue courts, have any jurisdiction in cases of attachment of deposits. But the best news so far is that Hyderabad has plenty of pulses for export this year in addition to millet. But the State is short of food grains like the majority of provinces, and Hyderabad, therefore, intends to copy British Indian policy in regard to food supply and price control.

* * * *

The Indian Central Cotton Committee has issued a booklet describing its work for cotton in the past 18 years. Since long staple cotton was unknown in 1924 whereas present production is 344,000 bales, one can measure readily enough the progress made. The gain to the Indian cotton-grower in the last five years is put modestly at Rs. 1 crore. But only one quarter of the area under cotton in India is under improved varieties. So there is real scope for further improvement. The Committee's main aim is to secure cotton that will spin above 20 counts. The major result apparently is the rise in the average outturn from 92 lbs. to 111 lbs. per acre in India. This increase has been secured by the co-operation of the many agricultural departments. It is even more important for the grower who can reduce the area so as to produce more food crops. In Bombay this year the cotton crop has fallen by 33.8 per cent in point of acreage recorded.

* * * *

A major change produced by petrol rationing is the acquisition of cars by those enriched by the war. Many have put down cars; some have acquired them. The majority of car-owners cannot get more than six gallons of petrol for a month, and many have long ago abandoned cars for taxis. But pleasure riding is not dead. There are car parks at Juhu, Mahalaxmi and outside all the cinemas. Those who get petrol appear to keep more cars. Many have gone in for gas plants. More than 1,400 vehicles are fitted with gas plants, but the average motorist finds fresh expenditure a burden. It has been urged that the Government must start making gas plants and sell them to motorists. A new problem is that of tyres. Bombay requires one lakh of tyres, but the ration available is only a fifth of the total. It is feared that more vehicles would go out of use for lack of tyres than for lack of fuel in the near future.

* * * *

The Muslim League has recorded its criticism of the Viceroy's speech. The local branch says that unity is not desired and the Viceroy's speech, by deprecating partition, has spoilt all chances of a compromise. The Working Committee does not want a majority rule under any circumstances. Its resolution speaks of a change of masters, with Hindus replacing the British. It suggests that Central responsibility is not wanted by the Muslims but only their own government in the Muslim majority provinces. It warns the Hindus against taking any stock in the Viceroy's speech, and the resolution insists again that the Indian Muslims are a separate nation. The local League is going to draft a charter of liberties, within three months, and is going to ask the Mahasabha to consider it. So there is an element of compromise left in after all. The Minorities' rights are to be defined by investigation, and the Bombay Muslim League has anticipated most others by asking the Mahasabha to lay down its views on what the individual, as distinct from the nation or nations, wants or needs.

* * * *

There are many confusing reports of sabotage and arrests in the Presidency. Mr. H. E. Butler has been made Commissioner of Police for the city and the Peoples' War, a Communist weekly, has been singled out for attack by country-made bombs. Explosions, underground activity etc. continue to appear

in headlines. Meanwhile Bombay Talkies is fully under the control of Devika Rani who is the producer, president etc. with Mr. K. D. Modi as second in command. Sir C. H. Setalvad is out of the Board and has disposed of his interest in the managing agency. These changes came into effect on Monday when it was also made known that Sir Chimanlal and Rai Bahadur Chunilal are organising a new film company.

The Indian Exporters' Association here has sent a protest against the U. K. C. C. forming new subsidiaries for increasing its share of trade. In spite of an assurance that East Africa is sending a delegation to India in order to discuss the ways in which textile imports should be drawn from India the exporters here are nervous. The East African trade is, however, a small matter as compared with the giant monopoly that overhangs our trade. The Commerce Department has been told that if the U. K. C. C. throws out more subsidiaries there will be little business left for Indians. A telegram sent on December 31 urged that trade with Africa and the Middle East should not be engrossed by the U. K. C. C. to the detriment of India. Intervention was sought, but it seems doubtful if the India Government can address either the Treasury or the Department of Overseas Trade in this connexion. After all the F. O. and the Colonial Office are directly interested, and Mr. Amery might well decline to act as liaison officer in such matters.

Resume of Commodity Markets

Commodity markets were naturally inclined to be easier on the reports of air raids on the Calcutta area. Markets in Calcutta in particular were badly affected. Later in the period, however, there has been a partial recovery in values. Though business has not yet returned to normal, there is a disposition to await further developments.

The general outlook has not been in any way affected though over a short period some difficulties might be experienced and operators selling and buying might cause violent fluctuations in prices. The enemy air raids, such as have been staged recently, have not done any harm and the respite has infused courage into the minds of many. It would be foolish, however, to assume that enemy raids will not be on a bigger scale. The dislocation to labour and the disturbance in normal trade facilities will certainly have an unbalancing effect and spoil all the good work done in the affected area in recent months. The present uncertainty cannot, however, continue for any length of time.

The jute and jute manufactures markets were weak earlier in the period under review. A better feeling, however, is noticeable now and the gains towards the close have greatly minimised the losses. The Bombay raw cotton market has been very irregular. The movement in cotton prices in the earlier days of the last fortnight was in sympathy with other markets. The bullion markets were inclined to be firmer earlier in the week but quotations have come down during the past week.

Jute:

The Government of Bengal have not so far made any statement regarding the size of the jute crop for the next season. In view of the fact that sowings will begin early next month, it need hardly be pointed out that an early statement in this regard should be made. At a conference held by the Government of Bengal, attended by the Commerce Member and some prominent members from the jute trade, it is reported that some tentative decisions were reached. What exactly is the nature of the decisions remains to be seen. The industry is not in favour of any great reduction of the crop especially as it is expected that the outlook might become very favourable after a few months. In view of the possibility of a large increase in the carry forward from the current season, and the difficulties in transport it is generally expected that there will be a reduction in the size of the crop. The need for releasing and growing more food crops might also influence the decision but whether the released area from jute will result in any big increase in the yield of food crops cannot be said.

Piecegoods:

Standard cloth is again in the forefront. The Commerce Member has promised that the commodity will be on the market in February, a further postponement in the schedule. The arrangements in regard to distribution appear to have been completed. Quantities will be allocated on the basis of the population of the areas concerned with allowances for climatic differences. Steps will be taken to ensure that the supply of cloth is properly "rationed" and that no black markets will be allowed to function. Bengal mills will also co-operate in the production of standard cloth.

There is one unfortunate development. The Madras Government is reported to be considering the manufacture of its own "standard cloth" by the handloom weaver and efforts are being made to prevent the entry of the mill "standard cloth" into the province which will be necessarily cheaper and which will defeat the purpose of the Madras Government. The handloom weaver in that presidency has been badly affected and the Government have an obligation to support him; but to penalise a whole province for the purpose is not quite the way things should be done especially if it is taken into consideration that it is the Madras Government that is in need of these cheap articles. If only the weaver is allowed to manufacture cloth, not necessarily "standard cloth", there will be no difficulty. The problem at the present moment is one of production and not of marketing. Any cloth will sell.

Jute and Jute Manufactues

(By Our Jute Correspondent)

Calcutta, January 6.

American consumption figures of Hessian for the month of November have again dropped back to the very low level of 16 million yards, equalling the low record established in July and August, and little more than half that recorded for September and October. The comparative figure for last year was 53 million yards. The U. S. A. therefore is more than carrying out its threat to reduce burlap imports to 25 million yards per month, for the average consumption over the five months July to November, corresponding to the current Jute Season, is no more than 21½ million yards, and the total for the five months, 107 million yards, would scarcely be considered, in normal conditions, a satisfactory consumption for two months, let alone five. Spot stocks have shrunk to the very low figure of 32 million yards against 101 million at this time last year. But afloat stocks reflect the improved shipping position, having risen to 92 million yards, though even this is very much below the comparative figure of 164 million last year. The figures for the last half of this year look like making very melancholy reading when they come to be made up.

Mills' total production during November amounted to 101,753 tons, of which 80,586 tons was on commercial account and the balance, 21,167 tons, or just about 21 per cent of the total, on Government account. One interesting feature of the figures is that, for probably the first time on record, the yardage of Sacking goods produced exceeded that of Hessian, 14 crores yards of Sacking against 13½ crores yards of Hessian. This would indicate that the recent tendency to switch all available looms to heavy goods had just about reached its zenith and can scarcely go further. November production is 11,000 tons over the figure for October, but November was a full working month with no festivals interfering. Adding the reduction in stocks recorded at the end of November to the production total, reveals the fact that over 128,000 tons of goods must have been despatched from Mills during the month, a very substantial and very satisfactory figure. While indications are that despatches for this month will also be good.

Owing to the reduced quantity of batching material available, it would appear that, in working back from production figures to jute consumption, not less than a full 28 maunds to the ton should be calculated. On this ratio, the total production for this jute season, that is since the beginning of July, which amounts to 495,716 tons for the five months, converted at 28 maunds to the ton, represents a consumption of 28,21,147 bales of jute. Total estimated arrivals into Calcutta for the five months amounted only 28,70,000 bales, out of which allowance has to be made for Exports, which up to the end of November are recorded as 6,24,000 bales, as well as stocks in Bazar and Presshouses. It is evident therefore that Mills have not yet come to the end of encroaching on their stocks of raw material to keep going. And as the arrivals are increasing but slowly, it will be some time yet before any accumulation of stocks can be possible.

Mill production will certainly show a considerable reduction this month on account of defection of labour as a result of the Air raids on Calcutta and neighbourhood. Some Mills have been closed down altogether while others have been working well under their full capacity. But there have been subversive elements at work in addition to raid panic, for why should a worker, having received his wages up to date, return to the mill and endeavour to induce or threaten his fellow workers to cease work? On the other hand, not a few workers, having received their wages, thought better of it and resumed their jobs. As a matter of fact there are few classes of workers as well off or as well looked after as the Jute Mill labour force. Not only are they in receipt of good wages and allowances, but they can procure their necessary foodstuffs from the Mill shops at much under current market rates. Those who have fled will doubtless soon regret their precipitance when they find themselves being victimised on every hand on their journey and probably at their destination.

victory.

(*Continued from page 33.*)

assistance to which Turkey is a party. A new pact with Russia in place of the non-aggression pact of 1925 is thus indicated. But the pact must be registered at Geneva, and apart from Russia having deserted the League in December 1939, the Geneva office is not in existence. It is apparent that Turkey's authority over the Straits can be adjusted only if the Allies dominate the Eastern Mediterranean.

Indian War Effort

A competent historian of India's Supply Department has been found in Mr. G. W. Tyson whose book "India Arms for Victory" (Kitabistan Rs. 4-8) will certainly find a wide public. The average chronicle of the Indian war effort tends to be a dreary digest of press notes. But Mr. Tyson has reduced the mass of information to a coherent, intelligible and pleasing narrative that demands nothing less than admiration. It is not, however, suggested that Mr. Tyson's record is equal, say to David Garnett's "War in the Air." The theme is less elevating, even after allowance is made for the inherent and undeniable difference between a distinguished man of letters with ink in his blood and a journalist compelled to record departmental doings and the harnessing of industry to new, exceptional needs. It may, however, be said that in his field Mr. Tyson has displayed customary skill. At least one chapter—that on aluminium—contains unfamiliar details and praise is due to Mr. Tyson for having shown what sectors of industry are strategic for the future in addition to the present.

The Munitions Board did not have its historiographer, but the Industrial Commission's report of 1918, gave more than a glimpse for professional students. But the general public was never reached and the Supply Department is doubly fortunate in having Mr. Tyson write the story of its great work. The second book to Mr. Tyson's credit certainly has no polemical purposes. No ex-Governor has provided a preface this time and Mr. Tyson has done the introduction to the story of Supply so well that M.L.A.'s should consider the book compulsory reading. Many questions are ably answered. There can be little doubt that Supply took shape before the war, and India has been assisted by the Allies to a remarkable degree thereafter. If the arrangement is conventional, Mr. Tyson is certainly able to show the wood from the trees in regard to Supply matters generally. What India lacks is trained men and machine tools That is viewed as an inevitable handicap and if one relates recent achievement to previous promise, its magnitude seems all the more taking. Mr. Tyson's book does not break new ground in regard to the abortive automobile factory scheme, but such a description, for the aircraft factory scheme as a "tricky project" may well excite criticism. It is hardly proper to relate Government's decision to take over to the original shortcomings of either the plan or its promoters.

The great development of the automobile assembly plants in Bombay is well described but it is preceded by a bare mention of the ship-repairing and aircraft servicing. One wishes that some details were given to make up for the non-fruition of the shipbuilding scheme. As for the bouquets distributed by Mr. Tyson to Indian industries, none can take objection at any time. The Kumardhubi Engineering Company's success in bomb-making comes from the importation of rather old machine tools from Britain. But it had many other unusual handicaps to overcome. As for the Eagle Rolling Mills, it is a Belgian enterprise in French India with French artisans that is going to help Turkey to maintain her armed neutrality. So it may well be said here that high policy is furthered by Indian industry.

In a personal postscript Mr. Tyson has assessed all this development for what it is worth. He concludes that India's new financial burden through war is lighter than is apparent. He derives comfort from the Bevin Boys scheme and extended training facilities at new centres. He is almost alone in looking forward to an extension of tariff protection after the war but is in the majority as sharing current preference for industrial development for defence and many other things. In a small book of 240 pages is packed much acumen, skilled observation and much else. But there are blemishes (perhaps the printer's) that cannot be overlooked even by the indulgent. But these are minor mistakes which only serve to show what a success has been made of a writing commission by Mr. Tyson who emphasises by his title that Indian industry working for defence has a precise object namely, victory.

Indian Cotton Annual

The year 1942 was in many ways notable for the Indian cotton textile industry. The requirements of the Defence Services increased from 20 per cent of total production to 35 per cent. There was a boom in exports and with the fears regarding shortage of cloth it was found necessary to discourage exports. The complete cessation of imports with the entry of Japan into the war caused a great strain on the capacity of the industry. Efforts to increase production were hampered by the large exodus of labour early in the year. Even in August and September 1942 several mills remained closed on account of the civil disturbances. Cloth prices soared and the public clamour for stand cloth is yet to be met. These and other developments are carefully recorded in the Indian Cotton Annual, 1942 published by Messrs. Gandhi & Co. Those interested in the Cotton Textile Industry will find the publication very useful. By keeping to the original "format" introduced by Mr. M. P. Gandhi the publishers have kept up the value of the publication.

JUTE

Calcutta, January 7.

The raw jute market was inclined to be easier in the fortnight under review. With the large exodus of labour from jute mill areas, and the slump in prices in the goods market, mills were naturally inclined to postpone their purchases until the outlook got clearer. There was a very small amount of business passing. With the anxiety of sellers to dispose of their holdings there was naturally a decline in values both in the loose jute and pucca bales sections.

Towards the close, in the loose jute section, a slightly steadier tendency has been noticeable and some of the lost ground has been recovered. The undertone is quiet and there is a general tendency to await further developments.

The important development in the period under review is the Conference in Calcutta convened by the Minister for Agriculture and Industries, Bengal, to consider the question of the acreage to be placed under jute in the province in the next season. The conference was attended by the Commerce Member and other important officials. It is reported that some tentative suggestions on the subject have been reached.

In the Loose jute section a very small amount of business has been passing and, as remarked above, with the anxiety of sellers to dispose of their holdings there was a drop of as much as two points in a short period of time. Indian Jat Middles were done as low as Rs. 12-4 and Bottoms Rs. 10-4. There has been a recovery to Rs. 12-12 per maund towards the close.

In the Pucca Bales section mills kept out of the market. With the difficulty on account of dock labour shippers also were not inclined to enter into any commitments. Balers were not keen to do business and Dundee Daisee 2/3 was reported done as low as Rs. 59 and Firsts ready 2/3 Rs. 60. There has been a recovery to Rs. 63 per bale towards the close.

JUTE MANUFACTURES

Calcutta, January, 7.

Rather weak conditions were noticeable in the jute manufactures market earlier in the period under review. 9 porters ready were done as low as Rs. 15-8. The fall in prices was mainly due to second-hand sellers and mills were inclined to keep out of the market pending further developments. It was generally feared that the damage on account of the raids might be very great and that it might not be possible to carry on normal business. These fears have been thoroughly unjustified and with the rush for covering, quotations have naturally been marked higher. Closing prices are at the highest levels for the period under review, 9 porters ready being Rs. 17-2, January-March Rs. 17-2, April-June Rs. 17-2 and July-September Rs. 16-12. 11 porters ready are Rs. 22-2, January-March Rs. 22-4, April-June Rs. 22-4 and July-September Rs. 22.

In the Heavy Goods section sellers were rather reserved and there was a slight decline in prices. After being lower at Rs. 59-8, B. twills ready are available at Rs. 60-2, Liverpool twills at Rs. 62-2 and Cornsacks at Rs. 61-8.

The local stock figures for the month of December should be rather interesting as with the holidays and the large exodus of labour production must have been badly affected. It should not be forgotten however, that shipments also would have been affected in the last week of December which is generally the important period so far as shipping is concerned in every month. While, therefore, there may not be any appreciable decline in stocks for December, the January figures might reveal an altogether different picture. It is reported that it is still difficult to work normal hours in several jute mills and that production during the current month will be adversely affected.

GOLD

Calcutta, January 7.

The gold market was inclined to be firmer earlier in the week with some rush of buying by speculators and investors. Gold ready in the Bombay market was done as high as Rs. 67-12. Selling at the higher levels however brought down the quotation to Rs. 66 for ready and Rs. 65-11 for First Settlement. Sovereigns were quoted Rs. 48-8, the quotation at one time being Rs. 49-4. In the local market not much business has been passing though quotations were nominally higher. Sovereigns were quoted as high as Rs. 50-4.

Most of the prominent dealers in the local market have left for their homes and business is virtually at a standstill. In view of the slump in the stock markets and in the markets for export commodities, it is surprising, however, that the rise in bullion prices has been shortlived.

SILVER

Calcutta, January 7.

The silver market also was inclined to be firmer though there was no appreciable rise in quotations. Business passing has been on a very small scale. The discount for First Settlement over ready has widened, the quotation for Indian Mint Silver ready quoting Rs. 99-8 and that for January settlement Rs. 96.

There has been no change in the quotation in the London market for both spot and forward, the quotation being 23½d. Idle conditions were noticeable and small demand on trade account has been satisfied.

COTTON

Calcutta, January 7.

Rather irregular conditions have been noticeable in the Bombay raw cotton market. Earlier in the period under review, there was a slump and the quotation for Jharilla, January 1943 was Rs. 400 in sympathy with other markets. Later with a slight recovery on the stock exchange and the appearance of bulls on the market the quotation was marked up to Rs. 428. Mills also were inclined to buy more freely. During the last two days, however, markets have again struck a bad patch with the quotation lower at Rs. 410. Only some covering towards the close has been responsible for the late rally to Rs. 411-8. So far as the Western Presidency is concerned, there is nothing to be feared and cotton prices can be maintained at a fairly high level having regard to the supply position and the great demand from mills. In a short period, however, the weakness of other markets should have their influence on cotton prices as well. The third Cotton Forecast for 1942-43 shows that there is a decrease of 18 per cent in the area and 19 per cent in the yield as compared with the forecast (revised) last year. Needless to say that the decline is due to the grow more food campaign. The figures are given below:

The following is a summary of 3rd cotton forecast for 1942-43:—

	Thousand Acres	Thousand Bales
All-India ..	18,256	4,438
Trade descriptions:—		
Bengals ..	1,820	657
Americans ..	3,136	1,283
Oomras ..	5,046	1,030
Broach ..	694	142
Surti ..	515	106
Dholleras ..	1,273	229
Others ..	5,772	991

Decrease 18% in area and 19% in yield as compared with the corresponding forecast (revised) of last year.—API.

PIECEGOODS

Calcutta, January 7.

The piecegoods market was easier in the early days of the period under review. Several small holders were keen to dispose of their holdings but the wholesalers are reported to have locked up their godowns and left for places outside the city. Business passing has been naturally on a very small scale.

It is reported that arrangements for the distribution of standard cloth varieties have been very nearly completed and that under the new scheme it will be assured that there is no misuse of standard cloth varieties and that the consumers of the poor and lower middle classes will get their rightful share. While the arrangements in regard to the distribution have been completed, it is to be regretted however that so far there are no reports of the actual commodity being placed on the market.

Do you know

How much you were worth last month—what you earned, spent, saved or lent? It is a bank's job to keep an account of your money to the last neglected pie. For its client the bank's passbook is the record for all that plus what the bank has paid in interest on the balance. Open an account with us—Current or Savings—and know how you stand every month.

15 Points ON SAVING PETROL
9 LUBRICATING OIL GRADES
The use of an oil in the engine heavier than that recommended by the manufacturer will tend to increase the petrol consumption, as the engine friction is higher with a heavier oil than with a lighter oil. It is important, however, to use a drag-free oil. This is particularly so during the period of starting up and warming up. This statement applies equally to the transmission and to the rear axle lubricants, where oils thicker than recommended can cause more friction than is necessary and therefore absorb power.
FREE Copies of our leaflet "15 Points on Saving Petrol" are available free on application to us at Hongkong House, Calcutta; in English, Hindi, Urdu, Bengali, Marathi, Gujerati and Gurmukhi.

Stock Markets to-day and to-morrow

MARKETS ON EVEN KEEL

Markets on the Calcutta Stock Exchange have been rather quiet during the past week and quotations have been fluctuating in very narrow limits. Businees passing has been on a very small scale and holders are awaiting further developments. During the holidays it was reported that Indian Irons and Steel Corporations were done as low as Rs. 28-4 and Rs. 20-4 respectively. The re-opening was, therefore, satisfactory. The absence of any air raids during the past few days has had an encouraging influence but there is still considerable anxiety regarding the immediate outlook. While holders are in no hurry to liquidate their holdings fresh enquiry is completely absent. It is interesting to note that there are no sellers of first class preference shares. Very few transactions have been recorded in the popular counters and sellers are not prepared to offer any concession in rates. This is due to the fact that the preference capital of many companies is covered many times over and that investors are sure of their capital. It may even be possible in the case of several companies to pay dividends from the income on investments.

The Bombay market was rather quiet in the earlier days of the week but during the last three days a definitely better feeling has been noticeable. Tata deferreds are higher by nearly 60 points. There has been a substantial rise in prices in other sections as well. It will be remembered that it was pointed out last week that the fall in prices in the Western centre was rather exaggerated and that there should be a substantial recovery in prices in a short time.

* * * * *

The accounts of the *Hukumchand Jute Mills Company Limited* for the half-year ended September, 1942 are now available. The net profit for the six months, before providing for taxation and depreciation, is Rs. 13,87,425. The sum of Rs. 3 lakhs is set aside to depreciation while Rs. 5.5 lakhs is placed to Reserve for taxation. The amount written off debenture issue expenses is Rs. 74,093. After the payment of the arrears of dividends for the two half-years ended September, 1940 the debit balance carried forward to the next account is Rs. 12,06,645 against Rs. 14,64,070 brought in. The earnings for the half-year would have made better showing but for the fact that production was affected in common with most mills by a shortage of workers and costs of production increased on account of the payment of premiums under the War Risks Insurance Scheme.

Since September, 1939, there has been a reduction in the debit balance from Rs. 28,53 lakhs to Rs. 12.07 lakhs on September, 1942. The arrears of preference dividends to the extent of Rs. 5.6 lakhs have been paid in the same period. In the earlier period considerable advantage was derived from the increase in earnings as there was no liability for taxation on account of the arrears of depreciation. During the last four half-years, however, it has been necessary to set aside substantial amounts on account of taxation. Even assuming that earnings are maintained at the same level it will take more than three years to pay off completely the arrears of dividend on the preference shares and wipe out the debit balance in the profit and loss account.

The latest balance-sheet presents a much neater appearance than it did when the present managing agents took over the administration of the Company. If the directors can now consider the adoption of a capital reduction scheme the ordinary shareholders have a chance of getting a dividend at an early date. The ordinary shares of Rs. 7-8 each should be written down in value from Rs. 7-8 per share to Rs. 5 per share. It will then be possible to write off Rs. 10 lakhs on the assets side. There will be a surplus of Rs. 5 lakhs from the current half-year's earnings. With the total amount of Rs. 15 lakhs it will be possible to wipe off completely the debit balance. The balance can be utilised for writing down the value of assets. The arrears of dividend on the preference shares as on March, 1943 will be Rs. 7 lakhs. The preference shareholders should be given income bearing certificates for this amount, carrying interest at, say, 3½ per cent per annum and these income bearing certificates should be redeemed when the company is able to find the funds. This will mean that the company will be creating another prior charge to the extent of Rs. 25,000 per annum. Having regard to the high level of earnings, this addition to the prior charge cannot however be of any great consequence.

If, as outlined above, the directors decide upon a capital reduction scheme, there is every chance of the ordinary shareholders getting a dividend out of the earnings for the half-year ended September, 1943. The surplus of Rs. 5 lakhs, on the assumption that earnings are maintained at the present level, should enable a regular payment of dividend on the preference shares. The ordinary shares can receive a dividend of 12½ per cent per annum.

* * * * *

From the above analysis it will be clear therefore that the preference shares which are now quoting around Rs. 151 cum dividend have good scope for appreciation. The same cannot however be said of the ordinary shares. Even on the basis of a 12½ per cent dividend one can expect only a quotation of Rs. 18. Sometime back it will be remembered that these shares touched the high level of Rs. 20-12.

* * * *

In spite of the difficult conditions in the industry, the *Bengal Jute Mill Company, Limited* has been able to maintain earnings for the half-year ended June, 1942 at the level of the previous six months. The net profit, before providing for taxation and depreciation, is Rs. 5,21,770 against Rs. 5,62,769. The sum set aside to depreciation is Rs. 90,505 against Rs. 92,975, while the figure on account of taxation is Rs. 2.3 lakhs against Rs. 2.25 lakhs. The transfer to general reserve is slightly lower at Rs. 75,000 against Rs. 1 lakh. After the payment of the dividend on the preference shares the distribution to ordinary shareholders has been maintained at 12 annas per share. The amount carried forward is Rs. 28,974 against Rs. 42,709 brought in.

* * * *

After three lean years *Carew & Company, Limited* has been able to report a substantially higher level of earnings for the year ended June 1942. The net profit for the year would perhaps have been higher if it were possible to get more cane supplies. At it is, the figure before providing for taxation and depreciation is Rs. 8,71,434 against Rs. 6,12,598 for the previous year. The sum set aside to depreciation is Rs. 3,44,910 against Rs. 3,44,535

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Jan. 8.

Rather quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. The reopening on the market after the long Christmas and New Year holidays should be considered rather satisfactory having regard to the confusion following enemy air raids on the Calcutta area. In unofficial transactions during the holidays Indian Irons were reported done as low as Rs. 28-4. The reopening was rather steady at Rs. 30-2 and there was an improvement in the quotation to Rs. 30-10. There has been no panic selling and quotations have been fluctuating in very narrow limits. Business during the past few days has fallen off. Even earlier in the week there was no accumulation of orders. There is considerable anxiety regarding the future outlook and even the respite has not had any great encouraging effect on operators. The present conditions in the market might continue to be in evidence for some time.

The giltedged securities section has not been affected to any extent. Even the slight fall in prices has been recovered. 3½ per cent Paper is now quoting Rs. 94 against Rs. 93-11 before the holidays. Business, however, has been on a restricted scale. Money conditions have remained unchanged though the Government of India have had some difficulty in obtaining their requirements of treasury bills. 3 per cent Defence Loan 1949/52 were done at Rs. 100-1, 3½ per cent 1947/50 at Rs. 103-11, 4 per cent 1960/70 at Rs. 110-5, 4½ per cent 1955/60 at Rs. 113-15 and 5 per cent 1945/55 at Rs. 108-12. No transactions have been recorded in provincial loans.

Business in public bodies debentures has been very limited. 3 per cent *Calcutta Port Trust* debentures 1951 were done at Rs. 96-4. Among industrial debentures, *Dalmia Cement* were Rs. 105.

Transactions in preference shares have been only few as sellers are not prepared to part with their holdings at the present levels. The only transaction in jute mills shares is in *National* at Rs. 162. *Alkali and Chemical* were Rs. 118, *Muir Mills* Rs. 81 and *Titaghur Paper* Second Preferences Rs. 112 *.cum*-dividend.

Coal shares have not been affected very much and quotations are almost unchanged. *Amalgamated* were Rs. 30-8 ex-dividend, *Bengal* Rs. 400 *cum*-dividend and *Hurriladih* Rs. 15-8. *Katras Jherriah* were Rs. 28-14, *New Beerbhoom* Rs. 16-12 and *Pench Valley* Rs. 34-14. *West Jamuria* were Rs. 31-4.

In the jute section quotations were generally lower. The fears regarding production have been mainly responsible for the lower level of prices. *Albion* were Rs. 183, *Alliance* Rs. 313, *Bally* Rs. 252 and *Budge Budge* Rs. 340. *Hukumchand* changed hands at Rs. 18-2, *Kamarhatty* at Rs. 476 and *Kanknarrah* at Rs. 281. *National* were Rs. 22.

In the Engineering section, *Indian Iron* opened rather steady around Rs. 30-2 and were fluctuating around that level for some time. The quotation during the last two days is slightly lower at Rs. 29-11. *Steel Corporation* were Rs. 22-4 earlier in the week. They are now quoting Rs. 21-8. *Indian Malleable Castings* ordinaries were Rs. 8-15 and *Saran Engineering* Rs. 6-10. *Steel Products* were Rs. 7-5. *Kumardhubi Engineering* were Rs. 5-7.

Sugar shares have been relatively steadier with *Cawnpore* at Rs. 29-4. *United Provinces Sugar* were Rs. 14-10, *Champarun* were Rs. 23-8 and *Belsund* Rs. 7-10.

Tea shares have been very well held and there has not been much selling. *New Samanbagh* were Rs. 31-12, *Rajnagar* Rs. 10-8, *Hattikhira* Rs. 25-2 ex-dividend and *Murphulani* preferred ordinary shares Rs. 13-12.

In the Miscellaneous section, only very few transactions have been put through. *British Ceylon Corporation* were Rs. 13-5 and *B. I. Corporation* Rs. 5-12. *Burma Corporation* were steady at Rs. 3-3 and *Indian Copper Corporation* at Rs. 2-2. *Britannia Biscuits* were Rs. 13-2 and *Walford Transport* Rs. 2. *Titaghur Paper* were Rs. 21-2 and *Assam Saws* Rs. 3-14.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 7.

After early weakness rather firm conditio have been noticeable on the Bombay Sto Exchange. It is generally felt that the earl decline in prices on the receipt of the ne regarding enemy air raids on Calcutta w rather exaggerated.

The shares most affected were Steels. Th is quite natural considering the proximi of the works of the company to the affect area. The absence of further raids and t proved superiority of our defences coupl with the encouraging war news have mo than offset the depressing effect produced the local Stock Exchange in Christmas Wee

Government securities were steady, 3½ p cent Government Paper quoting at Rs. For a time the quotation was lower Rs. 93-11.

Textiles.—Immediately on the receipt the news of enemy attack on Calcutta, shar

In paying a Dividend of Rs. 5½ per cent per annum, on Cumulative Preference Shares for the half-year ended 30th June, 1942 (free Income-tax) 27.500 0 0
In paying a Dividend on the Ordinary Shares of As. 12 per share (i.e., 15 per cent per annum), free of Income-tax ... 1.12.500 0 0
Transfer to Reserve Account 75.000 0 0
To be carried forward to next half-year 28.973 14 2

Total ... Rs. 2.43.973 14 2

Mr. J. S. Ker in terms of the Articles of Association of the Company retires this year from his office of the Board of Directors and being eligible offers himself for re-election.

Mr. Ram Coomar Bangur owing to prolonged absence has resigned from the Board of Directors.

Mr. Jugmohan Prasad Goenka, being out of Calcutta has not signed the Report and the Accounts.

Messrs. S. R. Batliboi & Co., Auditors of the Company retire this time and being eligible offer themselves for re-appointment.

During the period under Review, your Mills have worked in accordance with the working agreement of the Indian Jute Mills Association. Prospects for the half-year ending June, 1942 are good.

We are, Gentlemen,
Yours faithfully,

S. N. BANERJEE.
M. L. JALAN.
C. L. BAJORIA.
J. S. KER.
Directors.

MARTIN & CO.,
Managing Agents.

Calcutta,
The 8th January, 1943.

(Continued from page 45)

while the allocation to taxation reserve is Rs. 2.9 lakhs (nil). The arrears of dividend on the preference shares for two years ended March 1942 have been paid, while the dividend for the half-year ending September, 1942 is also to be paid. After all these payments the amount carried forward is the substantial sum of Rs. 72,510 against Rs. 17,986 brought in. Earnings for 1941-42 are the highest in recent years. It is not, however, correct to make any comparison with the earnings for the past years as the potential earning capacity of the company has considerably increased with the coming into being of the Darsana sugar factory. The company's distilleries are working to full capacity, almost the entire production being taken up by the Government. It is feared that it will not be possible to get adequate supplies of cane during the current year though efforts are being made to keep the factories going as long as possible. It can be expected that with the increase in the ex-factory maximum price for sugar to Rs. 14 per maund it will be possible to report a considerably higher level of earnings for the current year. In which case, the ordinary shareholders can hope to get a dividend. Not long ago, the shares of this company were very popular in the market and were quoted as high as Rs. 20: it may not be long before the shares touch again the former levels.

WATCH-DOG.

(Continued from previous page)

in this section were marked sharply. There was some nervous selling. *Bombay Dyeing, Central India* and *Century* went down to Rs. 1,605, Rs. 369, Rs. 578 respectively. However when it was known that the raiders were beaten in their own game there was a good recovery. *Bombay Dyeing* are quoted at Rs. 1,665, *Central India* at Rs. 391, *Century* at Rs. 666 and *Simplex* at Rs. 270.

Steels.—It is only natural to expect of the shares in this section to encounter greater selling pressure immediately after the raids as the works of this company are very near Calcutta. There was a drop in the quotation to Rs. 1,460. Later on buying and covering have resulted in a recovery to Rs. 1,520.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE

The Twenty-fifth Ordinary General Meeting of the Shareholders of the Indian Iron and Steel Company, Limited, will be held on Friday, 29th January, 1943 at 11 a.m., at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1942.
(2) To confirm the payment of the ad-interim dividend which was paid on and after 2nd November, 1942.
(3) To elect a Director in place of Sir P. P. Ginwala who retires and is eligible for re-election.
(4) To elect a Director in place of Mr. J. S. Ker, who retires and is eligible for re-election.
(5) To elect a Director in place of Dr. N. N. Law, who retires and is eligible for re-election.
(6) To appoint Auditors for the current year and to fix their remuneration.

COMPANY REPORTS

BANKURA-DAMOODAR RIVER RAILWAY COMPANY, LIMITED.

Audited accounts for the year ended 31st March, 1942:—

Capital.—The total Capital Outlay on Final Heads remains the same as at the close of the previous year, *viz.*, Rs. 39,69,975.

The Capital subscribed by Shareholders amounts to Rs. 34,00,000, 3¾ per cent. Debenture Capital to Rs. 4,00,000 and the Gross Capital Outlay, inclusive of Suspense Heads, to Rs. 40,35,997. The balance was met by means of an overdraft from the Imperial Bank of India secured by deposit of a second series of Bearer Mortgage Debentures of Rs. 4,00,000.

Revenue.—The gross earnings for the year amounted to Rs. 1,49,786 and working expenses to Rs. 1,69,162 as compared with Rs. 1,28,998 and Rs. 1,52,219 respectively for the previous year. The net loss of Rs. 19,376 has been carried as a charge against Net Revenue Account.

Under the Net Revenue Account, the net loss, together with interest payable on debentures and overdraft, etc., amounts to Rs. 41,204 which, added to the amount required for guaranteed interest at 3½ per cent., calls for a total subsidy of Rs. 1,60,604 from the Government of India in terms of the Agreement with the Secretary of State. Out of this sum an advance of Rs. 80,500 has already been received and the balance of Rs. 80,104 is still due.

Owing to the Secretary of State's refusal to allow Super Tax as an item of working expenses and the Reserve Fund, which partly contributed towards this expenditure in previous years, having been depleted, the directors are able to recommend payment of a dividend at the rate of Rs. 3-2-0 per share (less Income Tax thereon) for the year ending 31st March, 1942; this will be payable on receipt of the balance subsidy from the Government of India.

Working Expenses.—Compared with the previous year, the total working expenses show a net increase of Rs. 16,943 which is mainly due to unavoidable urgent maintenance works, as also abnormally high prices of materials and labour and Dearness Allowance granted to the staff (as sanctioned by the Government of India).

Coaching.—The receipts under this head amounted to Rs. 94,065 for the carriage of 187,718 passengers as compared with Rs. 74,373 and 146,242 passengers for the previous year.

The increase is mainly due to restricted bus service on account of Petrol rationing.

Goods.—The earnings from this source totalled Rs. 52,986 for 654,668 maunds of goods as against Rs. 51,944 for 677,859 maunds of goods for the previous year.

Managing Agents.—Messrs. McLeod & Co., Ld.

Synopsis of the balance sheet as at 31st March, 1942:—

Capital paid-up ..	34,00,000	Fixed Capital Expenditure ..	40,35,997
3¾% Mort. Debentures ..	4,00,000	Outstandings ..	88,332
Reserve Fund ..	2,911	Investments ..	24,000
Current debts ..	3,66,622	Cash balances ..	21,204
Total ..	41,69,533	Total ..	41,69,533
		Total Liquid Assets ..	1,33,536

KALIGHAT-FALTA RAILWAY COMPANY, LIMITED

Audited accounts for the year ended 31st March, 1942:—

Capital.—The total Capital Outlay on Final Heads now amounts to Rs. 23,80,626 as against Rs. 23,78,592 at the close of the previous year, the excess of Rs. 2,034 is mainly due to outlay on Bagirhat and Amtala Hat Station Buildings.

The Capital subscribed by Shareholders remains as last year at Rs. 19,50,000 (inclusive of Rs. 3,00,000 subscribed by Government), the Debenture Capital likewise remains at Rs. 4,50,000 (Rs. 3,00,000 at 4½ per cent and Rs. 1,50,000 at 4 per cent) and the Gross Capital Outlay, inclusive of Suspense Heads, amounts to Rs. 24,43,423; the balance has been met by means of temporary loans from the Reserve Fund and Revenue.

Revenue.—The gross earnings for the year amounted to Rs. 2,14,277 against Rs. 1,63,716 for the previous year and the working expenses to Rs. 2,20,773 against Rs. 1,60,821 for the previous year. The net loss of Rs. 6,496 has been carried as a charge against Net Revenue Account.

Under the Net Revenue Account, after meeting the net loss together with the interest, etc., on Debentures and other loans, there is a deficit of Rs. 26,827 which, added to the amount required for guaranteed interest at 3½ per cent on the total subscribed share capital of Rs. 19,50,000, calls for a total subsidy of Rs. 95,077; as, however, Rs. 10,500 of this guaranteed interest is due to the Government of India on their portion of the subscribed capital, the net balance (together with Income-tax on their share of interest) recoverable from them in terms of the agreement with the Secretary of State is Rs. 87,038. As this sum has already been received, the directors recommend that warrants be issued for the distribution of a 3½ per cent dividend to Shareholders (less Income-tax).

Working Expenses.—Compared with the previous year, the total working expenses show a net increase of Rs. 59,952 which is mainly due to unavoidable urgent maintenance works as also abnormally high prices of materials and labour and Dearness Allowance granted to the staff (as sanctioned by the Government of India).

Coaching.—The receipts under this head amounted to Rs. 1,81,289 for the carriage of 1,250,462 passengers as compared with Rs. 1,31,249 and 925,233 passengers for the previous year.

The increase is mainly due to restricted bus service on account of Petrol rationing.

Goods.—Earnings from this source amounted to Rs. 29,058 for 720,622 maunds of goods as against Rs. 28,472 for 688,964 maunds for the last year.

Managing Agents.—Messrs. McLeod & Co., Ld.

Synopsis of the balance sheet as at 31st March, 1942:—

		Total Liquid Assets ..	1,53,944

SIALKOT-NAROWAL RAILWAY COMPANY, LIMITED.

Audited accounts for the year ended 30th September, 1942:—

Accounts.—After payment of Government's share of Surplus Profits (Rs. 86,346-15-10), setting aside Rs. 5,000 to Reserve as above, and making provision for taxation including Rs. 34,132 to meet Excess Profits Tax, the earnings for the year show a net profit of Rs. 1,60,006-14-0. To this must be added the sum of Rs. 4,789-0-4 brought forward from last year's Accounts, making Rs. 1,64,795-14-4 in all.

The Directors declared an *ad-interim* dividend at the rate of 4½ per cent per annum, less Income-tax, which absorbed a sum of Rs. 71,100 leaving a balance of Rs. 93,695-14-4 available, which they recommend should be applied as follows:—

	Rs.	A.	P.
Dividend for the Second half-year ended 30th September, 1942, at the rate of 5½ per cent per annum on amounts paid up (making 5 per cent for the year) payable less Income-tax	86,900	0	0
Bonus to the Company's Staff	1,500	0	0
Balance to be carried forward	5,295	14	4
Total ..	93,695	14	4

The following statement gives the statistics of traffic on the line for the past five years:—

	1940.41	1941.42
Number of Passengers ..	1,121,506	1,273,506
Gross Earnings (in Rupees) ..	3,92,216	4,87,057
Merchandise (in Tons) ..	116,028	115,143
Gross Earnings (in Rupees) ..	1,87,910	2,20,267
Terminal Charges adjustments ..	13,188	13,188(c)

(c) The figure included in this amount for the half-year ended 30th September, 1942 (*viz.* Rs. 6,594), is subject to adjustment.

Coaching Traffic.—There has been an increase of over 1.5 lakhs in the number of passengers carried and over Rs. 94,000 in coaching receipts. The improvement is due to military movements, diversion of road traffic to rail on account of petrol rationing and the enhancement in passenger fares from 1st May, 1942.

Goods Traffic.—Whilst the tonnage of merchandise carried is about the same as last year, the earnings show a substantial advance of over Rs. 32,000 due to higher tariffs in force.

Investments.—It will be observed that the Company has purchased Rs. 50,000 2¾ per cent 1948-52 Government Loan Bonds.

Capital.—The Capital expenditure of the Company has exceeded the Company's Issued, Subscribed and Reserve Capital by Rs. 8,765, which has been financed from Revenue under the sanction of the Railway Board. From the profits of the year the Directors have taken the opportunity to increase the Reserve by Rs. 5,000.

Agents.—Messrs. Killick, Nixon & Co.

Sypnosis of the balance sheet as at 30th September, 1942:—

		Total Liquid Assets ..	1,96,509

BURDWAN-CUTWA RAILWAY COMPANY, LIMITED.

Audited accounts for the year ended 31st March, 1942:—

Capital.—The total Capital Outlay on Final Heads remains the same as at the close of the previous year, *viz.*, Rs. 20,01,852.

The Capital subscribed by Shareholders amounted to Rs. 17,80,000, 3¾ per cent. Debenture Capital to Rs. 3,50,000 and the Gross Capital Outlay inclusive of Suspense Heads to Rs. 20,53,830.

Revenue.—The gross earnings for the year amounted to Rs. 1,63,976 and working expenses to Rs. 1,35,330 as compared with Rs. 1,34,025 and Rs. 1,37,551 respectively for the previous year. The balance of Rs. 28,646 has been carried to Net Revenue Account.

Under this account after including interest earned on temporary loan of Rs. 75,000 to Ahmadpur-Katwa Railway and allowing for Debenture interest and other charges, there is a surplus of Rs. 17,946 which to make up the sum of Rs. 62,300 required to meet the guaranteed interest at the rate of 3½ per cent. on the Share Capital of Rs. 17,80,000, calls for a total subsidy of Rs. 44,354 to be recovered from the Government of India in terms ofthe Agreement with the Secretary of State. Out of this sum an advance of Rs. 31,400 has already been received and the balance of Rs. 12,594 is still due. Warrants for the distribution of a 3½ per cent. dividend to Shareholders (less Income Tax) will be issued as soon as the amount is recovered.

Working Expenses.—Compared with the previous year the total working expenses show a net decrease of Rs. 2,221.

Coaching.—The receipts under this head amounted to Rs. 1,24,118 for the carriage of 301,074 passengers as compared with Rs. 1,01,261 and 239,664 passengers for the previous year. The feeder bus service from Natunhat helped as before in contributing to the traffic earnings.

Goods.—Earnings from this source totalled Rs. 31,461 for 627,312 maunds of goods as against Rs. 26,997 for 596,445 maunds last year.

Managing Agents.—Messrs. McLeod & Co., Ld.

AHMADPUR-KATWA RAILWAY COMPANY, LIMITED.

Audited accounts for the year ended 31st March, 1942:—

Capital.—The total Capital Outlay, on Final Heads, remains the same as at the close of the previous year, *viz.*, Rs. 20,73,274.

The Capital subscribed by Shareholders amounts to Rs. 17,24,000; 3¾ per cent. Debenture Capital to Rs. 3,00,000 and the Gross Capital Outlay, inclusive of Suspense Heads, to Rs. 20,95,049, the balance has been met by means of a fixed loan of Rs. 75,000 from the Burdwan-Cutwa Railway Company, Limited, at the current Imperial Bank rate.

Revenue.—The gross earnings for the year amounted to Rs. 1,23,187 while the working expenses totalled Rs. 1,33,817 as compared with Rs. 1,12,324 and Rs. 1,14,106, respectively, for the previous year. The net loss of Rs. 10,631 has been carried as a charge against Net Revenue Account.

Under the Net Revenue Account, after meeting the net loss together with the interest payable on debentures and temporary loans, etc., there is a deficit of Rs. 24,953 which, added to the amount required for guaranteed interest at 3½ per cent., calls for a total subsidy of Rs. 85,293 to be recovered from the Government of India in terms of the agreement with the Secretary of State. Out of this sum an advance of Rs. 48,900 has already been received and a balance of Rs. 36,393 is still due. Owing to the Secretary of State's refusal to allow Super Tax as an item of working expenses and the Reserve Fund, which partly contributed towards this expenditure in previous years, having been depleted, the directors are only able to recommend payment of a dividend at the rate of Rs. 3-7-0 per share (less Income Tax thereon) for the year ending 31st March, 1942; this will be payable on receipt of the balance subsidy from the Government of India.

Working Expenses.—Compared with the previous year, the total working expenses show a net increase of Rs. 19,711, which is mainly due to unavoidable urgent maintenance works, as also abnormally high prices of materials and labour and Dearness Allowance granted to the staff (as sanctioned by the Government of India).

Coaching.—The receipts under this head amounted to Rs. 93,244 for the carriage of 269,447 passengers as compared with Rs. 84,932 and 233,551 passengers for the previous year.

The feeder bus service from Ganutia helped as before in contributing to the traffic earnings.

Goods.—Earnings from this source totalled Rs. 28,670 for 580,140 maunds of goods as against Rs. 25,315 for 498,126 maunds last year.

Managing Agents.—Messrs. McLeod & Co., Ld.

KATAKHAL-LALA BAZAR RAILWAY COMPANY, LIMITED.

Audited accounts for the year ended 31st March, 1942:—

Capital.—The total Capital Outlay on Final Heads now amounts to Rs. 15,06,169 as against Rs. 15,00,380 at the close of the previous year, the addition is due to cost involved in the improvement of the stations and buildings.

The Capital subscribed by Shareholders amounts to Rs. 8,91,100, 4 per cent. Debenture Capital to Rs. 6,50,000 and the Gross Capital Outlay to Rs. 15,06,169; part of the unexpended portion of these funds was invested in six-monthly Fixed Deposits with the National Bank of India.

Revenue.—The gross earnings for the year amounted to Rs. 68,564 as against Rs. 64,269 for the previous year; the Working Expenses, which under the agreement with the Working Agency amount to 50 per cent. of gross earnings, are retained by the Assam Bengal Railway (now the Bengal and Assam Railway) and the balance, being the like amount of Rs. 34,282 is carried to Net Revenue Account. Under this account, after including sundry petty receipts and interest on temporary investment and allowing for Debenture interest and other charges, there is a surplus of Rs. 8,069 which, to make up the sum of Rs. 31,189 required to meet the guaranteed interest at the rate of 3½ per cent. on the Share Capital of Rs. 8,91,100, calls for a total subsidy of Rs. 23,119 to be recovered from the Government of India in terms of the Agreement with the Secretary of State. As, however, the Secretary of State has refused to allow Super Tax as an item of working expenses and the Reserve Fund, which partly contributed towards this expenditure in previous years, has been depleted, the directors are only able to recommend payment of a dividend at Rs. 3-1-0 per share (less Income Tax) for the year ending 31st March, 1942.

Warrants for the distribution of the dividend will be issued as soon as the necessary funds are received from the Government through the Bengal and Assam Railway.

Coaching.—The receipts under this head amounted to Rs. 54,338 for the carriage of 362,882 passengers as compared with Rs. 51,540 and 279,682 passengers for the previous year.

Goods.—Earnings from this source totalled Rs. 13,698 for 14,877 tons of goods as against Rs. 12,521 and 14,385 tons for the previous year.

Managing Agents.—Messrs. McLeod & Co., Ld.

ISSUED WEEKLY

Vol. XXXI. No. 3 SATURDAY, JANUARY 16, 1943 Price Re. 1

NORTH WESTERN RAILWAY

The notice issued to the public regarding the closing of stations Matli exclusive to Padin inclusive on the Hyderabad (Sind), Badin Branch line, which appeared in certain newspapers during the second week of September, 1942, is cancelled. The Section in question will now be closed on 23rd July, 1943. The booking of traffic will, therefore, be stopped on the dates as shown below:—

(a) Traffic of all discriptions from Foreign Railways—14th July, 1943.

(b) Local goods traffic in bookings to station on this section—14th July, 1943.

(c) Goods traffic in bookings from stations on this section—22nd July, 1943.

(d) Local passengers and other Coaching traffic in bookings to stations on this section—20th July, 1943.

(e) Passengers and other Coaching traffic in bookings from stations on this section—22nd July, 1943.

The public is also advised that on and from the 23rd July, 1943, the running of trains between Matli and Badin will be discontinued.

GENERAL MANAGER,
Lahore.

Advertisements usually pay.

But this one won't.

Because we are only advertising the fact that we cannot manufacture sufficient cables to satisfy the presentday demands.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

AFTER the slightly—very, very slightly—steadier feeling noticed in the short loan market in connection with year-end adjustments, inter-bank call money has relapsed to a state of all lenders and no borrowers. The nominal rates are ½ per cent in Calcutta and ¼ per cent in Bombay. It is now evident—and this confirms the view put forward in INDIAN FINANCE last week—that banks had gone to the Imperial Bank both for temporary advances and rediscounting of treasury bills, with a view to reinforce their cash position at the time of the making-up of the annual accounts. The return of the Imperial Bank for the week ended January 8 shows a decline of Rs. 3.64 crores in bills purchased and discounted (that is, from Rs. 6.22 crores to Rs. 2.58 crores). Cash credits also show a decline of nearly Rs. 2½ crores from Rs. 17.33 crores to Rs. 14.85 crores. It is thus clear that the cash borrowed from the Imperial Bank for window-dressing purposes was over Rs. 5 crores. It is for this reason that the cash position of the Imperial Bank showed a sharp and sudden deterioration. It is also for this reason that the Imperial Bank was not able to take its usual interest in treasury bill tenders or tap bills. With the repayment of the loans taken by banks and the maturing of the rediscounted bills, and thanks also to the sharp increase of nearly Rs. 4 crores in deposits, the Imperial Bank records an increase of Rs. 9¾ crores in its cash balances.

This affluence is, we think, largely responsible for the satisfactory applications received on treasury bill tender day and for the substantial sales of tap bills. Against Rs. 6 crores of tender bills on offer, applications came to Rs. 9.73 crores. The average rate of accepted tenders, however, shows an increase of half-anna to rupee one anna one and pies five per cent per annum. We consider that if, as in the previous two tenders, the Reserve Bank had persisted in a firm treasury bill policy, that is to say, if the Reserve Bank had rejected unsuitable tenders even though it meant that the full quota of Rs. 6 crores was not made up, it would have been the more correct procedure. That considerable sums will again be forthcoming for treasury bills, is clear from the sales of tap bills between 6th January and 11th January exceeding Rs. 5 crores mark.

The Reserve Bank returns for the week ended January 8 reflect the changes resulting from the repayment of 3½ per cent India sterling stock. Sterling securities held in the issue department have declined by Rs. 67 crores from Rs. 412.83 crores to Rs. 345.83 crores, while foreign balances in the banking department are down by Rs. 1.42 crores from Rs. 66.61 crores to Rs. 65.19 crores. Thus, the total sterling assets withdrawn from the Reserve Bank for this operation of sterling debt repatriation is Rs. 68½ crores. It is, however, not possible to say that this is all the sterling used last week in connection with the redemption of 3½ per cent stock. For, it is not unlikely that a substantial instalment of payment in respect of intergovernmental transactions was received in London as usual in the first week of every month. We may hazard the guess that Rs. 10 crores was thus received in sterling. In other words, the amount of sterling so far utilised for 3½ per cent sterling stock is Rs. 78½ crores. As a considerable portion of 3½ per cent stock is held by investors and investment institutions in India, the need for further sterling for this transaction may not be much. By the same token, it is not possible to say precisely what is the amount of rupee finance that has had to be provided for last week's operations in this regard. Rupee securities have risen by Rs. 72 crores from Rs. 122.36 crores to Rs. 194.36 crores. It is also to be added that Central Government's deposits with the Reserve Bank have sharply declined by Rs. 8.94 crores from Rs. 14.07 crores to Rs. 5.13 crores. We may, from this point of view, advance the theory that, in addition to Rs. 72 crores secured from the issue of ad hoc treasury bills to the Reserve Bank, about Rs. 5 crores to Rs. 6 crores has been found from the current cash balances of the Government.

The active note circulation has gone up by Rs. 8 crores and has now reached a total of Rs. 586.35 crores. Thanks to the big bulge recorded in the Imperial Bank's cash, deposits maintained by member banks with the Reserve Bank have gone up by Rs. 7.57 crores to Rs. 55.66 crores.

It was one pice coins whose famine caused the first serious inconvenience in the routine monetary transactions of the mofussil parts. It was soon found difficult to secure all kinds of small change. Like the humbler individuals in the districts, the humbler banks now report of their difficulties on account of their being unable, in some cases, to secure notes of small denominations. Some of the branches of the currency offices are now finding themselves in extreme short supply of one rupee, five-rupee and ten-rupee notes ; and banks in those centres are asked to take payment in hundred-rupee notes. Unless the supply of the small notes is immediately replenished and adequately replenished in all parts of India, a serious crisis may develop.

As we go to press, a *communique* has been issued by the Reserve Bank to the effect that

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees six crores) of 3 months' Government of India Treasury Bills were opened on Tuesday, January 12, 1943. Total amount offered was Rs. 9,73,25,000 (Rupees nine crores seventy-three lakhs twenty-five thousand). Tenders at Rs. 99-11-9 per cent were accepted in full and those at Rs. 99-11-6 were allotted 42 per cent. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 1-1-5 (Rupee one anna one and pies five per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees six crores) of 3 months' Government of India Treasury Bills will be received on Tuesday, January 19, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, January 18, 1943, at other centres. Successful tenderers should make payment on Friday, January 22, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from January 13 to January 18, 1943, at Rs. 99-12-0 per cent, subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from January 6 to January 11, 1943, amounted to Rs. 5,05,00,000 (Rupees five crores and five lakhs).

During the week ended January 8, 1943, Government of India Treasury Bills for Rs. 76,02,00,000 (Rupees seventy-six crores two lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

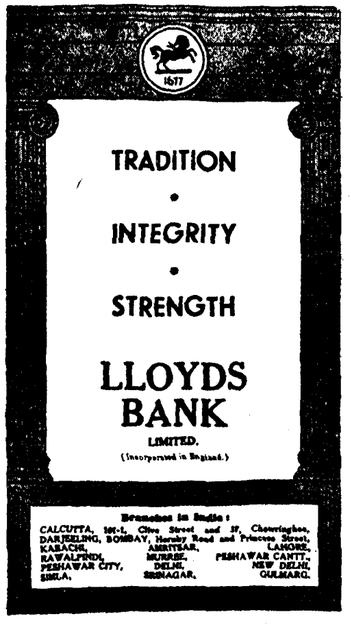
Finance Abroad

Thursday Morning.

THE U. S. Budget for 1943-44 has been outlined in the President's message to the new Congress. The message has not upset Wall Street for U. S. Steel is still over 48 and the quotations for Anaconda Copper, etc. are unaffected. The renewal of the credit to China and other proposals will seem subordinate to the tax programme referred to by the President. The Treasury Secretary has not broken silence yet but he will endorse the views of the President and submit proposals that will give the Committees no option of refusal. The year 1942 has brought a vast increase in war production in the U.S.A. Compulsory saving might be introduced, and the cessation of all hire-purchase (though repayments go on as usual) might be made part of a new financing system. All that clearly belongs to the future, but the President has queered his own pitch by putting up a machine politician for a high diplomatic post. The brisk nomination of Mr. Flynn has given Mr. Roosevelt's opponents a chance. But the President has received little support from his own side. There are other nominations to go through. Mr. Henderson's place has to be filled, and the Budget message with its harsh programme will excite displeasure from two sides but not from the farm bloc which will find that relief has been provided for, though not on the scale it would like.



The Republican Congressman's proposal to repeal the Silver Purchase Act of 1934 is not a bull point for silver. It is, however, a gain to the U. S. Treasury (even after its reduced purchases in 1942) which can quietly give up silver and divert its stock to the many industrial uses which are increasing in wartime. The Democrats from the West may oppose it, but the Treasury will forget the party line and approve Mr. Reed's proposal to give up silver after 8 years of regular large scale purchases. If the free market in New York gets stocks from the Treasury's suspension of its own purchases at an unduly high price, the holders of silver in the East will have little cause to regret the abandonment of the silver programme forced on the Treasury in the depression and maintained, owing to China's going off silver among other reasons. The gain to the U. S. Treasury which has plenty of gold to look after without troubling over silver will be fairly large, but it is in the possibility of Treasury silver going into Lease-Lend that interest will naturally converge. It may be said without prejudice that if the unofficial suggestion is accepted the Allies will gain and Indian sales will not be required in order to meet British demands. If the London sales stop, and the U. S. Treasury also stops buying silver for its currency reserve, the Indian speculator will take a knock because the Reserve Bank can sell silver and bring prices down. Premonition of some sort has not been lacking in Bombay which has displayed singularly little faith in silver after the year began.

There is really no need for the U. S. Treasury to buy at 70 cents silver, for which a price of 45 cents per ounce seems high enough. Cheaper silver means ultimately a gain to the users of silver including the Allies who will receive it in the form of Lease-Lend supplies. From the bullion operator's point of view it is better that due notice has been given to the Treasury by the Congressman. The silver bloc can have no chance against the Administration, and silver mines in the U.S.A. faced by higher taxation to come soon will accept the view that lower prices in New York cannot make much difference. India cannot afford to ignore the news received in December and January as to the changing views on silver in the United States. The higher price paid to Mexico will be ignored henceforth in assessing the prospects for silver. Apart from ending the shortage of coin in India a revision of views will demonstrate that the silver policy pursued by the Indian Government has been correct, while the criticism, repeated without any reference to pressing war needs and India's clear duty to assist the Allies in every way, will be seen to have missed the mark once again.

Since the Big Five in Britain report larger profits in 1942 and claim to have kept up dividends, etc., it will be seen that no special change occurred during the year. Apart from the ability to increase deposits there has been no indication that war has helped the big banks much though banks have helped the Treasury and war industries in many ways. The aggregate total of Clearing Banks' deposits is not known at present, but it will be surprising if it has gone up greatly since June 1942 though the note issue has steadily expanded in Britain as in India. It was assumed that the pace of expansion had slowed down considerably and banks with very restricted opportunities were not really interested in obtaining an increase in deposits. But a healthy banking position makes for easy borrowing on the part of the State, and the best thing that can happen is the continuance of currency management, with the Banks remaining free to order their own affairs. If there is 'free' purchasing power in the larger deposits recorded everywhere, that can be diverted into war loans when necessary and the increase in Bank deposits argues an increase in taxable capacity that will support optimism in Britain as to the power to pay for the war in part immediately. The usual cable as regards weekly Treasury borrowing says little about money conditions after the end of 1942. The market still lives largely by lending for six months at 1⅛ per cent and the probable addition to resources is a consequence of austerity in 1943. Dr. Dalton cannot predict anything but a lower standard of living in wartime. Mr. Ernest Brown, too, has said the same thing. Reduced consumption implies larger savings, and the recent Ministerial utterances support recent guesses of more money going into gilt-edged. But Home Industrials will remain a strong rival as a recent report urged that the public in Britain was developing a taste for industrial shares for various reasons and the rise in the index to a new peak since August supported the conclusion that Home Industrials were favoured on prospects. The consumption of tobacco was rising last year; tobacco shares rose. Rayon shares kept advancing because real silk was scarce. Inflation in Britain, apart from sustaining gilt-edged directed attention to industrials. The lower yield on all Government securities diverted funds to equities which had more than recovered by September. War news has been such as to stimulate Industrials though stores shares, notably Woolworths, have eased lately. Towards the middle of the week in London, giltedged showed a rise. The repayment of India stock had left much money for fresh investment and small changes in prices merely prove that in the first two weeks of 1943 giltedged rather than Industrials have attracted great attention. The Australian loan is going up though the Commonwealth is spending heavily on the War and is known to be worried over the resurgence of the invasion peril. In the industrial market prices have not risen to the same extent as in the Home Rail market. The price of 61 for G. W. Ord. appears to be almost a record and Transport A at 131 appears to have touched an unusual peak. Gold mining shares have been described as being off colour, but the attention paid to makers of radio equipment has been mentioned specially. The textile group has been called quiet, but the rise in Dooars Tea may be adduced in favour of what has been said here previously, about tea shares and prospects generally in the current year. An increase in the retail price of tea has been sanctioned and producers will doubtless get their share of the increase ordered. The speculative rise in Oils has been apparently halted by the sharp fall in Royal Dutch, but Anglo-Iranian must go higher as the Germans retreat down the Don Bank.

The gargantuan totals of U. S. war expenditure must go into an account of recent financial developments. The President expects war outlay to average eight billions a month. He wants 66 billions for munitions and 21 billions for soldiers' pay etc., all in one year—the next. Reduction on construction expenditure is promised after 1943. But then the budget total will have risen from 77 billions to 100 billions. Now and afterwards full employment will be maintained and concentration of industry, dilution of labour, etc., are forecast. Rationing too will extend. The farm relief programme will be retained as bigger food production is wanted in war. The average civilian in the U.S.A. will have to take 500 dollars in a year in goods and services. As the average income is about 1,000 dollars assuming that 135 billions are shared equally by 130 million people, it means that the President reckons on getting half the national income somehow. How this

India, a Creditor

Last week's repayment of India 3½ per cent non-terminable sterling stock marks the formal completion of the plan for repatriation of India's sterling debt, and vindicates and fulfils the forecast advanced in this column in a series of articles "India's War Finance" which appeared soon after the beginning of this war. It must be made clear, however, that repatriation of sterling debt does not mean repatriation of British investments in India. For, official policy and operations have, for reasons easy to understand, since the commencement of the war singled out the liabilities of India with which the Indian Government and the British Government could deal without giving rise to a complexity of consequential problems and controversial issues.

From this point of view, the loans and liabilities that came handy for repayment were the India sterling stocks that were outstanding on the London market, and the Railway sterling annuities. With regard to sterling loans, it may now be said that India ceases officially to be owing any money on loans quoted on the London market; but it must be added that small balances of the various sterling loans still remain unredeemed as their holders are outside the jurisdiction of DORA or of India Defence Rules. Including the now-redeemed 3½ per cent stock, the balances thus left outside the repatriation programme may amount to £50 million. Even so, the achievement is impressive and, from India's point of view, a memorable landmark.

With regard to Railway annuities payable in sterling, the scheme that was put into effect sometime ago does not contemplate liquidation of the liability, but provision of the requisite sterling assets for the meeting of this liability as and when due. That is to say, the present value of the annuities was estimated at slightly over £30 million; and sterling balances for this amount were made over to the British Government from whom the sums as needed from time to time will be receivable by the Indian Government who, from these proceeds, will make payment to the annuitants. In simple terms, the Indian Government have subscribed for British Government stock for £30 million on an interest basis reckoned at 2½ per cent per annum; and the stock has varying repayment dates in accordance with the schedule for the payment of the annuities. Thus, though India may be said to have discharged her liability for sterling in respect of railway annuities, she is not discharged from her formal liability for payment. If we may say so, it is a case of repatriation of sterling but not repayment of debt.

Taking this fact into account, the present position is that, while the Government of India's sterling debt in 1936 was £376 millions, the balance now outstanding (which means the balances of India sterling stocks remaining unredeemed plus the liability on Railway annuities) is £80 million. This liability, technical and otherwise, will continue for some time though we have ample sterling resources for meeting it now and here and though, for over 40 per cent of it, we have actually provided in advance the requisite sterling.

India has cause to be both gratified and relieved by this significant development. Gratified because she definitely sheds her status as an age-long debtor country and is well on her way to the esteem of a creditor country. We were going to say "esteem and influence"—but her subordinate political position has largely deprived her of any effective say in the disposal of her foreign balances. Besides, behind-the-screen discussions have, it is known, the objective of making this very golden opportunity of India her undoing.

Equally impressive, though not spectacular, has been the progress of plans for raising loans in India corresponding to loans paid off in London. In broad terms, it may be said that the programme of sterling debt repatriation embraced four stages. And it is fortunate that each successive stage was taken on hand only after it had become possible to make permanent arrangements for the rupee finance involved in the earlier stage.

In the first stage, sterling loans were being purchased from the open market in London; and rupee loans in the form of counterparts of these stocks were being sold on tap in India. Thus was full provision made for the sterling loans redeemed in the first stage (amounting to slightly over £30 million).

The second stage pertained to the terminable India sterling stocks whose repayment before due dates was made possible through the good offices of the British Government. The rupee finance was, in the first instance, provided by temporary makeshifts such as drawing on Government's cash balances, sale of ad hoc securities to the Reserve Bank and advances on ways and means account from the Reserve Bank. In the following months, however, these make-shift arrangements were replaced largely by loans issued to the public. This was accomplished in time to allow the third stage to be tackled.

In the third stage, redemption was taken on hand of the 2½ per cent and 3 per cent India non-terminable sterling stocks. The Indian end of the arrangements was, as in the earlier case, managed by recourse to makeshift devices. These have now been replaced by permanent arrangements, information regarding which is furnished in a New Delhi notification dated January 14. Drawing attention to the important, but not generally appreciated, fact that, side by side with investment in defence loans, a steady investment of new money is proceeding in the various rupee counterparts created in connection with the repatriation of the terminable India sterling stocks, the government note says:—

> "During the 6 months ended mid-December, 1942, investments in counterparts and certain extensions of existing issues amounted to nearly Rs. 45 crores while investments in defence loans of all kinds totalled just over Rs. 26 crores. (By the middle of December, 1942, approximately Rs. 115 crores had been invested in counterparts and extensions of existing issues since the repatriation operations were first started).
>
> Beyond the above amounts, about Rs. 8 crores of new money was subscribed during the 6 months in question to certain provincial loans which were floated for the purpose of making advance repayment of part of the consolidated debts of the provincial Governments to the Centre."

In other words, Rs. 79 crores have been raised in the form of rupee loans in the last six months; and this has greatly helped to complete the plans for providing the rupee-finance for the third stage.

The fourth and last stage was taken on hand with the repayment, on January 6, of 3½ per cent non-terminable India sterling stock. For the time being, this has been financed at this end mainly by issuing ad hoc treasury bills to the issue department of the Reserve Bank. And we may be certain that permanent arrangements will, in due course, be accomplished as successfully and as smoothly as in the earlier stages.

For the tact and triumph of this achievement—paying off about £250 million in London and raising Rs. 330 crores in India—the fullest credit goes to Sir Jeremy Raisman who has served both India and Britain well. He has received aptest aid and informed support from Sir James Taylor and from the Reserve Bank generally. In the heat and rancour and sullenness of present political discontent, let us not omit to record our gratitude to Sir Jeremy and Sir James who have played a notable part in the smooth and successful transition of India from debtor to creditor in the international sphere.

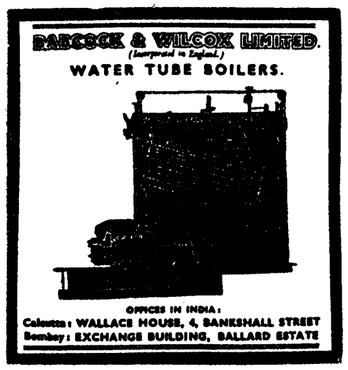
THIRD
DEFENCE
LOAN
1951-1954
3%
now available
Details and application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

(*Continued from page* 67)

"the Reserve Bank will shortly issue from its issue offices in India a bank note of the denomination of Rs. 2 in accordance with the direction of the Central Government in terms of the provisions of Section 24 of the Reserve Bank of India Act." A description of the note is given in the *communique* for the information of the public.

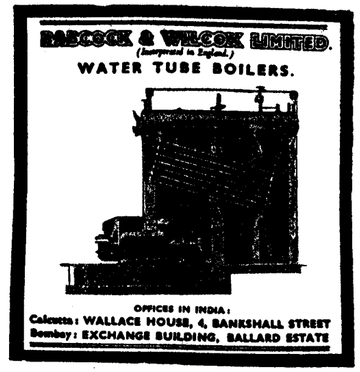
It will be remembered that sometime back there was demand for a new denomination of notes between the one-rupee and five-rupee notes and that it was eventually decided that two-rupee notes should be issued and by the Reserve Bank just like other note issues. With the acute shortage of rupee coin and the need for smaller denomination notes it need hardly be said that the two-rupee notes will be popular.

The exchange market was fully steady, though there was not much showing of export bills. Some T. T. business in connection with exports was, however, reported. Rates are unchanged.



Banks are sellers of T.T. at 1s 5 31/ for London Ready to six months forv Banks have been buyers of three m D.A. bills on London at 1s. 6 9/32d., and months at 1s. 6 11/32d.

Banks are buyers of T.T. New York R at Rs. 325.



Banks are sellers of T.T. New York R at Rs. 332¾.

Inter-bank call money remains uncha at ½ per cent., all lenders.

Editorial Notes

Price Movements and the Investor

The rise in prices last year stands out as the principal feature of a difficult year. If bank deposits in the past year have risen by about 60 per cent as compared with the total at the end of 1941 the rise in commodity prices shows that some part of the 80 per cent increase in note circulation has gone to push prices up. It may however be pointed out that prices of export goods like jute and hides and skins rose only slightly as compared with food grains. As compared with bullion prices too prices of commodites rose more rapidly in 1942. Among the export commodities, the biggest improvement was recorded by tea in 1942. By the middle of December tea prices had risen by 77 per cent and any setback thereafter in auction prices may be ignored. Cotton cloth is among the goods to show a steep rise. The explanation has been provided frequently. Compared with the advance in prices of consumption goods the rise in the cost of living appears moderate. When raw cotton, grain, pulses, oilseeds and oil, tea and cotton were going up steadily the cost of living was bound to change. The advance in 1941 has been followed by another rise in 1942. The continuous rise is not dissimilar to what has taken place in Britain in the war period, but the same restraints on consumption through a purchase tax, higher excises etc. are absent in India. If prices in most cases reflect short supply or failure of transport, the expansion of the currency during and after 1942 raises a whole host of questions. As compared with the increase in bank deposits referred to the investment in Defence loans appears small. Had the increase in investment gone wholly into the Defence loans, the Central Government would have no need to worry over the big increase in defence expenditure reported every month. The increase in treasury bills borrowing in the last quarter suggests that the Government had to turn to the banks, because the public, scared by the rise in prices, thought of commodities as the best hedge against inflation. Hoarding can be explained as a normal precaution. The movement in commodity prices will, naturally, support the belief that manufacturers of wool and silk textiles have better prospects to-day than engineering concerns and also that tea shares offer better opportunities for investors than mill shares at present, mainly because of the jump in raw cotton prices and the compulsory manufacture to Government requirements of what is called standard cloth.

Cotton Consumption

Figures relating to mills' consumption of Indian cotton in the current year have a special interest owing to the introduction of the zonal traffic system lately and the large carry-over at the end of the cotton year ended August, 1942. The figures for October indicate a fall in mill consumption. Indeed it may be said the fall in September has continued into October. The record level of 1941-42 may not therefore be reached since the prolonged stoppage of work in Ahmedabad mills reduced the offtake in both September and October, 1942. The figures for mill consumption of cotton, pressed and unpressed, reveal that consumption in Bombay was considerably lower than in 1941. Madras, however, reported an increase, and improvement in textile output, inseparable in this case from consumption of raw cotton, is to be noted on the basis of the figures for two months in regard to the U. P. but not in regard to the Punjab and Delhi, Bengal or the C. P. The total quantity of cotton consumed in two months in British India is shown as 500,978 bales as against 553,694 bales in September and October, 1941. The quantity used up in the Indian States was also lower by comparison with 1942 being 99,390 bales against 113,167 bales. Indore evidently consumes more cotton than any other State at present, but consumption there was lower by 3.800 bales for the two months referred to.

The rise in cotton prices this month belies the general estimate of cotton prospects based on the loss of export trade and superabundance of short staple types. But the textile industry must have increased its offtake since October and the reduction in raw cotton imports since April is decidedly an advantage to the Indian cotton grower. The third cotton forecast issued a fortnight ago pointed to a drop, to 4,438,000 bales in 1942-43 against 5,980,000 bales in 1941-42. The decline is traceable to a fall in the production of Oomras and Bengals this year in accordance with the restriction programme. A very small increase under American types is also recorded in the forecast and production of Cambodias and Comillas is likely to be only slightly below the quantity produced in 1941-42. The total area under cotton in India in 1942-43 is shown to have fallen by over 5 million acres as compared with 1941-42 and the only noteworthy feature is the increase in the area under the Gaorani type in Hyderabad State.

Industrial Progress in Baroda

In the statistical abstract of Baroda State are found details as to company flotations, cotton mills etc. in the State. If the number of companies registered in Baroda after 1935 seems to fluctuate little year after year, the paid-up capital attracted by jointstock companies seldom fell below Rs. 45 crores. According to the figures made available the cement industry is still the biggest in the State but the new chemical industry located at Mithapur received a substantial addition to capital in 1940-41. In regard to capital and output alike the cotton industry of the States reports continuous growth. At the end of 1940-41 there were 16 mills with a total paid-up capital of Rs. 38.42 millions. The number of mills at work has risen by only two in ten years but every year as in British India new mill companies have been registered in Baroda; and the progress is to be measured also in terms of yarn spun by the mills. The war explains the considerable increase in the output of cloth and yarn in Baroda's mills since 1938-39. The number of new companies registered in 1940-41 was larger than in any preceding year; so was the paid-up capital at Rs. 476 crores. The figure, however, seems rather to exaggerate the progress of saving and investment in Baroda. Even if the cement industry has a capital exceeding Rs. 74 crores, the total invested in the past in joint-stock companies cannot be as large as Rs. 47½ crores. The number of looms in Baroda's cotton mills at the end of 1940-41 was 6,874 and the number of spindles was 325,732. The mill industry employed 22,726 persons on an average in a day. The bulk of the mills production consisted of grey goods as the greater part of textile production was made of yarn below 20 counts. The number of factories covered by the Baroda Factories Act at the end of 1940-41 is shown as 148. The number of males employed therein was 34.708. Employment was provided for 6,075 females and 321 children. The number of factories in 1939-40 was 140 employing 37,143 workers. The development of local industry is to be measured not only in the number of accidents reported to the authorities but in the increase in factory employment. The majority of Baroda's factories provided a weekly holiday. Baroda District claimed more factories than the other three Districts in all the years covered by the statistics and the greatest change in the conditions of work in the ten years covered by the Abstract obviously lies in the grant of a weekly holiday, either on Sunday or some other day. CLIVE BUILDINGS, 8, CLIVE ST., CALCUTTA

workers have increased in number from 21,491 in 1931-32 to 41,404 in the ten years, and this satisfactory growth is reflected in the increase in the population of Baroda City to 152,326 in 1941 from 109,639 in 1931. The population of the Cantonment has fallen in the inter-censoral period but Patan and other towns have grown like the capital city.

Trade Marks Law

In the bulletin of the Bombay Mill-owners Association for November 1942 will be found a detailed criticism of the Trade Marks Act. Bombay textile interests have repeatedly asked for a single Registry in Bombay when questioning the value of the second office in Calcutta. The Act has been in force for six months only, but it has been ascertained that the number of applications received in Bombay is far larger than the number sent to Calcutta which evidently attracted only foreign manufacturers. The Association has again called attention to possible disputes and conflicts of jurisdiction. In regard to appeals from the Registrar's decision also there might be difficulties. The Association has reiterated its preference for one office in Bombay to deal with all textile trade marks and quotes in support the opinion of the Trade Marks, Patents and Designs Federation of London. The Association has also reviewed the working of the Act and asked for amendments. Representations have been already made to Government for defining the conditions under which associated trade marks are to be registered. A ruling as to the use of the Royal Arms or State emblems when usage is well-established was desired. Indian practice should be assimilated to British practice. Where no deception was intended, the use of distinguishing marks, disallowed by Section 69 of the Act at present, should be permitted. The Association also raised the question of uniformity of procedure as between Calcutta and Bombay and the avoidance of disputes. Reference was also made to the rule under which applications for textile marks had to be sent from Calcutta to the Bombay office for record. The rule seemed superfluous in the Association's opinion as Section 10 laid down the principle governing refusal of applications if the trade-mark resembled or was identical with one already registered by another. The Association in specifying details calling for amending legislation recommended that the Registrar of Trade Marks in Bombay should report after consultation with Chambers of Commerce and the future amendments to the Act should be based on his enquiries.

Supervised Sales

In last week's issue of the Indian Trade Journal appeared a new Control Order affecting typewriters. The notification of the Labour Department mentions the application of the usual control procedure to typewriters in British India as from January 2. 1943. The Order lays down rules as to the disposal of typewriters by dealers. Permits have to be procured from the Controller of Printing and Stationary in order to acquire typewriters. The permit is valid for 90 days from the date of issue and the purchaser and dealer alike have to comply with instructions set out in the Form granted by the Controller. The sales made to the Central Stationery office are outside the scope of the order. Dealers have to provide typewriters as required to persons if Ordered by the Controller. The Controller is vested with powers to inspect the premises in which typewriters are assembled or kept for sale or sold. The Controller is empowered to call for returns relating to stocks, deliveries etc from listed dealers. The Order applies only to Remington, Underwood and Royal typewriters and only 5 companies and their branches come into the schedule of dealers. The only thing in the Order which is of direct interest to the public is the form of application. Form B has to be presented in any case to an officer authorised by the Government to consider applications. The intending purchaser has to give his name, address, profession and state the purpose for which a typewriter is required, whether for replacement, and also to indicate how the old or unusable machine is disposed of. He has also to give details as to what he wants and to state what machines he has already got. The Order generally follows the forecast given by a Bombay correspondent. The trade in secondhand machines clearly lies outside the Order, but the Government of India has made it clear that in the war period the Government will prescribe the conditions under which the agents or manufacturers can sell machines. The scarcity of imports has already sent up prices and the suspension of manufacture in the U.S.A. has made it quite clear that typewriters are more than ever valuable. But an appeal as in Britain to the public to sell or surrender machines to Government has not so far appeared. But that, too, may come, in which case those who have glimpsed the future and bought up old machines and repaired them may find they have invested their money to advantage.

Falling Revenue

The Central Government's revenue from customs duties and excises amounted to Rs. 2¼ crores in November as compared with Rs. 2.94 crores in October.

When you bury the "TALENT" you only allow it to rust and lose its value. Same is the case with your money. So do not let your money remain idle. Keep your money in a safe custody where it will multiply.

The decline is more pronounced if the revenue for November, 1942 is compared with the revenue of Rs. 3.28 crores collected in November, 1941. The steady fall in India's customs revenue is a consequence of a shrinking import trade. The most unusual feature of the present year is, however, the fall in the yield of the Central Excises. Collections in November came to Rs. 97 lakhs as against Rs. 125 lakhs in November, 1941. The total revenue from sea customs, land customs, excluding salt revenue, for the eight months ended November, 1942 is known to be Rs. 30.51 crores as against Rs. 37.46 crores in the same period of 1941. Export duties accounted for Rs. 1.8 crores of the total, and land customs and miscellaneous revenue provided Rs. 38 lakhs. Import duties for eight months gave Rs. 20.39 crores and the Central excises, provided Rs. 7.94 crores. The fall in all manufactured imports since 1941 accounts for the reduction in customs revenue. The only import duties which show an increase in yield as compared with 1941 are those on motor spirit, tobacco, silver and liquors. A clue to the reduced exports of jute and agricultural produce in this year is provided by the statement that a decrease in revenue occurred in 1942-43. The excise duties on sugar and steel ingots are also said to have given less revenue in the eight months ended November, 1942 than in the corresponding period of 1941-42. The only excises that have given more revenue than in the preceding year are those on motor spirit (owing to the change in the rate of duty) and on matches. The last may be said to indicate a recovery in the production of the Indian match factories after the decline reported in the second and third quarter of 1941.

Taxes On Food

In the general feeling that food in India at present is both scarce and expensive many will detect scarcely any semblance of hostility to existing taxes on food. But there are taxes on food, apart from the well-known excise on sugar, and the Indian tariff may well be modified in order to stimulate imports of food supplies. Imports of fish from Somaliland may be encouraged like imports of wheat from Australia. The last issue of the Indian customs tariff needs to be examined, not in order to show how far the taxes on food existing at present limit imports, but to show how far the tax system departs from the old principle that articles of food should not be taxed except for revenue. The revenue duties in force are not vastly different from protective duties, specific or other. Discouragement of tinned and bottled provisions by a 30 percent import duty may appear salutary, but the duty of one rupee per maund plus surcharges on wet salted fish is admittedly no measure of protection devised for Indian fishermen. Imports from Burma are covered by preference under the pact of 1941 and the lowest scale of duty in force namely 18 percent, ad valorem only operates against salted dry fish (imports from Burma are duty-free). The standard rate of duty ranges from 36 percent on unsalted dry fish (24 percent if the fish comes from a Colony) to 18 percent on salted dry fish. Butter, cheese and ghee are equally subject to a duty of 30 percent (imports from Burma pay 12 percent in this case) while living animals can enter without payment of duty. Milk with the exception of skimmed dry milk, and milk products, are subject to 30 percent ad valorem. Vegetables are liable to a duty of 36 per cent ad valorem but imports from a British Colony pay 24 percent. Imports from Burma are however subject to a lower scale of duty, and potatoes and onions come under a 5 per cent duty. The tariff value for potatoes is fixed at Rs. 7-8 per cwt. so that the 36 per cent ad valorem duty is not perhaps a great burden. Fruits of all kinds are subject to 36 percent ad valorem but only 24 percent if coming from a British Colony; coconuts from Ceylon and cashew nuts from East Africa have to pay the 36 percent duty like dates, figs and raisins. Currants, however, are liable to a specific duty of Re. 1-8 per cwt. only. Coffee and tea alike are subject to revenue duties; in the case of the former, it is 25 per cent ad valorem plus one anna per lb. plus one fifth of the total duty; in the case of tea it is six annas per lb. but tea imported from a British Colony pays only 3 3/5 annas per lb.

The inordinate rise in the prices of spices, betelnuts etc. in recent months will direct attention to the tariff. All spices pay 54 percent ad valorem (45 percent if Colonial). The same duty applies to betelnuts and the only spices paying 36 percent ad valorem at present are chillies, gingers and mace (unground). Vanilla beans except those coming from Burma have to pay 30 percent. The tariff indicates that grain and pulse, not otherwise specified, including broken grain and pulse, but excluding flour, comes in free. Wheat is an obvious exception in being protected by a duty of Rs. 1-12 4/5 per cwt. in force up to March 31, 1944 suspended, however, since December 1941. Wheat flour is subject to a similar specific duty but all other flour is taxed at 30 percent of the tariff value. Sago flour is admitted duty-free but sago, tapioca and tapioca flour have to pay 36 percent ad valorem. Starch and farina have to put up with a duty of 18 percent ad valorem. Oilseeds from Indian States come within the class of free imports, but other seeds, including copra are subject to a duty of 36 percent (24 percent, if coming, from a British Colony). All other seeds are subject to a duty of 36 percent but rubber seeds are wholly exempt from duty. Indian brewers have an advantage to-day in getting their hops free. The same consideration is shown towards breeders of livestock who can get fodder, bran and pollards cheap because the import duty is only 3 percent (free, if supplies are taken from Burma). Sugar, being protected, is subject to a duty of Rs. 6-12 per cwt., plus the Central excise plus 20 percent of the total duty. Vegetable oils (non-essential) if imported have to pay 42 percent ad valorem (the duty on Colonial oil is 30 percent) while lard is subject to a duty of 30 percent. Molasses too are subject to a duty of 37½ percent. The standard rate for cocoa, biscuits, jams etc. is 30 percent as is the case with imported foods including vegetable product which has to pay six annas per lb. How far the specific duty like other duties on canned and bottled vegetables, provisions, fish, etc. has been to the advantage of Indian manufacturers making vegetable ghee or processing foodstuffs, need not be discussed. It may be inferred from the scale of duties levied under the First Schedule at present that the revenue duties are an element in the higher prices and the protection afforded to coffee-growers and tea-producers by

the tariff is considerable. Agriculture, particularly wheat-growing, is deliberately encouraged, in a measure, but the latest issue of the tariff does not show what is the protective duty on broken rice at present, hardly important, as imports are impossible.

Banking Developments in Japan

The Bank of Japan has undergone far-reaching changes under new legislation introduced in March, 1942. The statutes were remodelled and two new State-sponsored banks mainly to meet war demands were set up. The Bank of Japan established in 1882 became a creature of the State though it remains in theory the property of its shareholders. The Treasury really determines banking policy; the Bank is just an instrument of national policy. The President and Vice-President are nominated by the Government, subject to the Emperor's approval, and the Board is chosen by the Minister of Finance. The capital has been raised to 100 million yen of which 5½ million yen is held by the Government. Foreigners cannot make any deposits. Its activities have extended far beyond the routine management of the currency in the war period. The Government is a ready borrower. The Bank has to take up new issues of war loan. It has taken over control of foreign exchange from the Yokohama Specie Bank last year. It finances trade and industry at its own discretion. It can act outside the statutes, if directed to do so by the Minister of Finance. It can also put up money for foreign institutions, and the commercial banks' support may be enlisted at the discretion of the Minister. The upper limit to the note issue in Japan was raised in March, 1941, to 4,700 million yen, raised again in April, 1942 to 6,000 million yen. The transitory regulations were confirmed last year and the limit to the fiduciary issue disappeared. The holding of gold was merged even earlier in the general currency reserve.

The Central Banks of Korea and Formosa have experienced the same changes and their balances with the Bank of Japan are treated as primary cover for their own note issue. The Bank of Japan is invested with authority over East Asia. Occupied areas come within its scope of operations and two new affiliates were set up with the co-operation of other banks under the orders of the Government. The Wartime Financing Bank differs from the South Seas Development Bank in being concerned with providing new capital for companies in Japan and supporting the stock exchange. The Development Bank with a capital of 100 million yen excludes private capital from the South Seas and works under the Government's orders. It looks after the exchange of military notes into local currencies, deals in bullion and sells war bonds to the Occupied territories. If it deals with the local banks only, its place in the Japanese scheme of looting is shown by its subjection to military direction. Branches were set up in April in Singapore, Manila and Batavia and in Borneo, Sumatra and Celebes. The Yokohama Specie Bank opened a branch in Rangoon in May and earlier in Hongkong, Manila and Singapore. It is supposed to supplement the work of the Development Bank which is anxious to make the Occupied territories finance themselves and not take up money wanted in Japan. A puppet bank of Thailand was appended to the wartime creations. Thailand reduced the value of the baht to that of the yen, and the new bank set up in April started to use yen balances as cover for the note issue, the control of which passed from the Ministry of Finance to a new agency committed to the co-prosperity sphere doctrine.

Trans-African Air Route

The development of the Empire's airways in the war period is attested by the bringing into operation of the trans-African route. More than six years ago the line was created by Imperial Airways in accordance with its desire to start a branch taking off from the Cape to Cairo route towards the seaboard of Nigeria. A small band of pilots, navigators and ground staff began the survey early in 1936. Aerodromes were chosen, and landing grounds were made. The first section from Khartoum to Kano was opened in February, 1936. The route to Lagos was opened in October after the first plane reached the Atlantic. The service was extended to Accra and later to Takoradi on the Gold Coast. After the fall of France when the Mediterranean was closed this route acquired special importance. Captain A. C. Loraine of British Airways flew to West Africa and a regular service linking up with the Khartoum-Lagos route was opened. This route is one that serves the Middle and Near East as well as India and Australia. The further development in 1941 is largely due to the flow of American aircraft. Their ferry service began with May 1941. The British Airways route was soon supplemented by a line for flying boats from Lagos down to the mouth of the Congo up the river, then across darkest Africa to Port Bell on Lake Victoria Nyanza where the junction with the Cairo-Durban air route takes place. For about 2,000 miles from Coqulhatville in the Belgian Congo to Port Bell the planes fly over unbroken forest. In 1936 there were plenty of difficulties for flyers across Africa, but the Trans-African service today is comfortable and well-equipped. The work of the pioneers of 1936 has borne much fruit. Captain Pudney of British Overseas Airways has said that all difficulties have been overcome and the service can count on fine runways of 1,500 yards, short-wave radio, beacons, and meteorological service as well. The anthill problem too has been overcome. The trans-African service provides the armies of the Near and Middle East with urgently needed cargoes and precious airgraph mail. The Americans have aided Overseas Airways but they have generously recognised that all the credit must go to the British pilots who started work in 1936. Mr. E. R. Stettinius writing in the Satevepost about the route over which American aircraft are now flying across Africa has said it could not have been done without the British. They pioneered the way, built a skeleton route complete with weather stations and radio beams. They studied the climate, terrain, water supply and prevalent tropical diseases. They taught the Africans to man the weather and radio stations and to service the planes.

U. S. Achievement

Mr. Roosevelt's last message to his country on the war situation described the progress of war production fully. The report of Mr. Donald Nelson on progress in 1942 supports it fully. The report claimed that the United States is today making as many combat weapons as the Axis but that the grimmest fighting and the hardest work lay ahead. U. S. steel output last year advanced by five million tons, said the report. Ingot production in 1942 amounted to 87 million tons. The U. S. reserve of manganese was said to be equal to two years' requirements if production stopped today. After the acquisition of Africa's resources, there is no problem as regards either iron ore or manganese ore for the U.S.A. Mr. Ickes' demand for additional mineral production seems superfluous in view of Mr. Nelson's assurance that there is enough magnesium in sight to meet military needs for the duration and also that the U.S.A. would be independent of foreign aluminium ore imports by next May. Mr. Nelson added that the U.S.A. would be supplying Canada by next September. The advance in U. S. copper production was referred to by Mr. Nelson. The supply for 1942 was three million tons as against 2.46 million tons in 1941. The most significant change produced by the entry of the U.S.A. into the war was the negligible loss of working time due to industrial disputes. The total time lost by war production through trade disputes including walkouts, lockouts and unauthorised strikes was only 700ths of one per cent of the total number of man-days. Even if account is taken of the increase in the number of war workers from 6.9 million in December, 1941 to 17.5 million in December, 1942 the improvement is certainly suggestive of U. S. Labour's co-operation in the war effort last year. The increase in war employment by over 10 millions is also a measure of the changes produced in the field of civilian industry. The latter, apart from directions to stop sales by hire-purchase, suffered from manpower, difficulties and suspended production owing to dearth of labour as also materials.

TEA ESTATE

FOR SALE

AT THE

BROKERS' ASSOCIATION SALE ROOM

MISSION ROW

Under instructions from the Receivers for the Debenture-Holders and the Liquidators, the undersigned will offer for sale by Public Auction on Friday the 29th January, 1943, at 3 P.M. as a going concern as from the 1st January, 1943, that valuable property,

THE REDBANK TEA ESTATE

Situate in the Jalpaiguri District of the Dooars comprising some 660 acres under tea.

For full particulars and conditions of sale apply to—

A. W. FIGGIS & CO.

D. BLOCK, CLIVE BUILDINGS, CALCUTTA

The Lifeline

Communications are the lifeline of the British Empire—*the line which has remained intact thanks* to the Navy and the Merchant Marine, the Royal Air Force and the Merchant Air Service.

British Airways is, in effect, the British Merchant Service of the Air, and like the Merchant Navy, has *maintained and even increased operations despite* the war.

Government requirements must, of course, take priority in war-time. Nevertheless to the extent that accommodation is available to the public, your *air-travel needs will be met with the same efficiency* and courtesy as in peace-time by

BRITISH AIRWAYS

Bookings and further information from any office of Indian National Airways Ltd., (Principal Agents for India) or your usual travel agent.

BAK 27

Railway Receipts

While the customs revenue shows a continuous decline, State Railways' earnings, in November particularly, rose. Total earnings of the State Railways in November amounted to Rs. 11.7 crores showing an increase of Rs. 98 lakhs on November 1941. The increases is largely due to a rise in coaching earnings—shown as being Rs. 90 lakhs higher than in November 1941. The increase is attributed to the Kartik fair, the enhancement of fares, increase in long distance passenger traffic, military personnel and parcels carried by the railways. An increase in goods traffic also was noted except under coal, ore, wheat and metals. In fact, if wheat and coal are excluded, the goods earnings in November 1942 would be lower by Rs. 19 lakhs instead of being up by Rs. 6 lakhs as compared with November 1941. The tabulated total of Railway earnings for the eight months ended November shows that the total rose by Rs. 10.91 crores to Rs. 92.97 crores, while the increase in working expenses in the same period is Rs. 4.18 crores. The increase as before is most pronounced in the case of the G.I.P. and the N.-W. Railways. The increase recorded in 1942 is least in the case of the E.I. and B. & A. Railways but the E.I.'s total earnings of Rs. 17.91 crores for the eight months are in excess of any other railway's earnings. The only railway to show a fall in revenue in this period was the Tirhoot and Lucknow-Bareilly Railway. November saw a definite fall in wagon loadings on both the broad gauge and metre gauge. From April 1941 the story has been one of reduction in wagon loadings owing to reduced traffic in all commodities. Hoarding and retarded movement are alike factors in the smaller number of wagons loaded on the Indian Railways. The usual tabular analysis reveals that except for coal on the Home line for the B.N., E.I., and G.I.P. Railways there was no increase in wagon loadings on the broad gauge between April and November. The overall increase in the number of wagons devoted to Home line stores and materials in the period appears quite small. The reduction in cotton, seeds, grains, etc. carried by the Indian railways is an index as much of the pressure of military needs as of reduced supplies in the case of most commodities. The rise in the price level will have to be viewed as a direct result of the falling off in supplies normally carried over the State Railways.

Defence Loan's Progress

In the statement issued last month, it was noted that subscriptions to the 3 per cent Defence Loan from Bengal amounted to Rs. 126.42 lakhs in October 1942. Bengal is again the single largest source of subscriptions to the defence loan even if the gross total for Bombay exceeds that of Bengal by Rs. 5 crores. The progressive total for the whole of India is shown at Rs. 118¼ crores nearly. Contributions from the States and through Central Treasuries up to October 31 amounted to Rs. 3.04 crores only. It is noteworthy that in regard to subscriptions Sind is ahead of Bihar and many other provinces. Of the total of Rs. 113¾ crores, the greater part was put up by Bombay and Bengal. In regard to savings certificates alone the better showing made by the Punjab is noteworthy. In October the Punjab reported the largest sales of defence

Subscription list will be opened on 15th January, 1943, and will be closed on 25th January 1943 or earlier if full number of shares is subscribed.

PROSPECTUS

(A copy of this Prospectus has been filed for registration with the Registrar of Joint Stock Companies, Delhi, as required by Section 92 (2) of the Indian Companies' Act of 1913.)

THE GREAT INVESTMENT TRUST LIMITED

AUTHORISED CAPITAL - - - - - - Rs. 50,00,000

Divided into 20,000 5% tax free Cumulative Preference Shares of Rs. 100/- each and 3,00,000 Ordinary Shares of Rs. 10/- each.

Directors:

(1) Rao Bahadur U. S. DESAI, M.A. (Chairman): Share and Stock Broker, Dalal Street, Fort, Bombay.
Chairman, The Bombay Mutual Life Assurance Society, Ltd.
Director, Native Share and Stock Brokers' Association, Bombay.
Director, Graxalt Refineries Ltd., Karachi.

(2) The Honourable Mr. K. F. HAIDER, Finance Minister, Bhopal State.

(3) BADRUL ISLAM, Esq., Managing Agent, Cawnpore Tannery, Ltd., Cawnpore.
Director, Rampur Maize Product, Ltd., Rampur.
Director, The British Motor Car Co. (1934), Ltd., Delhi.
Bar-at-Law, 12, Curzon Road, New Delhi.

(5) J. N. BAHL, Esq., Director, The National Finance Corporation, Ltd., Proprietor, The Delhi Investors, 3, Bhagwandas Road, New Delhi.

Managing Director:

J. N. BAHL, Esq.

Bankers:

THE MERCANTILE BANK OF INDIA, LTD.
THE NATIONAL BANK OF INDIA, LTD.

Legal Advisers:

Messrs. MANILAL KHER AMBALAL & Co.,
Solicitors and Notaries Public, Fort, Bombay.

Auditors:

Messrs. DALAL & SHAH,
Incorporated Accountants, Bombay.
Messrs. WALKER CHANDIOK & Co.,
Chartered Accountants, Delhi.

Registered Office:

KASHMERI GATE, DELHI.

Present Issue:

The whole of the said 20,000 5 per cent tax free Cumulative Preference Shares of Rs. 100/- each and the whole of the said 3,00,000 Ordinary Shares of Rs. 10/- each, are issued; out of which, 650 Fireference and 12,506 Ordinary Shares have been applied for and allotted to Directors and their friends and the balance, viz. 19.350 Preference and 2,87,494 Ordinary Shares are offered for public subscription payable as follows:—

(1) CUMULATIVE PREFERENCE SHARES

On application, Rs. 25/- per Share.
On allotment, Rs. 25/- per Share, and
The balance of Rs. 50/- as and when called up.

(2) ORDINARY SHARES

On application, Rs. 2-8-0 per Share.
On allotment, Rs. 2-8-0 per Share, and
The balance of Rs. 5/- as and when called up.

OBJECTS OF THE COMPANY.

The Company has been formed for the objects set forth in the Memorandum of Association which forms part of this Prospectus.

The Trust will provide facilities for investors to have the advantage of sharing the varied investment of the Trust spread over the whole country and abroad. The investment of the Trust will consist of shares of all classes and debentures in public utilities, Banks, Insurance, Cotton, Jute, Sugar, Teas, Plantation, Mines and Government Securities, etc., and thus provide every shareholder (no matter how small) an interest and advantage of all these varied undertakings. This will also minimise the risk of fluctuation in investors income on account of investment so spread over.

The Directorate of the Company consists of men having vast experience in Trade, Industry and Finance. The Trust is thus in the hands of men eminently qualified to handle the task of judiciously investing the funds of the Company. The Trust intends principally to promote underwrite and finance new industrial ventures with a future and thus promote Industrialisation of the Country. The Trust will also assist the existing industries to develop their present production capacity.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors will proceed to allotment is Rs. 1,00,000/- which, in the opinion of the Directors, is sufficient to provide for the matters referred to in Section 101 of the Indian Companies' Act, including the working Capital.

UNDERWRITING COMMISSION AND BROKERAGE

(1) The Articles of Association provide that the Commission payable for procuring subscribers for the company's shares shall not exceed 5 per cent of the nominal value of the shares.

(2) Brokerage at the rate of Rupee one per Preference Share and annas two per Ordinary Share will be paid to recognised brokers on application bearing their stamp in respect of shares allotted.

The estimated amount of preliminary expenses (excluding commission and Printing and advertisement charges) is Rs. 5,000/-.

MANAGING DIRECTOR.

Mr. J. N. Bahl is to be the Managing Director of the Company for a period of 20 years commencing from the date of registration of the Company upon the following remuneration:—

(1) An Office allowance of Rs. 750/- per month: Subject to the provisions of Article 94(a) of the Articles of Association, the Managing Director shall be entitled to remuneration of 2 per cent on the net profits of the Company before charging the said remuneration to the Profit and Loss Account, provided he attends at least one half of the meetings of the Board or any of the Sub-Committees in the year, in respect of which a dividend of 5 per cent or more was declared in the Ordinary Share Capital of the Company.

The said remuneration will be exclusive of the expenses which may be incurred by the Managing Director in connection with the establishment, maintenance, management and upkeep of the Company's Office and of the remuneration and wages payable to Managers, Secretaries, Agents, Dealers, Brokers, Lawyers or Officers or employees who may be employed by the Managing Director for and on behalf of the Company for carrying on and conducting the business of the Company all of which shall be paid by the Company.

AGREEMENTS.

It is proposed to enter into the following contract, viz.—

An Agreement between the Company and Mr. J. N. Bahl appointing Mr. J. N. Bahl as the Managing Director of the Company for a term of 20 years on the terms and the remuneration and otherwise therein contained.

A draft or a Copy of the said Agreement and copies of the Memorandum and Articles of Association of the Company may be inspected at the Registered Office of the Company at Delhi any time during the usual office hours (except on Sundays and Holidays).

INTEREST OF DIRECTORS.

Mr. J. N. Bahl has spent time in the promotion of the Company has met and is meeting all preliminary expenses of and incidental to the formation and registration of the Company including all legal and other costs, charges and expenses, registration fees and printing and similar charges and is entitled to and will be reimbursed and indemnified against the whole of such expenditure incurred or which may be incurred by him on behalf of the Company until the Company is entitled to commence business.

The preliminary expenses to be so paid to him are estimated not to exceed Rs. 5,000 excluding commission, printing and advertising charges.

RIGHTS OF PREFERENCE SHARES.

The Cumulative Preference Shares shall carry the right to receive a fixed dividend at 5 per cent per annum, free of income-tax out of profits of the Company in priority to the payment of any dividend on the Ordinary Shares and in the event of winding up, the Preference Shares shall carry the right of repayment of capital and arrears of dividend in priority to the return of capital on the Ordinary Shares.

RIGHT OF VOTING AT MEETINGS.

On a show of hands, every member present in person shall have one vote for every Share held by him irrespective of the number and class of Shares held by him. On a Poll, every member shall have one vote in respect of each share held by him.

No promotion mony has been or is intended to be paid to any Promoter as aforesaid.

The Articles of Association provide as follows:—

(1) The qualification of a Director shall be the holding of Shares in the capital of the Company of the face value of Rs. 10,000/-.

(2) The following are the provisions for remuneration of Directors:—

The Directors of the Company shall be paid a yearly remuneration as follows:—

(a) No remuneration shall be payable to the Directors for the year in respect of which the dividend declared on the Ordinary shares is less than 5 per cent of the amount paid up on the said Shares, Provided that this clause shall not apply to the remuneration payable to the Managing Director in terms of the Agreement of his appointment;

(b) Subject to the foregoing clause, every Director (including the Managing Director) shall be entitled to a remuneration of 2 per cent on the net profits of the Company before charging the said remuneration to the profit and loss account, provided he attended at least half of the meetings of the Board or any of its Sub-Committees in the year in respect of which a dividend of 5 per cent or more was declared on Ordinary Share Capital of the Company;

(c) In all cases, the Directors shall be paid 1½ First Class Railway Fare each way for attending the meetings of the Board or of its Sub-Committees, as full compensation of their journey and stay expenses.

If any Director (other than the Managing Director) being willing, shall be called upon to perform extra service (which expression shall include work done by a Director as a member of any Committee formed by the Directors or in relation to signing Share Certificates or any other extra or odd job) or to make any special exertions in going or residing abroad or in negotiating or carrying into effect any contract or arrangement or for any other purpose of the Company, or to act as Trustee for the Company, or its Debenture-holders, the Company may remunerate such Director either by a fixed sum or percentage of profits or otherwise, as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his remuneration above provided.

(3) No member shall be entitled to be present at any time or to vote on any question either personally or by proxy, or as proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of the Shares of such member.

(4) No person shall be appointed a proxy, who is not a member of the Company and qualified to vote, but an Attorney under a Power of Attorney may attend and vote at meetings without being a Share-holder, and where a Corporation is the registered holder of Shares of the Company, it may by a resolution of its Directors, appoint any one of its Officials or authorise any other person to act as its representative at any meeting of the Company and the person so authorised shall be entitled to exercise the same power on behalf of the Company which he represents, as if he were an individual Share-holder of this Company.

(5) The Directors may at any time in their absolute discretion and without assigning any reason decline to register any proposed transfer of Shares on which any call or instalment is in arrears or of Shares which are partly paid up, or Shares upon which the Company has a lien.

(6) No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of their powers of management which are governed in terms of statutory Article 71 of Table "A" to the Indian Companies' Act, 1913.

APPLICATION FOR SHARES.

Application for Shares should be made on the form accompanying this Prospectus or copies of which may be obtained at the Registered Office of the Company at Delhi or from the Office of Messrs. Champaklal Devidas, Bombay, or Messrs. J. R. Motishaw & Co., Bombay, and sent in accordance with the direction contained therein with the remittance of the amount payable on application. Where no allotment is made, the deposit will be returned in full and where the number of Share allotted is less than the number applied for, the balance of deposit will be applied towards the amounts remaining payable on the Shares allotted and any balance thereafter remaining will be returned.

Applications will be made to the Bombay, Calcutta, Madras and Lahore and Ahmedabad Stock Exchanges in due course for permission to deal in the Shares of this Company.

Directors. { U. S. DESAI, K. F. HAIDER, BADRUL ISLAM, VASANTLAL MAGANLAL MEHTA, J. N. BAHL,

Dated this 13th day of December, 1942.

.....

APPLICATION FOR SHARES.

To

The Directors,

THE GREAT INVESTMENT TRUST LTD., DELHI.

Dear Sirs,

I/We enclose herewith cash/cheque for the sum of Rs.....being the required deposit of Rs.....per Preference/Ordinary share of Rs.....each in your Company, which I/We request you to allot to me/us and to register my/our name. I/We hereby agree to accept such allotment of the shares or any less number allotted to me/us and to pay the balance when called upon by Directors subject to the Memorandum and Articles of Association and the Prospectus of the Company.

Yours faithfully,

Dated,.....194 . Usual Signature.....

Name in full (Mr., Mrs. or Miss).....

Father's/Husband's name.....

Occupation.....

Full Address.....

.....

.....

RECEIPT FOR APPLICATION DEPOSIT.

THE GREAT INVESTMENT TRUST LTD., DELHI.

No..... Dated,.....194 .

Received from.....the sum of Rupees.....being application money of Rs..... per Preference/Ordinary Share on.....Shares of Rs..... each in the above-named Company.

Authorised Agent or Brokers.

N.B.—This receipt must be preserved and forwarded along with the allotment letter, to the Company to get the Share Certificate.

savings stamps claiming over Rs. 3 lakhs out of the net sales of Rs. 7.04 lakhs. The total sales in October will seem disappointing, but the amount collected from 1940, appears to be fairly large at Rs. 4.76 crores. The total exceeds the sum invested in interest-free loans for this war, and is clearly indicative of adequate response from four provinces at least. As for the rest, the total will seem disappointing. Delhi, for instance, is credited with a net total of Rs. 7.76 lakhs for over two years. It is manifest that the official classes are not extending enough support to the issue of Savings Certificates. Official direction alone can lead to the formation of savings groups. While the Viceroy spoke last month of the need for employers to encourage savings by wage-earners employers may well suggest that Delhi should set an example by making its own servants save more by way of buying defence certificates. The rising cost of living has not prevented Bombay from leading in respect of total subscriptions to defence loans and purchase of savings certificates. Employers who were asked to induce workers to invest in defence certificates may well reply that the State as employer should encourage its own servants to save regularly. The total for Delhi suggests that the savings drive in the capital had not begun even in October. Until Delhi organises, and sets an example, it is clear that small savings through the ten-year certificates will not increase to any extent.

U. S. Budget

The U.S.A. must have $100 billions for waging war. The President has told the new Congress formally that sacrifice is inescapable. He has also asserted that taxes would never revert to the pre-war levels. In the light of the assertion the estimate of the U.S. national income at $135 billions in 1942 has special meaning. A higher national income, spread largely among wage-earners, can support a higher level of taxation. But if the Federal Government absorbs the increase, the Commonwealths will be in an indifferent position, and champions of State rights will, doubtless, discuss this issue thoroughly hereafter. For the present, the States are subordinate to the Federal Government in the matter of raising and spending money. The only new financial device suggested by Mr. Henderson is that of deferred purchase. Advances to the State and delivery of goods after the war to the buyers seem appropriate. But the State will, in effect, be borrowing now and repaying in kind later. That, of course, is another argument for keeping down prices. The President has spoken of economic stabilisation in relation to reconstruction. Actually, the postwar demand will be one for accelerated investment in industries which have been compelled to go slow or stop work. The Administration unofficially admits a liability to these industries and after the war the R. F. C. will be called upon to finance the change-over to peace conditions in the automobile and many other industries. If the industries, which are already largely independent of the capital market, get their demands satisfied by the R. F. C., the scope for new investment will be smaller than ever. If savings go into Treasury issues after the war in larger volume the prospect of unbalanced budgets need not be disturbing. If higher taxation is retained to cover the interest payable, the only consequence for the in- [illegible] reduced corporate earnings offset in some cases by expansion of earnings.

Mr. Roosevelt reckons on an addition of $16 billions to tax revenue this year. The increase is very substantial in view of the fact that the tax programme of 1942 provided for only about $7 billions from new taxes. A way to make the tax burden more real is in keeping down prices, profits and wages. The threat of inflation has to be revived to tempt savers to invest in war bonds continuously. The borrowing programme must widen continuously and the harsh programme covers borrowing operations as well. Interest at 2 per cent or less will seem harsh only to lenders to the State, but the President has asked boldly for more taxes, more savings and a reduced standard of living, all in the interests of the war. Full employment with six million more in the armed forces and war work means full sacrifice; and the peremptory doubling of the U.S. tax revenue proves that Mr. Roosevelt and the U.S. Treasury intend to adopt British methods in financing the war.

To day's Prospectus

Only a part of the capital of the Great Investment Trust, Limited is required under the terms of the prospectus published today. The investment trust is familiar to the Indian public for over ten years. Its merits are appreciated, and the conservative class of investors has been ready to accept the spreading of risks. The Great Investment Trust differs only in its detailed mention of what it wants to do for new issues. The functions of an issuing and underwriting house will doubtless be discharged well and faithfully. The capital wanted is by no means large in proportion to the requirements and the conventional division between preference and ordinary capital is maintained. Attention may be rightly directed to the tax exemption provided for in the case of the 5 per cent cumulative Preference shares. It should appeal quite strongly to the investing public at present. The issuing and underwriting projected should contribute greatly to the profits of any investment trust. That Delhi is chosen as the headquarters is not surprising. The Capital is growing; jointstock enterprise and investment as well are developing. The Board is typical

of any financial institution above the average. Rao Bahadur Desai is widely known as the Chairman of Bombay Mutual, and Mr. Vasantlal Mehta is a specialist in both the underwriting and placing of shares. Mr. Islam is associated with that very successful new company, the Cawnpore Tannery and Mr. Bahl, the chief promoter, is conversant with investment in all aspects. The prospectus is brief and to the point. The work of investment at every stage should be carried out satisfactorily. The convenience of payment by instalment is offered in the prospectus of the new company whose shares, being far different from those of any new venture, must command a large following. That the market can provide Rs. 40 lakhs or more need not be doubted as money remains plentiful and opportunities for useful investment are severely limited. The issue is suggestive of big things to come in regard to the promotion of new enterprise and it is certainly encouraging to find that all aspects of investment will command the attention of the Great Investment Trust, Limited.

(*Continued from page* 69).

should be taken rather than why is the question answered by the President who spoke of the sacrifices entailed by total war. But in spite of the reduction in civil expenditure promised the standard of living in America must go down. There is no escape since the addition to taxes, etc., will give the U.S.A. only 34 per cent of the war outlay and at least 50 per cent has to be got in Mr. Roosevelt's opinion. A great effort, right in the middle of a war has been asked for, and the President wants new revenue measures to fight inflation. The public debt is sure to rise beyond 125 billions in the year. By June 1944 it will be 210 billions, according to Mr. Roosevelt who wants that as large a part of the war outlay as possible should be paid for by the tax-payer. Stabilisation is the main aim, but expenditure cannot be limited. If the proposals go through, the renewal and extension of Lease-Lend is assured. The Allies will then see how the U.S.A. pays for the war and accepts controls of every type for the sake of a common victory.

KNOWLEDGE GAINED SOME THOUSAND YEARS AGO-
paved the way to present-day achievements.

Some thousands of years ago, the Asuras, ancient enemies of the Gods, brought an end to the stone age in India with their discovery of metal. Historians connect this ancient tribe with the Agaria, who even unto this day are the iron smelters and blacksmiths of the Central Provinces. For centuries their simple ploughs and harrows have raised rich crops in the wild uplands of the Maikal Hills.

At this time when Indian industries are rapidly expanding in the development of which iron and steel play such a vital part, we pay homage to this ancient tribe, whose iron brought the law of plenty to the jungle—so long ago.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

Academic opinion is characteristically leisurely in lending its weighty support to the popular viewpoint. That is, perhaps, not only inevitable, but also desirable. For, if scholars should be quick to rush into the ring of public controversy, their opinion will lose something of its weight; and it should be easier for the opponents of the popular view to treat all its supporters alike. Scholars must take time, if they are to study a question with the care, detachment and thoroughness that are expected of them; and nothing is lost by delay in their reinforcing our ranks. I welcome Prof. Vakil's booklet on the falling rupee, much as Poland or France would have welcomed an armada of 'planes from Britain or the U.S.A. when they were subjected to Nazi blitz. The financial and currency problems which cluster round our sterling balances have not yet become the subject of keen and acrimonious controversy. It is true that, besides the writings in "Indian Finance," which started right from the outbreak of war, there have been various statements from leaders of commercial opinion. But there has been nothing of that series of statements and counter-statements which is the essence of controversy. Heat and dust seem to have been avoided. Which is perhaps precisely the reason why the popular view on these questions should be stated repeatedly, clearly and with the utmost force of reason.

* * * *

The fact that there is no heated controversy yet does not argue that the authorities are keeping an open mind on these questions or that decisions are not being taken. The next budget is due in a few weeks. Already, the Finance Member is committed to announcing a few momentous decisions. The question of a revision of the Financial Settlement regarding the allocation of military expenditure between the Government of India and His Majesty's Government is bound to be expatiated on. Certain ostensibly tentative decisions have also to be announced, for no budget for the next financial year is possible without assuming a basis of allocation of military expenditure. And with this is bound up the question of our lease-lend relations with America. Here, too, appropriations have to be made for reverse lease-lend. Revision of the settlement has its bearing on the question of sterling balances. Government are bound to seek some relief from the pressure of increasing sterling by increasing India's share of defence expenditure. And then, there is also the question of the free gift, which has been broached with great skill by the City Editors of London papers. The Budget may well contain intimations of our generosity of which we have been strangely unconscious. And through these various means we may gain a little of relief from the nightmare of inflation through increasing sterling balances. This is just the time when all these measures are brewing. And that is why the public has to bestir itself, speak out its mind, and exert itself to see that its interest is looked after according to its own notions and not those of others.

* * * *

That is why I say, Prof. Vakil's booklet is a valuable reinforcement, valuable because it is so timely, not so early as to be called hasty or too leisurely to be opportune. It is valuable, too, for the average student, because it is an extremely clear exposition of the subject, one which brings out the relation between the various problems I have been discussing in these columns during the last two months and which I have listed more or less completely in the last paragraph. The reader, I trust, will remember that I approached these problems from the side of the sterling balances. I accepted the sterling balances as they are and started with the question as to what is the best method of utilising these balances. I have pointed out how these balances have accrued to us, how their origin is liable to be misunderstood by foreign observers, how it is bound to be connected in their minds with military expenditure and its allocation between the Government of India and His Majesty's Government, and how the utilisation of these balances for wiping holdings in Indian industry, for accruing out the sterling debt, repatriating foreign dollar balances and the like can alone provide adequate compensation for all the sacrifices which India has made before she acquired these amounts in foreign currency. I said, too, that to treat these sterling balances at once as the original pretext and the ultimate justification for an unlimited increase in currency circulation is exactly what not to do with them.

* * * * *

Mr. Vakil, however, starts with the currency end of this tangle of problems. The book itself is entitled, "The Falling Rupee." And, though one is apt to think of external, rather than internal, value when one speaks of a falling currency, the book is a study in war finance and inflation. Within its few pages, the author raises the nightmare of unbridled inflation, and addresses himself to the problem of how to avoid such inflation. That inflation is not an imaginary danger is proved by putting together in a small statistical table the figures of notes in circulation at successive stages during the last two, three years. Set these figures against the sterling securities in the Reserve and the rupee securities, have a glance at the budget figures of the last three years and the deficits, as also the very poor results of recent loan issues and you see how much the Government of India have had to depend on inflation for financing their expenditure during this war period.

* * * * *

Mr. Vakil's reading of the situation, then, is as follows: His Majesty's Government acting for itself and on behalf of its allies places large orders for goods and services and directs the Government of India as a subordinate authority to execute them. The foreign governments do not bother about how the Government of India is to finance these undertakings; and all that they agree to do is to pay in sterling to the Reserve Bank of India. These orders are big enough for the Government of India even under normal conditions. But now the situation is abnormal in that even the customary sources of finance have dried up. There has been a fall in post office cash certificates. Defence loans make but little progress. New loan issues are left on the hands of the Reserve Bank. And what is more, the Government of India, too, have biggish deficits in these war years to be added to the unproductive debt. In these circumstances, the Government of India find it easy and tempting to increase the note circulation. That part of the sterling balances is utilised for repayment of our sterling debt and that in course of time these sterling loans are replaced in part by rupee loans is not an essential feature of the present situation. It can do little to detract from the inflationary character of the Government's policy.

* * * * *

Mr. Vakil, therefore, regards the problem as essentially one of finding the requisite rupee finance for the Government of India. Posed in this way, the question suggests its own answer. Why should it be the Government of India's job to find the rupee finance? Isn't India the seller and the foreign governments the buyers of our goods and services of which they have such urgent need? Then is it not their job to find the rupee finance, find the means of acquiring rupee exchange with which to pay for the things they want? Mr. Vakil, therefore, suggests that they should resort to the well-known means by which one country pays another. When India was in need, she figured as a borrower in the London market. Now

why shouldn't Britain or America, or whoever it is, figure in the Indian capital market as a borrower? There are investors in India who would be only too glad to buy up foreign interest in Indian industries. As for the Government of India's own needs of finance for making up for the withdrawals of Postal Cash Certificates or meeting the revenue deficits, well, they have only themselves to thank for the present position. If there is no popular support for the loans issued, it is because the Government have chosen to continue the political deadlock, and probably even to encourage His Majesty's Government in their policy of denying independence to India. On the one hand, they forego their rights as sellers to determine the mode of payment and take upon themselves the responsibility of finding the requisite finance. On the other, they render themselves more unfit to shoulder that responsibility in the proper way by pursuing anti-popular policies in the political sphere.

* * * *

The result is that the people suffer from unlimited inflation of currency. That what we have is inflation, there can be no doubt. Total notes in circulation have gone up by 218 per cent from August, 1939 to December, 1942. The money market is far from being active. Deposit money created by the banks has gone down. Velocity of circulation, as indicated by clearing house returns, is less than at the beginning of the war. Withal, the Calcutta index of wholesale prices has gone up from 100 at the beginning of the war to 227 in November, 1942. Here again, the forces making for higher prices are numerous. Not only is the volume of currency greater, but the stock of commodities available for consumption is less owing to exports from our stocks and lower imports from abroad. The result is that India is suffering just that kind of inflation which the experiences of the last war period made a veritable nightmare for the peoples of European countries. Looking at the problem as one of removing this pressure for inflation, Professor Vakil suggests that the foreign nations should be forced to adopt the correct methods of payment, that is, (1) in durable assets; (2) in gold; (3) in rupee loans raised in India by the U. K.; and (4) transfer of British assets in India to Indian hands.

* * *

The reader will hardly need to be told that while Professor Vakil starts at the currency end, he comes eventually to the same measures which I have advocated though I have started from a different end, the rising sterling balances. I shall not discuss the relative merits of these two different approaches. Perhaps, I am prone to look at problems as financial problems, while the Professor is used to seeing them from the more comprehensive economic viewpoint. There can be no doubt that the average man will feel the pinch of this tangle of problems only at the point of the level of prices; and it is as a problem of inflation that he can seize the significance of what is being done in the financial sphere. It is also true that at the present stage the paramount need is to take the load of heavy additions to currency off the meagre and sluggish economic life of this country. But I doubt if either in its origin or in the measures that are now called for to meet the situation, the problem can be regarded as one of inflation. Professor Vakil goes so far as to regard even our export surplus as a problem of rupee finance. Strictly speaking, there is only a problem of transfer; and its nature is not altered whether the foreign governments are called upon to pay us in our currency by raising loans or selling securities, or whether they pay in sterling and the sterling balances are utilised for buying up foreign investments. Inflation can be avoided so long as stering balances are regarded as a stage in the solution of this transfer problem and not as a pretext for additions to currency. The moment the Government of India incurs deficits or otherwise experiences the need for finance, it has either to win the confidence of the public by cultivating its goodwill or find itself thrown back on the printing press. The Government of India's needs for finance on its own account are still inconsiderable and are by no means an adequate explanation of the colossal additions to currency that have so far been made. And it is significant that even if Britain adopts from to-day all the suggestions of Mr. Vakil for paying India for war orders, there would still remain the problem of sterling balances to tackle as such.

* * * *

It must, of course, be admitted that in the present conditions, with our own war

IF.9

expenditure on the increase, with every threat that there is of our share of joint war measures being put up, there will be a pure problem of inflation. That is, a problem of inflation with nothing of the problem of transfer in it. From that problem, there is no use seeking relief in mere palliatives. I hope I shall be able to discuss this in a subsequent issue at length. Here I will content myself with saying this: that we must remember that the minimal inflation I am talking of will be inflation only in a special sense. For, we can speak of inflation only when additions to currency are unaccompanied by additions to the total production of goods and services. To the extent that there is addition to the production of goods and services on war account it is less of inflation. But we shall be justified in calling it inflation, because the payments to new recruits and holders of newly-created jobs set up an additional demand for the stationary or even falling stock of food, clothing and other consumer's goods. What is required, therefore, is that the production of these goods should be enabled to grow to meet the new demand. When the whole problem of transfer has been solved, when the additional needs of the Government of India have been met to the extent possible by additional taxation, there will still be an unavoidable element of inflation. But if we could only provide proper facilities for increased production of the necessaries of life that problem will have been solved, and many other problems besides. I have branched off in the last para from Professor Vakil's booklet which, before I close, I must heartily commend to everyone of my readers as an extremely succinct, comprehensive and penetrating treatment of the subject.

* * * *

If the times were normal the centenary of the Bengal Coal Company, Limited, would be celebrated in an appropriate manner this year. But circumstances forbid it and Mr. Mealing who dwelt on the proud connexion of the House of Yule with the Company said that celebrations must give place to the war effort in which the Company is engaged. That the effort is both strenuous and successful is borne out by Mr. Mealing's review of happenings in 1942. It is not inapt to relate his speech to the outlook for the entire industry in this case. The outlook may well be called fair in spite of the difficulties, described in a frank manner by the Chairman of the Bengal Coal Company on Wednesday. There is little left for the average commentator to add to Mr. Mealing's review. The financial results as always are impressive, but it is well that Mr. Mealing drew attention to postwar problems. The export trade cannot be sacrificed lightly and how the problem will be settled by Government is a question posed by every shareholder of the majority of Indian coal mining companies. That coal is dear is known, but it is not due to deficient production. That mining output is still rising may be inferred from the record reported by Mr. Mealing. There was trouble with labour. Conditions were disturbed and transport was short, though improvement was noted.

* * * *

Mr. Mealing's analysis of conditions obtaining last year took in the major events at home and abroad. Responsible for about one-fifteenth of the total output of coal in India, the great company has more than overcome its difficulties. Production problems now include deep-level working. Here it may be said is proof of efficiency. The efficiency that has added to mineral output in wartime and created satisfaction among geologists as well as among investors who may be easily pleased by the maintenance of the dividend year after year. The restiveness of labour is not blamed. Mr. Mealing's forbearance is in contrast to the harsh things that may be said ordinarily. The Railways' difficulties in wartime are not overlooked and the Bengal Coal Co., had obviously dealt with the problem by keeping small coals in stock and sending out steam coal in wagons, so that shipping and naval requirements are duly satisfied. The Bengal Coal Co., has evidently a nice scale of priorities worked out. Its Chairman appreciates the other man's difficulties. The note of tolerance is remarkable for more reasons than one. It is the direct result of great efforts already made by the Depart of War Transport to get coal on t consumer. Further improvement is cipated, and the Bengal Coal Co., fo is prepared to co-operate by raising Output can be raised to 2 million to a year, if labour is available. Bu availability and amenability of labo dependent on adequate food supplies.

(From Our Correspondent).

New Delhi, January 12.

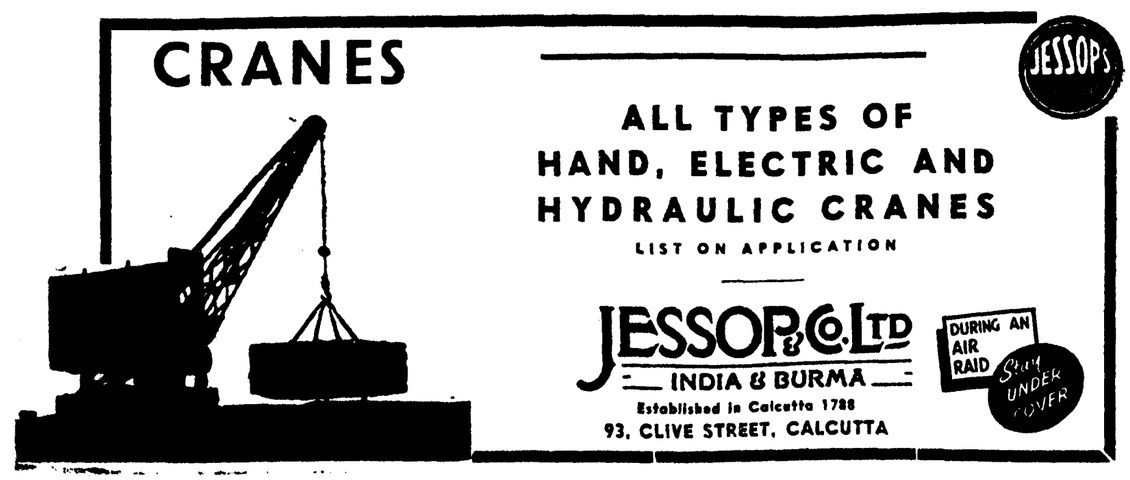
NEW DELHI is now humming with activity over the food question. The Commerce Member, Mr. N. R. Sarker, who cancelled his tour and returned to Delhi last week, met the Viceroy immediately after his arrival and had a long conference with him on the food situation—growing serious even in New Delhi. A number of Governors have been here, or will soon be, to discuss the position with the Government of India. It is expected that in a day or two the Commerce Member will hold a Press Conference to explain the measures which the Government propose to take in this connection. The situation has been complicated by many factors—particularly, the long delay in setting up the Food Department—but I understand that as the Viceroy is now giving his personal attention to the food question, vigorous measures will now be undertaken. In order to strengthen the Food Secretariat, Major-General Wood who is known to be a man of initiative and drive and has considerable administrative experience, has been drafted as Additional Secretary. Another able Civilian, Mr. P. S. Rau, has also joined the Department as Controller-General of Foodstuffs. There is a feeling, however, in business circles that if the food question is to be properly understood and solved the Department should have in positions of authority men, who have intimate knowledge of both trading conditions and food production.

* * * * *

Even now there is so great—and confusing—a multiplicity of authorities to deal with the food question that the task of co-ordination is no easy one. At a Press Conference which he addressed on Monday, Sir Joginder Singh, the Education Member, said: "So far as agricultural production is concerned, it is primarily the responsibility of Provincial Governments. Then again the control of prices and the movements of grains are under the Food and Commerce Department" He could well have added the Transport Member who controls the transport policy—not to mention the Defence and other authorities who in many matters have the controlling voice. What is the machinery to co-ordinate and control policies and measures and ensure that civilian interests do not suffer? It is not even possible to say that the Food Member, though the public looks to him for ensuring regular supplies and reasonable prices, is in a position to see what he wants of Provincial Governments or even of higher Departments in the Government of India, is done speedily and effectively. Much of the present trouble is due to over-complacency in the past.

* * * * *

It has often been pointed out that in wartime the plea that a certain matter is solely a Provincial responsibility sounds strange. For the purpose of training war technicians, the Government of India have been obliged to take up the responsibility of technical education and spend crores from Central revenues for speeding it up. That has been the case with labour welfare measures and similar war requirements. Agricultural production is no less important. It has only this week been announced that for the purpose of plans for all-out agricultural production, the Government of India would be prepared to give financial assistance to the Provinces (a) by way of loans to enable the Provincial Governments to give taccavi loans or finance the purchase of manure and improved seeds or (b) grants to enable them to meet part of the cost of any scheme. This is a welcome announcement, though belated, but the success of the policy depends largely on the speed with which these production plans are decided and the liberality with which the Central Government is prepared to give financial assistance. In the past there has been a tendency to make a distinction between war needs and civil needs. So far as the former are concerned—take the case of training war technicians—measures have been proceeded with, whatever the cost, on the ground that they are necessary. It is necessary that arrangements for food supply to the civil population should be treated in the same manner.



* * * * *

There are also other difficulties facing production. In some parts of the country there is a danger of a fall in agricultural labour as they are turning to more remunerative employment like road-making, factory work etc. It is therefore necessary to bear in mind that along with measures to increase the area of cultivable land for food crops arrangements should be made for having sufficient agricultural labour. According to Sir Joginder Singh such land as can be cultivated with the existing irrigation facilities, etc. is already under cultivation, so that the prospect of bringing new areas under cultivation has practically to be dismissed from consideration. What can be done soon is to turn over to food crops lands which are now producing cotton, jute etc. Figures are available in New Delhi only for five provinces—Bombay, C. P. Punjab, Bihar and U. P.—but these five provinces show an increase in food crop acreage to the extent of 4 million acres last year as a result of this diversion. It is expected that when the figures for all the provinces are received, it will be seen that the increase is over 7 million acres in the country. This is a welcome improvement, but so large is the present demand for foodgrains compared to normal prewar conditions, and so big is the deficit owing to the absence of imports, that this increase in food crop acreage cannot be expected to turn the balance in our favour. There is the other possibility—the employment of measures for increasing the yield per acre. It has officially been stated that if there is an adequate supply of manure the acreage yield can be increased by 25 per cent, but there is an insufficiency of manure in the country as imports of fertilisers has practically ceased. If the Government of India are able to persuade the authorities in the United Kingdom to allot sufficient shipping space for importing fertilisers, something can be expected, but at present there is no sign. During the coming year all that can be expected is to turn over more lands to food crops. There is, I understand, a proposal to reduce the jute acreage in 1943 to the 1941 figure; to 1.3 million acres from 2½ millions in 1942.

* * * * *

The immediate future largely depends on the success of the wheat purchasing agency in the Punjab. The visit of the Governor of the Punjab to New Delhi has been helpful as it has enabled the officials of the Government of India to discuss with him measures for purchasing surplus grains from his province. It is no credit to the purchasing agency that

Bombay, January 11.

MILLOWNERS here are not worried by the authority given to the new Board to prescribe conditions as to the production of standard cloth now and hereafter. Millowners will have soon an opportunity to state their opinion on the draft rules relating to the manufacture and sale of cloth. The actual scheme will be settled by the end of the month. In the meantime, textile shares here are brightening and cotton prices are hardening. The cloth distribution scheme will, of course, bear no resemblance to the rules enforced in Lancashire. The statutory Board will not meddle with the affairs of the industry except to ask for a quota of standard cloth for approved dealers who will be put on a register so as to enter into retail trade. Zonal quotas, etc. will be certainly prescribed and the individual buyer cannot get more than 10 yards of cloth from any dealer and cannot buy cloth for some time thereafter. Standard cloth and its sale will be limited by strict regulations. There is to be a special fund to keep prices steady over a period. Dealers will have to pay a fee equal to 5 per cent of the price charged by the mill. The Board is to have its own executive officers. The scheme looks awkward, but the mills can, and will, make a success of it. The Madras Government and the Southern States don't take much stock in standard cloth. The class of consumers there apparently stand up for handloom stuff and cannot think of mill goods as yet as the rationed necessity.

* * * *

Some interest has been created in the Morvi Railway's new service to Karachi by rail and sea. Kathiawar is brought nearer to Sind by a new combined route meant to bring Karachi into direct relation with the Kathiawar ports. A shortening of the distance by 270 miles is an advantage secured in the new route connecting Navlakhi in Morvi State with Karachi. Direct rail communication from Bombay to Karachi is yet to come, but Morvi State has already helped in a way. The State Railway has set up an office in Karachi to book merchandise through to any station in India. The charges include freight payable for country-craft, and marine insurance excluding war risk. The State Railway has the distinction of turning readily to country craft and will ease the pressure on Karachi port by taking off cargoes to Navlakhi for diversion to other parts. The B. B. and C. I. should gain from the departure in enterprise. Other States, especially, Jamnagar and Nawanagar, might copy by operating fleets of country craft. The Canadian Pacific is not the only railway to run ships but in India the Morvi State Railway will be the pioneer in the matter of providing rail-cum-sea transport. If the service develops passenger traffic too, it might be diverted to the new route though India's country craft are not suited for taking any but the poorest class of passengers.

* * * *

Calcutta's experience of air raids is being discussed by others here besides brokers. While fears have been discounted, it is realised that there has been dislocation of normal city life. Morale has suffered, some damage has been caused inevitably and civil defence measures in spite of India's preparations have not been all they have been claimed to be. Citizens here naturally think of some new machinery to promote contact and confidence. Mr. M. R. A. Baig as Sheriff of Bombay lately suggested a special committee to assist and advise the Civil Defence department at the Centre. The Provinces will have such committees but they will only supplement Public Relations Committees which have done good work in connection with A.R.P. City Corporations must have real authority and responsibility under plans to stimulate morale, and there should be no lack of response to enquiries. The public here has been asked by Mr. N. M. Joshi to go forward with civil defence.

* * * *

Stories of scarcity do not find support in the conventional percentage of the monsoon rainfall in various areas. But after the declaration of famine in Bijapur last week, it is realised that Hyderabad can help little, and Berar can help less. A report from Akola reaching Bombay two weeks ago dwelt on the shortage of food grains in Berar. Millet has to be conserved according to Berar traders who entered a protest against export. Berar wants wheat, sugar, oil and tea, and asks for Government help in order to set up an adequate agency to distribute foodstuffs. Assam is the only Province which has ordered these things well. Though Berar reports that 700,000 more acres came under food grains in the season, the province is short of food and asks the Government to purchase outside and sell in competition with local profiteers. Perhaps the Nizam's Government will be asked to help Berar in these things.

* * * *

In the last few days there has been no lack of statements as to what should be done with sterling balances. Mr. G. L. Mehta's visit produced discussion as to the scope of the Atlantic Charter, the suggested war gift and the bearing of Lease-Lend on post-war trade. A dinner party gave Mr. Mehta a chance to state his firm, clear-cut views on what should or should not be done. He deprecated any gift similar to that made by Canada to Britain, mainly because India is not a Dominion, and also because India is too poor to make any show of generosity. Mr. Mehta deprecated any pact with the U.S.A. that would limit India's fiscal autonomy at any time. The inspired messages have excited much distrust in Nationalist circles and talk of free trade reciprocity in war supplies etc., produces invariably the wrong reaction, to judge from Mr. Mehta's plea for fuller information while expressing doubts as to the value of arguments that can hardly apply to a country steeped in poverty and debt. The statement is, in some ways, a contradiction of Mr. Findlay Shirras' claim at Oxford that India is being educated for democracy through benevolent despotism for over a century.

* * * *

Rationalisation of import trade will probably affect Bombay to some extent. The Port Trust revenue might possibly suffer in the near future, but the Government's decision has not been assailed. It has been said that in order to ease the transport situation, imports should be handled mainly with reference to zones of consumption. Not only goods from Britain, but all imported goods will have to be landed at the nearest convenient port and licenses issued to importers have to give information as to the port of discharge. There are to be four zones instead of three, and the area for which goods imported are meant has to be shown. The Government probably reserve the right to fix the port for the four zones. The Central zone includes the Bombay Presidency, Central India, Delhi and the U. P. as also C.P. The N. W. zone comprises Kashmir, the Punjab, Sind, N.-W.F.P., and Baluchistan. The Peninsula is a separate zone and the North-eastern zone is made up of Bengal, Bihar, Assam and Orissa in addition to various States.

* * * * *

Delhi's view of the food situation just now is causing pained surprise. The belief that the Grow More Food plans have borne fruit, cannot be supported by convincing evidence. Bengal's rice crop is admitted to have fallen by 15 per cent this season. It is not realised that the demand for food in India is inelastic, as the textbooks say. A shortage of 1½ million tons in rice supplies required can cause much damage, moral and material. There has been no lack of advice to eat millet which has been grown extensively in the Punjab and Bombay on land formerly devoted to shortstaple cotton. The estimate of five to six lakhs tons having been added to the supply of millet this season seems optimistic. Bombay and Berar are complaining of shortage at present when supplies are expected to rise by 5 lakhs tons, but the fate of the current crop of winter oilseeds suggests that the spring wheat crop may not be up to expectations. Anyway imports from Australia are vital for tiding over the crisis. The Food Department has to work hereafter mainly expanding production. The I.C.A.R. has to assist, so must the Agricultural Departments. Distribution of manure, extension

(Continued on page 89).

Resume of Commodity Markets

Definitely firmer conditions have been noticeable in the several commodity markets during the past week. In the jute and jute manufactures market substantially higher prices have been recorded though there has not been any appreciable increase in the volume of business passing. The Bombay raw cotton market also is higher with the bullion markets more active. The absence of air raids since December 28, 1942 has had an encouraging effect on the markets and confidence in the several sections is slowly returning. In view of the present conditions in the war situation the strength of the bullion markets is not quite explainable.

It is encouraging to note that the Government of India are at last taking measures to control effectively the abnormal rise in prices of food grains. Thanks are due to the efforts made by the present Commerce Member. As the Member for Irrigation, Lands and Education, pointed out recently there has been a substantial increase in the area under food crops owing to the switching over from money crops like jute, cotton and oilseeds. Due to the difficulties in regard to irrigation, it is not possible to show any absolute increase in the total area under agricultural crops. The Member suggested that there could possibly be an increase in the yield by more intensive cultivation of lands with greater manuring and better seeds. For manuring purposes it has been found more advantageous to get imports from abroad which is not however possible under the present circumstances. It is also reported that the Government has so far incurred an expenditure of Rs. 35 lakhs in inducing the ryots to switch over to food crops. Efforts are being made to further increase the area under food crops as far as possible during the current year and the Central Government are even prepared to consider the financing of any scheme by the Provincial Government in case the schemes proposed by the Provincial Governments could not be undertaken owing to lack of finance.

While efforts are being made to improve the food position, there is a time-lag between harvesting and sowing and it is believed that it will be difficult to get through this period satisfactorily. Even with the increase in the acreage under the rice crop it will not be possible to eliminate the deficit. Such a deficit can be overcome only by the production and increase in consumption of other food grains such as 'Jowar' and Bajra." Efforts are also being made to redistribute the present stocks and get the co-operation of the surplus provinces. It is reported that the Assam Province has got a surplus of 40,000 tons of rice.

The wheat problem is very difficult of solution and it was discussed as to whether it would help the position if prices were de-controlled. The authorities, however, seem to be in favour of continuing control of prices though they have not been successful in their policy to any appreciable extent. The Punjab Government seems to have been willing to release stocks up to 225,000 tons though there appears to be an expressed feeling that such stocks should be replaced by the Government of India if it were possible to get imports from abroad. The necessity for bringing in imports from abroad cannot be over-emphasised as even with the utilisation of stocks from the surplus provinces, there will be a considerable gap between consumption and production and such a gap can be bridged only by supplies from Australia. Small supplies have actually been landed in this country but the shipping problem and the transport of 500,000 tons of wheat present difficulties. The upset in the supply position in wheat has been caused only by the increasing demand from the Government, though speculative factors also have been responsible to a certain extent. It is pointed out that as far as possible efforts should be made to bring supplies from other countries for military purposes.

The question of effective distribution of sugar is still in the experimental stage. It will be remembered that only recently Bengal Government had to dispense with the permit system owing to the inadequacy of stocks. Recently a new order, namely, the Bengal Sugar Order of 1943, has been promulgated. The new order is the result of a plan drawn up by the Directorate of Civil Supplies, Government of Bengal. The new scheme provides for the distribution of sugar in Calcutta and the districts of Bengal only through licensed dealers. The wholesale dealers in the districts and in Calcutta will be required to take out licenses. They are to maintain a detailed record of sales and submit returns to the aforesaid authorities so as to keep an adequate check on the activities of wholesale dealers. The plan of distribution in the districts envisages complete control by the District Magistrate from the time of the arrival of the consignment of sugar to its retail distribution to the consuming centres within the district. The actual distribution will, however, take place through the wholesale and retail

(Continued on page 89).

(Continued from page 86).

it is able to purchase only 200 tons of wheat per day. The Controller-General, Mr. P. S. Rau, has proceeded to Lahore to overhaul the purchasing machinery and make speedier arrangements for purchases. In the past there has been the complaint that sufficient local co-operation was not available, but now as the Governor of the Punjab is personally endeavouring to help in the matter of getting as much wheat supplies as possible from the Punjab, greater improvement is expected. It appears to be the intention of the Food Department to have a long-term policy before them and try to build up reserve stocks as a precaution against future contingencies. This will to some extent depend on the amount of wheat imports received from Australia. A certain quantity has already arrived, but more is expected within the next two months to tide over the present crisis before the next local crop is available—according to all accounts a bumper crop.

A number of resolutions and censure motions have been tabled on the food question for the next session of the Assembly. There is a general demand for the stoppage of food-grain exports. As the Commerce Member has already given an assurance, he may be able to satisfy the Assembly on this point. As regards textiles, I understand that exports have already been reduced to half and will soon be reduced to one-third—and this only for the benefit of Indian traders abroad. The Commerce Member is also shortly proceeding to Bombay for the Textile Board meeting to give the final shape to the standard cloth manufacture scheme.

HILL-BIRD.

(Continued from page 87).

Irrigation and price control have to be examined and reformed. Bombay does not take the view that the local rice crop is good though it may be so in the U. P. The organisation of Agriculture, the change of farming methods etc., must be taken up by the Food Member in order to satisfy the desire for self-sufficiency and create a surplus for meeting war requirements. The Provinces have not modified the revenue system to stimulate food production. Checking the black market is a minor consideration in the view of a City that is being prepared for rationing.

(Continued from page 85).

For the first time, a captain of Indian industry has related the food supply to wartime problems of labour. Not welfare in the usual sense, not the special measures for safety which the Bengal Coal Co., has already devised, but the procurement of food for the mining areas constitutes the major problem. The Bengal Chamber has been the first to insist that only an assurance of sufficient food supplies at reasonable prices will help to keep the working class in this city both contended and busy. Mr. Mealing agrees that the fulfilment of the condition applies to the coalfields as well. Last year, the Company dealt successfully with its labour problems, but they remain. If equipment can be reconditioned in the Company's workshops, and the petrol problem solved in the familiar fashion, it is otherwise with labour. Mr. Mealing has indicated that, if labour on the coalfields suffers, all industries in India will suffer in a way. Advocacy, vehement but wholly justified in this case, of the interests of miners will not surprise those who read Mr. Mealing's review of a remarkable year. Post-war taxation no more than replacement of used-up machinery is not an immediate problem, but food shortage is both compelling and disturbing. There is little doubt that the authorities will take note of Mr. Mealing's observations on the needs of a great enterprise working for victory. But for coal, there can be no real war effort for India. Since Mr. Mealing has made known that imports of wheat and rice are demanded by the exigencies of the situation in Bengal which is short of food, there is no need to canvass the details of old or new communiques on civil supplies. Plainspeaking was wanted and Labour's most effective spokesman has been found not in the members of the expanded Council but in Mr. Mealing, to whom miners of all ages and condition will confess themselves greatly indebted.

"EAVESDROPPER."

(Continued from page 88)

dealers who are already well established in the sugar trade in their districts. So far as Calcutta is concerned, distribution of sugar is proposed to be made through a large number of wholesale dealers well established in the sugar trade for a long time.

We have on several occasions pointed out the need for a proper control of the distribution of sugar at every stage and remarked that the consumer was at the mercy of the retailer and that there were cases of abuse among the wholesale dealers. The new system, if properly administered, might go a long way in ensuring cheap sugar for the people in Bengal.

Another order has been passed by the Governor of Bengal under the Defence of India Rules directing that no sugar factory within the province of Bengal shall enter into commitments in respect of sugar purchase with the different producers with effect from January 1, 1943 or despatch sugar out of the factory, to any destination till the factory receives instructions in this regard from the Director of Civil Supplies, Bengal.

Coal:

The problem of coal, as in the case of sugar, is one of transport, and with the allotments of wagons to the Coal Controller it appears that it will not be possible to meet all the demand. The Coal Controller for India has recently had a conference with the authorities in New Delhi. It is reported that a new arrangement has been reached in regard to the effective distribution of supplies at fixed prices to the consumer. There is no mention however of any appreciable increase in the allotment of wagons for coal supplies.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, January 14.

Our dismal prophecies with regard to the consumption of Burlap in the U.S.A. have been more than fulfilled. The December figure of consumption is recorded at no more than 100 lakhs of yards against the previous record low of 160 lakhs in November, August and July, and against last year's December figure of 750 lakhs, which was the highest level touched during 1941. The highest consumption in 1942 was in April, 680 lakhs, since when the fall has been little less than catastrophic. Naturally the totals for the year make melancholy reading, the total consumption being 4,220 lakhs yards against 7,130 recorded in 1941. The last half of the year, when the screw on burlap consumption was really being applied, looks worse still, only 1,170 yards in the last half of 1942 as compared with 3,780 lakhs in the last half of 1941. That is to say that, while the monthly average consumption over the whole year was 352 lakhs yards against almost 600 lakhs in 1941, for the second half of 1942, the monthly average was no more than 195 lakhs yards compared with 630 lakhs in the second half of 1941, well under one-third. Stocks of burlap in the States show a further reduction at 250 lakhs yards on spot, but goods afloat are higher at 1,730 lakhs at the end of December. These figures compare with 320 lakhs and 920 lakhs respectively at the end of November, and with 1,450 lakhs and 680 lakhs at the end of December 1941. Thus the total stocks in sight at the end of the year at 1,980 lakhs yards may be considered more than ample in the light of the consumption figure, though in normal circumstances their level would be looked on as dangerously low. The lowest stock figure recorded was in October last when no more than 740 lakhs was in sight, whereas in November 1941, there were 2,650 lakhs yards in sight.

Stocks of manufactured goods in Mill godowns at the end of December showed a further reduction overhead, though it was entirely accounted for on the hessian side. Hessians were down by a total of 8,771 tons, or 377½ lakhs of yards, whereas Sacking goods showed an increase of 5,900 tons of 163½ lakhs yards. The reduction was mainly in commercial hessians, 7,364 tons or around three and a half crores yards. Commercial Sackings were up by 4,720 tons or around one and a quarter crores yards. Government holdings showed little change overhead, a reduction in the quantity of Sandbags and other hessian bags and cloth being offset by almost similar increases in stocks of Scrim and Sacking goods. The net total reduction in goods of all kinds was 2,871 tons.

The fate of the coming Jute Crop area may be decided by now though it is not yet officially known. Meetings have taken place in Delhi this week between representatives of the Bengal Government, accompanied by the Chairman of the Jute Mills Association, and members of the Central Government to decide on how much of the area under jute this year should be turned over to food crops. It is rather astonishing how much ill-informed comment and criticism there has been on this subject of the extent of the jute crop, even from supposedly serious legislators who might be expected to know the facts before opening their mouths. When a comparison of food and cash crops is made, the purview should be an all-India one and not merely local to Bengal, and it is not probably realised that, even when the record 1940 jute crop is considered, the area under jute only represented two per cent of the cultivated area in British India, whereas food crops occupied 80 per cent of the total area. It is thus pretty obvious that any reduction in the area under jute is going to make scarcely any appreciable difference to the food situation, whereas undue interference with the supply of jute may reflect detrimentally on the prosperity of an industry which occupies a very important place in the economy of Bengal. From a short-term political view it may be an attractive proposition to promise the cultivators a high return from the minimum quantity of jute, but in the long term view, this is doing a disservice to the cultivator and to the Province, as it is going the shortest way to deprive Jute of its principal claim to consideration in worldwide markets as the world's cheapest wrapping material. Threats of competition from comparable fibres are in all conscience serious enough. Judging by news recently received from the Argentine, the largest consumer of Indian made hessians after the U.S.A., there is on foot in that country a definite scheme to grow actual jute, and by carefully studied scientific methods, not the haphazard, empirical, rule-of-thumb methods which obtain in this country. It may be that many of these competitors are still in their infancy and may not survive the war period of stringency. But it would be folly to ignore the possibility of some of them surviving as active rivals to jute in their neighbouring markets, and equal folly to pursue a shortsighted policy of restriction which might, by unduly raising the price of jute, place insuperable obstacles in the way of that fibre either maintaining its place in world markets, or regaining it when conditions return to normal. Jute stands to-day at what must be a more than satisfactory price level for the cultivator. It certainly stands above a normal datum line, and it is estimated that there is still six annas of this year's crop to be marketed. If nothing new happens seriously to upset the course of trade, there is every reason to expect that the major portion of the balance of the crop will be required and will be taken up. A drastic reduction of the coming crop to half that which has just been harvested, as has been freely advocated in many quarters, might go far to cripple the Industry at a time when it may require all its resources to play its part in rehabilitating the devastated and starved countries at present under Axis occupation. There is every argument in favour of maintaining a sufficient balance of raw material to meet all possible requirements and even emergencies, and few valid arguments in favour of artificial restriction of the area under jute to add an inconsiderable drop in the food bucket. It is to be hoped therefore that the Chairman of the Jute Mills Association, armed as he undoubtedly was with irrefutable facts and figures, was able to dissuade the Powers that be from being swayed by the ill-informed agitation which has been emanating from many quarters, some of which should, while others could not, have been expected to know better.

There has been quite a fair amount of enquiry for export jute for Dundee, mainly for Daisee and Tossa, but not much actual business has transpired. Prices have advanced sharply during the week, Mills having paid for Dundee Daisee 2/3 from Rs. 65 up to Rs. 72 while sellers now hold for Rs. 74. Dundee Tossa 4's have also risen from Rs. 66 to Rs. 72 with buyers over. Outport Tossa 4's sold at Rs. 58 and now quote Rs. 62. A fair turnover is recorded in Cuttings, N. C. from Rs. 25 to Rs. 28 and M.C. and T.C. at a rupee less. Mill Firsts are quoted at the close at Rs. 72. Baling costs have risen sharply in the past few weeks on account of labour shortage, which accounts for some of the advance. Turnover in Loose Jute has not been extensive, mainly owing to the reserve of sellers and the paucity of offerings. There is not enough showing to tempt buyers to operate. Supervised Jat and Bengali Jat were recorded at Rs. 13, Rs. 10 and Rs. 8-8 for Middles, Bottoms and X, while Indian District Tossa Middles and Bottoms found buyers at Rs. 12-12 and Rs. 9-12 with Jungli districts at four annas less. European packing is nominally quoted at Rs. 14 and Rs. 11 basis with no sellers at the rate. Arrivals of Jute into Calcutta during December are estimated at 7,37,000 bales, which is almost identical with the December 1941 figure. Total arrivals since the beginning of the season amount to 36,07,000 bales against 40,15,000 bales for the same period of the previous crop.

In the Fabrics section there has been a brisk demand for 7½ oz. and 10 oz. hessians for near delivery and prices have advanced from Rs. 17-6 to Rs. 17-10 in nines and from Rs. 22-4 to Rs. 22-14 in elevens. Forward deliveries have not been in much request but business was recorded in July-September 9s and 11s at Rs. 17-4 and Rs. 22-4 respectively. In the heavy Goods section, demand for ready "B" Twills continues and rates have advanced from Rs. 60-8 to Rs. 62 with Rs. 61-4 paid for January. April-May Cornsacks sold at Rs. 60 and Liverpools at Rs. 62 April-June and Rs. 61 July-September. Woolpacks fetched Rs. 2-14 for April-June and Rs. 2-12 for July-September, D. W. Salts sold at Rs. 53 for January and Cuban Sugars at Rs. 71 for April-June.

Withdrawals allowed once a week. Operations by cheques allowed. Advances made on approved securities All kinds of Banking business transacted.

A. J. DOCTOR, *Secretary.*

JUTE

Calcutta, January 14.

The raw jute market has been steady during the past week. A definitely firmer tendency has been noticeable towards the close in sympathy with the jute manufactures market and on the hopes of a drastic reduction in the area under the crop for the next season. Sellers adopted a rather reserved attitude and there was not much jute offering. After the recent lull in buying mills are anxious to get as much jute as possible. It is believed that with the maintenance of the rate of production at the existing level it will not be possible to keep out of the market for long. The transport problem has always proved to be the obstacle.

The important feature of the week is the report regarding the conference convened by the Commerce Member in New Delhi to consider the proposal for a reduction in the acreage under the crop for the next season. At this conference it is expected that a final decision will be reached in regard to the size of the crop for the next season. So far no news has been published in the press.

In the loose jute section quotations are at the highest levels for the week and business is not freely possible even at the advanced rates. Indian Jat Middles and Bottoms were done at Rs. 13-8 per maund; Supervised Jats were As. 8 higher.

In the pucca bales section steadier conditions were noticeable in sympathy with the loose jute section and mills are reported to have bought cuttings on a large scale. N.C's and M.C's were done at Rs. 30 and Rs. 29 per bale respectively. Outport Tossa 4's were done at Rs. 58 per bale, Dundee Daisee 2/3 at Rs. 71 and Dundee Tossa 4's at Rs. 70 per bale.

JUTE MANUFACTURES

Calcutta, January 14.

The jute manufactures market has been very steady with the resumption of some overseas buying and large covering by inter-bazar dealers. The reduction in the local stock figures for December has had an encouraging effect on the market. The freight outlook for the current and next months is reported to be very satisfactory. Mills are not very free sellers. Closing quotations are at the highest levels for the week. 9 porters Ready were done at Rs. 17-12, against Rs. 17-2 at th end of last week; February-March at Rs. 17-10, April-June at Rs. 17-8 and July-September at Rs. 17-4. 11 porters Ready were Rs. 22-10, February-March Rs. 22-12, April-June Rs. 22-8 and July-September Rs. 22-4.

In the heavy goods section also firmer conditions were noticeable in sympathy with the hessian and raw jute markets. "B" Twills sold on the basis of Rs. 61, Liverpool Twills Rs. 63 and Cornsacks Rs. 65. Local stock figures, published this week, show that there has been a further decline in hessian stocks, cloth and bags, on civil account at the end of December being 26.55 crore yards against 30.06 crore yards. Stocks on military account, are only 26 lakhs yards lower at 35.96 crores yards. Total stocks of hessians at the end of December were 62.57 crores yards against 66.28 crores yards. Sacking stocks, cloth and bags, on civil account, show an increase from 18.96 crores yards to 20.27 crores yards. On military account there is an increase of 33 lakhs yards to 3.84 crores yards.

GOLD

Calcutta, January 14.

Slightly steadier conditions have been noticeable in the Bombay gold market in the last two days. Earlier in the week there was no appreciable change in prices. The firming up in quotations is not quite understandable. Gold ready closed at Rs. 66-15; January settlement at Rs. 66-8. Sovereigns were quoted Rs. 48-10.

SILVER

Calcutta, January 14.

In sympathy with the gold market, silver prices also have been marked higher. There has been some resumption of investment buying and quotations are nearly four points higher on balance. The improvement is particularly pronounced for the forward position. Indian Mint Silver Ready were quoted Rs. 103 and January settlement Rs. 100-4.

There has been no change in the London market and the quotation for both spot and forward is unchanged at 23½d. The market is idle.

COTTON

Calcutta, January 14.

In the absence of any adverse developments in the war situation there has been a resumption of buying in the Bombay raw cotton market. Mills, also, are reported to have taken a greater interest. The rush for covering has naturally resulted in an improvement on balance. Closing quotations are at the best levels for the week. The strength of the silver market has been helpful. Jharrilla January 1943 closed at Rs. 415 against Rs. 399 at the end of last week; March 1943 at Rs. 411-8 and May 1943 at Rs. 417-12. It has been pointed out in these columns on more than one occasion that with the present greater activity in the industry and the need for production of standard cloth on a large scale, the outlook for cotton is very satisfactory. It is not surprising, therefore, that there is a rush for covering whenever there is a favourable development.

PIECEGOODS

Calcutta, January 14.

The piecegoods market has remained steady though in certain sections prices were marked down by a few annas. Forward business is at a standstill, owing to the mills in the Western Presidency being unwilling to negotiate for any delivery forward. Local stocks are very low and dealers are not inclined to part with their goods freely. The recent air raids have not caused any great panic. Dealers are rather inclined to keep back supplies or transfer them to some other safe place.

Business in cold weather styles has been very small and quotations are not very much changed from the highest levels touched recently.

NORTH WESTERN RAILWAY

In Your Own Interest

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to them showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to book the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed.

Chief Commercial Manager,
Lahore.

Stock Markets to-day and to-morrow

A. C. C. PAYS A HIGHER DIVIDEND FOR 1941-42

MARKETS, in Calcutta and Bombay, have been rather quiet throughout the past week. Both investors and operators are not prepared to enter into any fresh commitments though, at the same time, they are not quite keen on disposing of their holdings. There is a general tendency to await further developments and if nothing untoward happens in the war situation in the immediate future, it is generally felt that the upward movement will be resumed. In Friday's session quite steady conditions have been noticeable. Indian Irons and Steel Corporations were around Rs. 30-12 and Rs. 22-12 respectively. While there is a scarcity of sellers for first-class preference shares, buyers of equities are not quite prepared to concede the advance in rates asked for.

* * * * *

The important feature of the week is the publication of the accounts by the *Indian Iron and Steel Company Limited* for the year ended March 1942. Earnings for the year constitute a record for the amalgamated company since 1936. As the dividend on the ordinary shares in respect of 1941-42 has already been paid, the results for the year are not of any great significance to the market. They are, however, valuable as affording a guide regarding the trend of earnings in the current year. The Chairman's speech, supplied together with the balance-sheet, explains clearly the reasons for the improved working of the Indian Iron and Steel Company in the twelve months ended March, 1942.

The profit for the year includes the sum of Rs. 13,40,405 received from the associated Company, the Steel Corporation of Bengal Limited, being the one-fifth share of profit of that company under the supply agreements between the two companies. In addition to this, sums were received for the supply of electricity, gas, water and other services. Sales were maintained at the level of the previous year but lower freight and insurance charges and saving in the purchase of raw materials and stores have resulted in an appreciable increase in earnings inspite of increased labour charges. The net profit, before providing for taxation and depreciation, is Rs. 150,05,206 against Rs. 104,37,898 for 1940-41. The amount set aside to depreciation is Rs. 25 lakhs (Rs. 14.8 lakhs) while the transfer to Debenture Sinking Fund is Rs. 3,12,027 (Rs. 3 lakhs). War Risks Factories Contingency Fund receives Rs. 12 lakhs (nil) while the provision for taxation is the substantial sum of Rs. 53 lakhs (Rs. 28 lakhs). The earnings for 1941-42 compare very favourably with the earnings of Rs. 145,87,481 for 1937-38. Even with the increase in earnings over 1940-41 to the extent of Rs. 45 lakhs it has not been possible to effect any increase in the dividend to shareholders. The increase in the charge on account of depreciation is over Rs. 10 lakhs and the premiums on account of War Risk Insurance scheme take away Rs. 12 lakhs. Taxation accounts for an additional sum of Rs. 25 lakhs. The amount carried forward is Rs. 5,82,377 against Rs. 6,01,939 brought in.

The special provision of Rs. 12 lakhs to the War Risk Factories Contingency Fund is under the Government of India's compulsory insurance scheme. A total premium of Rs. 20 lakhs will, in the course of the next two years, be paid to cover the insurance of the Company's buildings and plant at Hirapur and Kulti, the collieries and the two groups of ore mines. A further sum will be set aside next year for this purpose. It is also pointed out that cover against damage by enemy action only extends to 80 per cent of the sum insured, so that in the light of future events it may be found necessary to take this into consideration in next year's accounts.

In regard to depreciation the directors have provided Rs. 25 lakhs in 1941-42 as against Rs. 14,80,000 in the previous year. On the amalgamation of the Company with the Bengal Iron Company some five years ago, it was decided that, having regard to the reduction of capital which was made at that time, depreciation for the subsequent few years should be taken on a lower basis than would otherwise have been necessary. The time has now come when the annual figure of depreciation must be taken on a more normal basis and this explains the difference between the two above stated figures. It may be that next year it will be found necessary to still further enhance the sum set aside on this account.

The prospects for the current year are quite satisfactory. With the increase in the earning capacity of the Steel Corporation and the payment of dividends, it may very well be that it is possible to report a further increase in earnings though with the possibility of a higher charge on account of depreciation and the need for setting aside sums to cover possible damages on account of air raids the directors may not decide on an increase in the distribution which has been maintained at 22½ per cent per annum.

* * * *

Another important balance-sheet to be published during the week is that of the *Associated Cement Companies Limited* for the year ended July, 1942. In this case also it has been possible to establish a new record for earnings. It will be remembered that only in 1936 the Associated Cement Companies Limited was formed and that the first year of working of the amalgamated company showed earnings at the high altitude of Rs. 132,65,180. After 1937-38 conditions in the cement industry were rather depressed and the coming into being of the Dalmia Cement Company caused cut-throat competition. Only in the latter half of 1941 an agreement was reached between the Associated Cement Companies Limited and the Dalmia group. With the revival of export demand and the increase in the consumption by military departments, the earnings for 1940-41 of the A. C. C. showed a good improvement. The figures for 1941-42 show a pronounced increase over those for 1940-41. The agreement referred to above was in operation throughout the year. Demand for cement showed a considerable increase. It is relevant to point out in this connection that at the present moment the sale of cement is rationed and that almost the entire production of the industry is consumed for military purposes. With the increase in the tempo of military preparations demand should continue to be at a very high level.

As for the post-war period, it is unnecessary to emphasise that there will be a great demand for cement on account of reconstruction. At the present moment building construction has had to be postponed inevitably due to the high prices of steel and the difficulties in getting cement. This backlog of orders should also prove to be a helpful factor.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent:)

Calcutta, January 15.

ABSOLUTELY uninteresting conditions have been noticeable on the Calcutta Stock Exchange during the past week. Prices have been fluctuating in very narrow limits and there is a tendency to await further developments. The undertone in the several sections is quietly steady though business passing is at a minimum. The reserve of sellers in the hope that there will be an early improvement is an encouraging sign. There are no important features during the week. The giltedged securities section has been steady while the speculative popular counters are slightly better.

In the giltedged securities section rather steady conditions have been noticeable with 3½ per cent Paper quoting around Rs. 94-1. It is reported that there are some buyers for the terminable loans. There is no large investment demand, however. 3 per cent Second Defence Loan 1949-52 were done at Rs. 100-8, 3 per cent 1963-65 at Rs. 95-4 and 3½ per cent 1947-50 at Rs. 103-7. 4 per cent 1960-70 were Rs. 108 and 4½ per cent 1955-60 Rs. 113-13. Money conditions have remained unchanged though there has been a slight increase in the average discount rate to one rupee one anna and five pies per cent per annum. No transactions have been recorded in provincial loans.

Business in public bodies debentures is not possible owing to the scarcity of sellers. Among industrial debentures the only transaction recorded was in *Dalhousie Properties* debentures at Rs. 101-8.

There is not much doing in the Bank section. *Reserve Bank* were steady at Rs. 104.

In the Coal section slightly firmer conditions have been noticeable and the remarks made by the Chairman at the recent half-yearly meeting are encouraging. *Bengal* were done at Rs. 402 cum-dividend, *Hurriladih* at Rs. 15-8, *New Beerbhoom* at Rs. 16-8 and *Parasea* at Re. 1-9. *North Damuda* were Rs. 5-8 and *Samla* Rs. 2-10.

In the Jute section also business has been possible more freely though no large buying has been in evidence. Fears were entertained regarding production being affected adversely owing to the exodus of labour. It is now reported that conditions are returning to normal and that before long it will be possible to work mills for the scheduled number of working hours. *Alliance* were Rs. 308, *Anglo-India* Rs. 324, *Champdany* Rs. 176, *Clive* Rs. 22-4, *Kamarhatty* Rs. 476-4, *National* Rs. 21-14 and *Orient* Rs. 175.

In the Engineering section, Indian Irons and Steel Corporations have been fluctuating around Rs. 30-8 and Rs. 22-8 respectively. The publication of the accounts for the year ended March, 1942 of the Indian Iron and Steel Company, Limited has had an encouraging effect on the market. Earlier in the week, *Indian Iron* were lower at Rs. 29-11, but the quotation is definitely better at Rs. 30-10 at the time of writing. *Bhartia Electric Steel* were Rs. 15-12, *Indian Galvanizing* Rs. 33-13 and *Steel Products* Rs. 7-4. *Burn & Co.* were Rs. 333 and *Kumardhubi Engineering* Rs. 5-10.

Sugar shares were steadier with *Carew & Co.* at Rs. 14-8. *Cawnpore Sugar* were Rs. 29-8, *Champarun* Rs. 25, *Gwalior* Rs. 181 and *Raza* Rs. 42.

Tea shares have been quite firm with Banarhat at Rs. 610, *Bhatkawa* at Rs. 41, *Dessai* and *Parbuttia* at Rs. 291-8. *New Samanbagh* were Rs. 30-12 and *Teliapara* Rs. 500.

In the Miscellaneous section, *Burma Corporation* were Rs. 3-2 and *Indian Copper Corporation* Rs. 2-2. *B. I. Corporation* were steady at Rs. 5-14 with *British Ceylon Corporation* higher at Rs. 14-5. *Bararee Coke* were Rs. 27-10 and *Indian Cables* Rs. 24-11. *Dalmia Cement* were Rs. 15-10. In view of the excellent showing made by the accounts of the Associated Cement Companies Limited it is quite likely that the Dalmia Cement Limited also reports a substantial increase in the earnings for the year ended October, 1942. *Indian National Airways* were Rs. 10-12 and *Midnapore Zamindary* Rs. 70. Among Paper shares. *Titaghur Paper* were Rs. 21-2 cum-dividend, *India Paper Pulp* Rs. 161 and *Orient Paper* Rs. 25-5. *Star Paper* were Rs. 18-12 cum-dividend.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, January 14.

LOCALLY, transactions during the period under review afford some noteworthy points for investors. The trend on most days was never settled. There was no continuity either in the direction of relapse or improvement with the result that while most of the minor shares remained almost steady, some of the most active counters moved in a zig-zag manner. On the whole, the trend may be described as definitely irregular with tired bull unloading and scattered liquidation on some days. In spite of the unsettled trend there is not any sign of weakness. The present behaviour of the markets is largely due to a popular belief that the enemy may repeat his attacks on Eastern India under a waxing moon. Suspense elsewhere influences operators who are not eager to take any risks until positive indications can be had.

The giltedged section has remained steady with 3½ per cent Government Paper quoting at Rs. 94. 3 per cent 1946 Defence Bonds were done at Rs. 102-14, 3 per cent (1949-52) at Rs. 100-7, 3 per cent (1951-54) at Rs. 99-14, 3 per cent (1963-65) at Rs. 95-8, 3½ per cent (1947-50) at Rs. 103-13, 4 per cent (1943) at Rs. 101-10, 4 per cent (1960-70) at Rs. 110-6, 4½ per cent (1955-60) at Rs. 114, and 5 per cent (1945-55) at Rs. 108-6.

The Textiles group after opening firm showed an easier tendency earlier in the week only to improve towards the close. Prices of most shares were unchanged. *Century*, however, recorded a slight improvement. *Ahmedabad Advance* were done at Rs. 402-8, *Central India* at Rs. 387-4, *Century* at Rs. 665, *Colaba Land* at Rs. 234, *Gokak* at Rs. 340-8, *Kohinoor* at Rs. 618, *Phoenix* at Rs. 641-4. *Simplex* at Rs. 266, *Svadeshi* at Rs. 476 and *Vishnu* at Rs. 2,080.

Like the shares in other groups, Steels also opened firm with *Tata Defds.* at Rs. 1,543-12. *Tata Defds.* were done towards the close at Rs. 1,537-8 and *Tata Ordy.* at Rs. 330. *Tata I Pref.* were Rs. 205, and *Tata II Pref.* Rs. 134. *Indian Iron* were steady at Rs. 30.

In the Miscellaneous section, *Alcock* were steady at Rs. 575. *Belapur Sugar* were slightly lower at Rs. 219, *Bombay Burmah* (olds) improved to Rs. 461-4, *Bombay Burmah* (New) were unchanged at Rs. 116-4, *Premier Construction* changed hands at Rs. 141-8, and *Scindia Steam* at Rs. 24. *Bombay Steam, B. B. P.* and *Bombay Trams* were steady at Rs. 410, Rs. 2-2-3 and Rs. 140-8 respectively whereas *Andhra Valley* were slightly lower at Rs. 1,767-8. *Tata Power* and *Tata Hydro* are quoting Rs. 1,650 and Rs. 183 respectively. *Associated Cement* were done at Rs. 214 on the publication of a satisfactory earnings report and the increase in the dividend for 1941-42 to 8 per cent.

THE COCHIN MALABAR ESTATES, LTD.

Payment of Interim Dividend on Ordinary Shares.

The Directors have authorised us to announce that an interim dividend of 7½ per cent free of Income-tax for the year ended 28th February, 1943, will be paid to the Ordinary Shareholders on the books of the Company as at 30th January, 1943.

The Ordinary Share Transfer Books will be closed from 20th to 30th January, 1943, both days inclusive.

Claims on behalf of holders of Shares on blank transfers will not be entertained.

By Order of the Board,
PEIRCE, LESLIE & CO., LTD.,
Mg. Agents & Secretaries.
Calicut, 6th January, 1943.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

The Sixth Annual General Meeting of The Associated Cement Companies, Limited, will be held at Shree Sunderbai Hall, near Government of India Offices, Queen's Road, Fort, Bombay, on Monday, the 25th January, 1943, at 3-30 p.m. (S.T.) to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st July, 1942.

(2) To sanction the declaration of a Dividend for the abovementioned period.

(3) To elect Directors in place of those who retire but are eligible for re-election.

(4) To appoint Auditors for the current year and fix their remuneration.

By Order of the Board,

For The Associated Cement Cos., Ltd.,
CEMENT AGENCIES, LTD.,
Managing Agents,
J. H. PATEL,
Managing Director.

Bombay, 4th December, 1942.

Note:—The Transfer Books of the Company, closed from Saturday, the 21st November, to Saturday, the 12th December, 1942, both days inclusive.

The Dividend when sanctioned, will be made payable on and after Wednesday, the 27th January, 1943, to those Shareholders whose names stand on the Register on Saturday, the 12th December, 1942.

THE INDIAN RUBBER PRODUCTION BOARD.

NOTICE.

The Board understands that land suitable for rubber cultivation is available in the areas mentioned below and that the Government of Madras (Development Department) would be prepared to consider applications for assignment. In respect of land in reserved forests applications will be scrutinised by the Forest Department, and assignment will be made by the Board of Revenue.

Areas:—

Reserved forests in the Uppinangati (or Puttur) Taluk, and all along the terai forests, in South Kanara District; Reserved forests around Manalur in the Madura District; 144 and odd acres in the Shevaroys, Salem District; 18,330 acres in Malabar District; and 12,781 acres in the Gudalur, and 471 acres in the Coonoor Taluks of the Nilgiri District.

C. R. B. MENON,
Secretary.

Kottayam,
5th January, 1943.

Company Meeting

BENGAL COAL COMPANY LIMITED

HIGH LEVEL OF EARNINGS & RAISINGS

MINING LABOUR & FOOD SUPPLIES

Mr. MEALING'S REMARKS

PRESIDING over the half-yearly general meeting of the shareholders of the Bengal Coal Company, Limited, held on the 13th January, 1943, Mr. K. W. Mealing, the Chairman of the Company, said:—

GENTLEMEN,

Addressing you on 14th January last year I used these words: "The recent events on the Russian and Libyan fronts together with the announcement of America's overwhelming armament programme spell beyond any doubt the defeat of the aggressors so that we can face the coming year with courage and confidence." Courage and confidence have both been vital requisites since then as we have passed through the most eventful and anxious year in the history of the Company and although the tide of war has temporarily engulfed Malaya and Burma and approached the borders of India, bringing with it many new and urgent problems, I am glad to report that your Company has succeeded in fulfilling its essential functions in the war effort without undue dislocation or delay.

The rapid approach of hostile forces during February and March and the possibility of attack by land, sea and air on Bengal increased the urgency of precautionary measures to minimise the effects should such attacks be made, and at the same time increased the tendency for labour to leave their work and go further inland. These problems had to be dealt with simultaneously and, I am glad to say, were met, and with a large measure of success. Following upon this came the problem of food supplies arising from difficulties of distribution and the initiation of price control, and a shortage, particularly of rice which necessitated the Company making arrangements to supply food to the miners at reasonable prices in order to keep them contentedly at work. This problem was also satisfactorily met, but during August the transport dislocation again threatened to upset our arrangements for distributing foodstuffs and here I must give the great praise that is due to the staffs of the Railways, in particular the East Indian Railway, for the loyalty, courage and endurance they displayed under difficult conditions through that unfortunate period.

As I informed you at our half-yearly meeting in July, the coal stock position gave us a good deal of anxiety in the early months of the year. The wagon position restricted our despatches and we had before us the alternative of restricting raisings or putting coal into stock. The off-take of steam coal was ample, so that the coal put into stock was largely small coal. Having regard to the war situation we deemed it our duty to raise every ton of coal we could so that in emergency, should raisings cease, there would be coal in stock for essential services. As a result, our raisings for the first half of the year constituted a record for six months' output in the history of the Company.

In the second half-year which is, of course, the period now under review, labour shortage became more acute and despite the transport dislocation in August, despatches from stock were heavy. Our raisings were therefore somewhat below the tonnage of the first half, and stocks as at the end of the half-year were lower than at the commencement. Moreover a large proportion of these stocks consist of slack coal and if some of the industries we serve could see their way to take a larger percentage of slack coal it would undoubtedly help us, firstly, to prevent too large an accumulation of this type of coal **and, secondly, to release larger quantities of steam coal for essential naval and shipping requirements.**

RECORD RAISINGS

The total raisings for the half-year under review amounted to 879,111 tons and for the whole year, the record figure of 1,854,803 tons. I think you will agree that considering the difficulties with which we have had to contend, this is highly satisfactory. Apart from labour, to which I will refer again later, the problems connected with mining at an average depth of 829 feet compared with that of mining at 581 feet which was our average in 1936, only six years ago, are naturally greater. Increased power for ventilation, for pumping, for winding, is necessary. Winding takes longer, more timber for support is necessary at this increased depth and above all, sand stowing is even more necessary. The great expenditure incurred by your Company amounting to something like 14¼ lakhs of rupees over the 6 years 1936 to 1942 on sand-stowing equipment, a decision which required some courage on the part of your Board and some patience on your part, is now proving to have been amply justified. Had that decision not been taken and the money spent, our raisings to-day would have been considerably less. Indeed the benefit in safety and reduced incidence of dangerous "bumps" in the deep mines which, of course, reacts on raisings, has been remarkable.

I will not again labour at length the question of supplies of stores, cables, wire ropes, steel, petrol, etc., etc., for the position has not materially altered, although you will appreciate that each year which passes adds to our difficulties and the depletion of our stocks of stores. Certain supplies about which we were getting worried have been made available and our workshops are doing a fine job in utilising scrap and in reconditioning plant and keeping the machinery going. Petrol has been in very short supply and most of our vehicles are now run on charcoal gas. Only by adopting this method and using our small petrol rations for starting up the vehicles, can we get the essential movement of men and materials to carry on.

POLITICAL UPHEAVALS

On politics I do not propose to enlarge. As your Chairman it is my function to see that your business is managed efficiently, that its interests are protected and its properties conserved. I cannot, however, deny that political upheavals have their effect upon your employees (both European and Indian, technical and labour). Not unnaturally they look to the future and wonder what lies ahead. It is my experience that most businessmen and shareholders desire political peace and progress and realise that political strife and upheaval is harmful to all sections of industry and commerce, from the shareholders to the labour. Politically we have passed through such an upheaval this year and we have reason to be glad that its effect upon your interests has not been of a serious nature.

Turning to the war, the events of the last three months, commencing with the brilliant victory by Generals Alexander and Montgomery in Egypt and Libya and followed by the stirring events in Morocco, Algeria and Tunisia, have immediately changed the whole aspect of the war. Our Allies' victories at Midway Island, in the Solomons and New Guinea have shown that the forces of Democracy are at last on the move and I need hardly add, on your behalf, our tribute to the magnificent defence of Stalingrad and the courage and sufferings of the Russian people throughout this eventful year.

Let me, nevertheless, remind you that no war is over until the last battle is fought and that this may yet be a long way off. It behoves us not to slacken our efforts because we have begun the long hard road towards victory, but to redouble our efforts, to ensure that we make provision for event-increasing quantities of the sinews of war, starting right from the basic motive power—coal, and that we allow no oversight, no failure to keep up efficiently, no breakdown in the winning of this vital commodity and in its transport to the Ports, factories and power stations where it is required.

Concerning transport, it has been the duty of my predecessors and of myself to give expression to strong criticism on the subject of India's supply of locomotives and wagons in the past. I do not propose to labour this matter on this occasion because I am glad to say that since I addressed you a year ago, much has been and, I believe, is being done in this connection. You will remember I said last year "Failure to deal with the present situation and plan ahead on progressive lines may create the bottleneck of India's war effort."

During the year two outstanding events have taken place: the creation of a Ministry of War Transport with Sir Edward Benthall as the Hon'ble Minister, and the appointment of a Controller of Coal Distribution, Khan Bahadur G. Faroque. Both of these events have had a beneficial effect on the coal transport situation and although I do not think the Hon'ble Minister would claim that perfection has yet by any means been reached there is no doubt that rationalisation of wagon space is being effected and wastage is being greatly reduced. Indeed we may even look forward to the time when the results of the organisation, thus set in motion, will produce the situation that instead of coal despatches being limited by transport capacity, we shall be required to increase our raisings to fill the wagons available. I need hardly tell you we are making every effort to anticipate and meet such a situation, the solution to which will greatly depend on the return of labour which has not unnaturally been attracted for the present to other important works under construction. You will, I am sure, be interested to know that your pits are capable of raising two million tons of coal a year providing we can get sufficient miners.

LABOUR AND FOOD SUPPLY

I must, however, utter a word of warning in regard to the coming months. Hitherto we have been free to purchase foodstuffs and supply them at below cost to our labour. This has been a great factor in keeping our miners and maintaining our raisings. Under the new regulations restrictions are placed upon the purchase and movement of foodgrains and the responsibility for obtaining, moving and making available foodgrains to the labour seems likely to be removed from our hands and assumed by Government. We shall naturally co-operate in every way in our power and so long as the Government control and supply measures are successful all will be well, but should they not succeed, the result upon raisings will be disastrous and will be felt by all industries dependent upon coal throughout the country. It is therefore of vital importance that food supplies to the mining labour be ensured.

Whilst on this subject I feel impelled to point out that if the situation in regard to foodgrains, particularly rice and wheat, is such that in Bengal there is likelihood of an actual insufficiency, and if such insufficiency is likely in any way to impede the war effort during the coming months, I have no doubt that the situation could be met by the United Nations by the provision of a sufficient number of cargoes of these two grains to fill the gap, whilst the very knowledge that such a policy had been adopted would do much to ease the situation. In a country whose population has so little margin between just enough and not enough, the margin between sufficiency and scarcity in stocks of food grains is probably not large, and a few shipments might make all the difference between sufficiency and famine, with all the grave consequences which this implies.

A WARNING

In considering the financial aspects of your Company's affairs I must utter a word of warning on three matters. Firstly, that although increasing costs have justified increase in the price of coal and the large output is

(*Continued on next page*).

OMPANY MEETING

MYSORE PAPER MILLS, LIMITED

SATISFACTORY WORKING DESPITE INTERRUPTIONS

DIVIDEND MAINTAINED AT 5 PER CENT

Mr. S. G. SASTRY ON NEED FOR PAPER ECONOMY

Following is the full text of the speech delivered by Mr. S. G. Sastry, B.A., M.Sc. (Lond.), Chairman of the Mysore Paper Mills, Ltd., Bangalore, at the Seventh Ordinary General Meeting of the Company held at Bangalore on 21st December, 1942:—

"GENTLEMEN,

"It has been a convention that the Chairman of a joint-stock company should make a speech before the formal Directors' Report is presented to the shareholders at the Annual Meeting. Such occasions have been sources of enlightenment in matters relating to industry, trade and commerce, when handled by capable leaders of industry. I make no claim to such qualities and, further, the times we are passing through are so abnormal that it will be a rash thing for an ordinary and humble person like myself to yield to the temptation of offering general remarks, which, in normal and peaceful times, may be tolerated by the shareholders and the wider public that read such literature when published. I, for one, would like to make my speech as brief as possible.

LATE MR. VENKATANARANAPPA

"Before the regular proceedings are commenced, it is my sad duty to refer to the demise in the early hours of 30th May, 1942, of Mr. M. Venkatanaranappa, B.A., Chairman of the Mysore Paper Mills, Ltd. I know from personal knowledge he was one of those who very assiduously worked behind the scenes, for the starting of the Paper Mills in Mysore State for over fifteen years. During the early stages, when the scheme was conceived and details had to be worked out, I was his close associate for some time. I remember vividly his instructions to me to gather details of the paper industry in Japan when I was last deputed to that country five or six years ago. He was the heart and soul of the Paper Mills during the time the matter was handled in the Secretariat and later when he became first the Director of the Company and later its Chairman. His untimely death was a terrible loss not only to the Paper Mills but the whole of Mysore. I request you to pass the following resolution standing quietly in your places:

'The General Body of the members of the Mysore Paper Mills, Ltd., have learnt with great sorrow, the news of the demise in the early hours of 30th May, 1942, of Mr. M. Venkatanaranappa, B.A., who was the Director of the Company since the commencement and later, the Chairman of the Company and wish to convey their condolences to the bereaved family.'"

(*After the resolution was unanimously* passed the Chairman added that, as a mark of respect to the memory of Mr. Venkatanaranappa, the business of the meeting would be adjourned for two minutes.—ED.)

"I welcome you with great pleasure to this the Seventh Ordinary General Meeting of the shareholders of the Mysore Paper Mills, Ltd., and place before you the report of the Directors and the Accounts for the year ended 30th September, 1942, along with the report of the Auditors.

"I am glad to inform you that the Mysore Paper Mills was lucky in being honoured by a visit in July last by His Highness the Maharaja Sri Jaya Chamaraja Wadiyar with the Royal Party and the Dewan. His Highness evinced great interest in all the processes carried on at the Mills and also made enquiries about the present conditions in the Mills and also the future of the industry.

"The Mills had the honour of visits from the Minister for Revenue and Finance and the Minister of Law.

"The Report and Accounts with the Auditors' Report have been in your hands for some time now and you will have observed that the working of the Mills, in spite of three fairly long-term interruptions, has been satisfactory.

FULL DEPRECIATION

"Out of the profits, depreciation for the year has been provided to the full. We had to incur this year an extra expenditure on account of emergency war risks factories insurance and also emergency war risks goods insurance. Proper provision has been made for the payment of income-tax and super-tax.

"We have also been able to wipe off arrears of depreciation for the year ended 30th September, 1939, completely, and also a portion of the arrears of depreciation for the year ended 30th September, 1940.

"Depreciation in full has also been provided for the next two years, viz., 30th September, 1941, and 30th September, 1942.

"After making all these appropriations we have been able to recommend the payment of dividend of 5 per cent on the share capital of the Company, absorbing Rs. 1,25,000 and leaving a balance of Rs. 31,039-13-2 which will be carried over. These figures, I hope, will prove to you that, in spite of interruptions of work, for reasons usual in such large and complicated plants and also for reasons beyond the control of the management, the working of the factory has been satisfactory.

"So far as the factory is concerned, the position of the raw materials is satisfactory.

"As regards coal, we had to close down the Mills for nearly 23 days on account of lack of coal due to transport difficulties. The situation is now better and we are trying our best to keep stock of at least a month's requirements of coal in the factory. The future is not free from anxiety, though there is no cause for alarm.

"Regarding chemicals, the factory has managed to have sufficient stocks all through, but constant and vigilant care about this is necessary.

"The Forest Department of Government of Mysore, the Coal Controller to the Government of India and the Controller of Heavy Chemicals, Government of India, have been rendering helpful co-operation and our thanks are due to them.

"The times are so abnormal that it is very difficult to forsee what difficulties are ahead; but I can assure you that the management is fully aware of the situation and spares no pains to do everything possible to keep the wheels running in the factory.

"When it is remembered that imports of paper have practically stopped and what is produced in India is not adequate to meet even 50 per cent of the normal demands, the cry for paper is insistent. In addition to this, the needs of the Governments, both Central and Provincial, and of the States have increased. The Defence Departments also want more and more paper. It is the primary duty of every manufacturer to give priority to the needs of Government and Defence services. The Mysore Paper Mills have been doing this to the utmost of their ability. Therefore, when what is left over is to be distributed for ordinary needs of civic life, there is bound to be dissatisfaction, and this is growing from day to day.

ACUTE SHORTAGE

"In view of the very acute shortage of paper and considerable demand, evils, such as cornering of stocks and the development of black market showed themselves prominently. In order to mitigate the hardships and inconvenience of the consumers, arrangements have been made, to the extent possible, to meet the requirements of consumers—such as printers, publishers, educational institutions, etc., by supplying papers direct to them or through recognised co-operative institutions. Papers have also been supplied through Government to meet the needs of the village officers. Endeavours are also being made for arranging supplies to meet other needs through the usual channels even though to a very limited extent in view of the abnormal conditions. Emergency newsprint manufactured by us has been purchased by Government for rationing amongst newspapers and periodicals in the State.

"It has often been stated that still more economy is possible in the use of paper by the civil population of the country and it is also held that great business houses can co-operate in this matter.

"Printers and publishers should seriously think of the present acute shortage of paper and stop all optional printing. It is a very curious thing that everybody thinks that somebody else's publication comes under the category of optional printing and his work should get priority since it cannot be delayed in any circumstances. The Department of Public Instruction in Mysore State has been most helpful in restricting the number of text-books to be printed and also in the use of exercise books and paper in the ordinary course of class work.

"In the interests of everybody concerned, common action on a mass scale is necessary to make a further drive towards more extended and rigid economy in the use of paper.

"As mentioned by your Chairman, the late Mr. M. Venkatanaranappa, during his last year's address to you, the Mysore Paper Mills can after all supply a very small share of the demand for paper in India and any action they may take in furtherance of their objects cannot solve the problem except to a very limited extent.

"I beg to inform you that during the year under report, the Mysore Paper Mills, Ltd., continued to receive guidance and support in all matters from the Government of His Highness the Maharaja of Mysore. The Directors and shareholders of the Mysore Paper Mills are conscious of the abiding and helpful interest of the Government of Mysore and they are glad to have another opportunity of recording their gratitude for all the past kindness, hoping that the future of the Mills will be safe and sound with the continued support from the Government of Mysore.

"I am very grateful to my fellow-Directors and Auditors and to the General Manager, Secretary and the staff of the Mysore Paper Mills, Ltd., both at Bangalore and at Bhadravati for their wholehearted co-operation in these days of difficulty and strain."

(*Continued from previous page*).

yet insufficient to meet the demand, when the time comes, as come it must for normal trading conditions to return, the potential output may again greatly exceed demand and unless the export markets can be built up again, prosperity will fade away. Secondly, the enormous cost of this war must be met, and high taxation must be anticipated for many years to come. The increase of taxation, including Excess Profits Tax, has already risen in the past two years to such an extent that it is necessary to make considerably higher gross profits in order to maintain the same dividend without reducing the allocation to depreciation. Thirdly, colliery, machinery like the machinery in most other industries is being worked hard and is depreciating, so that a heavy bill for replacements will have to be made when they are available. These are matters which I hope we shall all bear in mind and prepare ourselves to meet.

In conclusion, I must remind you that 1943 marks the Centenary of your great Company. For one hundred years the Bengal Coal Company has served the public in producing and distributing this essential raw material. For 35 of these 100 years Messrs. Andrew Yule & Company, Limited, have had the honour to hold the position of your Managing Agents, a relationship which I believe has proved a happy and successful one. In normal times it would be fitting to mark the occasion of our Centenary with suitable celebrations. Under present conditions little of this nature is possible or I think, you will agree, desirable, as we must devote our energies to the task of maintaining the war effort in every possible respect.

COMPANY REPORTS

BENGAL JUTE MILL COMPANY, LIMITED

	Half-year ended.

BHARAT INVESTMENT TRUST LIMITED, LAHORE

At the Statutory Meeting of the Company held on 5th January, 1943, at its Registered Office the accounts were passed and an interim dividend of 10 per cent. on Ordinary Shares and 15 per cent. on Deferred Shares after reserving 6 per cent. for Preference Shares was approved.

For BHARAT INVESTMENT TRUST LD.,
Secretary.

Lahore, dated 9th January, 1943.

THE HIGHLAND PRODUCE CO., LTD.
(Incorporated in Travancore)

NOTICE

6 per cent. DIVIDEND on PREFERENCE SHARES FOR the second half-year ended 31st December, 1942 will be paid to the Preference Share-holders who are in the Books of the Company on 16th January, 1943.

The Books of the Company for Preference Shares will be closed from the 12th to 16th January, 1943, both days inclusive, during which period no transfer of preference shares will be effected.

For The Highland Produce Co. Ltd.

A. V. THOMAS & CO., LTD.,
A. V. THOMAS,
Agents,

Alleppey, 2nd Jan., 1943.

RADIO & WIRE MANUFACTURING CO., LTD., LAHORE

The First Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office, Hall Road, Lahore on 15th January, 1943 at 3-0 p.m.

A final dividend of 7 per cent. on Ordinary Shares (making a total of 12 per cent.) and 9 per cent on Deferred Shares has been recommended after paying 7½ per cent. to the Preference Shareholders.

The Transfer Books of the Company will be closed from the 7th January, 1943 to 15th January, 1943, both days inclusive.

BIRLA MEHDIRATTA & CO.,
Managing Agents.

Lahore, dated 9th January, 1943.

(Continued from page 93)

The net profit, before providing for taxation and depreciation, is Rs. 1,53,14,192 against Rs. 1,02,94,845 for 1940-41. The provision for taxation is very much higher at Rs. 37.45 lakhs (Rs. 11.53 lakhs) while the charge on account of depreciation is Rs. 40,66,146 (Rs. 38,66,654). The sum of Rs. 1 lakh is written off expenditure on new works while the same on account of rolling stock and equipment, fixture and fittings etc. is Rs. 50,064 (Rs. 9,050). Prospecting expenditure written off is Rs. 2,23,450 (Rs. 1,69,528). The General Reserve receives Rs. 10 lakhs (Rs. 3 lakhs). A sum of Rs. 2,66,879 is transferred to Investment Depreciation Reserve to provide cover against the company's large holdings in the Burma Cement Company's shares which have been adversely affected by the occupation of Burma by the Japanese. The total sum to the credit of this newly created reserve is Rs. 10 lakhs. The amount transferred from the debenture redemption reserve is Rs. 6,94,936 and the insurance fund Rs. 38,195. The outstanding debentures were redeemed in February 1942. The company, has, therefore, no liability in regard to debenture capital. Even after these large allocations to reserves the dividend has been increased from Rs. 6 per share to Rs. 8 per share, the highest level in the history of the company. The amount carried forward is Rs. 2,62,656 against Rs. 1,06,475 brought in.

The company's policy of expansion, wherever warranted, is being steadily pursued. The extension of improvement of the Shahabad Works reported last year has been practically completed so far as the production side is concerned. A fresh extension is in hand at the Madukarai Works.

* * *

Bengal Coal Company Limited has been able to report a higher level of earnings for the half-year ended October 31, 1942. Even with the lower level of raisings despatches have been maintained with increased purchases of coal from outside. Total despatches during the half-year were 10,44,988 tons against Rs. 10,40,189 tons. The net profit, before providing for taxation and depreciation, is Rs. 16,14,164 against Rs. 11,93,177 for the previous six months. The amount set aside to depreciation is unchanged at Rs. 3 lakhs while the provision for taxation and cesses is considerably higher at Rs. 9.5 lakhs (Rs. 5.8 lakhs). The dividend is to be maintained at Rs. 10 per share and a bonus of Rs. 2 per share is to be paid in addition.

The directors point out that the decline in raisings during the half-year was due to the irregular attendance of the labour force. The prospects of the immediate future are dependent on an improvement in attendance of labour together with adequate transport facilities.

* * * *

The rise in the quotations of the Buland and Raza Sugar Companies recently has been more than justified. It is proposed that a bonus issue should be made to shareholders in both cases. In the case of the *Buland Sugar Company* the paid-up capital is to be increased from Rs. 18 to Rs. 24 lakhs by the capitalisation of Rs. 6 lakhs, being part of the undivided profits of the company. 60,000 new ordinary shares are to be created and distributed free to the existing shareholders in the proportion of one for every three shares. In the case of the *Raza Sugar Company* the ordinary capital is to be increased from Rs. 15 to Rs. 20 lakhs by the capitalisation of Rs. 5 lakhs out of reserves. The newly created 50,000 ordinary shares are to be distributed in the proportion of one for every three shares held.

With the improved prospects for the industry it may very well be that the directors are able to maintain dividends paid last year on the increased capital. At Rs. 44 cum-dividend-cum rights the shares afford good scope for appreciation, the average value of holdings taking into consideration the bonus shares issued being Rs. 36 per share. The return on this basis is over Rs. 6.25 per cent tax-free.

* * *

Mysore's Government is getting as much as the paper mills can spare. The use of paper is rationalised and emergency newsprint is under control. But the public has been nevertheless asked to use less paper. Mr. Sastry in his speech at the annual meeting reviewed the progress of manufacture. Difficulties have been skilfully surmounted, and the Bhadravati plant has few anxieties as regards coal, chemicals etc. Estimates of the total requirements of paper vary, but Mr. Sastry has made his contribution by an assurance that the mills will keep working and satisfy reasonable demands. As for the consumer, the duty is clear. Rigid economy is desired by paper-makers simply because the war demands are exigent.

The Company has cleared arrears of depreciation. It has maintained the dividend. The growth of profits in 1941-42 will be viewed as satisfactory and the earnings cover for the shareholders' share of profits is ample as ever. They are indications of healthy progress in the case of a Company endowed with advantages that have been maximised by the Government's guidance and support. Readers will note that new insurance and other charges have been fully met, and the Company's position, after three years of successful manufacture, has definitely improved in spite of the difficulties enumerated by Mr. Sastry.

INDIAN TEA LICENSING COMMITTEE

EXPOT QUOTA 1943-44

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, Tea Estates desiring to be allotted an export quota for the year 1st April, 1943 to 31st March, 1944 are required to submit an application for such which must reach the Indian Tea Licensing Committee not later than the 1st of February, 1943. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

J. J. B. SUTHERLAND,
Deputy Secretary.

WORLD OF INDIAN FINANCE

Friday Evening.

PLETHORIC conditions have continued to prevail in the short-loan market, where the rate for inter-bank call money is quoting nominally on the basis of ½ per cent in Calcutta and ¼ per cent in Bombay. It is a case of everyone being a lender and no one a borrower. As was to be expected in such circumstances, applications for tender treasury bills, the offer being Rs. 6 crores, came to nearly Rs. 10 crores; and sales of three months intermediate bills between January 13 and January 18 made good showing at Rs. 4,44½ lakhs. In spite of applications for tender bills being larger, there was not much keenness in bidding; for, the rate of average discount registered a rise from rupee one, anna one and pies five per cent on January 12 to rupee one, anna one and pies ten per cent per annum on January 19. It is quite possible that the absence of keen bidding at the auction is partly due to the natural desire on the part of bankers to test up to what point the Reserve Bank would be prepared to go. From the experience of the last two weeks, bankers will be justified in believing that, so long as the weekly rise in the discount rate is only a matter of a few pies, the Reserve Bank might not mind it.

So far as the Reserve Bank is concerned, it might argue that too much stress on a firm treasury bill policy must not be laid in circumstances in which the floating debt has risen to over Rs. 110 crores. In relation to the recent capacity of the Indian short-loan market, it is admittedly a spectacular achievement for the Treasury to have borrowed over Rs. 110 crores at an interest of roundabout 1⅛ per cent. From the present look of things, it may be necessary not only to maintain the present size of the floating debt but even to increase it. In relation to this necessity, it will be justifiable to offer on treasury bills slightly better inducement than in ordinary conditions. This is the case which the Reserve Bank might put forward to our plea of a firm treasury bill policy. We admit the tenability of this line of argument. But we may point out that the time has arrived when, as in the case of the Bank of England and the British banks, a kind of understanding is established in India also between the Reserve Bank and the principal banking institutions here as to a level of treasury bill discount which must be more or less adhered to. That is to say, we consider that an average discount rate of one per cent to be maintained as far as possible without any great change is a plan that is now feasible, and that should be fully in consonance with other money rates.

The return of the Imperial Bank for the week ended January 15 shows that quite substantial support for treasury bills has been forthcoming from this quarter. The Bank's investments are Rs. 2 crores higher at Rs. 118.12 crores. The Bank's deposits will build another new high record at Rs. 164.80 crores. In the result, cash is at the comfortable level of Rs. 29.68 crores.

The returns of the Reserve Bank for the same week reveal a further expansion of currency for Rs. 5 crores against sterling securities. Sterling securities in the issue department have risen from Rs. 345.83 crores to Rs. 350.83 crores . Rupee coin registers a sharp decline from Rs. 14.25 crores to Rs. 12.06 crores. Rupee securities are unchanged at Rs. 194.35 crores. In the result, active note circulation has risen from Rs. 586.35 crores to Rs. 589.44 crores. In the week ended January 8, the increase in active note circulation was Rs. 8.10 crores. In fact, there is hardly a week which does not record an expansion in active note circulation. This increase in paper money is in addition to the increase in circulation of one rupee coins. It has to be added that the circulation of subsidiary coins has also gone up by leaps and bounds. There can be no doubt that this persistent expansion of currency on an increasing scale is causing considerable disquietude. To the lay man, it is an easy step to jump from currency expansion to inflation.

There is, in fact, a considerable amount of loose talk about inflation. While it is necessary to emphasise that currency expansion does not necessarily mean inflation, it must be recognised that a kind of nervousness in this regard is definitely present in the public mind. Sir Chunilal Baichand Mehta has analysed the currency factors in a recent speech; and his exposition must be hailed as a timely reassurance to the public. While admitting that additional currency in circulation between September 1939 and December 1942 is Rs. 450 crores, he traces Rs. 250 crores in the form of increase in bank deposits. As is well known, while banks have greatly swollen deposits, their portfolios of trade advances are greatly shrunken. Banks, therefore, have played no part in fostering or inducing any inflation. Between the increase in the floating debt and the money secured for defence loans, the Government have drawn Rs. 200 crores from the market. There is also the considerable sum that has been tapped through the rupee counterparts of the sterling loans. From this point of view, it may be argued that most of the additional currency created since the war began is accounted for. But one important point that must not be overlooked here is that a substantial proportion of the sums that have accrued to the Government in the form of loans is out of the increased deposits of banks. This means that it will not be altogether correct to add up the figure of subscriptions for loans and the figure of increased bank deposits for arriving at the correct calculation for this purpose. In other words, while a substantial portion of the new currency is accounted for, further steps are required to be taken if the danger of inflation is to be completely guarded against. Sir Chunilal suggests that there should be alround stepping-up of production both in regard to industry and agriculture; and the volume of

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills were opened on Tuesday, Jan. 19, 1943. Total amount offered was Rs. 9,94,00,000 (Rupees nine crores ninety-four lakhs). Tenders at Rs. 99-11-9 per cent and above were accepted in full and those at Rs. 99-11-6 were allotted 60 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores the average rate of accepted tenders being Re. 1-1-10 (Rupee one anna one and pies ten per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills will be received on Tuesday, Jan. 26, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, Jan. 25, 1943, at other centres. Successful tenderers should make payment on Friday, Jan. 29, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from Jan. 20 to Jan. 25, 1943 at Rs. 99-12 per cent. subject to the conditions previously announced, (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from Jan. 13 to Jan. 18, 1943, amounted to Rs. 4,44,50,000 (Rupees four amounted to Rs. 4,44,50,000 (Rupees four crores forty-four lakhs and fifty thousand).

During the week ended Jan. 15, 1943, Government of India Treasury Bills for Rs. 15,44,00,000 (Rupees fifteen crores forty-four lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Assam

Tenders for Rs. 50,00,000 of three months' Government of Assam Treasury Bills will be received on Wednesday the 27th January, 1943 in Bombay upto 11 a.m. and upto the close of business on Tuesday the 26th January 1943 at the Calcutta office of the Reserve Bank of India.

(ii) Bills will be of the following denominations, *viz.* Rs. 25,000, Rs. 50,000, Rs. 1,00,000, Rs. 5,00,000 and Rs. 10,00,000.

(iii) Each tender should specify clearly the term of the bills applied for, the nominal value of the bills required and the price per cent which the tenderer is prepared to pay expressed in rupees, annas and quarter annas only.

(iv) Successful tenderers will be required to make payment and take up their bills on Friday the 29th January, 1943.

(v) A tender may be for the whole of the amount offered for tender, or for any portion thereof which is a multiple of Rs. 25,000. The minimum amount for which a tender can be made is Rs. 25,000. The amount of tender or tenders submitted by any Bank, individual, etc., must not in the aggregate exceed the amount offered for tender.

(vi) If the total of tenders received is in excess of the amount offered, a proportionate allotment will be made. These allotments will, in all cases, be in multiples of Rs. 25,000, the minimum being Rs. 25,000 the minimum being Rs. 25,000 and, in order to effect this, the Reserve Bank of India reserve to themselves full discretion to allot a higher or lower percentage, or to make no allotment, to individual tenderers as may be appropriate.

(vii) The Reserve Bank of India reserve the right to reject the whole, or any part, of any tender without assigning any reason.

(viii) A Treasury Bill will be paid on maturity only at the office of the Reserve Bank of India at which it was issued.

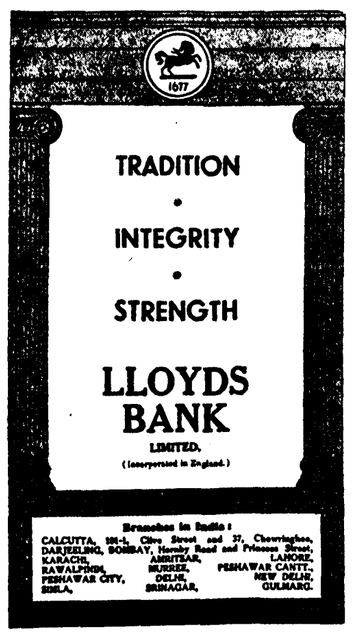
Finance Abroad

Thursday Morning.

A HINT of tight money in London last week even when banks had plenty of resources as before is probably the result of heavy tax payments in progress and to come. The first quarter of the year generally means heavy tax payments and clearing banks in spite of large deposits with the Bank of England and reduced takings of treasury deposits in recent weeks were not ready lenders last week. A change of minor importance is the fall in the rate for treasury bills for 75 million issued last week. In spite of a reduced volume of applications the rate dipped slightly in favour of the borrower. The money market is, however, to be helped again by the reduction in treasury deposits as only £15 million is asked for this week. The market's quota of bills also promises to be smaller again as the Public Departments may ask for more bills and the passing stringency will be rectified in the usual way, by buying up all bills on offer, and reducing the Treasury's weekly demand for short-term loans. The further advantage promised by Treasury control in wartime is the maintenance of rates at the same level over a long period. The price of money remains unchanged, but the demand is evidently expanding. Disbursements by the Indian Government and interest payments by the Treasury help the giltedged market but the Government is also asking for larger savings. The Air Minister has asked for another savings drive to assist the production of aircraft. London is to have a special savings week in connection with the arms programme, and in spite of the belief that over half the national income of Britain is swallowed up in the war effort, all the Ministers want greater austerity and bigger savings. The U.S.A. has much the same plans at present but she has also liabilities under lease lend and plans for maintaining export trade by special credits through the Export-Import Bank.

The stock exchange in London has apparently attracted greater attention. The latest reports speak of a firmer tendency in gold shares. The South African Government is not likely to change the basis of taxation; and the revival of Cape support has been mentioned more than once. The additional money provided by the call-up has been of direct benefit to giltedged in London. Over a long while, old War Loan has been standing at £105 7/16 and old Consols have actually risen compared with the prices a week ago; it may be claimed that the Funds have hardened all the same as Home Industrials have risen. A change of great importance from the market angle is the new system of marking bargains. Though dealings are for cash only all changes are related to the daily turnover and the Wall Street system seems to have found favour in the interests of adjustment of moving indexes. The onset of further firmness has been helpful to holders of industrials. Last week interest centred in heavy industrials and rayon shares. If there has been a fall since Friday last in Courtaulds, British Celanese has risen. The Board's scheme for clearing off the arrears of preference dividend was published about three months ago. The ordinary shares have been rising since then. But the rights as regards preference shares, both first and second, have to be adjusted, and in spite of the reserve manifested when the scheme appeared, the statement of the company's position has tempted buyers to support the ordinary shares. The chief factor is the prosperity of the rayon manufacturer. Concentration does not affect a relatively new industry and the shortage of wool and silk even at higher prices helps rayon substantially.



The recent setback in Home Rails is not to be viewed as disappointing as Transport C. at 5 percent conditional, has risen further and Southern Deferred has shown recovery. Interest will however centre in the notable rises in A.P.C. In the war period cement shares generally have been off colour though the cement industry is known to be strong and bound by price agreements. The rise in A.P.C. (£1) shares to 60 sh. is to be taken as something more than the rise in other industrials. Building material shares generally have offered a better yield for a long time than industrials, and the average buyer has now learnt to ask for a yield better than that obtained on Distillers Units (again higher) or Imperial Tobacco shares. The rise in A.P.C. must help London Brick of which Sir P. Malcolm Stewart is Chairman and other cement shares like Eastwoods. The buying movement in the case of industrials continues into the year as is proved by the rise in Vickers Ord. The quotation of 20/4½ can be called a wartime high for the shares of a very powerful arms combine. Only last week was it stated that iron and steel shares received the attention of the buyers like internationals. Concentration in the paint industry supports the revised estimate of Pinchin, Johnson shares in recent months. The 10 shilling shares have risen to over 32 shillings and the price may appear a record in this case.

After the Colonial Office's reply to Sir John Hay on compensation for the destruction of assets in the Far East, rubber shares have naturally yielded. In spite of an inspired note on tea prices and tea shares there has been some irregularity in tea shares. The dullness has obviously spread to Calcutta where restricted turnover with prices barely maintained has been mentioned in the market reports. A few days ago there appeared a note as to the market's rating of Burma oil stock. There has been no corresponding improvement in prices and the rise in Anglo-Iranian has been broken lately by a brief decline. The industrial group in London seems more satisfying than the oil group, so far as the investor is concerned, and it will not be surprising if London generally sticks to industrials for some time yet. The general trend towards higher prices for textiles, tobacco and other shares has a very important lesson for India where manufacturers' prospects are not yet assessed properly in relation to price and profit trends generally. Though the unofficial statement as to double taxation will affect British investment in oversea enterprises, the market must have been comforted by the assurance as to the further payment of interest on Malayan loans. Of special interest to Calcutta is the rise in Barnagore Jute (£5) shares to £7. The price may be said to be in line with the Calcutta quotation though the latest London quotation for Indian Irons appears too high compared with the prices at which dealings in Indian markets take place. If arbitrage business were possible as in the past, it would be profitable to sell in London the shares bought in India. Reference has been made recently to London buying of brewery shares. The coming budget is not likely to affect brewery earnings. The provincial brokers are always partial to brewery shares. If Provincial Governments in India do not modify excise policy, the Indian brewery companies are likely to attain the same prosperity as the great British companies whose loss of export trade is of direct benefit to their Indian rivals.

The strength of giltedged in London is not so instructive as the brief references to advances in the case of iron and steel shares, brewery shares and the depression in the oil share market. The Indian investor who has been told again of the rise in scheduled banks' deposits and of the fall in advances should not fail to take note of the developments in London. Air raids or the possibility of raids hereafter must cease to operate as a market factor. London has been generally firm; it is supporting industrials more readily than seemed possible whereas bullion is flat and commodities are subject to two-way movements. It is possible for investors to develop real confidence in industrial shares.

There have been no messages as to how the U.S.A. is going to pay for the war. The W.P.B. released its estimate of war expenditure in 1942. The daily bill (over 169 millions in 1942) is soaring and manpower has become a problem. Women are being taken on for war work by voluntary mobilisation and the only thing to cause disquiet is the report of the Republicans' desire to limit appropriations under lease-lend. A Democrat has expressed also a desire to see how the money is spent. Congress apparently wants to exercise real control over expenditure. It is likely to look askance at social security plans. Giving relief of any kind to 10 million more will seem distasteful to a fairly strong opposition in Congress. Expansion of the defence services and of war production is still the aim. Mr. Joe Martin stands for victory at any cost. The W.P.B. is holding on to its stock of lead and has restricted the use of zinc. The U.S.A. is as keen as Britain in conserving lead as supplies from Mexico are affected by transport difficulties. Help to the Allies is out of the question and the shortage reported in other countries will probably

Utilisation of Sterling Resources

The repayment of the 3½ per cent non-terminable sterling stocks, while it marks the final stage in the extinction of the Government of India sterling debt, solves only a small part of the bunch of problems connected with our increasing sterling balances. These problems have of late engaged the attention of the public; and, needless to reiterate, they have been examined in these columns from the outbreak of the war and concrete suggestions have been made towards their solution. Nevertheless, considering some of the prevalent misconceptions about the relations between these problems, as also the fact that their contours have now emerged more clearly into view, the present is an opportune moment for giving in short compass the remedies that we have all along advocated.

It is well to start with clear ideas of what has been achieved by the utilisation of sterling for the purpose we have been advocating, namely, the repayment of the Government of India's sterling debt. The total amount of India's sterling stocks, which have now been repaid practically in full, is £250 million. In addition to this, £30 million of Railway Annuities have, to all intents and purposes, also been paid off. It has been decided, too, that £20 million of Railway Debentures will be repaid on February 4, and another payment of £11 million will be made next year. It mill be seen that up to now £280 million of sterling liabilities have been wiped off. Of the Rs. 370 crores required for this, Rs. 115 crores have been found by the investments in rupee counterparts. To that extent, the upward pressure of sterling balances on rupee circulation has been reduced, while the increase of Rs. 115 crores in rupee securities which has also gone to the repayment of sterling debt through the replacement of sterling securities, represents an addition to the note issue which could have been avoided if response to the loan issues had been adequate.

The total amount of sterling securities in the Reserve Bank of India stands in the latest statement at Rs. 416 crores. Some idea of the rate of accumulation of sterling can be formed from the fact—though the rate, it must be remembered, has not been uniform—that, adding the amount of Rs. 370 crores worth of sterling already utilised for the repayment of the sterling debt, to the sterling securities in the currency reserve, India has had Rs. 720 crores worth of sterling during the last three years and more of the war. It is not possible to say at the present moment whether this rate of sterling accumulation will be kept up in what remains of the war period. The next budget will throw light on some of the important factors such as India's share of the expenditure on joint war measures. The revision of the Financial settlement may cut into the balances that will be owed to India in sterling. But it is impossible that net additions to our sterling securities will not be made in the future. Inasmuch as we have already Rs. 416 crores in our hands, the problem of the use to which these balances should be put must be tackled from now, so that, when the new financial year opens, a well-understood plan will be put into operation.

In our previous discussions of this subject, we have made it clear that, if the repayment of the Government of India's sterling debt is the first step, there are also closely associated with it certain other measures which are theoretically indistinguishable from it. It is generally accepted that one of the means of settlement of international balances is the sale of securities. The only difference between the India sterling stocks and the loans and debentures and other British investments in India is that the former are owed by the Government and the latter by public local bodies or private parties. Now that the India sterling stocks have been repaid, the sterling loans of public local bodies and of important Indian business units, like the Bengal Iron and Indian Iron and Steel ought to be next on the list. There is in the background the larger question of Britain repatriating her capital investments in India. To the extent that the investing public is more eager to buy up British interest in Indian industry than to lend to the Government of India for the purpose of wiping out its sterling debt, the sale of British investments may be deemed more appropriate, as it will solve not only the problem of sterling balances, but also that of additions to currency at this end.

The buying up of British investments in India must therefore be deemed to be the next step in the programme which we are attempting to outline here. It is not possible at the present moment to give in concrete terms the effects of this proposal. British investments in India have been estimated differently by different persons. It is difficult to say how much of them Britain would be prepared to part with. It may be supposed, however, that if the rate of sterling accumulation in the future does not slow down and Indian opinion is insistent on payments being made to this country in assets and not in paper money, then Britain will find herself obliged to sell her investments in India. The question as to what kind of investments should be bought up is largely a matter for the investor in India to decide. The question of State policy comes in only if India decides on the nationalisation of particular industries and proceeds to buy up foreign interests therein.

It is often overlooked that there is a certain minimum of sterling balances which India will be well-advised to keep. For one thing, it is a good gesture to Britain, that is, it will be a token of India's readiness to follow a policy of non-embarrassment in the financial sphere. This minimum we may put at Rs. 150 crores. Of the balance, a little more than half should be converted into dollars as the nucleus of a dollar reserve. The importance of dollar balances arises partly from the desire for freedom of trade relations in the post-war period and partly from the fact that the backing against our note issue should not consist so largely of a currency which is bound to have its special troubles and problems in the post-war period.

Our suggestions in regard to the sterling balances are: (1) the maintenance in the reserves of a minimum sterling balance of the value of Rs. 150 crores (2) the building of a dollar reserve by the conversion of Rs. 130 crores worth of sterling securities in the currency reserve to start with and (3) the buying up of British investments in India starting with the capital of public utility companies and loans and debentures of public local bodies and of Indian business units. In as much as the replacement of sterling liabilities by Indian investments is easier in the case of the industry and of business, it would appear that the loans of public local bodies are best left to be tackled at a later stage.

Another proposal which readily finds favour with most sections of opinion in India is that capital equipment necessary for our industrial expansion and development should be acquired in lieu of the obligations owed to India. It will be readily appreciated that this raises a number of issues ranging from the availability of such equipment or the shipping space necessary for their transport to the place which such industries will take either in the present conditions or in our post-war economy. If we seem to attach less importance to this proposal it is not because capital equipment is not worth having, but because the programme for the immediate future must be definite and independent of preparatory measures which are yet to be taken either by this country or others.

INDIA AND CHINA

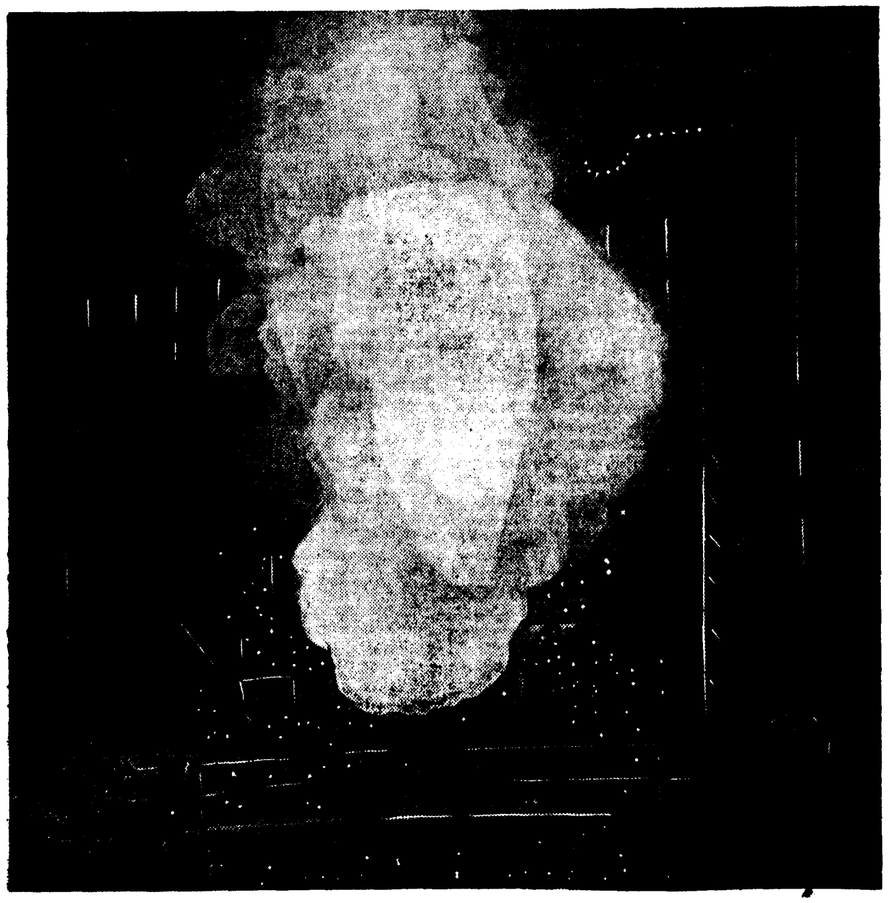
A treaty signed last week makes China's sovereignty complete. The Republic is enthroned in the world's esteem by the Allies' renunciation of extra-territoriality. The promise made in October has been duly kept by Britain and the treaty signed at Chungking on January 11 by Sir Horace Seymour is the sequel to the United Nations' implementation of promises made last year after the Jap campaign on the coastal provinces had failed. Aid to China in the sixth year of war is aid given to a nation quite equal to any of the major Allies. China's equality with the U.S.A. and Britain is fully established and the problem of the Pacific is solved. The Capital Question of China has been decided though questions may be raised as regards the cession of Hongkong and the revival of the international regime in Shanghai after the war is over. The major question of foreign jurisdiction was settled, it may be remarked, two years after Japan joined the Axis and only after Japan entered the war, for the first time against Britain, reversing the policy of the Meiji era. Until Japanese neutrality ended the Concert of Powers could not act, or would not act, yet the treaty of 1943 in abolishing extra-territoriality has largely anticipated the work of the postwar councils.

The announcement last week emphasised the fact that India signed the treaty in her own right. But the announcement failed to make one thing clear. The end of extra-territoriality does not mean the end of the Open Door. John Hay's policy, stated firmly in the period of aggressive European Imperialism, must stand as the corner-stone of all dealings with China. And India, by being a signatory to the new treaty, becomes eligible for all benefits available under a promise of a fair field and no favour in the future. It is on this view that the promise of a treaty of commerce and navigation becomes important. As we know India has a Chinese Relations Officer in addition to an Agent-General. She has received a Commissioner in addition to a Consul-General. The only two foreign nations with whom she has developed special friendship in the war period are the U.S.A. and China, both of whom have manifested much interest in the solution of the constitutional problem as well as the effective defence of India against Japan.

The actual rendition of the Concession areas to China's Government must wait upon the defeat of Japan in the Pacific. That is understood, but the coming into effect of treaties negotiated before actual signature will not depend upon the defeat of Japan. There is no concession at Chungking and the concession at Hankow was indeed restored by successful negotiation long before the end of the war. The treaty puts an end to Concessions and promises British support to China against other governments for recovery of lost rights. The investigation that took place after the Washington Conference of 1924 went in favour of the Chinese claims, and at Hankow, when the issue was forcibly raised by the Nationalist government, Britain yielded. If it has taken fifteen years and more for Marshal Chiang's government to win its main case against the Allies, after the end of the Ottoman Empire and the abolition of Capitulations in all parts thereof, there could be no valid ground for differential treatment of China. China as an Ally in the last war won back the little territory acquired by Germany, but she had to ask for tariff autonomy and the abolition of extra-territoriality specially. Britain gave back Wei-Hai-Wei and in 1929 exchanged notes with China concerning the other question on which recommendations had been made by a commission set up for the purpose by the Washington conference. The latest treaty speaks of the abolition of Concessions at Amoy and Shanghai as also Canton and Tientsin and mentions China's promise to give most favoured nation treatment at the ports mentioned to overseas merchant shipping.

In this context the treaty has special significance. British shipping in the Pacific will obtain decisive advantages as against Japan. An assurance of reciprocity must be advantageous to India. If India has received little benefit from the Boxer Protocol, though Indian troops shared in the sack of the Summer Palace at Peking, it will be otherwise after the treaty. The Dominions have agreed with Britain in advocating the abolition of the unequal treaties. The first of the new, equal treaties comes one year after the United Nations declaration of major war aims. It is none the less satisfying because there is a specific promise of a comprehensive treaty, negotiations for which will be undertaken within six months of the end of the war or even earlier. That the treaty to come will embrace trade and navigation has already been indicated. The end of extra-territoriality implies a promise to restore original investments and commercial interests, and it is on that reckoning, even when the freezing order is in force, that the outlook seems favourable for Anglo-Chinese concerns even now.

The announcement issued last week made no mention of what kind of treaty India would negotiate with China after the war. Since the requisite agency exists at present, it may be assumed that India could and should make a treaty with China. Even if the Japanese trade and industrial interests in China are liquidated rapidly there would be large scope in North China for Indian industry. It is quite likely that India might obtain a commanding position as a supplier of textiles, metals, etc., in exchange for Chinese supplies of silk and tin. Whether India can participate in Allied plans for the development of China after the war need not be asked. India's opportunity will arise after the war, and the recent opening of a branch at Chungking by the Hongkong and Shanghai Bank must suggest to Indian banks that they might follow this example. If China's own major banks finance her limited foreign trade and trade tends to be governmental it will be otherwise after the war. If India had no investments in China before the war as compared with Japan, Britain and the U.S.A. in any estimate of postwar prospects, India will figure naturaliy. For a year she has taken the place of Burma as the main supply route to China and the assurance of larger supplies given by Mr. Roosevelt recently enhances the value of India.



If the air route now in use is developed later through Assam as well as Burma the overland trade of both countries should increase in wartime. But the Treaty has no bearing either on the existing volume of trade or the great work of reconstruction in progress. There are many happy indications at present of growing trade. If China is India's rival as a producer of tea, carpet-wool or groundnuts, her future export trade may alter both in scope and nature. And China is a nation with a surplus of imports in most years. If coal and oil resources are developed along with copper, tin, antimony and other minerals —at least to replace British assets lost in the war with Japan— India should rejoice in that an assured supply will be available to her. There have been points as in Malaya where India and China have met as Allies of British enterprise. It is as a signatory to the latest treaty. It is quite probable that the rehabilitation of Burma after the war will call for the co-operation of India with China. Though India had no interest in Consular courts or the Maritime Customs of China in the past, the renunciation of the fruits of aggression promise infinitely greater advantages than those procured for assistance in the suppression of the Taiping Rebellion. No part of the Empire, not Canada nor Australia, has such an immediate interest in Sino-British relations as India and that interest is reflected duly in the promise of a comprehensive treaty of commerce and navigation.

It will be remembered that India's trade treaties with Japan were offshoots of the Anglo-Japanese convention of 1911. The instruments of the future will be generally described as supplementary to the treaty of 1943 which is not only the climax of this year-old alliance against Japan as also the master agreement governing Allied dealings with Asia, but is the logical result of China's demands and British assent thereto. Industrially China under the Republican regime has made remarkable progress since 1929. A diligent peasantry appears to be the counterpart of India's millions of cultivating proprietors and experiments in co-operation, land revenue, etc. offer lessons to India.

In the case of the textile industry in North China which is now under Japanese control, India has no reason to fear rivalry, if Japan is relegated to a secondary place as a textile exporter. India is likely to produce less cotton, and China may produce more cotton although her exports to Japan may fall off inevitably. An exchange of cotton rather than cotton goods will seem appropriate though India's mills may expect to build up once again a great trade in yarn with China. If rights in inland navigation are secured since China's shipping has practically disappeared, there is great hope for the Indian shipbuilding industry. Wartime prospects for Indian rivercraft will be enhanced even if British companies cannot immediately go back to the Yangtse and Pearl Rivers. The formation of companies in India associated with great Anglo-Chinese enterprises suggested not long ago that British enterprise would spread hereafter from India rather than Britain. If there are no treaty ports in the future, it is quite possible that Calcutta or Rangoon would seem the appropriate starting-point for post-war commercial expansion. Since Japan's place in the shipping and trade of China must be taken by some other nation, it is not wrong or far-fetched to suggest that India alone is qualified to do so. The rupee and the dollar alike are linked to sterling and both have been singularly stable under management. It is increasingly clear that the Colony of Hongkong cannot be set up as a going concern and trade with Europe must pass through ports other than Singa-

pore after the war. India's foreign trade, like China's, is largely a creation of British business houses and the development of local industry in China must confer opportunities for British Indian merchant houses. Due notice must be taken of industrial progress in South China in recent years. The shortening of the route to British territories in Asia makes for a growth of trade, and if Indo-China becomes a Chinese Mandate as some have argued the supplementary rice supplies of India will have to come as a sign of Chinese goodwill. India's limited mineral resources make it important for her to look to China. The non-ferrous metals are naturally of greater importance than iron ore.

What is important and must be emphasised in the context of recent developments is that apart from the treaty referred to, as a direct consequence of the ordering of Anglo-Chinese relations on a new basis, arrangements must be made to secure a place for India in any Allied consortium for dealings with China. It will be proper to urge that if fresh rights and privileges are secured by agreement, India can lend money to China for reconstruction and development. The time is at hand for extending the field of investment, and a growing export trade with China in coal, wheat and manufactured merchandise will offer compensation for our own restricted opportunities in Europe. If Europe is impoverished by the war and a lower standard of living reduces foreign trade for some time, India must look eastward. It is hardly a year since Marshal Chiang visited India. Within that period Indo-Chinese relations have grown at once intimate and formal. That fact is indeed recognised by the instrument which India has signed. If the Opium Wars originated from the East India Company's extended interests, it is clear that after a century India, even if she is not a self-governing India, must develop the same interest in China's affairs. The era of political privilege is to be succeeded by one of commercial ties. The existing agency and the recent treaty certainly provide the framework needed for the extension of trade and investment alike.

Trade in October

The busy season in India made a poor start to judge from the October trade returns alone. The further contraction in seaborne imports is not unexpected, but the fall in exports, after the improvement reported in September 1942 seems rather strange. But monthly changes in the volume and value of trade in war period are of limited significance. The shipping shortage has to be considered the decisive factor. But a fall of Rs. 31 crores in the value of Indian exports in the seven months ended October 1942 has to be regarded as a direct result of the war. If the decline in imports has increased the balance of trade in India's favour, and strengthened the rupee, the changes in foreign trade have caused a shortage of many goods. The fall in the value of exports cannot be due entirely to the reduction in India's exports of food and drink. The export trade in raw cotton has declined steadily and the demand for both jute and jute manufactures continued to shrink. The October returns point to a fall in imports of mineral oil as also cotton compared with imports in October 1941. Favoured commodities like tea and shellac were not differently placed to judge from the fall in exports but the decline in exports of yarn and cotton goods noted in October should be deemed a satisfactory development. The steady fall in all imports up to October raises a question as to the amount of purchasing power released for the purchases of Indian goods. The immediate effect should be a rise in Indian prices as the demand for all imports must be relatively elastic. It is known that the value of imports for seven months was Rs. 35.42 crores as against Rs. 64.92 crores in the same period of 1941. This decrease has to be related to the relatively small increase in home production and trade to measure the full influence of changes in th supply of goods alongside of the continuous expansion of currency in India. If Indo-British trade has held up well in October as in preceding months the trade with the British Empire is going down. Except for Canada and Ceylon no country can show an increase in exports to India in October. Similarly, Indian exports to the Empire generally fell away in October. Trade with the Middle East is apparently expanding. Iran is replacing Burma as the chief provider of mineral oils. Total imports from Iran for seven months have risen to Rs. 8.83 crores from Rs. 2.64 crores in 1941 when the Allies intervened to prevent the Axis entry. The fall in India's imports of raw materials and manufactures in 1942 supports optimism as to the prospects for Indian industry. October saw a fall in imports of paper, leather goods as well as machinery and millwork.

Salt and Byproducts

Salt as the base of the heavy chemical industry in India has assumed special importance in recent years. Important deposits of sodium sulphate have been located in Jodhpur State in the Didwana pans. The offshoot of irrigation—the saline efflorescence called reh—is described as a source of sodium carbonate. According to the Geological Survey of India the potential yield is large, particularly in the U. P. but reh has been utilised effectively in Bihar where the production of both sodium sulphate and sodium carbonate in a crude form out of local reh is established. Mysore State also reports small-scale manufacture of sodium sulphate which is used both for the tanning and bangle industries. Sodium carbonate occurs in various other parts of the country and the alkaline lakes Khairpur and Nawabshah in Sind are known to be promising sources of soda. But they must be less important than the Sambhar Lake deposits. The sodium deposits of the Eastern bitterns are estimated at 59 million cubic feet averaging 40 per cent sodium sulphate and 24 per cent mixed carbonate and sesqui carbonate of sodium. The reserves of the other areas must be enormous. In the production of common salt from the Sambhar Lake, large quantities must be secured and approximately 23,000 tons of sodium sulphate runs to waste at present. The Sambhar Lake apart from being the chief source of salt for Northern India at present, therefore promises more raw material for Indian chemical manufacturers than the scattered occurrences of reh. Sodium sulphate and sodium carbonate are known to exist in the Didwana Lake and the Pachbadra Salt basin in Jodhpur and the sulphate content is said to be the same as that noted in the case of the Sambhar Lake bitterns. The Sakti Chemical Works in the Dhrangadra State produce 1,400 tons of sodium carbonate by the solvay ammonia process. The new plants at Khewra in the Punjab and at Mithapur in Baroda will add to the production of soda ash in India. The more important result of recent examination of natural alkaline deposits is the possible utilisation of sodium sulphate for making sulphur and sulphuric acid. From the point of view of industrial progress hereafter, the last two will appear more important than sodium carbonate. Sulphur is still a problem as the Baluchistan supply has not been as good as it appeared two years ago when the Kohi Sultan deposits were examined.

Prices in 1942

A table appearing in the "Indian Trade Journal" last week, records the changes in the Calcutta index for wholesale prices over a year. The average for 1942 for all commodities at the end of December stood at 185 as against 139 at the end of 1941 going only by the change in the monthly average. The rise in 1941 was 19 points; the rise in the next year for the general index was 46 points. The compendious statement will, however, obscure the magnitude of many changes set out in the table. It is therefore better to turn to the changes in the prices of groups of articles during the year. The index for cereals at the end of December 1941 was 129, it was 250 at the end of 1942. In the case of pulses too, the index rose in the course of 1942 to 241 from 134. The rise was equally pronounced in the case of sugar which advanced from 162 to 231. The index is based on wholesale prices only. The movement is, in the main, significant of various things besides the failure of price control. The rise is not confined to the controlled commodities but extend to tea. The index for tea rose from 169 to 293 and the index for other food articles rose from 210 to 411. The material for the study of prices in India in wartime is supplemented by a record of monthly movements for five years. If the wholesale prices moved in a fashion, suggestive of inflation, it is well to record the fact that for nine months of 1940 the index for cereals was below that reached in the first, faint boom of 1939. The setback in commodity prices recorded after Japan's entry into the war proved shortlived. The table obviously does not cover what may be called the post-raid effects on the price level. But the exceptional measures adopted in regard to civil supplies may be explained by reference to the rise of 30 points in the index for cereals in the month of December. As for oilseeds, the index has risen in a single year from 109 to 199—the base in all cases being July 1914. It may be hard to attribute the rise in any particular case to local circumstances. The index for mustard oil had risen from 85 to 105 by November; the further rise in December is not known. The main point that emerges from the analysis is that prices of consumption goods rose steeply; the cost of living must rise with the advance in wholesale prices. In the case

of export articles like jute, the rise is almost inconsiderable. In the case of jute manufactures the price index for December 1942 at 159 was only 6 points above that for November 1941. The limited rise can be explained readily enough. But the presumption of a steady rise in cotton prices since July is supported by the rise in the index from 102 to 142. The dearness of cloth is obviously a consequence of higher cotton prices. It is, however, surprising to find that no index for cotton manufactures after March 1942 is available. In what is known as the largest cloth market in India if not the world the changes in a disturbed period cannot be measured in the usual manner by reference to an index number. But it may be concluded that the fall in prices during the first quarter of 1942 was more than made good by the subsequent advance. That the export trade has benefited little from the expansion in demand and the lift in prices last year may be proved by reference to the very slight rise in the index for hides and skins. Control appears to be effective in this case even if the control prices for leather for export or use at home have not helped to keep down the prices of footwear. The index for metals has moved naturally upward from 251 to 302 in a whole year. Control Orders cannot by themselves keep down prices when short supply is an established fact. But in the case of building materials, the Calcutta index for a fairly long period was stagnant but it is certain that there must have been a rise in the cost of building materials since May 1942. The index for other raw materials and manufactured goods advanced from 133 in December 1941 to 159 in December 1942. The limited rise is in contrast to the big jump in the prices of all necessaries including food. The latter has raised the Calcutta index for all commodities from 154 to 238 in a single year. The percentage rise is seen to be over 50 per cent. The rise is not independent of changes in the supply of money. even if the quantity theory is wholly forgotten except among students.

Oilseeds in 1942-43

The rise in prices since the beginning of the new year is not confined to Bombay. In spite of an increase in the area under groundnut, this season, groundnut prices have risen and the London quotation of £31 per ton may well be described as a record. The increase of 11 per cent in the area under groundnut (over 97 per cent of the area under the crop in India comes under the official estimate) is likely to result in a total crop not below the 2,546,000 tons announced in the final forecast last year. Nevertheless, Indian prices have risen steadily as groundnut oil has made headway as an illuminant in this period of kerosene scarcity. And all edible oils have risen in the wake of the sensational rise in the price of copra and coconut oil, a rise due largely to the Jap conquests in the Pacific. An increase of 11 per cent in the area under gingelly has also been reported. The figure of 2,745,000 acres is obviously below the area of 4,097,000 acres shown in the final forecast of 1941-42 but the first forecast in December referred to an increase of 11 per cent in the area sown. The forecast covers 86 per cent of the area under gingelly seed in India and the increase in area may be taken to point to a crop in excess of the 415,000 tons shown in last year's forecast. The price of gingelly seed has risen to Rs. 19 per cwt. in Bombay this month. The price of Indian linseed in comparison has risen only slightly during 1942 but the first forecast is distinctly bullish as the area under linseed (the forecast relates to 94 per cent of the total linseed area in India) has fallen by 4 per cent this year. Over 2½ million acres are under linseed and the crop may be below the quantity of 361,000 tons referred to in the final forecast of 1941-42. It is noteworthy that prices rose smartly before the forecast was issued. If the market tendency in Calcutta latterly has been shaky in spite of good demand for shipment, there is nothing to suggest that the premium for Ready linseed in Bombay is going to be smaller. The high prices paid for toria and rapeseed at Karachi indicate that demand for all other winter oilseeds is rising. The latest forecast indicates a small increase of 9 per cent in the area, even if the cropped area appears below that shown in the final forecast. The outturn is sure to exceed a million tons but the rise in castorseed and groundnut is likely to propel prices in this case upward. If prices of oilseeds rose rather slowly last year, the limited increase recorded in crop forecasts this year indicate that the Ministry of Food must revise the tender rates this year. The market outlook in India seems quite promising, and the possible changes in export demand are viewed in commercial circles as unimportant compared with the increased demand for oil and oilcake in the country.

Strikes and Settlements

In the Bombay Labour Gazette for November appear details relating to important industrial disputes. In the months of September and October 1942 strikes were reported from various important industrial establishments. The strike in the Calcutta Electrical Manufacturing Company's workshop was settled by an agreement as to annual bonuses equal to 15 days' pay, a dearness allowance of Rs. 5 plus halfpay for the strike period and an advance for the Puja holidays. Agreement was reached as regards overtime wages and two dismissed workers were reinstated. A threat of a strike by the Calcutta Trust employees is referred to but it is not known if the dispute led to anything beyond despatch of a representative by the Unions to Delhi. The dispute in the Britannia Building & Iron Company's shop was settled by an arbitrator who ordered the opening of a shop to sell foodstuffs at controlled prices. The award provided also for an increased grain allowance at 6 pies per hour. There was provision for a cash payment at the rate of 12 annas per head for attendance after every air raid alert. This provision must appear unusual, but significant, in view of recent developments in and around Calcutta. Demands for higher wages and a dearness allowance equal to 25 per cent of wages led to strikes in jute presses in the Cossipore area in October. The Bhartia Electrical Steel Works was affected by a brief strike which was followed by an official investigation by the Bengal Government's Labour Officer. The strike in the Dhakeswari mills was settled even before the month of September but an enquiry was ordered by the Provincial Government. Three hundred workers were

indirectly affected and one hundred directly by a short strike in the Asbestos Cement Company's works in the 24-Pergannas. Earlier the Kymore dispute was settled by a promise to pay 4 annas per day to all employees earning up to Rs. 60 per month as recommended by the Labour Commissioner C.P. The textile industry in the C.P. was not free from labour trouble but the Empress Mills strike ended on September 20, and the Hinganghat Mills' strike ended when the date of payment of differences in wages ordered by the Jayaratnam Committee was announced. There were many small disputes in Bombay before and during October. Clothing factories, mill, hosiery mills and engineering concerns were affected by the stoppage of work. Silk and woollen mills in Ambernath (Thana District) were closed down owing to labour trouble which started with a demand for wages and allowances similar to those paid by the big match factory. The labour situation in Bombay, however, was generally better in spite of 13 strikes originating in October. The rate of absenteeism in cotton mills declined though mills in Ahmedabad and Viramgaum remained idle. In the engineering industry the supply of labour was reported to be adequate and the average rate of absenteeism was lower. In the case of the Port Trust workers the ratio of absentees to men at work was relatively small.

Strain in Germany

A Swedish morning paper described recently the strain in Germany. A Swede returned from Berlin stated that the Germans are beginning to speak of the insanity of war and inclined to note the facts in spite of the distortions of propaganda. According to a cabled report of the interview received by the Associated Chambers, intelligent Germans are working out things for themselves and from their own conclusions are wondering if this war was necessary. The feeling of uncertainty lingers because of the activity of the Gestapo, but the Swede spoke in this connection of the independent reaction to the persecution of the Jews. The great changes in the Russian front must have led to the emergence of scepticism and war-weariness described by the Swedish observer. On the military side alone, the debit items continue to increase, and the only consolation given by General Dietmar last week was a change taking place at the moment so as to give the fighting front the numerical strength which was so far lacking. Though Russian claims regarding German losses for 18 months have seemed excessive to many, the admission of General Dietmar as to the heavy casualties and the need to replace them seems damaging. Dietmar spoke of inadequate numbers in the battles waged in Russia. The old estimate of a German army of 9 millions seems unrelated to the facts given out by Dietmar, who asked for sacrifices, and spoke of considerable restrictions on daily life at home. The restrictions will, naturally, provoke discontent even if the blow to come was softened by oratory in October. The main admission of the German spokesman is the need to take out men from the home-front for foreign service. This transference will accentuate the shortage of labour, reflected in the falling output of coal and other industries. A Ministerial Councillor asked for superhuman efforts to raise industrial output at a time when skilled men were taken off for military service. Reduced civilian consumption and the exploitation of imported labour are postulated by Dr. Voltfang's declaration. But rationing has gone as far as buttons and cords, and the chances of reducing the German civilians' standard of living do not look bright. As for the foreign conscripts they appear to help little against the manpower shortage. If Germany successfully passed on a part of the war costs to the conquered countries and started to take over their industries, and latterly their workers, the most recent reeports indicate that the imported workers are not quite satisfactory. The Schwarze Korps on January 1 complained of the lack of the German working discipline and the right spirit. The transfer of either Dutch or French workers does not give adequate relief, and Germany has a manpower problem for the first time. The unemployed millions of the Nazi era have disappeared and their place has been taken by mutinous alien conscripts from whom the war effort, hampered by shortage of materials will gain little. Meanwhile there are reports of a crisis in German transport. A new Council with Dr. Speer among its members has been set up to meet new difficulties arising from defeats in Russia, the R.A.F.'s attacks by night, and the need to reinforce the garrison in Tunisia.

Canadian Contribution

Canada's importance as a manufacturer of aircraft has been underlined by an announcement that Britain's biggest bomber, the Avro Lancaster is to be made in the Dominion this year. The increase in shipbuilding last year stands out as a part of Canada's war effort. The war effort has supplemented the big jump in U. S. aircraft output. The War Production Board is going to devote less attention to tanks and artillery but is bent on doubling the output of planes, cargo ships and naval vessels this year. The U.S.A. is credited with a desire to double the output of planes with particular attention being paid to heavy bombers under the amplified programme. The Dominion of Canada like Australia is producing British aircraft in addition to the Douglas Digby bomber. The Canadian aircraft industry can count on large supplies of aluminium in the current year and the steady increase in steel output during the war period will help shipbuilding. If the pulp and paper industry has been forced to work below capacity under orders, Canada's mineral industries look like beating their own records. The Chairman of International Nickel, says a report received by the Associated Chambers this month, hopes to increase the output of nickel by 50 million lbs. over the output reported in 1940. The expansion programme ensures an increase in output. Since International Nickel produces copper also, the Dominion's copper supplies should also increase. The estimate of bigger output accords with the estimate that all mineral output should increase further. Incidentally the Dominion's output of all minerals in 1942 touched new heights. The total value of minerals won exceeded 564 million dollars showing an increase of $4 millions on the value reported in 1941. The figures relating to Canadian production of base metals have not been released, but the combined value of copper, nickel, lead and zinc was nearly 1½ million dollars

in excess of the 1940 total which exceeded that of 1941 by 1½ millions. Canada's importance for the Empire at war is enhanced by the development of tungsten. Special war needs have led to an increase in the Dominion's production of mercury and metallic magnesium, and the latest reports speak also of a discovery of chromium deposits in Manitoba.

Reduced Foreign Trade

Changes in the foreign trade of Latin America are determined largely by the war. Figures relating to Argentina's trade in 1942 revealed a contraction in imports; and the export trade too was influenced by the shortage of shipping. In this connection, the table relating to special trade of certain countries provided by the League of Nations bulletin needs be examined. The recovery in Argentina's export trade apparently ended in July. The Central Bank's adjustment of figures makes out a larger export surplus than presumed, but the cost of living was going up and the higher total value is merely illustrative of the changes in prices in Argentina. There was a marked decline in Argentine imports in 1941. Exports, too, fell away and recovery in 1942 was not sustained. In many ways, Brazil was increasing her foreign trade before the war. She had a bigger export surplus in most months. The larger purchases of the U.S.A. from Bolivia and Chile are responsible for the growth of exports from these two Republics. But it may be noted here that the increase recorded in 1941 or afterwards in the trade of Latin America is quite small compared with the expansion of Canadian trade.

The main change produced by the war is a contraction of U. S. foreign trade. The trade of Latin America is directly affected by the progressive decline in U. S. imports from May, 1942. Cuba is perhaps exceptional, being a source of sugar, and a big field for U. S. investment, but except for minerals, Latin America has offered little to tempt U. S. buyers. In spite of many Republics having declared war on the Axis the foreign trade did not increase Guatemala's trade as imports and exports alike started to fall in April like those of Hati. Mexico singularly secured a favourable balance of trade after 1941 but that of Paraguay was reduced. Producers of raw materials, cut off from export markets and hampered by import control everywhere can hardly, hope to maintain foreign trade in former proportions. Venezuela had before the war a very large export surplus. It must have been reduced in 1942. The improvement noted in Uruguay's trade in 1941 could not have continued after the war extended acros the Atlantic. It is widely known that the war in Europe reduced the exports of Latin America. With the war spreading to the Pacific the export trade decreased further. This contraction naturally suggests that India's reduced trade with South America is due to many factors. With the exception of Colombia and Haiti most American countries reported a fall in foreign trade in 1941. The late recovery in Mexican exports does not wholly conceal the fact that imports and exports of the U.S.A.'s neighbours were equally affected by the war. The decline may influence the development of secondary industries in South America in the immediate future. Brazil has plans like Argentina and the shortage of U.S. goods may force the Latin American countries towards self-sufficiency and regional trade to an increasing extent. If their dependence on Europe is reduced thereby their external obligations will remain, and funds meant to pay off foreign debt if applied for developing industry at home may leave old liabilities intact. Countries like Costa Rica with an excess of imports in the past may fare better than supposed but Peru and Ecuador will probably have to depend more and more on inter-American trade.

Falling Standards of Living

Rationing has a direct influence on civilian consumption but other things like the amount of free purchasing power play a part. In the League of Nations Statistical Bulletin is found an analysis of changes produced by the war in the field of retail sales which have the dominant influence on civilian consumption. Hoarding, fear of inflation, additions to private incomes, scarcity of goods and the closure of shops are not separate factors but operate as a group in influencing consumption. The Bank of England's statistical summary usually records changes in U. K. retail trade. The League of Nations bulletin carries analysis further and describes changes on the supply side and seasonal variations. The total value of retail sales in the U.S.A. in 1941 is estimated at 53.8 billion dollars. This, of course, falls short of total civilian consumption, but is not far short of the amount of 60 billions which seems the proper level for the civilian share of the national income in 1943. The class of durable goods claimed 15 billions and the class of non-durable goods claimed 39 billions of the 1941 total. The first has since been reduced drastically; and the second has been limited by rationing of petrol, sugar etc.

The movement of the indices during a period when the U.S.A. was non-belligerent shows that inflation was at work since the sales of both durable and non-durable goods increased both in value and volume. There was a fall in December, 1941 followed by a further fall in retail sales. The decrease evidently affected the sales of durable goods most. In March, 1942 it may be recorded there was actually a striking jump in the sales of non-durable goods. Spring clothing and general merchandise cast a powerful spell on U. S. shoppers even after the U.S.A. was at war. But it was equally clear that the rise in the cost of living was a real check to both sales and consumption. Governmental control of raw materials, as from the second half of 1941 affected sales, and the cessation of car sales in 1942 followed numerous restrictions on instalment selling. Sales of durable goods slumped heavily in the first quarter of 1942 and the advent of petrol, sugar and tyre rationing followed the imposition of restrictions on deliveries of wool and tin.

Taxation in the war period is a distinct element in the contraction of retail trade. This may be inferred from the fall in retail trade reported by Switzerland in 1941. The succeeding year saw a further falling off in the volume and value of

NORTH WESTERN RAILWAY

In Your Own Interest

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to them showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to book the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed.

Chief Commercial Manager,
Lahore.

retail trade, which rose in 1939 only to fall in the war period. The consumption of food has been limited by rationing in many lands. Switzerland had to mobilise in May, 1940 and the advent of two meatless days from June, 1941 is illustrative of her difficulties. The neutral has to submit to clothes rationing like Britain. In Britain the consumption of all household articles dropped away in 1942. The consumption of food and perishables has not suffered to the same extent. The major change after 1940 is the large reduction in sales of apparel and non-food merchandise. The increase in the Purchase Tax has answered its purpose. It would appear from the chart that the consumption of food has actually risen in the war period in Britain but the higher cost must not be ignored. The cost of living curve was flattened out in 1941 but the total volume of retail trade fell and recovered only slightly. It has been noted that supplies for the retail trade except in the case of articles of food have been cut by 50 per cent. and the fall in the year 1941 to 79 per cent. of the 1938 average was due to the fall of 40 per cent. in sales of clothes.

Axis Submarine Menace

In spite of repeated assurances as to the rate of new building exceeding the losses at sea of merchant ships there will be some anxiety over the estimate of Germany's strength in submarines. The figures given by Reuter's naval correspondent indeed suggest that Germany is able to keep on building one U-boat for every one lost. The heavy raids on Augsburg and Bremen last year have not reduced ability to launch U-boats. If the crews are secured by press-gangs and no longer consist of an elite of marine volunteers, the U-boats themselves are more numerous, and operating efficiency is the same.

That the naval treaty of 1935—the first landmark in the policy of appeasement—was a gross blunder is proved by the progress of submarine building. The pocket battleships are not the menace they were intended to be but Germany has a useful navy in the submarines alone. The control of Europe's shipyards has added to naval strength in an unexpected fashion. Nothing is said about Italy's submarine fleet. But part of it must be in the Atlantic and mention of German U-boats in the Mediterranean provokes questions as to the present functions of Trieste and the Adriatic in the German plans for war at sea. Mr. Alexander claimed that in 3 years of war over 500 submarines had been destroyed. But the latest estimates as to ocean-going submarines suggest that even after the loss of the Graf Spee, Bismarck and Tirpitz the offensive power of the German fleet is unimpaired though the major units are retained for the defence of the Baltic. What stands out is the absolute increase in German submarine strength. That the fleet sucks up limited resources of oil is to be guessed but the estimates support claims as to concentrations off the Spanish coast.

The French bases have been attacked frequently but operations continue. The burden thrown on the coastal command of the R.A.F. will continue to be heavy. The reinforcement of German U-boats by the Italian and Japanese complements is to be surmised. Reference has been made to U-boat packs in the S. Pacific. The Japs are evidently adopting German methods in their war with the U.S.A. Heavy ocean-going submarines are slow compared with corvettes and destroyers. But convoys are slow and luck often favours the attack. If nothing has been said as to Luftwaffe co-operation with the submarines everyone must be aware that Focke-Wulf aircraft were designed specially for attack on convoys and to aid submarines. The figures published this week indicate that the Battle of the Atlantic will go on in the fourth year. Submarine parts are built and assembled in land and launchings take place somehow. The immediate results for the Allies are by no means favourable but we in India may derive satisfaction readily from the exclusion of the Indian ocean. The Germans with an average of 50 U-boats at work must give it a miss and as for Japan the main task in the Pacific remains difficult so that stray sinkings in the Indian Ocean or any part of it reported only after the survivors reach safely cannot cause much concern. As far as Britain is concerned the task of policing the Seven Seas must be accepted like the interception of Axis convoys in European waters. But naval officers will be disposed more than ever to look askance at big ships and ask for a bigger Fleet Air Arm and more destroyers right now.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

It is rarely that I avail of outside help in the conduct of these columns; and the present is one of those rare occasions. I had intended to make this universal annoyance of shortage of small coins the theme of this week's gossip; but a timely contribution on this subject from Mr. A. N. Agarwala of the Allahabad University has spared me the effort. Mr. Agarwala's treatment of the subject leaves little to be desired, unless it be that some readers may have set a value on the peculiarly discursive manner adopted in these columns.—"EAVESDROPPER."

* * * *

PRESENT SHORTAGE OF SMALL CURRENCY IN INDIA

By A. N. AGARWALA, M.A.

Recent months have witnessed a great shortage of small coins, which was at first confined to our great industrial centres humming with war production, but which has now spread over the length and breadth of this country. The shortage is so acute that it has become extremely difficult to carry on small business transactions in day-to-day essentials of life. Special difficulties have been faced by contractors and factory and mill-owners employing large labour force on daily wages, by public utilities and semi-governmental institutions, by retailers and general public in their transactions of consumable articles of small value. The "disappearance" of the smaller media of exchange from the midst of a well-established money economy is a situation which is as queer in its nature as serious in its consequences and calls for urgent and immediate solution.

The Government of India have been much obsessed with what appears to them the "disappearance" of small coins and have put forth the theory that the increasing supplies of small coins have been cut short by hoarders and the genuine demand is thus left starved. Small coins issued in 1938-39 were worth 18 lakhs of rupees only: but in 1939-40 the new issue of like currency increased to 2.19 crores of rupees and in 1940-41 to Rs. 4.26 crores. The total addition of small coins, other than half rupees, since September 1939 to the end of March 1942 was equal to Rs. 8 crores approximately while the increase during the six months from April to September of 1942 has been over Rs. 3 crores. Despite such unprecedented and stupendous increases in the volume of small coins, the market is today suffering from their serious shortage. During the course of the five years of the Great War I, the total amount of small currency put into circulation was only Rs. 5 crores and there was no report of a shortage; but during the present war Rs. 10 crores mark has already been exceeded and even then the public finds itself short of small coins. Naturally, so the official psychology seems to run, this is ascribable to hoarding; and Government action in the matter has been shaped in accordance with this theory. It is reported in financial journals that the public has hoarded copper coins to the extent of about Rs. 13 lakhs, besides nickel coins—especially one anna and two anna pieces—which come second in the preference scale of hoarders. The detection of a few sporadic cases of hoarding seems to have strengthened this hoarding theory.

The hoarding theory has to be examined with caution and care; for it is easy to overestimate and misunderstand the part played by hoarding in the existing shortage. At the very outset it should be observed that some cases of hoarding have recently been discovered, but they are only stray cases and are few and far between. Some such cases always occur and a theory of large scale hoarding cannot be fully supported only on this basis. It is, again, certainly true that considerable absorption of small coins has recently taken place; but does it logically lead to the conclusion that the issues already made are quite "adequate" and the scarcity must be ascribed to hoarding? Adequacy is a relative concept and its existence or absence cannot be proved without drawing an intelligent and relevant comparison.

Even the (wrongly drawn) comparison between the absorption of small coins during the Great War I and the present war would not quite prove the adequacy or otherwise of small coins recently put into circulation. It would not be quite correct to say that when Rs. 5 crores worth of small coins during the Great War I were found to be adequate, coins exceeding double this figure must be adequate, if not more than adequate, during this war at its present stage. Firstly, these figures must be corrected—which is usually not done—in the light of the fact that the figures of small coins for recent years include silver half-rupees which were excluded from this category for all the years before 1935-36. If we deduct the figures of half-rupees from the recent figures of small coins, the annual consumption in 1939-40 and 1940-41 comes down from Rs. 2.1 and Rs. 4.2 crores respectively to Rs. 1.6 and Rs. 2.7 crores respectively, which do not compare so very favourably with Rs. 1 crore per annum of the Great War I and Rs. 2.1 crores of the year 1919-20. Evidently the absorption in recent years is not so large

as is generally supposed by officials. Secondly, and this is more important, this argument involves the fallacy that since a war is a war, no matter whether it is the second war or the third war, the history of the first war must repeat itself and if Rs. 5 crores were adequate then, they must be adequate now also. Now, history repeats itself in the matter of big and broad tendencies, not in the matter of small coins, much less to the precise point of the amount of their issue! When this comprehension is associated with a recognition of the fact that the supply figures of small coins for recent years must be seen in their relation to the tempo of industrial and business activity in order to judge their adequacy or otherwise correctly, the weakness of the aforesaid argument stands fully exposed. The official theory of hoarding is evidently ill-founded and, at best, a hasty conclusion.

There are still other weighty arguments against the theory of hoarding. To assert a common sense proposition, if hoarding is the true cause of shortage and if Rs. 13 lakhs or so is a correct estimation of the extent of hoarding, then an addition of this much of small currency should have removed the existing shortage, which has not yet become a "fait accompli". The situation has not only not improved; it has actually worsened.

Again, if it is granted for the sake of argument that hoarding has been taking place for some time, it stands to reason that the original hoarding or hoarding in the first instance must be the result of some forces other than the hoarding itself; and though subsequent hoardings might have accentuated the shortage, the first hoarding can be ascribed only to an earlier state of shortage, the signs of which were clearly discerned in the official currency review for the year 1940-41. And if excess of demand for small coins over their new supply was the primary cause of the original hoarding, the same cause is logically still in operation; basically the hoarding promoted by it has only worsened the situation. As a matter of fact, hoarding is not in operation on any important scale and there are other very good factors which satisfactorily explain the present shortage.

The fundamental point in the situation is that the annual absorption of small coins must bear relation to the volume of big currency in circulation. The two must have a high degree of positive correlation and must increase together if the economy is to function smoothly. This is to be explained by the fact that in case the unrestricted issue of bigger currency results in the generation of inflation spirals, the amount of small coins required for the completion of small exchanges is bound to increase because of a spurt in the price level in the retail stage. This has been actually happening in India since the outbreak of the war and today inflationary tendencies have become very pronounced as is clearly reflected in the steep rise in the wholesale and retail price index numbers. A simple example would make this clear. In normal times we used to purchase one match-box for one pice; but now we have to pay two pice for each match-box. This means that we require twice the small currency now than we did formerly for all small match-box transactions. The same thing applies to other commodities entering into everyday transactions of small value. The demand for small coins has thus greatly increased, but the supply of coins has been cautiously regulated and has not been allowed to keep pace with it. We need considerably more coins today than formerly; and if they are not supplied, shortage would be inevitable.

Associated with this is the fact that the requirements of small coins also increase with an increase in industrial activity, such as has been brought about to a very great extent, by the present war, in our country, a war which is getting more and more serious and disastrous and is coming closer to us everyday. Increased industrial activity, in capitalist economy, means "fuller" employment of labour and a "rise" in wage rates. And as the amount of small coins paid to every worker daily has increased and the number of wage-receivers has also gone up, the demand for small coins has considerably risen. Again, our labourers are neither used to, nor capable of, investment and the monetary 'windfalls' received by them are squandered away on present consumption and "exciting pleasures". As the transactions entered into by them are usually of small amounts and involve large use of small coins, it should be understood that the increase in the demand for such currency has been very great. More and more small coins have got to be issued to satisfy this demand, and to remove the present shortage.

These then are the two fundamental factors in the situation. The stationing of large foreign military forces in India and the duplication of domestic establishments caused by the migration of fighting non-fighting war employees can also be cited, on the authority of the League of Nations, as other operating factors; though they are not of as great importance as the two aforesaid causes.

Does it mean, then, that hoarding has not played any part whatsoever in the causation of the present shortage? To this there is a sufficient answer. If by hoarding is meant (long-period) storage of value, as is its usual implication, then such a factor has not caused the present shortage. For, apart from the reasons already given, the hoarding theory suffers from want of understanding of the hoarding psychology. From the habitual hoarder's point of view, nickel and copper do not occupy the same position as precious metals which are the best media of storage of value. The embodiment of small value in large bulk, the non-utilisation of nickel and copper for ornamental purposes and the great fluctuations in their prices preclude their use for the purpose of storage of value. But there is a variety of collection of small coins, which is being practised at present and which resembles hoarding outwardly. It is no other than an average man's "holding" or retaining in cash box some small coins on account of his genuine fear, based on experience, that small coins might not be available when wanted for small-valued transactions. This phenomenon is 'holding' and not 'hoarding'; or at worst, 'genuine hoarding' if hoarding is the term which must be used.

This being the real genesis of the situation, it is not surprising that the remedies so far applied by the Government for removing this shortage have proved futile. The Government have hitherto adopted a dual policy to meet the situation. Firstly, the Reserve Bank has restricted the supply of short coins to the public. Secondly, the Government have taken shelter behind the Defence of India Rule of June 25, 1940 whereby the hoarding of coins beyond one's requirements is a penal offence.

It is, however, idle to think that mere punitive measures can achieve much in this direction. This policy has not at all succeeded, except for the detection of a few stray cases of hoarding which do not seem to have afforded any relief to the country. Holdings or "genuine hoardings" cannot be touched by law which permits holdings according to individual requirements, the limit for small coins having been fixed at Rs. 10 by the Reserve Bank in pursuance of the rule promulgated on this subject by the Government of India.

The policy of the Reserve Bank of India, under the circumstances, is the one which cannot at all be understood. In case the shortage of coins is so acute that the situation shows no signs of improvement despite the severe enforcement of

INSTRUCTIONS TO OWNERS OF SECURITIES TRANSFERRED TO THE CENTRAL GOVERNMENT BY THE CENTRAL GOVERNMENT NOTIFICATION NO. D/307-B/43 DATED THE 16th January, 1943

The following instructions are issued by the Reserve Bank of India under sub-rule 4(b) of Rule 94 of the Defence of India Rules for the guidance of the owners of the securities transferred to the Central Government under their Notification No. D/307-B/43 dated the 16th January 1943, hereinafter referred to as the Vesting Order.

The term "Owner" as defined in Rule 94(i) (ii) of the Defence of India Rules includes, in relation to any security, any person who has the power to sell or transfer a security, or who has the custody thereof, or who receives, whether on his own behalf or on behalf of any other person, dividends or interest thereon, or who has any interest therein.

2. Owners of the securities affected by the Vesting Order are required to make, or to arrange to make, delivery of the securities forthwith in the following manner. Holders are required to declare that the transactions do not constitute trading with the enemy, that no part of the proceeds will be made available to the enemy and that since the outbreak of war the coupons and the relative debenture stock certificates have not been the property of an enemy.

(A) SECURITIES HELD IN INDIA :—

(i) Stock Certificates to Bearer (Bearer Bonds).

If held in India the certificate and all coupons belonging thereto must be delivered to the Public Debt Office of the Reserve Bank of India in Bombay or Calcutta either by registered post or personally or through a Bank or a Broker. Coupons which fell due for payment before the date of the Vesting Order must be detached.

(ii) Inscribed Stock

A transfer in blank (in duplicate) executed by the person in whose name the stock is inscribed should be lodged with the Public Debt Office of the Reserve Bank of India in Bombay or Calcutta.

(iii) Registered Stock

The registered certificate together with a transfer in blank (in duplicate) duly executed by the registered holder should be lodged with the Public Debt Office of the Reserve Bank of India in Bombay or Calcutta.

(B) SECURITIES HELD IN THE UNITED KINGDOM :—

If the securities are held in the United Kingdom the holders must declare to the Public Debt Office the name of the loan, the amount of stock, the form in which it is held and the full name and business address of the United Kingdom agents in whose custody it is held. They must instruct their agents by DLT cable to make delivery of the stock and all the necessary documents to the Bank of England in accordance with such procedure as the Bank of England may prescribe in this behalf. The cost of the DLT cable will be borne by the Reserve Bank of India. The cable must be shown before issue to the Public Debt Office of the Reserve Bank, which will give a serial number to the holding under which the Agent should be instructed to surrender it to the Bank of England.

3. The owners of the securities to which the Central Government order mentioned above relates must surrender the securities against cash payment in rupees.

4. The transfer forms and registered certificates delivered in accordance with paragraph 2(A) (ii) and (iii) above will be sent by air mail to the Bank of England for verification and no payment will be made until the Bank of England telegraphs that they are complete and in order. With regard to the stock certificates to bearer (Bearer Bonds), provided the delivery of the requisite documents is found on scrutiny to be complete and in order, payment in respect of documents handed in on or before the 19th February 1943 will be made on the 12th March 1943 and payment in respect of the documents handed in after the 19th February 1943 will be made three weeks after delivery. Payment will be made to the owner or to the Bank or approved broker duly authorised by him in this behalf. Allowance has been made in the price fixed for each security in the Vesting Order for the period that must elapse between the date of the Vesting Order and the first due date of payment. This price represents capital payment and is not subject to income-tax. All transactions will be put through at the standard rate of 1sh. 6d. per rupee.

5. Brokerage will be paid by the Reserve Bank of India to Banks and Brokers in India who lodge documents with the Reserve Bank of India, irrespective of where the securities are deposited, at the rate of 1/8% of the nominal value of the securities delivered in good order converted at 1sh. 6d. to the rupee. No commission will be charged by the Reserve Bank of India on the cash payment in rupees in exchange for the securities acquired.

6. Any further information that holders of the vested securities may require may be obtained from the Bombay or Calcutta office of the Reserve Bank.

(From Our Correspondent)

Bombay, January 19.

THE Supply Member was told by the President of the Indian Merchants Chamber that the Defence Department's requirements of foodstuffs should be reduced. There was an informal discussion last week, and the Supply Member naturally had a chance of learning local views on lease-lend, requisitioning procedure and, of course, food. The announcement that Australian wheat is meant wholly for the Army has naturally strengthened the familiar claim that the Army should get its food from elsewhere. If a large number of foreign soldiers have been brought into India the Government must consider the civilian's plight. Bombay has to face rationing from April. The whole Province is short of food and quite recently Dharwar has been declared famine-stricken. The Governor said recently that large supplies of food will be coming in the next two months and Bombay will have a food reserve equal to three months' requirements. The only satisfactory feature of plans outlined so far is that mills will get larger supplies for the shops selling direct to workers and Government is also arranging some kind of distribution scheme for the salary earners. Hoarding is to be punished and time has been allowed for the ordinary holder of stocks to sell out. There is going to be an increase in retail shops. The Commissioner of the Corporation has to get ration cards etc, ready and special staff has been provided for the purpose. Bakers who went out of business voluntarily are not considered free from blame. Some bakers secreted both grain and flour and the charge of hoarding has been made against some restaurant-keepers. Cuttack is already familiar with rationing and the Bombay Government may take note of what has been carried out in regard to kerosene and rice. Bombay can expect nothing from Karachi where famine conditions prevail at present. Everything there is scarce including fuel. The trade in wheat has been engrossed by the Government, and Sind looks to the Punjab for a supply of millet. Cotton seed prices locally are likely to go up as export has been prohibited in Sind. Cotton seed like fodder is to be conserved by the threat of punishment for offenders. Food is something more than a weapon of war, or so it appears but India would like to receive a share of the Allied resources, and qualify as a member of the United Nations.

* * * *

Interest promptly excited by Iraq's entry into the war is quite slight. There is nothing to compare with the enormous guess-work following Rashid Ali's rebellion. That Saudi Arabia and Turkey do not object to Iraq's formal declaration of war is generally assumed and the assertion of independence after the change of Ministry in Iraq supports the present views as to how much of the oil in the Middle East will be made available to India. Trade ties will be strengthened and Iraq's cotton may figure prominently hereafter in India's imports. The Iraqi dinar is linked to sterling and Iraq's currency should strengthen further if trade develops. India's trade with the kingdom has grown steadily and textiles are among the things that Iraq wants of India at present. The trade agreement with Turkey regarding chrome has made it clear that Turkey, too, is friendly to the Allies. The importance of Basra as a port for Iraq and Turkey as well should increase. There may be plans for developing the Middle East as Iraq is linked with Turkey by rail and Turkey may depend hereafter on Iraq's oil rather than Russia's. The declaration of war may put Iraq in the charge of the U.K.C.C. Indian traders will not fail to take note of how trade moves after any demand for Allied assistance comes from Iraq. It is however possible that food exports will not be provided from India after so many assurances.

* * * *

The Labour Member wants that non-Brahmins should rebuild a real political party. When Mr. Latthe joined the Congress the Marathas lost their only able leader, and once their claim for a separate electorate failed abruptly the party could not survive. The much stronger Justice party has gone to pieces but the Labour Member wants to get back a party deliberately aiming at social reform and the breaking down of privileges. Non-Brahmins in Dr. Ambedkar's opinion would make real Democrats and he wants non-Brahmins to desert Congress in numbers and refloat their own party. The deep calculations as to the proposed party's chances are meant to sustain the Scheduled Castes' claims for many things. Dr. Ambedkar poohpoohs everyone's ideas except his own, but at Poona he may not find ready acceptance of his peculiar plans among Marathas though he may find many critics of the Congress. The Labour Member said nothing during his visit about the millhands, the savings plan recommended in connection with payment of allowances or trade disputes. Asking the Scheduled Castes to join the Army is not hard for anybody and hardship is likely to swell recruitment totals in this year.

* * * *

An account of the people's misery in Bijapur has appeared recently. It certainly supports the claim for contribution to a relief fund set up in the city. There is a danger of the administration breaking down in one district. An observer who toured the District said that food supply at the test works was inadequate. Famine relief is still hampered by general scarcity. The most hopeful feature is a plan to give work to village weavers by getting 50 bales of yarn from the Millowners Association. Sir Vithal Chandavarkar is sure to keep in this way. The yarn is expected to provide 10,000 saries for women engaged at the famine relief works. The emigration of 100,000 people from Bijapur had not reduced the demand for grain and fodder. The emigrants who have reached Bombay and other places could get no jobs. Permanent amelioration is possible only if a big irrigation scheme is started. The next budget must provide for Bijapur where drought is so common as to make it fear failure of crops in most years. There are plenty of reports of arson and looting in many places along with police raids on hoards but a lighter touch has appeared lately in the story of grainbags being used as sandbags by a clever shopkeeper in this place.

(Continued from page 117)

continue. In the U.S.A the raw materials' position may change after Chile's break with the Axis. Chile's support of the United Nations is not wholly due to President Rios or changes in the Chilean Cabinet or even the action of Argentina against a German attache. Chile's nitrate should be of greater help than the iron deposits, controlled by Bethlehem Steel. As one of the world's major producers of copper, Chile will be a source of supply for the U.S.A. which can look also for zinc, sulphur and manganese. The Chilean peso should strengthen if the export trade improves. In the past the silver piece called a peso was worth about 6d equal to 12 cents at one time. Since the U.S.A. in most years bought more than she sold to Chile her export trade should develop rapidly as was noticed towards the middle of 1942. Wool figured largely in the Republic's exports and Great Britain was second only to the U.S.A. in the foreign trade of Chile for a long time. British investments in the nitrate industry and the railways have been large, but the big Chilean telephone company is American-owned. Chile has a chequered currency history and is on the paper standard at present like the rest of South America. The depression saw the Chilean peso depreciate heavily (it was equal to 5.16 cents only in 1942) but Chile had a fairly strong currency reserve of 148 million pesos in gold last year. Prosperity there can be measured by the rise in bank deposits but the note issue was also expanding steadily after 1941. Chile was experiencing last year the effects of inflation like many other neutrals. From the middle of 1935 the Central Bank, established by the Government in 1926 after monetary reforms has kept down the Bank rate to 4 percent.

Resume of Commodity Markets

Commodity markets have been rather steady during the past week and there has been no deterioration in prices in the markets for export commodities with the resumption of enemy raids on the Calcutta area. With the efforts to improve transport facilities and effect a freer movement of crops, it is generally felt that prices will tend to be on the upgrade. The jute and jute manufactures markets have been quite steady though, of course, due to special factors, while the Bombay raw cotton market has rallied on the hopes regarding the possibility of an increase in the tempo of production and larger consumption of cotton by mills. Bullion markets have been absolutely featureless.

The food situation is still unsatisfactory and the demand for primary commodities in the 'black markets' is as keen as ever, where prices are out of all proportion to controlled rates. It must be mentioned, however, that vigorous efforts are being made by the Central and Provincial Governments to bring about a speedy improvement in the position. The problem of the day is the redistribution of commodities between surplus provinces and deficit provinces and the readjustment of surpluses even within provinces. Towards this end, the Government of India has appointed a purchasing agency for wheat. Thanks to the efforts of this agency and the ready co-operation afforded by the Government of the Punjab it has been possible to release as much as 40,000 tons of wheat in a short time. It is also reported that the British Government have given the assurance that efforts will be made to import 225,000 tons of wheat from abroad and that of this quantity 100,000 tons of wheat will be earmarked for the Western Presidency alone as the position in that Presidency is alarming. Supplies have been rushed to that part of India and with the arrivals during the next few weeks it is expected that there will be sufficient stocks for the next three months. 22 more grain shops are to be opened in Bombay for the distribution of food stuffs at controlled rates making the number of Government grain shops 100 while arrangements are to be made for the distribution of necessaries to industrial labour through their employers, thus relieving the strain on the grain shops.

It is believed that for effective distribution and consumption of stocks rationing will have to be introduced. Proposals for such a scheme are now under consideration and they will be put into operation in April. In the Bengal Presidency also efforts are being made to improve the position in regard to rice. It has been announced that the Government will have their own purchasing agents in some of the important districts and that the movement of paddy or rice by bullock carts or boats between districts has been prohibited except for purely local purposes. By the redistribution of stocks to surplus or deficit areas within the province, it is hoped that the demand of consumers will be met at rates which are fair both to the cultivator and the consumer. Having regard to the fate of the previous schemes one cannot be sure about the success of any measure proposed by the Government authorities. There is no mention of the level of prices at which the Government propose to purchase stocks and redistribute them to consumers and also the measures to prevent private agents competing with Government agents.

Lack of proper control will be evident from the fact that even in a centre which is close to the coal mining areas the retail price of soft coke recently touched the high level of Rs. 5 per maund against the control rate of Rs. 1-2 and the normal pre-war rate of annas 8 per maund. Only after considerable agitation the Government of Bengal has taken urgent steps to bring in large supplies of coke which, it is believed, will have a salutary effect on prices and ensure that the ordinary consumer gets his small requirements of coal at controlled rates. Even after this announcement there has not been any decline in retail prices. Unless proper measures are taken and the profiteers are penalised it will not be possible to enforce selling at controlled rates. It need hardly be mentioned that if the Government of Bengal fail in their efforts to bring down prices for coal, they will have no chance of success in a bigger and more complicated question of adequate and proper distribution of rice to the millions of Bengal.

No official statement has been so far forthcoming regarding the production and acreage of the jute crop for the next season. Towards the close of last week it was announced that there was no likelihood of the Bengal Government deciding to effect a reduction in the crop to one-third of the area licenced under the Bengal Jute Regulation Act 1940. On this report there was a firmer tendency in the jute market. It is now pointed out however that the question has been referred to the Secretary of State for India asking him regarding the probable requirements of jute for the U.K. While perhaps the estimate regarding consumption of mills, the requirements of U. K., and the U.S.A. have a relevance to the question of deciding on the size of the crop for the next season, it should not be forgotten that even with the assurance given by the U.S. and the Commerce Member in November last year, it was not possible to transport all the jute grown in 1942-43. The problem at the moment is one of internal transport and shipping freight and if in time it is found that it will not be possible to move more than a particular quantity, it is no use growing a larger crop unless the Bengal Government takes measures to provide facilities for storing, purchase etc. Having regard also to the difficulty in construction of warehouses and the retention of the crop in the absence of any transport facilities, it stands to reason that the crop for the next season should be very much lower than for 1942-43. The demand is there but, as ever before, the question is one of freight and if the demand cannot be satisfied owing to lack of freight, the demand is as good as non-existent. It is argued that the release of the area on account of a smaller crop of jute cannot possibly add to the food supplies to any great extent but it must be remembered that any small increase in production will be welcomed to making up a deficit as far as possible. The idea of growing more food crops on the areas released from jute cannot be pooh-poohed. Mill consumption at the present moment has been badly affected and it cannot be expected to be more than 4½ lakhs bales at the moment. Total consumption for 1943-44 can be put at 72 lakhs bales assuming that conditions return to normal in a short time. Exports have shown a tendency to improve during the latter half of 1942; the figures for the six months ending December 1942 being 7,95,000 bales against 4,66,000 bales for the corresponding period of 1941. On this basis it can be estimated that total exports for the next 18 months will be about 20 lakhs bales. Arrivals of crop for 1942-43 so far have been estimated at 36 lakhs bales. Arrivals during the first half of January have been slightly in excess of the total for the corresponding period of last year. Against the trade estimates of the crop of

(Continued from page 129)

penal measures, the restrictive policy of the Reserve Bank is bound to worsen the situation, as is unhappily the result today. As a matter of fact, the Reserve Bank should issue small coins as liberally as it can, so that the genuine scarcity of small coins, which is causing untold inconvenience, may come to an end; and the public may be assured that they can get small currency when wanted and they should empty their pockets of the heavy load of small currency. A challenge to hoarding is the best way of dishoarding.

A rightly conceived programme for curing the present shortage must contain the following essentials: (i) Mints must work to the full capacity and turn out small coins in bulk to meet the demand therefor more fully. These coins should be of light weight like the new two-pice coins, with a view to prevent their becoming full-bodied. (ii) The Reserve Bank of India must change its present policy of restrictive supply in favour of a liberal policy of abundant issue according to genuine needs of the country as it did in the case of rupee hoarding. (iii) The Government should also enforce the rule of June 25 regarding the hoarding of coins, but the punitive measures must play a subsidiary role in this scheme of things. (iv) Another part of the programme should be the prevention of large consumption expenditure on the part of labourers which involves large use of small coins, by promoting in them the practice of investment. It is, however, extremely doubtful if our labourers, so long steeped in the habit of thriftlessness and not used to investing money, would take to investing overnight. It would, therefore, seem that the best way of relieving the labourers of purchasing power at present would be to bring into force some scheme of compulsory social insurance. The proposed War Injuries Insurance may require some contribution from labourers, while the details of the compulsory sickness are awaited with interest. Other insurance schemes of like nature can be introduced to the benefit of labour and relief of the country from the present shortage.

So far we have not touched the problem of melting at all. It is sometimes said that because of a rise in the prices of copper and nickel the extrinsic value of these coins has fallen short of their intrinsic value; and melters have begun melting small coins causing thereby scarcity in the market. Without joining issue on the point as to whether melting is being practised on any large scale at present or not, we might say that if melting is an important factor in the situation, the Government cannot prevent it. It is an economic truth of universal application and experience that Government regulation cannot disturb or control the working of powerful economic forces, especially in matters relating to currency. Since the days of Elizabeth when Gresham propounded his celebrated law, right to the present day, no Government has succeeded in preventing the disappearance of 'good' coins by punitive measures; it is an elementary proposition of monetary theory. Hence if melting is going on at present then the only way of relieving the situation is to increase, as fast as possible, the supply of such light-weighted small coins as the new two-pice coins which would not become full-bodied in all probability. So melting or no melting, the remedy lies in the same direction, namely, an increase in the volume of coins of lower denominations and light weight.

(Continued from previous page)

100 lakhs bales for 1942-43, only 48 lakhs bales including exports have so far been utilised. There is thus a surplus of 52 lakhs from this season's crop. The consumption on account of mills during the next few months can be put at 27 lakhs bales on account of mills and exports during the next 18 months will, therefore, be 119 lakhs bales. Taking the surplus of the current season's crop it will be necessary to grow only 72 lakhs bales on the most optimistic expectations.

It is rather surprising to note that there has been a further postponment in the schedule for the marketing of standard cloth and April has been given as the earliest month. With the reduction in Government requirements to below 30 percent it was believed that it would be possible to put on the market varieties of standard cloth even earlier. Apparently, the reduction in the requirements of the Defence services to below 30 percent has been mainly due to the difficulties in regard to the supply position in Ahmedabad and Bombay. It will be remembered that from August to December production was adversely affected. While the further delay is regrettable it will be a matter for satisfaction if the authorities at least decided on the production of standard cloth varieties on a very large scale. But as at present it is estimated that even the peak production will be only 10 million yards which is but a small fraction of the total requirements of this sorely-needed cheap-priced cloth. Already, dealers seem to be canvassing arrangements for the marketing of the projected standard cloth which it is said will be available around Rs. 2-4 per pair. The market price of the same kind of cloth is around of Rs. 6. It is not surprising, therefore, that the authorities are taking the necessary precautions against misuse of the standard cloth.

(Continued from page 115).

consumer goods made available must be greatly increased.

We suggest that the time has arrived for the launching of an inflation drive. One plank of this movement will be more production in factories and more production in agricultural lands. Another plank should be the acceleration of sales of defence loans and of treasury bills. It will be appropriate if men like the Hon. Mr. R. R. Haddow as President of the Associated Chambers of Commerce and Mr. G. L. Mehta as President of the Federated Indian Chambers or Sir Purshottamdas Thakurdas or Sir Chunilal Baichand Mehta as being authoritative spokesmen on currency take the lead in organising such a drive and, as an earnest, plan a vigorous Defence Loan Week. A well-planned defence loan week should produce Rs. 20 crores, of which Calcutta could easily subscribe for Rs. 10 crores. The defence loan week which was observed in Calcutta eighteen months ago proves that much bigger results can be achieved now and by quicker methods. For our part, we would like to see the defence loan week celebrated some time towards the middle of February. If our proposal has the effect of securing over Rs. 20 crores for the defence loan, we would have taken an important step forward in combating inflation.

The exchange market has been featureless, the rate remaining steady.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, Jan. 21.

DESPITE notifications in the public Press to the contrary, notifications which would appear to carry official authority, it is understood that no final decision has yet been arrived at with regard to the acreage to be licensed for jute during the coming season. The decision cannot be long deferred, for rain has fallen in most of the districts and the ground is being prepared for sowings. The first ground to be sown however is the chur lands which, in any case, are unsuitable for any food crops. It may not turn out to the advantage of the cultivators of the higher lands if they are to be restricted in their jute growing in favour of the cultivators of the lower lands. That will depend on the relative values of food and cash crops at the time of harvesting and we doubt if all the omniscience of Government will venture to forecast these. Meantime we have some more data before us to indicate probable requirements of jute and these will be considered presently.

As an important factor in the situation, mills production figures for the month of December are now available and amount to 98,510 tons, a drop of 3,250 tons from the previous month which is accounted for mainly by the disturbance of labour at the time of the Christmas air-raids. Production on Government account amounts to 17 per cent of the total. With these figures, we can now sum up the position for the first half of the current season, that is, July to December, during which period mills produced 594,226 tons of goods As we have noted before, owing to the shortage of batching materials, mills are at the present time putting appreciably more actual jute into a ton of manufactured goods than formerly, and to allow for this we prefer to convert at a round figure of 28 maunds to the ton, which indicates that mills have consumed during the first six months of the season 33,82,000 bales of jute, in round figures. During the same period, 7,95,000 bales have been exported, giving a combined total of 41,77,000 bales disposed of. Against this, corrected arrival figures of jute into Calcutta amount over the same period to only 35,39,000 bales, leaving a short-fall of 6,38,000 bales. This shortage must obviously have come out of stocks held either by mills themselves or by bazar dealers and balers. Bazar and press-house stocks at 30th June, 1942 were heavy, being estimated at some 7½ lakhs of bales. By the end of December they had fallen very steeply to probably not much more than 1½ lakhs of bales. That reduction would account for practically the whole of the shortfall, which would leave mills with their stocks as at 30th June last virtually intact, a position which it is believed is not far from being correct. The significant fact however is that mills entered the season with stocks considerably lighter than normal, and during what is usually the busiest time for jute arrivals, they have not been able to increase their stocks. Arrivals of jute into Calcutta for the first half of January, though slightly better than the same period last year, amount only to 2,15,000 bales which indicates a falling off from the December rate of arrivals, and it is essential that the rate of shipments from upcountry should be at least maintained if the position of mills is not to become distinctly uncomfortable.

With these figures now before us we may revert to the question of the extent of the crop it is desirable to produce during the coming season. It is fair to deduce that mills will require close on 70,00,000 bales during next season if trade conditions are only no worse than they are at present. It might not be over-optimistic to expect that they should be better. At the present rate of offtake, export must require at least 12,00,000 bales. A conservative estimate of 82 lakhs of bales required, to provide which propagandists suggest that only one-third of the 1940 registered acreage should be licensed, an acreage which in 1941 yielded only, according to official figures, 54¾ lakhs of bales. No allowance is apparently to be made for the risks of unfavourable weather still further reducing the out-turn. If the short-crop fanatics are to have their way, it is obvious that mills will have to curtail working hours, upset their labour force, reduce their raw material stocks to vanishing point and place themselves in a position where they would be not only helpless in taking their proper part in aiding the reconstruction of the post-war world, but equally helpless in resisting the invasion and permanent occupation of their one-time overseas markets by competitive fibres. It is to be hoped that temporary political advantage, or whatever it is that actuates the advocates of a short jute crop, should not be allowed to obscure the inevitable consequences to Bengal of such a short-sighted view of the situation.

It may not be without interest to cast a backward glance at the December Mill stocks of manufactured goods in the light of the current production levels. Commercial hessian stocks represent slightly more than 3 months production. Military Hessian stocks run to 8 months production. Commercial sacking stocks are no more than about 6 weeks production while military sacking stocks represent 3 months. With shipping facilities continuing reasonably good, and production during the current month likely to be adversely affected by labour difficulties, it is quite on the cards that the end of January will see a further reduction in stocks of goods, provided similar labour difficulties do not unduly delay the handling of export cargoes.

All markets have displayed a firm tendency this week. Not a great deal of interest has been reported from the export side of jute, but prices have advanced all round on a comparatively small turnover with mills. Sellers are very reserved and only offering in limited quantities. Dundee Daisee 2|3 has advanced in price to Rs. 79 with Rs. 80 paid for Dundee Tossa 4s. Mill Firsts are held for Rs. 80, Lightnings for Rs. 75 and Hearts for Rs. 70. A moderate quantity of Cuttings again changed hands at rates rising to Rs. 30 for M.C. and Rs. 31 for N.C. Exports of Pucca bales in December were returned as 1,71,000 bales against 1,11,000 in December, 1941. Total exports from July to December, 1942 are 7,95,000 bales as compared with 4,66,000 bales in the same period of 1941 and 21,15,000 bales in the last pre-war period, 1938.

Mills have probably been deterred from attempting to enter the Loose Jute market on account of the paucity of offerings, but there has been steady nibbling whenever anything desirable was put up. European packing is reported sold up to Rs. 14-8 and Rs. 11-8 basis Mids and Bots, but could not be bought now under Rs. 15 and Rs. 12. Supervised Jat was reported at Rs. 11 and Rs. 9-8 for Bots and X grade, but this price basis has now been attained by Supervised District. Tossa has been in steady demand and almost all offerings have been taken up at from Rs. 13 to Rs. 13-8 basis for Indian District Mids, with Rs. 13 and Rs. 10 paid later for Jungli Districts. Arrivals of Jute into Calcutta for the first half of January are estimated at 2,15,000 bales against 2,01,000 bales for the same period last year. This brings the total arrivals since the beginning of the season to 37,54,000 bales against 42,16,000 at the same point last year.

After some nervousness in the early part of the reporting period, the Fabrics section resumed a firm tone and advances have been recorded all round. Eleven porters have been mainly in request in the Hessian section with a good business done and buyers over at the close. Ready to February have sold from Rs. 23 to Rs. 24, April|June from Rs. 22-12 to Rs. 23-12 and July|September from Rs. 22-8 to Rs. 23-8, with Rs. 23 paid for October|December. Nine porters have risen from Rs. 18 to Rs. 18-8 for ready, January and February|March, from Rs. 17-8 to Rs. 18-4 April|June and from Rs. 17-4 to Rs. 18-4 July|September. In the Heavy Goods end, "B" Twills have risen Rs. 4-8 in the early positions to Rs. 66 January and Rs. 64-8 February|March. April|June now quotes Rs. 61-8 and July|September Rs. 58-8. Liverpool Twills have been in good demand up to April|June, recording advances of Rs. 4 up to Rs. 67-8 January, Rs. 66-8 February|March and Rs. 64-8 April|June, while July|September has risen from Rs. 60 to Rs. 62. Cornsacks have been taken mainly for the April|September positions and now quote Rs. 67 January, Rs. 65 February|March, Rs. 61-8 April|June and Rs. 60 July|September. Other sales include Cotton-packs at Rs. 105 April|June, Wool-packs at Rs. 2-13 July|September, D. W. Flours at Rs. 74 March|April and Cuban Sugars at Rs. 75 January.

JUTE

Calcutta, January 21.

THE raw jute market has been definitely firmer during the past week with a larger volume of business passing. With the reports regarding the possibility of a reduction in the crop for 1943-44 to one-third of the total acreage registered under the Bengal Jute Regulations Act, 1940, sellers are very firm in their ideas. With the acute transport difficulties interfering with the buying programme, mills cannot possibly afford to keep out of the market for long especially with the prospects of definitely smaller deliveries for the next season. That is the reason why even with the slow-down in production in several of the mills in Calcutta areas, the raw jute market has been definitely firmer and the quotations are very much higher than the lowest levels touched sometime back. So far no official announcement regarding the size of the acreage under the jute crop for 1943-44 has been made by the Bengal Government. However, it is reliably understood that the same may be one-third of the area registered in 1940.

In the loose jute section firm conditions have been noticeable with reserved sellers and anxious buyers. Indian District Tossa Middles and Bottoms were done at Rs. 14 and Rs. 11 respectively.

In the pucca bales section firmer conditions were noticeable with sellers reserved on account of the difficulty in transport and shortage of labour and the consequent increase in costs. The improvement in rates in the pucca bales section has been more pronounced than in the loose jute section. Dundee Daisee 2/3 were bought by shippers at Rs. 77 per bale while mills bought Firsts 2/3 at Rs. 79 per bale. Cuttings were also bought at Rs. 30 per bale for N.C's.

JUTE MANUFACTURES

Calcutta, January 21.

THE jute manufactures market has been very steady throughout the past week and business has not been freely possibly owing to the cautious attitude adopted by mills and the favourable position occupied by mills. Production is still very much below capacity at the several mills.. It is feared that total production for the current year will be far short of demand. 9 porters ready are quoting Rs. 18, February-March Rs. 18-4, April-June Rs. 18 and July-September Rs. 17-12. The quotation at the end of last week for ready was Rs. 17-12. 11 porters ready are quoting Rs. 23-9 against Rs. 22-10; February-March Rs. 23-12, April-June Rs. 23-8 and July-September Rs. 23-4. It will be noticed that the improvement in the quotations for 11 porters ready is more pronounced than 9 porters.

In the heavy goods section business has not been possible due to the scarcity of supplies. With the scareity of supplies there has been a sharp rise in quotations. "B" twills for ready delivery are being sold on the basis of Rs. 66 against Rs. 61 and Liverpool twills Rs. 67-8 against Rs. 63. Cornsacks show a small rise at Rs. 66-8.

GOLD

Calcutta, January 21.

THE gold market has been uninteresting with quotations fluctuating within very narrow limits. Business has been on a very small scale. The tendency is rather irregular. It can even be said irregularly downward. Gold ready quoted Rs. 66-10 and January settlement Rs. 66-6. The premium for ready over first settlement is narrowed. Sovereigns quoted Rs. 48-8 against Rs. 48-10. In the local market absolutely uninteresting conditions were noticeable, the quotation being Rs. 66-7 for gold ready and Rs. 48-8 for sovereigns.

SILVER

Calcutta, January 21.

THE silver market has been easier with a very small volume of business passing. Towards the close, there has been a slight rally. Quotations, however, are considerably lower on balance. Indian Mint silver ready closed at Rs. 100-10 against Rs. 103 last Friday and January at Rs. 99-2 against Rs. 100-4. The premium for ready silver has come down to Re. 1-8 from Rs. 2-12 last week.

In the London market no change is to be reported; the quotation for both Spot and Forward being done at 23½d. The market is idle.

COTTON

Calcutta, January 21.

FIRMER conditions have been noticeable in the Bombay raw cotton market and a larger volume of business has been passing. In mid-week a rather irregular tendency was noticeable but speculative buying and short covering towards the close have resulted in a substantial improvement in values. Measures adopted by the Bombay Government to improve the food position and also to arrange food supplies for labourers in the mills are believed to have resulted in a substantial increase in production by mills. It will be remembered that only recently the Bombay Millowners Association granted an additional increase in allowance to the workers with the further rise in the costs of living. This, with the efforts to get more regular supplies of foodstuffs, ensures greater attendance at the mills and keeps labour contented. The possibility of production of standard cloth on a large scale owing to the reduction in the requirements of the Government consequent on the increase of supplies of certain classes of goods, should also be construed as a favourable factor for the Bombay Raw Cotton market for, standard cloth being of a coarser variety, should consume a greater quantity of cotton. Jharilla January quoted Rs. 423 against Rs. 418 at the end of last week; March 1943 Rs. 404-8 against Rs. 411-8; and May 1943 Rs. 406 against Rs. 417-12. It will be noticed that the improvement has taken place mainly in the January position.

PIECEGOODS

Calcutta, January 21.

THERE is no change in the conditions in the piecegoods market as stocks are very low and dealers are not inclined to part with their holdings. Quotations, however, are a few annas lower owing to the small demand from consumers and the possibility of freer supplies in the near future. It is reported that Government requirements will total about 27½ per cent to 30 per cent as against the 35 per cent estimated formerly. This should enable mills to manufacture goods for ordinary consumption on a larger scale. It is unfortunate, however, that there has been a further postponement in the date for the marketing of standard cloth. It is now said that the new standard cloth varieties will not be available before April. One wonders whether there will be any further postponment. Business in cold weather styles has been negligible as the season is nearing its end and it is now almost time for stocking summer styles. Dealers are not anxious to do any business as they can carry their stocks over to the next season.

Calcutta Commercial Bank Ltd.

Executes LETTERS OF GUARANTEE on behalf of contractors, suppliers and clearing agents, in lieu of cash deposit, acceptable by the Indian Custom and Tatas.

Furnishes INDEMNITY BONDS for issue of duplicates for lost share scrips, insurance policies, etc.

Undertakes CLEARING and FORWARDING work at Ports.

Collects Bills, Cheques and Hundies, Insurance Premia, etc., at competitive charges through sixty branches in India; specially reduced rate on exclusive arrangement.

Supplies regularly silver and coins to Collieries, Tea Gardens, Mills, etc., on nominal commissions.

Discounts approved Bills, makes investments against approved collaterals, Tea Quotas, Insurance Policies, etc.

Stock Markets to-day and to-morrow

27th JAN 1943

BANK PROFITS IN 1942

A DEFINITELY firmer tone has been noticeable on the Calcutta Stock Exchange during the latter half of the week. In Friday's session business passing has been on a larger scale though no further rise in prices has been recorded. The firmer undertone in almost all the sections is due to the strength of the Bombay market and the recent successful encounters with enemy raiders over Calcutta. Air raids have no terrors for the stock market operator at the present moment. If raids are to be staged in future only on the present scale damage to industrial property cannot be extensive and there will be no great interference with industrial activity in this part of the country. Readers are perhaps aware that I remarked on an earlier occasion that the depression in the markets could be only short-lived if the Japs were unable to attack in force.

The recovery in the markets in the latter half of this week has been, to a certain extent, helped by the hopes regarding the possibility of a higher interim dividend being paid by the *Steel Corporation of Bengal Limited*. It will be remembered that sometime back I referred to the possibilities in this regard and said that with the increase in the production capacity of the company and the smoother working it would be quite possible to increase the interim dividend from six annas per share to ten annas per share. The interim dividend for the year 1941 was paid on February 12, 1942.

The rally in the Bombay market is not anything surprising. If there was a decline in values it was mainly in sympathy with other markets. Industries are doing very well and there is no fear of any damage from enemy action. But for the anxiety regarding Tata Iron and Steel properties, owing to their nearness to the eastern seaboard of the country, the recovery in values would perhaps have been more pronounced.

* * * * *

The results of the *India Paper Pulp Company, Limited*, make very satisfactory showing. It has been possible to report a substantial increase in earnings even with the increase in costs of production. The net profit, before providing for depreciation and taxation, for the half-year ended September, 1942, is Rs. 12,52,655 against Rs. 8,86,013 for the previous six months. But for the substantially higher provision for taxation, Rs. 8 lakhs against Rs. 5 lakhs, it would have been possible for the directors to distribute a much higher dividend, it being 5 per cent against 4½ per cent on the former occasion. The sum set aside to depreciation is Rs. 2.25 lakhs against Rs. 2 lakhs while the transfer to General Reserve is Rs. 75,000 against Rs. 50,000. The amount carried forward is higher at Rs. 85,872 against Rs. 83,217 brought in.

On the publication of the report there has been a rise in the quotation to Rs. 163 cum-dividend. Even at the higher level the return is satisfactory at Rs. 6.1 per cent tax-free.

* * * *

In spite of a smaller volume of turnover it has been possible for two jute companies in the Andrew Yule group to report a slightly higher level of earnings for the half-year ended November, 1942. In both cases dividends have been maintained, the increase in profits being taken up by the higher provisions for taxation.

The net profit of the *Caledonian Jute Mills Limited* for the half-year before providing for taxation and depreciation is Rs. 4,55,786 against Rs. 4,18,673 for the previous half-year. The charge on account of depreciation is Rs. 50,000 (same) while the provision for taxation is Rs. 2,65,000 (Rs. 2,29,616). The dividend on ordinary shares has been maintained at Rs. 10 per share. The sum of Rs. 50,000 including Rs. 28,000 from the War Risks Insurance Reserve allocated out of that previous half-year's earnings and Rs. 22,000 from the profit and loss account for the latest half-year has been transferred to the Dividend Equalisation Reserve.

* * * *

The net profit of the *Delta Jute Mills Company, Limited* for the same half-year is Rs. 7,27,465 against Rs. 7,00,776 for the previous half-year. The sum set aside to depreciation is Rs. 25,000 (same) while the provision for taxation is Rs. 4,75,000 (Rs. 4,49,216). The dividend on the ordinary shares has been maintained at Rs. 15 per share.

* * * *

Results of important banks published during the past few days reveal a striking increase in earnings. Two important banks have effected an increase in the distribution to shareholders, the *Central Bank* increasing the dividend and bonus to 10 per cent from 9 per cent and the *Bank of India* from 11 per cent to 12 per cent. In both cases the dividends distributed are the highest in the history of the institutions. The increase in earnings of the leading banks does not in any way mean that there was an increase in business activity to bring about an appreciable increase in advances and loans. For, throughout the year advances were lower than the figure for 1941. The rise in earnings has been mainly due to the large increase in the funds at the disposal of the banks and the higher level of income from investments. As the bulk of the increase in the working capital was on account of the rise in deposits on current account the interest sums paid out by banks were relatively smaller.

The increase in funds at the disposal of banks will be evident from the return of the Scheduled banks. Demand liabilities on January 2, 1942 were 220.02 crores and time liabilities Rs. 107.05 crores. On January 1, 1943 demand liabilities were 337.06 crores and time liabilities Rs. 111.71 crores. There has thus been an increase in total deposits by Rs. 121.70 crores. Advances in India on these dates were Rs. 121.19 crores and Rs. 97.34 crores respectively. It will be quite evident therefore that the increase in earnings has been mostly on account of the increase in income from investments.

The net profit of the *Central Bank of India* for the year 1942 is Rs. 48.41 lakhs against Rs. 40.99 lakhs for 1941. The final dividend of 4 per cent with the interim dividend of 4 per cent already paid makes eight per cent for the whole year. There is to be a bonus of 2 per cent in addition. The total distribution for the year is thus 10 per cent against 9 per cent for 1941.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 22.

AFTER remaining quiet for the major part of the week under review definitely firmer conditions have been noticeable on the Calcutta Stock Exchange during the last two days in spite of the resumption of enemy air raids on the Calcutta area. The favourable progress of the Eighth Army and the hot reception accorded to enemy bombers over the Calcutta area by R.A.F. fighters have been mainly responsible for the improved tone of the markets. Business also has shown signs of expansion and sellers have been demanding higher rates. The expectations regarding the possibility of a higher interim dividend being paid by the Steel Corporation of Bengal have also been responsible to a certain extent for the firmer tone of the markets. Closing prices are at the highest levels for the week.

Giltedged securities have been quite steady though business is still on a restricted scale. Conditons in the money market are unchanged and money is in plenty. With the repayment of the last sterling debt by the Government of India it should be said that the outlook for giltedged securities is very bright. 3½ per cent. Paper is quoting around Rs. 94. 3 per cent. Defence Bonds 1946 were slightly higher at Rs. 102-15, 3 per cent. 1963|65 Rs. 95-8 and 5 per cent. 1945|55 Rs. 108-4. 4 per cent. 1960|70 were Rs. 110 and 3 per cent. 1949|52 Rs. 100-10. No transactions have been recorded in provincial loans.

There are no sellers of public bodies debentures and it is not possible to put through orders. First class preference shares have been marked higher with *Anglo-India* at Rs. 161, *Birla* at Rs. 121, *Calcutta Jute* at Rs. 123, and *Soorah* at Rs. 135. Among other sections, *Dalmia Cement* were Rs. 126, *Steel Corporation* Rs. 117 and *Rohtas Industries* Rs. 170. *Titaghur Paper* Second preferences were Rs. 111-8 and First preferences Rs. 184.

In the Coal section, *Amalgamated* are higher at Rs. 32. With the increasing difficulties regarding wagon supplies to serve the markets in the Western Presidency the capacity of the collieries in the Central Provinces should be fully utilised. The problem of labour also may not be very difficult in the case of these companies. The prospects for Central Provinces collieries should, therefore, be regarded as favourable. *Bengal* were noted at Rs. 397 ex-dividend, *Burrakur* at Rs. 13-4, *Deoli* at Rs. 9-12, *Equitable* at Rs. 35-8, *New Beerbhoom* at Rs. 16-12 and *Union* at Rs. 32-12. *West Jamuria* were Rs. 32.

Jute shares have been slightly firmer with the strength of the goods market and the reports that the labour situation at the mills is improving. *Adamjee* were Rs. 24-2, *Anglo-India* Rs. 332, *Bally* Rs. 259, *Clive* Rs. 22-15, *Howrah* Rs. 53-8, *Hukumchand* Rs. 19, *Kamarhatty* Rs. 488, *National* Rs. 22-12, *Nellimarla* Rs. 16 and *Sree Luchminarain* Rs. 15-2. *Birla* are higher at Rs. 38-12. There are reports that there is a possibility of a bonus issue to the ordinary shareholders. Even at the present level the shares afford the handsome yield of over 6.25 per cent. tax-free.

In the Engineering section, *Indian Iron* and *Steel Corporation* were fluctuating in narrow limits earlier in the week. In the last two days there has been a rally and the quotations at the time of writing are around Rs. 31-12 and Rs. 23-12 respectively. The improvement in the quotation for *Steel Corporation* is more pronounced. There are expectations of a higher interim dividend being paid for the year ended *December*, 1942. *Burn & Co.* also were higher at Rs. 346. *Bhartia Electric Steel* were Rs. 15-12 while *Indian Galvanizing* were higher at Rs. 33-13. *Kumardhubi* were unchanged at Rs. 5-12 and *National Iron and Steel* at Rs. 11-12.

Sugar shares have remained steady with *Buland* at Rs. 44-8, *Carew & Co.* at Rs. 14-12, *Cawnpore* at Rs. 30-5 and *Champarun* at Rs. 25. *Murree Brewery* were crossed at Rs. 18-8.

Tea shares have been quite steady with not many sellers offering. *Dimakusi* were Rs. 33, *Gillapukri* Rs. 22-8 and *Hattikhira* Rs. 25-2. *Patrakola* were Rs. 1,050 and *Sarugaon* Rs. 17.

In the Miscellaneous section, *Burma Corporation* were Rs. 3-2 and *Indian Copper* at Rs. 2-2. *B. I. Corporation* were Rs. 6 and *British Ceylon Corporation* Rs. 15-4. *Assam Bengal Cement* deferred shares were Rs. 3-1 and *Dalmia Cement* Rs. 16. *Aluminium Corporation* were Rs. 15-7 and *Indian Wood Products* Rs. 31-4. *Publicity Society* were higher at Rs. 11-6. *Indian National Airways* deferreds were crossed at Rs. 2-14. Paper shares have been in greater favour with *India Paper Pulp* at Rs. 163. *Star Paper* were Rs. 19 ex-dividend and *Titaghur Paper* Rs. 22-12. *Humayan Properties* were Rs. 8-4 and *Assam Saws* Rs. 4-1.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 21.

ANYONE who has followed the transactions in the local stock exchange in the last four days will find that the forecast given in this column is more than justified by subsequent occurrences. The operators here seem to have realised that they had been unduly cautious in the past few weeks and the time has now come to make amends. Even though popular prophecy has come true with regard to enemy air attacks on Eastern India, improvement in tone rather than gloom has attended the raids. Whatever may be the position elsewhere, Western India has little to worry from enemy action. This fact has at last been realised here and the local stock exchange has reflected this sentiment faithfully since. Tata Defds. have gained nearly 90 points and other shares have also recorded substantial increases: There was renewed support for the Textile group.

Government securities continued to be steady. The miscellaneous section though it opened easy improved towards the end and has shared in the general improvement noticed in all other sections.

Textiles.—Mill shares generally have recorded substantial increases on the week, almost all quoting over 7 to 30 points as compared with their prices last week. In view of the comparative safety of Western India from enemy action, mill shares, it is widely expected, would pay better dividends. *Ahmedabad Advance* are quoting Rs. 415-8 (402-8), *Bombay Dyeing* Rs. 1,717-8 (1,687-8), *Central India* Rs. 415 (387-4). *Century* Rs. 667 (660), *Colaba Land* Rs. 247 (234), *Gokak* Rs. 356 (340-8), *Kohinoor* Rs. 641 (618), *Indian Bleaching* Rs. 233 (223), *Phoenix* Rs. 665 (641-4), *Simplex* Rs. 274 (266) and *Svadeshi* Rs. 535 (476).

Steels.—The recovery of *Tata* Deferrds in mid-week constituted the most encouraging feature on the Stock Exchange. The rout of the Japanese night raiders on the outskirts of Calcutta seems to have lightened the fears regarding the vulnerability of the works of Tatas situate in Bihar. *Tata* Deferreds recorded a rise of nearly 90 points over the last week's quotation, the latest quotation being Rs. 1,625. *Tata* Ordinaries also rose by 12 points and changed hands at Rs. 342 as against Rs. 330 last week. *Indian Iron* are higher at Rs. 31-8 while *Tata I* Preferences are steady at Rs. 205, and the Second Preferences are slightly higher at Rs. 137.

The miscellaneous section which tended to be easy at the beginning, developed firmness towards the close. Almost all the counters in this section are a shade better. *Tata Power* recorded a rise of about 23 points. At the close of dealings on Thursday *Belapur Sugar* were Rs. 227, *Bombay-Burmah* (Olds) Rs. 356-4, *Bombay-Burmah* (New) Rs. 122-8, *Bombay Steam* Rs. 415, *Scindia Steam* Rs. 24, *Shivrajpur* Rs. 56, *Andhra Valley* Rs. 1,770, *Tata-Hydro* Rs. 184, *Tata-Power* Rs. 1,675, *Premier Construction* Rs. 154, *A. C. C.* Rs. 214-8, *Indian Copper* Rs. 2-3-6, and *Burma Corporation* Rs. 3.

(Continued from page 137).

The net profit of the *Bank of India* for the twelve months ended December, 1942 is Rs. 26.72 lakhs against Rs. 24.13 lakhs. The dividend has been maintained at 11 per cent as on the last occasion but a bonus of 1 per cent is to be paid in addition.

In the case of both banks the amount carried forward to the next accounts is substantially higher.

* * * * *

It will be remembered that recently the *Mahalaxmi Cotton Mills Limited* reissued the forfeited ordinary shares at a premium of Rs. 3-8 per share. The ordinary shares were subsequently quoted higher on the Calcutta Stock Exchange at Rs. 30. It is now understood that the issue has been oversubscribed and that allotment letters have been posted.

WATCH-DOG.

THE OSMANSHAHI MILLS, LIMITED.

(Incorporated in Hyderabad-Dn.)

NOTICE is hereby given that the Transfer Books of the Osmanshahi Mills, Limited, will be closed from 31st day of January, 1943, to the 9th day of February, 1943 (28th Isfandar 1352 Fasli to 7th Farwardi 1352 Fasli) both days inclusive.

By Order of the Board,
C. S. TYABJEE,
Managing Agent,
For the Industrial Trust Fund,
H. E. H. The Nizam's Government,
Secretaries, Treasurers & Agents.
Dated 8th January, 1943.

(Annual meeting, 29th January, 1943 at 11 a.m.)

*After taking into account a sum of Rs. 13,40,405 received from the Steel Corporation of Bengal Ltd., being one-fifth share of profit of that Company under the supply agreements between the two companies.

Audited accounts for the year ended 31st March, 1942:—

The net profits, after provision for taxation, depreciation, debenture interest, labour benefit schemes, other appropriations and all charges for the year, amounted to Rs. 56,93,179, to which has to be added Rs. 6,01,939 brought forward from the previous year, making a distributable sum of Rs. 62,95,118. From this has to be deducted Rs. 19,04,247 being the amount of the first Interim Dividend of Twelve Annas per share paid in May, 1942, and Rs. 38,08,494 being the further Interim Dividend of Rupee One and Annas Eight per share declared in September, 1942. The balance remaining at credit of Profit and Loss Account is Rs. 5,82,377 which amount the Directors recommend to be carried forward.

Following the practice of previous years, the Board decided, in order to enable shareholders to obtain their dividend as early as possible to distribute in the form of a Second Interim Dividend what would have been their recommendation for the Final Dividend.

During the year under review £1,473 debentures of the 4 per cent Convertible Second Mortgage Debenture Stock outstanding were converted into 982 Ordinary shares of Rs. 10 each, which rank for dividend from 1st April, 1942.

Relevant portions from the Chairman's advance speech at the General Meeting extracted below:—

"By comparison with the previous year, sales of the Company's products were maintained, but the purchase of raw materials has dropped due to the forced consumption of stocks as a direct result of heavy transport restrictions. The other variations in normal expenditure call for no special comment.

"In regard to Depreciation the directors have provided Rs. 25 lakhs this year as against Rs. 14,80,000 in the previous year. On the amalgamation of the Company with the Bengal Iron Company some five years ago, it was decided that, having regard to the reduction of capital which was made at that time, depreciation for the subsequent few years should be taken on a lower basis than would otherwise have been necessary. The time has now come when the annual figure of depreciation must be taken on a more normal basis and this explains the difference between the two above stated figures. It may be that next year the Directors may have to still further enhance the sum set aside on this account.

A special provision of Rs. 12 lakhs has been made for a War Risk Factories Contingency Fund. Under the Government of India's compulsory insurance scheme, a total premium of Rs. 20 lakhs will, in the course of the next two years, be paid to cover the insurance of the Compayn's buildings and plant at Hirapur and Kulti, the collieries and the two groups of ore mines. It is, therefore, necessary to make provision for this payment and a further sum will be set aside next year for this purpose. It is also proved that cover against damage by enemy action only extends to 80 per cent of the sum insured, so that in the light of future events it may be found necessary to take this into consideration in next year's accounts.

A sum of Rs. 53 lakhs has been set aside for taxation. The amount is large but this is a matter outside the Company's control.

In regard to the current year's prospects as indicated in the Directors' Report, the Company's products are practically all taken up directly, or indirectly, for use in connection with the war and, provided nothing unforseen takes place, continued prosperity may be looked forward to."

Production and Sales.—Statutory restrictions prohibiting the publication of figures of production and sales of different products are now in force, but satisfactory output was maintained in all departments, inclusive of the collieries, and all plant and machinery has been maintained in good condition. The Company's products are practically all taken up directly or indirectly for purposes in connection with the war.

Managing Agents.—Messrs. Burn & Co.

*Includes Prospecting Expenses and those on New Works written off.

(Annual meeting at Bombay on 25th January, 1943).

Audited accounts for the year ended 31st July, 1942:—

The year's working, after meeting all expenses of operation and management and after allowing for Depreciation and making provision for Taxation, shows a profit of Rs. 76,39,532. To this has to be added the sum of Rs. 1,06,475, being the balance brought forward from last year's Account, making a total of Rs. 77,46,007, out of which the following sums have been appropriated:—

	Rs.
To Debenture Redemption Fund	73,104
To Bonus to Employees (with the previous year's balance of Rs. 13,026 the total Bonus provision will be Rs. 5,23,026)	5,10,000
To Reserve Fund	10,00,000
To Investment Depreciation Reserve ..	2,66,879
Total ..	18,49,983

The leaves a balance of Rs. 58,96,024 from which the Directors recommend payment of a dividend for the year ended 31st July, 1942, at the rate of Rs. 8 per share (free of income-tax), which will absorb Rs. 56,43,368, leaving a balance of Rs. 2,52,656 to be carried forward to next year's Account.

The amount of dividend at the rate of 8 per cent per annum received on our Company's holdings in The Patiala Cement Co., Ltd. has been accounted for in the Profit and Loss Account for the year under review.

On the 28th February last, the Company redeemed the balance of Debentures outstanding amounting to Rs. 1,65,000. The sum of Rs. 6,94,936 standing to the credit of "Debenture Redemption Fund" has been transferred to "Investment Depreciation Reserve," as the liability against the Debenture Issue has ceased to exist.

The Agreement between this Company, The Patiala Cement Co., Ltd., the Dalmia Group and the Cement Marketing Company of India, Ltd., has since been signed by all the parties concerned.

The factories of this Company have been covered under the War Risks (Factories), Insurance Ordinance except three situated in Indian States. The Company has adopted whatever A.R.P. measures have been recommended by the authorities concerned.

The demand for cement during the year under review has again considerably increased.

Due to the heavy premia payable on account of War Risks (Factories), Insurance and to the continuous rise in almost all the commodities required for the manufacture and packing of cement, there has been a further rise in the manufacturing cost. This increase has been partly off-set by steadily pursuing a policy of manufacturing at the Company's Works and of encouraging within the country of most of the stores and spare parts required and by exploring further sources of economies. The efficiency of all the factories continues to be maintained at a high level.

To assist in meeting the abnormal rise in the cost of living all over the country, the Board has sanctioned dearness allowances to all the workmen and to most of the members of the staff at the various factories as well as at the Head Office.

The Company's policy of expansion, wherever warranted, is being steadily pursued. The extension and improvement of the Shahabad Works reported last year has been practically completed so far as the production side is concerned. A fresh extension is in hand at the Madukarai Works.

The Company's large holding in the Burma Cement Co.'s shares has been adversely affected due to the occupation of Burma by the Japanese. The Board has therefore deemed it prudent to place a sum of Rs. 10 lakhs to the credit of "Investment Depreciation Reserve."

Carried forward ..	94,818	2,17,754	2,74,632	2,58,082
Dividend per cent ..	12%	10	12%	10

%Includes Bonus of 2 per cent.

(*Half-yearly meeting, held on 13th January*, 1943).

Audited Accounts for the half-year ended 31st *October*, 1942:—

After providing Rs. 3,00,000/- for Depreciation and Rs. 9,50,000/- for Taxation, including Excess Profits Tax, there is a balance at the credit of the Profit and Loss Account of Rs. 5,82,618-3-5 from which they recommend:—

	Rs.	A.	P.
Dividend of Rs. 10 per share	4,00,000	0	0
Bonus of Rs. 2 per share	80,000	0	0
Provision for Commission to Directors and Staff	7,800	0	0
Carry forward	94,818	9	5

The decrease in raisings during the half-year compared with the previous half-year was due to the irregular attendance of the labour force, caused by circumstances over which the Company has no control. Further prospects are dependent upon an improvement in attendance coupled with adequate transport facilities.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 40,00,000 in 40,000 *shares of* Rs. 100 *each fully paid-up.*

*Includes Rs. 4,000 transferred from Reserves.

†Includes Rs. 10,000 transferred from Reserves.

(*Half-yearly meeting, held 14th January*, 1943).

Audited Accounts for the half-year ended 31st *August*, 1942:—

After transferring Rs. 1,000/- to Reserve for Taxation, the Profit and Loss Account shows a credit balance of Rs. 10,157-5-11 to which has been transferred the sum of Rs. 4,000/- from the Reserve Fund, making available the sum of Rs. 14,157-5-11, out of which the Directors recommend:—

	Rs.	A.	P.
Dividend of 4 annas per share	11,250	0	0
Carry forward	2,907	5	11

Raisings and Despatches were both lower than in the preceding half-year, but the average selling price realised was higher.

In the Report for the half-year ended28th February, 1937, reference was made to the fact that the workings of the colliery were then confined to depillaring. This work is now nearing completion and as advised in a separate letter to shareholders the disposal of the property is under consideration.

WORLD OF INDIAN FINANCE

Friday Evening.

BY standards understood till recently, January should be one of the peak months of the busy season. January is now drawing to its close; and there has so far been no sign of any of the attributes and marks of the busy season. The tenor of the money market during the current month is such that it could as well be the peak of the slack season. In the current week, as in the earlier, short credits have been in abundant supply; and no borrower could be found at the quoted rate of ½ per cent in Calcutta and ¼ per cent in Bombay for interbank call money. There has been a further increase in active note circulation from Rs. 589.44 crores to Rs. 590.73 crores. Deposits of scheduled banks of the Reserve Bank continued to make good showing at Rs. 51½ crores. On the weekly tender day, against Rs. 6 crores on offer, applications came to Rs. 11.01 crores, comparing with Rs. 9.94 crores last week. The larger tenders, however, have not meant keener bidding; and the average discount rate remains unchanged at rupee one anna one and pies ten per cent per annum. Sales of tap bills between January 20 and January 25 amounted to Rs. 2,94¼ lakhs as against Rs. 4,44½ lakhs in the corresponding period of the last week. The floating debt in the hands of the public has now attained the high watermark of Rs. 112 crores. The offer of tender bills for next week is unchanged at Rs. 6 crores; and tap bills have been continued at the unchanged rate of Rs. 99-12-0 per cent. It is remarkable that in the course of 1942, treasury bills sold to the public have more than doubled. This expansion in the digestive capacity of the Indian bill market is, on the face of it, a most gratifying development. There are, however, reasons to think that most of the support in this regard has been forthcoming from one special quarter, namely, the Imperial Bank. Between January 2, 1942 and January 22, 1943, the deposits of the Imperial Bank have risen by Rs. 56 crores to Rs. 166 crores. During the same period, the investments of the bank have risen by Rs. 56 crores to Rs. 119 crores. We think we are justified in assuming that most of the increase in the Imperial Bank's investment portfolio is accounted for by treasury bills. That is to say, the Imperial Bank has diverted most of its increased deposits to investments in treasury bills; and there is a kind of poetic justice in it. The increased deposits of the Imperial Bank are largely due to increased currency put in circulation by the Government. And, thus, the money has come back to the government in the form of treasury bills.

The Assam Government treasury bills for Rs. 50 lakhs, for which tenders were invited on January 27, were allotted on the basis of rupee one and annas four per cent per annum, which is about two annas higher than this week's rate of central treasury bills. Even this disparity of two annas must be said to be unnecessarily and unjustifiably big.

The returns of the Reserve Bank for the week ended January 22 disclose further payments by the British Government to the Indian Government. A portion of this additional sterling has been utilised to strengthen the holdings of sterling securities in the issue department, which were partly depleted recently in connection with the redemption of 3½ per cent India sterling stock. Rs. 5 crores of sterling securities have thus been added to the issue department, against which there has been a withdrawal of rupee securities for a like amount. The development thus recorded is in accord with the practice with which we have become familiar after each operation connected with the reduction of sterling debt. The practice has been, in the first instance, to withdraw sterling securities in bulk and add to the rupee securities also in bulk; and thereafter, in easy stages, restrengthen securities and reduce rupee securities. This week's addition of Rs. 5 crores to the sterling securities in the issue department and withdrawal of Rs. 5 crores from the rupee securities are the first stages in this process.

In spite of the transfer of Rs. 5 crores to the issue department, foreign balances in the banking department are higher by Rs. 3 crores at Rs. 69.10 crores. This means that payments received in respect of inter-governmental transactions are of the order of Rs. 8 crores. This also accounts for the increase in Central Government's deposits from Rs. 5.95 crores to Rs. 10.23 crores and for the reduction in ways and means advances from Rs. 1,51 lakhs to Rs. 83 lakhs. The deposits of the provincial governments have also risen from Rs. 8.86 crores to Rs. 10.12 crores.

In connection with the providing of rupee finance against the repayment of 3½ per cent India sterling stock, the Government of India have announced that rupee counterparts of 3½ per cent paper will be on sale. The third defence loan also is on sale through the tap. Nor should it be forgotten that one or two of the rupee counterparts of the sterling loans that were redeemed earlier are being sold through the tap. There is thus a multiplicity of government loans which are on offer for indefinite amounts. This accounts for giltedged prices remaining sticky while the undertone is exuberantly firm. For our part, we do not think that sale of so many loans through the tap is conducive to cheap borrowing, which must ever be the objective of defence loan planning. This aspect of the matter further lends emphasis to our plea for the review of the entire economic and currency position from the point of view of inflation. Both the Government and the Reserve Bank seem to have arrived at complacent conclusions and are satisfied with a policy of the evil being sufficient unto the day. They are not greatly worried over the morrow; but we can postpone thought of the morrow only at our peril.

The exchange market has been steady, with a few export bills showing. Rates are unchanged.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains unchanged at ½ per cent, all lenders.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills were opened on Tuesday, Jan. 26, 1943. Total amount offered was Rs. 11,01,25,000 (Rupees eleven crores one lakh twenty-five thousand). Tenders at Rs. 99-11-9% and above were accepted in full and those at Rs. 99-11-6 were allotted approximately 52%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 1-1-10% (Rupee one anna one and pies ten per cent per annum).

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months Government of India Treasury Bills will be received on Tuesday, Feb. 2, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, Feb. 1, 1943, at other centres. Successful tenderers should make payment on Friday, Feb. 5, 1943. Other conditions are as usual.

Three months Intermediates will be sold from Jan. 27 to Feb. 1, 1943, at Rs. 99-12% subject to the conditions previously announced (viz. sales can be stopped at any time without pervious notice, if Government think it necessary).

Three months Intermediates sold from Jan. 20 to Jan. 25, 1943, amounted to Rs. 2,94,25,000 (Rupees two crores ninety-four lakhs and twenty-five thousand only).

During the week ended Jan. 22, 1943, Government of India Treasury Bills for Rs. 2,31,00,000 (Rupees two crores thirty-one lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Thursday Morning.

The stability of markets in wartime is a byword. There is no change in the Bank rates, discount rates or exchange rates. Borrowing goes on steadily and all increases in expenditure are ignored. Control has produced an impression of unalterable uniformity, and the course of share prices shows little change from week to week. In the list of exchange quotations published in some papers, the Swiss franc figures regularly like the peseta but the Swedish krone has dropped out. The omission will certainly force some to ask questions as to what has been happening since 1941. Neutral Sweden has her difficulties and is bent on limiting company dividends just as she is going to stick to a policy of alertness at all costs but the krone must be strong as the gold reserve is large and increased defence outlay has been met by taxation. Unlike neutral Turkey, neutral Sweden has a vast fund of experience, of overseas investment and monetary management, so that the disappearance may be interpreted as the result of sudden cessation of Sweden's trade with the Allies. Neutrality forced Sweden out of the sterling area, quite soon after the outbreak of war, but active discouragement of trade with a country with a hard currency began only in 1940. Trade with India has shrunk steadily and the absence of quotations makes little difference when trade has gone by the board. Until the end of September it may be mentioned, the krone stood in London at 16.85 to 16.95 to the pound and had ceased to be as important as the escudo which was around 100 to the pound then.

The supplementary votes of credit asked for by Sir Kingsley Wood have not apparently touched giltedged prices. The last vote of credit was for 1,000 millions. The most recent one is for £1,900 millions but in two separate proposals. More money is wanted as war expenditure is up by £1¼ millions daily. The current year's expenditure will exceed April estimates by £400 millions. Indirect taxation is producing good revenue as liquor and tobacco consumption continue to rise. The votes of credit were passed without a division like that of October; and the Chancellor's promise of extension of price control is largely meant to cut civilian consumption further and increase savings. The next budget will be one for £5,000 millions or more and the chances of raising more money by loan have to be investigated rather early in the year. The Chancellor said nothing recently to show that fiscal policy is changing in order to bring up production to the hilt. The national savings movement will have to respond more vigorously, and its main hope lies today in the good showing made by the Funds after the New Year. But a further rise in Home Rails proves that money is still going into other channels. If Oils have been irregular in the past week, the railway market, not merely South American railway stocks, has been rising. Quotations appear to be over the prewar level in spite of the reports of a threatened strike. The firmer tendncy in Home Industrials is reflected by the advance of Courtaulds, Dunlop and other market leaders. Indian Iron is higher owing to the improvement in Calcutta and the further rise in Nickel is probably due to a rise in New York where the stock market this month has developed something like buoyancy as shown in the rise of U.S. Steel Common to 50 1/8. The Roosevelt-Churchill talks should take up all share prices further as an agreement on an offensive has been reached and the confusion in North Africa is expected to end soon by consultation. General Giraud's statement on the Casablanca Conference suggests that lease-lend will help North Africa to maintain its integrity.

More suggestive than the rise in share values in London, is the report of a sudden boom in Sydney only last week. The victories in Papua have been a powerful tonic and it is presumably no longer necessary to fix either minimum or maximum prices. Anyway, it is noteworthy that industrial shares have risen in Australia since November and mining, other than gold minings, must be correspondingly higher. In six months London has developed full confidence even in shares like Imperial Tobacco and Imperial Chemicals which yield less than 5 per cent to the investor less than Woolworth or Marks and Spencer which are affected by the restrictions on shopping and reduced supply of goods. The outstanding improvement in Cable and Wireless Holding is based on the investor's estimate of what can be earned for dividends when a million and a half words are dealt with every day by the Company. More impressive is the rise in Anglo-Iranian oil. The cabinet changes in Teheran should help to raise the price further over 90 shs. Six months ago the shares stood at 47sh. 6d., and rapid improvement has followed the increase in the dividend for 1941 to 7½ per cent from 5 per cent for 1940. The annual distribution of 7½ per cent was enough to encourage confidence in prospects though oil sales in Europe were at an end. The war in Asia is a sustaining factor but it will be some time before the peacetime earnings are restored. Royalty and taxes paid to Iran have increased since 1940 but the profits for 1941 exceeded £3¼ million and the carry-forward was about £1¼ million. As the British Government holds over half the ordinary capital, every rise in Anglo-Iranian shares must naturally please the Treasury, though it is not likely to sell out either in whole or in part as it did in the case of Lancashire Cotton Corporation and Harland and Wolff shares.

Rubber and tea shares are only slightly higher after six months while giltedged have been practically untouched by the boom noted after August 1942 in London.

German control has been effective in wartime but it has not stifled local discontent. Industrial producers are reasserting their rights over industry and a new industrial board has taken over from a State Commissar the control of Germany's iron and steel industry. Dividend limitation rules have also been relaxed for the arms industries but in all other ways the Nazi party rules the roost. Leading businessmen are all in the S.S. and Labour shortage is a matter left for the police. If private enterprise has got back part of its lost authority over the manner and time for production it is still lumbering in Funk's strait-jacket. Private enterprise has certainly shared in the spoils of war. German business is guilty of the crimes for which the United Nations seek retribution. Many countries have agreed that robbery should not be recognised as a title. The Germans, of course, get nothing from Rio Tinto's Spanish properties but Trepca's assets in Yugoslavia have been taken over without any sign of remorse. The facts published two years ago about Europe under Hitler have been supplemented from time to time but Occupied Europe has grown poorer in the interval and discontent is more rife than in 1941. Labour is the main problem for Germany and a plan to take off more Dutch workers has strengthened the impression that the Dutch Nazi's persuasive chatter about opportunities in the East has missed its mark.

Implications of De-Control

The de-controlling of wheat which the Commerce Member announced a few days ago is a measure, the importance of which reaches far beyond the wheat market or the food problems as such. For, it is essentially a confession on the part of the Government that they are powerless to prevent the inflationary rise in prices, against which hoarders are clinging to their stocks. It is with a view to induce stocks to come out of their hiding that all limits to prices have been removed. At the same time, the Government have succeeded in adding to available stocks by arranging imports of wheat from Australia How these measures will actually work, it is too soon to say. If holders of wheat argue to themselves that the imports measure up but poorly to the total demand, that their effects, psychological and other, must evaporate before long and that they have only to wait a little more to realise the high prices they have been dreaming of, then the food problem, so far as wheat is concerned, is not going to be lightened considerably by the de-control now decided on. As for rice, the other staple food, the position is far worse. Reports of unsatisfactory yields due either to poor monsoons or to cyclone are current with disturbing persistence; and rice is a commodity for which we have no external source of supply to turn to. It is reasonably certain that, whatever the Government may do, there will be neither adequate stocks nor reasonable prices.

In the context of present economic life in India, the announcement of the de-controlling of wheat is significant of the virtual impossibility of controlling prices of foodstuffs by Government measures directly aimed at that object. It is legitimate, therefore, to ask whether it is not time that the Government turned their minds to the problem of inflation. We, in India, had been living in a false sense of security, so far as this menace of inflation is concerned. In the earlier stages of the war, when war expenditure both on India's account and on account of foreign governments had not risen to present heights, it was thought that there would be no problem of inflation to face. The only possible source of inflationary forces was the accumulation of sterling balances; and we, for our part, were careful to urge that the sterling balances should be utilised to repay the sterling debt, that the repayment should be followed by the issue of equivalent rupee loans and that, through this process, the inflationary effects of large war orders on India should be avoided. At that time, the rise in prices was attributed, and rightly, to motives of profiteering, and measures of price control were regarded, not as buffers against inflationary forces, but as antidotes to the poison of profiteering in the body politic. No one will contend that the spirit of profiteering has been exorcised. But it would be grossly untrue to facts to suggest that mere anti-profiteering measures will suffice to prevent the rise in prices or that too stringent control of prices will not involve in the present circumstances a measure of injustice to producers.

When inflation is rampant, price control authorities will resolve themselves into a sort of rough and ready tribunal on questions of distribution, or they will have to appear before each class of producers as supplicants in the cause of the general consumer. Taking a bird's eye view of price control during the last one year and more, it would not be unfair to say that it is a combination of measures of coercion and of petitioning. The millowners, the kerosene manufacturers and others have to be induced to restrict the rise in prices; the former are implored to manufacture a special kind of cloth and market it among the masses at special rates. That is at one end. At the other, the cultivators are forbidden to move their stocks or to sell them above certain stipulated prices. The efficacy of these measures is extremely limited. In the case of the cultivators, it is obvious that the wheat producers have been able to resist, though not in any markedly defiant way, the coercive authority of the Food Department. Needless to say, the manufacturers will take time to get out of the promises they have been induced to make. But the vicious spiral of costs and prices is far more obvious in industry than in agriculture, for the simple reason that in industry the bargain among the various factors of production are struck more often and with far more deliberateness than in agriculture. So far, industrial labour in India has had an extremely lucky time. With the threat of the political movement hovering all along on the horizon, they have got more than they would have asked for. But the rise in prices at the present rate of additions to currency will not take long to leave the wage increases behind; and the country will find itself ascending the spiral to quite dizzy heights.

The time is come when the Government must frankly recognise the harm that its inflationary policy is causing to life in this country and undertake to tackle it as such. There is, indeed, quite a good deal of misconception in the country alike as to the origin and the nature and remedy of inflation. Only too often does the example of Britain and of the measures adopted in that country to sterilise the additions to circulation figure in discussions in the problem of inflation as it faces us in this country. We hope to examine this question in detail in a later issue. We shall content ourselves here with stressing one vital difference between Britain and India. In Britain, the authorities have had to effect additions—they have no choice to currency; and then they proceed to sterilise them so far as prices of goods are concerned. In other words, the price level is protected from the pressure of increasing personal incomes by measures of compulsory saving, high taxation and the like. Here in India, we are not helpless against colossal additions to currency. Nor are measures of compulsory saving feasible, just or otherwise advisable. Nor can the modes of additional taxation which we can reasonably think of relieve the pressure of money on prices. For us, relief lies in the direction of a vigorous contraction of currency and the setting of rigorous limits to the total volume of circulation. Doubtless, other spheres of government finance, of politics too, are affected. But it is for the Finance Member and the Government as a whole to effect the necessary accommodation, in order that the very basis of economic life in this country may be spared this kind of dangerous erosion.

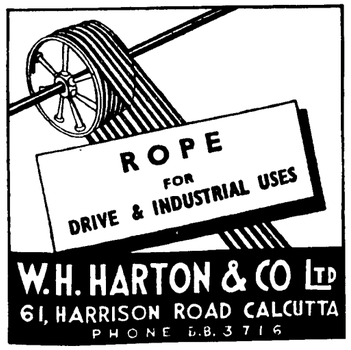
THE SELF-SUFFICIENT AMERICAS

Twenty Republics in the New World support the cause of the United Nations. Mr. Hull in examining the consequences of Chief's break with the Axis dwelt naturally on the immense value of moral support given by Latin America to the Allies when Iberian solidarity is meant to preserve existing neutrality. Latin America, except for Argentina, is not neutral. From the time of the Panama Conference of July 1940, all Latin American countries have developed an aversion to the Axis while their resources have been placed at the disposal of the United Nations. The peculiar ties developing even at a time when U. S. foreign trade is shrinking are of vast importance for U. S. war production. The general decline does not affect the trade in minerals, since the U.S.A. is anxious to get more and more imports from the neighbours in the South. A new sphere of co-prosperity is being built up. Inter-American trade is being promoted by tariff revision and reciprocity arrangements as also development of secondary industry; and special assistance is given by the U.S.A. to Latin America alone at present outside the rules of Lease-Lend.

The true parallel to the development of South-east Asia by Japanese arms is provided by the peaceful development of Latin America's minerals. Only last week it was announced that Chile, one year after the Rio Conference, had made her choice and accepted the foreign policy of Washington as that most suited to her circumstances. The Chilean Senate has supported the President in its resolution, and if attention has been bestowed on the potential naval contribution of Chile economists will prefer to discuss how Chile's minerals will assist in victory. The U.S.A. has nearly all the minerals it needs in peace. But there is a shortage of certain metals, and right from May 1941, there has been an incessant search for strategic materials in all parts of Latin America for stock-piles and other purposes. Commercial geography without being transformed into geo-politics in the Nazi way has acquired a new value in wartime, and the efforts to get Bolivian tin smelted in Texas have shown how the U. S. is adapting defence economy to all hemisphere needs. If one looks only at the map and can learn to ignore history beyond the Monroe Doctrine 1823-1943 it may well be said that the U.S.A.'s destiny lies South, not on the oceans. Consolidation now will lead to the sundering of Latin America's few ties with Europe and a compact new world, from Greenland to the Falklands, with a rising standard of living, supported by higher production, may stand forth against an impoverished Europe. Pan-American economic policy has not been uninfluenced by political considerations against intervention in Europe. Defence of the Panama Canal demanded the immediate entry of Panama and other Republics into the war. In the first year of war the U.S.A. has developed her own war production by embarking on war plant construction and expanding her own mineral production. Striking developments in spite of labour shortage have taken place. Tungsten in Nevada is a case of larger supply; Montana has increased production of antimony, and the war has led to an increase in the output of both manganese and mercury in Idaho. Reports published last year indicated the conversion of many smelters to the treatment of lead and zinc ores and actual going slow with gold-mining. Yet shortage has been referred to after the big increase in home production except in the case of aluminium. The Metals Reserve Corporation has not been able to get all that the W.P.B. wants and shortage of Mexican lead supplies has been described as the result of transport difficulties in the producing countries.

If Mexico is second only to the U.S.A. in her mineral resources to-day, her metal industries are undeveloped. After entry into the war in May last Mexico is credited with plans to build up a local iron and steel industry. Silver production has responded to the larger demand across the border, and home prices rose to a level of 65 cents per ounce according to a reliable source. But the U.S.A. wants lead and zinc rather than silver, and the higher price paid for imported silver is really designed to act as an incentive for a bigger output of lead and zinc. Not petroleum but the base metals constitute the attraction of Mexico. If mining co-operatives have revived in Mexico under the stimulus of war, the development of the industry is now extended to tin, manganese and tungsten. The lack of Far Eastern minerals has been the compelling reason for the programme of hemisphere self-sufficiency. Except for tea, every known agricultural product is available in the New World. The same might be said as regards minerals, and a survey of existing resources supports the general conjecture as to the successful replacement of Malayan tin and Russian manganese in the U.S.A. In regard to copper the U.S.A. can always reckon on Chile's production of half a million tons. Chile's mineral output at 215 million dollars for 1943, includes one and three-fourths million tons of iron of high grade. As the mineral industry, centred largely in the north supports over 100,000 workers the importance of mineral exports to the U.S.A. will be readily appreciated. Bethlehem Steel controls the iron ore and is latterly developing the Tamara deposits. Of the three big copper mines, (one an Anaconda affiliate) all are owned by U. S. interests, but two smelters belonged to French companies. The Braden Copper Mines have the advantage of hydro-electric power and provide molybdenum in addition to copper. Tin has been found near Antofagasta and mercury too is among Chile's minerals.

The declaration against the Axis and its allies will deprive Japan of cobalt and give the U.S.A. all the copper wanted. Chilean sulphur may not be wanted outside South America but tin, will be taken readily. Chile has set up a special bank for financing the development of mines and expert advisers select those qualified for help. Yet Chile will invite U. S. capital. Since nitrate and all mineral production is supported by gold-mining, which has made much progress since 1932, Chile may well hope for more assistance than the Andean republics. Prospecting in Southern Chile has been recommended as desirable and an important increase in mineral production has been indicated. Peru's mineral industry is still dominated by the Cerro de Pasco Corporation. Copper, however, is not the only mineral. The Vanadium Corporation takes Peruvian ore and the production of both lead and zinc commands an expanding market in the U.S.A. The main recent development is the increase in antimony production by small scattered miners and the expansion of molybdenum and tunnsten exports. It is the alloy metals that are short in the U.S.A. Not gold, but mica is wanted of Peru. As a supplier of coal to Argentina, and a country with large iron deposits at Marcona. Peru is more important than as a source of silver, though it must be noted here that expansion of base metal output is rising, because silver-mining is fully profitable. Peru's roads are better than those of other countries and for the U. S. A. Peru is now as important as Bolivia. The U.S.A. has made available technical help from the Bureau of Mines, financed essential exports, and the Metals Reserve Corporation has more than once raised prices and quantities taken. Canada too has received some help but not so much as Bolivia whose economy rests on mining. Tin and lead are the chief metals, but tungsten and antimony are receiving attention. Tin is won from old silver mines and the U.S.A. has arranged to take all the tin produced till July 1945. The share reserved for Britain is that of the Patino mines, which with the Hochschild and Aramayo groups, make up the Big Three in Bolivia. The increased price paid for Bolivian tin from last year has enlarged output. Restriction agreements do not touch Bolivia. Bolivia's copper is taken by American Smelting. As in the first World War, Bolivian tin is a vital material for the Allies, and pleas have been heard also for the diversification of mining output by expanding zinc, nickel, sulphur and asbestos production. Following despatch of an economic mission to Bolivia the U.S.A. has financed a Bolivian Corporation meant to help local miners and distribute supplies.



Since Brazil declared war of her own accord, attention has been riveted on her manganese and iron ores. Efforts are being made with U. S. aid to develop both. A steel mill at Volta Redonda will mark the beginning of a new industry in Brazil. The iron ore reserves of Brazil are put at 15 million tons, but from the U. S. point of view manganese from Corumba and chromite from Bahia would be more welcome. Mica and tungsten are essential minerals available from Minas Geraes. U. S. capital has been assigned for transport and mining development in Brazil in recent months and Brazil has drawn up plans of her own. A nearer neighbour, Venezuela has less to offer though petroleum and gold are equally important for Britain. The iron ore of Venezuela has captured the attention of Bethlehem Steel. At present magnesite and asbestos are considered more important for U. S. production though high labour costs will stand in the way. The Germans manifested interest in the limited supply of copper, but petroleum and gold will remain the chief minerals of Venezuela during the war. Ecuador provides oil but the chief minerals in this case are gold and silver. The lack of capital has prevented so far the development of lead, zinc and copper mining, but it should be soon different. Colombia has plans fur reduction plants to treat lead and zinc ores. Petroleum remains important but not so valuable as gold and platinum. U. S., Canadian and British enterprise are strongly entrenched in the mining industry and coal appears more hopeful than manganese or molybdenum. Emeralds and mercury figure among Colombian minerals which help to support half a million people and constitute the biggest export after coffee.

Central America has plenty of gold and silver but Costa Rica

is viewed as a promising source of manganese. The copper of Nicaragua is not considered worth exploitation, but considerable attention may yet be given to iron and nickel occurrences in Cuba. Honduras is known to yield gold and silver but little else. As against the wide distribution of coal. iron, lead, copper zinc and tin in the countries at war, neutral Argentina has not much to show. The Republic is a producer of tin and silver, like Bolivia and the output of lead and wolfram has been increasing. Argentina intends to develop a steel industry like Brazil, but non-metallic minerals appear to be the main prop of Argentine industry.

The saving in shipping used across the Atlantic is not the only consideration. Supplies from the Pacific ports can use the Canal to enter the Gulf of Mexico and a very important point to note here is that with the Japs fully occupied near Australia all S. American supplies can be conveyed safely to U. S. ports. The U.S.A. has something besides conservation and priorities to fall upon. There is a whole continent rich in minerals and waiting to be opened up fully. Air transport can aid mining progress in the Continent as in the past and Latin America's self-sufficiency achieved before it was aimed at is the cardinal factor in the programme for Pan-American development, sustained now as before by the Good neighbour policy. The twenty Republics are, of course, exponents of the Open Door and their needs are being constantly studied against the U.S.A's imperative curtailment of non-essential production.

British War Effort

In spite of a promise that 5 ships a day are possible after May 1943 the U.S.A. has problems in connection with shipbuilding. Steel is apparently one as current capacity cannot be expanded further, in the view of some, and plant extension projects must be deferred. But Admiral Land and Admiral Vickery have given many assurances, and their promises have been fulfilled last year by the great increase in construction on the Pacific Slope. Britain has openly expressed satisfaction with the results recorded so far. An announcement made last month by Mr. H. Gerrish Smith, President of the National Council of Shipbuilders, that American yards in 1942 had produced 750 merchant ships aggregating eight million tons gave much satisfaction. His further statement (reported in a press note issued by the Associated Chambers) that, given men and materials the call for 15 million deadweight tons in 1943 could be met mean a great deal for the United Nations. Washington still takes a grave view of the submarine menace which is acute in the Atlantic. The increase in new tonnage promised from America must be related to the increase in demands for shipping. It has been remarked that the ability to transport troops and supplies where they are needed, and to bring raw materials to British factories depends at present on more and better protection for shipping by escort vessels and aircraft on the rapid repair of damaged craft, on a quick turn-round in port, and on the maximum economy in all things that have to be carried by sea. That is why Lord Woolton declined to promise any increase in rations. Even for Christmas there was no extra fare because relaxation was disapproved, not merely because 54 per cent of the national income of Britain had to be reserved for the war effort in 1942. The percentage assigned for Government as against civilian consumption compares favourably with the 52 per cent of the nation's income diverted in 1941 to the national war effort. In the last peace year of 1938 the State left 81 per cent of the income for personal consumption and 19 per cent was taken for its purposes. The percentage now taken is 54 and is not very far short of what is compatible with efficiency. A further reduction in consumption is expected in the course of 1943 when Britain expects to set up the optimum ration. The Ministry of Food has indicated that the supply and consumption of food should be further reduced in the first half of 1943. Economy of food, shipping and transport has to proceed along with fuel economy which appeared to be giving good results following adequate directions to all consumers of fuel. In spite of an increase in the total arable area by 60 per cent in 3 years to a new peak of 18 million acres, by sustained effort, food must be limited. New ships are obviously meant for the war effort, not to restore imports to pre-war level and the tightening of restrictions is only to be expected though more ships are likely to be used for bringing in phosphates from North Africa for the benefit of British agriculture.

End of an Empire

The Italian writ no longer runs from Tunis to Egypt. Of the Empire bequeathed by the Liberals and built up by the Fascists after their own fashion only the Aegean Islands remain. The big towns in Tripoli have been taken by the 8th Army which has rapidly completed what was begun in 1940. The Axis has only a small fringe of Tunis left under its control. Italy's vulnerability is increased by the narrowness of the African bridgehead and the only Italian conquest in Europe, namely Albania, is threatened by Mr. Eden's promise of support to a Free Albanian movement. After Italy entered the war, she amused herself with plans for taking over Tunis. Those plans are dislocated by the advance through Tripoli. The three chief towns, Homs, Misurata and Tripoli are now in British hands and a vast shadow has fallen over the new Roman Empire. The new territory is more or less desert inhabited by a scanty population largely Negroid speaking Arabic. For a long while Tripoli was what may be called a subvention province. With military expenditure always in excess of civil expenditure it lived largely on grants from Italy. Since Tripoli has been taken there can be no naval station to menace Bizerta when that is evacuated. It is noteworthy that the resemblance between Tunis and Tripoli is more than one provided by proximity. Oases, sand dunes and a sub-desert zone are common to both. Tunny fishing and the taking of sponges are industries common to both. There are, however, no minerals and no forests, despite Italian experiments in afforestation though the cultivation of the olive is well established in Tripoli. The manufacture of tobacco provided an item for the export trade. Tripoli should help the Allies with the alpha plant, which is a source of cellulose, citrus fruit, leather and salt which constituted in the past one of Tripoli's biggest exports being as large as the exports from Benghazi. Tripoli remained undeveloped compared with Cyrenaica which was colonised by ex-soldiers and had a very large excess of imports over exports like the rest of Libya. In spite of being in touch with Central Africa, the province acquired in 1912 after 30 years had little railway mileage and traffic was poor. Italian banks had branches in Tripoli where English pounds and French francs circulated in the past along with the Italian currency. The most recent additions to Allied occupied territory in North Africa will call for large supplies including textiles and sugar. Africa rather than Asia appears to call for British exports in the near future.

Cotton Prospects

Details as to the 1942-43 cotton crop in India appeared last week. A decrease of 16 per cent in area is the principal cause for an anticipated reduction of over one million bales in total outturn as compared with last year. The outturn for 1942-43 is estimated at 4,438,000 bales of 400 lbs. each. The average outturn per acre is estimated at 97 lbs. only because of a sharp decline in the Bombay crop The three major producers, Bombay Central Provinces and Berar and the Punjab are reporting decreases ever with an acreage of over 3 millions under cotton this year. But Sind is admittedly more important than Madras even if the latter produces 100,000 bales more than Sind. The usual analysis made in the third cotton forecast shows that the area under American types has again increased. Outturn is expected to be higher at 1,283,000 bales in 1942-43. The increase should be deemed satisfactory in view of the steady fall in raw cotton imports The import duty is apparently beneficial to the Indian grower of long staple cotton at present.

The decline in the production of Bengals and Oomras, except perhaps in Hyderabad, this year is a result of the grow more food campaign and the official advice to curtail cotton cultivation after the loss of export markets. The limitations of size imposed on the Broach crop particularly in the Baroda State by bad weather this year, is not unconnected with the rise in cotton prices. But the fall in the Sind-American crop like the decline in the outturn of cotton in the Punjab, is calculated to support the higher premium paid for long-staples.

The third forecast viewed from the market angle is mildly bullish. It is known that the Deccan crop is poor owing to inadequate and ill-spaced rainfall. In the Central Provinces also the weather has spoilt the crop. The decline of desh cotton in the Punjab is a measure of the success of the food campaign. The Punjab crop has been spoilt by rain and flood in some districts and by duststorms in other districts. In Madras the cotton crop is expected to show a reduction o

(A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Bengal).

(THE SUBSCRIPTION LIST WILL REMAIN OPEN FOR A WEEK FROM THE DATE OF THE PUBLICATION OF THIS PROSPECTUS IN THE NEWSPAPERS).

ATAL TEA COMPANY (1943) LIMITED

COMPANY LIMITED BY SHARES

REGISTERED UNDER THE INDIAN COMPANIES ACT 1913.

NOMINAL CAPITAL Rs. 7,50,000/-, divided into 75,000 shares of Rs. 10/- each.

OF THE ABOVE SHARES 45,000 SHARES ARE TO BE ISSUED AND CREDITED AS FULLY PAID. RS. 5 PER SHARE IS TO BE PAID AS DEPOSIT WITH APPLICATION AND THE BALANCE OF RS. 5 PER SHARE ON ALLOTMENT.

THE SHARES HAVE TO BE PAID FOR IN FULL WITHIN 7 DAYS FROM THE DATE OF ALLOTMENT.

THE SAID 45,000 SHARES HAVE BEEN UNDERWRITTEN BY MESSRS. REED WARD & CO. AND MESSRS. G. M. PYNE JOINTLY AND OUT OF THE SAME 40.000 SHARES HAVE ALREADY BEEN SUBSCRIBED FOR BY THE DIRECTORS AND THEIR FRIENDS AND 5,000 SHARES ONLY REMAIN TO BE SUBSCRIBED FOR AND ARE OFFERED FOR SUBSCRIPTION. THE SUBSCRIPTION LIST WILL REMAIN OPEN FOR A WEEK FROM THE DATE OF THE PUBLICATION OF THIS PROSPECTUS IN THE NEWSPAPERS.

Directors:

1. Mr. N. C. Goenka, Banker & Merchant, Kurseong.
2. Mr. Stewart Gray, Senior Partner of Messrs. Reed Ward & Co., Stock & Share Brokers, 6, Lyons Range, Calcutta.
3. Mr. C. C. Pyne, Partner of Messrs. G. M. Pyne, Stock & Share Brokers, 7, Lyons Range, Calcutta.
4. Mr. G. S. Jhunjhunwala, Merchant, Hatighisa, District Darjeeling.
5. Mr. R. N. Agarwala (Ex-Officio), Merchant, Darjeeling.

Bankers:

Llyods Bank Ltd., Calcutta.
Messrs. Goenka & Company, Bankers, Kurseong.

Auditors:

Mr. K. N. Gutgutia, R.A., 57, Burtola Street, Calcutta.

Solicitors:

Brokers:

Messrs. Reed Ward & Co., 6, Lyons Range, Calcutta.
Messrs. G. M. Pyne, 7, Lyons Range. Calcutta.

Registered Office:

Kurseong, District Darjeeling.

Managing Agents:

Messrs. Goenka & Co., Merchants & Bankers, Kurseong.

PROSPECTUS.

The Company has been incorporated generally for the purpose of cultivating Tea and to carry on the business of Tea Planters and to prepare manufacture and render marketable such produce either in prepared manufactured or raw state and to acquire the tea estate commonly known as Atal Tea Estate within Mouzas Atal, Ghusroo, Naxalbari and Mahasing, Thana Naxalbari and Siliguri in the district of Darjeeling held under leases granted by the Government and for the other purposes mentioned in the Memorandum of Association of the Company a copy of which is annexed hereto and forms part of this Prospectus.

The said Atal Tea Estate with the tools plant and machinery etc. belonging thereto has been purchased on the 23rd day of December, 1942 from Saikowah (Assam) Tea Co., Ltd. of No. 149, Leadenhall St., London, the owner thereof, as the vendor and Pravat Chandra Syam of No. 2-C, Hyat Khan Lane, Calcutta as the purchaser, by Mr. Nagar Chand Goenka of Kurseong, Dist. Darjeeling, one of the Directors of the Company as the sub-purchaser for and on behalf of and as trustee for the Company then about to be incorporated. The consideration or price paid for the said immovable property is Rs. 4,00,000 in cash and for the tools plants machinery and other movable property appertaining thereto is Rs. 2,00,000 in cash.

The said purchase prices of Rs. 4,00,000 and Rs. 2,00,000 respectively making together the sum of Rs. 6,00,000 which have been paid in cash and the stamp duty, registration fees and Solicitors costs of the Conveyance and completion of purchase will be paid in cash out of the share capital of the Company and the amount proposed to be raised by the issue of Debenture as is hereinafter stated.

DIRECTOR'S QUALIFICATION AND REMUNERATION.

The qualification of a Director (other than an ex-officio Director) is the holding of 100 shares of Rs. 10 each.

The remuneration of a Director is Rs. 25 for attending each meeting besides all travelling and other out of pocket expenses incurred in attending the meetings of the Directors and General Meetings of the Company.

DIRECTORS AND MANAGING AGENTS.

The first Directors of the Company are:—

1. Mr. N. C. Goenka, Banker and Merchant, Kurseong.
2. Mr. Stewart Gray, Senior Partner of Messrs. Reed Ward & Co., Stock and Share Brokers, 6, Lyons Range, Calcutta.
3. Mr. C. C. Pyne, Partner of Messrs. G. M. Pyne, Stock and Share Brokers, 7, Lyons Range, Calcutta
4. Mr. G. S. Jhunjhunwala, Merchant. Hatighisa, Dist. Darjeeling.
5. Mr. R. N. Agarwala, (Ex-Officio, being a nominee of the Managing Agents), Merchant, Darjeeling.

In the Articles of Association it is provided that Messrs. Goenka & Company, Bankers and Merchants, Kurseong, are to be the Managing Agents of the Company for 20 years. The Managing Agents shall get a commission at the rate of 10 per cent. on the net profits of the Company without any deduction in respect of income-tax or super-tax or any other tax or duty on income or revenue or for expenditure on capital account or on account of any sum which may be set aside in each year out of the profits for reserve or any special fund.

Mr. N. C. Goenka, one of the Directors is the proprietor of Messrs. Goenka & Co.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors may proceed to allotment is 50 per cent of the shares now issued for subscription. Rs. 5 per share is to be paid with application and the balance Rs. 5 per share is to be paid within 7 days from the date of allotment.

PRESENT ISSUE OF SHARES.

45,000 shares are now being issued for subscription and the said number of shares have been underwritten by Messrs. Reed Ward & Co., Stock and Share Brokers, 6, Lyons Range, Calcutta, and Messrs. G. M. Pyne, Stock and Share Brokers, 7, Lyons Range, Calcutta jointly, who shall be paid a commission of 5 per cent on the nominal value of the said shares. Out of the said 45,000 shares, 40,000 shares have already been agreed to be subscribed by the Directors and their friends.

DEBENTURES.

Six per cent Debentures of the total amount of Rs. 3.00,000 divided into 300 bearer debentures of Rs. 1,000 will be issued and the amount will be secured by a Mortgage and Charge on all the properties and assets of the Company including its uncalled share capital. The Debentures will be repayable at the end of 10 years at Rs. 1,050 per Debenture with an option to the Company to repay the same earlier at any time after the expiration of 5 years.

The whole amount of the said Debentures have been underwritten by the said Messrs. Reed Ward & Co., Stock & Share Brokers, 6, Lyons Range, Calcutta and Messrs. G. M. Pyne, Stock & Share Brokers, 7 Lyons Range, Calcutta, jointly who shall be paid a commission of 2 per cent on the amount of the Debentures. All the Debentures have been subscribed for by the Directors and their friends.

Mr. Stewart Gray and Mr. C. C. Pyne, two of the Directors are partners respectively in the said respective firms of Messrs. Reed Ward & Co., and Messrs. G. M. Pyne, who have so underwritten 45,000 shares of the nominal value of Rs. 10 each and the total amount of the said Debentures namely Rs. 3,00,000.

The respective firms of underwriters Messrs. Reed Ward & Co. and Messrs. G. M. Pyne are well known firms of stocks of Stock & Share Brokers of Calcutta, with good reputation in the market and the Directors consider their resources quite sufficient to discharge the underwriting obligations undertaken by them.

CONTRACTS.

The following contracts will be adopted by the Company:—

1. Underwriting Agreement dated 15th December 1942 between the said Messrs. Reed Ward & Co. and Messrs. G. M. Pyne of the one part and Mr. N. C. Goenka and Mr. Stewart Gray and Mr. C. C. Pyne, three of the

PROSPECTUS—(Contd.)

Directors of the Company for and on behalf of the Company then proposed to be incorporated of the other part whereby Messrs. Reed Ward & Co. and Messrs. G. M. Pyne undertook to underwrite 45,000 shares of Rs. 10 each and Debentures for Rupees Three Lacs for the consideration of the commission of 5 per cent on the value of the shares and 2 per cent on the amount of the Debentures.

2. Conveyance dated the 23rd December 1942 between Saikowah (Assam) Tea Co. Ltd. as vendor, Provat Chandra Syam as purchaser and Mr. N. C. Goenka for and on behalf of and as trustee for the Company then proposed to be incorporated as the sub-purchaser whereby the said Saikowah (Assam) Tea Co. Ltd. granted and transferred to and the said Provat Chandra Syam confirmed such grant and transfer to the said Mr. N. C. Goenka as mentioned above of the said immoveable property known as Atal Tea Estate for the consideration of the sum of Rs. 4,00,000.

3. Purchase dated the 23rd December 1942 by Mr. N. C. Goenka for and on behalf of and as trustee for the Company then proposed to be incorporated, of the tools implements plant and machinery appertaining to the said Atal Tea Estate from Saikowah (Assam) Tea Co. Ltd. for the consideration of the sum of Rs. 2,00,000.

The said (1) underwriting agreement and (2) conveyance and (3) the receipt for Rs. 2,00,000 may be inspected at the registered office of the Company at Kurseong during the usual office hours.

PROMOTION.

No promotion money is being paid by the Company but the said underwriting commission is being paid as aforesaid for the underwriting of 45,000 shares and the Debentures as stated above.

Mr. N. C. Goenka, one of the Directors is the proprietor of Messrs. Goenka & Co., the Managing Agents of the Company as mentioned above and he is also the proprietor of Messrs. Goenka & Co., Bankers, Kurseong, the Bankers of the Company.

Mr. Stewart Gray, one of the Directors is a partner of Messrs. Reed Ward & Co., who have underwritten shares and Debentures as mentioned above.

Mr. C. C. Pyne, one of the Directors is, a partner of Messrs. G. M. Pyne who have underwritten shares and debentures as mentioned above.

The said Mr. N. C. Goenka, Mr. Stewart Gray and Mr. C. C. Pyne as such are interested in the promotion of the Company.

VOTING POWER.

On a show of hands every member present in person or by proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him.

PRELIMINARY EXPENSES.

The preliminary expenses in connection with the incorporation of the Company will be paid by the Company and are estimated to amount to not more than Rs. 5,000.

MEMORANDUM & ARTICLES OF ASSOCIATION.

Copies of the Memorandum of the Association and Articles of Association of the Company may be inspected at the registered office of the Company.

A copy of the Memorandum of Association is annexed hereto and forms part of this prospectus.

APPLICATION FOR SHARES.

Application for shares should be made on the accompanying form and sent to Messrs. Goenka & Co., Managing Agents of the Company at Kurseong or to the Company's Brokers.

If no allotment is made, the deposit accompanying the application for shares will be returned in full. If the number of shares allotted is less than the number applied for, the surplus deposit will be credited in reduction of the amount payable on allotment.

Failure to pay any future instalment on the shares allotted when due may render all previous payments liable to forfeiture.

Copies of this Prospectus and forms of application for shares may be obtained from the Company's Managing Agents and Bankers.

Dated this 22nd day of January 1943.

(To be retained by the applicant).

Received this.....day of.....1943 from Mr.....
.....the sum of Rs.....being deposit of Rs. 5 per share payable on Application for.....shares of Rs.....each in the abovenamed Company.

11 per cent on last year's crop. A fall of 26 per cent is anticipated in respect of the U. P. cotton crop. It is only in Bengal that estimated outturn at 32,000 bales shows an increase in spite of damage to the crop. The bulk of the Bengal crop is classed as Comillas so that the increase is welcome. Among the Indian States, Hyderabad alone accounts for 14.1 per cent of the Indian cotton crop. The increase in Gaorani cotton there is not enough to offset the fall under Oomras. Only a small quantity of Southerns comes from Hyderabad which is like C.P. and Berar a large producer of Oomras. The Indore and Rewa States produce over 100,000 bales included in the trade description of Central India Cotton. The major fact lately indicated is the fall in the area under cotton in India to below 20 million acres—the lowest in ten years. The crop is not correspondingly smaller this year to judge from the chart. If the increase in the U.S. cotton crop for 1942-43 has held up the rise in New York prices there is the farm relief programme and Congressional support for higher parity payments to U.S. farmers. As for Indian imports in this year the substantial reduction in the Egyptian crop will be of less importance than the increase in Uganda's cotton crop in 1942. Mill consumption may have recovered since October and the ginnings figures available up to January 1 are definitely optimistic in the view of the trade. That Bombay takes such a view is borne out by the course of prices which are naturally influenced by the news of Allied victories.

Defence Loan Totals

November was a good month in view of total subscriptions of over Rs. 4.22 crores to the 3 per cent Defence Loan. Bombay again provided the greater part of the new money put up for the Defence Loan and Bengal came a poor second with Rs. 1.33 crores against Rs. 2.6 crores raised by Bombay. The November figures again indicate that response from all other Provinces was poorer than ever though Delhi makes a fair showing with Rs. 6.52 lakhs against Rs. 3.85 lakhs contributed in the U. P. Though it would be a mistake to judge the scale and pace of the war effort by the monthly statistics of contributions to the Defence Loan alone, it is permissible to remark that only Bombay and Bengal have provided so far funds proportionate to their wealth and importance. The majority of Provinces still report total subscriptions below Rs. 1 crores for a period of over 28 months. In regard to interest-free loans also this judgment relating to poor response will hold good. The total raised by way of interest-free loans up to the end of November was Rs. 302 lakhs of which Rs. 144½ lakhs came from Bombay. As in October the Punjab led in the matter of defence savings certificates as well as deposits in the defence savings bank. But total net sales amounting to Rs. 9.13 lakhs only for the month indicate that the certificates did not attract small savings in any volume. The poor showing may be explained, but cannot be justified, and a proposal to divert part of the special allowances paid to wage-earner into defence savings certificates or the defence savings bank can be supported by reference to the total figures relating to the sale of certificates up to November 30, 1942. The progressive total

A copy of this Prospectus has been filed for registration with the Registrar of Companies, Bombay, as required by Section 92 (2) of the Indian Companies Act, 1913.

PROSPECTUS OF

THE ANAND INSURANCE COMPANY LIMITED

AUTHORISED CAPITAL - - Rs. 1,00,00,000

Divided into 20,000 4% Tax-free Cumulative Preference Shares of Rs. 100 each, 20,000 Ordinary Shares of Rs. 100 each, and 60,000 Unclassified Shares of Rs. 100 each.

ISSUED CAPITAL - - - Rs. 20,00,000

Divided into 10,000 4% Tax-free Cumulative Preference Shares of Rs. 100 each, and 10,000 Ordinary Shares of Rs. 100 each.

Payable as follows:—

	Preference Shares.	Ordinary Shares.
On application	Rs. 25	Rs. 25
On allotment	Rs. 25	Rs. 25

and the balance in Preference and Ordinary Shares will be payable in two calls of Rs. 25 each at intervals of not less than three months.

Out of the above issue, the signatories to the Memorandum and Articles of Association and the Directors are taking up 575 Preference Shares and 929 Ordinary Shares aggregating to the nominal value of Rs. 1,50,400 and the remaining 9,425 Preference Shares and 9,071 Ordinary Shares are now offered for public subscription payable as aforesaid.

The Preference Shares shall confer on the holders thereof the right to a fixed cumulative preferential dividend at the rate of 4 per cent per annum (free of income-tax), on the capital for the time being paid-up thereon, and the right in a winding-up to the payment of capital and arrears of dividend whether earned, declared or not, up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any further right to participate in the profits or assets.

PROSPECTUS.

OBJECTS:

The Anand Insurance Co., Ltd., was registered on 6th November, 1942, for the purpose of carrying on all kinds of insurance business permissible under the Insurance Act, 1938, and with the objects set out in the Memorandum of Association of the Company, a copy of which forms part of this prospectus. The Company proposes to transact all kinds of insurance business.

SCOPE & PROSPECTS:

Risk is an element which is quite common though not certain with men and things. In order to eliminate the undesirable effects of this uncertain element and to provide against any unexpected contingency, the need for insurance arises. It is encouraging that in *India, realisation is growing fast of the* splendid opportunities and increasing facilities afforded by insurance, which though not in the nature of a preventive of risks, saves one from losses. The basic principle is that the individual's risk is spread out and shared by the community, the medium of such social co-operation being the insurance company. The growth of insurance companies is therefore widely welcomed and in India particularly, the habit of insurance is being increasingly included and appreciated too by the general public. According to the latest available figures, the number of insurance companies constituted in India is 198, out of which 161 companies transact life business *only, 18 companies undertake life and other* kinds of insurance business while 19 companies carry on business other than life. With a population of over 400 millions and with a great expansion of national industries and increase in the tempo of business activity, the field before Indian insurers transacting a wide range of business is undoubtedly very large.

The investment merits of insurance shares can hardly be over-emphasised. A glance at the quotations of the shares of the leading insurance companies will show that an investor who had put his funds in insurance shares some years before is now having his capital multiplied many times, besides getting a regular income by way of dividends. Insurance companies are in fact *the very big and leading financial institutions* to-day having very large investment portfolios and contribute in a large measure to the industrial and economic prosperity of the country and the individuals. It is possible for insurance companies to pay dividend on shares from the incomes derived from their investment alone, accumulating at compound interest. Hence it is that shares of companies having a wide range of business are avidly bought by investors with a long-term outlook.

DIRECTORS' QUALIFICATION AND REMUNERATION:

The qualification of a Members' Director shall be the holding of any one or more class or classes of shares in the Company of the aggregate nominal value of at least Rs. 25,000 registered in his own name or jointly with others. The qualification of a Policyholderss' Director shall be such as may be prescribed from time to time by the Directors subject to the provisions of the Insurance Act.

The remuneration of a Director shall be such amount not exceeding Rs. 100 as the Directors may from time to time fix for every meeting of the Board attended to by him, or such fee not exceeding Rs. 150 per month as the Directors may from time to time fix, and such reasonable additional remuneration as may be fixed by the Directors may be paid to any one or more of their number for services rendered by him or them in signing the shares certificates in respect of the Company's original capital or any further or new issue thereof or any debentures issued by the Company; and the Directors shall be paid such further remuneration either by a fixed sum or by way of a percentage on the profits or otherwise as the Company shall in General Meeting from time to time determine and such remuneration shall be divided among the Directors in such proportion and manner as the Directors may from time to time determine.

The Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee, if any, appointed by the Directors, and may pay the same.

If any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing abroad or otherwise for any purpose of the Company, the Board may arrange with such Director for such special remuneration for such services either by a fixed sum or by a percentage of profits or otherwise and either in addition to or in substitution for his share in the remuneration above provided, as may be determined by the Board, and such Directors shall be entitled to be repaid any travelling or other expenses in connection with the business of the Company.

No Director shall be allowed or paid for the purpose of attending a Board Meeting of the Directors held in Bombay any sum to cover his travelling or other expenses, but he shall be entitled to his fee for attending any such meeting; provided however that the Directors may allow and pay such Directors as shall attend a meeting of the Directors held in any place outside Bombay such sum as the Directors may consider fair compensation for travelling or other expenses, in addition to their fee for attending such meetings.

DIRECTORS' INTEREST AND MANAGING DIRECTOR:

No Director except the Managing Director, Sir Chunilal B. Mehta, is interested in any way whatsoever in the promotion of the Company, except as holders of shares and to the extent to which they are entitled to remuneration as provided for in the Articles of Association of the Company, such as attendance fees, travelling or special allowances, etc.

Sir Chunilal B. Mehta is the Managing Director of Messrs. Chunilal Mehta & Co., Ltd., who have along with Mr. Hirabhai Ashabhai Patel, also a Director of the Company, underwritten the entire present issue of shares of the Company to the public. Sir Chunilal B. Mehta and Mr. Hirabhai Ashabhai Patel are thus interested in the underwriting commission and brokerage payable by the Company to the said underwriters.

Sir Chunilal B. Mehta is the Managing Director of the Company and as such is interested in the honorarium payable to him. By Article 153 of the Articles of Association of the Company it is provided that Sir Chunilal B. Mehta shall act as the first Managing Director of the Company till he continues to hold the necessary qualification of a Director or until he resigns, that the provisions in the Articles and/or statutes relating to retirement or resignation or removal of Directors shall not apply to him, that during the period of office as Managing Director, he shall be paid by the Company an honorarium of Rs. 1,000 per *month* which may be increased by the Directors from time to time either by way of honorarium, salary, commission or participation in the profits or by *another* of all these modes, and that in addition to the honorarium or other remunerations, he may also be paid such other allowances as may from time to time be determined by the Directors.

It further provides that subject to the control of the Directors, the general management of the Company shall be in the hands of the Managing Director who shall have the powers, authorities and discretions on behalf of the Company to enter into contracts in respect of the business of the Company and rescind and vary all such contracts and to do all things usual, necessary or desirable in the management of the affairs of the Company and in carrying out its objects, and shall have power to appoint and employ in or for the purposes of the transactions and management of the affairs and business of the Company or otherwise for the purposes thereof such Agents, General Managers, Managers, Secretaries, Clerks and other employees or servants as he shall think proper, with such powers duties and upon such terms as to duration of employment, remuneration or otherwise as he shall think fit and from time to time to remove or suspend or replace or reappoint any or all of them as he shall think proper.

Article 154 *inter alia* provides that subject to the provisions of Article 153, the Directors may from time to time appoint any one or more of their body to be Managing Director or Managing Directors of the Company for such term and at such remuneration either by way of honorarium or salary or commission or participation in profits or by another or all of these modes, as they think fit and they may from time to time (subject to the provisions of any contract between him or them and the Company) remove or dismiss him or them from office and appoint another or others in his or their place or places.

POWERS OF DIRECTORS:

The Articles provide that the business of the Company shall be managed by the Directors who may exercise all such powers of the Company as are not by the Act or by the Articles required to be exercised by the Company in General Meeting subject nevertheless to any regulations of the Articles, to the provisions of the Act and to such regulations, being not inconsistent with the aforsaid regulations or provisions as may be prescribed by the Company in General Meeting, but that no regulation made by the Company in General Meeting shall invalidate any prior act of the Directors which would have been valid if that regulation had not been made.

MINIMUM SUBSCRIPTION:

The minimum subscription on which the Directors may proceed to allotment is 6,500 shares of the face value of Rs. 6,50,000 which in the opinion of the Directors would be quite adequate to provide sums for deposits to be made under the Insurance Act, for the payment of preliminary expenses, underwriting commission and brokerage for subscription of shares payable by the Company, and for working capital.

UNDERWRITING COMMISSION AND BROKERAGE:

The Company is entitled under the Articles to pay a commission and/or brokerage to any person in consideration of his subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares in the Company not exceeding five per cent. on the nominal value of the shares so shares so subscribed. Messrs. Chunilal Mehta & Co., Ltd., have along with Mr. Hirabhai Ashabhai Patel underwritten the entire present issue of 9,425 Preference shares and 9,071 Ordinary shares of the Company on an underwriting commission of 3 per cent. including a brokerage of 1 per cent. on the face value of the shares. In the opinion of Directors the resources of the underwriters are sufficient to discharge the underwriting obligation. Brokerage at the rate of Re. 1 per Preference share and Re. 1 per Ordinary share will be paid by the Company to the debit of the said underwriters' account, to a recognised broker or firm of brokers or other agents approved by the Company on allotments made in respect of applications bearing the stamp of such broker, firm or agent.

PROMOTION FEE AND PRELIMINARY EXPENSES:

No promotion fee will be paid to the promoter excepting the actual expenses incurred by him incidental to the registration and formation of the Company. Preliminary expenses including expenses incidental to the formation of the Company but excluding commission on shares are estimated not to exceed Rs. 20,000.

APPLICATION FOR SHARES:

Application for shares should be made on the Company's printed form attached herewith and also available at the Registered Office of the Company in Bombay together with the amount payable on application either in cash or by a cheque. The Central Bank of India, Ltd., and all their branches and pay offices have been authorised to accept applications and the share money on the Company's behalf and grant receipts therefor. Where no allotments are made, the deposit of application money will be returned in full; and where the number of shares allotted is less than the number of shares applied for, the balance of deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned.

CERTIFICATE OF SHARES:

The share certificate will be ready within eighteen months from the date of allotment.

VOTING:

According to the Articles, every holder of Ordinary or Preference Shares shall, on his name being entered in the Register of Members, be entitled to be presnt and to speak and to vote at any General Meeting, and shall, when present in person or represented in the case of a Company by a representative duly authorised under Section 80 of the Act, have one vote on a show of hands, and shall, on a poll, when present in person or represented in the case of a Company by a representative duly authorised under Section 80 of the Act or by proxy, have one vote for each share held by him. When a Corporation being a Member is present by a proxy who is not a Member such proxy shall be entitled to vote for such Corporation on a show of hands. Votes may be given either personally or by proxy in the manner prescribed in the Articles. Where there are joint registered holders of any shares any one of such persons may vote at any meeting either personally or by proxy and if more than one such joint holders be present at any meeting personally or by proxy that one of the said persons so present whose name stands first on the Register of Members in respect of such shares shall alone be entitled to vote in respect thereof.

No member shall be entitled to speak or to be present or to vote on any question either personally or by proxy, or as proxy for another Member, at any General Meeting, or upon a poll or be reckoned in a quorum whilst any money due from him, whether alone or jointly with another or others, to the Company in respect of any shares or share remains unpaid.

TRANSFER OF SHARES:

The Articles provide that the Directors may in their absolute discretion and without assigning any reason therefor decline to register any transfer of shares and their power or discretion to refuse such transfer shall not be affected by the fact that the proposed transferee is already a registered Member of the Company.

MEMORANDUM AND ARTICLES OF ASSOCIATION:

The Memorandum and Articles of Association of the Company and also the terms and conditions of underwriting may be inspected at the Registered Office of the Company during the business hours and any person subscribing to the shares shall be deemed to have full notice thereof.

A copy of the Memorandum and Articles of Association may be supplied to any member of the Company on payment of Re. 1.

Copies of the prospectus and forms of application for shares may be obtained at the Registered Office of the Company or from all the offices of the Central Bank of India, Ltd., or from Messrs. Chunilal Mehta & Co., Ltd., 51, Marwari Bazar, Bombay 2, or from Mr. Hirabhai Ashabhai Patel, 94, Stock Exchange New Building, Fort, Bombay.

Branches and Agencies throughout INDIA and the EAST.

The Bank transacts banking business of every description.

Current Accounts are opened and Fixed Deposits received on terms which may be ascertained on application.

Savings Bank Accounts.—Opened at Delhi, Simla and Howrah.

The Bank undertakes Trusteeships and Executorships.

A. P. POWLES, *Manager.*

CLIVE BUILDINGS, 8, CLIVE ST., CALCUTTA

was below Rs. 1½ crores and the savings campaign had scarcely made a start. This year should, however, see a definite beginning and the growth of savings may be diverted away from joint stock banks, though it is possible to argue convincingly that control over all private issues of capital must come soon in the interests of the Government and investors alike.

Habib Bank's Progress

A proposal to raise the share capital of the Habib Bank will be considered at the extraordinary meeting of shareholders next month. The authorised share capital is to be raised to Rs. 2 crores from Rs. 50 lakhs and the Directors intend to issue 50,000 preference shares on which Rs. 50 will be paid up. The new preference shares are to be participating preference shares but will carry no voting rights, though eligible for bonus payable in respect of ordinary shares. The addition of preference capital, qualifying for a dividend of 3 per cent in addition to a share in profits, if the ordinary dividend exceeds 3 per cent, will be welcomed. The report issued with the notice is likely to make an impression. The remarkable progress in a single year removes the Bank definitely from the category of new, unproved enterprises against which a caution was given by Professor Davar. The Habib Bank's statutory report indeed suggested that by getting its entire share capital in the briefest of periods and being admitted to the Second Schedule at once, the Bank had more than made good. All anticipations as to further progress have been fulfilled in the period of 16 months covered by the report and accounts. The shareholders who will have a right to take up the new preference shares will be duly gratified by the maiden dividend of Rs. 3 per share payable from profits after appropriating Rs. 1 lakh to Reserve and Rs. 60,000 for taxation. The profit struck for sixteen months or rather fourteen months of successful working is as large as Rs. 3.66 lakhs and the dividend on Rs. 25 lakhs of paid-up capital takes only Rs. 1.51 lakhs. The Directors record satisfaction with the progress shown in the first year. Expansion is admittedly desirable, and the additional capital of Rs. 25 lakhs along with the contingent liability to the extent of Rs. 50 lakhs will put the Habib Bank among the oldest and most successful of Indian banks. There is much to support the comment made here on the statutory report presented last year. The Habib Bank is now well established as a distributor of gold and silver to its depositors and others. And the Board has also expressed its thanks to the Bombay Mint for its help in providing gold and silver bars. The auspicious entry into the bullion trade has been followed by the issue of cash certificates. Depositors should be pleased by the payment of a bonus of 10 per cent in addition to interest for 1942 on their current accounts and they should be even more pleased with the astounding increase in deposits. At the end of 1942 the Bank's total deposits exceeded Rs. 239.49 lakhs. The advantage of a large paid-up capital will be appreciated by all banks who would find evidence of exceptional liquidity in the case of the Habib Bank achieved in this case by limiting investments and quick realising of profits thereon. It is noteworthy that the Bank at the end of 1942 reported Advances exceeding Rs. 151.78 lakhs of which

Rs. 116.68 lakhs was on deposit with the Reserve Bank of India. The cash ratio is not the only guarantee of experienced and skilful management in this case. The distribution of Advances supports the belief that the Managing Directors have well nursed the bank in its first year. The Habib Bank is now far more fortunately placed to obtain its share of the growing volume of bank deposits in India, and it would not surprise Bombay if deposits top Rs. 5 crores within this year. The Bank is preparing for expansion by approved methods and the doubling of the share capital next month should lead not only to the further increase of deposits but to a steady increase in profits with a corresponding increase in Reserves. The main impression produced by the Bank's report is that if such progress has been made with two offices only the Bank may break all records if it turns to the opening of branches in the next few years.

Danger to Indian Jute

Reference to the progress of jute-growing in South America is made in a letter to a Calcutta firm published recently in the Indian Central Jute Committee's bulletin. The letter generally supports what has been said by many about the interest manifested in rival fibres and the immediate danger arising to India from an uncontrolled increase in the prices of jute and hessian. The Fabrics Argentina de Alpargatas, known to be a large consumer of jute, dwelt on the reduced shipment of jute and hessian to Argentina and the interest shown locally in growing jute. Although it started in a very small way last year, and the total production did not exceed 200 tons, a crop of 3,000 to 4,000 tons is expected this year. Naturally the jute from the next crop that will be ready in March-April 1943 will not be as well prepared as Indian jute, but good enough for our requirements and very much better than some of the jute we receive from Calcutta. The letter adds that jute production and local manufacture of hessian is to be encouraged by a Board associated with the Ministry of Agriculture. Plans for extending cultivation on correct lines have been drawn up. The letter states: "The climate in certain zones of the country is ideal for jute, the only objection being the scarcity of labour for stripping the fibre. This difficulty is to be got over by installing machinery". The letter also says: They already have a machine similar to that used for defibring hemp which we understand has given quite good results and a fair daily yield. You will see that serious steps are being taken to make jute-growing a success, and we believe that unless shipments can be maintained, local production may eventually supplant imported jute and hessian entirely.

Brazil also is working on the same lines, observes the Argentine firm. She is turning out a substitute for hessian in the form of a fabric made from 33 per cent jute and 66 per cent from locally grown fibres. Brazil, added the letter, will undoubtedly do all she can to place the new fabric on the Argentine as soon as she has any production to spare. Information was sought in the letter as to Calcutta's views on the developments reported. It was also pointed out that South American jute-growers would secure tariff protection very easily and later on would get tariff protection for local jute mills. American experts on a visit to the Argentine examined the possibilities and made a note of what could be done with jute especially as the plan drawn up in October covered cultivation, manufacture and marketing of jute in the United States of Argentina. According to the scheme framed then Argentine technicians are to be sent abroad if necessary and foreign advisers are to be imported in order to carry out plans for developing the cultivation of jute and other fibres in a country which is one of the world's biggest sources of wheat, linseed and maize. In connection with the scheme to develop jute, mention has been made of the Armour group (dominant in the U. S. packing industry) and connected also with a very distinguished American diplomat serving in South America. Chile is known to be concentrating on hemp like Ecuador at present without experiencing the difficulties of the latter. The U.S.A. may start buying hemp (canamo) from Chile in view of Chile's adherence to the United Nations.

Russian Victories

There is no longer scepticism as to the magnitude of the second winter campaign. The Germans have been cleared from the steppes, the Don Valley and the Trans-Caucasus. The achievement is breath-taking and is supported by the expulsion of the besiegers of Leningrad. The Indian markets have taken due note of the current of war, and the recovery in share prices this week stands out in contrast to the panic which compelled Committees to act last year in the interests of clients and brokers alike. Banks have latterly regained deposits taken out by nervous people and the Russian victories must be considered a very important market factor indeed. In a month or so the chances of a German recovery have virtually disappeared. The re-conquest of the Ukraine must be reckoned more than a possibility. Optimism in this case is founded on the remarkable increase in Russian war production reported in November. If Finland's resolution has not weakened her inaction is enforced by the Russian determination to keep up a continuous advance to the Dnieper. Allied assistance explains in part the Russian recovery, but only in part. For the recovery of this winter is based on the failure of the Germans to keep up two campaigns at a time—in Africa and Russia as well. If Rostov, Kharkov and other industrial concentrations have been shattered by the war, Russia's great resources in the Urals seem adequate for the supplies needed for the reserves thrown into action.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

At the bar of world opinion, which is apparently somewhere near the Supreme Court of the U.S.A., Great Britain puts in frequent appearances as a defendant. I don't know how she manages it, but Britain sees to it that, though she appears as defendant, the case is heard ex parte. The plaintiff, whoever it is, is the unusually obliging sort who institutes the case, but leaves the field clear for the defendant. And the judges listen to the defence without worrying whether the plaintiff is or is not present. This sort of trial has been going on for quite a long time now. And the defendant has been piling up dimissals with decrees for costs. A year or more ago, Mr. Amery had a few questions sent to him from over the Atlantic, questions which looked like accusations but were only opportunities for vindicating, shall I say, the indefensible. I forget what those questions were; and the references are not ready to hand. But in the ex parte defence which Mr. Amery put up, he came out with flying colours. That game has now been pushed to its logical conclusion. Why wait for somebody to institute the action? Why not, to change the metaphor, take the bull of American opinion by the horns and ram down its throat some of the flattering facts about British rule in India? "Who manages the affairs of India"?—that is the question which meddlesome Yankees are bothering themselves about. Tell them; and wait for paeans of praise for Pax Britannica and perhaps there will follow an application for a few British statesmen for the U. S. by way of reciprocal lease-lend.

The idea is as ingenious in execution as in conception. Fifty facts about India, all concrete facts, easily verifiable, each with its moral, definite and indisputable, all moving together in a solid phalanx against American prejudice against the British in India. The American may be trusted to look over these tabloids, gulp a few straightaway and tuck the others in his pockets for future, and more leisurely, consumption. Thus will the American public mind be immunised against the poisons which the Axis radios, not to speak of Congressmen in exile belch forth into air and ether. Nothing will come between Mr. Churchill and Mr. Roosevelt while the war is on; and once it is won, the Americans can be trusted to appreciate the fifty facts better than they may be disposed to now.

* * * *

Now, what are these fifty facts? They are divided into four categories, Government, people, economic aspects and war effort. Some of these, you would think are too obvious to call for mention. But when you tell the American that "Congress" is not the federal legislature in India but only a party, you not only put him wise, but rub it into him, politely but effectively, that he has been an utter ignoramus about Indian affairs. Likewise, religious freedom sounds differently in American than in Indian ears. We here might wonder how religious freedom is to be denied, and, if it is, what religion the Government of India could choose to impose on us. But to the American, the "Mayflower" is ever voyaging on all the oceans of the world; and his reaction to the intelligence that India has religious freedom is a great asset to this publicity campaign. The facts, then, are chosen with an eye to propagandist value and not to their objective importance in the Indian situation.

* * * *

By the same standard, the war effort is more important than the grouses about denial of Swaraj. And publicity in regard to war effort has been so standardised that the author of "fifty facts" has not to rummage many ponderous files to get at what he wants. "Sea-going personnel has increased by over 600 per cent. India's output of shells in April, 1942 was 433 per cent greater than that of June, 1940." That India started from scratch may be a disadvantage in other spheres; but in propaganda, it is a singularly fortunate circumstance. Percentage of increase can be put at slightly less than infinity; and if more familiar figures are employed, you can gain a reputation for under-statement. I wonder how the Americans will react to this part of the propaganda. To them, war effort is in terms of aeroplanes and tanks and ships; and when they are told that all shipyards in India are working to capacity and 4,000 ships have been refitted and repaired, they might wonder whether the capacity of a whole sub-continent may not reach higher than repairing and refitting 4,000 ships. The figures given for the Army and the production of military garments and the like must be expected to persuade the American public that it needn't interest itself in the Indian political problem on the ground of inadequacy of war effort.

But the American public will resent being told that its interest in India is selfishly motivated. American susceptibilities in this regard must be respected; and the facts that are to convince the American public that the British have done well by India are easily culled. After all, this sort of propaganda is not altogether new. Why, as children we used to read of the Benefits of British rule; and the list included everything that is not a mark of savage life of primeval times. Here, the picture is to be presented from a new angle, the tone has to be altered slightly and the highlights have to be shifted somewhat. You can't talk of telegraph and posts as benefits of a modern system of governance. But how about India having the largest single steel plant in the whole of the British Commonwealth including even the United Kingdom, or about India having the largest irrigation system in the world (over twenty-two times the acreage irrigated under United States federal projects) or the Indian Railways being one of the world's largest business enterprises? As for economic development, there has been a rapid growth of industries, the number of cotton mills have increased, Indian investors hold 75 per cent of the Indian Government securities, fiscal autonomy dates from 1921 and, to cap all, since 1900 there has not been a serious famine. Against this background are set a few facts about Indian political life. India has been offered full self-government, ten out of every eleven judges in India are Indians, only four out of fifteen members of the Viceroy's Executive Council are Britishers and not the whole of India is British India. Now, the author of this pamphlet asks the Americans, what is there to weigh on your democratic conscience?

* * * *

A few zealous democrats, I imagine, will rush to some public library, ask for certain books of reference and check up the figures and facts given in the book. The more such zeal, the greater will be the success of this propaganda. Which of these facts can be controverted? And he who fights facts because they are against him can only look to untruth for an ally Once these facts are verified, the zealots in the cause of India will become converts to the opposite view and will help to win more converts. They will make open confessions of their previous errors and misapprehensions and their confessions will be useful for pushing the propaganda yet further. Only a few thoughtful men who have studied the subject independently will know what beautiful lies can be manufactured with nothing but facts as raw materials. In publicity, as in war, fronts, there are none like the British to fight a losing battle. I remember an extremely intriguing remark in an article in the Encyclopædia Britannica (the article is on "Billiards" I think) in which the writer says of the British champion, that he won because of the characteristic British trait of not knowing when he was beaten. A few months ago, it was thought that British propaganda in the U. S. A. had misfired, why, that it had more than defeated its purpose, since it had served to put the Congress in a particularly favourable light before American opinion. Practically the whole of the American press was asking for another move towards settlement of the Indian problem. But the British Government did not throw their hands up. They have been hard at work. We hear less and less of American interest in India and by the time the war is over, the Americans will probably be enthusiastic supporters of the British policy in India.

* * * * *

That would be a most unfortunate development judging from the interest of all the three countries and of the world at large. In more ways than one, India is now a world problem; in fact, any large country with such a variety of natural resources would be a world problem, if its people have failed for some reason or other to establish an efficient and stable government of their own. Economically and politically, such a country would prove to be a source of trouble both to its own people and to others. I say economically and politically, because I contend that the economic troubles would remain, even if you assume that there is no political problem in India which can be profitably tackled. If Indians cannot agree amongst themselves, if the only kinds of leadership that Indians can throw up are the kinds we have—one vegetates in jails, another in secluded heights of intransigence and a third with a warped mentality that seeks compensation in office in Delhi and tirades against Congress—well, it is more than you can expect any foreigner to do to look into your quarrels, to adjuge them and to award a decree of Solomon's wisdom. Why should any one do it? True, but what sort of economic order are you going to bring about in the post-war world if his country, of which the pamphlet says everyone man in five on this planet is an Indian, is to be left in chaos? What part can a country like this play in a post-war world economic order? And America has bled herself only in order that there may be no world wars which are not of her making but which she cannot ignore. Weak India would be a temptation to all. And if India were in the hands of any one nation, there is bound to be rivalry among the Powers. These fifty facts may be multiplied into five-hundred; but the Indian problem as it concerns the people of India or of the Powers abroad would still be the same.

* * * *

I do not claim to know what British policy to India will be in the post-war period. But my own honest thought on the subject tells me that what we lack in communal goodwill at home must be made up by the goodwill of other nations to us as a people and as a country. Britain by herself cannot, and will not, make up this shortage of goodwill. She has played this divide and rule game too long to abandon it abruptly and back up a strong national government against the dissentients. But it is far different to devise a wise federal constitution with all the appropriate checks and balances and give this country a chance to prove its worth. Such a task, if it were attempted under the aegis and with the help of a committee of international experts, cannot possibly be doomed to failure. Only a free and self-governing India can fit into the framework of permanent world peace. This fact, America and all the United Nations can overlook only at their peril. And my quarrel with these fifty facts is that they disable the States for a proper appreciation of this fact. Who is to combat this pernicious propaganda? It is not easy to say. The Congress leaders are in jail; and even if they were free, they would not be free to embark on this propaganda. What about the Muslim League or the Hindu Mahasabha? Or these non-party leaders, who fuss about their futile conferences? I contend that to counteract this propaganda is everybody's job. Which, unfortunately, amounts to saying, it is nobody's job. A friend, who has been reading these lines over my shoulder from behind, asks, why not the Federation of Indian Chambers. Yes, why not, when you come to think of it?

* * * * *

Investors are offered preference and ordinary shares in the Anand Insurance Company Limited. The prospectus refers to the growing popularity of insurance. All Indian companies have reported better results in recent years; and insurance shares are still rising. As the ideal long-term investment insurance shares are better than bank shares. That the Board has put up a part of the capital in this case is an advantage to investors. Sir C. B. Mehta as Chairman and Managing Director of the new company is a guarantor of success. The new company has the best connections in Bombay and Guzerat; and the formation of a new company with adequate capital and influential connections proves that the Insurance Act of 1938 is no bar to the further development of insurance. The Anand is the largest new company formed after the Act came into force. Its promoters are keen, successful businessmen who have taken all the usual precautions including underwriting.

* * * *

That the preference shares afford 4 per cent only indicates clearly the investment rating of the company's ordinary shares. There should be a rush for the prospectus as well as the shares now issued. The Anand has a large capital so that steady development is assured. Readers will note that mill agents, industrialists etc. are associated with the Anand whose shares being fully paid up from the beginning, will be different from most other insurance shares. That more Indian insurance companies are wanted in order to get the maximum benefit for Indian enterprise has never been questioned. But it has been left to Sir C. B. Mehta to show India the way to do things. The Anand certainly has a big future for Sir C. B. Mehta is known as a financial wizard. That he has travelled beyond bullion and cotton towards a wider financial sphere is a happy sign that he like those who have promoted big banks of late is wholly confident and reckons on a full term of prosperity during and after the war. The Anand prospectus is more than an offer of shares. It is an omen of great things to come when money is abundant and desirable investments are scarce.

* * * * *

The Atal Tea Estate in Darjeeling has been acquired from a sterling company by outright purchase and a new rupee company has been formed to take over the Estate. The ban on new planting estates remains, but a very hopeful departure in Indian planting enterprise has taken place. That two famous firms including that of Mr. G. M. Pyne who is

15 Points ON SAVING PETROL

15 GENERAL ENGINE CONDITION

No car can perform with its maximum economy if the engine is not in perfect condition; therefore, from time to time the whole engine should be inspected, particularly to ascertain if compressions in each cylinder are good and approximately equal, and if the valves and spark plugs are in efficient working order.

Motorists will find that they will obtain greatly improved petrol consumption when cars have been correctly tuned. Re-tuning of engines in most cases necessitates only minor adjustments which can be speedily effected by competent garage and service station mechanics.

FREE Copies of our leaflet "15 Points on Saving Petrol" are available free on application to us at Hongkong House, Calcutta; in English, Hindi, Urdu, Bengali, Marathi, Gujerati and Gurmukhi.

regarded as the ultimate judge of tea shares are connected with the present issue of shares as underwriters and directors is, of course, an important consideration for Calcutta investors. Messrs. Goenka and Company of Darjeeling have been selected as managing agents and the intial success has been great as 40,000 shares have been already subscribed for by the Directors and their friends. The investor outside is however, given a chance to take at par shares in a Darjeeling tea company. Tea prices have risen; so have share prices. A Darjeeling company's shares cannot be had at par. Since details as to acreage, output and capitalisation per acre are not available in this case it is necessary to stress the outstanding fact that the Atal Tea Company (1943) will take over part of an English tea company's property in the Darjeeling district. In view of the firmer tone in tea shares, with the majority well over par, success is assured for the present issue of Rs. 4½ lakhs in ordinary shares. Only a week is left for investors to decide, but in view of the striking success of recent plantation issues, in the south, it is possible that the lists may be closed soon. The Company is not a new concern but one formed to take over substantial assets. Those who will look on the new issue as a straw in the wind will naturally dwell on the advantages of securing for Indian investors the assets of sterling companies. It is possible for them to regard this flotation as the precursor of many similar issues, through which India's savings, still growing owing to the war, can be profitably diverted to the acquisition of British investments in India. Investors who can count on the prosperity of the tea industry through the renewal of the restriction agreement will help themselves and India if they endorse this view

'EAVESDROPPER'

(*Continued from page 171*).

Russia's strategy and its timing are no longer questioned and Japan's continued neutrality has been helpful rather than otherwise for the garrisons there could be diverted to Stalingrad to hold up the fierce onrush of the Nazis in the autumn. Japan failed to move in the Far East because the U. S. Navy started to peg away at the Solomons. If that is understood, the real value of present Allied help to Russia as compared with the opening of a second front in Europe will be discerned by those who have argued that after the passing of the 80 days (mentioned in July by Captain Lyttelton) something should be done in Europe. That the Nazis fear an invasion of Norway from U. S. bases in Iceland and Ulster may be said to prove that the U-boats by themselves cannot check the Allies' descent on Europe when that is called for. Russian views on the grand strategy must have changed since Mr. Churchill's visit to Moscow, and in the next survey of the war by the Premier one should get all the events and consequences in the right order.

Confusion in French Africa

The compromise between Giraud and de Gaulle has not materialised. The latest obstacle to unity appears to be the selection of M. Peyrouton as Governor-General of Algeria. The Fighting French distrust the Vichyites. They want no truck with those who supported for any time the surrender of June 17, 1940. General de Gaulle however has not allowed prejudice to stand in the way of military co-operation in Tunisia with the garrison that supports the Allied advance. But from the Fighting French point of view the Allies' diplomatic envoys in backing Eisenhower's temporary arrangements have gone far to prejudice their original claim for a new Empire that should wage war until victory. The chances of getting phosphates and iron ore may have improved since Darlan's death, but naval units and Dakar as a base, do not confer the advantages that will come from a clean break with the past regime. Continuity of policy is opposed by the Fighting French who find that Washington is slow and unnecessarily cautious as in its dealings with Martinique. That the U.S.A. influences the support given by Britain to Giraud is not doubted but nothing has been said as to the need to preserve arrangements that will keep Spain neutral and the Empire of Morocco friendly. Another Moroccan crisis is not desired by the Allies; that is self-evident, and restoration of Tangier's international status may be viewed by Britain as even more important than securing an agreement among the French.

(From Our Correspondent)

Bombay, Jany. 28, 1943.

Sir Alexander Gray was among the guests at the opening ceremony of the Bharat Bank's office in Bombay when Sir S. Askuran Shah discussed the need for banking development in India. In the absence of Seth Dalmia Mr. Amersey described the plans of the founders. The States are to have modern banking facilities because the Bharat Bank has a big capital and can set up its branches without waiting for deposits and reserves to accumulate. Mr. Amersey referred to the unprecedented demand for the Bank's shares after the prospectus was issued. The preference shares have not been fully allotted though Rs. 13 crores was received soon in subscriptions for shares. The preference shares may be issued at a higher premium later on if the Directors decide. A very important announcement made was that the Maharaja of Dumraon and the Maharaja of Darbhanga had joined the Central Board since the prospectus was issued. Mr. Amersey also announced that Mr. Rajagopalchariar would open the Madras office and Sir Padampat Singhania would open the Cawnpore office while Sir Maurice Hallett would be present at the opening of the Lucknow office. No jointstock bank in India has started in this big way. The Bank has been asked to help in the fight against inflation and to give credits to clients in a careful manner. A leading stockbroker, Mr. Amritlal Kalidas, welcomed the opening of the Bank and predicted the success of the branch under Mr. Jayantilal Thakore.

* * * *

If the financial outlook here is brightening quickly the food situation is still alarming. The position in Dharwar is causing anxiety. Scarcity has been openly admitted but Bijapur's claims are considered imperative. The Governor on tour offered little consolation to Dharwar though he was pleased with the District for having raised Rs. 13 lakhs for war loans and sent Rs. 2 lakhs to the War Gifts Fund. At Gadag the Governor made a gesture by returning a gift meant for the war fund for the purchase of food. The amount involved was Rs. 300 but the villagers who are forced to earn their bread on test works opened in the taluka have cause to be grateful. The villagers made bold to ask for continuous relief work in the vicinity of their homes. Tank restoration schemes are in progress and road construction or repair is going on in the District. The most arresting intelligence is that the National War Front is helping in opening cheap grain shops in nearly all towns and Civic Guards are helping in the distribution of supplies.

* * * *

An application has been made before the High Court of Bombay by the Zenith Life Assurance Company recently. It is in connection with a change in the Articles. They have been, of course, considered at an extraordinary meeting of the shareholders and accepted readily but confirmation by the Court of the proposed changes is held necessary. The Company intends to carry on business as marine, fire and accident insurers. The entry into the field of general insurance from life business has many precedents and the petition presented last week supports the belief that the shareholders will approve the insertion of new clauses in the memorandum. The Zenith is among the older insurance companies and gains much from the connection with Sir Homi Mehta. The chances opened up by the war are to be seized by the Zenith in the future, and as agents for Government's schemes of insurance, Zenith will hold a new position.

* * * *

There has been no comment on the changes in the Indian Coinage Act. The changes in weight and the variations from the standard prescribed are of litle importance as compared with the promise to give crores of pice quite soon. Hoards should be dispersed by an assurance that the mints will turn out all the change wanted. 10 crores of pieces are to come every month even if metal is scarce. Melting may not be attempted because it is presumed to be unprofitable. A lighter pice with an English, Hindi and Urdu legend is to appear. The States have perhaps coinage plans of some kind or other but the time for having an all-India coinage has not apparently come. Lighter coins are promised, and the only doubt is about its being made of copper, some look for nickel-brass. There has not been an acute problem here so far and the metal market does not care for small change when speculation is always turning towards gold and silver.

* * * *

The Marwari Chamber here has come out with a simple suggestion for helping income-tax payers. It is a very easy one of raising the exemption limit to Rs. 3,000 per annum. Some would urge that the limit can be lowered with advantage to the revenue in wartime, but the Marwari Chamber feels that taxation at the present rate is almost an intolerable burden. The taxpayer's claim for relief rests on the higher cost of living. The middle classes are badly off and know it. The Marwari Chamber speaks up for them, particularly when they have drawn upon their savings to meet the rise in expenses. The Chamber suggests that India is raising too little by way of loans and is turning too readily to taxation. The Finance Member who considered favourably a proposal to alter the exemption limit in the taxpayer's favour may not prove responsive this year.

* * *

If the cotton market has eased and there is no passion for medium staple cotton, there is not much support in the trade for the view that one must go back to Broach. The East India Cotton Association can alter or suspend the rules of business when it likes and the January contract has been really popular besides having stabilised the outlook more or less. Sangli has limited resources but the State is keen on development. An enquiry committee has reviewed opportunities and made recommendations in a report which may easily pass for a gazetteer. Being in the Bombay Deccan in the middle of Maharasthra to the West of Byapur, Sangli is rather badly off but livestock breeding offers possibilities. There are mills and factories in Sangli and there is a growing trade in groundnuts, oil and turmeric. A village development scheme is tacked on to the soil conservation plans. Afforestation and cultivation of fodder crops will help Sangli more than well irrigation. In the Shirhatti taluka some mineral deposits are available and there are good prospects for a glass factory. The report issued last week discusses plans for better farming, rural credit facilities, and the revival of handcrafts like tanning and rope-making. The formation of a guild for silk weavers in Shahapur and organisations of blanket weavers at Shirhatti, are approved. Sangli has a State Bank which is called upon to help industry and the co-operation movement in the State. The report in scope and results corresponds to that published in Bombay about the development of the Province's resources in the future. It certainly suggests that Sangli is fully progressive and ready for development. A special fund is to be created according to the committee which asks that the State should borrow fully and finance the development schemes needed for making Sangli more prosperous. The Dewan, Mr. Baitmangalkar, is fully aware of the State's needs and is likely to give effect to most of the proposals.

IT'S A FACT—
that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, January 28.

UP to the time of writing it would appear that no decision had yet been arrived at with regard to the acreage to be licensed for Jute cultivation during the coming season, and that discussions are still going on. Inasmuch as this would indicate that there is substantial opposition to the 5½ annas school of thought, it is perhaps a hopeful sign that wiser counsels will prevail. Last week we indicated in broad outline the dangers inherent in unduly restricting the jute crop, but it might be of interest to go into the facts and figures with greater particularity. Mill consumption of jute during the past six months indicates that Mills in the Association will require not less than 68 lakhs of bales during this season if they are to maintain their present working hours, which are justified by the offtake of goods by internal and export markets. Mills outside the Association consume 4 lakhs of bales and domestic consumption is calculated to absorb at least 6 lakhs. On the figures for the past 6 months it may be estimated that export will require no less than 14 lakhs of bales. We have here therefore a total requirement figure of 92 lakhs of bales for the current season. The carryover from last season, including Mill stocks as at 30th June 1942, was in round figures 39 lakhs of bales and the current crop is estimated to yield 90 lakhs of bales, giving a total supply of 129 lakhs against a probable consumption of 92 lakhs, leaving a balance to carry over at 30th June 1943 of 37 lakhs of bales. This quantity it may be said is not so large that Mills could not easily carry it themselves, leaving nothing in the hands of the cultivators or merchants. Mills have carried larger stocks than that in the recent past.

To turn now to what may be expected from the coming crop according to whatever acreage is sanctioned by Government. Were the same acreage as this year to be licensed, a crop of another 90 lakhs of bales is to be expected. This added to the carryover of 37 lakhs would give an available total of 127 lakhs of bales. It may not be considered over optimistic to allow that world requirements of jute goods during the 1943-44 season should not be less than in the current season, at 92 lakhs of bales. A 10½ anna crop therefore would, at 30th June 1944, leave the trade with a working balance of 35 lakhs of bales, less than was carried in last year and only enough to render the position of the industry comfortable. Again, the whole of this quantity could be easily held by the Calcutta Mills, so that there is no reason whatever to fear that surplus jute might be left unsaleable in the hands of the cultivators. On the other hand, if only an 8 anna crop is licensed, this cannot be counted on to yield more than 70 lakhs of bales. Add 37 lakhs carryover and we have an available supply of 107 lakhs to provide for requirements of 92 lakhs of bales. Carryover at 30-6-44 would be reduced to 15 lakhs of bales in all hands—a distinctly uncomfortable position for all concerned and calling for an extra large crop the following season to restore the balance.

Lastly, to take the case of the 5½ anna crop which is such a fetish with some of our myopic legislators. Even under average weather conditions, this area could not be relied on to yield more than 50 lakhs of bales, though we are asked to believe that over 60 lakhs may confidently be expected. Experience of nearly 40 consecutive crops impels the writer to avoid stretching his faith in Providence to that extent and, *pace* our benign Government, prefers the more conservative, and certainly safer estimate of 50 lakhs of bales. Adding the carryover of 37 lakhs provides a supply of 87 lakhs of bales against requirements of 92 lakhs—a positive shortage of 5 lakhs of bales with no stocks whatever of raw material to tide the industry over from one season to the next. This, in short, is the position to which the policy of some members of our legislature at least, wish to commit the jute industry, in a short-sighted and misguided effort to ensure a high return to the cultivator for the smallest possible jute crop. Doubtless that object could be achieved, but at what ultimate cost to the industry and to the economy of Bengal?

If this policy were put into effect, Mills could only safeguard themselves by an almost immediate curtailment of working hours, or by sealing a considerable proportion of looms. Either event would bring hardship to the labour force, which might not improbably express its dissatisfaction in a manner embarrassing to the Government. Doubtless the mills would be expected to placate the labour force with doles, but any such suggestion might not be received with much sympathy by an industry deliberately deprived of its raw material by the ill-considered action of Government. It is obvious that the whole situation is pregnant with dangers to the peace and welfare of the province, and Government might be well advised to abandon entirely for this year the idea of regulating the jute crop, leaving it to the innate shrewdness of the cultivator to decide for himself what proportions of paddy and jute he should sow. As we have already suggested, we doubt if even our omniscient Government will venture to predict what the relative prices of jute and paddy will be six months hence. If they were to leave the cultivator alone to decide for himself what he should grow, then he could not turn round and blame the Government for advising him wrongly.

One interesting subject which had recently been occupying the attention of a sub-committee of the Indian Central Jute Committee, is the evolvement of a more scientific, but still practicable method of grading loose jute. That the purely scientific view cannot over-ride the practical is shown by the fact that it was proved possible to divide the various characteristics of jute into no less than 625 different grades! For the average upcountry assorter something less elaborate is obviously necessary while at the same time it is desirable that a certain type of jute should not be de-graded because of one characteristic, while its others would entitle it to a higher grade. It is understood that a proposed scheme is shortly to be circulated to the Associations interested for their comments which, while retaining the present system of Tops, Middles and Bottoms, suggests subdividing the two upper grades into sub-grades according to their freedom from cuttings and other faults. Thus good coloured jute with a heavy cutting would still be in a sub-grade of Tops and not necessarily be de-graded to a Bottom merely on the point of cuttings. Further comment must wait till the scheme is fully stated to the trade.

Comparatively little enquiry has been reported from the Export Jute section but Mills have shown some interest in pucca bales and business has probably been limited by the scarcity of offers. Higher price levels have again been registered, Firsts at Rs. 80, Lightnings at Rs. 75, Hearts at Rs. 71 and Rs. 72, Dundee Daisee 2/3 at Rs. 81, Dundee Tossa 4s at Rs. 82 and Outport Tossa 2/3 at Rs. 81. Subsequently to business done at these rates, sellers advanced their prices about Rs. 2 but towards the close there are again sellers at above rates. N. C. Cuttings are reported as high as Rs. 33. There has been a small steady business going on in Loose Jute, the quantities on offer having been limited and precluding any large scale trading. At the close sellers are more in evidence. European packing has scarcely been on offer until the close when Rs. 16, Rs. 13 and Rs. 11-8 is asked for Mids, Bots and X. Supervised and Bengali Jat was reported at Rs. 15-8 and Rs. 12-8 Mids and Bots after Rs. 12 and Rs. 10-8 was paid for Bots and X. Supervised District Bottoms sold at from Rs. 11-12 to Rs. 12-4 with X done at Rs. 11. Indian District Bottoms sold up to Rs. 11-12, and X to Rs. 10-12. District and Jungli Tossa were reported at from Rs. 14 and Rs. 11 to eight annas more with X mark at Rs. 10.

The Fabrics section has ruled steady to firm but not very active, mainly owing to Mills not being inclined to look at business earlier than July-Sep. Nine Porters for any position up to June have ranged from Rs. 18-8 to 18-4 and back to Rs. 18-8. July-Sep. firmed from Rs. 18 to Rs. 18-4. Eleven porters for ready firmed from Rs. 23-12 to Rs. 24-4 and close at Rs. 23-14. April-June quotes Rs. 23-12 and July-Sep. Rs. 23-8. Business has not been extensive owing to the reserve of Mills and buyers have had recourse to the Bazar for their early requirements. In the Heavy Goods section, early "B" Twills have been in fair demand and have ranged from Rs. 66-12 to Rs. 68 and close at Rs. 67-12. Feb.-March rose from Rs. 65 to Rs. 65-12. April-June from Rs. 61 to Rs. 61-8 and July-Sep. from Rs. 59 to Rs. 60.

NORTH WESTERN RAILWAY

In Your Own Interest

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to them showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to book the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed.

Chief Commercial Manager,
Lahore.

JUTE

Calcutta, Jan. 28, 1943.

Both the jute and jute manufactures markets have been very firm during the past week thanks to the increase in the volume of production by the mills. Sellers in the raw jute market are reserved though there is some anxiety regarding the delay in the announcement by the Bengal Government regarding the size of the acreage of the jute crop for the 1942-43 season. Mills are anxious buyers and are prepared to take up any quantities that are offered. Towards the close, however, buying seems to have been satisfied to a certain extent and there is a tendency to await further developments. In sympathy with the slightly easier tone of the hessian market quotations are a shade easier though substantially higher on balance.

The delay in the announcement by the Bengal Government of the sowings quota for 1942-43 is due to the need for having consultations with the authorities in the U.K. before taking any definite steps. It is reported however that the Bengal Cabinet is being prevailed upon to reduce the acreage to one-third of the area registered in 1940. Trade interests are strongly in favour of a much larger crop owing to the possibility of the ryots choosing to grow other crops instead of jute with the present remunerative prices offering. Pending this announcement markets will continue to be irregular. It can however be safely said that in view of the difficulties regarding transport, the Government may decide to effect a reduction in the acreage under the crop for 1942-43.

In the loose jute section Indian Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund respectively while Cross Bottoms were noted at Rs. 10-8 per maund. Indian Jat Tossa Middles were done at Rs. 15-8 per maund and Supervised Cross Bottoms at Rs. 11 per maund.

A further rise in prices is reported in the Pucca bales section with Firsts 2|3 done at Rs. 83 per bale. Business in Dundee Daisee 2|3 was restricted owing to the scarcity of sellers. Lightnings were done earlier in the week at Rs. 75 per bale, Dundee Tossa 4's at Rs. 82 per bale and Outport Tossa 2/3 at Rs. 81 per bale. The export outlook is reported to be much better owing to the hopes regarding the possibility of substantial freight being available during the next two months.

JUTE MANUFACTURES

Calcutta, Jan. 28, 1943.

The jute manufactures market was definitely firmer early in the week with the reports regarding the possibility of a substantial increase in shipments. The main reason for the strength of the market was the news regarding the British Government's decision to bring in substantial shipments of food into the country. As the tonnage involved will be more than 200,000 tons, it is generally felt that it will be possible to effect a large increase in shipments of the sorely needed commodities like jute and jute manufactures. 9 porters ready have improved from Rs. 17-12 to Rs. 18-8. The quotation is now easier at Rs. 18-4. February-March were Rs. 18-6, April-June Rs. 18-4 and July-September Rs. 18. Owing to the scarcity of supplies for the near positions and the prospect of a large increase in shipments, a premium is demanded for February-March position. 11 porters ready quoted Rs. 23-12 after being higher at Rs. 24-2, February-March Rs. 23-14, April-June Rs. 23-12 and July-September Rs. 23-8.

The Heavy Goods section has been firmer in sympathy with the jute and hessian markets though quotations towards the close are a shade easier. B. twills for January delivery sold on the basis of Rs. 67-12, Liverpool twills at Rs. 68-8 and Cornsacks at Rs. 60-8. The production figures for the month of December now available show that there has been a decline from 101,753 tons in the previous month to 98,510 tons owing to the exodus of labour following the air raids on Calcutta after December 20, 1942. The figures for the current month also might show a decrease as most of the mills were working with depleted labour in the first half of January.

Total Reported Production of Manufactured Goods*

By the mills in the membership of the Association and also by Gagalbhai Mills.

Description.	Quantity.
1. TWIST AND YARN—	
(a) For sale ..	3,388 tons
(b) all other, including that used in sewing bags	1,598 tons

GOLD

Calcutta, Jan. 28, 1943.

The Bombay gold market has been absolutely uninteresting and rates have fluctuated within very narrow limits. Investment demand has been very poor and speculative buying is completely absent. Gold ready were quoting Rs. 66-8 and First Seetlement Rs. 66-3. The quotations at the time of last writing were Rs. 66-10 and Rs. 66-6 respectively. It will be noticed that there has been a widening in the discount for February settlement.

SILVER

Owing to the firmer tone of the Bombay cotton market the silver market is slightly better with Indian Mint Silver Ready quoting Rs. 101-8 and February settlement Rs. 99-8 against Rs. 100-10 and Rs. 99-2 at the end of last week. Buying has been mainly confined to spot positions. That is the reason why the premium for Ready silver has improved from Re. 1-8 to Rs. 2 per hundred tolas.

In the London market there is no change to be reported and quotations for both spot and forward remain unchanged at 23½d. Conditions have been very quiet.

COTTON

Definitely firmer conditions have been noticeable in the Bombay raw cotton market during the past week. It is believed that the efforts made by the Bombay Government to ensure regular food supplies to labour will result in a substantial increase in production in the textile mills. Something tangible is expected to materialise out of the Conference that will be held by the Commerce Member in Bombay to consider afresh the problems affecting the textile industry and to explore the possibilities regarding larger production of standard cloth. The firmness of other markets also has been helpful to a certain extent. It is reported that mofussil agents of mills have been busy buying all available stocks in upcountry centres, and that the Karachi market also has shared the view of Bombay operators. Jharilla January was done as high as Rs. 430 early in the week. Business in this contract is now terminated. With the switching over of business to March and May a very substantial increase in prices has been recorded. The quotation is at the highest levels for the week at Rs. 419-8 for both positions. At the end of last week Jharilla January was quoting Rs. 423, March Rs. 404-8 and May Rs. 406. It will be noticed that the premium for May position has disappeared.

PIECEGOODS

Calcutta, Jan. 28, 1943.

The piecegoods market continues firm and local dealers are not inclined to part with their holdings. The absence of any large enemy air raid attacks have caused many to return to their work. Even with the improved position in the Western Presidency, mills are not quite free sellers. Neither are they prepared to reduce rates or give any assurance regarding deliveries. Business passing is on a very scale and prices for handloom products have been maintained at the high level touched recently.

THE PUNJAB NATIONAL BANK

Stock Markets to-day and to-morrow

STEEL CORPORATION MAINTAINS INTERIM DIVIDEND

DEFINITELY firmer conditions have been noticeable on the stock markets both in Calcutta and Bombay and the popular counters have been marked higher by several points. The developments in the war situation have, obviously, been responsible for the accession of strength to the markets. One would have expected, however, that there would be a greater broadening of interest, in the Calcutta market especially, and business passing was on a larger scale. The absence of any appreciable increase in the volume of business is to be explained by the anxiety to await further developments in the Far East. The absence of air raids, on the Calcutta area, when it was expected that the enemy would utilise to the best advantage the full moon period, has certainly had an encouraging influence but general opinion is not inclined to believe that this is all that the enemy can do.

If these factors are taken into consideration, it will be agreed that the behaviour of the markets during the past few days has been very impressive. Engineering shares, as usual, led the recent upward movement in the Calcutta market. Indian Irons have improved from Rs. 30-4 to Rs. 33-2 and Steel Corporations from Rs. 21-4 to Rs. 25-4. Selected Cotton shares moved higher in sympathy with Engineering shares. Jute shares then firmed up followed by Coal shares. In the Miscellaneous section, the outstanding features of interest are the rise in British Ceylon Corporations to Rs. 19-8 and the strength of Paper shares.

In the Bombay market there has been a spurt in Textiles. Tata deferreds also are more than 120 points higher on balance.

* * * * *

The developments in the war situation, as pointed out above, have been mainly responsible for the strength of the markets. It is now confidently said that the end of the Tunisian campaign in favour of the Allies is a foregone conclusion and that the Allied Powers are planning the next attack. The Casablanca Conference has naturally excited considerable interest. The decisions at the conference, which are still secret, will, we are told, be revealed in the shape of events. With a confident view regarding the immediate future, it stands to reason that the trend of the markets should continue to be upward. The uncertainties regarding the budget proposals and the desire for more cheering news regarding the operations in Burma, might have a restraining influence but these considerations will be overlooked if the developments in the other theatres of war prove to be spectacular.

* * * *

Speculation regarding the interim dividend of the Steel Corporation of Bengal Limited for the year ended December 1942, has now been set at rest. It has been announced that the interim dividend is to be six annas per share (same as for 1941). It was generally expected that it would be possible to pay a higher dividend with the reports regarding the increase in the potential earning capacity of the company and the scope for an increase in the distribution to ordinary shareholders. After the publication of the Indian Iron accounts, however, operators were not inclined to be very hopeful of a higher interim dividend. Even with a substantially higher level of earnings, the Directors of the Indian Iron and Steel Company Limited chose to maintain only the distribution at Rs. 2-4 per share. There has been a certain measure of disappointment over the declaration of the interim dividend but operators are in no mood to take it seriously and the quotation has dropped only a point from the highest level to Rs. 24-2.

* * * *

It was pointed out in these columns last week that the recent re-issue of the forfeited ordinary shares of the Mahalaxmi Cotton Mills Limited was oversubscribed and that allotment letters had been posted to applicants. We now understand that the share scrips will be ready early in March. The Company is reported to be doing very well and there are reports that the directors may pay a dividend of Rs. 1-8 per share (6 per cent tax-free) to the old ordinary shareholders for the year ended June 1942. The new shareholders also have reason for cheer as it is said that there may be an early payment of an interim dividend in respect of the half-year ended December 1942, and that it may be as much as Rs. 2 per share. The annual general meeting will be held in a short time and we only hope that the directors take advantage of the opportunity to effect a revision in the terms of the managing agency agreement to bring them in line with those of other modern progressive companies. The new capital that was raised recently should help the directors to eliminate many unpleasant features in the company's balance-sheet, though the changes as a result of the new issue of capital will not be noticeable in the balance-sheet for the year ended June 1942.

* * * *

The balance-sheets of three more jute companies in the Andrew Yule group, for the year ended June 1942, also make satisfactory showing. The net profit of the *Cheviot Jute Mills Company Limited* for the half-year is Rs. 4,87,315 against Rs. 5,38,372 for the previous half-year. The amount set aside to depreciation is unchanged at Rs. 50,000 while the transfer to reserve is Rs. 50,000, including the figure of Rs. 28,000 transferred from the War Risk Insurance Reserve, against Rs. 53,000 on the previous occasion. The amount allocated to insurance fund is Rs. 3,221 against Rs. 3,163; provision for taxation is lower at Rs. 2.8 lakhs against Rs. 3.2 lakhs. The dividend to ordinary shareholders has been maintained at Rs. 6 per share.

* * * *

The net profit of the *Lothian Jute Mills Company Limited* for the same half-year is higher at Rs. 4,09,524 against Rs. 3,73,087 for the previous six months. The transfer to General Reserve is Rs. 27,000, which sum with the amount of Rs. 23,000 utilised from the War Risk Insurance Reserve, makes it Rs. 50,000. On the last occasion, Rs. 23,000 was transferred to War Risk Insurance Reserve. The amount set aside for depreciation is unchanged at Rs. 50,000. Taxation accounts for Rs. 2.55 lakhs against Rs. 2.4 lakhs. Ordinary dividend is unchanged at 4 per cent.

* * * * *

The net profit of the *Orient Jute Mills Company Limited* before providing for taxation and depreciation is Rs. 5,41,052 against Rs. 5,27,972. The sum set aside to depreciation is Rs. 40,000 (same) while the allocation to reserve is Rs. 24,000, which including the transfer of Rs. 26,000 from War Risk Insurance Reserve makes in all Rs. 50,000 against Rs. 26,000 transferred to War Risk Insurance Reserve on the former occasion. Provision for taxation is Rs. 3,20,000 against Rs. 3,04,558. Dividend to ordinary shareholders has been maintained at 6 per cent.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 29.

RATHER active conditions have been noticeable on the Calcutta Stock Exchange during the past week. The undertone towards the close is firm in all the sections. The reports regarding the meeting between the British Premier and the American President and the continued successes of the British Eighth Army have had an encouraging effect. Sharp rises in prices have been recorded in the popular counters and business passing has been on a larger scale though one would have expected there would have been a greater broadening of interest with the three to four point rises in the popular speculative counters. The strength of the Bombay market has been helpful. But for the anxiety regarding the possibility of fresh enemy air attacks a further rise in prices would perhaps have been recorded. The declaration of the interim dividend of the Steel Corporation of Bengal for the year ended December, 1942, towards the close on Thursday has had a slightly discouraging effect but the setback in prices has not been anything substantial. The undertone in several sections is steady and closing quotations are at the highest levels for the week.

The giltedged securities section was inclined to be firmer earlier in the week on some buying for medium and short-dated loans but during the last two days absolutely uninteresting conditions have been noticeable. Conditions in the money market have remained unchanged but there is no keenness to invest in giltedged securities. 3½ per cent. Paper is unchanged at Rs. 94. Among terminable loans, 2¾ per cent, 1948-52 were done at Rs. 99-2, 3 per cent 1949-52 at Rs. 100-10, and 3 per cent 1963-65 at Rs. 95-9. 4 per cent 1960-70 were Rs. 110-5 and 4½ per cent 1955-60 Rs. 113-15. 5 per cent 1945-55 were Rs. 108-4. Among provincial loans, 4 per cent Punjab bonds were done at Rs. 104-8.

Business in public bodies' debentures is still restricted. 3¼ per cent *Howrah Bridge* debentures were done at Rs. 97 and 5 per cent *Calcutta Port Trust* debentures 1957-87 Rs. 111. Among industrial debentures 5½ per cent *Dalmia Cement* debentures were Rs. 105.

Preference shares have been marked higher with not many shares offering. *Birla* preferences changed hands at Rs. 126 and *Hastings* at Rs. 136. *Soorah* were Rs. 137-8. Among other sections, *Dalmia Cement* were Rs. 133, *Steel Corporation* Rs. 118 and *Bengal Paper* Rs. 76. *Orient Paper* were Rs. 111, *New Victoria* Rs. 11-4 and *Titaghur Paper* First preferences Rs. 184.

In the Bank section, *Reserve Bank* were noted at Rs. 103-8.

Cotton shares have been firmer especially Cawnpore counters. *Cawnpore Textiles* are higher by two and a half points at Rs. 17 with *Elgin* at Rs. 44-14, *Bengal-Nagpur* were Rs. 29-6, *Benares Cotton* Rs. 9-10. *Bowreah* were Rs. 505 and *Dunbar* Rs. 266.

In the Coal section also some useful rises in prices have been recorded, *Amalgamated* being Rs. 33-2, *Bengal* Rs. 412, *Dhemo Main* Rs. 13-14 and *West Jamuria* Rs. 32-12. *Burrakur* were Rs. 14-6, *Rewa* Rs. 30-12 and *Katras Jherriah* Rs. 32.

In the Jute section almost all the important shares have been marked higher. The strength of the goods market and the generally improved tone in other sections have led to greater buying. Sellers are reserved. *Adamjee* were Rs. 26-12 and *Agarpara* Rs. 24. *Bally* were 15 points higher at Rs. 275. *Birla* have improved by three points to Rs. 41-12. *Anglo-India* were Rs. 350 against Rs. 332, *Howrah* Rs. 55-8 against Rs. 53-6 and *India* Rs. 454 against Rs. 423. *Hukumchand* have improved from Rs. 19 to Rs. 21 and *National* from Rs. 22-10 to Rs. 25. *Nuddea* were Rs. 74-8 and *Reliance* Rs. 56-12.

In the Engineering section, *Indian Iron* improved from Rs. 31-4 to Rs. 33-2 and *Steel Corporation* from Rs. 23-6 to Rs. 25-2. With the declaration of the interim dividend a slightly easier feeling has been noticeable but the undertone is steady. *Indian Iron* are now quoting Rs. 32-12 and *Steel Corporation* Rs. 24-12. There has been a sharp rise in the quotation for *Burn & Co.* to Rs. 370 from Rs. 346. *Indian Malleable Castings* ordinaries were done at Rs. 8-4 and *National Iron* and *Steel* at Rs. 12-6.

In the Sugar section, *Carew & Co.* and *Cawnpore* have been marked further higher the quotations being Rs. 16 and Rs. 33-12 respectively. *Balrampore* were Rs. 12-7, *Champarun* Rs. 26-8 and *Murree Brewery* Rs. 19. *United Provinces Sugar* Rs. 15-10.

In the Tea section, *Bishnauth* were Rs. 30-4, *Hantapara* Rs. 472-8 and *New Samanbagh* Rs. 30-4 ex-dividend. *Rajabhat* were dealt in at Rs. 42 and *Tezpore* at Rs. 11-5.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* have remained unchanged at Rs. 3-1 and Rs. 2-5 respectively. *B. .I. .Corporation* were Rs. 6-2 and there is possibility of a further appreciation in values with the proximity of the dividend. *Aluminium Corporation* were Rs. 16. There has been a sharp rise in the quotation for the *British Ceylon Corporation* shares from Rs. 13-12 to Rs. 19-12. *Calcutta Trams* were Rs. 14-7. *Dunlop Rubber* were three points higher at Rs. 47-8. *Indian Cable* were Rs. 25-8 and *Indian Wood Products* Rs. 21-8. *Publicity Society* were crossed at Rs. 12-6. Paper shares have been very firm with *Star Paper* done at Rs. 20, *India Paper Pulp* at Rs. 173 and *Shree Gopal Paper* at Rs. 19-8. *Titaghur Paper* were one and a half points higher at Rs. 23-12. *Assam Saws* were Rs. 4-4 and *Borooah Timber* Rs.20-4.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 28.

DEFINITELY firmer conditions prevailed in the local Stock Exchange during the period under review. Encouraging developments in the several theatres of war have been mainly responsible for firmer prices and the longer list of transactions. The improvement in the Allied position this year and the United Nations' resolve to carry the war into the enemy's territory have encouraged operators and investors alike while the danger from enemy air attacks on India is viewed in the right perspective. The absence of fresh air attacks by the enemy on Eastern India during the period has further given time to size up the situation in the light of what is happening in other theatres of war. A glance at the daily list of transactions will show clearly what the reaction has been to the present situation.

This week, the local market was open only on three days. On Monday prices of almost all shares recorded a substantial increase over previous closing prices. On Tuesday there was no trading and on Wednesday there was a slight decline in prices though the undertone was good. On Thursday, however, markets have brightened up after the announcement of the Roosevelt-Churchill meeting at Casablanca.

Tata Defds. recorded a further rise of nearly 120 points. In the Textile section, some selected shares rose by many points on fresh buying inquiry. The Miscellaneous section too reflected a lively feeling with prices showing a tendency of steady increase.

Mill shares, especially selected scrips, recorded substantial increases on the week. *Ahmedabad Advance* are quoting Rs. 442-8 (415), *Bombay Dyeing* Rs. 1,760 (1,717-8), *Central India* Rs. 422 (415), *Century* Rs. 666 (667), *Colaba Land* Rs. 242 (247), *Gokak* Rs. 364 (356), *Indian Bleaching* Rs. 234 (233), *Kohinoor* Rs. 660, *Phoneix* Rs. 662-8 (665), *Sholapur* Rs. 8,200, *Simplex* Rs. 276-4 (274) and *Svadeshi* Rs. 593 (535).

The encouraging war news has been more than a guide to the shape of things to come and the prices of steel shares have firmed up. *Tata* Deferreds have gone up by more than 120 points over last week, quoting Rs. 1,747-8 (1,625). *Tata* Ordinaries were Rs. 364 (342), *Tata I* Preference Rs. 205 (205), *Tata II* Preference 140 (137), *Indian Iron* also are higher at Rs. 33-2 (31-8).

Hydro-Electrics—Rather steady conditions were in evidence in this section with *Tata*

(*General Meeting to be held on 11th February, 1943 at 11-5 a.m.*).

Audited accounts of the half-year ended 31st July, 1942:—

After providing Rs. 15,001-3-9 for Depreciation and Rs. 15,000 for Taxation there is a balance of Rs. 71,034-14-6 at the credit of the Profit and Loss Account out of which the Directors recommend:—

	Rs.	A.	P.
Dividend of Re. 1 per share	50,000	0	0
Carry forward	21,034	14	6

Raisings were lower than in the previous half-year but despatches were higher and a better average selling price was realised. The sinking of the new pits at Laikdih Deep Colliery made satisfactory progress.

(Meeting, already held on 29th January, 1943).

Audited Accounts for the half-year ended 30th September, 1942:—

After providing Rs. 8,00,000/- for Taxation and Rs. 2,25,000/- for Depreciation and placing Rs. 75,000/- to Reserve, there is a balance of Rs. 2,35,872-2-3 at the credit of Profit and Loss Account from which the Directors recommend payment of a dividend of Rs. 5/- per share absorbing Rs. 1,50,000/- and leaving a balance of Rs. 85,872-2-3 to be carried forward.

The production of the mill has continued at a satisfactory level. Manufacturing costs continued to rise throughout the half-year and increasing difficulties were experienced in obtaining raw materials, stores etc.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

WORLD OF INDIAN FINANCE

Friday Evening.

Short credits continue to be in plentiful supply with call money rates unchanged at ¼ per cent in Calcutta and ¼ per cent in Bombay. There has been a further accentuation in easy money conditions during the past week. In spite of the slight improvement in demand for money, the problem of banks is still the disposal of surplus funds in remunerative channels of investment. With a heavy expansion in currency and the present demand for money, it appears that banks will never be able to get over the difficulty in regard to investment.

The return of the Scheduled banks for the week ended February 26, 1943, shows an increase in demand liabilities by over 2.25 crores at Rs. 363.86 crores and an increase in time liabilities of nearly Rs. 90 lakhs at Rs. 119.65 crores. Cash balances are only Rs. 39 lakhs lower at Rs. 14.48 crores in spite of the increase in advances of over Rs. 4.4 crores at Rs. 115.23 crores. Treasury bills maturities are nearly equal to sales at the present moment so that any additions to currency, in the absence of a great increase in demannd for money will naturally be reflected in higher deposits with banks. There does not appear to be any halt to the heady currency expansion by the Reserve Bank. We have on more than one occasion pointed out that the limit in respect of expansion of currency has been reached, and that, unless proper measures are taken in time to combat inflationary forces having their effect, further additions to currency may prove to be harmful [illegible] country's interests.

At the auctions held this week for treasury bills the Government could not obtain any reduction in the average discount rate. As a matter of fact, it appears as if some sort of convention has been reached in regard to the treasury bills rate which has been maintained at Rs. 1-1-11 per cent per annum for the fifth week in succession. Applications were not very much changed at Rs. 12.29 crores. The amount accepted was Rs. 8 crores. The amount of intermediates sold was Rs. 2.18 crores against Rs. 3.69 crores. With the smaller amount of maturities during the next few weeks and the comfortable ways and means position of the Government it can be expected that an early decision will be reached in regard to the reduction of the treasury bills offer. As hinted last week, either the authorities may decide to suspend sales of intermediates or they may choose to reduce the amount on offer.

The returns of the Reserve Bank for the week ended March 5, 1943, reveal some important changes. There has been a further expansion in currency against sterling securities for Rs. 10 crores. Even with the large addition to currency, notes in the banking department are lower at Rs. 9.43 crores against Rs. 11.87 crores. Notes in circulation are higher by Rs. 11.02 crores at Rs. 625.38 crores. Total notes issued are Rs. 634.81 crores against Rs. 626.23 crores. On the assets side sterling securities show a rise of Rs. 10 crores at Rs. 395.73 crores. Rupee coin are Rs. 1.42 crores lower at Rs. 12.2 crores, thus indicating that there has been no abatement in the withdrawal of rupee coin. Rupee securities are unchanged at Rs. 182.46 crores.

In the banking department, Central Government's balances are sharply lower at Rs. 14.72 crores. The increase of Rs. 6.35 crores in provincial government's accounts with the sharp decline in Central Government's balances is perhaps due to the fact that the former have received their share of income-tax receipts from the Centre. Month-early disbursements would have accounted for the balance. Bank deposits are further higher at Rs. 52.95 crores. Balances held abroad show a rise of about Rs. 25 lakhs even with the transfer to the issue department of Rs. 10 crores. Sterling receipts during the week have, therefore, been of the order of Rs. 10.25 crores.

The statement of the Imperial Bank for the week ended March 5, 1943, shows a further increase in the amount of deposits to Rs. 174.45 crores from Rs. 172.99 crores. With the heavier treasury bills maturities, and the greater interest shown by joint-stock banks in short-term bills at the moment, there is a decline in the Bank's investment portfolio by nearly Rs. 2 crores to Rs. 121.33 crores, the figure at the end of the previous week being Rs. 123.24 crores. Total advances are more or less unchanged at Rs. 30.95 crores. Cash balances are, therefore, sharply higher at Rs. 31.88 crores against Rs. 28.56 crores.

With such a glut of funds in the money market, it is not surprising, that there has been a great increase in activity in the commodity, bullion and stock markets. This is perhaps the first time in several months that there has been a parallel movement in all the markets and that there is every indication at present of the upward movement in prices being maintianed. The outlook for stock exchange securities especially, is considered to be very bright at the present moment. The Budget proposals have had a salutary effect on values. Even the increase in income-tax, super-tax and corporation taxes has not had any adverse of effect on prices of giltedged securities. As was pointed out last week, the absence of any adverse reaction in prices for giltedged means that the basis of yield for giltedged is now lower and that with a reduction in the basis of yield for this class of securities, there should be a corresponding upward revision in prices for other stock exchange securities which are fetching taxfree incomes and for which there is a prospect of an increase in the income. It is perhaps too early to say that we are on the eve of a boom in the stock markets; but the indications point to the possibility of one at an early date provided, of course, that developments in the war situation continue to be satisfactory.

The exchange market has been dull with very few bills showing and only a small amount of business has been done on account of remittance.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of 3 months' Government of India Treasury Bills were opened on Tuesday, March 9, 1943. The total amount offered was Rs. 12,29,75,000 (Rupees twelve crores twenty-nine lacs seventy-five thousand). Tenders at Rs. 99-11-9 per cent were accepted in full and those at Rs. 99-11-6 were allotted approximately 64 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 1-1-11 per cent (Rupee one anna one and pies eleven per cent) per annum.

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of 3 months' Government of India Treasury Bills will be received on Tuesday, March 16, 1943 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, March 15, 1943 at other centres. Successful tenderers should make payment on Thursday, March 18, 1943. Other conditions are as usual.

Three months Intermediates will be sold from March 10 to March 15, 1943 at Rs. 99-12 per cent, subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from March 3 to March 8, 1943, amounted to Rs. 2,18,25,000 (Rupees two crores eighteen lacs and twenty-five thousand only).

During the week ended March 5, 1943, Government of India Treasury Bills for **Rs. 13,62,00,000** (Rupees thirteen crores sixty-two lacs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

LITTLE has been heard as to the scope and nature of inter-Allied discussions on post-war financial problems. Beyond the report that discussions are in progress nothing is known and a major development must remain obscure though there have been plenty of assurances as to complete accord and the desire for better understanding of Russia's achievement. The need to avoid trade war has been described by Mr. Wallace. His advocacy suggests that exchange and other agreements of a suitable nature will be soon evolved and the Allies can carry out the tasks of peace. The discussions as to finance will certainly cover the future of gold and present firmness of bullion prices in India supports the belief that no great change will ensue.

The most important development of recent weeks is the report that sterling companies are ready to open offices in India and dispose of plantations. The development was not unexpected, since sterling companies, exposed to 100 per cent E. P. T. and income-tax in Britain at 50 per cent could not make profits on the same scale as Indian companies, and their withdrawal from business would be satisfactory to both countries. The suggestion that British investors in India should be bought out has received consideration at once, and one company whose shares have jumped up suddenly is said to have made arrangements for transfer of its estate. Many tea companies would be inclined to do likewise, and Indian investors anxious to buy tea shares for income would find unusual opportunities in the near future. There is more British capital in the tea than in other industries, and the process of disinvestment will be an advantage to the British Government anxious to get more money for its war loans.

The special savings drive started this week and the response of the metropolis is described as satisfactory. London has put up over 80 millions in 4 days and one company I. C. I.—the largest enterprise in the Empire—has kept up its reputation by subscribing one million sterling. The fractional losses in giltedged are, therefore, unimportant. The Wings for Victory campaign, meant to give a better air force, has received all the support needed from the raids on Germany and Vichy's decision to evacuate the Channel ports. The R.A.F. may thus count on more money than has been provided in the Air Ministry estimates this year. The total of War Weapons Week in 1941 is sure to be surpassed and the British war savings movement abroad had previously decided to go beyond the provision of an aircraft carrier by [illegible] the money for heavy bombers. The movement is likely to gather strength from the success of the savings campaign in London and Sir Henry Richardson's call in the Central legislature for greater sacrifice for the sake of the war effort in India should help to obtain a regular flow of subscriptions for war bonds, savings bonds and savings certificates.

The assurance that U. S. aid will continue after the Lease-Lend Act is renewed should also help to secure money for the Government. If the U.S.A. decides on giving up the provision for direct return, but takes reciprocal aid, as and when required, the investor in Britain will be ready to do more than pay more out in indirect taxation. The fact that the war may not end in 1943 will not be unconnected with heavy buying by the Cape of its favourites. The West Wit subsidiary Blyvoor is said to have received special attention towards the last week-end. It implies that the development in South Africa of the new Far Western mines will not be held up, and the shares of holding companies like Johnnies will therefore command greater attention in the near future. Improvement is not confined to Kaffirs. There has been a rise in Nundydroog and, presumably, in all Mysore shares. Deep level development has paid last year for Champion Reef. This should be heartening to South Indian investors who find in the Mysore excise a burden comparable to South African taxation dating from Mr. Havenga's term as Finance Minister.

The Home industrial market has experienced a measure of recovery and last week special mention was made of Marks and Spencer (5 sh.) shares being bought on prospects. Concentration is of some help to the chain store business and the 5 shilling shares of Woolworth have topped 60 shillings this week. The setback in rayon shares has been overcome, and last week's recovery in brewery shares has sent Distillers' stock ahead. Buying of dollar securities, particularly Brazilian Traction has been reported, and a quick rise in International Nickel, followed by a drop in the quotation, is directly related to the firmness in evidence on Wall Street which raised U. S. Steel to $54¾. The maintenance of the half-yearly dividend by the National Bank of India supports the belief that the exchange banks have not been unduly depressed by the course of war in the East. The steady rise in shares since January 1 naturally suggests that the banks have staged a striking recovery independently, and delay in the reconquest of Burma will not impair their prospects. The accumulation of overseas assets will make for continuous carrying on of business, because purchase of goods for industrial reconstruction in India will entail many banking transactions, even if Britain's export business with Africa is not developed from India. The balance-sheets for 1942 should soon appear with the Chairmen's statements, and it will be found then that the growth of bank deposits in India has sustained the recovery referred to. The Chartered Bank's report is said to be better than expected. The possibility of new Indian banks cutting into the business has been mentioned, but the threat must be dismissed as inconsiderable, since tradition counts for much in a country like India, and familiarity in this case has bred esteem.

The next week will be noteworthy for publication of full figures as regards subscriptions to the savings campaign. London alone should provide £150 million for the R.A.F. aimed at by the Prime Minister and Lord Brabazon's forecast that British bombers would put the Rumanian oilfields out of commission should be satisfactory even to shareholders in companies like Astra Romana and Phoenix Oil. Russia has been helped by air attack, according to Captain Balfour, and the progress of aircraft production mentioned by Sir S. Cripps on March 7, should help Britain to keep up the bombing of Berlin, Munich and other cities. The big lesson to be drawn from the savings drive is that India should start a campaign of the same kind. The I.A.F.'s work should be publicised, and the end of fighting in Tunisia should be made the occasion for launching a special campaign for the third defence loan. The cessation of air raids should make Calcutta keen on a second Defence Savings week, of its own devising, and the share market boom should not be allowed to drain savings.

The constitutional amendment to be undertaken at the President's instance in Porto Rico is more than due to U. S. desire to give responsible government to the island. The island annexed in 1898 is governed under the Jones Act which created a representative legislature and an executive responsible to the President of the U.S.A. An elected Governor in the future means dominion status for an island where discontent has not been stifled either by kindness or balanced budgets. Porto Rico may become another banana republic, if the mixed commission says so. In recent years coffee planting has languished but sugar is a flourishing industry with production nearly equal to Indian production. Many minerals are found in addition to manganese shipped usually to the U.S.A. The U.S.A. dominates the foreign trade and the U. K. has only a small share in the exports and imports of Porto Rico. Illiteracy and other handicaps have been noted in Porto Rico but the White majority has been increasing and local industry has developed steadily. Constitutional changes may lead to Porto Rico being denied the benefit of free trade with the U.S.A. and tariffs may impair the value of a grant of self-government. Porto Rico may be prepared for that while the island's security may be independent of the small U. S. garrison.

Economic Significance of the Budget

With the publication of the Budget proposals for 1943-44, one of the pretexts for postponing consideration of long-term economic policies is removed. And the incentive to take up questions which were shelved on the ground of uncertainty about the budget is increased. The two problems, to the solution of which the disclosures in the budget for 1943-44 were supposed to hold the key, are, firstly, the revision of the Financial Settlement between His Majesty's Government and the Government of India regarding the allocation of military expenditure, and secondly, the utilisation of India's sterling balances. On both questions, the public has now been informed of the decisions of the Government of India. The former has a bearing on the further growth of sterling balances, the scale of public expenditure during the war, the burden of taxation and the flow of current income into the channels of current consumption. The utilisation of sterling balances has greater reference to the development of the national economy in the not immediate future, the prospects of continuance of inflationary tendencies, their mitigation or their accentuation, the extent and manner of conservation of India's war profits for purposes of future development and the nature and direction of India's commercial and financial relations with the rest of the world in the post-war period. It may be thought that the budget proposals for one year, which are avowedly and inescapably of a tentative kind, cannot possibly have much significance for the fortunes of the country in the comparatively distant future. The uncertainties of a budget are grave enough even in normal peacetime. That they are increased many times during a war is also equally true. And it may also be conceded that the wide variety of surprises that a war like the present may have in store will alter many of the assumptions made in economic reasoning. Nevertheless, one can readily recognise that the issues on which Sir Jeremy Raisman's speech on the Budget for 1943-44 contains decisions of a reasonably final character are so far-reaching that an attempt to glimpse the future may be made with profit.

Let us first consider the question of the Financial Settlement between the Government of India and His Majesty's Government. Here, the importance of the question to long-term developments arises from the fact that a drastic revision of the terms of the settlement will, on the one hand, increase the burden of taxation at present and, on the other, handicap our future development through the decrease in our annual balance of payments and consequently in the foreign balances which we are acquiring. The decisions arrived at by the Government in this regard have not been expounded to the public with any appreciable clarity. While the Finance Member has stated categorically that His Majesty's Government have abandoned their intention of asking for a revision of the terms of the financial settlement, there are other circumstances which detract from the force and value of that statement. There is, in the first place, the progressive increase in India's military expenditure. There are the uncertainties about the lease-lend relations with the U.S.A., as against the fact that till a late stage of the war our supply relations with the U. S. were not direct but through His Majesty's Government. And more important than all these is the observation of the Finance Member in his reply to the general discussion on the budget that "the sterling balances arose not only from goods exported out of the country or services rendered in other theatres of war but that, in so far as under the Financial Settlement with H. M. G. the whole cost of the defence of India was not borne by India, the remainder of the cost of defending India and the measures taken in India became part of the sterling balances."

The Finance Member is apparently anxious to discourage the idea that the decision to abandon the revision of the Financial Settlement is not final. Which means that India must be prepared to pay out larger sums by way of her share of the military expenditure. We hope we are wrong in our reading of the position. And our hope is strengthened by the fact that in his reply to a question in the Assembly Sir Jeremy stated clearly that India's capacity to pay continues to be the main consideration. After all, the Financial Settlement can hardly be called inequitable when it is meant to cover what are called joint war measures. The allocation of expenditure in respect of any of these measures can be on a 99 to 1 basis, if the Governments agree to such a division; and in case agreement is not possible or a suitable formula difficult to devise, the allocation is to be on a fifty-fifty basis. Such an elastic clause ought to meet the requirements of any change in circumstances that may possibly occur in the future, but only if Britain accepts the equity of her having to find goods and material which she has consistently disabled India for producing. If, in this sense at least, the Financial Settlement is to continue for the remainder of the war period and if the war does not extend to Indian soil—recent developments suggest that the war zones will progressively recede from the Indian frontier—India might look to the continuance of taxation at the present levels and to deficits which will be no serious addition to the unproductive debt of the nation. At the present level of taxation bigger incomes will continue to yield a fair margin of savings which will be available for investment in the period of economic reconstruction which can be expected to follow the declaration of peace. Indeed, considering the paucity of new investment during the war, the pressure of savings during the post-war period will call for special precautions as a safeguard against ill-considered expansion.

If the Financial Settlement may be said to improve the outlook of savings at home, sterling balances may be said to improve the outlook of India's savings maintained abroad in the form of foreign balances. In spite of the disturbing references made by the Finance Member to these balances, there is no reason to think that our sterling balances will not continue to increase. The present decision to constitute an industrial reconstruction fund does not necessarily rule out the building up of foreign balances in other currencies, though it seems to be too much to hope that the Government will do anything to help the process of transfer of British investments in India from British to Indian hands. Yet such a change is essential if the present talk of the change in the status of India from a debtor to a creditor country is to be in accord with the realities of our economic position. The reluctance of the authorities to bring about such a transfer is only to be expected; and it is to be expected, too, that this reluctance will induce them to reduce the pressure of the transfer problem by adopting measures which are seemingly a solution of the problem of sterling balances. We have expressed on earlier occasions our view that what are virtually loans to Britain cannot be held to be a solution of the problem of sterling balances. For that problem has two facets, one, that of transferring India's war profits to India and, two, of relieving the pressure towards inflation. From neither standpoint can the measures adopted by the Finance Member be said to solve the problem of sterling balances. It is probably in appreciation of this fact that Sir Jeremy is induced to affirm that the problem of the sterling balances is a post-war problem. One could perhaps acquiesce in this statement, if sterling balances did not lead to an immediate increase in currency circulation and in prices.

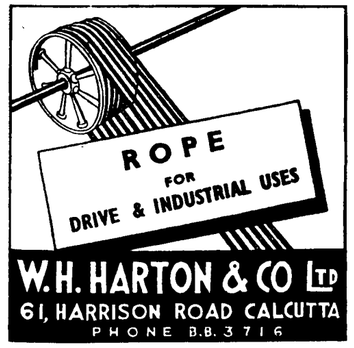
For the purpose of the long-term view, it is the decisions and not their merits that are important. The consequences that flow from these decisions from the standpoint of the national economic life are the continuance of the present inflationary trends, the absence of the danger of any heavy increases in tax burdens, the accumulation of savings both at home and abroad for investment in the post-war period of economic reconstruction and the certainty of special aids like the industrial reconstruction fund for the development of trade relations. The favourable prospects are, for the present, outweighed by the danger that there will be no mitigation of inflation at home. In so far as inflation saps the very basis of economic life, it may even serve to demonstrate the falsity of the hopes we entertain in other respects. Sir Jeremy Raisman's record as Finance Member, commendable as it is in many respects, suffers from its indifference to the problem of inflation and might ultimately be marred by it. In the hope that the currency problem will be tackled soon, one can look beyond the high prices and the scarcity of the present to a period of post-war reconstruction when a national government, should India have the wisdom and the good fortune to have one, will not be deterred by lack of capital resources to pursue its plans of economic development.

TRADE AFTER THE WAR

While general acceptance of Article 4 of the Atlantic Charter removes doubt as to the economic consequences of the war, and the peace to come, there is still no agreement as to the measures required for restoring the quantum and course of world trade. Disturbance may be viewed as temporary if justifiable, but it seems as if the tug-of-war between autarky and original freedom only serves to expose the difficulty in the way of applying the Charter so as to procure a restoration, outside Russia, of pre-war equilibrium, all the more essential as all trade is now subject to control. Licensing, priorities, etc., determine both the value and volume of imports while demands of war production elsewhere affect the supply available to neutrals. The accumulation of overseas assets is, in part, due to many restraints imposed on the export of capital. The habit of overseas investment is changed by the war just as the debt position is radically altered by dis-investment and large buying for war purposes. World trade has steadily shrunk so that the shaping of policy after the war will remain difficult. To restore prewar standards and to go back to old relationships, will appear more difficult than usual; but that it must be undertaken sooner or later is urged to-day not only by the partisans of peace by economics, but by all those who hope to find in the opportunities of the future a compensation for present hardships.

India must be reckoned among those, for obvious reasons. Between the two wars, trade underwent many changes. Tariffs were raised and exchange restrictions were multiplied along with the application of quotas. But the essential features remained the same, as the investigation made last year into the network of world trade indicates that inequalities in resources and organisation will condition a return to multilateral trade emphasising interdependence anew. If the conclusions run counter to the prevailing prejudice in favour of closed economies, it is well to remember that concentration of trade in rice, jute or rubber will eventually force a return to prewar relationships. If Japan were cut out of world trade by dictation, there will be a shortage of silk and other textiles; and the punitive exile of Germany after economic disarmament, will lead inevitably to a chronic shortage of electrical goods and steel. Indeed, the shortage of imports and the loss of markets should make India keener on a derided liberalism and a hope of a speedy return to pre-war conditions. It will be conceded that industrialisation is dependent more than ever on imports of capital goods, and if Europe ceases to export industrial goods not only Africa, but Asia will suffer—the latter from arrested development. It is perhaps necessary to link the promise of equal access to raw materials—to a demand for equal access to capital goods. The demands of reconstruction in Europe must not be allowed to prejudice the development of industry in the East, and any accentuation of inequality, apart from that imposed by Nature, must be remote from the ideas of Allied statesmen, who are anxious for co-operation in the development of China.

If a return to restrictionism is ruled out, the appropriate fiscal policy appears less important than presumed. The complete rehabilitation of production can only come from the restoration of trade along the old lines. It must not be made contingent on any scheme of federal union. Europe's interest in the subject will be appreciated as she obtained in 1938 only 52 per cent of her imports from within the Continent and took four-fifths of Africa's exports. The present dependence of Latin America on the U.S.A. may be treated as a further reason for the restoration of world trade so as to give Latin America, its markets in Europe and give the tropics their former supplies of European manufactures. Arguments as to balances of trade will appear out of place in describing the need for multilateral trade. Critics of Imperial preference will certainly recall that India's markets in Europe were lost as the U.K.'s share in imports and exports tended to grow larger. It may be that the war has reduced foreign trade with the neutrals and made India turn to the Middle East in place of the Far East, but the pattern of world trade cannot be altered either by will or by victory. That India and China together in 1938 had only 5 per cent of the world's trade is an argument for going back to a policy that will give us the share of Europe's trade held before the last war. If Britain intends to hold the Colonies for the sake of raw materials and consuming markets, going back to the plantation theory antedating Free Trade, India, too, may enter a claim for such privileges as may fall to a creditor of Britain.



Before the present war broke out the imports of raw materials into India were gradually increasing while imports of food were falling. To recapture that favourable trend supported since by increased manufacturing activity, something more than an increase of food production at home seems necessary, though food exports for the benefit of impoverished Europe from the Dominions and America will have to be larger. If Latin America's mineral production is to be maintained after the war in fair volume Europe's own supplies of manufactured goods to them must be kept up. It has been recognised by special treatment on the part of the U.S.A. The case for restoration of trade exempt from present restrictions, cannot be stated in any other way. Imports of manufactures into India were declining before the war, while her exports of raw materials were going down. That tendency was illustrative of a new, finer balance in the economic structure, arising largely from the depression which forced India to ship gold in place of goods. The fact that the Dominions' exports of raw materials and manufactures increased, even before the war while foodstuffs diminished, can be cited to prove that they have an interest like India in reverting to prewar policies and standards. That France will expect a large proportion of North African supplies after the war while the Netherlands naturally will seek to obtain the former proposition of imports from the N.E.I. may be regarded rather as the consequences of restoration than the direct claims put forth. The depression led to a reduction in French exports of manufactured goods and a reduction in food imports; but the Empire was largely supplied with manufactures by France which accepted the policy of Colonial preference. A revival in European trade cannot be expected if the French and Dutch Empires are denied the former conditions of access to the mother countries. The fact that the U.S.A. may be anxious to recover the usual markets for oil, cotton, tobacco, etc., in Europe must be related to India's own desire for European outlets for cotton, jute and oilseeds. Geographical concentration of production and trade, as the League of Nations study demonstrates, is inescapable. India has to ship the tea drunk by Britain which took 53 per cent of the world's imports while manganese and nitrate must find a market mainly in the U.S.A. If Latin America shipped more petroleum and Europe shipped more coal than the U.S.A., there were good reasons for it, including the preponderance of the U.S.A. in world trade in cotton, tobacco and copper. Rubber producers to-day will, probably, desire that the U.S.A. should take after the war as much as 38 per cent of the world imports, while Palestine's fruitgrowers would desire that Britain should take, as in the past, 40 per cent of the total imports of citrus fruit. If trade associations dealing in commodities are anxious to escape from control after the war, that desire must spring from an expectation that Europe's agriculture, in spite of large imports of fertilisers, cannot give what the tropics can give her. Canada's industrial development before the war supported an expansion in imports from the U.S.A. and an increase in food exports to Britain. The reduced importance of agriculture will not impair the desire for assured markets in the face of American competition in respect of foodstuffs and manufactured goods.

The influences operative before the war in the trade of the U.S.A. may have been twisted out of shape by belligerancy; but a big revival in overseas investment postulates the recovery of trade, in primary goods and manufactures. A rapid development of secondary industry during the war in Latin America should induce the U.S.A. to look not only to South Africa but to other parts of the British Empire. India took only 1 per cent of U.S. exports in 1938 and she provided only 4 per cent of U.S. imports, but the trade may be in readjusted proportions, particularly, when Japanese competition is less acute in Asiatic markets. The disposal of her agricultural surpluses will always be a problem in U.S. trade and the disinclination to take in conjunction with Europe three-fourths of Latin America's exports, may force her to reduce exports

to Latin America while increasing her exports to Europe and Asia alike.

After the repatriation of overseas investments and the reduction in income it is difficult to predict a complete or swift stretching of the network of world trade. But the disparity in natural endowments and labour supply may soon lead to the clearing up of world trade's channels. The U.S.A.'s chief market will be Europe and the Dominions while 40 per cent or more of her own supplies will come from the tropics as in the past. The ejection of Japan from China will lead to the break-up of the yen bloc but at the same time, the restoration of Japan's share in multilateral trade should be easy when trade increases production in China. The escape from barter and clearing agreements may not come with the end of the war, but Europe's urgent needs will condition a large increase in extra-European imports. And India too may find abroad her opportunity when intra-European trade is reduced to less han half of total trade. The difficulties in the maintenance of exchange stability cannot be many, and one must base hopes of large-scale expansion in trade both on the pent-up demand and on the revival of U.S. capital exports. If creditor countries do not withdraw balances abruptly, the former triangular relationships can be restored, and India's sterling assets will have by then served more than one purpose by being kept in London, apart from the assurance as to the diversion of a part for capital development. What is perhaps most important among the conclusions reached in any analysis of trade, is that tropical Asia including India, must provide raw materials like jute, shellac, rubber, tea and copra and will naturally stand high in the list of available markets for Europe and America. Owing to accumulation of war profits the conditions needed for a return to prewar state may be said to exist and commercial policy should have no other objective.

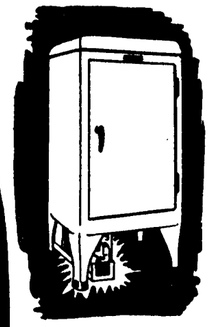
Prices in Bombay

A note on retail prices in Bombay City appearing in the "Labour Gazette" for January explains how the cost of living there has risen steadily and the dearness allowance has been adjusted in consequence. During 1942 there was a rise of 35 points in the working class cost of living index over the average for 1941 and the rise between February and December lifted the index from 135 to 188. Rent was stationary, but the cost of clothing was more than double at the end of 1942 while fuel and lighting costs increased by 75 per cent. The cost of food was almost double, but the percentage increase was greater in Ahmedabad and Sholapur. The increase in the cost of living was to be noted in Lahore, Cawnpore, Madras and Patna. Comparison with Britain where the index was more or less stagnant right through 1942 has little justification except to prove that price control in India was a failure. The "Labour Gazette" in reviewing the changes in retail prices in Bombay, draws attention to the fall under fish and the rise in the cost of all other articles including vegetables. The fall under fish only means that the local fishermen had a bad time or a worse time than the rest of the working class. Control kept rents down, but the rise in the cost of clothing was continuous. The most considerable change was under cocoanut oil and tea. The losses in the Far East lie at the bottom of this. The rise in the annual average for retail prices of foodstuffs is presumed to be 29 per cent, but the actual increase might be greater, as the black markets openly flourished and the increase of 25 per cent in the average price of refined sugar was more or less nominal. The experience of the working class in Ahmedabad was identical as the index rose steadily in 1942. A point to note here is that in Ahmedabad most articles were quoted in December at prices well above those for the base year 1926-27 and the only unchanged item was salt. Milk was the only article, the price of which was lower in 1942 than in 1941. There may be a reason for milk selling at 3 annas per seer. The rise in the cost of living in December proceeded from various causes and was not confined to Bombay where wholesale prices were 63 per cent above the average for August 1939. Prices in December incidentally exceeded those recorded in August 1918 when the highest prices in the last war were recorded.

Two New Excises

The new taxation provided for by Sir J. Raisman has not been vigorously attacked in the Assembly. Some objected to the tobacco excise as raising the working-class cost of living, others objected to the tax on Vanaspati as a burden to the middle-class while some protested against indirect taxation through the railway and postal departments. The retention of the customs surcharges has not been criticised, and the Finance Bill of 1943, therefore is likely to have a smooth passage in spite of the increase in rates of income-tax, etc. The middle class has been left untouched by the increase in taxation. On income between Rs. 5,000 and Rs. 10,000 the surcharge will be 10 pies instead of 9 pies and in the next slab between Rs. 10,000 and Rs. 15,000 the surcharge will be 16 pies instead of 14 pies. The increase is so moderate as to appear desirable. Actually the increase in taxation is limited by graduation and the surcharge described as 66 2/3 of the basic rate is obviously meant to take off a share only of incomes over Rs. 15,000 per annum. The larger increase in super-tax and surcharge up to 10½ annas on the top slab of incomes of Rs. 3½ lakhs per annum should be welcomed as evidence of getting for the Exchequer bigger share of war profits. That neutral Turkey has embarked on a capital levy this year can be readily cited in favour of taxation that will reduce great fortunes. Since changes in direct taxation are expected to give Rs. 7 crores out of the Rs. 20 crores sought, the bulk of the new revenue will come from indirect taxation. The new tobacco excise is a result of both former recommendations and present needs. The procedure has been settled in advance, and an increase of 20 per cent in the cost of tobacco is considered probable, though the rich man will pay more than the poor obviously the principle adopted in the case of matches and sugar in regard to uniformity and certainty has not been followed strictly, and the schedule of taxation will have to be distinguished from the 10 per cent excise on rubber tyres levied in 1940, though the rules relating to exports, etc. will be similar. The yield of the tobacco excise is put at Rs. 10 crores which means that it will displace the older excise as a source of revenue. As in the case of sugar excise, there is provision for agricultural research with the help of a grant of Rs. 10 lakhs. The excise on vegetable product for Vanaspati is a specific duty of one annas per lb., and may turn out to be less than the 10 per cent levied on tyres. The yield is put at Rs. 140 lakhs which at once suggested that the value of Vanaspati made in India must be equal to Rs. 14 crores though the number of factories engaged may not be more than a score. The decline in imports has produced an increase in production in recent years. If the production of Vanaspati should decline it enlarges the supply of vegetable oil and leads to a slight fall in the prices of oilseed, neither of which would be unwelcome at present.

Industry and the Budget



The effect of capital expenditure in the defence budget cannot be ignored in any appraisal of prospects for Indian industries. The large sums spent on aerodromes in 1942-43, certainly led to an improvement in the profits of the construction as well as cement companies. Since war expenditure in 1943-44 will be lower than in 1942-43, according to the Budget speech the construction companies may not do so well as in the past. Capital outlay on industrial expansion is put at Rs. 4 crores instead of Rs. 12 crores, and construction of aerodromes is expected to take Rs. 2.52 crores as against Rs. 18.37 crores. The only increase is that noted under tele-communications in the 1942-43 budget estimates published last Saturday. It is quite likely that cable-makers will benefit substantially from the increase in the provision though much of the equipment required may be imported. What is most important to note here is that the capital provision in the defence budget is substantially less than that shown in the Revised Estimates of 1942-43. The expenditure on naval construction is also lower than that shown in the same Revised Estimates. Though Indian yards may get more repair work under a separate directorate set up last year, it is not possible to predict a substantial increase either in income or profits. If more orders are given to Indian yards instead of Australian yards, the former level of profits may be maintained. But it is clear that the reduction noted under war measures, etc. spells a reduction in the volume of Supply orders for Indian industries though such reduction may be balanced by increased purchases on behalf of the others. What the others will order, and pay for, cannot be estimated, but one may assume that victory in Africa will reduce the demands made on India for goods. African resources may be developed more rapidly in order to save transport, and those who care to look beyond markets will do well to note that the reduction in defence expenditure forecast on February 27, is necessarily related to the prospects of all companies producing goods for the war effort. A reduction in sales or turnover of these firms may lower profits even if taxation does not and having regard to Sir J. Raisman's remarks to accountants on costing and profits on War contracts one may declare that in the coming year slacker conditions may obtain in the engineering and other Allied industries which may have a backlog of civilian orders to execute. The reduction in im-

ports will also have a stimulating effect, but inflation of profits in spite of prevailing optimism as to what may be ordered for the benefit of India from the U.S.A. in the matter of plant and equipment, to promote industrial expansion seems contingent rather than certain.

Silver for Savings

Anticipating the Finance Member's remarks on inflation, Sir Tracy Gavin Jones in his speech to the Upper India Chamber of Commerce on February 27 argued strongly in favour of rationing of materials for industries as well as the suppression or regulation of manufacture of luxuries and non-essentials. He added that all building and capital expenditure by individuals, private or public corporations, must be rigidly controlled. All production not necessary for life and the war would be checked and controlled under orders. He added that the manufacture of standard cloth instead of fine goods is a step in the right direction. He urged in this connexion that glass bangles are not a necessity and there are many things made in India which are a temptation to all classes to spend their increased income due to higher prices and higher wages. He argued that in taxation, the Indian States, landowners and agricultural classes are not pulling their weight. "I suggest that a special war purposes tax should be levied on landholders and tenants to be removed immediately on cessation of hostilities. The tax could be based on land revenue and land rent payable so as to be an equitable form of income-tax. The Indian States should be pressed to co-operate. Agriculture is doing well, and can afford this tax, also a substantial rise in the salt tax as a war measure." The suggestions of Sir Tracy may be questioned as trenching on the field of Provincial taxation. Surcharges on land revenue cannot be uniform in all Provinces in view of the poor crops reported in certain regions and an obstacle remains in the Permanent Settlement while an income-tax is not possible in most Provinces. The abrogation of the system of grants to Provinces from income-tax will appear more desirable but the Constitution Act stands in the way. A system of subventions to the Centre may be repugnant to public opinion even in the war period, but a levy of a War Purposes Tax for such a purpose by individual Provinces, may command approval. That the Finance Member's tax proposals are altogether different does not detract from the value of suggestions for taking off a share of the war profits of landlords. The most interesting suggestion of Sir Tracy relates to silver. Sales in India instead of London to withdraw superfluous purchasing power are desired by Sir Tracy who pointed out that the Bombay price was approximately double the London price at which the Government sold silver up to August 1942. The import of silver from the U.S.A. is desirable in the view of Sir Tracy who argued that free sales of silver, even for hoarding, is a cure for inflation. The risk of ultimate depreciation was not mentioned by Sir Tracy who advanced the view that such sales of silver would lead to sales of food grains and help to solve the food problem. Some will add that the call-up of standard silver coins presents the Government with an opportunity to get rid of part of its silver holdings, and sale at present prices by the Government may help Bombay to function smoothly with an enlarged offtake. The rise in commodity prices, since the Budget was presented, makes it necessary to create a flight into silver in the near future. Sir Tracy's suggestion is not unpractical and silver may be a convenient form of saving for the masses though the Finance Member would urge that investments in war loan would be vastly better. Payments to contractors in war loans have been approved by some, besides Sir Tracy, but that is a form of compulsory saving or forced loan which may not be found acceptable.

Economy IN KEROSINE

THE REFRIGERATOR

A medium sized Electrolux oil-burning refrigerator consumes on average 5 gallons of kerosine per month when in full operation.

During the winter months it is not necessary to keep the flame burning so high as during the hot weather. When it is cold, satisfactory refrigeration can be obtained from a flame of much reduced size, while during very cold nights the flame might even be put out altogether and the refrigerator restarted early in the morning.

By observing this practice, an appreciable saving of Kerosine can be effected in the cold weather.

Soil Erosion in the Punjab

Sir Harold Glover in a pamphlet on soil erosion in the North Punjab drew attention to a problem present in the U. P. and Central India as well. The erosion in the Punjab is not in a submontane region, but in the cultivated uplands in the districts of Jhelum, Rawalpindi and Attock, flanked by the Salt Range. The rivers have washed away the soil, except where terracing and embankment have been carried out. The washing away of the top soil calls for co-operative labour. Col. F. L. Brayne suggested that land reclamation societies as in the Gujar Khan Tehsil can do a good deal. Preservation of soil is deemed as important as retention of water in such tracts, and Sir Harold Glover's pamphlet is meant to show that apathy is dangerous and the Forest Department for its part is ready to help in checking soil erosion. Expert advice on soil conservation, forests and pasturage is available. Dams to catch the flood water and hold back the ravines were not unknown but concerted action was required; and experience in one Tehsil showed how in a district with only 25 inches of rainfall per annum, good crops could be raised by conservation of the soil. After the rains the terracing of an alluvial dam is not difficult, and keeping the ravines under check by blocking with masonry weirs is not difficult either. Behind the weirs much fertile silt is trapped and new fields are formed. Government makes grants for putting up such weirs and villagers are called upon to give labour only. Five or six societies had accomplished much up to July 1941 so that other villages were ready to ask for advice. Photographs secured by the R.A.F. and Sir Harold show the effects of erosion and embankment in areas where the ravines have extended into cultivated uplands. Crops of wheat and barley require the attention of small holders working together and the plan against erosion carried out in some places makes the outlook more hopeful than imagined. Erosion in Hoshiarpur presents different features and the restriction of pasturage has been the remedy tried after the passing of the Chos Act. Afforestation has been tried with distinct success by the soil conservation branch of the Department over which Sir Harold presides.

Shortage of Rubber

In Britain the tyres of laid-up cars have been viewed as a source of essential rubber. In the U.S.A., too, the Government has its eye on tyres on unused vehicles and the reduction in the reserve built up before the war has led the authorities to examine the possibilities of both reclaim and synthetic rubber. A deficit of 211,000 tons has been forecast in regard to the supply of rubber for this year and the curtailment of civilian demand by various orders is but one aspect of the rubber programme. The possibility of passenger cars being forced out of traffic through the lack of tyres has been mentioned at the same time as increased output of combat vehicles this year. But the U.S.A. with its ample coal and oil is in a position to develop synthetic rubber rapidly and it is hoped that the output of Buna s. and neoprene would rise to 425,000 tons so as to overcome the shortage and leave a small margin. But in spite of this anticipated increase in synthetic rubber production, the mileage possible for civilian cars would have to be reduced. And the lack of rubber rather than petrol would be the cause of the decay of motoring in the States. Attempts have been made to work out programmes of expansion for neoprene described as ideal for combat and heavy duty tyres either alone or combined with Buna s. Delays in production might force a crisis and the automobile industry's having gone over to war production, after curtailing its output of vehicles voluntarily is now seen as an intelligent anticipation of the consequences of disasters with the Far East. The possibility of larger imports of rubber from S. America and Africa cannot be ruled out but Britain might be a keen buyer in these places and the U.S.A., will, presumably, rely to a greater extent on its synthetic production.

Punjab's Surplus

Surpluses in succession are unusual, but in the Punjab they are due to the expansion of revenue rather than curtailment of expenditure. And the application of revenue balances to special Reserves is part of Sir Manoharlal's policy of keeping the provincial finances in better condition than ten years ago. The increase in civil defence expenditure in 1942-43 was offset by increased receipts from the Punjab's share of income-tax and forest receipts. After the transfers to Special Development and Welfare Funds totalling Rs. 80 lakhs, the 1942-43 surplus, according the Revised Estimates, was shown to be Rs. 6 lakhs. The improvement in land revenue by Rs. 68 lakhs in 1942-43 should continue into the year though estimated revenue

is Rs. 15.1 crores as against Rs. 15.77 crores in 1942-43. The latest budget points to a big increase in revenue compared with that of last year. A charge of under-estimating either expenditure or revenue cannot be laid against the Finance Minister who pointed out that in 1942-43 there were exceptional demands calling for additional expenditure. The increase in commodity prices should make revenue buoyant, while the proposed curtailment of expenditure as compared with 1942-43 will give the Punjab a surplus of Rs. 50 lakhs in 1943-44. The surplus will help to meet any probable increase in expenditure though the relaxation of A.R.P. restrictions in Northern India should help to keep down fresh expenditure while special outlay for police will not be called for. The demand for Indian timber should raise forest revenue and grants for revenue-producing departments may increase in consequence. Shortfall of revenue will not occur in the Punjab which is not a deficit province in regard to food. In that respect, too, the Punjal is fortunate, and total expenditur charged to revenue in 1943-44 at Rs. 14.6 crores will be below the estimated reve nue of Rs. 15.19 crores. The steady in crease in revenue during the period o autonomy marks the Punjab out from th other Provinces, and such loans as hav been taken for productive purpose should therefore be well covered i regard to interest, and higher quotation for the Punjab loans may follow th budget having regard to the genera

reluctance of sellers to part with Provincial loans.

New Taxation in Sind

An increase in the entertainment tax and that on sales of electric energy is not confined to the Bengal Budget. Sind, too, seeks more revenue from these two sources apart from proposed revision of stamp duties, and the Assembly approved last week a proposal that will secure Rs. 6 lakhs of additional revenue. In spite of the new taxation recommended, there will be a deficit. The last year was indifferent, and Sind's revenue suffered from the Indus floods, the Hurs and famine in some districts. Revenue fell by Rs. 83 lakhs and the improved position in 1943-44 will not suffice to balance expenditure and revenue. A deficit of Rs. 13 lakhs is expected by the Premier who has relied again on land sales and revised settlements on Barrage lands in addition to profits on sales of surplus grain bought by the Government under the price control plans. The last appears, in the view of many, indefensible, though the additions to taxation of the urban population may be regarded as quite proper. Whether storage and distribution arrangements are such as to produce a profit may not be questioned; but Sind's critical attitude to the Central Government's decision to decontrol wheat has been modified by the realisation that the Centre has presented it with an opportunity to make a profit. That Sind depends on a subvention, and is indebted to the Centre, may not be regarded as sufficient reasons. Expenditure has been curtailed owing to the fall in ordinary revenue and the development expenditure is not proposed by Sir G. H. Hidayatulla. Sind's finances will not be improved by any long-term plans and the reduction in the Province's balances and reserves, suggests that borrowing is out of the question for Sind as for the other Provinces. The provincial share income-tax may not increase steadily and Sind's autonomy is again prejudiced by finances in poor condition.

Russo-Polish Differences

Poland's claim to her pre-war frontiers has been denied more than once by implication. The agreement of July, 1941 has not produced Russo-Polish accord. General Sikorski had obviously tried for diplomatic support abroad before asking the Polish National Committee to set forth its views as to what it wanted. The Moscow statement last week was a demand for parts of White Russia and Ukraine formerly in Poland. Slav unity was referred to in order to defeat the Polish claim. There has since been a report that the emigre government may undergo changes, and a more resolute attitude may be openly adopted against the Russian demand for self-determination for Ukrainian and Byclo-Russian

OBJECTS

The Company has been formed for the purposes set out in the Memorandum of Association, and in particular for the fabrication of commercial plywood to be used in the manufacture of tea chests, building boards, circular and rectangular containers, ammunition and shell boxes and other articles. It will also specialise in the slicing of veneers made from Indian hard-woods, both for export and for local use in making laminated boards, solid doors, veneered panels for cabinet makers' work, etc.

PROSPECTS

For many years now India has been a very large buyer of plywood in the form of builders boards, or cut to sizes for making up into tea chests. Of the latter commodity alone, the country has been consuming over four million chests a year. Up to the outbreak of the present hostilities the principal source of supply was from Finland and other Baltic countries, the whole of which has now been stopped on account of the war. This has created an enormous demand for the immediate manufacture of plywood in India, and the last two years have shown without a doubt that there is no insuperable difficulty in supplying the country's requirements from Indian timbers fabricated in India. The few existing factories in India are at the present time working up to full capacity, but the amount of plywood that they are able to turn out is an infinitesmal portion of what is required. It is the intention of this Company to expedite production so as to take full advantage of the present demand, and at the same time develop those lines for which there will be a big demand both for local use and for export after the war.

ACQUISITION OF PLANT

The Company has installed the necessary plant for veneer slicing and some of the machinery for the manufacture of finished plywood, and it is hoped that within the next six weeks they will be able to commence production in certain lines.

MANAGING AGENTS

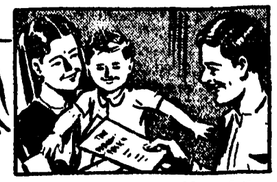
The firm of Messrs. Holmes Wilson & Co., Ltd., who have had considerable experience in Indian Industrial businesses, have been appointed as Managing Agents for a period of twenty years from the date of incorporation of the Company, subject to the usual provisions and conditions set out in the Articles of Association. Mr. Charles H. Holmes, the senior Director of Messrs. Holmes Wilson & Co., Ltd., will act as Managing Director and will give the Company the advantage of his many years' experience of Indian Industrial requirements.

TECHNICAL STAFF

The Company has been fortunate in securing the services of a highly qualified engineer, who has had many years experience in the technique and manufacture of the various types of plywood. They have also engaged a specialist in the running of plywood machinery.

FACTORY SITE

A suitable site has been acquired within the manufacturing area in Calcutta, and some of the factory buildings have already been erected and the machinery installed. The site has the advantage of a railway siding and is easily accessible for road transport.



MEMBERS' LIABILITY

The liability of the members is limited. The share capital of the Company is Rs. 10,00,000 divided into 75,000 ordinary shares of Rs. 10 each and 2,500 tax free 5½% cumulative redeemable preference shares of Rs. 100 each. The issued capital is Rs. 5,00,000 divided into 37,000 ordinary shares and 1,250 preference shares. The redeemable preference shares shall confer on the holders a right to a fixed cumulative preferential dividend at the rate of 5½% per annum tax free on the capital for the time being paid up thereon and shall rank in a winding up as regards return of capital and payment of arrears of dividend down to the commencement of winding up whether earned or declared or not in priority to the ordinary shares, but shall not confer the right to any further participation in profits or assets. The Company will at its option be entitled to redeem the preference shares either in part or whole at any time after giving one month's notice at a premium of Rs. 1-8-0 per share per annum but so that in any event the same shall be redeemed not later than the 31st December, 1952.

Thanks to father's plan,

TODAY MY LIFE INSURANCE COST IS NEGLIGIBLE

When I was two years old my father took out a 45-year Children's Deferred Assurance Policy* for me. The premiums he paid every month were less than even Rs. 1/8/- per thousand rupees.

When I became financially independent at 26, I started paying premiums for this policy myself. I found their cost amazingly easy to meet. I have never submitted to any medical examination.

When I reach the age of 47 the entire amount insured for will be paid to me. In the event of my death before then my wife will benefit in full—and yet my premiums are only about one third of those paid by my friends.

New India's Children's Deferred Assurance Policy provides life assurance at the lowest possible cost. *Full particulars are available to parents in return for the coupon included in this advertisement.

The large assets of this company guarantee maximum protection to its policy-holders and their beneficiaries. Since its establishment in 1919, New India has paid claims over Rs. 8 crores.

Authorised Capital—Rs. 6 crores. Subscribed Capital—over Rs. 3 crores. Paid-up Capital—over Rs. 71 lacs. Total Fund—nearly Rs. 4 crores.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

The "Back to Cripps plan" cry has caught in the sense that it has compelled attention and provoked adverse comment in the British Press. The Calcutta correspondents of British newspapers have lost no time in putting wise the public at home about the genesis and the motives of this move. They are careful to convey the suggestion that there are not many supporters of this move besides its protagonist, Mr. N. R. Sarker. And in fairness to them it must be said that, at present, that is not far from the truth. The Leaders' Conference in Bombay has not evolved any idea yet. And for a time there will be little said in India about it. But it is more or less certain that, if the leaders in Bombay do not choose to be grossly unpractical, they will make a categorical demand for the renewal of the Cripps plan. The London press seems to prepare for such a contingency. And arguments have been trotted out in advance in support of British refusal to renew the offer of the Cripps proposals. Sir Alfred Watson argues that "although the British Government have affirmed that the declaration of policy taken by Sir Stafford Cripps to India remains an offer to the Indian people, doubt has been deepened during the last few months whether the whole position would not have to be reviewed anew."

* * * * *

There are others who shift the centre of attention from the revival of the Cripps plan to a possible demand for the release of Gandhiji and the Congress leaders. They thus secure for themselves the opportunity to reiterate one of the most humiliating demands that have been made on the Congress in its long history, the demand that it should tender a "written withdrawal" of the August resolution. This reiteration will help to stir up passions when the whole country is in the mood to renew the political situation as dispassionately as possible.

* * * *

Talks of Mahatma Gandhi's release and the terms on which it can be secured tend to divert attention from the Cripps proposals. And for my part, India would be walking into a trap cleverly laid for her, if at this moment, any confusion of issues should be permitted. It is no use feeling sterile sentiments over the question of Gandhiji's release. What the fast and the Mahatma's own efforts have failed to achieve, a conference of leaders without following or following without leaders is not going to accomplish. Much greater good can be achieved if the release of the Congress leaders comes about in a setting of general understanding about the next step. Such an understanding, once it is brought about, can also have a salutary effect on the Congress. For the Congress is apt to repeat old cries, provoke opposition, shy at issues and draw into its shell, whether it is the prison-house, or its own constructive programme so called. An understanding among the various important sections of the public will not only delimit the choice of policies open to the Congress, but will also commit the non-Congress nationalist sections to certain settled policies, instead of the pleasant liability to meet in non-party conferences on occasions of political tension.

After all, what do we expect to gain by making the demand for the release of Mahatma Gandhi? We have not even a reasonable hope that the demand will be heeded. In the correspondence, that passed between Gandhiji and the Viceroy before the fast, the latter clearly stated the terms on which the release could be granted. These terms are tantamount to Gandhiji pleading guilty to all the charges that the Government have laid at his door in their pamphlet on the disturbances. They have also to call off the movement. While the latter may perhaps be complied with by the Congress, the former is certainly unthinkable. And so long as there is this vast difference between the two viewpoints, no purpose can be served by making the demand. It should also be remembered that the position and prospects will hardly be bettered even if the demand were conceded. I sincerely hope that the country will now turn its attention to the establishment of general understanding about the next step instead of allowing itself to be sidetracked by an obviously futile attempt to secure the release of Gandhiji and the Congress leaders.

* * * *

But what is the next step? I have no hesitation in saying that it is a united demand for the revival of the Cripps offer. As many parties as possible should be persuaded to join in the demand. Since there is no one to speak in the name of the Congress, the views of prominent ex-Congressmen of such different types as C. R., Mr. Munshi and Mr. N. R. Sarker must be held to signify the nearest approach to the changed attitude of the Congress. Support for this move can be made very weighty indeed, if the Federation of Indian Chambers, which is a non-communal, but important, association can pass a unanimous resolution in support of the demand. The depressed class leaders can be convinced of the importance of India having a nationalist government before the war draws to a close and the fate of the world is transferred from the lap of the war lords to that of the

peace lords. About the Muslim League nothing can be said. But I have no doubt that if the movement gets going, the League will not withhold its support, especially if the principle of Pakisthan is not opposed.

* * * *

What if Britain refuses to revive the Cripps proposals?—I may be asked. Personally, I do not think it is much of an if. British reluctance to revive the Cripps proposals will be in direct proportion to the prospects of their successful acceptance by the Indian parties which implies that the offer was made at first in the confidence that the proposals were bound to be rejected. The more we succeed in our attempts to get unanimous support for the acceptance of the proposals on their renewal, the more reluctant will the Government be to repeat the offer. But I am not concerned at this stage with what the British Government might do or what steps India should take once the British Government have refused to revive the proposals. I have always considered it far more important that the Indian parties should learn to appraise the situation properly and to work together than that they should be ready with a counter-move to every move that the British Government may make. For, the weakness of India no longer lies in the strength of our opponents. Both the August declaration and the Cripps proposals have brought out clearly the fact that on the one hand we have an important political party which has a strong faith in its power to benefit by the weakness of the whole and on the other a party which can never come to grips with the problem that confronts it. It is true that the Congress might have tackled the problems better if it were not weakened by the dissensions within the country. But these dissensions are unquestionably part of the problems which the Congress should feel called upon to solve.

* * * *

The rejection of the Cripps proposals by the Congress must be attributed to two different reasons. One is that Congress had its own pet illusions about its capacity to bend the Government to its will. The other is that the mind of the Congress is hopelessly chaotic on the question of its attitude to the Muslim League and its demands. The same may be said though certainly to a lesser degree in regard to the Congress attitude to the depressed classes and other minorities. A political organisation like the Congress in any other country would have seized the opportunity aand utilised it to strengthen its position. But the Congress in India has always shown itself an utter stranger to the idea of a progressive increase in its power relatively to other parties. If the Congress leaders had ever troubled to understand the process by which a dominant political party becomes a power in the country, it would not have wasted the three years of office in the provinces nor would it have regarded the Cripps proposals with that aloofness and blinkered vision that doomed the proposals in advance in their eyes. Another fact of importance to the Indian political situation to-day is the failure of the Congress to realise that every time it brings on a policy of active opposition to the government, its links with the other parties are loosened if not altogether severed. Thus it happens that, while the Congress is in jail, there is hardly anyone to pick up the threads of the nationalist movement where the Congress left them.

There is, therefore, a great deal of spadework to be done before the Congress comes on the scene. Considering that the Government has chosen to be adament in the matter of the release of the Congress leaders, I am extremely sceptical of the value of a demand for such release. On the other hand, it may well prove to be another of the false starts which have reduced this country to this position. But the leaders in Bombay have thought differently. They have not only asked for the release of Gandhiji, but they have expressed the view that the talks which some of them have had with Gandhiji lead them to think that he is inclined to review the whole position and that therefore the signatories to the statement issued from Bombay will be quite willing to regard themselves as hostages for the good conduct of Gandhiji and the Congress leaders. I cannot help wondering whether this kind of abjectness can serve any purpose. For I am by no means sure that Gandhiji or the Congress will be prepared to subscribe to the terms of the leaders' statement. It is true that Gandhiji always manages to keep an open mind. It is true, too, that if he should be released, his examination of the situation in the country will induce him formally to call off the August movement. But Congress does not stand less on prestige than the Government. Nor, perhaps, is prestige less important to it. The demand made by the leaders can, therefore, be justified only by the unlikely event of the Government granting it.

* * * *

All that the leaders in Bombay can do, therefore, is to make up for all the errors of the past few months which have been to the reactionaries in Government circles such a tower of strength. It is certainly up to them to take the wind out of the sails of these reactionaries. Their principal sources of strength as against the Congress are firstly, the plausible allegations of violence against the Congress, secondly, the attitude of the Congress to war, which is determined in part at least by its vague loyalties to non-violence, thirdly, the rejection of the Cripps proposals, which is made much of for purposes of propaganda abroad and fourthly, the disunion within the country. All these matters can be dealt with by the

Tender No. S/F1/1203/B for the supply of Wheels C. I. rubber tyred 10 ins. dia. with 1¼ ins. dia., wheel for axle with rubber tread 2 ins.

Tender form with full particulars can be had from the office of the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta may, however, remit the amount to the Controller of Stores, direct by Money Order. Once this document is issued, no refund is permissible.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the Tender Box outside the Deputy General Manager's (Works) room, by the Tenderer or his representative.

R. E. MARRIOTT,
General Manager.

leaders not in open conference but in talks, pourparlers, committees and the like. Surely, the leaders can furnish an answer to the Government publication on "Congress Responsibility for disturbances" and ensure the same degree of publicity for it abroad, as, I presume, the Government have secured for theirs. As for the Congress attitude to the war, there has, indeed, been a significant change of which the world at large has not been adequately appraised.

* * * *

But the two points mentioned above pale into insignificance by the side of the next two. The Cripps proposals, the manner in which they were made and even more the manner in which they were withdrawn are really a masterstroke of diplomacy. It is, indeed, a bitter thought that Congress leadership was so singularly unequal to the moves taken at that time by the reactionary elements in the British Government. It is sometimes said that Mr. Churchill killed two birds with one stone, that the same move enabled him to put an end to all thoughts of national government in India at least for the duration of the war and disposed of a formidable political rival at home. Whatever the truth of it, the Cripps proposals were conceived primarily with a view to exonerate the British Government from the charge of taking advantage of the discussions in India. Taken by themselves, they, no doubt, represent a very practical, though tentative, solution of the communal problem. If the Congress had regarded it as the only means of circumventing a problem which they can neither solve nor surmount, they would have welcomed the proposals. They would have understood that, once in office, they would have the choice between actively working for union and strengthening their own position so as to obviate the need for undue placating of their opponents. The failure to understand the Cripps proposals in this light accounts for the rejection of the proposals.

* * * *

The British politicians, I mean, the reactionary elements therein, counted on the Congress declining the Cripps' offer and looked, therefore, to the substantial advantages that might flow from making such an offer. It is quite understandable, therefore, that the Cripps proposals should figure so largely in the propaganda carried on by the authorities. For this very reason it is important now that India should make a united demand for the renewal of the Cripps offer. The unity behind the demand will also be an answer to the charge of disunion. If all the parties are for the immediate adoption of the Cripps proposals, the Muslim League will not be able to ride the high horse any longer. It will have to state its position; and precise statement always involves a degree of accommodation. The nationalist forces in India have all along been so split up and dissipated, they have been so lacking in understanding of the essentials of a practical political programme, that the Muslim League has been able to make the most of silence and inaction. Now that there are certain elements even within the League which are dissatisfied with the present position, a general rally may be fruitfully attempted over the question of the revival of the Cripps proposals.

'EAVESDROPPER'

IMPORTANT ANNOUNCEMENT

TO ALL PAINT AND VARNISH CONSUMERS

WAR NEEDS MUST RANK FIRST :

The paramount necessity of shipping space being reserved to the greatest possible extent for munitions and essential commodities, dictates that members of the Association of Paint Colour & Varnish Manufacturers in India should reduce drastically their importations of raw materials to a level consistent with continued ability to produce those materials which, in turn, are of prime necessity to the War supply effort. Readers of this announcement are no doubt aware of the vital part which Paint plays in the mounting needs of our Army, Navy, Merchant Marine, R.A.F. and War Industries. Moreover, apart from the question of shipping space, this Association is confronted with the hard and inescapable facts of certain raw materials, both indigenous and foreign, being either in short supply, or rigorously controlled, or even no longer procurable at all.

SPECIALITIES MAY BE WITHDRAWN :

Under the impact of the above factors certain Manufacturers are already, and others will sooner or later become, unable to supply various Speciality or Branded Paints, Enamels and Varnishes to their original pre-War formulations and performance standards. By a unanimous decision of its members, and in what are believed to be the best interests of all Paint consumers, this Association now announces that as and when a Speciality or Branded material becomes impossible of production to its original standards of formulation and performance, it will—purely and simply—be withdrawn from the market until such time as happier circumstances again permit of its restoration. Customers and consumers are thus assured of the sustained quality of goods purchased under the advertised Brands, Marks and descriptions of the members of this Association hereunder listed.

. . . . BUT SUBSTITUTES WILL BE OFFERED :

To counteract the inconvenience otherwise suffered by consumers as an outcome of the above decision, the Technical staffs of the respective Manufacturers have evolved emergency formulae for those types of Paints, Enamels and Varnishes in common demand, and these will be offered wherever an enquiry for a Speciality or Branded material can no longer be met. These War-time emergency materials will represent in performance the best possible value and quality that can be achieved under the temporary conditions of restricted raw material availability. It will be sufficient for purchasers to indicate the uses to which the material required is to be placed to enable the Manufacturer consulted to provide the appropriate material under that description.

RESTRICTED COLOUR RANGES :

From the causes above mentioned it also results that many colours and shades can no longer be produced. This Association therefore gives due notice that its members must henceforth reserve the right to substitute, for specific colours demanded, the nearest available match from a restricted range of emergency colours which each of them will shortly issue.

CONSUMERS HAVING SPECIAL PRIORITIES :

(Important Note) The above arrangements relate primarily to the general business of members of this Association and are not necessarily applicable to those consumers whose demands are backed by Essentiality and Priority Certificates issued by Government enabling Manufacturers to obtain releases of raw materials otherwise denied to them.

(From Our Correspondent).

New Delhi, March.

ONLY two days were spent in the two Houses of the Central Legislature over the general discussion of the Budget. There was a good deal of criticism from non-official benches, but generally speaking, one found that the new taxation proposals did not evoke much protest. The impression which the debates left on one's mind was that non-official members were not disposed seriously to question the Finance Member's decision to cover a third of the coming year's Budget by additional taxation or the sources which he has selected for raising it. A number of amendments have been tabled on the Finance Bill—particularly for giving some relief as regards income-tax and postal rates, but it is now clear that the Finance Member will have little difficulty in getting his proposals passed. Sir Jeremy Raisman claimed in defence of his taxation policy that it "is as favourable to the poor man as could possibly be expected in these abnormal times." What really drew considerable, and certainly anxious discussion was not so much the Finance Member's taxation policy as the policy involved in larger issues concerning the Indo-British Financial Settlement, the disposal of sterling balances and other matters like the mutual aid agreement with the United States. The Finance Member was frank, friendly and full in the statements which he made in answer to criticism on these points.

* * * *

One or two important assurances were given by the Finance Member which helped to remove a certain amount of misunderstanding. With reference to the mutual aid agreement with America, the Finance Member assured the House that the Government of India were anxious to see that India's fiscal policy after the war was not unduly hampered. No one could now foresee what would be the economic conditions existing in the world after the war and India's problems in relation to them, but it is necessary to ensure that no commitments will not be entered into which will fetter the discretion of the future Indian Government. Even as regards sterling balances, the Finance Member stated categorically that he did not see how any future Government of this country was prevented from handling these balances to the advantage of India. It was Sir Cowasji Jehangir who raised the question whether India would be free to purchase her capital goods and machinery from any country she liked after the war. Was it intended that these should be purchased only from the United Kingdom? Sir Jeremy was not quite categoric in his answer, but what he actually said was "The present position is that you have a certain sterling balance and that you wish to draw up a programme for the utilisation of this balance in order to obtain capital goods, Well, I cannot foresee the precise conditions in which this fund will be employed. I also said that it was not intended, as far as we are concerned, to limit the objects of the Fund in any way. The fact remains that the fund will consist sterling balances and at the present time the sterling area is one thing and the dollar area is another thing. The relation between these currencies as I said a little while age is a matter which will undoubtedly be settled and it is essentially a postwar problem."

On the question of sterling balances the Finance Member spoke no less than three times in the course of the last few days. In reply to the "cut" motion on this subject which was initiated by Mr. Neogy in the Assembly on Monday, Sir Jeremy went a little further into the position and explained the Government's viewpoint thus. "The sterling balances represented a debt from Britain to India. Before a bilateral obligation between Britain and India could be converted into a multiliteral one, there must be some international arrangement, some international recognition, some international system which would enable the necessary economic processes to take place," Sir Jeremy went on to say that these credit were not actually money immediately available for conversion into goods or services." All that he was prepared to state about the present was that "we should set to work to examine our own circumstances and see to what extent we could put ourselves in a position to take advantage of the circumstances as they would exist after the war." In fact it was only this morning that Sir Sultan Ahmed in reply to a debate on another "cut" motion made an important announcement about the Government's postwar reconstruction plans. He said that the Government was actively considering the matter and would soon be in a position to announce the Government's plans in this respect.

* * * *

There has been a good deal of complaint that before finally coming to an arrangement with His Majesty's Government regarding the allocation of military expenditure, the Government of India should have consulted the Legislature and ascertained its views. It is a matter of common knowledge that the Viceroy's Council discussed the financial settlement in a series of meetings and was able to make its influence felt. So far as consultation with the Legislature is concerned, the Finance Member took the view that "it is not possible for the whole business of Government to be conducted in a process of consultation with the Legislature" and that matters of this kind did not lend themselves to continuous consultation. Whatever it is, the feeling among non-official members appears to be that the new arrangement is not quite so favourable to India as is sought to be made out. Dr. H. N. Kunzru raised an interesting question in the course of his speech in the Council of State. After demanding that what is called "joint war measures" should be clearly understood and properly defined, he said that the expansion of the Army in India to its present scale was not merely for the defence of India, but also for the reconquest of Burma and Malaya. He therefore thought that it should be regarded an imperial concern and financed as an imperial responsibility. His plea was that the entire cost of "white" troops in this country should be borne by Britain. Practically every speaker in the two Houses urged that the capacity of India to pay should be the first consideration in apportioning expenditure. According to Mr. Hoosain Imam, another speaker who went into the question of Defence expenditure in great detail, it was not true that England would be spending much more than India on India's defence expenditure, for according to his calculation England's share would not be more than 53 per cent of the total war expenditure.

* * * *

One result of the "cut" motions discussed to-day in the Assembly was an undertaking from the Leader of the House that there would be two more sessions of the Legislature this year—one at the end of July and the other at the end of October. If this new arrangement proposed materialises, the Central Legislature would have the opportunity to meet thrice in the year. Though it is the longest and continues for more than two months, the Budget session is so fully occupied with debates on the two Budgets and the Finance Bill that it has little time for any other important work. Thanks to the assistance given by the Treasury Bench, the current session enjoys the privilege of having put one more non-official Bill in the statute book—the Reciprocity Bill which is undoubtedly an important measure from the point of view Indians overseas. It is likely that the Government's assistance will also be available for referring the Hindu Law of Succession Bill to a Joint Select Committee, during the current session. No other important non-official business is likely—nor is there any time for any big official legislation also. If, however, there are to be two more sessions of the Central Legislature before the end of the year, it will provide facilities both to the Government and non-official members to take up other work. This has raised the question whether the Government of India will now at least think of dissolving the two Houses and hold fresh elections. At the moment the authorities do not seem to be in a mood to think of fresh elections, for they think that they may rouse up political and communal controversies and interfere with the war effort.

* * * *

It appears likely that if the Viceroy is not able to release Sir Jeremy Raisman from the Finance Membership, the Governorship of the Reserve Bank will go either to Sir Edward Cook or Mr. C. E. Jones.

Bombay, March 11.

THE sharp rise in cotton prices has surprised many, but cloth prices fully support the rise and the difficulty of importing cotton has forced many to follow the rise in the price of Indian cotton. There is already talk of cotton at Rs. 700 per bale, because all commodity prices have gone to the 1918 level. The silver market has turned firmer like the share market. The successful conclusion of Gandhiji's fast has been a factor in the revival in all markets after the Budget proposals were known. Criticism of new taxation has been mild but Mr. A. D. Shroff has objected to the excise on Vanaspati. That subsidiaries of British firms are exposed to it like Indian firms here will certainly please many, but it is doubtful if an anna per lb. is going to affect the cost of living for the middle class. The comments on the Budget heard from the Federation of Indian Chambers are not wholly endorsed by leading businessmen who approve the idea of more borrowing at the same rate as in the past. The criticism of Mr. Haridas Madhavdas has been mild and not at all bitter. The jump in prices shows how the markets view the tax proposals. The announcement that sterling balances will be used for development satisfied everyone who considers the progress of industry in the war period as quite satisfactory.

Confidence and cheerfulness led to the record crowd at the Red Cross meeting at Mahalaxmi. Indian Princes provided popular winners in most races and fat dividends were available to those who picked the winners on Thursday. There was a big gathering elsewhere for the Exchange Bank of India and Africa opened its doors. Sir Rustom Masani performed the ceremonial opening at the invitation of Sir J. B. Boman Behram. There were references to the need for new banks and extensive facilities. The defect has been found in inadequate branch expansion, particularly in the States, and the patronage of princes should encourage the new bank to go ahead with its programme. The share capital has come from East Africa and Ceylon as well as India and the average holding is only 34 shares per head showing that the prospectus secured very good response. Nawanagar will be the first State where the new bank will set up its branches. Sir Rustom Masani recalled that the Central Bank opened a branch in Jamnagar though the Managing Director was averse to the proposal. The Directors found that the late Jam Saheb accepted their suggestions and the Jamnagar branch got plenty of business in the first year of its career. Acceptance of bills is a department in which Indian banks are backward, and Sir Rustom expressed a hope that the new bank would go for discounting mainly because internal trade is far bigger than foreign trade. He expressed a caution against indiscriminate opening of branches because small towns do not pay and he drew lessons from the Central Bank's experience. His happiest thought was to indicate the importance of brains in banking. Balance like character is required and he asked that practical talent should find a place on the Board. Mr. Akhaney drew satisfaction from the fact that bank failures are rare. Having Rs. 10 lakhs as capital, the Bank will concentrate first on India. The turn of Ceylon and East Africa will come afterwards. The fact that Rs. 10 lakhs have been secured as deposits encourages the belief that Mr. Akhaney's, association with the Bank is responsible for a promising start.

One of the Presidency Magistrates has declared that a notification against hoarding is *ultra vires*. Two persons who had kerosene amounting to twenty gallons did not declare their stock. In the prosecution that followed reliance was placed on the Defence rules. The magistrate held that those who dealt in kerosene were subject to the notification and returns could not be demanded of private persons. Consumers' stocks could not be covered by a notification unless the terms chosen were different. Discharge was followed by the restoration of tins of kerosene to the Parsis who have vindicated the rights of the citizen.

Famine is not confined to Bijapur. Relief has to be provided in four Districts. Distress is severe, and fodder like food, is scarce. Free kitchens have to be kept up and the only bright spot is public health. Emigration from the Districts is common and prices are not soaring, but stationary at the scarcity level. Deficiency of rainfall has been reported from Guzerat as well as the Konkan. Hyderabad, too, has not had good crops and scarcity is general in Madras. The peninsula is not better off than Eastern India where the scarcity of rice is due to various other factors than drought.

The hopeful outlook referred to last week has resulted in a signed statement asking for conciliation. The key to the deadlock has to be used by Mr. Jinnah who can indicate that he is ready for talks with Congress and a compromise on the Pakistan issue. Bombay does not look for any large change since the detention routine has been restored in Poona, but Mr. Phillips' presence here should do much good. There must be a good deal unexplained; but in the thankful mood no questions are put to those who may know. Mr. Aney's visit to Poona has shown that those who resigned are with the Congress. The need to get away from old prejudices has been stressed by Sir R. P. Masani. His appeal is meant for both Government and Congress who have been told of what has come after anti-Russian prejudice disappeared.

Newspapers have ceased to worry over newsprint. Higher prices, fewer copies and less advertising will be the rule after April 1. Readers will suffer in many ways and advertisers too. The entertainment business will be most hit and only after the year end can there be enough newsprint to revert to old sizes if not old prices. The threat of German naval activity in the Spring, indeed restrains hope of an early improvement, but Canada, ready to spend for the United Nations, may do us a special favour by giving the press (praised by Sir R. Maxwell for amenability to argument and control) the thing it wants most. Sharing the newspaper may prove helpful and turn out a useful economy when money is wanted for other things.

Soldiers are wanted for rural uplift. Exsoldiers make good farmers and pensions help them out in lean years as readers of Darling know. Colonel Brayne who was here spoke of using a million men in the future war against poverty and squalor in the countryside. To use the equipment released by the war to promote better living is desirable on all counts and India must avoid the experience of the returned soldier described in Dr. Anand's last novel. The Army believes in educating the soldier for the tasks of peace and has got up a special fund to benefit soldiers. The Army is an instrument that can be adapted to peace and Colonel Brayne is going to try out his ideas so as to treble the wealth of the average village by better farming and more cooperation. Amenities mean reconstruction and a sturdy middle class should be planted in the villages so as to avoid disappointment. Agricultural improvement turns on the settlement of the soldier on the soil and the moral guidance should be sought within the village.

It is rumoured that Mr. Thomas, Superintendent of Insurance, is handing over charge. This is disquieting news if it is true. During the period he has been in office he has distinguished himself and created a good tradition. At the time he was selected many expressed doubts but he more than justified the selection by his work during the last three years. The smaller insurance companies might perhaps have some reason for complaint against Mr. Thomas who made the New Act work out to everyone's advantage and secured essential amendments in time.

HILL-BIRD.

Resume of Commodity Markets

GENERALLY firmer conditions have been noticeable in the several commodity markets during the past week. The jute market has remained steady owing to the anxiety of consumers regarding the regular supply of the raw materials and the disposition to buy up such quantities of ready jute as were offering in the market. The jute manufactures market was inclined to be rather quiet in the early days of the week on the publication of discouraging local stock figures for the month; but the announcement of a fresh order for tents involving a considerable quantity of hessian cloth has resulted in a late rally in values. Bullion markets were rather irregular in the first half of the week, but during the last three days, there has been some investment and speculative buying and closing quotations are at new high levels. The cotton market was erratic, but there has been a late rally and Jharilla cotton has established a fresh record, the quotation for March being as high as Rs. 595. The undertone in the several sections is steady.

* * * *

There have been no particularly favourable developments during the past week to stimulate activity in the commodity markets. The rises, with the exception of the bullion markets, have been mostly due to special factors. It was pointed out last week that the abrupt rise in cotton prices was due to the fears regarding the possibility of a famine for long-staple varieties and the tendency on the part of mills to buy up existing stocks of long-staple varieties. With the present shipping position, the authorities will try to discourage as far as possible unnecessary imports, unnecessary in the sense that substitutes could be found for them within the country and that lack of such imports will not seriously affect the prosecution of the war effort. The relaxation in the specifications by the defence services has made it possible for Indian mills to do the work, involving smaller quantities of imported cotton and a greater utilisation of the raw material obtainable within the country. It was at one time feared that the recent disturbances in the internal political situation might possibly interfere with production at mills and that manufacturers would postpone their buying programme for some time. There has been no serious interference to mill production and there is great anxiety at the present moment to lay in stocks as far as possible. The financial position of mills is very strong at the present moment and there is plenty of money seeking investment in cotton. The appreciable rise in prices for Jharilla cotton, however, as remarked last week, must not be taken to mean that there has been a proportionate improvement in values for short-staple varieties as well. The appreciable rise in the quotation for Jharilla cotton has been useful. There should be and there has been some diversion of interest for the inferior varieties. This diversion of interest has resulted in an improvement in values, though not proportionate. Suggestions have been made for some time past for the revision of the contract before trading begins in the new crop as from May 1, 1943. With the one-sided movement in Jharilla cotton in recent weeks, this question has assumed greater important significance from the market point of view. What action the Committee of the East India Cotton Association propose to take remains to be seen.

Jute:

Transport is again presenting great difficulties. Arrivals in the last two months have been on a very small scale. With the present production of mills there is need for replenishment of stocks. There is not much ready jute offering in Calcutta, and there is no prospect of any large increase in arrivals in the immediate future. There is naturally a tendency on the part of sellers to ask for an advance in rates. Imports into mofussil centres also have been small. If nothing is done to improve transport facilities a further rise in prices for jute cannot be prevented.

* * * *

Jute Manufactures:

The jute manufactures market has behaved much better than it was expected. The new war orders have evidently had a stimulating effect though the strength of the jute market also has been helpful. The publication of the stock figures had a discouraging effect for a time but, there is now a feeling that production on account of commercial sacking and hessian will not appreciably increase even with the cancellation of some sandbag orders last month. The two recent orders will make up for the short fall on account of the concelled sandbag orders and thus prevent an increase in the production on account of commercial sacking and hessian. It will be remembered that two weeks back there was some selling by second-hand dealers on fears that there would be a substantial increase in production for ordinary consumption and that mills will be forced to unload those goods on the market at very much lower rates. With the removal of this threat prices have firmed up.

Stock figures for February show that there has been an increase in hessian stocks by 1,86 lakhs yards and sacking 74 lakhs yards. The total increase in stocks is, therefore, over 2.5 crore yards. If it were not for the fact that February was a short working month, one can say that the production figures for the two months were not strictly comparable. The output for January was lower on account of the difficulty in regard to labour in the first two weeks following the successive raids by the enemy over the Calcutta area. At first it was expected that it would be possible to report a further decline in stocks, but the reports regarding shipments during the month of February were not quite satisfactory to effect any decrease in local stocks. The actual increase, however, had a depressing effect in the early days. Stock figures for the current month are very important from the market point of view.

Bullion:

The strength of the bullion market in recent weeks may come as a surprise to some. There has been no deterioration in the war situation. Stock markets have been active as also the commodity markets. It would appear that inflationary forces are at work and that unless these are effectively checked investors cannot be prevented from putting their money in precious metals, even with the knowledge that there would be a heavy depreciation in values in their holdings in the postwar period. The refusal of the Government of India to disclose their sales of silver both in Bombay and London giving the details regarding the quantity and the average price at which they were sold, might also be viewed suspiciously by the market.

* * * *

Rice:

The position in regard to rice has become so acute that it has been found necessary by the Bengal Government to remove all restrictions regarding the control of prices. An announcement has been made to this effect and holders have been asked to part with their stocks at reasonable prices. The restrictions in regard to the movement of rice still exist. The responsibility for the transport of supplies from the surplus to the deficit areas still rests with the Government. With the removal of restrictions regarding prices, and the undertaking by the Government to move stocks to the areas needed, it is hoped that prices will be kept within reasonable limits and that the removal of control will not act as any incentive to speculative activity.

Rubber:

A communique has been issued by the Government of India saying that rubber estates would be requested to intensify tapping on 80 per cent of their acreage by tapping the double 23 system of tapping, that is, 133 per cent intensity and that the remaining 20 per cent should be brought under the double-two system equal to 200 per cent intensity or "slaughter" tapping. It is proposed that compensation should be paid to the estates concerned.

EAST INDIAN RAILWAY

TENDER NOTICE

Sealed tenders for the contract of repairing, regulating and maintaining in proper condition, platform and office clocks, watches and time pieces belonging to this Administration are invited and will be received in the General Manager's Office, 105, Clive Street, Calcutta, upto 12 o'clock (noon) on the 12th April, 1943.

Tenders No. S/UC/NS/Cont/Clock and Watches at Rs. 2 per copy with full particulars is obtainable from the Controller of Stores' Office, E. I. Railway, Calcutta.

Calcutta Branch - - - - - 15, CLIVE STREET

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, March 11.

THE expectation that there would be a substantial rise in the quantity of stocks of manufactured goods held by mills in godowns at the end of February, has not been falsified this time as it was at the end of January. During January the deterioration in the overseas shipping position had been more than neutralised by the fall in mill production due to defection of labour. February production figures are not yet available, but it must presumed that they show a return to something like normal, so that the scarcity of shipping is reflected in a sharp increase in stocks. The gross increase amounts to 11,047 tons, fairly evenly distributed over Hessians, 5,144 tons and Sackings, 5,903 tons. The main point of interest, however, is that the accumulation is entirely in commercial goods which show an increase of 13,807 tons, Hessians 6,369 tons and Sackings 7,438 tons. The difference is due to clearances of Government goods which, with the exception of Sandbags, which show an increase of 3,000 tons in stock, have been depleted in all other descriptions by some 5,800 tons. In yardages, commercial Hessians are up by 145 lakhs yards and Sackings by 120 lakhs yards.

While these figures would in normal circumstances tend to have a bearish effect on markets, other factors have caused quite an opposite effect. In the first place, Bombay speculators, having reached what they presumably thought was the utmost limit in their manipulations of the cotton market, looked round for another medium for speculation and apparently decided that Hessians offered the most promising field. Operations on this so-called "investment" account started the ball rolling, the particular medium being eleven porters. Either by luck or superhuman judgment, they have been favoured in their selection by the placement by Government of a considerable order for tents, which while of no very vast extent so far as the quantity of canvas required is concerned, had the effect of making mills rather more reserved sellers. On top of that comes the news that an urgent order for the U.S.A. Government has been placed to the extent of some 12 crores of hessian cloth for March-April delivery. With mills already pretty fully sold for these near months, the execution of this order almost inevitably means the opening up of all sealed hessian looms and possibly also an increase in working hours to 60 per week till the order is completed. So the "investors" in hessians look like being on a giltedged security for the time being.

Mills, on the other hand, are not nearly so happily situated. We took the opportunity to point out last week that the jute supply situation was becoming acute with no sign of improvement in the inland transport position, in fact every indication of a further deterioration. Mills have already been trenching on their stocks of raw material in godowns, though exactly to what extent up to date it is rather difficult to estimate until the February production figures are published. In any event the quantity by which mill godown stocks must have been depleted is quite considerable. Nor can they look now to the local bazar for much relief, for there have been considerable drafts on that source of supply lately, and the arrivals there are scarcely enough to keep Press-houses supplied.

Before the placement of this urgent American order even a curtailment of working hours in mills was foreshadowed, to accommodate production to the rate at which raw jute was coming forward. No doubt mills would like to have put off that evil day as long as possible, but now matters have been precipitated by this urgent order which, if as seems likely, will necessitate an increase in hessian production to accomplish it, will equally inevitably bring much nearer the day when mills will have to reduce hours again to come into line with jute supplies. Unless some *modus vivendi* can be arrived at with the military authorities to release some of the transport they have requisitioned so that it may be diverted back to its normal purpose of carrying jute to the mills. There is no scarcity of jute in mofussil stations. Sellers and shippers would be only too glad to see freight provided for them to implement contracts with mills, the original due date of some of which runs back to August. Meantime there has been a small rush on the part of mills to put purchases on their books at least, of sufficient raw jute to cover their sales on the recent rise and their share in the new orders.

The only section of the market which has not participated in the recent activity is Heavy Goods. Speculators had their innings with these some time ago and purchases then made were far greater than the country trade could absorb. These descriptions therefore have been left severely alone by market operators, and though there have been the usual inter-bazar covering transactions reported, mainly for the near positions, prices of heavy goods have been maintained almost entirely by sympathetic reaction to the activity in other sections. Again, if working hours have to be increased, even temporarily, unless the effect can be neutralised by a switch back of looms from sackings to hessians, there promises to be a glut of heavy goods on the market presently, and the

(Continued on page 449)

With the use of plastic products in many industries and their growing importance in preparing articles of common utility, the manufacture of plastics in India is a definite contribution to India's industrial progress.

The switches, plugs, ceiling roses and lampholders made by J. K. from plastic materials are 10% to 15% more durable and cost 15% to 20% less.

Meanwhile, new and important uses for plastics in industry are being explored and experimented upon and will shortly be put on the market.

PLASTIC PRODUCTS LTD.
CAWNPORE
A J.K. INDUSTRY

JUTE

Calcutta, March 11.

FIRMER conditions have been noticeable in the raw jute market during the past week. Business passing has been limited only by the availability of offerings. Even at the end of last week, sellers were rather reserved and mills were eager to purchase any amount of jute offering as it was generally felt that without an increase in the rate of arrivals, it would not be possible to replenish stocks. There has been no improvement in the rate of arrivals so far. Upcountry also have firmed up. There is a tendency on the part of everyone to keep back stocks for higher prices. If the present conditions continue to obtain, there may be a further improvement in Calcutta prices.

Estimates regarding the crop for the next season are now lower. With the prevaling high prices for foodstuffs and the possibility of no large supplies from abroad, there will be encouragement for the cultivator to switch over from the production of jute to the cultivation of more profitable food crops.

In the loose jute section a fairly large amount of business has been passing at higher rates. Indian Jat Middles and Bottoms were done at Rs. 15 and Rs. 12 per maund. District jute were 8 annas lower. Supervised Jat Bottoms and Cross Bottoms were done at Rs. 12 and Rs. 10-8 per maund and Indian District Cross Bottoms at Rs. 10-4 per maund. Mills are interested buyers.

In the pucca bales section, firmer conditions have been noticeable with some business done for export. Dundee Daisee 2/3 were nearly 5 points higher at Rs. 77 per bale. Some business was done for export for March and April shipments at Rs. 75 and Rs. 76 per bale respectively. Dundee Tossa 4's were done at Rs. 78 per bale and Short Crop Daisee at Rs. 83 per bale. Mills bought Firsts Ready 2/3 at Rs. 79 per bale and Cuttings N.C. and M.C. at Rs. 36 and Rs. 35 per bale.

JUTE MANUFACTURES

Calcutta, March 11.

THE jute manufactures market was inclined to be rather quiet last week on reports regarding the possibility of a substantial increases in the local stock figures. The stock figures now available show that the fears were completely justified. Total increase in stocks, in spite of the smaller number of working days in February, is 11,047 tons over the figures for *January*. The discouraging effect of local stock figures has, however, been offset by the two new orders for camouflage cloth and tents, received recently, the production in respect of hessian cloth against these orders being nearly one and a half months output. Secondhand dealers were again on the bull side and takings were at the highest towards the close. 9 porters Ready were Rs. 18-2, March Rs. 18-2, April-June Rs. 18-4 and July-September Rs. 18-4. 11 porters Ready were Rs. 23-15, March Rs. 24, April-June Rs. 24-2 and July-September Rs. 24.

Rather quiet conditions have been noticeable in the Heavy Goods section and business passing being on a very small scale. "B" twills for March delivery were sold on the basis of Rs. 59, Liverpool twills Rs. 61-8 and Cornsacks Rs. 61.

Local stock figures for the month of February 1943, show that there has been an increase in total stocks of hessian, cloth and bags, from 59.5 crore yards to 61.37 crore yards. Hessian stocks on civil account were 25.93 crore yards against 24.48 crore yards and on military account 35.44 crore yards against 35.02 crore yards. Sacking stocks, cloth and bags, show a rise on civil account from 18.5 crore yards to 19.69 crore yards; on military account there is a decline from 2.72 crore yards to 2.27 crore yards.

GOLD

Calcutta, March 11.

EASIER conditions were noticeable in the Bombay gold market in the first half of the week due to the reaction in the cotton market ome operators. During the last two days, owever, the upward trend has asserted itlf and quotation are higher on balance. There is still some small investment buying. In spite of the recent improvement in values it appears that investment interest in precious metals will continue to be in evidence. Gold ready closed at Rs. 68-10 and First Settlement at Rs. 68-6 earlier being lower earlier in the week at Rs. 67-14 and Rs. 67-6 respectively.

SILVER

Calcutta, March 11.

THE silver market also has behaved likewise. Quotations, however, are not higher on balance, silver ready being Rs. 106-14 and First Settlement Rs. 106-15. A level as high as Rs. 108 was touched last week. It will be noticed that Silver Ready no longer commands a premium. Instead, a slight premium is offered for First Settlement. The quotation at the end of last week was Rs. 106-14.

Rather quiet conditions were noticeable in the London silver market. There was no change in the quotation, both Spot and Forward being unchanged at 23½d.

COTTON

Calcutta, March 11.

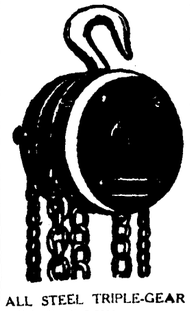
THERE is a further rise in the Bombay raw cotton market on speculative buying and the firmness of the Spot position. Quotations for Jharilla was as high as Rs. 565 early in the week. There was some selling in the Karachi market and mills suspended buying for some time. There was a temporary setback in the quotation to Rs. 549, but the technical position reasserted itself. On commission house buying and encouraging upcountry advices, closing quotations are at new high levels. Jharilla March were Rs. 594 against Rs. 558; May Rs. 595 against Rs. 559-8 and July Rs. 604 against Rs. 566 at the end of last week. With the sharp improvement in prices for March position, there has naturally been a narrowing in the premiums for forward positions.

It is interesting to note that the Karachi cotton market authorities have decided to keep open the market for business all through the 24 hours of the day in the week excepting Saturdays and Sundays.

PIECEGOODS

Calcutta, March 11.

THE piecegoods market has been active with a greater volume of business passing. There has been some enquiry for summer styles, Thanks to the recent arrivals from Bombay it has been possible to meet demand. Owing to the satisfactory position regarding labour in the Western Presidency, it appears that Bombay mills are showing a greater disposition to enter into forward contracts though there has not been any tendency on their part to offer any concession in rates. Marketing of standard cloth is eagerly awaited and it is reported that supplies will be available from next week.



(Continued from page 448)

prospects for this section seem distinctly bearish at the moment.

Slightly more activity has been in evidence in the Export Jute market during the past week, mainly in Dundee Daisee 2/3, sales of which have been recorded at from Rs. 73 to Rs. 76 for March shipment, up to Rs. 77 for *April, and up to Rs. 78 for May. Short* Group Dundee Daisee was also reported done at Rs. 81. Mills have also been buyers of Dundee Daisee 2/3 at Rs. 77 and Rs. 78, and earlier Dundee Tossa 4s were reported at Rs. 76. Low qualities such as Habi-jabi and Ropes were recorded at prices varying from Rs. 46 up to Rs. 52.

In the Loose Jute market also there has been more activity, the volume of business put through being restricted only by the limited quantities which sellers would offer at any one time. Few sellers are holding any large quantity of jute and after unloading what they have in hand, usually prefer to see what they can cover up-country before offering again, and then usually at an enhanced price. European Jute has been scarcely offered, balers being more concerned as to when the jute they have already stored for mills in their up-country godowns, is likely to be shipped. Some X grade alone was reported at Rs. 11-8, but the nominal quotation in assortment is now Rs. 16-8, Rs. 13-8 and Rs. 12 for Middles, Bottoms and X. Supervised Jat was taken at Rs. 15-8, Rs. 12-8 and Rs. 11 with buyers over, and good Bengali Jat was also done at the same rates. A fair trade was reported in Indian Mymensingh side Jat Bottoms at Rs. 11-12 and in Indian District and Northern Bengal Bottoms at from Rs. 11-8 to Rs. 11-12. Mills have also been drawing on local Bazar stocks for hard District qualities at from Rs. 14-12 Middles and Rs. 11-12 Bottoms upwards. These grades are now held for Rs. 15-8 and Rs. 12-8. Tossa has been in steady demand and sales of Indian District Tossa have been recorded at from *Rs. 14-12 and Rs. 11-12* Middles and Bottoms to eight annas over these rates. Jungli Tossa and white jute has been reported at varying rates.

peoples. Though Moscow quoted the 'Atlantic Charter,' it must be said that neither the Charter nor the Anglo-Russian treaty of 1942, say anything about Russia's frontiers. Restoration of regimes overthrown by Hitler implies a restoration of original frontiers, and if Poland yields on the question of Teschen or Upper Silesia, she may claim that all Catholics must be in the fold of Poland. The mere fact that Poland is Catholic—not Orthodox—may be quoted to prove that Pan-slav sentiment is a Moscow delusion. Poland's government has not asked either for a port on the Black Sea or a frontier on the Dnieper, but it is evidently prepared to take up later questions as to Vilna and Danzig. The Moscow statement was a proof of bad blood. References to the ruling clique were by no means impartial, and the Allies have been set a difficult problem in regard to the adjustment of Poland's frontiers. Not so easy as in 1919-20, the important difference is that Poland was independent for twenty years, before the fourth partition took place, and she may be acutely anxious to get the Galician oilfields for herself. Poland's coal resources are not large and Russia's oil resources are enormous in comparison with that of any country except the U. S. A. The Poles, evidently, dispute the validity of the Russo-German arrangements made in 1939 and are preparing to fight their claims out. Since there is no formal treaty between Poland and the U.S.S.R. which may ignore Poland's record in the Ukraine and consider only the need to put a strong buffer state between the Russian and German federations. The duty to intervene and settle the questions is obvious.

Chance For Investors

The main purpose of the Plywood Industries (India) Ltd., is to operate a factory for the manufacture of veneers and plywood. The cessation of imports has created an opportunity for the Indian producers of tea-chests. Plywood, of course, is extending in use as a substitute for metal, timber etc. which are scarce owing to the war. The announcement relating to the issue of shares in the new company promoted by Holmes, Wilson & Co., describes the market conditions as well as the facilities for manufacture in Calcutta. The present issue is by no means large, and given the favourable market setting, the ordinary shares of Rs. 10 each are likely to command great attention. The fact that the issue has already been subscribed and factory premises with railway siding etc., have been secured must prove decisive in leading the investor to consider the prospects for both the ordinary and redeemable preference shares. The success of previous issues with which the promoters have been connected makes for confidence as to the immediate response to the announcement published to-day. The extension of demand for Plywood is supported by an increase in Indian tea production as well as general manufacturing activity. The Company has obvious advantages including an experienced and qualified manager for its factory, and the Board is what may be called a strong one. In regard to ready absorption of the shares the unsatisfied appetite for sound industrials to-day should be a favourable factor.

BAK 29

There are four men concerned with food.

FIRSTLY THE CULTIVATOR. This year he is better off than usual; paying land revenues and buying necessities out of profits—keeping crops and feeding well. One can hardly begrudge him his good fortune.

SECONDLY THE DEALER. There are good dealers and bad. There are profiteers and honest men. Good or bad, he gets enough food for himself.

THIRDLY YOU, THE CUSTOMERS. You, it is, who suffer. The 5% total shortage, which should be spread over the whole population, is largely borne by a tenth of the population.

FOURTHLY there is the unscrupulous speculator—operating illegally outside the grain trade—who hoards vast stocks of grain waiting for a further rise in prices in order to make huge profits.

The Government is going to punish the fourth man ruthlessly.

But you must play your part. Buy only what you need. Think of the poor who buy day by day.

Leave the big hoarders to Government. But do not become a small hoarder yourself. So, in serving India, and India's poor, you will be serving yourself.

Outwit the hoarder

Stock Markets to-day and to-morrow

INCREASE IN JUTE MILL WORKING HOURS

QUITE active conditions have been noticeable in the stock markets, both in Calcutta and Bombay, during the past week. With a substantial increase in the volume of business, a sharp rise in prices for the important counters was recorded earlier in the week. After the successive rise in prices for over two weeks, there was naturally some profit-taking and even some selling at the higher levels and the quotations for Indian Irons and Steel Corporations came down from Rs. 37-10 and Rs. 27 to Rs. 36-2 and Rs. 26-2 respectively in midweek. However, there has been a resumption of buying at the lower levels, and in Friday's session, most of the lost ground has been regained. Even with the substantial improvement in prices, operators and investors alike are saying that a further improvement in values will be recorded in the near future. There is no sign of the investment demand abating. The strength of the commodity markets also may have an encouraging effect on stock exchange values. The developments during the next few weeks have to be carefully watched.

It will be remembered that the recent improvement in values has followed the publication of the Central Government budget proposals for 1943-44. They are considered satisfactory from the market point of view. The successful termination of Mahatma Gandhi's fast also has been a helpful factor.

* * * *

As we go to press it is learnt that the Committee of the Indian Jute Mills Association at a meeting held on Friday afternoon decided on an increase in the number of working hours from 54 to 60 hours per week with the full complement of looms working. At the present moment, mills are working 54 hours per week with 10 per cent of the looms sealed. The increase in the number of working hours is to take effect from March 15, 1943, and will remain in force for two months in the first instance. The decision to increase the number of working hours has come as a complete surprise to the market. It is reported that the Indian Jute Mills Association decided on the increase in working hours on the receipt of an order from the U. S. Government involving the production of 12½ crores yards of hessian cloth, delivery to be completed before May 15, 1943. It will thus be seen that the increase in production on account of the larger number of working hours will be more than offset by the requirements in respect of the U. S. Government. There has naturally been a rise in values in the hessian market, Operators have shown correct judgment in buying up popular shares.

Apart from the fact that the higher level of production will permit of a higher level of earnings for jute mills, the decision has greater significance from the market point of view. That the U. S. Government hope to get the necessary freight in respect of this order, clearly shows that the shipping position is considerably easier now and that, in future, it will be possible to export more liberally jute manufactures. It need hardly be emphasised that the production of jute mills has been only limited by the availability of freight and that, demand could not be satisfied only due to the difficulties in regard to shipping facilities.

* * * *

The results of the McLeod Jute Mills group for the half-year ended Dec. 1942 make satisfactory showing. Those belonging to the Nellimarla and Chitavalsah Jute Mills are particularly satisfactory. It has been possible for these two companies to increase the ordinary dividends to the shareholders. The increase in earnings is probably due to the fact that the two mills are situate outside the Bengal Presidency.

The net profit of the *Chitavalsah Jute Mills, Limited* for the half-year ended December, 1942, is Rs. 7,85,106 against Rs. 5,73,696 for the previous six months. Provision on account of taxation is higher at Rs. 4 lakhs (Rs. 3.2 lakhs), while the amount written off for depreciation is unchanged at Rs. 2 lakhs. There is to be a transfer of Rs. 1 lakh (nil) to the General Reserve. The dividend on ordinary shares has been doubled at 8 annas per share. Even after these substantial allocations, the amount carried forward is higher at Rs. 38,392 against Rs. 21,035 brought in.

The net profit of the *Nellimarla Jute Mills Company, Limited* for the same half-year is Rs. 4,87,895 against Rs. 3,35,154 for the previous half-year. After setting aside Rs. 1.25 lakhs (same) the provision for taxation is higher at Rs. 2 lakhs (Rs. 1.1 lakhs). The transfer to General Reserve is Rs. 75,000 (Rs. 50,000). The dividend on the ordinary shares is higher at 12 annas per share against 8 annas per share. The amount carried forward is Rs. 26,748 against Rs. 10,103 brought in.

Having regard to the progress made by this Company in recent half-years it should be said that the ordinary shares of the company at present quoting around Rs. 20 are relatively undervalued.

* * * *

The shareholders of the *Soorah Jute Mills Company, Limited* might perhaps be disappointed with the decision of the Directors not to pay any dividend on the ordinary shares. A greater liability in regard to taxation has been responsible for the decision to pass the dividend. The arrears on the preference shares for two more half-years are to be paid. The dividend in respect of the second half of 1942 only remains to be paid. If the present conditions in the industry continue to obtain, it can be expected that it will be possible to pay an ordinary dividend out of the earnings for the current half-year. The net profit, before providing for taxation and depreciation is Rs. 2,60,472 against Rs. 2,96,335 for the half-year ended June, 1942. The amount set aside to depreciation is lower at Rs. 60,000 against Rs. 75,000 while the provision on account of taxation, in spite of the lower level of earnings, is higher at Rs. 1,62,500 (Rs. 1,20,000). The arrears of dividend for the two half-years ending June 30, 1942, are to be paid. The amount carried forward is lower at Rs. 12,646 against Rs. 44,674 brought in.

* * * *

The absence of any increase in the ordinary dividend of the *British India Corporation, Limited* for the year ended December 1942, has not perhaps come as a surprise to the market. It will be remembered that I pointed out sometime back that the dividend in respect of 1942 may not be more than 4 annas per share. The accounts for 1942 of this Corporation, now to hand, show that further progress has been made in the last accounting period and that the directors have considered it advisable to strengthen further the financial position of the Company. The improvement in earnings have been due mainly to the uninterrupted production at the company's factories. The net profit, before providing for taxation and depreciation, is Rs. 1,15,72,952 against Rs. 88,71,480 in 1941, and Rs. 69,07,079 in 1940. All through these years the dividend has been maintained only at 25 per cent per annum. Much of the increase

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 12.

QUITE active conditions have been noticeable on the Calcutta Stock Exchange during the past week. A larger volume of business has been passing in the several sections and profit-taking at the higher levels was fully absorbed. The strength of the markets has been mainly due to the satisfaction in regard to the budget proposals and the hopes regarding a settlement. Bombay operators seem to have considerable interest in the market. On Thursday slightly easier conditions were noticeable on account of some profit-taking. Closing quotations, however, were only slightly lower than the highest levels for the week. The undertone in the several sections is steady and it is generally felt that the upward movement will be resumed again.

Giltedged securities have remained firm though no important rise in prices has been recorded. Business passing has been on a restricted scale. 3½ per cent Paper is steady around Rs. 94-1. Among terminable loans, 3 per cent Defence Loan 1949-52 were done at Rs. 100-8 and 3 per cent Defence Bonds 1946 at Rs. 102-15. 4 per cent 1960-70 were Rs. 110-2, 5 per cent 1945-55 Rs. 108-3 and 4½ per cent 1960-70 Rs. 113-14. 3 per cent N.-W. F. P. at Rs. 96-4 and 4 per cent Punjab Bonds 1948 at Rs. 104-8 were among the transactions recorded in provincial loans.

Business in public bodies' debentures was not possible owing to the scarcity of sellers. Among industrial debentures, 5½ per cent *Carew & Co.* debentures were Rs. 103-4.

Bank shares have been steady with *Imperial Bank* fully paids at Rs. 1,727 and *Reserve Bank* at Rs. 106-8.

Coal shares also have shared in the general improvement though the rise in prices has not been quite proportionate. *Amalgamated* were Rs. 34-6, *Bengal* Rs. 450, *Dhemo Main* Rs. 14-4, *Bokaro and Ramgur* Rs. 19-10, *Equitable* Rs. 36-10, *Hurriladih* Rs. 17-4 and *West Jamuria* Rs. 34-2. *New Beerbhoom* are more than a point higher at Rs. 18-12.

Greater interest has been shown in jute shares. It is reported that in future it will be possible to look for a substantial improvement in shipments. The reduction in the rates for insurance from the ports in Eastern India has been an encouraging development. There are reports that the Committee of the Indian Jute Mills Association has decided upon an increase in the number of working hours to 60 per week. This increase in the number of working hours, if decided upon, will have a great stimulating effect on the market. *Adamjee* are quoting Rs. 30-2 against Rs. 27-8 at the end of last week. *Anglo-India* are higher by ten points at Rs. 383. *Agarpara* were Rs. 25-8, *Bally* Rs. 300, *Bengal* Rs. 25-12, *Clive* Rs. 26-12, *Hukumchand* Rs. 22-14, *Howrah* Rs. 63, *Kamarhatty* Rs. 555, *Kanknarrah* Rs. 456, *National* Rs. 26-5 and *Nuddea* Rs. 68. There has been good enquiry for Nuddea, Chitavalsah and Megna.

Cotton shares have been firm with *Bengal-Nagpur* at Rs. 33-12, *Cawnpore Textiles* at Rs. 18-12, *Dunbar* at Rs. 297 and *Dhakeswari* at Rs. 22-4. *Elgin* have been outstanding with a rise to Rs. 50. *New Victoria* were Rs. 8-12 and *Muir Mills* Rs. 402-8. *Mahalaxmi Cotton* were two points higher at Rs. 32.

In the Engineering section, *Indian Iron* and *Steel Corporation* have been active being done upto Rs. 37-10 and Rs. 27 respectively. There was some profit-taking at the higher levels and the quotations for both the counters came down to Rs. 36-2 and Rs. 26-3 respectively. Renewed buying at the lower levels has resulted in a recovery to Rs. 37 and Rs. 26-14 respectively. *Burn & Co.* were done at Rs. 392, *Britannia Building and Iron* at Rs. 13-4 and *Bhartia Electric Steel* at Rs. 17-8. There has been a jump in the quotation for *Indian Galvanizing* to Rs. 40. *Kumardhubi Engineering* are more than a point higher at Rs. 7-12. *Marshalls* were Rs. 3-13 and *National Iron and Steel* Rs. 13-6. *Jessop* had good buyers at Rs. 22-8.

Sugar shares have been active and there has been good enquiry especially for the lower priced shares. *Belsund* have improved from Rs. 8-4 to Rs. 10-2. *U. P. Sugar* are one and a half points higher at Rs. 18-8. *Buland* and *Raza* were done at Rs. 37-4. *Carew & Co.* were Rs. 15-6 and *New Savan* Rs. 14-4. *Murree Brewery* were unchanged at Rs. 18-4.

Business in Tea shares has been restricted owing to the scarcity of offerings. *Bishnauth* were Rs. 34-8, *Baradighi* Rs. 55-8, *Hantapara* Rs. 555, *Hasimara* Rs. 55. *Dessai and Parbuttia* were Rs. 365 and *Tezpore* Rs. 13-10. *New Dooars* were in great demand at Rs. 1,350. *Tezpore* were Rs. 13-8 and *Tukvar* Rs. 17-4.

In the Miscellaneous section, *Burma Corporation* were rather quiet at Rs. 3-3 with the reports that a major campaign in Burma will be postponed. *Indian Copper* were a shade better at Rs. 2-7. *B. I. Corporation* were firm at Rs. 6-6. The dividend for the year ended December, 1943 has been only maintained at four annas per share. *British Ceylon Corporation* were unchanged at Rs. 18. *Indian Cable* were higher at Rs. 28 and *Alkali and Chemical* at Rs. 32. *Humayan Properties* ordinaries were Rs. 9-9 and *Aluminium Corporation* Rs. 18-2. *Assam Saws* have been very firm at Rs. 4-14 on expectations of a higher dividend. Among Paper shares, *India Paper Pulp* were Rs. 179, *Titaghur Paper* Rs. 24-12 and *Mysore Paper* Rs. 23. *Indian Wood Products* were firm at Rs. 31-13 ex-dividend.

BOMBAY STOCK EXCHANGE

(From Our Correspondent).

Bombay, March 11.

THE Bombay Stock Exchange, which was rather irregular in the earlier part of the week, showed a bright tendency towards the close to-day. After a long time business was transacted on a Friday, last week, and prices kept up their upward trend. Steel and mill shares touched further high levels, Tata Deferreds quoting Rs. 2,057-8 as against Rs. 1,900. Other shares in these groups also recorded substantial improvement. There was no business on Monday. When the market opened on Tuesday, a rather irregular trend was in evidence. The reason for such behaviour on the part of operators is to be sought in the fact that prices have gone up rather steeply either to keep up their upward course, or even to maintain the levels already reached. As is to be expected in similar circumstances, prices went down. Speculative buying leads inevitably to profit-taking which in its turn results in lower prices. The behaviour of the market for the past three days, taken as a whole, can be described as an endeavour to find balance and also as a trial and error method of finding out whether the new situation created as a result of the Budget and the Allied success is as hopeful as it seemed at first. The recovery of the market to-day demonstrates clearly that operators and investors are now certain that the advantages are real and not illusory.

The giltedged section continued steady with 3½ per cent Government Paper quoting Rs. 94; 2¾ per cent 1948-52 Rs. 99-2; 3 per cent Loan 1951-54 Rs. 99-14; 4 per cent Loan 1943 Rs. 101-3 and 3 per cent 1946 Defence Bonds Rs. 102-15.

Textiles.—Mill shares were again the fancy of operators. Shares touched further high levels on last Friday after undergoing a change for the worse. There was, however, a rally towards the close to-day. *Ahmedabad Advance* which were steady last week, have travelled in an upward path uniformly in marked contrast to other shares in this section. *Bombay Dyeing* which touched the very high level of Rs. 1,990 on Friday last, have, however, regained much of their lost ground latterly after going down as low as Rs. 1,912-8. *Central India* were higher on balance by 26 points, quoting Rs. 489 (Rs. 455); *Century* also are higher at Rs. 799, in comparison with their price on Thursday last. *Colaba Land* were Rs. 270; *Gokak* Rs. 430; *Indian Bleaching* Rs. 266; *Kohinoor* Rs. 775; *Phoenix* Rs. 722-8; *Sholapur* Rs. 10,500; *Simplex* Rs. 326; *Svadeshi* Rs. 641 and *Vishnu* Rs. 2,450.

Profit-taking lead to a temporary setback but prices rallied latterly. *Tata Deferreds* were quoted as high as Rs. 2,095 on Tuesday, but the latest quotation is lower at Rs. 2,030-8. *Tata Ordinaries* were Rs. 408.

Hydro-Electrics.—*Andhra Valley* were higher at Rs. 1,805; *Tata Power* at Rs. 1,782-8 and *Tata-Hydro* at Rs. 191.

Miscellaneous.—In the miscellaneous section, *Alcock Ashdown* after being higher at Rs. 755, are now Rs. 745. The price is, however, above that prevailing last week-end. *Belapur Sugar* are Rs. 245-8; *Shivrajpur* Rs. 74-8; *Premier Construction* Rs. 167 and *A. C. C.* Rs. 229.

(Half-yearly General Meeting, on 24th March, 1943 at 12 noon).

Audited accounts for the half-year ended 31st December, 1942:—

The amount available for distribution is Rs. 35,931-4-3, which the Directors recommend be dealt with as follows:—

	Rs.	A.	P.
Dividend at the rate of 5 per cent per annum ..	18,000	0	0
Carry forward	17,931	4	3
Total Rs. ..	35,931	4	3

The difficulties on the first half-year's trading were intensified during the period under review. In the early months the Wheat Commissioner was forced to reduce all quotas of wheat allocated to Mills owing to shortage of supplies and latterly we were unable to make any purchases whatsoever owing to sellers' reluctance to part with their wheat at the controlled rate fixed by Government.

This resulted in the Mills only working spasmodically and accounts for the poor results shown.

The outlook for the current year is very uncertain.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ld.

Authorised Capital—Rs. 12,00,000. Issued and Subscribed—Rs. 7,20,000 in 72,000 shares of Rs. 10 each fully paid-up.

Synopsis of the balance sheet as at 31st December, 1942.

The Mills have continued to place their maximum output at the disposal of Government for the Defence Services.

It is expected that considerable sums will have to be expended in the next few years on the reconditioning of machinry which cannot be undertaken at present owing to the impossibility of laying off plant for overhaul. It is also expected that the cost of replacing worn out machinery will be higher than it has been in the past. The Board have therefore decided to anticipate this expenditure by the creation of a "Reconstruction Reserve."

And leaving a balance of				16,358	2	5

which the Directors recommend be carried forward to next year's accounts.

As will be seen from the Balance Sheet, the Debenture loan was repaid during the year, and the necessary legal formalities to release the Company's property have been complied with.

The authorised capital of the Company was increased from Rs. 10 lakhs to Rs. 24 lakhs, and the paid-up capital from Rs. 6 lakhs to Rs. 12 lakhs by the issue of bonus shares in accordance with the resolution passed at the Extraordinary General Meeting held on 2nd March, 1942.

During the year there was a continued strong demand for both cloth and yarn at satisfactory prices. Part of the Company's plant was engaged in producing goods for the Government for war purposes.

A donation of Rs. 1,500 was made by the Company to the Bombay War Gifts Fund to be earmarked for the families of the Indian Fighting Forces.

The Company's property, including Buildings, Machinery and Stock, has been insured against Fire and Riot for Rs. 83,85,800. In addition, the Company's buildings, Machinery and Stock have been insured against War Risk in accordance with the Ordinance of the Government of India.

Profit and Standing Charges of the Company have been insured for Rs. 41,00,000 to cover a maximum stoppage of 24 months, such insurance to run from the 3rd day of January, 1943 to the 2nd day of January, 1944.

Managing Agents.—Messrs. W. H. Brady & Co., Ld.

Audited accounts for the year ended 31st December, 1942:—

	Rs.	A.	P.			
The accounts show that the profit for the year after deducting normal depreciation of Rs. 5,74,717 is				90,94,336	0	0
From this amount the Directors have set aside:—						
For Special Depreciation ..	2,00,000	0	0			
For Machinery Reserve Account ..	10,00,000	0	0			
As provision for Taxation ..	64,11,676	0	0	76,11,676	0	0
				14,82,660	0	0
Add—Balance brought forward from last year ..				1,01,522	0	0
				15,84,182	0	0
Less—Amount paid as *ad-interim* dividend on 7th September, 1942, at the rate of Rs. 12 per share, free of Income-tax				3,60,000	0	0
Leaving a balance available for disposal of ..				12,24,182	0	0
From this sum the Directors recommend the following allocations:—	Rs.	A.	P.			
Payment of a final dividend for the year ended 31st December, 1942, at the rate of Rs. 13 per share, free of Income-tax making a total for the year of Rs. 25 per share	3,90,000	0	0			
Payment of a bonus for the year at the rate of Rs. 15 per share, free of Income-tax ..	4,50,000	0	0			
Employees' Provident Fund ..	28,217	0	0	8,68,217	0	0
Leaving to be carried forward to next year's accounts				3,55,965	0	0

Trading Conditions.—Owing to the serious reverses suffered by the Allies in the Eastern Theatre of War during the early part of the year, considerable nervousness at first prevailed but, although business in cloth and yarn was on a restricted scale, prices were well maintained. From May onwards, however, it was generally realised that, owing to large exports and the increasing demand for war purposes, there would be a shortage of goods and, during the rest of the year and, in spite of bad news from Libya and Russia prior to December, prices continued to rise and at the close had reached very high levels. This, coupled with the fact that the Mills again had the advantage of low priced cotton, has resulted in the figures to be seen in the accompanying accounts which the Board have no doubt the shareholders will consider sastisfactory.

Depreciation.—The statutory allowance for depreciation, which only allows one and a half times the normal rates for double shift working, amounts to Rs. 5,74,717, but the Directors feel very strongly that, in view of the great strain put upon mill machinery by virtue of double shift working, twice the allowance for single shift working should be allowed and, in support of this contention they have set aside a sum of Rs. 2,00,000 as special depreciation. They further consider that, in all equity, in view of the fact that Government are taking over 60 per cent of the Company's profits by way of taxation, the least the latter can do is to allow the mills double depreciation when working two shifts.

Mortgage Debenture Loans.—The balance of this loan amounting to Rs. 4,55,000 was redeemed on the 1st May, 1942.

Mill Buildings.—A cloth shop, an extension to No. 2 Mill card room, a settling tank with a capacity of 1 lac gallons and various other small improvements and additions were made during the year at a cost of Rs. 67,473.

Mill chawls.—These continued to be fully occupied throughout the year.

Mill Air Raid Precautions.—Under instructions from the A.R.P. Authorities, equipment and structures, such as trenches and shelters, were provided at a cost of Rs. 76,673.

New Machinery.—Machinery to the value of Rs. 3,74,019 was received and erected during the year.

Dearness Allowance.—The amount paid to mill employees under this heading during the year was Rs. 12,56,580. In addition to this, an amount of Rs. 6,49,728 has been set aside to be paid as bonus for the year 1942.

Insurance.—The Mill Property as at 31st December, 1942, was insured against loss by fire and all risks arising out of Riots and Civil Commotion for the following amounts:—

	Rs.
Buildings	46,42,900
Machinery	1,17,37,700
Stocks	1,58,87,800

The profits and fixed charges have been insured against a stoppage by fire for £960,000.

Under the Government of India War Risk Insurance Ordinance, the Mill stocks as at 31st December, 1942, were covered for a sum of Rs. 1,61,00,000 and the Mill Buildings and Machinery were also covered for a sum of Rs. 1,80,06,000 as at 31st December, 1942.

By order of the Board,
McLEOD & CO. LTD.
Managing Agents.

28, Dalhousie Square,
Calcutta, 9th March, 1943.

To the Shareholders of The Soorah Jute Mills Company, Limited, and in particular to:—

Messrs. G. Findlay, J. D. Guise, F. Owen, R. H. Whittall, T. H. Laird, W. E. Sassoon, A. H. King, and Hormazdiar Limji Soparivala.

(*Continued from page* 453)

in last year's earnings has been taken up by the higher provision for taxation, the sum being Rs. 75 lakhs (Rs. 50 lakhs); the provision for depreciation is higher at Rs. 8 lakhs (Rs. 7 lakhs); transfer to rehabilitation reserve is lower at Rs. 5 lakhs (Rs. 7 lakhs). The allocation to Obsolescence Reserve is Rs. 10 lakhs (Rs. 5 lakhs) After the payment of a dividend of 4 annas per share the amount carried forward is Rs. 3.83,039 against Rs. 3.61,837 brought in.

From the latest accounts, it will be seen that the earnings of the company are as much as 59 per cent of the ordinary capital after providing for taxation and depreciation and providing for payment of preference shares. The dividend on the ordinary shares is covered more than twice.

* * * *

Bangalore Woollen, Cotton and Silk Mills Company, Limited has been able to report a further improvement in earnings for the half-year ended December 1942. The net profit, before providing for taxation and depreciation, is Rs. 18,90,377 against Rs. 12,38,828 for the previous six months. After allowing Rs. 5,04,702 (Rs. 4,53,125) for depreciation, Rs. 1 lakh (same) to General Reserve and Rs. 2 lakhs to Reconstruction Reserve (nil), Rs. 50,500 (same) to Equalisation Fund, Rs. 20,000 (same) to Work People's Housing Fund, Rs. 15,000 (same) to Officers Retiring Fund and Rs. 15,000 (same) to Fire Accident and Insurance Fund, the dividend on the ordinary shares has been maintained at Rs. 6-4 per share. The amount carried forward is lower at Rs. 27,171 against Rs. 46,966 brought in.

In view of the very high level of earnings and the conservative policy pursued by the managing agents in recent half-years, the directors could possibly have been more liberal in their distribution to ordinary shareholders. The mills have continued to place their maximum output at the disposal of the Government for the Defence services. The directors point out that considerable sums will have to be expended in the next few years on the re-conditioning of machinery which cannot be undertaken owing to the impossibility of laying out plant for overhaul. It is also expected that the cost of worn-out machinery will be higher than it has been in the past. The Board has, therefore, decided to anticipate this expenditure by the creation of a Reconstruction Reserve.

* * * *

U. P. Sugar Company Limited has been able to report a considerable improvement in earnings for the year ended September, 1942 in spite of the difficulties in regard to cane supplies. 15,92,342 maunds of cane were crushed against 21,12,631 maunds in the previous accounting period. The shortage in respect of cane supplies has been, to a certain extent, offset by the increase in the recovery percentage, which was 10.07 for 1941-42 against 9.4 for 1940-41. The net profit, before providing for taxation and depreciation, is Rs. 2,38,018 against Rs. 1,12,419 for the previous year. After placing Rs. 50,000 for taxation and transferring Rs. 25,000 to General Reserve, the dividend is increased to 10 per cent from 3 per cent.

Regarding the prospects for the current season the directors point out as follows: "Although there is some difficulty in securing an adequate supply of railway wagons, fair quantities of sugar have already been despatched. Cane supplies are reported to be ample for the Tamkohi Factory's requirements and prospects are good. With a cane price of 10 annas per maund, the Company's Zemindary section should again show a useful profit."

Recently, greater interest has been shown in the shares of this company and the quotation has improved from around Rs. 15 to Rs. 18-4. With the assured prospects for the current year, it can be said that the shares afford scope for further appreciation.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Interbank call money continues to be quoted ¼ percent in Calcutta and ¼ percent in Bombay; and the rates are nominal, though banks seem to have experienced some demand for trade advances. But the cash position of the scheduled banks is now so strong that no worth-while impression on money market sentiment or rates can be made unless the dearth caused by financing on trade account is definitely substantial. At this fag-end of the season for the movement of crops, there is no reason to look for such substantial demand for trade advances. The latest returns of the Reserve Bank of India, which is for the week ended March 12, show deposits of member banks at Rs. 54.35 crores. During the current busy season, deposits maintained by member banks with the central banking institution have persistently remained roundabout Rs. 50 crores. The period of tax payments on a heavy scale is drawing to its close, and the so-called busy season has only a few weeks left. Taking these factors into account, there are grounds to believe that banks will be receiving substantial and embarrassing replenishment of their cash resources. It may well be that, by next summer, cash balances of member banks will beat all previous records.

For the sixth week in succession, evidence is available that a kind of definite understanding has been arrived at between the Reserve Bank on the one hand and the banking institutions in the country on the other for the stabilisation of the treasury bill discount rate at Rs. 1-1-11 percent per annum. Though, in relation to current monetary conditions and current money rates, this discount rate must be considered unduly favourable to investors in treasury bills, there is a definite gain in an arrangement which avoids unnecessary variations. This arrangement is all the more desirable as the variations in the discount rate in the past were oftentimes whimsical or capricious. From the point of view of the success which has attended the policy of working a smooth arrangement in regard to treasury bills rate, Mr. Deshmukh who is now discharging the work as Governor of the Reserve Bank must be said to have made a propitious start. Against Rs. 8 crores of tender bills on offer on March 16, applications came to Rs. 11.40 crores. The offer of tender bills for next week remains unchanged at Rs. 8 crores. Sales of three months intermediate bills between March 10 and March 15 came to Rs. 35 lakhs and make poor showing. Sales of intermediate bills are to continue at the unchanged rate of Rs. 99-12. In regard to the tap rate also, the policy has been successfully adopted for some time of maintaining an unchanged rate.

The returns of the Reserve Bank for the week ended March 12, show an increase in total notes of Rs. 11.39 crores, of which active note circulation accounts for Rs. 9.12 crores and notes held in the banking department for Rs. 2.27 crores. This increase is due to expansion of currency largely against rupee securities and partly against rupee coin, offset to some extent on account of reduction in sterling securities. Sterling securities held in the issue department are down by Rs. 3.97 crores, while foreign balances in the banking department have shrunk by Rs. 7.55 crores. Thus, there is a reduction of Rs. 11½ crores in the total sterling assets of the Reserve Bank. On the other hand, rupee securities in the issue department have risen by Rs. 11.97 crores. It seems probable, that during the week under review, sterling securities for Rs. 12 crores have been handed over by the Reserve Bank to the Government in connection with the plans devised for India's sterling obligations, and against the sterling securities thus withdrawn, the Government have delivered to the Reserve Bank rupee securities for the amount. There is an increase in rupee coin of Rs. 3.39 crores and this is possibly connected with the delivery of rupee coin for, say, Rs. 5 crores by the Government. Delivery of rupee coin by the Government means a corresponding increase in their cash position. The Central Government's deposits with the Reserve Bank show a small increase of Rs. 78½ lakhs while those of Provincial Governments reveal a sharp decline of Rs. 4.94 crores. The miscellaneous deposits are also down by Rs. 2.53 crores. On the other hand, the deposits maintained by member banks are higher by Rs. 1.40 crores. Some of the Provincial Governments seem to have had recourse to the Reserve Bank for ways and means advances which show a rise of Rs. 68 lakhs. Imperial Bank's deposits have shot up to Rs. 177.93 crores. Investments and advances show some rise and the bank's cash position is comfortable at Rs. 33.49 crores.

The exchange market has been steady but the turnover continues none too large.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward.

Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Banks are buyers of T.T. New York Ready at Rs. 325.

Interbank call money continues at ½ per cent, lenders.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of 3 months' Government of India Treasury Bills were opened on Tuesday, March 16, 1943. Total amount offered was Rs. 11,39,75,000 (Rupees eleven crores thirty-nine lacs seventy-five thousand). Tenders at Rs. 99-11-9% were accepted in full and those at Rs. 99-11-6 were allotted approximately 68%. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 1-1-11 (Rupee one anna one and pies eleven) per cent per annum.

Tenders for Rs. 8,00,00,000 (Rupees eight crores) of three months' Government of India Treasury Bills will be received on Tuesday, March 23, 1943, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday March 22, 1943, at other centres. Successful tenderers should make payment on Friday, March 26, 1943. Other conditions are as usual.

Three months' Intermediates will be sold from March 17, to March 22, 1943, at Rs. 99-12% subject to the conditions previously announced, (*viz.* sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from March 10 to March 15, 1943, amounted to Rs. 35,00,000 (Rupees thirty-five lacs) only.

During the week ended March 12, 1943, Government of India Treasury Bills for Rs. 14,42,00,000 (Rupees fourteen crores forty-two lacs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

SINCE the major financial development of the last week is discussed at length elsewhere, there is nothing notable but the success of the London savings drive. The cables have said little about either the Budget or fresh borrowing though much about U. S. army production. By the end of September the National Debt was double the prewar debt, but the annual debt service was just about that incurred in 1924. The big conversion schemes had secured that benefit for Britain and the continuance of cheap money has favoured private conversions also as in the case of the P. & O. Navigation Co., which decided last year to convert its debenture stock. The Australian conversion plans of November last went through and the latest proposal of Mr. Curtin to raise a loan for £100 millions at home receives its justification from the intensification of war effort. The fractional falls in giltedged prices can have little effect on the Treasury borrowing programme. Revenue must be flowing in quite satisfactorily and the year's deficit may be smaller than anticipated. The threat of new taxation does not loom large as London Stock Exchange quotations for industrials have tended higher. But the Russian news has caused a small setback, just as it did in Indian markets and prices are below the best touched. The revival in textile shares with Courtauld's standing out like Celanese has been arrested, but last week there was good buying in London by the Cape of gold mining shares and of heavy industrials like Vickers by investors. There was also support for Argentine rails and in regard to gold minings the market certainly proved a correct guide in view of the inter-Allied currency plans about which Mr. Eden told questioners in the Commons very little. The confidence underlying Mr. Eric Macfadyen's speech rather than a vague promise of compensation for losses accounts for the recovery of rubber shares in London. It is more pronounced than the lift in tea shares that continues to attract notice now and then. The irregular tendency in oil shares is probably due to profit-taking for oil shares have always been speculative.

The general impression remains one of great stability in London due to correct understanding and goodwill in all markets. The success of the weekly borrowing programme supports the view of London being immune from bad news. If caution has replaced exuberant optimism in regard to oil shares or internationals with a following in New York there is no change of note in bullion, discount or exchange rates over a week. In India there has been a jump in bullion. The Finance Member's refusal to give details as to Government's sales of silver has pushed up prices in Bombay. As there is no guarantee of sales to the people here to make good the call-up of standard silver coins, the hoarder will probably be tempted to go for gold and silver. The Indian market may know little of bancors it is certainly aware of the Union Corp's estimate of gold mining output in 1942. It fell by 11 per cent as compared with 1941 according to Samuel Montagu's report quoting the Union Corporation's familiar estimate. The fall is explained readily by reference to difficulties in Russia, voluntary curtailment in the Dominions and the diversion to lower grade over in South Africa. What is important to-day is that gold will retain its original function and the B. I. S. or some other authority will do the work of managing the business of settling accounts. The British Empire produces enough gold to look America in the face, but the British Empire's oversea investments are halved by sales up to 1941 and the import surplus in post-war years will cause many difficulties. Gold has to be conserved and there will be no departure in policy. The U.S.A. does not disagree. It accepts the policy of 1936 not that of 1933 and in giving a lead to the world as regards monetary management, the U.S.A. makes sure of its own position and the continuity of policy exemplified by the trade treaties, notably, the Anglo-American trade pact of 1938. The agreement referred ot by City correspondents must help currencies off gold rather than those on the modified gold standard. But no depreciation of the Swiss franc or the Swedish Krone will follow since both the countries have plenty of money including gold and their own imports are falling. The multilateral dealing system anchored to gold is the answer to Berlin's plans for a continental system divorced from gold and based on the paper market: Germany cannot give goods to work the barter system thoroughly. The Allies do not like that system but the post-war plan premises the blocking of assets for some time. Withdrawals of funk money will not be easy though the Allies will display great liberality in restoring the world's currencies. Nothing has been heard of purchasing power parity or of essential adjustments of costs etc., but only of the international balances of payments. Each country will have to do certain things as its own special job but readjustment will have to go on under supervision in deference to the U.S.A.'s own plans. Perhaps the major victory is the acceptance by the U.S.A. of the view that no claim for gold in regard to debt can lie. It may cut across the Indian view that gold should be obtained from Britain now or after the war in return for goods sold. But it helps to raise the premium for gold as gold will be money of account, not procurable by exchange operatinos of the ordinary type. Evidently there is enough gold to go round and the U.S.A. is going to keep the price steady at 35 dollars per ounce. Mr. Morgenthau has followed his own previous policy in leaving inter-Allied debts to settle themselves in due course.

All this was not unexpected, and it is certainly advantageous to know that post-war currency confusion will be limited by arrangements devised in advance. The U.S. Treasury has not produced a gold crisis as it did in 1937. It has said Yes to orthodox, Liberal plans, and has pleased the majority by accepting plans for co-operation. The B.I.S. will certainly have a definite role under the plans prepared to stabilise currencies. A very important point to note here is that depreciation of sterling is unlikely. That certainly means the present discussion as to India's sterling balances should cease. The dollar-sterling rate will probably be the same—at 4.02 not at 4.86 impossibly high. There will be no return to gold such as that advised by the Cunliffe Committee, and Mr. Churchill, warned by previous experience, is likely to take more notice of John Maynard Keynes than he did in 1925 in connexion with pursuit of deflation as a meritorious policy.

The fall in U. S. Steel and market leaders is so small as to suggest that Mr. Morgan's death is unsensational. The house of Morgan is now a corporate instead of a private body. Original suspicion produced by Mr. Pecora's investigations has been extinguished by the many acceptable domifications of the U. S. money power. The New Deal killed high finance and the Morgan empire was sapped by the dissolution of utility hook-ups and railroad groupings. Mr. Lloyd George turned to Morgan for borrowing, purchases and sales of British securities when the U.S.A. was neutral. There is lease-lend to reduce the financier to a nullity. Morgan's mistakes after the war may be generally forgiven, but not forgotten. An exponent of the holding company Morgans was knocked on the head and the value of its assets was sadly reduced by the depression. Mr. T. W. Lamont rather than Mr. Morgan has been the key man in recent years. The house of Morgan has long had (being much like Mellon of Pittasburgh) large industrial and banking connexions. Known to-day as a Trust Company with salaried directors instead of partners it had a paidup capital of 25 millions only and a reserve of 25 millions only and a reserve of 25 millions, not at all large compared with A.T.T.'s enormous balancesheet figures. Connexions with Guaranty Trust, the Chase National and other banks certainly were not effaced by the change of status in 1940. The pro-Allied policy of Morgan has received much praise but the House of Morgan has lost its grip on the public after the death of J. P. Morgan II who was famed as the man who fought the crisis of 1907 running to the rescue of President Theodore Roosevelt. Oversea associates include Morgan, Grenfell which has a finger in many juicy pies and Lord Bicester is not the most famous of financiers associated with Morgans, traditionally friendly to Britain.

The importance of keeping to the savings plan has been referred to in the Central legislature. The mill industry's earnings

Post-war International Finance

The public has been treated much in advance to what purports to be "the most reliable outline of post-war currency proposals which have yet appeared anywhere." The qualifying clause at the end may not detract from the importance of the report. Since the proposals for post-war reconstruction have a special importance for India, where the public mind is highly apprehensive—and not without reason—that schemes for world economic order are apt to prove covert attempts at victimisation of the weaker peoples, it is necessary to examine the proposals which the City Editor of the "News Chronicle" and Reuter's City Correspondent believe to be more or less authentic. The immediate purpose of any post-war international exchange system is to minimise exchange disequilibrium and provide a mechanism for clearing of debts between countries. But the return of international finance and world trade to conditions of reasonable equilibrium is hoped for. In fact, economic theory will encourage the belief that, if the immediate purpose is achieved through sound measures which not only deal with the symptoms, but also tackle the root causes, the more distant aim of stable equilibrium in international finance and world trade will also be realised.

The authors of such schemes of international regulation will not be deterred from their efforts by the failures of the last post-war period. For, if the history of the first decade after the last war has a great deal to discourage such efforts, the period following the great depression is rich in practical experience of these problems and the efforts to solve them. This is also the period in which the Bank for International Settlements was actually functioning. Its working, no doubt, leaves much to be desired. But what it did and what it failed to do are equally illuminating. Every important country in the world has accumulated a fund of experience about exchange controls and the relation which these controls bear to the nature and direction of their foreign trade relations as well as the conditions and needs of the internal economy. There is also the experience relating to the working of the Tripartite Agreement among Britain, France and the U.S.A.

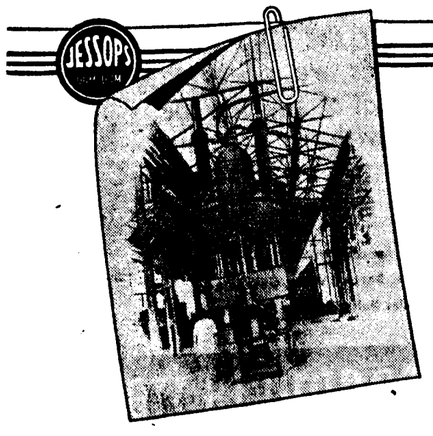
Thus the period that will follow this war will have three distinct advantages over the last post-war period: (1) the experience of individual countries regarding exchange controls, exchange equalisation fund and the like; (2) the experience of the working of international agreements about exchange rates and exchange regulation, agreements which were in effective operation and not mere expressions of pious wishes like the Genova Protocols; and (3) the experience of the working of the Bank for International Settlements which, despite its imperfections and failures, is useful for making more accurate blueprints for a similar organisation which will meet the needs of the future. To these must be added, though it probably follows from the first two, a more precise knowledge of the part which gold has to play in international finance.

There is also the other circumstance that during the last one decade and more the primacy of economic as distinct from financial factors in international trade and international finance has been brought out more clearly than in earlier times; for the readiness to subordinate exchange stability to requirements of foreign trade or internal economy cannot be viewed as other than a sign of the recognition of the fact that, powerful as is finance, the troubles of international finance are but a symptom of the evils from which world economy and international trade are suffering and that the former cannot be cured without reference to the latter. The significance of this fact to the question of the post-war international exchange system is not far to seek. While the system cannot by itself bring about a reconstruction of world economy, by altering the international distribution of productive activity or the direction and content of exports and imports, it must be so devised as not to increase the strains of the national economic systems. On the other hand, its remedies for correcting disequilibria in the sphere of exchanges can, if they are wisely conceived, also serve to correct the disequilibrium in the economic sphere, as when a specially arranged foreign loan enables the borrowing country to develop an export trade in a new line. That, however, is not, strictly speaking, within the scope of the post-war international exchange system, while, no doubt, the authors of the system have to bear in mind such implications of their immediate task.

It would appear from the reports to hand that Britain and America have been working both independently and in collaboration at a scheme, that the results have been communicated to the Allied Governments; that the British and the American plans assign to gold an important place in the post-war mechanism and that the British scheme provides for an international unit of account based on gold and named bancor. We are told that "the bancor will be merely a convenient yardstick for expressing relative exchange values of gold and of currencies participating in international clearing. The new clearing authority would keep its accounts in bancors just as the Bank for International Settlements keeps its account in fictional gold units, namely, the former Swiss franc. All countries would continue to use their own currencies in their respective clearing accounts." Such an international unit of account is the basis of the Keynes plan. But the official United States commentary on the plan propounds some form of international gold stabilisation fund with an international clearing house for clearing balances of international payments and for meeting deficiencies. "The clearing house would allow clearing of overdrafts expressed in bancors in order to allow debtor countries to meet their liabilities without engendering deflationary forces which a gold standard would necessitate. All currencies will be related to bancor though parities will not be permanent or fixed." With further development of the technique of the exchange equalisation fund through the addition of an international credit mechanism and with the recognition of the fact that attempts should be made to remedy causes and not merely neutralise symptoms of exchange disequilibrium, it is hoped that a stable order in international finance will be reached with all that it means for world economy and international trade.

How far can this hope be regarded as reasonable? As we have already hinted, regulation of international finance can only help, and cannot by itself bring about, the stability and progress of world economy. Since financial crises usually accentuate economic crises and are only in part the cause of them, the contribution which financial regulation can make to economic stability is limited to measures which, on the one hand, slow down the impact of adverse economic trends on the financial mechanism and on the other prevent the strains of the financial mechanism from accentuating the economic crises. These two aspects of international financial regulation stand out boldly from the experience of the last depression. The stoppage of American credits to Europe precipitated the crisis; the strain on the exchanges caused deflationary measures to be adopted; and the severity of the depression increased by geometric progression. This part of the phenomenon of the Great Depression, which we have simplified for the purpose on hand, can to a certain extent be avoided, if machinery is provided which can watch the trends in international finance from day to day, apply correctives to undesirable trends and prevent the accumulation of adverse factors and forces.

The proposals that have now been put forward by Britain are designed in such a spirit. The authors of these proposals apparently believe that the sources of instability in international finance are (1) the position of gold, the rights of creditor nations to demand gold and the liability of debtors to tender gold, and the consequent tendency towards maldistribution which becomes chronic in an age which does not feel bound to observe the principles of free trade, (2) movements of funds on both long-term and short-term account and (3) disequilibrium of foreign trade.



Of these three sources, only the first two fall directly within the scope of international financial regulation; while in the case of the third, the problem is seen only after the mischief has been done. What is more, preventive measures do not lie in the hands of those in charge of international financial regulation. In the scheme that has now been published, the authors tackle the problems in the order of their tractability. Taking gold first, they believe that some advantage is to be derived from the adoption of a fictitious unit for the accounting purposes of the international bank. But the more important point is that the system they propose is not to be a sort of gold exchange standard in which the participating countries will be entitled to gold in return for the bancors to their credit. In the various accounts so far received of these proposals, it is not clear how the system by itself can be capable of alleviating the severities of the gold problem. Reuter's City Correspondent in one of his commentaries points out that "the proposals look increasingly like a new charter for gold." But gold hardly stands in need of a charter. On the other hand, gold is rather the tyrant from whom world trade has to wring a charter of liberties for itself.

It would appear that the proposals are designed with a view to benefit countries which have little gold or which are unlikely to increase their stocks owing to the state of their balance of payments. For, while "debtor countries would, to an unlimited extent, be able to use any gold they have, and gold-producing countries would unlimitedly be able to exchange their output for goods and services", "creditor countries will not be entitled unlimitedly to insist on gold payments". And this, it is said, "must mean only that they will no longer be allowed to stultify gold by chronically accumulating uncleared balances and in effect insisting on debtors paying in gold which debtors do not possess and cannot obtain". It is added that "this limitation does not derogate from gold's status, it buttresses it." This is difficult to understand, unless it is implied that any addition to the strain on the gold stocks of countries like Britain will force them to dispense with gold in their transactions with foreign countries either through barter or otherwise and that ultimately gold will be dethroned from its position as the virtually sole monetary metal.

It will be seen from this that the only provision that seeks to tackle the gold problem in the aspect which was in the forefront in the years before the war is the one which lays down that no country will have a right to demand gold in return for the bancors lying in the international bank to its credit. It is a question how far creditor countries will be prepared to acquiesce in such a ruling and co-operate with the Bank in this New Order in international finance. Something can, indeed, be done to check undesirable movements of gold if the payment of gold by the Bank is not to be automatic and the Bank authorities are to take up negotiations with the countries concerned with a view to obviate the need for shipments of gold. But it is certainly straining ordinary understanding to say in the same breath that gold will remain international legal tender, and that creditor countries will not be entitled to demand gold in payment. It is a strange conception of legal tender that leaves the debtor free to meet his liabilities in other modes of payment than the legal tender so-called.

The complexity of the problems of international finance has its roots in the international distribution of productive activity and in the volume and mode of international exchange of goods and services. Though the gold problem looms so large, gold will move in implicit obedience to changes in balance of trade and balance of payments. The value of financial devices for solving the problem should not therefore be exaggerated, though, doubtless, such devices can and must be resorted to as palliatives or even temporary cures. Within the sphere of international finance, it is certainly possible through the control of short-term funds, the negotiation and management of long-term investments designed to develop new areas and restore balance in world economy and through the regulation, as far as may be possible, of gold movements, to prevent the system of international finance from becoming a magnifier of alarms in the sphere of world economy and international trade and even to make it an efficient shock absorber. Some of the provisions can prove very efficacious in the hands of able and well-meaning financiers, e.g., the provision for both overdraft limits for deficit (over-import) countries and balance limits for surplus (over-export) countries proportional to their foreign trade during the base period, the establishment of international machinery for consultation with delegated exclusive powers to an international consultative body to maintain international equilibrium of prices and costs either by directing changes in exchange rates or by inducing various countries to correct any tendency for their domestic position to deviate from the international equilibrium; and the provision that creditor as well as debtor countries would have to submit to the check of consultation whenever their credit or debit balances rose abnormally.

The whole scheme, then, can at its best tackle only the second of the three sources of instability. It can tackle short-term movements of funds more or less effectively. It can do some service in the matter of the volume and direction of long-term capital movement. It can slow down, up to a point, the movement of gold. But in so far as all these are the results of national production and international exchange of goods and services, they are not susceptible to treatment as financial ills. Maldistribution of productive activity, which is, indeed, a world phenomenon is, in the eyes of Europe and

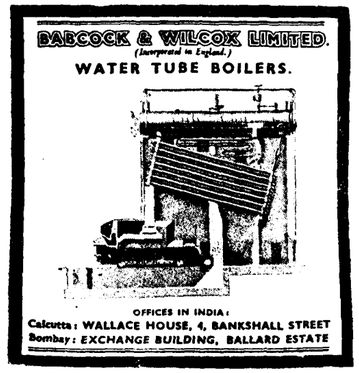
particularly of Britain, limited to the favourable balance of the U.S.A.; and this favourable balance is in turn attributed more or less wholly to the U.S. tariff. That the proposals of Britain are designed with a view to check the flow of gold to U.S. is too obvious to need mention. But it is interesting to note that it is touched on only as a subsidiary aspect or as an incidental afterthought. Reuter's city correspondent observes:

If the U.S.A. maintains a tariff policy which prevents the remainder of the world acquiring vitally needed dollars, all gold will continue to gravitate to the U.S.A., but any way we shall not be the worse off and have good prospects of something more sensible and more prosperous. The U.S. tariff policy remains crucial to the restoration of any international system—no monetary arrangement can alter that fundamental fact—but the proposed system has valuable prospects of bringing the facts home to Washington and enabling Washington to put them palatably to the electorate.

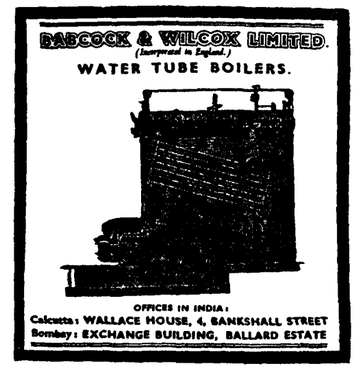
The U.S. electorate will, no doubt, regard taste for free trade as acquired taste and probably decline to acquire it.

A VIEW OF THE NAIL MILL



We have been pioneers in India in the manufacture of Wire and Wire products on the most extensive scale. Today, circumstances over which we have no control, make it impossible for us to satisfy civil requirements even partially. It is taking all our efforts to help with the mighty drive for War productions.

We apologise to our patrons for the hold-up in their supplies. But when peace comes, we will again be in a position to place at the disposal of any one the full range of our products together with our accumulated knowledge and experience of the manufacture of Wire and Wire products.



M. S. Rods, Tested and Untested, Wire Nails, Galvanized Wire, Telegraph and Telephone Wire.

M. S. Annealed Wire, Hard Bright Wire, Barbed Wire, Galvanized Staples, Bolts and Nuts, M. S. Rivets.

Editorial Notes

Essen Smashed

Not since the big raid of October on le Creusot has there been a concentrated attack on an industrial target. The heart of the Reuhr has never been immune from R.A.F. attack but it was only on March 18 that the big effort was made. The result must be depressing to Krupps' shareholders as well as the rulers of Germany. The industrial giant of Germany has been crippled by the cascade raid in which big British bombers had the say. The raid has elicited special praise from Sir Archibald Sinclair, and the industrial mobilisation plan will certainly undergo changes in the light of the bombing that continues over Western Germany. Damage has been determined by post-raid reconnaissance. Bombing, accurate, heavy and resolute, will certainly keep German workers on their toes, and one good result referred to by a bomber captain was that flak was overpowered by bombing.

The second raid on Essen is apparently the climax of the bombing that began in May last with the big raid on Cologne. The results of the raid have been assessed already. The weakening of German fighter defence has contributed to the sudden revival of attacks on the Ruhr. Incidentally, the Ruhr is the source of 70 per cent of Germany's steel and 70 per cent of her coke. About 40 per cent of the electric power used in the Reich comes from the Ruhr which produces in addition much of the synthetic oil. The heavy industries there cannot be moved to safer places and British air attack which has ranged from the past has found that Essen is the best target. Fighters went over the Ruhr during the week-end, and the most encouraging conclusions can be drawn from the later attack on transport system. The "Frankfurter Zeitung" recently declared that shortage of workers is not the only problem of German industry. New women workers in armament works are likely to develop acute nerves now that British bombers are busy as never before.

Famous Islands

Naval operations in the Solomons have made the islands famous. The British protectorate known as the B.S.I.P. consists of a double row of mountainous islands running from New Guinea nearly a thousand miles in a north-westerly direction. The land and sea area of the group is about the size of France, Italy and Switzerland put together. A Resident Commissioner under the High Commissioner for the Western Pacific is in charge. According to Sir Harry Luke the administration under Mr. Marchant held together even after the Japs invaded the islands and helped the Allies to win out. The islands discovered by the Spaniard, Mendana in the 16th century were named after King Solomon because he thought the natural wealth must be great. There is gold in the mountains behind the airbase in Guadalcanar. Sir Harry Luke in his broadcast of November stated that the Anglo-German convention of 1899 gave part of the Solomons to Germany. That is why Bougainville island is part of Mandated New Guinea under Australia. Most of the islands have Spanish names but Choiseul (Choyzle) and Bougainville have French names. Of the 96,000 natives half live in the island of Malaia. Being good labourers the islanders were the victims of the surreptitious slave trade of the Pacific. Many were therefore taken to Queensland. The natives have been praised as loyal, intelligent and amiable by Sir Harry Luke. Cannibalism is dead but only missionaries have an idea of what has been achieved. In the Melanesian group of people occurrences of Polynesians are not unusual, for example in Ticopia the average islander is over 6 feet tall with golden beard and long mane. The Polynesian minority however is dying out owing to the advent of European diseases but the Solomon islanders speaking a strange version of pidgin English are certainly holding their own. Compared with French New Caledonia the B.S.I.P. does not produce exceptionally valuable minerals but the natives are more interesting, and their valour is proved by the heroism of Sergeant-Major Vouza of the Solomons Constabulary who refused to tell the Japanese anything though he was bayoneted in arm, shoulder, face and stomach.

Civil Aviation Plans

The U.S.A. with its many transcontinental air lines is keener on civil aviation than ever. The British Government has only recently taken note of what has been accomplished elsewhere and the best news to date is the selection of Sir F. Bowhill for a new post linking up the R.A.F. with civil aviation. If troop-carriers can be put on to the job of air services after the war the future of civil aviation is assured and mails can be carried so as to get back to old times. Though the interesting reports on civil aviation belong to the past India has not lost interest for mail services must rely on air transport and if the Railways start to run them here the P. & T. Dept. will not be the only gainer. Civil aviation in Britain was reorganised to some extent after the Cadman Committee reported in 1938 and its major achievement since then has been the launching of the Trans-African services. But problems raised by the war more or less drove civil aviation into cover and an inter-departmental committee under Sir F. Sheimerdine set up in 1941 was asked to examine questions. Its labours have not been made public and in November the "Times" Aeronautical correspondent confessed that Britain had lost ground and was losing ground in the field of civil aviation. Compared with the U.S.A. there was no ferry command and the correspondent remarked that the U.S. army had got control of private airlines and decided on a worldwide transport system. Major-General George was asked to take charge of the biggest air service and told Pan-American Airways that he had a plan to keep U.S. armies abroad within reach of supplies by air services. Air lines were offered new aircraft and carriage of cargo was considered one of the jobs to be undertaken. The Aeronautical Chamber of Commerce came out with a plan for a globe-circling system and declared that a fifth of multi-engined aircraft was to be turned over to the new Air Transport command. There were in operation last year four routes including one to Britain via Iceland. The U.S. air force programme is meant to support post-war civil plans for which there is no parallel. The civil aviation companies like de Havilland having gone over to bomber production cannot give Britain the machines wanted for mail services. The complaint made as to the lack of coherent plans compared with the U.S. long-range air programme should have made India sceptical as to the revival of oversea services, but within India civil aviation may be developed if the railways are earnest and machines are brought from the U.S.A. where the tradition of safe flying over long distances has not been limited to oversea services alone.

Japanese Failure

The failure of the Japanese offensive in Central and North China alike, is more important than the reverses in the S.W. Pacific. The latter is helpful to Australia but not to India which finds in Burma a threat to her security. The holding of New Guinea is less important than repulse of a Jap sweep in China by China's own forces. The grant of U.S. aid is ensured by initial performance by the defenders of China who have promptly prevented Japan from obtaining compensation for disasters in the Solomons and New Guinea. Though the southern offensive has not been wholly unsuccessful, it is

clear that Indo-China, Hainan and Burma do not provide the Japs with enough strength to reduce Yunnan. General Stilwell has succeeded in holding Yunnan, if he failed in Burma. Paoshan has not been captured after the Salween campaign began, and retreat has been forced on the Japs again. The Chinese have kept up counter-offensives in the Yangtse Valley. They are important because the Japs will have to take off their recently reinforced Burma garrison for future operations in China. The limited success obtained in Arakan by the British forces so far may be changed if the Japs are forced to take off troops to other parts of China. The Chinese have to do the attacking hereafter and the end of February saw a definite change in the situation in China. Nanking may have declared war, but that has not helped the Japs to get at strategic railways before the summer. The campaign in Kiangsi has again failed, and mention is now made of the possibility of another raid on Tokyo from Chinese bases. The importance of these attacks will be enhanced by the Japanese failure in Melanesia against the U.S. air and naval forces. The Chinese held off the attack in the last summer, and before the spring have held off another more far-flung attack. Occupation has not resulted in conquest and losses in the field may bring about a reduction in the garrison in Manchukuo and alter the position of Japan 'vis-a-vis' Russia in the near future. That must be reckoned a considerable achievement, if and when it comes, as a result of the arrest of the offensive begun towards the end of January and almost wound up at present.

Strain on Germany

The Nazis' plan to speed up and expand war production, largely with the aid of imported foreign workers, has not impressed neutrals. A recently cabled report refers to the scepticism of Swedish observers. The total mobilisation decrees, meant to cut down the supply of goods, labour for a fresh concentration of industry in Germany are viewed by the Berlin correspodent of the Svenska Dagbladet as an essay in propaganda. A long and important conference between Hitler and Goebbels took place before the mobilisation decree was issued. Goebbels received far-reaching powers concerning its practical execution and afterwards discussed the details with Speer, Sauckel, and Keitel. The total mobilisation was a fact before the decrees of 1943, and it produced a strain to which reference has been made. Workers had begun to hate work and ask questions about the war in the fourth year. The tendency should have strengthened as the defence in Russia is weakening. Germany's plight therefore is receiving the attention of neutral observers. A well-known economic writer Stefan Szede, writing in a Gothenburg paper has drawn a searching parallel in relation to the manpower shortage in the final stages of the last war. He has said: "We remember that the same difficult situation existed for Germany during the fourth year of the last war. Then, too, agriculture and industry were short of first-class workers because they were all serving in the Army. Then all efforts were in vain. Prisoners of war and women could not fill the gaps and larger populations and reserves in the Allied countries proved decisive in the end." Attention is drawn to the fact that foreign workers, prisoners of war and labour conscripts from Russia can be used for industrial work only to a small extent. Moreover, they must be put on work like reconstruction of roads and the building of fortifications all over Europe and a tremendous amount of work in devastated Soviet territories while Germans must take up many administrative and transport tasks in occupied countries which cannot be left to the inhabitants because of their unreliability. Owing to the mechanisation of warfare, it is a far more complex problem than before to fill up gaps in the Army. During the last year, about 150 workers were needed at home for every hundred in the Army; but the proportion has risen now to three workers for every soldier or even four or five according to some estimates. That is why Norway is being scoured for workers and Count de Brinon is being made to talk of the duty of French workers to do their share of Germany's tasks. An Army of ten or even eight million men produces problems of its own. Germany's inability to-day to deal with them may not be reflected in the progress made as regards distillation of oil from coal; but in the deficiency of equipment for armies fighting in Russia one may see the failure of total effort.

Safety for Miners

The Coal Mines Stowing Board set up after the Coal Committee reported in 1937 has collected a cess, given advice and made advances to mining enterprises. Its annual reports have pointed to the progress of safety measures, and the subterranean fire danger has been minimised owing to stowing alone. According to the Board's report for 1941-42 protective measures continued in the Jharia and Kusunda fields by stowing underground galleries with sand in one case and mattee in the other. Assistance was given to the Tisra collieries threatened by fire. Voluntary stowing is now a branch of the coal industry and 2.6 millions of tons of stowing material were used by collieries in a year. In the current year as in the last the Board has continued to give assistance to companies. The Advisory Committee decided that assistance should be limited to the acual cost of supplying stowing material at the pithead and Rs. 16 lakhs should be allotted for this year. The original complaint that the Board helped some companies with loans, but not others equally deserving has not appeared and the Board's preventive action in regard to saving of Durgapur colliery by putting up a masonry wall 270 feet long and 6 feet high supported by a bund is certainly a departure calling for special notice. It was done mainly to protect neighbouring collieries. It was on the same view that the Board decided to give full assistance to the Singaran Colliery in certain vital stowing measures in order to avert a threatened fire.

French Unity

Satisfaction will be derived from the report that General de Gaulle wholly approves General Giraud's war aims, and a meeting between the two is to take place. General Giraud's outline of his war aims leading to the restoration of the Third Republic through full participation with the Allies has evoked the feeling that the Casablanca meeting has produced results more important than expected. That Mr. Harold Macmillan was present when Giraud broadcast to Frenchmen at home can be taken as proof of Allied approval. Giraud wants a restoration. The Allies too desire it, and Giraud is opposed not only to Hitler but Laval. The more important point is that French Africa will be soon one and indivisible, whereas France is still divided into two. Giraud's call to France has been approved already by the French National Committee, and the meeting with Catroux is the prelude to another meeting which will bring anti-Axis Frenchmen into one fold. General Eisenhower's campaign in Africa should benefit from this revival of unity which has inspired guerrillas in France to show their hands, encouraging thereby French workers to resist conscription for the sake or Germany.

The purely temporary character of his own regime has been emphasised by General Giraud. There is no question of rivalry since the final judge in all questions is the French electorate. The Allies will have no difficulty in endorsing the General's view that restoration is the only intelligible object and Petain's constitutional amendments have only to be cancelled to secure that. The emancipation of France is also made easier by Giraud's reference to the role of Africa and the fusion of the Fighting French movement with Giraud's commissariat will have the further advantage of ending the latent confusion in the Empire with the exception of Indo-China where the Japs have found Vichy's weakness an advantage. The Giraud—de Gaulle agreement will put the Vichy franc beyond the pale and fortify the position of the currency sponsored by local banks of issue. The franc in North Africa is now exchanged at the pre-war rate with sterling and the appreciation is advantageous to producers of iron ore, phosphates etc. in demand by the Allies.

Reverses and Recovery

Discussion as to the Japanese ability to recover from the defeat in the Bismarck Sea has not ended. General MacArthur's request for more planes is meant to support Mr. Curtin's demand earlier for increased assistance from the Allies. The enemy's expulsion from Guadalcanar, the defeat in New Guinea, and the continuous attack on bases in New Britain and the Solomons are viewed as unimportant compared with the power to bring up more aircraft to support the navy. It is singular that the recent claim of Admiral Nimitz that the U.S. fleet is ready for a major offensive in the Pacific is ignored. Evidently, the distance from Hawaii is regarded as a handicap and the strategic defensive operations in the Solomons in progress from August last, are viewed as the limit of naval action. If Japan's cruiser strength has been reduced, and capital ships are restricted to the home fleet, the possibility of a direct attack on the Japanese fleet appears directly related to Australia's security. That the U.S. fleet has fully recovered from Pearl Harbour is not doubted, but its victories in the Coral Sea and Midway have not evidently given it the power to turn on the enemy in the islands of the Pacific. That a base is ready in Samoa need not be referred to; but southern isles in the Solomons should be more suitable than Port Moresby. The S.-W. Pacific appears a region where Japan is still holding the initiative, and one year after the loss of Java, many will note that the Allies' intentions of recapture have hardly been announced. Because Japan has lost 151 warships against 71 belonging to the U.S.A. after December 1941, the U.S.A. must be able to field superior strength at sea to expel the enemy who entered New Britain in January last. A preliminary is heavy air attack on the scale noted in Germany, but the U.S. air force has its tasks in Europe just now, and the Japs' hope of reinforcing New Britain is based on the belief that the Mediterranean will receive more attention in order to facilitate the opening of a second front in Europe. Since the Casablanca talks settled both the theatres and turning of war, the Japanese launched their offensives in China and the S.-W. Pacific. That both have failed does not promote optimism as to what may be attempted by Japan after reverses. Victory in the Pacific is likely to be delayed by Japan's control of the territory from Akyab to the Aleutians, and whatever may be her present deficiency in steel or shipping, she probably thinks of Tojo's earlier dictum that the war is just beginning. Attack on Japan through China remains a mere possibility, and the postponement of the re-conquest of Burma, will excite some doubts as to the ability to finish the war with Japan at the same time as the war in Europe ends.

SECOND *Childhood*

Hard to believe, that this middle-aged executive has resuscitated his childhood friend—the slate!

Instead of simple sums, it now carries notes of telephone conversations, figures, and appointments. It saves daily paper of ten times its own surface.

Follow this lead back to second childhood—help to save paper—for essential uses only.

Revise all your stationery, forms and statements. You can save over 25% of the paper surface you are now using.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper :—

- Use the smallest sheet of paper for any purpose that will do the job.
- Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.
- Do not make copies except where absolutely necessary.
- Always type single spacing.
- In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.
- Reduce the size of labels on manufactured goods.
- Use the back of the letters received for the carbon copy of your replies.

Save paper

OBJECTS OF THE COMPANY.

1. The Company has been formed for the purpose of carrying on business as an Investment Company and for the object set forth in the Memorandum of Association of the Company, a copy of which is attached herewith and forms part of this Prospectus.

2. It is believed that an Investor derives advantage and benefit by sharing the varied Investments effected by an Investment Company. A mofussil Investor is generally remote from the market conditions prevailing from time to time and would naturally like to seek Investments through the media of such an Investment Company and thus become interested as a Shareholder in varied Investments without the worry of observing from day to day the conditions of such Investments. A private Investor in recent times when fluctuations are wide considerably minimises his risk by reason of becoming interested in an Investment Company.

3. The Company has been sponsored by the well-known House of Devkaran Nanjee which was established in 1879 and has been able to secure a Directorate amongst whom are men having a vast and considerable experience in respect of Investments as well as in trade, commerce, finance and industry and who are imbued with a spirit of subdued optimism coupled with confidence to work and see to the progress and success of the Company.

4. The Company is authorised under its objects *inter alia* to promote, underwrite and finance industries, undertakings and concern and to lend assistance and co-operation to the existing industries, undertakings and concerns. The Shareholders will therefore have the satisfaction of seeing that they contribute their mite in the industrialisation and development of such industries, undertakings and concerns.

MINIMUM SUBSCRIPTION.

5. The Minimum Subscription upon which the Directors will proceed to Allotment and which in the opinion of the Directors must be raised out of the proceeds of this issue in order to provide for the matters referred to in Section 101 of the Indian Companies Act including the working capital is Shares of the nominal value of Rs. 10,00,000.

UNDERWRITING AND BROKERAGE.

6. Devkaran Nanjee Banking Company, Limited, Bombay have underwritten the whole of the present issue of Rs. 1,00,00,000 (RUPEES ONE CRORE) divided into 1,00,000 Shares of Rs. 100 each. In the opinion of the Directors the resources of the said

TED for 65,000 Shares of Rs. 100 each of the nominal value of Rupees Sixty-five Lakhs, the Directors, Underwriters and their friends and to take up the balance.

l close on the 27th March, 1943.

DIA of Imperial Bank of India, Allahabad Bank, Ltd., Bank of Baroda, Ltd., Bank of India, Ltd., Central Bank of India, Ltd., Chartered anking Company, Ltd., who will receive Applications for Shares and grant Receipts for the Application Money on the Company's behalf.

with the Registrar of Companies, Bombay.)

ECTUS
MENT COMPANY, LIMITED

VII OF 1913 ON THE 15TH DAY OF FEBRUARY, 1943.

Divided into 2,00,000 Shares of Rs. 100 each.

Underwriters are sufficient to discharge the underwriting obligations. The underwriting commission payable by the Company to the said Underwriters is 3½ per cent on the nominal amount of the said issue of 1,00,000 Shares. Brokerage at the rate of Rupee One per Share has been agreed under the said Agreement to be paid by the Underwriters to recognised Brokers or Banks on Allotment made in respect of Applications bearing the stamp of such Brokers or Banks.

7. The following is the Article relating to Commission for Placing Shares:

Article 10:—The Company may at any time pay a Commission to any person for subscribing or agreeing to subscribe (whether absolutely or conditionally) for any shares in the Company or procuring or agreeing to procure subscriptions (whether absolute or conditional) for any shares in the Company, but so that if the commission shall be paid or payable out of capital, the statutory conditions and requirements shall be observed and complied with; and the commission shall not exceed five per cent on the nominal amount of the shares in each case subscribed or to be subscribed. The commission may be paid or satisfied in cash or in shares, debenture stock of the Company.

PRELIMINARY EXPENSES

8. The estimated amount of the preliminary expenses (excluding the underwriting commission) will not exceed in the aggregate Rs. 30,000.

MANAGING AGENTS.

9. Denasons, Limited, and their successors and assigns have been appointed Managing Agents of the Company in terms of the below mentioned Managing Agency Agreement for a period of Twenty Years commencing from the date of the incorporation of the Company upon the following terms as to remuneration and other terms and conditions appearing in the said Agreement:

(i) A commission at the rate of 10 (TEN) per cent on the net annual profits of the Company.

(ii) For the purpose of calculating the commission aforesaid, "net profits" means the net profits of the Company as defined by Sub-section [illegible] of Section 349 of the Indian Companies Act.

(iii) The said remuneration and commission payable to the Managing Agents shall be exclusive of and shall not include any remuneration or wages which shall bedome payable to the Bankers, Solicitors, Engineers, Experts, Managers, Commission Agents, Dealers, Mukadums, Clerks, Servants, Workmen, Brokers or other Officers or Employees who may be employed by the Managing Agents for and on behalf of the Company or for carrying on or conducting the business of the Company nor any rents, taxes, costs, postage, printing or stationery or other office expenses nor any travelling charges and expenses incurred by the Managing Agents in connection with the business of the Company all of which remuneration, salaries, wages, costs, charges and expenses shall be borne and paid by the Company.

10. The following is Clause 14 of the Managing Agency Agreement:

During such time as the Managing Agents or their successors and assigns shall be the Managing Agents of the Company, the Managing Agents or their successors and assigns shall subject to the provisions of Sub-Section (2) of Section 83B of the Companies Act be entitled to appoint such number of Directors as shall not exceed in number one-third of the whole number of Directors as provided by Section 87 I of the Companies Act and to remove them or any of them from office and on a vacancy being caused in such office from any cause whether by death, removal, retirement or otherwise, they shall have right to appoint a Director or Directors to fill in such vacancy. One of the Directors appointed under this Clause and selected by the Managing Agents or their successors and assigns shall be the Ex-Officio Chairman of the Directors. The Directors appointed under this Clause are herein referred to as Ex-Officio Directors. The term "Ex-Officio Directors" shall mean and include the Directors or Director for the time being in office appointed under this Clause. The Ex-Officio Directors shall not be liable to retire by rotation or be removed from office except by the Managing Agents or their successors and assigns as aforesaid. The Ex-Officio Directors shall not be bound to hold any qualification shares. The Ex-Officio Directors may at any time by notice in writing to the Company resign their office. Pranlal Devkaran Nanjee, Esq., shall be the first Ex-Officio Chairman of the Directors.

Corresponding to the above is Article 101 of the Articles of Association of the Company.

SPECIAL DIRECTOR ETC.

11. The following are the Articles relating to the appointment of Special Director and Debenture Director:

Article 102:—Devkaran Nanjee Banking Company, Limited, shall be the main Bankers of the Company. The said Devkaran Nanjee Banking Company, Limited, shall have a right from time to time to appoint a Director of the Company and to remove any Director so appointed. The Director appointed under this Article is herein referred to as "Special Director." The Special Director shall not be bound to hold any qualification shares and shall not be liable to retire by rotation or be removed from the said office by the Company. Provided however, that if the said Devkaran Nanjee Banking Company, Limited, fail to hold within a period of three months from the date of the incorporation of the Company shares in the Company of the nominal value of Rs. 5,00,000 at least registered in their name solely or jointly with any other person or persons or at any time thereafter cease to hold such shares as aforesaid, then in such case the power of appointing a Director shall cease and determine and any Director appointed in pursuance of this Article shall vacate office.

Article 103:—Any trust deed for securing debentures or debenture stock issued by the Company may provide for the appointment from time to time by the holders of the debentures or debenture-stock secured thereby or by the trustees or some of the trustees for the time being therof in accordanc with the provisions therein contained in that behalf, of some person nominated by such appointors to be a Director of the Company and may empower such appointors from time to time to remove any Director so appointed and to appoint another in his place. The Director appointed under this Article is herein referred to as the "Debenture Director" and the term "Debenture Director" means the Director for the time being in office under this Article. A Debenture Director shall not be liable to retire by rotation or be removed by the Company or be required to hold any qualification shares. A Debenture Director may at any time by notice to the Company resign his office.

AGREEMENTS.

12. The following agreements have been entered into:

(a) Managing Agency Agreement dated the 20th day of February, 1943, between the Company of the one part and Denasons Limited, of the other part appointing Denasons Limited, and their successors and assigns Managing Agents of the Company.

(b) Agreement dated the 22nd day of February, 1943, between the Company of the one part and Devkaran Nanjee Banking Company, Limited, of the other part providing for the underwriting of the present issue mentioned above.

Copies of the said documents may be inspected at the Registered Office of the Company at Devkaran Nanjee Buildings, Elphinstone Circle, Fort, Bombay, at any time during office hours.

INTEREST OF DIRECTORS.

13. Mr. Pranlal Devkaran Nanjee, Mr. Choonilal Devkaran Nanjee and Mr. Shantilal L. Thar are Directors and Members of Denasons, Limited, Managing Agents of the Company, and are interested accordingly.

Mr. Pranlal Devkaran Nanjee and Mr. Choonilal Devkaran Nanjee are Directors and Members and Mr. Shantilal L. Thar is a Member of Devkaran Nanjee Banking Company, Limited, who have underwritten the whole of the present issue as aforesaid and are interested accordingly.

Mr. Amarchand N. Shroff is a Partner in the Firm of Messrs. Amarchand & Mangaldas, Solicitors, and is thus interested in the remuneration to be paid to his said firm for their professional charges.

Mr. Laxmikant S. Dabholkar is a Director and Member and Mr. Pranlal Devkaran Nanjee, Mr. Choonilal Devkaran Nanjee and Mr. Shantilal L. Thar are Members of Devkaran Nanjee Printing and Publishing Company, Limited, and as such are interested in the remuneration payable to the said Company in respect of the printing and/or other charges.

DIRECTOR'S QUALIFICATION AND REMUNERATION.

14. The qualification of a Director (other than the Ex-Officio Director, the Special Director, the Debenture Director or the alternate Director) shall be the holding of shares in the Company of the nominal value of Rs. 25,000 at least registered in his name solely or jointly with any other person or persons.

15. The following are the Articles relating to Remuneration of Directors:

Article 109:—The remuneration of a Director shall be such amount as the Directors may from time to time fix, for every meeting of the Board attended by him.

DEBKARAN NANJEE INVESTMENT COMPANY, LIMITED—PROSPECTUS (Contd.).

Article 110 :—The Directors may allow and pay to any Director who is not a bona fide resident of Bombay and who shall come to Bombay for the purpose of attending a meeting such sum as the Directors may consider fair compensation for his travelling expenses, in addition to his fee for attending such meeting as above specified.

Article 111 :—If any Director being willing shall be called upon to go or reside out of Bombay on the Company's business, or otherwise perform extra special services (which expression shall include the work done by a Director in signing certificates of shares or debentures issued by the Company, or work done by him as a member of any committee appointed by the Directors in terms of these Articles) the Directors may remunerate such Director for such services, either by way of salary or commission, or by a percentage of profits or the payment of a fixed sum of money, as may be determined by the Directors, and such remuneration may be either in addition to or in substitution of his remuneration above provided. The Directors shall also be entitled to be repaid any travelling or other expenses incurred in connection with the business of the Company.

Article 112 :—The Directors shall be entitled to allow and pay to a Director such remuneration as they in their discretion think fit, for any services that such Director might have rendered or may render to the Company in addition to the remuneration, if any, payable to him under the foregoing Article. Such remuneration may be paid by way of salary, remuneration, bonus, a percentage of profits or in such other manner as the Directors may determine.

VOTING AND RESTRICTIONS.

16. The following are the Articles relating to voting and restrictions thereof:

Article 88 :—On a show of hands every member present in person shall have one vote for every five shares held by him, and upon a poll every member present in person or by proxy shall have one vote for every five shares held by him.

Article 89 :—Where a Corporation being a member is present by proxy who is not a member, such proxy shall be entitled to vote on a show of hands.

Article 90 :—Any person entitled under the transmission clause to transfer any shares may vote at any general meeting in respect thereof in the same manner as if he were the registered holder of such shares, provided that seventy-two hours at least before the time of holding the meeting or adjourned meeting as the case may be, at which he proposes to vote, he shall satisfy the Directors of his right to transfer such shares, or the Directors shall have previously admitted his right to vote at such meeting in respect thereof.

Article 91 :—Where there are joint registered holders of any share, any one of such persons may vote at any meeting, either personally or by proxy, in respect of such share as if he were solely entitled thereto ; and if more than one of such joint holders be present at any meeting, personally or by proxy, that one of the said persons so present whose name stands first or higher on the register in respect of such share, shall alone be entitled to vote in respect thereof : Provided always that a person present at any meeting personally shall be entitled to vote in preference to a person present by proxy although the name of such person present by proxy stands first or higher on the register in respect of such share. Several executors or administrators of a deceased member in whose name any share stands shall for the purposes of this article be deemed joint holders thereof.

Article 97 :—No member shall be entitled to be present, or to vote, on any question, either personally or by proxy or as proxy for another member, at any general meeting, or upon a poll, or be reckoned in a quorum whilst any call or other sum in respect of any of the shares of such member or any other moneys on any account whatever either solely or jointly with any other person shall be due and payable to the Company.

Article 42 :—The Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason decline to register any proposed transfer of shares whether the transferee is a member of the Company or not.

17. No restrictions are imposed in the Articles of Association upon the Directors of the Company in respect of their power of management except such as are imposed upon them by the provisions of law and save and except the restrictions imposed upon them by the provisions to Article 61 which runs as follows:

"Provided that the Directors shall not without the sanction of a general meeting of the Company so borrow any sum of money which will make the amount borrowed by the Company and then outstanding (exclusive of the amount borrowed on the liquid assets of the Company) exceed the issued capital of the Company for the time being. Nevertheless, no lender or other person dealing with the Company shall be concerned to see or enquire whether this limit is observed."

DEALINGS IN THE COMPANY'S SHARES.

18. Application will be made to the Bombay Stock Exchange (the Native Share and Stock Brokers' Association), Bombay, in due course, for permission to allow dealings in the shares of the Company.

APPLICATION FOR SHARES.

19. Application for shares should be made on the form accompanying this Prospectus which may be obtained at the Registered Office of the Company or at all the Offices in India of the Company's Bankers, and sent in accordance with the direction contained therein with a remittance of the amount payable on application.

Such application should be made in minimum unit of Five Shares or any multiple thereof. An application for an odd number will be treated as an application for a number equal to the multiple of five not exceeding the shares applied for.

Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount remaining payable on the Shares allotted and any balance there, after remaining will be returned. Failure to pay any amounts due on Shares allotted when due will render previous payments liable to forfeiture.

Dated this Third day of March, 1943.

GOODS AND PARCELS BY RAIL

When booking goods and parcels by rail, ensure that each package is properly addressed in English, showing destination, station and consignee's name. All old addresses must be obliterated and old labels removed. If this is not done, goods and parcels are liable to be lost.

YOU HAVE BEEN WARNED 1

THINK of the enormous appetite of India's factories ! Of coal alone, the railways load 3,408 wagons **every day**, mostly for the factories. Another 17,138 wagons, containing grain, cotton, and other raw materials, are loaded **every day**.

Makes you realise what the Railways are doing, doesn't it ? Every minute of the 24 hours, they are working, quickly, efficiently, to help India's War effort. And **still** finding time to run 3,965 passenger trains—to carry 17,07,047 passengers swiftly and safely to their destination.

Quite a big job of work ! And you can help by travelling as little as possible, by clearing the lines for vital supplies.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

The extension of the Lease-Lend Act in the U.S.A. for another year, coming, as it does, after the statement of Admiral Standley, serves to remind the world of the dependence of the Allied nations on America for accomplishing what remains of the tasks connected with the war. I do not know how far the recent successes—the Russian triumphs in Europe, the advance of the Allied armies in North Africa and the sinking of the Japanese convoy off Aaru Island—are responsible for it. But the fact remains that statements by no means conducive to the solidarity of the anti-Fascist front have of late been conspicuous; and from this point of view the Lease-lend luncheon in Washington and the speeches made thereat and the publication of figures relating to Lease-lend aid are quite opportune. We in India have all along been anxious to know how India stands in the network of relations which America has with the rest of the world over this lease-lend. We were anxious to know not only the aid that has been given to India and in India—a vital difference!—but we were also eager to know the aid received by other Allied nations. For, on this question of lease-lend and its reverse, it has been extremely difficult to form any idea of what is just except on the basis of what other nations have been getting and giving. The Government of India is never eager to satisfy the public desire for information. And naturally; because in these matters desire which cannot develop into demand must perforce be classed as curiosity. It is fortunate, indeed, that the American Government has met our needs, when our own Government has been indifferent to it, a fact which Mr. G. L. Mehta has aptly stressed in a recent statement.

* * * *

But, as I said, the publication of these figures relating to lease-lend and the extension of the Lease-lend Act for another year should serve to administer a check to the few, but disturbing, signs of discord among the Allied nations. I am reluctant to think that the recent successes along the important war fronts have engendered a facile optimism about the duration of the war and about the nature of the tasks that still remain to be accomplished. The feeling that the war is nearing its end can be encouraged only in so far as it can increase the consideration of post-war problems and of the need for the establishment of common understanding among the Allied nations. If, on the other hand, the approach of an Allied victory should tempt the nations to take isolated and nationalist viewpoints of their own, there can be no question that Allied victory will recede further, even if it does not prove wholly elusive. It is not a little significant that, during the last few days, there have been, on the one hand talks about regulation of international finance in the post-war period and on the other, incipient bickerings among the Allies such as those indicated by the statement of Admiral Standley in Moscow and the affirmation of Mr. Oliver Stanley that the governance and development of the colonies must be solely a British responsibility. It goes without saying that British statesmen know better than people outside how far such statements will handicap the problems of peace and how far Britain herself will be able to deal with the reactions of other countries to such statements. Mr. Churchill himself has said that, if there is the danger of truculence on the one side, there is also on the other the danger of grovelling to beware of; which shows that the British Government have made up their mind to present from now on a stiff resistance to possible demands for the internationalisation of the colonies.

* * * * *

This is hardly the occasion for discussing the question of the future government of the colonies. But, considering that Sir Samuel Hoare's offer for readjustment of the position regarding colonies was made nearly a decade ago, the least that can be said of Mr. Stanley's statement to-day is that it is inconsistent with the spirit of the times and both premature and inopportune from the point of view of the further conduct of war. While Mr. Stanley's statement can at least be justified on the ground of national interest, Admiral Standley's indictment of Soviet Russia for ingratitude has all the look of an irrepressible outburst of deep-rooted political prejudice. This war has made strange bed-fellows. And it has therefore imposed on many people both in Britain and America, a curious form of psychological repression, I mean the repression of the hatred of communism. Persons like Admiral Standley are probably on the look out for opportunities of blaming Soviet Russia. It is indeed fortunate that the statement has had no considerable after-effects. It has been both refuted and virtually repudiated.

* * * *

The British argument in support of their claim that the colonies are their sole responsibility is that Britain will undertake to finance the development of the colonies. To say that Britain has no monopoly of the financial facilities that the colonies may need for their development would have been a more or less accurate statement of the situation before the last war. But to-day it would be a serious mis-statement. It is one thing to say that Britain cannot afford to part with her grip on the colonies. It is quite another to give more uptodate versions of the old idea of the White Man's Burden. It is often said of the problem of India's sterling balances that the problem arises principally from the fact that India has

been left with a very small part of the total military expenditure. While in the case of India, there is a certain justification for India calling upon Britain to foot by far the bigger part if not the whole, of the defence bill of this country, a similar relation between Britain and the U.S.A. would be very hard indeed to defend. In the light of the amounts of lease-lend aid provided by the U.S.A. for Britain, among other countries, it is indeed a strange claim for Britain to make that, because Britain is prepared to put out the necessary finance for the development of the colonies, the colonies should continue to be an exclusive British responsibility. Britain's financial resources after the war will be attributable to the gifts of material which America has been making to her. In spite of the aid which America has lavishly given to practically the whole of the world except the Axis powers, America will still be in a position after the war to finance the development of the colonies on even cheaper terms than Britain. But it is not so much a question of who can finance the development of the colonies as that the war and the ways in which America has provided help for the Allied nations should, before the war draws to a close, help the Allied powers to gain a new sense of solidarity of civilisation and of the need to treat the world as a unit rather than stake claims to squatter's rights which are neither legitimate nor otherwise tenable.

* * * *

The grouse against Soviet Government that they are not giving full accounts of American aid to the Russian people is of a piece with Mr. Stanley's statement in Britain. For, it weakens the growing bonds of sympathy between the Western democracies and the Soviet Government, which, in the eyes of the former, does not count as a democracy for the very strange reason that the Soviet Government have not confined the democratic principle to the sphere of politics, but have had the temerity to extend it to the economic life as well. Whatever the form of government in Russia, it is certain that, if war is not to be a kind of malarial fever occuring with a stipulated periodicity and wasting the limbs of human society, the democracies and Russia have got to come closer together to evolve a new world order. In spite of the apprehensions entertained in India about reciprocal lease-lend and possible post-war liabilities of various kinds to America, the U.S.A. has preserved an attitude, at once practical and altruistic, over this question of lease-lend. That the statements of American officials and leaders should reveal a degree of mental reservation about the quid pro quo that America expects is only natural. For, in a world which is not noted either for gratitude or enlightened self-interest, it would be folly indeed not to reserve claims for future presentation in the event of unreasonable truculence on the part of others. It is in such a spirit, I believe, that the claim to return of lease-lend aid has been retained in part. But it has been stated more than once that the one kind of return on which America insists is hearty co-operation in the cause of permanent world peace and, as a means towards that end, in economic and political reorganisation. Admiral Standley's statement at Moscow strikes a discordant note. For one thing, it has been shown that Admiral Standley's statement is not true. Though the American ambassador in Moscow would have liked to see in every line of Russian papers paens of praise for the U.S.A., it is hardly possible, with the exigencies of the war being what they are, to satisfy such cravings. Besides, the extent of American aid, though it doubtless seems large, must be seen with a proper sense of proportion to the totality of the Russian war effort. As M. Litvinov has been careful to emphasise in his speech at the lease-lend luncheon, the Soviet army has been waging war without a lull for twenty months along a continuous front of 2,000 miles. It is hardly possible for them to grasp the enormous quantities of all varieties of armaments and supplies used by the Red Army during this period. Besides, the Soviet Government might have thought that to harp on American aid would be to jeopardise the spirit of self-reliance.

* * * *

The receipt of lease-lend aid from America by the various allied nations, I hold, should be capable of providing an emotional setting in which it should be possible to make adjustments amongst the nations through the mediation of the common benefactor. And attempts to disturb that background must be deprecated. In this spirit, I should regret the tendency amongst some sections of Indian opinion to be too outspoken about the fears of American economic domination, fears for which there has been no real warrant. If there are complications in our lease-lend relations with America, we must have the honesty and the frankness to recognise that they are the result rather of our position than of America's attitude. The fact remains that, whatever may be the variety of purposes for which lease-lend materials have been sent out to India, the value of these materials amounts to the formidable figure of 295 million dollars. While two-thirds of this represent actual war materials, there have also been imports of capital goods which increase the total capital equipment of the country, though not on the lines we most desire. America has helped substantially in the improvement of our harbours and our railway systems at a time when such aid is not to be had from any other quarter. But I cannot help wishing that when Lease-Lend aid is provided on such a large scale, America should send us also equipment which would enable us to increase our output of current consumer's goods. It would be a mistake to think that such materials have no relation to the war situation. For the stocks of foodstuff and other consumers' goods in India is being sorely strained on account of the war and the value to the further conduct of the war of any increase in such stocks brought about by capital equipment from America can hardly be despised. It is noteworthy that among the materials obtained by India on lease-lend terms, there are such goods as pasteurisers and accessories for use on Indian farms. It is for the Indian agent in America to see how far the list of such items can be expanded with advantage both to India and to her war effort.

'EAVESDROPPER'

TEA ESTATE FOR SALE

AT THE

Tea Brokers' Association Sale Room
Mission Row, Calcutta

Under instructions from the Assam Consolidated Tea Estates Limited, the undersigned will offer for sale by Public Auction on Friday the 2nd April, 1943, at 3 p.m. as a going concern as from the 1st day of January, 1943, that valuable property, the SELIM HILL TEA ESTATE, situated in the Darjeeling District.

For full particulars and conditions of Sale, please apply to:—

(From Our Correspondent)

Bombay, March 17.

THE arrangements for rationing as from April 1 are nearly complete. Enumeration took place on Sivaratri day and the population for which cards has to be issued is put at 1.7 millions. Some urge that the total is again underestimated. What is obvious is that annual influx and seasonal migration will suffer greatly. The ration card will have to be held by every householder and guests will be a problem. Entertainment and dining out will become equally difficult and the corporation which is working the scheme out will have to get its own staff to use the cards. Controlled shops will sell goods only to those with cards, and experience in Bangalore is cited as wholly favourable for the experiment here. The economists here agree that rationing is practical and necessary, but getting the food—the 4 main cereals—is going to be a problem. There is no worry over sugar at present. In fact, merchants want that stocks should be cleared, but the major problem is wheat. Bakers have been driven out of business, and barley has already taken the place of wheat in biscuits.

The local Government has quite a good record in finance. Another surplus is to be got without new taxation. The budget is balanced though there is famine. Revenue balances remain large, and special development funds too are kept. Total expenditure is over Rs. 17.6 crores and the Government cannot keep it down. The year ending March 1943 will show a surplus of Rs. 59 lakhs so that the balances will be higher. The Government is going to make an addition to its post-war fund to raise it by Rs. 60 lakhs. The target figure is Rs. 2 crores so that local industry should develop rapidly after the war. Schemes that are worth attention are being drawn up, and soldiers leaving the Army should find a place in the plans. Landlords in the city will be sorry that the property tax is retained and others will feel sad over the disturbing increase in excise revenue.

There has been some discussion here as to the surcharge on companies' income-tax. There is likely to be some doubt as to what a company must pay after the Finance Bill is accepted. Anyway, an elucidation is sure to come. The basic rate and the surcharge are up. Dividend receivers are the class hit and bank shares etc., which are not affected by higher taxation, are therefore fancied by local investors at present. The average yield is just 4 per cent. Yet the buying remains keen because there is a lot of idle money and there is no faith in steel or other shares which show no high yield and are always going up or down. The cotton market has weakened moderately after the story of a rise in cloth prices. There has been a late rise in futures but the market cannot ignore the official warning. The standard cloth experiment must not be wrecked. There is much else at stake and the closure of the market may follow if prices are too high. The mills would not object because the demand for cloth is keener and their goal is bigger production though they are not anxious for sales oversea. Their profits are good, and they are ready to pay taxes but not fancy prices for cotton because of a blight in Uganda or a riot in Alexandria. The demand for mill share is quickened by a notice that the Podar mills will issue bonus shares. It proves that Bengal mills alone are not making big profits. Profits rose by about 175 per cent over those for 1941 and 2/3rds of the sum earned goes to Government. An interim of 4 per cent was paid and the final is to be in the form of three 4 per cent. Preference share of Rs. 100 for each score of ordinary shares held. This plan mean a large draft on the reserves but the shareholders are not many and 15 per cent in scrip is not very luscious when one Cawnpore mill is paying out 120 per cent as dividend for 1942. The Podar Mills retain plenty of liquid assets and stock alone should make good the bonus payment. Big increases in profits are not confined to Edsu. The Apollo mills did very well, and its profits rose by about 175 per cent. The dividend is raised by less than 5 per cent because taxes swallow up Rs. 21 lakhs. Till 1940 there was no dividend but war prosperity has given shareholders in Apollo and Meyer Sassoon mills their chance. The progress is a guide to the better management, and it is the Government which benefits most. The big jump in Century profits has beaten the market. The Worli cycle factory needs more capital. Birla Bros., here are offering 10,000 shares at par to present shareholders so that authorised capital of the Hind Cycles Ltd., will be Rs. 50 lakhs and issued Rs. 35 lakhs. The Company's capital is Rs. 25 lakhs and it wants Rs. 10 lakhs more. It should get it as the petrol rationing and import difficulties have brightened prospects for cycle manufacturers in India. The Army has tried Hind cycle and called it O.K. The increase of capital by giving 100-rupee shares to its shareholders is justified by 2 years of successful running. The return of Sir H. P. Mody to the Board of the Central Bank may be taken as certain. The usual notice of meeting refers to his being re-eligible for election on March 29. He may be Chairman hereafter with Mr. H. C. Captain as M.D.

BENGAL NAGPUR RAILWAY CO.
LIMITED

NOTICE

Rounding off of Passenger Fares from 1st April 1943

With a view to effecting a reduction in the demand for smaller coins, all fractions of an anna in Passenger fares will be rounded off to 6 pies or 1 anna. On the printed tickets—

wherever 3 pies occur—these will be dropped.

wherever 6 pies occur—no change will be made.

wherever 9 pies occur—these will be reckoned as one anna.

The printed tickets at present in stock in the Booking Offices will continue to be issued, the fares being corrected in ink.

Dated. 15-3-1943.

Commercial Traffic Manager.

Resume of Commodity Markets

EARLY in the week rather active conditions were noticeable in the several commodity markets. The jute and jute manufactures markets were firmer on receipt of a new order for hessian cloth, while the bullion markets were sharply higher on the report that efforts were being made to evolve an International Monetary Unit with gold as its basis. The cotton market improved further on speculative and mill buying and only on some selling at the higher levels, there has been a setback in prices. The piecegoods market has continued firm as also linseed and food grains.

* * * *

The new order for hessian cloth is more a bullish factor for the raw jute market than the hessian market; in the sense, that with the present difficulty in regard to the transport of the raw material, there will be an accentuation of the difficulties of mills in this regard, and that the disparity between Calcutta and mofussil prices will tend to become wider. The increase in the working hours is a rather bearish factor for the market though it can be argued that with the greater disposition of the U. S. Government to buy jute goods from India, there is every possibility of a substantial improvement in exports in the near future, with an improvement in the shipping position. Even with the fall in consumption by the U. S., it was possible for mills to keep up production at the fairly high level of 54 hours per week with 10 per cent of the looms sealed. Any further increase in demand should naturally be reflected in higher production though the slightly heavy stocks at the moment can possibly allow a lower production for some time, even with a slightly greater demand. That is the reason why while the earlier improvement in the raw jute market has been maintained the jute manufactures market has shown slight signs of easiness towards the close.

* * * *

It was pointed out last week that the one-sided movement in the Bombay raw cotton market could not be sustained and that, before long, there would be profit-taking. Early this week, Jharilla March improved by more than 30 points to Rs. 624 but at the higher levels there was heavy profit-taking and the quotation came down to Rs. 589. At the close there has been a rally to Rs. 610. The undertone of the market is rather quiet and operators and mills are inclined to await further developments.

* * * *

At long last standard cloth has been marketed though, as expected, it has not been first marketed in Eastern India. It is reported that the Punjab has received a certain amount of standard cloth against the allotted quota of 1.8 million yards.

The recent order of the Madras Government prohibiting the export of yarn to outside the province has perhaps reference to the efforts made by the Provincial Governments to produce standard cloth for that Presidency out of the yarn supplied to the handloom weavers. Most of the mills in Madras are spinning units and a good portion of the quantity is marketed in Bengal and other centres. The power to requisition yarn and the control over exports on or after March 15, 1943, is evidently designed to procure adequate supplies of yarn for the Government to pursue their scheme of standard cloth. This check on the part of the Government cannot be without its effect on other centres and those mills that are dependent on the South Indian mills for their yarn might be affected.

* * * *

It was pointed out last week that the rise in prices for the precious metals was not quite understandable. It now appears that the recent speculative buying has been due to the proposals for the creation of an International Stabilisation Fund. There are also proposals for the creation of an international monetary unit with gold as its basis. This, it is pointed out, is to prevent competitive depreciation in currencies in the post-war period and to secure an agreed re-valuation of currencies. Efforts to utilise gold as the basis for currency do not necessarily mean that gold prices in the post-war period will be higher. As there is every likelihood of the rupee being overvalued in relation to other currencies, and as sterling will certainly not be at the present depreciated level, it cannot be denied that post-war prices for gold would be lower. The present boom in prices is altogether unjustified.

* * * *

The Second Wheat Forecast for 1942-43 published during the week shows an increase in area to 34,311,000 acres in 1942-43 from 32,349,000 (revised) for 1941-42 or an increase of 6 per cent. The present condition of the crop is reported to be quite good on the whole.

It is satisfactory to note that with the recent increase in arrivals of wheat and wheat products in Bengal it has been found possible to release small quantities of atta or flour for public consumption through controlled and approved shops. Only ½ seer of either atta or flour will be sold in paper bags to public buyers.

* * * *

Only recently the Government of Bengal decided to lift all manner of restriction regarding prices so far as rice was concerned and an appeal was made to holders to part with their stocks at any reasonable price. The authorities, however, kept the control regarding the movement of paddy in force. It was anticipated by this means that hoarders will come out with their stocks on the market, and will sell them out at any price they liked. In pursuance of the scheme of bringing down prices, it is proposed that the Bengal Government should sell all the rice at their disposal through controlled or approved shops at fixed prices. As these prices are lower than outside market rates, it is believed that it will be possible to bring down prices if the Bengal Government are in a position to release sufficient quantities of rice for the consuming public and are able to give an assurances that in future they will be able to supply rice regularly at notified rates.

* * * *

The All-India Second Winter Oilseeds Forecast for 1942-43 shows that there has been an increase in the area under rape and mustard seed from 3,095,000 (revised) acres for 1941-42 to 3,423,000 acres in 1942-43 or an increase of 11 per cent. The area under linseed is lower at 2,713,000 acres for 1942-43 against 2,780,000 acres for 1941-42 or a decrease of 2 per cent. The present condition of rape, mustard and linseed crops is reported to be fairly good.

Bombay's New Trust

That Devkaran Nanjee & Sons are associated with a new Investment Trust should cause little surprise. The success of an older company launched by another famous firm supports hope as to the success of the new Devkaran Nanjee Investment Company, Limited, whose prospectus published in this issue is the first overt sign of the flowering of stock market activity this year. The Board is giltedged, so to say. Seth Pranlal and his partner are reinforced by Mr. Amritlal Kalidas and Seth Haridas Achratlal 'of Ahmedabad. Directors of the Premier Construction Company and the Central India Spinning and Weaving Company are joined with the partners of Devkaran Nanjee & Sons. Opportunities for investment opened up by the war are not many. Money still has to flow into older industries and enterprises, and the tasks of judicious selection and distribution of risks are such as to call for continuous and expert management. That the present issue is one for Rs. 1 crore does not produce surprise since Bombay, and particularly Devkaran Nanjee, are accustomed to doing things in a big way. The 100 rupee shares are offered to the public. The connection with banking and insurance will help the Trust in many ways, not the least being in regard to the acquisition of its share capital. That the Trust is to be run by a managing agency of the approved pattern on the usual terms does not detract from the importance of the flotation. Conservative investors who realise the value of a moderate and regular return on their capital will certainly find the shares to their taste. The shares certainly are meant for those who can judge prospects, take note of standing and business connexions, and examine also the conditions under which the issue appears. The conditions are admittedly propitious. In view of the high prices for giltedged and semi-giltedged securities like bank and insurance shares the offer of shares of the same class at par should be regarded as wholly advantageous. The departures in industrial finance referred to may add to the investment income and those who can help to put new enterprises on their feet may find that a Trust company on American lines is better than a special Bank. The relations between the new company and its sponsors are described in the prospectus. Jobbing in securities and shares may not be the only profitable line for a company which has been organised to act as an issuing and underwriting house. It is not too much to see in this the genesis of a company that will combine the work of supporting the market at times with that of picking out for others the investments that are worth while. The conditions of investment have changed as money has become cheaper and those who think of the future rather than immediate prospects will find that an investment trust offers very substantial advantages. That is one reason why the new issue should meet with the success it deserves, more so, as the present issue is meant for many outside Bombay who may like to invest through a suitable agency in Bombay's many sound and active securities.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, March 18.

THE U.S.A. hessian stock and consumption figures which have been published show that spot stock, have increased at the end of February to 650 lakhs of yards from 300 lakhs at the end of January. Stocks afloat on the other hand had dropped from 1,680 lakhs yards at the end of January to 980 lakhs yards at the end of February. Goods in sight therefore were 350 lakhs yards less at the end of February than a month before, which has perhaps some bearing on the placement of the recent large order for early shipment by the U.S.A. Government. Consumption of Burlap in the U.S.A. for February is returned at 210 lakhs yards, 10 lakhs less than the previous month, but 320 lakhs less than in February last year. Superficially, the figures would almost seem to indicate that no shipments of Hessians had been effected during February at all, or alternatively that hessian cargoes had suffered owing to enemy action. The 650 lakhs yards shown as on spot at the end of February may be taken to have been largely transferred from the January afloat figure of 1,680 lakhs yards. But the balance is not even fully accounted for in the 980 lakhs yards reported as afloat at the end of February. Apportionment of Goods to Government account may perhaps explain the discrepancy. In any case it is apparent that the U.S.A. is more lightly stocked with hessians than is comfortable, notwithstanding the extensive switch over to substitute fibres and fabrics. And the placing of the order last week for early shipment indicates that the American market is still prepared to absorb hessians whenever shipping space can be spared.

As we forecast in these columns last week, the mills decided that it was necessary, in order to overtake this order, that working hours should be increased to 60 per week for two months from 15th March, while at the same time the 10 per cent of looms which have been sealed, would be opened for that period. As a further facility, the Supply Department are understood to have agreed to the suspension of Sandbag manufacture during these two months, though, of course, mills which are manufacturing these on narrow sacking looms may prefer to continue to do so.

It seems an unhappy circumstance that an attempt appears to have been made to place some portion of this order in the open market before recourse was had to the Controller of Supplies. For the preliminary buying for several days before the order was officially placed was enough to put some at least of the prominent Bazar operators wise to the situation, of which they were not slow to take advantage. The result was that the major portion of the order probably cost the U.S.A. considerably more than if the mills had been approached in the first instance, before the preliminary buying forced prices up. The total quantity required appears to have been some 15 crores of yards and it must have been obvious that such a quantity, having in view the "sold" position of the mills, could not be secured from the open market for shipment within two months, and that special arrangements were essential if the order were to be covered. The quantity actually undertaken and allotted to the mills was eight crores of eleven porters at Rs. 24 and 4 crores of nine porters at Rs. 18. It is understood that shipment is to be effected through normal channels and that the freight will definitely be forthcoming. The order is described as for the purpose of establishing a reserve in the U.S.A., but it is to be hoped that, when freight is available, further purchases may be made, so that burlaps may not be entirely forgotten as the pre-war mainstay of the U.S.A. packing trade. After all, the quantity now placed, though it requires special arrangements to produce it within two months in present circumstances, represents little more than two months consumption of the U.S.A. under active normal trade conditions.

As a natural consequence of the increased consumption of jute resulting from the increase in working hours, something had to be done to ensure that Mills would receive sufficient quantities of their raw material. We have been emphasising the acute position which was in course of evolution due to the falling off in arrivals of jute into Calcutta. The estimated figure for the first half of March is no more than 2 lakhs of bales, which in the circumstances is dangerously insufficient. To ameliorate the position it is

	Tons
Mill production for February ...	92,436
Total Mill production, July to February	7,65,349
	Bales.
Equal to a consumption of ...	43,55,000
Total Exports of Raw Jute, July to February ...	9,17,000
Quantity consumed during the season up to end of February	52,72,000
Total arrivals of jute into Calcutta, July to February ...	44,34,000
Shortage, consumed ex-Mill and Bazar stocks	8,38,000

understood that instructions have been issued under the D. I. rules to the Shipping Companies that all available space is to be allotted meantime to Mill deliveries to the exclusion of Press-house and Bazar shipments, and that even priorities for Export jute are to be considered cancelled. It is believed that similar steps will be taken with regard to rail shipments and that endeavours will be made to increase the supply of wagons for jute carriage. At the same time it appears doubtful if these steps will prove sufficient to ensure adequate supplies coming forward to Mills. Even the total quantities moved for all destinations recently have not been enough, if diverted entirely to Mills, to prevent inroads on their godown stocks. What is required is either the release of some of the tonnage requisitioned by the Military authorities, all of which is not being put to the utmost use, if reports are true. Also a quicker turn-round of the available freight is eminently desirable if it can be effected, and this would automatically occur if more flats, and what is almost of greater importance, more towing power, were returned to the carriers.

The estimate of 2 lakhs of bales arrived in the first half of March compares with 1,82,000 bales during the similar period last year, when jute was much less urgently required. Total arrivals from the beginning of the season up to mid-March are 46,34,000 B/s as compared with 51,46,000 B/s for the same period last season. At this rate of progress it seems hopeless to get even mill purchases out of this crop delivered before the end of June. Analysis of the arrival figures by different modes of transit up to the end of February show that shipments by river have further deteriorated while there has been some improvement in rail deliveries, though these are far below the levels attained in October, November and December. Country Boat arrivals show a further falling off. We are now approaching the period when normally there is much less traffic offering. But that will not be the case this year, and it will only be the utmost utilisation of all available shipping space in the next few months that will save the industry from the otherwise inevitable course of a drastic curtailment in production.

No particular activity has been noted in the Export Jute market, and prices are quoted lower from Britain in the last few days. Some Dundee Daisee was reported done at Rs. 78, with sellers over at that rate and buyers offering now Rs. 2 less. Mills have not been buying in quantity, perhaps because there was no quantity offering. Up to Rs. 80 was paid for Dundee Daisee, Rs. 82 for Firsts for quick shipment, Rs. 77 for Lightnings, and Cuttings business was reported at Rs. 36 to Rs. 37 for N. C. and at Rs. 35 to Rs. 36 for M. C.

The Loose Jute market has also been less active and prices have declined somewhat from the top, though the tone at the close is again steadier. European packing was reported up to Rs. 17, Rs. 14 and Rs. 12-8 for Mids, Bots and Cross in assortment, but four annas less is now indicated. Similarly, Supervised Jat was done up to Rs. 16-8 and Rs. 13-8 but is now Rs. 16-4 and Rs. 13-4. Indian Megna side Jat Bottoms have fetched Rs. 12-12, Hard Districts, Rs. 12-4 and Northern Districts, Rs. 12. Indian Good. District Tossa was reported up to Rs. 16 and Rs. 13 for Mids and Bots while Rs. 14-12 and Rs. 11-12 was paid for Jungli.

Mofussil markets rule firm and prices have advanced still further, with imports small and firmly held.

The Hessian side of the Fabrics market has ruled generally firm but with some fluctuations from day to day. Mill sellers were naturally offering nothing for near and most transactions have been inter-bazar. Ready nine porters were raised from Rs. 18-12 to Rs. 19-4 but close around Rs. 19. April/June sold at Rs. 18-8 to Rs. 19, July/September at Rs. 18-12 and January/March next year at Rs. 18. In eleven porters quotations for March ranged from Rs. 25 to Rs. 26 and back to Rs. 25. April/June sold at Rs. 25 and Rs. 25-4 but again quotes Rs. 25. July/Septr. was up to Rs. 25 but closes at Rs. 24-8. May/December was reported at Rs. 25 and January/March next year at Rs. 24. In Heavy Goods there have been the usual Bazar transactions in "B" Twills around Rs. 60 and Rs. 59-8 March. Mills sold April/June "Bs" at Rs. 59 and they now quote Rs. 58-8, with July/September at Rs. 57-8. Other descriptions have been neglected. Cornsacks ruling steady but Liverpools being marked back eight annas to a rupee on the week. Ready 6X8 Sugars sold at Rs. 74 and 3¼ lb. Grains at Rs. 95 for April.

JUTE

Calcutta, March 18.

THE raw jute market has been rather firm during the past week. The announcement regarding the increase in the number of mill working hours from 54 to 60 hours per week, as from Monday this week, following the placing of an order with the Indian Jute Mills Association by the U. S. Government, involving the consumption of 12 crores yards of hessian cloth, has had an encouraging effect on the market. It will be remembered that even before the announcement of the new order, sellers were inclined to be rather reserved owing to the level of consumption by jute mills being higher than the rate of arrivals and the fears regarding the possibility of an increase in the arrivals of the raw materials. It is not surprising therefore that with an increase in the consumption of jute, sellers are not inclined to part with their holdings and are asking for an advance in the rates. But for the reserve shown by mills, there would perhaps have been a further improvement in values. Mills cannot possibly stay out of the market for long as the present stock position is not quite satisfactory and they cannot continue to eat into their own stocks. Business passing has been restricted only by the reserve of sellers. In the loose jute section mills were free buyers of whatever small quantities offering. During the last three days, they have shown a greater disposition to buy jute but sellers continue to be reserved. Indian Jat Middles, Bottoms and Cross Bottoms were done at Rs. 16, Rs. 13 and Rs. 11 per maund, while European Packing Middles, Bottoms and Cross Bottoms were sold on the basis of Rs. 17, Rs. 14 and Rs. 12-8 per maund respectively. Jungli Cross Bottoms were done at Rs. 10-8 per maund.

In the Pucca bales section not much of business was done for export. Dundee Daisee 2/3 were done at Rs. 78 per bale. Mills also bought this quality at Rs. 80 per bale and Short Group at Rs. 82 per bale. Cuttings N. C., and M. C. were higher at Rs. 37 and Rs. 36 per bale.

JUTE MANUFACTURES

Calcutta, March 18.

THE jute manufactures market was inclined to be very firm early in the week on reports of the placing of an order by the U. S. Government for delivery before May 15, 1943, involving the consumption of 12 crores yards of hessian cloth. It was at first expected that mills would not decide on an increase in the number of working hours as only a few days earlier it was considered even necessary to reduce production. There was some purchase of ready stocks in the open market but as it was found that the entire quantity could not be had from the market without any undue rise in values and as the U. S. Government were not prepared to pay above the "ceiling" prices, the Committee of the Indian Jute Mills Association ultimately decided on an increase in the number of working hours from 54 per week with 10 per cent of the looms sealed to 60 per week with the full complement of mills working. The increase in the number of working hours will remain in force till May 15, 1943. Mills are working 60 hours per week as from March 15, 1943. The decision to raise the number of working hours, however, has not had any undue depressing effect on values as it is pointed out that the entire increase in production will be taken up by the recent war orders. After being higher at Rs. 19-4 9 Porters Ready are now quoting Rs. 19, March Rs. 19, April-June Rs. 19-4, and July-September Rs. 19. 11 Porters Ready are Rs. 25-4 after being higher at Rs. 25-12, March Rs. 25-5, April-June Rs. 24-12 and July-September Rs. 24-12.

The Heavy Goods section has been quiet and has not been influenced in any way by the higher rates in the jute and hessian markets. It is expected that the increased production of sacking might have a detrimental effect on values. B. twills for March delivery were sold on the basis of Rs. 59-8, Liverpool twills Rs. 62 and Cornsacks Rs. 60-8. No business of importance has been reported.

The American stock and consumption figures for the month of February should be considered rather encouraging though the figure is appreciably lower as compared with that for February 1942. It should be said that the improvement noticeable in January this year has been maintained, the consumption for February being 21 million yards against 22 million yards for the previous month and 53 million yards for the corresponding month of 1942. Thanks to the higher level of shipments in December and January, there is an increase in stocks spot to 65 million yards from 30 million yards but the improvement in shipments has not been maintained. Stocks afloat in February are appreciably lower at 98 million yards against 168 million yards in January.

GOLD

Calcutta, March 18.

A RATHER sharp improvement in prices was noticeable in the gold market this week following the proposals that an International Stabilisation Fund and a new monetary medium with gold as its basis should be created. This report gave rise to considerable speculative buying and the quotation for gold improved from Rs. 68-8 to Rs. 71-12. At the higher levels there was some selling, and the quotation came down to Rs. 69-14. The close is quite steady at Rs. 71-2. First Settlement also improved to Rs. 71-10 and after being lower at Rs. 69-12, the close was Rs. 71-3. Sovereigns improved from Rs. 50-2 to Rs. 51-4.

SILVER

Calcutta, March 18.

THE silver market has improved in sympathy with the gold market and the quotation for ready has risen from Rs. 108 last week to Rs. 112. The closing quotations are Rs. 111-4 for Ready and Rs. 111-2 for First Settlement. In the London market there is no change to be recorded and the quotation for both Spot and forward is unchanged at 23½d. The undertone is steady.

COTTON

Calcutta, March 18.

A FURTHER improvement in cotton prices was recorded in the Bombay market on heavy speculative buying and cloth merchants support. The strength of the stock market also was helpful. Jharilla March improved to Rs. 625 from Rs. 594. There has been bull buying also. Mills have taken a good interest in market. At the higher levels, there was considerable selling with the reaction in the stock exchange and also with the easier tone in the cloth market. Nearly all the gains were lost and Jharilla March was recorded as low as Rs. 589. In yesterday's session, a firmer feeling has been noticeable and the close was higher on balance at Rs. 610. The quotation for May is three points lower at Rs. 607 and July four points higher at Rs. 614. The market is fluctuating widely and it seems that there is some overbought position. Unless the technical position of the market is corrected, it will not be possible to record any further improvement in rates. Moreover, after the recent sharp improvement in values one has to be prepared for a wide fluctuation in prices.

PIECEGOODS

THE piecegoods market has continued active though a slightly smaller volume of business has been passing. The difficulty is still in regard to the regular supplies of fresh stocks. Dealers are not freely inclined to dispose of their stocks. Bengal mills have had a busy time and quite a good amount of business has been reported in the coarser styles. It is reported that standard cloth has been on the market for sale in the Punjab against the quota allotted to that province for the first quarter of 1.8 million yards. The quota for the second quarter has been increased to 3.6 million yards.

The Government of Madras have prohibited the export of yarn on or after March 15 outside the Province without a permit. The power to requisition stocks of cotton yarn of all counts in the possession of spinning mills in the province, has been conferred on the Yarn Commissioner of Madras under the Defence of India Rules. Mills from whom the stocks are requisitioned will be paid compensation at the prevailing prices fixed by the Cotton Textiles Advisory Panel constituted by the Government of India.

(*Continued from page 477*)

position was explained by Sir Vithal Chandavarkar who also argued in favour of early assessment and prompt collection of taxes. The threat to speculators in cotton removes any doubt as to sincerity of anti-inflation talk in India. The Finance Member has announced that he can and will cut any unjustified rise in prices. The warning is for the public as much as profiteers. There can be no flight from the rupee since it is known that the exchange value will be the same as before the war. In fact, changes in the war position should have made the rupee distinctly stronger, and what was noted here months ago as regards depreciation in Goa should be dismissed as a reference to a temporary phenomenon. The jump in local gold and silver prices cannot be a guide to changes in the purchasing power of the rupee. There is no fall in exchange in spite of frenzied argument and there is no largescale withdrawal of cash for buying either goods or property such as might appear if inflation were acute. Bank deposits are still rising, and cash balances are as ample as ever, while Government securities stand high because interest rates are as low as before the war. The Indian monetary situation in spite of additions to the note issue is unchanged by the war and British experience suggests that argument as to credit expansion etc. has little validity at present. If hoarding is dealt with, the symptoms should disappear, and most arguments for fresh taxation would also be dropped because there is much disagreement as to taxable capacity, and borrowing is both safe and convenient from the view that India's debt has been reduced since 1940.

GOODS

forwarded and cleared to and from railway stations and ports. Deliveries received at Calcutta, on cash payment of customer's purchases and subsequent despatches arranged to suit outstation clientele.

Stock Markets to-day and to-morrow

UNSETTLED MARKETS

AFTER earlier firmness rather quiet conditions have been noticeable in the stock markets in both Calcutta and Bombay. With the rapid improvement in prices in the past two weeks, there was naturally profit-taking at the higher levels, which in the earlier days of the week was fully absorbed. Only with the unsatisfactory news from the several theatres of war in the last two days and the intervention of holidays operators are inclined to await further developments. With bear selling, quotations for the popular sepculative counters have been marked down. It is significant to note that the drop in values for other securities has not been quite pronounced and that most of the recent gains have been firmly held. Reports regarding the withdrawal of the Allies from the Arakan Front have had a slightly discouraging effect though, it can be said that, from the military point of view, this news has not much significance. The technical position of the market is quite healthy; in fact, it is said that there is some oversold position in regard to certain counters and that bears are at a great disadvantage. There is no reason, therefore, to change one's ideas as to the trend of values in the immediate future.

* * * *

The accounts of the *Swadeshi Cotton Mills Company, Limited* for the year ended December 31, 1942, make very good showing. There has been a spectacular increase in earnings for the year, the figure before providing for taxation and depreciation, being Rs. 1,50,05,534. Provision in regard to taxation alone takes away Rs. 1.1 crore. The amount set aside for depreciation is Rs. 6 lakhs. Dividend on ordinary shares has been increased from 90 per cent to 120 per cent. Even after the payment of a higher dividend, the amount carried forward is substantially higher at Rs. 23,28,154 against Rs. 11,27,621 brought in. The ordinary capital is only Rs. 17,50,000. So that, it should be said that earnings after providing for taxation and depreciation are nearly 200 per cent on the ordinary capital.

* * * *

Thanks to a large coffee and tea crop it has been possible for the *Ouchterlony Valley Estates (1938) Limited*, to report a substantial improvement in earnings for the year ended October 31, 1942. The net profit before providing for taxation and depreciation, is Rs. 3,20,027 against Rs. 1,57,431 for the previous year. The amount set aside to depreciation is Rs. 12,745 against Rs. 11,938 while the allocation to Debenture Redemption Reserve is Rs. 1 lakh (same). Provision in respect of taxation is Rs. 37,000 (Rs. 28,000). The directors have also allocated Rs. 60,000 (nil) to Reserve for Dearness Allowance to staff and labour. A dividend of 30 per cent (nil) is to be paid on ordinary shares. The amount carried forward is higher at Rs. 1,47,057 against Rs. 99,195 brought in.

Even with the improved earnings for 1940-41, the directors did not decide on the payment of an ordinary dividend as it was felt that the Company's resources must be conserved to enable the redemption of the debenture stock in stages from December 31, 1943. As sufficient provision has been made in this respect, the substantial dividend of 30 per cent is to be paid out of the earnings for 1941-42.

The coffee crop harvested during the year under review was one of the largest so far obtained by the Company but, as is so often the case with coffee, the following crop 1942-43, will be small. Furthermore adverse weather conditions have resulted even in a revision of the low original estimate.

Under the Coffee Control scheme 60 per cent of the crop was taken over by the Indian Coffee Market Expansion Board for what is known as the Surplus Pool and sold by them, and 40 per cent was left for the owners to sell. In 1942-43 the Surplus Pool will take 90 per cent of the crop leaving only 10 per cent for the owners to sell.

* * * * *

Publicity Society of India Limited is to pay an interim dividend of Rs. 1 per share in respect of the year ending July, 1943. The same interim dividend was paid for 1941-42. It will be remembered that the directors decided on the payment of an interim dividend for the first time in April, 1942 and that on the announcement of a dividend payment, there was an improvement in the quotation for the shares. Only recently, transactions were reported as high as Rs. 13. On the basis of the total dividend for 1941-42, the yield is more than 12 per cent tax-free. It may very well be that in regard to the current financial year, the directors find it possible to pay a larger dividend though, in the notice to the shareholders, they point out that this distribution should not be considered as a promise of a satisfactory final dividend, and that, the final dividend will depend entirely on the working results of the year taken as a whole. The Company has been doing very well in recent years and, if the progress is maintained, one can look forward to an increase in the dividend distribution. The interim dividend is payable to shareholders registered in the company's books as on March 14, 1942. The dividend is payable after March 16, 1943 to registered shareholders.

* * * *

I had occasion to comment on an earlier occasion regarding the improvement in the earnings of *Spencer & Company, Limited* for the year ended June 30, 1942. Speaking at the annual general meeting, the Chairman pointed out the difficulties in regard to imports and the possibility of earnings being adversely affected owing to the lack of supplies. He, however, pointed out that business in indigenous products was quite satisfactory and that it was possible to ensure continuity of business in some departments.

The acquisition of the Savoy Hotel in Ootacumund and the Blue Mountain Hotel in Kotagiri should add to the earnings capacity of the Company. These establishments will help in a small way to offset some of the falling revenue which has had to come out of the restricted imports and other difficulties. The current financial year is expected to yield good results. Nothing however can be said of the prospects for 1943-44.

* * * *

Calcutta Jute Manufacturing Company, Limited is to issue bonus shares to ordinary shareholders. A sum of Rs. 1 lakh is to be capitalised out of the reserves and 10,000 ordinary shares of Rs. 10 each are to be created as fully paid. These new ordinary shares will be distributed to the existing shareholders in the proportion of one for every four shares held. These new ordinary shares are to be issued to the shareholders in lieu of any dividend that may otherwise have been declared by the Company on the share capital for the half-year ending December 31, 1942. The new shares rank equally in all respects with the existing shares of the Company.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March 19.

RATHER quiet conditions have been noticeable on the Calcutta Stock Exchange during the past three days and closing quotations are at the lowest levels for the popular speculative counters. Early in the week firm conditions continued to be in evidence though there was a tendency to cash profits. Business passing, however, was on a large scale and demand for investment securities was quite satisfactory. The unfavourable news regarding the war situation in the Far East, in Burma and the evacuation of Kharkov have had a slightly discouraging effect. Selling during the last two days has brought down Indian Irons to Rs. 34-14 from Rs. 36-14, and Steel Corporations to Rs. 25-4 from Rs. 26-14. Quotations in other sections also have been marked slightly lower. The undertone is quite steady and it is generally felt that the upward trend will be resumed again if there is no bad spell of war news.

Giltedged securities have been quite steady though business passing is on a restricted scale; 3½ per cent Paper is quoting Rs. 94-1 and 3 per cent Government Paper Rs. 81-2. Among terminable loans, 3 per cent Defence Bonds 1946 were done at Rs. 103; 4 per cent 1960-70 at Rs. 110 and 5 per cent 1945-55 at Rs. 108-5; and 3 per cent 1949-52 at Rs. 100-7. Among Provincial loans, 3 per cent U. P. 1952 changed hands at Rs. 97-6, and 3 per cent U. P. 1961-66 at Rs. 95.

Bank shares improved further, *Imperial Bank* fully paids being quoted at Rs. 1,736. *Reserve Bank* were unchanged at Rs. 106-8.

Coal shares have been fully steady particularly *Amalgamated* being in great request at Rs. 35-8. *Bengal Bhatdee* were Rs. 3-6, *Burrakur* Rs. 14-2 and *Bhalgora* Rs. 6-10. *Bengal* were Rs. 447, *Bokaro and Ramgur* Rs. 20-2, *North Damuda* Rs. 6-11, *South Karanpura* Rs. 5-4 and *West Jamuria* Rs. 33-15. Business passing during the last three days has been on a much smaller scale.

In the Cotton section there was a sharp rise in Elgins early in the week to Rs. 54-4. There were buyers even at this level. *Cawnpore Textiles* were Rs. [illegible] and *Bengal-Nagpur* Rs. 34-4. *Dhakeswar* were Rs. 300 cum-dividend early in the week. Towards the close they were Rs. 285 ex-dividend. *Kesoram* were a shade easier at Rs. 18-8. Business was reported in *Mahalaxmi Cotton* at Rs. 33. *New Victoria* quoted Rs. 8-11.

In the jute section, following the announcement of the increase in the number of working hours to 60 per week, there was some buying of selected shares but in sympathy with the decline in prices for popular speculative counters, the closing prices are below the highest levels for the week. After being higher at Rs. 63 *Howrah* are now quoting Rs. 60-14, *Adamjee* Rs. 30-6, *Bally* Rs. 296, *Champdany* Rs. 198, *Clive* Rs. 25-8, *Hukumchand* Rs. 23-4, *Kanknarrah* Rs. 435, *Nellimarla* Rs. 20-8 and *Reliance* Rs. 63-4. *Hooghly* were unchanged at Rs. 82-8, *India Jute* were in great favour earlier in the week and were done as high as Rs. 534. The close, however, was lower at Rs. 521. *Nuddea* were as high as Rs. 90 but towards the close the quotation came down to Rs. 87-4. With the publication of satisfactory accounts, *Chitavalsh and Nellimarla* improved to Rs. 20-8 and Rs. 21-12. At the close *Nellimarla* were slightly easier at Rs. 20-8.

In the Engineering section, Indian Iron and Steel Corporation were unofficially quoted at Rs. 37-8 and Rs. 27-4 respectively. On Monday business was put through at Rs. 37 and Rs. 27 respectively. On profit-taking at the higher levels and the unfavourable news regarding the war situation there was a decline in prices and the lowest levels were touched on Thursday afternoon. *Indian Iron* were Rs. 35-4 and *Steel Corporation* Rs. 25-4. Among other shares, *Braithwaite* were unchanged at Rs. 9-2, *Indian Galvanizing* at Rs. 40. *Kumurdhubi Engineering* at Rs. 7-10 and *Marshalls* at Rs. 3-12. *National Iron and Steel* were nearly a point lower at Rs. 12-8.

In the Sugar section, firm conditions have been noticeable. *Buland Sugar* were higher at Rs. 38-4, *Carew & Co.* at Rs. 16-6 and *Cawnpore* at Rs. 32-2 cum-dividend. *Champarun* were one point higher at Rs. 28. *New Savan* quoted Rs. 14-4, *Purtabpore* Rs. 14-2 and *Samastipore Central* Rs. 14-9. *U. P. Sugar* were Rs. 19 cum-dividend.

Tea shares are very firm. There has been a further rise in prices and it is very difficult to find sellers. *Bishnauth* were one and half points higher at Rs. 35-8, while *Hattikhira* have put on nearly five points in recent weeks and are now quoting Rs. 31-10. *Hasimara* were not very much changed at Rs. 55. *Tezpore* were nearly a point higher at Rs. 14-8. *Sapoi* were Rs. 17, *Namburnadi* Rs. 10-10 and *Rutema* Rs. 14-6.

In the Miscellaneous section, *Burma Corporation* were lower at Rs. 2-13 with the unfavourable reports regarding the allied campaign in Burma. *Indian Copper* were unchanged at Rs. 2-6, *Dalmia Cement* were steady at Rs. 18 while *Alkali & Chemical* were in good favour at Rs. 34-8. *British India Corporation* were Rs. 6-2 cum-dividend while *British Ceylon Corporation* were sticky around Rs. 18. *Dunlop Rubber* were noted at Rs. 49-8, *Indian Cable* at Rs. 28 and *Indian Wood Products* at Rs. 31-8. *National Rolling Mills* were Rs. 10-4 and *Spencer & Co.*, Rs. 8-2.

Among Paper shares, *India Paper Pulp* were not very much changed at Rs. 177-8, while *Sree Gopal* were higher at Rs. 24-12; *Orient Paper* were Rs. 27 and *Titaghur Copper* Rs. 24-7.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, March 18.

EASIER conditions were noticeable on the Bombay Stock Exchange during the period under review. After the recovery noticed towards the latter part of last week, the market displayed an irregular tone on Monday. What with the Russian reverses on the Kharkov front and the Finance Member's warning to cotton speculators, the market was in no mood to brighten up. The adverse news from the nearest theatre of war was also responsible to a certain extent for the decline in prices. Steel shares seem to be the worst sufferers, Tata Deferreds quoting at the moment Rs. 1,847-8. Among Textile shares, *Bombay Dyeing* are quoted Rs. 1,982-8.

Giltedge securities are steady with 3½% *Government Paper* at Rs. 94.

Mill shares were a shade easier with the drop in the cotton market consequent on the Finance Members' warning to speculators. *Ahmedabad Advance* are Rs. 530-4; *Bombay Dyeing* Rs. 1,982-8; *Central India* Rs. 487; *Colaba Land* Rs. 261; *Gokak* Rs. 408; *Indian Bleaching* Rs. 258; *Century* Rs. 796; *Kohinoor* Rs. 794; *Phoneix* Rs. 875; *Simplex* Rs. 313; *Svadheshi* Rs. 607.

Steel shares also were marked lower in sympathy with Textile shares. The news of Russian reverses was also responsible for the decline. *Tata Deferreds* were Rs. 1,847-8 as against Rs. 1,942-8 on Monday last. *Tata* ordinaries were lower at Rs. 381.

THE CENTRAL BANK OF [illegible] LIMITED.

NOTICE IS HEREBY GIVEN that the THIRTY-SECOND ORDINARY GENERAL MEETING of the Shareholders of THE CENTRAL BANK OF INDIA, LIMITED will be held at the Central Bank Buildings Esplanade Road, Fort, Bombay, on MONDAY, the 29th day of MARCH, 1943 at 4 p.m. (N.S.T.) to transact the following business:—

1. To receive the Report of the Directors and the Audited Accounts for the period ending 31st December 1942.
2. To declare a Dividend and a Bonus
3. To elect Sir H. P. Mody who vacates his seat under Article 86 of the Articles of Association and who is eligible for re-election.
4. To elect three Directors in place of Mr. A. B. Dubash, Mr. Vithaldas Kanji and Sir Ardeshir Dalal who retire by rotation under Article 94 of the Articles of Association read with Regulation 78, Table "A" of the Indian Companies Act, and who are eligible for re-election.
5. To appoint Auditors and to fix their remuneration.
6. To do such other work as may be placed before the Meeting by the Chairman.

BY ORDER OF THE BOARD
H. C. Captain,
MANAGING DIRECTOR

BOMBAY, 10th MARCH 1943.

N.B.—The Transfer Books of the Bank will be closed from MONDAY, the 15th MARCH 1943 to MONDAY, the 29th MARCH, 1943, both days inclusive.

BY ORDER OF THE BOARD
H. C. Captain.
MANAGING DIRECTOR

N.B.—Dividend Warrants for the half-year ending 31st December 1942 will be posted to the Shareholders at their Registered addresses on and after the 30th day of MARCH 1943. Intimation of any change in address should be given to the Bank immediately.

THE GHUSICK AND MUSLIA COLLIERIES, LIMITED

NOTICE

is hereby given that the Seventy-First Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 30th day of March, 1943 at 3 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1942, declaring the Dividend recommended by the Directors and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd to the 30th March, 1943 both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 16th March, 1943.

(*Half-yearly meeting to be held on 31st March, 1943 at noon*)

Audited Accounts for the half-year ended 31st December, 1942:—

Profit and Loss Account.—Including the balance brought forward from last half-year and providing for Interest, Debenture Interest, Commissions and Taxation, shows a credit balance of Rs. 1,42,645-15-1 which sum, the Directors recommend, should be dealt with as follows:—

	Rs.	A.	P.
Pay the Dividend due on the Rs. 10,00,000 7 per cent Cumulative Preference Shares for the two half-years ended 30th June, 1942 ..	70,000	0	0
Write off to Depreciation	60,000	0	0
Carried forward to Profit and Loss Account ..	12,645	15	1
Total ..	1,42,645	15	1

Throughout the period under review, the Mills worked 54 hours per week with 10 per cent of the total loom complement remaining silent under seal from the manufacture of Jute Goods. Certain of the looms sealed from the production of Jute Goods were employed on the manufacture of Khaki Cotton Web Drab for Government account. These arrangements were in accordance with the Working Time Agreement of the Indian Jute Mills Association.

In the last week of the year normal working was interrupted by labour dispersals which followed enemy air raids carried out over Calcutta district.

Managing Agents.—McLeod & Co., Ld.

Audited Accounts for the half-year ended 31st December, 1942:—

Profit and Loss Account.—including the balance brought forward from last half-year and providing for Interest, Debenture Interest, Commissions and Taxation, shows a credit balance of Rs. 2,23,175-9-9 which sum, the Directors recommend, should be dealt with as follows:—

	Rs.	A.	P.
Pay the dividend due on the Rs. 10,00,000 7 per cent Cumulative Preference Shares at 31st December, 1942	35,000	0	0
Pay a dividend on the Rs. 6,00,000 Ordinary Shares at the rate of 15 per cent per annum, or As. 12 per share for the half-year ..	45,000	0	0
Write off to Depreciation	1,00,000	0	0
Carried forward to Profit and Loss Account ..	43,175	9	9
Total ..	2,23,175	9	9

Jute Stocks are shown at or under cost. Stocks of Gunnies none of which are unsold, have been calculated at contract sale price.

Throughout the period under review, the Mills worked 54 hours per week with 10 per cent of the total loom complement remaining silent under seal from the manufacture of Jute Goods. Certain of the looms sealed from the production of Jute Goods were employed on the manufacture of Khaki Cotton Web Drab for Government account. Manufacture was interrupted during September/October resultant from lack of Khaki Cotton Yarn supplies, but was resumed in November and continued until the end of the year. These arrangements were in accordance with the Working Time Agreement of the Indian Jute Mills Association.

In the last week of the year normal working was interrupted by labour dispersals which followed enemy air raids carried out over Calcutta district.

*Includes possible provision for taxation.

(*Half yearly meeting to be held on* 6*th April*, 1943 *at* 3-30 *p.m.*)

Audited Accounts for the Half-year ended 30*th September*, 1942:—

The accounts show a gross profit of Rs. 21,13,863-12-10. After deducting Rs. 5,31,271-8-2 for Insurance, Interest, Commission etc. and providing Rs. 3,75,423-4-6 for Depreciation and after making sundry adjustments, there remains a balance of Rs. 12,30,831-3-8. To this has been added Rs. 21,239-15-5 the balance brought forward from the previous half-year. Thus there remains a sum of Rs. 12,52,071-3-1 to the credit of the Profit and Loss Account (subject to provision for taxation on the profits of the half-year ended 30th September, 1942) which the Directors propose to utilise as follows:—

	Rs.	A.	P.
To pay Dividend on 20,000 Preference Shares at 7% per annum free of Income-Tax or Rs. 3-8-0 per share	70,000	0	0
To carry forward the balance (subject to provision for taxation on the profits for the half-year ended 30th September, 1942) ..	11,82,071	3	1
Total ..	12,52,071	3	1

The Directors have not made any separate provision for the taxation because the Companies' E. P. T. case has not been finally decided. They think, however, that the amount shown in the carry forward is more than adequate.

The Directors consider it advisable that a part of the Reserve Fund should be capitalised. They recommend that a sum of Rupees Five lacs should be capitalised from the Reserve Fund and utilised in the issue of two lacs Ordinary Bonus Shares of Rs. 2-8-0 each to the Share-holders in proportion to one Bonus Share for three existing Ordinary Shares. As the Articles of the Company do not contain any power for capitalisation of the Reserve Fund, a notice convening an Extra Ordinary General Meeting of the Company to consider the Resolution necessary to give effect to this proposal is enclosed.

The Directors have provided a slightly larger amount for depreciation of the machinery. But they feel that even the increased amount is not sufficient to cover the extra wear and tear that are being caused to the machinery due to the supply of War Orders.

The prices of all the essential stores, colours, chemicals etc. have increased to a great extent. Many of the articles required by the Company are not available in the market. The prices of the staple cotton have also appreciably increased. With 60% of the production reserved for the Supply Department of the Government of India and the Standard Cloth, the high prices of Stores, Chemicals, Colours etc. and with the uncertain labour situation and other circumstances the prospects for the current half-year are very uncertain.

Managing Agents.—Birla Brothers Ltd.

(Annual general meeting to be held on 27th March, 1943 at Cawnpore at 9 a.m.)

Audited Accounts for the year ended 31st December, 1942:—

The profit for the year, after making all the usual allowances, (including the sum of Rs. 8,00,000-0-0 for Depreciation), including Income from Investments, providing for a bonus to Employees, and setting aside Rs. 75,00,000-0-0 for estimated Taxation, amounts to Rs. 32,72,952-0-9 to which has to be added the amount brought forward from last year, namely, Rs. 3,61,836-12-9, making the total sum available Rs. 36,34,788-13-6. The Directors recommend that this sum should be disposed of in the following manner:—

	Rs.	A.	P.
(1) Transfer to Rehabilitation Reserve ..	5,00,000	0	0
(2) Transfer to Obsolescence Reserve ..	10,00,000	0	0
(3) Dividend for the year to 31st December, 1942, on the Cumulative Preference Shares (8% per annum), free of Income Tax ..	6,48,000	0	0
(4) Dividend for the year to 31st December, 1942, on the Ordinary Shares at four annas per Share, free of Income-Tax ..	11,03,750	0	0
(5) Carry forward to next Account ..	3,83,038	13	6
Total ..	36,34,788	13	6

The Sales made by the Branches of the Corporation in 1942 again show an improvement and once more disclose a record turnover for the Corporation.

During the year 1942, there was little or no industrial unrest in Cawnpore or at Dhariwal and the Labour employed by the Corporation generally worked industrially, and in an apparently contended manner, throughout the year. Further increases in War Dear Food Allowances were granted during the year in keeping with the rise in the cost of living index figure. The Accounts make provision for the payment of a generous bonus to workers in respect of the year 1942, during which year steps to provide the requisite A.R.P. measures for the protection of Labour were continued.

The amounts previously reserved against the Corporation's liability to Income, Super and Excess Profits Taxes have sufficed, with but little to spare, to meet the assessments in respect of taxation on the Accounts up to the end of the year 1941. The amount which it has been necessary to provide against the liability arising from Accounts for the year to 31st December, 1942, (Rs. 75 lakhs) has, following the procedure adopted last year, been debited to Profit & Loss Account.

The Directors are pleased to be able to recommend the allocation, on this occasion, of further sums to the Rehabilitation and Obsolescence Reserve Accounts.

Secretary.—F. G. Brightman.
