Calcutta, Saturday, January 8, 1944.

£2-15s. including Year Book, all supplements routine as well as special.

crores against Rs. 479.44 crores at the beginning of the year, an increase of Rs. 376 crores. On December 25, 1942 sterling securities were Rs. 475.81 crores against Rs. 288.22 crores on January 2, 1942, an increase of Rs. 187.59 crores. As sterling repatriation was on a large scale in these two years the total of sterling receipts was thus between Rs. 650 and Rs. 700 crores.

The return of the Imperial Bank for the week ended December 31, 1943 shows that there has been a decline in deposits from Rs. 214.52 crores to Rs. 210.17 crores. This is perhaps due to year-end adjustments. Investments are nearly Rs. 2 crores lower at Rs. 129.8 crores as also advances by Rs. 2.3 crores at Rs. 36.7 crores. Cash balances show a decrease to Rs. 52.59 crores from Rs. 55.34 crores.

(Continued on page 25)

In the banking department, Government balances showed a sharp decline to Rs. 13.37

TREASURY BILLS

India
Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on January 4, 1944. Total amount offered was Rs. 10,77,75,000. Tenders at Rs. 9-14-0% were accepted in full and those at Rs. 9-13-9% were allotted approximately 95%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-9-0% per annum.
Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be

received on January 11, 1944 in Bombay up to 11 a.m. (S.T.) and up to the close of business on January 10, 1944, at other centres. Successful tenderers should make payment on January 14, 1944 or on January 13, 1944, where Friday is a holiday. Other conditions are as usual.

During the fortnight, December 31, 1943, Government of India Treasury Bills for Rs. 6,06,25,000 were sold in favour of the Issue Department of the Reserve Bank of India.

ASSAM TREASURY BILLS

Tenders for Rs. 1,00,00,000 of three months Government of Assam Treasury Bills will be received at the offices of the Reserve Bank of India, Bombay and Calcutta up to 11 a.m. on January 13. Successful tenderers will be required to make payment and take up their bills on Jan. 15. Other conditions are as usual.

Finance Abroad.

Thursday, Evening.

EXCEPT for the news that the response to the U. S. Treasury's proposal for a conference to go into the White Plan is encouraging, there is not much to show that postwar agreements hold the first place in discussions. There was mention of a proposal for a currency union for the British African colonies and a new silver coinage. The colonies, probably, will want silver if native production is to be developed, and there is, of course, enough gold and silver in Africa to support colonial coinage plans. There is, under wartime control, something like economic unity in Africa, and the African colonies use sterling and not the South African currency. West Africa would probably be out of the currency union now planned. The silver shilling made up of 100 cents is the most common coin in East Africa since 1922, but foreign banks, e.g., the Banque de Congo Belge, have acquired an important position. The colonies, of course, have worked the exchange standard with success, and the use of paper money is well established. Notes in Kenya and Uganda are, however, printed for 100, 200 and 1,000 shillings so that it may be said that the East African shilling is like the rupee in most respects, being a silver coin which is legal tender to any amount. The Indian rupee, familiar in the Middle East, certainly entered Zanzibar as well as Somaliland, and is not likely to be displaced peremptorily.

The main interest lies in the possible impact on trade and banking connections. If African colonies on the Indian Ocean look more to Britain than to other countries, the new notions of regional security will not be translated into economic unity. But there is no reason to believe that anything more than a change in administrative routine is contemplated, and the East African colonies with exports booming may have need of a more drastic and coherent system than that provided by the old Board though, East Africa will certainly be in the sterling area like every British colony except Hongkong.

The President's messages to Congress will certainly influence coming financial developments. The New York messages as to the lapse of leasehold have been confirmed in cabinet reports. Dissatisfaction of U. S. exporters with purchase missions and the system of controls was manifest after Mr. E. A. Johnston's visit to Britain. It is known that the new ad hoc agencies mostly foreign represent a real danger to well-established services and the swollen export totals of 1943 independent of lease-lend supplies created the impression that commercial imperialism could not be limited to the States.

Businessmen in Britain generally went to get the export drive going by getting away from controls, but importing countries like India must prepare by letting their own administration rules lapse. The handbook is described as not enough for the importer and the developments promised by the declaration that U. S. goods will be called out for the good of overseas markets must lead of necessity to a drastic change in import controls. It may be assumed that if North Africa, indebted to Britain, can pay as she goes, other countries too can and the U.S.A. probably will exert direct and real pressure in getting exchange control out of the way. It is not difficult to see that a hint from the

By Special Cable

Lancashire Short of Coal

SPECIAL FOR "INDIAN FINANCE"

LONDON, January 5.

It is reported that many Lancashire cotton mills are faced with the necessity of closing down one or two days weekly as a result of the Fuel Ministry reducing coal supplies by ten per cent. A cotton mill Director in Oldham stated to the "Daily Mail" that many mills have less than one week's supply and have been borrowing from other mills with larger supplies. This practice is now banned. On the other hand, the Regional Fuel Controller insists that Lancashire, with care, should be able to maintain full production. This is the first time an industry is reporting difficulties due to the severe tapering off in Britain's coal production, but it has always been rather vulnerable to fluctuations in coal supplies.

The action of the Chilean Government in again slashing the rate of interest which it pays on sterling debt has greatly upset the stock exchange. Normally, the Stock Exchange leaves foreign debt negotiations entirely to the semi-official Council of Bondholders but dealers in the South American bond section are so perturbed by the long series of defaults and one-sided settlements imposed upon British investors by Latin American borrowers that they are putting pressure on the Stock Exchange Committee to intervene. It is suggested that the stock exchange should press the Foreign Office to protest vigorously. But the Foreign Office is reported to be reluctant to intervene since these Latin American borrowers are mostly aligned in the war on the side of the United Nations.

Another embarrassing feature is the fact that some borrowers, notably, Brazil openly state that they granted more favourable terms to United States lenders than to British lenders. According to the British view New York investment banks should have worked closely with the British Council of Foreign Bondholders since investors in both countries have a common interest in preventing borrowers from defaulting or imposing one-sided settlements upon lenders.

Several newspapers predict that the old-established London market in South American bonds will virtually disappear after the war owing to alleged discriminatory treatment which British investors have received. Lord Perry of Stock Harvard, Chairman of the Ford Motor Company, writing in the "Engineer" has somewhat upset Trade Union circles by declaring "I am afraid I believe that God made most humanity to be servants depending entirely upon a cream of leaders for direction". It is also stressed that he is opposed to trade unions because their officials interfere between employer and employee, but has approved the State's fixing a minimum wage. Upon the basis of this minimum the employed will be able to add a bonus for good work. It is recalled that recent efforts to unionize workmen in the Ford Motor Co.'s works failed owing to the resistance of the Company's officials.

New Policies for New Year

The turn of the year, which ceased long ago to be a critical time for the money market, is not without significance to the economic life of the country. For one thing, the new year opens with a distinct improvement in the food position. Rice forecasts encourage the expectation that the shortage following the loss of Burma will be more than made up. The machinery of food control has to some extent being rationalised in the light of inescapable lessons of past failures. The Home Front, which for years had been denied even ordinary lip sympathy, has begun to figure in discussions of public policy. This, however, would have meant little, and might even have been inopportune, if the war had not developed more indubitably in our favour. From the point of view of the average Indian, the defeat and conversion of Italy and the consequent reopening of the Mediterranean for safe transit are far more important than the intrinsically impressive triumphs of Russian arms. Now that Allied ships are in a position to use the customary short sea routes, supplies for the Allied forces in India are flowing freely from Britain and the U.S.A.; the shortage of goods, food and other, is being made up to some extent. The pressure of war demand on Indian industry and Indian production has been relaxed; and it is possible now as never during the war for the consumer to think of loosening the belt.

Such heartening signs, which are specially appreciated at the beginning of the year, can by themselves promise little to long suffering people. Economic conditions during a war are dependent to a far greater extent on official policy than is thought even in these days when it should really be an obvious truism. One has only to read the utterances of the head of the Central Government and its other spokesmen to realise that the distinction between administrative action and broad policies aimed at the attainment of certain conditions of economic life is not always keenly appreciated or even borne in mind. We pointed out in the course of our comment on Lord Wavell's speech at the annual session of the Associated Chambers of Commerce that not only does the Viceroy regard good Government as a substitute for self-Government but is also apt to deny that without the latter, the former is in many important fields well-nigh impossible. One can perhaps go farther, if only because one follows from the other, that the tendency of the Government of India is to be believe that vigorous administrative action can overcome the handicaps of defective general policies. It is only on the basis of such unstated premises that it is at all possible to initiate anti-inflationary measures, while leaving avoidable inflation wholly unchecked, to put extra steam into the machinery of food control when general conditions warrant a resumption of normal trade channels and to put off indefinitely those larger basic problems of Indian economy in favour of the increase of imports of consumer's goods.

Such a frame of mind in official circles more than outweighs the few changes of a heartening kind which have come over the objective situation in the country. However favourable the turn of events in the new year may be—and it is quite easy to have an exaggerated sense of the possibilities in this regard—they cannot be so strong as to obviate the need for Government's adherence to sound policies on basic issues. It is necessary therefore to make an attempt to clarify these issues. The special features of the present economic situation, no less than theoretical predilections, favour the broad distinction between the monetary and the economic policies. Inflation, which is the most outstanding feature of India's finances today, lies at the root of the economic ills we have been suffering during the last few years. And the measures, which are

necessary firstly, to check its growth in the future and secondly, to roll back the tide of inflation or correct its evil effects, are closely bound up with our general economic fortunes, immediate and remote. At this stage of the war when we seem to have turned the corner, future policy in regard to inflation is of obviously fundamental importance. As the merits and main features of this question are quite familiar, we may content ourselves with stating that (1) further inflation should be avoided insisting on foreign Governments finding their rupee finance by sale of gold to the Reserve Bank on terms we stated last week and by the Government of India speeding up its borrowings in consonance with current war expenditure (2) that absorption of redundant money should be continued by larger Government loans, sales of gold and import of capital goods from abroad for new industries of basic importance. It will be easily understood that, once further additions to currency are rigorously forbidden, the financial problem is capable of being considered firstly, as one of utilisation of sterling reserves and secondly of absorbing to some extent and, to a greater extent, canalising the large volume of surplus funds in the country. Readers of "Indian Finance" are familiar with the plea made in an earlier issue of this journal for a fresh approach to our monetary and currency problem, one in which these two problems will to some extent be considered apart on its own merits. The size of our foreign reserves can be no cause for concern when additions to sterling do not automatically lead to an increase in rupee circulation. Once that position is reached, it is not the size of our foreign resources, but the way they are held or earmarked or utilised that will be of importance. If internal circulation is not unduly tacked on to foreign reserves, it should be possible to devise measures which will change a considerable part of the additional currency from the millstone which it is now to milestones on the path to a new economic goal.

Such measures must necessarily be of far-reaching importance not only to present economic conditions, but also to the development of the national economy in the future. They have therefore to be related to what has now come to be termed post-war reconstruction. Few people now are quite clear whether the term indicates merely the date of certain reconstructional efforts or whether those efforts are related exclusively to the changes of the war period. The difference between the two will be obvious on a little reflection. On the one hand, it is possible to argue that the end of the war ought to be the proper time to begin our programme of economic development. On the other, it may be contended that the war has wrought so many changes in the economic structure and life of the nation that after the war our prime preoccupation must be to overcome the adverse effects of war and pave the way to normal peacetime economy and economic progress. The official mind naturally thinks of post-war reconstruction in the latter sense. But, post-war reconstruction can in no case mean the same thing to India as to countries like Britain and the U.S.A. If the Governments of foreign countries are thinking of sweeping reforms of the pre-war system along with the removal of wartime changes in the economic structure, it is in response to new economic idealogies. But in India, wartime changes in the national economy have affected not so much the structure, as the tenor, of economic life. It is not a new gearing of production, but the erosion caused by the floods of inflation, that is today the major change of wartime. The liquidation of the war effort in the sense of de-khakiing large numbers of non-combatant workers and finding jobs for them is more a faintly moral obligation of the Government than a major requirement of the national economic system. Doubtless, their re-employment, like employment for the millions of other idle hands in the country, is an economic

desideratum. But if post-war reconstruction is thought of in relation to wartime changes, the major problems are to overcome inflation by helping the country to grow to a far larger volume of circulation than in the pre-war period and to find new peacetime uses for the fixed capital which the war has obliged us to get from abroad.

While the latter must wait for the end of the war, there is no reason why the former should. A plan that can increase the production and consumption of food and clothing or find immediate use for the surplus of iron and steel and cement, which the progress of the war towards victory may leave at every stage, will, far from taking anything from the war effort,

only make invaluable contributions to it. To think that post-war reconstruction necessarily means waiting for the end of war is to be guilty of misunderstanding its essential purport, so far as India is concerned. Schemes have been evolved even during the stress of these years which will provide a sound basis for the ambitious programmes of the post-war period. While the country is having money it doesn't know what to do with, there is no reason why education and agricultural development, which are really spending and earning departments of a complementary kind, should be asked to wait for the end of the war. If the favourable turn of recent months is not to be a flash in the pan, the next budget should make liberal appropriations for national development.

PRICES AND PROGRESS

When the problems of the transition to peace overhang all current discussions, it may appear rather unnecessary to look back on the main changes of the past year in order to indicate the fundamental disequilibrium caused by the war. But the lessons of the past year have to be studied because of the convulsive lift in prices occasioned by relative scarcity which may even have been caused by the operation of diminishing returns. What part has been played by the fall in the value of money has been discussed in Parliament and less august assemblies, and it is perhaps all the more necessary when there is a lull in the debate to examine how far prices have moved. Price-movements up to the end of November can be studied in the usual graphs appearing in the Indian Trade Journal which convey the general impression that the rise in prices was broken towards the middle of 1943. But, the major symptom as before is the rise in wholesale prices, and except for a fall in June, the Calcutta index rose continuously up to November, when a fall was recorded. The major contributory cause for the reversal is trend was a recession in food prices; but the basis of computation was the official control price of rice; and this may well affect the whole conclusion as to the drop in the wholesale price index from 334 in October to 314 in November.

The more important consideration arising from the change in the price-level (the Calcutta index rose from 227 in November 1942 to 314 in twelve months) is as to the probable response of producers. The assurance as to larger imports of food may have definite results on both supplies and prices, and the familiar conclusion as to saving for use in the future when commodity prices move downwards may need to be modified. It is perhaps necessary to refer to one important assumption that war expenditure will grow and the demand for goods for war purposes will increase as before. Granting that any assumption as to India being the only base for South-East Asia is correct, the national income will be larger while consumption will be limited by necessity. A more regular growth of savings may be looked for when the influence of hoarding is withdrawn. The growth of capital should ordinarily affect the rate of interest and the importance of Governmental borrowing on an enhanced scale need not be emphasised. Since bank advances in India have risen moderately in recent months, there has been some conjecture as to the effect of loans on the price-level; but the ordinances removed one factor from speculation, and we have only to examine the irregular movements in prices to be convinced that the boom has been left behind. If inflationary influences are still dominant, it may squarely be urged that the same distorted features are discernible in the U.S.A. As between India and America, the major difference lies not in regard to large-scale disputes or the growth of exports, but in the progress of war production. As the principal question relates to the effect of higher prices on production, we may note here that an important exception is provided by two commodities, cotton and jute, now subject to official restriction programmes. But in spite

of the anticipated decline in production, this year cotton prices after the reopening of the market are considerably below the May peak. The effects of control are more clearly discernible in the case of cotton manufactures. The rise in 1943 was definitely arrested by a series of measures meant to force stocks out and lower prices. Yet all commodities and manufactures have not been amenable to control and the rise in the price of iron and steel after September points largely to the influence of unsatisfied demand. When costs of production including wages have been intractable, the rise is more or less inescapable, and this conclusion has received marked support from the quotations for cement during 1943.

The influence of unofficial control on prices corresponds, in the main, to that exerted by ordinances. From the middle of July 1943, the prices of jute and manufactures have shown astonishing stability in spite of the disturbing local factors. It may well be urged that voluntary control yields more satisfactory results; and so far it may be noted that black markets have not come into being and no complaint of scarcity has arisen, though the real reduction in jute acreage and outturn was known. In the case of oilseeds, official control, passing from one commodity to another mainly by the prohibition of futures, has lowered prices. There is, however, an important exception. Copra prices rose in November in an abrupt manner and the effect was immediately transmitted to the market for coconut oil.

If the available crop forecasts for example, in regard to rice, sugarcane and groundnuts do not seem to have the usual effect on prices, it is essential to remember that prices last year moved irregularly. For instance, the course of linseed prices in Bombay was different from that noted in Calcutta up to September, and the elimination of speculation led to the withdrawal of influences which ordinarily made for uniformity. In retrospect, the only commodity whose behaviour was more or less normal, that is to say, in time with the enlargement of supplies, was wheat. This may not by itself support the argument that the abandonment of control by the Centre before embarking on purchases for the deficit areas created satisfactory conditions. The influence of larger supplies on prices is fully in conformity with expectations only in the case of tea, and the original virtues of restriction and relaxation are demonstrated to satisfaction only in the case of one industry run by large producers whose primary concern is the export trade. Yet the point deserves special notice here, for it will be argued that it is not the previous control measures like the ban on private exports and the block purchase scheme that have lowered the average price for tea sold in Calcutta for internal consumption, but the producers' own effort to raise outturn in order to make good last supplies. That must be reckoned the most important contribution and one may refer in this connection to the fact that the bulk of India's tea crop goes to the U. K. at a fixed price so that the producers' effort is unrelated to the course of prices here.

Yet the prices realised in the 1943-44 sales favouring the consumer to an exceptional degree afford an indication of what is the part of unorganised agriculture to-day. The difference in circumstances and organisation notwithstanding, one may note the sense of responsibility evinced by capitalist agriculture and advocate an extension of estate farming. For many the backwardness of Indian agriculture is largely the consequence of peasant farming, and the only radical change that would find favour, when all circumstances are against collective farming, is the general extension of estate farming.

Descriptions of estate farming in India have certainly illus-

trated the measures of modern methods and how far Indian agriculture would progress is dependent on the acceptance of private capitalism in the form of an impersonal landlordism. High prices by themselves do not stimulate efficiency as sugar mills today urge that cane-growers are already looking to other crops. When the Dominions have reorganised agricultural production in the light of shifts in demand at home and abroad, Indian agriculture has mostly stood still. It is the standstill that explains the abnormal changes in prices for which corrective measures have been ordered, with results admittedly so moderate as to be disappointing.

THE FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Editorial Notes

Iron And Steel

In the Survey of Business Conditions in India April 1943 are found figures relating to iron and steel. Indian production in 1942-43 is only conjectured in the preliminary estimates appearing in the League of Nations monthly bulletin but it may be noted that in November-December 1942 there was a marked fall in the output of both pig iron and steel in India. The pressure on home supplies in the past year requires no detailed explanation but attention may be drawn here to the fall in pig iron exports in 1942-43 since this implies a definite increase in steel production. From the wartime peak of 599,500 tons in 1940 India's exports of pig iron fell to 239,800 tons in 1942-43. The usual tables relating to overseas trade disclose an appreciable fall in exports of iron and steel since 1940-41. The monthly exports after March 1942 were inconsiderable, and the real explanation for this must be sought in the steep decrease in imports of iron and steel. Imports in 1939-40 amounted to 260,600 tons. Imports in 1942-43 amounted to 48,500 tons only. Clearly lease-lend did not enlarge British Indian supplies in the past year and the moderate recovery in April 1943 cannot have large effects.

The imports of protected iron and steel have undergone the same variations in the same period. There was a substantial fall in India's imports during 1942-43. The total takings for 12 months under protected types of iron and steel were 22,900 tons out of the total imports of 48,500 tons. The decrease had no effect on prices of foundry iron but the quotation for corrugated sheets reflected the scarcity. The main element in the stability of prices is the Control order but the relaxation in effect or proposed must be governed by the increase in imports to which the 1942-43 statistics do not lend support. The more important conclusion, however, is that conservation of supplies has been secured by the drop in exports from 36,700 tons in 1941-42 to 6,100 tons only in 1942-43. The fall under imports of protected iron and steel is almost balanced by the decrease in Indian exports, indicative of the efficiency of regulative measures introduced for the sake of war production.

Labour In The C.P. And Berar

What the C. P. Government has done for industrial labour is largely due to the development of cotton mills in the Province. Industrial labour outside the textile, mining and bidi-making industries is unimportant. The story of labour troubles begins in 1917 when a strike broke out at Akola. The experiments in labour

welfare conducted by the Empress Mills had apparently no determinate effect on administration. Labour was treated as a branch of general administration under the Industries Department, and it was only after the Committee presided over by Mr. T. C. S. Jayaratnam that the problems of textile labour received due recognition. The Committee wanted to do away with wage cuts imposed in the depression by raising wages to the 1931-32 level and providing dearness allowances recommended by the earlier Committee in 1938. The Provincial Labour Department was established in January 1942 under a Labour Commissioner assisted by a Labour Officer. Work on cost of living index and investigation into family budgets in Jubbulpore and Akola has been undertaken. The new Department deals also with trade unions and trade disputes through the Labour Officer. The restoration of old rates of wages after the previous inquiry involved some trade disputes and the Labour Commissioner's award was required in case of dispute. The Labour Officer is immediate authority in cases of conciliation but in case of an illegal strike the District Magistrate has full powers of intervention, and in the case of disputes in which municipal menial servants are involved, the District Officer deals with the subject. Unlike the Punjab which has just embarked on legislation the C.P. had a Maternity Benefits Act earlier. The Provincial Assembly provided for two representatives of Labour.

Changes In Foreign Trade

The changes in India's foreign trade leading to a recovery in imports towards the end of 1943 are of a nature meant to bring out India's dependence on overseas supplies. The fact of scarcity is established by the fall in imports and the trade returns for August (the latest available) show that except for oils—vegetable, mineral and animal—wool and raw cotton, there was a fall in the value of India's imports. Conclusions as to improved prospects for Indian manufacturers may be drawn from the figures while the need to relax control may also be taken as proved. In the years after 1941, the volume of imports has fallen, especially in the food, drink group. Imports of raw materials, notably minerals have increased and this change alone may be expected to survive the war. As compared with 1942 the most important changes in regard to import trade are the virtual extinction of grains and flour and sugar. These go to prove that an unusual and immediate expansion in Indian production is more necessary than relaxation of control in regard to

imports of rubber and oilseeds while there was a fairly large increase in respect of cotton and wool. The increased supply of raw wool should support the relaxation of control in favour of larger civilian consumption, while indicating that the growth of trade with South Africa cannot be prejudiced by outside discussion as to the merits of South African legislation.

As may be expected from complaints as to the shortage of essential supplies in India there was a fall in imports of wool manufactures. With the exception of dyes and colours all other items show a decrease. In regard to value the imports of machinery and electrical goods are only slightly lower than in 1942 but the great fall under steel, paper, rubber manufactures and vehicles show the extent of unsatisfied demand even in a period of regulated supplies. The decline under cotton manufactures etc may be well regarded as permanent but efforts since August to increase the supply of motor vehicles etc under Lease-Lend should be attended with good results. The reduced volume of imports is reflected in the reduction under re-exports. The trade in African sugar from Bombay appears to have dis-

appeared last year; and the only note-
worthy change is the increase under re-
exports of tea which appear to exceed
India's imports. Part of the increase un-
der mineral imports appear to have been
diverted into re-exports and the only pecu-
liar feature is the increase in exports of
foreign silk when imports of silk manu-
factures have fallen. Control would per-
haps explain the increase recorded in the
trade returns while the fall in India's ex-
ports of silk must also be considered a
material factor. Re-exports of all manu-
factures including cotton goods in the
April/August period shrank substantially
and this is, perhaps, the cause of the de-
cline in India's exports to Egypt, Iran,
Iraq and Asiatic Turkey as compared with
1942.

In the field of exports, the main change
is not the fall in exports of grain, but the
significant increase in exports of tea even
before the Ministry of Food announced
its decision as to prices and purchases.
The improved outlook can be directly re-
lated to the increase in shipments in 1943.
The decline in exports of jute and cotton
is a consequence of the war. The increase
in sendings of jute manufactures in Aug-
ust followed the U.S. war order and the
increase recorded in 1943 trade returns
should neutralise pessimism as to the ex-
port prospects though the rise in prices
as compared with 1942 must be allowed
for. It is noteworthy that the increase in
exports of manufactures noted after 1939
did not appear in 1943 and the few in-
creases under iron and steel, rubber
manufactures and cutlery are unimport-
tant as compared with the fall under
cotton yarns and manufactures. The
effects of textile control cannot be dis-
sociated from the fall in exports and re-
exports. The five-months' totals general-
ly point to a degree of stability in exports
that could be explained only in terms of
the recovery in India's exports to the
U.S.A. during 1943.

Proposed Sugar Committee

On the lines of the Central Cotton and
Jute Committees a new Central committee
is to be set up. The Commerce Member's
promise to give the industry a separate
advisory body has been carried out by the
recent decision. The tentative decision
referred to in December has been follow-
ed by a report as to the establishment of
four new committees. The sugar commit-
tee (said the earlier report) was to be a
body corporate, registered as a society
under the Registration of Societies Act by
a Resolution and is to be financed out of
the proceeds of the sugar excise fund. The
functions of the committee were describ-
ed as similar to those of the cotton
and jute committees. The Central
Sugarcane Committee will undertake im-
provement and development of growing
and marketing of sugarcane and its pro-
ducts in India and all incidental matters.
Agricultural, technological and economic
research on sugarcane, gur and sugar will
naturally fall to the Committee. The
Institute of Sugar Technology at Cawnpore
will be in charge of the Committee which
will advise the Central and Provincial
Governments on all matters referred to it
provided the subject matter falls within
the scope of the Committee's work. A large
committee consisting of 44 persons repre-
senting growers, manufacturers and
traders is proposed.

The Imperial Institute of Sugar Techno-
logy is to continue, but the Director alone

will be responsible for the returns, the
trade information and any special work
required by the Government. The Com-
mittee is to take over the sugar excise
fund. The Government intends to give
one anna per cwt. of white sugar pro-
duced in British India out of the Central
Excise duty. The question of increasing
the amount will be considered after the
war. If the contribution falls short of the
Committee's requirements, an interest-
free loan is to be made by Government,
subject to two conditions (1) the expendi-
ture of the Committee will not exceed
the present level of expenditure which
has been fixed at Rs. 11.75 lakhs (2) the
repayment of the loan will be the first
charge on any surplus in receipts. The
committee's work is not likely to stand in
the way of control imposed by the Cen-
tral Government on sugar and gur prices.
The Provincial government also remain
free to regulate cane prices and move-
ments and the only benefit to sugar mills
arising from the creation of a new Com-
mittee is the hope that a cane grower will
respond directly to advice. The greater
part of the sugar industry is, at present,
subject to external limitation of profits
and sugar manufacturers too may find that
the coal shortage has a real effect on pro-
fits this season. The new Committee will
provide however more opportunities to
the industry, to state its case against one
Order or another. No industry appears to
suffer from so much of outside direction
as sugar and the only means of reconcil-
ing interests, so far ravaged by control,
appears to be the new committee which
takes the place of the advisory board.
The States are not represented but it is
possible that the States which levy an ex-
cise duty may find it easy to cooperate
with the Committee which has to rein-
force the Agricultural Departments in re-
gard to the maintenance and improve-
ment of cane supplies.

Changes In Textile Output

Under the Cotton Industry Statistics
Act of 1926 the mills in British India fur-
nish production figures. The fall in tex-
tile output in 1942-43 is reflected in the
official statistics. The production of yarn
at 1533.7 million lbs. showed a fall of 2.8
percent as compared with 1941-42 and 13.7
percent as compared with 1940-41. In re-
gard to woven goods the total Indian pro-
duction of 1 062 million lbs was 2.9 percent
less than that reported in 1941-42 and 8.2
percent less than that reported in 1940-41.
The reasons for the fall in output need
not be examined. But the fall in imports
necessarily accentuated the effects of the
drop in mill production. It is noteworthy
that mills produced in 1942-43 less yarn
of counts over 40 while they produced
more yarn of counts between 1 to 25 in-
dicating that cloth for Government, and
for the poor, was made available by ignor-
ing the chances presented to spin finer
counts as imported yarn supplies fell
away.

The statistics afford an indication of the
increase last year in coarse yarn supplies
for the handloom industry as well as the
decrease in certain classes of goods. Pro-
gress is noted under cloth, domestics and
sheetings while the Indian mills produced
fewer dhooties than in 1942-43. The fall
under this head as compared with 1941-42
is 17.9 percent and the influence of this
fall on cloth prices last year cannot be

overlooked. The fall is smallest in re-
spect of coloured goods and the effects of
the recovery in textile output after Janu-
ary 1943 are apparent in the statistics. The
major feature of the year is the fall in
home output as well as imports. Home
production did not grow to the anticipated
extent when imports fell from 181.5 million
yards in 1941-42 to 13 million yards in the
succeeding year. But the mills produced
over 4,109 million yards (of which 1,089
million yards were in the form of coloured
piecegoods—the decrease being less than
100 million yards under this head) and
kept up exports which were in excess of
imports. The mill industry's record before
the introduction of Control cannot be dim-
med by the ascent of prices which lay for
long outside the control of producers. Ac-
tually, mill production of piecegoods fell
in 1942-43 by 384 million yards and the in-
elasticity of demand in a period of rising

prices was fully revealed. The statistics
certainly support another conclusion as to
the mills being the chief outlet for cotton-
growers, and the need to adjust cotton
prices to cloth prices was appreciated
earlier than presumed.

Canadian Supplies

While construction and mining reported
setbacks, manufacturing activity in Canada
rose further in the first half of 1943 by 25
percent as compared with 1942. The figures
for the first half of 1943 point to a fall
in newsprint production as well as tim-
ber, but not under woodpulp. The major
industry, agriculture, reported some pro-
gress as the quantity of wheat sold by
farmers rose, but the adverse weather has
made any increase in food supply uncer-
tain. Since 55 percent of Dominion pro-
duction was wanted in 1942 for war the

FIVE YEAR

Interest-Free Prize Bonds 1949, to be issued at par and repayable at par on or after the 15th January 1949.

Available for sale in denominations of Rs. 10/- and Rs. 100/- from the 15th January 1944 until further notice.

The Prize Bonds (which will be in the form of bearer bonds) will be on sale at the Indian offices of the Reserve Bank of India, all branches of the Imperial Bank of India and all Government Treasuries and Sub-Treasuries in British India or a State in India conducting Government of India treasury business. Subscriptions will be received in the form of cash only and no written application will be necessary.

The Bonds will not bear interest but half-yearly on the 15th January and 15th July each year commencing from the 15th July, 1944 up to and including the 15th January, 1949, a draw by lot will take place for prizes under the supervision of the Government of India in respect of each series of bonds sold completely.

Each series of Rs. 100/- and Rs. 10/- denominations will consist of 1 lakh pieces. The half-yearly prizes in each completed series will be :—

Series of Rs. 100/- denomination

1	Prize of Rs. 50,000	-	-	Rs. 50,000
2	Prizes of „ 20,000	-	-	„ 40,000
2	„ „ 5,000	-	-	„ 10,000

Total amount of prize money half-yearly in each completed series of 1 lakh pieces Rs. 1,00,000

Series of Rs. 10/- denomination

1	Prize of Rs. 2,500	-	-	Rs. 2,500
2	Prizes of „ 1,250	-	-	„ 2,500
5	„ „ 500	-	-	„ 2,500
10	„ „ 250	-	-	„ 2,500

Total amount of prize money half-yearly in each completed series of 1 lakh pieces Rs. 10,000

Full particulars can be obtained at any of the offices authorised to receive subscriptions.

increase in manufacturing activity before the summer especially when 70 percent was required in 1943 was inescapable. As the construction programme was reduced, the pressure on available supplies increased during 1943. Canada has to provide more than minerals like nickel and asbestos for the Allies. The arms and associated programme for 1943-44 was expected to cost 3,425 million dollars. The changes in the direction of war effort arises from shortages as much as the shift of demand. But the 1943-44 programme is undoubtedly large in relation to that already carried out. In June last Mr. Howe told the Canadian House of Commons that the Dominion had produced since the outbreak of war, material valued at \$4500 millions made up of items like 5,00,000 motor vehicles, 21,300 combat vehicles including over 3,000 tanks, 8,000 aircraft and 500 ships including 141 merchant freighters delivered before June. War work alone claimed about 900,000 workers and shortage of labour was manifest outside civilian factories. Practically all kinds of equipment required for this war are made in Canada, even those of the most scientific and intricate nature. Over 160 plants are engaged in anti-submarine detection devices while some of the Allies' most effective secret weapons are of Canadian design, including communication appliances and a tank track which is regarded as the best available anywhere. The decline in production in the case of pulp and paper in 1943 was offset by increase under iron and steel, automobiles and chemicals. Mr. Howe acknowledged that the Dominion produced over 800,000 tons of chemicals and explosives for the war. The armaments industry built up since 1940 had made a most useful contribution and figures as to aircraft etc., show how the Allied air force receives help from the air programme in the Dominion. The civilians naturally got less than in 1942 owing to the fact that more goods for war purposes were taken. The Dominion now gives 40 percent of aluminium required by the Allies because Canadian output since 1939 has increased six-fold. This outstanding development deserves notice here in view of the notice given to Canada's new hydro-electric projects in Ontario and Quebec. The decline in coal output increased dependence on U.S. supplies, and the effects of the U.S. mines dispute on Canadian industry extended beyond the freezing orders.

Bag Famine And Bigger Crops

Changes in Argentina's economy have been reviewed in the Jute Committee's bulletin by its B. A. Correspondent. If imports have fallen away and exports are dependent on one rather than many markets owing to the war, it was argued by a foreign expert that Argentina's trading position was stronger after four years of war. In addition to a gold reserve of over one million pesos, Argentina had balances abroad totalling over 1,769 million pesos, more than enough to pay off the external debt and leave over 700 million pesos for exchange stabilisation. Of the main developments recorded after the change of Presidents the promise of a trade treaty with Chile is the most important. Argentina expects to sell more wheat and other grains to her neighbour. It was noted here that Brazil had become an important buyer of both wheat and flour from the Argentina. The U.K. takes the entire meat surplus, but Argentina's only real rival is New

Zealand, and there is a freight advantage which explains the agreement with Britain concluded in September. An increase in Argentine crops, and hence in export surpluses, is expected. This may inspire hopes of better demand for jute or jute fabrics but the shipping difficulty cannot be overlooked. An increase in groundnut cultivation in Argentina is looked for, and a clue to the world wool position is afforded in the statement that stocks on September 1 were mostly of coarse types, the medium and fine qualities having been practically cleared. In spite of the late arrivals of both jute and carao fabrics, there was a bag famine which led to a decree from the Ministry of Agriculture ordering the expropriation of all new and used bags. The decree prohibited all private trade in bags except by license. The shortage of jute manufactures is well established; so the further attempt to grow cotton imports of jute manufactures for baling are essential and the increase in Peru's imports from India in 1942 indicates that the benefit did not extend to Chile alone. Cotton prices in Peru were going up before the crops came and in view of India having imported cotton in 1936 from Peru attention may be drawn to the fact that prices for the 1943 crop were 40 to 50 percent above the prices ruling in 1942.

Promising Markets

The direction of trade in 1943 showed no large changes because controls reduced supplies, and the rise in prices stood in the way of expansion. Changes following the capitulation of Italy may be guessed but the August trade returns indicate a gradual recovery of trade with Italian East Africa. The inexact description for liberated territory should not pass unnoticed. The failure of export trade with Russia after the sudden recovery in 1942 will claim some attention like the very large increase in India's trade with Turkey. The figures shed no light on the U.K.C.C.'s operations but it may be noted that Indian exports to Syria, Iraq and Iran fell off in 1943 while trade with Turkey showed a remarkable increase. The fall in textile exports accounts for the decrease in trade with Egypt which sends less cotton of late. Since the Belgian Congo is for tariff purposes part of the British Empire at present the increase in exports needs no explaining while the decline in exports to Portuguese East Africa corresponds to the fall in India's imports. The increase in raw cotton imports is reflected in the substantial growth of imports from Egypt. The only other foreign country to sell more to India in 1943 was Iran whose oil becomes increasingly important. The further decline in trade with Europe is a consequence of the war. But trade with the British Empire shrank to a greater extent in the fourth year of the war though an exception is provided by Australia. Larger imports of minerals from South Africa accounts for the moderate increase in imports. Colonial markets seem less important than in 1942 but the increase in trade with Rhodesia (whether North or South cannot be indicated) deserves notice as it may be due largely to the increase in minerals imported into India. India's special position as Ceylon's biggest supplier calls for special notice as the political future of Ceylon (now under discussion in the Colony) may lead to no large changes. While the objections to some form of federal union cannot be supported merely

by any reference to the failure of negotiations last year prejudice may persist. But fear of the immigrant will not last as against the real increase in trade though Ceylon's currency is delinked from the Indian rupee and the island had its own exchange standard. The U.S.A. holds after Britain the most important position in India's foreign trade and the increase recorded last year based on the increase in shipments of jute manufactures and certain essential materials like shellac and mica. The decline in Indo-American trade in 1942 was followed by a real recovery. An increase in Indian exports in regard to value occurred in respect of South America also.

Rubber Control Reviewed

Three Governments have presented a memorandum last week as to the continuance of the rubber regulation scheme. The scheme, after its second term of five years, was due to expire and the proposed changes in the governing body are only meant to bring in the U.S.A. as the world's biggest consumer of rubber and the only

NORTH WESTERN RAILWAY

Break of Journey on Passenger Tickets.

As already notified from 1st October, 1943, holders of tickets for more than 250 miles only are allowed to break journey en route. It is further notified for the information of the public that:—

- No break of journey is permitted if the actual distance for which the ticket is issued is 250 miles or less.
- The distance between the starting station and the station at which the journey is broken first or between any two stations at which the journey is broken subsequently must be in excess of 250 miles.
- The tickets will be collected if the journey is broken en route, except as permissible under the above rules.

General Manager,
Lahore.

TEST OF TIME

The Pyramids, standing through the centuries in spite of natural disintegration, are enduring monuments to the superlative workmanship of the ancient Egyptians.

Our lives should be built up with the same pride of accomplishment—built to withstand the ravages of time and adversity. Such permanency can only rise on a foundation of financial solidity.

PALAI CENTRAL BANK LTD.
(Incorporated in Travancore with liability of members limited.)
PALAI. TRAVANCORE

potential rival in regard to synthetic production. There is as yet no indication of the U. S. view as to the proposal to provide for representation of consumers or producers of synthetics (Germany excluded) and to the other proposal to keep alive an international committee for certain purposes, distinguishing late between the objects of the old committee and a new advisory board. The international regulation committee's work in its first term excited little criticism as compared with the Colonial Office's earlier experiment in regard to rubber restriction. Temporary renewal and possible acceptance of an international scheme may improve the prospects for Indian rubber producers though it may be suggested that only an increase in price counts when estates are faced with the rise in costs. Obviously the renewal has no meaning for the hard-

boiled when 90 per cent of the world's rubber supplies are in Japanese hands. And the agreement as between the British and Dutch Governments indeed is important only in regard to compensation. The Colonial Office's reply to Sir John Hay's memorandum remains the last word on the subject of compensation. But it may be noted that a small rise in rubber shares in London has followed the cable as to the Colonial Office's views on the work of the Restriction Committee and the necessity for control. The improvement in rubber prices, the exigent demand for rubber, and of course domestic conservation schemes are matters of common knowledge. For the present, it may be noted that India and Ceylon may count on an assured market for natural rubber, and in case the U.S.A. gets an adequate voice in the affairs of the rubber industry, the

recovery prospects for rubber producers elsewhere will be decidedly better. The leaders of the U.S. rubber industry look to a big rise in consumption and do not regard either neoprene or cheinigung as a permanent rival to natural rubber. Old figures have little interest but the U.S.A. normally took 500,000 tons (half the rubber produced by the world in a year) and U.S. interest in the N.E.I. was based essentially on tin and rubber. In the event of vigorous commercial imperialism being adopted after the war, the U.S.A. would endorse producers' views as to the future of rubber and assist in restoring production because substitutes, efficient in their way, are expensive compared with natural rubber.

(Continued on page 24)

A CAREER IN ADVERTISING

Post-war India will need experienced Advertising & Merchandising executives

Hitherto only a few young men in India have been attracted by Advertising as a profession in which to build a career. This is not surprising, for whereas the concentrated, highly competitive industrial production of Western countries has made necessary a constantly advancing technique of selling, India has readily absorbed most goods available to her. In the West the genius of the clever advertising expert is richly rewarded but in India it has scarcely been needed, except by experienced foreign exporters and a few far-seeing Indian manufacturers. And so, young men have been more attracted by the law, by medicine and by other established professions than by Advertising.

The changing times

But times are changing. The years just previous to the war saw a remarkable increase in advertising, and markedly greater appreciation by Indian manufacturers of the power of carefully planned, scientific advertising as a sales force. For the technique of advertising had undergone great improvement, largely as a result of the work of the professional Advertising Agencies, who fitted the tested methods of the West to the habits and thinking of the Indian public.

Opportunity lies ahead

With the advent of the war—and the consequent shortage of raw materials, the diversion of industry to war purposes and restrictions on advertising space—the business of advertising in India has received a temporary check. This respite should be used to prepare for the tremendous task which lies ahead. India's strategic position as a supply base for the armies of the East has caused her industry to grow prodigiously; factories have doubled and trebled their output and new workshops have sprung up all over the country. These factories are busy now, but with the return of peace Government orders will cease and further business must come from the public. And

then the trained advertising man will be needed as never before. His will be the task of helping industry to fashion products to the public needs, of defining profitable markets and creating consumers.

Two years' training with the leading Advertising Agency

In the firm belief that trained Advertising men and women have a vital contribution to make to the industrial progress of India after the war, J. Walter Thompson Company (Eastern) Limited propose to apprentice a number of carefully selected young men and women of good family and background and train them over a period of two years into executives. Only those prepared to make Advertising their career will be chosen and to this end fees will not be low. Training will cover all branches of advertising and merchandising and will be conducted by experts with many years experience in America, Europe and India. J. Walter Thompson Company is an international organisation with headquarters in New York and offices throughout the world. It is the largest and the oldest of all the Advertising Agencies and its history is closely identified with the development of modern scientific advertising in all its aspects. In India J. Walter Thompson Company (Eastern) Limited has been responsible for such famous campaigns as those for Horlicks, 501 Soap, Tata Iron & Steel, Kodak, Pond's Creams, Binny Suitings and Shirtings, Eno's Fruit Salt, etc., etc.

Young men and women wishing to apprentice themselves to J. Walter Thompson Company (Eastern) Limited with the object of becoming executives in the Company or in industry should ask their Parents or Guardians to write in the first place to the Company's Head Office at Lakshmi Building, Sir Pherozshah Mehta Road, Bombay, addressing their letters personally to the Managing Director, Mr. Edward J. Fielden.

DEPARTURE FROM LEASE-LEND

U. S. EXPORT DRIVE PREPARING

Special for "Indian Finance"

WASHINGTON, January 5.

United States exports will soon begin flowing to India and the Middle East at an increased rate and through private commercial channels instead of lend-lease, if the present Government plans mature. Already the new official policy has removed some important exports and articles from lend-lease classification and others will probably be included in the near future. Businessmen are of opinion that this programme may aid in combating inflation in the Middle East, particularly Iran where prices have risen to 40 or 50 times the normal level as scarcity of goods continues to be acute despite a plentiful supply of dollar exchange.

Since the entire Middle East is under the jurisdiction of the Middle East Supply Council in Cairo, it is contended that American exporters have been severely hampered in their efforts to transact business because the Council follows the most stringent rules in issuing import permits. The gradual abolition of lend-lease and the substitution of pre-war commercial facili-

ties would be designed to alleviate that situation. French North Africa has already withdrawn its lend-lease machinery. Diplomatic sources recently revealed that France had agreed to pay cash for everything that North African economy requires.

Similarly England and the British Empire have decided to switch over certain purchases from lend-lease to a cash basis. These purchases which will be handled through regular commercial procedure include machine tools, certain permanent projects, industrial equipment, materials for producing and refining petroleum, and portable pneumatic and electric tools.

It is considered a virtual certainty that textiles destined for the Middle East will be transferred to private traders soon. It is recalled that world exports of cotton goods alone to that area formerly averaged between \$160 and \$180 millions annually. At present, lend-lease exports exceed one milliard dollars monthly, comprising over four-fifths of the total United States' export trade. The remaining one-fourth has

been largely Western Hemisphere trade but it is hoped here that these proportions may be reversed during 1944.

One of the most important considerations in returning trade to private hands is whether private importers can obtain deliveries as promptly as Governments. The Export-Import Bank is likely to become the leading factor in the restoration of private commerce, particularly, after the war, when it is understood that the Bank will be prepared to offer its facilities to foreign countries desiring financial assistance in buying American-made goods. Such an undertaking would have a three-fold aim: First, aiding world rehabilitation; secondly, helping United States manufacturers, and thirdly, utilising active United States merchant shipping which will aggregate between 15 to 20 million tons at war.

The Export-Import Bank in the post-war period would continue to co-operate with commercial banking institutions in foreign countries where loans are made.

"I must have liberty

Withal, as large a charter as the wind
 To blow on whom I please."

—(As You Like it)

A few weeks ago, I examined the American attitude to the larger problems of world peace and the responsibilities, which as a result of two world wars must increasingly devolve on her. As the careful reader may remember, I purposely avoided clear-cut conclusions, not only because public opinion in the States is in an inchoate state, but also because Americans themselves recognise the danger of making up their minds hastily on issues which are vast, complicated and of far-reaching importance. We have also to take note of the fact that the post-war world to which the policies of the victorious Allied Powers will have to be applied is still in the making. The commonest and the most serious of the mistakes that are being made about post-war problems is the assumption that the post-war world is nothing more nor less than the present world minus Axis aggression. The dialectic of world events is never so simple as that. If it is certain that from now Germany and Japan will slide down the inclined plane to utter defeat, there is no similar certainty about the dispositions of the Three Great Powers towards the problems of peace. Sure enough, there will be no clean slate for them to write on. Small nations acquire a terrible nuisance value, once hostilities cease; nor will the Powers be of one mind as to what is to be written thereon. Ideas which have been formed in the light of past experience may well call for material changes if they are to be applied to the conditions of 1945. As I never weary of pointing out, peace this time will not be the work of a single evil genius. Three Great Powers, who are unlikely to be of one mind, have got to adjust their differences and arrive at some common understanding. They have to reckon with the wishes and potentialities of a score of other nations, take into account the possibilities indicated by vast aggregations of unarmed and ill-developed peoples in the East and plan realistically not only for peace but also for the contingency of its failure. The post-war world to which these efforts will have to be directed is yet in the making. The war may be nearing its end. But its most formative phase from the standpoint of the post-war world has hardly begun. The Cairo and Teheran Conferences were held hardly a month ago; and Mr. Churchill is not back yet at Whitehall. Advance units of the Red Army crossed the old Polish frontier only a few days ago. And the Allies are yet to land in Western Europe. In the East, the offensive against Japan is in the stage of planning and preparation. Victory is there on the shop window; but the price level is yet to be affixed to it. In terms of power, it may cost the great powers more to keep

it than to win it. The world war, which is the only possible agent of world peace, has not yet released its full schedule of work for the nations.

Almost alone among the Allied Powers, America strives to keep an open mind on the shape of the post-war world. The only preparation so far made is the overcoming of the old erroneous ways of isolationist thought. Old prejudices, too, against particular foreign countries, Soviet Russia, for instance, have been overcome. But the formation of sound positive ideas has been left to the future, while the other Allies are quite clear in their minds about what they want of the coming peace settlement. Soviet Russia is still too young as an independent people to have a highly complicated foreign policy. Since the birth of the communist state, its almost sole pre-occupation is security against a ring of hostile and well-armed powers. Its ideal of a world revolution was less in deference to Marxist preachings than a natural reaction to the hostility she found around. All that the war will have done is to remove the nearest and, in that sense and to that extent, the most powerful, of her enemies, Germany. Stalin will doubtless, have his own opinion of the extent to which others have been converted from enmity to friendship; and on that opinion will depend his attitude to the post-war position of Germany. It is unnecessary to exaggerate the importance of ideological differences. But there is no warrant yet for supposing that Soviet Russia will attach no value to balance of power or will overlook the possibility of another and necessarily more frantic German bid for domination. Soviet Russia will in all probability seek to retain a Germany that will neither cease to count in international politics nor become too serious a menace to world peace. She might try also to interpose a friendly federation between herself and Germany, instead of states like the Poland of pre-war times, which shut off Russia from Europe and made the latter an easier victim to Nazi aggression. Russian attitude to Japan may not be far different; and here the fact that the two nations have preserved formal friendship is not without significance.

British foreign policy, in spite of the variety of the objectives it has to secure, is on the whole simple. Politically, it has to care both for Western Europe and for the wide world over which the great Empire sprawls. Economically, it has to safeguard the standard of living in Britain by preserving and furthering, if possible, a system of foreign trade which every

fundamental change in world economy since the first world war has seriously threatened and to some extent undermined. To the extent that British trade depends upon the Empire, there is no conflict between political and economic aims. The only source of embarrassment lies in the proneness of each Dominion to take note of the lessons of this war and to gravitate towards other political systems which are in a position to afford them greater assurances of security. This danger will be more than provided against if Britain and the U.S.A. contrive to draw closer together and spare the Dominion the irksome and difficult task of choosing one in preference to the other for its support. The political game on the continent of Europe has been so messed about since the last war that it is doubtful if even an independent and reasonably powerful France would have made a difference. Since Western Europe is a common responsibility, British policy will concentrate on the issues connected with the Empire, that is, that part of it which lies outside the Dominions and which is more vital to British trade than the self-governing units. And it is in anticipation of these issues that Mr. Churchill struck a defiant note long ahead and asserted that he did not become the King's first Prime Minister to preside over the liquidation of the British Empire. The vehemence and setting of that utterance are sufficient to bring out the lack of accord between the Empire as Mr. Churchill would like to preserve it and the requirements of a post-war settlement most favourable to peace. However, the fact remains that the ruling classes are not in two minds about their policy in the post-war period.

Against this clarity of foreign policy of other nations, the vacillation and nebulous character of American opinion present a somewhat sad contrast. But the reason, as I have said before, is not far to seek. America has no axe to grind as the term is ordinarily understood. Her only interest is to sterilise all the sources of war for the future for it has been proved more than once that whoever may call the 'Martial' tune it is Uncle Sam that has to pay the piper. To prevent a world war, the whole world has to be made orderly and comfortable; and since America has no selfish interest in the post-war settlement, she does well to reflect that misguided altruism can do even more harm to herself and others than clear-eyed selfishness. She is naturally anxious therefore that she must proceed with greater knowledge and caution.

For those who have to travel, by Sea, Air, Rail or Road we continue to offer a WORLD-WIDE TROUBLEFREE TRAVEL SERVICE. No journey too short, none too long or complicated, for our attention. Local Railway tickets in India issued.

But this insistence on knowledge and caution may be easily overdone. At the moment, American effort to clarify its attitude to post-war world order is confined to an examination of the relations with the British Empire.

At any rate, misguided altruism can easily lead to the deserved discomfiture and impotency which was the lot of President Wilson after the last war. The same has, indeed, been the fate of those sections of opinion in America which stood for forcing Britain to concede immediate and complete independence to India. While their good intentions, like those of President Wilson, are unquestionable, they were ill-equipped to withstand not to speak of answering, the defence which Britain was in a position to put up. The result is that the other side gains a victory which disables the altruistic intruders for a long time for a second attempt. American opinion is rightly on guard against repetition of this kind of experience. That, I believe, is behind the present mood of indecision.

But this sort of caution may easily be overdone. The U.S.A., unlike other great nations, has not been able to choose the responsibilities it will shoulder. Its career as a great power began at a time, when the pace of developments in world politics was infinitely faster than in any previous period of history. France and Britain, among the Powers, are nations of whose history, the whole story of the new hemisphere is but a small chapter. While the United States were developing, Britain had lost new empires to replace the one she had lost. France had lost her bid for the suzerainty of India and carved for herself biggish Empires both to the east and the west of the Indian continent. The Powers had time to appraise their position in Europe and adjust their responsibilities abroad to the resources at home. But the position of the U.S.A. has been far different. Beginning its career as a group of rebel colonies, the U.S.A. grew to maturity under the protective wing of the British Navy on the other side of the Atlantic. The last war changed her, within the twinkling of an eye so to say, from the position of an undeveloped and debtor country to that of the most powerful financial and industrial nation. The aftermath of the last war with its reparations drew her into the vortex of world finance and economy, while she was keeping herself sullenly aloof from world politics. Isolationism soon spread from politics to economics as well, and precipitated the great depression. From that the chain of consequences led on from Hitler and rearmament to lend-lease and global war. America has not had time to find her bearings. She is rushed on by the dialectic of events to bigger tasks and heavier responsibilities. And if she asks for time to consider the various questions that clamour for an answer from her, she is asking for something which Fate never granted her in the past.

America cannot take an unconscionably long time in judging world problems and coming to a decision thereon. This war is worse than the last one, since it has added the Eastern to the Western hemisphere as a theatre of war. If intervention in Europe was disagreeable, intervention in Asia is difficult, to say the least of it.

Twenty-five years have been sufficient to show that Europe has no monopoly of the cockpits of the world, that the H. G. Wells of the next generation will find for his "Shape of Things to Come" a Danzig or a Polish Corridor somewhere in South-East Asia. If war is to be prevented a sort of malarial survey for the larvae of war has to be carried out all over the world and all the endemic areas have to be sprayed with equal care. America has to spot out every potential source of armed hostilities, measure up every possible kind of opposition to the measures necessary for peace and give the greatest strength and security she can to the great cause.

The chances of world peace are in direct proportion to the strength and determination which the U.S.A. is prepared to bring into play. Europe is full of problems.

fallen France, invertebrate Italy, the ever aggressive Germany, the sitters on the fence, the noisy rabble of small nationalities that cannot distinguish between friend and foe, and above all, the great question mark of our time, Stalin's Russia. But the East compels no less attention. Littered with lost Empires, crowded with backward peoples and burdened with economic systems that have no relation to the needs of the people, the East will be problem both politically and economically. European reactionism, losing its foothold at home, will sure seek to entrench itself in Indo-China and Java and Malaya. To give free play to the power lust of effete imperialisms is to make sure not only of the next war, but also of defeat therein for the progressive forces. A policy adequate both from the near and long view has been brilliantly outlined by Mr. K. M. Panikkar in his book on South-East Asia. It takes account of the needs not only hope that the book receives as much attention in the U.S.A. as it deserves. The reconstruction of the economic life of South-East Asia is a special responsibility of the U.S.A. which the States can neglect only on pain of another world war, one in which the odds will probably be not in her favour.

Such far-reaching reconstruction would be impossible if American opinion handicaps itself with too much of ethical doubt. America's record in the question of Indo-British relations fills one with grave apprehensions about American ability to shoulder the responsibilities of peace. Let me make it clear before I say a word more on this subject, that I am not one of those who think that India can get 'swaraj' through the intervention of a third party or that Britain will, or has to, show undue deference to American wishes in matters which are her own intimate concern. If I say that the American record in this matter is pitifully poor, I mean that America has shown but poor ability either to apprehend the Indian problem or to choose proper ways of influencing Britain. The period immediately following the Atlantic Charter and the period of Mahatma Gandhi's fast are quite clear instances of this inability. Why should America talk at one time as if Indian independence were an urgent necessity, and at another, let the whole of British official propaganda glide down its gullet without any impediment? Of course, the incredibly poor tactics and diplomacy of our Congress have afforded the Government invaluable help in its American campaign. But it is not India's lot or prospects that are important in this context. What is important is that American opinion is not yet equal to an understanding of the Indian problem which is both realistic and sympathetic. Here is an extract from fortune, in which anxiety to do the right thing is fatally blended with honest in capacity for correct judgment:

In nine cases out of ten, arguments about British imperialism boil down to India. Following the lead of the Nationalistic Congress Party, many British and American intellectuals believed before the war that the only solution for India was immediate and complete independence. Events have tempered those judgments. For one thing, the Americans discovered some complexities of the Indian minority problems.

India may emerge from the war not as a kind of annexe to the British Empire but as huge power within it. Instead of following the course of rationalism—with the risk of Balkanisation of the whole sub-continent, India may choose to become a peer of Australia and New Zealand and the United Kingdom within the commonwealth.

It seems to offer the means of preventing a mad scramble for the pieces of the British Empire, which would ensue, should Britain simply withdraw from a game that by no means is all clear profit.

The last sentence is the best—a parrot like repetition of Lee-Warner's Benefits of British Rule. It is a poor manifestation of the "new and awakening sense of world power" of which fortune speaks with just pride.

Centenaries are apt to be overlooked 'inter arma' as one was told that the abolition of slavery in India by statute a hun-

dred years ago was not properly remembered. But citizens of Calcutta should not forget that the House of Jardine Skinner has now attained the very respectable age of 100 and the firm's fame endures. In its home in Clive Row the firm's strong position has been upheld by a succession of eminent partners who have given of their best to the city in which they lived and worked. Like so many firms in the East, the house of Jardine Skinner moved to Calcutta not long after the East India Company's trading monopoly expired. Here it may be said that its solid and undisturbed growth duly reflects the considerable change in India's exports from sugar and indigo to jute and tea. Messrs. Skinner and Jardine undoubtedly have built for permanence as one may be reminded by the number of exceedingly successful companies like Triton Insurance (the oldest insurance company in India) and the Howrah Mills Co.

(From Our Correspondent)

NEW DELHI, Jan. 3.

The Viceroy opened the Indian Science Congress here today. The cramping effects of the chronic political deadlock on all progressive national activities were again brought home today when the President of the Science Congress, Prof. S. N. Bose, referred to the absence of Pandit Jawaharlal Nehru, Chairman of the National Planning Committee. "Many of our front-rank scientists and industrialists had met under his leadership, not long ago," said Prof. Bose, "and given the questions of future reconstruction much time and anxious thought. My regret is keen that had deprived us of the benefits of a sustained and careful study of the problems of the day. I would have liked to present here the results, if they were available. Unfortunately, they are not, as most of the reports are, inaccessible to me." Prof. Bose's regret is universally shared here, for there is absolutely no reason for the Government for not allowing Pandit Nehru to carry on his activities as Chairman of the Planning Committee even in detention.

It is expected that one of the main problems that will be discussed at the Congress will be the urgent need to reorganize scientific research and plan it on national lines. Compared to most other industrial nations, the inadequacy of official scientific services and the paucity of research facilities has long been felt in this country. One suggestion is that industries should set up their own research laboratories if they can afford them, or combine together and foster cooperative research like the Iron and Steel Industrial Research Council in England.

The defence expenditure has been swallowing almost the whole of the recent remarkable increase in revenue receipts. A study of the Central Exchequer returns for the first seven months (April to October) of the financial year 1943-44 show appreciable rises under all revenue heads except salt—the net result being a gain of about 30 crores compared to the corresponding period in the previous year. Excise receipts have been doubled. The railway earnings for the first eight months (April to November) are responsible for a further increase of 17 crores compared to the corresponding period in 1942-43. In spite of these windfalls the net deficit almost remains the same due to a further big increase in defence expenditure. It seems doubtful whether the Finance Member will be able to augment his revenues still further by introducing fresh taxation. Authoritative financial circles here believe that the limit of taxation has already been reached and that the Government has rather got to revise its taxation of Indian industry if its post-war competition prospects are not to be seriously compromised. It is also feared that the next year's yield from income-tax may not be as big as during the current year—due to the recent imposition of controls on industry and trade and the operation of the Anti-Profitteering Ordinance. The new expedient of issuing interest-free prize bonds does not seem to have met with much public approval. It is generally felt that this method will fail to attract sums big enough to influence inflation appreciably. Like the gold sales experi-

ment, it will be simply tinkering with the inflation menace.

At Calcutta the Viceroy had disowned all anxiety to see the political deadlock resolved immediately. In any case he did not regard this as a necessary condition for the prime task of winning the war. His Ameryish appeal to all and sundry for 'cooperation' does not lead one to hope that he will offer any commendable solution of the political impasse in his next public pronouncement—his address to the Legislature on February 17 next.

Official reports are daily giving it out that the famine crisis is past and there is a noticeable slump in news of distress from the Bengal districts—though occasional bits of information reveal the terrible toll that epidemics are still taking in the famine-stricken areas. Informed circles however assert that there is no reason for complacency yet; only a proper distribution of the 'aman' crop and the building up of reserves in all deficit areas for the future emergencies will ensure a solution of the crisis. There is no information as to what is being done to build up such reserves. Food imports from overseas seem to have almost come to a stop. Even the all-India food plan has not been enforced yet. The Food Price Control Conference is meeting this week when it is hoped the Sind rice price dispute will be settled and uniform prices agreed upon for the whole country. Meanwhile rationing is being slowly introduced in all urban areas. Plans have been drawn up for Delhi and rationing should be in force here by the beginning of April 1. It is learnt that calculating on the basis of Bombay's population and needs—the imperial city will require a rationing staff of 800. All citizens are to be rationed including the families of military personnel serving outside Delhi.

I understand that Mr. J. V. Joshi, at present Deputy Economic Adviser to the Government of India, is likely to join the Reserve Bank as Economic Adviser.

The presence of Mr. J. J. Ghandy in Delhi has helped to remove certain misapprehen-

sions regarding the coal position. I am in a position to state that the proposal that the Jamshedpur steel works and similar concerns should close down for some days in order to find coal supply for other industries and tide over the crisis has been definitely given up. It is realised that there can be no interruption to steel production.

Special care shown by "Indian Finance" regarding Russia's attitude to post-war currency questions, particularly, with reference to gold has attracted considerable attention. The view seems to be that both Britain and America will have to revise their proposals. It is likely that the proposed United Nations conference this year to discuss post-war currency plans will have to be postponed for six months or more in order to reconsider proposals.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, January 5.

THE Liberal Federation's annual session has come and gone, and Bombay is thinking whether the Bombay resolution is dead or alive. The Liberal view, as expressed by Sir Cowasji Jehangir, was not the view of the majority, but it is well worth noting that C.R.'s arguments have made real penetration. What is required is a declaration from the Congress party and Madras appears to be hatching a move which may bring the Government and the League too nearer the goal of appeasement in India. The Liberal's resolution has been favourably interpreted and the old view that a Centre party is what India requires, as a cure for communalist extravagance, is not without local support. An unexpected measure of goodwill in the Anglo-Indian press for arguments against the deadlock is not wholly due to the Metropolitan's X'mas message, but to the realisation that administrative failure has created difficulties for the majority as well as the minorities of whom the Europeans are the most disciplined and forbearing. A reasonable settlement is desired because the war in the East requires it. Whatever may be said about armed might economic conditions in India are not satisfactory, and the Japanese in Burma having patched up a separatist regime, are making the most of occupations. Territorial losses in 1943 are unimportant and Japan has plenty of raw materials. These two facts have not bitten deep into the general consciousness already and the Viceroy's speech in Calcutta promising little more than administrative efficiency after a spell of mis-government has made little impression. Some continue to hope for a conciliatory gesture if an agreement is reached as to the way out in the year of victory for Japan's Premier has spoken lately of the crucial test.

Interest in mixed fare is reflected in the advice to use barley with wheat. The rationing authority's advice is to the effect that barley is good for mixing and improves the quality. An announcement runs: Barley is a nutritive foodgrain and is a common ingredient of diet in Northern India. It has been found from local experiments that mixture of barley flour with wheat flour adds to the taste of chapattis and puris and baker's bread. Barley costs only 10 annas a pylee and mixed barley-wheat bread and chapattis are, therefore, cheaper than all-wheat products. The ideal proportions of wheat and barley for making chapattis and puris are 50:50; 66:34 and 75:25. The proportions for baker's bread are 66 2/3:33 1/3 or 75:25. As advertisement copy, the notice does not count for much; but it helps to bring out the need to make the most of available wheat supplies. Bombay has to import both wheat and rice and it is not easy to make the millets generally acceptable to consumers.

Another press note on crop purchase plans describes the intention to take only 10 per cent of the millet crop together with the surplus of certain districts in addition to 25 per cent of the entire rice crop. The Government does not seek to force sales by small cultivators. That is the assurance contained in the press note which states that only those having more than 25 Bengal maunds will be called upon to sell grain. Small ryots keeping food for their own use are safe, but in two districts, the minimum for exemption is

lower. Ceiling prices are not applicable only to Government purchases but to all grain bought and sold this season until the next kharif crop comes into the market the Government wants to keep prices steady. Price control is to be put into effect by using the device of purchase. The Bombay Government's procurement programme differs little from that adopted in Bengal. Purchases are not meant to exhaust normal reserves and the main idea is to keep down prices. It has been admitted that rice shortage is serious in Ratnagiri and the Provinces total supply of rice will require to be supplemented by seaborne imports from Sind this year.

Extensive changes in the Articles of Association of the Scindia Steam Navigation were proposed and approved at an extraordinary General Meeting. The usual petition for confirmation by the High Court has been submitted. The company intends to keep its control of the Bombay Steam and other companies. Leave to obtain control of air services or shipbuilding companies is sought through the change in article and the British shipowners' move to get into civil aviation is probably the real cause of the changes desired. Proposal to run a training ship figures in the list of objects specified in the Articles. A long advertisement appearing over the company's solicitor's name describes the many-sided and comprehensive nature of the changes required. The petition is to be heard on the original side this month as the petition, was presented in December.

At the Marwari Chamber's annual meeting on Monday last reference was made to the profiteer's prosperity. The new Viceroy's efforts to check the evil were welcomed by Mr. Shukla. Th new President, Mr. R. A. Podar independently outlined suggestions for dealing with inflation. Silver rupees in place of notes would create greater confidence ac-

cording to Mr. Podar. Marwaris were asked to modernise moneylending methods so as to help economic development. More suggestions against the curtailment of dearness allowances were provided in the survey of the economic changes of the year. The Marwari Chamber wants control of food prices in the interests of the poor. Women in North Bombay who have a list of concrete hardships agree and demand for control of milk and therefore of fodder prices. The black markets in charcoal and kerosene were among the items in the resolutions adopted at two meetings in Dadar.

The Southern Army is keen on salvage. The Army to-day is avoiding waste and using waste materials. In six months 4,099 cwt. of paper has been salvaged 1,911 cwt. of cardboard besides much rubber, metals and gunny bags. The Navy and the R. A. F. too are of an economic turn of mind. Salvage depots are self supporting and one depot ran itself by just getting the silver metal off tins opened. Old tins found a new use and the Army got containers for anti-mosquito cream saving Rs. 30,000 for the Government. The list of achievements is meant to knock out the story as to waste in barracks.

The cotton market is quite steady after a week of brisk trading in which the local bulls showed their mettle. The close of the year was unusual prices rushed up because little spot cotton was available. Anyway, prices are far above the minimum fixed by the Government, and cotton for future delivery appears to be in better demand. As the bullion market is shaping better, and the stock exchange starts off with an improved tone, no decline in prices can be expected. There is besides the fear that imports will be limited and the Punjab crop will be rather short.

The economists gathered at Walchandnagar near Poona asked for food imports. The opening speeches dwelt on the wartime problem of food shortage. The Policy Commit-

FOR THE YEAR 1942-43

Managing Director: **Dr. AMAL KUMAR ROY CHOWDHURY, M.D.**

"Consent of the Central Govt. has been obtained to the issue of a limited number of shares under the Defence of India Rule 94-A. It must be distinctly understood that in giving this consent the Govt. of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the Statements made or opinions expressed with regard to them."

South India

(From Our Correspondent)

Madras, January 4, 1944.

THE Twenty-Sixth session of the All-India Economic Conference was held here last week with Dr. B. V. Narayanswamy as President. In his welcome address Dr. A. Lakshmanaswami Mudaliar, Chairman of the Reception Committee, referred to the economic implications of the Atlantic Charter which outlines the policy of post-war reconstruction on a global basis and not on the basis of the demands of individual nations. He said that we cannot rest content on Charters, but must plan the future of our country right now. Indian Economists have been playing in active role in helping the capitalists, labour and the Government in drawing out schemes of postwar progress. They should give a correct lead to the country in evolving the most suitable postwar plan for India bearing in mind that the country is one unit. The President in his address on "Post-war Reconstruction for India" referred to the numerous economic problems confronting the nation at present and outlined the broad features of postwar reconstruction. Planning, he said, must be so designed as to facilitate the introduction of a socialistic new order in India. While the Central Government would be the best authority for drawing up plans, the Provinces and States alone should execute them. The progress made during the war should not be sacrificed and the transition from war to peace economy must be achieved with the least possible dislocation. The postwar plan should be so devised as to increase the national income several times the present level so that the vast masses of India can achieve higher standard of health, food, shelter, and education.

The Government of Madras have placed Mr. H. R. Dogra on special duty to study the problem of maintaining all main lines of communication in the Province and draw up a scheme for the proper upkeep of trunk roads, second class roads and marketing roads. He is expected to submit his proposals within three months, but his scheme would be taken up for execution only after the war. In view of the fact that the Vipan scheme drawn several years ago cannot be applied to post-war conditions, the recommendations of Mr. Dogra are bound to be more valuable. But the public are not yet aware of the actual scope of enquiry to be conducted by this officer. The "Hindu" in its editorial suggests that Mr. Dogra may probably look into the financial problems born of the unsatisfactory working of the Government road grants policy. After the loss of the tolls income the local bodies have found it extremely difficult to do justice to the roads in their jurisdiction and certainly the financial aspect of the road planning for Madras has to be revised and improved. A road plan is the first requisite for any scheme of industrial advancement of Madras, and with the extension of electricity services, rural roads are bound to play a vital role in agricultural development. It is expected that Madras would soon evolve a road plan best suited to develop her natural

resources and serve the needs of the agriculturists.

Postwar reconstruction of Burma is not the concern of Burmans only: the South Indian commercial community with its enormous stakes in Burma are anxious that their interests should in no way be jeopardised in future. The Government of India have already been addressed to assure that Indian interests would be fully safeguarded in Burma when reconquered. But though a formal assurance had been given the working of the Committees set up to draw up schemes relating to the administration of postwar Burma has created a suspicion among the mercantile interests of India. As many as 27 reports seem to have been drawn up and while some European interests were consulted the Indian commercial community had been excluded. The South Indian Chamber of Commerce has taken up the question and has protested to the Government of Burma against the way in which Indian interests have been led down. If satisfactory safeguards to Indian interests are not provided in the postwar plan for Burma the Indian commercial bodies will accuse the Secretary

of State for India of tolerating discrimination against legitimate Indian interests.

With the usual efficiency the Madras Government authorities have proceeded with the stamping of piecegoods manufactured prior to August 1, 1943 and it is expected that the work will be completed in a short time. The fees for the purpose, being 10 per cent of the ex-mill price is to be paid into the local treasury and not to the Reserve Bank of India as at first directed. The problem of stamping unmarked goods so far as the Madras Government is concerned is not a big one as it is reported that only 10 per cent of such stocks remain unsold and that the total stocks of unstamped varieties were relatively small compared to the provinces of Calcutta and Bombay. A deputation of piecegoods merchants waited on the local Textile Commissioner and pointed out that they were unduly penalised as an extension of the time-limit till the Pongal season was over would have enabled them to mark all the unstamped varieties and avoid unnecessary loss due to the stamping fees which are considered to be rather high. During the Pongal season the poor man usually lays in his requirements for the year.

Young Men of Steel

"What greater gift or better can we offer to the state than if we teach and train up youth?"

"Cicero"

The continuance and development of our Industry is one of the most important tasks of our Management.

Men of practical experience guide the youth of Jamshedpur along the paths of knowledge, assuring a constant flow of recruits for the future industrial army of India.

TATA STEEL

ISSUED BY THE TATA IRON & STEEL CO. LTD. HEAD SALES OFFICE—100A, CLIVE STREET, CALCUTTA

(Continued from page 19)

More than one generation of Indian investors has manifested complete and justifiable confidence in the name of the managing firm. Of the links with Jardine, Matheson, and therefore with China's trade and navigation, there is little need to speak. For Calcutta the Jardine, Skinner firm symbolises the manufacture of jute, and the shares of the four companies under the Jardine, Skinner management have been indisputably market leaders. That goes for much when the market is, to all appearances, on the brink of a new boom. Of the shipping and insurance interests, the agencies acquired and held, the links between East and West. There is less need to make mention than of the technical improvements in jute manufacture undertaken in the jute mills. The formal celebration has been missed for obvious reasons, but the event is of more than domestic significance, and for those who measure time by centuries, the stability of one merchant house, with all that it has meant for Indo-British relations, has abiding significance.

In the Honours list published on New Year day there were some notable names, and men outside the Services received appropriate recognition. At least two stand out for reasons connected with services to War and Industry. Knighthoods have been bestowed on Mr. K. J. Nicolson and Mr. E. M. Souter. Both have reinforced a Department that was, or is, apt to plough a lonely furrow. Sir Kenneth Nicolson was long familiar alike to the world of business and the world of sport, and if it may be said that the honour was predestined, satisfaction is not less for the addition to the list of Knights Bachelor. The inclusion of the new Governor of the Reserve Bank is in line with precedent, as Sir James Taylor and Sir Manilal Nanavati were both knighted in office. In Saturday's list, the Press too could claim one of its few knights as Sir U. N. Sen received another mark of His Majesty's pleasure.

"EAVESDROPPER."

(Continued from page 5)

too in Germany. German investors must be having a bleaker time after the transfer of control to the Gestapo. Evidently there was a flight from the mark into shares and speculation has to be checked. But the value of shares must be doubtful when the air raids are growing in scope and intensity.

The entry of Russian troops into Poland brings in the threat of invasion from the east apart from the previous threat of invasion from the west. The changes in Europe make any assumption as to a speedy recovery unwise and how Yugoslavia or Greece will fare after the war cannot be indicated. Little States attached to big States seem to have a chance of survival, and an article in the Observer suggests that Norway would be in the British or sterling group instead of looking to a revival of the Oslo pact in another form. The changes to come may put Finland, too, outside the old Scandinavian scheme, and some may argue that Russia's plans for postwar trade, etc., will be more important if Poland and the Balkans go into the Russian sphere of influence. Poland's industrial output was small, but Lodz developed a textile industry of its own, and the current view that a smaller, subservient Poland is highly likely means that after the war Poland will have less coal to sell and Europe will have to get British coal. There is, of course, more

scope for Indian coal in most markets then, and high politics seems to lie behind the local coal share boom.

(Continued from page 21)

tee's report went over the whole ground and its views have been accepted one by one. Professor Gadgil, however, mentioned that the grow more food drive must be intensive. There must be real incentive and the C. P. example of rewards for putting land under food crops in place of commercial crops was held up as desirable. Advisory boards are not enough to make price control, said some, while blanket control was wanted by another. Professor Gyan Chand showed marked scepticism as to the anti-inflationary measures in force. Some here really like the idea of prize bonds which come in the place of the Goa lottery. What Mr. Walchand Hirachand has done for a thriving colony showed that agricultural development is best undertaken by a businessman and Sir Manilal Nanavati called Walchandnagar an object lesson in agricultural economy.

Brave Old Order

A Western Senator outlining his ideas as to the post-war world in a Denver newspaper declared that a new Trinity of Powers will dominate the globe. The Balkans would be shared by Russia and Britain but Germany would be in the Russian sphere of influence like France. It may be geopolitics or extra-realistic thinking that puts all the four European

neutrals outside the allotted sphere. The Senator predicted that Russia will dominate the Baltic States, the N. Balkan States, Poland, Czechoslovakia, Germany and France. Britain will dominate Norway, Holland and Belgium including the latter's colonies and also the Dark Continent and the Mediterranean States of Spain, Italy and Greece. The position of Sweden and Portugal as also of Turkey can only be conjectured. The prediction accords with Field Marshal Smuts' outline

in London of the post-war world in denying the position of a great Power to France. An adjustment of interests between Communist Russia and Britain is forecast. If the Low Countries are duly under British control, Russian ascendancy in France would be neutralised; but the adjustment of interests is the same thing as the old discredited balance of power, Europe being divided into two camps united by a treaty that is barely two years old. Yet to many it will appear that events in Europe justify the predictions and the choice is therefore simplified for neutrals.

The outline is more than an answer to the Nazis' new order because the global war brings the Far East into all the new schemes. Instead of China being the fourth Great Power as imagined by some, she is allotted the position of a field for investment and development. According to Senator Johnson there is to be a sort of joint overlordship in the Orient after Japan is humbled. The plan hardly accords with the presumption that the Japanese Emperor is to enjoy another restoration after the modern Shogunate passes away. It does not obviously accord with the doctrine of equality for China, and the joint overlordship, if it were to cover South-East Asia, would cut across the new theory as to India's position at the head of the Indian Ocean. The Administration, of course, will disclaim the theory that the U.S.A. secretly hopes to develop commercial imperialism on a gigantic scale, but a doubt will linger in view of the discussions following the five Senators' tour. Fortunately the Senates' resolution as to post-war collaboration may be set up as an obstacle to commercial imperialism though there will be little doubt as to the kind of export drive which America will launch after the war. It is noteworthy that the Senator left the New World, lapped in the Majesty of the Monroe Doctrine, outside the spheres of influence. The U.S.A. is to brook no rivalry in the hemisphere, and this may be taken as proved by the circular relating to the displacement of one regime by another in Latin America.

Vagueness as to the position of the Dominions and the dependent Empire may be intentional; but the Orient includes the colonies of Holland and how the Big Three are going to exercise joint overlordship when the devolution of Dutch authority has taken place is a problem for post-war politicians, not necessarily Senators. Some prejudice may be engendered in neutral countries by the omission of States like Denmark and Finland. The latter still looks to Scandinavia as a Lutheran Magyar nation cannot look to Hungary. How China would benefit under a Three-Power treaty in place of a Nine-Power treaty need not be worked out in detail but some may dwell on the necessity for federal unions when the seven great Powers are reduced to three.

THE BIHAR MICA INDUSTRY

Facts you should know

THE world's most important deposit of mica is in Bihar and gives direct employment to 1½ lakhs of workers, with a further 3½ lakhs of dependents.

Mica mining in Bihar is, therefore, one of India's most important industries, based on one of India's greatest national assets.

The Bihar mica mining industry, which dates back to the 1870's, has not progressed as it should, due largely to an extensive and ever growing trade in illicit mica.

From time to time during the past 40 years the question has arisen of preserving the valuable Bihar micafield, and its important mica industry, from the ultimate destruction with which it is threatened by the illicit mica trade. But nothing has been accomplished.

Whenever this question arises, it encounters strong opposition and causes great agitation amongst those who benefit directly from the trade in illicit mica. Irresponsible statements are then made in an effort to divert attention from the necessity to preserve this great national asset, and protect its deep mining industry for the benefit of its 5 lakhs of Bihari dependents.

The legitimate mica miners believe it to be their duty to make

known to the people of Bihar the facts relating to this industry.

Recently, for example, handbills have been circulating in the micafield irresponsibly accusing members of the Kodarma Mica Mining Association of curtailing output in order to compel Government to impose "still more rigorous control over the industry", and of "threatening 50,000 Mica Majdoor with unemployment".

Both these statements are incorrect.

Output has been seriously affected by the exit from the deep mechanised mines, whence the bulk of the production normally comes, of a large volume of labour attracted by big profits in the illicit mica trade. Such labour is, of course, uneconomically employed, to the detriment both of the war effort and of the factory labour, which depends on mines output for employment, now and in the future.

The mica industry does not depend for its existence on mica dealers, but on mica producers. Anything that ensures the proper operation of the mines automatically means more and better employment for factory labour

The responsible mica producers do not want, for its own sake, more Government control of the industry. What they do seek, however, is the protection of their property and their elementary rights as traders, who, through good times and bad, have developed the industry to its present important place in the life of Bihar and the war effort of the United Nations

Resume of Commodity Markets

THERE are no important developments in the commodity markets during the past week. There is a rise in prices in the silver and cotton markets due to special reasons. The jute market has been slightly firmer with the smaller arrivals from up-country centres and the hopes about a higher level of consumption in 1944. The jute manufactures market has been uninteresting while the piecegoods market has been rather quiet with dealers worried about the disposal of unstamped varieties.

The outlook for jute is not yet clear but there is a feeling that the troubles of the industry are over and that there will be a higher level of production throughout the year. There is no justification for this view as it is still pointed out in competent quarters that, without any appreciable improvement in the coal situation, it cannot be expected that mills will be able to increase production appreciably. It has also been suggested that the Indian Jute Mills Association might think of a new plant of working to bring about a higher level of production by concentrating to a greater extent on the electrically driven mills. There is opposition to this scheme from the steam-driven units. Whether a compromise will be reached between the conflicting claims remains to be seen. Apart from the difficulty in finding a solution to the present troubles of the industry, there is the question of acreage under the jute crop for the next season and the uncertainty due to the demand from the U.N.R.R.A., if the war in the West comes to an end this year. 1944 is generally believed to be the victory year. Whether the termination of hostilities in the West comes about in the current year or not, does not very much affect the question of acreage under the jute crop for the 1944-45 season. Even for a probable increase in consumption early in the year 1945 plans have to be made from now, the new crop for 1945-46 season being available only in September 1945. It can certainly be expected that at the meeting of the provincial and Central Government representatives in New Delhi, it would be agreed that provision would have to be made for an increase in demand for rehabilitation purposes and that an increase in the acreage under jute crop would have to be made. There is thus great significance in the statement that has appeared in the press that the question of whether the jute crop for the next season should be regulated or not will be the subject of discussion in the New Delhi conference.

The latest rice forecast shows that a larger area has been brought under cultivation. Whether the increase in the area has been at the expense of jute cannot be said as the winter crop might be sown after jute and be freed again in time for sowings in February and March. There is the other question. How far the area under jute cultivation has been diverted to the growth of rice? In any case, without efforts on the part of the authorities, it cannot be expected that it would be possible to bring about an appreciable increase in the acreage under jute for the next season. If it is agreed that efforts should be made to raise a larger crop, it should be made sure that the ryot gets a fair price for his crop in relation to other commodities. The Government of Bengal are anxious that this aspect of the question should be satisfactorily settled before any agreement is reached in

regard to the increase in acreage. It is only to be hoped that the several points of view will be taken into consideration and a satisfactory arrangement concluded.

It was pointed out last week that it would be illegal to sell unstamped varieties after the end of 1943 and that dealers would be required to seal all their stocks and submit returns to the Provincial Textile Commissioner. According to the *communiqué* that was issued a few days back, cloth manufactured prior to August 1943, is to be restamped and a fee for that purpose will be levied. The *communiqué* was published in full in these columns last week. The Provincial authorities have taken the necessary action. In Bombay, large stocks, which were still on role, were seized by the police. In Bengal, dealers have been asked to furnish returns before the 10th inst. It is said that stamping operations will be completed before the third week of this month. In Madras restamping has already started and it is expected that there will not be much of delay in marketing. The volume of goods involved, however, is very small as it is said that only 10 per cent remains unsold.

The Rice Conference opened in New Delhi on Thursday and it appears that no definite solution has yet been found to the various problems confronting the representatives of both the Centre and the Provinces. Sub-committees have been appointed to consider the various questions and it is said that the recommendations will be placed before the plenary session of the Conference for approval. As far as possible efforts will be made to eliminate or reduce the difference in prices between one province and another. In view of the difference in the quality of rice supplied and the claims for higher prices by individual provinces it is felt that it will not be possible to enforce a uniform price for the whole of India.

A 12½ per cent decrease in the area under rape and mustard seed and 8 per cent fall in the area under linseed compared with the 1942-43 acreage is estimated in 1943-44 according to the first all-India forecast of the winter oilseeds crop. The area under rape and mustard seed in 1943-44 is placed at 3,038,000 acres and that under linseed at 2,370,000 acres. The present condition of both crops is reported to be fairly good on the whole.

At the auctions of tea for consumption in India 12,000 packages of black and green teas were offered. The market was firm with common teas in great demand. Medium sorts were fairly steady. Good and medium broken teas were dearer while Darjeeling teas were keenly bid for and average prices were considerably higher than those at the last auctions.

(Continued from page 3)

We had occasion to point out earlier that there was need for an increase in the capital of the prominent banks to bring it in line with the higher level of deposits. It has just been announced that the Bank of India is proposing to increase its authorised and subscribed capital from Rs. 2 crores to Rs. 3 crores and its paid-up capital from

Rs. 1 crore to Rs. 1.5 crores. One lakh ordinary shares of Rs. 100 each are to be newly created and offered to shareholders at a premium of Rs. 50 per share. The new shares will be Rs. 50 paid-up. The premium as a result of this new issue will thus be Rs. 50 lakhs. The capital and reserves as a result of the new issue will be strengthened to the extent of Rs. 1 crore.

The exchange market has been steady.

Banks are sellers of T.T. at 1s. 5 31/32d. for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 322¼.

Interbank call money remains unchanged at ½ per cent.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, Jan. 6.

MILLS and the Jute Industry generally will look back on the year just closed as one of many and varied vicissitudes, most of which were met and overcome with greater or less success, though at very material cost or financial sacrifice. Requisitioning of mill premises has been met by introducing double shift working in other neighbouring units, but the requisitioning of godown accommodation cannot be overcome and has been the cause of much inconvenience which is not likely to diminish. Probably the worst and at the same time perhaps the least expected problem has been the shortage of coal which has persisted for the past six months. While there has been some improvement in the volume of supplies recently, there is no guarantee that we are yet out of the wood in this respect, and in the matter of quality, arrivals still leave much to be desired. It is interesting to note a proposal to establish a Fuel Research station at Dhanbad to assist in the grading of coal, though it should not require the services of an expert in research to eliminate the rocks and other rubbish which at present clutter up valuable transport space by masquerading as coal.

Distribution of the coal arrivals at the depot has been much hampered of late by shortage of labour and various suggestions have been mooted to overcome this difficulty. Quite a number of mills could comfortably accommodate half a rake of wagons at a time in their compounds, and rather than have wagons delayed at the dump, it would seem sensible to divert them direct into such mill compounds where they could be unloaded by mill coolie labour. In most cases the quantity thus dumped could be allotted to several mills in the same group and the distribution attended to by the receiving mill. In this connection, it seems unfortunate that the down-river depot was abandoned. This was served by the B.N.R. thus spreading the haulage, and it was much more conveniently situated for mills situated below Howrah. Much time is wasted and boat space occupied for prolonged periods by the down-river mills having to be served from the up-river depot. It is understood that wagons would be available on the B.N.R. and also that coal is available at collieries served by that railway. As the labour situation at the collieries is reported to be still far from normal and as adequacy of transport is an uncertain factor, it would seem advantageous to the mills to have this second string by reopening the down-river depot. As the position stands at present there seems a fair chance of mills being able to run continuously this month without having to close down for a week as in the recent past. But they are running on no reserves at all—simply hand to mouth—and any irregularity in the coal supply means shutting down. It must be remembered too that mills are actually burning probably something like 25 per cent more than their normal consumption at present owing to the very inferior quality being supplied. The delivery of decent quality coal would conserve transport and handling, and be more economical in every way.

Stocks of manufactured goods in mill godowns at the end of December show very

little variation, except in detail, from those at the end of November. The total tonnage of goods at the year's end was 221,576, a reduction of only 431 tons since 30th November. Production figures not being yet available, it is impossible to comment on the general situation, but there has been quite a material turn-over in the stock position as regards the relative quantities of Hessians and Heavy Goods. Commercial Hessians show an increase of nearly 234 lakh yards in stock, or 6,053 tons, and this is slightly more than balanced by a reduction of Heavy Goods by 119 lakhs yards, or 6,192 tons. Overhead goods on Government account are almost static, though here again Sandbags and Serim cloth are reduced by nearly 3,000 tons while other descriptions of Hessian cloth, bags and canvas are up by about the same amount. Sacking cloth and bags being virtually unchanged. In the aggregate, Hessian stocks are up by 243 lakhs yards or 5,759 tons while Sacking stocks are down by 123 lakhs yards or 6,190 tons, leaving a net reduction of 431 tons on the month.

The quota to be allotted to jute acreage in the coming season will be discussed between the Bengal Government and the Central Government at Delhi on 10th January and it is to be hoped that the balance will be fairly adjusted between the claims of "grow more food" on the one hand and what constitutes the daily bread of several hundred thousand workers in the various ramifications of the Jute Industry on the other. One would like to be convinced that every acre of fallow land is devoted to food cultivation before any further reduction is effected in the jute acreage. In the long view, there is no doubt that more intensive and scientific cultivation would go far to make Bengal self-supporting in foodstuffs and provide a large saleable balance of cash crops, at the same time providing the cultivator with the means for a far higher standard of living. This aspect of the situation is now receiving much more of the attention it deserves, and it is to be hoped that it will not be allowed to fade out in more prosperous times like the spectre of famine which has evoked it.

Another Jute substitute, a fibre prepared from *Urena lobata* grown in Dominica, British West Indies, is reported on in the current issue of the Bulletin of the Indian Central Jute Committee. A leading firm of fibre merchants (presumably in the U.K.) has assigned to it a higher value than jute of Calcutta First Marks and considers it a good substitute for the best grade of Bengal jute. No mention however is made of the cost of production and whether that would be competitive. A very learned article on "The Genetics of Corchorus Jute" is, we fear, much above the heads of 99 out of 100 readers of the Bulletin, and we venture to suggest that the tabulation of a series of tests of different types of jute fibre carried out by the Technological Research section of the I.C.J.C. would have been much more informative and intelligible to the average reader if the significance of the figures in the last two columns had been indicated in lay language. With regard to these tests, it would be interesting to know whether any steps were taken to confirm that the samples tested actually emanated from the districts they were supposed to represent. Without a very definite guarantee of where the jute was really grown, the tests cannot but be inconclusive. And the mere name of a certain

shipping station on a bale ticket is no guarantee that the jute under the ticket originated within a hundred miles of the shipping station.

We commented recently on the report of the Belakoba Co-operative Multi-purpose (Jute Sale) Society, Ltd., and the current Bulletin contains the report of a similarly sonorously entitled concern at Sarishabari. The results appear to be equally futile and ineffective, 97 members having sold to the Society 1,884 maunds of jute during the season—one-third of its total purchase. The report does not quote the total membership of the Society, so it is not possible to know what proportion of the membership availed themselves of its facilities. But the costs of management, which again were defrayed by the I.C.J.C., apparently amounted to eight annas per maund on the quantity handled. While the expense of running these concerns is small, it seems very questionable if it is worth persevering with them unless a very much larger number of cultivators can be induced to take interest.

The Export Jute market has shown more activity than for some time past, and prices show an all-round advance. Dundee Daisee sold from Rs. 70 up to Rs. 74 for shipment and up to Rs. 76 to Mills. Short Group Daisee for shipment sold at Rs. 80-8 to Rs. 85, and Dundee Daisee 4s at Rs. 62 to Rs. 66. Dundee Tossa 4s sold at Rs. 73 up to Rs. 77 with Short Group reported at Rs. 89. In addition Mills bought to some extent of Firsts at Rs. 80, Lightnings at Rs. 74 and Hearts at from Rs. 62 to Rs. 66. Mills have also been buyers of low grade stuff which is now in very short supply. N.C. Cuttings have sold up to Rs. 40 and M.C. to Rs. 39.

Loose Jute has also shown a hardening tendency with mills moderate buyers. European packing was reported at Rs. 15-12 and Rs. 12-12 Mids. and Bots., all districts, and Sellers now hold for even money. Good Indian Jat marks were reported at Rs. 16 and Rs. 13 for forward shipment. Supervised District Bottoms sold at Rs. 11-12 and Indian District at Rs. 11-8 with sellers now holding for four annas more. Indian District Tossa sold to Mills at Rs. 15-12 and Rs. 12-12, Mids. and Bots., while Balers paid up to Rs. 17-8 for European Tossa Mids., Rs. 17 for Indian Jat Tossa and Rs. 16-4 for Indian District Tossa Mids. Arrivals of jute into Calcutta during December are estimated at no more than 2,96,000 bales against 6,69,000 in December a year ago. Total arrivals for the first six months of the season are therefore 28,45,000 B/s against 35,39,000 B/s for the same period last year. Rail arrivals account for most of the falling off, being less than one-fourth of a year ago, though much jute is lying at uncountray stations awaiting shipment.

The Fabrics market has ruled very steady and quotations, such as were below maximum, are generally marked up on the week. Mills are reluctant sellers for the near months, being behind with existing orders and having had instructions to give priority to Indian Government orders. Forward of March there are few, if any buyers, as with everything at ceiling rates there is no point in booking too far ahead, the argument being that prices can't go any higher, while they might be lower. Nine porter Hessians quote Rs. 21-4 any position and while 10 oz. is still available at Rs. 28-4 basis, 10½ oz. has touched ceiling at Rs. 28-8. Some Liverpool Twills sold at the ceiling rate of Rs. 75 while "B" Twill continue to be deat in by the Bazar at around Rs. 67, Rs. 67-4.

JUTE

Calcutta, January 6.

THE raw jute market has been definitely steadier during the past week. The firmness of upcountry markets and the smallness of arrivals as well as reports that efforts will be made to increase consumption as far as possible, have been mainly responsible for the slight increase in prices in the loose jute section. Mills have bought larger quantities of jute during the holidays but they are not anxious buyers at the higher levels and are not prepared to concede the advance in prices asked for by holders. Sellers for their part cannot operate freely owing to the difficulty in covering their purchases in the mofussil. As such, there is a tendency to await further developments. A conference of central and provincial government representatives is being held in New Delhi to consider the problems affecting the jute trade and jute industry. The main subject for discussion before the Conference will be whether the acreage to be sown for jute this year should be regulated, and if so, what the area should be. The Bengal Government are of the opinion that the acreage should be such that the requirements of the manufacturers is assured at the same time getting a fair price to the grower for his crop.

In the loose jute section business passing has been on a large scale though in the past two days mills are not taking a keen interest in the market owing to the higher prices demanded by sellers. There is still good enquiry for Tossa varieties by balers and Indian Jat and District Tossa Middles and Bottoms have been done up to Rs. 17 and Rs. 16-4 earlier in the week. Indian Jat Middles and Bottoms were done at Rs. 15-4 and Rs. 12-4 per maund. Sellers were asking 4 annas more towards the close.

In the pucca bales section not much of business has been reported for export though quotations are higher in sympathy with the loose jute section Dundee Daisee 2/3 were nearly 4 points higher at Rs. 73 per bale. Lightnings were reported to have been purchased by mills at Rs. 69 and Cuttings upto Rs. 38 per bale.

JUTE MANUFACTURES

Calcutta, January 6.

The jute manufactures market has been fluctuating in narrow limits and quite steady conditions have been noticeable. There was a slightly easier feeling on the reports that an increase in production might affect the market. It is now pointed out, however, that any increase in production cannot appreciably affect market values as mills are very much behind deliveries and the increase in production will come in handy for them. 9 porters are quoting Rs. 21-4 for all positions while 11 porters ready are Rs. 28-3, January Rs. 28-2 and January/March Rs. 28-2.

In the heavy goods section, firm conditions have been noticeable. B. twills have improved to Rs. 67-8 on the placing of an order by the Government for B. Twills bags. Liverpool twills were Rs. 75 and Cornsacks Rs. 67-12.

GOLD

Calcutta, January 6.

The gold market has remained very steady and fluctuations in prices have been confined to very narrow limits. No appreciable change in prices is expected without a further lowering in the selling rate by the Reserve Bank. The jobbing by holders, referred to in the last two weeks, has resulted in the further narrowing of the discount rate for delivery over ready contract to 8 annas per tola. Gold ready is thus quoting Rs. 71-4 and delivery Rs. 70-12 against Rs. 71-12 and Rs. 70 last week.

SILVER

Calcutta, January 6.

The silver market has been very firm and a substantial rise in prices has been recorded. Forced covering and fresh buying, with a scarcity of supplies, have resulted in the quotations closing five points higher. Silver ready were Rs. 119-12 against Rs. 114-3 and forward Rs. 116-12 against Rs. 112-13. There has thus been a widening in the discount rate with a greater demand for ready. There is no change in the conditions in the London market, the quotation for both spot and forward being 23½d. In the Calcutta market, silver closed at Rs. 118-4. There is a rise of three points on balance.

COTTON

Calcutta, January 6.

With the strength of the bullion and the stock markets very firm conditions have been noticeable in the raw cotton market. It is said that mills are behind schedule in their purchasing programme and that, with the delay in the movement of crop, bulls are placed in a favourable position. Adverse weather conditions in the cotton-growing districts also have been responsible to a certain extent for the rise in prices during the last week. Trade estimates are very much lower than the figures given in the forecast. Jharilla January closed at Rs. 484-4 against Rs. 468-8, March Rs. 478-12 against Rs. 467-8 and May Rs. 478-12 against Rs. 468-12. It will thus be noted that there has been again a firming up in prices for the near positions and that the quotation for January contract is more than five points higher, what time they were level last week.

PIECEGOODS

Calcutta, January 6.

In the piecegoods market, easier conditions have been noticeable and business passing is on a very small scale. It was first pointed out that the sealing of unstamped varieties might result in a temporary shortage of goods in the market and that, dealers might take advantage of the situation to push up prices. It is now, however, said out that unstamped varieties duly stamped, will be on sale in the market in the last week of this month and there is therefore no apprehension of a shortage of supplies. Prices are lower and no important fluctuations are expected for some time.

Stock Markets to-day and to-morrow:

CHEERFUL OPENING FOR THE NEW YEAR

THE hope was expressed on the last occasion that the reopening in the stock markets in the New Year might prove to be active and that with the outlook for Indian industries as satisfactory as before and the large volume of surplus funds seeking investment the upward trend in prices could be maintained. It was pointed out at the same time that the victory year, 1944, might not prove to be quite smooth sailing for stock market operators as, if there were a termination of hostilities in the West, there would have to be a readjustment in values. The outlook for some industries might change with the changing conditions.

Trading on the Calcutta Stock Exchange in the last four days, however, suggests that operators are not unduly worried either about the prospects for the forthcoming Central Budget or the possibility of an adjustment in values as a result of important changes in the war situation in the latter half of the year. With very few profitable channels of investment there has been a diversion of attention to equities and all the surplus money is now finding its way into stock exchange securities. This necessarily means that the appreciation in values has taken place regardless of yield and the improvement in quotations for certain classes of shares has been more pronounced with favourable developments affecting them.

Thus, in this week, Coal shares have again been prominent. With the present mood of operators it does not appear that the upward movement has spent itself. There are reports that the position in regard to labour has considerably improved and that the efforts of the authorities to increase raisings might prove to be successful. The latest report that production at the works of the Tata Iron and Steel Company, Steel Corporation and Indian Iron and Steel Company will continue uninterrupted perhaps reflects the improvement in the situation. The jute industry also is reported to have received larger supplies in recent weeks. There are also the hopes about a liberal basis for excess profits tax assessment and the drive for exports of coal to the Middle West areas materialising. But with all these favourable developments, it cannot be definitely said whether the increase in raisings and prices will more than offset the increase in the cost of production and that companies will be able to earn such profits as to justify the present quotations. The sharp rise in prices that has taken

place in the last four weeks will be clearly evident from the table given below:

	6-12-43	3-1-44	6-1-44
	Rs. A.	Rs. A.	Rs. A.
Amalgamated	44 7 43 12 xd	46 4	
Bengal	552 0 581 0	595 0	
Burrakur	24 4 27 10	28 14	
Equitable	47 10 52 4	53 12	
Katras Jheriah	56 0 57 8	58 0	
New Beerbhoom	27 12 30 14	32 10	
Raneegunge	31 4 37 14	39 2	
West Jamuria	40 8 42 8	43 8	

On the basis of the last dividends Amalgamated gave a return of 4.3 percent, Bengal 3.7 percent, Burrakur 2.2 percent, New Beerbhoom 3.8 percent and West Jamuria 3.4 percent. It would thus appear that the prospects have been fully discounted.

The accounts of the Mahalaxmi Cotton Mills Limited for the year ended June, 1943 are now available. As forecast in these columns, the final dividend is Rs. 1-8 per share, which with the interim dividend of a similar amount already paid, makes Rs. 3 per share for the whole year against Rs. 1-8 per share for 1941-42. The net profit, after providing for depreciation, is Rs. 2,67,861 for 1942-43 against Rs. 94,942 for 1941-42 and Rs. 53,941 for 1940-41. The earnings would have made better showing but for the large distribution to shareholders of dhoties and sarees at concessional rates. A sum of Rs. 50,000 is provided for taxation and Rs. 17,120 for capital outlay written off. During the year a new issue of ordinary shares was made and was oversubscribed. The issue consisted of 25,203 shares, each share of Rs. 25 paid up, being issued at Rs. 28-8. The premium amount on this issue together with the amount available in respect of forfeited shares and other miscellaneous receipts have been utilised to write off the capital outlay account by Rs. 1,45,209.

At the quotation of Rs. 46-12 cum-dividend the yield on the shares works out to nearly 6.6 percent taxfree.

The accounts of the Burma Corporation Limited for the fifteen months ended September, 1942 have just been published. This is the first balance-sheet to be published since the properties of the company fell into enemy hands. The present accounts are only provisional and must await the decision of the shareholders until the Corporation is re-established in Burma and can convene a general meeting there. The directors hope

that it may then be possible to give some account of the condition of the properties.

The report now available gives an idea, as far as possible under present circumstances, of the financial position of the Company. The operating profit for 1942-43 has been utilised for improving the position of the balance-sheet and writing off such loss as a result of enemy occupation. Stores for Rs. 35,00,676 and metals and stocks in the process of treatment in Burma at date of evacuation at estimated market value of Rs. 85,84,000 have been completely written off. Even after all these losses the free net liquid assets of the company amount to Rs. 2.23 crores thus allowing for the break-up value of a share of Rs. 1-12. It is pointed out that the demolitions to the company's properties were carried out at the instruction of the Government and that it would be legitimate to expect that some compensation would be paid when the time arrives.

Operating profit Rs. 1,03,57,604 and Sundry Revenue Rs. 3,95,719 brought the total of gross profit to Rs. 1,07,53,323 (£806,499). After making provision for the items shown in the accounts, net profit carried to the Appropriation Account was Rs. 12,43,567. To this was added the balance brought forward from the previous year and after providing for the payment of dividend No. 36, there remained Rs. 22,56,604 (£169,245) to carry forward.

The Directors have thought it wise to create a "War Contingencies and Taxation Reserve" by transferring the balance in taxation and other reserves and credit balances amounting to Rs. 76,12,510 which owing to the cessation of active business are no longer specifically required. Rs. 56,00,000 have also been appropriated out of profits, being approximately the amount which would have been required for taxation if trading had not ceased. Thus Rs. 1,32,12,510 (£990,938) is reserved towards meeting any eventualities. It has also been thought proper to exclude off Floating Assets, such as Metal Stocks and Stores, which could not be removed from the properties and which may have been converted by the enemy to his own use, destroyed or otherwise rendered unserviceable. The amounts so written off, or excluded, are Rs. 35,00,676 (£262,551) in the case of stores and Rs. 85,84,000 (£643,800) in the case of Metal Stocks taken at their estimated market value.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 7.

VERY active conditions have been noticeable on the Calcutta Stock Exchange during the past week. The reopening after the long holidays was quite brisk though it is reported that there was no large accumulation of orders. There has been fresh buying. The immediate outlook is considered satisfactory. Developments in the war situation also have been encouraging for the markets.

The feature of the week is again provided by the Coal section. Popular shares were marked higher on reports regarding an increase in raisings at the mines and an improvement in the conditions of labour. The Jute section also came in for some buying and a rise of two to three points was recorded. In the Engineering section firmer conditions have been noticeable in sympathy with coal and jute shares while in the Sugar section Carew & Co., have been the feature of the week with a rise of two points to Rs. 28-15 ex-dividend. The undertone is generally firm and it is expected that, given the continuance of the present conditions, the upward trend will be maintained.

The gilt-edged securities section also is firmer and 3½ percent paper is at the highest level for some time, nearly one point higher at Rs. 99. Terminable loans are not very much higher. 3 percent 1963-65 were in good request and done up to Rs. 99; 3 percent Defence bonds 1949-52 were Rs. 100-10, 3 percent 1953-55 Rs. 99-10, 4 percent 1960-70 Rs. 112-12 and 5 percent 1945-55 Rs. 105-11. Among Provincial loans, 5 percent U. P. 1944 were steady at Rs. 101-12. Easy conditions have been noticeable in the money market and there has been a decline in the average discount rate to 9 annas percent per annum from 11 annas percent per annum last week.

The only transaction recorded in Public Bodies Debentures was in 3¼ percent Howrah Bridge at Rs. 99. There were no sellers either for industrial or public bodies debentures and business is difficult of execution. First-class preference shares also are scarce and there is a hunt for the regular dividend paying shares. Among jute mill preference shares, Empire were Rs. 166-8, Howrah Rs. 170-8, Calcutta Jute Rs. 148 and Fort William Rs. 181. Hukumchand changed hands at Rs. 175. Among others, Alkali and Chemical were unchanged at Rs. 132, while Steel Corporation were quite steady at Rs. 130-8. Kumardhubi Engineering preferences were Rs. 125 ex-rights and Indo-Burma Petroleum Rs. 113-8.

Bank shares have been active with Bharat Bank being done up to Rs. 122-8. Hind Bank were at a premium of Rs. 6-8. Imperial Bank fully paid were Rs. 1,950 and contributors Rs. 497-8. Reserve Bank were higher at Rs. 128-8 while United Commercial Bank were fluctuating around Rs. 22-8 premium.

The Cotton section has remained steady though no important rise in prices has been recorded. Bengal-Nagpur were the only exception with the quotation higher at Rs. 38-4. Cawnpore Textiles were Rs. 13-12, Elgin Rs. 89, New Victoria Rs. 10-6 ex-dividend and Kesoram Rs. 15-10. Mahalaxmi were

Rs. 46-12, Muir Mills Rs. 275 and Sri Radheyshyam Rs. 18-8.

The Coal section, as pointed out above, has been very active and nearly all the shares have been marked higher. Amalgamated were Rs. 46-4 against Rs. 43-8 earlier in the week, Bengal Rs. 595 against Rs. 575, Bokaro & Ramgur Rs. 33-8 against 32, Burrakur Rs. 28-14 against Rs. 27, Central Kurkend Rs. 23-12 against Rs. 20-2, Equitable Rs. 53-12 against Rs. 51-14, Katras Jherriah Rs. 58 against Rs. 57-8, New Beerbhoom Rs. 32-10 against Rs. 31-5 and Raneegeunge Rs. 39-2 against Rs. 37-2. Samla were Rs. 6-4, South Karanpura Rs. 10-10 and Talcher Rs. 6-12. West Jamuria were Rs. 43-8 against Rs. 41-15.

The Jute section has been firmer on reports of improvement in the coal situation and the hope that the new plan of working might result in an increase in companies' earnings. Howrah are nearly three points higher at Rs. 66-12. Agarpara were Rs. 27-4, Anglo-India Rs. 408, Birla Rs. 45-4, Fort Gloster Rs. 732 and Gourepore Rs. 839. The bigger-priced shares are ten to fifteen points higher, National were Rs. 30-6, Megna Rs. 86 and Nuddea Rs. 115. The improvement in the share of the electrically-driven units is more pronounced than those of the steam-driven units. Rameswara were Rs. 16-7, Soorah Rs. 15-8 and Presidency Rs. 7-4.

In the Engineering section, Indian Iron were 1½ points higher at Rs. 36-2 on reports that a satisfactory interim dividend for the year ending March, 1944 will be declared. Steel Corporation are higher at Rs. 27-14, Arthur Butler have jumped to Rs. 20-8 from Rs. 17-12 while Braithwaite were Rs. 10-6 and Burn & Co. Rs. 381. Bhartia Electric Steel also are more than a point higher at Rs. 13. Jessop & Co., were Rs. 21-8, Kumardhubi Engineering Rs. 9-10 and Saran Engineering Rs. 9-10.

Sugar shares have not been much enquired for but a slight rise in prices has been recorded. Carew & Co., being done up to Rs. 28-14 ex-dividend. Cawnpore were Rs. 44, Murree Brewery Rs. 23-10 and New Savan Rs. 22-12. Ramnagar Cane & Sugar were unchanged at Rs. 13-8 while U. P. Sugar were in great demand at Rs. 37-10, a rise of nearly 3 points on balance. Samastipore were Rs. 20-10 and Darbhanga Sugar Rs. 35-14 ex-dividend.

Tea shares have been neglected and quotations are only around last levels. Dimakusi were crossed at Rs. 48-10, Sapoi were Rs. 20-8, New Terai Rs. 28-2 and Killing Valley Rs. 28-4.

In the miscellaneous section, Aluminium Corporation were Rs. 21 while Calcutta Ice were steady at Rs. 16-14 and Bararee Coke at Rs. 32. B. I. Corporation were unchanged at Rs. 6-9; Great Eastern Hotel came in for attention at Rs. 283. Rohtas Industries were Rs. 36, Northern India Oil Rs. 22-4 and Assam Saw Rs. 5-8. Burma Corporation were done at Rs. 3-15. Indian Copper were in good request and were done up to Rs. 3-1, a rise of nearly 4 annas. Karanpura Development encountered good buying and there is a rise of four points to Rs. 24-4. Rhodesia Copper were Rs. 2-11. Among paper shares, India Paper Pulp were Rs. 2-10. Titaghur Paper, on the publication of accounts, were done up to Rs. 27-12.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, January 6.

The New Year found the local Stock Exchange in a very buoyant mood with all sections taking part in an alround advance. Conditions resembling a boom prevailed in the Textiles Section on the very first day itself. Bombay Dyeing which closed previously at Rs. 1,970 were quoted as high as Rs. 2,025. Other shares in this section also met with keen enquiry. The continued absence of enemy air raids and the easy money conditions attracted a large number of investors to the Stock Exchange with the result the market was lively with activity. Though demand for shares was fairly widespread, Mill shares were in the forefront. Though Steels also made some headway the improvement was by no means sustained. There are rumours here that Tatas may decide to close down for a stated period or for a few days at regular intervals to help release coal to other industries. This is probably the reason why Tata Deferreds were not able to show much advance. However, a better feeling prevailed today, and Tata Deferreds closed at Rs. 1,962-8. Bank Shares were in good request. The gilt edged market was extremely firm with 3½% Government Paper quoting at Rs. 98-15. Though the market opened firm, it is very difficult to define the trend. As a matter of fact, while there is no lack of buying enquiry there is an influential section whose view seems to be that the time is not yet ripe for unfettered buying. What with the threat of air raids on Eastern India still remaining a possibility and the impending budget, it is rather unsound, in the view of some, to enter into commitments at this stage. Such an attitude was responsible for the profit-taking operations indulged in by some of the operators. This has resulted in reducing the gains and the market as a whole has firmly withstood the effects of these and similar transactions.

Textiles.

Mill shares met with keen buying enquiry on the opening day itself. Investors have once more turned their attention to their favourite shares in this section as it is believed that cotton mills have another year of prosperity before them. Bombay Dyeing have gone up by nearly 70 points in the course of three days. But for the intervention of profit-taking at higher levels the closing rate would have been even higher. The advance in the section was not limited to the usual speculative counters only but all the shares participated in the general increase. Century were Rs. 983; Gokak Rs. 363; Kohinoor Rs. 640; Phoenix Rs. 765; Simplex Rs. 290; and Svadeshi Rs. 615.

Though Steel shares also showed some improvement in sympathy with Textiles the liveliness that was noticed in the Textiles section was absent. Renewed buying enquiry today however has sent up prices considerably and Tata Defds. closed at Rs. 1962-8. Tata Steel (Ord.) were Rs. 398 while Indian Iron were quoting around Rs. 35-14.

In the miscellaneous section there was no outstanding development to report. Steady conditions prevail with prices quoting around previous levels. Alcock Ashdown were Rs. 585 and Premier Construction were done at Rs. 236. Among Hydro-Electric shares Tata Power were Rs. 1,950, Andhra Valley Rs. 1,902-8 and Tata Hydro, Rs. 202. Bombay Steam were Rs. 665, Shrivajpur Syndicate Rs. 79 and A. C. C. were Rs. 231-4.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 3rd Jan., to 5th Jan., 1944 both days inclusive)

GOVERNMENT SECURITIES:

3 per cent Defence Loan (1949-52):—(3rd) 100-10 s.l., 100-10; (4th) 100-12, 101-14 s.l.; (5th) 100-8, 100-10, 100-15, 101 s.l.
3 per cent Defence Bonds (1946):—(4th) 102 s.o.l., 102-6 s.l.
3 per cent Loan (1951-54):—(3rd) 100-1 s.l.
3 per cent Loan (1953-55):—(4th) 99-12 s.l., 99-12, 99-13, 99-14; (5th) 99-13 s.l.
3 per cent Loan (1963-65):—(3rd) 98-8 s.l.
3½ per cent Govt. Paper:—(3rd) 97-10, 97-14 s.l.s., 97-12, 97-15, 98; (4th) 98-1 (98-2, 98-4, 98-10 s.l.s.), 98-8, 98-9, 98-10; (5th) 98-12 (98-12, 99-4 s.l.s.), 99, 98-13, 98-15.
4 per cent Loan (1960-70):—(5th) 112-5, 112-12.
3½ per cent Loan (1947-50):—(4th) 103-5, 103-7.
5 per cent Loan (1945-55):—(4th) 105-11 s.l.; (5th) 105-14 s.l., 105-11.

THE BANK OF INDIA LIMITED.**NOTICE.**

The Directors have decided to recommend to the Shareholders that the Capital of the Bank be increased to Rs. 3,00,00,000 with Rs. 1,50,00,000 paid up thereon by the offer to existing shareholders of one new share of Rs. 100 with Rs. 50 paid up thereon in respect of every two shares held, at Rs. 50 per share premium. The sanction of the Government of India has already been obtained to the proposed increase of capital and this announcement is of a preliminary nature only.

By Order of the Board.
A. C. CLARKE,
Manager.

Bombay,
31-12-1943.

MAHALAXMI COTTON MILLS LTD.**NOTICE**

NOTICE is hereby given that the twenty-first Ordinary General Meeting of the shareholders of the Mahalaxmi Cotton Mills Ltd. will be held on Saturday the 22nd January, 1944 at 3-0 p.m. at the Registered Office of the Company at 15, Clive Street (2nd floor), Calcutta to transact the following business:—

- (1) To receive and adopt the Directors Report, Audited Balance Sheet and Profit and Loss Account for the year ending 30th June, 1943
- (2) To confirm the payment of 'ad interim' dividend which was paid on and after 15th July, 1943, and to declare a final dividend for the year ending 30th June, 1943
- (3) To elect a Director in place of Mr. S. R. Ray Choudhury, who retires and is eligible for re election.
- (4) To elect a Director in place of Mr. Bahadur W. C. Dey Biswas who retires and is eligible for re election.
- (5) To appoint auditors for the current year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 15th to 27th January, 1944, both days inclusive.

By Order of the Board.
H. DATTA & SONS LTD.,
Managing Agents.

(Continued from page 29)

Sometime back I referred to the possibility of an increase in the paid-up capital of prominent banks in this country. The Indian Bank was the first to come out with an offer to shareholders for an increase in the paid-up capital. The new shares of Rs. 100 fully paid-up were issued at a premium of Rs. 137-8 and the shareholders were entitled to subscribe to one share for every five shares held by them.

The Bank of India has now decided to recommend to the shareholders that the capital of the Bank be increased to Rs. 3 crores with Rs. 1.5 crores paid up thereon by the offer to existing shareholders of one new share of Rs. 100, with Rs. 50 paid up thereon, in respect of every two shares held, at a premium of Rs. 50 per share. The present authorised and subscribed capital of the Bank is Rs. 2 crores in two lakhs shares of Rs. 100 each. The paid-up capital is Rs. 1 crore in two lakhs shares of Rs. 100 each on which Rs. 50 has been called up. The present market quotation for the shares is Rs. 225 cum-rights. The average value of the holdings, if the shareholder exercises his option, will therefore come down to Rs. 183 and even less if allowance is made for the dividend that has accrued on the shares. The increase in capital cannot possibly affect the distribution to shareholders as earnings have considerably improved. As affording a return of 3.75 per cent taxfree the shares can still be said to have scope for appreciation.

Jute Stocks have been valued at or under cost price and stocks of goods at or under contract rates.

In accordance with the Indian Jute Mills Association's Working Time Agreement the mills worked 60 hours per week with all looms unsealed until the 15th May subsequent to which the hours of work were reduced to 54 per week and 10% of looms sealed. With effect from 14th June all looms were again unsealed following the receipt of a large hessian order from the Government of the United States of America. Working hours continue to be 54 per week. Later, when the coal shortage became acute the mills, in common with all other mills in membership of the Indian Jute Mills Association, situated in Bengal, closed down for the weeks which ended on July 31st, August 7th, September 4th and October 2nd.

In addition to closing in the weeks indicated above, Reliance Mills was compelled, owing to acute coal shortage, to remain closed for a further five weeks.

The Shareholders will note in the Agenda for the Ordinary General Meeting the proposals to make the following donations:—

To His Excellency The Governor of Bengal's Red Cross and St. John's Ambulance Appeal ..	6,380	0 9
To the Government of Bengal's Central Relief Fund ..	6,380	0 0

Managing Agents.—Messrs. Jardine Skinner & Co.

(Half-yearly General Meeting on 11th January, 1943 at 12 noon).

Audited Accounts for the half-year ended 30th September, 1943:

After allowing for taxation, including Excess Profits Tax, etc., and transferring Rs. 4,50,000 from Taxation Reserve, which it is considered is no longer required on account of tax liability for previous accounting periods, show a balance of Rs. 26,40,679-12-5.

There has been set aside for Depreciation Rs. 3,90,853-1-9.

Transfers have been made to:—

	Rs.	A. P.
Provision for Deferred Mill Renovations ..	12,03,950	10 0
Debt Redemption Reserve ..	2,50,000	0 0
Labour Quarters and Welfare ..	50,000	0 0
Indian Workers and Mill Staff Pension Funds ..	60,000	0 0

The balance remaining, after giving effect to these transfers, is Rs. 6,85,876-0-8 which, together with Rs. 1,97,253-8-11 brought forward from last half-year, gives a total of Rs. 8,83,129-9-7.

The directors propose that the balance available for distribution be disposed of as follows:—

	Rs.	A. P.
In paying a dividend on 1st Preference Shares at the rate of 8 per cent per annum without any deduction for Income Tax paid by the Company ..	46,000	0 0
In paying a dividend on 2nd Preference Shares at the rate of 5 per cent per annum without any deduction for Income Tax paid by the Company ..	37,500	0 0
In paying a dividend on Preferred Ordinary Shares at the rate of 10 per cent per annum without any deduction for Income Tax paid by the Company ..	21,875	0 0
In paying a dividend on "A" and "B" Ordinary Shares of As. 8 per share, without any deduction for Income Tax paid by the Company ..	3,50,150	0 0
In paying a bonus on "A" and "B" Ordinary Shares of As. 4 per share, without any deduction for Income Tax paid by the Company ..	1,75,075	0 0
In carrying forward ..	2,52,529	9 7
Total ..	8,83,129	9 7

During the period under review, the Mills were working at full production until the last month of the half-year when, owing to restricted supplies of raw materials, production was slowed down. Results for the half-year may, however, be considered satisfactory.

Manufacturing costs again show a big increase in all departments. The costs of all raw materials continue to advance and are likely to do so for some time. The unprecedented demand for bamboos for war constructional purposes has not only put up the price of this raw material to a very high level, but has also made it extremely difficult to obtain adequate quantities to keep the Mills running fully. Considerable apprehension is felt regarding the future of bamboo growth and regeneration in the Province because of the methods of unrestricted cutting adopted by contractors collecting bamboo for non-paper making purposes. Added to this, the directors, are still experiencing transport difficulties in regard to all their main raw materials and auxiliary raw materials.

Anxiety regarding coal supplies is continuing to be experienced owing again to transport difficulties and shortage of raisings at the collieries. Government have recently found it necessary to reduce their coal quota substantially, which has necessitated shutting a paper-making machine at each Mill. This has, of course, resulted in a serious drop in the output of paper. As paper is necessary for the conduct of the war, representations are being made to endeavour to obtain a more adequate coal allocation. It will be appreciated that the drop in the monthly tonnage of paper manufactured will seriously affect the cost of production.

The Welfare Stores at each Mill continue to function satisfactorily for the benefit of their labour, and they have again been successful in maintaining the supply of adequate rations at low prices—the wide difference between the cost and sale price being borne by the Company. When the Government rationing scheme is brought into operation at Titaghur and Kankinara, the Company may have to bear greater responsibilities in the supply of foodstuffs to all the dependents of their Mill workers.

With the approval of the Government of India, further steps are being taken to improve the efficiency and scope of the Paper Control and Distribution Association because, as anticipated, it has been found that the quota of 30 per cent. of the total production of paper made in this country is inadequate for the civil demand. It is not yet clear whether or not the 30 per cent. quota will be maintained during the period of short production, which must ensue as a result of the reduction in the coal quota, but representations have already been submitted to Government with a view to securing a larger proportion of the total production of paper to meet the needs of war industries, education, the printing and publishing industry, and commerce and trade generally.

A sum of approximately Rs. 12,00,000 will be due for payment as Compulsory E.P.T. Deposit when the liability to E.P.T. for the year ended 31st March is agreed. The equivalent of this approximate amount has been set aside to Provision for Deferred Mill Renovations, thereby earmarking this amount for future Capital replacements, which cannot be carried out now due to present conditions. No credit has been taken into the accounts for amounts which will be repayable by Government from E.P.T. on account of the Optional Deposit made in 1942 or in respect of Compulsory Deposits to be made.

A sum of Rs. 2,50,000 has been set aside against the redemption in 1946 of the present Debenture Issue and the equivalent sum is shown separately invested.

It has not been considered necessary further to increase the Reserve for Revaluation of Stocks and Stores.

As hitherto, Rs. 50,000 has been allocated to Labour Quarters and Welfare Reserve, and a further sum of Rs. 60,000 for investment by the Trustees of the Mill Employees' Pension Funds.

Managing Agnts.—Messrs. F. W. Heilgers & Co.

Authorised, Issued and Subscribed Capital—Rs. 65,89,000 in 11,500, 8 per cent First Cum. Pref. of Rs. 100 each, 15,000, 5 per cent. Second Cum. Pref. shares of Rs. 100 each, redeemable on or

after 30th September, 1946 at a premium of Rs. 5, 175,000 Preferred ordinary of Rs. 2-8 each, 350,000 "A" Ordy. and 350,300 "B" ordinary shares of Rs. 5 each, all fully paid up.

Synopsis of the balance sheet as at 30th September, 1943.

(Annual General Meeting on 14th January, 1944 at 3-30 p.m. at Bombay).

Audited Accounts for the year ended 31st July, 1943:—

The year's working, after meeting all expenses of operation and management and after allowing for Depreciation ad making provision for Taxation, shows a profit of Rs. 59,48,450. To this has to be added the sum of Rs. 2,52,656, being the balance brought forward from last year's Account, making a total of Rs. 62,01,106, out of which the following sums have been appropriated:—

	Rs.	A. P.
To Bonus to Employees (with the previous year's balance of Rs. 14,640, the total Bonus provision will be Rs. 4,39,640) ..	4,25,000	0 0
To Reserve Fund ..	7,00,000	0 0
	11,25,000	0 0

This leaves a balance of Rs. 50,76,106 from which the Directors recommend payment of a dividend for the year ended 31st July, 1943, at the rate of Rs. 7 per share (free of Income-tax), which will absorb Rs. 49,37,947, leaving a balance of Rs. 1,38,159 to be carried forward to next year's Account.

There has been a further increase in the manufacturing cost due to increases in the cost of packing materials, coal and other articles required for the manufacture of cement. The increase was also due to a substantial raisings of the dearness allowance and to the fact that the charge for War Risks (Factories) Insurance covered the whole of the year, as against a broken period during the preceding year.

The factories were maintained in a high state of efficiency, and the workshops turned out an increasing extent, equipment and articles which previously had to be imported.

The policy of improving and extending the works was continued during the year in spite of difficulties due to war conditions. In particular, notable improvements were carried out at the various workshops with a view to enable them to handle the manufacture not only of spares, but also of new machinery for extensions of plants.

To meet the increased cost of manufacture, the selling price of cement had to be increased all round during the year. Owing to Government demands, restrictions on sales to the public were in force throughout the year. The offtake was slightly less than in the previous year, due to transport difficulties.

Chairman.—Sir H. P. Mody.

Authorised, Capital—Rs. 8,00,00,000. Issued and Subscribed—Rs. 7,05,42,100 in 7,05,421 shares of Rs. 100 each, fully paid up.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

CALL money is quoting $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay with no borrowers and many lenders. With the continued expansion of currency and the excess of treasury bills maturities over sales, there has naturally been a decline in the average discount rate in the last two weeks. If the amount of applications at the last two auctions has been rather small, it was only in anticipation of a decline in the average discount rate. At the auctions of treasury bills held this week the total amount of applications was Rs. 8.56 crores against Rs. 10.78 crores. The average discount rate came down to 8 annas 7 pies per cent per annum from 9 annas per cent per annum last week, the lowest level touched in the last two years. Only in November, the rate was as high as 13 annas 8 pies per cent per annum. In view of the large demand for treasury bills and the low cash balances of the Central Government it has been decided to increase the offer from the next week to Rs. 8 crores from Rs. 6 crores. The decision of the Government to increase the amount on offer at this stage might perhaps prevent a further decline in the average discount rate. However having regard to the fact that the short-term borrowing programme has been conducted on a very cheap basis, it is enough if it is made sure that no undue increase in the rate is allowed. The Assam Government has been able to get its requirements of treasury bills only at the rate of 10 annas per cent per annum. The greater disparity between the Central and provincial government's rate on the present occasion is unjustified.

The returns of the Reserve Bank for the week ended January 7, 1944, shows that there is no sign of an early end to the expansion of currency against sterling securities. Total notes issued are higher at Rs. 853.32 crores against Rs. 850.4 crores while notes in circulation are Rs. 845.7 crores against Rs. 840.8 crores. Sterling securities show an increase of Rs. 4 crores to Rs. 738.83 crores while rupee coin are further lower at Rs. 11.9 crores against Rs. 12.82. Rupee securities are unchanged.

In the banking department, Central Government's balances show an increase to Rs. 16.3 crores from Rs. 13.87 crores as also

other government accounts to Rs. 10.54 crores from Rs. 9.9 crores. Bank balances, on the other hand, decreased to Rs. 80.27 crores from Rs. 90.17 crores. Other liabilities are higher at Rs. 14.28 crores against Rs. 6.81 crores. Balances held abroad show an increase of Rs. 3.1 crores to Rs. 123.7 crores. If the transfer to the issue department is taken into consideration there has thus been a net receipt of Rs. 7.1 crores during the week.

The returns of the Imperial Bank for the same week shows a further decrease in deposits from Rs. 210.07 crores to Rs. 209.1 crores. In spite of the decrease in deposits, investments are even slightly higher at Rs. 129.89 crores. There is an increase in advances of Rs. 39.86 crores from Rs. 36.7 crores due mostly to the rise under the head bills discounted and purchased, from Rs. 2.87 crores to Rs. 6.39 crores. This might be due to the rediscounting of treasury bills. Cash balances, as a result, are lower at Rs. 50.94 crores against Rs. 52.59 crores.

It was announced early this week that there was to be a second issue of 3 per cent 1966-68 Funding Loan for Rs. 50 crores at prices ascertainable from the Reserve Bank from time to time. It will be remembered that the 3 per cent 1966-68 Funding Loan was first issued at Rs. 98 per cent in the middle of October and subscriptions for cash were limited to Rs. 25 crores approximately. Then the quotation for 3 per cent 1963-65 loan was around Rs. 97-12. After the announcement of the terms of the 3 per cent Funding Loan there was an increase in the quotation to over Rs. 98-4. In the last two months the gilt-edged market has gained further strength and even last week the 3 per cent 1963-65 loan encountered large buying and the quotation was over Rs. 99. Subscriptions for the first issue of 1966-68 loan were quite satisfactory at Rs. 20 crores against Rs. 25 crores asked for. The Government took up the balance on their investment account. It can now be said that this portion of the loan has been sold to the market by now. Having regard to the fact that there has been an appreciation in the quotation for 1963-65 loan from Rs. 97-12 to over Rs. 99-4 and that there has also been an appreciation in the value of 3 per cent 1966-68 Funding Loan it is time the authori-

ties consider the closure of the list for the fourth defence loan which is still available at par.

The announcement this week regarding the weekly increase in the sale price of 1953-55 loan to the extent of the accrued interest is perhaps an indication that the list will be closed early. In which case, it can be expected that subscriptions during the next few weeks will be on a larger scale.

We take advantage of this occasion to congratulate the Finance Member on his planning the defence loans in the last three years. The first loan started as a short-term loan issued at par and repayable at a premium. There was a increase in the term of the loan later. Thus, from short-term the loans are now on a medium-term basis. It can be expected that there will be a further increase in the duration of the loan when the terms of the fifth defence loan are announced. This policy is calculated to strengthen the gilt-edged market. It also enables the Government of India to bring in subscriptions on as large a scale as possible.

The exchange market has been steady with a large number of bills offering.

TREASURY BILLS

India
Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on January 11. Total amount offered was Rs. 8,55,50,000. Tenders at Rs. 99-14%

and above were accepted in full and those at Rs. 99-13-9% were allotted approximately 62%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 0-8-7% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Jan 18 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Jan 17 at other centres. Successful tenderers should make payment on Jan. 21. Other conditions are as usual.

During the week ended Jan. 7, Government of India Treasury Bills for Rs. 5,94,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday, Evening.

A fall in note circulation in Britain like the very large increase in the deposits held by the Bank of England conveys a hint of a speedy return to very easy conditions while the Treasury's demand for funds is limited this week to £130 million. That may be as significant a proof of skilled Treasury management as anything cited against a return to gold. For two days there was a stream of hostile comment that indicated British opinion had not undergone any change in three months. The City is opposed to the White plan and not all the U.S. Treasury's men or horses can change it. In the light of informed criticism it looks as if the forthcoming conference will disappoint like the World Economic Conference of 1933. It is noteworthy that Mr. Roosevelt in his message to Congress disclaimed that there were political or financial commitments. It is easy to see that nuclear alliances do not imply identity of opinions on trade or other matters and for the present Mr. Roosevelt and his Treasury Secretary have a great deal on their hands at home.

Stabilisation of the dollar at home appears more important than the fixation of rates for other currencies and the U.S.A. has other problems, manpower, labour relations and war production. Last Summer plane output was below the best according to the President and the British to-day may not find something unpleasant in the misfortunes of her friend. For the present details of realistic taxation are not known. The Budget message alone will describe aggregates and targets for taxation and savings in 1944. In the light of the President's plea for all-out effort an increase in expenditure is certain but cancellation of war contracts and the instruction to the U.S. steel industry not to continue work on certain new plants indicates that an increase in expenditure would not be uniform or immediate.

Last week the President reviewed lease-lend to show Congress that something was being got and the U.S.A. alone was not providing all the oil or the ships needed for the war. The renewal of lease-lend for another year may be reckoned certain if Congress is not resigned to the anti-inflation programme drawn now in such a way as to catch the farm bloc. The promise of social security is not far removed from the Four-Year Plan of Mr. Churchill and the latest version of the New Deal appears to be drawn to British specifications, necessarily on an enlarged scale. The more important features may be left to social philosophers. The ordinary U.S. citizen will only think of the nomination for 1944 and the President's desire to unsettle the Senate's decision.

There may be less interest in the tax proposals than before and the U.S. Treasury may count on last-minute changes in public opinion. The swing to the right is certainly helpful to Wall Street where common stocks are moving up though the railroad strike threatened improvement based as much on domestic news as the war plans. It may be suggested by some that the dollar has depreciated during 1943 and stabilisation plans will entail a revision of the gold content of the dollar. But that seems unlikely in spite of the chance that a higher price in

New York would lead to an inflow of gold because that sort of change would inevitably force up the price in London and spoil the whole course of Anglo-American agreement from 1939. So the Americans must decide in favour of price control, subsidies and the rest of the stabilisation programme in spite of the election to come. Mr. Dewey who has fought the Dragon of gangsters in New York has no clear-cut opinions as to world finance and may take over even Dr. B. M. Anderson's opinion as the real Republican revelation. No guesses can be made as to Republican views to-day about labour, farm products and their prices but the Party Line is undoubtedly hardening and 1944 is the year of decision for America as well as Europe.

The Department of Justice having unscrambled the Elk Hills business has got on to chemical cartels. Lord Melchett and McGowan have described the position of the great English Company in the patent exchange arrangements but the U.S.A. is claiming jurisdiction and ordering an enquiry. The immediate effect of the news was a fall in Imperial Chemicals ordinary stock but that kind of marking down does not reflect real anxiety as to the future. The Department of Justice is not the same as the Supreme Court and the whole affair may be due to a pet prejudice against cartels inherited from the days of the New Deal. What Imperial Chemicals have done before and now has been described in order to prevent misunderstanding as to the sharing of knowledge. It may be recalled in this connection that a patent action was started in India against a leading British concern in order to get at its processes and the answer was given firmly and promptly. There is, of course, no parallel between this and the U.S. enquiry—the purpose of which can only be guessed at present in spite of the President's preference of the small men against great corporations. If

it is realised that their growth is due to tariffs many important results would follow but U.S. tariffs after the war may be outside politics. A rather curious development of the Roosevelt period is the offsetting of tariffs by farm subsidies so that farmers ceased to be hostile to tariffs as in the days of Bryan. When Mr. Eric Johnston visited London the question of tariffs was raised along with trade and Sir Owen Chalkley examined the problem from his own experience as Commercial Counsellor at Washington. A permanent export surplus appears desirable to the U.S.A. and raw material imports from the Empire to offset the permanent unbalance between U.S. exports and imports from the British Isles are not unwelcome. The whole subject was discussed completely in 1938 when the trade pact was negotiated, and hereafter the U.K. spared German rivalry in Latin American markets which may take a different view of what is desirable.

The news that the U.S.A. has got the opposite number of the U.K.C.C. already will make many interpret the news as to an export drive now preparing in their own way. Sir Francis Joseph apparently likes the arrangement but a State-aided corporation spells danger to established trade interests particularly in the era of controls. Pending the peace settlement, nothing may be done but a measure of reserve would develop in Empire countries. If the U.S.A. is the good neighbour in Latin America she may not be the same in other parts of the world and that seems to justify the present apprehensions as to what should be done after the war. To countries living by an exchange of products the U.S.A. is not a free trade country and the old arguments and familiar assumptions are doubtless going to be resurrected before the monetary conference takes place.

Bengal Coal Co.'s Meeting

Others besides the shareholders of the Bengal Coal Co., will read, mark and inwardly digest the Chairman's careful and comprehensive survey of events in the 100th year of the old great company. A year ago, Mr. K. W. Mealing expressed some alarm as to the food position on the field and the possible effects on output. Six months ago the same note of caution was struck, and pointed attention was drawn to the fact that, in view of tax demands, the Central Government had become the senior partner in the enterprise. The doings of the senior partner then rightly claim great attention in the review given to shareholders. Tolerance of difficulties is certainly to be expected, and the special measures adopted lately to increase output will be watched with attention. Mr. Mealing referred in this context to the possible increase in mining costs, and the initial observations as to output in relation to higher wages must neutralise optimism. Higher coal prices must be expected, and the peculiar situation on the fields despite higher wages has been described. The Viceroy last month dwelt on the continuance of coal shortage. Early or radical improvement is not predictable, and attention has been therefore drawn to the necessity for improvement in general administration.

Whether the Central and Provincial Governments will pull their weight, whether consumers will avoid waste when the coal industry has promised not to

Saving Made Easy

You can help to bring prices down by curtailing your spending and increasing your savings.

Five Rupees will open a Savings Bank Account at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

Interest is allowed, and withdrawals can be made by cheque.

relax its war effort remains to be seen in the light of the tempered advice given to one and all. Welcome departures in labour welfare were described. Mining labour has good reason to be pleased over the new hospital endowed by the company. Miners' children are given special school facilities and one more rural school with a purpose has been added to the small list of schools in India that bring

teaching in relation to work. The example set to others must have a value for the recent decision as to women labour below the surface has been criticised. But it is of real interest to know that maternity benefits are supplemented by baby welfare clinics and the general belief that the large British employer takes the lead in labour welfare once more receives support from the manner in which the Bengal

Coal Co.'s Centenary has been commemorated. The figures as to raisings and despatches in the 100th year would be of real interest to some but for most, it is enough to know that the Bengal Company alone accounted for 1/15th of India's coal output in the past; and the proportion was evidently preserved in a year marked by difficulties for which the company is clearly not responsible.

THE FOURTH DEFENCE LOAN 1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th January 1944 will be paid on the 15th January 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

India's Dollar Balances

While India's political status and fortunes have ceased to disturb Anglo-American relations, India's economic future is exciting considerable interest in trade circles in the States. This is hardly a matter for surprise, since one could expect self-interest to prompt the U.S.A. to bestow some thought on the future of her trade with this country. It would be wrong to assume that American interest in Indian politics was quite altruistic and that her apparent discomfiture would be an effective warning not to meddle in Indian affairs. The American demand for better treatment of India, which is believed to have prompted the Cripps offer, was a manifestation less of the State's fervour for democracy than of their anxiety that the base for the offensive against Japan should not be rendered dangerous to the Allies by political discontent. Satisfaction on this score, together with appropriate expressions of British resentment at outside interference, has made American passion for India's freedom somewhat tepid. But trade is clearly a different matter; and businessmen in America have started far earlier than businessmen in other countries to give attention to trade problems in the post-war period.

The American attitude to all post-war questions is coloured by the consciousness that America has made in this war by far the largest sacrifice in material wealth. While the average American probably shrinks from seeking a return for this in political power, American business argues that America's surplus of production, excess of capital wealth and, last but not least, the incalculable debt owed by the rest of the world to the U.S.A. entitle her to first place in the trade of all the nations. U.S. exporters, surveying their post-war prospects, have naturally taken note of those features of Britain's administration of India's finances, which are unfavourable to the development of American trade with this country. Britain has of late, quite understandably, developed extreme sensitiveness to American comments on British policy, particularly in relation to India. The result is an acrimonious debate across the Atlantic, of which only a few incoherent outbursts are heard here on the shores of India. India's interest in the controversy lies firstly in the freedom of her foreign trade relations in the post-war world, and secondly, in the proper understanding both in Britain and in other countries abroad of the true facts of her financial position.

It is unfortunate that we in India have heard nothing of the comments made in the U.S. and that the news agencies tell us only of the reactions of the City to such comments. It is said that the "ridiculous" allegations made in New York are

that despite India's war-time accumulation of large dollar balances, these are being converted into sterling as part of the deliberate effort by the British to bar the Americans from the Indian market. The Indian Government is being controlled by Britain to the point that they may not buy in the U.S.A. any more than they have to do, so that when the war ends, Indian importers will continue to trade with England.

Why these allegations should be described as "ridiculous" when there is at least a strong "prima facie" case in support of them passes one's understanding. The anxiety to refute these charges is to be welcomed as a sign of higher standards of conduct. The fact that India has no dollar balances of her own left in spite of the fact that India has had all along a favourable trade with the U.S.A. as much as the rest of the world taken together, can hardly be disputed. There is thus more than a fair presumption that India's dollar balances have been converted into sterling, which is the only currency in which her foreign balances are maintained. The motive behind this conversion may perhaps be treated as a matter for doubt; but not the fact that India, left to herself, would

by now have had a sizeable dollar balance or that the dollar balance was converted into sterling. Such comments of British newspapers and periodicals as have been cabled out to India show that the British Press is divided between denying these facts and obscuring them with a description of the methods of the sterling area. One comment, presumably that of Reuter's Financial Correspondent, runs thus:

India, like all other parts of the sterling area, clears her dollars through London while the U. S. Treasury—in sharp contrast to the generosity with which the U. S. Treasury treats many non-British countries—restricts dollar accumulation in Britain and the sterling area (including India) to a minimum working balance.

India has never had any substantial dollar balances of her own. Like the remainder of the sterling area, she relies on converting her sterling into any desired foreign exchange to meet her requirements in any part of the world (that is what "sterling area" means).

It is not clear on what authority the statement has been ventured that India has never had substantial dollar balances of her own. In the absence of official statistics, it is not possible to give exact figures. But one has only to look to the normal trade balances of this country and the special war expenditure on American account in India to realise that India's dollar balances would have been no negligible addition to the dollar resources of the British Government. If, then, India did have a large favourable balance of payments with the U.S.A., what need was there for her to convert the dollars into sterling? India has not had to make remittances to foreign countries, for which conversion of dollars into sterling was a necessary intermediate step. Sterling has long ceased to be an international currency of ready convertibility. To quote the general practice of members of the sterling area to convert all their foreign balances into sterling is neither proof of fair treatment to India nor a refutation of the American allegation.

The "Financial News" is more discreet when it points out that all the dollars that Britain can lay hands on are "returned" to the U.S. Treasury as payment for essential supplies that must otherwise be procured as "Lend-Lease" and suggests thereby that the benefits of the alleged conversion went to America.

We give up the attempt to understand how the future supply of £1,000 million of goods to India can be described as "gratis". Indians have their doubts about getting the money's worth. But why should it be overlooked that consideration for the debt has been already received and that the debt that is now owed to India is in many ways more equitable than the debt which India paid to Britain not long ago?

The commentator who urges that India had never substantial dollar balances of her own overlooks the simple fact that India's gold worth hundreds of crores, and more valuable than the almighty dollar—gold which is now being resold to India at a far higher rate than that at which it was bought from this country—have also gone into the 1,000 million sterling which is now owed to India.

The merits of the dispute as between Britain and America are, we concede, quite different. There is reason in the "News Chronicle's" contention that the U.S. policy is to keep "British pockets empty of dollars and that the dollar income of the British Empire is cleared through London not to serve the interests of British export trade but to ensure that every dollar earned by the Empire is mobilised to pay the U.S.A. for essential imports thus reducing Britain's Lend-Lease requirements from the U.S.A."

While this may be in extenuation of the offence with which Britain is charged by America, it is no defence of the treatment accorded to India. Nor can it be a reflection on the

equity of America insisting that Britain should not export goods which contained either lend-lease material or its equivalent.

The weakest answer to the American charge is that of the "Economist" when it argues that the post-war period will witness a scarcity of sterling and a super-abundance of dollars. The suggestion is obvious that Britain, where economic science is of a high order, has no need to adopt special

measures to handicap American trade which will be handicapped sufficiently by America's high production costs. We have no desire, and even less need, to examine this prophesy. If this argument is intended as a sop to India, we can only say that we do not grudge Britain the benefits of this economic Coueism; but India must ask for greater freedom of trade relations and greater security for the funds she had built up literally by blood, toil and tears.

FRONTIERS OF THE FUTURE

Described as a belt of political change Eastern Central Europe is a region in which warring nationalities have long striven for more than self-determination. The Germans in 1940-41 incorporated the entire region in the Reich because the Nazi Party stood for expansion. Indeed the changes effected in Poland after the fourth Partition reflect the Nazi view as to lebensraum more than anything else. In October 1939 Mr. Neville Chamberlain recorded the view that the Russo-German agreement of September 1939 had not affected the aims of the British Government. The agreement between Germany and Russia after the collapse of the Polish State made for the fourth Partition and the drawing of new frontiers in Eastern Europe. Slovakia is evidently untouched by the entry of the Soviet Army beyond the 1939 frontier, and the German organisation of Poland alone is threatened to-day. In the East, the Reich has created two new provinces. According to maps prepared in 1942 the new German territory includes Galicia. In Western Poland the Danzig-West Preussengau and Wartheland which includes the province of Lodz were created. East Prussia was enlarged by the addition of Memelland and the territory to the south, and it appears that Russian territory of Bialystok to the south-east was added. The Reich's own province of Silesia was enlarged to include the Upper Silesian industrial area including Teschen (which was originally taken from Czechoslovakia) and the German frontier carried into South-West Poland beyond the 1941 frontier. The province of Silesia was divided into two Gaus, Upper and Lower, the first centred on the industrial area, and the second on Breslau. The Government-General, centred on Cracow and cut off from the sea, is surrounded by German territory. In August 1941 Galicia became a dependency of the Reich which was added to the Government-General but it is constitutionally a dependency of the Reich.

These changes are now of little consequence as all frontiers drawn from 1939 to 1941 in spite of the breaking off in diplomatic relations are annulled by the agreement made in London between the Soviet Union and Poland in July 1941. According to Mr. Eden, under that agreement the Soviet Government recognised that the Soviet-German treaties of 1939 as to the changes in Poland have lost their validity, while the Polish Government for its part declared that it was not bound by any agreement with a third party directed against the Soviet Union. Provision was then made for the formation of a Polish Army in Russia under Soviet control. In a note to the late General Sikorski it was explained that His Majesty's Government had entered into no agreement with the U.S.S.R. which affected the relations between that country and Poland. In General Sikorski's reply it was stated that the Polish Government too was satisfied with the view that territorial changes effected in Poland since August 1939 would not be recognised. In General Sikorski's note it was further explained that the Polish Government had never recognised any changes effected in Poland since the outbreak of the war. Mr. Eden then welcomed the agreement and quoted the Prime Minister's statement that His Majesty's Government did not propose to recognise any territorial changes which took place during the war, unless they took place with the free consent and goodwill of the parties concerned. The last condition alone requires to be fulfilled.

The events of 1943 and the changes in the Polish National Committee do not appear of overwhelming importance as compared with the undertaking referred to. It is the undertaking which explains the recent exchange of statements and the renewed anxiety as to the outcome. The open offer from the Soviet side accords with the general anticipations as to what sort of settlement would restore friendship. Since it is to the interest of both Britain and America to promote an immediate agreement interested pressure will doubtless play a large part. Indeed the previous conclusions as to the frontiers of Poland hark back only to the Curzon Line of December 8, 1919. If Polish independence is older than the Treaty of Versailles which gave Poland the larger part of

Posen and West Prussia there may well be further claims. The Treaty of Riga extended Polish territory to the East but the Curzon Line, drawn in accordance with the Treaty of Versailles, was drawn when Russia and Poland were at war. The Ambassadors' conference in May 1923 assigned Vilna to the Poles and Poland's northern, eastern and south-eastern frontiers were accepted in the name of the Allied Powers, the United States subsequently accepting the decision. The Curzon Line was never actually in effect and it was mentioned in 1939 only to show how Russia got as much as she took. The old treaties are, however, less important than presumed. Poland's position for years rested on the French alliance, and the fall of France has made far greater changes than imagined currently. Given the universal assumption as to adjustments between spheres of influence, and calculations as to more than local effects of the Czech-Soviet Treaty of December, 1943, the only possible conclusion is that negotiations will have to be conducted on Russia's own terms. But the detachment of old territory in the East would put Western Poland more into the German orbit and the usual comparisons between the old German areas and the rural regions in the East merely revealed that independence rested almost entirely on the resources of Upper Silesia, and of Lodz, developed by German business interests. Warsaw is not threatened by projected extensions of Soviet territory and the Vistula will be a Polish river. But Poland's future is ultimately bound up with Upper Silesia which has been swallowed by Germany. It is necessary to remember that Sweden and other countries are dependent on coal from Upper Silesia, and instead of regarding Danzig as vital for Poland, it may be proper to regard Upper Silesia as the debatable region. Obviously, Polish acceptance of a new frontier in the East in place of that arranged at Riga only in 1921 after the Polish reverses and the recovery in 1920 is largely dependent on the Allies being ready to give compensation to Poland. Claims have been advanced in respect of East Prussia since the German province is regarded as a danger to peace but others might regard the Russo-Polish adjustment as inseparable from the assignment of Upper Silesia in entirety to Poland. The Silesian coalfield contains one-fourth of Europe's coal reserves but in the past Germany and Czechoslovakia qualified for a share. Since Germany's real industrial centres are still in the West, the main claim will be conceded. Poland in the past had to import both iron ore and scrap and the acquisition of German resources would improve greatly Poland's output of iron and steel. Formerly, for lack of iron Poland was compelled to export coal. Should German Silesia be given to Poland (by ignoring the League of Nations award of 1921) a measure of economic justice would be reached. Poland and Czechoslovakia, as well as an independent Austria, in the future would gain. Silesia's importance for the whole Danube Basin is based on the fact that it is the only source of coal and coke for Eastern Central Europe. Owing to the losses in the Ukraine during and after the invasion, Russian intentions as regards Silesia may be at present indefinite, mainly because Silesian ore and fuel are essential for control of South-Eastern Europe. The fact that the Germans have developed Upper Silesia rapidly after the conquest of Poland, points to its ultimate importance for Poland which has always remembered that the pre-war ambition of Germany to dominate Poland rested on the desire to develop Upper Silesia where the coal began to be worked only about 1840 as the Germans were indifferent to minerals and industrial progress alike. It is useful to recall that Mr. Lloyd George was responsible for the decision as to a plebiscite in Upper Silesia. To-day when the Versailles settlement is completely discredited the old Polish claim for the whole of the rich industrial district receives its justification from the exploitation by Germany, the course of history between the wars as well as the need to reduce Germany's economic strength as much as possible. Nor can the requirements of Poland's plan for a central industrial region be overlooked in the future for the Poles showed before the war the ability to scheme and execute.

Editorial Notes

Economists and Post-War Plans

The burning topic of the day is post-war reconstruction of India, and it is but quite fitting that Dr. B. V. Narayanswami, President of the twenty-sixth All-India Economic Conference held at Madras a few days ago, chose it as the subject of his address. Schemes and suggestions are pouring in as to what should be done and how. While the Government have kept certain post-war reconstruction committees going, the commercial bodies of the country have also engaged themselves in drawing up schemes for the future. As yet there has been no clear-cut statement of official post-war reconstruction policy. While in countries like the U.S.A. numerous expert organisations, official and non-official, are working hard to outline the post-war lines of progress, India has been slow in appreciating the importance of planning for peace. There is a strong suspicion that India would be handicapped by important international commitments and that the absence of a National Government would jeopardise the acceptance or execution of a correct post-war plan for India. A Government which carefully neglected the key industries during the past four years may not play an active part in satisfying the legitimate aspirations of the country. But academic opinion should give a lead in outlining the actual requirements of post-war India and suggest the best possible means of achieving the end. In his presidential address, Dr. Naidu takes stock of the wartime developments in India and pleads for a comprehensive plan for national progress. He points out that two essential requisites should be satisfied before any plan is evolved. "The plan must, firstly, reduce the impact of sudden and drastic changes both at home and abroad on the economic position more especially the immediate prospects of the nation . . . and, secondly, it must prevent the changes from war to peace economy from either disorganising the national economy or neutralising the industrial and economic progress achieved during the war or from rendering the nation less fit to realise its economic aspirations and aims". He underlined the importance of swelling the national income of India to raise the appallingly low standard of living of the people. According to him the national income should be raised at least to Rs. 3,000 crores per year, if the pitiable conditions of famine are to be banished for ever. While pleading for the formation of a Committee for All-India industrial planning he is against any "slavish imitation of Western industry with its urban civilisation and perpetual clash of classes". In the field of agricul-

ture the elimination of middlemen interests in land and encouragement of collective and co-operative farming methods are advocated. Retention of wartime controls is favoured as handy instrument for facilitating the execution of reconstruction plans. The most desirable scheme of reconstruction, according to him, is one which is so conceived as to usher in a socialistic new order in India.

Effects of Disease

The economics of public health should receive due notice when a major Province is in the grip of epidemics. The economic and financial effects of malaria in British India are as important as the effects of the disease on both the birth and death-rate. The inadequacy of facilities for the treatment is a measure of India's persistent backwardness. The financial loss is not limited to the cost of treatment put many years ago by Colonel Sinton at Rs. 20 crores or £15 millions per annum. The common estimate that a hundred million persons fall ill of malaria every year can be related to the loss of working time and hence of wages, post malarial inefficiency (up to 25 per cent) apart from unprofitable funeral expenditure estimated in the aggregate at Rs. 40 lakhs to Rs. 100 lakhs each year. The overall estimate of financial loss due to malaria given in the Health Bulletin No. 26 is Rs. 4,500 lakhs at the least or more probably nearer the total of Rs. 9,000 lakhs. As to the losses caused to employers and the higher cost of successful operations industrial and other no estimate has been offered, but malaria is pre-eminently a rural disease and agriculture suffers most from its ravages. More than one sugar company in the past has been handicapped by malaria. Indeed rural decay in Western and Central Bengal has more frequently been attributed to malaria than any other since Dr. Bentley proved that embarking of the country and the shutting out of river water from the surface of the Delta was marked by epidemics of malaria; a serious decline of agriculture and progressive depopulation of the affected areas.

In Malaya until control succeeded in minimising the ravages morbidity was attended by unusual labour turnover. Large industries in India like jute and cotton have suffered to some extent and the epidemic of 1930 in the Calcutta area affected jute mills' output. Mining labour is also subject to malarial sickness and railways, shipping and numerous interests have in the past paid a high price. While the Army in Eastern India is said to have

been protected to an unusual degree last year, the Province as a whole, has suffered much and proof as to the value of control measures in selected areas has been forthcoming in the recent past. But permanent anti-malarial measures except in selected areas are unusually expensive, and the problem (as was noted in 1932) is to bring the control within the economic measures of the community. What has taken place in the war is the partial withdrawal of palliative measures such as issue of cinchona febrifuge tablets. In recent months, the limited supply of quinine has been the most common subject of discussion, and special efforts to obtain, and distribute, supplies have been watched with great interest in view of the League of Nations Malaria Commission in 1930 having taken the view that it is one of the primary duties of the Government (of India) to arrange for adequate medical assistance to the greatest possible number of malaria patients. How far that duty has been discharged is a question for the future, but any assessment of the famine's major consequences must not leave out the impaired powers of resistance.

The Post-War Trade Problem

Since mental confusion prevails as to the plain purpose of British anxiety over exports after the war, attention may be drawn to an explanation advanced by two authors connected with the non-partisan organisation PEP. They have argued that the loss of overseas resources makes it necessary to increase exports in return for a given level of imports because an increase in external debt involves a transfer of income from Britain as a whole to persons living overseas. Depletion of overseas assets has the same effect as debt involves a transfer of income from Britain as a whole to persons living overseas. Depletion of overseas assets has the same effect as debt abroad, in that it reduces credit on the rest of the world. India, before the war, rigidly adhered to an export surplus in order to meet overseas debt, and when merchandise exports were insufficient, resorted to export of treasure. Since Britain cannot export treasure, and readily realisable investments are few, the case is almost established. Britain, it has been urged, needed imports more than any other country. In the past her income from investments abroad amounting to £200 millions per annum went to meet the liability along with the invisible exports valued at £150 millions. So Britain had to find exports valued at £500 millions. It is calculated

Prosperity road

THIS is the road which in India, largely remains to be built, for India has but a very small fraction of the roads she needs.

Roads benefit everybody. Agriculturist, Industrialist, Business man, each shares in the benefits from improved road transport facilities.

The time to plan for India's post-war road construction requirements is now. General Motors India Ltd., offers its hearty support to programmes of road development which will add to the wealth, health, and happiness of the people of India.

Inserted in the interests of better roads by

GENERAL MOTORS INDIA LTD.

CHEVROLET	PONTIAC	OLDSMOBILE	BUICK
CADILLAC	VAUXHALL	BEDFORD	G.M.C.

that after the war instead of £350 millions from overseas investments and invisible exports, Britain would be able to draw only £200 million. Additional exports to the value of £150 million must be made available in order to keep up imports.

It must be noted in this connection that maintenance of imports is as much related to the question of employment as exports. To secure an immediate increase in imports would be necessary since British exports are so largely made up of materials from abroad, to which value is added in Britain; so additional exports of say £50 million would be necessary. If imports total £850 millions after the war exports would have to be increased after the war by £200 millions or by about 40 per cent. It must, however, be noted that British imports may have to be increased to a greater extent in order to provide for reconstruction.

The main postwar problem then is one of foreign trade rather than the changes in technique or industrial control. All questions are duly subordinate to the maintenance of imports. For the Empire, as a whole, the problem of markets is far more important; and Britain's continuing need of imports creates the opportunity for Indian exporters even when controls are retained in Britain in order to preserve a scale of peace priorities. The only conclusion that may now be drawn is that after the disappearance of trade with Germany there is little scope in Europe and Britain's main interest in the export of capital goods will, of necessity, support plans for industrialisation. The efforts to get Anglo-American tariff issues settled by an exchange of visits last year, suggests that appreciation of the postwar trade problem for Britain will follow the projected visit of representative Indian industrialists.

Directorate General of Munitions Production, Government of India

DEPARTMENT OF SUPPLY, CALCUTTA

Import of Spare Parts for Diesel and Petrol Kerosene Engines from the U.K.

Importers of the above spare parts, other than those who are approved importers of Diesel and Petrol Kerosene Engines under the Panel Scheme, are requested to submit to the Director of American and Panel Imports, 7/8, Ezra Mansions, Calcutta, within fourteen days of the date of appearance of this notice in the Press, a statement showing:—

1. Number and date of Import Licences which are still valid.
2. Number and date of outstanding orders on U.K. manufacturers covered by licences referred to in (1) above.
3. Name and address of U.K. manufacturers and/or suppliers.

Unless the above particulars are submitted, importers may find some difficulty in getting their outstanding orders on U.K. manufacturers executed.

Coal and Miners.

Appeals for volunteers for mine work, for sparing use of gas and coal alike, and for absolute economy in cooking, travel, etc., do not seem to have mitigated the fuel problem in Britain. The problem is older than 1943 and is directly related to the progress in Britain's war production. Strikes were a minor evil as compared with the shortage of workers and measures previously applied for maintaining labour supplies for farms were adopted in regard to mines. The Minister for Fuel announced in October that in addition to as many volunteers as possible men would be taken out of the forces and industry for the mines as for the armed forces. But over and above the question of a call-up, there raged differences over control. Miners' leaders argued that until nationalisation was formally adopted the coal problem could not be solved. More recent measures have been the procurement of coal-cutting machinery for the mines from the U.S.A. in order to raise the output by 15 million tons. The traditional party differences came to a head in October and the reports of persistent shortage justified the prediction of Mr. Greenwood that mines' output would decline.

Admittedly the defects of dual control are such as to make it necessary to accept the view that in India nothing short of free enterprise can lead to improved output. Official investigations into the Indian coal mining industry set up very distant targets and the mining industry, exhorted and cajoled by turns, to produce more coal will be on strong ground in rejecting the view that pampering of mine labour for any reason will be less effective than presumed. In Britain coal miners have done little of their own free will to increase output, and the lack of harmony between management and labour made the Prime Minister take the view that such an issue as nationalisation could not be considered relevant without a general election. Mine-owners have complained of lack of discipline and the only suggestion towards higher output was one in favour of bonuses on a pit basis. Miners independently argued that £6 per week must be paid as the minimum wage. The decline in Britain's coal output from April naturally favours Indian exports, and on a rigidly exclusive view there may be locally satisfaction over the reports as to shortage of coal in Lancashire. It Britain's textile exports are affected, more Colonial markets may be held for Indian cotton mills. The other line of reasoning as to getting out coal exports to as many markets as possible instead of Ceylon only seems more important in view of Major Lloyd George's admission that coal output in Britain without the absolute minimum of 720,000 men for the mines could not stay up at the 1942-43 level.

Cotton in Assam.

Assam is the only province which does not grow cotton, as may be inferred from the cotton trade statistics, and efforts to introduce cotton into the plains will be of some interest to Bengal cotton mills. In spite of the earlier failure with long-staple cotton, the Economic Botanist obtained about 100 varieties and started experiments after 1939. These experiments showed that long-staple cotton of a very fine quality with a staple of one inch or more could be successfully grown. A

sample was sent to the Cotton Technological Laboratory and was favourably reported upon. It is intended to carry out experiments with long-staple seed in twelve different centres in 1943-44 to find out the possibility of successful cultivation and for securing cross-strains combining all the desirable characteristics. It appears that Assam is already acquainted with short-staple cotton in the Garo Hills. The fibre is coarse; the staple is less than ½ inch, and the cotton grown on 38,000 acres in the hills is suited only for mixture with wool. The Agricultural Department has ascertained since that short-staple cotton has deteriorated in Assam and wants to carry out an improvement scheme meant to bring pure strains back into cultivation. A research station in the Garo Hills is planned and systematic experiments are to receive the support of the Indian Central Cotton Committee. The Provincial Development Board last year recommended the scheme favouring cotton cultivation though Assam rightly concentrates attention on rice which is to be helped by minor irrigation facilities for which cultivators have to make a contribution in the form of labour and material.

Ships and Exports.

While the U.S.A. having new ships totalling 20 million tons or more, is thinking of postwar prosperity for American liners, older builders are also planning for recovery. In spite of the general belief that steel may be in short supply for some years after the war, the U. K. thinks of getting back a share of the export trade in ships. In the last century, Britain built the greater part of the world's new tonnage every year, but shipbuilding declined steadily as an export industry. The U.S.A. will lead in tonnage after the war but British shipbuilding's hopes are reared on the need for ships. The Dominions are expected to offer more than the orders for replacement of vessels lost by enemy action. The new building yards in the Dominions and India will be unimportant. The major advantage to the like will accrue from the disappearance of the competition from Japan, Germany and Italy. The occupied countries will

have nothing left and inland assembly of vessels may not be carried on after the war.

Most of the ships built for the emergency cannot be regarded as typical. The new, slow ships will have to disappear because other nations will not buy them from America which intends to reserve the Victory (as distinct from Liberty) ships for herself as well as the tankers built of late. Questions are being asked at a time when renewed anxiety is felt over the resurgence of old commercial rivalry about what will happen after the war. British shipyards can manage to obtain lower costs, only if the output is high. As to the withdrawal of naval

"LAND OF BEGIN AGAIN"

Will the year 1944 bring with it the much longed for Peace?

For the present we only know that we must go on striving to bring "the land of begin again" nearer to the men who are fighting this war for OUR freedom.

Those, who have been in the thick of the battle and now lead listless lives in prison camps as suffer in hospitals far from home, need renewed hope and a faith in the future.

The Indian Red Cross is constantly in touch with these men through countless channels.

Please make a resolution to give us money regularly, in order that we may continue to send parcels of food and clothing, arrange for family broadcasts provide musical instruments, and all the other little things that make life bearable for prisoners of war.

Send your donations to the Hony. Treasurer, Indian Red Cross Appeal, C/o Imperial Bank of India, Strand Road, Calcutta.

orders, and the possible effect on employment in shipyards, little can be said, but materials should be available while compensation to shipowners will provide some work. British yards look mainly to the equality in tonnage afloat as between the U. K. and the U.S.A. Something like parity in new construction seems to be the aim, and much play is made with the fact that quality is high and cost is lower

in Britain. The wartime speed in U. S. construction has been ignored by Admiral Vickery who confessed that "the British build their ships at less cost than we do". But the main support must come from countries with long coastlines, much trade, and few ships. Plans as to building in the Dominions may well be modified by a familiar distinction as to ship construction and operation, and one argu-

ment at least for escape from the burden of agreements, customs and inequalities has been heard in connection with a plea for modernisation of British yards. Ships will necessarily be classified as capital goods, and countries with blocked balances may assist largely in the buying of British tonnage, unless commercial imperialism pursued by the U.S.A. creates unforeseeable difficulties.

STRENGTH IS BORN

Silently a steady stream of glowing strength flows towards the harness designed by man.

Iron has been made.

Soon it will reach the more adolescent stage of steel, to form the basic strength of industrial growth.

Always, everywhere **STEEL** for strength

SAVE FOR VICTORY**BY INVESTING IN WAR LOANS ASK YOUR BANK**

The writer of a personal column may, I think, be forgiven if sometimes he prefers to persist in some lines of thought all his own, rather than go in search of themes of general importance on which he can hold forth with pontifical authority. The inclination may be due as much to paucity of the latter as fascination of the former. The journalist's mind is like that of a privileged prisoner. It is free to wander over wide, but definitely circumscribed, ground. There are occasions when the limitations of the "topical" seem not less galling because they are broad. There are occasions, too, when the broad expanses of the "topical" seem but a dreary waste, in which the ground under your feet and the stretches ahead seem equally an eye-sore. At such moments, one perforce prefers—oxymoron? to follow a train of thought, suggested by something one had been reading not long ago. Necessarily, it is related to one's major mental pre-occupation. For my part, that pre-occupation is none other than to formulate a satisfactory explanation of India's national backwardness, satisfactory in the sense that by putting the finger unerringly on the weak spots it will show us the way to strength and power.

We have need for it more than at any other period in our history. Till a few years ago, we lived in a world, in which the general framework seemed to have been made up for decades. The last war wrought great changes, no doubt. Economically and politically, the post-war world was decidedly different from the pre-war one. But considered from our viewpoint, it was very much the same. Swaraj and Swadeshi, the twin ideals of Indian nationalism had both to be realised within the framework of a world order dominated by the British. Great as were our difficulties, we never felt that we had been moving along a blind alley. We never felt that discriminating protection would not be adequate for securing industrial progress though we knew the pace would not be all that we would desire. We never suspected that our brand of protectionism would end in confronting us with a number of dilemmas or that two decades of discriminating protection would leave the crux of the problem of India's poverty virtually untouched. Likewise, in the political field, we have a distressingly bumper crop of disappointments. In our mental horizon of a few years ago, Pakistan was no cloud as big as your fist. The cruel disillusionment about the efficacy of non-violence as a defensive and offensive weapon was never suspected even by its avowed opponents. We did not, it is true, rule out the vicissitudes of

the conflict. We were not blind to our internal dissensions. But we looked forward to a steady ascendancy of genuine nationalism and a progressive solution of the problems of nationbuilding. In other words, we were quite prepared to think that our path to Swaraj and Swadeshi was long and hard. But we never thought that it would lead us to the abyss of Pakistan and food crisis.

Now our knowledge is both better and bitter. We know now, as we did not formerly, that when you deal with a nation's future, it is not the obvious facts of the present, but the trends, and the possibilities of the future that must be considered. For decades, we were thinking that like you we could develop within the shell of British protection and burst it when we were in a position to do so. That the British Empire, vast as it is, is only a part of a vaster world, that the Empire, too, would be subjected to stresses and strains, that if we are to solve the problem of our national existence, we ought to think in terms of our internal conditions in their relation to the larger world order—these ideas never adequately influenced political thought in the country. I know the reader will feel a strong temptation to differ from me, particularly because of the general feeling that the Gandhian methods of political uplift are equally revolutionary and realistic. The Gandhian

Congress did not, any more than the old Moderate Congress, consider the contingency of India having to reckon with the outside world more or less directly, that is, with the British having a less dominant voice than before in world affairs. All our talk of independence had a touch of pathetic insincerity about it. For the implications of independence were never seriously thought of. When the Cripps proposals came up, they were instinctively, and perhaps not quite consciously, felt to confront India with the implication of independence, namely, the obligation to provide the defence of the soil. The historical antecedents of our belligerency in this war are no doubt important; but they are, in a sense, irrelevant to the question of our preparedness, I mean even purely mental preparedness, to face up to the consequences of independence. The utmost that could be said is that we postulated a transition of a comfortably smooth kind from wardship under Britain to complete independence. That the course of world events has been unfavourable to the materialisation of these hopes is probably but another instance of the peculiarly perverse dispensation of our national destiny. But whatever it is, a proper attitude to political problems, one that takes in all relevant facts and attempts by quite practical methods to change them into suitable accord with our legitimate aspirations, is yet to be adopted by our political leaders.

The position is not far different in the economic sphere. Our economic thought, too, is characterised by a similar proneness to escapism. We may date it from, say, Dadabhai Naoroji's Poverty and un-British Rule in India. The very title betrays the lack of realism; for it implies a readiness not only to attribute India's poverty to British rule, but also an eagerness to believe in British philanthropy and to regard the economic policy of the British Government in India as a lapse from normal conduct which requires to be explained. Anyway, all the earlier works of Indians and friends of India had the effect of encouraging public faith in the doctrine of drain. The assumption behind it—and it is also an obvious suggestion—is that sufficient wealth was produced in India to maintain the population in reasonable comfort and freedom from want, but that a great part of the wealth was being drained away, leaving the country in terrible poverty. The fact of the drain of national wealth as a consequence of foreign rule does not matter very much in this context. No one will question the fact that there was a drain, that the drain was weakening the stamina of the national economy and rendered progress far more difficult than it would have been otherwise. But it is wrong to suggest that the drain was an adequate explanation of our poverty or that the stoppage of that drain was the first step in our progress towards economic prosperity. This should have been obvious to all reflective minds. But the drain theory was readily accepted because on the one hand, it was a handy weapon for political agitation and on the other, it was useful for pressing the claims of Swadeshi and asking the people to set aside the ordinary economic considerations of price. In the result, however, neither purpose has been adequately served. Political sentiment remains as tepid as ever, while Indian industry had to be served by the coercive methods of high protectionist duties. It is quite understandable that Indian economic thought, when it had to attain some doctrinal outline, should be composed so largely as it has been of protectionism. For, protectionism is the logical development of the theory of drain of national wealth. For nearly three decades, economic discussions in India have centred round the question of protection to Indian industry. The alignment of opinion was for long on political lines. Arguments for and against protection were easily secured from more or less advanced textbooks of economics, while finality for practical purposes was provided by political exigencies. The orbit of protectionism was slowly and irregularly widened. And its actual result supplied both sides more or less impartially with arguments to suit their purpose. But the summing up of the case for and against protection was, in essentials, a misdirection of the jury, while the European Chambers of Commerce were always guilty, to use another legal term, of a misjoinder of issues. For the Chambers sought to set up a conflict between agriculture and industry and charged Indian industry with harm to Indian agriculture. But the truth is that the development of industry by protection or by other means is only part of the far larger problem of increasing the national wealth. The absence of industry was no more adequate as an explanation of our poverty than the old drain theory, though both have no doubt their place in accounting for it. The tendency to hold to

protection as the one means of economic uplift has its parallel in the political field to cling to agitation as the one means of attaining and securing independence. Both in politics and economics, there was a sad lack of readiness to seize and grapple with facts.

If the world of our times had been less turbulent, less prone to cataclysmic changes, our failings in this regard might have been condoned. But in the realm of Time, ours is a most dangerously volcanic region. The progress of our national economy under the stimulus of protection was impeded by the great depression. For every step forward that our industries took, our agriculture slid back by two. The whole question of the division of productive activity at home and our trade relations abroad was thrown into the cauldron. And before anything could come out of it, the war broke out. Our foreign trade is distorted. Our domestic economy is experiencing severe scarcities. We shall be left with a load of post war problems which will both intensify and complicate our normal economic problems. These post-war problems will cummulate in the eyes of our authorities, with the post-war problems of the Empire and the world at large. What we do at home may well have to be determined by undue deference to what are called the requirements of world economy and international trade.

Parallel developments in the political sphere hardly need to be dealt with at length. Such understanding as has been arrived at among the three powers about the post-war settlement has not been divulged to the public. Only slowly, under pressure of events are the outlines of the settlement in Eastern Europe emerging into view. But other and far more ticklish problems are there on which understanding is either not attempted at all or is too tentative. Poland's predicament throws a most sad light on the future of all peoples who, for some reason or other, have lost grip over their own destinies. India's position is even worse in that she is still, unlike Poland, no nation; that she has been, and is, a subject country; that the ruling power desires to act as a commonwealth rather than as one dominant member of it; and that in the background there is a nexus of obligations, moral and other, among the Allied Powers which is not without relevance to the future fate of India. My thought at the moment is, why is it that a people, who are by no means so low down in the ladder of civilisation, so utterly incapable of shaping its destinies? The thought occurred as I was reading a brilliant account of the Battle of Britain and the

Battle of Russia. The Battle of France, I sometimes think, offers some explanation and no little consolation. But I must pursue this question on some later occasion.

The East Bengal banking invasion has hardly come to an end, for this week the Bank of Mymensingh-Gouripur opened its doors to the public in Calcutta when the Central Office was set up. There was a formal ceremony and speech-making followed. The connexion between ancient landholding houses and banking was explained by the Chairman who said that the Bank had an eminent adviser in Mr. N. R. Sarker. The honours easily went to Mr. T. S. Gladstone, the President of the local Board of the Imperial Bank, who declared that mofussil banks have a real function largely because agriculture requires credit. Mr. Gladstone dwelt on the need to develop agriculture along with industry and conveyed his good wishes. The real meaning of the entry of another mofussil bank will not be lost on those who sometimes argue that there are too many banks and competition is attended with dangers. The money crop has to be moved in the season and the grower has to be helped before and after. That is where banking is expected to play a part, and in the most populous district in India, growing more jute than any district, the chances are strongly in favour of a bank that has the backing of the principal landholders. The bank, established a year ago, had necessarily to get into touch with Calcutta because of the obvious connection between jute and the mills, between exports and bills. Instead of the middleman, for whom many harsh words come readily, there would be a bank, conversant with the needs of the grower, a bank able also to send the city's money into the country and irrigate agriculture by low rates of interest. The old paradox of the city and stringency in the districts is almost solved by a late but welcome departure. The happiest results may be anticipated at present through the essential junction of interests between the old landed houses and the more conventional type of banking which carries its own guarantee of safety for great and small.

An extract from the New York Times' review of Mr. Jack Keenan's auto-biography reached India and many noted immediately that he had paid a tribute to the Indian worker's adaptability and efficiency in his account of Steel town. There comes soon afterwards a cable announcing his death and it is not merely because of his work for Jamshedpur that a formal notice of his death is due. He was linked by his long career with India's iron and steel industry and gave clear and convincing testimony before Tariff Boards when he put India's claims squarely. He proved of course that it could be done here as well as in Gary (Indiana) with all the advantages or such advantages as were available. Believing in training Indians for every job he more than carried out a policy of Indianisation. The higher executive positions are filled by Indians, for he meant well and did well in order to give the chances required and deserved. Local recruitment, training and experience went a long way towards building up a steady and reliable labour force but the career open to Indian talent was of Mr. Keenan's own making. That is where he was ahead

of many who fashioned success, stories, for individuals or communities. He demonstrated over a period that American methods are not unattainable so far as Indians go, and filtration certainly has

done its work very well because Mr. Keenan, more than the Board, decided that Indians should run their industry.

"EAVESDROPPER".

NERO'S EMERALD

THE Roman Emperor Nero is said to have used a finely polished emerald as an eyeglass. In his day aids to eyesight must have been rare, but to-day many of us wear spectacles for one purpose or another. Yet our pince-nez, lorgnettes, monocles, or "horn-rims" form only a small part of the optical glass industry, the products of which are as various as they are important in War as in Peace. Industry needs microscopes, spectrophotometers, polarimeters, refractometers, photometers and pyrometers! The fighting services need lenses, prisms and mirrors for range and height finders, gun sights, cameras, field glasses, sextants and submarine and tank periscopes. When war broke out in 1914, more than 90 per cent. of optical glass required by Great Britain had to be imported. The result was a serious temporary shortage but British chemists, physicists and glass manufacturers set to work with such energy and resource that not only was the immediate supply problem solved, but British optical glass is to-day equal to that made anywhere in the world. Only chemical ingredients of the utmost purity satisfy the makers of our modern optical instruments and apparatus. The manufacturing processes demand the most accurate scientific control by the physicist and chemist. It is in large part due to the British chemist that you, perhaps, are able to read this type, or a British camera to take air photographs of the damage done to an enemy vessel by a torpedo sighted through the periscope of a British submarine.

Olympus

(From Our Correspondent)

New Delhi, Jan. 10.

The introduction of statutory control for foodgrains is still proving a tough problem. The conference which met here last week to evolve uniform prices for kharif crops seems to have dispersed without arriving at any final agreement. It appears that the recommendations of the three regional committees of the conference regarding rice prices are so widely divergent that the Central Government's attempt to introduce uniformity may be abandoned for the present and revived at a more suitable time later. For the present the Centre may be satisfied by fixing different prices for the three regions and eliminating to some extent the wide disparity in the prevalent rates. They may advise the Punjab, Bengal and Assam Governments to make a genuine attempt to effect a further reduction in the rice prices and leave the Sind rates unchanged. The centre is still fighting shy of forcing its views on all the Provincial Governments and allowing the food policy controversies to develop into an open constitutional quarrel. But it is increasingly felt that the recalcitrant and uncompromising attitude of certain provinces may force the Central Government to dictate reasonable price policy to the provinces concerned. The Punjab representatives still appear to be fighting for a higher rice price than the neighbouring province of Sind on the plea that their produce is of better quality than Sind's. It was thought earlier that the forecasts of bumper rice crops would have a sobering influence on the Punjab's attitude. The new Viceroy's categorical assurance: "We have a food policy for India as a whole and I am prepared, if necessary, to take the most drastic action in support of this" is recalled here. It is not known whether the Centre regards the assurance applicable to the present statutory price controversy. Only the final announcement of the Centre's decision will show. This announcement is expected within the next few days. It is reported that the Government may also refer the matter to the Food Advisory Committee of the Central Legislature.

Meanwhile the arrival of the Bengal Premier and several other Ministers for

food and jute conferences has focussed attention here on that province's peculiar problems. The Jute Conference which is meeting to-day is to decide what acreage should be placed under jute cultivation next year and to make the difficult choice between augmenting the food supplies of the province which has suffered so terribly from the recent famine and retention of the foreign market now threatened by jute cultivation experiments in some other countries. Details regarding rationing and the procurement of 'aman' crop are also being discussed as well as the controversy between rice milling interests and the Bengal Government which has led to the closing down of several mills and may lead to a food crisis if not settled soon.

Ambitious post-war plans for the development of communications in India costing about Rs. 500 crores are being drafted. The plans, it is understood, will shortly be before the Policy Committee on Reconstruction. The plan broadly involves the building of two highways connecting India with Burma—a road into Assam finally linked with the Burma Road system and a road from Calcutta to Chittagong linked with the new military road into the Arakan and possibly extended up to Akyab—and two new highways connecting Bombay and Peshawar and Bombay and Cape Comorin (along the west coast). It is also intended to close the present big gaps in the Calcutta-Madras and Madras-Bombay highways. It is estimated that 400,000 miles of new roads will be required to link all the villages with the national road system. The aim seems to be that no village should be more than an hour's walk from an all-weather road. It is foreseen that an improvement in vehicles is necessary if such a vast road system is to be maintained in good state at a reasonable cost. A gradual replacement of the wooden-wheeled cart by lighter models with pneumatic tyres simultaneously with the construction of the roads will be absolutely essential.

Several suggestions regarding long-term policies as well as emergency projects to increase India's food production were put forward by Dr. D. V. Bal in his address to the Agricultural Sciences Section of the Science Congress. According to Dr. Bal the present food production had to be increased by 8.6 to 26.8 per cent (by 4.6 to 14.3 million tons) to meet the minimum national requirements. As regards long-

term planning, Dr. Bal suggested (1) experiments to determine maximum crop production capacity of soils; (2) colonization of new areas; (3) stabilising incomes of agriculturists and (4) preventing fragmentation of holdings. Regarding emergency measures he pleaded for (1) tube-well irrigation schemes; (2) subsidies to cultivators from industrial incomes; (3) extensive cultivation of leguminous crops; (4) preparation of composts from farm wastes and (5) increase of seed multiplication centres.

Mr. J. J. Ghandy emphasised the urgent need to expand organised research in the country in his address to the Engineering Section. Mr. Ghandy complained of lack of 'national laboratories for physical, metallurgical, fuel, glass and cement research', lack of a bureau of standards and measurements and absence of proper liaison between industries and the universities.

The Science Congress Session concluded last week. It is learnt that plans for the early formation of a National Research Council have been submitted to the Government of India by ninety prominent scientists. The scheme which was circulated for opinion, about three months ago, was finally approved by most of the scientists who had gathered here for the Science Congress session including over 50 Fellows of the National Institute of Science. The Council's aim will be to coordinate research activities in the country and watch and guide technical and research developments according to national needs. The Council's advice regarding training and supply of scientific personnel shall be made available to all research institutions in the country. It is proposed to have separate boards of the Council at present for Pure Science, Agriculture, Medical Science and Engineering.

(FROM OUR CORRESPONDENT)

Bombay, Jan. 11.

Last month the Indian Merchants Chamber put on record its opinion as to the proposed amendments in the law relating to securities. The Committee asked for uniformity and certainty because the public does not distinguish ordinarily between Central and Provincial Government securities. If amendment is needed, it urged that it should be done by amending the Act of 1920. The memorandum raised the question as to the validity of title given by the issue of renewed promissory note because of the Privy Council's decision in an appeal. The memorandum declared in favour of protection for the investor as against the debtor, i.e., the Government and merely reflected the view of a leading stock broker on this subject given in 1939. The most important change in the law promised is the power to be given to the Reserve Bank to decide summarily in case of dispute as to the title. The memorandum asks for the right to appeal over the Bank and asks also that an appellate committee should have a member who knows law. The Central Government wants that a period of six years should be the maximum in regard to liability as to principal or interest. The Chamber objects unless it be that section 18 (a) of the Act of 1920 is copied. Unconditional issue of duplicate securities are described by the Chamber. The memorandum despatched to the Finance Department wanted that the private creditor should have definite and precise rights in case the public debt was controlled by an outside body.

In spite of rationing food prices continued to rise and the Labour Gazette records the rise in the cost of living during September in Bombay and other places. Fuel and clothing were higher than in August for the working class in Ahmedabad as well as Bombay and that is why the withdrawal of dearness allowances seems objectionable to workers. The Industrial Court reviewed the agreement as to dearness allowance for Ahmedabad mill workers. The Advocate-General declared that the allowance must be reduced. The court held the view that the average all-in profit was 21 per cent in 1943 instead of 16 per cent in 1941 and aggregate profits of mills would be higher. The judgment pronounced in September went against the employers and there have been developments since. There is, however, no threat of stoppage of work in Ahmedabad as the mills are going to pay one-fifth of the year's wages as bonus, and the general line of argument used by the Court has not been without effect on the investor's view in the last two weeks as to the merits of textile shares.

Anyway, the merchants here are against cuts in dearness allowances. A long memorandum protests against official proposals to limit bonus, commissions and dearness allowances. The Indian Merchants Chamber regrets that in order to increase revenue the Government should desire to limit private incomes when these are damaged by inflation. Bonus up to four months' pay for workers is considered the reward of efficiency. The memorandum is interesting mainly for the view that persons earning

over Rs.300 per month should also qualify for dearness allowances. A graduated scale of allowances from 60 per cent to 67½ per cent has been recommended because salaried classes have suffered as much as the manual workers, through the rise in the cost of living. Generally, the memorandum objects to limitation of commissions as also to new rules as to stocks of raw materials and finished products because all traders to-day must keep more owing to irregular supplies.

The cotton market has been commended for restraint. Last January the price of the Indian cotton contract was Rs.413 the opening quotation for 1944 was Rs. 484 showing a rise of only 17 per cent in spite of unusual factors. The market has been on good behaviour and the main achievement is not merely that of control. That is the outside view taken after the swift recovery noticed. In spite of the familiar belief that cotton is a hedge against inflation, outside interest has been limited as may be inferred from the rise of 17 per cent only. The argument that prices would decline gradually if goods were given in place of notes, has been heard after the meeting of agricultural economists at Poona. As the bullion market is moderately steady of late, and mills are likely to take more Indian cotton—Egypt's cotton crop in 1943 was smaller than expected and East Africa reported drought—it is expected that prices would show no change even after the final forecast appears.

A ban on futures trading in oils and oilcakes completes the quota of prohibition. A notification on Saturday brought linseed oil and coconut oil into the list of articles which should be sold only for ready delivery. Outstanding contracts are to be adjusted on January 12, at rates fixed by the Government. Specific contracts executed on given dates to be as well as delivery orders, etc., are exempt from the prohibitory order so the dislocation of trade should be inconsiderable.

Lithographic reproductions figured in a recent copyright case here. A picture of Shri Ranchodraji of the Dakor Temple in Diwali regalia was prepared by Laxmisanar Ambalal in 1933. Another man copied the picture in 1939 and so an action followed. The Chief Justice, Sir Leonard Stone and Mr. Justice Divatia heard the appeals and granted an injunction because they were of opinion that the picture drawn by the plaintiff was not a slavish copy of the idol but was the plaintiff's conception of an idea inspired by having seen the idol and was an original work containing skill and artistic merit. Their Lordships had not the slightest doubt that the picture brought out in 1939 by Balashankar Trivedi was copied from the plaintiff's picture. An injunction perpetually restraining the defendant, his servants and agents from selling and publishing copies of the 1939 picture was granted.

The alarm and confusion prevailing in the piecegoods trade is not merely due to the seizure of unstamped goods. Control extends now to all imported goods and there is evidently going to be rigid limitation of profits and prices. If cotton has duly recovered, cloth prices are falling and there is a belief that prices will go lower. In the first week of the year, buying enquiry was disappointing

and export enquiry has offered no compensation in view of difficulties as regards licenses. The market reports few sales of consequence and the rates for all standard styles have declined.

Lower prices in the case of cycles or soap do not compel so much notice as the fall in cloth prices here. Dealers intend to hold a conference on January 15, when other things besides Government action in respect of stamped goods—seized stuffs total over one million yards—will be reviewed.

Dr. Khare was in Bombay last week and discussed the question of special Haj facilities with those interested. Requests for a special officer were made in addition to one for a Musafirkhana in Calcutta for pilgrims. No question was raised as to the discontinuance of the Haj last year though it may be imagined by some that shipping is far more important than the appointment of a permanent Haj officer. Dr. Khare presided over a meeting arranged here to discuss Hindu law reform. Laymen and women were asked by Dr. G. V. Deshmukh to secure piecemeal reforms rather than wait for codification. He spoke up for his Sa-Gotra marriage bill as a desirable legal change, and Dr. Khare spoke at large of the need to get the law changed in the light of social development. Dr. Deshmukh is said to have brought the walk-out into a company meeting last week. There was one objection to the re-election of two directors and the whole trouble was not due to the rate of dividend but to the changes in the Board.

Of greater interest is the appeal to Indian Christians to play a proper part in politics. Sir Maharaj Singh said that the community was still increasing and it had to show its impartiality by trying to compose differences for the sake of political progress. Compared with other communities Indian Christians have secured more places in the commissioned ranks of the Indian Army than any community. Sir Maharaj Singh expressed due satisfaction with a result which he attributed to good home training. The Bishop of Bombay declared that Indian Christians could break down the isolationist element in nationalism.

N.W.R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications are invited from Anglo-Indians & Domiciled Europeans only for appointment as School Mistresses Kotri (Karachi Division). There is one permanent vacancy (appointment and to be made, however, on a temporary basis for the duration of war), and in addition names of two suitable candidates will be borne on a waiting list for a period of one year. Applications must be made on the prescribed form, obtainable at a cost of Re. 1/- from large stations on N. W. Railway. PAY: Rs. 110-5-150 plus dearness allowance. A quarter on payment of rent will be provided. QUALIFICATIONS: Kindergarten and Cambridge School Certificate. AGE:—Above 18 years. Applications on the prescribed form together with attested copies of testimonials and proof of nationality should reach the Chairman on or before 31st January, 1944.

FOR Quality TOOLS

The letters BATU. on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Taps, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unexcelled in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

(From Our Own Correspondent)

Karachi, Jan. 8.

While the eyes of Sind are turned towards Delhi where a conference is on to fix the price of food grains, a big controversy is raging in the local press whether it is in the interests of Sind cultivators to impose an embargo against raising the present control price of rice and other new khariff crops in this province. Telegrams have been dispatched to the Viceroy stating that the Central Government's action in throttling Sind's Ministry's proposals to raise the rice price will be regarded as injurious to the Sind cultivator. The Sind Ministry's claim to have parity with the Punjab in this regard is also supported.

As I indicated in one of my letters, there is clash of opinion between the Governor and the Ministers on price control of food grains and one of the Hindu Ministers has gone to the extent of saying that if the Sind Assembly refuses to fall in line with the Governor's plans regarding rationing and food procurement policy, the Governor would either have to yield to the Ministry's wishes or dismiss it. A Cabinet crisis is feared when the Assembly meets for its budget session in March.

Meanwhile, the Governor has been canvassing views in favour of rationing. He stated at Sukkur the other day that the object of rationing was not to starve the people, not even to reduce their consumption of food below what is reasonably required for health and strength but to prevent hoarding and waste. He further stated: "It is the declared policy of the Government of India and also of your Government, that rationing should be progressively and rapidly introduced in all the towns in India, a policy which has been accepted by every Provincial Government." It is very doubtful after the categorical statement by the Governor whether he would allow the Ministry any liberty to deviate from the all-India policy that is being forged at Delhi.

Though vigorous official steps are being taken to enforce the anti-hoarding and anti-profiteering ordinance, perfect chaos prevails in the market. The buying public is as much at the mercy of the dealers as it was ever before. The moment the price of a particular thing is fixed, it goes underground. Besides, prices have not been fixed for several articles so far. No prosecutions have been launched against dealers who have violated the price control order, by selling goods at higher prices.

Acute shortage of bajri is reported in the city, though the crop has only recently ripened and has not been exported from the province in any large quantities. The official machinery does not permit of bajri being brought to the city to any appreciable extent by private dealers. It is not possible for them to get the commodity at controlled rate from the cultivator, or for consumption in the city because of the latter's reluctance to part with his produce, in the hope that he may get higher prices in the near future. On the other hand, it is maintained by officials that city dealers themselves have good stocks of bajri but they themselves are not willing to sell it to the public, because of their greed and hope of securing higher prices.

Local cloth dealers have decided not to take any overt action and to accept the new dispensation under the stamping order which came into effect on January 1. Over two lakhs yards of pre-August cotton cloth were seized by the inspectors of price control departments. The work of seizure is still going on.

Acute congestion in respect of full pressed cotton bales is reported from various stations on railway yards and factories in Sind. At some stations cotton has not been lifted for over one and a half months. The Karachi Cotton Association has made representation to the North-Western Railway to afford them facilities for the removal of cotton bales.

Mr. S. K. Kripalani, the newly-appointed Indian Trade Commissioner in the United States is now in our midst. He met the local merchants at the Buyers' and Shippers' Chamber. Mr. Jamshed N. R. Mehta, President of the Chamber, represented to Mr. Kripalani that war had given a considerable impetus to the trade between India and the United States and said that the Indian Trade Commissioner would play an important role in regulating supplies from the United States. Referring to exports from Karachi to the United States, Mr. Jamshed said that they were anxious that direct trade connections should be established for trade between India and U.S.A. He further mentioned that Karachi handled 80 per cent of India's total exports of wool and that the best

standards of wool suitable for the U.S. were prepared in India. Concluding, he requested the new Trade Commissioner to use his good offices in the service of national trade and industry and in promoting cordial trade relations between the two countries. Individual members pointed out their difficulties in trading with the United States.

Asking too much?

Not necessarily. In all the giant steel structures that we see around us, the "little chaps" are holding their own. We're talking about the nuts, bolts and rivets that link the girders—and take their full share of the strain, too: little heroes in their way! They've got to be accurate and immensely strong. Sounds a tall order? But that's our job.

Resume of Commodity Markets

The feature of the week is the strength of the jute section on the reports that the Government of Bengal might decide on a smaller crop for the next season and that higher minimum prices might be fixed. There is no confirmation so far regarding these reports and no official announcement about the deliberations at the conference of Central and Provincial Government representatives has been made. The jute manufactures market has been firmer in sympathy with the jute market and the reserve of sellers. The raw cotton market continued firm earlier in the week but towards the close easier conditions were noticeable in sympathy with the silver market and the selling by holders for nearer positions. Definitely easier conditions have been noticeable in the piece-goods market with the acceleration of deliveries by mills and the large supplies of standard cloth varieties. The gold market has been uninteresting but the silver market was firmer earlier in the week. Only in the last two days quotations have been marked sharply lower with selling from important sources.

The strength of the jute market might have come as a surprise to some but with the firmness of upcountry centres and the smallness of arrivals, larger buying by mills has naturally resulted in an upturn in prices. Reports regarding the possibility of a smaller crop for the next season cannot be regarded as correct, though it should be expected that the Government of Bengal would have been anxious to settle the question of acreage satisfactorily. In the event of a slump in prices in the next season, with an increase in the size of the crop, the Government might not perhaps be in a position to give any relief to the ryot. Any increase in the acreage under the crop or any anticipated surplus in the jute supplies in the event of a decrease in the estimated consumption will have to be followed by an assurance from the Central Government to the Bengal Government that financial assistance will be afforded, if prices for jute declined to below a certain level. The suggestion that the Government of Bengal are asking for a higher minimum price leads one to conclude that the Indian Jute Mills Association and the Central Government are in favour of a larger crop for the next season. Otherwise, in the event of a restriction in the crop to 40 per cent of the additional acreage, there will be no need for insistence on a higher minimum price. The position is not clear. Pending the official announcement about the decisions at the conference nothing can be definitely said.

The gold market has been fluctuating in narrow limits and it appears that there may not be any appreciable reduction in the selling rate of the Reserve Bank for some time. Even at the present level absorption of gold is on a very large scale. In view of the large sales by the Reserve Bank it might therefore be expected that the authorities would try to maintain the prices for some time and divert their attention to the silver market. The extremely tight position in regard to ready supplies resulted in an appreciable rise in prices in the silver market in the early days of the week. In the last two

days, however, it was reported that there was some selling from official quarters. It is not definitely known whether the sales were made by the Reserve Bank or as to whether a policy in regard to silver sales, as in the case of gold, will be followed. But the need for selling silver on a large scale cannot be over-emphasised as already the quotation for the white metal is relatively overvalued and there is need for preventing undue speculative activity. Silver is more widely held by the ryot and he should not be encouraged to put in his money in this precious metal as there is bound to be a heavy decline in prices after the war and the poorer classes will suffer a great loss.

At the auctions of tea for consumption in India offerings were again limited and quite firm conditions were noticeable. Sweet liquoring qualities were ½ anna higher. Darjeeling selections were taken up at dearer rates. For best polished types of green teas there was keen demand though ordinary kinds were easier. Dusts were firm and higher prices were fetched.

Dealings in future of vegetable oils and cakes have been prohibited by a new order of the Government of India. The list covers both vegetable oils and cakes, namely, groundnut oil, linseed oil, mustard oil, rapeseed oil and cocoanut oil and a corresponding variety of oilcakes. The order came into effect after the close of business on January 12, 1944 and up till that date it was open to operators to

liquidate voluntarily their contracts. All contracts outstanding at the close of business on that date will be closed at a rate fixed by the Government of India. As in the case of other orders, forward contracts for specified qualities and types and specified deliveries at specified prices, delivery orders, railway receipts or bills of lading against which contracts are not transferable to other parties are exempted from the prohibition.

The Bombay Government has passed an order controlling the price of groundnut oilcakes at Rs. 75 per ton ex-godown of the mill. This order applies only to groundnut oilcakes sold by oil mills run on power machinery. An order has also been issued freezing the stocks of groundnut oilcakes held by oil mills run on power machinery in Bombay province excluding Bombay City and suburbs. Application for the release of frozen stocks should be made to the Deputy Director of Agriculture in charge of the division in which the stocks are held. Stocks of oilcakes in Bombay City and suburbs have already been frozen (by Order No. 45/IV, dated 28th May). Another order has been issued calling for return of stocks of groundnut oilcakes held by oil mills run on power machinery in Bombay Province, excluding Bombay City and suburbs. The returns are to reach the Deputy Director of Agriculture concerned every Monday, beginning with 3rd January 1944 and should refer to the stocks held on the preceding Saturday. Stocks of oilcakes in Bombay City and suburbs have to be separately submitted.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, 13th January.

THE Jute Conference which extended over two days in the beginning of this week has so far produced only the laconic statement that it has ended and that its conclusions will be considered by Government. The Bengal Government was adequately represented by the Chief Minister, the Food Minister, the Finance Minister, the Minister of Labour, Commerce and Industries, and the Minister for Agriculture, while the Central Government were represented by the Commerce Member, who presided, with Sir Ramaswami Mudaliar, Sir Theodore Gregory, Sir P. M. Kharegata, chairman of the Indian Central Jute Committee, and Mr. C. E. Jones. What light some of those attending the conference could throw on the subject is not very clear but it not infrequently appears as if the Central Government considered that a sinequa-non for impartial judgment was a complete ignorance of the subject to be considered. Fortunately for the Jute Industry, the Chairman of the I.J.M.A. was also amongst those present and there is little doubt that he would press the views and requirements of the industry in no uncertain terms.

Meanwhile in Calcutta, rumours of what has been decided or is going to be decided have been rife and varied. A popular theme is that the Maximum rates fixed by the Mills earlier in the season are to be abandoned and prices to be allowed to take their own course. Considering that prices dropped below the fixed maxima very soon after these were fixed and have remained below throughout up to date, so that the cultivator has marketed practically the whole of his crop at rates below the fixed maxima, would indicate that these were fixed at a sufficiently high level to safeguard the interests of the cultivator, and that any suggestion to remove them now can only be a speculative move connected with the fixation of a licensed acreage for the next crop, or for the benefit of those who now hold the balance of the current crop, who generally speaking are not the cultivators. Considering that the declared policy of the Central Government is to do everything possible to combat inflation, it seems hardly probable that the first step in respect of the coming crop will be the raising or the removal of the maximum rates fixed by the Mills, which, if transferred back in full measure to the cultivator, give him a very adequate return for his crop. Admittedly the price ruling for paddy during recent months has made the price of jute look poor, but there can be no gainsaying the fact that the price of paddy has been grossly inflated, and all, or most, of the energies of the Bengal Government are supposed to be concentrated on deflating it. A rough and ready relation between the prices of jute and paddy is as two is to one. That is to say, a return of Rs. 12 per maund for jute to the cultivator and a return of Rs. 6 per maund for paddy is approximately the same. Variation one way or the other tends to bias him in what he should sow, where his land is suitable for either crop. What should be remembered is that the Bengal cultivator is pretty shrewd where his own interests are concerned and may not be too easily swayed by the edicts either of the Bengal Govt. or of the Central Govt. The publication of a

licensed acreage for the coming crop neither guarantees that such acreage will be attained, nor that it will not be exceeded. The last word lies with the cultivator and in our view the present administrative machinery can do little to control the acreage.

The rumours as to the acreage to be licensed have been as variegated as some of them have been ludicrous. It is sometimes forgotten that only the acreage in Bengal comes under license (we refrain from saying control). The crop from outside of Bengal may amount to anything from 9 to 12 lakhs of bales when conditions are more or less normal. Any suggestion of a drastic cut in the Bengal acreage promising enhanced prices, might encourage more intensive cultivation in neighbouring provinces—take for example Assam, which is a surplus province so far as rice is concerned. The "outside" yield has before now reached the figure of 17 lakhs of bales and might do so again, or even exceed that figure if the policy of forcing prices of jute to unduly high levels, which seems to be favoured by certain members of the Bengal Government, is allowed free rein.

The maximum prices for jute were of course linked with maximum prices for all descriptions of manufactured goods and the Central Government will doubtless keep in view that any relaxation in jute prices would have to be balanced by similar adjustments in prices of goods. Actually, supplies for the Indian Government have invariably been placed with the mills at prices in strict relation to the price of jute current at the time, which very often meant that Government got its goods at much below the rates ruling in the open market. It has sometimes intrigued Mills to know on what scale of costs these prices were calculated, for in recent months it has been practically impossible for any mill to know what its costs for any particular month were going to work out—till afterwards. So that these Government orders, based on an arbitrary figure of costs, must often have been unremunerative to mills though they were cheerfully accepted as part of their war effort. Supplies of jute goods to almost all foreign markets are nowadays under control and the purchasing agencies would certainly not look kindly on any relaxing of the present control exercised by the mills themselves. Anything of the sort would immediately be communicated to all the Allied Nations and Bengal would lay herself open to be stigmatised as trying to make capital out of her exports while calling for the sympathy of the world in her shortage of food.

Finally there is the attitude of the Mills themselves to be considered. After all, there is very little outlet for jute these days except to the Calcutta Mills. The Maximum rates for both Jute and Fabrics were introduced and enforced by the Mills themselves, not by the Bengal or the Central Government. The former has in fact gone out of its way to emphasise that the rates fixed by the mills were not endorsed by the Bengal Government. Nevertheless the fixation has undoubtedly been to the benefit of the trade generally and for the most part has been effective. It is open to the Mills, whatever Government do, to stick in their toes and say they will not buy jute at over the maxima fixed by themselves, and what will the market do then? The Mills are in quite a strong enough position to act in this manner if they feel so disposed and then the Bengal Gov-

ernment will be in a quandary if they venture on any ill-considered move. They could of course come out as buyers of the crop themselves at the prices they may fix, but that would be scarcely probable in the present precarious state of their finances.

Coal has been relegated to second place this week and the principal complaint is still the lack of coal—combustible coal—though there is a more than adequate supply of rubbish of no calorific value whatever. Several mills have had to remain idle this week owing to the impossibility of keeping steam up with the alleged coal foisted on them.

In the Export Jute market, interest has been confined as usual to Daisee and Tossa descriptions, but there has been a sharp advance in price. Dundee Daisee sold up to Rs. 79 for Long Group and up to Rs. 90 for Short Group while Dundee Tossa 2/3 sold at Rs. 93. Mills have operated with some freedom, paying up to Rs. 85 for Firsts, to Rs. 81 for Dundee Daisee and Rs. 71 for Outport Tossa 4s. Lower grades also came in for attention and Cuttings reached maximum rates at Rs. 43 for N. C. and Rs. 42 for M. C. Rejections sold at Rs. 62 white and 65 Tossa with H. J. at Rs. 57 and Rs. 58.

Loose Jute has also been fairly active and prices have registered sharp rises in all descriptions. European packing sold from Rs. 16 and Rs. 13 Mids & Bots up to Rs. 16-12 and Rs. 13-12. Indian Jat sold from Rs. 15-12 basis to Rs. 16-4. Supervised Jat was reported at Rs. 16-8 basis Mids with District at Rs. 16 basis, but Jat Bottoms alone sold at Rs. 13-4. Indian District Tossa Bots sold at Rs. 14-4 and Jungli at Rs. 13. Sellers have been reserved on the rise but at the higher levels now reached there is greater quantity offering. Mofussil markets are naturally very firm and as labour difficulties have rendered costs exorbitantly high the mofussil parity is in most cases higher than Calcutta.

There has been little change in the Fabrics section, practically all descriptions having reached ceiling levels. Nine porter hessian is now quoted Rs. 21-8 with elevens at Rs. 28-8 up to March. A sale of elevens for July/Decr. was reported at Rs. 28. "B" Twills are about the only description of Heavy Goods still quotable below maximum, Rs. 67 to Rs. 67-4 still being the current rate. Some Liverpool Twills were reported for April/June at Rs. 75, and 5 lb. Grains have sold more than once at Rs. 151 for January and Jan/Feb.

JUTE

Calcutta, January 13.

VERY firm conditions have been noticeable in the raw jute market during the past week and quite a large amount of business has been reported. Both mills and speculators have been active and for certain grades maximum prices fixed by the Indian Jute Mills Association have been touched. The increase in buying by both mills and speculators is reported to be due to the anxiety of the Bengal Government to reduce the acreage under the crop for the next season in order to make a success of the "grow-more-food campaign", and the need for buying by mills to replenish stocks which have been considerably reduced in the last few months. Arrivals at the moment are considerably below consumption. With the reserve of sellers and the hopeful outlook for 1944 any increase in buying should, therefore, result in an improvement in prices. Developments during the next two weeks should be interesting. The conference of Central and Provincial Government representatives in New Delhi to consider the question of the regulation of the jute crop for the next season has finished its work, but no official announcement has so far been made about the decisions taken at the conference.

In the loose jute section, Indian Jat Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 with European Bottoms at Rs. 13-8. Supervised Bottoms were sold at Rs. 13-4 and Jungli Tossa Bottoms at Rs. 13. Balers are still interested buyers of Tossa varieties and a further rise in prices has been recorded, Rs. 17-4 being paid for Indian Jat Tossa Middles.

In the pucca bales section also very firm conditions have been noticeable. Export business is on a larger scale with mills buying on a larger scale. Balers, however, are not inclined to offer freely and a sharp rise was reported in Firsts at Rs. 83, Dundee Daisee 2/3 at Rs. 79, Hearts at Rs. 66 and Lightnings at Rs. 73. Cuttings N.C. and M.C. were purchased at maximum rates.

JUTE MANUFACTURES

Calcutta, January 13.

THE jute manufactures market also has been steady and quotations are around maximum levels. The improvement in the shipping situation and the satisfactory showing of the stock figures for the month of December have been mainly responsible for the rise in prices. Mills have not much to sell in spite of the improved coal situation and the higher level of production in the last two months. The strength of the jute market also has to a certain extent been helpful. 9 porters are s. 21-8 for all positions as also 11 porters s. 28-8 for all positions.

In the heavy goods section, sellers are very reserved and business has been very restricted owing to the scarcity of offerings. "B" twills for January delivery sold at Rs. 67-4 while Liverpool twills and Cornsacks were nominally quoted at Rs. 75 and Rs. 67-12 respectively. The local stock figures for the month of December show that there has been an increase in hessian, cloth and bags, on civil account from 19.09 crore yards to 21.4 crore yards. Stocks, on military account, are slightly higher at 29.71 crore yards against 29.62 crore yards. Total stocks thus show an increase from 48.71 crore yards to 51.13 crore yards. Sacking, cloth and bags, on civil account, on the other hand, are lower at 21.73 crore yards against 22.93 crore yards while those on military account are 1.47 crore yards against 1.51 crore yards. Total stocks are 23.21 crore yards against 24.43 crore yards. There is an appreciable decline in tonnage from 1,00,776 tons to 94,586 tons. The reduction on balance is thus only 431 tons. The figures are given below:—

TOTAL CIVIL & MILITARY ACCOUNT.			
Description.	30-11-43	31-12-43.

GOLD

Calcutta, January 13.

THE Bombay gold market has been fluctuating in narrow limits. In the absence of any selling by the Reserve Bank in the early part of the week, there was a hardening in rates but with the resumption of selling quotations have again been pushed down. There has been no lowering in the selling rate by the Reserve Bank which is still Rs. 71-2. The absence of any selling early in the week caused a narrowing in the discount between ready and delivery contracts and the quotation at one time was almost level at Rs. 71-2. Towards the close, however, there was an easier feeling in sympathy with the silver market and gold ready closed at Rs. 71-2 and delivery at Rs. 70-9. Quotations at the end of last week were Rs. 71-4 and Rs. 70-12 respectively. Sovereigns were unchanged at Rs. 49-4.

In the Calcutta market gold closed at Rs. 72 and sovereigns at Rs. 49-12.

SILVER

Calcutta, January 13.

AFTER earlier firmness on covering by bears and the cornering of supplies by a prominent operator, firmer conditions were noticeable and towards the close silver Ready was done as

high as Rs. 122-4. There was a narrowing in the discount for delivery over ready contract to Rs. 2-8. In Wednesday's session, however, a definitely quieter feeling has been noticeable on reports of influential selling. Silver ready being Rs. 118-8 and two-days delivery Rs. 115. The discount has thus widened to Rs. 3-8 per 100 tolas from Rs. 2-8. The quotations at the end of last week were Rs. 119-12 and Rs. 116-12 respectively. In the Calcutta market, silver sold at Rs. 122-4 against Rs. 118-4. There has been no change in the London market and the quotation for both Spot and Forward is 23½d.

COTTON

Calcutta, January 13.

THE Bombay raw cotton market was inclined to be firmer in the early days of the period under review. In sympathy with the strength of the silver market, quotations were marked higher but the straddling operations and the issue of delivery orders induced a quieter feeling. The weakness of the silver market in the last two days also led to some selling and quotations are considerably lower than the highest levels for the week. It is significant to note that the decline in prices towards the close has been rather pronounced for forward positions. Jharilla January closed at Rs. 480, after being higher at Rs. 485 while March were Rs. 474-12 against Rs. 484, May Rs. 476 against Rs. 481 and July Rs. 480-12 against Rs. 485-4.

PIECEGOODS

Calcutta, January 13.

THE piecegoods market has been definitely easier with the larger supplies of standard cloth. It is also pointed out that the arrangements in regard to unstamped varieties will not interfere with normal trading and that with the speeding of deliveries from mills a considerable decline in prices should take place. Business passing has been rather limited and there is a tendency on the part of buyers to await further developments. Forward business is restricted in spite of the improvement in transport facilities.

The opening of the Central Office
on Jan. 12 by Mr. T. S. Gladstone,
Sheriff of Calcutta.

INDIAN TEA LICENSING COMMITTEE

EXPORT QUOTA 1944-45

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, as amended, Tea Estates desiring to be allotted an export quota for the year 1st April 1944 to 31st March, 1945 are required to submit an application for such which must be filled with the Indian Tea Licensing Committee not later than the 1st of February 1944. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1 Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

SATURDAY, JANUARY 15, 1944

Price Re. 1

Stock Markets to-day and to-morrow:

BANK RESULTS FOR 1943

It has been a very active week on the Calcutta Stock Exchange. The Bombay market also has been firmer with Steels in the forefront. The increase in activity in both centres cannot be satisfactorily explained and has been mainly due to the large buying by professional operators. With the uncertainty regarding the budget proposals it is rather surprising that it should have been so easy for speculative operators to take up prices without public support. The main reason, perhaps, is to be found in the nature of business that has been transacted in the market in the last few months. Most of the business has been on a cash basis and the shares that were taken up have not come back to the market for a long time. So that with the continued activity of speculators and the rigorous rules regarding deliveries, the rise in prices has been disproportionate to the volume of buying. Investors have taken advantage of the higher level of prices to cash their profits but such selling has not been sufficient to curb speculative activity. It is also taken for granted that the forthcoming budget will not have any terrors for the market and that, with the large volume of money seeking investment, there will have to be a reduction in the yield basis. The reports that some restrictions might be placed on the transaction of business outside office hours and outside the stock exchange, led to a slight decline in prices in Thursday's session but on Friday, the upward trend has been resumed and the undertone is quite firm.

Jute shares have come in for greater attention in the last two days on the possibility of an increase in production and a decrease in working expenses, the saving in respect of supplies of food grain to labour alone constituting a great bullish factor. It should also be borne in mind that the yield in respect of certain shares is relatively higher. Pending the official announcement regarding the deliberations of the jute conference, however, one cannot take a definite view.

The results of important banks for the half-year ended December, 1943 have been published. With the large increase in the working capital there has naturally been a rise in earnings. The Imperial Bank, the Punjab

National Bank and the Bank of India have maintained their dividends at the previous levels. Only the Central Bank is paying a higher dividend. The decision of the Bank of India to maintain the dividend at the level of 1942 is, perhaps, due to the announcement regarding the increase in capital. Their intention might be to pay the same dividend on the increased capital in the current year. The increase in the dividend of the Central Bank cannot, however, be taken to mean that the directors have no consideration of increasing the capital. The rise in earnings is more pronounced in the case of this Bank than others. The net profit for the year is Rs. 10,706,401, more than twice the figure for 1942. The final dividend of 5 percent, with the interim dividend of a similar amount already paid, makes, with the bonus of 2 percent, 12 percent for the whole year against 10 percent for 1942. The return at the present quotation of around Rs. 92 cum-dividend should be considered rather attractive for a share of this class.

The accounts of the Indian Cable Company Limited for the year ended March, 1943 are available. The reduction in earnings for the year would have come as a surprise to many but such decline in earnings has not in any way affected the distribution to shareholders. Total sales are lower at Rs. 38.2 lakhs against Rs. 48.65 lakhs, probably due to a lower level of prices charged to consumers. The net profit, before providing for taxation and depreciation, is Rs. 23,35,854 against Rs. 33,15,194 for 1941-42. Provision for taxation is lower at Rs. 14,16,801 against Rs. 21,93,444 while the amount set aside to depreciation is Rs. 981,542 (Rs. 100,638) and the allocation to reserves Rs. 4,03,000 (Rs. 5,02,000). After paying a dividend of 14 percent (same) on both ordinary and participating cumulative preference shares, the amount carried forward is higher at Rs. 5,11,181 against Rs. 4,63,277 brought in.

The sensational rise in Orissa Minerals and Karanpura Development in recent weeks has drawn the attention of many investors. Orissa Minerals were quoting only Rs. 12-8 a few weeks back while Karanpura Development were quoting below par a few months back. The rise in Orissa Minerals has em-

phasised the possibilities of Karanpura Development, which owns mining rights over an extensive area. The rise in the quotation for Karanpura Development in recent weeks, however, has been mostly due to the reports that this company might benefit to a certain extent from the increased demand for coal. The sub-lease of properties owned by the company might bring in a large revenue to enable the payment of good dividends.

Another company affected by enemy occupation is the Consolidated Tin Mines of Burma. Only last week it was pointed out that the Burma Corporation had considerable difficulty in making up its accounts and that negotiations were being carried on with the British Government for getting compensation for putting the affairs of the company in order. The provisional accounts made satisfactory showing. Consolidated Tin Mines of Burma Limited have published their accounts that cover up to March 1943. In spite of the unfortunate occurrences, the balance-sheet presents a neater position. The increase in liquid assets is due to the recoveries effected under claims submitted to the Government for concentrates awaiting shipment at the time of the invasion of Burma. The amount so recovered was £27,710. Relief from taxation also has increased the liquid resources. It is pointed out that even the sum of £17,395, shown as provision for taxation, will not be ultimately required for the purpose for which it has been set aside.

The gilt-edged market has been very firm in the last two weeks. There has been a sharp rise in the quotation to Rs. 99 on institutional buying. In anticipation of the announcement regarding the second issue of 3 per cent 1966-68 loan there was some buying of 3 per cent 1963-65 loan. Sales of 3 per cent 1966-68 will be limited to Rs. 50 crores, but the rate has not yet been announced. It should, however, be higher than the last issue price of Rs. 98 and it is generally felt that gilt-edged prices would be marked further higher. Already, there is considerable speculation regarding the possibility of a new defence loan.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 14

VERY firm conditions were noticeable on the Calcutta Stock Exchange in the first three days of the week under review and business passing was on a very large scale. Speculators were busy and prices for Coal and Cotton shares were marked sharply higher. Engineering issues also showed a rise of one or two points in sympathy with the strength of the other sections while in the Sugar section Carew & Company were prominent with a rise up to Rs. 32-12. Tea shares came in for selective buying. The reports that some restrictions might be placed on the transaction of business on the floor of the Stock Exchange led to some selling towards the close and some of the gains were lost. The undertone, however, continues steady.

The gilt-edged securities section remained firm and 3½ percent Paper was steady at the high level of Rs. 99 in the absence of any selling by the Reserve Bank. The announcement by the Government of India that a fresh issue of 3 percent 1966-68 Funding Loan would be made for Rs. 50 crores at prices ascertainable from the Reserve Bank, from time to time, had also a slightly encouraging effect on the market. Among terminable loans, 3 percent 1953-55 were Rs. 99-15, 3 percent 1963-65 Rs. 99-3, 3½ per cent 1947-50 Rs. 103-5 and 4 percent 1960-70 Rs. 112-11. No transactions have been recorded in Provincial loans. Easy conditions have continued to prevail in the money market and there has been a further decline in the average discount rate from 9 annas last week to 8 annas and 7 pies percent per annum. No transactions have been recorded either in Public Bodies or Industrial debentures. First class preferences have been in good request with jute mill preferences being marked further higher. Bally were Rs. 177. Empire Rs. 166-8, Hastings Rs. 150, Howrah "A" Rs. 170-8 and Lawrence Rs. 161. Jessop & Co., were Rs. 125, Kumardhubi Engineering Rs. 344, Steel Corporation Rs. 130-8, Alkali and Chemical Rs. 130 and Dalmia Cement Rs. 145.

In the Bank section, the feature of the week is the rise in the quotation for Reserve Bank to Rs. 134 on some special buying. Bharat Bank were dealt in around last week's level of Rs. 122-8. Hind Bank were dealt in at a premium of Rs. 7 and United Commercial Bank Rs. 25 premium. Imperial Bank fully paid were Rs. 1,960 cum-dividend and contributories Rs. 504 cum-dividend. The results of important banks for the year ended December, 1943, have been published and make very satisfactory showing. While the Imperial Bank has maintained its dividend for the half-year ended December, 1943, the Central Bank is paying the higher dividend of 12 per cent for the whole year against 10 per cent for 1942.

In the Coal section, firmer conditions were noticeable till Wednesday, but on Thursday a slightly easier feeling was noticeable on selling for profit-taking. Quotations are not very much lower than the highest levels for the week, Amalgamated being Rs. 46-10 and Bengal Rs. 611 cum-dividend. Burrakur were further higher at Rs. 31-10; the quotation at the end of last week was Rs. 30. Central Kurkend were quiet at Rs. 21-13,

but Equitable were steady at Rs. 53-8. New Beerbhoom were Rs. 32-8 cum-dividend, North Damuda Rs. 10-4, Raneeunge Rs. 37-12, South Karanpura Rs. 10-12 and Talcher Rs. 6-10.

Cotton shares improved suddenly on reports that the output from mills was on a large scale and that the Government of India had been successful in their plans for maximising production. Benares were done up to Rs. 14-14 and Bengal-Nagpur Rs. 39-7, Cawnpore Textiles were nearly one point higher at Rs. 14-10 while there was good buying for Dunbar at Rs. 303, the quotation at the end of last week being Rs. 275. Elgin were steady at Rs. 91-8, while Muir Mills, with the approach of the dividend, have risen to Rs. 517. New Victoria were marked up to Rs. 11 earlier in the week, but are quiet at the time of writing at Rs. 10-4. Sri Radhesyam were Rs. 19-8.

The Jute section was quite firm and business passing was satisfactory. The hopes regarding the possibility of an increase in the number of working hours and an improvement in exports were primarily responsible for the greater interest shown in jute shares. The reports that the Bengal Government were asking for a higher maximum price for jute and were keen on reducing the acreage under the crop for the next season had a slightly depressing effect on the market and closing prices are lower, Anglo-India being Rs. 403 and Champdany Rs. 277, Calcutta Jute has been freely bought up to Rs. 39-8 while Clive were higher at Rs. 31-11. Howrah put on nearly two points to Rs. 69 while India were slightly lower at Rs. 56. Kamarhaty were Rs. 518, Kankarrah Rs. 487 and Orient Rs. 234. Naskarpara and National were unchanged at Rs. 30 while Nellimaria were done up to Rs. 26-12 and Northbrook Rs. 34. Presidency, after being higher, at Rs. 7-6 are lower at Rs. 7-1. Rameshwara came in for good buying and were done up to Rs. 17-8. The quotation at the end of last week was Rs. 16-4. Soorah also improved to Rs. 17-10 from Rs. 15-8. Reliance were Rs. 63 and Waverley Rs. 6-2.

In the Engineering section, Bhartia Electric Steel were steady at Rs. 18, but Braithwaite were in better enquiry at Rs. 11-10. Burn & Co., were a few points higher at Rs. 391. Hooghly Docking & Engineering were better at Rs. 108. Indian Iron improved from Rs. 37-2 to Rs. 38-1, but are again at last week's levels the close being quiet Rs. 37-2 on some selling. Kumardhubi Engineering were steady at Rs. 10 and National Screw Rs. 13-3, Steel Corporation were not very much higher at Rs. 28-4.

In the Sugar section the only feature of interest was Carew & Co., with a rise to Rs. 32-12. There has been considerable speculative activity and the quotation improved from Rs. 31-8 to Rs. 32-12. With some selling at the higher levels the close was slightly easier at Rs. 32-6, Cawnpore were quieter at Rs. 43-12, while Belsund were Rs. 13-4 and Murree Brewery Rs. 26. New Savan were a shade better at Rs. 23-4 while Ramnugger Cane & Sugar came in for late buying being done up to Rs. 14-2. Samastipur were Rs. 21 and U. P. Sugar Rs. 37-4.

Tea shares were a shade better but business was still small. Dimakusi were Rs. 48-8,

East India Rs. 16-8, Namburnadi Rs. 11-11 and Patrakola Rs. 1,106, Sapoi were unchanged at Rs. 20-4 and Tezpor at Rs. 16-8.

In the Miscellaneous section, Burma Corporation were firmer at Rs. 4-3 on the satisfactory report by the directors. Indian Copper, after being higher at Rs. 3-5, are now quoting Rs. 3-2. Karanpura Development have continued to rise on special buying and the quotation is at the highest level for the week at Rs. 29-7. Orissa Minerals also have been in good request and done up to Rs. 23-8, British Ceylon Corporation were firm at Rs. 17-5 while Britannia Biscuits were at the higher level of Rs. 20-8. B. I. Corporation were held at Rs. 6-10 while Calcutta Ice improved by three points to Rs. 19-2. Spencer were one point higher at Rs. 13-8, Northern India Oil improved by one point to Rs. 25-5, while initial transactions were put through in the Dehri Oil Refinery at a premium of Rs. 3-8. It will be remembered that only recently these shares were issued at par to the public. Paper shares also are higher with Mysore at Rs. 30-4 cum-dividend, Orient Rs. 32-4 and Titagur at Rs. 28-10 ex-dividend. Midnapore Zemindari were Rs. 139 and Assam Sawes Rs. 5-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, January 13.

BUT for a brief setback the local stock exchange was very active throughout the period under review with selected scrips touching new levels. It is rather difficult to attempt an analysis of the transactions with a view to arrive at the underlying factors governing the present boom. Contrary to expectations the new year has opened well for the market and there is no indication yet of a slackening of interest in the stock exchange. It is believed that as long as the currency expansion continues unabated the stock exchange is bound to be brisk especially at this juncture as there are not many fields open for the speculator. Though the speculator has not been left absolutely free to indulge in his activities in this field, yet there is more scope here than elsewhere. Since the volume of surplus funds seeking investment is still quite considerable both operators and investors do not feel compelled to pay much attention to the relevant data before entering into commitments. Even the nearness of the Central Budget which used to put the market on a cautious mood has so far failed to wield its usual influence this year. Further there is a growing feeling among both operators and investors that even if the war ends this year, the post-war prospects of Indian Industries are bound to be better and brighter.

Though the local market is rather firm, profit-taking activity continues to assert itself now and then. But for this interruption share prices would have been higher than what they are at the moment. The weakness of the silver market had an adverse effect on the stock exchange on Wednesday and equities lost considerable ground. Though there has been a recovery since prices have not regained the levels they touched earlier in the week.

The gilt-edged market was very steady with 3½ per cent Government Paper quoting around Rs. 99. 3 per cent Loan (1949-52), were Rs. 100-11 while 3 per cent (1951-54),

(Continued on page 76).

Company Meeting

BENGAL COAL COMPANY, LIMITED

THE PROBLEM OF LABOUR AND RAISINGS

Mr. MEALING'S REMARKS

ADDRESSING the Annual General Meeting of the shareholders of the Bengal Coal Co., Ltd., held in Calcutta on Wednesday, the 12th January, 1944, Mr. K. W. Mealing, the Chairman, said:—

Gentlemen,

Before proceeding with the formal business before the meeting I will, with your permission, give you a brief survey of the past year's events and activities.

A year ago I forecast that instead of coal despatches being limited by transport capacity, we in the coal industry might be required to increase our raisings to fill the wagons available. In July I again told you of my grave anxiety at the prospect of a shortage either in raisings, or transport, or both, so acute that it might seriously affect the war effort and production in many directions. I regret that these prognostications have been justified by the event, and despite all our endeavours the many factors inimical to good raisings of coal have continued to drain our mining labour away and thus restrict output throughout the year. Recently the position has arisen that in spite of the grave dislocation caused to the transport system by the breach of the Damodar river bund from July to September, there have been more wagons available than our raisings can fill. As a result of this and the urgent demand for other essential war purposes we have had the unhappiness of seeing many of our best customers including the great Jute Mill Industry of Calcutta at a standstill week after week through lack of coal. I would appeal to all classes of coal consumers, industrial and domestic, to avoid waste by all possible means during the coming months.

Of the several factors limiting raisings I must refer to some of the most important. The demand for manual labour for other purposes continues, and a miner and his wife not unnaturally prefer more congenial work in which both can earn cash and rations above ground, rather than work below ground for the man only. The high prices ruling for rice naturally enhanced and greatly prolonged the annual seasonal migration during planting time and whilst this will, we hope, result in a greater crop of aman paddy, it inevitably resulted in an abnormal reduction in coal raisings. Three outbreaks of cholera between July and October, despite the provision of chlorinated water at each colliery, also resulted in labour leaving the colliery districts until it has subsided. We believe this infection to have been brought in by Government contract labour employed on neighbouring projects for whom no proper housing, sanitation or water supply had been provided. The question of nutrition of mining labour has also concerned us and although we have so far been able to issue at concession rates a fairly sufficient ration of rice to our mining labour, I think the very fact that a limitation has had to be fixed, has had an effect on the work-output of the miners and thus on raisings.

RAISINGS 8 PER CENT LOWER.

The effect of all these factors becomes clear when I tell you that the total raisings for the

half-year ended 31st October were 11 per cent lower than the half-year ended October 1942 and for the whole year were 8 per cent lower than in the previous year. Needless to say we are giving anxious thought to the problems confronting us in the coming year for, whilst some of the factors which have kept raisings down in 1943 may be somewhat mitigated in the future, it behoves us not to count on this but to take such steps as we can to deal with the situation.

A year ago I gave this warning in regard to foodstuffs: "So long as Government control and supply measures are successful all will be well but should they not succeed the result upon raisings will be disastrous and will be felt by all industries dependent upon coal throughout the country". The restrictions then placed upon the purchase and movement of foodgrains were subsequently removed and as a result we have been enabled to obtain sufficient supplies for issue to our labour during 1943, but looking to the coming year, this warning has lost none of its force and I would add that if the present basis of rations to mining labour is reduced for any reason I believe the result will be an immediate and proportional drop in coal output. I cannot therefore stress too strongly the vital importance to the war effort that coal output should not be prejudiced in this way.

Here in Calcutta we are about to embark upon the rationing of foodgrains and other articles and in wishing every success to the officials responsible for its introduction and administration, I must make it clear that in my view it is nearly a year overdue and that political influence or sectional prejudice must in no circumstances be allowed to obstruct the success of the scheme. Rationing in other countries has proved the greatest saver of waste and has enabled surpluses to be built up and extra rations to be provided for those engaged on heavy manual labour where the actual output per man is in direct ratio to the quantity of foodstuffs allowed him. If the output in all collieries and heavy industries is to be maintained, it is therefore essential that this principle should be adopted and it can only be done by the equitable rationing of all urban areas.

First of all, however, I will deal with the vexed question of allowing women into the mines. It is quite probable that in a number of coalfields raisings will be materially increased as a result of this, and if this is so, the famine in coal which has developed probably justifies permission for this to be granted during the present emergency.

In the deep mines owned by your Company in the Dishergarh field, however, we are doubtful if the allowance of women below ground will be of any particular advantage to raisings and have not therefore urged this request in respect of your collieries.

Indeed, although there is little doubt that this step will prove effective in most mines it may have an adverse effect in your Dishergarh collieries where we are already employing a very large number of women on the surface in connection with sandstowing. The output from these collieries is largely de-

pendent upon the quantity of sand that can be stowed underground, and if the women prefer to work underground with their husbands and thus reduce the number available for work on the surface loading sand, it may be that the output of Dishergarh coal will be actually reduced.

Government have, however, permitted women below ground as from 24th November, 1943.

NEED FOR MECHANIZATION

Another step that would, in our opinion, help to increase the production of coal and being more uniformity in output throughout the year, would be the further mechanization of such collieries suited to this type of mining. Such equipment, is of course, only obtainable in these times through permits and priorities which only Government can grant, and the excessive capital cost under war-time conditions also requires careful consideration and negotiation. I need only assure you that your Board are fully alive to the necessity of improving raisings and, consistent with the Company's proper interests, are prepared to take whatever steps are deemed advisable to this end.

Whilst on this urgent question of raisings I must refer to one aspect in regard to which there is a good deal of misunderstanding. The welfare and proper treatment of our mining labour is a matter constantly before us, but it is a regrettable but undeniable fact that hitherto it has been the inclination of the miner to work only sufficient days in each week to earn the necessities of life and no more. The theories propounded by Government Advisers that the way to increase raisings is to increase wages would, for this reason, be likely to have the contrary effect. As the disposal of the whole of your output of Dishergarh and Poniati coals is now controlled by Government and is largely consumed by Government interests the effect would thus be, in our experience, to reduce the output and increase costs which Government would have to pay. As a result, however, of recent conferences with the Labour Department, increased remuneration is now being paid and the effect on the raisings per man employed will be watched with great care and interest. I am informed, however, that the first results have not been encouraging. In any case the effect will be to increase the cost of production which in view of the reduction in output, is already extremely high and it is therefore likely that further increase in the cost of coal will now become necessary. Indeed an increase of Rs. 2 per ton on the selling price has recently been decided upon.

The time will undoubtedly come when mining labour will be educated to the stage when they will no longer limit their work to the earnings needed to cover their week to week necessities, but I do not think it has yet arrived and until it does, higher pay has little attraction except as an inducement to less work especially as there are few consumer goods available and the idea of thrift and saving is not yet attractive to miners. Education is primarily the duty and responsibility of Government but I will tell you later what your Company is doing for its employees in this regard.

I referred earlier to the disastrous breach of the Damodar river bund and I would like to take this opportunity of paying a tribute to the officials, engineers, and staff and to the other personnel who assisted them, for the magnificent way in which the breach was tackled and the expedition with which it was closed and through running again

organized. During the period of the breach the amount of traffic which was conveyed to and from Calcutta by other routes, through the careful planning of the Coal Controller, Khan Bahadur G. Faruque, and the co-operation between the two Railways concerned, was remarkable. We have not yet been vouchsafed any authoritative statement as to how the breach took place, whether the maintenance of the dam of recent years had been adequate and what steps are to be taken to assure us against a repetition this year. Here again I am impelled to point out that neither politics, nor sectional or vested interests, should be permitted to delay or hamper a correct assessment of the reasons for the disaster and the proper methods for the prevention of its recurrence. Of recent years we have suffered too much from political disagreements and insistence upon the communal ratio in the appointment of officers without regard to efficiency. I sincerely hope that public opinion and a sense of civic responsibility will be strong enough to insist that food procurement and rationing, the raising of coal for essential industries, and the maintenance of vital communications are not hampered and delayed by such matters during the coming critical year.

Turning to the war, I am sure you will all agree with me that 1943 has been a marvellous year. The enemy have suffered and are suffering resounding defeats in Russia, they have been finally swept from the shores of Africa, and are now battling defensively almost at the gates of Rome. The overthrow of Mussolini and the capitulation of the Italian Government has sounded the death-knell of Fascism, whilst Nazi Germany is now on the defensive everywhere. The same applies to the Japanese who are beginning to feel the tightening band from the islands in the South as step by step the Allies go forward in the general direction of Tokyo. We look forward in 1944 to great and world-shaking events and long strides nearer to that victory without which there can be no future happiness in any part of the earth. I fear, however, that too many people are forgetful that no war is over until the last battle is successfully fought and it may well be that the hardest and bloodiest part of the war yet lies ahead of us. To relax our efforts in any degree at this time might be to prejudice victory otherwise within our grasp. Those who put self-interest, personal or political prejudice before the war effort are in fact no less traitors than those in the enemy's pay.

In regard to domestic matters, the same problems which have been with us during the past few years, of obtaining stores, spare parts, improvising where such are unobtainable, transport difficulties and such like, are now becoming a part of our general routine and I am glad to say for the most part have been reasonably successfully dealt with during the past year. I understand the industry is now to receive the assistance of the Chief Mining Engineer, Railway Board, Mr. J. R. Harrison, in the purchase of plant and machinery, and with his very extensive knowledge of mining conditions in India, this should be a great boon to the trade. Your staff most of whom have now been many years without long leave and who are working under high pressure, under-strength and over-burdened, are carrying on magnificently, for they know that their part in the production of coal stands in importance second to no other task to which they could be allotted. There is no doubt in my mind that the coming year will be one of coal shortage for, while less is being produced,

far more than normally will be required. We believe the Government of India to be apprised of the position and can only hope that such steps as they may take to improve the situation will prove successful.

I regret to have to tell you that under medical advice Mr. R. H. Worthington who, as you all know, has been in executive charge of your affairs for some 14 years, is having to retire in March of this year. His loss will be greatly felt by all of us and he regrets the necessity of having to retire no less than we do. I am sure you will wish me to convey to him on behalf of the Company our sincere wishes for his complete recovery and the enjoyment of many years of retirement.

As you know, 1943 has marked the hundredth year in the life of this great Company. As I mentioned a year ago, we felt that under present war-time conditions it would not be possible nor, indeed, desirable to celebrate the occasion as, in peace-time, we would have desired. What we have done, however, is to build at Sanctoria a fine, modern, well-equipped hospital known as the Bengal Coal Company's Sanctoria Centenary Hospital for the benefit of our labour. The new Centenary Hospital is both larger and better equipped than our old one which will be kept in service as an emergency hospital for the Sodepore and Sitalpore collieries. We have also completed a Mining School for the training of boys in the profession of coal-mining and created scholarships to enable lads of all classes drawn from amongst your employees' families from miners' sons upwards, to receive a first class mining education. As you know, we have primary schools at most of our collieries which we encourage miners' children to attend, and although they are generally well attended by the children of the clerical and technical staff we find it difficult to persuade the mining labour to send their offspring. We also have a Baby Welfare Clinic for each group and I am glad to tell you that these are gradually becoming more popular with the miners whose superstitious prejudice against such institutions is gradually waning. I am sure you will approve our decision to mark the Centenary Year in the directions I have indicated.

The past year has also marked the end after seven long and arduous years of Lord Linlithgow's Viceroyalty and the sad death of our late Governor, Sir John Herbert. Both gave of themselves unsparingly during the most anxious periods this war has yet produced. In welcoming their successors, His Excellency Lord Wavell and Mr. Casey our Governor-designate, I am sure you would wish me to record our intention that the Bengal Coal Company shall maintain its proud record as the oldest and greatest Coal Company in India in service to the community in the production to the fullest extent possible of the output of this vitally needed mineral—Coal.

DEHRI-ROHTAS LIGHT RAILWAY COMPANY, LIMITED

NOTICE

The Sixty-eighth Ordinary General Meeting of the Shareholders of the above Company will be held at the Office of the Managing Agents of the Company at Dalmianagar on 31st January, 1944 at 3 p.m. to receive and adopt the Directors' Report and Audited Accounts for the periods ended 30th September, 1942 and 31st March, 1943 and to declare dividend, to elect Directors and Auditors and to transact the ordinary business of the Company.

The Share Transfer Books of the Company will remain closed from 20-1-1944 to 31-1-1944 (both days inclusive).

By order of the Board,

S. P. JAIN,
Director.

Dalmianagar,
Dated 5th January, 1944.

(Continued from page 74).

were done upto Rs. 100-3. 4 per cent Loan (1960-70) had buyers at Rs. 112-8.

Mill shares continued to be the main attraction in the entire market though there was considerable enquiry for Steel shares also. *Bombay Dyeing* touched a new high at Rs. 2,080 earlier in the week though some ground was lost owing to the general weakness of the market on Wednesday and due to profit-taking at higher levels. *Century* after being higher at Rs. 996 closed a bit easy around Rs. 984. *Gokak* were Rs. 386; *Kohinoor* Rs. 692; *Simplex* Rs. 299 and *Suadesini* Rs. 623.

Steel shares met with good investment support throughout the period under review and it seems that prices will further go up if nothing untoward happens to disturb the present mood of the market. *Tata Steel* *Deffereds* are steadily rising and the latest quotation is around Rs. 2,076. *Tata* ordinaries show an increase of more than 12 points during the week at Rs. 409-8. *Indian Iron* were better at Rs. 37.

In the Miscellaneous section A-C-C were very much in request and the latest quotation is higher by 3 points at Rs. 234, over the quotation last week at the same time. Both *Burma Corporation* and *Indian Copper* show considerable improvement with the former quoting at Rs. 4-1 and the latter at Rs. 3-2. *Alcock Ashdown* continue to attract buyers at Rs. 580, *Premier Construction* were rather neglected at Rs. 234. *Shivrajpur Syndicate* were steady around Rs. 79. *Bombay Steam* were Rs. 660, while *Scindia Steam* were in request at Rs. 37 x.d. and *Belapur Sugar* at Rs. 245-8 x.d.

COMPANY REPORTS

CALCUTTA TRAMWAYS COMPANY, LIMITED

Audited Accounts of the Company for the year ended 31st December, 1942:—

The result of the year's working is as follows:—

	£	s.	d.
The Revenue for the year, including Interest and Dividends on Investments and Deposits, less Income Tax and Exchange Adjustment, and after transferring £80,000 to General Reserve and Renewals Fund, amounts to	90,517	16	7
The Balance brought forward from 1941 Accounts is	28,131	5	7
Total	118,649	2	2

	£	s.	d.
Against which has been debited:—			
First Debenture Stock Interest	15,750	0	0
5% Second Debenture Stock Interest	11,935	0	0
5% Second Debenture Stock Redemption Account	3,027	10	0
Preference Share Dividend	12,500	0	0
	43,212	10	0

Leaving a Balance as shown by the Net Revenue Account of

There was paid on the 28th November, 1942, an Dividend of 2½ per cent., less Income Tax, on the Ordinary Shares, absorbing	17,500	0	0
and the Directors now propose the payment of a Final Dividend of 4 per cent., less Income Tax, on the Ordinary Shares, making 6½ per cent for the year, which will absorb	28,000	0	0
and to carry forward to next Account the balance of	29,936	12	2

The General Reserve and Renewals Fund at the commencement of the year stood at £583,856 2s. 2d. Deducting therefrom £21,710 3s. 10d. written off for Renewals, etc., during the year and adding £80,000 allocated out of 1942 profit, there remains a balance of £642,145 18s. 4d. to the credit of the Fund.

The Revenue Account for the year to 31st December, 1942, shows a further increase in Traffic Receipts of £32,108, largely due to the restriction in petrol supplies for buses and cars and the increased earnings of the working classes owing to War conditions. Working expenses have increased and are increasing; the supply of all materials and stores has become more difficult and a further reserve of £10,000 for Deferred Repairs has, therefore, been made.

The Net Revenue Account after charging an increased provision for British and Indian Taxation, interest on the Debenture Issues and dividend on the Preference Shares, shows a credit balance of £75,436, including £28,131 brought forward from last year. An interim dividend of 2½%, less Income Tax was paid on the Ordinary Shares on the 28th November, 1942. The final dividend of 4%, less Income Tax, leaving a balance of £29,936 to be carried forward.

During the year £70,350 was spent on Capital Account, including the expenditure in connection with the New Howrah Bridge and the Ballygunge Extensions, the New Ballygunge Depot, additional transformer stations and additional Rolling stock. To meet this expenditure and the cost of renewals, a further sum of £80,000 has been set aside to the old Depreciation Fund now more correctly included in the Balance Sheet under the heading "General Reserve and Renewals Fund."

Secretaries.—Messrs. Hays, Akers & Hays.

Authorised Capital—£1,400,000. Issued and Subscribed—£950,000 in 700,000 ordinary and 250,000 5 per cent Cum. Pref. share both of £1 each, fully paid up Debentures—£600,000, £350,000 in both of £1 each, fully paid up Debentures—£100 in the event of 4½% First Debenture stock redeemable at £100 in the event of the Company being purchased by Calcutta & Howrah Corporations and £250,000, less redeemed £13,550 in 5 per cent Second Debenture stock redeemable at 102 per cent on 1st October, 1974.

Synopsis of the Balance Sheet as at 31st December, 1942.

Liabilities.	Rs.	Assets.	Rs.
Capital Paid up	950,000	Block expenditure	2,104,901
Debenture Stock	586,453	Stocks & Stores	108,583

CHAIRMAN'S SPEECH.

BANK OF MYMENSINGH GOURIPUR LTD.

Opening of Central Office in Calcutta

MR. T. S. GLADSTONE'S SPEECH

THE inauguration ceremony of the Central Office of the Bank of Mymensingh-Gouripur Ltd. took place before a large and distinguished assembly on Wednesday afternoon. Mr. T. S. Gladstone, the Sheriff of Calcutta, performed the opening ceremony.

Those present were afterwards entertained to tea at the Great Eastern Hotel.

Prominent among those present were Sir David Ezra, Mr. Jadu Nath Roy, Mr. P. C. Law, Dr. S. B. Dutt, Mr. N. Dutta, Khan Bahadur G. A. Dossani, Mrs. C. Gillies, Mr. K. Dutt, Mr. N. L. Chatterji, Mr. K. Bonnerjee, Mr. Dunbar and Mr. C. S. Rangaswami.

Mr. B. K. Roy Choudhury, the Managing Director, read the speech of the Maharaja Bahadur of Mymensingh, the Chairman, who was ill and could not attend.

The Chairman said:—

"We possibly owe an explanation to the critical section of the public for this new venture at a time when there have been a number of big floatations, heavily capitalised. Personally speaking, I consider these floatations as sufficient justifications for our venture as well. For, they bear testimony to the fact that there is a wide prospect for banking development now. Mymensingh—the district to which both the Managing Director and myself belong and which is also the birth-place of this institution, does not possess any big banking house of its own. It, however, enjoys a sort of quasi-monopoly in jute and an equally covetable position in rice and other products. Bengal as you may know, produces 80 per cent of total world production of jute and 80 per cent of Bengal's production is from Mymensingh. In

my own area, and that of Mr. Roy Choudhury, crores of rupees are handled in the jute trade. Sometimes we have to extend credit to a set of people on a piecemeal basis and we have always keenly felt the want of an institution run by persons who are fully conversant with the trade and could adequately finance it to the immense benefit of the people. Why should we not then have our own bank with our own money for our own business and why shouldn't such an institution grow if the Zemindari houses of the district with a tradition of honesty and efficiency for generations are behind it? I am confident of the success of this institution, for we have not started it in an amateur fashion merely to take advantage of the prevailing easy conditions in the money market. Our resources are growing. We have also a plan of work. And in addition we have a person of the eminence and financial acumen of Mr. N. R. Sarkar, who also hails from our district, to advise us on financial matters. I consider that these conditions constitute an assurance of our success".

Mr. Gladstone, in performing the opening ceremony, said:—

"I must begin by expressing my appreciation for the honour accorded me in inviting me to preside at the opening of the new Central Office of the Mymensingh-Gouripur Bank in Calcutta. Less than one year ago the opening ceremony of the then newly constituted Bank was performed in the district of its birth by Mr. Nalini Ranjan Sarkar and it is a tribute to the enterprise of those responsible for its management that the decision has now been made to open an office in Calcutta. As a member of the local Board of the oldest Bank in Calcutta, I bid welcome to the newest comer to our Banking circles and I feel confident that in view of its past history and the eminence of those gentlemen responsible for its management, it has a sound and excellent future before it.

I am particularly interested in the original conception of the Mymensingh-Gouripur Bank and I should like to pay a tribute to the initiative and enterprise of its founder and patron and its Directors. I am fully convinced that it is only by means of the extension of rural banking in India that real prosperity can be brought into our countryside and the greatest credit is due to those who help to attain this object. Industrialisation is naturally a most desirable objective, but to increase industrialism in India before you have increased the purchasing power of the cultivator and those associated with him who form the great mass of the population and backbone of India, is to put the cart before the horse. In order to sell our factory products we must first, or simultaneously, have a general public possessing the wherewithal to purchase them. This point is too often forgotten by our industrialists and I cannot too strongly point out the folly of making industrialism versus agriculture and the general commercial development of country districts a positive or a political issue. The two must go hand in hand. On the purchasing power of the agriculturist and local Zemindar and their capacity to produce more and better crops economically and without financial strain depends primarily the wealth and prosperity of this great country. The importance of well run and enterprising Banking Institutions of this type, therefore, is very great indeed. Without them advance is well-nigh impossible. With them everything is possible.

In conclusion, therefore, may the Mymensingh-Gouripur Bank continue to flourish and develop and may it prove an example and a guiding light to others in the future. I sincerely wish both the Bank and its Directors and Management a happy, prosperous and successful future".

The bank's premises are situated at the junction of Hare Street and Banks' Hall Street.

CENTRAL BANK OF INDIA, LIMITED

IMPERIAL BANK OF INDIA

The Central Board at a meeting held at Calcutta declared a dividend to shareholders for the half-year ended 31st December, 1943, at the rate of 12 per cent per annum, payable on and after the 24th January, 1944.

The profits available, including Rs. 47,48,000 brought forward from the previous half-year, amounted approximately to Rs. 92,11,300 which sum was disposed of as follows:—

	Rs.
I. Payment of a dividend of 12 per cent per annum (free of income-tax) ..	33,75,000
II. Transferred to Reserve Fund ..	10,00,000
III. Transferred to Pension Funds ..	1,05,800
Carried forward to next half-year ..	47,50,500
Total ..	92,11,300

The average rate for Demand Loans during the half-year was 3½ per cent.

THE PUNJAB NATIONAL BANK LIMITED

Subject to audit, the profits of the Punjab National Bank Ltd. for the year 1943 amounted to Rs. 24,37,690-5-5, out of which over Rs. 1½ lakhs have been added to the Reserve Fund and an ad-interim dividend at the rate of 6% p.a. for the half-year ending 30-6-43 having been already paid, a final dividend at the rate of 6% p.a. for the half-year ended 31-12-43 is proposed to be declared.

TREASURY BILLS

India
Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on January 18, 1944. Total amount

offered was Rs. 12,11,25,000. Tenders at Rs. 99-14-0 per cent were accepted in full and those at Rs. 99-13-9 per cent were allotted approximately 57 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-8-8 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on January 25, 1944, in Bombay up to 11 a.m. and up to the close of business on January 24, 1944 at other centres. Successful tenderers should make payment on January 28, 1944. Other conditions are usual.

During the week ended January 14, 1944, Government of India Treasury Bills for Rs. 3,94,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday evening.

Market behaviour abroad in the last few days confirms the fear that confusion would arise after Congress met. The Cairo rumours, of course, count for little as compared with the struggle ahead between the party which is the beneficiary of larger votes in Pennsylvania and the President. A Canadian who knew the U.S.A. as a diplomat said that the President should or would begin his campaign for a Fourth Term by offering an improved version of the New Deal. The message on the State of the Union, like the earlier outline to pressmen of a social security plan, suggested that President's armoury of arguments and promises was full. But no real headway has been made as the Republican Chairman has postponed consideration of the manpower question and it looks as if party spirit will be rampant for some time.

Wall Street has been quick to read the signs in the election year and more than normal recovery was shown in prices last week though turnover was under the million. Ebuilient optimism is ruled out, but the Republicans are looking for an innings, and business revival prospects in the U.S.A. will have to be assessed without undue regard to Mr. Donald Nelson's recapitulation of war production totals. The budget message seems to have excited little controversy after Mr. Harold Smith's talk to the financial press. The revenue proposals of September dwell largely on the consolidation of the federal income-tax so as to get the Victory tax out of the way. But the U. S. legislature dealt recklessly with the realistic tax plan, and one may even suggest that the U.S.A. has its own version of the deadlock at present with Congress frowning on wage agreements, food subsidies and much else.

If there is little concern with harvests in 1943-44 there is plenty of trouble for industrialists as transport wages have been raised and the whole battle of control against inflation has to be fought over again. The U. S. portents are not overlooked in Britain where markets have turned quieter this week. Stock Exchange prices reflect a new mood of caution, partly due to the differences between Poland and Russia. As the year ended and the excess of railway earnings over the guaranteed revenue came to be appraised there was some liveliness in the railway share market. But a setback followed, and the weather, from the investor's view, has been spoilt by politics abroad. The main influence is discernible in the drop in leading oil shares. Though it is known that Anglo-Iranian has important interests in Saudi Arabia alongside of the American oil companies, and Saudi Arabia is nearing the British orbit, the shares have receded. The hope of a settlement with Mexico appears to have died out to judge by the fall in Engles. News of forthcoming U. S. competition in the Middle East has restrained textile issues. It is certainly proper to relate much of the drop to the belief that agreement is more remote than last year in regard to trade and financial matters. The Five Senators appear to have stirred up U. S. sentiment—pretty thoroughly by defining the rights of the U.S.A. after the war as regards shipping and aviation. War news has now ceased to be as important as calculations of an adverse turn to Anglo-American relations. Senator Nye is known to have become active and the isolationist fringe should be reckoned im-

portant. A Gallup poll in October put the Democrats' chances in 1944 higher than seemed possible, but there has been since then a great deal of bad news. The U.S. offer to mediate has led to no direct reply from Russia. Big battles in Russia mean little for the markets so that even Russia's offer to talk over matters financial in Washington is known to be of little consequence.

What has stimulated Indian markets lately springs from the confusion of Allied purposes. Perhaps Mr. Churchill's review would set most things right. The agreement with France *outré-mer* has been distinctly strengthened by the visit to Marrakesh. Clearly the franc after the war would be allied to sterling and the resources of the Colonies would be at the disposal of the Power that controls Africa. The Anglo-French alliance then appears to become a stronger factor for the future and those vast insular republics, the U.S.S.R. and U.S.A. would not be of vast importance. There is also the fact that Mr. Willkie's prospects would improve before autumn though the Post-war Policy Association turned too readily to Mr. Dewey. Mr. Willkie told the U.S.A. that it was necessary to get away from the extravagance of the New Deal, work for economy and freedom of enterprise and while looking for collaboration the U.S.A. should not toy with the notion of permanent alliances. A semi-detached America was recommended and it looks as if the 78th Congress approves the St. Louis programme.

The State Department cannot put over the tax bill and the whole budget of 92 billions (instead of 106 billions in the year coming to an end) would have to face critical committees again. The course of war may however deflect political sentiment but it must be said that politics will rule markets.

Totals cease to surprise and Mr. Roosevelt's estimates as to war expenditure will only make the Truman Committee sit up. One (Continued on next page).

By Special Cable

Plan for International Commodity Control

SPECIAL FOR "INDIAN FINANCE"

WASHINGTON, January 20.

The formation of a post-war international cartel to control world production, distribution and prices of raw materials is being carefully considered here, and in Britain, according to the highest Government sources who revealed unofficially that plans have reached a stage where the proposed Board's Executive Committee membership is even being discussed.

These sources said that it is tentatively decided that the Committee should comprise representatives of the United States, United Kingdom, France, the Netherlands, Belgium, Italy and probably Russia and China.

The current plans contemplate a World Board to govern both sources and supplies of basic raw materials which would occasionally curb production, and at other times encourage output, and allocate materials to specific markets. The Board's membership would comprise all nations producing exportable raw materials. The purpose would be to effect more equitable production, to further a better peace-time global economy with potential sanctions against countries adjudged in aggression.

So far as the United States is concerned, the cartel is still in a formative period without any official pronouncements thereon, but it is known recently that the reorganised State Department's Economic Division, headed by the Under-Secretary of State of Mr. Edward R. Stettinus, regards this as one as the foremost of post-war planning projects and is co-operating thereon with the Foreign Economic Administration.

Both these Government agencies are of comparatively recent origin, and both represent the latest phase in Mr. Roosevelt's economic thinking wherein he appears to be envisaging an all-embracing, inter-related post-war productive and consuming organisation.

The proposed world cartel would be modelled on the present Combined Raw Materials Board which is a joint wartime project of Britain and the United States and Canada. The cartel would decide such questions as firstly, how much of each raw material each Government would produce, secondly, the price level in case it is necessary to stabilise output and thirdly what producers would share what markets. Consumer nations would be granted an appeal against the procedure in order to seek freer access to raw materials and better price levels.

One of the formidable barriers to the plan, as related to the United States, is its implied relinquishment of national sovereignty to over production and distribution of its own raw materials. This is another matter that Congress must decide, if and when the Administration presents the proposal in finished form.

Officials state that they intend to keep private enterprise operating, but under Governmental regulation. It is argued that one of the plans' greatest appeals to private initiative is that it would eliminate many wide pre-war commodity price fluctuations which hampered normal market transactions.

LLOYDS BANK

LIMITED

(Incorporated in England)

Saving Made Easy

You can help to bring prices down by curtailing your spending and increasing your savings.

Five Rupees will open a Savings Bank Account at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

Interest is allowed, and withdrawals can be made by cheque.

(Continued from previous page).

disturbing factor has been removed. The inquiry into international chemical cartel arrangements is held over. The budget message is important mostly for the promise of joint effort in the transition to peace. After the spending of 397 billion dollars in four years on war the U.S.A. would be distinctly poorer. The war too does not look

like coming to an early end and that is cold comfort for all except the hardened bulls here. The whole budget turns not on the old tax plan but in the ability to keep wages and prices at a certain level. The economic stabilisation law is not yet renewed and even the fear that the Federal debt will be over 258 billions i.e., over the approved statutory figure, a year hence has not changed the view that new taxes cannot be paid. The U.S.A.

according to Mr. Smith is getting only 41 per cent of its war expenditure through taxes. Britain, and Germany too, resort to taxation far more readily and Japan has plans for a bigger war budget as the Diet is being summoned to hear Tojo's proposals. The economic mobilisation in force should suffer from the evacuation of the big cities of Japan caused by the fear of air raids.

TRACTOR OR TANK ?

What is the ultimate destiny of this glowing plate, wending its way through the multiple processes required of flawless steel ?

Will it in time emerge to the world as a tank, conserving water in a torrid desert ; will it go into the making of a tractor to till the fertile soil of the Gangetic Valley ?

Whatever be its final mission, it will contribute to the growth of indigenous industry now, and in the days to come.

World Currency Plans—and India

We understand that the discussions on post-war currency plans at the session, held early this week in New Delhi, of the General Policy Committee were constructive and helpful in every way ; and that, by his just and understanding presentation of India's case in his opening address, by the consideration he showed to the worth-while points made out in the course of the debate, and by the clear assurances he gave in his concluding speech, Sir Jeremy Raisman has greatly reinforced the goodwill which he enjoys as a trusty steward of India's finances ; and that, while the Indian Government have not yet reached any finality with regard to the conclusions on the currency plans proposed by America and Britain, they will welcome the fullest expression of Indian opinion and, in any case, no final decisions will be reached until there has been an opportunity for discussion of the various issues in the Central Legislature. Sir Jeremy has frankly admitted that the plans as evolved by the British and American experts have not yet assumed their final form and are still undergoing further changes. For this reason, the speakers at the General Policy Committee had necessarily to confine themselves to the wider issues. Our comment in the present circumstances has, likewise, to be mainly on the broad aspects of India's case with regard to world currency plans.

In fact, one may even doubt if it will be at all possible for the American and British experts to come to a compromise. As a recent cable of "Indian Finance" indicated, Russia has thrown a bombshell by her simple and curt assertion that she would like to be paid in gold and she would pay in gold. The attitude thus taken by Russia may well necessitate further re-examination of the whole position.

Meantime, City circles in London do not appear to be optimistic about the outcome of the present efforts for bridging the gulf between the American point of view and the British. In this connection, it is not without significance that the plan of the Canadian experts is definitely inclined towards the American proposals. Gold occupies an important place in the U.S.A. scheme for an International Stabilisation Fund ; gold has practically no role to play in the British plan for a Clearing Union. Russia has now lent a hundred per cent support for gold. Canada also has fallen in line with the view that assigns an important place to gold. In this matter, it may be said, the British view has been found unacceptable by powerful groups. As regards quotas and voting power, the American view has prevailed against the British. In such circumstances, London feels naturally pessimistic whether such a wide gap can be filled up.

It seems to us that, on a careful study of the details of the various proposals and on an appreciation of India's special problems and interests, this country may find it necessary to fall in line with America and Canada rather than with Britain. For, frankly, the British plan is designed primarily to find a solution for those problems which shall be the special problems of Britain in the post-war period on account of her changed status as a debtor in the international sphere, and her greater need to find ways and means to pay for her imports.

In general terms, it may be said that the Keynes and White plans are both conceived and worked out mainly to

deal with surpluses or deficits on current account in international transactions. We emphasise the words "on current account". Thus, for instance, the Keynes plan has but one short paragraph for what is called "abnormal balances in overseas ownership." It is admitted that this is a problem of considerable importance and special difficulties ; but the British plan is content with the expression of the hope that there might be some special provision for dealing with the transitional period only. In the White plan, too, the emphasis is on the balances in current transactions ; and the provisions regarding abnormal war balances are only sketchy. So far as India is concerned, the large accumulations of sterling balances present a problem which she cannot afford to be lightly disposed off in world currency schemes. The most important matter, from the point of view of which India must regard any international currency plan, is whether her rights as regards the large sterling balances are fully and appropriately safeguarded. As the plans stand now, there is no such safeguard.

Another important consideration to bear in mind is that the plans now proposed, particularly the British plan, are specially tender to countries which are likely to have debits in their international balance sheets. The British scheme frankly admits that its merit lies in warning the creditor countries that they must be no longer passive. Considering that India's Home charges after the war will not be even half of the Home charges in pre-war years, and considering that the industrial expansion, which has taken place in India under the stimulus of war, will mean lesser imports of manufactured goods in post-war years, it may be taken as certain that, in ordinary circumstances, this country will enjoy favourable balances of trade. That is to say, the world currency plans in their present form are designed not for India, but for countries which are the opposite number of India.

For generations, India had been a debtor country ; and she had to bear the humiliation and pay the penalty for being a debtor. We are just now facing the prospect of becoming a creditor country ; and we find that the British plan, at any rate, accords no high status for a creditor and imposes a definite penalty on credit balances. In simple terms, when India was a debtor, her lot was humiliation and penalty. Now that she is a creditor is the world order to be so changed that her lot will again be humiliation and penalty ?

Another special problem of India is connected with her demand for gold and silver for purposes other than monetary. As "Eavesdropper" had remarked in an earlier context, no one can be born or can wed or die in India without some amount of silver or gold being necessary in the rituals. Custom and usage have given the precious metals a social more than a monetary status in India. India has, therefore, to make sure that, in whatever world currency plan is adopted, her right to buy gold and silver in the world markets for her social requirements is not curtailed in any way.

To sum up this portion of the argument which deals with the international implications of the currency plans, India has to be satisfied that the plan as finally adopted protects and safeguards her firstly with regard to the foreign balances which she as a creditor country now possesses ; secondly, with regard to her position in international current transactions where she is more likely than not to enjoy surpluses in her

favour; and thirdly, as regards her right to buy and import precious metals for her customary needs and requirements.

We have now to deal with the internal aspects of the plan from the point of view of individual countries. The British plan, for example, makes it clear that there should be the least possible interference with internal national policies, and the plan should not wander from the international terrain. We must admit that this assurance is definite and categorical. But we are not so sure that this assurance will work in practice. As we have already stressed, India is likely to be in credit in international current accounts. What will be the treatment accorded to India in such a contingency? Clause 9 of the British proposals provides the answer to this poser. The Governing Board of the Clearing Union will suggest to India the appropriateness of the following measures for the restoration of the equilibrium of international balances:

(a) Measures for the expansion of domestic credit and domestic demand.

(b) The appreciation of its local currency in terms of bancor, or, alternatively, the encouragement of an increase in money rates of earnings.

(c) The reduction of tariffs and other discouragement against imports.

(d) International development loans.

In other words, India will be asked either to appreciate the exchange value of her currency or to put into force deflationary measures and increase the money rates of earnings or to reduce tariffs and encourage imports in every possible way or to make international development loans. In brief, the measures that India will be obliged to inaugurate will be deflationary in character and contractionist in effects. At this context, we may as well emphasise that the currency plans, as they are now devised, are calculated to set free inflationary and expansionist forces in countries which have debit balances on international account and to release deflationary and contractionist forces in countries with favourable balances. India has suffered from deflation and contraction for a quarter of a century. Is the future also to hold deflation and contraction in store for her? It must, therefore, be clear that the assurance of non-interference in internal policy is valueless in practice as the very basis of the plans is such as to influence internal policies though indirectly.

Another important consideration from the standpoint of internal policy is the kind of standard that India should have. India's demand for a gold standard has always been a cry for the moon. India has, of course, had a gold exchange standard. But, truly speaking, it was not a gold exchange standard as sterling exchange standard. The post-war trade opportunities require India having not a sterling exchange standard but a gold exchange standard in the full sense of the term. This war has had the effect of opening up trade possibilities between Russia and the rest of the world. India as a close neighbour stands to gain greatly from these possibilities. If trade with Russia is to be developed, it is essential that our currency reserves must contain a far higher proportion of gold than is the case now. It is also to be carefully noted that the many contacts which are being established with America will pave the way for a larger trade between India and America. This means that our currency reserves must have a sufficient stock of dollar assets. While the bulk of our transactions will

be in sterling and while, from this point of view, the primary link of the rupee will be with sterling, it is, at the same time, essential that our currency reserves should have much more gold than now and also considerable dollar assets.

Towards this end, India has a right to demand that the balances in dollars which have so far accrued or which will accrue hereafter in respect of India's transactions with America during the war should be made available to this country. Our dollar balances have hitherto been merged into the Empire pool. As Britain is now in a position to render a good account of reverse lease-lend operations, there is no longer the same need for Britain to utilise India's dollar balances. It should therefore be no strain on Britain to return us our past dollar balances and to allow India to secure her future dollar balances.

Similarly, India has a right to demand that the gold, which has been exported from India to Britain since the beginning of the war, and part of which is now being sold by the British Government in India as an anti-inflationary measure, is returned to India at the original cost. This is a matter for negotiation between the Indian Government and His Majesty's Government; and, knowing the success which has attended Sir Jeremy Raisman's earlier espousals of India's case on various occasions, we have every confidence that Britain will be persuaded to return to this country a substantial portion of the gold which India placed at her disposal when the former needed it most. Now that her need has disappeared and India's need for more gold in her reserves is urgent and imperative, Britain should show appreciation of our past services, present position and future needs.

Another point of internal policy is the exchange value of the rupee. Who is to decide the exchange value of the rupee? Is India a free agent to determine the international value of her currency? The currency plans do not seem to provide a clear answer. The British proposals state that the member states will "agree between themselves the initial values of their own currencies." The White plan suggests that one of the powers of the Stabilisation Fund is to fix the rates at which it will buy and sell one member's currency for another and the rates in local currencies at which it will buy gold. Before India agrees to participate in any plan of world currency, she has certainly to make sure that she has absolute right to decide and determine the initial exchange value of her currency. She has too bitter an experience in regard to this ratio question to let this matter be a whim or caprice of others. India must insist that her true representatives, and they alone, will, of their free will and accord, ascertain and determine the exchange ratio.

While these are some of the special problems which India has to study in relation to world currency plans, there is much comfort in the assurances given by the Finance Member that Indian opinion will be given every opportunity to influence the final views of the Government. We understand that a sub-committee of the General Policy Committee will be appointed to study the currency problem in detail as and when the final version of British and American agreement is made available to India.

Above all, Sir Jeremy has put this country under a debt to him for the precise guarantee that "India will in the last resort have to take decisions on her own behalf in the sphere of monetary policy in the same manner, and to the same extent, as other members of the United Nations."

Notice of Rationing

Announcements to the effect that rationing for Greater Calcutta is to begin on January 31, have been supplemented by notices as to shops, registration and the quantities allowed. Commercial organisations asked, in the main, for the preservation of customary agency. The balance between Government stores and private establishments is retained under the Rationing Order. The most pleasing feature is the uniformity in the sugar ration for young and old. Questions have not been asked as to the quantity allowed. Differences between practice in Chittagong and Calcutta certainly stand out, but the main question that may be asked is whether the rations for the hot weather should be the same as those fixed at present. The list of unrationed foodstuffs is large and any shortage in cereals would be made up by other things like milk and meat. The only rationed food ready to eat is bread and the unit of 12 oz. is reasonably high. In fact, general availability may induce many to turn to baker's bread in preference to grain or flour.

This may have important results especially as bread has been cheapened by order lately because the price of both wheat and flour is lower. Obviously flour mills' shares would stay up for that reason and the investor who has noted that rationing is intended in Delhi would be ready to draw conclusions. If changes in diet encourage the free use of flour in place of rice, the millers' outlook would be different, and not many would overlook the fact that a remarkable rise in flour mill shares took place last year after wheat control was abandoned and free imports of grain became possible. Discussion as to mills' costs and margin has certainly taken place, but the further changes promised by rationing are admittedly more important for the mills and their shareholders.

No estimates as to quantities involved have appeared and no assurance has been given as regards prices of rationed foodstuffs. If Sind and the Punjab maintain export prices for rice at the former level it is difficult to say whether rice would be cheaper in Calcutta than in the Districts. Sind is not free to raise prices but uniformity has not been attained as Mr. Suhrawardy confessed after his return from the last price conference. It may be suggested that the price of rice in Bengal was fixed mainly in relation to the price asked by exporting Provinces and the present margin between rice and wheat prices despite the improvement in supplies described in the rice forecast is a consequence of price control worked in Sind. It is clear that the surplus Pro-

vinces prescribe prices and only a striking fall in prices outside the deficit area fed on imports would contribute towards the restoration of prices remunerative to the grower and just to the consumer in Bengal. It is clear that prices are now outside the Bengal Ministry's control and the success of rationing also will be outside its control as mechanics, not policy, is left to the Ministry.

Consumer Subsidies

High prices are being dealt with in many ways but the difference between official measures and the unofficial approach to the problem is readily indicated in Sir C. B. Mehta's plan for consumer subsidies. His proposal for bullion sales in India was adopted rather late, only after the Middle East duly started to absorb gold and silver. His most recent suggestion is in favour of guaranteed prices for farm producers, stabilisation of the cost of living and the imposition of price control—strikingly reminiscent of Mr. Roosevelt's written message to Congress. Most of these suggestions have figured in previous discussions of the food problem. That the Government should buy up grain and sell at prescribed prices is superficially attractive. Last year most large employers in Calcutta did it with results that are apparent to investors. The U.K. has resorted to subsidies mainly as a complement to overall rationing. The U.S. legislature has rejected it. Subsidies are recommended generally to stimulate production. High prices have already stimulated agricultural production in 1943 except where restriction plans have been adopted. The more important fact in the view of some is that the Central Government has derived some profit from wheat sales and purchases at high prices continue to be made when price control is the main aim of food policy.

Provincial Governments have been told that prices must be fair to the consumer and the producer should count only on the enlarged supply of civilian goods. Higher prices through subsidies would only increase the surplus of purchasing power. Crop production figures do not indicate how much of marginal land has come under cultivation. Crop purchase plans, even on a strictly limited scale, tend to go askew as has been shown in Bengal. There is also the constitutional difficulty and all subsidies must necessarily come out of provincial budgets. Increases in the land tax are obviously difficult when the land code does not permit it. If the proposal is merely meant to arrest a fall in commodity prices in India, it is superfluous. In the New Year prices have certainly developed a stability that makes it neces-

sary to argue that costs ruling last year rather than subsidies would determine prices this year. When chances of mal-administration are frequent and general, it is doubtful if the Provinces can bestow subsidies in the proper manner. And a State monopoly in foodstuffs would certainly be unwelcome to those who have argued consistently that the food problem originated from resolute interference with normal transport and distribution arrangements. To offer money rewards at a late stage in the form of guaranteed prices would be an admission that production has so far failed to respond to official promises of proper prices, during and after, the war. When dearness allowances are cut by order, it may appear somewhat desirable to reduce the cost of living by the Government shouldering the loss on sales of grain bought at special rates. But local Governments cannot resort to new taxation in order to finance purchases at special prices. Most have prepared for post-war reconstruction only by enhancing stamp duties and the like, and the Centre would clearly desire to have the field for itself this year. What are the crops suited for State purchase and what are the prices that industries should pay when they are

already subject to control are admittedly questions that cannot be answered by any advocate of farm subsidies. Nor is it likely that larger consumption (encouraged by subsidies) is desired when the main need is austerity.

Within a Year

Important developments promised for the near future in the Balkans are independent of Turkey's decision to stay neutral. The crossing of the Dnieper is complete and the war for Rumania well may take the same course as the invasion of Poland. It is only in the South that the Russian advance from the summer appears inconsiderable, but there is a real threat to the Crimea already, and repeated mention of the danger to the Warsaw-Odessa railway indicates that the latter is much an objective as the former city. The frantic efforts made to keep the Dalmatian coast by an offensive in Bosnia indicate how the defence is being drawn in. The German circle is definitely shrinking in size even before the attack from the west.

The reduction of commitments is not attributable wholly to reverses in Italy where the weather has so far favoured the defence. There is, of course, Vichy's promise of collaboration and Spain's non-belligerency. But the neutrals have moved far away from Germany in 1943 and diplomatic failures of the year were underlined by Von Papen's visit to the Vatican as well as the more recent execution of Ciano. Portugal is ranged on the side of Britain since October and relations with the Free French have steadily improved in spite of the episode in Lebanon.

The last year has been one of preparation for a greater and more arduous task in the opinion of Mr. Edward Montgomery. The preparation has been supplemented by a direct attack on Germany's fighter strength, actual and potential, for reasons that are connected with the invasion programme. The attack by air precedes landing and its tempo and range are greater than before. There has been already a suggestion that German resistance may be broken by air attack alone, and a swift surrender may take place. The probable shortening of war has however to be related to the events in the Far East. For the present the Japanese keep their position and do not seem to have real difficulties outside Arakan. The London view as to peace stocks has evidently changed of late, to judge by a fall in leading textile shares. Indian market sentiment, except in regard to bullion share no real change as compared with 1943 and the persistent use in mining and industrial shares indicates the average operator's assessment of the outlook for certain classes of enterprise. In spite of direct encouragement to imports it is not likely that industrial production will fail to respond to special measures. Confidence as to the outcome rather than the duration explains many changes over a year but diplomatic and military happenings are of less interest than the international relief plans which afford a guarantee of large exports in the case of jute and cotton manufactures. New views are evidently taking shape so that possibilities, rather than performance, receive first consideration. Temporary irregularity cannot conceal the emergence of opinion that ignores yield by assigning special value to real or fancied post-war

prospects. For the present Allied achievements in 1943 constitute the foundation for the improvement in share prices in the New Year without excessive regard for the probable changes in taxation.

Australia's Aims

The electoral victory of October has been followed by Australian Labour's mandate to Mr. Curtin to proceed with the policy followed during Mr. Curtin's two years of office. The Inter-State Labour Conference of the Australian Labour Party gave the Government virtually a complete mandate to proceed with a policy of full co-operation with other countries of the British Commonwealth and with friendly nations in the problems of peace as well as war. According to a recent news bulletin the Conference dealt with all controversial subjects in a way least likely to cause embarrassment to the Government. The passage of a negative resolution on financial policy freed the Government of the need for haste in carrying out the extreme lines of party policy. Complete ratification has been given to the Commonwealth Cabinet's decision to seek by referendum next year only the temporary powers recommended in 1942 by the Constitutional Convention and leave, until after the war, the wider constitutional reforms which are in the Labour platform.

The party mandate may well explain the decision to consult with the New Zealand Cabinet about the future of the Western Pacific. The projected conference is part of a wider programme but the main interest lies in the decision to build up a security zone for Australia. Before the operations in S.W. Pacific are over the future of the Solomons must be settled. From the last war, Australia acquired some German territory but Mandates are of less use than an agreement with New Zealand about the islands. The foreign policy that goes with Dominion nationhood as in the case of

Canada may not be the same as that of the Foreign Office and Mr. Curtin having failed to secure an assurance as to Imperial policy has duly prepared for consultations with the neighbour. Union of New Guinea with the Northern Territory may appear logical when the programme for development is ready and what Australia wants out of the conference is to make the most of inter-Imperial relations as the U.S.A. has disclaimed territorial ambitions altogether. Guarantees as to Timor and Dutch New Guinea may not be required when the Commonwealth has a plan for the islands in the South Pacific. The Minister for External Affairs expects that the two Dominions can deal with the requirements of the islands better than the Colonial Office and the first efforts made by the Dominions might have repercussions in Africa where there is a plan for closer union—not merely in East Africa, but for a development of organic connections between South Africa and all British territories.

The further object of the Pacific expansion programme may be inferred from Mr. Curtin's declaration that there is no suggestion of a policy of self-sufficiency for Australia. In regard to post-war planning and reconstruction he recognised that Australia would have to adopt a policy aiming at rising employment and consumption. He recognised that 'round the Indian and Pacific Oceans were many countries whose economic productivity was extremely low. Some had large populations, living with few exceptions, at subsistence level. These near neighbours had carried on too little trade with Australia in the past. Their primary and secondary industry lacked capital equipment, modern techniques and economic efficiency. Any moves to increase the productivity of their economies, of the living standards of the masses of their people as well as being good in themselves offered an expanding market for Australian foodstuffs and manufactures.' Mr. Curtin's definition of aims and results is of special interest to India as well as China at present and it is useful to recognise clearly that the growth of the Dominions in war has a real bearing on whatever plans, political or economic, may be prepared in India apart from the fact that the Dominions refuse to be left out when the Big Three settle their spheres of influence.

Antipathy to Gold.

Frankly disapproving U. S. Treasury plans to force Mr. White's plans into general consideration at an international conference. London comment apparently ignores the tempered rejection of official plans by unofficial opinion. The private plan of Mr. Leon Fraser offering debt extinction deferred payment on lease-lend and above all, a large gold credit to Britain to keep the dollar-sterling rate steady is more likely to meet with Congressional approval than the Treasury's scheme. The White Plan must run the gauntlet of a hostile Congress and U. S. bankers, less isolationist yet more severe, than the Treasury, accepted the familiar doctrine that sterling is in wider use and all that is wanted is a stable cross-rate. Of course, the White plan wants the rate to be the same as in August 1942, but it asks for gold contributions from one and all. The maldistribution of the World's gold cannot be rectified by any attempt to bring what would be really a gold exchange

standard, not worked as in the past between one country and another, but between sets of countries whose views as to gold are still uninfluenced by any argument as to Russia being ready to sell gold. In effect, there may be no real demand for Russian gold after the war because exporters cannot give what Russia may want.

It may be generally assumed, that Russia offers gold for international trade because it is already known that export credits will not be available and Russia will only be a competing rival for limited supplies of British or American goods. Obviously, to a country like Britain with a surplus of imports, the offer of gold, in place of essential goods, cannot be very attractive, and Britain having also to

meet claims of her short-term creditors may find that it is more necessary to develop trade with countries other than Russia. If Russia's imports are limited to relief supplies in the first few years after the war, any offer to put gold first has very little meaning for other countries. The Russian argument would encourage the outflow of gold to the U.S.A. because of the perennial export surplus. It would not help one or other countries to draw gold out from the U.S.A. and the weight of unofficial opinion is already against the change that may follow when a new gold bloc is created perhaps to be broken after some years. The U.S.A., of course, has devalued the dollar about ten years ago, and has accepted exchange control. That point is as important as the

thorough control practised in Russia. The differences in kind and degree between the controls enforced in Britain and America are negligible, so the only argument relates to what is good for Britain after the war. The main British problem will be that arising from the altered balance of payments, rendering export of capital unlikely and adjustments on current deficit all the more necessary. The U.S.A. has not offered to lend; the Johnson Act is in the way and it is unlikely that the U. S. Treasury will be able to convince Congress that the revised White plan is perfect. The developments in Eastern Europe may bring about a change in opinion that may be more potent than British unwillingness to commit a debtor to gold quotas. In any case, Congress rather than the Executive will decide, and it should be remembered in this connection that Mr. Roosevelt's financial programme was based mainly on the Glass-Steagall Act.

Britain's financial aid to France and the Belgo-Dutch agreement have been mentioned in order to indicate that an Anglo-American agreement is more desirable. There may be no need for any new bank if a trade pact and an exchange agreement are produced. The tripartite arrangement of 1936 worked well enough though France got her full measure of crises (but not for any reasons connected with finance be it noted). The maintenance of stability in practice may be very easy if the dollar and sterling areas are defined and the exchange rate fixed unofficially as was done after the outbreak of war.

Chemicals from Canada

Before the war the U.S.A. produced as much chemicals as Germany, Britain and France put together, and during the war North American production has naturally increased to a greater degree owing to the superiority in basic resources like petroleum and hydro-electric power. Moreover, the need to produce rubber and other materials, lost after Japan's seizure of many Asiatic territories, forced on America the task of developing substitutes. It has been reported that most of the requirements have been met by North American chemical concerns a full supply of synthetic rubber being the notable exception—and the balance is assured before long. Within two years, the industry has undergone unparalleled expansion and transformation to an extent that might ordinarily be accomplished in a decade including one development not even contemplated before the war, namely, the provision of over three-quarters of a million of artificial rubber.

When it is said that North American production has developed it is implied that Canada has built up a mature chemical industry to greater strength and success. Canadian munitions progress is based on the manufacture of chemicals and explosives. Canada had in 1939 a fairly substantial chemical industry though deficient in certain products, particularly, war chemicals. It is of interest to note that a Canadian, Dr. L. V. Redman developed a phenolic plastic of which bakelite is one product, and that the first commercial production of another synthetic resin for plastics took place in the province of Quebec. After the outbreak of war, Canada was given the important role of reserve producer for the Allies. Conversion of existing facilities was undertaken in order to

provide for certain new products and the vast expansion programme commenced in 1940. In three years of war the number of chemical plants in Canada rose from 797 to 869 while capital invested therein rose from 170.6 million dollars to 410.2 millions. Employment was almost quadrupled like the total wage bill, and the gross value of output rose from 157.4 million dollars to 471.8 million dollars or by over 200 per cent.

The greatest increase in production took place in regard to war chemicals derived from thirty newly completed plants including huge explosives, shell-filling, fuse-filling and high octane gasoline projects,

all of which required the services of more than 50,000 employees. Canadian processes have been adopted in the U.S.A. and the combined efforts have led to the displacement of linters by cellulose from wood-pulp for making explosives. Owing to the Canadian process, the output of TNT from existing plants has approximately doubled and joint effort has resulted in the production of a super-explosive. Other achievements claimed for Canadian chemical plants are the equipment of a large synthetic rubber plant. It is known that employment in the Canadian chemical industry rose last year, and important benefits promised for peace are the expansion of the Dominion's output of fertilisers, artificial fibres and plastics. A certain type of ammonia derived from natural gas is considered one of the cheapest ammonia products available while ammonium nitrate originally made for munitions has been used for making nitrogen fertilisers.

Crops and Prices in Canada

Changes in Canadian agricultural production are of limited value so far as export trade is concerned. It is known that Canada's trade in 1943 continued to increase, and a fairly good showing was made by imports last year. Nevertheless, the main results of the rise in the Canadian export surplus were a reduction in gold exports and the increase in the balance of trade. Most striking change recorded in 1943 was the lead obtained by the U.S.A. over the U.K. in Canada's export trade. But it is useful to note here that Canadian imports from the U.S.A. constituted 82 per cent of total imports, and this familiar import surplus explains the relatively large offering of Canadian dollars in New York, and the persistence for long of differences between the official rate and the free rate over 1942-43. The changes in import trade were small—the increase for 7 months of 1943 over the 1942 total for imports—was to the extent of only 8 million dollars. The lack of outside supplies did not limit shipping, and the growth of retail sales was in direct relation to the increase in farm purchasing power. In regard to farm incomes generally, the enhanced importance of milk products, livestock and poultry and eggs in Canada was a consequence of the war. Wheat ceased to be as important as in 1940 and the Bank of Commerce in a survey of agricultural conditions in 1943 recorded that farmers got the benefit of high prices after allowing for the rise in costs in greater measure last summer. The rise in farm income sprang from the large crop yields of 1942. It was duly recognised that 1943 crops would be below average, and the rise in wheat and eggs alone accounted for the jump in wholesale prices last summer.

Since supplies of Canadian wheat for India are probable attention must be drawn to the fact that weather affected the wheat crop of the Prairie provinces. Spring crops were just about half the average, and a reduction was noted under beet sugar as well as tobacco. It was estimated that total agricultural outturn in Canada would be about one-third below those of the banner year 1942. The information makes plain many developments in U.S. commodity markets. The rise in wheat over a dollar per bushel must be related to the assumption that the wheat crop of 1943 in Canada was about 50 per cent below the 1942 crop

and only the substantial carry-over released farmers from anxiety as to feed from stock. Vegetables and fruits were also affected by the indifferent weather and the livestock industry in places encountered shortage of feed. Shortage of labour in 1942-43 might explain the reduction in agricultural production as also the desire to maintain the lighter branches instead of field crops. Production and price indices in July and August did not afford any measure of the prospective deterioration in the Dominion's food supply, but the main lesson to be

drawn from reports as to Canada's food supplies last year must be that the U.S.A. will have to ship more and the pressure of external demand on the U.S. price-level in the near future would be substantial. It is known, for instance, that the U.S. cotton crop is subnormal and only the Federal Government's cotton holdings obviate real anxiety as to textile production. But cotton prices in the relatively free American market have developed more than stability, and Bombay appears to have drawn the essential conclusions well in time.

CHEMICAL AID

Wherever wheels turn or steam flows, there is some process which can be improved by better Chemicals — or by Chemicals which are more exactly suited to the job.

Delhi Cloth Mills were persuaded of this truth by years of experience in Chemical Engineering. From making Chemicals for their own use D.C.M. have now installed the most modern equipment to yield an efficient and exact production of much larger quantities of standard Chemicals, so that their products are available to other industrialists. The new plant enables D.C.M. to offer many allied products in the chemical field as well, and their whole output comes under rigid laboratory control before it is passed out for industrial use.

Nitric and Hydrochloric Acids • Ferrous Sulphate • Potash Alum • Glauber Salt Nitre & Salt Cake Stamping Paste Paints & Varnishes Printers' Inks (Type & Litho) • Chrome & Prussian Blue Pigments Lubricating Greases.

Post-War Burma

The Overseas Department is known to have held consultations in regard to the future of Indians in Burma after the Burma Reconstruction Department had formulated general desires and considerations. The post-separation problems have been only trade and immigration. Agreements were reached as to both, and a fair estimate of what the Indian minority did for Burma would cover the development of agriculture in the delta and the growth of foreign trade, mostly with India which was the logical market for rice, oil and timber. Changes effected by the war cannot be large in relation to either industry or agriculture. But Burma would not have an export surplus after the war, and capital wanted for rehabilitation must be obtained from abroad. In the years before 1942 Burma's trade with India developed without direct help from tariff preferences, and separation actually made trade relations closer.

The promise of Dominion Status made in November 1941 to Burma should have no direct effect on the relations secured by the treaties on the old model. Whatever shape the external relations take some guarantees would probably be demanded. Mr. Amery as a member of a Tribunal fixed the annual debt contribution of Burma but the debt may be much larger owing to the requirement of reconstruction. Amendment of the Burma Act may lead to a demand for fresh safeguards. It is clear that Rangoon is a port for South-west China as well as Burma, and the currency and exchange arrangements of the future will be naturally in the charge of the former authority. The original decision as to Burma's separation was not due so much to the Simon Commission as to the Burma Round Table Conference which examined both the political and economic issues. Before the war Burma lost her nearest market for rice and in S.E. Asia there are Indo-China and Thailand, each with a surplus of rice. What Burma, whose principal industry was milling, would require after the war can be conjectured roughly. Machinery would have to be bought abroad and minerals may not be important as in the

past. The only important source of imports would be India, and any future treaty of commerce and navigation prepared after the war would have to take account of the Burmese distrust of China and the long familiarity with India. Changes in Burma's Government as a part of Japanese-occupied territories would probably have no bearing whatever on the future of Indians. The most recent survey of the affairs of Burma urges 'Perhaps the shock of war will bring a sense of added realism into Burmese politics and persuade political leaders that Burma's problems must be considered now not merely as internal concerns of a unique and isolated Golden country but as part of the whole international system'. It is on that reckoning that the work of salvage must proceed, and what happened in Burma should leave no disturbing memories when the new chapter begins.

Trade and Lease-Lend

Figures as to lease-lend in the third year were released in the 13th report of the U.S. President to Congress. Reciprocal aid was mentioned in addition to the part played by British-controlled shipping and oil to show that sacrifices were not limited to the U.S.A. at present. Successful operations against the enemy in the President's view justify the increase in assistance last year to a total of \$10.35 billions for 11 months against \$7 billions in 1942. The budget message contains no special indication as to aid in the current year and the precise effect of the change-over to cash transactions e.g. in the case of French North Africa can only be guessed. Evidently North Africa desires to show independence of outside assistance for various reasons mostly connected with the situation in France. But the U.S. exporters' view that lease-lend exceeds private trade has also been forced into the open. There is indeed the view that controls have encouraged lease-lend against private trade, and the N. A. M. meeting in December expressed some doubt as to the value of a policy that drove independent business out.

GENERAL BANKING BUSINESS TRANSACTED

The end of last year saw modifications of lease-lend which do not affect the original principle of the Master Agreement. Admittedly those countries which are eligible for reciprocal lease-lend facilities have increased in number, and if the U.S.A. were to increase aid to China, the countries which could pay should have to accept the modifications desired by the U.S.A. The countries which have an active balance of trade with the U.S.A. normally have no reason to fear the change. Any increase in exports from the U.S.A. would be subject to the main requirements of the war production programme this year. Obviously, shipment of capital goods to certain creditor countries would only enlarge their blocked balances in another currency. To prepare for the transition to peace by letting U.S. exports take the direction then would not be undesirable in the election year. Price control and other arrangements are likely to be maintained, and the prospect of indiscriminate competition for goods in limited supply is remote.

It may be assumed by some that the U.S.A. intends to obtain a reserve of foreign exchange against post-war requirements by the change in procedure. Without guarantees as to both aviation and shipping after the war U.S. business interests would naturally hesitate to approve indefinite continuance of lease-lend. For countries which supply strategic materials the problem really is one of acquiring dollars in direct return for goods. If goods cannot be provided by the U.S.A. exports of treasure remain a possibility, and the U.S.A. again gives an indication of readiness to give up wartime financial control by a readiness to give either dollars or gold in return for goods sold by countries other than Britain. Any limitation of lease-lend supplies in the future implies larger supplies for neutral markets and the tentative atti-

tude towards freedom of trade in wartime by giving private trade its place would offset the creation of a commercial corporation under the U.S. Government's auspices. A different view may be that the Act of 1941 is likely to be revised, and the Administration has duly prepared for it by reducing the commitments for the final quarter. Trade rivalry apart, it may be suggested that India would gain if imports of steel etc. are limited by the decision of the U.S.A. for the encouragement to Indian production would be obvious in this case. While

India's only essential import, oil is admittedly derived from non-American sources, there would be no difficulty, and discussions as to how trade should flow hereafter would help to put dollars at the disposal of India rather than Britain, for the shortage of dollars has so far been the real inhibiting factor in India's import trade. The acquisition on current account would be duly favoured by changes in the U.S.A. in the direction of freedom for private enterprise in the Middle East, especially, where goods are said to be the only cure for inflation.

**THE BIHAR MICA
INDUSTRY****Facts you should know**

MICA is the world's chief electrical insulator. It is indispensable in the manufacture of most kinds of electrical machinery.

THE MICA deposits of Bihar, which are one of India's greatest national assets, provide 90% of the world's demand for the high grade mica required for Wireless, X-Ray and Television apparatus. These deposits also supply 75% of the lower quality muscovite mica required for the manufacture and repair of Electrical Power Machinery, Generators, Dynamos, etc.

THE PROCESSING of mica is very largely a cottage industry in Bihar, giving part time employment to tens of thousands of women and children. This is in addition to thousands of others who are wholly employed in mines and factories.

BUT THIS socially important industry is threatened with early destruction by an extensive illicit trade in mica.

IF THE MICA INDUSTRY is to be saved, drastic action will have to be taken to eliminate illicit trading, and those who profit by it to the detriment of the rest of the community.

ALL THOSE BIHARIS who are anxious to see this industry preserved for the good of its 1½ lakhs of employees, and their 3½ lakhs of dependents, should extend their moral support to the crusade which is now being carried on against the illicit trade in mica.

"HITCHING WAGONS"

Filled with bright hopes for the future, after peace is won, many of us are now "hitching our wagons to a star," because out here, we are relatively untouched by war.

But what have our fighting men to look forward to?—those wounded in battle—these languishing in prison camps.

Their health impaired, these men are constantly in need of our care, until such time as they can be tended by their families at home.

Please help us to build the tremendous funds we need for this work of mercy; we must continue despatching warm clothing, food and hospital accessories overseas.

**CHAMPAGNES, WINES
 AND SCOTCH WHISKY
 ALWAYS AVAILABLE**

Within the first three weeks of the New Year, I have had to undertake two trips to Delhi; and, thanks to the overcrowding in trains, I was provided with lively company. In the natty but tiny compartment of the air conditioned coach, our debating society was in continual session except for the few hours for sleep. The discussion was frank and all-embracing and was both instructive and interesting. There were no less than five participants; and the most incisive and thought-provoking of them was Lala Shankarlal, the younger brother of Sir Shri Ram. I have known Shankarlal for a long time but never had an opportunity of intimate or detailed exchange of ideas. It was a pleasant surprise to realise into what full stature of understanding and leadership he has blossomed. Lest his advent should dim the effulgence of his brother, Mr. Shankarlal has kept himself more or less aloof from the Federated Chambers. But what is a loss to the Federated Chambers is a distinct gain to the Associated Chambers. For, though it is not known generally, the Associated Chambers have a sprinkling of Indian delegates. I may go further and say that, through the Chambers of Commerce of Cawnpore and Delhi, the Associated Chambers provide opportunities for the ventilation of what may be described as India's side of the economic questions. There are definite indications that the small but competent Indian minority have come to wield an influence far greater than would be imagined from its numbers. Of this Indian group, Mr. Shankarlal is the acknowledged leader and brain trust. By universal accord, the last session of the Associated Chambers has been acclaimed for the momentous character and comprehensive range of some of the resolutions passed thereat. The resolutions with regard to planning in particular reveal careful study, just understanding and shrewd judgment; and even a purely Indian commercial body could be proud to have fathered such resolutions. The establishment of this brilliant record is due to the tactful lead given by Mr. Shankarlal and his friends on the one hand, and to the statesmanlike conduct of business by the President, Mr. Burder on the other hand. I cannot but feel that the time is not far off for Mr. Shankarlal to enjoy in the counsels of Indian commerce as great a regard as is now enjoyed by Sir Shri Ram.

Before I take leave of Shankarlal, I must refer to some plainspeaking which he gave me and for which I am grateful. "Where is the old champagne quality of Clive Street Gossip gone?"—asked Shankarlal more in sorrow than in anger.

I refer to this pointed remark of Shankarlal as I have heard similar complaints from other quarters also. My readers, who have always cherished a special soft corner for me, are certainly entitled to an explanation. In the early years of this feature, I regarded it as a kind of personal diary or chronicle of my movements and observations. The personal touch of this column was, therefore, its distinguishing feature; and, in this respect, "Indian Finance" has unique record among financial papers for its unusual experiment in discussing serious questions in a light way. The conduct of a personal column for sixteen years in a way which provides both amusement and instruction is no ordinary strain; and Mr. Geoffrey Crowther of the "Economist" wondered how I managed to keep the personal touch week after week and year after year. Readers of this column expect me to deal with personalities rather than with topics; and they prefer the light to the serious vein. The more the personalities I drag into this column, the more pleased are the readers. But one of the difficulties I have encountered is that many of our Indian readers are too sensitive and do not care to have their leg pulled. In sum, while I have made a number of friends among the mass of my readers, I have also recognised that this column is responsible for quite a few of my old friends becoming positively unfriendly. All of which would seem to suggest that,

in a country where caricature and cartoons are hardly appreciated, the minimising of the personal touch is desirable.

But this is not the main reason for the sparse figuring of personalities in recent months in my gossip. It has so happened that some of the topics have required to be dealt with in a series of articles. These subjects have included the development of what I have called the New Economics. This is not a theme that lends itself to light treatment. Other topics of equally serious import have engaged my attention; and the result is that topics and events have crowded out personalities from this column. I say all this not in extenuation but in explanation. And I deem it fitting that I should conclude this personal explanation with the assurance that I shall endeavour to maintain this feature as a personal link between my readers and me.

In my last trip to Delhi, I attended the meeting of the General Policy Committee; and I did not realise, till I saw the table plan, in what distinguished company I figured. Sir Jwala Prasad Srivastava, the Deputy President of the Reconstruction Committee of Council, is to be congratulated on the wise choice of members and on the success which he has achieved in getting acceptance from such a number of distinguished leaders. The thought

Mr. J. C. CHAKRABORTY

uppermost in my mind was that, if a National Government set about forming a General Policy Committee, the personnel it would have selected would not be far different from the members now composing this committee. The two days' session of the General Policy Committee may be said to be a complete success from every point of view. In the first day's proceedings, the world currency plans were the subject of discussion; and Sir Jeremy Raisman, who was in the chair during this debate, was able to inspire the completest confidence that the final views of the Government would reflect non-official Indian opinion in a way that may well prove to be a turning point in India's sad currency history. The present arrangement is that, as soon as the final draft as approved by America and Britain is received by the Government of India, a sub-committee of the General Policy Committee will be appointed to study and recommend such amendments as may be necessary to safeguard India's special interests and special problems; and that the report and recommendations of this sub-committee will be placed before the main committee. This assurance provides the final and conclusive answer to those who have been apprehensive that, with regard to world currency plans, the Indian Government will act as a subordinate branch of the India Office.

Equally precise and reassuring were the declarations made by Sir Jwala Prasad Srivastava at the second day's session with regard to an effective say of Indian opinion on postwar reconstruction plans. We learn that comprehensive reports have been already prepared on roads and road transport, agriculture, forestry, fishery and education. A large amount of valuable data has also been collected with regard to the re-settlement of soldiers, labour questions, civil aviation and electrical development.

In today's instalment of gossip, I shall refer only to the three important points that were strongly urged by speaker after speaker. Sir C. P. Ramaswami Iyer led the debate by emphasising that it was the drive and inspiration from the Centre that would be the determining factor in the speed and thoroughness of planning. He stated that too detailed a consultation with provinces and states would delay matters. In the original conception of Sir Jwala Prasad, the provinces and states would have the larger say.

The verdict of the meeting, however, was that the provinces and states should have a comparatively minor say. It was also pointed out that central committees and provincial committees and state committees would only mean too many reports and too little work. In this connection, it will be pertinent to recall our experience with regard to the banking enquiry. Our readers may recall that the heading we gave to this enquiry was "A crowd, and not a Committee." There was the Central Banking Enquiry Committee with about 25 members. Half a dozen foreign experts were added to the heap in the later stage. Every province and a good few of the states set up their own committees. The result was that the reports and proceedings of the various committees would require a whole almshouse to keep them. But there has so far been no attempt of any kind on the part of any government or state to implement the

recommendations of the main committee or any of the subsidiary committees. It was Sir George Schuster's idea to set up representative committees. A committee used to mean an expert committee. The scheme of representative committees inaugurated by Sir George Schuster has caught on to the detriment of any real work being done. Many of the members of the so-called representative committees would not be even summoned as a witness before an expert committee. The place of the representatives is not on the committee but as witness before an expert com-

mittee. The time has arrived when the Government of India should definitely abandon this costly, unwieldy, wooden and positively useless contraption known as representative committee.

The second point which received considerable emphasis was with regard to the necessity for the continuance of State Control. To the question "State enterprise versus private enterprise", the answer given by the General Policy Committee was "State enterprise". Mr. A. D. Shroff, who is the Financial Director of Tata Sons Limited, expressed his alignment with State control provided certain conditions in India's true interests were satisfied.

Most of the speakers who participated in the debate drew special attention to the importance of social services in planning. The Viceroy's speech at the last meeting of the Associated Chambers has given rise to misgivings that education and health would not enjoy high priorities. The meeting substantially rejected the Viceroy's idea of priorities.

There can be no doubt that Lord Wavell is taking keen interest in reconstruction plans. If this were construed as an insinuation that Lord Linlithgow did not take much interest, I shall not quarrel with such interpretation. Sir Jwala Prasad is, therefore, supported and strengthened in directing and framing the plans on the most comprehensive basis. The full co-operation which was promised to him by the various speakers must also provide encouragement and inspiration. Above all, it is necessary and useful to provide the assurance that, however ambitious the plans may be and however costly their execution, the question of finance need not worry the planners. There is a feeling in the mind of the public as well as certain official circles that it may be easy to evolve plans but it will be difficult to finance them. It fell to my lot in the meeting to prove that India can find all the finance necessary for all the most ambitious plans. During this war, the economic front has proved far stronger than the military front. Great revolutions in monetary technique and in prevalent ideas have taken place in the smoothest and quietest fashion. Take, for instance, the borrowing rate of the governments. In the last war, the borrowing rate of the Government was sometimes as high as 6 per cent free of tax. In the present war, Britain has been able to raise the defence loans at an interest rate of 2½ per cent. India has so far paid no more than 3 per cent. The Prize Bonds, for which the list opened last week, may well prove that this country is able to raise large sums by paying no more than 1 per cent free of tax. The list for the Prize Bonds opened on the 15th; and there was such a rush for the Bonds that most offices had to say that the scrips were exhausted. From the reports we have received, it seems safe to infer that anything like Rs. 5 crores of Prize Bonds must have been sold in the first week. For my part, I shall not be surprised if the Government are able to raise as much as Rs. 100 crores from Bonds. This will be a feather in Sir Jeremy's cap; and "Indian Finance", too, may claim some pride in being the first to put forward the suggestion of Prize Bonds.

During the four years of war, India has paid off all sterling loans and various sterling debts. Rupee finance against these

repatriated loans has been successfully found. These rupee borrowings, inclusive of my estimate for the Prize Bonds, would amount to over Rs. 500 crores. This will come to an average of over Rs. 100 crores per year. In pre-war years, the annual average of government loans was Rs. 20 crores to Rs. 25 crores. This figure has been easily quadrupled, and at a rate of interest which could not have been imagined as possible. If, for a war which has not engaged the full sympathy of the public, Rs. 100 crores per year and more could be easily raised, is there anything fantastic in the hope that, for national planning which will be beneficial to the highest interest of the country and which will raise the standard of living as well as the national income, India can find Rs. 200 crores or Rs. 300 crores per year without any difficulty. Let it not be forgotten that the proceeds of these loans will be largely spent within the country and will thus be in Indian hands. Thus, these earnings will again be available for further investment in national reconstruction loans. So far

as the financing of reconstruction plans is concerned, let us say to the planners: "It is not your job to worry about finance. Your job is to make your plans as thorough and as efficient as possible. This country will find all the finance required".

This lends point to an important suggestion. While planning committees for various sections of national life have been formed, there has not so far been, so far as I am aware, any committee for dealing with finance. I think it will be appropriate for a finance planning committee to be brought into being, with terms of reference to include the examination of a scheme to set up a National Investment Board. I have so far dealt only with the finance that may have to be raised by Government. There is also the equally important problem of capital for private enterprises. In this regard much valuable work is being done by the department created under the Examiner of Capital Issues. The study of new investment proposals is a special con-

(From Our Correspondent)

New Delhi, Jan. 17.

THE General Policy Committee on post-war reconstruction met here today for a two day session. It is learnt that much of the discussion today was regarding post-war currency policy. There is general regret here that while the British and U. S. Governments formulated their tentative plans long ago, the India Government is still undecided and that no Indian delegates are to be present at the preliminary currency talks at Washington. The Russian intentions are not yet clear and it is not known how far the desire to obtain Soviet cooperation will modify Anglo-American views. Meanwhile the currency sub-committee of the Consultative Committee of Economists which met on last Wednesday has recommended a modification of the White plan. The sub-committee favours maintenance of a de facto link with the sterling bloc for the present as opposed to a de jure connectoin and wants freedom for a future revision of the currency policy.

Sir J. P. Srivastava's attempt to define more exactly the scope and functions of the General Policy Committee was not very reassuring and left matters as vague as ever. Neither was his repeated warning that the progress at this stage "is bound to be tentative and exploratory in character" mere welcome. The only new announcement by Sir J. P. Srivastava was the decision to appoint experts as Development officers, "to work full-time on the different reconstruction sub-jects."

It is generally feared here that plans for statutory control of rice prices have been abandoned for the present. Out of the three regional committees appointed by the recent conference to consider the question of food prices, only the Central Committee seems to have recommended statutory control. There is however still the possibility of an early control of the prices of millets. As regards the final plans for the procurement of 'aman' crop, the Centre seems to have yielded for the present to the Bengal Government's views as regards the 'minimum load' which is to be put on the chief agents who are to make purchases. The quarrel between the rice-milling interests and the Bengal Government still remains unsettled. The Government of India tried to effect a compromise and the two parties will soon discuss the terms on which a settlement can be based.

The Railway budget this year is expected to be challenged sharply even by the present unrepresentative and truncated Assembly. I understand that a proposal is under consideration to drastically increase the railway fares from 25 to 50 per cent. If the Government finally decide to effect this increase with the avowed object of further reduction of non-essential traffic and helping the anti-inflationary drive, it is bound to meet strong public criticism. It is generally felt that civilian passenger traffic has already been reduced to the essential minimum due to the terrible deterioration in conditions of travel. While there has been a big reduction of 32 per cent and 40 per cent in the daily train mileage broad and metre gauge railways respectively, the restricted services have carried about 75 per cent more passengers than in

pace time. The passenger trains already overcrowded are now filled to suffocation and there have been numerous cases of fatal incidents, due to this over-crowding. It is thought that if the Government want to eliminate luxury travel altogether, more effective measures can be found for that than a general increase in fare-rates. Moreover the Government will find it impossible to square up this move with the policy of bringing down the level of common consumer goods to a more reasonable level. It is feared that even provincial governments which are already reluctant to agree to fix food prices at a low level will find it difficult to reconcile themselves to this additional burden on the common consumers, particularly the rural population. Then there is the other valid criticism that as much of the passenger traffic these days is directly or indirectly military in character, the proposed enhancement will mean an unjustified burden on the general revenues.

It is learnt here that as a result of Mr. M. S. A. Hydari's recent talks with the Textile Control Board in Bombay, the Government intend to regulate export of textiles. There has been an ever-increasing demand of Indian textiles during the war years, particularly in some Middle East and African countries and Indian exports which amounted to a paltry 100 million yards a year in the period preceding the war jumped up to 1,000 million yards till they were again brought down by Government action. It is now proposed to stabilize exports during wartime at about 600 million yards a year, but only after assuring adequate supplies for the home market. The Government also intend to appoint an inspecting staff to stamp and certify the quantity of all textiles meant for export to assure that there is no undue fall from pre-war standards. As a result of recent searches the Government is believed to have sealed about 500 million yards of unstamped cloth. There are widespread complaints in trading circles at the Government's drastic action with the universal plea that the stocks were too large to be disposed of in the allotted time. Among the general public, there is however still the feeling that while middlemen's profits have been sharply reduced, the ex-mills prices are still generally too high. In some cases the control prices are said to be higher than those prevailing a few months back.

I learn that the personnel of the delegations to the two Labour Conferences to be

held in March in London and Philadelphia will be announced shortly. The Trade Union Congress and the Federation of Indian Labour have already been asked to nominate their representatives.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, Jan. 18.

Journeys by air bring Prof. Hill to one city after another. In Bombay Prof. Hill prescribed the remedy for India's old ills. Science applied to all her problems should yield results. Money, he stated, should not be allowed to become a major consideration dominating India's post-war reconstruction policy, and if necessary, this country should borrow largely in the future for her scientific advancement. The utilisation of available resources appears the chief problem. Economists here say the same thing, and how far welfare can be made to yield wealth is the question posed by the Viceroy. Public health is a problem mentioned specially by Prof. Hill. He argued that orthodox methods have no place. Malaria was described as Public Enemy No. 1 and what India pays for malaria was fully described in relation to the famine in Bengal.

The visiting physiologist wants a special hospital for the separate study of malaria even if it had only a few hundred beds. Research work in this country could be directed towards co-operation with other countries, and the whole problem of using science for reconstruction turns on the borrowing. If loans are taken for war, they can be also taken for peacetime development in the opinion of Prof. Hill. As to spending on a big scale there is the industrialists' plan for industrial development—the cost runs into crores over fifteen years. Others have gone over the whole ground, but the essentials of planning have been put before the public fairly early, and how far the Government will accept the view of Prof. Hill remains to be seen. A New Deal with specific reference to education and health should divert attention from political quarrels, and the investigation into public health appears a promising start.

Local ordinances are supplemented by a new defence rule regarding cultivation. Government has got the power to forbid or authorise certain crops and also to limit acreage. It is a part of the grow more food drive. High prices for cotton may lead to a departure from the restriction programme now two years old. Waste land has got to be used and the new rule gives also the power to seize crops grown in defiance of the order. Private enterprise has been displaced by an agriculture adjustment programme, even in India, and the work of getting fallows under the plough has to receive support from special rules. Farmers in Bombay have been given plenty of directions, but somebody argued openly that seed distribution and other measures had led to no striking increase in outturn. If the rule increases expenditure on agriculture few should complain for the only cure for inflation seems to be an addition to supplies not one or two orders. Landholders desirous of making full use of possibilities would find the rule favourable since not many realise that work is the real cure for poverty.

Rotary is an American plant which has taken root in India. The annual conference was held in Surat so that Sir Sultan Chinoy's description of post-war industrial requirements and the need to co-operate with other nations for our own good was given to the press rather late. Sir John Colville went to Surat to meet

the delegates nearly 110 in number. Rotary has spread to Satara and the old ideal of service has acquired fresh meaning in view of what Calcutta's Rotary Club did during the famine. Post-war demands on Rotary should be larger but the movement is able and prepared for the tasks of the future. The Governor met a delegation of Burma evacuees at Rander and told them that the best cure for their troubles was help in the reconquest of Burma.

Reports from Delhi as to extension of price control to cloth exports explain the poor condition of the market. Inquiry has been disappointing for weeks and prices have declined. Values are unsteady though buyers of shirtings have appeared. Though some export markets want Indian cloth exports are rigidly controlled. News of prospective U.S. competition outside Egypt does not cause much misgiving. But the Control Board wants to limit exports and peg down prices. The visit of Mr. Hydari to Bombay produced a report that margin over internal prices would be fixed. Recently imports were brought under control and the procedure applied in Lancashire where British Overseas Cottons deals with applications, quotas and prices is likely to be followed here. Appraisal of the working of control has revealed that except in the Punjab and Bengal results have been up to anticipations. Seizure of unstamped cloth must have conveyed a hint of what is in store for the trade which

will encounter selling of seized goods by order of Government which will make per cent as profit. Textile control is likely to make one department self-supporting to an unexpected degree. Actually India's exports totalling over 600 million yards a year should ensure prosperity to the mills since imports today are negligible. Mills have said nothing about prices but much about depreciation allowances for the current view is that profit earned on capital is far above the average rate of interest and mills have become independent of outside capital. The trade is organising itself against interference. Mr. Thackersey welcomes a merchants' federation because distribution problems would be solved of their own accord. The Textile Commissioner explained the main purpose of price control. Traders led by Mr. G. Morarje referred to the millowners' prosperity in wartime and described their responsibility to the public.

A letter in the local paper says that Mr. Willkie's new book is being printed in India. The censors had nothing to do at all with the delay. Mr. Willkie's One World issued by Cassell at 7/6 has reached India and the predigested summaries have appeared earlier in print. Reviews by M. Herbert Agar, Mr. Kingsley Martin and Prof. D. W. Brogan in London journals have appeared here; so the intelligent reader knows what Mr. Willkie knows and feels. The recent Soviet Press attack certainly makes Mr. Willkie's book important. The U.S. publishers authorised the English edition which was ready before October. The ship bringing a large (Continued on page 115)

Masula boats are stitched . . .

Battleships are rivetted . . . No matter how you do it, it's the seam that counts. Rivets in a battleship, nuts and bolts in a bridge, screws in a door-hinge or nails in a packingcase . . . vibration, strain and pressure form a severe test which only the best can withstand.

TATANAGAR

South India

(From Our Correspondent)

Madras, Jan. 18.

The Hon. Dr. N. B. Khare, Member for Indians Overseas, Government of India, had discussions with the members of the Southern Indian Chambers of Commerce last week. The Chamber urged that the Indian Reciprocity Act should be effectively enforced against Colonies and Dominions which ill-treated Indians. The Member expressed his belief that peaceful negotiations and persuasive methods must be tried before the enforcement of the Act. In reply to a suggestion that Government of India should appoint Agents in British Guinea, Jamaica, Trinidad and Fiji to protect the interests of Indian nationals there Dr. Khare disclosed that the subject is now under the consideration of the Government. Questioned if the services of the United Nations Relief and Rehabilitation Administration would be available for India in return for the contribution India is to make, the Member stated that this organisation would be of invaluable help to India and that already a seat has been allotted for an Indian representative on the body. He referred to the Ceylon Government's proposal for introducing peace-rate wage scheme instead of the minimum wage scheme and pointed out how on the active intervention of the Government of India the proposal was withdrawn. The South Indian Commercial community have often expressed their doubts if Indian interests would be fully safeguarded in post-war Burma. The Overseas Member assured them that for his part he would do his very best in the matter. With regard to the representations made about the difficulties of Indian in Aden, he said he would certainly help in the matter if specific cases are mentioned.

During his recent visit to Madras, Mr. K. G. Menon, Deputy Chief Controller of Exports, Government of India, had discussions with local trade organisations connected with export restrictions. Explaining the necessity and implications of export control he said that the aim of the Government is to prevent commodities leaking into enemy countries through neutral zones and to prevent the export of articles now required within the country. In the matter of assessing the exportable surplus in any commodity, the Central Government is guided by the Provincial authorities. Regarding the claim of the South Indian exporters of handloom products that they should be allowed a larger quota of exports to Ceylon, Africa and the Middle East, Mr. Menon assured that he would consider the question favourably. He has also promised to give his sympathetic consideration to the question if a trader who had previous connection with Burma and Malaya be allowed to be taken into account in regard to exports to Ceylon.

The question of demobilisation of soldiers is engaging the post-war reconstruction committees in every province and, at a public meeting held in Triplicane last week, Mr. C. H. Masterman, Commissioner for Post-war Reconstruction, outlined some of the ways of utilising the services of disbanded soldiers for economic and social progress of this province. While the Government of India have started building a fund to be utilised after the war for the benefit of the soldiers who had

served in the war and their families, the Provincial Governments have to prepare detailed schemes for helping the soldiers who have returned to their respective districts. The Commissioner said that there should be an organisation in every district—which might be attached to the existing District Soldiers' Board—to look after their welfare. The idea of giving grants of land to every demobilised soldier is dismissed as impossible. While land colonisation schemes on a district basis is impracticable, the Government of Madras are now considering schemes for forming colonies for soldiers in certain areas from which a large number of recruits had come. By providing cheap and controlled credit and finding fair markets for their produce, the Co-operative Department can be of great help in making the colonisation schemes a great success. Regarding the Government services, Mr. Masterman made it clear that, though some posts in all grades of service are reserved, the general scope for employment will be very limited. If the industrialisation of the country is speeded up there would be enormous scope for absorbing the demobilised soldier in the new factories and mills. If the road development plan, now in progress, materialises it would afford jobs for a good number of soldiers who had served as sappers and miners in the Army. He said that the Railways, large business companies and private firms would be addressed regarding the steps they are willing to take for providing employment for these ex-soldiers.

Addressing the Sri Mulam Assembly which commenced its session last week at Trivandrum, Sir C. P. Ramaswami Aiyer, the Dewan-President, stated that along

with the rest of India Travancore shall have to pass through difficult times and that a carefully planned scheme of long-term development is absolutely essential. Regarding the food situation he said that from November 1943 to October 1944, 30,000 tons of rice would be received from Orissa and Bahawalpur, Sind, Coorg and Kashmere would also be sending supplies to Travancore. Arrangement has been made with a well-known steamship company for securing vessels for the transport of foodstuffs to the state. Besides rice, millets from the Punjab, pulses from Hyderabad, barley from the Persian Gulf and wheat from Australia would be imported into the State. Travancore has a normal annual deficit of 450,000 tons of rice and only 200,000 tons are now expected from outside sources. The food scarcity therefore cannot be ended in the immediate future unless vigorous steps are taken to conserve the tapioca resources of the State and intensify the agricultural operations by reclaiming waste lands. The Dewan also disclosed that extensive projects of reclamations of lands at Vembanad and Kayamkulam would be launched at heavy cost and the required funds would be raised by floatation of loans.

The seizure of unstamped cloth has resulted in serious reduction of stocks in the shops at Mysore and the Mysore Piece-goods Merchants' Association have drawn the attention of the Government to the hardship caused to different interests at present. They have also requested the Government to make available to the shopkeepers the unstamped cloth properly sealed. A request is made that the duty on stamping may be reduced to 1 per cent on ex-mill rates.

(FROM OUR CORRESPONDENT)

Karachi, January 15.

As I write this dispatch, the whole province of Sind is anxiously awaiting the decision of the Viceroy's Council on the control price of rice. The threat of the Sind Ministry notwithstanding, it does not appear that Sind's representatives were able to get any enhanced rates. It is believed here that the Government of India will affirm its determination to fix a statutory price when conditions are favourable and would advise the distressed areas to continue their efforts to bring down the price of rice. It is feared that there will be no change in the price of rice in Sind. Many merchants and middle men have hoarded lots of rice here and are keeping them in the hope that they would be able to get better price and if the decision of the Viceroy's Council is not to enhance the existing prices, they will be affected adversely.

Meanwhile, the news that Sind government's representation for liquidating the Barrage debt on the basis of "No subvention, no debt" is being sympathetically considered by the Central government has created good reactions in both official and non-official quarters. A subvention of one crore of rupees was given to Sind as part of the Niemeyer award in order to help the new province to attain financial stability and cover possible deficit in finance. In the event of the Central government finally deciding to wipe off the Barrage debt, the subvention also goes and a suitable amendment of the Award, which is part of the Schedule of the Government of India Act, will be required.

News from Bombay that the Control Committee of the Textile Control Board has unanimously recommended the reopening of hedge contracts for cotton at Karachi is welcomed in commercial circles here. Such a step will provide the much-needed facilities for the hedging of Sind and the Punjab cotton. So far as Sind is concerned, five-eighths of the cotton crop is already marketed and the balance does not need much protection in the matter of hedging facilities, but a large portion of the Punjab cotton is also marketed through Karachi, the major portion of which remains unmarketed. The opening of the forward market at Karachi is therefore welcomed by cotton traders. The Committee has recommended that the ceiling in cotton rates should be fixed at Rs. 61 and Rs. 46 respectively, which are on the parity of rents fixed for Bombay.

The need for expanding trade relations between India and the United States was stressed by Dr. Chellaram, President of the Karachi Indian Merchants Association at an interview the members of the Association had with Mr. S. K. Kripalani, Indian Trade Commissioner-designate to the United States, who was in our midst recently. Dr. Chellaram pointed out that the first essential of mutual trade intercourse was equally of status which unfortunately was not accorded to Indians in the United States. The speaker pointed out that although India was mainly a producer of raw materials, she was on her way to industrialisation and this fact should be fully borne in mind in any negotiations and effort between the two countries. India needed heavy machinery, equipment and technical advice from U.S.A. in the post-war period and facilities should also be given for the training of our young men in this regard in the States. The importance of the trade of Karachi which serves not only Sind and the Punjab but the whole of north-western

India was stressed in the development of trade relations with America and Mr. Kripalani was apprised of the handicaps with regard to the export of principal commodities, specially wool and short-staple cotton. It was suggested to him to attach a publicity and exhibition department to the office of the Indian Trade Commissioner.

Replying, Mr. S. K. Kripalani characterised the removal of certain disabilities of our nationals as purely an issue involving politics and as such, it was not within his sphere but he added that he would communicate the Association's views to the proper quarters. As regards the difficulties about the trade of Karachi, he assured that he would help in removing such difficulties as lay in his power.

Referring to the post-war development of trade in India in general and Sind in particular, he said that he would welcome definite requests for help for the starting of well-planned industries on a large scale. Mr. Kripalani agreed that the question of the import of machinery for building up of industries here would be one of the principal items for his consideration. The Government of India was building up dollar reserves for this purpose which should not be frittered away. He however warned that on the termination of hostilities the United States would be flooded with orders for machinery and industrial equipment from countries that have been devastated by war and the supply of requisite machinery to India would involve priority.

Washing soap in Karachi is becoming scarce as 22 soap-making concerns, manufacturing soap locally have ceased to prepare it from the beginning of the new year. This is due to their not being able to obtain coconut oil, a chief ingredient in the making of soap at controlled rates. The traders have represented to the authorities their difficulties and requested them to intervene and get them oil from merchants at controlled rates.

It is understood that the Sind Cabinet would meet again for fixing the date for the introduction of rationing in the city of

Karachi. At a Cabinet meeting held in November last year, at Hyderabad, the introduction of rationing was postponed, pending the decision of the Government of India for its introduction in other towns in India. The Government of India's decision on this subject is now known and the Punjab which at that time was opposed to rationing has fallen in line with other provinces and has decided to introduce rationing in large towns. The Sind Cabinet is likely to meet towards the end of this month or early in February for the purpose and as things stand at present, rationing may be in force at Karachi by the middle of February. Its introduction in other centres would follow in due course.

The fight between the consumer and the dealer is proceeding apace in Karachi. Many articles whose prices have been controlled have gone underground. The enforcement officer and the inspector of civil supplies have visited several firms during the week with a view to checking information given to them regarding the hoarding of certain articles.

The Buy Muslim campaign initiated by the Muslim League has not cut much ice, but Hindu merchants fear that the cry might spread and act to their detriment. As it is the entire trade of Karachi is in the hands of Punjabis, Gujeratis, Shikarpuris and a few Muslims.

(Continued from page 113).

number of copies was sunk. The English edition has run out and the paper shortage over there has made it necessary to get an Indian edition out. Important new books are reprinted in India by authorisation of the London houses and the book trade should count itself fortunate in being able to get certain books for the Indian edition. The Nuffield Report on India by the way is one of the books prepared for India and sold at a rupee price below the London price under the publishers' own arrangements. The point may be stressed to show that Mr. Willkie's book about his world trip by air (leaving India out by special request) should be sold at a moderate price for a public that is apt to shy at prices now asked for new books.

Resume of Commodity Markets

No important developments are to be recorded in the commodity markets during the past week. The jute market has turned slightly easier after being steady for most part of the week while the jute manufactures market has remained firm throughout the period. The raw cotton market has been easier on some selling by mills and speculators while the bullion markets have been uninteresting.

The jute market has been rather quiet in the last two days. The absence of any announcement regarding the size of the crop for the next season has led to the feeling that the authorities might ultimately decide on an increase in the acreage under the crop for 1943-44. Meanwhile the hopes regarding an increase in output with the improvement in the coal situation are not quite justified as the production figures for December show a substantial decrease over the figures for November. The technical position of the markets, however, is quite sound. Arrivals are still behind consumption and mills have been obliged to eat into their stocks.

The drop in raw cotton prices was due to the operation of various factors. The hopes regarding liberal supplies of imported cotton and the reports that prices for export cloth would be reduced have led to some selling. Also, it is reported that there has been a heavier movement of the crop.

The piecegoods market has been quiet and further developments are awaited. At the meeting of the Federation of Piecegoods Merchants Associations held in Bombay recently the Chairman pointed out that the trade had not been properly consulted and that there was a feeling that the interests of the trade have been subordinated to those of the consumers and the vested interests. The Textile Commissioner for India pointed out that there was need for negotiating with one compact body which was representative of the trade. For this purpose the formation of a body like the Federation of Piecegoods Merchants Association was to be welcomed.

The question of disposal of unstamped varieties is still hanging fire. It is pointed out that the seizure of goods and the levy of the stamping fee would result in a great loss to the traders and that the fixation of a lower price was by itself a sufficient penalty. While the demand for a further extension of time limit might not be considered it is felt that the authorities might decide on a revision of the decision relating to the stamping fee. The Indian Merchants Chamber, Bombay, has proposed that a nominal stamping fee of one per cent should be levied.

There are reports that there would be a reduction in export prices for cloth and that a committee would examine the goods intended for export in order to avoid complaints. Recently, the Distribution Committee has been considering also the question of standardising qualities and looking into the complaints regarding inferior, shortage in yardage etc. The question of maintaining a high level of quality for exported goods and preventing profiteering is very important as, with the

end of the war in sight, and the possibility of competition from other quarters every effort must be made from now on to retain our hold on the export markets.

It was pointed out last week that the efforts of the Textile Control Board towards maximising production were beginning to bear fruit and that with the easier

transport position the output from the producing centres had increased considerably.

During the quarter ended September, 1943, more cloth was distributed from the main producing centres to the consuming areas than during the corresponding period of the previous year. An aggregate of 417,585 bales left the producing centres to different destinations during the quarter

(Continued on next page).

THE NATION'S HEALTH

Doctors and Chemists play an all-important part in the life of the nation. By careful diagnosis and treatment they help to reduce human suffering. They also check the spread of diseases and thus contribute to the well-being of the Nation. In this they are aided by the manufacturers of patent medicines whose responsibility it is to place at their disposal scientifically prepared and tested preparations.

The number of capable physicians and chemists in this country is rapidly growing. Hand in hand grows the demand for reliable patent medicines.

The resourceful Birla Laboratories are conducted on modern scientific lines. Purely indigenous chemicals and drugs are used in their preparations, which are tested for quality and efficiency and certified by the medical profession.

Preparations include:

● **NEO-VIGORIN** A general tonic in tablet form for muscular and nervous exhaustion. It is ideal for shortening convalescence.

● **NEO-VENTROL** A safe and gentle laxative specially beneficial to sufferers from dyspepsia, constipation and hardening of the arteries.

● **LECOSOL** A tonic for women, with curative properties for low grade infections of leucorrhoea and general debility.

● **KAFTON** A valuable preparation for baby's bronchial disorders and colds—particularly recommended during the teething period.

● **NEO-CHYAVANPRASH** An Ayurvedic tonic prepared by modern scientific methods with Calcium and Vitamins.

EMPIRE ECONOMIC UNITY AN ISSUE

Special for "Indian Finance"

London, Jan. 19.

The post-war world will see a clash between the Atlantic Charter and the British Empire's system of trade preferences known as the "Ottawa Agreements," according to some City commentators.

Thus far, British industrialists have been fairly quiet regarding the Ottawa Pacts but the Conservative Party's sub-committee on post-war reconstruction in the recent much-discussed report entitled *Work: The future of British Industry*, comes out definitely in favour of Ottawa. This is practically the only reference to tariffs contained in the report but some critics complain it is one too many, for first of all revival of Atlantic Charter, secondly, the Ottawa pacts enjoy only moderate popularity among the Dominions who are signatories, thirdly, Britain's retention of the Ottawa doctrine would handicap the Roosevelt Administration's efforts to lower tariffs—the last named being absolutely essential to any post-war trade recovery over the whole world according to this school of thought.

The truth seemingly is that British Industrialists are still far from agreement as to what should be Britain's attitude to problems of post-war reconstruction. Some industrialists like the rayon manufacturer, Mr. Samuel Courtauld believe this must be production of far-reaching changes. But powerful groups such as the Federation of British Industries apparently think post-war Britain would not differ greatly from pre-war Britain except that the general standard of living must be somewhat lowered owing to sheer inability to import goods on the pre-war scale.

Apparently convinced that its critics both at home and abroad intend to make a strong campaign against it, Imperial Chemical Industries is reported to have

expanded its Public Relations Department in readiness to repel attacks. The company is not only Britain's biggest industrial enterprise, it is also the one most conspicuously identified in the public mind with international cartels—a belief which the United States Government's lawsuit has now tended to strengthen.

The Chairman, Lord McGowan denies the charges that Imperial Chemicals' agreements with overseas competitors have hindered either Britain or the United States' war efforts and makes a suggestion that members of all international cartels should follow Imperial Chemicals' example and hand over to Government copies of all international agreements. This promises to be one big issue in 1944 as the United States Officially is opposed to cartels while Britain heretofore has tacitly supported them.

(Continued from page 111)

cern of this department; and, from my experience—which is a considerable one—of the way in which the new department is working, I can say that Sir Alan Lloyd is examining the new capital issues not only from the point of view of their bearing on inflation, but also from the point of view of the merits of the proposals. I am convinced that Sir Alan Lloyd's department with its organisation and personnel will prove an apt nucleus for the National Investment Board I have in view.

Sir Alan was called upon to organize a new department at short notice; and the disposal of cases which came in a spate shows both correct judgment and clear understanding of the prospective business situation. The committee on finance will thus have valuable data to go upon. The same committee can also be called upon to examine the avenues for increased revenues, as some of the reconstruction plans like education may have to be financed, in part, from current revenue. That is to say, the picture of post-war planning could be said to be complete only by the addition of a committee for finance and taxation.

For want of a gallery the Art in Industry Exhibition has again sought the Calcutta School of Art. The number of exhibits has been increasing along with the subjects treated. The promise of permanence has made for popularity, and distinct improvement in quality, at any rate in some sections, has been registered. The famine has obviously inspired the good idea behind the posters. The choice of pattern and colour has been rather restricted but a poster giving the tip from the bullock's mouth undoubtedly compels attention. The journalist would perhaps get very little help from the stand for newspaper display and in fact all the exhibits in the passage should, in the opinion of some, be passed over. Public purposes including the war effort have evidently overwhelmed the serenely commercial element, but good work has been done for canned and packed goods this time. Few would question the intrinsic merit of the lithographic work on display this time but one wishes that original ideas, for instance, in respect of screen posters had been tried out for many know that indifferent films and moderate circuses have been put over by striking posters. The tea, shoe, cement and rubber industries have not failed in propaganda, mostly

for conservation now and here this time, but the calendars prepared for advertising Indian Tea are rather shy, being cast in the rigid mould of Mughal miniatures, raising incidentally the question whether the Grand Mogul know tea though modern Tartary is more than partial to chikhana.

About the recruiting posters little can be said in praise and none would perhaps really do for billboards. No special efforts have been made so far for things wanted for sandwichmen. It may be presumed that post-war unemployment would create a demand for the designs suitable for boards carried by the workless and the human appeal in advertising would be inevitably more pronounced thereafter. Great advertisers should not disdain the moving advertisement, moving in more than one sense. As for the right things needed for kiosk displays they too are still lacking, and some time it is hoped that Burmah-Shell, the original sponsor having made good use of hoardings, would get out the ideas, and the exhibits too. As for the exhibition it is a real change from the crowded display of posters and enamel signs on railway platforms wasted absolutely when the main problem is getting a ticket, not one of knowing who makes what. The prizes have been given, scholarships provided, and all is well with commercial art—a late but vigorous growth in India, thanks to the encouragement of private and corporate patrons who have consistently supported Burmah-Shell's efforts.

"EAVESDROPPER".

(Continued from previous page).

as compared with 292,323 bales in the same quarter of 1942. This represents an increase of 43 per cent in the distribution of cloth. Bengal has had its share of this distribution. Up to the end of November, 1943, besides cloth sent by the rail route, 38,000 bales of cloth, amounting approximately to 38 million yards, were sent by the all-sea route. The province received in addition during the period a supply of 32 million yards of standard cloth.

BACK THEM UP -
as we do - to defend you

Where they need planes, tanks and guns they also need woollen clothing. Our entire plant is working for the war effort. Soon we hope we shall be able to manufacture for you again.

Shafid
FABRICS
THE NEW EGERTON WOOLLEN MILLS BHARUWA

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, 20th January.

As was feared, due to the serious deficiencies both in quantity and quality of coal during December, the production returned for that month by the Mills has dropped back to 67,554 tons, a reduction of 18,450 tons or 21½ per cent from the previous month. This is a deplorable state of affairs, when the tone of the fabrics market indicates that every bag and yard of goods that mills can turn out should be easily saleable. The comparable production figures for December 1942 and 1941 were 98,510 tons and 115,770 tons respectively. The position is the more regrettable in that there had been a progressive improvement from the nadir of 46,000 tons registered in August, up to November, with 86,000 tons, while with working conditions normal, production should be in the region of 100,000 tons per month. Of the total December production, 8286 tons or 12¼ per cent, was on Government account against 10¼ per cent the previous month. Total hessian production was 1014 lakhs yards, of which 199 lakhs was on Government account. Total Sacking production was 863 lakhs yards of which 43 lakhs was on Government account.

The seriousness of the coal shortage to the jute industry is very clearly demonstrated when the total figures for the first six months of the season are compared with the previous years. For the period July/December 1943 the total mill production amounts to 401,548 tons as compared with 594,226 tons in the similar period of 1942, and 610,258 for the similar period of 1941. The coal famine has shorn the industry of one third of its productive capacity over the average of six months, a very serious reduction in what are, in the last resort, essential war supplies. It is satisfactory to know that there has been an improvement in the level of supplies of coal in recent weeks, and also some improvement in quality, and it is to be hoped that both of these will be maintained. A much closer scrutiny of the despatches from the pits would be a great boon and would also effect much saving in transport of incombustible rubbish which has been too common lately.

The stock figures issued at the end of December made it evident that mills had despatched goods equivalent only to their months production, so that December despatches of goods must have totalled around 68,000 tons.

On a strict weight for weight ratio, the July/December total production of goods would indicate a consumption of raw jute to the extent of 22,20,000 bales, but with batching materials in short supply it would be safer to put the quantity actually consumed at nearer 22,80,000 bales. Incidentally it is estimated that Mills have purchased out of the current crop little, if anything, more than this total, so that their stocks of raw material must be practically unchanged from the opening of the season in July. The consumption of jute during the first six months of the 1942/43 season was estimated at 33,28,000 bales and during that same period Mills were estimated to have purchased out of the crop some 53 lakhs of bales.

The arrivals of jute into Calcutta for the period July/December totals 28,58,000 bales compared with 35,35,000 bales during the similar period of 1942. December arrivals registered a drop of 25 per cent from the November figures, in which reduction arrivals by steamer shared equally with arrivals by rail. The total arrivals in December were less than one half what they were a year ago. This falling off is not entirely due to shortage of transport so far as river carriage is concerned, but as much due to the slowing up of buying by mills. For there have been frequent instances in the more important stations of freight-space going begging because shippers had no orders wherewith to fill it. Estimated arrivals of jute for the first half of January are again light at 1,70,000 bales compared with 2,15,000 bales in the same period last year.

No pronouncement has yet been made as to the results of the Conference held at Delhi last week on the subject of Jute. It is suggested that the reason for the delay is that certain points have been referred home to H.M.G. for their approval. H.M.G. is certainly interested in the jute crop to the extent of wanting to be sure that there will be sufficient raw material available for all the essential war requirements of the United Nations, not to mention the activities of U.N.R.R.A. when that body starts to function, which everyone hopes will be before the coming crop is harvested. In this respect their interest may clash with that of the Bengal Government who would probably like to see much of the jute area switched to food crops. Doubtless some guarantee can be arranged that the Bengal food position should not be imperilled while an adequate acreage of jute is sown, and at the same time it is believed that any fear of a serious break in the price of jute due to an apparently excess crop, will be safeguarded by the fixation of a minimum price level, at which point, if reached, Government would come to the support of the market. As we suggested last week, it seems unlikely that any raising of the maximum levels fixed by the Mills Association will be contemplated, as this would be contrary to the declared policy of deflation which the Central Government is endeavouring to enforce. But the fixation of appropriate minimum prices for jute would be a sop to the protagonists of cultivator. What is more important than anything else in the inter-related economic problems of the Province is the early reduction of the price of Paddy to the level of around Rs. 7 per maund. Naturally, any fixation of minimum prices for jute would entail the similar fixation of appropriate minima for all types of manufactured goods, though with the current aspect of the Fabrics market, there would seem little prospect of such minima becoming effective at any early date.

The coal supplies arriving for Jute mills have been more satisfactory in quantity and regularity during the last two weeks and it is gratifying to hear that quality also shows some improvement. It is to be hoped that the constant menace of broken time may have been removed with its unsettling effects on labour, not to mention its drastic consequences to costs and economic working. The attitude of labour to this broken time had an

illuminating sidelight thrown on it last week. The arrangement is that if, due to broken time, any worker earns less than Rs. 4-4 for the week, he will be paid this sum. If his wages earned exceed Rs. 4-4 for the broken week, of course he receives his earned wage in full. But if his earned wage does not amount to Rs. 4-4, he is paid a minimum of Rs. 4-4 even if he has not worked at all, owing to the mill having been stopped. Owing to the poor quality of the coal to hand, a certain mill was unable to get up steam on Monday, Tuesday and Wednesday of last week, but some better quality having arrived, it was possible to raise steam on Thursday and the workers were invited to resume. This they refused to do on the grounds that they would not be able to earn more than Rs. 4-4 on Thursday, Friday and Saturday, so why should they work for Rs. 4-4 when they would get that sum by sitting idle. To disillusion them on the subject, the Mill Agents promptly declared a strike, the workers having refused employment when it was offered them, and consequently the workers forfeited their Rs. 4-4. The Jute Mill industry have treated their labour force with great consideration during difficult times and it is to be hoped that this episode will instil the idea that this consideration should not be taken advantage of.

The Export Jute market has been idle during the week but Mills have displayed some interest in pucca bales, business being reported at Rs. 85/- for Firsts, Rs. 79/- for Lightnings and Rs. 81/- for Dundee Daisee. At the close these rates could be discounted by one rupee. Exports of baled jute in December are recorded as 82,000 bales against 1,70,000 bales in December 1942 and 1,20,000 bales in December 1941. For the six months of the season July to December, the total exports for the three years were, 1943, 4,76,000 B/s, 1942, 7,35,000 B/s, 1941, 7,49,000 B/s, while for the last pre-war half-year, 1938, the total was 21,15,000 B/s. Mills have bought moderate quantities of Loose Jute on a rather quieter market during the period reported on, paying Rs. 16-4 and Rs. 13-4 for European packing, all districts, Rs. 16/- and Rs. 13/- for Super-vised Jat Mids and Bottoms and the same rates for Indian District Tossa. A sale of Bengali Jat at Rs. 16-4 and Rs. 13-4 Mids and Bots was reported for forward shipment.

The Fabrics market has been stagnant, partly because practically every description of goods is quoted at ceiling rates with few if any sellers thereat, and partly because the Controls, which do all the important buying now, have not been displaying any interest. Mills occasionally sell small surpluses at maximum rates. The only exception to this state of affairs is "B" Twills which the Bazar continue to deal in around the Rs. 67-4 level.

Post Box No. 997, Bombay

JUTE

Calcutta, Jan. 20.

The raw jute market has been easier during the latter half of the period under review though in the early days quite firm conditions were noted. Pending the announcement of the decisions taken at the recent Jute Conference there is no tendency to enter into further commitments. In view of the conflicting reports regarding the deliberations at the recent Jute Conference an official announcement on the subject is eagerly awaited. In the last two days, in the absence of any fresh buying by mills, sellers were eager to do business and a slight discount in prices was offered. The general feeling seems to be that there will be an increase in the area under the crop for the next season and that supplies of raw materials will be more plentiful. Arrivals from mofussil centres also have been on a larger scale.

In the loose jute section, Indian Jat Middles and Bottoms were done at Rs. 16 and Rs. 13 per maund with European Bottoms at Rs. 13-4. Indian District Tossa Middles were Rs. 16 per maund and Bottoms Rs. 13 per maund, while European packings Middles and Bottoms were done at Rs. 16-4 and Rs. 13-4 respectively with Supervised Jat at 4 annas less.

In the pucca bales section also slightly easier conditions have been noticeable in the latter half of the week. Shippers were inclined to buy Dundee Daisee 2/3 up to Rs. 80 per bale but the closing quotations are Rs. 2 per bale lower. Mills purchased Firsts at Rs. 86 per bale and Lightnings at Rs. 80.

JUTE MANUFACTURES

Calcutta, Jan. 20.

The jute manufactures market, on the other hand, has remained fully firm throughout the period under report. Earlier in the week there were no sellers and with the over-sold position in the bazar, prices were even higher than the maxima fixed by the Indian Jute Mills Association. The reports regarding the possibility of an increase in production did not have any effect on the market. Later in the week a few mills were inclined to do business for forward deliveries but it has not affected prices in any way. 9 porters quoted at Rs. 21-10 for all positions and 11 porters at Rs. 28-8.

In the heavy goods section very firm conditions were noticeable earlier in the week, but quieter conditions prevailed towards the close. The undertone is steady and quotations are around the maximum levels. B. twills were Rs. 67 for January delivery while Liverpool Twills were Rs. 75 and Cornsacks Rs. 67-12. No business of importance has transpired.

The production figures for the month of December are now available. It was generally expected that with the small variation in the local stock figures for the month of December, offtake had been maintained at the high level of November. The figures now available, however, show that there has been some interruption in production in that month in spite of the slight im-

EAST INDIAN RAILWAY

Tender Notice

Annual Contract items costing over Rs. 8,000/-.

Sealed Tenders are invited for the following and will be received in the General Manager's Office, E. I. Rly., 105 Clive Street, Calcutta, on 10/2/1944 at 12 o'clock noon. Tender No. 802/GB10/1061 for the supply of 2000 tons Lime-stone.

Tender forms with full particulars can be had from the Controller of Stores Office, E. I. Rly., Calcutta, on payment of Rs. 2/- per copy to the Treasurer, E. I. Rly., Calcutta, and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores direct by money order.

No refund is permissible after payment. Sealed Tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the Tender Box outside Dy. General Manager's (Works) room by the tenderer or his representative.

provement in the coal situation. The holidays as well as the disturbances to labour in the first week following the enemy raid have perhaps been responsible for the lower level of production. It is also pointed out that the poorer quality of coal supplied has been one of the factors contributing to the decline. Total production was 67,544 tons compared with 86,004 tons in November and 69,739 tons in October. There has thus been a reversal in the trend that has been noticed since August.

GOLD

Calcutta, Jan. 20.

The Bombay gold market has been absolutely uninteresting. Quotations were fluctuating around last levels for most part of the week. Gold Ready and delivery contract fluctuated around Rs. 71-2 and Rs. 70-12 respectively but in mid week the quotation for delivery was slightly lower at Rs. 70-9. There has not been much selling by the Reserve Bank during the past week and absorption continues at a fairly high level. There are signs of demand tapering off. That is the reason why the quotation for Delivery contract receded to Rs. 70-9 though the close is again higher at Rs. 70-14. So-ereigns were quoted Rs. 4-3.

In the Calcutta market, gold sold at Rs. 71-14 against Rs. 72 at the end of last week and Sovereigns Rs. 49-5 against quoted Rs. 49-3.

SILVER

Calcutta, Jan. 20.

The silver market has been irregular in the past week. There was some selling in the first two days and the quotation came down by two or three points. In the latter half of the week, however, a firmer tendency has again been noticeable in the absence of any influential selling. There is still considerable speculation regarding the policy of the Government of India in respect of silver. It is being debated that in the near future there might be large sales of the white metal. Speculators in this precious metal, however, are not inclined to believe in any of these reports and quotations have been well maintained with scarcity of supplies. Silver ready quoted Rs. 119-6 and forward Rs. 118-6. The quotations at the end of last week were Rs. 119-12 and Rs. 116-12 respectively. The lowest levels touched during the week were Rs. 118-8 and Rs. 115-8.

COTTON

Calcutta, Jan. 20.

The Bombay raw cotton market also has been irregular. Closing quotations are definitely lower due to the feeling that mills might try to push down rates with the proposal for a reduction in the price of cloth exports. There is also a feeling that imports of U. S. textiles into the Middle East countries might result in a decline in Indian exports. There was some selling for forward positions both by speculators and mills. The close is rather heavy on tired liquidation and bear selling. Jharilla January closed

PIECEGOODS

Calcutta, Jan. 20.

The piecegoods market has been uninteresting though in Western India a slightly easier feeling was noticeable on reports that prices might be reduced for export cloth and that the volume of exports also might be substantially lower. The situation caused by the seizure of unstamped cloth has prevented any decline in prices as it is reported that in certain centres, following the seizure of unstamped varieties, trading has come to a standstill. Representations are being made to the Government of India to revise the procedure in regard to unstamped cloth. It remains to be seen how the authorities tackle the question. Business passing in the Calcutta market has been on a smaller scale and buying has been confined to immediate requirements. There has been no appreciable change in prices.

INDIAN TEA LICENSING COMMITTEE.

Export Quota 1944-45.

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, as amended, Tea Estates desiring to be allotted an export quota for the year 1st April, 1944 to 31st March, 1945, are required to submit an application for such which must be filed with the Indian Tea Licensing Committee not later than the 1st of February, 1944. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

Price Re. 1

Stock Markets to-day and to-morrow:

MARKETS CONTINUE FIRM

THE Calcutta Stock Exchange has remained firm throughout the past week. The volume of business has greatly increased and there has been more selective buying. Grandiose schemes regarding post-war reconstruction, large sums of idle money and the improvement in the war situation have been mainly responsible for the improvement in the sentiment in the market. The Bombay market was inclined to be irregular in mid-week, but the close has again been steadier. The main consideration at the moment seems to be one of capital appreciation and not yield. In the scramble for buying shares of established companies there has naturally been a reduction in the yield basis. While the reduction in the return on shares at the present quotations might be regarded as only a temporary feature in the end it could be expected that investors would reconcile themselves to a smaller return on their investments unless better opportunities present themselves. There is no fear regarding the budget proposals for the next year. If the war against Japan goes well it can be expected that the present level of prices would be fully maintained.

We drew attention to the fact last week that a greater proportion of the transactions passing were purely on a cash basis and that considerable difficulty was being experienced in regard to deliveries in respect of certain countries.

With the sustained improvement in prices and the proximity of the Central Budget there is need, however, for adopting a cautious attitude. In Friday's session a sharp rise in prices has been recorded in the quotation for Indian Iron to Rs. 38-13 and Steel Corporation to Rs. 29-8.

The results of the Bengal Coal Company, Limited for the half-year ended October, 1943 should be regarded as rather satisfactory. Only recently, the Chairman remarked at the meeting of the shareholders of the Company that raisings had been badly affected and that there was a sharp increase in production costs. In spite of the lower level of raisings total sales are higher at Rs. 78.05 lakhs against Rs. 64.13 lakhs in the previous half-year. The net profit, before providing for taxation and depreciation, however, is lower at Rs. 16,59,550 against Rs. 21,39,276 for the

previous half-year. It is clear, therefore, that the increase in the selling price for coal has not been sufficient to compensate the increase in working expenses. The amount set aside to depreciation is unchanged at Rs. 3 lakhs but the provision for taxation is very much lower at Rs. 9.25 lakhs against Rs. 14 lakhs. The dividend has been maintained at 10 per cent. The bonus of 2 per cent, as in the corresponding period in the previous year, is also to be paid. The amount carried forward is lower at Rs. 96,441 against Rs. 1,41,891 brought in.

Raisings were 7,84,398 tons against 9,33,526 tons in the previous half-year and 8,79,111 tons in the corresponding period in 1942. Despatches, which include purchased coal as usual, were 9,88,661 tons against 11,74,567 tons in the half-year ended April, 1943 and 10,41,988 tons in the half-year ended October, 1942.

While discussing the results of the Bengal Coal it is perhaps relevant to refer to the improvement in the coal industry in recent weeks. It is reported that the labour position is improving and that the Government are making efforts to release coal labour engaged on other works and that a Labour Corps will help the industry.

The shares of the Tide Water Oil Company (India), Ltd. have recently been very popular and the quotation is now very much higher at Rs. 25-12. The net profit of the Company for the half-year ended October, 1943 is very much higher than the figures for the corresponding period in 1942, the figure before providing for taxation and depreciation being Rs. 2,94,736 against Rs. 1,43,614. As in the case of other companies the bulk of the improvement in earnings has been taken up by additional provision for taxation but it has been possible to effect a slight increase in the dividend to shareholders from 10 per cent 12½ per cent tax-free. The return at the present quotation of Rs. 25-12 is more than 4.8 per cent tax-free.

On a total capital outlay of Rs. 21.5 lakhs Dharangadhra Chemical Works, Limited has been able to make a net profit before providing for taxation and depreciation of as much as Rs. 27,36,363 in the year ended June, 1943. The provision for depreciation is Rs. 2,08,173. The sum of Rs. 7 lakhs is to be placed to General Reserve and Rs. 2.15 lakhs to Dividend Equalisation Fund. The

final dividend of Rs. 35 per share makes, with the interim dividend of Rs. 25 per share already paid, Rs. 60 per share for the whole year. A bonus of Rs. 15 per share is to be paid in addition. The total distribution for the year is thus 75 per cent.

That large and far-flung concern, the Associated Cement Companies, Limited has a plan for post-war expansion, if occasion arises. Sir Homi Mody's assurance in this regard is of interest only to those who look to an export trade in cement but for investors the further assurance that no awkward period will follow the advent of peace is of value. The warning as regards costs is directly related to the coal shortage. The cement factories of this country are not obviously in an identical position as regards costs but unitary control makes for uniformity of prices; and that is the main result of a constant policy of holding prices at a reasonable level. That cement as a war material is known; and that Government is the chief buyer has been patent. The fall in profits is of direct benefit to the tax-payer, and that fact goes on record. If the Chairman of A.C.C. has been less reticent about the outlook than expected the company's important services have been described. Profits in 1942-43 were affected for distinctive reasons, and the main source of satisfaction is the statement that the factories are in an efficient condition. The companies associated with A.C.C. in regard to marketing and sales policy are not the less likely to derive advantages from the qualified promise as to resources available for post-war development.

In the statutory report of the Hindustan Commercial Bank, Limited, appear essential figures as to initial progress. Paid-up capital in the form of Ordinary shares only at the end of December 1943 amounted to Rs. 1,24,93,375. Total deposits amounted to over Rs. 152.36 lakhs. On the assets side cash at Rs. 77.1 lakhs was in excess of Advances totalling Rs. 69.84 lakhs. A promising start has been made with bills valued Rs. 18.29 lakhs out of the total of Rs. 278.6 lakhs of which Rs. 109.07 lakhs were invested in Government Securities. The new Director, Lala Guru Charan Lal's joining the Board on September 2 is recorded in the report to be considered on February 4.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 21.

Active conditions continued to prevail on the Calcutta Stock Exchange in the past week and quite a large volume of business was put through. There has been no general rise in prices as investors of late have shown a greater disposition to put their funds in shares which give a relatively a higher yield and have scope for further capital depreciation. The developments in the Arakan front and South West Pacific have had an encouraging effect. But for the irregular tone of the Bombay market, early in the period review, closing prices might have been further higher. The general undertone is very steady and it is expected that a further rise in prices will be recorded. Surprisingly, enough, there is very little speculation regarding the budget proposals for 1944-45.

Coal shares have again been in good request and the lower-priced shares have come in for greater attention. In the Jute section, there has been some selective buying. In the absence of any announcement regarding the quota for the jute crop for the next season, it is expected, that mills will be able to get their raw materials in abundance and that a higher level of production during the year would be possible. There is nothing of importance in the Engineering section but in the Miscellaneous section Orissa Minerals are further higher. Assam-Bengal Cement have come in for good buying. British Ceylon Corporation, Indian Wood Products and Midnapore Zemindary are other features.

The gilt-edged securities section has been very firm. 3½ per cent Paper was done even up to Rs. 99-4 for small lots. The quotation is now steady at Rs. 99. Business in terminable loans has been rather restricted owing to scarcity of offerings. The developments in the next few weeks are keenly awaited. It is reported that the reception to the new Prize Bonds has been very satisfactory. 3 per cent Government Paper was done at Rs. 88. Among terminable loans 3 per cent 1953-55 were done at Rs. 99-14, while 3 per cent 1963-65 were Rs. 99, 3 per cent 1949-52 Rs. 100-2, 3 per cent 1951-54 Rs. 100-5, 3½ per cent 1947-50 Rs. 103-4, 4 per cent 1960-70 Rs. 112-14 and 5 per cent 1945-55 Rs. 105-2.

Easy conditions prevailed in the money market and the average discount rate on treasury bills is only slightly higher at 8 annas 8 pies per cent per annum against 8 annas and 7 pies per cent per annum last week. No transactions have been recorded in Provincial Loans.

Among Bank shares, Bharat Bank ordinaries were steady at Rs. 123-8 while the deferreds were bought up to Rs. 5-3. Calcutta National Bank were Rs. 13-12, and Central Bank Rs. 92 cum-dividend. There has been no announcement so far regarding the increase in capital though there are reports to the effect that the new ordinary shares might be issued to existing shareholders on bonus terms. Imperial Bank fully paid were Rs. 1,935 ex-dividend and contributions Rs. 505 ex-dividend. Reserve Bank were steady at Rs. 136 and United Commercial Bank at Rs. 25-8 premium. Hind Bank were dealt in around Rs. 57.

Coal section has continued active and quite a large turnover has been reported. Amalgamated were Rs. 46-4, while Bengal were slightly lower at Rs. 603. Bhalgora have improved to Rs. 14-10 and Bokaro and Ramgur to Rs. 34-2. Burraukur were frequently dealt in and have improved to Rs. 32-6 from Rs. 31-2, Dhemu Main have risen further to Rs. 20-10 from Rs. 19-2 while Equitable were Rs. 54-12 against Rs. 53-8 at the end of last week. Hurriladih were higher at Rs. 26-8 against Rs. 25-8, and Mundulpore at Rs. 18-3 against Rs. 18. New Beerbhoom were a shade easier at Rs. 13-14 while North Damuda were Rs. 10-6 and Sendra Rs. 19. Raneepong have been in great request in the last two weeks and the quotation is nearly three points higher at Rs. 39-12. Katras Jheriah were Rs. 58-8. West Jamuria have registered a rise of more than 4 points to Rs. 46-8 though the close is slightly easier at Rs. 45-12. Among the lower priced shares, Kuardi were Rs. 11-13, Samla Rs. 5-14, Ghusick and Muslia Rs. 13-4 and Satpukuria and Asansol Rs. 4-1. Talcher were unchanged at Rs. 6-9.

There is nothing of interest to be recorded in the Cotton section and prices are fluctuating around last week's levels. Basanti Cotton were Rs. 13-8 and Bengal-Nagpur Rs. 33-14. Cawnpore Textiles were Rs. 13-14 and Kesoram Rs. 18-8. New Victoria were easier at Rs. 10-6, Sri Radheshyam were further higher at Rs. 20-2 and Benares at Rs. 15-2.

Jute shares, as pointed out above, have been in good demand on expectations that the results for the current year will make better showing and that the post-war demand for jute goods will be on a very large scale. Anglo-India were Rs. 415 against Rs. 402 while Calcutta Jute were further higher at Rs. 42-10 against Rs. 38. Champdany were Rs. 213 and Chitavalah Rs. 26-8 against Rs. 25-12. Clive were two points higher at Rs. 33-11 while Empire registered a rise of more than 5 points to Rs. 40-4. Howrah fluctuated around Rs. 70 with Gourepore at Rs. 850. Kamarhatti were 10 points higher at Rs. 510, Kankannarrah 15 points higher at Rs. 502 while India were nearly 40 points higher at Rs. 600. Megna were rather quiet at Rs. 84 while National improved by 2 points to Rs. 31-10. Nellimarla were Rs. 26-10. Nuddea were a shade better at Rs. 117-3, Presidency were firm at Rs. 7-4 as also Rameshwara at Rs. 17-6. Waverley and Craig were bought up to Rs. 7-4 and Rs. 6-8 respectively.

In the Engineering section, there was no important change in the quotation for leading shares till Thursday, Indian Iron and Steel Corporation being around Rs. 37-10 and Rs. 29-2 respectively. Bhartiya Electric Steel were further higher at Rs. 19-2 as also Britannia Building and Iron at Rs. 18-7. British India Electric Construction were 4 points higher at Rs. 22-8. Burn & Co. improved to Rs. 400. Indian Galvanising were Rs. 46-8 and Indian Malleable Castings ordinary Rs. 9-12. Jessop & Co. improved suddenly to Rs. 24-2 from Rs. 21-3 while Kumardhubi Engineering fluctuated around Rs. 9-14. Marshalls were Rs. 4-13 and National Iron and Steel Rs. 12-12.

In the Sugar section, Balramore were quieter at Rs. 18-12 as also Belsund at Rs. 13. Carew & Co. were easier at Rs. 31. Darbhanga Sugar were Rs. 34-7 and Murree Brewery Rs. 25. New Savan were higher

by 1 point at Rs. 23-10 while Cawnpore were Rs. 43-8. Champardai changed hands around Rs. 42-6 and Ramnugger Cane and Sugar Rs. 4-10. Samantipur Central were Rs. 23-8 and Purtabore Rs. 27-12. U. P. Sugar were quiet at Rs. 36-14.

The Tea section has come in for selective buying but no appreciable rise in prices is to be recorded. Bishnauth were Rs. 38-6, Hasimara Rs. 69-8, Hattikhira Rs. 30-4 and Tezpur Rs. 16-8.

In the Miscellaneous section, Burma Corporation were higher at Rs. 4-4 but are now quiet at Rs. 4. Indian Copper are rather subdued at Rs. 3-1 on some selling in the London market. Karanpura Development are lower at Rs. 27-10 on profit-taking. Orissa Minerals were further firm at Rs. 30, Assam-Bengal ordinary improved from Rs. 15-7 to Rs. 17-8. The deferreds are nearly 2 points higher at Rs. 5-8. Bararee Coke are steady at Rs. 32-8. There has been a sharp rise in Indian Wood Products to Rs. 37-8 from Rs. 32-8. B. I. Corporation were steady at Rs. 6-10 while Calcutta Trams were Rs. 27-8. Dalmia Cement were marked up to Rs. 120-4 from Rs. 118-4. Dehri Oil Refinery were steady around Rs. 13-10, Dunlop Rs. 59-8, Kalimpong Ropeways Rs. 17-6, New India Investment Rs. 77, Reliance Firebrick Rs. 22-12 and Rohtas Industries Rs. 35. Ruby General Insurance were higher at Rs. 23-12 against Rs. 22-4 while Tide Water Oil were firm at Rs. 25-12.

There has been good buying of Paper shares. India Paper Pulp registered a rise of over 5 points to Rs. 231. Star Paper were Rs. 25-8 and Shree Gopal Rs. 25-14. Tita-gur 'A' and 'B' ordinary were further higher at Rs. 30 ex-dividend. Midnapore Zemindary have improved to Rs. 151 from Rs. 138. Assam Saw were Rs. 5-15, Calcutta Landing and Shipping Rs. 29-12 and Port Shipping Rs. 26-12.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 20.

The local Stock Exchange was rather irregular during the period under review. It was already noticed that prices especially in the Textile section of the market began to give way under selling pressure towards the close of last week. When the market again opened on Monday (Friday being a holiday) mill shares were quoted well below the previous closing rates. Bombay Dyeing, for instance, were done around Rs. 2,037. There was a sympathetic decline in other sections also. Tuesday saw the market in a better mood with prices regaining much of their lost ground. But there was a setback again on Wednesday with prices in all sections recording a steep decline. Today the market is once more buoyant and prices have again shot up. It is rather difficult to attribute this irregular behaviour of the market to any particular event or events that have taken place during the period under review. Speculative support coupled with profit-taking activity is responsible for the frequent adjustments in scrip values. Though the market is irregular the undertone remains steady.

Government securities were rather quiet with 3½%, Government Paper quoting slightly lower at Rs. 98-13.

Mill shares opened quiet in contrast to the hectic activity noticed in this section throughout last week. Genuine investment buying

CHAIRMAN'S SPEECH

ASSOCIATED CEMENT COMPANIES LIMITED

Shortage of Coal, Labour and transport difficulties.

Chairman's remarks

The 7th annual general meeting of the Associated Cement Companies, Limited, was held on January 14, 1944, at Shree Sundar-hai Hall, Bombay, Sir Homi Mody, the Chairman presiding.

Addressing the meeting the Chairman said: Ladies and Gentlemen.

"After an absence of two years, it is once again my privilege to occupy the chair at the annual general meeting and to address you on the affairs of the Company. When I resigned my position as a member of the Government of India, your then chairman, Sir Purshotamdas Thakurdas, expressed his desire to make way for me, and it is due to this friendly act, which I have much appreciated, that I have been enabled to resume my place at the head of the organization. Sir Purshotamdas, during his tenure of office as chairman, rendered very valuable services, which the Board have gratefully recorded.

"The profits for the year, though not so good as those of the preceding 12 months, must be considered satisfactory in view of the several adverse factors which the industry had to face, such as coal shortage, labour and transport difficulties, higher costs and increased taxation. While the offtake of cement showed a decrease, the realization from sales was on a higher level. In the result, the net profits of the company dropped by about Rs. 17 lakhs, of which Rs. 10 lakhs is accounted for in the higher provision for taxation. Manufacturing charges again increased, owing to a substantial rise in the cost of coal and packing materials, and increases in wages and dearness allowances, which were common to every industry. The incidence of War Risks Factories Insurance, the effect of which was only partially felt in the previous year, was particularly heavy. On the other side of the picture must be put down the cost of repairs and maintenance and of stores, which was kept at a gratifyingly low level, owing largely to the planned policy of manufacturing spare parts and equipment in the company's own workshops attached to each factory. As a matter of interest, I may add that, of the materials which we have to purchase, articles of Indian manufacture form a steadily increasing proportion.

MANUFACTURING CHARGES UNDER EFFECTIVE CONTROL

"Considering all the difficulties of operation, it is very satisfactory that manufacturing charges were kept under such effective control and the factories maintained in an efficient condition. I am afraid, however, we must expect an appreciable increase in production costs during the current year, mainly on account of the acute shortage of coal and the high prices ruling in the market. I would remind you that the cost of fuel is the heaviest single item in the manufacture of cement.

"It is the intention of your Board to keep ahead of the demand in the country, and, as and when opportunities arise, to extend the existing and to establish new factories. We have all the resources which would enable us to keep pace with the developments that may be expected when normal conditions are restored, and it will always be our aim to stimulate the use of cement and to place within the reach of the consumer a first-class product at a reasonable price.

PLANNING FOR LARGE-SCALE DEVELOPMENT

"As everyone knows a great deal of planning is going on for a large-scale development of India's industrial capacity and when the war comes to an end, there will be a rush for expansion in every direction. This must mean increasing competition in

fields covered by existing industries. New machinery and new processes are essential for progress, and development in such a direction would be in the interests of any industry, however, securely established. It is possible, however, that in the abnormal conditions brought about the war, competition may take other forms, and the experience of the past may come to be ignored. The A.C.C. will meet such a situation with a certain measure of confidence. The work it has accomplished, the experience it has acquired and the organization it has built up, afford an assurance of its capacity to retain its position in the industry.

"The company has maintained a generous policy towards labour by increased dearness allowances and adjustments in the scales of wages; by the provision of cheap grain shops and means of recreation; by free medical relief and educational facilities; and, where practicable, by a scheme of canteen feeding. Your directors have under consideration a more adequate and comprehensive scheme of labour welfare, which it is hoped to carry through by successive stages. The question of maintaining an efficient, adequate and satisfied labour force is a problem which needs constant attention, owing particularly to the present shortage of unskilled and semi-skilled workers, which has affected to some extent, the company's full production programme. The scarcity of food grains all over India and the diversion of labour for military requirements have been largely responsible for this situation.

"To meet the continuous rise in the manufacturing cost, the selling price of cement had to be increased twice during the year under review. The policy of the company all these years of offering its product at a reasonable price still holds the field, however, and has been steadfastly pursued, even during a period in which prices of other manufactures achieved steep rises. It is a point to be particularly emphasized, and I hope the consumer of our product, whether it be Government or the public, will not be lacking in appreciation of what we have done.

DEVELOPMENT OF MARKETING ORGANISATION

"In pursuance of the policy laid down by the Board of the Cement Marketing Co., four branch offices were opened during the year in order to take over and operate the territories managed by various selling agents. It is the intention to go ahead with this policy, as and when circumstances permit. You will appreciate that it will take some time before the requisite organization is built up.

"Your Directors have set aside Rs. 7 lakhs to Reserve. The provision cannot be said to be adequate for a company of the size of the A.C.C. but our profits were unfortunately not on a scale which permitted of a larger sum being appropriated. It is for the same reason that your Directors have been regretfully compelled to recommend a reduced dividend. Shareholders will, however, appreciate that it would be against all principles of sound financing to make a distribution in excess of what is warranted by the profits for the year.

"I cannot say anything useful at this stage about the prospects for the current year. The profits for the first three months have been badly affected by the shortage of coal which resulted in the factories not being able to work at full strength. The position has recently improved, and there is reason to hope that so far as our essential requirements are concerned, a high priority will be accorded to the industry, enabling it to meet the increasingly heavier demands which are likely to be made upon it by Government. They are our principal customers nowadays, and a contract for the current year's supplies

is under active negotiation with them. I am unable to give you any information about it, as the matter is still under discussion. I shall only express the hope that, considering the way in which the industry has extended its co-operation and contributed to the war effort, and the great moderation it has exercised in the matter of price what time the products of other industries were enjoying boom conditions, Government will recognise all it has done and give it a square deal, which is no more than we ask for.

"My review of the year's working would be incomplete without an acknowledgment of the very valuable and loyal services rendered by the Company's staff, both at the factories and at headquarters. It is a matter for regret that we have not been able to sanction the same bonus as that of last year. I would like, however, to assure all those who are working for the company of its constant anxiety, consistent with its interests, to do everything possible to promote their well-being and to secure their contentment."

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LIMITED.

NOTICE OF 62ND DIVIDEND.

NOTICE IS HEREBY GIVEN that the Directors have determined to pay an Interim Dividend of Rs. 2/- and a Bonus of Rs. 4/- per share of Rs. 50/- for the half-year ended 31st August, 1943. The Dividend and Bonus will be payable at THE CENTRAL BANK OF INDIA, LTD., BANGALORE CITY, on and after MONDAY, the 14th February, 1944, to those shareholders whose names stand on the Register of Members on the 8th January, 1944.

By Order of the Board,
N. SIKKUR & CO., LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BENGAL COAL COMPANY, LIMITED

†Includes Bonus of 2 per cent.

*Includes purchased coal.

(Half-yearly meeting, held on 12th.

(E.A.)-yearly meeting, held on 12th January, 1944).

Audited accounts for the half-year ended 31st October, 1943:—
After providing Rs. 3,00,000 for Depreciation and Rs. 9,25,000 for Taxation, including Excess Profits Tax, there is a balance at the credit of the Profit and Loss Account of Rs. 5,84,240-12-8 from which they recommend:—

Despatches, which include purchased coal as usual, were 9,88,661 tons against 11,74,567 tons in the half-year ended 30th April, 1943 and 10,41,988 tons in the half-year ended 31st October, 1942.

The serious fall in raisings during the half-year was due to scarcity of labour. This was partly due to the high price for paddy attracting the labour to cultivation and partly to attraction to other works above ground. Every effort is being made to remedy the position.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 40,00,000 in 40,000 shares of Rs. 10 each, fully paid up.

Synopsis of the balance sheet as at 31st October, 1943.

(Half-yearly meeting, 2nd February, 1944 at 3-35 p.m.)

Audited accounts for the year ended 31st March, 1943:—

Capital. The total Capital Outlay on Final Year's work:

Capital.—The total Capital Outlay on Final Heads remains the same as at the close of the previous year, viz., Rs. 23,80,626.

The Capital subscribed by Shareholders amounts to Rs. 19.50 000 (inclusive of Rs. 3 00,000 subscribed by Government); the Debiture Capital to Rs. 4.50,000 (Rs. 3,00,000 at 4½ per cent. and Rs. 1,50,000 at 4 per cent.), and the Gross Capital Outlay, inclusive of Suspense Heads, amounts to Rs. 24.47,882, the balance has been met by means of temporary loans from the Reserve Fund. The Government of India have since agreed to the opening of an overdraft account with the Imperial Bank of India up to a limit of Rs. 50,000 at the Bank rate to meet the surplus outlay necessary.

Revenue.—The gross earnings for the year amounted to Rs. 3,00,386 against Rs. 2,14,277 for the previous year and the working expenses to Rs. 2,93,531 against Rs. 2,20,773 for the previous year. The net earnings of Rs. 6,855 have been carried to Net Revenue Account. Under this account, after meeting the interest, etc., on Debentures and other loans, there is a deficit of Rs. 13,020 which, added to the amount required for guaranteed interest at 3½ per cent. on the total subscribed share capital of Rs. 19,50,000, calls for a total subsidy of Rs. 81,270; as, however, Rs. 10,500 of this guaranteed interest is due to the Government of India on their portion of the subscribed capital, the net balance (together with Income-tax on their share of interest) recoverable from them in terms of the Agreement with the Secretary of State is Rs. 73,504; the warrants for the distribution of a 3½ per cent. dividend to Shareholders (less Income Tax) will be issued as soon as the amount is received.

Working Expenses.—Compared with the previous year, the total working expenses show a net increase of Rs. 72,758 which is mainly due to unavoidable urgent maintenance works as also abnormally high prices of materials and labour and increased Dearness Allowance granted to the staff (as sanctioned by the Government of India).

Coaching.--The receipts under this head amounted to Rs. 2,62,029 for the carriage of 1,164,385 passengers as compared with Rs. 1,81,239 and 1,250,462 passengers for the previous year. The increase is mainly due to the increase in the basis of 3rd class passenger fare from 3 pies to 4½ pies per mile.

Goods.—Earnings from this source amounted to Rs. 32,287 for 737,989 maunds of goods as against Rs. 29,058 for 720,622 maunds for the last year.

Managing Agents.—Messrs. McLeod & Co., Ltd.

Authorised, Capital—Rs. 30,00,000. Issued and Subscribed—
Rs. 19,50,000 in 19,500 shares of Rs. 100 each, fully paid up.

(Continued from page 122)

gave place to purely speculative transactions except in one or two cases, with the result prices were moving up and down frequently. Among Mill Shares Kohinoors continue to be in good request with the price making steady headway to Rs. 708. Centuries were down by 3 points at Rs. 981 while Gokak were almost unchanged at Rs. 365. Bombay Dyeing after being as low as Rs. 2,036-4 are however better at Rs. 2,070. Central India were Rs. 476 Swadeshi were in request at Rs. 621.

Except for a setback on Wednesday, the Steel section continued to be active throughout the period under report. There was good investment support for the shares in this section and prices were pushed up. Tata Deferreds, after closing as high as Rs. 2,110, on Tuesday, were slightly easier and the latest quotation is around Rs. 2,092. Tata Ordinaries were Rs. 410 after being higher at Rs. 413, while Indian Iron were in request at Rs. 37-10.

Rumours about Government control over Hydro-Electric companies have failed to keep down prices for any length of time in Hydro-Electrics section. Andhra Valley have steadily improved to close at Rs. 1,892-8; Tata Power have likewise gone up to Rs. 1,900. Tata Hydro were Rs. 202-4.

In the Miscellaneous section more or less steady conditions prevailed.

The feature of the week in this section was however provided by Alcock Ashdown which has to its credit a gain of nearly 60 points in four days. Opening at Rs. 582-8 this share has shot up to quote at Rs. 647-8. Belapur Sugar were Rs. 241, though on Tuesday they were done up to Rs. 244. Bombay-Burma (Old) were two points higher at Rs. 437-8 while Bombay Steam were higher by 7 points at Rs. 687-8. Shivrampur Syndicate remained neglected at Rs. 79 while Sindia Steam were Rs. 37 x.d. Premier Construction were nearly 3 points lower at Rs. 231. Both Burma Corporation and Indian Copper were steady at Rs. 4 and Rs. 3-1 respectively. A. C. C., were done at Rs. 223-8 ex. dividend.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Jan. 17.

Firm conditions continue to prevail on the local Stock Exchange with Mill Shares in the forefront. This renewed interest in mill shares is due to the large volume of surplus funds seeking investment and a growing realisation of the postwar prospects of industries. It may be remembered that both investors and operators were of the opinion that in the event of the war coming to an end soon, Cotton Mills would not be able to make as much profit as they were making during the war period. It now seems that they have revised their opinion with regard to the future prospects of Indian industry especially, cotton mills. This is exactly the reason why even genuine investors have once more turned their attention to mill shares. Side by side with the improvement in mill shares, other sections have also made considerable headway. While Plantings received moderate support, chemicals and fertilisers were in good request. Bank shares were in good request especially after the extremely satisfactory reports issued by some of the first class banks.

The gilt-edged market was firm with 3½% Government Paper quoting around Rs. 99-3% (1945-52) were done upto Rs. 100-13.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Interbank call money is quoting nominally $\frac{1}{4}$ percent in Calcutta and $\frac{1}{4}$ percent in Bombay. The applications received for the Central Treasury tender bills on January 25 make poor showing at Rs. 10½ crores. This was in excess of the amount on offer by only Rs. 2½ crores. Applications were smaller and bidding must have been lethargic. The average rate of accepted tenders has rather sharply risen from 8 annas and 8 pies percent per annum to 10 annas and 4 pies. The offer of tender bills for next week remains unchanged at Rs. 8 crores. While the Central Government came on the market for three months bills, as usual, on Tuesday, the Central Provinces tapped the market on the previous day for bills for Rs. 80 lakhs. The most remarkable feature about the C. P. treasury bills is that the average discount rate in their case is almost on par with the average discount rate of Central treasury bills, the disparity being only 1 pie. This is the first time that the disparity between Provincial treasury bills and Central treasury bills as almost disappeared. This event must give great satisfaction to the Hon'ble Mr. T. C. Goswami, Bengal's Finance Minister, who urged, at the General Policy Committee meeting New Delhi, a forceful plea for provinces being enabled to borrow on terms and rates analogous to those of the Central Government. The Bengal Government are asking for Rs. 3 crores of three months treasury bills on February 2; and we hope that, in this case also there will be no disparity worth mention between the central rate and the provincial rate. The Bombay Government treasury bills were opened today for Rs. 50 lakhs and the result is not known up to the time of writing.

The returns of the Reserve Bank for the week ended January 21 show an increase in active note circulation of Rs. 1.44 crores, due mostly to the reduction in the notes held in the banking department. Both rupee securities and sterling securities are unchanged. Rupee coin shows further outflow of Rs. 26.75 lakhs. In the banking department, Central Government deposits are higher by Rs. 1.09 crores, the Burma Government deposits by Rs. 52.77 lakhs, the Provincial Government deposits by Rs. 4.93 crores and the depo-

sits of member banks by Rs. 1.32 crores. Foreign balances in the banking department are up by Rs. 7.31 crores.

The return of the Imperial Bank for the week ended January 21 discloses a reduction in deposits from Rs. 213.27 crores to Rs. 212.09 crores. Investments are also lower by Rs. 2½ crores and stand now at Rs. 134.31 crores. Loans and advances have increased by Rs. 1½ crores to Rs. 41.96 crores. As a result of these changes, the Bank's cash is more or less unchanged at Rs. 45.20 crores.

We had occasion to meet some of the assistants in the industrial concerns in the vicinity of Calcutta; and we were surprised to know that they knew very little about the significance and implications of the new Prize Bonds. The Prize Bonds are calculated to make a special appeal to two classes of the population. The first class is the large body of clerical staff and officers, to whom a monthly saving of Rs. 10 or multiples of Rs. 10 is not difficult and for whom the prospect of such an investment bringing in a substantial prize is a positive allurements. The second class of the population who should be keenly interested in the Prize Bonds is the considerable number of people who have adopted various means to evade tax or who have managed to pay less tax than they should. These people have been piling up currency notes; and the stupendous accumulation of these notes has been causing great anxiety. Such tax-dodgers have been on the lookout for a security which will be in the nature of a bearer bond and the interest of which can be collected without disclosure of the name of the owner. The Prize Bonds are thus ideally suited for them. If the Prize Bonds succeed in roping in substantial money from the lower and upper middle class, they would have served as a very useful anti-inflationary measure in respect of an important section of the community. As for drawing in the tax evasion money, the anti-inflationary significance of the Prize Bonds is even much higher. Our own view is that the heady expansion of currency in recent months is a less important factor in price inflation than the diversion of tax evasion money to the purchase of those commodities in regard

to which the ownership need not be declared. It is, therefore highly important that the propaganda through press and otherwise must be devised in a way and on lines that would impress the categories of the population we have mentioned.

There is just a month left for the Central Budget to be announced and the stock exchanges have been moving up or down according as hopes of no further tax or fears of heavier tax pervade speculative circles. It is possible—it may even be said to be certain—that railway passenger fares will be raised. There is no justification for this rise but a plausible explanation is possible in terms of anti-inflationary significance. But even such justification is impossible in the case of a rise in freight charges. It must also be pointed out that monthly ticket holders who come to the city from the suburbs must be specifically exempt from any increase. As for taxation proposals in the general budget, any change in the E.P.T. position for the worse is most un-

Finance Abroad

Thursday evening.

The political weather is not quite favourable to markets abroad and except for Senatorial excursions into post-war policy there is not much to be said about the shape of things to come. The bills for relief has passed through the Lower House. There is a minor scandal over somebody's letter, but inflation is the big issue. There is a fear that wages may go up. So would prices and profits inevitably must take the strain. Wall Street therefore tended to be quiet. London appears to labour under a variety of influences ranging from the Soviet Union's considered rejection of U.S. mediation to queries regarding cartels. Lord Strabolgi alone has raised the question because of the U.S. episode but nobody has yet suggested that the British iron and steel industry's recovery is due mainly to trade agreements. The notorious Hatry recognised that reorganisation was essential but it came late only after the I.D.A.C. accepted the Federation's views.

Any largescale uncovering of the agreements and arrangements will disadvantage the heavy industries most British industry's view was put plainly enough by Sir George Nelson in November when he said that nationalisation on a large-scale would turn British into a second-class nation. The Master Cutler of Hallamshire when deprecating bureaucratic control generally spoke of the need to raise exports. He favoured concentration in the iron and steel trades and conferred that control, if it is retained, is likely to alter methods of doing business out of recognition. As to cartels, generally located in small neutral States, there has been some illuminating discussions of late. Legislation can do little as the anti-trust laws were defeated in the States by Delaware. The U.S.A.'s intentions may be very good but cartels nowadays seem respectably old and necessary simply because no Government can set out to control effectively. In fact, combination and co-ordination in the transport field on trustified lines was recommended when Lord Leathers declared that the railway companies contemplated amalgamation of packet services. Coasting lines too were pursuing schemes of consolidation for improving services and reducing costs. Government control alone does not make the cartel unacceptable and the general belief is that the European steel cartel must reappear because U.S. steel output has risen from 50-60 million tons a year to over 100 million tons. Self-preservation comes first for major industries and an agreement elsewhere is far more necessary for tariff-nourished industries in India.

If improved tone has been mentioned already. The advance on Rome has led to no important change in share prices in London. The Argentine decision as to diplomatic relations with Germany and Japan should, however, be an impressive market factor. The freezing arrangements are sure to go as the Argentine is no longer isolationist. The blocked sterling balances may present no problem and less should be heard about Senator Butler's inquiry into the working of the Good Neighbour policy. All investments in Argentina are likely to be rated as more secure, and the main changes as regards wheat and linseed may be unfavour-

able to India though it will be readily agreed that buying of jute and hessian must increase after the departure in foreign policy.

The effects on foreign bonds and railway shares in London must be substantial. Britain has, of course, been less antagonistic to a neutral Argentina than the U.S.A. which draw conclusions from the anti-semitic drive in a country where racial origins are so confused as to defeat inquiry.

The transfer problem for British nationals might conceivably ease after the indication of cordiality in regard to Allied counter espionage in South America. The prompt crushing of the revolt in Paraguay and the attitude developed to the Bolivian affair are likely to be familiar factors, but so far market reactions do not seem to be definite. Argentina's currency is far stronger owing to the increase in overseas assets and the decline in imports. But the main question that might be raised is the peso's relation with the dollar in the future. Revision of views as to lease-lend supplies may follow the B.A. decision as to exclude the Axis. It is not known how far the recent earthquake has compelled the Argentine Government to shift its ground. The Argentine oil industry's development is likely to receive strong support in spite of the many local indications of economic nationalism. The British stake in Argentina is fully secured, and that point should not be overlooked in regard to London's short-term liability that may have increased on account of the war. Fears as to Latin American debt settlements engendered by the Mexican offer of a big cut in capital value for interest payable, may be partially dispelled through Argentina becoming a Good Neighbour.

U.S. price policy seems to be a little vague as Congress appears to have prejudged the revenue bill and is not at present thinking of economic stabilisation. Figures as to war production, lease-lend

supplies, and food provided for other nations appear to make no impression on Congress which may be developing independent views as to post-war financial agreements. In regard to the last Mr. Montagu Collet Norman's illness may be a material factor. Mr. Norman rather than Mr. Churchill prescribed the return to gold in 1925 and so far as the financial world is concerned Mr. Norman has been a bigger figure than any statesman for the simple reason that the Court has consistently elected him as Governor of the Bank of England. In the recent past Mr. Norman's fame was spoilt by association with appeasement doctrines, but a late estimate of his record in 1941 led to the sincere conclusion that he was indispensable and irreplaceable. The promise of recovery in the last bulletin might stimulate gilt-edged as well as Bank of England stock which is distinct from bank shares generally.

The accomplished fact of the Belgo-Dutch financial agreement has received bare mention in connection with the inter-Allied plans. Both the Belgian and Dutch currencies before the war were inherently sounder than sterling or dollar. The agreement reached in October was meant to promote smooth clearing at a fixed rate. It may be imagined that both countries would need dollars most but U.N.R.R.A. is ready to act. The major feature is that the agreement dispenses with gold and there is no provision for exchange but only for interest on excess balances. It is perhaps unlikely that the agreement will be copied in the British Empire but India might duly note that a fixed rate of exchange and maintenance of credit balances are not impossible, and Holland's economy incidentally will be less tied to Germany than in the past while the Dutch and Belgian Colonial Empires would be integrated. The merit of flexibility overshadows the vagueness, and in January there has been some canvassing of what are the real advantages of a limited clearing union though little attention has been so far bestowed on the concentration of Nazi Europe's trade and exchange through Berlin, with neutrals too sharing in the arrangement.

Saving Made Easy

You can help to bring prices down by curtailing your spending and increasing your savings.

Five Rupees will open a Savings Bank Account at Lloyds Bank, and small sums deposited regularly quickly accumulate to a substantial amount.

Interest is allowed, and withdrawals can be made by cheque.

likely. The recent relief given in the case of coal companies provides a pointer in the opposite direction. We believe that an examination is being made in respect of the levy of tax on incomes of Rs. 100 per month. This will be most unfair. The proper thing is to put a ceiling on incomes. Such a proposal will be resisted by vested interests who are powerful and whom the authorities are not very likely to displease. Taken all in all, it may be said that the Finance Member should be able to announce considerable increases in tax realisations over estimates and that the deficit disclosed in the current year and the deficit that will have to be provided for in the next year will not be such as to cause any concern. In simple terms, if there are any new or additional taxation proposals, they will be not so much for securing revenue as for their import as anti-inflationary measures.

The Exchange Banks' Association have now permitted the purchase of sterling bills for delivery up to six months forward. Hitherto, forward delivery was only up to four months.

The exchange market has been steady but business has been only on a small scale.

**The 15-Year Plan—an Analysis
and Appreciation**

While our task this week is the study of the first complete economic plan presented to the Indian public for consideration and examination, it will be false modesty on our part if we did not, in this context, stress that, during the greater part of its career, "Indian Finance" has been repeatedly urging the necessity, importance, and advantages of planning; that the first plea for planning was advanced in these columns as early as 1929—we may mention that "Indian Finance" made its debut exactly 16 years ago on January 28, 1928—; that our contention has always been to the effect that India provides an ideal field for planning, that the opportunities for planning are provided and emphasised by the very potentialities of the country, that, from this point of view, the main problem as well as inspiration of planning lies in the conversion of India's potential wealth into kinetic wealth, that India could find all the finance required for such planning and that, if the cost of planning is high, the cost of drift is far higher. From 1929, "Indian Finance" had advocated the setting up of a supreme economic council. In response to our suggestion, Sir George Schuster, the then Finance Member, invited Sir Arthur Salter to study Indian conditions and make recommendations for an economic plan and an economic council. Sir Arthur prepared a valuable report; but no action could be taken by Sir George during his regime. As for his successor, Sir James Crigg, he had no use for the results of the many enquiries initiated by Sir George. Curtly and irreverently he bundled all these reports and consigned them to oblivion. The present war has stirred wide interest in problems connected with planning; and, on this occasion, the circumstances are propitious as such stirring has taken place both in the official mind and the non-official. Though New Delhi may not admit it, it cannot but realise that, if schemes had been put into effect on the lines suggested by "Indian Finance" 15 years ago, this country would have been able to serve the war effort in even more significant ways. The arrangements for war supplies have opened the eyes of the Government to the present deficiencies caused by past lack of foresight and foreplanning, and to the compelling importance of initiating planning on a comprehensive basis with as little delay as possible after the end of hostilities. We may say that the Government, Big Business and the general public are all today plan-minded. In the words of the authors of the 15-year plan, this by itself will help in some measure towards securing the conditions necessary for the successful accomplishment of planning.

The first and foremost point which should receive pointed attention and careful thought with regard to planning is that, as we have already stated, India provides ideal conditions for successful planning. The following passage, which is an extract from an article we wrote in 1929, sums up the conditions which make India ideally suited for planning:

"India, like the U.S.A., is richly endowed by a beneficent Providence in every manner and with the utmost abundance of raw materials and primary agricultural products. Mother Earth is rich in minerals of every description. To win these minerals from the womb of the earth and to convert the raw products into manufactured goods, factories and workshops are necessary and abundant capital will be required. This country is not suffering from any paucity of capital, provided the psychology of the investing public is properly tackled. The experience of the boom period in 1919-20-21 affords final and conclusive testimony that the stream of domestic capital flowing towards industrial enterprise can be hydra-headed. The psychological factors to draw out the savings and hoardings of the masses in that period were apt and appropriate; and money was forthcoming in abundance and for any manner of industrial venture. That much of the capital so invested in industries was lost is an argument not

altogether relevant to the present discussion. The point we seek to make out is that there was then no paucity of capital from domestic sources; and if efforts are made to inaugurate an industrial renaissance on sound, proper and healthy lines, the capital required for the purpose would be readily and adequately available. As for the building of the factories, plenty of land is available and the fullest conveniences in regard to their erection. Labour to work those factories is also available in any quantity. Power for these factories is to be had from hydro-electric sources in certain provinces and from coal in certain other provinces—power for the fullest requirements and at an economic price. All this is on the production side. On the consumption side, India, with a population aggregating one-fifth of the world's population, affords one of the largest markets at the very door of the indigenous industries. And, it may be added, China is next door; and if these two Eastern countries be taken together, there is a market composed of half the world's total population.

In other words, we have all possible advantages on the production side—raw materials, minerals, capital, conveniences for erection of factories, cheap power and abundant labour. In regard to consumption, there is an unlimited market. How is it, then, that when India is exactly like America in regard to all the natural advantages for a successful organisation of industry, U.S.A. is today in the forefront of industrial nations and India is amongst the backward members? The answer to this query is to be found in the absence of a national economic policy on the part of the State. The American Government were determined to make the most of what nature has, in her abundance, given her; the India Government have been either ignorant of, or indifferent to, the great blessings which Nature has endowed this country with. We are firmly persuaded that, if the Indian Government, like the American Government, make up their minds, now and here, that they would take all possible measures for converting the potential wealth of the country into kinetic wealth, India could occupy a proud place amongst the industrial nations of the world within a decade or two. If the old saying that where there is a will there would be a way is anywhere full of the most fruitful significance, it is in the case of a proper economic policy to be accepted, adopted, and put into effect by the Government of India. Let us once again repeat: If the Government of India have the will to make India economically as strong as she could be, the way is both easy and short."

We hail the 15-Year Plan as the materialisation of what we have been dreaming of these many years. This materialisation has taken place in a setting more impressive than we had hoped for. We take it that the main initiative and inspiration for the research workers whose labours have resulted in this plan have come from Dr. John Matthai. We see his Roman hand in the drafting of the manifesto. We see his authoritative knowledge in the boldness and vigour of the plan. We see his balanced judgment in the integral character of the scheme. Further, he has had the advantage of being able to draw upon the rich and varied experience of his illustrious colleagues. Dr. Matthai's connection with the plan endows it with authority by virtue of his participation in tariff enquiries of over a score of Indian industries, and independence by virtue of his present non-official status. If, as has been suggested recently in certain quarters, an Industrial Commission were appointed now, or if, as we have been urging, a Supreme Economic Council were set up, what more weighty names could be thought of for such a Commission or Council than the names of the authors of the 15-Year Plan?

There are important reasons why this plan should be studied not only in relation to India, but in relation to world economy. The present shortages particularly of consumer goods, experienced all over the world on account of war conditions, have tended to obscure the not so old nightmare of a world glutted with goods and suffering from low purchasing power. In our present state, we can only realise the need of increased production. Prudence and correct perspective, however, demand that we should always remain forewarned against the recurrence of what has been describ-

ed as poverty in plenty. In relation to this problem, India's purchasing power has world significance. We are convinced that India's well-being is a vital factor in world well-being. The raising of the standard of living of the Indian population and the expansion of their consuming power will make all the difference to a world that may once again suffer from glut. In this connection, we may be permitted to quote the following passage from the "Indian Finance Year Book", 1932 :—

"If each Indian consumes one yard per annum more than the present average of 10.5 yards per head, the cotton mills of the world will not be afflicted any more with the nightmare of unsold stocks; and, far from planning short hours working, they will have to devise measures for working overtime. If each Indian drinks a cup of tea more per day, the tea industry of the world will be producing barely enough for meeting world demand. If a pinch of sugar is included in the daily diet of the millions, and millions in India love sugar but never see it month-end to month-end, Cuba and Java need not bother themselves with restriction agreements but embark on a wise policy of expansion.

India contains one-fifth of the world's population; nine-tenths of that one-fifth live only in the sense that they are not dead; it is, in their case, lingering perdition unkindler than death. This could not be destiny, for aye and for ever, for so large a proportion of the world's population. When steps are taken by India and the world for the conferring of a sunnier, ampler and happier life for this nine-tenths of the one-fifth of the human race, then will these people, in their new-found happiness and their new-enlarged scale of life, repay the world by causing so vast an increase in consumer demand as to end, once and for all, the irritating problem of world surfeit of commodities."

Our contention is that, in the interests of world trade and world prosperity, the economic well-being of India should receive wider and keener world attention. World affairs are now engaging the attention and thought of economists, thinkers, statesmen and politicians in the leading countries. The 15-Year Plan is to be hailed as the contribution of India's leaders of economic thought and industry towards the summation of Indian economy becoming a strong link in a strong chain of world economy. Planning for India's future is thus both a domestic and an international problem. The plan now put forward merits, therefore, to be carefully studied by the Government and the public in India and by the framers of the various world plans. The joint authors have put forward their 15-Year Plan with a view mainly to focus attention on the objectives to be kept in mind in economic planning in India, the general lines on which development should proceed and the demands which planning is likely to make on the country's resources. They make it clear that the plan as set out by them is not claimed in any sense to be a complete scheme. This should rather serve as a basis for further discussion; and those who are competent and knowledgeable in these matters will be of great help in offering critical comment and constructive suggestions. Viewed in this light, it would be beside the point to point out that this aspect or that or the other of national economy has not been included in the plan. The authors themselves admit that they have made no reference to such essential matters as the organisation, methods and technique required for carrying out the plan. Neither the problem of distribution which is vital to any scheme for raising the standard of living nor the allied question of the control to be exercised by the State over economic activities is discussed in the plan. These matters are at present under examination by the joint authors; and we shall await their supplementary memorandum with interest.

Underlying the whole plan are certain definite assumptions on the part of the authors. Firstly, it is assumed that, on the termination of the war, or shortly thereafter, a National Government will come into existence at the Centre which will be vested with full freedom in economic matters. In the second place, it has been assumed that the future Government of India will be constituted on a federal basis and that the jurisdiction of the Central Government in economic matters will extend over the whole of India. The authors emphasise that no plan of the kind they have proposed will be feasible except on the basis of a central directing authority which enjoys sufficient popularity and possesses the requisite powers and jurisdiction. In the third place, it is assumed that, to facilitate planning, there will be a National Planning Committee under the Central Government and that this committee will be responsible for drawing up plans. It is also assumed that the actual execution of the Plan will be the function of a Supreme Economic Council working alongside a National Planning Committee under the authority of the Central Government. In the fourth place, there is the implicit assumption that, be it called National Government or not, the future Government will be such as

to inspire confidence in, and secure the goodwill of, the population. There will be general agreement with the force and validity of these assumptions.

As is to be expected, the central aim of the plan is to secure a general standard of living which will leave a reasonable margin over the minimum requirements of human life. The question arises: What are the constituents of a minimum standard of living as applicable to existing conditions in this country? There are firstly, the physiological requirements of human life like food, clothing and shelter. Secondly, there must be provision for medical relief and education. Finally, every individual should be left with enough resources for a fuller life. In spite of India being an agricultural country, a large proportion of her population does not get enough food to eat, and a still larger proportion fails to get the right kind of food. A well-balanced diet is, therefore, urgent and imperative. Nutrition experts have studied the problem of balanced diet; the general conclusion is that the per capita requirements of a balanced diet in India will amount to 2,800 calories per day. That everyone may get food of this calory value, food production in India must be greatly increased and there should be better planned production of various kinds of food. On the basis of pre-war prices, the cost of a balanced nutritive diet of this description will cost Rs. 65 per annum per head. That is to say, to get 389 million people properly nourished, the annual food bill will be Rs. 2,100 crores. So far as cloth is concerned, the 15-Year Plan adopts the estimate of the Nehru Planning Committee and fixes 30 yards per person as the minimum requirement per year. The cloth bill will, on this basis, come to Rs. 255 crores per year. The next primary need is adequate shelter against sun, rain and weather; and the joint authors make a detailed study and come to the conclusion that the total expenditure for adequate housing will be Rs. 1,400 crores by way of capital. The annual cost of maintenance will be Rs. 258 crores. From the point of view of health, preventive measures as well as curative measures are carefully examined, and the total cost of the various health and medical services is thus summarised:

	(In Crores of Rupees).	
	Non-recurring cost	Recurring cost
Sanitation, water supply etc.	100	7.5
Rural dispensaries	132	141.9
General hospitals	22	16.5
Maternity clinics	8	6.6
Specialised institutions	19	12.5
Total	281	185.0

Another important element in the standard of living is that every person above the age of 10 should be able to read and write and take an intelligent interest in private and social life. The provision of adequate facilities for primary education is all-important. The total cost of making the whole of our population literate is estimated as follows:—

Primary education—non-recurring cost	Rs. 86 crores
Primary education—recurring cost	„ 38 „
Adult education	„ 66 „

Taking these various components of a minimum standard of living, the following table gives the income required to be spent under the five heads we have discussed:

	Income required to be spent round figures (In Crores of Rupees)
Cost of food	2,100
Cost of clothing	260
Recurring expenditure on housing	260
Recurring expenditure on health and medicine	190
Recurring expenditure on primary education	90
Total	2,900

This sum of Rs. 2,900 crores in relation to the present population means that the minimum per capita income should be Rs. 74 at pre-war prices. According to Dr. V. K. R. V. Rao, the per capita income on the estimates he made of the national income of British India for 1931-32 was Rs. 65. The figure for 1939 will be still lower if allowance is made for the large increase in the population of British India. The aim of the plan is to increase the per capita income which was Rs. 65 in 1931-32 to Rs. 135 at the end of 15 years of the plan. That is to say, the income of British India in 1931-32 was estimated at Rs. 1,766 crores. The joint authors would like the income of British India to rise to Rs. 5,300 crores by, say, 1960. Taking the Indian States also into account, the total national income for India should be Rs. 6,600 crores by 1960.

Editorial Notes

Land Reform and the Future

In answering his own question "What is wrong with Indian agriculture?" Sir Manilal Nanavati laid bare last month the inherent weakness of Indian agriculture in the war. He referred to the generally accepted opinion that India's main problem is the failure to utilise the varied resources with which she is endowed. Investigation and example, in his opinion, have brought so far small results. He referred in this connection to the U.S. Government's work for agriculture. The Federal Government has undertaken more and more responsibility for rehabilitation of agriculture through financial and other forms of assistance. Their Federal Department of Agriculture, which employs nearly 75,000 men in their service in all sections of the rural problem, is a continuously working body collecting data on every aspect and applying corrections where needed.

In Sir Manilal's opinion the whole problem of modernising agriculture, extending irrigation or conserving the soil and promoting the best possible use of land can be solved only through the initiative of the Central Government. He argued that the most urgent problem of the country is to increase productive capacity. For that purpose, the large surplus population on the land must be dealt with. This surplus has been estimated at 30 per cent of the population now subsisting on the land. He glimpsed the future in this connection. As our population increases and the process of deindustrialisation continues, the problem becomes more and more acute as large-scale industries fail to absorb the increasing numbers and the small-scale rural industries continue to decay. The result is too much pressure on the land, uneconomic cultivation, rural indebtedness and a devitalisation of the rural population. In order to solve this problem it is necessary to bring more land under cultivation by making use of 110 million acres of area classified as cultivable waste other than fallow. Capital expenditure for reclamation should be substantial, and it may be noted in passing that the Rs. 10,000 crore plan for post-war development makes the largest allocation for agriculture. As the source of raw materials for most industries, agriculture has acquired new importance but the surplus of population will remain even after the soldiers' settlement schemes go into effect; and small and medium industries will be wanted. Like Dr. Anstey, Sir Manilal recognises the incidence of land tenures. He deprecates share-cropping, to use the U.S. phrase, and favours peasant pro-

prietorship. The State as universal landlord and the cultivating tenant appear wholly desirable; but the value of estate farming for demonstration of improved methods is not overlooked. Restraint of alienation and a fair rent which cannot be raised are demands so that agricultural reformers here do not stand by the three F's demanded by the Irish Land League. The real interest of all suggestions for land tax reform lies in the approach towards the conversion of the land tax into a graduated income-tax. Nearly twenty years ago, the whole question was examined thoroughly, but today in the light of the demand for agricultural progress, the adjustment of taxation as between country and town appears imperative. Tax reform may not reduce the yield of land revenue in any manner and the main point to note is that adjustment will give the small cultivator the resources for improvement.

New Uses for Jute

Two important developments described in the last annual report of the Indian Central Jute Committee have real interest for the public. Work on reducing hygroscopicity of jute arose from the difficulties experienced in storing sugar in bags. Experiments have shown that treatment

with aluminium soap have reduced hygroscopicity. Steps were taken to make sugar bags made of jute cloth treated with aluminium soap in the yarn and also similarly treated in the piece for actual storage experiments, and they were sent to the Institute of Sugar Technology for tests. The results are awaited, according to the report. Obviously, the bag proof against moisture will be of special interest to sugar manufacturers and the trade who are finding that a seasonal industry has its drawbacks. In Cuba, the rival fibres may not make headway if an improved type of sugar pack comes from India and the only others most directly interested in the experiments are salt merchants.

According to the report experiments were also carried out to find out the conditions which favoured the absorption of moisture by sugar. It was found that reducing sugars, particularly, fructose absorbed moisture much more rapidly than waste. The use of cuttings and waste for paper-making at Dehra Dun on the basis of experiments was described as satisfactory though the cost of Rs. 60 per ton was called excessive. Jute waste and jute sticks at the optimum price of Rs. 2 to Rs. 3 per maund offer possibilities as cropper caddis used with or without sabai grass turned out to be promising. The only limiting conditions appear to be

transport and price. Jute stalks or waste as a paper-making material acquire real importance from the fact that India has no woodpulp. Of some interest to the trade is the departure in the manufacture of twine. Some blue-dyed and polished twine of requisite strength and grist was sent to the South African Government for tests if they meet their requirements. In that case jute twine will be able to replace Italian hemp-twines which are used for sewing woolpacks. Experiments with knitted jute materials were carried out and there seem to be possibilities for jute in the production of scarves, jerseys and blankets. The use of jute ropes to replace steel bands for cotton bales was studied, and promising results were obtained. The main importance of the use of jute as a substitute lies, not in the offtake assured for the grower or the export trade, but in the connection with the committee's scheme to extend the use of jute goods in India. In the report referred to mention is made of both jute-wool union fabrics and jute for household furnishing. Opportunities for gunnies in place of baskets, earthenware because the containers could be returned undoubtedly exist. The manufacture of tea chests and cases for transport of eggs which are at present packed in wooden chests or baskets may be attempted. It is known that a beginning has already been made in regard to tea, and special fabrics have displaced plywood, at least tentatively. The connection between tea and jute should, therefore, be stronger than obtaining under the managing agency system which takes care of jute mills as well as tea estates.

Education in India

In the 64 pages of an Oxford pamphlet on the Indian educational system all the proposals for educational reform take a duly subordinate place to the account of existing conditions. But the contributors are duly impressed by the need for radical change. Constitutional progress as the Simon report indicated is associated with educational advance, and progress in literacy between the 1931 census and the last must be evaluated only in the light of the demand or grant of dominion status for India. All the old evils, wastage, stagnation and the divorce of schooling from life figure in the account. The claim for reorganisation is made to rest on the usual advertisement of defects. The actual achievements of a century are very critically assessed. There is little said about the school-leaving age, continuation causes or the place of private enterprise, since conditions, as between India and Britain, are conspicuously dissimilar. Pandit Amarnath Jha is however content to let the Indian universities stand or fall by their own record to date. But one point as regards cost has been made—university education is denied today to many who are stunted for it. Endowments are as few as free places. Extra-educational work may have its own place as the promising experiments as Tambaram in rural reconstruction have demonstrated. The last has an organic connection with adult education in regard to which Chinese example should be decidedly stimulating.

Original views are advanced in regard to technical education. There too quality is the prime consideration, and the statement that we have too many schools and colleges undertaking technical education in comparison with, the number of pupils

trained, the subjects studied and the total expenditure deserves careful notice like the suggestion in favour of more 'shop' training in place of class room instruction. As in the rest of the educational system a prompt elevation of standards in technical education is the most obvious line of approach for the reformer. But the advocates of improved education in this case do not overlook the needs of the

intelligent artisan for whom part-time courses may have a basic value. The pamphlet may lack the vigorous texture apparent in Mr. Arthur Mayhew's well-known book, and too much is made of the schoolboys' or technicians' handicaps in point of unfamiliarity with English. Little is said about the virtues of Basic English for which the Prime Minister is the outstanding advocate at present. The

chisel & hammer cannot make safes

Adequate equipment and long experience are essential to make *safe* Safes. Hardly anything is wanted to make metal boxes, and name them "safes." Godrej alone in the East have the equipment and the experience—a complete machine-tool plant and patented processes manned by hundreds of skilled hands, plus nearly 50 years' experience in Security Engineering—for making safes which are best not merely on paper, but which have proved the Best against actual fires and determined burglars.

Thousands upon thousands of Godrej Safes, worth many lacs of rupees, have been bought in wartime by Governments, Banks and Institutions for safe-custody of their valuables. Besides meeting the country's requirements for reliable security equipment, Godrej are now engaged on other more important and urgent war demands.

pamphlet necessarily is limited to an outline of the possibilities and in point of time at any rate appeared before Mr. Sargent's big breath-taking plan. It is interesting, however, to note that Mr. K. G. Saiyadain (formerly of Aligarh, now in Kashmir) regards educational reconstruction as a part of the national reconstruction 'in which popular indifference and administrators' hesitation and timidity have to be swept away.' He thinks that the real beginning will only follow the solution of the constitutional problem so that the King Charles' Head has got into the description of the Indian schoolmasters' successes and failures.

Cement for Oil Tanks

Concrete progress has not been interrupted by the war and last year news as to special linings for concrete oil storage tanks was released. The Indian Concrete Journal describing the new departure in the use of cement concrete notes that in 1940 the U.S.A. prepared for the inescapable shortage of steel by planning concrete tanks. Although concrete has certain defects tanks of good design and workmanship could offset them like the use of suitable linings. Concrete tanks have, in fact, been used successfully for nearly 20 years for the storage of water, petroleum products, and other liquids. A method devised in 1921 for reinforcement of circular concrete structures subject to internal pressure was adopted. Its application was tested by the U.S. Navy in the building of a number of oil tanks near Seattle since July 1941. The design was successful, and the Navy has since built larger and larger oil storage tanks in accordance with standard designs. The method of construction calls for concealment of the tank underground; so excavation is the first step, followed by the preparation of the subgrade and the installation of piping. The floor slab, with which is combined the wall and column footing is laid by conventional methods, but an outer shelf is prepared for supporting the wall. The pre-stressing operation is meant to put all the burden on the steel rods, and the tendency for concrete to crack is checked. Iron dust mortar is latterly used for sealing the wall base but the main problem was lining since concrete is porous. Quality also might suffer in the case of high-class aviation petrol because of the free alkali present in cement concrete. A lining impervious to liquids, and without effect either on the fuel stored or the concrete structure was devised after experiments. The results obtained kept costs and availability of material in view. The several types approved in this connection by the U.S.A. Navy used for fuel oil a coating of sodium silicate applied four times by either mops or brooms or spray; for diesel oil the tank lining is provided by an inert resin base enamel applied over a prime coat and covered with a double seal coat, all applied by a spray gun. In the case of aviation gasoline the special problem is met by using the resin-base enamel or an organic polysulfide film applied by spray or in fabricated sheets. Both are in use but the polysulfide film demands synthetic rubber, so that the U.S. Navy is again engaged on research on alternative linings. Since the tanks must be near the water each tank installation is viewed as a problem in itself and the question of foundations is dealt with.

Bombay City's Factories

Regional surveys connected either with town planning or social reform on the lines of Mr. Charles Booth's work in London are rare in India so that a special welcome must be given to the A.I.M.O.'s monograph on Bombay's industries. It is not surprising that 559,926 persons in the city were employed by Bombay's industries in 1941. The official returns have been analysed to show that 1,205 factories working in 1942 contained a larger pro-

portion of engineering and textile concerns than any other group. As many as 207 paper and printing establishments were supported by Bombay's industry and trade. Miscellaneous industries evidently cover paint, liquor and other industries but the six cosmetic and soap factories run on a fairly large scale with labour limited are certainly surpassed by the number in Calcutta. The industries are located mainly in the northern part of the city and the island of Bombay

CONFIDENCE IN MEDICINE

The qualifications of a physician as well as his reputation gives confidence to a patient, thereby facilitating treatment. These factors are equally important in respect of Patent medicines, essential adjuncts to the medical profession.

The proprietors of Birla Laboratories enjoy in the Industrial and Commercial field of India a position of distinction. Their preparations are made by modern scientific methods under the supervision of experts with the aid of indigenous drugs and chemicals. The quality and the efficiency of the preparations are certified by the medical profession.

Preparations include:

- **NEO-VIGORIN** A general tonic in tablet form for muscular and nervous exhaustion. It is ideal for shortening convalescence.
- **NEO-VENTROL** A safe and gentle laxative specially beneficial to sufferers from dyspepsia, constipation and hardening of the arteries.
- **LECOSOL** A tonic for women, with curative properties for low grade infections of leucorrhoea and general debility.
- **KAFTON** A valuable preparation for baby's bronchial disorders and colds—particularly recommended during the teething period.
- **NEO-CHYAVANPRASH** An Ayurvedic tonic prepared by modern scientific methods with Calcium and Vitamins.

BIRLA LABORATORIES

Proprietors: The Upper Ganges Sugar Mills Limited.

while most offices still lie in the Fort area. Of the divisions of the City Parel, Byculia and Mazagaon claim the largest number of industrial establishments today. Bombay's mills run on hydro-electric power and cheap labour from the Konkan make cotton the major industry. There are 76 spinning and weaving factories as compared with 25 bleaching and dyeing factories, 7 hosiery mills and 3 woollen mills in Bombay.

A result of large imports of silk and rayon is the setting up of many silk mills. As many as 208 factories are grouped as textile and the most concentrated mill area is Parel. Between 1940 and 1942 as many as 26 textile establishments were added and the number employed in 1941 was a little under 200,000. In the central part of the island are located most of the engineering establishments which employ altogether about 40,000 workers. General engineering accounts for 98 out of the total of 404 concerns, but it will be surprising to note that there are 19 concerns dealing with kerosene (tinning and packing) and 16 dealing with drums and iron tanks. Shipbuilding and repairing is limited to three concerns only. Bombay can claim two paper mills but the entire employment in paper, printing and publishing trades is as small as 8,093. Limited progress made in recent years is ascribed to the paper shortage. The concentration of factories serving the city's consumers is not peculiar to Bombay where there are six flour mills and ten important ice and aerated water factories in addition to bakeries and pastrycook shops. The total employed in the food, drink group is however as small as 4,708 since the demand is local, except in the case of tobacco and oil mills which have developed on the basis of a large import trade.

First Choice

On Monday appeared a cable from Washington that put most doubts to rest. The Democratic National Committee by an unanimous resolution earnestly soliciting Mr. Roosevelt to continue 'as our great world humanitarian leader' answered all queries as to the Fourth Term. Before Christmas Mr. Roosevelt practically outlined his programme for the campaign. The meeting with Congress was avoided in order to let the electorate grasp the permanent as well as the temporary elements in the programme. Many inferred that the message on the state of the Union was directly related to the election platform. Stories as to the revolt of the Solid South receive their quietus with the resolution. There is no constitutional amendment against a Fourth Term, and Mr. Roosevelt was long ago first choice, so far as the Democrats go.

It might be that Mr. Roosevelt now looks for an early end of the war and is prepared to use his immense prestige as the man who won the war with others besides serving soldiers. Self-criticism in the U.S.A. has not blinded the Democratic party to the virtues of tried leadership and Mr. Roosevelt certainly has used the interval to prepare a definite version of the New Deal. In view of the alliance with both Russia and Britain, the Democrats may desire no change in the White House in 1944 and if tipsters' forecast of a majority for the Republicans in the Lower House is taken as correct, it is desirable to note that with Speaker and

Chairmen of Committees on his side, the President could make light of Congressional opposition. Since 1938 Mr. Roosevelt has found the Supreme Court more and more acceptable as the interpreter of the Constitution owing to the changes in the Bench. While the Democrats have not found it necessary to look beyond Mr. Roosevelt who may point readily to the new promise of social security rather than the eleven years' record in connection with the Convention, the Republicans have not exactly committed themselves as regards the candidate. Mr. Dewey is still regarded as a lightweight for the Presidential stakes as two candidates from New York in one year for one office may excite deep-seated jealousies.

The Republicans, of course, cannot draw either on Mr. Hoover or Mr. Landon at present and Mr. Willkie has too many enemies in the party. The Post-War Policy Group is known to favour Mr. Dewey even after the Mackinac Charter but the real decision will probably rest with Mr. Spengler. Mr. Eric Johnston is said to have disclaimed political aspirations. Experience of high office is limited to three Republican Governors Messrs. Bricker, Stassen and Warren but it may be duly noted that State Governors do not usually make Presidents and the real chances then lie between Mr. Willkie and Mr. Dewey. Labour after the railroad wage increase may favour Mr. Roosevelt rather than Mr. Willkie and the dormant

INSERTED BY THE CALCUTTA SELECTED COAL ASSOCIATION

promise of agreement between A.F.L. and C.I.O. has already become a factor in the contest. There are, of course, seven months to go for electoral preparation to start, and Mr. Roosevelt too has not answered directly the request of his party executive. Four years ago, it was imagined that Mr. Farley's withdrawal would spoil the chances of Mr. Roosevelt. It turned out otherwise, but it is not easy to say that a unanimous request improves Mr. Roosevelt's prospects. As many see it, it is the domestic policy of the next few months that will make all the difference to Mr. Roosevelt, already the first candidate to define war and peace aims though Mr. Willkie gave Missouri a platform with a lot of planks in October, 1943.

Exclusive Claims

In view of the report that a conference to examine the affairs of the Pacific is likely to meet in June, the joint declaration from Canberra should interest many others besides advocates of civil aviation under national auspices only. The inter-governmental declaration followed a four-day conference at Canberra between New Zealand Ministers and Commonwealth Ministers. It produced a declaration as to the future of the islands in the Pacific. It defined Australia's security zone as being bounded by a line through the island arc North North-east from Australia to Western Samoa and the Cook Islands. The only Power on the other side is Chile whose Eastern island answers to the Andamans, being a place of exile for political dissentients. But many would read into the declaration definite views following the outline of U.S. requirements by the Five Senators who toured the world. Post-war claims are not recognised merely because construction and use of military, naval and air installations has been permitted.

The future of the Solomons and New Guinea is secured by the Dominions indicating, well in advance of the British Government, that a part of the S.W. Pacific is an excluded area. The Dominions, of course, commit themselves as to the welfare of the natives. The Colonial Office has said so far little or nothing. Any assertion as to its jurisdiction must be doubtful as the successful defence of the Solomons was not due to British effort but to Australian resolution. For the student of Imperial relations the close correspondence in the foreign policy of the two Dominions in the Pacific holds out the promise that combined war effort and consultation in peace will put the British case higher when the Far East is discussed for some might remember that the Far East became the Near North owing to the war. The agreement relating to air services contemplates an international agreement as to routes, stops and subsidies, for the last is likely to be important as Australia is bent on remaining a producer of aircraft in peace. Government ownership and operation of air lines is described as a possibility, if a comprehensive international agreement does not eventuate. The London conference in October 1943 is obviously far less important than the inter-governmental arrangement proposed. As regards the disposal of territory after the war, it is suggested that Australia and New

Zealand have certain over-riding claims. But it is not likely that the Marshalls or Carolines are desired by the Dominions. Consultation with France and Portugal at a future conference is desired, but the omission of Holland is not without interest. It is to be surmised that there are no doubts or difficulties as to the restoration of the Dutch Empire in the East from Sumatra to Timor.

CINEMA

CREDIT for the actual invention of the cinematograph is difficult to apportion. It is certain that Englishmen played an important part. As long ago as 1860 Sir John Herschel published a theory of cinematography, and about 1889 a patent for a cinema camera and projector was applied for by W. Friese Greene and M. Evans. Today the cinema is a great relaxation. The big films afford us an escape from the realities of a world at war, just as the short films and newsreels present us with sharp, hard pictures of that world and allow us to see ourselves, our allies and even our enemies as we live and fight. But how many of us who go to "the movies," who watch the latest performance of our particular "star," or of troops on a commando raid, realise what the cinematograph industry owes to the workers in many branches of science and technology, and not least to the chemist? No other form of entertainment owes him so heavy a debt. Celluloid itself, the basis of the industry, is a chemical achievement. This must be transparent to give clear images after great magnification, resilient and tough to stand great strain. It must be so treated that the danger from fire is reduced to a minimum. The hand of the chemist is indeed traceable from the make-up of the actors to the lamps in the projectors. In the apparatus used for the sound-recording rare metals are needed: in the lenses of cameras and projectors, optical glass of the highest quality: in the colour-photography, pigments of the truest and most vivid colour. The sets for the ballrooms and palaces of the cinema's Cloudcuckoo-land involve the use of large quantities of paints, quick-drying stucco and plasters: the costumes and draperies must be dyed. The tale is continued into the cinema theatre itself, in its decoration, its disinfection, its air-conditioning. When next you sit in your favourite cinema, think for a moment of the patient work in laboratory and factory that has enabled you to see the wonders of the world or the finest product of the cinematograph studio so clearly and still at so modest a price.

The Leading Hotel of Calcutta

Another interesting companion in my recent Calcutta-Delhi journey was Mr. Kashi Nath who boarded the train en route. And on this occasion, I had the rare experience of having a two-berth compartment all to myself from the starting station. By a two-berth compartment is usually meant a coupe which contains a lower bunk and an upper bunk. The two-berth compartment of the Toofan Express by which I travelled, had two lower bunks and no upper bunk at all. I was luxuriating in the comfort of a sole occupant of the compartment till Allahabad whence Mr. Kashi Nath joined me. At first sight, he struck me as somewhat indeterminate in regard to age and nationality. He was well-built though rather short; brimful of cheer and health; and clear, lustrous and healthily fair in complexion. Who could this be—a Parsi? or a Guzerati? or a Kashmiri Pandit? As I was groping for an answer to this question, the newcomer addressed me in Urdu which was much above my head with my faltering knowledge of colloquial Hindi. I answered him in English; but he persisted in plying me with questions in Urdu. Meantime, as happens to us on some occasions, his face and expression and style of speaking seemed to remind me of some one I knew. So, I asked him what his name was. The following conversation ensued:

"May I know your name?"

"My name is C. S. R."

"Yes, I have heard of you from my son."

"Do I know your son?"—I asked.

"My son is in the Reserve Bank," he replied.

"What is his name?"

"Ram Nath."

"I know Ram Nath since his days in the Imperial Bank. I used to meet him quite often when he was in charge of the London Office of the Reserve Bank. I saw him only a few days ago when he had come down to Calcutta with the Governor. I am happy to know you because Ram Nath and I had been old friends and good friends."

And I realised that Ram Nath's strong nature and sturdy understanding are an inheritance, and not a mere personal gift.

As our subsequent conversation proved, Mr. Kashi Nath appeared to me as the answer to a big interrogation mark which has assailed me for some months. Since last August, I have been associated with the organisation of mass cooking and free distribution of food. We prepared

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like it)

and distributed over 30,000 meals a day in Calcutta. We also opened branches in the villages and distributed 20,000 meals a day. Our main difficulty was the work in the villages. It was unthinkable to send men and volunteers from Calcutta to organise cooking in each of the villages. There was dearth of volunteers even in respect of cooking and feeding in Calcutta. It was, therefore, necessary to secure local assistance for most of the work that had to be done. It was not easy to get such local help. For one thing, there is no kind of organisation which could be utilised as our agents in the village, to whom we could send rice, dal and stuff from Calcutta and who would be able to arrange for the cooking of food on the lines we had standardised, and who would distribute food in a way that will give satisfaction to all the people in the locality. In the absence of such an organisation, we had to make a search for local men of standing through whom we could execute relief work. In this respect also, we were confronted with not a few difficulties. One was not always sure if one made the right choice in selecting a particular local individual. Many times, it happened that some one else would turn up and tell tales against our choice.

The lesson of all of which was that, for any kind of good to be done in rural areas, it was necessary to create a sense of organisation in each village or each group

of villages—to imbue the villagers with a higher sense of self-respect, orderliness, good-neighbourliness and social spirit. It is not only the giver but the recipient that must have character if relief is to be effective. Even with regard to the several planning schemes that are now being discussed, the country cannot reap the full benefits until the villages and the villagers have developed the higher values I have indicated. What plan will be most suitable in this regard? What is the organisation that has to be brought into being? How are the personnel to be recruited? What is the training to be given to such personnel? Will such an organisation and staff be official or non-official? How is the necessary finance to be provided? These are some of the questions to which I have been giving considerable thought in recent months. Mr. Kashi Nath was able to throw light on many aspects of this problem.

It was he that started the discussion of rural development and reform. I came to know from him that he was the Officer-in-Charge of the Rural Development Department of the United Provinces. This Department was created while the Congress Ministry was in power. Pandit Govind Vallab Pant and his colleagues had definite schemes and were imbued with high ideals in regard to the rural development programme. Some of their schemes got a start; but before they could make headway, and before their other schemes could

be launched, the Congress Ministry resigned in response to the developments connected with the war. With the idealism and missionary fervour of Congress leadership thus removed, the Rural Development Department in the United Provinces has carried on in a humbler way but, perhaps, with much loss of the fitfulness that was inevitable in a department coloured by party enthusiasms. If I am not mistaken, the United Provinces are the only provinces in India in which there is a province-wide organisation, and there are adequate staff for the entire territory, solely devoted to the various aspects of rural development as such. I am beholden to Mr. Kashi Nath for much valuable information as regards the administrative details and the plan of work of the development department of which he is the head. In the course of a question, I explained that my own idea of the proper staff for rural development was that men retired from service in either Government or business-houses must be selected from the point of view of their being not too old or too crusty; that they should be given a preliminary training; that they should be paid a reasonable allowance; and that they should be in charge of villages or groups of villages nearest their own native place. This idea of harnessing retired men and utilising their rich administrative or other experience has engaged my thought for a considerable time. When I said this, Mr. Kashi Nath replied that he himself was a retired official; that after retirement, he was employed in an honorary capacity in the Benares Hindu University; and that he was now the head of the government department for rural development in an honorary capacity. This plan of what I may call exploitation of retired officials seemed to build another important link between my new friend and me.

This is not the place nor the occasion for setting out fully the details about the plan of work adopted by the United Provinces Rural Development Department. For my part, I have undertaken to pay a visit to some of the villages in the United Provinces; and Mr. Kashi Nath has kindly agreed to be my friend, philosopher and guide in my rural studies. I was particularly interested in learning from him the general economic conditions of the agriculturists in his province. He said that the satisfactory prices that had been available in recent months for rice, wheat and

sugarcane particularly had played an important part in reducing agricultural indebtedness. "From your intimate knowledge of the various villages in the United Provinces, could you tell me," I asked, "by what proportion approximately agricultural indebtedness has been reduced? Have agricultural debts been wiped off to the extent of 30 per cent or 50 per cent or 70 per cent or what?" Mr. Kashi Nath's impression is that there is not much of agricultural indebtedness left in the United Provinces. It follows that, in provinces like the Punjab, Central Provinces, Bihar, Gazerat and Maharashtra, similar remarkable reduction in agricultural indebtedness must have taken place in recent months. In his presidential address at the General Policy Committee, Sir J. P. Srivastava made an important statement in this con-

Before tendering goods and parcels for transport remove all old markings and labels. Affix fresh labels showing name, address and destination in BLOCK LETTERS—preferably in English.

Packages which can not be durably marked e.g., bundles of hides and skins, iron bars, tins of oil and ghee etc. must have leather, metal or card labels attached showing consignee's name and destination station.

If old marks are not removed or obliterated and packages properly marked your goods may be refused for booking.

YOU HAVE BEEN WARNED

nection: "In connection with agriculture, it should be realised that the end of the war will probably mark, for the first time in the history of India, the extinction, or at least a very large reduction in agricultural debt." The 15-year plan prepared by Dr. John Matthai and industrial leaders estimates that agricultural debt has already been reduced from the pre-war figure of Rs. 1200 crores. The general public in India will thus be realising, for the first time, that what was generally believed to be an intractable problem has been solved by the war; and that India's agriculturists, who for generations had been steeped in debt and knew nothing but indebtedness, are nearly out of debt now. There have been learned discourses on the marvellous transformation of India from a debtor country to a creditor country in the international field. Even more marvellous is the revolution in the prospect of our agriculturists ceasing to be in debt. The question is how we should ensure his continuing to remain in this happy state. In simple terms, the agriculturists should not get into debt again. Agricultural debt is like a snowball; it grows bigger and bigger. If all of us find that the unexpected has happened and that the age-long and century-old tradition of indebtedness has disappeared, wisdom demands that everything should be done to guarantee that this new state of affairs remains intact and for ever. The greatest of plans and the most urgent and imperative of plans is planning for a Better Rural India.

This news about the hydra-headed change in agricultural indebtedness sounds too good to be true. May I suggest that each provincial government should have test investigations made in various groups of villages so as to get precise data about the proportion of the reduction effected in agricultural debt? It may be true that provinces like Bengal, which has suffered from cyclones and floods and from famine and disease, has not shared in these fortunate developments. It is, from this point of view, important that immediate enquiries be made whether any transitional plan could be adopted for Bengal so as to provide for a more equitable distribution of the larger agricultural income received by the province as a whole. Many of the labourers in the villages have been rendered landless by the recent food crisis. After harvesting was over, such labourers could not secure any work. Reports from the interior lead us to believe that there is still much distress and there may be even more distress in store. What are the public works schemes that can be quickly got ready and immediately put into effect, with a view to provide employment? Plans in connection with this question and in connection with the ensuring of conditions for the larger agricultural income resulting in the extinction of general agricultural indebtedness, must be a special study of an expert committee to be appointed by the Bengal Government without any delay. From the talk I had with His Excellency Mr. Casey in the informal tea party he gave the other day, I was much impressed with his ease and naturalness which made the party informal not only in name but in fact; and, much more, by his inquisitiveness about the economic conditions in the country. If I am right in my impression that the new Governor has a special flair for economic problems and will take a special

interest in proposals calculated to enhance the economic well-being of the population, the most urgent task for him, as I see it, is the appointment of an economic adviser who knows the province and the problems of the province and an expert planning committee with directions to produce public works schemes suited to the present conditions and designed to provide immediate relief. An expert committee of this kind can, I feel, produce plans in the space of a month or two. The financing of such plans need not be a provincial strain as the Central Government would be only too glad to arrange for finance for an advance instalment of planning in this province. Such an advance plan would also be a reassurance to the Indian public that the Central Government's labours in connection with post-war planning are not a mere pretence or make-believe, but are inspired by conviction, and confidence in the potentialities of the future for India.

Olympus

(From Our Correspondent)

New Delhi, January 24.

The public interest here for some days has been monopolised by the 15-year master plan of the industrialists. The very audacity of the plan involving as it does an investment of 10,000 crores brings into bold relief the immense nature of the tasks that will confront India in the post-war period. The Government policy of procrastination in formulating their decisions has already come in for a lot of criticism. For some time it was becoming obvious from the new Viceroy's references and the speeches of more Executive Councillors that the Government to-day was putting a wrong emphasis on rural aspects of the reconstruction task as well as communications and modernisation of agriculture, giving the development of heavy and basic industries at best the third place. The industrialists' plan, for the first time, provides a whole picture in outline based on the minimum national needs and on the realisation that without an intensive development of industries, the raising of the general standard of living will be almost impossible. The plan provides for nearly 45 per cent of the expenditure on industry, another 12 per cent on agriculture and 10 per cent on communications. Lord Wavell was perhaps speaking as a military man when he put the development of communications first on the priority list.

Official reaction to the plan is still non-committal. It is of course stated that at present the Government can do no more; they treat it as an important item in the data they are busy collecting. The assurance is given that whatever plan they finally evolve, they will leave it completely to the future Indian Government to modify it, as it pleases. It is moreover pointed out that the financial, particularly, the inflationary aspects of the plan have to be subjected to the most careful scrutiny before any final judgment is passed. The future financial relations between the Centre and the Provinces are still uncertain, though it is hoped that the final arrangements will place more elastic sources of revenue in the hands of the Provincial governments.

The non-official reaction to the plan points to the wide gaps left in the industrialists' picture, and the latter's silence as to the necessity of a more equitable distribution of the national wealth. It is pointed out that there can be no guarantee of a rise in the standard of living of the masses if a larger share of the wealth created by national exertion goes to a few of the industrialists. It is also pointed that the financing of the scheme involving a sum of 600 crores a year, which the planners say can be done by the joint resources of our hoarded wealth, sterling assets, the national savings, the vast reserves in manpower and material. And eight years' progressive rate of capital formation should in no way put additional inflationary burdens on the lowest stratum of society which has already suffered grievously from the wartime inflation.

Meanwhile the Finance Member's categorical assurance that India is in no way committed yet to any post-war currency arrangements and that the India Office will in no way influence the Government's decision in the matter is generally welcomed here.

Lord Wavell has after all found somebody agreeing to succeed Sir Ramaswami Mudaliar on the War Cabinet. Sir Feroz Khan Noon is expected to leave for Britain sometime in March though it seems that his stay there may not last more than three months. It is not certain whether the Viceroy is going to fill up the vacancy in the Executive Council. Sir Reginald Maxwell's retirement is now quite certain though no successor has been found yet. The utter farce of putting an unrepresentative Indian in the War Cabinet is again commented upon here.

To learn that the office of Mr. C. C. Desai, Controller-general of Civil Supplies, is being shifted to Bombay as the latter is the main centre for receiving imported goods is no surprise. This will facilitate contact between the trade and the Controller-general and help in administering the Anti-profiteering ordinance more efficiently. Meanwhile, the Government have decided to control the prices of woollen cloth and goods. For some time the whole of the Indian woollen industry has been booked for defence work. The Government is now reserving a certain percentage of the manufacturing capacity for the civilian needs. All such manufactured stocks, will be taken over by the Government, stamped and delivered for distribution to the general public through a limited number of dealers. It is not yet known what the Government are doing to redress the general consumer's grievance that the ex-mill prices for cotton textiles have been fixed too high.

The Standing Committee on the Central Excises Bill is meeting this week. The standing Finance Committee of the Central Legislature is meeting on February 12 to consider new items of expenditure for inclusion in the Budget which is to be presented on February 29. As a larger number of Congress members is expected to attend this session, the budget debates are expected to be more interesting than last year. A

number of non-official resolutions have already been tabled including Mr. Govind Deshmukh's recommendation to float an anti-inflationary loan of 10 crores to subsidise agriculture. Mr. A. C. Dutta and Sardar Sant Singh remark on the necessity to resolve the political deadlock and suggest the formation of a National Government at the Centre and coalition Governments in the Provinces.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, Jan. 24.

Engineers in Bombay have been informed that the future holds great opportunities for them. The Indian Institute of Engineers here held its annual session on Friday when the Governor of Bombay addressed the Institute in which the Bombay Engineering Congress has been merged. The union is said to be very significant as promising united effort by the profession. Students too are likely to benefit as the status and efficiency of the engineer in India should be higher. As for the profession which has set up enduring memorials on all sides there was nothing but praise. The harbour shows what reclamation could do, but the really big jobs are likely to come after the war. Mention was made of the reconstruction projects which call for skilled assistance from the profession for road-building, irrigation and water supply schemes. Engineers generally eschew politics, but little was said about Sir M. Visweswaraya's great concern for industrial development. Only recently a plan for district development inspired by his views has appeared. His old book *Reconstructing India* published by P. S. King is still good reading and has a coherence denied to the most recent schemes, for the early effort came in the heyday of Sir Visweswaraya's official career. In that sketchy volume are found nearly all the schemes meant to make the most of resources and in 1920 in the middle of a boom antecedent to a severe slump the facts as to poverty and ineffectiveness were set forth in order to justify large administrative efforts in India for the national welfare.

Prince Aly Khan's visit is not big news as compared with a conference of reforming Bohras. That small but alert business community appears to suffer from divisions like the whole country. A minority appears to favour progress at the expense of tradition. An uplift programme has been put out but the reformers do not seem to have got much change out of the two-day's conference here. The reformers do not seem to have made any headway for the main issue is likely to be the place of the priesthood, and the world knows well that the Mullaji Saheb enjoys a very great position similar to that of the Aga Khan, not at all that of any dignity in any Church. There have been charges and denials but the affair of the compulsory beard-growing has certainly blown over. Bohras remain eminently conservative, and eminently respectable and their go-ahead business instinct does not mix with the revolutionary zeal or impatience from which the handful of reformers suffer.

The Tata plan looks good to Sir M. Visweswaraya whose published views commend without reservation the scheme rather than the discreetly hidden plans of India's Government. Road-making, in his opinion appears secondary, and it has been stated that America did not put big industries after roads. The vast roads indeed came after the motor plants. The Tata scheme appeals to the engineer because it is sponsored by practical industrialists, familiar with high finance. But he recognised that much would depend on the power the future government of this country would wield. He criticised details as to finance in the first stage, and

assumed that capital for consumer goods industries would be inadequate because much money would have to be given in the shape of subsidies to small producers. Prof. Shah's criticism of the plan turned on the omission of distribution and ownership problems but he recalled that the National Planning Committee approached the main question in the same way. As to national income and outlay Prof. Shah entered a warning. He remarked that 67 per cent of the population owned only 32 per cent of the country's wealth and one per cent of the population 37 per cent of the wealth. His fear was that vested interests would snap up the increase in wealth, and he was concerned also over the threat of inflation implicit in the plan, though he declined last week to express any definite opinion until he had studied the proposals. Sir Victor Sassoon's remark at Hyderabad that the first decade after the war is the period most auspicious for India's industrial advance could be interpreted as supporting the Tata plan.

The coal shortage led to an elucidation last month of the plans for increasing output. The Labour Department has set out the scheme for minimum output and for tax relief based on higher output only recently. As for the Railways the coal shortage is largely a problem of traffic. Sir Edward Benthall admitted that the coal shortage apart from forcing the railways to use less coal compelled them to maintain an even flow of empty wagons to the coal-fields. Because coal wagons come first, traffic on some sections has been restricted according to the War Transport Member. He confessed that coal stocks were so low that no risk of even a temporary shortage of wagons for transporting coal could be contemplated. Sir Edward spent three days in Bombay

to learn more about the port, the place of country craft, and the railways.

Without any report from Cairo as to gold prices the bullion market here broke rather badly on last Thursday simply because the Reserve Bank offered gold at Rs. 71 per tola instead of Rs. 71-2. Fears produced frantic selling and demand suddenly tapered off. This kind of convulsion produced guesses as to what is in store. It is calculated that since summer the special sales at rates from 87 to 71 per tola have accounted for 3½ million tolas so far. How much money has gone into unproductive and depreciating investment can be guessed readily but the sales at a price below Rs. 73 served as the danger signal. Offtake latterly has been disappointing and the commodity boom that supported hoarding is a thing of the past. Silver operators had their share of the trouble experienced by the market. Last week bullion prices fell slightly, but the damage to sentiment was out of proportion. The good harvest in parts of India may bring out fresh buying, but the future seems very uncertain. The direct result must be favourable to the share market as idle money will seek jute shares on the other side or more probable tea shares as many now argue that yield must be a deciding factor in regard to investments. On the day that bullion prices fell, the textile share market registered real improvement and Bombay Dyeing is likely to move up after the Viceroy's visit to the Spring Mill.

The Bombay Branch of the Royal Asiatic Society publishes a journal for the learned and keeps the flag of culture flying. The Governor has admitted its importance by going to attend the ceremonial presentation of medals to Mr. P. V. Kane and Dr. Sankalia at the Town Hall last week. The Bengal branch is the original branch of the Society in London but the Bombay branch set up 1804 has not lacked support. It has a library of over

(From Our Correspondent)

MADRAS, January 25, 1944.

Problems connected with the road transport came in for discussion when Sir Kenneth Mitchell, Controller of Road Transport, Government of India, gave an interview to the Press a few days ago. While the people, particularly the villagers, are looking forward to an early inauguration of the so-called road development schemes for this province, the owners of cars and buses are worried about the petrol rationing, scarcity of tyres and the lack of supplies of spare parts. The over-crowding of trams and the buses has been trying the patience of the public in the city. Till now the Government authorities did not take adequate steps to alleviate the distress caused to the public but they have fed the public on promises of good future. Sir Mitchell was quite satisfied that out of 7,000 new lorries that were distributed all over India, Provinces and the States included, Madras could get 780 or 11%. He is also reported to have stated that the position regarding the spare parts has become satisfactory since only about three or four items could not be procured. In answer to this easy disposal of a pressing need of this province Mr. W. W. Ladden, Chairman, Madras Motor Vehicles and Allied Merchants' Association, has issued a statement that more than 70 items of spare parts could not be procured from the factory. He points out that "without certain of these parts the vehicles cannot run and without others, the transport vehicle cannot get its certificate of fitness from the Road Traffic Board." The public are one with him when he says, "This situation has existed for more than 14 months with periodical promises that all would be well within a month or two." It is indeed high time that the War Transport Department arranged for the adequate supply of the much needed spare parts. Sir Mitchell also disclosed that at a recent meeting he had with the Provincial Motor Vehicles Controller, Madras and the Controllers from Mysore, Travancore, and Cochin, the standardisation of the bus bodies was considered so that it would be easy to get the required materials. He said that the gas plants can be more usefully employed for long runs but declined to discuss why a fair portion of the buses in the city still remain petrol driven. When the question of the recent increases in bus fares in the city came up for discussion Sir Kenneth said that if the fares charged in Madras are higher than the prevailing rates at Bombay and Calcutta the reason may be partly due to higher rate of motor vehicles taxation in Madras. The Government of Madras have now issued a press note stating that the increase in bus fares are found to be justifiable.

Regarding the position of tyre supply, Sir Mitchell said that we should congratulate ourselves on getting any tyres at all after the loss of Malaya. India's production hardly came up to 1,000 tons of rubber. Yet, the future is not dark. Even if, 15,000 to 20,000 new vehicles are put on India's roads in 1944, the Controller assured, they would be provided with the required tyres. As usual he promised a bright future for vehicles and enumerated the general advice usually doled out

by salesmen of motor cars viz., keep the tyres at correct inflation, don't exceed the optimum load, avoid over-speed, repair at the right time, retread the tyres before they are worn out, so on and so forth. The public are also asked to expect extensive schemes of road development after the war.

The scarcity of firewood has assumed menacing proportions. Demand for rationing has been too often expressed at public meetings and the corporation discussed the situation at a special meeting. sent a deputation to the Governor and stressed that urgent measures must be taken to guarantee equitable and regular supplies to the population. Mr. S. V. Ramamurthi assured the public at a press

conference that arrangements are going on for accumulating the necessary stocks before rationing can be introduced. The city needs 11,500 tons of fire wood per month and the lack of transport has been mentioned as causing delay in accumulation of stocks. When the retail shops are chosen and ration cards distributed, a temporary rationing system, supplying half the ration intended for distribution, would be introduced.

Answering certain critics who emphasised the growing difficulties of the masses as a result of the rising prices of foodstuffs Mr. S. V. Ramamurthi pointed to the trends of the index number of Madras as proof that this Province fares better than most other places in India.

While the Index number of Madras has risen only by less than two times the level of August 1939 other cities showed considerable increase. Further, even in this Province the index for Madras City is the lowest compared to the mufussil towns. In the matter of pulses Madras is deficit and the Government of India have been asked to intervene and persuade the exporting provinces to reduce the price of articles like Bengal gram. For the adequate and equitable distribution of chillies and tainaid the Government are now evolving suitable zonal schemes. Unless one is very sceptic about statistics it should be admitted that the Government of Madras are doing their best to reduce the prices of foodstuffs as they have successfully tackled the rice situation.

Dr. B. V. Narayanaswami Naidu, President of the Indian Economic Conference, in a statement to the press expressed his full agreement with the 15 year plan sponsored by leading industrialists like Sir P. Thakurdas, Tata and others. Any plan for India's reconstruction has to be bold and ambitious and tremendous efforts are needed because tremendous issues are involved. He supports any attempt at drastic changes in the field of agriculture and industry. A plan of the type put forward by the industrialists will be necessary to achieve a peaceful transition from war time economy to enduring prosperity after Peace.

(Continued from page 149)

That the per capita income in 1960 is to be only double of what it was three decades prior to that date is, stated as the aim of the 15-Year Plan, definitely not impressive. It may be said that this is far too modest an aim; and the authors seem to have exaggerated the cost in terms of human suffering during the period of the execution of the plan. It is true that the U.S.S.R. had to pay a heavy cost in terms of human suffering with regard to its three 5-Year Plans. But the U.S.S.R. was a pioneer in this respect and had to pay fully for all the trials and errors. The technique and methods of planning are better understood now than when the Soviet executed their plans. There is also the valuable lesson to be learnt from the Soviet experience. In the execution of clear-cut plans, it should now be possible to minimise mistakes and to make the maximum provision for such adverse repercussions as are likely. Nor can we agree that the national resources of India are not extensive or varied. It is to show the varied extent of our resources that we have given, at the outset, a long quotation from an earlier article. Our comment so far as the objective of the 15-Year Plan is concerned is, therefore, that its very modesty spells practical success.

In our next article, we shall deal with the details and financial aspects of the 15-Year Plan.

100,000 books and manuscripts and it has been stated that Livingstone of Africa farm lectured under its auspices in 1865. Sir James Campbell, the compiler of the Bombay Gazetteer, was compiler of the endowment of the medal which has gone to Sir Aurel Stein among others and most recently to Prof. Kane. The Society's work for natural history has seldom been ignored and the Prince of Wales Museum has found its best supporter in the journal. Advance publishers' announcements are uncommon in India and the return of Bengal Lancer to India has been barely mentioned in the papers. His last tour in 1936 resulted in a book after the articles in the Spectator (London) Col. Yeats-Brown was not unsympathetic to Fascism for the link with mysticism is obvious in any case. His first two books were real best sellers but Lancer at Large was opinionated and diffuse. The new book promised is India and the War which means that politics will claim attention. It is certain that it will be better than the summaries work into order in haste for Col. Yeats-Brown knows his India and far more important knows to tell a story of places far beyond the Frontier.

Resume of Commodity Markets

Another week of uninteresting conditions in the commodity markets is again to be recorded. There were no important developments to affect the course of the markets. The raw jute market has been easier and an official statement is still to be made about the decisions taken at the recent conference of Central and Provincial government representatives in New Delhi. The jute manufactures market was inclined to be easier on the reports of a cancellation of government orders but the receipt of others in the latter half of this week has resulted in a firming up in prices. The raw cotton market has been irregular though closing prices are higher on balance while in the piecegoods market uninteresting conditions have been noticeable. Gold prices have been fluctuating in narrow limits but Silver prices are higher.

The raw jute market has been easier with prices lower by eight annas per maund. It is still not known as to what will be the size of the crop for the next season but it is now pointed out that there might not be any important change in the area under the crop for the next season. It is felt in some quarters that there might not be any need for a restriction of the acreage under the crop. For, with the high prices for rice there must naturally be greater incentive to grow rice. But the behaviour of the market seems to discredit this view. If it were anticipated that the crop for the next season would be smaller sellers would not have shown any anxiety to do business. The reason for the recent fall in prices is said to be the absence of an announcement about higher minimum prices.

Nothing definite can as yet be said regarding the immediate outlook for jute. The policy of requisitioning mills is a definitely discouraging factor though it may be pointed that, with the improvement in the coal situation, other mills can be worked a greater number of shifts and the loss in production of requisitioned mills made up.

The raw cotton market has been rather irregular. The demand for finer cotton is on a smaller scale and it is felt that imports of cotton might be on a larger scale. Also, the heavier movement of the crop might have a depressing effect on prices.

At the forthcoming meeting of the Indian Central Cotton Committee it is expected that the question of improving the growth of cotton varieties and grading them pro-

perly would be considered so that after the termination of hostilities Indian cotton might be able to compete with foreign growths. Good progress has been made in recent years in the growth of long staple cotton. It is very important that this progress should be kept up and full advantage is derived by the ryot from the improved conditions.

The piecegoods market has been quiet. In certain centres the sealing of unstamped varieties has led to a shortage of goods. But with the cooperation of

Output greatly in excess of what was formerly considered possible—this is the report from industrial concerns all over the country. Good management & careful maintenance of plant play important parts in bringing about this excellent state of affairs, but the principal factor is the

ability of the labour force to maintain continuously a high level of output. It is here that Indian Tea has helped in many hundreds of factories; tea served to the worker on the job is giving extra concentration and renewed energy, thus eliminating the fall-off in production usually noticed towards the end of a working period.

consumers there is no pressure for buying.

Reference was made in these columns last week that the Export Committee was considering the question of fixation of prices for cloth exports and that arrangements were being made to standardise the quality of cloth for export. An army of inspectors would inspect the goods intended for export and a special fee would be levied for the purpose, which would be included in the price of cloth. The regulation of exports will, it is believed, enable Indian goods to compete effectively in foreign markets.

Regarding the disposal of unstamped goods the Provincial Textile Commissioner, Bengal has issued a press note, saying that small lots of cloth and yarn can be sold and that they would be exempt from complying with the conditions relating to bigger lots. The prices of

exempted goods, however, shall not exceed 10 per cent. over the maximum current ex-mill prices; all such exempted goods shall be disposed of before the end of February and weekly statements showing particulars of sale shall be furnished.

Exemptions will be granted in respect of stocks not exceeding five pairs or pieces of any quality or qualities that are usually sold by pair or piece, 80 yds. of any quality or qualities that are sold by the yard and 80 lbs of yarn of any one count or quality.

The Government, it is officially announced, have decided that maximum prices in primary wholesale markets in British India should be fixed for bajra and jowar. These prices will be notified by provincial governments. As regards rice, provisional conclusions have been reached

about appropriate price levels of coarse rice and administrations are to be instructed to reduce current prices to these levels before fixing statutory maximum prices.

The Government of India's declared policy, says a press note, is to eliminate as soon as possible wide regional variations of food grain prices and to impose uniform statutory maximum prices throughout India, which will be fixed for the respective crop season, at levels based on a fair return to the cultivator and related to the prices of other commodities and the needs of the consumer.

At the auctions of tea for consumption in India there was a strong demand. Good and medium qualities advanced by ½ anna to one anna per lb. Commoner varieties, however, were easier. Darjeeling teas were in plentiful supply but were fully taken up.

A CAREER IN ADVERTISING

Post-war India will need experienced Advertising & Merchandising executives

Hitherto only a few young men in India have been attracted by Advertising as a profession in which to build a career. This is not surprising, for whereas the concentrated, highly competitive industrial production of Western countries has made necessary a constantly advancing technique of selling, India has readily absorbed most goods available to her. In the West the genius of the clever advertising expert is richly rewarded but in India it has scarcely been needed, except by experienced foreign exporters and a few far-seeing Indian manufacturers. And so, young men have been more attracted by the law, by medicine and by other established professions than by Advertising.

The changing times

But times are changing. The years just previous to the war saw a remarkable increase in advertising, and markedly greater appreciation by Indian manufacturers of the power of carefully planned, scientific advertising as a sales force. For the technique of advertising had undergone great improvement, largely as a result of the work of the professional Advertising Agencies, who fitted the tested methods of the West to the habits and thinking of the Indian public.

Opportunity lies ahead

With the advent of the war—and the consequent shortage of raw materials, the diversion of industry to war purposes and restrictions on advertising space—the business of advertising in India has received a temporary check. This respite should be used to prepare for the tremendous task which lies ahead. India's strategic position as a supply base for the armies of the East has caused her industry to grow prodigiously; factories have doubled and trebled their output and new workshops have sprung up all over the country. These factories are busy now, but with the return of peace Government orders will cease and further business must come from the public. And

then the trained advertising man will be needed as never before. His will be the task of helping industry to fashion products to the public needs, of defining profitable markets and creating consumers.

Two years' training with the leading Advertising Agency

In the firm belief that trained Advertising men and women have a vital contribution to make to the industrial progress of India after the war, J. Walter Thompson Company (Eastern) Limited propose to apprentice a number of carefully selected young men and women of good family and background and train them over a period of two years into executives. Only those prepared to make Advertising their career will be chosen and to this end fees will not be low. Training will cover all branches of advertising and merchandising and will be conducted by experts with many years experience in America, Europe and India. J. Walter Thompson Company is an international organisation with headquarters in New York and offices throughout the world. It is the largest and the oldest of all the Advertising Agencies and its history is closely identified with the development of modern scientific advertising in all its aspects. In India J. Walter Thompson Company (Eastern) Limited has been responsible for such famous campaigns as those for Horlicks, 501 Soap, Tata Iron & Steel, Kodak, Pond's Creams, Binny Suitings and Shirtings, Eno's Fruit Salt, etc., etc.

Young men and women wishing to apprentice themselves to J. Walter Thompson Company (Eastern) Limited with the object of becoming executives in the Company or in industry should ask their Parents or Guardians to write in the first place to the Company's Head Office at Lakshmi Building, Sir Pherozshah Mehta Road, Bombay, addressing their letters personally to the Managing Director, Mr. Edward J. Fielden.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, 27th January.

Apparently we have not yet come to the end of requisitioning of Jute Mill premises for military purposes. It was announced this week that another two large units had to be handed over, while it is reported that inspections of other premises have been made, also with a view to requisitioning. Efforts will of course be made to minimise interference with production of jute fabrics by doubling up with other units in the same agency and working multiple shifts. But in some cases a certain amount of displacement of labour seems inevitable which it may be somewhat difficult to adjust. Further requisitioning of godown accommodation in the mofussil is still taking place, particularly at rail-heads. Some of this is in pursuit of the Government scheme for establishing reserves of foodstuffs. The immediate effect on the market of the report of the requisitioning of more mills was to steady the fabrics market which had been rather easier, and simultaneously to weaken the market for the raw material.

It is believed that the Jute Mills Association contemplate taking drastic steps to put a stop to the consigning to mills of parcels of jute for which the senders have no contract. Admittedly the practice is the cause of much unnecessary work and worry to the mill authorities, and more often than not, little if any profit to the sender, but still it goes on. The root of the trouble is of course in the erratic supply of waggons at upcountry stations and the frequency with which bookings to certain mills, or certain sections of the jute mill area, are closed or restricted. It happens that a seller may have had to wait a couple of months till his turn came round on the roster for the supply of a waggon at his shipping station. The waggon is at last supplied. The seller has a contract with mill "X", but the booking for mill "X" is closed. If the seller does not load the waggon, he forfeits his turn and goes back to the foot of the roster to wait perhaps another two months, perhaps longer. If he wants to utilise the waggon he must load it for some mill to which the booking is open. If there is such a mill in the same group as his contract mill, he probably chances his arm and books to that, in the hope that he may either persuade the buyer to transfer the contract, or that the buyer at least will take in the jute at the mill to which it is despatched, at valuation. It is obvious that the unfortunate seller often finds himself on the horns of a dilemma, but this is no reason why the mills should be inconvenienced by the circumstances. The people who can and ought to solve the difficulty are the Railway Authorities. It is certainly extremely difficult to imagine adequate reasons for some of the anomalies which prevail on the railway system, more particularly the B. & A. railway. Why should waggons be available at a station where they are not urgently required, or where river transport is also available, when only a few miles away where there are no river transport facilities, not a wag-

gon is to be had for weeks on end? Both the E.I.R. and the B. & A. are State owned, and waggons in any case are pooled. Why therefore should bookings be restricted from B. & A. stations to E.I.R. stations and vice versa. Sometimes the restriction is only sectional and not to the whole of the opposing system, which makes it less understandable. Admittedly the railways are overloaded according to pre-war standards but judging from incidents which constantly come to notice, it is difficult to assume that they are working to maximum efficiency or even to believe that their efficiency has not deteriorated under pressure. Indian Railway officials must go all of a tremble if they ever read of the volume of traffic handled by the Home Railways under much more severe war conditions. It may be well for them to know that the commercial community is by no means satisfied that the Indian railways are doing all that they might.

The Indian Central Jute Committee at its meeting last week decided to undertake considerable expansion of its Jute Agricultural Research work at Dacca, and also to establish experimental outstations at Kishoreganj, Jessore, Burdwan, Rungpur and Chandpur, so that all types of soil and climate, not only in Bengal but representative of the neighbouring provinces too, may come under observation. The cost of the scheme is considerable, Rs. 4.25 lakhs non-recurring and Rs. 1.3 lakhs per annum recurring. Much valuable information towards better crop yields and quality yields may well however accrue from the investigations. What is of more doubtful value is the proposal to establish another Co-operative marketing Society at Akhaura. The recently published reports of such Societies at Belakoba and Sarishabari recorded such feeble results that the Committee are to be commended on their optimism in pursuing the scheme at all. While we are ready to admit that the cultivator might benefit enormously by co-operative marketing if his innate suspicion and conservatism could be overcome, the encouragement to be derived from the operations of the Societies already functioning is very scant.

An important suggestion put forward by the Committee for consideration of the Bengal Government is the accumulation of a jute seed reserve against the time when trade demands may require a much larger crop than at present. For the consideration of the industry generally there is also a proposed new grading scheme to be put forward to replace the current Tops, Middles and Bottoms grading. It is understood that the new scheme contemplates 6 grades, graduated according to percentage of cutting, colour and soundness of fibre. We withhold criticism until more details are known, except to remark that the present system, which after all boils down practically speaking to two grades, Middles and Bottoms, for the greater part of the season, although admittedly a very rough and ready grading, seems to suit the Mills quite satisfactorily and is certainly well within the compass of the comparatively unskilled labour available in the mofussil. The U.S.A. Hessian Stock and Consumption figures are now available for

the full year 1943, and they show a reduction in consumption of 350 lakhs yards over the year. Certainly the figure for the past six months is an improvement on the similar period a year ago at 1750 lakhs yards compared with 1170. But it must be remembered that the second half of 1942 was the period when the policy in the U.S.A. appeared to be a complete squeeze-out of jute goods consumption. That policy had to be hastily revised, with the result that an average monthly consumption of less than 200 lakhs yards in the second half of 1942 has been raised to an average of 323 lakhs per month in 1943, though the last six months the average has dropped to 291 lakhs yards. Previous to 1942 average consumption ruled from 550 to 600 lakhs yards per month. The mystery of the Stock position is not yet solved. Again Afloat stocks are returned as NIL. That means that, according to this record, only 20 lakhs of cloth have been shipped from Calcutta in the past four months. Yet during that same period, while 1080 lakhs of yards have gone into consumption, Spot stocks have also increased from 610 lakhs yards to 760 lakhs. A modern demonstration of the widow's curse if ever there was one.

NORTH WESTERN RAILWAY

Tender No. 197—6/664/19 Code word "CAXOD"

Tenders are invited for supply to the North-Western Railway for total quantity of 3,000 maunds of vegetable ghee product at station given below in quantities enumerated in the tender form:—

Lahore.
Rawalpindi.

Tender forms can be obtained on and from 22-1-44 between 2 to 3 p.m. on working days and between 12.0 to 1.0 p.m. on Saturdays from the office of Controller of Stores, N. W. R., Lahore and District Controller of Stores, N.W.R., Karachi Cantt. at Re. 1 local and Rs. 1-11 each if posted outside Lahore and Karachi Cantt.

Applications for tender form per V.P.P. will not be entertained and forms will only be issued on receipt of cash by Money order.

Sealed tenders must be delivered to Office Superintendent of General Manager, N.W.R. Office, Empress Road Lahore not later than 2 p.m. on Monday the 7th February, 1944 and will be opened in that office at 3 p.m. on the following working day. Tenderers will be allowed to be present at the time of opening tenders if they so desire.

Controller of Stores.

THIS WEEKLY IS PRINTED

BY

DORCHESTER PRINTING WORKS

116, LOWER CIRCULAR ROAD,

CALCUTTA.

JUTE

Calcutta, January 27.

No announcement has yet been made regarding the decisions of the jute conference at New Delhi, recently. The absence of any announcement in this regard has led to considerable speculation. It is now generally felt that the reduction in the acreage might not be so drastic as was at first expected. As mills are awaiting an official announcement on the subject they have not taken any interest in the market in the past week. With larger imports in the mofussil centres and the anxiety of sellers to do business there has, therefore, been a decline in prices.

In the loose jute section business passing has been rather restricted and mills have been buying only in small quantities. Sellers are more anxious to do business. There has naturally been a decline in prices. Indian Jat Middles and Bottoms were done at Rs. 15-8 and Rs. 12-8 respectively while District Jute were 8 annas lower.

In the purca bales section also dull conditions have been noticeable in sympathy with the loose jute section and quotations are Rs. 2 to Rs. 3 per bale lower. Shippers are reported to have purchased Dundee Daisee 2/3 at Rs. 78 per bale while mills bought small quantities of Firsts and Lightnings at Rs. 81 and Rs. 77 per bale. As in the loose jute section, balers, however, are not very keen to do business and are awaiting further developments.

JUTE MANUFACTURES

Calcutta, January 27.

The jute manufactures market has been uninteresting and quotations have been fluctuating around maximum rates. Sellers are rather reserved. Some business has been reported by mills in special qualities at maximum rates. The easier tone of the market has not in any way affected the hessian market as it is pointed out that with the difficulties in regard to production and the large uncompleted deliveries there cannot be any decrease in values. 9 porters were Rs. 21-8 for all positions and 11 porters Rs. 28-8.

In the heavy goods section slightly easier conditions were noticeable in the earlier days of the week with some sellers doing business in B. twills at Rs. 66-10 but in the last two days firmer conditions have been noticeable with B. twills being done at Rs. 67 for January shipment. Cornsacks and Liverpool twills were nominally quoted at Rs. 67-12 and Rs. 75 respectively.

The U. S. stock and consumption figures for the month of December are now available. As in November, there has been no export of jute manufactures on private account. Stocks afloat are shown as nil. Stocks Spot, on the other hand, show an increase from 75 million yards to 76 million yards. Consumption is better at 29 million yards against 27 million yards for the previous month and 10 million yards for the corresponding month in 1942. The figures are given below:

U.S.A. HESSIAN STOCK AND CONSUMPTION

Excluding Pacific Coast Business						
Millions of yards						
Stocks at the end of month			Consumption for month			
Spot	Afloat		1943	1942	1943	1942

GOLD

Calcutta, January 27.

The Bombay gold market was uninteresting and business passing has been on a small scale. The Reserve Bank continued to sell at Rs. 71-2 but speculators are not taking

much interest in the market. As such quotations have been fluctuating around Rs. 71. Gold ready at the close was Rs. 71-1 and delivery contract Rs. 70-13.

In the Calcutta market, gold closed at Rs. 71-4 against Rs. 71-14. Sovereigns were further lower at Rs. 48-12.

SILVER

Calcutta, January 27.

The silver market has been firmer on speculative buying and forced bear covering. It is said that considerable difficulty is experienced in regard to deliveries owing to the absence of transport facilities. Quotations have closed at the highest levels for the week, Silver ready being Rs. 120-12 against Rs. 119-6 and forward Rs. 118-8 against Rs. 116-12. There has been some selling at the higher levels but it has been fully absorbed. It has to be noted that the discount for delivery over ready has narrowed to Rs. 2-4 from Rs. 3 at the end of last week.

In the Calcutta market silver ready closed at Rs. 121-4 against Rs. 120-4 at the end of last week. The Bombay markets were closed on Wednesday being, "Independence Day."

COTTON

Calcutta, January 27.

The Bombay raw cotton market has been rather irregular in the past three days due to the easier tone of the stock market and some selling by prominent operators earlier in the week. Rates steadied up on buying by prominent bulls and the general support offered by both mills and public. The uncertainty regarding the immediate outlook and the heavier movement of the Guzerat cotton will, it is expected, result in a slight decrease in rates. There has been some selling for forward positions. Recently, mills have shown a greater preference for inferior varieties of cotton. Jharkila January closed at Rs. 436 against Rs. 472-8, March at Rs. 469 against Rs. 466-8, May at Rs. 467-8 against Rs. 465-8 and July at Rs. 471-12 against Rs. 470

PIECEGOODS

The piecegoods market has been uninteresting and buying is confined only to immediate requirements. Greater interest has been shown in imported varieties in anticipation of supplies from Lancashire manufacturers. Prices have been maintained with the sealing of unstamped varieties but the general feeling is that there will be a downward movement once the stock position gets easier. There has been better enquiry for handloom products and Bengal mills are reported to have done very large business in coarser varieties.

Stock Markets to-day and to-morrow:

STEEL CORPORATION INTERIM DIVIDEND FOR 1943

The Budget fever seems to have caught on the markets again though the fears regarding the budget proposals have affected to a greater extent the Bombay market. The Calcutta Stock Exchange continued active in the early days of the week. Only the persistent selling by Bombay operators and the weakness of Textile and Steel issues brought about a decline in prices on Wednesday and Thursday. Operators on the Calcutta Stock Exchange are still inclined to take an optimistic view of the immediate future. The profit-taking in mid-week has thus been useful in consolidating the ground gained in recent weeks. In Friday's session firmer conditions are again noticeable. The late recovery in prices has wiped out the losses of the last two days to a great extent.

Opinion regarding the Budget proposals is divided. It is pointed out in some quarters that the authorities might decide to levy additional taxation in furtherance of their anti-inflationary drive. Also, efforts might be made to provide funds for post-war reconstruction purposes. Others, however, point out that any fresh taxation would go against the Government and that as far as possible new Government would be avoided. While the creation of funds for post-war reconstruction purposes might be incidental the bulk of the money needed for post-war reconstruction would come through borrowing. I am inclined to the view that the Central Budget for 1944-45 will not be unduly regressive though one would have to be prepared for some surprises.

The announcement of the interim dividend of six annas per share for the year ended December, 1943 by the Steel Corporation of Bengal Limited has been well received by the market though it was generally expected that a higher dividend would be paid. The interim dividend for 1942 also was six annas per ordinary share. After the announcement of the dividend the quotation for the shares has improved to Rs. 28-12 from Rs. 28-4. The dividend is payable to those shareholders whose names were on the Company's books on February 14, 1944.

The jute industry has left behind its prosperous times and is at present experiencing very difficult conditions. Four balance-sheets of important companies published during the week show that the difficulties in regard to coal and the restricted plan of working have resulted in a sharp decline in earnings and

that dividends to shareholders have had to be reduced. Three companies have reported a loss in revenue account in the last trading period and the payment of dividends has been possible only with the excess provision for taxation in the earlier half-year. Thus the Albion Jute Company Limited is reducing the ordinary dividend for the half-year ended October, 1943 to Rs. 3 per share from Rs. 4 per share for the previous half-year; the Budge-Budge Jute Mills Company Limited to Rs. 10 from Rs. 12-8 per share and the National Company Limited to ten annas per share from fourteen annas per share for the same half-year.

The difficulties of steam-driven mills has thus been clearly brought forth. If sufficient coal supplies are received it would be possible for these mills to make up lost production but it does not appear that the increase in coal supplies will be such as to permit a higher level of production. The loss in production of National owing to the lack of fuel during the half-year was as much as 44 per cent, of Budge-Budge 38 per cent and of Albion 43 per cent.

The net loss of the National Company Limited for the six months ended October, 1943, is Rs. 3,49,825 against a net profit of Rs. 6,86,696 for the previous half-year. Only with the excess provision for taxation of Rs. 4,12,913, the estimated refund of Rs. 30,000 and the transfer from the Dividend Equalisation Reserve of Rs. 1 lakh it has been possible to pay the preference and ordinary dividends. The ordinary dividend, as mentioned above, is ten annas against fourteen annas per share.

The net loss of the Budge-Budge Jute Mills Company Limited for the same half-year is Rs. 1,73,878 against the net profit of Rs. 7,25,369 for the previous half-year. The excess provision for taxation in the previous account is Rs. 2,10,000. A sum of Rs. 1.5 lakhs is transferred from Dividend Equalisation Fund to the Profit and Loss Account. The ordinary dividend is lower at Rs. 10 per share against Rs. 12-8 per share.

The net loss of the Albion Jute Mills Company Limited is Rs. 4,05,584 against a profit of Rs. 75,779 for the previous six months. Estimated tax refund recoverable is Rs. 3.5 lakhs while excess provision for taxation is Rs. 23,840. These amounts with the sum of Rs. 1 lakh transferred from Dividend Equalisation Fund have wiped off the debit at profit and loss account and the dividend of Rs. 3

per share against Rs. 4 per ordinary share is to be paid.

The earnings of Hukumchand Jute Mills Company Limited for the half-year ended September, 1943, also have been similarly affected though it was still possible for the company to report a profit. The net earnings, before providing for taxation and depreciation, is Rs. 9,78,221 against Rs. 16,00,772 for the previous six months. The amount set aside to depreciation is higher at Rs. 2 lakhs (Rs. 1 lakh) while the provision for taxation is lower at Rs. 4.5 lakhs (Rs. 9 lakhs). The arrears of dividends on the preference shares for two more half-years are to be paid. There are thus only two half-years dividend to be paid. The amount carried forward at debit is lower at Rs. 8,37,652 against Rs. 8,85,872 brought in.

Even with the difficult conditions in regard to labour the New Bansdeopur Coal Company Limited has been able to maintain raisings at the level of the previous half-year. The net profit before providing for taxation and depreciation for the half-year ended September, 1943 is Rs. 2,48,473 against Rs. 2,04,682 for the corresponding period in 1942. The amount set aside to depreciation is Rs. 11,123 against Rs. 10,972 while the transfer to Reserve is Rs. 5,000 (same). The provision for taxation is Rs. 35,000 (Rs. 25,000). The dividend has been increased to 12½ per cent from 10 per cent. The amount carried forward is lower at Rs. 2,984 against Rs. 8,768 brought in.

The sensational rise in the quotations for Indian National Airways preferred ordinary and ordinary shares gave rise to the impression that the dividends on both these classes of shares would be increased and that the deferred shareholders would receive their first dividend. Even with an increase in earnings the directors have decided only to maintain the dividends at 6 per cent and 5 per cent respectively. The net profit before providing for taxation and depreciation for the year ended June, 1943 is Rs. 2,65,035 against Rs. 1,38,828 for the previous year. The amount set aside to depreciation is Rs. 59,607 against Rs. 43,354 while the provision for taxation is Rs. 97,000 against Rs. 35,000. The sum of Rs. 50,480 has been written off development account against Rs. 30,943 formerly. After the payment of

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 28.

After earlier firmness slightly easier conditions have been noticeable on the Calcutta Stock Exchange during the past week. The easier tone of the Cotton, Coal and Jute sections in the latter half of the week is due mainly to the irregular tendency of the Bombay market and the new fears that the Budget might spring a surprise on both operators and investors. The volume of business, however, is still on a large scale and there is not very much selling in evidence. Beyond the decline in prices for the leading speculative counters on profit-taking and speculative selling, there is no important change in prices for investment securities. The undertone is steady and it is felt that the upward movement will again be resumed.

The feature of the week is the Tea section. Almost all the shares have been marked higher on investment buying. It is expected that satisfactory dividends would be paid by the well-established companies.

The gilt-edged securities section has been slightly easier with a smaller volume of business passing. 3½ per cent Paper was lower at Rs. 98-12 but at the time of writing the quotation is higher at Rs. 99. Among terminable loans, 3 per cent 1953-55 were Rs. 99-12, 3 per cent 1951-54 Rs. 100-2, 3 per cent 1946 Rs. 102-6, 3½ per cent 1947-50 Rs. 103-4, 4 per cent 1960-70 Rs. 112-4, 4½ per cent 1955-60 Rs. 115-4 and 5 per cent 1945-55 Rs. 105. There has been no change in the conditions in the money market but the average discount rate on Treasury Bills is sharply higher at 10 annas and 4 pies per cent per annum against 8 annas and 8 pies per cent per annum last week.

Among public bodies debentures the only transactions recorded were in 4 per cent Calcutta Port Trust 1931 at Rs. 113 and 5½ per cent 1927 debentures of the same public body at Rs. 117.

Bank shares have been listless and a slight decline in prices has been recorded. Bharat Bank quoted Rs. 123-8 and Hind Bank Rs. 57. Imperial Bank fully paid were Rs. 1,949 ex-dividend and contributories Rs. 490 ex-dividend. Reserve Bank were lower at Rs. 124 as also United Commercial Bank at Rs. 24 premium. Calcutta National Bank were Rs. 13-8.

With the uncertain tone of the gilt-edged market, preference shares have been marked higher. Auckland Jute were Rs. 160, Kelvin Rs. 180-8, Northbrook Rs. 159, Alliance Rs. 181 and New Victoria Rs. 13-4. Associated Hotels were Rs. 110, Bhagwati Pressing Rs. 109, Dehri Oil Refinery Rs. 105, Aluminium Corporation (old pref.) Rs. 156, and (new pref.) Rs. 130.

The Cotton section was inclined to be steadier in the early days of the period under review but as the week progressed a slight decline in prices has been recorded on the fears that the fixation of prices for export cloth and the assertions made by the Government spokesmen that there will be a further decline in prices would affect companies' earnings. Durrani, however, were the exception with a rise to Rs. 325 on expectations of a higher dividend. The quotation is slightly easier at the time of writing at Rs. 320.

Cawnpore Textiles were Rs. 14-1 against the highest levels for the week of Rs. 14-8. Benares Cotton were Rs. 14-0 against Rs. 15-4; Bengal-Nagpur Rs. 38-10 against Rs. 49-4 and Elgin Rs. 82-8 against Rs. 87. Kesoram were steady at Rs. 18-6 as also Mahalaxmi at Rs. 40-10. New Victoria were quiet at Rs. 19-4 while Sree Radhey Shyam were steady at Rs. 20-8.

The Coal section continued very active for the first three days of the week and quite a large amount of business was done. There was greater buying of the lower-priced shares and a good number of transactions were reported in Bhalgora between Rs. 15 and Rs. 17-8. The close is quietly steady at Rs. 17. Bengal fluctuated around Rs. 600 for the most part of the week while Amalgamated after being higher at Rs. 47 are now quoting Rs. 46. Bansra were Rs. 9-5 and Baraboni Rs. 3-3; Bokaro and Ramgur improved to Rs. 35 though the close was lower at Rs. 38-12. Burakur were further higher at Rs. 33-12 against Rs. 31-4 but closed at Rs. 32-8. Dhemo Main were Rs. 22, Churulia Rs. 4-8, Central Kurkend Rs. 23-3 after being higher at Rs. 24-12 while East Indian were Rs. 32. Equitable encountered some selling at the higher levels and declined by 1½ points to Rs. 53-6. Hurraladih have been in good request and were done up to Rs. 27-8 though the close is easier at Rs. 26-8. New Beerbhoom were Rs. 31-8, Standard Rs. 32 and Satpukuria and Asansol Rs. 43-3. West Jamuria were Rs. 45-6 against the highest level for the week of Rs. 47-8 and South Karanpura Rs. 10-12 against Rs. 11-4.

The Jute section was steady in the early part of the period under review in sympathy with the coal section but prices have been marked lower later. The reports about the further requisition of mills have had a depressing effect. Anglo-India were Rs. 414, Champdany Rs. 230 and Cheviot Rs. 26-12. Clive were steady at Rs. 33-4 as also Hukumchand at Rs. 34-8. Howrah were lower at Rs. 68-12 against Rs. 70-4 while Kamarhatty were Rs. 591 and Kinnison Rs. 377. Meena were higher at Rs. 39; Nuddea were lower at Rs. 119 against Rs. 124. Presidency were steady at Rs. 7-8 and Rameshwara at Rs. 13-8.

In the Engineering section the announcement of an interim dividend of 6 annas per share by the Steel Corporation of Bengal for the year ended December 1943 was not upto market expectations. On profit-taking India Irons and Steel Corporation receded to Rs. 38 and Rs. 28-6 after being higher at Rs. 39-12 and Rs. 29-8. At the time of writing quotations are higher at Rs. 38-8 and Rs. 28-10. Arthur Butler were Rs. 21-4. Braithwaite were unchanged at Rs. 11-6 while Britannia Building & Iron were well held at Rs. 19-8. B. I. Electric Construction were Rs. 21; Burn & Co. came in for good buying at Rs. 420 and Jessop & Co., Rs. 23-8. Kumardhubi Engineering were steady at Rs. 9-14. Marshalls were Rs. 4-12; National Iron & Steel improved by 1 point to Rs. 14-2; Saran Engineering changed hands at Rs. 10-2; Steel Products at Rs. 8-2 and India Malleable Castings (defds.) at Rs. 3-6.

Sugar shares have been steady, Belsund being Rs. 12-13. Carew & Co. were Rs. 30-6, Cawnpore Rs. 43-12, Champaran Rs. 41-12 and New Saran Rs. 24-6. Purbapore firm-ed upto Rs. 24-10 and Ramnugger Cane & Sugar to Rs. 15-1. South Behar Sugar were

Rs. 25-10 while U. P. Sugar were lower at Rs. 34-10.

The Tea section has been very interesting and a rise of two to three points is common, the popular shares being done 5 to 6 points higher on balance. Bishnauth improved by nearly 4 points to Rs. 41-8 and Bhatnagar by 30 points to Rs. 844. East India were 2 points higher at Rs. 18-12 and Loobah 1½ points higher at Rs. 16-8. Hasimara were Rs. 76 against Rs. 69-12 at the end of last week while Jullibari were Rs. 22 against Rs. 19-12. Namburnadi were Rs. 13-6 against Rs. 12. New Samanbagh Rs. 35-4 against Rs. 34. Rajebhat Rs. 57-4 against Rs. 53-4. Sapti Rs. 21-10 against Rs. 20 and Tezpur Rs. 20 against Rs. 17-4.

In the Miscellaneous section, Burma Corporation were lower at Rs. 4 and Indian Copper at Rs. 3. Karanpura Development were marked lower at Rs. 25 but Orissa Minerals continued steady at Rs. 35-12. Aluminium Corporation were Rs. 25-5 and B. I. Corporation Rs. 6-14. Bararee Coke were steady at Rs. 34-12 and Calcutta Ice at Rs. 21. Publicity Society were Rs. 14 and Dehri Oil Refinery Rs. 13-4. Among Paper shares, India Paper Pulp were Rs. 232-8. Orient were steady at Rs. 36-2. Sree Gopal were Rs. 25-5 and Titaghar 'A' & 'B' Rs. 30-10. Midnapore Zemindary shed 5 points to Rs. 146-8. Assam Saws were Rs. 6-1, Calcutta Trams Rs. 27-10, Dalmia Cement Rs. 20-11 and Assam Bengal Cement Rs. 16-7.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 27.

Though the local Stock Exchange tended to be slightly easy, the turnover continues to be considerable. The announcement regarding fixation of prices for exports of cotton and yarn was partly responsible for the irregular conditions noticed last week. There was a recovery towards the close and on opening on Monday this week the market gave no signs of weakness. However easy conditions set in towards the close of transactions on the same day and Tuesday and to-day (the market was closed on Wednesday) saw further decline in prices. All sections gave way under selling pressure, particularly Textiles and Steels. Even better advices from Calcutta have failed to induce any parallel improvement here. It would seem that the local market is more easily led away by rumours than its counterpart in Calcutta. The prevalence of various vague rumours here has something to do with the present mood of the market. All this goes to prove that the buoyancy recently exhibited by the market is induced and not innate.

Mill shares declined under general liquidation and profit-taking. Bombay Dyeing were nearly 22 points lower at Rs. 2,048-12. While Kohinoor have lost 18 points to quote at Rs. 690. Svadeshi were Rs. 609. Gokak were better at Rs. 365. Central India were Rs. 462 and Colaba Land Rs. 250-8.

In sympathy with Textiles, Steel shares also have dropped. The decline in Tata Deferreds is considerable with a loss of more than 45 points at Rs. 2,045. Tata ordinaries were easier at Rs. 403 as against Rs. 410 last Thursday. Indian Iron after being higher at Rs. 39-2, however closed slightly lower at Rs. 38-5.

MININGS:

Bisra Stone L-me:—(20th) 135; (22nd) 136; (24th) 136, 138, 140 c.t., 138-12, 139; (25th) 137, 140, 141, 142, 143, 143-8; (26th) 144, 145, 146.
 Burma Corp.:—(20th) 4-1, 4-2, 4-3, 4; (21st) 4-1, 4-2; (22nd) 4 s.l., 4-1, 4-2; (24th) 4-1, 4-2; (25th) 4-1, 4-2; (26th) 4-1, 4-2.
 Consolidated Tin:—(20th) 2-12; (22nd) 2-10; (26th) 2-11, 2-12.
 Indian Copper:—(20th) 3-1; (21st) 3-2, 3-1; (22nd) 3, 3-1; (24th) 3-1, 3-2; (25th) 3, 3-1, 3-2.
 Karanpura Development:—(20th) 27-8, 27-10 (29 s.l.); (21st) 27-4, 27-8; (25th) 28.
 Orissa Minerals:—(20th) 29-12, 30; (21st) 31-2, 31-4, 31-5, 3-9, 31-10, 31-8; (22nd) 31-3, 31-4, 31-6, 31-8, 31-14, 31-15, 32, 32-8, 32-8 c.t.; (24th) 33, 33-8, 34-2, 34-8; (25th) 36, 36-3, 36-4, 36-7, 36-8, 36-9, 36-12, 36-13, 37, 37-4, 37-6; (26th) 34-8 s.l., 36, 36-2, 36-8, 36-12 c.t.
 Rhodesia Copper:—(20th) 2-7, 2-8; (25th) 2-7, 2-8, 2-9; (26th) 2-9.
 Sutna Stone Lime:—(21st) 286-8.
 Tavoy Tin:—(20th) 1-11; (21st) 1-10; (22nd) 1-11; (25th) 1-10.

CEMENTS:

Assam Bengal:—(20th) 17-2, 17-3, 17-4, 17-5, 17-6; (21st) 17-4, 17-2; (24th) 17 c.t., (25th) 16-15, 16-14; (26th) 16-12, 16-14, 17.
 Assam Bengal (Defd.):—(20th) 4-3, 4-2; (22nd) 4-3; (24th) 4-3, 3-15 c.t.
 Bengal Potteries:—(20th) 27-13; (21st) 27-12 c.t., 27-15; (26th) 27-12, 27-13.
 Dalmia:—(20th) 20-12, 20-13 (20-2, 20-6 s.o.s.) 20-6 s.l., 20-8, 20-40; (21st) 20 s.l.; (24th) 20-10, 20-7, 20-11.
 Dalmia (Defd.):—(20th) 4-8, 4-9 (4 s.o.s.).
 Dalmia (Pref.):—(20th) 144 s.o.s.; (21st) 147, 145; (24th) 145; (26th) 144.
 Reliance Firebricks:—(24th) 22, 22-4, 22-6; (25th) 22, 22-6, 22-4, 22-8; (26th) 22-3.

ELECTRIC:

Dacca:—(20th) 14-12, 14-11.
 Mozaffarpore:—(20th) 13-8.
 Muttra:—(20th) 9-12, 9-11.
 Patna:—(25th) 16-14, 17; (26th) 17.

CHEMICALS:

Alkali & Chemical:—(20th) 31-4, 31-1; (25th) 31-1, 31-3; (26th) 31-10, 31-4.
 Bengal Chemical (Pref.):—(26th) 21.
 Bengal Aerating Gas:—(22nd) 135, 137, 140; (24th) 143; (25th) 140, 141, 146.
 Frank Ross:—(24th) 7-11.

ENGINEERINGS:

Arthur Butler:—(20th) 19-8, 19-9, 19-10; (22nd) 19-10; (20th) 19-10, 19-8; (25th) 19-12, 19-14, 20; (26th) 20, 20-2, 20-4, 20-6, 21, 21-2, 20-5, 21-4, 20-8, 20-12.

Bhartia Elec. Steel:—(20th) 19-7, 19-12; (21st) 19-12; (24th) 19-9, 19-10, 19-11, 19-13, 19-12; (25th) 19-6, 19-7, 19-5, 19-10, 19-8, 19-12, 19-14; (26th) 19-8, 19-2, 19.

Braithwaite:—(20th) 11-8, 11-9, 11-11; (21st) 11-10, 11-9; (22nd) 11-7, 11-10; (24th) 11-10, 11-7; (25th) 11-12, 11-5, 11-6; (26th) 11-8, 11-2.

Britannia Building & Iron:—(20th) 18-10, 18-8, 18-7; (22nd) 19-6 c.t.; (24th) 18-8 c.t., 18-12, 19-4, 19-6, 19-8; (25th) 19-8, 19-12; (26th) 19-7, 19-10.

Britannia:—(20th) 17-14, 17-12; (21st) 18, 18-4, 18-1; (22nd) 17-15, 18, 18-2; (24th) 18, 18-2, 18-4, 18-8; (25th) 18-3, 18-3; (26th) 18-6, 18-7.

British India Elec. Construction:—(20th) 22-10, 22-8; (21st) 22-8.

Burn & Co.:—(20th) 400, 402; (21st) 402, 406, 404, 407, 408; (22nd) 410, 412, 415, 414; (24th) 414, 415; (25th) 415, 416, 420, 421, 422, 432, 424.

Hooghly Docking:—(20th) 111 s.l., 112; (22nd) 126 s.l., 125; (24th) 127-8 s.l., (25th) 129 s.l., 128; (26th) 125, 126-8, 127.

Indian Galvanizing:—(20th) 46-8; (24th) 46-8.

India Machinery:—(20th) 10-12, 10-13; (25th) 10-12.

Indian Steel & Wire Products:—(22nd) 55-8; (25th) 55-4; (26th) 55-8.

Indian Iron:—(20th) 37-10, 37-9, 37-11, 37-8; (21st) 38-12, 38-9, 38-10, 38-8 (38-8 s.l.) 38-7, 38-11, 38-13; (22nd) 38-6, 38-7, 38-8, 38-9; (24th) 38-8, 38-7, 38-9 (38-6, 38-14 s.l.) 38-10, 38-12, 38-6; (25th) 39-5, 39-6, 39-8, 39-12, 39-9, 39-7 (38-12 s.l.) 39-3, 39-4, 39, 39-13, 38-14; (26th) 38-13 (38-12 s.l.) 38-14, 38-3, 38-12 (38-8 s.l.) 38-1, 38-10, 38-4.

Indian Malleable Casting:—(20th) 9-2; (24th) 8-12.

Indian Malleable Casting (Defd.):—(20th) 3-9; (24th) 3-8, 3-9; (25th) 3-7, 3-10, 3-5, 3-6; (26th) 3-10, 3-6, 3-7.

Jessop & Co.:—(20th) 24-4, 24-6, 24-7, 24-8, 24-9, 24-10; (21st) 24-4, 24-5, 24-7, 24-8 (24-6 s.l.) 24-10; (22nd) 24-4, 24-6, 24-4 c.t.; (24th) 24-4 c.t., 24-1, 24-2, 24-4; (25th) 24-2, 23-12, 23-14; (26th) 23-14, 23-8.

Kumardhubi:—(20th) 9-14; (21st) 10-1, 9-15; (22nd) 9-14; (24th) 9-14, 9-15; (25th) 10, 10-2, 10-4, 9-12, 9-14; (26th) 9-15.

Marshalls:—(20th) 4-13, 4-14; (21st) 4-11, 4-13, 4-14; (22nd) 4-13; (24th) 4-13, 4-14; (25th) 5, 4-14, 4-15; (26th) 5, 5-1, 4-15.

National Iron & Steel:—(20th) 12-14, 12-13, 12-11, 12-12, 12-9, 12-10; (21st) 12-12, 13, 12-15, 12-13, 12-14; (22nd) 13-5, 13-6, 13-8, 13-9, 13-7; (24th) 13-5, 13-7, 13-8, 13-4, 13-6; (25th) 13-14, 13-15, 14-1, 14-5, 14-6, 14-4, 14-8, 14-2; (26th) 14 c.t., 14-1, 13-10, 13-12, 13-14, 13-15, 14.

National Screw & Wire:—(20th) 13-5; (21st) 13-6 (13-4 s.l.) 13-4; (22nd) 13-6, 13-7; (24th) 13-6; (25th) 13-8; (26th) 13-8.

Saran:—(21st) 10 c.t., 10-2; (22nd) 10, 10-2, 10-3; (24th) 10-3, 10-4.

Steel Corporation:—(20th) 28-14, 29, 29-4, 29-2, 29-3, 28-15, 29-1; (21st) 29-5 s.l., 29-12, 29-8, 29-10, 29-9, 29-13, 29-5, 29-6, 29-7; (22nd) 29-3, 29-4 c.t., 29-2, 29-5; (24th) 29-3, 29-4, 29-5 (29-9, 29-10 s.s.) 29-2; (25th) 29-8, 29-10, 29-7, 29-5, 29-3, 29-4; (26th) 28-14, 29-1, 29-2, 29 (29-7 s.o.s.) 28-15 (29-8 s.l.) 28-9.

Textile Machinery:—(22nd) 23-12; (24th) 23-12 c.t., 24 c.t.

Flour Mills:

Bengal:—(20th) 27-6, 27-3, 27-4, 27-8, 27-5; (22nd) 27-4, 27-8, 27-10; (24th) 27-10, 27-12.

Delhi:—(20th) 21-6; (21st) 21-12; (24th) 21-8.

United Flour:—(21st) 36; (24th) 36-8; (26th) 37-8, 37-12.

Oil:

British-Burma Petroleum:—(20th) 3-6; (21st) 3-9; (24th) 3-7; (26th) 3-7.

Dahri:—(20th) 13-8, 13-14; (21st) 13-8, 13-10, 13-4; (24th) 13-6, 13-8; (25th) 13-2.

Dehri (Pref.):—(26th) 105.
 Northern India Oil:—(24th) 23-15.
 I. B. P.:—(26th) 69, 68.
 Tide Water:—(20th) 25-6; (26th) 25-4, 25-4, 25-6, 25-8.

INSURANCE:

New Asiatic:—(20th) 12-12, 12-13, 12-14, 12-10; (21st) 12-13, 12-12, 12-14, 12-15, 13; (22nd) 13; (24th) 13-1, 12-14, 13-2, 13; (25th) 13-2, 13-3, 13-1; (26th) 13, 13-1, 13-4, 13-5.

Ruby General:—(20th) 23-4, 23-7; (21st) 24, 23-10, 23-12; (25th) 23-6, 23-7.

Triton:—(26th) 285.

Paper Mills:

Bengal:—(26th) 225.

India Paper Pulp:—(20th) 228-8, 229 s.l.s., 228-8, 227-8, 228-8, 231; (1st) 237 (237 s.l.) 238, 235-8, 235; (22nd) 238, 239; (24th) 238, 239, 240; (25th) 238, 239.

Mysore:—(20th) 32-4 c.div.; (22nd) 31-8; (24th) 31-8, 31-10, 31-12, 31-13; (25th) 31-10, 31-12, 32-1, 32.

Orient:—(22nd) 35-15; (24th) 36-8, 36-5; (26th) 36-11, 36.

Orient (Pref.):—(22nd) 117, 117-8.

Star:—(20th) 25-2, 25-8; (21st) 25-4 s.l., 25-6, 25-7, 25-8, 25-10, 26; (22nd) 25-12, 25-13, 26, 26-2, 25-15; (24th) 26-4, 26-8, 26-8, 26-9; (25th) 26-2, 26-5, 26-6.

Shree Gopal:—(20th) 24-4 s.o.s., 25, 25-4, 25-2, 26, 25-6, 25-8, 25-12, 25-14; (21st) 25-8, 25-10, 25-11, 25-12, 26; (22nd) 25-12, 25-14; (24th) 26, 26-2, 26-4, 26-5, 26-7; (25th) 26-4, 26-6, 26-8; (26th) 26-4, 26-8.

Titagur:—(20th) 30, 30-1, 30-2, 30-3, 30-4, 29-15, 29-14; (21st) 30, 30-2, 30-3, 30-4, 30-5, 30-6, 30-8; (22nd) 30-10, 30-5, 30-14, 30-6 (30-4, 30-8 s.l.s.) 30-9, 30-12, 30-11; (24th) 30-11, 30-12, 30-14, 30-15, 31, 31-1, 31-3, 31-4, 31-2; (25th) 30-12 s.l., 30-12, 30-14, 31, 31-2, 31-5, 31-4, 31-4 c.t. (31-8 s.l.); (26th) 30-8 s.l., 30-12, 30-14, 30-15, 31, 30-10.

Titagur (Prefd. ord.):—(25th) 6-4, 6-2.

Real Properties:

Humayan Properties (Pref.):—(24th) 12-1; (25th) 12, 12-1; (26th) 12-1.

Midnapore Zemindary:—(20th) 148, 148-8, 149, 149-8, 150, 150 c.t., (151 s.l.); (21st) 150-8, 152-8, 150, 151, 152, 152-4, 151-8; (22nd) 151, 152; (24th) 150, 151, 151-8, 152, 152-8; (25th) 151-8, 152, 153; (26th) 151-8 s.l., 150, 149-8, 149-4, 151.

Commercial Properties:—(22nd) As. 15, 1; (26th) 1-4.

(Meeting held on 21st December, 1943)

*After transferring Rs. 22,822 from Dividend Reserve Account.

†After transferring Rs. 10,000 from Preferred/Ord. Dividend Account.

Audited accounts of the Company for the year ended 30th June, 1943:—

After providing for obsolescence the Accounts show a profit for the year of Rs. 2,05,427-8-11 which, together with the "carry forward" from last year, gives a balance in the Appropriation Account of Rs. 2,08,012-2-4. The Board recommend that this amount should be disposed of as follows:—

	Rs.	A. P.
Allocation of Development Account	50,479	10 4
Allocation to Income Tax Reserve	97,000	0 0
To Payment of a Dividend of 6% on the Preferred Ordinary Shares	30,000	0 0
To Payment of a Dividend of 5% on the Ordinary Shares	30,532	8 0
TOTAL	2,08,012	2 4

The Board regret that they are unable to recommend any further distribution of profits as they consider that the Development Account should be liquidated as rapidly as possible, and that the Company's cash resources should be maintained in order to provide funds for the acquisition of additional aircraft as soon as these become available.

Operations.—During the year under review the Company continued to expand its operations under its contractual arrangements with the Government of India. Regular services for varying periods and at varying frequencies extended to Calcutta, Tezpur, Dinjan and Balijan in the East, Karachi in the West, Colombo in the South, and Quetta in the North-West.

In November, 1942, the Company commenced its first operations with large aircraft of the Douglas type by the introduction of a twice-weekly return service between Delhi and Calcutta with D. C. 2's. This was followed in January, 1943, by the inauguration of a twice-weekly D. C. 2 return service between Delhi and Karachi via Jodhpur.

The Company has recently received on loan from the Royal Air Force one Douglas D. C. 3 aircraft which will shortly be available for regular service operations.

In addition to its transport activities the Company continues to carry out a large amount of rebuilding and repair work on behalf of the Royal Air Force. In this direction also there has been marked expansion during the past year.

Empire Air Services.—The Company continues to act as Principal Agents in India for the British Overseas Airways Corporation and is in charge of the traffic organisation at all the Corporation's trans-Indian stations.

Future Outlook.—The Board is keeping in close touch with discussions on Post-War Civil Aviation, and are now actively considering the basis of the Company's future operations.

Managing Agents.—Messrs. Govan Bros., Ltd.

Authorised Capital—Rs. 30,00,000. Issued—Rs. 16,25,000. Subscribed Rs. 11,65,711 in 50,000 6% Pref. Ord. of Rs. 10, 61,065 Ord. of Rs. 10 and 55,061 Deferred of Re. 1 each, all fully paid up. Synopsis of the Balance Sheet as at 30th June, 1943.

Liabilities.	Rs.	Assets.	Rs.
Capital paid up	11,65,711	Block expenditure	8,04,641

Carry forward	..	Outstandings	1,75,000
		Investments	1,14,772
		Cash Balances	1,75,000
Total	20,71,399	Total	20,71,399
		Total Liquid Assets	12,66,758

NEW BANSDEOPUR COAL CO., LIMITED

	Half-year ended.	30.9.1943	30.9.1942	31.3.1942	30.9.1941
	Rs.	Rs.	Rs.	Rs.	Rs.
Raisings in Tons	45,630	48,520	43,399	45,986	45,986
Despatches in Tons	46,645	47,122	34,845	49,352	49,352
Sales	2,48,473	2,04,682	1,67,608	1,74,268	1,74,268
Stock	5,752	17,790	30,215	21,566	21,566
Net Profit	70,343	61,312	28,839	26,009	26,009
Depreciation	11,128	10,972	10,524	9,965	9,965
Reserve Fund	5,000	5,000	..	..	..
Taxation	35,000	25,000	..	..	..
Dividend Amount	25,000	20,000	20,000	20,000	20,000
Carry Forward	2,984	2,060	1,720	3,405	3,405
Dividend %	12½	10	10	10	10

(Meeting held on 28th January, 1944)

Audited accounts for the half-year ending 30th September, 1943:—

	Rs.	A. P.
The net profit for the half-year after deducting all working expenses and Depreciation on all assets and after setting aside Rs. 35,000 towards reserve for taxes amounts to	24,216	14 4
To which is to be added the Balance brought forward from the previous half-year	8,767	9 6
Making the total available profits during the half-year	32,984	7 10
This amount, the Directors recommend to distribute as under:—		
In payment of a Dividend on the 20,000 fully paid up Ord. Shares of Rs. 10 each at Rs. 1-4 per Share or 25% per annum (free of income-tax) absorbing	25,000	0 0
Amount to be transferred to General Reserve	5,000	0 0
	30,000	0 0
Balance to carry forward	2,984	7 10
Total	32,984	7 10

The total Coal sales during the half-year amounted to Rs. 2,48,473-3-3 as compared to Rs. 1,60,932-9-9 in the previous period.

In spite of the unprecedented labour shortage consequent upon the diversion of the labour force to War and other works, and due to a bumper crop, the output of coal from the mines during the period under review was maintained, but the prospects of the same during the next period are not very encouraging and raisings and despatches are likely to be affected adversely.

Managing Agents.—Messrs. Amritlal Ojha & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 2,00,000 in 20,000 shares of Rs. 10 each, fully paid up.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, February 1, 1944. Total amount offered was Rs. 11,71,00,000. Tenders at Rs. 99-13-3 per cent and above were accepted in full and those at Rs. 99-13-0 per cent were allotted approximately 56 per cent. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being As. 11-4 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, February 8, in Bombay upto 11 a.m. and upto the close of business on Monday, February 7, at other centres. Successful tenderers should make payment on Friday, February 11. Other conditions are as usual.

During the week ended January 28, Government of India Treasury Bills for Rs. 1,60,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

United Provinces

Tenders for Rs. 1,00,00,000 of three months' U. P. Government Treasury Bills were opened on Thursday, February 3, 1944. Total amount offered was Rs. 1,75,00,000. Tenders at Rs. 99-12-9 per cent were accepted approximately 67 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1,00,00,000, the average rate of accepted tenders being Re. 0-13-0 per cent per annum.

Bengal

Tenders for Rs. 3,00,00,000 of three months' Bengal Government Treasury Bills were opened on Wednesday, February 2, 1944. Total amount offered was Rs. 4 crores and 49 lakhs. Tenders at Rs. 99-13-0 per cent and above were accepted in full and those at Rs. 99-12-9 per cent were allotted approximately 99 per cent. Lower tenders were rejected. Total amount accepted was Rs. 3 crores, the average rate of accepted tenders being Re. 0-13-0 per cent per annum.

Finance Abroad

Thursday evening.

Apart from discreet mention of a war bond drive in the U.S.A. and the tax bill now past the incubation stage there has been little to show that the anti-inflation struggle has produced results. Last week the stock market in New York was heavy though Corporation earnings were viewed as wholly encouraging to investors. There has been no improvement in tone this week though conclusions as to the Republican revival, the war in the Far East and the Soviet Union's sending of a delegate to attend monetary talks may suggest that all is well in Washington. The Soviet budget figures have been mentioned in a curt cable but what the Japanese Diet has done about Tojo's proposals for more taxes for the war is not known. The Supreme Soviet dealt with the Budget before the constitutional amendments giving the major republics power to make treaties and create army groups of their own. It is, however, surprising to note the Commissar's claim that budgets for the years 1940 to 1942 were balanced. It was claimed that voluntary contributions to the Defence Fund made good the loss of revenue. It looks as though the Party State is able to look beyond borrowing, and the enormous successes claimed as to the war loans in propagandist sheets describing the ardour of Soviet factory operatives have been only one means of paying for Russia's war. The Commissar mentioned Allied aid in the form of produce, arms and equipment for the Red Army. Admiral Standley's complaint that U.S. aid was overlooked has been met rather late and only after the release of figures as to U.S. lease-lend supplies to Russia.

The Soviet Government's main claim is that the planning made the losses in the war important. That may be a point in favour of planning, but the Soviet Government's claim that Russia is industrially and financially sounder after 2½ years of war will excite some doubt or criticism. A sympathetic observer like Elizabeth Haldane noted in 1942 that things were topsy-turvy and financially speaking Russia was full of loose ends untied by the war. In any case, the claim may be held to support the Russian view of the gold standard's importance. Not many can remember that legislatures, not the delegates flitting across the stage, count in this matter; and the White Plan may have to run the gauntlet of a House of Representatives in which the Republicans are in a majority. It may be said that the frenzied discussion as to quotas and clearing has made most people sceptical of the value of a written agreement. Limited regional pacts negotiated for special terms may be better, and all that may be said today on the basis of experience of the 1936 agreement may yield no conclusion as to the future. Some might imagine that trade rivalry would overshadow all the harmony produced by the pacts and the drummers' drive may raise delicate questions as to what the U.S.A. is going to do about its tariffs. Promise of relief for one country or another may create initial goodwill but the U.S.A. has got to take back goods for lease-lend, and reciprocity would not end there. What was said about the trade drive in India in a monthly may or may not be correct but the anxiety to give others besides the

State-aided commercial corporation a chance to win new markets will lead to talks about the latest departure in cash and carry.

The London stock exchange has been subdued but good features among industrials are certainly to be noted. Motor and radio shares apparently have regained popularity, and the post-war prospects for both are better than presumed. Last week's features was a revival in South American issues and Argentina's proceedings against enemy agents will help to maintain market interest. Tobacco shares have strengthened of late as though the British industry can count on larger imports of tobacco from abroad in the future. There is still no parity between the price for Barnagore Jute in Calcutta and the rate quoted in London. In view of the lack of support from Indian speculators, the fall in Burma Corporation is understandable, but buying of Indian Iron in London must clearly emanate from this end.

Diplomatic exchanges with Spain may account for the fall in Rio Tinto. It is known that all copper mining shares have lost ground owing to higher costs and taxation. The fall in Rio Tinto may, however, be temporary, as there is mention of Spain turning away definitely from Germany. After the fall of Italy, Spanish policy has moved in reverse gear, and the Hoare-Franco talks like the hurried journey of the Duke of Alba and Berwick may be interpreted as a pointed to a revival in Spanish Fours. Spain's foreign trade in oil and minerals has invited American notice, and the rationing of oil imports is inevitable. The main factor may be change in Portugal's sentiment as proved by the agreement concerning the Azores and the condemnation of the Japanese occupation of Timor without permission. Any big change in Spanish policy may not result so much from the Latin American view as to the

war as the belief that Germany cannot cross the Pyrenees. The Spanish peseta should improve in the exchanges rapidly for Spain's foreign trade will flow in new channels. German technicians when turned out may be displaced by other foreigners and the Spanish Falange, already curbed, may die of inanition. In any case, Spain's trade with the world must improve and the main chances are in favour of Indian jute manufactures, provided some kind of financial agreement Britain is made.

Spain's debt to Italy ceased to be an issue and a departure from neutrality would deprive Germany of mercury, iron and copper. The blockade would be far more effective and the price payable may be small. Republican emigres would not be countenanced and appeasement in the last instalment may lead to a formal disclaimer by the Allies as to a Bourbon restoration. The diplomatic victory would underline the breach with Russia, but that may be ignored easily.

The news relating to further repayment of sterling stock by Australia has not come as yet but the Commonwealth's indebtedness abroad has been reduced by payments for wool—wool prices this season are better. At home borrowing keeps step with war expenditure and Victory loans have replaced Liberty loans. Industrial profits in Australia should recover after the fall in 1942 and that may help the Commonwealth's borrowing now and after the war.

Inflation statistics appearing in the international bulletin of statistics prove that countries not at war have experienced the same effects as others. From Ankara came a recent news item as to the rise in the cost of living thereby 500 percent. Iran and Iraq have experienced the same effects from a scarcity of imports. But inflation in Iran has not affected the currency reserves which are described as adequate without being supplemented by the Crown Jewels because gold imports are large of late. Iran is more deeply committed to the Allied cause after the Three-Power Guarantee. There is again mention of big plans for oil development in the Middle East and the U.S. Government's interest therein. That has not helped to raise prices of oil shares of late but the main result will be that losses in the Far East would be soon made good by the Middle East.

Since Indian Chambers of Commerce are very keen on civil aviation the news that five British shipping lines are floating a company to run air services to South America from Britain will be interesting. Royal Mail, Blue Star, Pacific Steam, Booth Steamship and Lamport and Holt are combined to start an air line which will begin work as soon as machines are got. This is not surprising in view of the pamphlet on Air and Sea Transport issued by the Council of British Shipping. It is known also that air lines on the North Atlantic and West African routes have been planned by British liner companies whose main advantage may be described as world-wide organisation for dealing with passengers and freights.

The Cruzeiro of Brazil displaced the milre after Brazil's entry into the war. Another republic has introduced a new currency from November. Paraguay has dropped the peso in favour of the guarani (denoted by a G with an onlique stroke through it as in the sign for the dollar). The Guarani divided into 100 centimes will be a bigger unit than the

By Special Cable

LANCASHIRE'S RETREAT FROM INDIVIDUALISM

London, January 31.

The gap between the Bombay price of £14 per fine ounce and the London price of £8 per ounce often attracts comment but few pundits venture to forecast how the gap will be bridged after the war.

The "Economist" remarks cautiously that the present wide disparity might be narrowed after the war by some depreciation of the rupee from its value of one shilling sixpence since the scale of inflation of prices in India is much greater than in the United Kingdom. However offsetting this is the fact that the war has revolutionized the debtor-creditor relationship between India and Britain and the "Economist" concludes: "It would be unwise to count upon such inflationary development to remedy the whole disparity between gold prices in India and elsewhere".

The Lancashire cotton industry is the first large industry to tackle the problem of its post-war future. A special committee headed by Sir Raymond Streat has presented the Board of Trade with a 24,000-word report including a statistical appendix which contains a mass of official and semi-official figures not heretofore available to the public. The key-note is that while Lancashire will be abundantly busy immediately after the war making up the world-wide shortage of cotton textiles, it faces immediately thereafter a position of great difficulty since the manufacture of textiles is being vigorously pushed on in many countries, especially, raw material-producing countries which heretofore were content to accept textiles from Lancashire.

The Indian market is cited as an example. The report points out that India exported in 1937-38, 377 million square yards but by 1942 exports totalled 940 million yards. During this period the United Kingdom's exports shrank from 1,921 million square yards to 485 million yards. Even more striking expansion is visible in respect of Brazil whose exports have risen from 7 to 250 million square yards.

Broadly speaking, the committee wants legal powers to control the size of the industry, powers to bar newcomers rushing in when the industry is prosperous, and when the industry is suffering hard

times, it wants powers to close down enough mills to leave the surviving mills fully employed. In this connection, it also wants powers to enforce minimum prices, thus preventing suicidal price-wars. On the whole, press comment is

not enthusiastic, though newspapers acknowledge that the report obviously shows much careful thought and a remarkable degree of agreement in an industry always heretofore notable for its excessive individualism.

THE FRAGRANT WEED

TOBACCO-SMOKING is said to have been introduced into Britain by Sir Walter Raleigh. How many of the millions of smokers to-day realise how much the satisfaction of their desire for a "smoke" depends upon the chemist? Tobacco is a crop which no less than wheat or coffee needs appropriate fertilisers. The tobacco plants are liable to pests and diseases, many of which must be fought by chemical weapons. The curing and preparation of the tobacco present chemical problems of unexpected complexity. The leaf must be kept in condition from the time it is shipped to its final cutting and blending. The cigarette paper must pass stringent chemical tests. Tobacco by itself, whether in pipe, cigar or cigarette, is of little use without the means to light it—as we are coming to realise wherever matches get more difficult to obtain. A box of matches is a triumph of chemical investigation. The striking part of the ordinary match contains a compound of phosphorus and of potassium chlorate. Gum, sulphur, colouring-matter and impregnating substances for the stalk are among other chemicals needed for the manufacture of the humble match and provided by the British chemical industry. It is further to the credit of the industry that as matches get scarcer, cigarette lighters increase in quantity and efficiency. These are a further tribute to chemical research and production from the mixture of cerium and other rare metals in the so-called flint (natural flint does not give nearly enough spark for modern needs) to the material of the ribbed wheel and the petrol refined from natural mineral oils or even, it may be, derived from British coal by the hydrogenation process.

The 15-Year Plan—an Analysis and Appreciation*

In our last week's study, we examined the 15-Year Plan in relation to domestic opportunities and international needs and explained the central objective of the joint authors. The objective is this: The per capita income in India is to be raised to Rs. 135 per year by, say, 1960, as compared with Rs. 65 in 1931-32. To achieve this two-fold increase, the national dividend has, allowing for increase of population, to increase three-fold. This increase in national dividend is to be achieved along with changes in the respective contributions of agriculture, industry and services to the national dividend. As at present situated, India's economy is marked by overwhelming predominance of agriculture. A predominantly agricultural economy has, from repeated experience, proved a precariously poised economy. While India reaps but little rewards in periods of world prosperity, her distress is disproportionately high in periods of world depression. This fact is overlooked by our British friends who like to make out that India will, at her peril, effect any change in the agricultural character of her economy. This partiality for agriculture is put forward with profession of sympathy and concern for the poor agriculturists of this country. The real explanation, however, cannot be unconnected with apprehension that around development of Indian industries will mean serious rivalry to British industries. We cannot understand why Britons should fight shy of stating simply and frankly that they would like to continue to have a market in India for their goods. We understand this position. And our contention is that India as a market in the future for British (and, generally, for foreign) goods can be of any value only if her prosperity rests on more secure foundation and less liable to fluctuations and only if the standard of living in this country, which means the purchasing power of the population, is much higher than now. Mere extension of agriculture will not raise the standard of living or stabilise natural prosperity. India has to achieve a balanced economy so as to be able to participate competently and usefully in plans of world economy and world trade.

The aim of the 15-Year Plan is to bring out the desired three-fold increase in national dividend by reducing the overwhelming predominance of agriculture while retaining for agriculture the major importance and by establishing a more balanced economy. According to the national income figures for 1931-32, the total national dividend was made up in the following proportions:

Industry	...	17 per cent.
Agriculture	...	53 "
Services	...	22 "
Misc.	...	8 "
		100 "

The 15-Year Plan would like to bring about the following percentage changes:

Industry	...	35 per cent.
Agriculture	...	40 "
Services	...	20 "
Misc.	...	5 "
		100 "

On the basis of these percentages, the three-fold increase in the national income which is aimed at would involve the following increments in the net income from industry, agriculture and services:

	Net income in 1931-32 (Rs. cro es)	Net income expected after 15 years (Rs. cro es)	Percentage increase
Industry	374	2,240	500
Agriculture	1,166	2,670	130
Services	484	1,450	200

The authors take care to point out that, although the ultimate contribution of agriculture to our national dividend is envisaged as 40 per cent as compared with 53 per cent in 1931-32, it will not change the essentially agricultural character of our economy.

"From the point of view of employment, agriculture will continue to employ the greater part of our population. Even the U.S.S.R., in spite of the tremendous development of industries which she has achieved since the inauguration of the first Five Year Plan in 1928, has not been able to reduce to any marked degree the percentage of population employed in her agriculture."

The authors divide the industrial plan under two heads, (1) Basic Industries, and (2) Consumption goods Industries. Basic industries to which priority is to be given over consumption goods industries are detailed under the following groups:

- (1) Power—electricity.
- (2) Mining and metallurgy—iron and steel, aluminium, manganese etc.
- (3) Engineering—machinery of all kinds, machine tools etc.
- (4) Chemicals—heavy chemicals, fertilizers, dyes, plastics, pharmaceuticals etc.
- (5) Armaments.
- (6) Transport—Railway engines and wagons, ship building, automobile, aircraft etc.
- (7) Cement.

There will be ready agreement with the authors in their point of view that the basic industries should engage the first and foremost attention in an All-India economic plan. They set out the reasons in the following paragraph.

"These industries are the basis on which the economic superstructure envisaged in the plan will have to be erected. It is obvious that in modern times no industry can be established without power, machinery, chemicals etc. Similarly, without fertilizers it is difficult to imagine any progress in agriculture. In the absence of adequate shipping and other forms of transport, economic life especially in a country of the dimensions of India will remain stagnant. But for the lack of most of these industries, India would not have been left so far behind other countries of the British Empire such as Canada and Australia in the matter of industrial development in response to war conditions. We consider it essential for the success of our economic plan that the basic industries, on which ultimately the whole economic development of the country depends, should be developed as rapidly as possible."

According to the 15-Year Plan, the consumption goods industries that need to be developed further are as follows:

- (1) Textiles—cotton, silk and wool.
- (2) Glass industry.
- (3) Leather goods industry.
- (4) Paper industry.
- (5) Tobacco industry.
- (6) Oil industry etc.

*The first article in the series appeared on January 29, 1944.

DIVIDEND 6% FOR 1943

CENTRAL LAND &

BUILDING SOCIETY, LIMITED

2/2, SOUTHERN AVENUE, CALCUTTA

The authors place strong emphasis on the organisation and expansion of small scale and cottage industries along with large scale industries. This recommendation is in consonance with the traditions and prevailing conditions in this country and is also considered important from the point of view of the need to utilise available capital in the most effective way and to reduce dependence upon imported machinery which may mean more external capital than possible on our resources. It is true that cottage industries and small scale industries are mostly relevant and possible only with regard to consumption goods; and, so far as basic industries are concerned, there is hardly any scope for small industries in it. A further point to be noted is that no exhaustive list for consumption goods industries either from the point of view of extension or de novo inauguration can be furnished from the outset. Any list now given for consumption goods can only be illustrative.

The underlying principles in this regard are thus detailed by the authors:—

"The nature and kind of consumption goods industries to be developed will ultimately be dependent upon the income of the people. As income increases, the percentage of expenditure on different classes of consumption goods will show marked variations. For example, demand for articles of consumption like furniture, books, artware etc., which will be relatively small at a low income level, will increase as the general level of income rises. What classes of consumption goods industries should be developed will naturally be decided from time to time, as the plan progresses, in the light of variations in the demands of consumers."

With this estimate of further industrial requirements there can be no difference of opinion. It is the capital and finance side of the industrial plan that has to be carefully studied; and this and other aspects of the 15-Year Plan will be discussed in a next article.

BANKING EXPANSION IN 1943

General surveys of the banking situation in India in 1943 will be content mostly with a description of the large increase as compared with the extraordinary stability of interest rates, in deposits, the mild improvement under advances and bills, and the decrease in the cash ratio as recorded in the consolidated statement as to the position of Scheduled Banks. The year end statements of several leading Indian banks would also be cited in proof of the summary description of progress. Comparisons with the final quarter of 1942 would certainly support the view that the most noteworthy change is the increase in the ratio of advances to liabilities. The improvement as compared with 1942 is substantial, though it will be agreed that applications for Treasury bills showed no important change and Government's short-term borrowing was conducted on the same scale as in 1942 with only a minor difference in regard to average rates of discount in 1943 and to the advantage of the borrower at any rate in December, 1943.

The more important questions raised by the growth of deposits in relation to the expansion of circulation without prejudice at all to the banking system are not connected either with the additions to banks or the trend of bank profits last year. They are really connected with the supply of capital in India for post-war reconstruction and the future independence of the capital market. Given such a condition as that obtaining in 1943 when bank deposits on current account rose every month by Rs. 20 crores on an average it may well be urged that investible funds have continued to rise as fast as the note circulation or that Government spending in itself stimulated the growth of such funds. It would, of course, be difficult to distinguish in regard to the absolute proportions between the funds of companies and those of individuals. It is certain that the former have increased in spite of increases in tax liability and the main consideration for the future in any case would naturally be the reinforcement of such funds by the refund of a percentage of Excess Profits Tax after the war.

Though it may be argued that banking statistics in the form of consolidated totals bear no relation to business activity it is noteworthy that the movement of funds by telegraphic transfers issued and encashed through the Reserve Bank showed a remarkable increase last year. The same movement (dependent on the increased use of bank facilities) may be noted in respect of clearing house returns for seven cities. The available figures certainly point to a very considerable increase in the use of bank money based as it is naturally on the increase in total deposits of scheduled banks by Rs. 203 crores nearly between December, 1942 and December, 1943. The increase exceeds even the increase in note circulation but the changes in the general price level are of very little importance as compared with the more or less precise correspondence between the increase in deposits and that in regard to circulation. Bank deposits in India are, of course, below the total for note circulation for several reasons but the increase in cash balances and balances with the Reserve Bank over a long period points to the maintenance of unusual stability. The legal ratio in India has been always exceeded in spite of the increase in total advances over a year by Rs. 67½ crores. The over-all cash ratio has actually risen to 17.86 per cent in December, 1943 as compared with December, 1942 when it was 14.96 per cent.

Encouraging conclusions may be drawn from that single fact when it is fashionable to deprecate expansion of Indian

banking, and cite some forgotten view to the effect that the multiplication of branches does not make for sound banking. How well new entrants have acquitted themselves last year has been described in regard to the flying start obtained by one or more banks though the most important lesson for some would be that an addition to the Defence Rules has not hampered the steady increase in Advances though the real increase took place in the last quarter. The exceptional liquidity can be measured most readily by the proportion of scheduled banks' balances with the Reserve Bank the total liabilities. The growth of banks' investments in the year cannot be indicated by reference to the statistical summary but the sustained strength of the gilt-edged market as may be inferred by the difference between the price of 3½ per cent Paper in December, 1942 (Rs. 93-15) and that ruling in December 1943 (Rs. 97-9) (higher since then) must be attributed mainly to the part played by our banks in a period when the yield on gilt-edged fell by over 1/8 per cent.

Remarkable as the changes between 1941 and 1943 appear they must be related mainly to the faith in the currency in spite of unusual rises in both bullion and commodity prices. The mere fact that bank advances rose substantially in March 1943 lends no support to the theory that banks financed speculation to any extent since the fall in the total cash ratio in the slack season was not connected with any rise in advances but with the movement of funds. How far the growth of funds and the banking habit in India was influenced directly by the additions to the banks and branches may be ignored for the main question would turn directly on national income and outlay in 1943. It may be inferred by some that the many shortages, and the resulting fall in consumption, explain fully the increase in deposits. Obviously the actual volume of savings in a year must be in excess of the increase in scheduled banks' deposits. When the impact of new taxation on both consumption and saving is studied, it may be readily suggested by some that the quantity of bullion exported or sold must also be taken into account. There is, however, much to be said for the view that broad conclusions should rest only on the significant fact that time deposits of India's scheduled banks rose consistently except for a slight fall in September indicating greater confidence in banks during 1943. Whether effective price control would have raised the total for bank deposits and defence loan subscriptions as well in 1943 may be asked by some who would urge that high prices took a heavy toll of profits though the consequences for the revenue would not be greatly different. But for the present it is enough to take note of the power of banks to draw off superfluous purchasing power and turn over the greater part of it to Government. The original function of banks may be to finance trade and industry but the secondary and temporarily more important function is to assist the growth of the national debt. The State as borrower has derived real and important advantages from the smooth functioning of the Indian banking system in wartime and progressive adjustments of the rate of interest have been assisted largely by the strength and flexibility of a system that has retained in its excess reserves the resources for a credit policy attuned to the needs of reconstruction for it is necessary to remember that the joint stock banks largely make policy. Final and categorical judgments would not be out of place even in a review of developments that are associated with a wide variety of changes from the customary point of view.

Excess Capacity Of Re-rolling Mills

At a time when national resources should be fully mobilised for war effort and civilian demands, it is regrettable to know that many of the steel (re-rolling) mills are not put to maximum use. In a letter addressed to the Secretary, Department of Industries and Civil Supplies, Government of India, the Secretary of the Federation of Indian Chambers of Commerce points out that the actual operation of the Iron and Steel Control order has left much to be desired. While the capacity of the re-rollers is estimated at 50,000 tons the order placed on these hardly exceeded 18,000 tons during the first quarter of 1943. The allocation of raw materials to the different units seems to have been inadequate and, in certain instances, firms with lower production capacity have been given a fairer treatment than others with greater capacity. It is also pointed out that owing to inefficient supply of wagons the mills could not dispose of their stocks of ready goods. Dissatisfaction is also expressed at the manner in which licences to sell defectives are issued. The re-rollers are also handicapped, it is pointed out, because of the defectives of the big producers sold under the direction of Iron and Steel controller who affords easy facilities for them.

The question of coal supplies has given rise to strong criticism. In spite of the fact that the re-rollers had agreed to work only 60% of their capacity, the Iron and Steel controller could not agree to supplying 1,789 tons of coal required for running the steam driven mills to the required capacity. The crisis in coal industry has affected many of India's industries in Bengal and elsewhere, but some of the re-rollers have the impression that they have been neglected even before the recent crisis in coal production. It is up to the Government to give a sympathetic consideration to the legitimate demands of the re-rollers and redress their grievances. It is hardly necessary to point out that a vital industry like the iron and steel industry would naturally comprise of bigger and smaller units differing in technical equipment, financial resources and political influence. But during war time every effort should be made to help them and re-vitalise them to play a useful part in war effort and post-war reconstruction. The habit of looking at industrial units only from the point of view of immediate requirements should be abandoned in favour of a policy of satisfying India's permanent industrial needs. If the excess capacity of some of the re-rolling mills cannot be profitably used for military requirements steps should be taken to offer them facilities to manufacture civilian requirements,

like agricultural implements, etc. which have been woefully neglected till now.

While rationalisation of the several units of the industry may be desirable it should not result in the wastage of the production capacity of the smaller ones. If the problems confronting the re-rollers are now faced squarely and solved without undue delay in the best interests of India then the authorities would have paved the way for India's prosperous future.

Rice Forecast

Great interest naturally attaches to the rice forecast this year in view of the scarcity experienced in 1942-43. The absence of imports explains the marked increase in production under the compelling force of famine and high prices. The final memorandum issued in February should be regarded as more important for further conclusions as to the changes in prices. The area under rice in India has increased by over 4½ million acres and the increase in Bengal alone accounts for over 3 million acres as compared with 1942-43. The outturn in Bengal is estimated at 101 percent of normal for the winter crop and the total for the Aman crop is put at 8,334,000 tons of cleaned rice as against 5,381,000 tons of cleaned rice in the corresponding estimates of last year. The Agricultural Department's previous estimate as to a bumper crop finds strong support in the provincial report, though imperfections of forecasting in a Permanently Settled province have been recognised at all times.

It is noteworthy that an increase in rice production is not confined to Bengal this year. The Province to report a small decrease in outturn is Assam where the weather was unfavourable to the autumn crop but the increase in the winter crop more than offsets the fall in the yield of the earlier crop. The other Provinces to report a decrease in cultivation and outturn alike are Orissa and Bombay. Surprisingly enough Sind with 1.7 percent of the area under rice and the Punjab with 1.3 percent of the area have surpluses for export, and their views as to the price-level have unusual weight at present. Both the exporting Provinces report an increase in rice-growing in 1943 and Sind's crop of 451,000 tons is obviously more important for the deficit areas than the Punjab crop and the spread between internal and export price counts for much. The second forecast indicates that the increase in rice cultivation since 1941-42 has been considerable, the difficulties experienced last year being not wholly attributed to the shortfall in production in Bengal. The increase of 6.4 percent in the total area under rice is likely to be stabilised by new rules governing the use of

arable land. Provincial governments are authorised by the amendment of Defence Rule 80B to regulate agricultural production in the future.

Property Values

Only the Registration Departments of the Provinces in their annual reports could say how land values move, what is the volume of new incumbrances, or the nature of transfers and charges created. It may well be inferred from the remarkable rise in the shares of certain estate companies in recent months, that appreciation of assets influences the market rating today rather than income prospects. Without the war affecting real property to any extent, not even to the point of war risks insurance, even city estate companies, without liability for anything more than vagaries of requisitioning, stand on a footing different from those of industries subject to controls of all kinds. As to the trend of property values in the war auction or treat good sales may contain a hint of what is the future value. Obviously, municipal revenues will benefit if such changes are accorded immediate recogni-

PALAI. TRAVANCORE

tion, and the real, whole case for a substantial increase in the rates paid in the great cities turns on the change in property values rather than the suspension of building activity.

While British municipalities show more than proper eagerness to acquire and develop areas which have suffered from air raids, by staking out claims before the builder gets busy little ambition has been evinced by Indian municipalities to acquire or develop estates.

The post-war plans of Indian industrialists are related to a considerable increase of housing in the cities. Preparation for the plan must not be altogether independent of the changes in values, and it may be considered desirable to get the land required before values reflect the inflation. The building industry's difficulties have no obvious connection with land values at present, and the increase in the value of building plans passed in South Africa towards the end of 1943 has a lesson for India like the report that property markets, both urban and rural throughout the Union, remain very firm at levels which are substantially higher than during the pre-war years. Similar conclusions as to changes in land values in India may be drawn from the reduced demand for loans, the liquidation of debts and the addition to deposits reported by land mortgage banks in Bombay as well as Madras. What proportion of savings go as yet into land when the ordinary agriculturist has no desire to sell cannot be determined. But it is quite permissible to infer that the rise in values by itself has deterred the flow of money into land from the towns and money seeks other investments more readily procurable. Obviously, the high prices for produce rather than the multiplied annual rent should be the basis of transactions in rural property. There is a plan for expansion of cultivation or reclamation of waste, but it is highly likely that land has appreciated like live-stock and deadstock on the farms. The rise in rural wages is a direct result of such appreciation, and so far most investigations of the economic consequences of the war have been unmindful of the position of the property-owner. The appreciation might even call for a revision of views as to taxable capacity and much else. Whether readily realisable or not, the higher value of all property should influence the standard of living, even more than the calculated income. Salary and wage-earners face the prospect of limitation in regard to commission, bonus etc., whereas property-owners, except where rent control of varying degrees of imperfection obtains, enjoy a degree of immunity which puts rent-receiving high among sheltered occupations.

Capital Issues Under Control

The familiar figures to company registrations, increase of capital etc., are released at infrequent intervals—the volume for March 1943 which would make it possible to discuss capital market trends in the past year is not yet available although the figures relating to one or two provinces appear occasionally in order to indicate that flotations, increases of capital and dissolutions run their course as usual. The main change, introduced rather late by the war, was control through an addition to the Defence Rules. The control scheme followed the E.P.T. ordinance

Hindusthan Buildings, Calcutta

in May 1943 and was meant largely to check speculative activity nourished by inflation. Its working for six months has been the subject of a review which states that nearly 500 industrial applications involving a total capital of Rs. 15 crores have been approved. After the first order of control one or two explanations were given as to companies already registered before May, and more recently an indication has been given as to the part of capital to be drawn for capital construction and the use of what may be called free funds in the interval. The control order did not check company flotations. The Examiner's new department was more than liberal and the summary states that the total number of applications classed as industrial on which orders were passed were 564 and the total capital asked for was about Rs. 20 crores. Refusals which applied to 12 percent of the proposed issues accounted for only 22 percent of the total capital. It may be conjectured by some that Rs. 5 crores have been saved for the public by the procedure of preliminary examination, but others would argue that the post-war period would impose the real test, for the official consent given is a qualified consent as a note appended to prospectuses reminds all. The Examiner's own certificate in any case is not equivalent in any sense to that of a reputable issuing or underwriting house, but is the consequence of an enquiry on conditions into certain aspects of the promoter's proposals. The Examiner's Department does not and cannot initiate but the hope that it will grow into the directive agency for all future investments must persist. Report speaks of over 4 crores going in the textile industry. Bonus issues have not been interfered with and the total in the classified list should be lower in regard to new ventures. In the case of industries like chemicals, the total given (Rs. 1½ crores) may be taken to represent mostly new money for new ventures. The figures evidently relate to authorised capital and not to the subscribed or paid-up capital for the existing central control is only over issues and the Provincial Governments keep the figures as to subscribed and paid-up capital. The volume of net (new) saving can therefore be estimated only in the light of the joint-stock company statistics for the period. But it may be surmised that control has been flexible and fruitful and the formalities have not been onerous.

Still Rising

Interest in railway earnings has been duly fostered by reports as to the increase in fares or the enhancement of surcharges. The trend of railway earnings throughout 1943 has been favourable in spite of a fall in goods traffic in April to December. The communique dealing with earnings describes the cumulative totals. From April 1 to December 20, 1943 the Class I railways earned Rs. 124.77 crores, the total being Rs. 17.63 crores higher than the 1942-43 total. All systems except the B.B. & C.I. reported large increases in earnings. The most important change is the larger increase recorded in the case of the B. & A. railway than on the other lines. Changes in earnings have been uniformly favourable so far and the table of earnings provided as usual indicates that the G.I.P. is no longer the first in the matter of growth of revenue. Company-managed lines show less pronounced increase in earnings.

Significant changes in wagon loading figures deserve notice. In spite of continuous shortage of coal, there was no increase in the number of wagons detailed for carrying coal and coke for the public and for foreign railways. The increase in the wagons allotted for grains and pulses is a consequence of the food crisis. The fall under cotton may be viewed as a result of the reduction of the 1943 crop while the sharp increase under miscellaneous full wagons on both the broad and metre gauge is a consequence of the most recent phase of the war effort which conditions also the substantial increase in the earnings of the B. & A. railway from April. The totals available will naturally suggest that the railways have earned a year's estimated revenue in ten months, and the revised estimates will be more favourable from the angle of a contribution to general revenues. There is also a likelihood of the increase in earnings being held up as an obstacle to projected increases in fares. A late recovery in customs revenue and the steady rise in railway earnings should make the figures as to the Central Government's deficit less impressive as a market pointer. Indeed the stock market has shown little sign of fear and may even derive support from the stories as to the increase in fares, for the resort to a more indirect form of taxation implies that rumoured changes in income-tax and super-tax for companies are far less likely. The Railway Budget this year should dispel confusion of mind as to Government's intentions though it may be argued that tax relief to the coal industry or more generous depreciation allowances for cotton mills may entail a sacrifice of revenue for which compensation will be immediately sought.

U.S. Apprenticeship Plan

If the W.P.A. has been dissolved and the C.C.C. is a memory to most the Federal Government is still rightly mind-

ful of reclamation. There is an apprenticeship scheme for training workers under the U.S. Government's auspices. The U.S. Bureau of Reclamation (according to the Indian Labour Gazette for January) drew up the scheme after consultation with the trade unions concerned and the Training Services of the Manpower Commission. The scheme provides for the training at special centres of apprentices for reclamation projects when there are adequate facilities and sufficient candi-

dates. Local joint committees are to adapt the basic plan to local needs, and local boards of education will be requested to provide class-room instruction in cooperation with State boards for vocational education and the U.S. Office of Education. The scheme calls for supervision by a Director of Apprentice Training responsible to the Chief Engineer of the Bureau of Reclamation. He will decide how many apprentices are to be admitted to each trade after consultation with representatives of the trade.

The Supervisor of Apprentices is to work under the Engineer in charge of each project. He has to select the persons for training and make arrangements for instruction and enforce apprenticeship agreements. The Manpower Commission is authorised to review the progress of local training schemes and apprentices are to register with the Federal Committee on apprentices. Provision for workers'

representation is a feature of the local committees. The committees have to secure help from the local education authorities while the workers' representatives have to maintain touch with the trade unions concerned. Candidates for training must be 16 or over and have an education equivalent to a Grammar School graduation and pass an aptitude test for the trade they propose to enter. Local committees are free to fix the maximum age. The term of apprenticeship will generally be that needed for the trade, but usually it will be 8,000 hours and should include 144 hours a year of related class-room education. Provision for a probationary period, for periodical examinations to test the progress made and grant credit for previous experience is made in the scheme. Apprentices are entitled to credit for overtime hours as well as the regular hours and on projects where wage boards have been set up. Time and a half must be paid for all hours exceeding 40 per week. A progressive wage schedule for apprentices is the complement to a scheme resulting in the grant of certificates for trainees, if recommended. The new plan for American youth is not vastly different from earlier schemes, but the connection with the Manpower Commission indicates how continuation courses are made to support duly both war work and reconstruction. The post-school training is strictly vocational and voluntary but the connection with reconstruction is obvious. Larger reserves of labour for post-war development in the U.S.A. are promised by the scheme and the main defence of extension of training lies in the 40 hour day ordered for apprentices. Youth will on no account suffer and other safeguards are provided in the scheme, distinguished readily enough from the conscription of youth characteristic of Nazi Germany.

Synthetic Rubber

Frequent reference to synthetic rubber justifies the note as to the results actually obtained in the U.S.A. Manufacturers of tyres in the U.S.A. complained of the shortage of labour and of rayon used for tyres after Mr. William Jeffers resigned, to be replaced by Mr. B. Dewey. The total tyre reserve was reduced by less than 3 million, and appeals for tyre conservation became insistent because U.S. tyre manufacturers came to doubt whether they could produce 30 million new tyres in 1944. More important was the

critical attitude to tyres made of synthetic rubber. Official assurances supplied as regards labour and cord to tyre manufacturers were followed by assurances as to the quality of synthetic tyres. It was declared that a synthetic tyre would last 20,000 miles. But manufacturers expressed the view that they were not at the end of the problem, though they had enough synthetic rubber. Investigation of the American Chemical Society pointed to certain defects. It was noted that synthetic treads crack and chip, separate more readily, have poor resistance to heat, because they are less elastic and flexible than tyres made of natural rubber. In the case of lorry tyres, even when mixed with 20-30 percent of natural rubber, synthetic tyres heat up rapidly, and frequent blow-outs follow. Tyre manufacturers remarked that for synthetic rubber a new technique was wanted along with new machines. Pro-

cessing of rubber also takes a longer time than for natural rubber. Another complaint was that the quality was variable—synthetic tyres' quality depended so much on the skill of the maker. U.S. Motorists were duly enjoined to conserve the tyres they were using by the Director attached to W.P.B.

The U.S. Army's Road

The Alcan Road from the U.S.A. to Alaska runs through Canadian territory. Last year the U.S. Army engineers finished the construction of what is called the Alcan Highway which links Alaska with Canada and the U.S.A. by land. Con-

struction was inaugurated in November 1942 for the road to Fairbanks from Dawson Creek became the most important of U.S. defence projects. There is only one town on the 1630 miles road, meant for war traffic only. The cost of construction in this case is put at 125 million dollars of 75,000 dollars per mile; so that it is not cheapness which the Army was after. Two small highways taking off the main highway have followed the major project. The road is meant to supplement sea communications, but its value has been demonstrated as buses run from Dawson Creek (950 miles from Fargo—the greatest little city in the world) to Whitehorse which is the principal point on the new road. The buses run at an average speed of 22 miles an hour. The service is meant to keep the big airfield at Watson Lake going as also the projected oil refinery at Whitehorse.

The construction is a triumph for the military engineer who started without maps or the preliminary survey. Marshes and rivers represented obstacles to be got round but the ice of the north was another danger as bridges were washed away. Indeed, for some months traffic between Fairbanks in Alaska and Whitehorse the terminal was suspended. U.S. papers described the new road as the biggest job carried out by Army Engineers since the Panama Canal. The road with its small bridges on intervals was finished with an indifferent surface and was only 26 feet wide. The post-war tourist therefore rush may not be large but the short route from Haines on the coast (site of an Army post) leads to the Alaska-Canada highway. The U.S.A.

may perhaps vie with Canada to develop its northwest in one way or another. The dispersal of the enemy from the Aleutians did not interfere with the completion of the Army's road-building project. In view of the Pan-American highway running through Central America it may well be said that the big new roads run parallel to the enormous mountain systems of two Continents and coastal defence from Alaska to the Straits of Magellan is one problem, happily settled by Chile's adherence to the Allied cause last January.

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS
OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank
of India Act 1920, do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 31st December, 1943.

We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of
the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the
above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information
and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet
containing the particulars prescribed by the Imperial Bank of India Act 1920, and the Bye-Laws of the Bank, and is properly drawn
up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the expla-
nations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. W. J. Younie, B. S.
Billimoria and James Orr respectively.

W. J. YOUNIE,
B. S. BILLIMORIA,
JAMES ORR, } Auditors.

28th January, 1944.

GRAND HOTEL

The Leading Hotel of Calcutta

"Many thanks for the revival of the champagne quality. It is invigorating. Most of us prefer your Gossip invigorating rather than instructive."—writes a correspondent. Many thanks, dear reader, for this encouragement. Another correspondent dwells on my argument about personalities versus events, and says: "You state that you have been fighting shy of personalities. Gossip in the last two weeks is chokelof of personalities. And you have showered bouquets on one and all. Well, these must reinforce for you quite a few valuable friendships." Yes, wait till I am obliged to rub this one or that the wrong way. So long as it is not you, and only then, you will remain pleased. A third reader pulls my leg: "You must have tarried quite a long time on your way to Delhi. And I can quite believe that your journey was exceptionally eventful. (Or, may I say, from previous experience of your vagabonding, that you manage to make everyone of your journeys eventful). But every journey has a destination. May I ask: 'Did you reach Delhi? Didn't nothing happen in Delhi?' Surely, there is much to note, observe and report in what is now the headquarters of the American war planning, and combine Eastern Command, besides being the good old capital of India? What is the political 'khabar'? Is there any likelihood of Mahatma Gandhi and others being released? Any prospect of the ending of the deadlock? How is life in New Delhi? Very expensive? Very hectic? What is it that we all hear of Americans buying up anything and of a roaring business for all including the tonga-driver? Tell us something about Delhi now; and, mind you, don't think we do not appreciate the journey—includes, thanks to Shankarlal and Kashi Nath."

I am glad to be thus pulled up, and, at the same time, provided with intriguing 'directives'. The old story-tellers did not like to inflict on their hearers whole chunks of narratives. They welcomed interruptions such as "Really", "Then?", "What happened then?" As exclamation, they look trivial, almost pointless—but they contain the reassurance to the story-teller that his audience are not bored, are evidently being gripped by his tale. In the same spirit, I hail saucy communications from my readers—the saucier they are, the more braced I feel. In the case of my correspondents, it is much more than an exclamation which is an expletive. Not infrequently, they inspire thoughts for the next instalment of Gossip. The last correspondent I have quoted has, for instance, suggested a range of topics which can keep me busy for a few

Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like It)

weeks. But, no, I am not going to tarry too long in Delhi and provoke another essay in sarcasm from him.

So, I shall be brief in my answer to the 'political' posers. There does not seem any likelihood of any move with regard to congress leaders in jail. As for the solution of the political deadlock, the new formula is: Good government is as good as self-government. As a clue to the understanding of what will transpire in Delhi in the coming months, remember this: A vigorous pursuit of the goal and plan of good government is likely, New Delhi now believes and hopes, to make people overlook or blur the significance of self-government. Good government is to be tried as a universal opiate.

I, too, had heard that the free-spending by Yankees has made everything dear in New Delhi; that the picture houses were always full; that restaurants gave little and charged much; that, while tonga fares were many times the old rates, the tonga-driver is, in his new prosperity, the cheekiest person alive; and that, altogether, the even tenour of life in India's capital is all a thing of the past. Taking the last first, I found the tonga-driver as cheery, breezy and as chatty as ever; and his joviality is not to be mistaken for cheekiness. He is now quite pleased with himself and his world. I made enquiries

of one or two of my tonga friends with regard to the fables of their fares paying five rupee notes and ten rupee notes where, formerly, four annas and eight annas would have been the norm. "We get more now-a-days"—was the reply "but we have to spend more also. This horse is costing me four times as much; and it is a mighty bill for the tiniest repair in carriage or harness". He added: "God be praised, we don't have idle hours as we used to have. There is plenty of demand, and no one higgles and haggles as before." My report on my tonga enquiries is as under: Full employment at reasonable rates. From my experience on the few occasions I did use the tonga, it is totally far-fetched to say that the tonga-drivers sting you. I may go so far as to say that going from one place to another in Delhi is cheaper and more comfortable than it is in Calcutta.

As for profiteering on the part of the traders and restaurant-keepers, my impression is exactly the contrary. Connaught Circus is, in my view, one of the finest shopping centres in India. Calcutta shops are bare in comparison and charge you arbitrarily. Let me give an instance. For some weeks, I had been trying to get some good ties and silk socks in Calcutta. You cannot get good ties in Calcutta for less than Rs. 25 each; hardly any silk socks are available. The variety, quality and reasonable charges of ties and socks

in Delhi really surprised me. Winter clothes, too, are available and at reasonable cost. As for our humble but more essential requirements, Delhi does not know scarcity or fancy prices for such commodities as rice, dal, vegetables, milk, sugar etc. They are dearer now than before; but, then, not long ago, things were ridiculously cheap in Delhi. I have no hesitation in acquitting Delhi shopkeepers of the charge of profiteering. Restaurants enjoy good custom, and picture houses are well patronised; but entertainment at neither strikes you as poor value for your money. Two shortages must be admitted—houses and coal. But our Delhi friends, grateful for the many mercies, are cheerfully putting up with the few discomforts.

Now to our American visitors. Their informality is intensely liked by Indians who, I find, meet them in various relationships; but their informality is out of tune with the frigid formality of ruling race who do not take much pains to conceal their feeling that they tolerate it because they must. In the Indo-British-American contracts, the first and last elements get on excellently; and the attitude of the American to the British is not incomparable to the traditional attitude of the British to the Indian. For generations, Indians have, in their own country, been suffering witnesses and participators of happenings in which all advantage and superiority have, as a matter of right, been appropriated by the Britons. The Britons are now witnessing, and participating in, developments in which, they feel, the Americans flaunt their superiority in a country which is still British. Take the simple case of the British pay and American pay in the services. Even the "Statesman" felt called upon to write in a strain that seemed to suggest that it was unfair and wrong for the Yankee to be paid relatively higher. Neither the "Statesman" nor the community it represents has ever, these many decades, tried to understand how the Indians feel the slur of relatively lower pay and lower status in their own land. This unexpressed grievance against the American's superiority in emoluments has produced and is producing various complexes in our British friends. Similar reactions were caused among the French on the advent into Paris, in the last war, of the higher-paid British tommies and, later, of the still higher-paid American troops. I call the following from an American paper which describes what the British tommies did to Paris in the early years of World War I. "Then it was the French who were annoyed. Then the tommies (British) drew more pay than the French soldiers; with it—until the American Expeditionary Force came—they got the lion's share of French girls, the best wishes, the best hotel rooms, hogged the bistros (pubs) and transportation facilities". These sores of France were healed only after the B.E.F. and A.E.F. departed for their homes. Similar sores are now clearly noticeable in Britain, too." Thus writes "Time" in its issue of December 6, 1943.

"In recent months it has become increasingly obvious that the people of Britain are annoyed by the free-spending, free-loving, free-speaking U.S. troops. Worn by a long war, already crowded on an island that is about the size of Oregon

with more than 40 times its population, the British are understandably short of temper.

The friction begins at the level where G.I. Joe meets the British common man. The American wants to be friendly. His way of showing it is by spending his money freely. The Briton, too, wants to be friendly but he cannot follow the American lead because he hasn't the money. That hurts his pride and he becomes even more than normally shy.

By such stages many Britons have now come to think of the U.S. soldier as sloppy, conceited, insensitive, indiscriminating, noisy."

As symptoms of this state of mind in Britain, "Time" narrates two instances:—

The London Magazine "Time and Tide" charged that American Red Cross clubs in Britain, now open only to U.S. troops, encouraged 'segregation'; prevented free and healthy mingling of Britons and Yanks. Many a thoughtful American concurred, but wondered how the Red Cross could do otherwise.

Midland's farmers were told that they must vacate their land for U.S. tank-training grounds. The natural reaction; they forget that thousands of farmers had previously done the same for British, Canadian, even Polish troops. One softly cursed: 'Aye, we went through the blitz but the Americans take the land'.

The current Anti-American irritations in Britain and in India bode no good. They must be frankly admitted and squarely faced. Unless these are solved in time, the post-war freindliness which is essential for the competent, smooth and authoritative handling of world problems and world plans will be gravely imperilled by antipathy allowed to grow into a habit. In touching on this topic, I realise, I must say nothing which disturbs the correct poise of relationships. But nothing can be correct if there is underground or unexpressed irritation. This has to be removed at the source. In this connection, I may be permitted to refer to certain activities which have had exactly opposite repercussions. I mean the working of the English Speaking Union in Calcutta. It was due to the initiative of Sir Renwick Haddow that the first branch in India, of the English Speaking Union was started in Calcutta. It has a well-proportioned membership of Americans, Britons and Indians—of men and women—of civilians and the services. Social functions are promoted by the Union, at which, say, once a month, various groups of gents and ladies from the three races are brought together in frank and friendly intimacy. And many an American visitor has told me, at the end of the function, "I have not so far had such an opportunity to meet others in this cordial fashion". The answer to the irritation complex is: search your own hearts—sponsor English Speaking Union branches wherever there is opportunity—and while, on the one hand, Indo-British understanding is thereby fostered and promoted, the Indian element acts as a hopeful agent to bring together the formal Briton and the free Yankee.

The curtain regularly lifted affords every one a fair glimpse of what is going on in the banking world. Old and new thrive, and competition clearly does

not hold up expansion. Encouragement to hope for more than ordinary stability is regularly provided by bank statements, and I must say that the finest traditions are more than upheld at present by India's big banks whose wartime career is singularly suggestive of adequate support to the nation's borrowing programme and the spread of the banking habit. Figures published on four pages

today tell nearly the whole story as to how confidence grows apace, and savings increase, how prosperity is duly nourished by the conditions of monetary abundance, and what may be the measurable results as to the future. The best is yet to be—that is a conclusion readily derived from comparisons between the 1942 and 1943 totals in the case of two banks whose results are recorded in totals that

confirm the prognosis of both layman and expert as to the condition of the Big Five in India.

Earnings have been influenced indirectly by the rise in the Treasury Bill rate while the most impressive advantage is to be expected from the improvement in

(Continued on page 215).

STRENGTH IS BORN

Silently a steady stream of glowing strength flows towards the harness designed by man.

Iron has been made.

Soon it will reach the more adolescent stage of steel, to form the basic strength of industrial growth.

Olympus

(From Our Correspondent)

New Delhi, Feb. 1.

The budget session of the Assembly which opens here next Monday promises to be livelier than the last two sessions as a larger number of Congress members are expected to attend this time. Apart from the budget debates, the food crisis is to be discussed again. There is growing concern here at the complacency of the Government in continually postponing the promised enforcement of an all-India policy. There is still no statutory price control for either wheat or rice—the two main food crops—whereas urban rationing is still in its preliminary stages, at best a half measure. Several other economic issues will also come in for discussion. There is for example that tariff policy to be reviewed as the protection duties on iron, steel, paper, sugar and textiles expire at the end of March and necessary legislation is to be introduced to extend the period of protection by another two years. A revision of the duties shall have to be postponed till a comprehensive tariff enquiry is possible. Then there is the proposal to reorganize research on coconut, sugar, tobacco and rice industries. No final decisions have yet been taken regarding tobacco and rice as negotiations with the provincial and State governments concerned have not yet concluded. Legislation is however to be introduced to set up a Central Coconut Board on the lines of the Central Cotton and Jute Committees. A cess is proposed to be imposed on coconut exports to finance research and expansion of markets. As regards the Central Sugar Committee, it will be soon separated from the Imperial Council of Agricultural Research. The committee will have enlarged personnel and functions. Other official business includes minor amendments to the Income-tax Act and the Factories Act and legislation to legalize the settlement of marine insurance claims outside India.

The proposed legislation to endorse the United Nations Relief and Rehabilitation Administration Agreement is likely to meet with strong opposition due to the stubborn refusal of the U.N.R.R.A. Council to consider the question of Indian famine relief. It is not known how far the recent amendment to the U.N.R.R.A. Bill in the U.S. House of Representatives making all the distress areas vital to the Allies' war effort (whom obviously include Bengal and Assam) entitled to relief will soften opposition to India's participation in the U.N.R.R.A. Even if the U.N.R.R.A. Council, at its next meeting agree to the U.S. proposal, it is doubtful if the U.N.R.R.A. will be able to effect any speedy relief in the famine-stricken areas in this country. Shipping which could not be released in any adequate volume when the famine was at its worst is not likely to be made available in the near future as the demands on it will grow enormously as the second Front approaches.

As regards non-official resolutions, Mr. Lalchand Navalrai's demand for the release of political prisoners has obtained the first place in the ballot. This will provide an early opportunity to debate the political deadlock, though there is hardly any expectation that the Wavell Government will have anything new to announce. Press censorship and the recent suppression of some political state-

ments will come up for discussion when Mr. A. C. Dutta's motion asking the Government to "issue instructions not to prevent on political grounds free transmission of political messages whether come-in or going-out of India". Dr. G. V. Deshmukh has tabled a bill to amend Company Law with the purpose of ensuring honesty of dealings on the part of company directors. It renders such directors ineligible for election for five years and provides for a heavy fine in addition. I understand that the Government is also considering the question of amending the Company Law in some respects as there have been complaints about the working of the managing agency system.

A review of the public debt position of India during the war period shows that the next increase in total public debt up to March 31, 1943, was Rs. 86 crores. The rupee debt has increased from 718 crores in 1938-39 to Rs. 1,208 crores in 1942-43, while during the same period the sterling debt has been almost wiped out, having been reduced from 469 crores to Rs. 57 crores. As against an interest of Rs. 17 crores paid in 1938-39 on the sterling debt, the interest due for 1943-44 is only Rs. 3 crores. The total Government borrowing during the war years up to July 31, 1943, was Rs. 375 crores including Rs. 157 crores worth of rupee counter-parts of repatriated sterling loans. There has been a big rise in short-term indebtedness (from 34 crores to 126 crores) due to favourable short-term rates of interest. As against an average discount rate of one per cent per annum in 1938-39, the average was less than a rupee in 1940-41, 1941-42 and 1942-43.

There is a general feeling here that the enforcement of the Anti-Profitsteering Ordinance has brought much needed relief to the common consumer as regards imported goods, though the prices of articles of local manufacture still remain rather high. The Government has already fixed the prices of a limited number of silk and woollen goods, but negotiations are still going on for the fixation of the prices of a wider range of silk articles. The Government is also contemplating more rigorous action against offenders under the Ordinance. The latest list of common consumer goods for which prices have

been fixed includes cigarettes, razor blades and fountain pens.

A 40-year national education plan has been submitted for consideration by the Reconstruction Committee of the Executive Council. The first five years are proposed to be devoted to planning including the training of teachers and then the plan envisages progressive expenditure rising from Rs. 10 crores in the fifth year to Rs. 312 crores in the 40th year. Compared to this, the industrialists' 15-year plan involves a non-recurring expenditure of 267 crores and a recurring expenditure of 237 crores in the fifteenth year. It is felt that 40 years is too long a period to wipe out illiteracy and that other countries like Russia and Japan have been able to educate their population in a much shorter period. The estimated gross annual expenditure at the end of 40 years of 312.65 crores is distributed as follows:

Basic education, 22 crores; pre-primary education, 3.18 crores; high school education, 79 crores; university education, 9.6 crores; technical and art education, 10 crores; adult education, 3 crores; training of teachers, 6.23 crores; recreation and social facilities, one crore and employment bureaux, 64 lakhs.

EAST INDIAN RAILWAY

TENDER NOTICE

Class I Contract costing over Rs. 8,000 Sealed Tenders are invited for the following and will be received in the General Manager's Office, E. I. Rly., 105, Clive Street, Calcutta, on 24-2-1944 upto 12 o'clock noon.

Tender No. GB10/1037/C for the supply of 2500 Nos. Jars Empty Earthenware 2-1/2 gallons capacity each.

Tender forms with full particulars can be had from the Controller of Stores Office, E. I. Rly., Calcutta, on payment of Rs. 2 per copy to the Treasurer, E. I. Rly., Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores direct by money order. No refund is permissible after payment.

Sealed Tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the Tender Box outside Deputy General Manager's (works) room by the Tenderer or his representative.

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, February 2.

At a recent meeting of the Indian Central Cotton Committee, opened by the Governor of Bombay, other things besides the floor price being raised to Rs. 500 per candy from Rs. 400 were discussed. The Committee over which Sir P. M. Khareghat presided was asked to examine the practice of mixing. Improvement of Indian cotton is compromised by the practice which is harmful most to the grower. The cultivation of long-staple cotton since 1925 has made substantial progress and India produces about 589,000 bales of cotton above the 1 inch staple. To get the full benefit of the improvement in cultivation, the better types must be offered without mixture and measures to deal with malpractices are required according to Mr. Hurschlev's resolution. The re-opening of the futures market at Karachi is a consequence of efforts made in this behalf by the committee though it is feared Karachi may depress prices here. The progress of research was reviewed, and the results of seed distribution schemes examined. The Committee spent Rs. 15½ lakhs on these schemes. There are schemes in operation in Bombay, Madras, Berar and Baroda. The improvement of cotton grown in Assam is the object of a new scheme placed before the Committee which was asked also to examine the possibilities of growing Jarila cotton only in the Buldana, Aurangabad and Parbhani districts. The committee approved of the price control in principle.

The Bohras who support the High Priest have answered the so-called reformers. A meeting at Nagpada recorded confidence in the Mullaji who is known to support a school at Surat where about 250 scholars receive temporal and spiritual instruction. Another school at Surat owes much to the High Priest's support. Many schools at Burhanpur and elsewhere benefited from the grant of Rs. 50,000 made by the Mullaji Saheb. It was stated that Sir Ziauddin Ahmed has pronounced favourably upon the Mullaji's educational grants. The orthodox recorded confidence in their leader and animadverted on the excommunicated who described the Bohras as a backward community without justification. Lawyers, doctors and businessmen attended the Bohras' demonstration of confidence in their leader.

Cricket still runs racing very close though the win of an Arab called Wavell is a surprise to excite much comment and plans for the big match for 4 days at the Brabourne stadium are described as promising. Hardstaff will turn out with Major Jardine's team along with the Notts fast bowler Mr. H. J. Butler. The Indian team selected to meet the eleven assembled for the charity match must be very good. Langridge and other cricketers known to India are also in the country and efforts to put an England XI for the local test match are strenuous.

Delhi's latest ban on future trading in spices will interest Zanibar as much as Calicut. Pepper and ginger (both grown in Bombay) figure in the list of commodities covered by the ban. From February 2, all contracts are closed by order but the

usual exemption for delivery contracts is given. It is known that after the East Indies were taken by the Japanese, the prices of all spices went up without any effort to form any Pepper Pool on this side. There appears to be no ban on sago so far, but the sensational rise in the price cannot be ignored. Oil-millers should benefit more than somewhat from the recent ban on copra futures. Herewith Ceylon prices rather than local speculation will influence the price of copra and oil. The oil mills and soap factories alike should benefit from a fall in prices and recent cuts in the prices of Indian soaps suggested that the example of a giant combine was not overlooked.

Sir Chimanlal Setalvad is ranged with the rest of the Liberals in asking for a fresh effort on the British side. The veteran Liberal doubts whether Congress legislators could independently commit themselves to a reversal of policy because the feeling of loyalty is strong. Sir Chimanlal has duly recognised that the leaders' imprisonment has not weakened the influence of Congress. "I have no doubt in my mind that if general elections to the legislatures were held, the Congress would sweep the polls and would acquire greater influence". The admission leads up to the argument that Britain must strive to improve relations, Congress could or would not cancel the August resolution and Sir Chimanlal, while deprecating press statements has joined Mrs. Sarojini Naidu in criticising the official decision to prevent interviews with Gandhiji in prison. Mr. Rajagopalachari is held to be the best person to reason with and influence Gandhiji. It is recalled that efforts were made by Lord Irwin to promote a settlement with the Congress by getting up a meeting of the Working Committee in Yeravda jail.

Hides and leather prices fixed by the Civil Supplies Department are too low according to a trade deputation which protested against the prices fixed by notification. Tanners and merchants agreed that raw materials are costly, and they must be controlled, if leather is to be controlled. Relief was sought in order to clear off high-priced stocks. The assurance of consideration for the request as to the period wanted for clearing old stocks is said to have followed the representation. The best news of the month is the improvement in piecegoods offtake here. Buying in big lots has been reported and Australia is said to have taken up Indian textiles. Prices in the bazar have steadied up and a slight recovery is looked for when demand is better. The cotton market has more than turned the corner last month and piecegoods prices are likely to follow cotton. The revival of futures trading has justified itself. For the trade asked to keep more stocks the futures market is essential in the trade view and some argue that Liverpool should make use of Bombay's example.

A. R. P. remains after the black out. There was a big parade on Sunday, when the Governor spoke of the need for the A. F. S. even after the direct threat to the city is past. The emergency is over but the organisation must be maintained according to the official view. Encouragement was provided by the response from volunteers and the City Corporation in regard to civil defence. Bombay is to keep a mobile rescue and casualty service in view of the possibility of a light attack in the future. The city and suburbs have no reason to be complacent though Sir John Colville dwelt at length at the recent Allied successes. Most volunteers have gone into reserve but they have been asked to keep their knowledge ready for application, should occasion arise. The Corporation may have financial difficulties, but housing plans look impressive. Bombay is ready to deal with slums again and again. After the budget debate the Muni-

cipal Commissioner mentioned that post-war housing schemes would cost Rs. 74 crores so that the 239,000 one-room tenements would pass out of existence. Because Improvement Trust work has been held up, and war has led to overcrowding. (City workers number over five lakhs at present), the housing problem comes first. As the Trust is merged in the Corporation, it is the City Council that must stand ready to clear and re-house the slum-dwellers. Paper revelations showed that in spite of much work there were unsatisfactory patches. The Corporation's plan is likely to take a fair slice of the funds for the big 15-year plan; but the Corporation will probably draw its main inspiration from the Public Health enquiry. Indeed, local interest in public health was reflected in a demand for health centres. A Labour leader wants something to reinforce maternity welfare. Leading women, including Lady Rama Rao, supported the plan meant to reduce maternal and infant mortality. Existing commercial clinics are decried and the plan is to bring competent advice to the poor who need it most.

Mr. Lele who took up Talpade's case lately discussed the proposal to extend the Federal Court's jurisdiction. For making a court for communal appeals legislation is wanted. The need is known to exist. The Law Member is expected to provide one. It is not enough to extend original jurisdiction. There must be a tribunal in India to limit appeals to the Judicial Committee.

Figures published here about the mill industry's working in 1942-43 have been well received. Ten million spindles and 200,000 looms put India ahead of most countries as a textile manufacturer. Progress has been consistent as the number of mills has risen from 396 to 401 in one year. Invested capital has risen from Rs. 46½ crores to Rs. 48½ crores in the last cotton year. The mill-owners' association's annual statement is full and detailed as ever. Efforts to raise output have been reflected in Standard cloth plans and the increase in double shift working in recent months, the fall in labour turnover, etc., support optimism. Bombay mills of late have issued gratifying reports and some companies can turn in accounts which are as good as those of the leading jute mills. It is a big thing for an Indian industry to hold its end up fully from the investor's point of view. Stock brokers' annual reviews (they are fairly common at present) dwell on the appraisal of prospects by Sir Fred Stones, Mr. Thackersey and others. The textile share market has picked up and buying of cheaper shares by outside investors is again reported.

Extension Of Control

A notification of January 17 extends scope of textile control to foreign cotton imported into India. The procedure outlined in the control order is familiar and is meant to keep price limits in relation to those approved for Indian cotton. Mill-owners are not likely to be disappointed over measures that will keep down the price of longstaple types of Indian origin in spite of the reported or presumed capacity. The Indian cotton market has developed this year great steadiness in spite of the anticipated increase in the Indian crop owing to cal-

culations as to mill offtake in the year ending August 1944. The former restriction on imports by way of licenses are evidently to lapse after the trip of the Indian trade mission to Egypt. Something like rationing of imports was in force last year, and a far-reaching departure is now contemplated in view of the indications of a short crop in Egypt and the drought in East Africa. To prevent the predictable rise in prices by measures of a familiar kind is the main object of the order promulgated under Defence Rule 81. The order applies to British India as from January 17. The main requirements imposed on the trade and mills is the submission of a formal monthly return as to quantity and prices of both imports and sales.

Dealings in foreign cotton are to be regulated by license issued by the Textile Commissioner who is authorised under Section 5 of the Order to direct sales on his own terms. Non-compliance entails inspection of books etc. or a search of premises. The destruction of documents relating to business is forbidden. Mills which furnish returns as to cotton stored and consumed are not called upon to prepare special returns in accordance with the new Order. The schedule divides Egyptians from other imported varieties, and the more curious will note that Upper gets the first place in the list while Giza 7 and Giza 12 are ahead of Sakel. At one time, the typical growth selected for dealings in futures in Alexandria and abroad was Sakellaridis only. The more hardy and less finer types have gained much ground in Egypt since 1935 and the most typical at present is Giza 7. Sudan growths hardly distinguishable from Upper are grouped together separately like East Africans though the trade would recognise various sub-divisions among East

African varieties. All American growths are lumped together and to some minds the most interesting addition is that of Afghan cotton. Though the mill industry is small and weak Afghanistan grows something better than Indian cotton and offers its cotton in return for piecegoods from India.

EAST INDIA FUND

Receipts for week ending 27th January Rs. 12,883
Total to date - Rs. 1,12,94,823

Contributions may be sent for the general purposes of the fund or earmarked for the following specific charities:—

1. H. E. The Governor of Bengal's War Purposes Fund for Amenities for Troops.
2. The Lady Mary Herbert's Bengal Women's War Funds for Amenities for Troops.
3. H. E. The Governor's Christmas Gifts Fund.

(From Our Correspondent)

Madras, Jan. 31, 1944

Mr. S. K. Kripalani, Indian Trade Commissioner, New York, who is now visiting the important commercial centres in this country with a view to knowing the demands of India's commerce at first hand, was here last week discussing with the local chambers of commerce the various problems connected with Indo-American trade. The Madras traders expressed their anxiety that the dollar assets accruing out of the favourable balance of trade with U.S.A. should not be frittered away to suit the convenience of the British. U.S.A. is best fitted to supply capital goods to India to start key industries and India's post-war reconstruction can be a success only if the dollar assets are conserved and judiciously used. The Trade Commissioner naturally could not commit himself with assurances. He said that he would try his best to help them in this matter. He drew their attention to rivalries amongst Indian trading interests and urged them to close up the ranks so that the drive for foreign markets can be organised more profitably. Large number of Americans are now in this country and he urged that their technical skill and organisational ability can be utilised particularly for promoting hydro-electric schemes. If Indian industrialists, said Mr. Kripalani, could put forward in 3 or 4 months concrete schemes it would be easy to obtain at least 30% of the demand for capital goods from U.S.A. Full and detailed information regarding American markets can be of immense value to Indian producers and traders. The periodic statements from trade commissioners have been temporarily suspended during war time. Our trade Commissioner in New York cannot therefore promise to send weekly cables or frequent despatches on the market prices ruling in America. But Mr. Kripalani would oblige if any chamber of commerce would write to him on any particular point. He has also assured them that if there should arise any specific difficulty regarding banking and transport transactions he would enquire and remove the difficulty. The idea of opening a museum attached to the Trade Commissioner's office was welcomed but he wanted that only high grade goods should be exhibited.

The visit of Mr. Wright Henderson, Controller of Leather in the United Kingdom, to New Delhi, to conduct talks with the Government of India possibly regarding the export of hides and skins from India has raised the anxiety of the local leather interests that Indian interests should be safeguarded. Mr. Meredith, Leather Controller, Madras, and the representatives of a few local European firms have also gone to Delhi. The Indian merchants, tanners and the rest connected with the trade, who control practically 80 per cent of the leather business, are suspicious that European interests who control barley 20 per cent are preferred over the rest and that some bad news from Delhi may be in store for them. The forthcoming talks at Delhi will, therefore, be followed with keen interest and anxiety.

The Government of Madras have placed a permanent advance of Rs. 90 lakhs at the disposal of the Director of Agriculture for the purchase and sale of improved paddy and other seeds and manures for the agriculturists. It is expected that in a year seeds worth about Rs. 46 lakhs and manures worth about Rs. 75 lakhs will be distributed. The Government would subsidise the sale of manures and seeds by excluding the establishment and overhead charges in the sale price. Half of the subsidy of Rs. 13.25 lakhs during 1944-45 will be met by the Central Government.

Under a scheme of research undertaken by the Imperial Council of Agricultural Research investigations and experiments in cigarette, chewing and cigar tobacco are to be conducted at three centres in this province, viz., Guntur, Coimbatore and Dindigul. The scheme will be financed by the Government of India grant of Rs. 10 lakhs.

The working of the land mortgage banks of this province during 1943 was reviewed by Dewan Bahadur C. S. Rathnasabhapathi Mudaliar in his welcome address at the Fourteenth Land Mortgage Bank's Conference held here yesterday. He pointed out that the problem of rural indebtedness has hardly been tackled by the Land Mortgage Banks and that a very large section of agriculturists could not offer the necessary security to receive loans from these banks. Today over 48 lakhs of pattadars paid Rs. 10 lakhs and less as land revenue and obviously their repaying capacity is very low. If the rural indebtedness is to be liquidated and

the buying power of the ryots raised a scheme like the Bombay Plan should be put into effect. In order to improve lands and reclaim waste lands, he emphasised, the lending rate of interest of the Land Mortgage Banks must be reduced at least by half a per cent. The banks, he said, must be allowed to utilise the surplus collections in their own business as was done in Bombay and, if the functioning of the banks is to improve, the Government must not interfere with the decisions of the board of management of the banks.

Chemical & Mining Industries (India) Ltd.

An announcement in this journal a fortnight ago drew attention to the permitted issue of shares by Chemical and Mining Industries (India) Limited, a New Delhi enterprise that is embarking on the manufacture of sulphuric acid, copper sulphate and sulphate of alumina. India's requirements are large in respect of all these, and the backing secured from the Supply Department invests the enterprise with real importance. The 50-rupee shares issued by the Company in connection with its recent issue of Rs. 15 lakhs are intended to secure capital for factory construction. The shares (25 on application and 25 on allotment) are as promising as any that have been offered to investors, and the Managing Agents, General Sales Corporation 25, L. Block, Connaught Circus, New Delhi invited correspondence as to full particulars from those interested in the announcement referred to.

WARNING

When goods and parcels tendered for despatch contained "excepted" articles, (for details see current Railway Goods Tariff) and the value thereof exceeds Rs. 100/-, the contents of the package including the "excepted" articles must be declared at the time of booking and insured. Failure to do this means that Railway Administration is not liable in the event of loss or damage.

YOU HAVE BEEN WARNED

Resume of Commodity Markets

There is nothing of importance to be recorded in the commodity markets during the past week. The jute market has been dull while the jute manufactures market has been firm on the shortage of ready supplies for immediate delivery. The gold market was quiet while the silver market was firmer. The raw cotton market improved on reports that the Indian Cotton Committee had decided to recommend to the Government of India an increase in the minimum price. Higher advices from Karachi also proved helpful. The piece-goods market was firm though in some centres there was a tendency to await further developments.

The raw jute market was easier in the early days of the week in the absence of any mill support and prices recorded a slight decline. But at the lower levels sellers are rather reserved. It is felt that the prospects for the next crop are not very satisfactory and that with the efforts of the Bengal Government to fix higher minimum prices there might not be any appreciable decline in values. In the mofussil centres also dealers are not very anxious to dispose of their holdings. The delay in regard to the decision by the Central Government about the size of the crop for the next season is not explainable. It is pointed out, however, that with the continued scarcity of rice and the relatively high prices for foodgrains the temptation on the part of the ryots is to sow more foodgrains than jute so that the sowings for the next season will be definitely smaller than 1943.

The raw cotton market has firmed up in the last three days. At the half-yearly meeting of the Indian Central Cotton Committee, held early this week, it was decided to take steps to prevent the malpractice of mixing cotton and also recommend to the Government of India to raise the floor price of the Indian cotton contract from Rs. 400 to Rs. 500 per candy. The committee was of the opinion that it should be a definite floor independent of the basis of hedge contract which might prevent it from acting as a floor. The decision of the Government of India on this subject is keenly awaited. This decision of the Indian Central Cotton Committee and the resumption of trading in the Karachi cotton market have been mainly responsible for the sudden upturn in prices in the last three days. There has been heavy selling at the higher levels both by mills and speculators but all selling was fully absorbed.

The reopening of the Karachi cotton market after a long time was marked by lively activity and a substantial improvement in prices was recorded. The press 'communique' authorising the resumption of the Karachi cotton market is given below: "By a notification under the cotton Forward contracts and Options Prohibition Order published in the Gazette of India, dated January 29, 1944, the Government of India have permitted the reopening of futures trading in cotton in the ring of the Karachi Cotton Association, subject to rigorous safeguards on the lines laid down for the reopening of the futures market in the East India Cotton Association. Trading is to be permitted only in fine

Mg. 4f hedge contract subject to a ceiling of Rs. 61 and a floor of Rs. 46 per maund (1943-44 crop). Government retain the right of buying cotton at the floor rate from any person who offers to sell at Rs. 46 per maund at any time when either this rate is quoted in the Karachi market or the Indian cotton contract in the Bombay market is quoted at Rs. 400 per candy. To prevent price manipulation and in order effectively to maintain the floor level, Government may actually begin to purchase when the prices quoted in the market are three per cent or five per cent above the floors fixed. The reopening of futures trading in the Karachi Cotton Association, with these safeguards is permitted only because the constitution and bylaws of this Association have received the official recognition of the Sind Government which will closely supervise the operation of this concession."

The delay in regard to the stamping of goods manufactured prior to August 1943 has resulted in a shortage of ready goods in certain centres and prices have not improved to any great extent in the absence of any large consumer buying. There is genuine apprehension regarding the ultimate disposal of unstamped varieties and the conduct of daily business has been hampered owing to large investments in stamped goods. It is reported from Madras that stamping of these varieties has been very nearly completed and that prices at which these goods will be sold will be announced soon. Meantime, the issue of a press 'communique' by the Textile Commissioner to the Government of India to the effect that mills cannot sell to dealers situated within 100 miles of the mill area at above certain rates should improve conditions in the piece-goods market to a considerable extent. Recently, there have been reports to the effect that distributors situated near the mills were appropriating a larger proportion of the margin allowed over ex-mill prices for their own benefit and that only a small profit was allowed to retailers and dealers in the principal centres. This discouraged fresh business to a certain extent. According to the 'communique' issued this week, any sale within 100 miles of the manufactured mill area at a price ex-godown or f.o.r. station of despatch exceeding by more than 4 per cent the ex-mill price is not valid. Also, no dealer may buy or sell except to a consumer at a price for godown or f.o.r. station of despatch at a price exceeding 10 per cent for ex-mill price. These measures are intended to ensure that the retailer will be in a position to secure his supplies at a price which will leave him a margin of 10 per cent.

At the auctions of tea held for consumption in India 14,600 packages of dusts were offered. The market was irregular and generally lower. Only the best red liquoring Assam and Doorgas teas were in request and higher prices were fetched. The market for leaf grades was weak and an all round decline in prices was recorded. Commonest teas were lower by as much as 2 annas per lb. while leaf grades showed a decline by 1½ annas to 1 anna.

(Continued on next page).

By Special Cable

U. S. FEARS OF FOOD SHORTAGE IN 1944

SPECIAL FOR "INDIAN FINANCE"

Washington, February 2.

The United States is facing a shortage of some staple foodstuffs that may become serious unless the European war ends this year, according to crop experts who have made a nation-wide survey of farm prospects and prospective domestic food consumption.

This finding is underscored by last week's joint report of the American Federation of Labour and the Congress of Industrial Organizations asserting that the cost of living has increased by 43.5 per cent since January, 1941 or almost double the figure published in the Government's Bureau of Labour Statistics.

U.S. Labour groups told the Roosevelt Government that the cost of living index has been restrained by concentrating subsidies and ceiling prices on commodities comprising the index while other (unreflected in the index) living costs have risen more rapidly. This report coincided with Mr. Roosevelt's renewed efforts to obtain Congressional approval of an appropriation of over one milliard dollars for food subsidies and the statement by the Secretary of agriculture, Mr. Claude R. Wickard predicting that the year will witness increasing food difficulties among the United Nations. Mr. Wickard anticipates normal domestic crop production, but said that food requirements "will continue to rise. Tentative estimates for 1944-45 indicate a large increase in demands over 1943 supplies."

Although in the United States over-all farm yield may be up to average of this year independent analyses recently revealed a distinct deterioration in the nation's subsoil moisture. Heavy snows saved the winter wheat crop but in the Mid-western food belt the outlook is most discouraging. Areas are suffering drought unmatched since the spring winds of decade ago turned the Nation's Bread-Basket into the Dust Bowl. Mid-western rainfalls have been 20 per cent below normal while the Wheat Belt's subsoil moistures are the lowest in many years.

All these factors lend weight to the Labour argument that since the cost of living has already increased by 43 per cent in three years it is likely to advance much further before the end of 1944. Labour groups contend that wage levels have risen only by 15 per cent since 1941. That is debatable, but there is no doubt that industrial discontent will spread nation-wide unless price-climbs are halted or wages swell proportionately.

The latter course means a greater threat of inflation which is already worrying United States economists. The only alternative seems to be an intensified attempt to restrict food prices through distribution subsidies to farmers. If Congress passes the pending measure, designed to forbid subsidy payments, it is certain that Mr. Roosevelt will veto it, and it probably could not be enacted over his veto. Hence there is still some slight hope of success for the Administration's anti-inflation campaign.

(Continued from previous page).

It is reported that India's production of rubber for this year will be a record and that the estimated production from the existing plantations alone will be 18,000 tons, much higher than the former output. It is expected that the new plantations and crude rubber tapped in Assam will add considerably to the total output.

It will be remembered that owing to the lack of facilities for consuming the whole of Indian production within the country, considerable difficulty was being experienced in regard to storage and that shipping space had to be wasted in order to utilise Indian rubber. It is now pointed out that the capacity of tyre producing companies in India has increased and that they will be able to absorb fully the Indian production of rubber. This should make it possible for the smaller rubber companies to dispose of their production then and there and save difficulties in regard to storage.

(Continued from page 209).

gliltged prices recorded in the Imperial Bank's report. The usual comparison reveals that the half-yearly gross profit is up by Rs. 15.6 lakhs while expenditure has risen proportionately. The most noteworthy change is the increase in the allocation to Reserve Rs. 10 lakhs from the half-yearly profit as against Rs. 5 lakhs a year ago. This increase is invested with significance because the dividend is unchanged after the increase in profits. The increased appropriation to reserve follows three years after the attainment of full parity with the paid-up capital in this case. The latest balance-sheet of the Imperial Bank shows that paid-up capital is composed of 75,000 fully paid-up shares and 1,50,000 partly paid-up shares amounting in value to Rs. 562.5 lakhs while reserve liability is Rs. 562.5 lakhs. The Reserve at Rs. 585 lakhs at the end of 1943 is large enough to defeat calculations as to adjustment of capital to deposits that have risen in a year by over Rs. 51 crores. The balance-sheet totals as to Deposits, Investments and Advances again indicate that improvement is not limited to one side. Progress is uniform and sustained, and the recovery in Advances when additions to Defence Rules laid obligations of a new kind on banks will suggest that expansion goes on despite concentration. The year-end totals in respect of Deposits are Rs. 214.53 crores as against Rs. 163.46 crores at the end of 1942. The weekly returns indicated that deposits rose continuously by an average of 1 crore every week. The expansion is more than reflected in the cash ratio of over 25 per cent at the end of the year. Cash balances at the end of 1942 totalled Rs. 23.53 crores while the latest balance-sheet shows a total of over Rs. 53.76 crores. The extraordinary liquidity is derived less from the slack demand and low interest rates than from an appreciation of what is proper in wartime. No judgment as to the orderly progress of Indian banking can ignore the marked rise in the cash ratio which of itself may support the big plans of Government and capitalists for post-war development. In the year 1942 the principal change was the increase in Investments. If the Imperial Bank's investments are higher by about Rs. 14 crores on the 1942 total the partial sterilisation of deposits in the form of cash balances held by banks should indicate that independent

remedies are administered against inflation at present.

In the case of the Bank of India the balance-sheet reflects the general trends more clearly than ever. The opening of two branches at Bhuj and Amritsar is a consequence rather than a condition of unusual progress recorded in totals that show how bank profits move more in accordance with anticipations than presumed, though the chief beneficiary is the Government. The increase in annual profit by Rs. 16.28 lakhs is based on the increase in Advances from Rs. 9.28 crores to Rs. 13.53 crores. The increase in Deposits however overshadows every other feature of the 1943 report. Deposits have risen very strongly to Rs. 55 crores from Rs. 36.8 crores at the end of 1942. At the end of June 1943 the total was Rs. 47 crores indicating that in the first half of 1943 the expansion was as pronounced as in the period in which Advances have risen and treasury bill holdings have declined. Investments in securities have risen to a greater extent than either advances or cash balances. The increase in interest accrued may be treated as a measure of the increase in resources, particularly, investments. Since the cash balances at the end of 1943 totalled over Rs. 12.69 crores the increase on June is greater than the increase shown as compared with December 1942. The increase in securities held by the Bank is greater than the increase in Treasury bills over a year, but the major change in the balance-sheet is the increased proportion of Investments, totalling Rs. 31 crores to liabilities shown at Rs. 55.13 crores. The total Advances are scarcely a quarter of the Deposits, and cash balances are almost equal to the Advances which are classified in the conventional manner to show that exacting standards are always adhered to. Since progress in 1943 has flattered expectations the proposed increase of capital will support the inescapable increase of business and resources. The features deserving of notice are as striking as in the other statement, reviewed in order to show that the remarkable rise in shares finds full justification in the results recorded in both reports and accounts.

'Eavesdropper'

(Continued from page 191)

There was an increase of Rs. 127½ crores under floating debt which was mainly to fill the gap caused by the revenue deficit and the defence capital outlay.

The exchange market has been steady with some export bills showing. There has also been some remittance demand.

Banks are sellers of T.T. at ls. 5 31/32d. for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at ls. 6 9/32d., and four months bills at ls. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 329½.

Banks are sellers of T.T. New York Ready at Rs. 322¼.

SAVINGS BANK—Deposits received and interest allowed at 1 per cent. per annum.

SAVINGS BANK DEPOSIT ACCOUNTS—Sums of Rs. 300 and over accepted at 1 per cent. per annum by transfer from Savings Bank accounts, subject to three months' Notice of withdrawal. Rules on application.

W. G. GROUNDWATER, General Manager

FOR THE INDULGENCE OF RAILWAY PASSENGERS

It is regretted that the interior lighting of trains is greatly restricted due to an acute shortage of bulbs owing to War conditions. The Railway Administration requests the indulgence of passengers in this matter which is entirely outside the control of the Administration. Passengers are advised in their own interests to provide themselves with electric torches as far as possible.

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, Jan. 28.

"No control can be effective as long as there is misunderstanding on the part of either the merchants or the officials," said Mr. N. C. Mehta, Sugar and Gur Controller for India, replying to an address of welcome presented to him by members of Karachi Sugar Dealers' Syndicate, when a large gathering of officials and non-officials was present. Mr. Mehta added that the merchant class of people specialised in selfish aggrandisement and entertained wrong notions about the officials in charge of control. This kind of mistrust on either side should be eliminated, said the speaker. He stated that both the parties must cooperate with each other in order to work out the system of control effectively. The All-India control of production and distribution of sugar was an accomplished fact on account of the cooperation and understanding between the government and the merchants.

Mr. Mehta averred that sugar production was the second biggest industry in India and it was one of the most active products in the market at present. He revealed that about 25 crores of rupees were invested in the industry. The fundamental policy followed by the government, said the speaker, was the economic distribution of sugar on the basis of past requirements less 25 per cent and economisation of transport as much as possible. The Sugar Controller, after explaining the machinery of sugar control in India at length, congratulated the Sind Government and particularly Mr. Bolton and his staff for devising an efficient machinery for effective control and distribution of sugar in this province. The speaker held that traders should have no hand in the fluctuation of prices but should be held responsible for the distribution of the product. He opined that the control machinery should be entrusted to proper persons and not to philanthropic and semi-philanthropic people.

Earlier, Rai Bahadur Shivrattan Mohatta read an address of welcome in the course of which he referred to the numerous activities of Mr. Mehta and paid a tribute to his ability and organising power for the development of industries in the United Provinces. He asserted that while other controls had proved to be of doubtful value, the control of sugar had been an outstanding success.

The 10,000-crore development scheme for India has had a mixed reception in Karachi commercial circles. Mr. Jamshed Nusserwanjee Mehta, Chairman of the Buyers and Shippers' Chamber has administered a warning against centralisation of financial or political power in the hands of a few. Giving his opinion he said that schemes of industrialisation of such magnitude cannot but engage the minds of Indians with hopefulness. Our country has to be uplifted to the industrial level of other chief countries of the world and as such the report is welcome. Such schemes as are envisaged must eliminate centralisation of power either financial or political and must give full scope for a richer and more beneficial life to the middle class people and labour. The upliftment and co-sharing with capital must be made compulsory and emphatic.

As against the views expressed by Mr. Jamshed, Lala Wazirchand Seth, Vice-President of the Karachi Indian Merchants' Association welcomes the Bombay move. He holds the view that the scheme provides a basis for post-war industrialisation and gives good scope for thought. The pre-requisite for the achievement of such an ambitious plan is a national government. With such a directive government behind the industrialisation of India, Wazir Chand feels that the fears expressed by Mr. Jamshed of centralisation of power in a small group of combination of a few industrial magnates have little justification.

Mr. T. M. Gurbuxani, the energetic Secretary of the Karachi Indian Merchants' Association, had placed some schemes for the industrial expansion of Sind before the Association and they are likely to be referred to a sub-committee. Karachi's main trouble is the lack of water. If an oil hydrogenation plant is installed, we have scope for starting industries in this city. In Junshai, not far distant from this city, a glass factory can be erected. The particular type of sand there is suited for such a venture. Round about that place prospecting of mining is proceeding and it is stated that coal has been discovered. In Hyderabad, a glass factory which has been put up is about to commence work. In Sukkur, there are a few small industries, which can be expanded.

If an up-to-date textile mill is started in Sind, it can produce from the cotton available in the province enough cloth for Sind, Baluchistan, part of the Punjab and Kathiawar. State aid for such a venture is possible.

Schemes costing Rs. 15,000,000 for raising and strengthening the Indus River bunds have been sanctioned by the Indus River Commission which met here recently for three days. The purpose of the new constructions is to afford additional protection against floods to some of the towns in the danger area.

The first step towards implementing the recommendations contained in the blue print of communications prepared by the Central Government has been taken by the Advisory Communication and Transport Board of Sind. The Board has recommended to the provincial gov-

ernment to set apart a handsome amount from the sale of wheat etc., for the development of rural areas, inter connecting all the important villages and towns to enable speedy and cheap transport of agricultural produce. Programme of roads to be improved from provincial revenues was discussed and finally approved. The estimated cost of these improvements would be about Rs. 25,00,000. Sind also requires some feeder railway lines in the Barrage zone to market cotton and other produce and these will be undertaken after the war.

The Indus water for which the citizens of Karachi are awaiting has not yet flowed down to Karachi pipes. Something is wrong in the pipes which have been laid and this defect will be rectified soon. Then the city will heave a sigh of relief and we hope to get 50 million gallons of extra water every day.

N.W.R. SUBORDINATE SERVICE COMMISSION, LAHORE.

Applications are invited from candidates to fill 7 temporary vacancies of Tracers on N.W. Railway, 6 of which are reserved for Muslims. In addition names of 33 suitable candidates (20 Muslims, 5 Sikhs, Indian-Christians & Parsees and 8 Unreserved) will be borne on a waiting list for a period of one year. Applications must be made on the prescribed form, obtainable at a cost of Re. 1/- from large stations on N.W. Railway.

PAY:—Rs. 30—214—50—2—60, plus dearness and other allowances admissible under the rules.

QUALIFICATIONS:—'B' Class Certificate from Punjab College of Engineering & Technology or Draughtsman's Certificate from Thomason Engineering College, Roorkee, or from the Government College of Engineering, Rasul, or any other equivalent certificate from a recognized technical school or college. Literacy in English up to Matric Standard. Candidates with proof of practical experience and ability as fully competent Tracers will also be considered.

AGE:—Between 18 & 35 years. Last date for receipt of applications together with attested copies of testimonials:—10-3-1944. Full details should be obtained on sending a stamped and addressed envelope to the Chairman.

BAREILLY CORPORATION (BANK), LTD.

(ESTABLISHED IN 1928)

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, 3rd February.

THIS has been rather a dull week for trading of any description. There has been quite a steady demand for both hessians and gunnies for positions up to June at maximum prices, but mills are reluctant to commit themselves for further sales for these near at hand deliveries. Various factors militate against confident trading. The coal supply has again deteriorated and little more than half the official quota has been arriving. Quality also leaves much to be desired, thus raising the quantity of coal consumed to keep a head of steam. Also there is still the threat of further requisitioning of mill premises hangover certain units which have been inspected by the military authorities. Again, mills are at any time liable to be landed with fresh Government orders for quick delivery. One has been placed this week for Canvas, a specially close woven fabric which takes three times as long as hessian to produce. The quantity which each individual mill has to turn out is not large, but it all tends to slow up production, and most mills are behind with their orders on hand as it is. Hence there is no encouragement for mills to overload themselves for the near months, particularly when the tone of the market indicates that they should have no difficulty at any time in disposing of surpluses at maximum rates. On the other hand shippers of gunnies are not tempted to place orders for delivery beyond June at the maximum prices which mills ask. They know they will not have to pay any more than maximum, so why hurry about booking orders now when mills are keen sellers? So we have arrived at a species of stalemate. This is also reflected in the Jute market, Mills showing little inclination to buy further supplies when they cannot sell their goods. Jute standing at one rupee under maximum rates might seem a profitable buy, with fabrics at maximum rates. But with so much intermittent working, what may appear to be a margin of profit to a Mill may very well turn out to be an actual loss by the time costs are calculated after the double transaction is completed, for in present circumstances the forecasting of costs is nothing but a futile waste of time.

As suggested above, the coal position, after showing some improvement, has been less satisfactory recently. The quota officially allotted to Mills was presumably calculated on decent quality coal, capable of keeping steam up under normal working conditions. Much of the quality which has been foisted on to mills in recent months has been so inferior that not even the most strenuous firing would maintain a head of steam. The result is that the actual consumption has increased by 25 per cent or more, so that the official quota is that much insufficient to keep mills working, even if and when the quota quantity is actually delivered, which is seldom. Some mills have been experimenting with a mixture of Coke Breeze and Coal and this is found to work quite satisfactorily provided the coal in the mixture is of decent quality. But it will certainly not work with inferior quality coal.

Supplies of coal and oil for mofussil baling presses looks like becoming an acute problem. Coal of course has been in very short supply all this season and most steam presses were

long ago reduced to using wood. Now the supplies of wood are either unobtainable or so expensive as to be prohibitive. Then, many kutchra bale presses are oil driven, but it is now threatened that the supply of heavy mineral oil for such use may be cut off. There remains the old-fashioned hand press which still functions very largely all over the mofussil. But here again the question of obtaining the requisite labour arises. Able-bodied labour is a scarce commodity in Bengal at present, so much having been absorbed in military projects, and so much of the balance having been decimated and rendered incapable by the famine and attendant epidemics. The present circumstances are such that a large jute crop simply could not be handled, and it is unlikely that the rate of arrivals of jute into Calcutta obtaining during the past few months can be much improved upon. Any sharp recrudescence of demand for jute could not be met in a hurry, on account of the labour position up-country. Furthermore there is the question of transport. Last week we had to advert to the service of the railways in regard to the movement of jute. But we also remarked recently that movement by river was on a reduced scale, though at times this appeared to be due to a shortage of orders from mills. It would now seem however that river transport freight space is not so freely available as before, even in the more important stations which were previously well supplied. The combination of the various circumstances set forth above might be of serious moment to mills, which are not carrying as much reserve stock of raw material as they normally do, partly because so much of their storage space has been requisitioned. Also there are already a number of cases, and likely to be more, of two units being doubled up in one by means of multiple shifts. These will be consuming double the quantity of jute with only half the storage space wherein to hold stocks. The whole position is pregnant with difficulties which require to be kept in view and remedies if possible devised.

It is expected that within a few days an official pronouncement will be made by the Government of Bengal with regard to the quota of acreage to be licensed for the coming jute crop. With recent weather favourable for preparing the ground for sowings, the announcement will have to be very promptly made if it is to be of any effect at all. The market seems to expect with confidence that at the same time some sort of statutory effect will be given to maximum and minimum prices for jute. These, if issued, will certainly be based on the standard grades established by the I.J.M.A. and currently in use. The result will be therefore to give virtual statutory recognition to the current grades, so that the proposed new scheme of six standard grades, which we mentioned last week, would be non-effective. So the labours of the I.C.J.C. in that connection seem likely to be wasted.

Information recently to hand regarding the prospects of Jute cultivation in South America seems to be somewhat contradictory. The protagonists of the idea are very optimistic over the results already achieved, though these are still on a limited scale, but the claims made as to the quality and value of the fibre produced scarcely seem to be fully substantiated and trade circles generally would appear to evince a preference for the Indian fibre, if and when that is obtainable. Shipment difficulties to that part of the world

will certainly give indigenous fibres a good opportunity to establish themselves, but whether they will be strong enough to survive the competition of Indian jute when conditions again become normal, seems open to question, unless support in the way of protective tariffs is afforded by the several Governments concerned.

Export Jute has ruled dull and in little demand during the week. Small transactions in Dundee Daisee around Rs. 73-8 and Rs. 74 are all that have been recorded for shipment. Neither have mills lent much support to pucca bales though enquiry continues for Cuttings and Low grades which are in very short supply owing to the light turn-over in higher grades. Quotations for delivery to Mills are Firsts at Rs. 83, Lightnings at Rs. 77 and Dundee Daisee at Rs. 78. A sale of high class Dacca Tossa was reported at Rs. 103.

Loose Jute has also ruled quiet but there is no give in mofussil markets where endeavours to reduce prices have been ineffective. Towards the close there has been evidence of rather more enquiry from Mills, but at rates generally cut too fine to result in business. A sale of European Mids alone was reported at Rs. 15-12 but the general quotation remains at Rs. 16 and Rs. 13. Indian Mills are reported to have paid Rs. 12-12 for Marwarri Jat Bottoms, and District and Assam Bottoms have again been done to a limited extent at Rs. 12. Sellers, in face of the steadiness up-country, are not inclined to discount prices.

The general tone of the Fabrics market we have commented on earlier. Small sales of both nine and eleven porter hessians have been recorded, all at maximum prices for shipment up to June, and mainly from Bazar holders. There has been enquiry for Cornsacks at ceiling rates for deliveries up to June but Sellers are hard to find. The only exception to the ceiling rates is "B" Twills which continue to be dealt in around Rs. 67 to Rs. 67-4. Mills on the other hand are prepared to sell either Hessians or Heavy Goods at maximum rates for shipment July and onwards but do not find shippers responding. Bran Bags were reported sold at Rs. 56-12 for July/Sept. and 3¼ lb. Grains at Rs. 101 for Feb/March.

(Continued from page 193)

peso as the rate is to be 100 pesos (centimes) for 1 Guarani. The Bank of London and South America stated that the exchange rate was likely to be 12.4 guaranis per £. The Guarani currency is expected to displace the peso completely by 1947. As the Argentine has a peso, the decision is readily explained, but the change in legal tender is perhaps one way of dealing with hoarding, smuggling etc. of notes.

Last month there appeared an interesting notification concerning import of rupee notes from places beyond the Eastern Frontier. The purpose is plain enough for the advance into Burma may force the enemy to try to plant stolen rupee notes on others. The import of British notes etc. is regulated but this is the first time that the carriage of legal tender into British India from specified areas is banned. The export of gold without license to all Indian States (the exceptions are Cutch, Kalat etc.) is permitted. The offtake should improve for hoarding is more common in the States than here and the notification should help to attract goods including food from the States into British India. Possibly the Reserve Bank wants to extend the market for the gold it sells for others.

SATURDAY, FEBRUARY 5, 1944

Price Re. 1

Stock Markets to-day and to-morrow:

SUDDEN INTEREST IN JUTE SHARES

THE Calcutta Stock Exchange has continued steady during the past week though it would appear that there has been a slowing down in the upward movement and that there is a disposition to await further developments. After the sustained rise in prices in the past few weeks, the present pause is to be welcomed. It affords opportunity for operators to consolidate the ground that has been gained in recent weeks. Also, with the proximity of the budget, a cautious tendency is to be welcomed.

The market, however, is not entirely devoid of features. In the last two days livelier conditions have been noticeable and greater demand has been forthcoming for coal, jute and cotton shares.

It should be said that the feature of the week is provided by the Jute section. The general rise in prices cannot be satisfactorily explained. It is perhaps due to the fact that there has been no closed week in January and that the companies which have lost working hours in the latter half of 1943 can possibly make up the arrears of production with a sufficiency of coal supplies. This might enable certain units to earn relatively higher profits. Nothing definite, however, can be said, at this stage. Even at the present levels the return on some shares is quite satisfactory. Having regard to the sound financial position of many companies and the encouraging prospects in the postwar period, the rise in prices for jute shares cannot by any means be regarded as exaggerated.

Tea shares have remained firm and a further small rise in prices has been recorded. The decision of the British Ministry of Food to grant an allowance of 2d. per lb. towards increased cost of production for Ceylon tea producers, has been taken as a bullish factor for the industry. It is said that with a further compensation for the increase in the cost of production tea companies can report a higher level of earnings. It was pointed out last week that the return on tea shares was relatively higher and that with a widening market for popular shares greater interest was being shown.

The accounts of the *Purtapore Company, Limited*, under the managing agency of Messrs. Begg, Sutherland & Co., Ltd. for

the year ended October, 1943, make very satisfactory showing. Thanks to the large cane supplies and the ideal weather conditions in the growing districts the Company has nearly doubled its production of sugar to 2,11,332 maunds in 1942-43 from 1,11,777 maunds in 1941-42. The average percentage recovery was higher at 11.72 against 11.22. It is not surprising, therefore, that the net profit, before providing for taxation and depreciation, is very much higher at Rs. 6,62,128 against Rs. 1,35,925 for the preceding year. The amount set aside to depreciation is very much more at Rs. 1.5 lakhs (Rs. 50,000) while the provision for taxation is as much as Rs. 2.54 lakhs (Rs. 48,471). The dividend on ordinary shares is 15 per cent against nil for 1941-42 and 5 per cent for 1940-41. At the quotation of around Rs. 28 cum-dividend the return on the shares should be considered rather satisfactory.

Britannia Biscuit Company, Limited has made sensational progress in the half-year ended Sept., 1943. Sales at Rs. 68,66,631 constitute a record in the history of the company, sales in the half-year ended March, 1943 being Rs. 31,38,427. The increase in the total of sales was due to the abundant supply of raw materials. The net profit, before providing for taxation and depreciation is naturally higher at Rs. 13,36,033 against Rs. 6,06,410. Provision for depreciation is not very much changed at Rs. 57,628 (Rs. 56,650). The provision for taxation is the considerable sum of Rs. 10,14,445 (Rs. 3,82,215), while allocation to reserves is Rs. 1.9 lakhs (Rs. 1 lakh). The dividend on ordinary shares has increased to 3½ per cent from 2½ per cent, but the bonus has been maintained at 1¼ per cent. The total distribution is thus 5 per cent against 3½ per cent. The amount carried forward is Rs. 73,787 against Rs. 68,571 brought in. The recent rise in the quotation for ordinary shares has thus been fully justified.

The results of the *Agarpara Company, Limited* for the half-year ended September, 1943 make very satisfactory showing. The accounts however relate to a period in which jute mills were not affected very much by the closed week. The net profit, before providing for taxation and depreciation, is substantially higher at Rs. 17,22,870 against Rs. 9,48,070. The amount set aside to de-

preciation is Rs. 1,09,626 (Rs. 1,11,272) while the transfer to reserves and other funds is Rs. 2 lakhs (Rs. 1 lakh). The provision for taxation is higher at Rs. 12.5 lakhs (Rs. 6 lakhs). The dividend on ordinary shares has been maintained at 5 per cent. The amount carried forward is lower at Rs. 20,509 against Rs. 50,265 brought in.

With the efforts for maximising production of rubber in this country, existing plantations have been reporting an increase in output year after year. *Thirumbadi Rubber Company, Limited* has been able to report a further increase in earnings in the year ended September, 1943 in spite of the rise in costs of production. The net profit, before providing for taxation and after depreciation, is Rs. 1,58,250 against Rs. 1,05,635 for 1941-42. The provision for taxation is Rs. 1,300 (Rs. 700) while the allocation to general reserve is Rs. 50,000 (Rs. 15,000). The final dividend of 25 per cent with the interim dividend of 7½ per cent already paid makes 32½ per cent for the whole year against 25 per cent for 1941-42. The amount carried forward is higher at Rs. 87,045 against Rs. 79,272 brought in.

A crop of 329,417 lbs. was harvested at a cost of 3.84 annas per lb. f.o.b. and realised an average net price of 11.61 annas per lb. as compared with 9.78 annas per lb. in the previous year.

It is interesting to make a study of the *Indian Finance* Daily Index of Stocks and Shares for the last two months. Early in December quite active conditions were noticeable and the index for all shares was 158.11. There was a decline to 155.39 towards the close of the year on profit-taking and the reduction in commitments on the eve of the holidays, but the reopening in the New Year has been very active and the market has not looked back for some time. The index for all shares on January 24, 1944 at 161.79 is the highest for some time and perhaps for the war period. The sustained improvement in the index figure has been due to the greater activity in the Engineering, Sugar, Paper, Tea and Miscellaneous sections. All of which goes to show that the recent upward movement in prices has been very broad-based and there is no suggestion of excessive speculative activity or indiscriminate buying.

WATCH DOG...

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 4.

STEADY conditions continued to prevail on the Calcutta Stock Exchange though latterly a slightly easier feeling is noticeable and the volume of business is relatively smaller. The undertone, however, is very steady and it is generally felt that the upward trend will be resumed once the budget proposals are announced.

The feature of the week is provided by the Jute section. On good buying the larger denomination shares have registered a rise of twenty to thirty points and the smaller denomination shares two to three points. In the last two days a firmer tendency has been noticeable in the Coal section. Cotton shares also have come in for greater attention. Tea shares continue to be in good request though no further improvement in prices has been recorded.

The gilt-edged securities section was firmer with a slightly larger volume of business passing. 3½ per cent Paper quoted Rs. 99-1. There has been greater enquiry for Provincial loans and business has been reported in two or three securities at higher rates. Among Central Government terminable loans there is no important change in prices to be recorded. 3 per cent 1946 were Rs. 102-6, 3 per cent 1951-54 Rs. 100-10, 3 per cent 1963-65 Rs. 98-14 and 4 per cent 1960-70 Rs. 112-11. 5 per cent 1945-55 were in good enquiry at Rs. 105-5. Among Provincial loans, 3 per cent Punjab 1952 were more than a point higher at Rs. 110, while 5 per cent U. P. were Rs. 101-12 and 4 per cent Punjab 1948 Rs. 105-2. Easy conditions have continued to prevail in the money market though the average discount rate on treasury bills has, for the third week in succession, registered a rise to 11 annas and 4 pies per cent per annum from 10 annas and 4 pies last week.

Bank shares have been quite steady with Imperial Bank fully paid at Rs. 1,935 ex-dividend and Contributories at Rs. 495 ex-dividend. Reserve Bank were unchanged at Rs. 134 while Bharat Bank (ordy.) were a shade easier at Rs. 121. Hind Bank were Rs. 6-8 premium while United Commercial Bank were higher at Rs. 28 premium.

There was nothing of importance in the first three days in the Cotton section but with the announcement of satisfactory dividends by some Bombay companies and the reports of increased production, a rise in prices has been recorded in the last two days. Basanti Cotton improved from Rs. 13-4 to Rs. 15-5 and Benares to Rs. 15 from Rs. 14-4. Cawnpore Textiles were nearly a point higher at Rs. 15-3 while Bengal-Nagpur were a shade better at Rs. 39-4. Dunbar met with renewed investment demand and were done up to Rs. 320 while Elgin were three points higher at Rs. 85-8. Kesoram suddenly improved to Rs. 21-10 while Mahalaxmi were Rs. 46-2 ex-dividend. New Victoria also were higher at Rs. 10-10 and Pravati Textiles at Rs. 11-10.

Business in the Coal section was smaller in the early days of the period under report and even a small decline in prices was recorded on profit-taking. In the latter half of the week, however, some of the lost ground was regained and the popular shares are higher on balance. Bhalgora were Rs. 17-2 after

being lower at Rs. 16-4 while Amalgamated were unchanged at Rs. 46-4 and Bengal at Rs. 606. Burrakur were quite steady at Rs. 32-10 and Central Kurkend at Rs. 24-8. East India came in for good buying and were done up to Rs. 34-8. There was some selling at the higher levels and the close was slightly easier at Rs. 33-12, the quotation at the time of last writing was Rs. 32-4. Dhemo Main have improved from Rs. 21-14 to Rs. 22-14 while Equitable were quiet at Rs. 52-8. New Beerhoom were Rs. 32-6, North Damuda Rs. 10-2 and Pench Valley Rs. 46-8. Raneesgunge improved further to Rs. 42-4 while South Karanpura were quiet at Rs. 10-12 and West Jamuria at Rs. 45-10. Kuardi were around last week's level of Rs. 16-6, Samla Rs. 5-10 and Satpukuria and Asansol Rs. 4-6.

The Jute section has been active right from the beginning of the week and with an expanding volume of turnover an all-round rise in prices has been recorded. As pointed out above, the larger denomination shares improved by 20 to 30 points and the smaller denomination shares by 2 to 3 points. The sudden interest is perhaps due to the better coal situation and the hopes that the arrears of production of steam-driven units might result in a considerably higher level of earnings for the current half-year. Agarpura improved from Rs. 28-10 to Rs. 31-6 but are lower at the time of writing at Rs. 28-12. Auckland registered a rise of nearly 40 points to Rs. 415 while Anglo-India were not very much changed at Rs. 422. Bally touched a high level of Rs. 379 against the quotation of Rs. 365 last week, but at the time of writing are around Rs. 372. Champdany were Rs. 236 against Rs. 229, Chitavalsah Rs. 28-5 against Rs. 26-12, Clive Rs. 34-14 against Rs. 32-12, Howrah Rs. 70, Hukumchand Rs. 36-4 against Rs. 34-8 and Nuddca Rs. 128 against Rs. 119. Megna registered a sharp rise to Rs. 95 from Rs. 87 and India to Rs. 590 from Rs. 577. Kamarhatti and Kankannarah were 20 points higher at Rs. 627 and Rs. 580 respectively while Naskarpara were Rs. 31-7, Nellimaria Rs. 29-2 and National Rs. 31-12. Presidency were unchanged at Rs. 7-8. Soorah were 2 points higher at Rs. 19.

In the Engineering section, there is nothing of importance to be recorded. Indian Iron and Steel Corporation fluctuated around Rs. 38-7 and Rs. 28-11 respectively. Burn & Co. were unchanged at Rs. 4-13, Britannia Building and Iron at Rs. 19-6 and Bhartia Electric at Rs. 19. Marshalls improved suddenly to Rs. 5-6 and are steady at the higher level. National Iron were well held at Rs. 14-10, Saran Engineering at Rs. 10-4 and Steel Products at Rs. 8-4.

In the Sugar section, there is nothing of interest to be recorded and only a small number of transactions is reported. Carew & Co. were Rs. 30-4, Cawnpore Rs. 43-8, Ramnugger Cane and Sugar Rs. 15-9 and New Savan Rs. 24-5. U. P. Sugar were quiet at Rs. 35-4.

Tea shares are quite firm and a further improvement in prices is to be recorded for certain counters. Bishnauth were Rs. 43-12, Betjan Rs. 42-2, Hasimara Rs. 76-8, Hattikhira Rs. 32-8, Tezporer Rs. 19-10 and Loobah Rs. 16-4.

In the Miscellaneous section, Burma Corporation and Indian Copper Corporation have been sticky around Rs. 4-1 and Rs. 3-1 while B. I. Corporation improved to Rs. 7-2 from Rs. 6-12. British Ceylon Corporation were

steady at Rs. 19-7 while Dunlop Rubber were firm at Rs. 61. Spencer & Co., came in for good attention at Rs. 13-5. Dehri Oil Refinery were easier at Rs. 13. Paper shares were quiet with Mysore at Rs. 31-8 and Titagur at Rs. 29-10. Orient Paper were relatively steadier at Rs. 36. Midnapore Zemindary were Rs. 147-8, I. G. N. Rs. 150, Assam Saw Rs. 6-4 and New Asiatic Rs. 14-5. Ruby General Insurance have improved further to Rs. 24.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, February 3.

THE local stock exchange showed a mixed trend during the period under review. As though in sympathy with the Calcutta market, both operators and investors bestowed their undivided attention only on two sections, Textiles and Steels, to the complete exclusion of other shares. The rather easy conditions noticed towards the middle of last week were interpreted by some as an indication of a re-

*After transferring Rs. 50,000 from War Risk Insurance Reserve.

†After transferring Rs. 1,00,000 from Dividend Equalisation Reserve and taking into credit Rs. 3,73,840 being estimated tax refundable and excess provision for taxation in previous account.

(Half-yearly General Meeting, 17th February, 1944 at 12 noon).

Audited accounts for the half-year ending 31st October, 1943:—

After adjusting the provision made for taxation in the first half of the Company's Income Tax year and allowing for estimated refund of Tax, the result shows a loss of Rs. 41,743-11-8. After bringing forward the balance from the last account and transferring Rs. 1,00,000 from Dividend Equalisation Reserve, there is a balance at the credit of Profit and Loss Account of Rs. 92,237-2-8. From this the directors recommend payment as follows:—

	Rs.	A. P.
Dividends on Preference Shares at Rs. 3-8 per share	31,500	0 0
and on Ordinary shares at Rs. 3 per share	36,000	0 0
thus absorbing Rs. 67,500 and leaving Rs. 24,737-2-8 to be carried forward.		

During the half-year the Industry was gravely affected by coal shortage resulting from transport difficulties aggravated by breaches of the Railway due to floods.

In order to assist the wagon situation the Indian Jute Mills Association agreed to take delivery of coal in bulk at Central depots, thereby enabling the Railway to deliver in train loads instead of to individual mills in separate wagons.

Unfortunately coal arrivals at the depots were disappointing and the depot set up by the Association to supply mills in the Budge-Budge area failed to operate successfully and had eventually to be closed down. As a result the mill remained closed for lack of coal for a considerable period at a time when most of the Industry was working.

During the half-year the weekly hours of working under the Indian Jute Mills Association Working Time Agreement were 60 until 15th May and 54 thereafter, 10% of the total looms being silent from 17th May to 14th June inclusive. This represents a total of 1,131 hours for the half-year, after deducting 270 hours lost in the five emergency closed weeks fixed by the Association for the whole Industry. These 270 hours cannot be made up in the future. In addition, however, a further 358 hours of working were lost by the Mill for lack of coal. Of these, 30 hours were made up during the closed weeks in the half-year, and the Company is entitled to make up the balance as and when circumstances permit. For the reason explained above the total time lost is considerably more than the average for steam driven mills, while electric mills have not been appreciably affected except for the five weeks in which the whole Industry was closed.

Since it was necessary to pay allowances and provide food at very heavily subsidised rates for the labour throughout the period, and since all costs are rising, very little economy in expenditure was possible so that the loss of production resulting from a total reduction of 598 working hours (equal to 43% of those authorised under the Working Time Agreement) has increased production costs enormously.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 21,00,000 in 12,000 Ordinary and 9,000, 7 per cent Cum. Pref. shares, both of Rs. 100 each fully paid up.

		Total Liquid Assets	82,65,681

HUKUMCHAND JUTE MILLS, LIMITED.

(Meeting held on 26th January, 1944).

Audited accounts for the half-year ended 30th September, 1943:—

The Revenue Account, after deduction of Interest, Commission etc. shows a profit of Rs. 9,78,220-10-2 which the Directors recommend should be dealt with as follows:—

	Rs.	A. P.
Depreciation	2,00,000	0 0
Reserve for Taxation	4,50,000	0 0
Paying Preference Dividend for the two half-years ended 30th September, 1942 at the rate of Rs. 7 per cent per annum	2,80,000	0 0

leaving a credit balance of Rs. 48,220-10-2 to be adjusted against the debit balance of Rs. 8,85,872-14-6 brought forward from the previous half-year, leaving a net debit balance of Rs. 8,37,652-4-4 to be carried forward.

During the half-year the Mill has worked 60 hours per week from 1st April to 15th May, and thereafter 54 hours per week with 10 per cent looms sealed up to 12th June. A considerable number of loom hours were lost through breakdown of a 650 H. P. Motor. Under the terms of the supplementary agreement all Mills in the membership of the Indian Jute Mills Association had to close down for certain specified periods. In addition the Mill had to be closed altogether for further long periods owing to want of coal. The position with regard to coal continues to be precarious and frequent stoppages of work have already occurred due to coal shortage during the current half-year.

Results for the half-year were thus adversely affected. Prospects for the current half-year are far from bright.

Managing Agents.—Messrs. Ramdutt Ramkissendass.

Authorised, Issued and Subscribed Capital—Rs. 70,00,000 in 4,00,000 Ordinary shares of Rs. 7-8 and 40,000, 7 per cent Cum. Pref. shares of Rs. 100, both fully paid up.

Synopsis of the Balance Sheet as at 30th September, 1943.

(Annual General Meeting, 25th February, 1944 at 11-0 A.M. at Cawnpore)

Audited accounts for the year ended 31st October, 1943:—

	Rs.	A. P.
The results for the period after providing for taxation and a bonus to employees, show a profit of	4,08,128	5 4
from which has been deducted:—		
Depreciation	1,50,000	0 0

to which has to be added the Carry Forward from the previous year

Less, interim dividend on Ordinary Shares for the year ended 31st October, 1943

Leaving at credit of Profit & Loss Account This balance the directors recommend should be disposed of as follows:—

	Rs.	A. P.
In payment of a dividend of 10 cent on the Preference Shares	60,000	0 0
In payment of a dividend on the Ordinary Shares of Re. 1 per share	90,000	0 0
Carry forward	70,885	14 4

The Factory commenced crushing on the 10th December, 1942 and continued until the 31st March, 1943.

The season was remarkable for almost ideal climatic conditions in the area serving the Company's Factory, with rainfall abundant and well distributed. The incidence of disease was notably lower than in previous seasons, indicating that the measures of control carried out by the Company's staff had achieved results. The sugar value of the cane treated was fully maintained, the figures for recovery being very satisfactory.

The Industry in the Provinces of the U. P. and Bihar was directed by Government to treat all the cane which might be available, as stocks of sugar in the country had been greatly reduced, and a season of 120 working days was confidently expected by Government. This estimate has proved to be much too optimistic and very few factories in the two Provinces have recorded a season of this duration: One of the chief causes of this miscalculation on the part of Government was the severe competition experienced from the manufacture of Gur, prices for which had risen to fantastic levels, coupled with the fact that Government had not raised the minimum price for cane from 8 annas to 10 annas per maund until the end of December, 1942. The late announcement of the enhanced price for cane also had the unfortunate effect of diverting considerable areas to grain crops for which most attractive prices were ruling, with the result that a large proportion of next year's crop will be represented by ratoons, which is very undesirable as this means a much reduced yield per acre and tends to carry on disease from year to year. Prices for sugar were raised by Rs. 2-5-0 per maund as from January, 1943, which would have represented adequate compensation for the increased cost of raw material if a factory could have worked for 120 days with reasonable efficiency. In the case of the Company's Factory, however, the enhanced price obtained for sugar has not covered the extra price paid for cane and the higher cost of production on a much curtailed season.

As regards Government Control measures, these would seem to be working more smoothly, but there still remains the question of transport difficulties. Sugar deliveries, since the introduction of the system of permits by the Sugar Controller for India, have been satisfactory. The entire 1942-43 season's sugar has been disposed of.

For season 1943-44, Government's policy is aimed at a maximum of sugar production, but it is doubtful whether factories will be able to obtain all the cane that may be available as facilities for the transport of cane may be even less than during the last season.

Government has not yet declared any policy as regards season 1944-45, and the directors fear that this delay on the part of Government in declaring their intentions may have an adverse effect on plantings for season 1944-45.

Managing Agents.—Messrs. Begg, Sutherland & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 15,00,000 in 90,000 Ordinary and 60,000, 10 per cent Cum. Pref. shares, both of Rs. 10 each, fully paid up.

TREASURY BILLS

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Feb. 8, 1944. Total amount offered was Rs. 13,34,00,000. Tenders at Rs. 99-13-3 were accepted in full and those at Rs. 99-13-3 were allotted approximately 61%. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-12-0 per cent per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Feb. 15, 1944 in Bombay up to 11 a.m. and up to the close of business on Feb. 14, 1944, at other centres. Successful tenders should make payment on Feb. 18, 1944. Other conditions are as usual.

During the week ended Feb. 4, 1944, Government of India Treasury Bills for Rs. 1,87,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday evening.

MONETARY unification in French Africa secured by the new financial and mutual aid agreement with Britain contains a promise of what may be expected if the White and Keynes Plans are not reconciled or the parliament of the two principal countries develop divergent views. The despatch of an envoy from Algiers some months ago indicated that the French National Committee looked beyond diplomatic recognition. The agreement evidently displaces that negotiated with General de Gaulle earlier, and the main fact is that the Algiers franc will be the same as the Brazzaville franc in exchange value. The effective rate is 200 to the £. Against the large depreciation undergone by the franc at home like the lira, the depreciation as compared with 1939 is inconsiderable in respect of the North African currency. The implications of mutual aid in the case of Syria and Lebanon was touched upon. The two territories are preparing for independence and the Syrian pound divided into 100 piastres is to survive as an independent currency. In the past the Syrian pound was equal to 20 francs but the present value in francs must be greater. Since Syria's imports have always exceeded exports, and the principal Syrian markets before the war was Palestine, the scale of Allied assistance in return for and promised will determine the position of the Syrian pound.

The Belgo-Dutch financial agreement may not have been without influence on the Anglo-French monetary pact which, in Sir John Anderson's opinion, is to be the foundation for further agreement. The £ sterling's value in the French Empire is fixed, and the cessation of the Colonial Empire's trade with France gives Britain great influence in spite of sporadic local disturbances. It may be inferred that the fixation of the rate is in line with the arrangements in force in August and the provisional stability aimed at in the White Plan has been secured. The main question as to postwar currency arrangements has been answered by a pact that takes due note of the wartime depreciation of sterling but no more than because the French National Committee's work entails the maintenance of the paper currency's value. Values in Tangier of both sterling and franc should duly reflect the arrangement concluded with the French National Committee. Obviously there would be a surplus of francs at the disposal of Britain and from the postwar angle this should be useful, because it looks as if the machinery of trade will turn more on payments agreements than on a formal, all-embracing pact. It should be helpful in the long run to Occupied countries to look beyond the relief period to the stability of sterling, and the point that has been repeatedly brought out is that sterling's external value will be wholly independent of small changes in the U. K. price level and take note only to a limited degree of the depreciation of other currencies. As a recent cable indicated that the dollar of the Third Term is as much bonorony as anything known the question of India building up dollar reserves for future imports appears superfluous. There may be a surplus of cotton in the U.S.A. but the farm outlook is a big factor in the inflation situation. There have been strikes by both juveniles and adults work at Ford plants is dislocated like work at various war plants and the Administration has made no headway. Congress has stuck to its amendments to the

Tax bill of September and the deficit in 1944 threatens to be larger. Efforts to get money for war bonds through sales even in cinemas through the box office may be intensified but this is election year and the revolt of the South has led to a real defeat over the soldiers' ballot. Indeed the Illinois primary's choice of MacArthur for the Presidency may be a factor in the soldier's vote. But the political confusion has made Wall Street tired, and the limited recovery in the leading stocks has been taken note of in Bombay.

Soviet gold sales to Iran may or not be a disturbing factor. If the gold is meant to strengthen the real—the exchange rate has been twice revised though the inflation is not wholly reflected in the alteration—the Soviet Union's financial assistance may be welcomed. Whether the Soviet Union will offer gold for hessian or tea from India procured from India need not be asked because the U. K. C.C. deals with these things. But gold imports and sales are described as a remedy for inflation in India and Sir Jeremy Raisman's reply that gold sold by the Reserve Bank met from the E.E.A. and the U.S.A. strikes at the root of the belief that the gold was bought in South Africa which made a profit. Since a gold sovereign was sold for over £4½ (A) at a sale in Australia where the cost of living is controlled by price ceilings, the prices paid by Indian buyers of foreign gold is not too high. As to who took the profit and why questions will recur while the higher premium will raise questions as to the future exchange rate for the rupee in relation to sterling. If the rupee is depreciated the essential imports would be more expensive, and the advantages to exporters dubious, since the bulk of India's foreign trade after the war will be with the sterling area.

The argument to leave well alone will not be heard till the international agreement is ready. But to all appearances the U. S. situation checks optimism as to an agreement, and the only thing that can be said now is that

Lord Keynes is not likely to be the chief adviser. Prof. Robbins is the adviser attached to the Chancellor of the Exchequer. He too has gone to Washington to confer and his inflexible orthodoxy may have a larger effect on post-war policy than guessed.

Financial control in America has led to a scrutiny of foreign assets held by U. S. nationals. Returns as to assets have to be filed with Consulates before March 15 and exemption is given only to those whose property is less than 1,000 dollars in any country or 10,000 dollars all told. The U. S. Treasury has called for a census of property abroad. It is clear that vesting orders are not proposed and there is provision for waiver of exemption as also exclusion of the armed forces. The census ordered by notification in June was ordered as part of economic control and warfare. It was a consequence of the successful invasion of Europe in the summer but it was duly explained that the registration of claims against enemy countries was not a purpose of the census. Attention has been drawn to American interests in Allied companies etc., on which information is required by the Treasury and the estimates previously made as to overseas investments and income in Europe and Asia should be modified where the census of property is complete. Compliance with the Treasury's instructions was insisted upon. The present blocking of assets and the ban on remittances may have increased property belonging to American citizens in India during the war years.

The declaration from Madrid as to Spain's neutrality has not led to any recovery in Rio Tinto though it has resulted in the release of Italian shipping in Spanish ports. The declaration may be viewed askance by those who have noted Spanish volunteers intervention in Russia or the efforts made to promote the Montoire agreement in 1940 between Vichy and the Nazis. The Spanish Government's declaration was forced by the U. S. ban on oil supplies and was an appendix to incidents of various types. Satisfaction over Tangier where the convention of 1925 has been ruptured is still due from Franco but the efforts made to secure tungsten for the Allies at very high prices should benefit Spanish exporters. The shift from non-belligerency to neutrality may bring about an industrial revival in Spain which benefited as a neutral in the last war and has benefited to some degree in the present war as Spanish shipping and the coal trade have made real progress for obvious reasons. Allied assistance to Spain will probably be very limited as compared with assistance to Portugal.

The attack of a New York evening paper on the agreement over the Middle East pipeline with two companies has brought into focus U. S. ambitions, engendered by the five Senators' demand for more oil for the war from the Middle East. Saudi Arabia and Kuwait are the States most interested, and the advance recoverable in instalments over 25 years to two companies is suggestive of a late compromise in Washington with Big Business. A pipeline (presumably from Hase t. Beirut) will bring up questions of armed protection and extra-territorial rights but Mr. Eden's reply in the Commons indicates that Britain was not unprepared for the developments. The market's interpretation is shown in the small rise in Anglo-Iranian oil. After the war questions as to markets would arise but the Soviet Union is a weaker competitor than in the past, and the share-out would not be disadvantageous to Britain which is known to have interests in Saudi Arabia.

A Working Compromise

The communique issued by the Bengal Government early this week regarding the acreage of the jute crop and the prices of raw jute embodies the decisions arrived at by the Provincial and Central Governments on some of the tangled issues connected with jute. The basis on which jute and jute goods will be produced and marketed for the next one year and more has apparently been well understood between the two Governments. Normally, in matters connected with jute, the jute industry and the jute-growers are regarded as the principal pair of opposing interests. But in the present condition of food shortage, the possibility of diverting a part of the land normally under jute to the production of rice accounts for a not too helpful cross-current. The foreign governments are also in the picture; as large scale consumers, their requirements have to be taken into account for deciding the size of the jute crop; and prices of jute goods cannot be determined without reference to their wishes. Within the province, there is always keen competition among the political parties for championing the cause of the jute growers. Obviously, in a position like this perfect agreement between all parties is too much to ask for. To the extent that the Government of Bengal is genuinely solicitous of the interests of the jute-growers of this province and the Central Government of the interests of the jute industry as well as of the Governments which are the chief consumers of jute goods, it is reasonable to assume, prima facie, that the decisions now announced represent a working compromise between the various interests that are in conflict. On this ground, at any rate, the communique is to be welcomed as settling the uncertainties which with time can only become more disastrous. It will be clear from a glance at the terms of the communique that there is a division of functions and responsibilities between the two Governments and that, given a degree of understanding and co-operation between the two, the ultimate results may be far better than one would be disposed to think at the present moment.

The communique is obviously the result of deliberations in a conference held recently at Delhi. The first question on the agenda of the conference was, doubtless, the size of the jute crop for the next season. The Indian Jute Mills Association is known to have pressed for a larger crop while the general public is more impressed with the need to increase food production by diverting land from jute to rice. The Bengal Government, on the other hand, has been making it clear that any increase in the size of the crop should be followed by an assurance of purchase at specified minimum rates and that the ryot should be compensated to a certain extent for the increased costs of living.

The old controversy regarding the utilisation of jute lands for foodgrains can never be satisfactorily solved. While it cannot be denied that there is need for production of food grains on as large a scale as possible, certain quarters emphasise that Bengal's monopoly of jute crop should be carefully preserved and that the maximum advantage should be derived from the existing conditions. The danger of assuming that we have a free hand in jute can never be overstressed. What is more, of the total area under jute of 54 lakhs acres, 4 lakhs acres cannot be used for any other purpose and only 27 lakhs acres could be sown for jute. The possible addition, it is contended, constitutes a very small proportion of the total acreage under the rice crop. The force of this argument cannot be disputed. Jute is still the cheapest raw material for packing purposes and both the war effort and the future of the industry suggest that the growth of jute has to be encouraged. The decision of an 8 as. crop has apparently been made with due deference to these diverse considerations.

A more knotty question is that of prices. According to the communique issued this week, minimum prices have been fixed at Rs. 15 for Indian Jat Middles and maximum at Rs. 17 per md. for the same quality of jute. Both minimum and maximum prices will be fixed under statutory orders to be issued by the Government of India. The Government of India will also under statutory orders simultaneously fix maximum prices for manufactured goods. The Government of India undertakes to buy all crop, old and new, upcountry or in Calcutta, and will maintain prices at the above level in Calcutta and at parity prices upcountry. It is said that the Bengal Government will take the necessary steps to give the grower the full benefit of this arrangement and ensure to the cultivators as high a price as possible.

It is noteworthy that the maximum price fixed for Indian Jat Middles is the same as that announced by the Indian Jute Mills Association in the middle of 1943 following the placing of an American order with the Calcutta jute mills. According to the by-law and order passed by the Committee of the Indian Jute Mills Association, members were prevented from paying any price above Rs. 19-8 per md. for the best quality of jute. Other kinds of raw jute were similarly governed by maximum prices in accordance with the market potentialities. Purchases were restricted to the extent of jute required for the execution of the order placed by the U. S. Government. The new decision, therefore, means that statutory recognition has been accorded to the prices fixed by the Indian Jute Mills Association. While this may be said in one view to be a vindication of the action taken by the Indian Jute Mills Association several months back, it may also be argued that the Bengal Government have either not cared, or failed in their attempt, to secure a higher maximum for the jute-grower. But no one can overlook the guarantee of a minimum price at a fairly high level, which is, indeed, a great achievement. The assurance is, perhaps, different from that given on an earlier occasion by the Central Government. It is not clear whether the Central Government has, in its turn, received the assurance from the U. K. and U.S.A. Governments, whose interests have to be considered before deciding to maintain the quota at 8 annas of the basic acreage of 1940. But in view of the fact that jute supplies would be needed on a large scale after the cessation of hostilities in the West, it is reasonable to assume that the U. K. and U.S.A. Governments have given the assurance that all surplus jute would be purchased at the minimum rates. The fear, therefore, that minimum prices cannot be enforced in case of a surfeit of stocks cannot be quite justified.

It is mentioned in the communique that the Government of India will simultaneously fix the maximum price for manufactured goods. But the price has not been mentioned as in the case of jute. The significance of the difference may be easily exaggerated. But it seems unreasonable to expect the price to be fixed at a higher level. The maximum prices fixed by the Indian Jute Mills Association for jute goods were relatively higher than the maximum prices fixed for jute. The Indian Jute Mills Association's case, however, was that the bulk of the production was sold at the U.S. ceiling price and that mills have only a very small margin of profit on these sales. Having regard to the fact that there has been a further increase in production costs and that several units of the industry have suffered seriously in recent months owing to the compensation paid to labour and the loss in working hours due to lack of adequate supplies of coal, a reduction in the maximum prices fixed by them may well involve unfairness to the mills. It has been said that there are some anomalies in the rates for standard goods. Perhaps advantage might be taken on this occasion to rectify these defects.

There are naturally some misgivings about the enforcement of minimum prices and the fixation of prices for several grades of jute. It is also pointed out that the recognised distinctions in the trade between Jat and District jute will prove to be disadvantageous to the ryot as, so far as the cost of production of these varieties is concerned, there is no difference practically. It is reasonable to assume that minor adminis-

trative difficulties will be easily overcome, particularly where an efficient modern industry like our jute industry is concerned. The basis of the whole scheme is the understanding and co-operation between the Bengal Government and the Central Government; and if the latter has taken care to take the consumer Governments with it, the scheme may be said to have every reasonable prospect of success.

CHANGES IN FOREIGN TRADE

Since the consultative committee of economists offered their own views as to trade policy after the war, the Government's view of changes in foreign trade should be more or less settled. Wartime changes in demand rather than the conditions of supply determine both prices and course of trade, and allowing for the fact that a part of India's foreign trade is excluded from the statistics, we may look for guidance into the total for the first half of 1943-44 in relation to the changes recorded in 1941-42. The fall in raw cotton exports as well as the recovery in groundnut exports, are features that have continued into the present year, while the fall in re-exports is peculiar to the period following 1941-42. But the improvement under merchandise exports is so limited as to make it clear that the direction of trade has a bigger influence than ever on the exports. What is most obvious under present conditions is the very limited recovery in exports to the U.S.A. compared with 1941-42. And this may suggest that the Empire's predominance in India's export trade should settle the nature of most financial arrangements. Out of the total of Rs. 93.35 crores shown in the September trade returns under exports, the British Empire's share was Rs. 60.8 crores. In the year 1942-43 the proportion was higher and in 1941-42 the total value of exports to the Empire, excluding Burma, was Rs. 141.03 crores against Rs. 98.92 crores, the total value of exports to foreign countries.

If the war in the East has increased the dependence on Empire markets, it may be noted that India's exports to Egypt and Portuguese East Africa have fallen in 1943. The changes in the proportion of imports are suggestive of India getting more goods out of foreign countries than in 1942 though the main factor is the increase in oil imports from Iran as also Bahrain. The volume and value of imports has fallen greatly in 1943 and the Empire's share in the import trade is less than that of the foreign countries. This indicates that a great change has taken place since 1941-42 in spite of such features as the increase in oil imports from Iran and cotton imports from Egypt. The most important conclusion to be drawn is that the active balance of trade with the sterling group of countries is far larger than the active balance of trade with foreign countries in spite of such gains as those shown under exports to the Belgian Congo and the West Indies during the first half of 1943-44. The reduction in exports to Arabia and Iraq shows that other countries have already entered into competition with India, and the main justification for the Indo-British trade agreement, renewed despite the Assembly's disapproval, proceeds from such changes in exports as have followed the closure of European and Far Eastern markets. The generally accepted view that Europe's recovery would be a long-drawn-out process sustains the conclusion that the Empire must remain the principal market for India's exports independently of such changes as the increase in mica and skins exported between April and September. The increase in imports during this period under such items as unmanufactured tobacco, raw cotton, wool and coal-tar dyes is a condition of industrial progress like the increase in India's takings of textile machinery and copper. Little doubt is left as to the source of essential imports in the half-yearly period when seaborne imports of manufactures have fallen by Rs. 11.05 crores and India's own exports of manufactures have risen by Rs. 4.8 crores though it will be recognised that the chief

factor is the striking rise in jute manufactures, duly reflected in the enhanced value of Indian exports to the U.S.A.

The most important feature of the country's foreign trade is the fall in exports of foodgrains but the fall under oils and oilseeds, despite the improvement under castorseed and groundnuts, shows that powerful competition exists. Some might argue plausibly that export restrictions have prejudiced the growth of foreign trade but the Empire countries apply import controls of the usual kind since 1941 though India's export trade has benefited largely at the expense of the United Kingdom. Except for South Africa, no Empire country has entered into trade pacts. Yet the decline in exports to the Empire is attributable wholly to the disappearance of trade with Malaya and Hongkong. The postwar line-up in regard to trade policy may be settled by the Dominion Premiers' conference in the absence of an Imperial Economic Conference, but eleven years after the Ottawa agreements, it may be said that the diversion by Preference has yielded results. The main changes that have been recorded in regard to exports of raw jute, oilseeds, wool, hides and skins (all reduced in 1943 as compared with 1942) and exports of raw cotton, tea and minerals (manganese shipments in 1943 point to a strong revival) contain an important lesson as to the continuity of demand. Empire raw materials, notably, cotton, tobacco, wool, rubber and copper are far more necessary for Indian industry as the alternative sources especially the U.S.A. in regard to cotton are uncertain. It is increasingly clear that the U.S.A. now or after the war will not have the surplus of agricultural commodities for satisfying any but the claims of relief. It may be rather hazardous to urge that British export policy alone would influence the pace of industrialisation in India but it appears unlikely that either Germany or Japan would recover the old position in world trade. Possibly, the shrinkage of Europe's trade (very large in relation to the world's trade) will determine for some years the course of India's foreign trade rather than the efforts made here to advance exports in competition with colonies which might attain the position of successful rivals in respect of tea, oilseeds or hides and skins.

Since the Dominions have developed industries and Britain's own dependence on imported food is modified by the food plans of war-time, the pattern of inter-Imperial trade has changed greatly. But India's trade returns month after month point strongly to the purely temporary importance of markets like Turkey and Arabia and the enduring value of connections with Australia and the African colonies. The trade of India with countries on the Indian Ocean may inspire Australian ambition to provide either steel or wheat but the demand for jute manufactures or tea must be very small in relation to the total. If the U. K. ceases to compete with the Indian textile industry in the largest market namely India and the tariff wall is lowered in respect of such goods as motor cars and machinery over and beyond the conventional preference, the advantages to Indian shippers of other goods besides linseed and chrome-tanned leather (which benefited substantially from preference in the U.K.) would be made real in a new way. Indian sugar would possibly obtain an export market on terms and the sharing out of lost markets such as Burma would also be negotiated more easily. While it is easy to declare that export groups and planning would make a real difference to the

quantum of exports after the war, the impoverishment of all foreign markets except the U.S.A. must not be ignored. The fact that the U.S.A. takes the second place in India's foreign trade and the export surplus is based on the U.S. need for jute and jute manufactures, shellac, goatskins and carpet wool suggests that a trade pact is not altogether necessary as it was in the case of Japan which insisted that acceptance of Indian cotton should be regulated by the quota of Japanese textiles imported into India. The quota device, if employed to a generous extent, would reconcile the claims of protectionists with the requirements of agriculturists to whom the fall in imports has been invested with greater meaning than the expansion in exports of Indian textile or other manufactures.

Chinese post-war policy, emphasising the doctrine of open access to raw materials, even to the defeated enemy, assuredly would influence the manufacture of consumption goods in India, and the acquisition of overseas concerns should enable Indian industry to play a greater part in the development of China. The retention of controls for some time after the war would necessarily confer greater importance on the Empire markets which have taken Indian goods in place of German goods. Obviously, all the arguments employed by Britain in connection with the American trade pact of 1938 in regard to the U.S. balance of trade with the Empire as a whole, not Britain alone, would reappear if the strictly bilateral view were employed.

MAKE NO MISTAKE

The Japanese are no ordinary enemy. They are dishonest, brutal, lustful, treacherous. They do not honour international treaties; they maltreat prisoners of war—which even Germany does not do. There is only one way to deal with them. We must beat them, on land, at sea and in the air. We must destroy their forces utterly. We must reduce them to impotence. Unconditional surrender! Nothing less will secure India against these barbarians permanently.

IF YOU MUST WORSHIP WORSHIP ME!

*".... I am a demigod,
sprung from the loins
of divinity.
YOU are an inferior being
and your only purpose is
to obey my will
and serve my end
unquestioningly"*

So speaks the average Japanese. And he does not only speak it. He really believes it. Consider what this means. In his own view an ordinary Japanese soldier is, by divine right, the superior of the finest man in India. He is superior to men like Tagore, Iqbal, or C. V. Raman. Any Japanese soldier, trader, tailor, bootmaker or farmer really believes he is a superior being!

How can you deal with a nation like that? They are, by our standards, irresponsible and unbalanced. But if they are to be pitied for the madness that seems to be in them, remember they are also fanatics. They are dangerous!

Editorial Notes

Standard Cloth

The Indian mill industry's services in regard to standard cloth should be viewed as more important than the response to control orders. The industry accepted voluntarily the proposal to assign a part of the capacity to the making of standard cloth which was to take precedence over ordinary production though the price formula devised was far more rigid than in the case of war orders. If distribution arrangements in one or two Provinces have been inadequate the proportion of standard cloth to total production is fairly high. The mills accepted orders for 786 million yards up to the end of 1943 and produced 408 million yards for distribution to the Provinces. The largest quotas fell to the U. P., Madras and Bengal but the small share taken by Bombay may be due to the availability of other textile goods. The N.W.F.P. and Baluchistan do not appear to have shared in the supply of standard cloth to any extent. The Civil Supplies Department enlisted the regular cloth trade to deal with the supply of standard cloth and the profit margin was limited to 3 per cent while the Government concerned was authorised to charge 1½ per cent for expenses. Advisory Committees were set up to assist in the distribution and the working of the scheme in Bengal after the false start in 1942 has revealed that imports of essential goods, namely food and textiles are needed to supplement local production. Interest in the unsold portion of the quantity ordered may be limited to the poor, but the principle of rationed supply will, probably, be retained. As between town and country it is claimed that the latter has been favoured in regard to standard cloth and the only check on the consumption of standard cloth may be a revival of the handloom industry in the country-side though the recent hardening of yarn prices might prejudice revival.

Trade in September

September's trade returns point to a recession in regard to British India's imports and exports alike. The change is not very important as the surplus is considerable and the half-year's totals answer to expectations. The fall in exports as compared with September 1942 was governed by the decline in exports of tea. The main lesson to be drawn from the fall in exports of tobacco this year is the increase in home consumption. Colonial tobacco may improve its position in the British market but India's manufacturing industry is admittedly large enough to support the proposed improvement of tobacco cultivation. The increase in exports of jute manufactures is largely connected with

the recovery in India's export trade with the U.S.A. in 1943. The effects of control are visible in the decline noted under hides and skins as well as leather. The expansion of home demand accounts for the fall recorded under metals, iron and steel, machinery, chemicals and most manufactured exports. The increase in exports of woollen goods is another effect of control, though it may be noted here that relaxation in the interests of consumers has been promised already. In the first half of 1943-44 the most significant and reassuring features are the rise under exports of tea and jute manufactures as compared with 1942-43. The food crisis in Bengal had apparently little effect on overseas trade and in the case of tea and jute manufactures, the rise in prices was not a material factor. Of the staple exports only cotton shows a small increase in value and raw jute suffered in 1943 a setback which explains the stagnation in prices.

The fairly large decline in exports of oilseeds may be due to the forcing up of prices in India as well as the rivalry of West Africa (British and French) in regard to export markets. The export statistics indicate that exports of rubber manufactures have increased while raw rubber exports have ceased. This may point to the smooth working of control. Indications of scarcity are furnished in the figures relating to paper and stationery as well as iron and steel. The continued decline in textile imports is an established feature but Indian industry's present handicaps are to be measured by the fall recorded in chemicals, machinery and metals. The fall under imports of all manufactures including liquors and oilmanstoes explains the efforts to increase supplies and to secure a readjustment of prices. High prices rather than shipping difficulties lie behind the marked decline in exports of cotton yarn and manufactures from April to September. But the main change since 1941 has been a decline in India's exports following a decline in imports and questions of post-war trade policy therefore acquire real importance as Indian agriculture is still dependent to some extent on exports.

West African Prospects

Except for unilluminating entries in respect of India's sea-borne trade with Nigeria each month, there is little known about the developments in the Colonies. It was casually recorded that events in North Africa produced an effect on Accra but the continuous trade contact with West Africa has been lacking. South Africa is known to be keen on developing trade beyond the Belgian Congo. East Africa has received much attention on this side

but so far export organisation seems to have been held up by import control. Colonial production notably on the mineral side has developed rapidly and Britain's interest was indicated in the appointment of Lord Swinton to a new post in 1943. Special efforts are made to increase cloth supplies from Britain for West Africa and allocations have been based on an expanding market. In November, it was noted that in spite of the increase in local stocks demand was heavy. The Board of Trade laid down the rule that Nigeria should receive 70 per cent of cotton cloth allotted for export to West Africa, the Gold Coast 22 per cent, Sierra Leone 6 per cent and Gambia 2 per cent. Like the recent decision to buy up all Colonial sugar for Britain's use, the decision as to cloth will make Indian shippers take note of what Lancashire has planned without persuasion. British shippers agreed that ceilings for export prices were required. Economic conditions in Nigeria are known to be satisfactory at present as good prices for both cotton and groundnuts are assured. Cocoa prices have been increased slightly on the Gold Coast where groundnut prices also have been increased to stimulate native production. Cotton cloth supplies from India and the U.S.A. are expected to supplement British exports. The rise in prices here is said to have interfered with the expansion of trade. Shipping facilities should be better and the application of price control to Indian cloth exports should make for the maintenance of India's position as a supplier of colonial markets. The most considerable change of 1942 was the importance of markets like Nigeria and Portuguese East Africa for India's exports. But a setback was recorded last year owing to the scarcity and high prices in India. Britain recovered the larger advantages

promptly while Indian exports were lower in 1943 than in 1942. The cotton industry's export side should therefore be reorganised, for West Africa today is more than a market for Madras handkerchiefs. Efforts to improve import trade should naturally be linked with development of promising Colonial markets.

More Banks and Branches

The progress of Indian banking last year is reflected readily in the increase in the number and value of cheques cleared in the three months ended November, 1943 as compared with 1942. The most important changes in the quarter are the addition of three banks including the Bank of Mysore to the Second Schedule. The Bank of Mysore with its offices outside British India is widely known to be a strong and stable institution with resources equal to those of any bank in South India. The addition of three more to the list of scheduled banks has raised the total from 47 at the end of March to 60 at the end of December. The exchange banks numbered 17 out of the total and the branches limited to 85 showed no increase. The five leading jointstock banks, however, reported an increase in branches from 359 at the end of December, 1942 to 431 at the end of September, 1943 since which date another increase is likely. The total number of branches rose in a year from 1,953 to 1,725 of which the Imperial Bank claimed 393. The increase in the number of branches is accompanied by an increase in the resources. As was noted the cash ratio is higher and the proportion of bills and advances to deposits better than in 1942. Excess of balances with the Reserve Bank over the statutory minimum continued to increase and the increase in bank deposits in the final quarter of 1943 was as much as Rs. 67 crores. More significant in a way is the increase in resources reported by non-scheduled banks. Their position in regard to cash ratio showed no striking change, but the increase in time liabilities is a measure of the stagnation of interest rates and the confidence of small investors comparable to the increase in time liabilities in the case of savings deposits held by the Scheduled Banks. The consistent increase after 1941 in the number of banks furnishing returns as to the distribution of deposits and cash balances held is invested with special importance because legislation in the future must cover all banking companies as defined in the Indian Companies Act. The important developments of 1943 are not limited to scheduled banks but the large volume of classified statistics (the publication of which has been taken over by the Reserve Bank) alone will throw light on the distribution of the gains in deposits. In spite of frenzied pleas for an exchange bank and and overseas connexions, the balance of advantage may lie with internal development, especially, as the increase in branches is unaccompanied by any signs of saturation.

Rayon Possibilities

The outstanding feature of India's textile imports, up to the outbreak of the war was the increasing proportion of rayon yarn and fabrics. The growth of the rayon industry abroad was accompanied by an increase in India's takings and questions have, therefore, been asked as to the prospects for indigenous manufacture. Both short staple cotton and linters are accept-

able raw materials and bamboo pulp also presents possibilities. The Industrial Research Bureau and a private concern have examined the operations and the findings were not hopeful. But more recently, the plea for a rayon industry has been advanced even on the basis of imported wood-pulp. The A.I.M.O. concludes that the viscose process alone is desirable and describes the conditions required for successful development. It suggests that Ambernath near Bombay, Dehri-on-Sone in Bihar or a big town in Mysore near the Cauvery are potential sites worth further investigation. Cheap power is an essential for the rayon industry so that, conditions also must be satisfied. The three important chemicals wanted for artificial silk manufacture are carbon disulphide, caustic soda and sulphuric acid. The last two are available in India since home production is increasing. Other chemicals required may also be obtainable in India through the development of chemical enterprises.

It has been argued that establishment of rayon manufacture is mainly a matter of

chemical technology and India has the resources. Labour could be trained in a few months and a factory producing 4 tons per day would claim only 750 workers though the optimum factory should have a capacity of 6 or possible 10 tons per day. The advantages are a big market, hitherto dependent on imports, and the tariff. The A.I.M.O. courageously outlines the prospects for more than one rayon factory, but proceeds on the assumption that a concern with a capital of Rs. 1 crore, with Rs. 25 lakhs assigned for working capital from the outset, could set up a factory. It is claimed that rayon manufacture will assist in the production of staple fibre and cellophane. The former could be produced in India so as to reduce imports of superior cotton. It is urged that locally rayon could be made at 8.17 annas per lb. Estimates as to profits arising from the sale of rayon made in India at 12½ annas per lb. are offered, and the return on an investment of Rs. 1 crore is put at 18 per cent exclusive of the profit on staple fibre and cellophane. Advice to Indian industrialists

To intending buyers of New Trucks

associated with the chemical and textile industries already to form a company has been offered along with a suggestion that competition on the part of industrial groups must be avoided.

Strikes in 1942

The strike statistics of 1942 have appeared recently and as one may expect the chief feature is the increase in the number of disputes and the number of workers involved. The total number for British India was 694 involving 772,653 workers against 359 involving 291,054 workers in 1941. The total number of days lost in 1942 was over 5.7 millions as compared with 3.3 millions in 1941. The August disturbances had their own effect on industrial peace, while conclusions drawn from the increase in major labour disputes in 1942 must also be duly related to the rise in the cost of living since 63 per cent of the trade disputes reported turned on wages or bonus. In a fairly large proportion of disputes the workers duly won. The industry most affected by the strikes of 1942 was the textile (cotton, silk, wool and jute). The province where disputes were most numerous was Bengal which reported 222 strikes in 1942 but the largest number of unsuccessful strikes took place in Bombay indicating that more political strikes occurred there. The N.W.F.P. has a special distinction in reporting no labour trouble during 1942. Strikes were most common in August-September and at the end of 1942 only 13 strikes had not terminated. In the tabular analysis appearing in the Labour Gazette as many as 378 strikes are described as unsuccessful. That may be due to the political origin of the 1942 strikes and the only inference permissible is that abnormal factors caused an abnormal increase in trade disputes. The computed cost of the August disturbances must include the loss of wages for workers who were induced to strike. The statistics available however indicate that the strikes were not prolonged since 113 disputes terminated in September 1942.

Spain—Non-belligerent to Neutral

Spain's proclaimed desire to maintain neutrality and make others respect neutrality is a consequence of the U.S. decision to suspend oil supplies. Reference has been made to tungsten shipments and Berlin credits as illustrative of the non-belligerency that was announced in June 1940. The U.S. Government's decision to withhold oil supplies followed Soviet protests as to the Blue Division employed abroad. General Jordana's report on the international situation led to a declaration of neutrality in Madrid that reflects more than mental confusion. From Tangier the "Daily Express" correspondent reported that Franco was preparing for changes. The decision to let Italian ships out of port is a direct result of the variation of neutrality. The "Daily Express" also reported that the British request that Germans should leave Algieras was complied with. Further, British planes from Gibraltar can fly over or near Tangier territorial waters without Spanish anti-aircraft batteries going into action. The high value of the oil sanction is proved by the "Daily Express" report. American petrol experts calculated that Spanish stocks including military reserves, would last barely eight weeks after which four-fifths of the country's industrial activity must stop and the important fishing fleets which bring in a large part of Spain's food would be

rapidly immobilised. Mention was made of sabotage in Spanish harbours and the threat to British and Italian vessels there to indicate the concern that produced representations. The Cabinet's agreement as to obligations of neutrality may suggest that Spain has bowed to the inevitable. The example set by Argentina cannot be overlooked by the Spanish Government. Most outstanding questions were only recently discussed by Sir Samuel Hoare with General Franco and the Spanish Envoy in London came back to report.

Sir Samuel Hoare's mission has been a complete success since Spain came round from partiality for one side to the view that neutrality is not reconcilable with the claims for assistance. Recovery from the Civil War is a slow business in Spain and the Franco regime rests on rather weak foundations. The growth of corruption nourished by black markets, is a real symptom of the distress prevailing in Spain. The dictator's personal popularity is known to have fallen last year and the effort to restore prestige has taken the form of a dissolution of the Fascist Militia. The Falange's weakness explains the declaration to the Powers engaged in the war. The Spanish figures as to unemployment may suggest that recovery was uninterrupted from 1942 but the cost of living was high in 1942 and afterwards. The main change indicates that profiteers thrive at the expense of the people. Observers of the Spanish scene have commented on the growth of luxury hotels and the supply of scarce goods at fancy prices, while the increase in Spain's foreign trade in 1942-43 was derived from the larger output of coal, lead, zinc and copper recorded in statistical bulletins.

Australian Manufactures

Australia where the use of saucers was banned by Government order has plans for increasing the output of cutlery and crockery. An increase of production has been decided upon and the severe shortage is expected to pass. Development of the use of cupra—a waste metal product from munitions manufacture—will help in the greater output of spoons and forks. According to the latest news-letter from Australia, articles made from cupra are stated to compare favourably with pre-war imported types in point of quality and price. Utility kitchen utensils made in Australia will include kettles, pans, buckets etc., and utility glassware output is to be raised by 40 per cent. In any case, Australia has passed through the shortages and the conversion of a grenade factory to the manufacture of alarm clock is admittedly a sign of the new times. In Tasmania, where the aluminium production plan is to be carried out, will be the new centre of fertiliser production. The Electrolytic Zinc Company's aim is to set up a big sulphate of ammonia plant so as to make Australia independent of imports. Sir Colin Fraser addressing the company's shareholders at the annual meeting outlined the new use for sulphur derived from the zinc plant. Situated at Risdon, the plant would require 30,000 hp. of electrical energy entailing therefore an addition to power supply facilities in Tasmania while construction would help employment. The Electrolytic Zinc Company's works are the third largest in the world and extensions are being planned.

Australia's food programme, calling for an increase in subsidy payments to wheat-growers this year, is to be supported by an

increase in the output of farm machinery. Pea-harvesters and potato-diggers will be among the new types manufactured in Australia. Owing to imports under lease-lend being limited, the Australian Government asked home manufacturers to produce 80 per cent of the machinery wanted. The most recent departure in steel production reported is the investigation of a proposal to manufacture tramway rails by the Broken Hill Pty at the instance of the Melbourne Tramways Board. Successful production of grooved rails would save the cost of imports in the future. Distillation of power alcohol from grain has been well established and the £1½ millions invested in four distilleries should yield 12 million gallons of fuel in a year. Apart from the beginning made in respect of hyoscine, derived from a shrub found in New South Wales, there is mention of a shark liver oil industry developed largely on account of the lack of cod liver oil. The beginning made in India has not been overlooked in Australia where a start was made in 1940 and fisherman are encouraged to take more snapper sharks whose flesh has assumed new importance as a wartime food. The manufacture of spectacle lenses and frames is to be undertaken in Australia this year. By the middle of the year the country's requirements would be met from home factories. Production of optical glass is assured of success and experts are confident that Australia's 1,800,000 spectacles users would find the local product up to the highest overseas standards.

Europe's Population Changes

Tables appearing in the League of Nations statistical bulletin indicate that the birth rate in Britain has followed directly the improvement in national health. War has also brought a decline in the death-rate. In spite of Marshal Petain's "cri de coeur", the birth-rate in France was lower in 1941 than in 1940. There was also a fall

in the German birth-rate, pointing to a late reversal of the trend established in the Nazi regime. German occupation has influenced the birth-rate unfavourably in Belgium but not in Bohemia or Denmark. There is, as may be expected, close correspondence between the birth-rate in Ulster and that in Eire. Both are as usual higher than that for Great Britain. Neutrality does not account wholly for the rise noted in the case of Sweden and Switzerland.

NORTH WESTERN RAILWAY

Following two tenders are invited on rupee basis for purchase by the North Western Railway of Stores mentioned against them.

(1) Tender No. 212-S/2/3 code word 'CACYD' for Mantles upright for Washington Lamps—17,000 Nos.

(2) Tender No. 212-S/2/6 code word 'CAZCD' for pans, mild steel, mortar—3,000 Nos. (147 cwt. approximately).

Former must reach the office of the General Manager and latter the office of Controller of Stores, North Western Railway, not later than 14.00 on Monday the 28th February and Wednesday, the 1st March, 1944, respectively. The Former will be opened in the office of the General Manager and the latter in the office of the Controller of Stores of 11-00 A.M. on the following working days. Tender forms and other relative documents can be seen at and obtained from office of the Controller of Stores on and from 1st February 1944. The sale price of each tender in duplicate is Re. 1/- local and Re. 1/8- mufasil.

Backward countries are still distinguishable by a high death-rate associated with a high fertility rate. Natural increase thus appears to be greater in the case of Albania than of Switzerland or Britain.

An excess of deaths over births is peculiar to France. The good showing made by Denmark in regard to vital statistics is proved by the death-rate of 9.7 per million in 1942. Populations that appear to be stagnant in respect of numbers in recent

years are recorded in respect of Spain which is certainly different from Portugal in regard to the movement of the death-rate in recent years. Roman Catholic countries where the prejudice against birth-control is rooted in religion have a higher birth-rate than Lutheran countries. Before the war the largest percentage increase from year to year was claimed by Albania though the claim was not proof of progress. The French population in 1941

was estimated at 39 million against 40.3 million in 1942 owing to the enforced absence of prisoners of war. Deaths arising from war are excluded from the statistics. As for Britain the birth-rate has hardly recovered to the level of 1911-13 and social security is now concerned with what Miss Eleanor Rathbone has long asked for, namely, family allowances which alone would restore the balance between age and youth.

THE FOURTH DEFENCE LOAN

1953-1955

3%

now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

AUDITOR'S REPORT

I have audited the above Balance Sheet and Profit & Loss Account with the books of the Head Office, & all the branches in Madras and the certified returns from the other branches and sub-offices, verified the cash and securities at Mayavaram, and the Madras offices, and have obtained all the information and explanations I have required. I beg to report that the above Balance Sheet and Profit & Loss Account are, in my opinion, drawn up in conformity with the law, and that the Balance Sheet exhibits a true and correct view of the Bank's affairs as on that date, according to the best of my information and the explanations given to me and as shown by the books of the Bank and that in my opinion books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

Time was when travel was a tonic. With a heavy sigh, one has to use the past tense. In less than three weeks, I have done the whole of the East coast of this vast country. From Calcutta, where rationing was getting ready, to Madras where it has functioned for some time, and from Madras to the far south where rationing and requisitioning alike impinge on a perturbed people, the journey was a long experience of public suffering, from which, I am afraid, I shall take long to recover. It is not alone the discomforts of travel during wartime, but the spectacle of widespread and varied suffering, a growing sense of administrative inefficiency and popular helplessness that makes you wish you had stayed at home and not, so to say, asked for all this suffering and sorrow. Neither the hardships of the journey nor the sorrow you feel when you are out of it is altogether inevitable. It is, of course, easy to foist it all on the war. Not the least of the evils of war is that it covers many sins of government and of administration. Think of all the evils that war is called upon to condone. From the denial of freedom to India to the inefficiency of village unions, the war is asked to take the blame off the shoulders of those who are really responsible. The war can account for shortages of certain goods and services. But can it be held to condone inefficiency or corruption in their distribution or in the growing slackness in the discharge of administrative responsibilities or the indifference to the avoidable hardships of the public? This journey has left me with a most distressing sense of public apathy and official indifference which together means nothing less than our communal worthlessness.

Take, for a start, the reservation of berths at the beginning of a journey. I have, for my part, been extraordinarily lucky and can have nothing much personally to grumble about. Through the good offices of friends and the pluck of my own agents, I succeeded at every stage in securing a goodly part of my requirements. But it would be hard to pretend that the system in force leaves little to be desired. There is, indeed, much to confirm the public suspicion that around the booking office there hang too many big pockets of corruption, that there are too many ropes to pull and that there lies no strait and narrow path to a place in a mail train. I am told that in the mofussil, buying of tickets and reservation of accommodation are for some a new line of profitable activity. Such evils are to some extent inevitable, when train services are cut to the minimum and the demand is out of proportion to the supply. But it

should be possible to remove the uncertainties which help corrupt officials to increase the hardships of the public. For instance, one often gets the promise of a berth in case of an additional carriage being attached. I do not know why there should be such uncertainty. Where the maximum accommodation you can provide is far short of what is required an additional carriage need not be contingent.

The initial difficulties are far from being compensated by the subsequent amenities of travel. The absence of a dining car, doubtless, necessitated by war conditions is by no means made up by the efficiency of refreshment rooms on the way. On the other hand, they seem to find in the war a sanction for laxity. In the South you cannot, for love or money, get food served in the compartment as of old. For chota hazri, which used to be offered most appetizingly even before day break, you have now to run up and down the platform. And for lunch or dinner, one has either to go to the crowded refreshment rooms or be content with the meagre and poor food that is hawked in packets on the platform. I do not see how the war necessitates these hardships. There is no shortage of labour or of utensils. Demand has not fallen off. And if today passengers are obliged to suffer all this, I can only attribute it to a mild sadism in some quarter of railway officialdom. The service of food in the South Indian Rail-

way was formerly one of the delights of travel in that part of the country. A healthy appetite was a blessing then. But, now, though the quality continues as high as before, considering the difficulty of procuring it, you almost wish you had a touch of dyspepsia.

All the same, I pay my tribute to the South Indian Railway as the one system which stands out best in war conditions. That I am able to compose my thoughts and jot them down while the Express is maintaining its highest permissible speed is proof and testimony that the carriage is well-sprung and kept well-sprung. In my recent travels what has struck me forcibly is the worn-out condition of carriages now in use. It looks as though the last war's coaches have been requisitioned for this and one finds around some evidence of dilapidation. Ceilings seem to fall in flakes. Floors are so full of cracks that they could never keep clean. Lavatories have but little of their equipment left and the stench is awful. As I was leaving Calcutta the other day, I noticed that the closet was in a filthy state at the very starting station, and when I drew the attention of the guard at the next halt, he said "These closets are past cleaning, they have the accumulated odour of a generation of travellers." My two journeys on the S. I. R. were a most welcome change and a pleasant surprise. The compartment was tidy and the

appointment in good repair. The cushions were in excellent state and every lamp had a bulb including the lamps for reading. Wonder of wonders, the bathroom light, too, was functioning. Most of us who have travelled in northern India must have noticed that for some months no bathroom lamp has had any bulb. Equally universal must be the experience about the late arrivals of trains. The S.I.R. trains continue to run on time and I believe this system has the best record in India as regards punctuality of train timings. Such fine achievement should not lead one to suppose that this Railway is working under exceptionally favourable circumstances. Far from it. Coal shortage affects the S.I.R. more than the East Indian or the Bengal Nagpur Railway. Being metre gauge, the S.I.R. is denied the facility of borrowing coaches or wagons from other Railway systems. In the result, there has been more drastic curtailment of trains. Such services as are left still going have to carry longer rake and far more passengers. I have always thought that the S.I.R. is the best metre gauge system in the country and my present trip leads me to believe that, despite the many problems and difficulties created by the war, the S.I.R. holds a pre-eminent place for competent handling of problems and smooth solving of difficulties.

South India has, on the whole, a stronger tradition of administrative efficiency. But that tradition is being sorely tried, what with the strain on transport and the accumulation of administrative tasks which the shortages of various goods have entailed. In Madras city, they have to ration not only rice, but also firewood, of which there is now a severe scarcity. In the mofussil not only rationing, but also procurement has to be carried out. Authority touches the individual at too many points; and the atmosphere is one of general discontent. It is wrong to underrate the difficulties of the officials concerned. But some mistakes stand out; because they affect the individual in his ordinary daily life, and it is hard to believe they are unavoidable. Take the case of the rationing of fuel in the city of Madras. One would think that the fuel ration would be related to the fuel requirements of each family, and not any irrelevant consideration like the income of the head of the family. The authorities claim that the fuel ration is decided with reference to the rice ration and the income of the family. But the fact remains that the lower income groups do not get fuel sufficient to cook the rice that has been rationed to them, not to speak of other purposes for which firewood is needed. I have been told that a family of two or three with an income of Rs. 1,000 a month get fuel enough to burn the neighbourhood, while a poor man with a family of five or six and an income of Rs. 50 per month doesn't get enough to cook one meal. I do not know who imported into fuel rationing this utterly irrelevant consideration of income. Income would be relevant perhaps, if fuel were to be supplied on credit. But since realisation of bills is the dealer's responsibility, the rationing officer might have spared himself the hardships involved in applying a complex formula which takes income also into consideration.

Of course, the mistake will soon be rectified. But I cannot for my part bear the

thought that in a country like India, the people have run short of fuel for domestic purposes. Coal shortage in Calcutta is understandable up to a point—there is wagon shortage, labour shortage and all the rest of it. But South India with its wide hill slopes and the deltas of the great river systems should always be in a surfeit of firewood. If today, fuel is so scarce, military requirements are by themselves no adequate explanation. Decades of bungling in the forest department, and the anti-social habits of the people who wink at the clandestine felling of trees in public avenues, and are indifferent to the hoary injunction to plant new trees—these and not the shortcomings of the Government must explain the unfortunate predicament of the public today. In Madras city, people are hard put to it to find fuel for cooking. Indeed, a joke in common currency is that one can get more fuel by death than by honest work. But the position in the mofussil is not much better. Price of firewood has gone up six or seven times; and today it is quite a common thing for people to fell trees in the backyard for fuel purposes. The slaughter of plant life is perhaps on an even bigger scale than the slaughter of cattle and men during wartime.

Rice rationing, it must be said, has worked smoothly and efficiently. Complaints are few and far between. The quantity allotted is slightly above requirements and insufficiency of ration is never even suggested. It is as regards quality that complaints seem possible. I say "possible" because they are not yet audible. I myself saw one sample of rationed rice which was by no means up to the mark. It is, in the nature of things, impossible to give the same kind and quality of rice week after week. And I am told that, when the rice is changed too frequently, one's digestive system tends to be impaired. In the olden days, village folk used to get their year's requirements of rice in the shape of paddy bought immediately after harvest. Each consumer looked to the drying and milling of grain himself. The milling was done locally from time to time according to requirements; and one's digestive system was not called upon to tackle strange kinds of food. But now a change of rice from week to week may well prove a serious hardship, especially if the rice is subjected to fumigation and other treatment which I am told is necessary to keep large quantities of rice in storage. These difficulties have not yet made themselves manifest. But they are bound to sooner or later. And the Government will probably realise then the folly of rejecting all remedies other than rationing.

In the mofussil, the overlapping of procurement and rationing is an interesting phenomenon. In my own village, the staff of the local high school had to invoke the Sub-Collector's intervention for securing their requirements of rice. The school hostel serves the boys a kind of rice to which the majority of them are not used. At the same time, the landowners in the village are waiting for official instructions as to where they should sell that part of their harvest which they are obliged, under the procurement plan, to sell to the Government. This juxtaposition of surplus and scarcity in each little area is strange,

to say the least of it. So far, the crop prospects are excellent in the south as in the rest of India; and conditions can hardly be better for an honest endeavour to restore normal trade conditions. Government can never do to the consumer what his customary shopkeeper can. If the harpies of profiteering are still hovering over our table, Government has sufficient powers to cripple them; and if these powers are judiciously exercised, Government can ensure the efficient functioning of normal trade in foodgrain. But Government is infatuated with rationing and is yet to realise that rationing will only tend to tie up authority in so many knots.

It is necessary, however, for the public to realise that the defects of rationing and the hardships caused by it only reflect their own defective sense of social obligation. It is not enough to tell ourselves that the food situation is better with a better rice crop. The basis of the social fabric has been warped by the develop-

ments of the last two years. All along the 1,500 miles of the East coast which I have covered in this journey, I have seen crowds of beggars crying themselves hoarse for a morsel of food. At every station at which the train stops, there are beggars on either side. Their cries are so importunate, that one almost loses one's feeling of compassion and is only concerned to drive them away. In the villages, too, one sees signs of a class conflict which has so long been absent there. The landowners are more concerned to sell their surplus grain at the highest price than to co-operate with the authorities in equitable distribution. Altogether, one must confess, the troubles and travails of the present have failed to bring the people together in a spirit of helpful co-operation. That is why I began by saying that travel is far from being a tonic and that to the discomforts of travel in wartime one must add the depression caused by the spectacle of widespread suffering.

Indo-Commercial Bank Ltd.

Very substantial improvement in profits justifying the promise contained in a circular to shareholders is the outstanding feature of the Indo-commercial Bank's report and accounts. The improvement is conditioned by the growth of deposits in a period altogether free from strain. The percentage increase is as large as that reported by other banks, but the main point requiring notice here is the substantial recovery in profits that brings dividends within reach of the holders of A and B shares. Since the increase in profits is followed by a substantial allocation to

Reserve Fund, the increase in carry-forward to provision for taxation is unimportant as compared with the proportion of dividend allocations to net profit. The part of profit retained in the books is larger than that distributed to the Bank's shareholders and the pattern of disposal contains a hint of stability that is welcome to others besides shareholders. The revival in Deposits makes it possible to predict that the Big Five have not monopolised the savings that have increased in a year that has witnessed a revival of investment, measured by appreciation of values and an increase in the internal debt of the Government.

The balancesheet certainly defeats surmise as to exceptional features, but a consequence of the slacker demand for funds is the rise in the cash ratio (33.4 per cent at the end of December in the case of the Indo-commercial Bank Ltd.). The cash balances totalling Rs. 61.38 lakhs loom as large as investments (71.44 lakhs) and Advances (Rs. 72.2 lakhs) in the balancesheet published today though their connection with Directorial policy, past and present, is obvious. These three items indicate how the liabilities totalling Rs. 182.6 lakhs (as against Rs. 152.07 at the end of June) are covered. The absence of seasonal variations in the supply of funds like the general acceptance of low rates of interest is adequately indicated in the progress reported by the smaller Scheduled Banks. It is of some assistance to deduce that banking expansion in India is independent of the rates offered to depositors for whom the service is today more important than the return. The symptoms of recovery noted in the latter half of 1942 have led to a vigorous growth of deposits in the case of the Indo-Commercial Bank though the Bank's operations are limited to one Province and the adjacent States. The revival in South Indian banking, continuous and consistent after the setback in 1938 has a significance of its own for those who argued that the antecedent to industrial and commercial progress in the South is the sound and efficient banking system of which the Indo-commercial is an important and typical member.

The Nazis' Oil Problem

With the Red Army on the edge of Rumania the question of oil becomes far more important for Germany than the prospective loss of the small Galician field. A recent summary emphasises that the oil position during 1943 did not improve to any significant extent. At the beginning of the year, enemy stocks of oil were so low that they could not be reduced further without impairing efficiency of distribution. At that time, supplies were about equal to consumption, so that there was a serious danger that if consumption rose owing to more extensive campaign—or production fell owing to air attacks, or other causes—supplies would prove inadequate and disaster would ensue. Germany's chief concern in 1943 was to build up her stocks to a safe level. In spite of strenuous effort, very little increase in production was secured in 1943. The Austrian oilfields have been developed, but this has been offset probably by the declining output of the Rumanian and Polish oilfields, so that crude oil output has remained about the same as before. The low rate of expansion in the synthe-

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, Feb. 8.

THE view that without political freedom, no industrial and commercial development is possible in India was expressed by the outgoing President of the Indian Merchants Chamber at the 34th Annual General Meeting of the Chamber held recently. While appreciating the businesslike manner in which Lord Wavell tackled the Bengal food crisis Mr. Haridas Madhavdas appealed to the Viceroy to make an early announcement with regard to the release of political prisoners. The newly-elected President, Mr. Pranlal Devkaran Nanjee, deplored the efforts of the Government of India to fight high prices by importing goods from abroad without first exploring the possibilities of developing Indian industries which, given proper facilities, could easily supply the needed materials. In the opinion of Mr. Pranlal the right of every State to restrict, regulate and even prohibit non-nationals from engrossing certain branches of the economic life of the nation has not been properly exercised by the Government of India. The establishment of subsidiary undertakings in India by foreign interests within the past few years must be an eye-opener, both for the Government and the industrialists, and any post-war industrial scheme that is finally decided upon must contain sufficient safeguards against this type of exploitation.

The Government of Bombay are spending Rs. 7 lakhs in 1944-45 under the land development and reclamation scheme, which is part of its post-war reconstruction plan, and which is calculated to develop about 1,500,000 acres of fallow land at a total cost of Rs. 15 crores. Large-scale contour bunding, scientific dry farming, conservation of soil through anti-erosion work, afforestation and terracing of hillsides will be undertaken. Already 2,500 acres of land have been developed in the Sholapur district. The Ahmednagar and Poona Districts are next in the list while as much as 70,000 acres in the Bijapur district have been included in the scheme. A survey of lands rendered fallow by soil erosion has, it is learnt, been ordered by the Government. The initial cost of these undertakings will be borne by the Bombay Government and the cultivators will be called upon to maintain the land in good condition on certain terms. The land reclamation scheme is expected to cover a minimum period of five years and provision is made for the employment of soldiers when they are demobilised. The lands then reclaimed will be used for the cultivation of food crops in preference to cash crops.

During his visit to Nasik, Sir John Colville, the Governor of Bombay, categorically denied rumours that Government were purchasing grains for export abroad. Rural development schemes were to be put into operation almost immediately and the Government have taken up the work in right earnest. The preservation of the cattle wealth of the province which is a prerequisite for increased cultivation of lands occupies a prominent position in the Government's scheme of rural reconstruction. Already there is an order which prohibits the slaughter of milch cows and bullocks fit for agricultural operations. The order is to be enforced strictly. His Excellency said that the Government are

contemplating the appointment of inspectors at all slaughter-houses. Each animal will be subjected to close examination before it is allowed to be slaughtered. Steps have already been taken to provide the cultivator with good quality seeds and the Government have sanctioned a sum of Rs. 5 lakhs, for this purpose.

A number of prominent City Councillors made their appearance at the Corporation meeting hall on Thursday last with samples of "barwheat" which is being supplied to city dwellers for the past few weeks. Serious charges were made against the Government and the Councillor who moved the resolution maintained that the quality of barley that is being mixed with wheat is very inferior and not fit for human consumption. Several other speakers condemned the compulsory character of the measure as the mixture containing 25 per cent barley and 75 per cent wheat is absolutely useless and is consequently thrown away by many. In the opinion of some it would be better if the two grains are given to consumers without mixing them as it would help them to save their wheat even though they have to discard the barley. A resolution urging that Government should revise their policy with regard to barwheat was passed and the Mayor was requested to communicate the resolution to both the Provincial and the Central Governments.

Such persons throughout the Province are dependent on catering establishments for their meals will not get more than three courses, viz., one substantial dish, one subsidiary dish and one sweet dish or cheese or fruit or two subsidiary dishes and one sweet dish or fruits or cheese after the 12th instant; for the Government of Bombay have issued the Bombay Food (Restriction of service of meals by catering establishment) Order which applies to all catering establishments including railway refreshment rooms and restaurant cars. Bread and butter, biscuits, ghee, buttermilk and a host of other items in the menu are exempt. The austerity meals are supposed to help relieve the food situation but one wonders whether it is at all possible to attain the objective contemplated if there is no co-operation from the people as there is nothing in the order prohibiting the consumer from obtaining more than one meal at a time though it is impossible for him to ask for more than the three courses allowed for a single meal. Though the order applies only to catering establishment, the Government have issued an appeal to heads of all household to restrict voluntarily their meals to three courses.

The success of the "Grow More Food campaign" in the Province is reflected in the wheat forecast issued by the Director of Agriculture. An increase of 14.3 per cent in the acreage under wheat is, according to the Director, solely due to the campaign. The crop is said to be fairly satisfactory.

Dr. AMAL KUMAR ROY CHOWDHURY, M.D.

Ever since the report regarding the proposed increase in railway fares was received, a lot of grumbling and individual protests could be heard in the city. Both the press and public are opposed to the measure in varying degrees. While one section maintains that though the spirit of the measure is beyond reproach in practical application it will amount to inflation rather than a deflationary move as the large number of workers who

use the suburban trains will demand a parallel increase in their wages. The argument that the measure will to a certain extent relieve the present congestion in trains is however absurd. For none can say after the "Travel only if you must" campaign by railways, that people still take to the railways for pleasure. The majority of the people simply shudder at the thought of travelling by trains especially by third class.

Bombay will soon be rid of its beggars if the Government plans to seek powers with legislation for rounding up the city's 10,000 beggars and remove them to suitable shelters, go well. The plan of the Government seems to be to classify the beggars collected from the various parts of the city into the able-bodied and those who are unfit for any sort of work. People coming under the first head (Continued on page 269)

TRACTOR OR TANK ?

What is the ultimate destiny of this glowing plate, wending its way through the multiple processes required of flawless steel ?

Will it in time emerge to the world as a tank, conserving water in a torrid desert ; will it go into the making of a tractor to till the fertile soil of the Gangetic Valley ?

Whatever be its final mission, it will contribute to the growth of indigenous industry now, and in the days to come.

South India

(From Our Correspondent)

MADRAS, Feb. 8, 1944.

The closure of the Madras Port to American shipping has denied valuable opportunities for the export of hides and skins from this province. The Muslim Chamber of Commerce referred to this point when they represented to Mr. S. K. Kripalani, the Indian Trade Commissioner, New York, the numerous disabilities affecting the leather trade at present. In recent years Ceylon and the Mideast have shown a great liking for the finished leather products from this province and owing to the closure of the port the export trade could not develop to the extent desired by the traders. The Chamber further pointed out that the Bombay exporters were given export quotas for exporting tanned hides and leather to Iran and the Mideast countries. This favour being denied to the Madras traders the leather goods manufactured here have to pass through the Bombay exporters if ever they are to reach foreign markets. Unless a reasonable export quota is allotted to the Madras exporters they have reasons to feel that a fair share of the profits are pocketed by the Bombaymen as a result of the unsympathetic attitude of the authorities. A third point raised by the Muslim Chamber deserves careful consideration. At present the raw skins exported from India to U.S.A. are tanned there and then sent back to the Mideast and elsewhere. The wastage of shipping space in view of the war conditions is obvious. Besides, raw hides are known to occupy double the space compared with tanned leather. If tanning industry is organised in India, as recommended in the recent Government of India marketing reports on hides and skins, it would save valuable shipping space and satisfy India's aspiration for more industries.

The suspicion of several importers of chemicals that the Government of India is unduly favourable to the Imperial Chemical Industries, Limited, has been fanned by the proposal before the Government to restrict and narrow import channels in chemicals and dyestuffs. The Committee of the Southern Indian Chamber of Commerce in a communication to the Commerce Department, Government of India, protest against any such proposal and point out that such a course of action would shut out most of the present importers of chemicals and entitle only the representatives of manufacturers to any quota for imports. The Imperial Chemical Industries Limited, who would practically enjoy monopoly rights conferred by the proposal, had already received favours from the Central Government. It is recalled that at the beginning of the war, the tremendously huge quantities of chemicals and dyestuffs possessed by Chemdyes Limited, had been transferred to the Imperial Chemical Industries at a low price with exclusive right of sale. The protest of commercial bodies against this was of no avail and the assurance given by the Government that the I.C.I. would effect fair distribution to all dealers at low rates still remains to be substantiated by facts. The Chamber further suggest that importers should be allowed freedom to procure their requirements from different countries and from any importer with

whom they had contact previously. In order to satisfy the traders and others interested in the satisfactory distribution of chemicals, it is suggested, an Advisory Committee with representatives from different provinces and different sections of the trade should be set up.

In extending food rationing to different towns the Government must take into account as to how the rural areas would be affected by their schemes. The People's Food Committee, Madras, in a communication to the Government state that unless precautionary steps are taken to ensure adequate supplies to the rural areas the extension of rationing to urban areas would result in hardship for the villagers. The increased allotment to urban areas would necessitate greater imports or cutting down of the share of the rural areas. The committee expressed its opinion that the present allotment of 11,000 tons for Madras is very much higher than the requirements of the city and hence it should be reduced and the surplus diverted to answer the urgent call of hunger from Malabar. Full account must also be taken of the 'marketable surplus' available in surplus districts and this quantity should be requisitioned to supplement the quota allowed for other districts. The effect of sales tax on food grains has also come in for criticism and it is pointed out that the tax has raised the prices causing hardship to the people. According to the Committee, either the foodstuffs must be totally exempted from the Sales Tax or the tax should be levied only once instead of at all stages. The problem of middleman still remains and a statutory price control of rice would prevent them from sponging off the profits due to the primary producers. Another valuable suggestion put forward is that when rationing is extended to dry areas where millets form the chief staple grain of the poor the rationing scheme should cover these grains also. The public are anxious that the distribution of foodstuffs should be arranged equitably and without delay. If selfless public workers are appointed to the District Food Councils and if the collectors release summaries of the proceedings of the council for publication it would be of immense value in

eliciting the maximum co-operation from the public.

While no one can question the appalling poverty of India everyone has his own say with regard to the method by which the malady can be eradicated. Rao Bahadur M. Giriappa, President, Madras Provincial Marketing Co-operative Society, expressed his firm belief in collective farming as the only panacea for India's economic ills. The Grow More Food campaign, he said, can yield best results only if collective farming is introduced. Collective farms are co-operative bodies of small peasants owning and working the agricultural implements in common. He cited the instance of Soviet Russia which strengthened the body politic with schemes of electrification and collective farming. Post-war reconstruction schemes are in the air and, as part of the agricultural rehabilitation of India, he urged, collective farming should be given a fair trial to speed up the economic development of this country. While Rao Bahadur Giriappa may have his own belief in the success of collective farming methods in India it is doubtful if in this country with too many factions, excessive pressure on land, huge indebtedness and conservatism collective farming can be introduced with success.

OFFICE OF THE STEEL IMPORT CONTROL, CALCUTTA.

PUBLIC NOTICE.

Holders of import licences for goods falling under Part I of the Schedule annexed to the Government of India, Commerce Department, Notification No. 23-I.T.C./43 dated the 1st July, 1943, are informed that licences which are valid for shipment upto 31st December, 1943, stand automatically revalidated for shipments made in the period January-June 1944 and do not require formal revalidation by the licensing authority.

FOR THE INDULGENCE OF RAILWAY PASSENGERS

It is regretted that the interior lighting of trains is greatly restricted due to an acute shortage of bulbs owing to War conditions. The Railway Administration requests the indulgence of passengers in this matter which is entirely outside the control of the Administration. Passengers are advised in their own interests to provide themselves with electric torches as far as possible.

Resume of Commodity Markets

The long-awaited decision by the Bengal Government regarding the size of the jute crop for the next season has been announced. The press communique issued early this week said that the area under the crop had been fixed at 8 annas of the registered area in 1940, the same as for 1943-44. This has had no effect on the market as it was said that the acreage under the crop would not be in any way influenced by the decision and that, with the prevailing high prices for foodgrains, the tendency for the grower would be to raise foodgrains on a larger scale.

The jute market has been uninteresting. The jute manufactures market has continued firm in spite of the reports that there may be a revision of the maximum prices fixed by the Indian Jute Mills Association and the prospects of larger supplies of jute as envisaged by the Bengal Government. The raw cotton market has been easier on the heavier movement of the crop and the possibility of a reduction in prices for cloth. The gold market has been quiet with prices fluctuating in narrow limits while the silver market has been firmer with further improvement in prices on short covering.

The decision of the Bengal Government to fix the area under the crop for the next year at 8 annas of the basic average of 1940, as pointed out above, has not come as a surprise to the market. It was generally expected that, with the insistence of the Bengal Government to fix a high level of maximum prices, the acreage for 1944-45 would be equal to and not more than the area for 1943-44. The decision to grow more jute than is needed by mills is obviously to provide adequate stocks against the possibility of an increase in demand for jute manufactures following the cessation of hostilities in the West. This decision must have been made after due consultation with the Central Government and the United Kingdom and the U.S. Governments as, otherwise, the offer to buy large quantities at the minimum price of Rs. 15 per md. for Indian Jat Middle in Calcutta or at parity price in mofussil districts cannot be achieved by the Central Government alone under present circumstances. The Central Government cannot be expected to purchase all the jute offered at the minimum price, in the absence of sufficient demand, if the United Kingdom and the U.S.A. Governments did not come into the market as buyers and provided the necessary shipping space. The assurance of a minimum price for the ryot is, therefore, to be welcomed. There has been some criticism regarding the fixation of maximum prices and the reservation of the right to requisition stocks from holders.

How far the Bengal Government will be able to bring about an increase in the area under jute consistent with the policy of growing more foodgrains cannot be said. Already, there is some criticism about the intentions of the Government to encourage the growth of jute as far as possible. Trade circles estimate that, with the outlook for jute not quite promising and the higher prices for foodgrains, the actual area sown might prove to be far short of the licensed area of 27 lakhs acres and that the total crop for the next season might not be

more than 75 lakhs bales. In view of the difficulty in anticipating developments in the war situation nothing can be definitely said at the moment. The season 1944-45 may thus prove to be very important.

The jute manufactures market also has not been in any way affected by the announcement regarding the size of the jute crop for the next season. The difficulty, however, at the present moment is one of getting ready goods. Mills are not in a position to sell freely for near deliveries. It is reported that bazar operators are oversold. As such there is no disposition to effect a slight precautionary marking down in values. What is meant by the statutory orders fixing maximum prices for manufactured goods is not quite clear. There is no reference to the level of prices fixed by the Indian Jute Mills Association. If it is only according Government sanction to the steps taken by the Indian Jute Mills Association a reference should have been made to that effect. Having regard to the opposition from certain quarters to the fixation of maximum prices for jute goods, which are higher in relation to the maximum prices for

jute fixed, it is pointed out, there might be a downward revision of prices. One cannot be sure on this point as recently there has been a large increase in the cost of production of jute mills and earnings have suffered considerably with the difficulty in regard to coal supplies and the higher wages paid to labour as compensation.

It was announced recently that the period of delivery in respect of transactions of bullion had been extended to one week from two working days. This has not had any effect on gold prices. With the persistent selling by the Reserve Bank at a fixed price, there is no dearth of supplies. There is very little speculative

activity in the market. The amendment extending the period of delivery has been due to the difficulties experienced by sellers in effecting deliveries in time. The period of seven days will enable sellers to effect prompt deliveries. The silver market has been further firmer with prices higher by two to three points. The spot position is tight and supplies are very difficult to get.

At the auctions of tea for consumption in India this week weak conditions were again noticeable. Leaf grades being lower by 1 anna per lb. Dusts also were easier by ½ to 1 anna per lb. Darjeeling and green teas were in less demand even at the lower prices. A large proportion of the offerings consisted of very common and stalky teas with many lines nearly out of condition. Official estimate for the outturn for December is 9 million lbs. as compared with 10.8 million lbs. making the total to the end of the month 452.7 million lbs. as compared with 474.9 million lbs. last year.

A survey of the sugar position of all producing areas for the week ended January 15, 1944 discloses total production at 354,564 tons, an increase of 72,340 tons over the previous week. This increase shows that mills have begun production in right earnest. Despatches during the week amounted to 22,267 tons against 14,827 tons while the progressive total of despatches was 78,587 tons or 22,267 tons higher. Physical stocks were thus higher by 50,023 tons at 275,994 tons. The percentage of progressive despatches to production was 22.2 per cent as compared to 19.9 per cent in the previous week. The balance of physical stocks of 1941-42 and 1942-43 sugar on January 15, 1944 aggregated 17,365 tons.

(Continued from page 266)

will be given proper training and after the completion of the training period will be absorbed in Government or municipal Labour Departments. Those who are permanently disabled have to be sent to asylums constructed for the purpose. The cost of this scheme will be the concern of the Government in a large measure. The Government have to bear the initial cost themselves in all the cases and possibly there will not be recurring expenditure as the able-bodied may be able to support themselves in a short time.

With the introduction or extension of rationing to the remaining 65 villages round about the city the whole of the Bombay Suburban district is now under the rationing scheme. By assuring to supply two units of rations each to 94,000 people, the Director of Civil Supplies has filled up a rather inconvenient gap in the rationing scheme. The Government were not absolute losers either as they have managed to procure 18,000 tons of paddy from this area.

The question of using short staple cotton and cotton waste for making paper constituted an interesting item on the agenda of the half-yearly meeting of the Indian Central Cotton Committee. While keeping an open mind on the advisability of this measure the Committee duly decided to request the Forest Research Institute, Dehra Dun to conduct experiments with short staple cotton and cotton waste.

(Continued from page 264)

tic oil industry, due chiefly to the raw material and labour position, has been a disappointment to the Germans and the output did not reach the level which they expected to achieve.

Conversion of the majority of German civilian vehicles and a good many military vehicles from liquid fuel to producer-gas, has been one of the change affected. This has not been effected without some difficulty in conversion and maintenance. Above all, the supply of fuel for producer-gas-driven vehicles demands a great deal of labour which must be taken away from vital war work. Although producer-gas vehicles are not used on the fighting fronts, restrictions on the consumption of liquid fuel in the Army must cause some impairment of efficiency. Meanwhile, the consumption has been kept up at a very high level through the Allied offensives, and appreciable losses of stocks have been incurred as a result of Allied action which the attack on Rumanian fields has taxed

seriously the refining capacity of S.E. Europe. Despite all efforts Germany's stocks have been kept down to a level which she considers quite inadequate. The outlook must be determined by the events of 1943. The collapse of Italy actually helped Germany because she secured about one million tons of oil which Italy took. The retreat in Russia should shorten lines of communication and lead to a saving in fuel. But these gains are not likely to decline appreciably during the next few months, and civilian consumption, both in Germany and the Occupied territories, can hardly be cut further without upsetting economic stability. It may be possible to increase synthetic production though the process would be slow, and additions to stocks formerly imported from Rumania would depend largely on the ability to safeguard and maintain sources of supply. But it remains to be seen to what extent additional supplies may alleviate the oil position.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, 10th February.

A feeling of considerable uneasiness pervades the markets on account of the threat of further impending requisitions of Jute Mill premises by the military authorities. The loss in jute goods production resulting from the requisitions which have already taken place has been to a large extent minimised by working multiple shifts in other units of the same agency. But this may not be always possible of arrangement, particularly as some units which have been inspected with a view to requisitioning are single companies which have no counterparts under the same agency. In any case it may not be possible to persuade labour to move to an entirely different area where there is perhaps no sufficient accommodation for them. The implications of further requisitioning to an extent equal to, if not greater than, that already taken might well have serious effects on markets. In the meantime, while the sword of Damocles is hanging over them, mills are naturally very reluctant to commit themselves to sales of goods and equally to further purchases of raw material. The effect is to keep the fabrics market firm at maximum ceiling rates while an easier tendency is perceptible in the jute market which is only maintained more or less steady by the firmness with which jute is held in the mofussil.

A Press Note issued by the Government of Bengal confirms what has been noted in these columns from time to time as the expectations of the markets in regard to the regulation of the crop for the coming season. Eight annas of the registered acreage will be licensed and cultivators will be encouraged to plant fully up to this acreage. The Central Government guarantees a minimum price of Rs. 15 landed Calcutta for Indian Jat Middles and will undertake to buy up all jute offering in Calcutta at that level or upcountry at appropriate parities. Other qualities or grades to be in parity with the rate fixed for Middles. The maximum price is fixed on the basis of Rs. 17 landed Calcutta for Indian Jat Middles, (other qualities or grades on a parity with this rate) and Government has the right to requisition jute on this basis, in which requisitioning from middlemen, if necessary the Bengal Government will assist. The italics are ours and it is instructive that no suggestion is made to requisition from the cultivator if that individual decides to sit on his jute. Both minimum and maximum prices will be fixed under statutory orders from the Central Government while maximum prices for manufactured goods will be similarly dealt with. Again it is instructive to note that it is apparently not considered necessary to fix minimum prices for manufactured goods. All prices so fixed will come into operation from a date to be notified shortly and will remain in force till 30th June, 1945. It is further notified that the Bengal Government is taking steps to ensure to the growers the full benefit of these arrangements and to secure to the cultivator the highest price possible in parity with the prices so fixed. It will require a pretty exhaustive schedule to cover the correct parities for all districts in Bengal with their varying handling and freight charges, and we wish the Government joy in the task they have undertaken.

The basis for the fixed prices is somewhat invidiously described as an Indian Jat Middle. Officially there is only one standard of Middle, described in the official specification of the I.J.M.A. and exposed for exhibition in the Bengal Chamber of Commerce. In practice of course, the industry makes fairly clear and established distinction between different types of packing, even among Indian packed marks, and it will be interesting to learn if, in fixing the parities, these distinctions are to receive recognition, statutory or otherwise. The acreage quota came in for some pretty severe criticism in the Bengal Assembly but ultimately successfully weathered the storm, mainly because much of the criticism was vitiated either by woeful ignorance or by deliberate distortion of the facts. It would be interesting, for instance, to know how one member arrived at his estimate of 27 lakhs of bales being the total requirements of jute for war purposes in season 1944/45.

Rumours are circulating of another large order to be placed for the U.S.A., similar to that fixed about a year ago. This may be another factor in mills' unwillingness to commit themselves in sales. Most of any surplus of heavy goods which might have been available for the early months was mopped up by the placing of an order in the end of last week for bags and sacking cloth.

The return of stocks of goods held by mills at the end of January show that these increased during the month by 10,804 tons, a very substantial figure considering that interruptions in working were frequent owing to irregular deliveries and poor quality of coal. Obviously shipping was not in as good supply as might be desired. The increase was pretty equally distributed over all descriptions of goods, commercial hessians being higher by 154 lakhs yards or 3110 tons, commercial sackings higher by 121 lakhs yards or 4837 tons, and Government goods, both hessians and sackings, being higher by over 1400 tons each. An interesting point is that while Government stocks of hessians rose in weight by 1400 tons, the yardage that represented actually declined by 5 lakhs. Total stocks of hessians at the end of January were 5244 lakhs yards or 131,283 tons, and of sacking 2473 lakhs yards or 100,825 tons, making an aggregate tonnage of 232,108 tons. With so much of their godown space already requisitioned for war purposes, mills cannot view with equanimity such increase in stocks of goods, further limiting as it does their already limited space for storage of raw material.

It is regrettable that no improvement is yet recorded in the coal supply position. Quantity continues to fall far short of requirements and quality continues to leave a great deal to be desired, with the result that production is being materially curtailed by interruptions in working. Moreover, it is credibly reported that Mills are to be called upon to pay an increased price for the very inferior article they have been receiving. The price was considered unconscionably high at Rs. 16 per ton, but this is now to be raised to Rs. 22. Coal owners are apparently determined to be well compensated for their "wasting asset."

Only a moderate turn-over has been recorded in the Export Jute market. Some Outport Firsts were sold at Rs. 79 and Rs. 79-8, Short Group Dundee Daisee at Rs. 85 and Dundee Tossa 2/3 at Rs. 89.

Shippers also bought Cuttings at higher than the maximum rates permitted to Mills, paying up to Rs. 45-8 for N.C. and Rs. 44-8 for M.C. Cuttings are now in very short supply and are held for Rs. 47 and Rs. 46 for N.C. and M.C. respectively. Mills have not been operators in the pucca bale market which is relatively expensive compared with loose jute prices. For Mills the quotation for Firsts is nominally Rs. 83 and for Daisee Rs. 78.

Interest in Loose Jute has centred largely in Tossa, European packing being reported done at Rs. 17 and Rs. 14 Middles and Bottoms, Supervised District at the same rates, Indian Jat Tossa at Rs. 16-12 and Rs. 13-12 and Indian District Tossa at from Rs. 16-4 and Rs. 13-4 up to Rs. 16-12 and Rs. 13-12 for selected marks. European white jute sold at Rs. 16 and Rs. 13 Mids and Bots and also at Rs. 13 for Bots alone. With better quality jute appearing in the imports upcountry, dealers are pressing sales of high assortment and of Middles alone, while mills seem content to concentrate mainly on the lower grades. Consequently there is a tendency to discount the price of Middles and a sale of Indian Jat Middles alone is reported today at Rs. 15-4 which is eight annas less than was asked in assortment a few days ago. Arrivals of Jute into Calcutta during the month of January are estimated at 3,56,000 bales compared with 4,41,000 in January a year ago. Total arrivals from the beginning of the season to the end of January now total 32,21,000 bales as compared with 39,80,000 bales during the similar period last season.

The Fabrics market rules firm with all descriptions of goods standing at ceiling rates, with the exception of "B" Twills, which continue to be dealt in around Rs. 67-4 for the nearer positions. As noted above, any surpluses of heavy goods which mills might have had to dispose of, were pretty well mopped up by the placing of a Government order for "B" Twills, "C" cloth and "E" cloth for shipment by June. Mills have practically nothing to sell this side of June and having got maximum rates for some July/Sept. goods, would now like to extend the shipment to June/December but shippers are not following.

BACK THEM UP -

THE NEW EGERTON WOOLLEN MILLS
(INCORPORATED IN THE UNITED KINGDOM)

February 12, 1944

JUTE

Calcutta, Feb. 10.

The event of the week is the announcement by the Bengal Government that the acreage under the jute crop in the next season has been fixed at 8 annas of the registered area in 1940 and that both minimum and maximum prices will be enforced from a date to be announced by the Government shortly. The ryots are to be encouraged to grow up to the licensed area and have been given the assurance that their stocks will be purchased at a minimum price of Rs. 15 per maund for Indian Jat Middle at Calcutta and at parity prices in mofussil centres. The maximum price has been fixed at Rs. 17 per maund and the Government have reserved the right to requisition stocks at this level if sellers were unwilling to part with their holdings. Thus speculation regarding the size of the crop for the next season has been set at rest. The announcement did not come as a surprise to the market as they were substantially anticipated. The press communique issued by the Bengal Government is given below:

The question of acreage to be sown with jute this year and its probable effect on prices was recently discussed with the Government of India representatives at New Delhi. The following decisions were reached:

(a) The Government will issue orders for licensing of an acreage of 8 annas of the basic average of 1940, and will advise and encourage agriculturists to plant fully up to this acreage.

(b) The Government of India will guarantee a minimum price of raw jute on the basis of Rs. 15 per maund of Indian Jat Middles at Calcutta (other qualities or grades of raw jute to be in parity with this price).

(c) The Government of India will undertake to buy all crop offering old and new upcountry or in Calcutta in order to maintain prices at the above level in Calcutta and at parity levels upcountry.

(d) A maximum price of raw jute will be fixed on the basis of Rs. 17 for Indian Jat Middles in Calcutta (other qualities or grades of raw jute to be in parity with this price) with the right of the Government of India to requisition on the basis of the maximum price. The Government of Bengal will assist in such requisitioning from middlemen if necessary.

(e) Both the minimum and maximum prices will be fixed under statutory orders to be issued by the Government of India. The Government of India will also under statutory orders simultaneously fix the maximum prices for manufactured goods. The prices so fixed will come into operation from a date to be notified shortly and will remain in force up to and including June 30, 1945.

The Government of Bengal are taking steps to give the growers the full benefit of these arrangements and to ensure to the cultivator the highest price possible in parity with the prices so fixed.

There has been no change in the conditions in the raw jute market during the past week. It was pointed out that the quota for the next season at 8 annas of the registered area for 1940 might not be reached as with the uncertain outlook for jute and the high level of prices for foodgrains the actual area sown might turn out smaller and the total crop could be disposed of easily. The initial adverse reaction was therefore short-lived and the lost ground has been completely recovered. Business was on a smaller scale though mills were reported to be anxious buyers for forward deliveries and offering a slight increase in the rates for godown facilities.

In the loose jute section only a small amount of business has been done with mills not very keen buyers and some sellers anxious to do business. Indian Jat Tossa Middles and Bottoms were done at Rs. 16-12 and Rs. 13-12 per maund, while Indian Jat Middles and Bottoms were done at Rs. 15-8 and Rs. 12-8 per maund.

In the pucca bales section steadier conditions are noticeable in the latter half of the period under review with balers asking for an increase in rates. Packing costs have gone up further and there is no disposition to discount rates. Dundee Daisee and Tossa were higher by Re. 1 per bale. Shippers are

said to have purchased cuttings N. C. & M. C. at Rs. 45-8 and Rs. 44-8 respectively but no business has transpired with mills.

JUTE MANUFACTURES

Calcutta, Feb. 10.

The jute manufactures market has been very steady and there are not many sellers at the maximum rates. There seems to be some disappointment, however, over the press communique issued by the Bengal Government. It was confidently expected that there would be no official revision of the maximum prices for jute goods fixed by the Indian Jute Mills Association. It is not known as to what is meant by the statutory fixation of prices by the Government of India. The lack of reference to the rates fixed by the Indian Jute Mills Association has led to the suggestion that there might be a re-adjustment, downward, of prices. Quotations are at maximum prices with very few sellers at these levels. 9 porters quoted Rs. 21-10 for all positions and 11 porters Rs. 28-8 for all positions.

In the heavy goods section very steady conditions have been noticeable and standard goods are not available at maximum rates for near delivery with the exception of B. twills and similar grades. B. twills for February delivery sold on the basis of Rs. 67-4, Liverpool twills Rs. 75 and Cornsacks Rs. 67-12.

The local stock figures for the month of January are now available. There has been a further increase in hessian stocks, cloth and bags, to 52.44 crore yards from 50.95 crore yards at the end of December. The increase is solely on civil account, the figures at the end of December and January being 21.37 crore yards and 22.91 crore yards respectively. Sacking stocks also show an increase to 24.74 crore yards from 23.2 crore yards. On civil account there is a rise from 21.37 to 22.94 crore yards and on military account from 1.47 to 1.79 crore yards. It is not clear, however, whether the increase is due to the higher level of production during the month as it was reported that shipments had been on a fairly satisfactory scale. The figures are given below:—

Description.	31-12-1943.	31-1-1944.

N.B.—January stock figures include returns of Gagalbhai in addition to those of member mills, but contain an estimate of the stocks of Calcutta jute, Naskarpara, Katihar and Maheswari Devi. Against these are shown the actual stocks of member mills and Gagalbhai for the month of December 1943.

GOLD

Calcutta, Feb. 10.

The gold market has been uninteresting and prices have fluctuated in narrow limits. The extension of time for delivery from two working days to one week has not affected the market, and quotations for both ready and forward are almost level. Investment demand is on a considerably smaller scale. The Reserve Bank is offering freely gold at Rs. 71. The reply made by the Finance Member in the Central Assembly regarding gold sales does not throw any further light on the subject. It has been given out, however, that sales have been made by the Reserve Bank of India out of stocks supplied by the Bank of England on account of His Majesty's Government and the U.S. Government on terms that have been agreed upon between them. What the terms are is not yet known.

SILVER

Calcutta, Feb. 10.

The silver market has been active and quotations have improved further on bear covering. There is still no news about the possibility of Government intervention in the silver market. With the continued shortage of supplies in regard to the white metal, bears have rushed to cover their positions and quotations are higher by 3 to 4 points. Silver ready closed at Rs. 126-8 against Rs. 123-4 at the end of last week and delivery Rs. 123-8 against Rs. 120-14. It will be seen that there has been a further appreciation in the premium over ready for delivery contracts. This is, as it should be, as an increase in the rates is demanded by bulls, for carry-on facilities and time for delivery has been extended from 2 days to one week.

COTTON

Calcutta, Feb. 10.

In the Bombay raw cotton market rather irregular conditions have been noticeable in the past week. The close was definitely easier on the reports that there might be a further reduction in cloth prices and that the Government might not agree to the recommendations made by the Indian Central Cotton Committee, for a higher level of minimum prices. Mills have not been buying on the usual scale and there has been a heavier movement of the crop. In the last two days there has been some selling. Karachi advices also have been helpful. Closing quotations are lower all-round. Jarilla March being Rs. 471-4, May Rs. 470 and July Rs. 474-4 against Rs. 474-8, Rs. 473-4 and Rs. 477 respectively.

PIECEGOODS

Calcutta, Feb. 10.

The piecegoods market has shown an easier tendency on the reports that, at the next meeting of the Textile Control Board, prices for cloth might be further reduced. There were also reports that imports of manufactured goods will be on a greater scale and that after two or three months there will be no difficulty in getting one's requirements. There would perhaps have been a greater decline in prices but for the shortage of ready goods in certain centres with the sealing of unstamped varieties. Business passing is still restricted but there has been greater enquiry for coarser varieties and some forward contracts have been concluded.

Stock Markets to-day and to-morrow:

MARKETS EASIER: PRE-BUDGET FEARS

DEFINITELY quieter conditions have been noticeable on the Calcutta Stock Exchange in the past week. The initial decline in prices was in sympathy with the Bombay market though, latterly, the news from the Arakan Front and the fears regarding the Budget have had a greater restraining influence. But at no time there has been heavy selling and investors have preferred to await further developments. Speculation regarding the budget is different in the various centres. In the Calcutta market, there is no fear of an increase in direct taxation while in the Western centre it is felt that the Government will try to increase taxation and also intensify their anti-inflationary drive. The weakness of the Bombay market, however, is not solely due to the fears regarding the budget, as there have been persistent reports that cloth prices might be substantially reduced and that earnings of cotton mills would be affected thereby. It is thus unfortunate that the effect of excellent earnings of cotton mills published at the present moment is lost on the market.

There was no important change in prices till Wednesday and the quotations for the leading speculative counters were fluctuating in narrow limits. Only in Thursday's session, there was some selling and Indian Irons and Steel Corporations came down to Rs. 37-4 and Rs. 28-2 respectively. There was a slight recovery on Friday morning though the close is again quiet at the lowest levels for the week. Other sections have not been affected. In fact, certain counters have moved against the trend. The general undertone is very steady and it is confidently expected that the upward movement will be resumed after the Budget is out of the way. It is expected, however, that in the next two weeks prices will be fluctuating in wide limits and that the speculation regarding the budget and the developments in the Arakan Front will continue to dominate the market.

It was announced on Friday morning that an Advisory Committee has been formed for considering the questions affecting the coal industry and that as from the beginning of March the entire distribution of coal, by road as well as by rail, will be controlled by the Government of India and that coal companies will be paid at fixed rates. This is very encouraging news for the industry as there will be no problem in regard to transport and the industry is assured of good profits with an increase in raisings. It is already

reported that conditions in the mines have definitely improved and raisings have also increased. Apart from the fact that coal companies will get relief from E.P.T. with the increase in raisings to above the allotted quota it is pointed out that bonuses will be paid for increased production by or through the Central Government to the companies concerned and that these bonus payments will not be liable for excess profits tax. It is pointed out, however, that income-tax will be levied on these bonus payments. These concessions and the announcement by the Transport Member in the Central Assembly this week that there would be improvement in the transport situation as a result of the shipping facilities afforded by the United Kingdom and the U. S. Governments, should improve greatly the position of the coal industry. The market, however, has not reacted favourably to these proposals as it is felt that the recent rise in prices has discounted the best prospects and that it would not be advisable to push up prices further without waiting for actual results.

The balance-sheet of the Muir Mills Company Limited, for the year ended December, 1943 has been published. Needless to say, it makes very satisfactory showing. The net profit for the year is perhaps the highest in the history of the company, the total, before providing for taxation and depreciation, being Rs. 1,52,32,887 against Rs. 75,58,234 for 1942. The amount provided for depreciation is lower at Rs. 7 lakhs against Rs. 9 lakhs while the provision for taxation is considerably higher at Rs. 1.15 crores against Rs. 56 lakhs. A sum estimated at Rs. 18 lakhs will be due for payment during 1944 as a compulsory E.P.T. deposit under section 10 of the Finance Act 1942. The equivalent of this amount has been set aside as provision for deferred mill renovations. There was no similar allocation out of profits for 1942. The dividend has been maintained at Rs. 10 per share but the bonus has been increased to Rs. 25 per share from Rs. 15 per share on the previous occasion, the total distribution for the year thus working out to 70 percent against 50 percent. The amount carried forward even after the increased allocations is higher at Rs. 4,83,679 against Rs. 3,90,792 brought in.

The jump in earnings for 1943 even after the promulgation of the Cotton Cloth and Yarn Control Order might be surprising to

many; but it should not be forgotten that till October 1943 there was no substantial decrease in mill prices and in the earlier months of that year mills had effected large forward sales. The results for the current year only will reflect the effects of control over the affairs of the industry. But even now it is pointed out that, with an increase in the volume of production and the decrease in costs, earnings may not be appreciably lower and that cotton mills will continue to enjoy prosperous conditions.

The accounts of the Cawnpore Sugar Works Limited, for the year ended October, 1943 are now available. Like other companies in the group there is a substantial increase in earnings for 1942-43 over 1941-42. The net profit, before providing for taxation and depreciation being Rs. 18,88,878 against Rs. 7,46,407 for 1942. The amount set aside to depreciation is Rs. 1,65,000 against Rs. 2 lakhs while the provision for taxation is very much higher at Rs. 12.5 lakhs against Rs. 3,25,150. The dividend on ordinary shares has been increased to Rs. 2-8 per share from Rs. 1-8 per share and is the highest for several years. The amount carried forward is higher at Rs. 1,26,010 against Rs. 1,07,132. The improvement in the earnings of the Company has been due to the longer crushing season and the higher recovery percentage, the quality of cane supplied being very satisfactory. Total quantity of cane crushed by the two factories was 36,18,305 mds. against 18,80,322 mds. for 1941-42. The quantity of sugar produced was 422,155 mds. against 202,463 mds. The recovery percentage at the Marhowrah factory was as much as 12.22 percent against 11.6 percent for the previous season, the highest for over a decade. At the Gauri factory the recovery percentage was 11.17 percent against 10.95 percent.

There has been no improvement in the quotation for the shares after the publication of the accounts. Having regard to the sound financial position of the company and the satisfactory return on the shares it should be said that they are cheap at the present quotation of around Rs. 42-8 cum-dividend.

The Court Order confirming the reduction of the capital of the Burro Dhemo Coal Company Limited, resolved by the Special Resolution passed at the Extraordinary General Meeting held on 29th April 1943, has now

(Continued on page 292)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE (From Our Correspondent)

Calcutta, Feb. 11.

QUIETER conditions have been noticeable on the Calcutta Stock Exchange during the past week and transactions have been on a smaller scale. The easier tone of the markets was at first due to the lower advices from Bombay and the small raids at some points on the East Coast of India. The unfavourable news in mid-week regarding Japanese activities on the Arakan Front also had a restraining influence but at the time of writing a steadier feeling is again noticeable and a slight improvement in prices has been recorded. Pending the announcement of the budget proposals, it cannot be expected that operators will enter into large commitments. It is satisfactory to note that there has been no appreciable decline in prices and that the undertone in the several sections is very steady. The general feeling is that the upward trend will be resumed after the end of the current month. No important changes in the war situation are expected, it being pointed out that the Allies are in a fairly strong position and that the Japanese are fighting a losing war. Developments in the next few weeks are, therefore, of great importance for the stock markets.

The gilt-edged securities section has been very steady and in places quotations are even higher. 3½ per cent Paper was done at Rs. 99-4. The quotation at the time of writing is Rs. 99-1. 3 per cent Paper was Rs. 89-1. Among terminable loans, 3 per cent Defence Loan 1949-52 were Rs. 100-1, 3 per cent 1946 Rs. 102-6, 3 per cent 1951-54 Rs. 100-3, 3 per cent 1966-68 Rs. 98-8, 4 per cent 1960-70 Rs. 112-8, 4½ per cent 1955-60 Rs. 116-2 and 5 per cent 1945-55 Rs. 105-5. Among Provincial loans, 3 per cent U.P. 1952 were Rs. 99-10. There has been a further improvement in the average discount rate on treasury bills to 12 annas per cent per annum from 11 annas and 4 pies.

Bank shares were steady with *United Commercial Bank* being done up to Rs. 31 premium. There has been some selling at the higher levels and the quotation is now Rs. 28 premium. *Bharat Bank* were Rs. 123, *Calcutta National Bank* Rs. 13-12, *Imperial Bank* fully paid Rs. 1,935 and *Contributories* Rs. 490. *Reserve Bank* were quiet at Rs. 133 and *Hind Bank* at Rs. 57.

Cotton shares were firm in the early part of the week but in sympathy with the other sections and the weakness of the Bombay market, a slight decline in prices has been recorded. Closing quotations are not very much changed on balance. *Cawnpore Textiles* were Rs. 15-2, *Dunbar* Rs. 320, *Elgin* Rs. 87 and *New Victoria* Rs. 10-6. *Kesoram* have come back to Rs. 20-1 ex-dividend after being higher at Rs. 22 cum-dividend while *Radheyshyam* on reports of a higher dividend of Rs. 2 per share for the current year were marked up to Rs. 26. They are now back at Rs. 24.

In the Coal section, there is not much interest in evidence. With profit-taking at the higher levels quotations are generally lower. The announcement this morning that the Government will take over the entire distribu-

tion of coal and purchase from mines at fixed prices, should have an encouraging effect on prices as it is reported that conditions in the coal mines have improved and that raisings have increased. *Amalgamated* were Rs. 45-8, *Bengal* Rs. 583, *Bokaro & Ramgur* Rs. 32-8 and *Burrakur* Rs. 31-14. *Bhalgora* were Rs. 15-14 against the high level of Rs. 17 touched sometime back. *Central Kurkend* were Rs. 25-4, *Dhemo Main* Rs. 22-2, *Equitable* Rs. 52-8, *Kuardi* Rs. 15-12, *New Beerbhoom* Rs. 32-8 and *Raneegunge* Rs. 41-2. *West Jamuria* have been the only exception with a rise from Rs. 45-8 to Rs. 47.

In the Jute section, irregular conditions were noticeable earlier in the period under report on rumours that there might be a downward revision of maximum prices of jute goods. But with the feeling that production by the mills might increase and that further larger orders would be placed with jute mills there has been a slight recovery in prices and the close is steady. *Anglo-India* were Rs. 421 against Rs. 435 at the end of last week. *Auckland* Rs. 311 against Rs. 320, *Bally* Rs. 375 against Rs. 380, *Champdany* Rs. 233 against Rs. 240 and *Clive* Rs. 34-4 against Rs. 35-4. *Howrah* were unchanged at Rs. 69-8 and *Hukumchand* at Rs. 36-4. *Kamarhatti* were Rs. 610, *Kankannarrah* Rs. 529, *National* Rs. 31 against Rs. 31-12 and *Neilmarla* Rs. 28. *Nuddea* were Rs. 126, *Presidency* Rs. 7-10 and *Rameshwara* Rs. 17-10 ex-dividend. *Sooran* were lower at Rs. 18-4 after being higher at Rs. 19-12.

There is not much activity in the Engineering section and quotations are lower for the leading speculative counters. *Indian Iron and Steel* and *Steel Corporation* were done at Rs. 37-2 and Rs. 28 against Rs. 38-14 and Rs. 28-14 respectively at the end of last week. The questions at the time of writing are Rs. 37-8 and Rs. 28-4 respectively. *Burn & Co.* were unchanged at Rs. 413 while *Britannia Building & Iron* were Rs. 19-8, *Jessop & Co.* Rs. 23-6 and *National Iron & Steel* Rs. 14. *Marshall* were easier at Rs. 5 and *Kumardhubi Engineering* at Rs. 9-3.

The Sugar section has been inactive with only a small number of transactions put through. The publication of satisfactory earnings reports by the *Begg Sutherland* group of companies has not had any effect on the market. *Belsund* were done at Rs. 12-4. *Carew & Co.* were strong earlier in the week at Rs. 31-10 but closed easier at Rs. 30-10. *Cawnpore Sugar* were Rs. 42-8 cum-dividend and *Gwalior* Rs. 283. *Ramnugger Cane and Sugar* came in for some selling at the higher levels and the quotation has come down to Rs. 14-12 from Rs. 15-8. *Purtapore* were Rs. 27-8 cum-dividend and *U. P. Sugar* Rs. 34-4.

The Tea section remains steady but business passing has been on a smaller scale. *Hasimara* were Rs. 76, *Bishnauth* Rs. 42, *Hatikkhira* Rs. 32, *Namburnadi* Rs. 13-2 and *Tezpore* Rs. 19-6.

In the miscellaneous section, *Burma Corporation* were easier at Rs. 3-15, and *Indian Copper* at Rs. 3, *Karanpura Development* recovered sharply to Rs. 25-8 from Rs. 23-12 while *B. I. Corp.* receded to Rs. 6-11 from Rs. 7-2. *British Ceylon Corp.* were steady

at Rs. 19-5 while *Dunlop Rubber* were further higher at Rs. 64. *Spencer* were Rs. 13-1, *Assam Bengal Cement* Rs. 16-12, *Assam Saw* Rs. 5-12 and *Bararee Coke* Rs. 32. *Midnapore Zemindary* were 5 points lower at Rs. 142-8. *Titaghar Paper* were Rs. 29-12, *Orient* Rs. 34-2, *Mysore* Rs. 31-8 and *India Paper Pulp* Rs. 231.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Feb. 10.

Quiet conditions elsewhere have influenced the local stock exchange to a great extent during the period under report. Pre-budget nervousness that was conspicuous by its absence has at last succeeded in bringing about a break in the buying fervour on the market. The feeling, that the budget may after all contain some unpleasant items for the market, has slowly gained ground, and both operators and investors have taken a more cautious attitude. The sporadic enemy air activity along the Eastern Coast in the past few days was another adverse factor. Rumours regarding a further reduction in cloth prices had their share in inducing the present quiet mood. However, reaction did not definitely set in before share values in the two principal sections touched new highs for some time. *Bombay Dyeing* for instance were quoting as high as Rs. 2,201-8 on Tuesday while *Tata Deferreds* were done upto Rs. 2,235. Unless there are some really surprising items in the Budget one may confidently expect the market to shoot up again, gaining greater and greater momentum. Another factor which investors would do well to be vigilant about is the comparatively favourable position in which the Cotton Mills would be placed in the event of no new taxation affecting their earnings.

Cotton Mill shares opened steady and after a day of brisk activity with a further rise in scrip values, however, began to show signs of weakness. The cause of this sudden break is to be found in the lower advices received from Calcutta. Renewed fears regarding the budget were also responsible for the lack of enthusiasm on the market. *Bombay Dyeing* after being as high as Rs. 2,201-8 steadily lost ground to quote at Rs. 2,145, which represents a loss of nearly 55 points. *Century* which went up to Rs. 1,244 suffered a steep decline of nearly 74 points to close at Rs. 1,170. *Kohinoor* withstood the shock better by closing at Rs. 731 though earlier in the week it was quoted as high as Rs. 762. But considering the last week's quotation of this share (727) the latest quotation is 4 points higher. *Central India* were lower by 13 points at Rs. 470.

As is to be expected, the decline in steel shares was more marked than in the case of Textiles. While the decline was generally in sympathy with market sentiment, the enemy air activity over parts of the East coast though not worth much attention called for caution. *Tata Deferreds* were firm on opening with the price as high as Rs. 2,235, but in sympathy with Textiles moved down abruptly on Wednesday to close at the comparatively low level of Rs. 2,165. The highest level touched by *Tata Ordinary* was Rs. 435, but the close is easy at Rs. 424-8. *Indian Iron* were 8 annas lower at Rs. 38.

 Indian Malleable Casting:—(8th) 9-6.
 Indian Iron & Steel:—(3rd) 38-8, 38-10 (38 s.l.), 38-6, 38-7; (4th) 38-12, 38-14, 38-13, 38-15; (5th) 38-10, 38-11, 38-8, 38-7; (7th) 38-6, 38-4, 38-5, 38-8, 38-7, 38-4; (8th) 38-2 s.l., 38-3, 38-4, 38-6; (9th) 38-8, 38-6, 38-7.
 Jesson & Co.:—(3rd) 23-10, (4th) 23-12, (8th) 23-6, 23-8, 23-9, 23-10; (9th) 23-11.
 Kumardhubi:—(4th) 9-12, 9-15; (8th) 9-4, 9-5, 9-7; (9th) 9-8.
 Kumardhubi (Pref.):—(7th) 386.
 Marshalls:—(3rd) 5-3 (5-8 s.l.), 5-2, 5-4; (5th) 5-1, 5-4, 5-3; (8th) 5, 5-2, 5-3; (9th) 4-14, 4-15.
 National Iron:—(3rd) 14-7, 14-5, 14-4, 14-8, 14-10; (4th) 14-5, 14-8, 14-9, 14-6, 14-10; (5th) 14-6, 14-8 c.t., 14-4, 14-5; (7th) 14-2, 14-3, 14-4, 14-6; (8th) 13-14, 14-2, 13-15, 14; (9th) 13-14, 13-15, 14, 14-2.
 National Screw:—(4th) 13-7; (8th) 13-6.
 Saran:—(3rd) 10 s.l., 10-4; (7th) 9-14 s.l., 10-2 c.t., 10.
 Steel Products:—(3rd) 8-2, 8-3, 8-4; (4th) 8, 8-3, 8-2.
 Steel Corporation:—(3rd) 28-15 s.l., 28-11, 28-12; (4th) 28-13, 28-14, 28-12; (5th) 28-8; (7th) 28-8, 28-6, 28-7; (9th) 28-5, 28-7, 28-8, 28-9.
 Steel Corporation (Pref.):—(4th) 131; (5th) 132, 133; (7th) 132; (9th) 131 (131-8 c.t.).
 Textile Machinery:—(5th) 26, 26-4.

SAW MILLS:

Assam Saws:—(3rd) 6-3, 6-4; (4th) 6-3, 6-4, 6-5; (5th) 6-1, 6-3, 6-2, 6-4; (7th) 5-15, 6, 6-1, 6-2; (8th) 5-13, 5-14, 5-15, 6; (9th) 5-13, 5-15, 6, 5-14, 5-12.
 Borooah Timber:—(4th) 21-13, 21-14; (5th) 21-11; (7th) 21-12.

CEMENTS:

Assam-Bengal:—(3rd) 16-6, 16-8, 16-7, 16-9; (4th) 16-6, 16-8, 16-9, 16-11, 16-12, 16-13; (5th) 16-10, 16-13, 16-14, 16-15, 17; (8th) 16-9, 16-11, 16-12; (9th) 16-11, 16-12, 16-13.
 Assam-Bengal (Defd.):—(4th) 4, 4-1, 4-2; (5th) 4-1; (7th) 4; (8th) 4; 3-15; (9th) 4.
 Dalmia:—(8th) 18-14; (9th) 19-2, 19-3.
 Dalmia (Pref.):—(9th) 14-2 s.o.l.
 Reliance Firebricks:—(3rd) 22, 21-15, 22-2; (4th) 22, 21-14; (8th) 21-15.

OIL:

British Burma Petroleum:—(3rd) 3-8; (4th) 3-8, 3-9, 3-10; (5th) 3-7, 3-9; (8th) 3-7, 3-6.
 Indo-Burma Petroleum:—(7th) 68, 68; 112-8, 113, 111, 112; (8th) 112.
 Indo-Burma Petroleum (Pref.):—(7th) (8th) 63; (9th) 68, 67-8.

Dehri Oil Refinery:—(3rd) 13-4 c.t., 13-2, 13; (4th) 13-4, 13; (5th) 13-5.
 Northern India Oil:—(9th) 22-15, 23, 23-1.
 Tide Water:—(9th) 25-8.

INSURANCE:

New Asiatic:—(3rd) 13-13 s.o.l., 14-8, 14-4, 14-5; (4th) 14-3, 14-4, 14-7, 14-6, 14-8 c.t.; (5th) 14-6 c.t., 14-7, 14-2, 14-5, 14-6; (7th) 14-4, 14-3; (8th) 14-3, 14-5, 14-6; (9th) 14-4, 14-3.
 Ruby General:—(3rd) 23-14, 23-12, 23-15, 24; (4th) 24, 24-4; (5th) 24-4, 24-6, 24-10; (7th) 24-4, 24-12, 24-13, 25-3, 25-10 (25-14 c.t.), 25-4, 25, 25-5, 25-2; (9th) 25-8.

PAPER MILLS:

India Paper Pulp:—(4th) 232-8, 233; (7th) 230 s.l., 231 s.l., 231.
 Orient:—(5th) 35-12, 35-14.
 Orient (Pref.):—(5th) 117 c.t.
 Mysore:—(3rd) 31-8.
 Shree Gopal:—(7th) 25-6, 25-5, 25-10, 25-7; (8th) 25-4 c.t., 25-6; (9th) 25-7, 25-4.
 Star:—(4th) 24-5, 24-8 x.d.; (8th) 24-3.
 Titaghur:—(4th) 30, 29-14, 29-13, 30-4, 30-8, 30-5, 30-12, 30-13; (5th) 30-6, 30-7; (7th) 30-3, 30-5, 30-4, 30-6; (8th) 30-2; (9th) 30-2, 30-3.
 Titaghur (Prefd. Ord.):—(7th) 6-2; (8th) 6-2.

REAL PROPERTIES:

Chowringhee Properties (Pref.):—(3rd) 138.
 Commercial:—(7th) As. 15.
 Humayan Properties (Pref.):—(4th) 12-8 c.t., 12-8.
 Humayan Properties (Ord.):—(9th) 12-12.
 Humayan Properties (Defd.):—(9th) 3-7.
 Midnapore Zemindary:—(3rd) 147-8 s.l., 146, 147; (4th) 146-8, 146, 147; (5th) 146-8, 145; (7th) 145; (8th) 144; (9th) 143-8, 144 (143-8 s.l.), 143.
 Midnapore Zemindary (Pref.):—(8th) 149, 150; (9th) 149.

SUGARS:

Balrampur:—(3rd) 18-10, 18-7; (4th) 18-10, 18-14, 18-12; (5th) 18-8 s.o.l.; (8th) 18-13, 18-14, 18-12, 18-11, 18-10.
 Belsund:—(5th) 12-14; (7th) 12-14; (8th) 12-13 c.t., 12-13, 12-14, 12-15; (9th) 12-14.
 Cawnpore:—(3rd) 42-8, 43-8; (4th) 43-8, 43-10; (7th) 42-14.
 Champaran:—(4th) 41-13, 41-15, 42, 42-1, 42-4, 42-2; (5th) 41-13; (7th) 42, 42-4, 42-6, 42-3; (8th) 42-6, 42-10 s.l.s., 42-10, 42-8.
 Carew:—(3rd) 30-4, 30-6; (4th) 31-1, 31, 31-2, 31-6, 31-9, 31-7, 31-11, 31-15, 31-10, 31-12, 32-2, 31-13, 31-14, 32; (5th) 31-10, 31-12, 31-13, 31-14, 31-15; (7th) 31-2, 31-5, 31-6, 31-8, 31-7, 31-10, 31-9; (8th) 31-2, 31-3; (9th) 31-7.
 Carew (Pref.):—(8th) 150 s.l.
 Darbhanga:—(3rd) 33-2.
 Dyer Meakin Brewery:—(4th) 20-2 c.t.
 Gwalior:—(4th) 277; (8th) 277.
 New India:—(3rd) 20-4; (5th) 20-3, 20-4; (7th) 20-4; (8th) 20-3.
 New Savan:—(3rd) 24-4, 24-6, 24-5; (4th) 24-4; (7th) 24; (8th) 23-14, 23-10 c.t.; (9th) 23-12, 23-13, 23-8, 23-10.
 Purbapore:—(4th) 27-10, 27-12; (5th) 27-12 c.t.; (7th) 27-12 c.t., 27-10.
 Ramnugger Cane & Sugar:—(3rd) 15-6, 15-7, 15-9 (4th) 15-6, 15-7, 15-8; (8th) 15-2, 15; (9th) 15-4 c.t., 15-2 (15-6 s.l.).
 Raza:—(5th) 40-8, 40-5; (7th) 40-8.
 Ryam:—(3rd) 39-4 s.l.; (5th) 39-10 c.t.
 Samastipore:—(3rd) 22-4 c.t.; (5th) 22-3; (7th) 22-2, 22-3, 22-4; (8th) 22-4, 22-1; (9th) 22-3, 22-4.
 Sitalpore:—(7th) 18; (9th) 17-4, 17-9.
 Shree Sitaram:—(3rd) 32 c.t.
 Shree Yuvraj Jammu and Kashmir:—(9th) 25-8.
 South Behar:—(7th) 26.
 Sree Krishna Gyanodaya (New Pref.):—(8th) 117.
 U. P.:—(3rd) 35-8, 35-4; (4th) 35-2, 35-4, 35-3, 35-6, 35-8; (5th) 35-1, 35-6, 35-4, 35-8; (7th) 25, 35-1, 35-2, 35-5; (8th) 34-12; (9th) 34-6.

(Annual General Meeting, 25th Feb., 1944 at Cawnpore at 10-30 p.m.)

Audited Accounts for the year ended 31st October, 1943:—

	Rs.	A.	P.
The results for the period, after providing for taxation and a bonus to employees, show a profit of	6,38,877	10	1
from which has been deducted:—			
Depreciation	1,65,000	0	0
	4,73,877	10	1
to which has to be added the Carry Forward from the previous year	1,07,132	10	8
Leaving at credit of Profit & Loss Account	5,81,010	4	9
This balance the directors recommend should be disposed as follows:—			
In payment of a dividend on the Preference Shares at 8 per cent for the year	80,000	0	0
In payment of a dividend on the Ordinary Shares of Rs. 2-8 per Share	3,75,000	0	0
	4,55,000	0	0

Carry Forward .. 1,26,010 4 9

The Marhowrah Factory commenced crushing on the 4th January, 1943, and continued until the 30th March, 1943, while the Gauri Factory commenced crushing on the 1st December, 1942, and continued until the 5th April, 1943.

The season was remarkable for almost ideal climatic conditions in the areas serving the Company's Factories, with rainfall abundant and well distributed. The incidence of disease was notably lower than in previous seasons, indicating that the measures of control carried out by the Company's Staff had achieved results. The sugar value of the cane treated was fully maintained, the figures for recovery being very satisfactory and in the case of Marhowrah Factory only surpassed in India by that obtained by a factory situated in the Kolhapore State.

The Industry in the Provinces of the U. P. and Bihar was directed by Government to treat all the cane which might be available, as stocks of sugar in the country had been greatly reduced, and a season of 120 days working was confidently expected by Government. This estimate has proved to be much too optimistic and very few factories in the two Provinces have recorded a season of this duration. One of the chief causes of this miscalculation on the part of Government was the severe competition experienced from the manufacture of G. prices for which had risen to fantastic levels, coupled with the fact that Government had not raised the minimum price for cane from eight annas to ten annas per maund until the end of December, 1942. The late announcement of the enhanced price for cane also had the unfortunate effect of diverting considerable areas to grain crops for which most attractive prices were ruling, with the result that a very large proportion of next season's crop will be represented by ratoons, which is very undesirable as this means a much reduced yield per acre and tends to carry on disease from year to year. Prices for sugar were raised by Rs. 2-5 per maund as from January, 1943, which would have represented adequate compensation for the increased cost of raw material if a factory could have worked for 120 days with reasonable efficiency. In the case of the Company's Marhowrah Factory, however, the enhanced price obtained for sugar has not covered the extra price paid for cane and the higher cost of production due to a much curtailed season.

Owing to the high prices prevailing for Gur, the Cawnpore Refinery could not work profitably and therefore remained idle throughout the year. Government's attitude towards refineries appears to be one of indifference.

The Company's Distilleries worked throughout the year with only brief stoppages due to coal shortages.

As regards Government Control measures, these would seem to be working more smoothly, but there still remains the question of transport difficulties. Sugar deliveries, since the introduction of the system of permits by the Sugar Controller for India, have been satisfactory. The Directors are pleased to report that the entire 1942-43 season's sugar has been disposed of.

For Season 1943-44 Government's policy is aimed at a maximum production of sugar, but it is doubtful whether factories will be able to obtain all the cane that may be available as facilities for the transport of cane may be even more restricted than during last season.

Government's neglect to declare any policy as regards Season 1944-45 before the time when cultivators must decide on their planting programme has had a most serious effect on prospects for next season.

During the year under review the machinery of the Saran Oil Mills was disposed of as this had not been working for several years.

The Company's property has been maintained, as usual, in good repair.

Managing Agents:—Messrs. Begg, Sutherland & Co., Ltd.

Authorised Capital—Rs. 50,00,000. Issued and Subscribed—Rs. 25,00,000 in 1,50,000 ordinary shares of Rs. 10 each and 10,000, 8 per cent Cum. Pref. shares of Rs. 100 each, both fully paid up.

Synopsis of the Balance Sheet as at 31st October, 1943.

Liabilities.		Assets.	
	Rs.		Rs.
Capital Paid up	25,00,000	Gross Block	85,47,122

Total	82,01,110	Total	82,01,110
		Total Liquid Assets	57,71,321

BURRA DHEMO COAL COMPANY, LIMITED

Audited Accounts for the half-year ended 30th September, 1943:—

These accounts do not show the adjustments resultant upon the reduction of Capital as the Court Order in respect of this reduction only became effective as from the 8th December, 1943. Subsequent accounts will, of course, show the reduced Capital.

After making Sundry Adjustments and adding the Carry Forward from the previous half-year there is a debit balance of Rs. 23,157-12-0 to be carried forward.

The Directors regret to report that due to very heavy rain in July a jore crossing the Company's property broke its banks resulting in the flooding of the mine and the suspension of raisings during the remainder of the half-year. Credit is due to the Chief Mining Engineer and his staff for the very strenuous work carried out in this connection, and it is due to their efforts that the mine was saved and is again in production.

Actual raisings, therefore, were for three months only and the profit made during this period was offset by the expenditure in connection with the inundation and the provision of rice to the labour until such time as it was possible for them to resume work.

Managing Agents:—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 8,12,500 in 81,250 shares of Rs. 10 each, fully paid up.

Synopsis of the Balance Sheet as at 30th September, 1943:—

Liabilities.		Assets.	
	Rs.		Rs.

(Continued from page 273)

become effective and the amounts due will be paid to the persons registered as shareholders on 25th February, 1944.

It is, therefore proposed that the repayments of Rs. 1-8 per share shall be made to the respective registered holders of shares on application being made to the company at their registered office 8, Clive Row, Calcutta. The relative Share Certificates should accompany the application so that an endorsement can be made thereon.

The accounts for the half-year ended September, 1943 show that, after making sundry adjustments and adding the carry forward from the previous half-year, there is a debit balance of Rs. 23,157 to be carried forward. Due to very heavy rain in July/August crossing the company's property broke its banks resulting in the flooding of the mine and the suspension of raisings during the remainder of the half year. Due to very strenuous work carried out in this connection the mine was saved and is again in production.

Actual raisings were for three months only and the profit made during this period was offset by the expenditure in connection with the inundation and the provision of rice to the labour until such time as it was possible for them to resume work.

WATCH-DOG.

(Continued from page 274)

Among Hydro-Electrics, Andhra Valley were a bit easy at Rs. 1,847-8, while Tata Power were 17 points lower at Rs. 1,855; Tata Hydro were Rs. 199-8.

In the miscellaneous section easy conditions prevailed. Alcock Ashdown were 27 points lower at Rs. 618-12, while Bombay Steam lost rather heavily to close at Rs. 685. Belapur Sugar were Rs. 239; Scindia Steam were 2 annas lower at Rs. 36-14. Shivrajpur Syndicate lost 2 points to quote at Rs. 73. A. C. C. were Rs. 220-8. Premier Construction were Rs. 236-8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Feb. 8.

Firm conditions prevailed on the market. Though the volume of business passing was not as large towards the close of the period under report as in the beginning, prices were well maintained and selected scrips in the Textiles section show further improvement.

In the Textile section Maduras were firm at Rs. 88. Vasantas were better at Rs. 395. There was not much change in the quotation of Cambodias at Rs. 39-6. Mettur Industries have advanced by 6 points to quote at Rs. 338 while Buckingham Carnatics were a strong feature at Rs. 337-8. Pankajas were Rs. 378; Dhanalaxmis Rs. 592; Sri Sarada Rs. 290 and Rajalaxmis Rs. 307-8.

Among Planting shares, Midland are higher by 12 as. at Rs. 16-8; Cochin Malabars were slightly higher at Rs. 18. Chembra Peaks were Rs. 12-8; Be Be Rubbers Rs. 11-14; Periakaramalais Rs. 31-4 and Thirumbadis Rs. 5-1.

Among Miscellaneous shares, Bruntons were Rs. 17-13; Mysore Paper Rs. 31-10; Spencer & Co. Rs. 13-4; Mettur Chemical (New ord.) Rs. 27-2 and Mysore Chemical Mfg. Rs. 49-10.

TREASURY BILLS

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills were opened on Feb. 15, 1944. Total amount offered was Rs. 14,74,00,000. Tenders at Rs. 99-12-9% and above were accepted in full and those at Rs. 99-12-8% were allotted approximately 16%. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-12-8% per annum.

Tenders for Rs. 8,00,00,000 of three months' Government of India Treasury Bills will be received on Feb. 23, 1944, in Bombay up to 11 a.m. and up to the close of business on Feb. 22, 1944 at other centres. Successful tenderers should make payment on Feb. 25, 1944. Other conditions are as usual.

During the week ended Feb. 11, 1944, Government of India Treasury Bills for Rs. 1,75,00,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

The brief week-end cable relating to comfortable money conditions in London contained a hint of larger borrowing than usual as the amount asked for in six months' deposits has been raised this week to £70 millions. The final quarter marks an increase in weekly revenue receipts but this year, perhaps, war expenditure is rising fast and revenue has to be supplemented by the increase in borrowing. Since clearing banks have large balances with the Bank of England, and the note issue is well over £1,000 millions, the borrowing problem is simplified for the Treasury. Rates show little or no change from week to week and as for the decline in bullion or the increase in public deposits shown in the last Bank of England return, they cease to interest people who think that Treasury policy settles everything. But over and above the Minister concerned, the Treasury's permanent chief and advisers is the Governor, whose unique position is derived from 25 years' control of the Bank of England. What 'Mr. Skinner' has thought of prewar politics in Europe or his own experience of the Boer war has not been indicated in the indiscreet reminiscences that are in the fashion since Mr. Churchill and Mr. Lloyd George wrote formidable volumes about their part in the last war. The biennial election due next month, is certainly a matter for others besides the Court but the City is not unmindful of the enormous significance of the Jubilee year for Mr. Norman, and one may presume at this distance that it will be again a choice of Mr. Norman and Mr. Catterns as Deputy, largely because the Governor's post in the world of finance corresponds to that of the Speaker in the political world. Incidentally, reference may be made to the absolute continuity in the office of the Chairman of the London Stock Exchange since Mr. R. B. Pearson still remains at its head.

The calm of markets has not been broken by the Pravda's attack on the Polish National Committee or the rejoinder. The market is described as quietly firm on most days, and one may fail to note any effect of the violent fluctuations of Indian Iron and Barnagore Jute in Calcutta in the list of London quotations appearing in the daily papers, while the rise in Burma Corporation over there is hardly reflected in India. The only noteworthy change this week is the rise in Doocars Tea (£1) shares and this may be due to an increase in the dividend. The more important Home Industrials have been fully steady and the small rise in International Nickel may be due to a rise in New York rather than anything else. Some improvement in stores shares has been noted after the encouraging results of Woolworths for the year (reported last month) appeared an assessment of post-war prospects explains the rise noted under 'Emmies' and Pinchin Johnson (both 10sh. paid-up) and strongly fancied by all classes of investors between the wars.

In spite of Mr. Roosevelt's disclaimer as to the arrival of a British oil mission to consult on the questions raised by the new American pipeline there has been measurable improvement in the quotation for Anglo-Iranian stock. The leading oil shares are inextricably connected with one another though the rise in Anglo-Iranian has not led to a rise in Burma oil which has evidently been influenced by the mixed news from Arakan and the Daily Herald's comments on the Second

Half. The pipeline story led to buying of Anglo-Egyptian oil shares in Cairo according to the cable which said that the King of Saudi Arabia was almost ready to take the U. S. offer to develop the oil located in his country. It is not at all likely that an oil war of the kind known in the past would ever appear because in spite of the sensational stories appearing in Ludwell Denny's book or in Louis Fischer's book the last act of the oil drama is over. The U.S.A. was free to develop new property last year on the edge of Alaska for the sake of the Navy and the air force and the setback in the Turner Valley did not cause jubilation in the States. Oil is strictly international and the British politicians who are worried over the grip of U. S. big business on Canadian industry, for instance, in the aluminium and nickel industries, hardly care to note that the greater part of Canada's trade is with the U.S.A. and there is a big export surplus to prove that the debtor is not compelled to sell gold.

There has been much talk about what cartels do or don't but the Canadian view may be strikingly different as Mr. Mackenzie showed when he dismissed without costs, Lord Halifax's case for equality of function combined with equality of status in the British Commonwealth. Far more important for the future is the promotion accorded to Iran where the three major Powers are to have Embassies as at Ankara. The failure of the Staff talks has been without effect on the markets since the Near Eastern situation was cleared up when the Syrian and Lebanese crisis was dealt with. The two States have a direct interest in the Arab Union talks still on but the proposed appointment of Syrian consuls, etc., in Iraq will have less effect than the recrudescence of bomb outrages in Palestine. The London stock exchange does not appear to experience any tremors either on this account or on account of a tempered claim for the Dodecanese on

behalf of Greece or on account of the happenings in Greece or Yugoslavia where the confusion is not offset by a promise of real, federal union after the war.

After Mr. William Green's polite but firm rejection of the plan for national service, another plank in the U. S. administration programme has been knocked out. Except for the Wall Street Journal's story of what is desired in Washington by some about the return for lend-lease supplies, there is nothing of importance. The plan for the Veteran's bonus (even Veterans with 60 days active service) has gone through, but the Southern Democrats are one up with the success of the Bankhead Bill against subsidies. The Presidential campaign has begun and Mr. Willkie undeterred by opposition in Illinois has crossed the continent to seek nomination in Oregon. There are possibly other G.O.P. candidates but Mr. Willkie has decided to make the running and he has ably cited British example for dispensing with a permanent ruler. In view of setbacks over the subsidy for rationing business, general conscription and the soldiers' ballot the tax bill without amendment looks highly unlikely. The failure may affect the international currency plans and the Anglo-French financial agreement appeared in time to remind that America is not the world.

The recovery of Nikopol may mean that in the future Russian manganese, coming by way of the Black Sea, would compete with Indian or African mineral exports. So far nothing has been said about what the Russians would give to the Allies though the significance of the German loss in the South Ukraine has been duly explained. The U.S.A.'s requirements may be found in the New World, and it is fairly clear that Indian manganese must look mainly to the British market. That improves the outlook for sterling companies operating in India, and so far little has been said about the need or the desire to buy out British mining concerns. Voluntary sales of plantations are so common as to escape notice except when the purchaser pays a stiff price to take over properties. Whether the outlook for natural rubber is modified by the development of substitutes or not hardly claims attention today and the process of voluntary disinvestment proceeds, since rupees offered at this end for sterling assets are desirable to His Majesty's Government.

The beginning made in Egypt with reference to gold sales in November led to comment as to the third parties involved. The M.G. noted that Empire gold finds its way

(A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal).

THE JALPAIGURI-DARJEELING TEA & PRODUCE DISTRIBUTION COMPANY, LTD.

JALPAIGURI

BANKERS:

THE CENTRAL BANK OF INDIA LIMITED.

AUDITORS:

MR. A. RUDRA, B.Sc., B.L., G.D.A., R.A., Jalpaiguri.

REGISTERED OFFICE:

JALPAIGURI (Bengal).

Objects.—The Company has been formed with the objects as set forth in its Memorandum of Association and in particular as its immediate object to carry on the business of purchase of Tea from Tea Gardens and from others, to stock same in different centres throughout the Northern and Central India and to distribute same in cheapest containers to the consuming public with the addition of smallest possible costs.

Preliminary.—Tea is one of the world's most cheapest and wholesome beverage which is being consumed in larger quantities by the people year after year. India is not only self-sufficient in tea but the major portion of its produce is exported. Not even 25 per cent of the produce of this country is consumed in the country itself but the potentialities of developing the tea consumption in India are immense.

Why Tea Reaches Consumers at High Cost? The principal reason for the formation of the Company is to see that the tea reaches the consumer with the least of middlemen's profit and additional unnecessary expenditure. Probably it is not known to many that practically all the tea that is consumed in India does not go from the Factory to the consuming centres but are first sent down to Calcutta where they are stored in the Ware House, samples drawn, teas catalogued and then sold in auctions from which some buyers as representatives of traders of different parts of the country buy and then either after blending and packing or in original containers sell them to the consuming public. The auction buyers do not pass the tea to the traders in the different parts of the country without keeping a decent margin for them and then again the traders also keep their margin before the tea is placed before the consumer.

Proposed Mode of Operation.—To reduce such unnecessary expenses and wastages and to assure a reasonable price for the producers and the buying cost of Consumer the Company therefore proposes to buy the tea mostly from the gardens direct and send them to the consuming centres direct without passing through the long (and cumbrous) channels enumerated above and to place the fresh tea at the quickest possible time in the hands of the consuming public. The promoters of the Company practically all of whom are of Jalpaiguri and are all connected with various Tea Estates intimately as Directors or as Managing Agents or otherwise and as such they are very intimately known to the Tea Producers of the two important producing centres of North-East India, viz., the Doars and the Darjeeling and also of Assam. JALPAIGURI Planters have gained the reputation of becoming the most successful INDIAN Tea Producers and their experience in the line is compelling them to turn their attention to tea distribution side as well on a large scale. The Promoters feel that if they can place the tea direct from

garden to the consumers, not only they can put the tea in the consumer's cup at a cheap price but will also retain a decent margin of profit for the proposed Company giving, at the same time, a better price to the producers than they usually get.

Special Features.—The special features of the Company are in its proposed operations which are generally as under:—

- (1) Large scale distribution of fresh tea from garden direct to consumers without passing through costly intermediate channels and with the least expensive packing.
- (2) Sufficient tea is proposed to be stored in no less than 40 large centres throughout Northern and Central India so that even temporary dislocation of communication would not affect supplies at a regular rate and at reasonable price.
- (3) The addition to the purchase cost including Railway freight packing, etc., is estimated not to exceed As. 3 per lb. in arriving at the selling cost at the different centres.
- (4) No fanciful blending, selection of the right type of tea for the right centres, and no unnecessary handling.
- (5) Proposed operations would readily place fresh tea in the consumers' cup in smallest possible time.
- (6) The Directors are all men having intimate knowledge of manufacture of tea and such knowledge would prove invaluable for the distribution side, a feature, so far unknown in the trade.

RESULTS OF CAPITAL EMPLOYED.

	Rs.		Rs.
Capital Outlay ..	42,500	Annual Gross Turnover of Tea expected ..	24,75,000
Working Capital ..	4,57,500	Estimated Purchase-cost of Tea (Annual) ..	20,25,000
Total ..	5,00,000	Management Expenses and Taxes on Profit	3,60,000
		Net Profit expected ..	90,000

From the above it will be apparent that the Company will be able to pay a minimum dividend of at least 15 per cent on the Capital Employed.

Minimum Subscription.—The minimum subscription upon which the Company will proceed to allotment is share of the Face Value of Rs. 25,000 and nett realisation of Rs. 7,500 thereof which in the opinion of the Directors is necessary for the commencement of business. The Directors and their friends havng already taken shares worth more than the minimum subscription, the Company has commenced business.

Preliminary Expenses.—The Preliminary Expenses have been estimated at Rs. 7,500.

Qualification and Remuneration of Directors.—The qualification of a Director shall be his holding of shares of the Face Value of Rs. 1,000 as provided in the regulation of the Company. One-third of the Directors shall retire every year who will be eligible for re-election.

The Directors shall be paid a sum of Rs. 20 and actual travelling expenses for each Board's Meeting he attends. The Directors or Promoters have got no pecuniary interest in the Company save and except as shareholders or Director.

Management.—The Management of the Company shall unless any Managing Agent be appointed in accordance with the provisions of the regulation of the Company, vest on the Directors who shall be assisted by a Manager, who shall be the principal officer of the Company.

Commission and Brokerage.—The Company is authorised to spend up to 10 per cent on the subscription or procurement on shares which may be agreed to be subscribed or procured.

Promotion Money.—No Promotion Money will be paid to any one.

Application for Shares.—Application for shares should be made in the accompanying form or as near thereto as may be, together with Rs. 3 per share to the Registered Office of the Company or to any branch of the Central Bank of India Ltd.

THE RETURN FOR LEND-LEASE AID

Fresh Views Emerge

Special for "Indian Finance"

Washington, February 16.

The Roosevelt administration is internationally-minded but United States advocates of post-war anti-Isolation received a minor setback last week when it was released that influential Government officials (so far in a minority) are seeking repayment of 19,000 million dollars this country has advanced to the Allies in Lend-Lease supplies. This group envisages compensation not in gold, but in raw materials and a chain of strategically-located air bases and military fortifications. Although their views hitherto have not prevailed, it is certain that they will be vociferous when the United Nations finally gather around the peace conference table.

Mr. Stettinius says "the contribution that the United States expects anything more than a token repayment of Lend-Lease aid, while the Lend-Lease Administrator, Mr. Edward R. Stettinius who is now Under-Secretary of State said in his recent book, "Lend-Lease Weapon for Victory" that the United States has already been amply paid in dead Germans for 19 milliard dollars' worth of goods and services given to the Allies.

Mr. Roosevelt himself never indicated each United Nations is pledged to make toward the common victory is set forth clearly in the declaration of the United Nations. Each Government pledges itself to employ its full resources, military or economic, against members of the Tripartite Pact and its adherents with which such Governments are at war."

If Mr. Stettinius' ideas prevail after the conclusion of the European war, there will probably be little question as to lend-lease repayment. But a small yet steadily growing clique here is quietly agitating first for direct political control by the United States of all islands recaptured from Japan, secondly, for the permanent retention of all naval bases which Britain leased to the United States for 99 years, thirdly, for partial "equity control" in Colonial holdings of raw materials.

The first two objectives are purely political. It is generally anticipated that the first will be attained at least as far as former Japanese-mandated islands are concerned but few expect that Britain will permanently cede bases such as Bermuda and Trinidad to the United States.

There will be a vigorous United States campaign however for wider acquisition of sources of raw materials in partial payment for Lend-Lease. Senator Richard

Russell of Georgia who is one of the leaders of this movement recently said although "we won't be paid in full for all materials of war we advanced to our Allies, there are many ways in which the United States can be repaid in part."

Senator Russell and his followers hope that the United States will obtain policy-making control in foreign corporations

producing certain raw materials and will also get a substantial share in any international pooling scheme which might be eventually developed for handling basic raw materials. In that connection the U.S.A. is particularly interested in tin, rubber, petroleum, manganese, sisal, chromite, copper, zinc, lead, tungsten and nickel.

Unreal Profits & Real Hardships

Sir Edward Benthall, the Member for War Transport, has chosen to mix a drop of bitter gall with the cup of milk which he has set before the Central Legislature. He is not, apparently, satisfied that the milk is of doubtful quality, that the surpluses of which he has spoken with such evident satisfaction mean but little to the people in the ultimate realities of national life. And the little satisfaction that the country might have felt that the Railways continue to yield higher and higher profits on paper is outweighed by the prospect of having to pay more for a service which dwindles daily in scope and quality. The main features of the Budget now presented to the Assembly need hardly be the last minute revelation of the Member in charge. They have been writ large in all that has been happening in the country, in the limitless rise of currency circulation, in the numerous military specials that run over all parts of the country and in the ceaseless shrinkage of the place given to the ordinary public in the country's transport system. There is neither mystery nor surprise in the tale of increasing surpluses which Sir Edward gave to the Central Legislature. And the fact that the proposal to increase fares was forecast, almost broadcast, far ahead of the Budget can do little to mitigate the pain that the public must feel about this gratuitous addition to the hardships of the present war period.

The results of the three years to which the present budget statement refers are in all conscience impressive. Revenue has acquired a commendable habit of exceeding estimates, while expenditure, not to be outdone, obligingly suffers shrinkage. The gross receipts for 1942-43 were Rs. 6.23 crores above the revised estimate, while ordinary working expenses were Rs. 2.29 crores less. Payment to worked lines and interest charges declined by Rs. 4 lakhs and Rs. 13 lakhs respectively. In the net result, the surplus was Rs. 45.07 crores, or Rs. 8.79 crores more than the revised estimate and this additional sum has also been transferred to the Railway Reserve which at the end of the year stood at Rs. 9.35 crores against the revised estimate of Rs. 56 lakhs. The current year promises in the revised estimates to be as good as last year. Owing to the continuance of the high level of earnings, the present estimate of gross earnings is placed Rs. 28.5 crores higher than the budget estimate, at Rs. 178.5 crores. Gross working expenses are expected to rise to Rs. 108.58 crores and interest charges by Rs. 86 lakhs. The net result is a surplus of Rs. 43.77 crores as against Rs. 36.04 crores in the budget estimates. Out of this surplus Rs. 11.05 crores will be transferred to the Railway Reserve Fund and the balance of Rs. 32.72 crores will go to the general revenues.

As for 1944-45, taking into account the proposed increase in fares and the maintenance of the surcharge on coal throughout the year at 20 per cent, the gross earnings are placed at Rs. 192 crores or Rs. 13.5 crores in excess of the revised estimate for the current year, while in the case of expenses an increase of only Rs. 5.32 crores is provided for. The net surplus is estimated at Rs. 52.21 crores, as against Rs. 43.77 crores for the current year in the revised estimates and the realised surplus of Rs. 45.07 crores for 1942-43.

The figures cited in the last sentence constitute in themselves a strong prima facie case against an increase in fares such as has been proposed by the Member for War Transport. But the purpose of the new levy is not to meet an imperative present need but to make a far-seeing provision for the future. And the special reasoning put forward by the Hon'ble Sir Edward Benthall for effecting an increase in fares must be considered with more than usual care.

There are three good reasons for increasing fares today, the effect that such an increase may have on reducing passenger travel, the deflationary effect owing to the immobilisation of a substantial volume of currency and the opportunity of taking the first step towards building up a fund for postwar reconstruction purposes. As regards the first, the experience of 1917, when in similar conditions fares were increased, is likely to be repeated. Action then was followed by a decrease in the number of passengers travelling and, although after a year the number again increased, it did restrict the number who would have travelled had there been no increase in fares. I, of course, agree with the Central Advisory Council that in present conditions increasing fares, except to a penal extent, will not alone so reduce travel as to prevent overcrowding. The deflationary effect, combined with other measures which the Finance Member may take, will be a very valuable contribution to the solution of India's most pressing economic problem. An increase in goods rates on the other hand, although it would be thoroughly justified on the general level of prices, would, unless there were other compensatory action, tend to have an inflationary effect which it is desirable to avoid. The argument in favour of building up a fund for postwar purposes is to my mind paramount and irrefutable and the Governments of the future would rightly blame our shortsightedness and lack of courage if we failed to put them in a position to carry through the postwar plans which we are preparing for their fulfilment.

Overcrowding, inflation and heavy depreciation during the war period, constitute according to Sir Edward, the "three good reasons" for increasing fares today; and it is necessary to see how far these three circumstances can be held to be a valid ground for increasing passenger fares. We may perhaps change the order and deal with inflation first, not only because the word provokes unreflective reactions in most minds, but also because anti-inflationary measures do not exactly come within the orbit of the Member for Transport. It is unfortunate, indeed, that public understanding and official comprehension of the inflationary problem have all along been on wholly unrealistic lines. Strange ideas regarding inflation have been insidiously encouraged. It is thought that nearly every one in the country has his pockets bulging with new money; that the increase in everyone's income is proportionate to the increase in the Reserve Bank's currency circulation and that everyone is crying for some outlet for his surplus cash. Nothing can be farther from the truth. Though Sir Edward has cited figures to show that the farmer is getting more for his produce than formerly, he has little to say of the increase in his expenditure or of the desirability of his having something left for the rehabilitation of his household or his farmstead. In any case, the value of higher fares as an anti-inflationary measure depends on whether they cut into the pockets of a large class or a small one. With travel as restricted as it is, with passenger earnings being derived in so large a part from public funds instead of private pockets, it is idle to contend that the proposed increase has any value as an anti-inflationary measure. After all, every forced deprivation of private individuals cannot rank as an anti-inflationary measure. And since the task of the Transport Member is to administer the Railways efficiently according to sound principles and not make up for any possible errors of policy of his colleague in the Finance portfolio, the introduction of inflation in this context is as unnecessary as it is unjustifiable.

As a measure for preventing overcrowding, the increase in fares is even more unsuitable. If one remembers the courses behind what is called overcrowding and the nature of the passenger traffic at the present period, then it will be conceded that an increase in fares can only add to the hardships of the passengers without remedying the evil it is directed against. Sir Edward has in this context too cited figures to show that the increase in the passenger traffic coincides with the period in which inflationary tendencies were most apparent. But as a matter of common personal experience one might say that passenger traffic increased with the growing

reduction of other means of transport such as motor buses. The severity of petrol rationing is a factor that lets directly on the volume of passenger traffic on the railways. Even with in cities like Calcutta, the strain on the tramways developed a great deal with the decrease in the number of private motor cars and the cut in the bus services. What we call overcrowding is the combined result of reduced motor transport and the cut in the number of trams run. The Railway administration pays itself an undeserved compliment, if it fancies that any considerable number of people undertake railway travel for pleasure. What passenger traffic there is today is not less obligatory than the suburban passengers who have been exempted from the increase in fares. For avoidable travelling one should perhaps look to officials on tour or transfer rather than to the ordinary civilian public; and if the increase in fares should result in a reduction of passenger traffic, we make bold to say that it can only indicate that a most unjustifiable and crushing disability has been imposed on the public.

We doubt whether the Railway Member's estimates of increased yield will prove correct. So far as we are able to judge, the average individual spends about a month's income on travel on the movements necessitated by personal and domestic business. These movements are as necessary as food or clothing; and if the cost of this necessity is arbitrarily put up by 25 per cent, the consequences cannot be accurately predicted. But it is certain that the Government's claim of keeping the costs of living down will have been greatly weakened.

PREFERENCES PREFERRED

If most market reports contain no hint of the outstanding and consistent improvement in fixed interest stocks over a fairly long period the more than local phenomenon admittedly invites examination. Its connection with the narrowing yield on gilt-edged and the volume of funds at the disposal of the institutional investor is obvious. In the opinion of some the outlook for all preference issues was settled when the minima for Government securities were revised. The singular correspondence between the rise in gilt-edged and bank shares has not escaped general notice, but the unsatisfied demand for prior charges is of unusual importance as a guide to current market behaviour. The drop in equities in the past few days has been without influence on the structure of prices in the section to which reference is made. The problem on which attention has been focussed by a steady rise in the shares of guaranteed light railway companies during recent weeks is not merely as to the outlets for the volume of disposable savings outside the gilt-edged market. The real success of Government borrowing does not impinge on the upward movement of senior stocks.

The paucity of transactions in preference shares generally since the year began does not imply anything more than a reserve on the part of sellers to whom fixed interest stocks have a special attraction. In the period before the Central Budget when the fears of increased taxation are pervasive and persistent, the improvement receives unexpected support, and attention may be rightly drawn here to the rise in Steel Corporation 5 per cent tax-free preference to Rs. 133 two weeks ago and also to the absence of sellers of Hooghly Jute Pref. even at Rs. 24 whereas the quotation is Rs. 22½ for the 10 per cent preference of Rs. 10. Business in B. I. C. 8 per cent preference at Rs. 213 has been noted last week and the very considerable premium to be noted in the case of even new preference shares indicates that funds which ordinarily sought the familiar, if limited, market for public utility stocks are now diverted to preference shares.

The impression that the spring outlook for preference shares will be wholly different from that for gilt-edged or ordinary shares receives special support from the guarded mention of a possible increase in income-tax or surcharge. The undeniable attractions of 3.9 or 3.8 per cent as a regular return are underlined by such talk as is heard today about the increase in taxation although the direct reference to an outside target in respect of defence loans this year must mitigate the worst fears. Time was when the demand for preference shares was less than that for debenture loans. But debentures are even scarcer, and the demand greater. The successful conversion noted in the case of one jute company last year indicated that in the war period joint stock companies derived a measure of assistance from the increase in the funds that were available for investments. But irregular variations are still common and little attention has been paid to theory of gearing that was in vogue years ago. Rating of preference shares as a class has

It may said, however, that the requirements of the financial soundness and stability of the Railways should outweigh to a reasonable extent most other considerations. Few will deny that the strain on the railway system imposed by war is so great that it is almost impossible to err on the side of excess in our provision for depreciation. It may be conceded, too, that the conditions in which repairs and renewals will have to be made on a large scale cannot be foreseen and that it is not the part of wisdom to assume that the conditions will be quite favourable. It is all the same a big jump from these concessions to a recognition of an immediate need to provide a fund of Rs. 10 crores for repairs and renewals. The mention of lower class passengers in this context and the effusive sympathy which the Government have shown for them are too patently demagogic to impress the public. If the 10 crores are to be earmarked for this purpose, then it must be agreed that to some extent this is integral part of the general problem of allocation to depreciation. The surplus realised unexpectedly in 1942-43 by itself is nearly equal to the amount which Sir Edward wants to set apart for the provision of facilities for lower class passengers.

The public will naturally prefer to decide this question after the war in the light of the circumstances of the time, rather than increase the hardships of the travelling public by an increase in rates. It is, we consider, fortunate that the proposed increase is not an integral part of the Railway Budget and that the Government should have no difficulty in acceding to the verdict of the Legislature if it should go against the proposal.

not been undertaken. It is still possible to find preference shares on which the return is over 4 per cent at present. And the difference between the return on the ordinary and the preference shares on the basis of the last dividend is altogether in favour of the preference shareholder. Since listed quotations are on the basis of the last marking great importance should not be attached to the differences in yield, but the general conclusion to which students of industrial finance have drawn attention frequently, the reliance of public concerns on their managing agents rather than on the market for working capital is indicative of the special feature, the limited number of prior charges. Not many companies in India seek more than a small proportion of their resources in the form of prior charges. The reason is not merely fear as to the possible failure to discharge liability in respect of preference capital. The absolute difference between the British and Indian markets may be found not only in the difference in current yields but in the proportion of fixed interest capital to ordinary capital. In a period of depression fixed interest stocks always represent a burden and railway stockholders in Britain, as in America for years on end, have realised the dangers of too many preferences. Here the small proportion of debenture or other capital to ordinary capital in any case confers a degree of immunity from risk that justifies the appreciation in values already reported. The appreciation, in any case, is not limited to Calcutta, for many will note with interest that Ahmedabad Advance 5 per cent tax-free cumulative preference is quoting at Rs. 133 though theorists would note in this case that gearing is unusual since the ordinary capital in Rs. 100 shares of the famous cotton mill company is Rs. 10 lakhs, the same as the preference share capital in issue in this case.

Since the sustained improvement in prices cannot be wholly due to the real immunity from taxation or the inordinate supply of capital limited to fixed interest stocks, we may pass on to enquire whether the improvement is directly conditioned by the increase in earnings cover for the preference dividend. The answer must be affirmative, and the very important distinction between gilt-edged (during a period when the rates of interest are held to the advantage of the borrower and the public debt increases like the annual provision for interest) and preference stocks for which the annual earned income is many times larger than the sum wanted for dividend preference deserves special emphasis. Corporate earnings trends have a value in the rating of senior stocks. Those who evolve a philosophy of their own for investment purposes should not ignore the absence of war and peace risks in the case of preference stocks as compared with the secular efforts of the Government to obtain conversion on its own terms. The last may be unimpeachable from the point of view of public policy, but in the investor's view the degree of security that is available is small as compared with that obtained from preference shares, apart from the very definite fact that with the excep-

tion of one loan all Government stocks at present are liable to tax.

Since the reference to earnings cover has been made here mention must also be made of the immunity developed by jute preference shares to the fall in profits recorded in company reports published in the last three months. This is both interesting and significant, and confirms our view that the outlook for the jute industry rather than profit statements for a period has a direct effect on the values of preference shares. Even where preference capital exceeds ordinary capital, and there is a provision for redemption at any time at a small

premium, as in the case of New Central Jute, the quotation for the preference shares is in line with those of other jute mills' 7 percent preference shares. The changes in this limited field detract from the value of any hasty conclusion as to a hardening of money conditions in India. Not many will overlook the fact that movements in such indices as are cited do not point to any advance; here is the real inspiration for arguments in favour of preferences. Careful examination of the share tables and transactions over a period should indicate when and where preference shares are preferable; and in our view the search for a guaranteed yield of over 4 percent can still be pursued with advantage to the investor.

THE FOURTH DEFENCE LOAN 1953-1955 3% now available

The Loan is issued at par and will be redeemed at par not earlier than 1953 and not later than 1955. Subscriptions will be received without limit of amount and the loan will be on tap until further notice. Interest will be payable half-yearly on the 15th January and the 15th July and will be subject to income tax and surcharge. As interest for the full half year ending the 14th July 1944 will be paid on the 15th July 1944, the issue price of the loan will increase by 8 pies per cent. weekly to allow for the approximate weekly net accrued interest.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Steel Control In Britain

The main differences between steel control in Britain and India are not substantial and the outside examination conducted in Britain by the Select Committee or National Expenditure has great interest for those who ask that public control of private industry must not be relaxed. Steel in Britain is a regulated and more or less rationalised industry. Its stability and efficiency are, in the main, derived from tariff protection. The iron and steel industry in Britain is admittedly wealthier than in 1939 but its strength is not enhanced by the war. The difference as between India and Britain should not be overlooked for in all recent discussion of its ability to hold its own in the export field doubt has been dominant. The crucial difference may be made clearer by the maintenance of the subsidies estimated at £9 million to steel masters. In view of the old finding as to price differentials etc. by Tariff Boards it may be necessary for India to retain the tariff surcharge. On the other hand, Committee on National Expenditure duly recognised that fixed prices gave the producers no special advantages, and the industry paid more by limiting prices charged than it received. The working of control since November 1940 has resulted in keeping prices down for the benefit of consumers for whom steel is essential. The object in India is identical and price regulation, quota allocation etc. stands justified by British practice though the cardinal difference between a steel industry which is guaranteed minimum profits in war by subsidy and the situation in India where prospect of expansion on the export side is dim should not be missed.

In most recent appraisals of heavy industries' prospects it has been noted that freedom from E.P.T. has been of direct assistance only to steel. Whether the guarantee of profits explains the escape from the levy or not, the point that companies not allowed to earn excess profits but experiencing normal growth owing to increasing returns and lower costs have a claim to more than tax refund after the end of the war must not be overlooked. That profits must be reasonable in relation to the real value of assets employed, and the risks taken, and that efficiency must be maintained at the highest practicable standard are points enunciated in the House of Commons Committee's report. The important conclusion may be cited in support of either tax relief or the retention of tariff advantages in the future when the claim for Imperial preference must be duly linked with the admission that subsidies for maintenance of fixed prices are a new factor in the price equation.

Editorial Notes

Indian Oilseed Prospects

Though there is frequent mention of Argentina's rivalry Indian linseed's prospects are distinctly strong. Prices of both linseed and oil in India are still higher than the rates held by control in London. The main feature of the past year was the firmness of oilseed prices, despite the ban on futures and the warning as to the impairment of export prospects. Prices in India up to the end of January remained high and the winter oilseeds forecast has supported the bullish feeling in evidence. The decline in the area under oilseeds in India is reflected in the fall of 12 percent in the acreage under rape and mustard and the fall of 8 percent under linseed as compared with 1942-43. The decline was attributed to adverse weather during the sowing period, and the progress of the crop was held to be dependent on the winter rains. Whether the decline is due to the increase under food crops or any other reason it is clear that the oilseeds markets will experience little change this year. The increase under linseed in Bombay and the Central Provinces may, influence prices in Bombay but the very considerable fall in Hyderabad (due to incomplete reports) must be of great importance to the export trade. The increase in the U.S. and Canadian linseed crops may be ignored conveniently as Indian prices for a fairly long period are influenced by local factors rather than the world demand.

The first forecast compiling the Provincial and State figures indicated that supply would be subnormal this year. The increase under groundnut is not reflected in any considerable fall in prices, and the shorter crop of sesamum this year may have a different effect on the market for other oilseeds. The decline from the very high levels touched in 1943 may be arrested by trade estimates of the carry-over and the supply. The increase in cultivation during 1942-43 is limited to sugarcane and rice. The commercial crops are below the standard of the pre-war years, and the main conclusion to be drawn at present is that notwithstanding the drop in food prices in India, the supply and transport position in regard to oilseeds would have a far greater effect on prices at the ports than the facilities for shipment available. The fall in linseed and groundnut prices this year may not then proceed according to anticipation as the demand for oil and oilcake must have grown. The war in the East created a new situation in regard to Indian oilseeds which slumped in 1940 when old export markets were lost. Restriction of cultivation was the direct result, at any rate, in the case of groundnuts and the fall recorded in respect of most oilseeds during 1943-44 is part of

the wartime adjustments. The prices paid this season would certainly determine the proportion of exports and one may readily forecast that the fall under rape and mustard will keep the prices of edible oils at the high level reached after prices started to move up in the summer of 1942.

Engines (Made In India)

The final report of the Committee which invested the manufacture of internal combustion engines is noticed in the latest issue of the Journal of Industrial and Scientific Research. The Committee appointed in March 1941 sent out a questionnaire and received the Supply Department's support. The Secretary of the Committee carried out the enquiry in person and the information obtained then led to requests for assistance from Britain. The Committee ascertained that four firms manufactured engines in India and a large number of workshops produced components for standard engines. The firms referred to experienced difficulties in importing steels and parts from abroad to build complete engines. The High Commissioner was asked to approach British manufacturers for designs etc. in

order to produce engines in India under license now and after the war, but the organisations could not disregard Mr. Amery's view "that the manufacture of internal combustion engines in India is not a practical proposition so far as the present war is concerned." Reference was made after the preliminary report was submitted to the difficulty of providing special steels, parts and spares which were wanted at home and as regards the post-war period commitments were not

welcomed though a promise was made that cooperation with Indian interests would not be forgotten.

The only result of the investigation was to indicate the need for special alloy steels, some of which are made in India now. The Mahindra Committee advised that a research workshop should be set up under the auspices of the Board of Scientific and Industrial Research for the production of pilot plants and the acquisition of specialised engineering experi-

ence. The import of machine tools and increased facilities for the production at home may help producers of machinery but the summary report only makes the suggestion that Lease-Lend could be invoked to get over the difficulty of getting machines and men for India. As regards fuel and lubricating oils encouraging results with vegetable oils have been obtained. It has been learnt that cotton seed oil is more economical and its efficiency higher than mineral oil. At Guindy experiments with groundnut oil have been carried out. Vegetable oil blends offer real possibilities as lubricants. Oil from coal has answered well, but the low temperature carbonisation plant has to be created therefor. Pulverised coal is not regarded as a likely fuel for oil engines. The Committee's finding in favour of power alcohol led to the proposal that admixture to the extent of 20 percent with petrol should be compulsory in India. The Secretary of the Committee in his notice of the report refers to the suggestion that the slow speed tank engine or any other engine used by the Army should be analysed so as to find out what parts could be made in India. Cooperation by manufacturers concerned has been advised, but the general view as to the need for engines, both stationary and mobile, explains the A.I.M.O.'s demand that internal combustion engines of Indian manufacture are necessary for industrial reconstruction in India.

New Medicinal Plant

Attempts to grow plantago in Sind have been described in Indian Farming lately. The medicinal plant called Isapgul was grown by the Sind Agricultural Department because the seeds of the plant have a proved value as a cure for dysentery and diarrhoea. In Mr. Vachani's account of the experiments special reference is made to the native physician's use of the seeds. The plant has not been tried on a commercial scale but the work successfully carried out at the research station at Sakrand deserves special notice as indigenous drugs from plants grown in India have acquired a greater value owing to the shortage of imports. The plant found in the Punjab and Sind is described as hardy but thriving best on rich, loamy and well-drained soil. It requires irrigation as it is a rabi crop sown in November. Preliminary irrigation comes before sowing and only 10 to 12 lbs. of seed per acre is required. It is noted the crop may do well even where irrigation is lacking. The crop comes to hand after four months and the average yield is 450-750 lbs per acre. Trials at Sakrand produced higher returns. The seed sells at Rs. 12 to Rs. 16 per maund in the local market so that the return per acre should be Rs. 100 per season. Considerable attention has been devoted in India to pyrethrum cultivation but the virtues claimed for plantago seeds in the treatment of various diseases make the experiments in Sind unusually important. A small plant with narrow leaves and flowering spikes, it is listed in the medicinal plants of India since ten species out of 250 are known to India. The main interest of the experiment lies in the effort to get a subsidiary crop for Sind zemindars because the irrigated crops are too few in number; and the thorough tillage demanded by plantago should have a separate value for the agriculturist.

AUDITORS.

G. BASU & Co., 6, Hastings Street, Calcutta.

The authorised capital is Rs. 15,00,000. The subscribed capital is Rs. 5,76,500 in 2,000 "A" class Ordinary Shares of Rs. 25 each and 21,060 "B" class Ordinary Shares of Rs. 25 each. The called-up and paid-up Capital is Rs. 5,46,500.

The "B" Class Shares confer on the holders a right to participate in the dividend to the exclusion of the "A" Class shares until such time as the total dividend received by the holders of "B" Class shares comes to 40 per cent.

The "A" Class shares confer on the holders thereof the right to participate in the dividends of the Company each year but only after the "B" Class shareholders have received dividend from the Company aggregating 40 per cent.

In winding up "A" and "B" Class shareholders rank equally for return of capital and will be entitled to participate equally in any surplus assets.

The Maharaja Bahadur of Mymensingh, the Chairman of the Bank, Mr. B. K. Rai Chowdhury of Gouripur, the Managing Director, other Directors and their friends have agreed to take up further 4,940 "B" Class Ordinary Shares.

Further, the Managing Directors has, in the interests of the Company, kindly agreed not to take any remuneration whatsoever till the Company declares dividend.

The Bank has begun well under the distinguished and active patronage of the two leading landholding houses of Eastern Bengal, viz., Mymensingh and Gouripur.

This Bank is acting as bankers in two rich agricultural areas; and a considerable volume of business in the move-

ment and financing of crops is thus assured. The handling of principal crops, namely, Jute, Tea and Paddy and trade bills which have grown considerably in volume in recent years is a chief item of business for the Bank. By opening up interior trade centres, the Bank expects to be a valuable link with important Calcutta Banks in respect of some of the most paying of Bengal's crops.

The Bank is fortunate in securing the co-operation and assistance of Mr. N. R. Sarker whose extensive experience and all-India influence is of immense value.

The Prospectus has been filed with the Registrar of Joint Stock Companies, Bengal. Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

This is not an invitation for shares but only an announcement. Copies of the Memorandum and Articles of Association can be inspected at the Central Office or the Registered Office of the Company.

Only "B" Class shares are available for subscription and can be had on the terms and conditions laid down in the Prospectus and on application being made in the prescribed forms.

Copies of the Prospectus and Application Forms can be had on application to the Central or other offices of the Bank or the Company's brokers.

Fruits Of Research

The dividends paid by industrial research are not limited to one industry in India, and investigation of the possibilities by the Supply Development Committee has added to the profits obtained from research pursued under other auspices. Abroad the general cry is more research, and continuous research, larger grants and more contributions from industry for research. The commercial applications of research have not been exhausted by the transfer of processes to industrialists. New uses for reclaimed and waste materials have been found and the use of reclaimed rubber in place of crepe for soles has been mentioned lately in connection with the official direction to a company to produce 6 million pairs of canvas shoes at specially low prices for the Indian market. The Board of Industrial and Scientific Research is known to have placed at the disposal of industrialists processes for making air foam solution, potassium chloride, barium chloride, glass substitute, urea, formaldehyde, cork substitutes, plastic collapsible tubes, laminated paper and fibre board. Most of these are being produced and still in the stage of development are processes for making jute boards, small carbon electrodes, waterproof paints for textiles, moulding powder and jute mill bobbins. New uses for indigenous raw materials have been established also and the Research Council is negotiating for the lease of processes for exploitation. Mention must be made of a composition for imparting water and fire-resistant qualities to the brattice cloth used in mines, for tent cloth and camouflage nets. Air-drying varnishes for securing protection from white ants have been evolved. Further uses for reclaimed rubber have been ascertained including the manufacture of ebonite. Most interesting, for various reasons, is the discovery of a tin-lining compound. This can be used for sealing the seams of containers of fruit preserves and dairy products. The antiseptic properties of neem have been demonstrated by its use for making disinfectants, mouth washes etc. Since the cotton industry for a year has been alarmed by the shortage of hoops for bales, the discovery of a substitute for hoops is good news for mills. The great variety of inventions reported makes it clear that the setting up of the new department is fully justified, and a ready lease of processes indicates that the State as a patentee has embarked on a policy of more income and less secrecy in regard to the fruits of research.

A City's Growth

In a recent survey of Bombay city's industries the growth of engineering concerns received special mention. In 1942 there were as many as 384 engineering enterprises showing that the rate of increase was largest in that field. The increase in the consumption of electricity there since 1940 is a consequence of the increase in engineering work. The A.I.M.O. takes the view that the increase in the number of engineering concerns is the effect of war demand for materials. War has given a great impetus to the advancement of the industry combined with the growth of small works which cater for the larger trades by producing equipment and instruments of comparatively small size to which larger establishments cannot attend because they are engaged in producing war material. trades in Bombay have received direct encouragement from Government. A late but significant Bombay development is the growth of industry subsidiary to the cotton textile industry. The manufacture of uniforms and tents represents no new departure but the production of accessories and stores like bobbins and shuttles indicates how the cotton mill industry of Bombay supports new enterprise. To quote: For the first time in the history of the cotton industry accessories like bobbins, shuttles, pickers and belting and new lines such as mosquito nets, camouflage nets, cellular and waterproof clothing came into production. The local timber industry has benefited from the war, but the war has most perceptibly helped to multiply shops. Production of footwear and leather goods also has increased. The increase in beedi shops has been described. While retail trade in countries at war has suffered greatly according to all accounts, the number of small private shops in India has actually increased. The changes characteristic of Bombay may be noted in Calcutta where the engineering industry is more strongly represented. The increase in the number of shops catering for the armed forces is equally noteworthy and the A.I.M.O. monograph dealing with Bombay has reviewed more than local developments. As regards the mill stores industry in Bombay the main possibilities were canvassed after Japan's entry into the war, but American manufacturers' present readiness to accept orders for textile machinery for delivery after the war may compromise the development of one or more sections of the engineering trade in Bombay.

British Cotton Industry—Another View

Since a recent cable outlined the aspirations of the Manchester Chamber of Commerce in regard to textiles and drew attention to the growth of rival exporters, there is little doubt as to the concern felt there over the loss of old markets. The cotton industry's requirements under concentration are wholly different from the post-war requirements and the case for something far beyond the Spindles Act of 1936 has been presented. The operatives' view was made known earlier when the trade unions examined the future of the mill industry. A sudden boom and a severe slump such as that described in Bowker's Lancashire under the Hammer is not desired, least of all by the unions; but the trade union clings to ancient prejudice by recommending nationalisation. The industry least suited to official control except through a Board dealing with export quotas was regarded as the subject for State control. The trade unions did not care to note that cotton is a complex industry dealing with new synthetic fibres as much as cotton. The difference between India and Lancashire is really indicated in the last sentence. What the trade unions demanded was the purchase of establishments and the running of the whole textile industry as a State concern. When investments in Lancashire Cotton Corporation have been tightened steadily, and the Government actually limits profit margins so as to keep down wages, it seems that the trade unions have lost touch with reality. State control as distinct from ownership has advantages which Sir Raymond Streat's Committee recognised, but the idea of creating a board on which the textile operatives' unions

would have special representation, was dangerously novel. The trade unions urged that a nationalised industry alone could compete effectively with Japan and the export trade could be recaptured. It was claimed that labour was efficient and organisation poor, forgetting that in the depression Lancashire underwent great changes. The trade unions emphasised that the Lancashire textile industry to hold its own need fresh capital and that must come from the State. The trade unions' view was challenged at once by those who still think that Lancashire's handicap is over-capitalisation. The trade unions offered also a suggestion that exports should be helped by increasing the prices of home-consumed goods. After

the Import Duties Act of 1932 there is no claim for protection but only for export advantages through Preference, but the variation of preference by export dumping recommended by the trade unions indicates what India may expect if Labour takes office and the trade unions exert real pressure. The trade unions looked forward to a big international cartel to deal with cotton and prices, exports and raw material allocations all to be determined by agreement. Nothing is more unlikely for the dissimilarity between the U.S. cotton industry drawing its cotton from the home market, independent of export trade and secured by tariff, is not likely to extend co-operation, and Japan may cultivate the Chinese market to the ex-

clusion of all others. The trade unions suggested that a great international board would settle everything connected with cotton and the Lancashire industry could be stabilised by preventing new middlemen and new manufacturers from making a start. Since the emphasis on restrictionist practice is heavy, the trade unions have apparently not taken note of the legislative proposals of 1938 and Mr. Oliver Stanley's efforts then to reconcile free enterprise with State control, efforts which stood for the application of control for specified purposes only.

Japan's Puppets

Indirect rule after conquest has been applied with variations by Japan which has lately striven to make a co-prosperity sphere by appealing openly to the passion for independence. The creation of puppets was resorted to in the Philippines as well as Burma last year, and recognition of one or both is at present limited to Japan. Inflamed nationalism has been encouraged in many ways and a correspondent in the "Manchester Guardian" has described the many methods used. A native army has been recruited, given its own officers, and its own uniform. The employment of natives in both administrative and police posts naturally calls into being a class whose interests lie with a Japanese victory. In Burma, a Buddhist country, the accent is duly laid on Japan's support of Buddhist religion and culture though the militarists of Japan are wholly materialist. In East Asia only Thailand owing to prompt submission enjoys special privileges. Burma is ruled by Dr. Ba Maw who proclaimed himself dictator even before the conquest. His party the Dobama Sinyetha is encouraged. It is organised on totalitarian lines with youth and labour organisations for Cooperation through whom the Japanese ambassador acts. In spite of much propaganda for equality Japanese subjects in Burma have been secured extra-territorial privileges. Japan's dealings with the N.E.I. have largely escaped notice. The unity of the island empire has been broken by division into four divisions, Java, Sumatra, (which was annexed to Malaya), Borneo and Celebes with the Moluccas. The first two are under military rule and the last two under naval rule. In Java concessions have been offered in the form of native councils that have been set up to advise the Japanese administration. Councils are planned in Malaya but in that country the Army has so far given its orders to the Sultans. Elections have been evaded and Japanese supremacy is reflected in the selection of persons ready to support Japan especially after the surrender of four Malay States to Siam. In Malaya the Japanese have behaved as though no danger to authority threatens. Interference has been dictated by the continued presence of Chinese suspected to be loyal to Chungking and Japan's own need of raw materials.

The Japanese government's way with its puppets was settled before the war when the Nanking regime was set up. That regime has apparently survived the attempt on Wang-Chingwee's life and its puppet army in spite of desertions, defeats and discontent supplements the garrison from which the northern provinces must be reconquered. It is important to note that the Japanese have readily dealt with

U.S. and British possessions in the same way as they dealt with Manchuria where the puppet regime is respectably old if not secured. The erection of new obsta-

cles to reconquest should not be overlooked when the Cairo declaration as to restitution of territories won by Japan over half a century is examined.

PROSPECTS.

OBJECTS: The Company has been started for the various purposes set forth in the Memorandum of Association (a copy of which together with the names of the Signatories thereto is annexed to and forms part of the Prospectus) and this issue is made particularly to purchase and work the Portland Rubber Estates belonging to the Coorg Rubber Co., Ltd., situated in the Province of Coorg. The following contracts have been entered into:—

- Between the Coorg Rubber Co. Ltd., Calicut and Mr. K. Gopala Pillai for the purchase of Portland Estates belonging to the first-named Company for a sum of Rs. 10 lakhs.
- Between Mr. K. Gopala Pillai of the Travancore Agencies, and Mr. Ananthanarayana Iyer on behalf of the Portland Rubber Estates Ltd. whereby the former has agreed to transfer his rights for a consideration of Rs. 10 lakhs WITHOUT TAKING ANY PROFIT, WHATSOEVER, FOR HIMSELF.

PARTICULARS OF ESTATE.

AREA: Total matured Rubber area is 1238 acres.
SITUATION: The Portland Rubber Estates lie in the Province of Coorg and is linked with a good Government road from Tellicherry and is only 36 miles from Tellicherry Post and Railway Stations, Malabar.

PREVIOUS CROP.

The Crop harvested during 1941-42 is .. 2,81,900 lbs.
The Crop harvested during 1942-43 is .. 3,12,384 lbs.
The Crop estimated by the Coorg Rubber Company for 1943-44 is .. 3,45,000 lbs.
Estimated Crop for 1944-45 is .. 3,45,000 lbs.
The above statement shows the steady increase in yield of the Coorg Rubber Company. The mature Rubber area is in excellent condition and the estimated yield from this area works out only at about 300 lbs. per acre which is considered to be modest. We anticipate at least 370 lbs. per acre in the near future. The estate has been well cared for by the previous owners and results of their manuring and intensive cultivation have just started bearing result. It is therefore expected that better crop will be easily possible hereafter. But due to the heavy rains during the last few months, there is a slight decrease in Crop which may be compensated in the course of the next four months.

The Income estimated from the Estates:—

	Rs.	Rs.
3,45,000 lbs. at 75 cents per lb. ..	1,03,500	2,58,750
Less Production Cost at 30 cents per lb. ..		
Less Office Allowance of Rs. 850 per month ..	10,200	
Less 5% Interest on Debentures for the value of Rs. 4,00,000 ..	20,000	
Less Dividend on Pref. Shares at 6% to the value of Rs. 4,00,000 ..	24,000	
Less Reserve for Debenture redemption per year ..	40,000	
Less 5% Managing Agency Commission ..	7,500	2,05,200
Balance Rs. ..		53,550

The balance available for distribution among the holders of Ordinary Shares will render a dividend of 13½ per cent possible. The above calculation is on a very conservative estimate. After redemption of Debentures the Company will be in a position to pay handsome dividends on Ordinary Shares.

PAYMENT TO VENDORS & DISPOSAL OF CAPITAL MONEYS.

By an agreement, dated 2nd May, 1943 and amendments thereof between Mr. K. Gopala Pillai of the one part, and the Vendors, the Coorg Rubber Co., Ltd., a Company incorporated under the Indian Companies Act with its Registered Office at Calicut, of the other part, Mr. K. Gopala Pillai has obtained an option of purchase of the said estate from the Vendors for a price of Rs. 10 lakhs and he has agreed to assign to the Company his rights to purchase the Estates, for a consideration of Rs. 10 lakhs without taking any middleman's profit whatsoever, for himself.

	Rs.
For purchase of Portland Estates ..	10,00,000
For Estimated Preliminary Expenses including conveyance, Registration, Stamp Duty, Advertisement, Printing, Travelling, Lawyer's fee, sundries, etc. ..	75,000
For Brokerage and underwriting ..	50,000
For Working Expenses ..	75,000
Rs. ..	12,00,000

CAPITALISATION.

The price to be paid for the estates is Rs. 10 lakhs and estimated preliminary expenses and working capital amount to Rs. 2 lakhs. The estate is so well equipped with adequate Bungalows, Staff quarters, and cool lines and in particular with a Crepe Factory costing about Rs. 2 lakhs. Therefore the capitalisation will be as follows on a very conservative basis:—

	Rs.
Buildings, Lines and Quarters, etc. ..	65,000
Crepe Factory ..	1,35,000
1,238 Acres of yielding Rubber area at about 808 per acre ..	10,00,000
Total Rs. ..	12,00,000

THE ABOVE FIGURES WILL SHOW THE CAPITALISATION OF ONE ACRE OF PLANTED RUBBER, WORKS AT ONLY ABOUT 808 WHICH IS CONSIDERED TO BE VERY LOW WHEN COMPARED TO SOME OF THE RECENT RUBBER FLOATATIONS.

When the Debentures are redeemed the capitalisation will go down to about Rs. 647 per acre.

It is rumoured that the price of Rubber is likely to be FIXED at Re. 1 per lb. and if that be the case, the distributable surplus to Ordinary Shares will be very much higher.

SHARES AND VOTES.

Every share, Preference or Ordinary, entitles the holder thereof one vote exercisable either in person or by proxy.

DIRECTORS' QUALIFICATION.

The qualification for a Director other than an Ex-Officio Director holding in his name either class of shares to the nominal value Rs. 2,500.
All Directors will be remunerated with a sum of Rs. 25 for each Meeting attended by him plus Travelling Expenses for attendance at such Meeting.
They are also entitled to any other expense they may incur, authorisation in or about the company's business. If any Director appointed to advise the company as an expert or be called upon to perform any professional service or other extra work or services

or make special exertions for any of the purposes of the Company, the Directors may pay to such Director such special remuneration as they think fit, which may be in the form of either salary, commission or lump sum.

DIRECTORS' INTEREST.

None of the Directors of the Company is interested except in a personal capacity and to the extent of their holdings of shares in the company except Mr. K. Gopala Pillai, the Vendor, who has assigned his option to the Company without any extra consideration on his purchase price. Mr. K. Gopala Pillai is also interested as a Director of the Managing Agency Firm.

MANAGEMENT.

Subject to the control and supervision of the Directors, the General Management of the affairs of the Company will be in the hands of The Planting Agencies (India), Ltd., who will act as Managing Agents of the Company for a period of 20 years. The Company will enter into a Managing Agency Agreement with the said Messrs. The Planting Agencies (India), Ltd. in terms of the draft-agreement which for purpose of identification is subscribed to by Mr. A. K. Durasami Aiyer, Advocate, Calicut.

The remuneration of Managing Agents shall be as follows:—

- From the date of certificate of commencement of business a sum of Rs. 850 per mensem as Office Allowance payable monthly, and
- 5 per cent of the net profit of the Company, the net profit being as that defined in the Indian Companies Act, Section 87c.

The above mentioned Office Allowance of Rs. 850 payable to the Managing Agents shall be exclusive of all salaries or wages of superintendents, clerks, or other employees engaged on the Estate or outside Agencies by the Managing Agents for the Company's business and of all remunerations, and wages which shall be payable to solicitors, accountants, auditors, bankers, engineers, experts, commission agents, dealers, brokers, or official servants or workmen who may be employed by the Managing Agents as authorised by the Directors for and on behalf of the Company.

PRELIMINARY EXPENSES.

Mr. K. Gopala Pillai as per agreement, dated 14th December, 1943, agreed to meet all the preliminary expenses of the Company, other than underwriting commission, and the actual expenses incurred will be paid to him. It is estimated that the preliminary expenses will be around Rs. 75,000. The underwriting Commission payable by the Company is Rs. 50,000.

UNDERWRITING AND BROKERAGE.

The entire issue has been underwritten by Mr. P. R. Subramanyam, M.A. (Member, Bombay Stock Exchange), Stock, Share and Finance Broker, 61, Stock Exchange Building, Apollo Street, Fort, Bombay, for a commission of 4 per cent. The entire ordinary capital of Rs. 4 lakhs has been sub-underwritten by Messrs. Coorg Rubber Co., Ltd. Brokerage at the rate of 1 per cent on Debentures and Preference Shares and 2 per cent on Ordinary Shares will be paid and borne by the Underwriters to recognised Brokers on allotments made in respect of applications bearing the stamp of such brokers. The Directors are of opinion that the resources of the underwriters are sufficient to discharge their above underwriting obligations.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the Directors shall proceed to allotment is as soon as 40,000 Preference and 20,000 Ordinary Shares or 20,000 Preference Shares and 40,000 Ordinary Shares of the Company have been subscribed for and the application money due thereon has been paid.

INSPECTION OF DOCUMENTS.

Copies of the following Documents are open to inspection during regular office hours at the Registered Office of the Company.

- Memorandum and Articles of Association.
- Contract entered into between the Coorg Rubber Co., Ltd. and Mr. K. Gopala Pillai.
- Agreement entered into between Mr. K. Gopala Pillai and Mr. M. R. Ananthanarayana Iyer.
- Underwriting Agreement between Mr. P. R. Subramanyam and this Company.
- Draft Managing Agency Agreement between Messrs. The Planting Agencies (India), Ltd., and this Company.

GENERAL.

Application for shares are to be made in the attached Form and forwarded with a remittance of the amount in full to the Company's underwriters or to the Registered Office of the Company or to the Bankers. The Directors reserve the right to reject any application without assigning reasons therefor. When no allotment is made the deposit will be returned in full, and where the number of shares allotted is less than the number of shares applied for, the surplus

To-day's Prospectus

Both ordinary and preference shares are offered for subscription by the Portland Rubber Estates, Limited. The Company is formed to take over the rubber-bearing property in Coorg. The heavy rainfall makes Coorg practically the best rubber-growing area in India and the Directors expect a yield of 370 lbs. per acre. Sufficiently near the port of Tellicherry in North Malabar the estate is large and the capitalisation at Rs. 808 per acre is not excessive in relation to known yields and profit estimates. When the debentures are redeemed, the earning power should be higher, and the present

estimate of 13½ per cent as return on the ordinary shares makes the issue a fully remunerative proposition for the investor. The rubber outlook is hardly unsettled by the development of synthetics and estates in India have, for a fairly long period, assured prospects. The present issue is underwritten by Mr. P. R. Subramanyam, stockbroker of Bombay for a commission of Rs. 50,000. The lists will open on February 23 and close on February 29. The popularity of South Indian rubber shares outside the Madras market has already been established by a general appreciation of the high yield offered to the investor as well as the greatly improved prospects for

rubber despite the Control Order in force. The estate with 1,238 acres of matured rubber is described as equipped with staff quarters and cooly lines in addition to a crepe factory costing about Rs. 2 lakhs. In the Company's prospectus appearing today details relating to the vendor's consideration, disposal of capital etc. are furnished, but a point of special importance, the increase in outturn since 1941-42 merits emphasis like the familiar facts as to the performance of the Coorg Rubber Company which is connected in a way with the Portland Estates, Limited.

THE PORTLAND RUBBER ESTATES LIMITED, (PROSPECTUS—Contd.).

amount paid in, will be refunded to the applicant from the Registered Office of the Company.

Consent of the Central Government has been obtained to this Issue under the Defence of India Rule 94-A. It must be definitely understood that in giving this consent the Government of India do

not take any responsibility for the financial soundness of any schemes or for the correctness in all the statements made or opinions expressed with regard to them.

Copies of the Prospectus and application Form can be had from the Registered Office of the Company, the Company's Bankers, and the Company's Underwriters.

FAITH IN GOLD SHAKEN

BRITISH TEXTILE EXPORTS IN 1943

SPECIAL FOR "INDIAN FINANCE"

London, February 16.

A Stock Exchange firm has attracted much attention all over the City by its market letter advising its clients that gold-mining shares are unsafe since the postwar outlook for gold is uncertain inasmuch as it depends on the unpredictable action of various Governments, especially, the United States.

The letter challenges recent attempts to boost gold shares by those who argued that gold is certain to play an important part after the war in settling international balances, whether the Keynes plan or the White plan or a compromise plan is adopted.

The brokers contend that even if a gold standard scheme is adopted after the war, there is considerable evidence that existing gold stocks are already ample wherefore little new gold would be required. They point out that there has been a huge increase in output since 1928 and furthermore the cost of gold production is now rising sharply, threatening the profits of mining companies. The chief complaint is that gold is the most vulnerable of all commodities since its market value depends mainly on the United States. Whether the United States succeeds in having an export surplus after the war and secondly remains willing to accept gold instead of goods remain important.

The opponents of these arguments complain they are over-logical and fail to appreciate various imponderable factors such as the fact that both the British Empire and the United States have a vested interest in maintaining a good price for gold while even Soviet Russia is seemingly not averse to selling gold to the rest of the world.

But the market for gold shares is considered unlikely to be very buoyant until the outlook is clearer. The Financial Times' index for gold shares is now idle around 156 compared with last year's high of 168 and this year's low of 145.

Release of British export figures for cotton and rayon textiles show that exports of cotton yarns are fairly steady but cotton piece-goods are down to the lowest level since the war began. The exports of rayon both yarns and piece-goods are also down moderately.

Exports of cotton yarns in 1943 totalled 19.2 million lbs. compared with the previous year's total of 18.8 million lbs. and the 1938 total of 122.8 million lbs. Exports of cotton piece-goods amounted to 374.32 million square yards as compared with 484.2 million yards in the previous year and the total for 1938 namely 1,387.4 million yards.

The United Kingdom's exports of rayon yarns at 14.2 million compares well with 7.7 lbs. in 1938. As for rayon piece-goods the total in 1943 was 74.8 million square yards as compared with 114.4 million yards in 1942 and the total of 61.8 million for 1938.

Since the outbreak of war the largest exports of cotton yarns were 66 million lbs. in the year 1940. The peak for cotton piece-goods was reached within the same year with 9,78,400 square yards. Exports of rayon yarns reached the peak in 1941 with 20,150,000 lbs., but exports of rayon cloth has not reached the peak until 1942 with the total at 114,400,000 square yards.

Tea Distribution

A company to distribute tea at moderate prices to the public certainly satisfies a real need, and attention may be drawn to the company's announcement. Well-known Indian planters are associated with the new Jalpaiguri Company and the assurance that middlemen's charges would be limited to 3 annas per lb. duly reinforces the estimates

of costs and profits in this case. The Jalpaiguri Tea and Produce Distribution Company's capital outlay will be limited: it will be a tea trader ready to serve the Indian market through 40 distributing centres. Tea warehousemen and blenders are known to make large profits and the direct link with producers in the case of the Jalpaiguri Company appears a guarantee of successful operation from the start.

GRAND HOTEL

FOR AN

UNRIVALLED STANDARD
OF COMFORT

STAY AT THE
GRAND HOTEL

The Leading Hotel of Calcutta

By the time I start to collect my thoughts on the Viceroy's address to the Central Legislature, various sections of public opinion have expressed themselves on it. Reuter's reports of remarks made in the Assembly lobbies were received even ahead of the full text of Lord Wavell's speech. And by the time I begin to write the week's gossip on this important theme, Lord Wavell's speech has been more or less unanimously condemned as leaving us just where we were, as lacking in any indication of change of policy and as a mere repetition, though in somewhat different words of what his predecessor had been saying throughout the latter half of his too long term of office in this country. For my part, I am reluctant to record here a routine conformity with general public opinion. I confess I conceived a bias in favour of the present Viceroy, born partly of my faith in Balfour's saying that the style is the man and partly from a belief that Lord Wavell was chosen for the Viceroyalty of India in preference to politicians, because the British Government was not disposed to cling as tenaciously as before to the old policy in regard to India. Not that their views had changed; but, I imagine, they were less sure of themselves and were not unwilling to let a new, but nonetheless typically British, mind attack the problems on hand. Lord Wavell's way of going about his tasks in India, cannot, whatever the result, be said to be of the routine kind. He was in no hurry to deliver his address to the Central Legislature; and I should fight shy of the conclusion that he wanted six months to be able to repeat what his predecessor had been saying ad nauseam. My initial attitude to the Viceroy's speech, then, is one of eagerness to consider it most carefully but not, for that reason, without the readiness to accept adverse conclusions if they should be borne in on me by the facts revealed.

But it may be asked, what is careful consideration? Too many of us look at official pronouncements solely from the point of view of some single idea, whether it is the immediate and unconditional release of Congress leaders or the grant of Pakistan. If the Viceroy announces the imminent release of the leaders, the speech is good, is not disappointing and is evidence of supreme statesmanship. But if one looks for that, one might well save one's self the trouble of reading a long speech. Nothing has happened during the last six months either on the British or on the Indian side, to lead one to expect such a climb-down on the part of the Government. Britain is not defeated in war. Nor has the Congress had such an access of strength that Government should think of

Clive Street Gossip

"I must have liberty

Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like It)

suing for peace. To condemn the Viceroy's speech as disappointing because it does not contain an announcement that Congress leaders are shortly to be released is only to condemn one's self for lack of judgment and proneness to wishful thinking and exaggerated hopes.

The release of Congress leaders, let us remember, will be, when it comes, a great political event. It will be, potentially, a major political development, leading to even more significant developments in the future. The release of Mahatma Gandhi and Pandit Jawaharlal and others does not mean merely that they will be back in their own home and family, but that the palsied limbs of our body politic will be vitalised and begin to function again. Such a development is not a matter of any individual's wishes or inclinations. Lord Wavell, even if he wished devoutly for such a consummation, might be easily foiled by those above him. And it is no help if individual Indians wish for it without realising its tremendous social significance or appreciating the forces that alone can achieve it.

Immediate release of leaders is not, therefore, the angle from which to view or judge the Viceroy's speech. As I have said already, Lord Wavell could be easily foiled, if he favoured it. The test that he can do

if he is in favour of the release of Congress leaders and all that it means for India and Britain, is to work towards conditions in which the release of leaders and their activity in the interest of India could not be opposed by the worst diehards within the British Government or out of it. In the creation of such conditions, the Viceroy would clearly need the help of others: these conditions cannot in the nature of things be wholly of his making. But if he has conceived those conditions in the proper spirit and chalks out the lines on which the effort is to be made both by himself and by others, then, it would be wrong and, more than that, unfair to condemn him merely on the ground that he has failed to satisfy some of our own exaggerated expectations.

I trust, I have clarified to some extent the proper criteria of judgment in regard to the Viceroy's speech. To my mind, the test to apply in this case is whether the Viceroy has appraised, in all its complexity and intricacy, the problem of our national progress, whether he has a keen appreciation of the merits of the issues that are now in the foreground of our politics and whether he is prepared to strengthen, though only judiciously, the forces of goodwill and stand up to the forces of dissension and diehardism. I am urged by my study of the Viceroy's speech to say that on the whole Lord Wavell comes out well of this test.

will be Opened Shortly.
Managing Directors:
Mr. NIBARAN CHANDRA DUTTA, M.A., B.L.
Mr. J. C. CHAKRABORTY

Take the first point of appraisal of our national problem in all its complexity and intricacy. There is little indeed in his review of our economic problem on this occasion to quarrel with. When he addressed the Associated Chambers at Calcutta a few months ago, Lord Wavell almost shocked us by his readiness to assign education a low priority in the tasks ahead. He has not exactly gone back on what he said then. But he has assured us that the reports of the Bhoré Committee and the Educational Commissioner will be given earnest attention. He has made specific reference to the Bombay plan—quite unusual in our Viceroys—has affirmed the basic principles of his own Government and has given more than one indication of a realistic understanding of our economic problem. What will be done does not rest solely on him or with the Government, but on the conditions that prevail in the country as a whole and on the social energy and enthusiasm that we can raise in the country and harness to our tasks.

That is a political problem. And our politics has always suffered from a phenomenal lack of realism. The logical mind of the Indian intelligentsia understands cause and effect, but never comprehends the interlocking of mutually aggravating factors. The average Indian insists on assigning to Swaraj and Swadeshi a logical and chronological sequence, without recognising that economic backwardness and political helplessness are mutually aggravating factors and that the national problem will not be solved unless the nation's leaders attempt to cure both by an appropriate change of priorities according to circumstance. There is no doubt that the post-war period will witness some kind of economic planning and economic development even as this period of eclipse for the Congress has seen some kind of political development like the League Ministry in Bengal or the setting up of a "predominantly Indian" Government at the Centre. But the economic development is bound to be unsatisfactory, even dangerous to the cause of political freedom, if the Congress will not find the means of regaining its share in the control of national life in all its aspects. Such control can neither be obtained nor exercised, if the formulation and execution of a plan are not preceded by the formulation of a political constitution which, whatever its merits or demerits, will not leave the direction of affairs in the hands of anti-social forces whether of foreign or of Indian origin. The national problem is not, as some people imagine, one of bolstering up the prestige of this party, or that, but a bundle of concrete tasks, all of which and everyone of which require that the will of the people should be formed, should be enabled to express itself and should be exerted through the medium of its accredited leaders. This is different from a mere sentimental allegiance to leaders without any thought of their relation to the tasks on hand.

When Lord Wavell talks of the tasks ahead and appeals for co-operation, I cannot help feeling that for the first time since Lord Linlithgow made his August statement, something has been done to shift our political problem from the plane of prestige. The question of what the Congress can or cannot do is different and I shall consider it at a later stage. But between asking the Congress to recant from

the August resolution and asking for the co-operation of Congress leaders in the solution of the problems that lie ahead, there is, I believe, a world of difference. Here is the relevant extract:

Not the least of these tasks is the preliminary examination of the constitutional problems of India by an authoritative body of Indians. We should be ready to give this body every assistance it might desire in carrying out its task. . . . We offered a suggestion in the Cripps proposals, which may

or may not have been suitable. If Indians can devise a method which will produce agreement more readily so much the better. If I may offer a personal opinion, born of some experience, the smaller the body which discusses a difficult and controversial problem, the more likely it is that a profitable solution will emerge.

Of the Congress specifically, Lord Wavell says:

There is an important element which stands aloof. I recognise how much ability and high-mindedness it contains. But I deplore its present policy and methods as barren and impractical. I should like to have the co-operation of this element in solving the present and the future problems of India. If its leaders feel that they cannot consent to take part in the present Government of India, they may still be able to assist in considering future problems.

It is not in the conduct of the war effort or the running of the Government on its present admittedly unsatisfactory basis that Congressmen are invited to co-operate. It is for the formulation of the future constitution, for the patient unravelling of the knots which, whoever may have tied them, it is our concern to untie. These are tasks which we Indians and our leaders will have to accomplish and delay in which can yield nothing but the infinite prolongation of the famine, poverty and epidemics which now stalk the land. If Congress can find ways of tackling these problems which involve no parleys with the present Government or with the Muslim League or with other dissentients, it would be for me hypocritical to pretend that I do not prefer them to the ways indicated by Lord Wavell. But faith in Congress wisdom and power has been sorely tried. I never look for miracles in the political field. To me, the most important fact is that not only the August movement was a miserable and disastrous failure but it has been followed by famine and pestilence, and a dangerous disintegration of the social will. The paramount need is to salvage the nationalist movement.

But what is the price of such co-operation? Lord Wavell states the terms:

The demand for release of those leaders who are in detention is an utterly barren one until there is some sign on their part of willingness to co-operate. It needs no consultation with any one or anything but his own conscience for any one of those under detention to decide whether he will withdraw from the quit India resolution and the policy which had such tragic consequences and will co-operate in the great tasks ahead.

I see no reason to release those responsible for the declaration of August 8, 1942, until I am convinced that the policy of non-co-operation and even of obstruction has been withdrawn—not in sackcloth and ashes, that helps no one—but in recognition of a mistaken and unprofitable policy.

I concede, the pill is still bitter. But if I were to put myself in the position of the Viceroy or any other spokesman of the British Government, I should be at a loss to know how better to sweeten it. It should suffice for us that an official, formal repudiation of the August resolution is not called for—that is ruled out by the fact that the members of the Working Committee are not to be brought together—but that what is wanted is a readiness to co-operate in the formulation of a new constitution in the place of the Cripps plan.

That should suffice for us; because the job is our job. If what you are after is the consolidation of India's strength and power, you can ask for no more than that Congressmen will again be free to apply themselves to that work. Lord Wavell does not demand that Congress shall go into "sackcloth and ashes"—the phrase is, perhaps, meant to be a pointed reply to the open letter of the Rt. Hon. V. S. Srinivasa Sastri. If there is still insistence that there shall be an individual dissociation from the August resolution, that is the minimum requirement of face-saving from the Government side. And the Government can always save their face better than the Congress can save its own. The alternative now open to Congressmen is to hug the petrified corpse of the August resolution.

I may now come to the third test I mentioned at the outset, namely, of the readiness of the Viceroy to stand up to dissentients and diehards. No one in this country will have missed Lord Wavell's

uncompromising insistence on the unity of India. He has made clear what I have long suspected, that the British Government is now conscious of having played too long with the fire of Pakistan and that it is anxious to be armed with a constitution commanding general support before turning it down finally and unequivocally. In the fight against the vivisection of India, the Congress can almost regard the Government as an ally. Neither internal politics, nor the requirements of post-war economy will allow it. And security definitely rules it out. The League must be in a chastened mood; and if the opportunity for removing dissensions is now adroitly used by the Congress, it will never again find itself in the present position. As for diehardism in Britain, I imagine that it will hardly raise its head once Indian parties satisfy the condition of an agreed constitution. British diehardism has thriven on the errors of the Congress and the shortcomings of our national existence. Perhaps, British

(From Our Correspondent)

New Delhi, February 14.

The first week of the Assembly's budget session proved as exciting as could be expected with an 'ancient' house which has already outlived its normal span of life by six years and a mere token attendance on the part of the majority party. Political issues dominated the discussion during the first four sittings with ever so many censure motions. Though the Government managed to win by narrow margins on the first two days, they suffered a dramatic defeat when all the non-official parties joined in a grave indictment of the misuse of powers by the executive under the Defence of India Rules. The nominal defeats of Mr. A. C. Dutta's motion to censure the ban on Mrs. Sarojini Naidu's communicating with the Press and the resolution of Mr. Lalchand Navalrai's asking for the release of political prisoners were however meaningless for the overwhelming majority of elected members bitterly condemned the Government's repressible policy. Mr. Govind Deshmukh's motion censuring the Government for not implementing the provisions of the Reciprocity Act against South Africa was withdrawn on the Overseas Member's assurance that a satisfactory settlement may result from the current correspondence between the Viceroy and Field-Marshal Smuts. It is expected here that the Viceroy's efforts may persuade the Union Government to concede the Indian demands for repeal of the 'Pegging Act' and the grant of both parliamentary and municipal franchise.

The retiring Home Member's virulent attack on the Congress has confirmed the view here that the Viceroy's first address to the Legislature will offer no new solution towards a settlement of the deadlock. The Viceroy may have, however, something on the need of a general election as the present legislatures lost their representative character years ago. It is, however, doubtful whether the Government would satisfy public opinion even on this issue. The Viceroy may have something more to say about postwar reconstruction problems, particularly the Government's reaction to the industrialists' plan. There is a lot of anxiety here regarding the complacent official attitude on the food situation and the continued heavy toll of epidemics in the distress areas and the Viceroy is expected to allay public anxiety on this issue.

The Food Member had an uncomfortable time in the Assembly when he was heckled about the famine mortality figures for Bengal. The Food Member surprisingly denied having supplied any statistics to the Secretary of State and said the Bengal Government was at present busy collecting all the necessary data which should be available within a month. The Food Member also recounted the various steps taken by the Government to improve agricultural statistics relating to production, distribution, exports, consumption and stocks. It will be recalled that such improvement was considered essential by the Foodgrains Advisory Committee for framing a rational food policy. It was also disclosed that enquiries had been made in the U.S.A. regarding plant for the manufacture of fertilisers, particularly ammonium sulphate, and reply was awaited. As regards the import of tractors and agricultural machinery required

during 1944 for projects designed to bring new land under cultivation, the demands of provincial and State Governments had been ascertained and steps were being taken to obtain the same from the United States. It was also stated that the Government had fully supported the Foodgrains Policy Committee's recommendations regarding import of foodgrains. Over 3,60,000 tons had been imported during 1943-44 and more were expected.

Though the Government still refuse to take the public into full confidence regarding the recent sales of gold by the Reserve Bank, the Finance Member disclosed that the sales were not made out of the bank's own reserves, but under arrangements with the Bank of England. The gold was provided by the British and U. S. Governments. The proceeds were utilized by the Governments in meeting their war expenditure in this country. The Finance Member refused, however, to divulge the extent of the Reserve Bank's operations (the amount of gold sold) and the amount of profit earned on these sales.

It is understood that the Central Government have formulated tentative plans to ration woollen goods. Under these plans each person can get only one suit, a blanket, a scarf, a jersey, a shawl and two pounds of knitting wool. The control measures will

specify the goods to be manufactured by the Indian mills, a percentage of whose capacity will now be switched on to satisfy civilian needs. There is no indication yet whether the Government will resort to the coupon system to enforce rationing. For without this it would be rather difficult to effectively check excessive buying.

According to present arrangements, rationing will be introduced in the whole of the Delhi urban area on February 29. The rationed articles will include all wheat products, all kinds of fuel and kerosene oil. Two thousand enumerators are busy just now preparing lists of the citizens to be rationed.

There is no information yet whether the Viceroy intends to carry further the process of Indianisation on the Executive Council and whether Indians will be appointed to the Home and Finance portfolios. The reshuffling of the Executive Council will be necessary consequent on Sir Feroze Khan Noon's departure for London, though it is now learnt that there will be no new addition to the Executive Council to fill Sir Feroze Khan's place. His duties perhaps will be distributed among the remaining members.

(Continued on page 318).

Gateway of India

(FROM OUR CORRESPONDENT)

Bombay, February 16.

The 15-Year Plan for the economic development of India, or the Bombay Plan as it is widely known, it was said, was not perfect, as plans go. The signatories to the pamphlet themselves neither claimed originality nor perfection for what they had set forth in respect of the minimum requirements of the country nor did they dogmatically assert that the ways and means for achieving in the post-war period the goal, any self-respecting nation would place before anything else, were the only course open to us. As Mr. A. D. Shroff one of the signatories to the Plan told the Progressive Group on Thursday last, it was an attempt to focus attention on the most vital problem of the country in the days following the conclusion of hostilities. In this the authors of the pamphlet have more than succeeded. Not only has the pamphlet been subjected to close scrutiny by those who are trained for the job, and whose job is to review such plans but throughout the length and breadth of the country people have, perhaps for the first time in their life—some arm-chair theorists also come under this category—begun to get used to hearing about big amounts in connection with eradicating poverty in India. While there has been much criticism of the vagueness of the plan as a whole, particular aspects aroused genuine doubt and called for a clearer exposition. The concept of created money, its procurement and utilisation encountered much opposition as it would lead the would-be National Government to deteriorate into some kind of Fascism or Communism with all its unpleasantness. Mr. Shroff has indicated the manner in which the Government may remain essentially democratic and at the same time "create" the money needed to make the plan a successful one. He said it would be even necessary for the State to take over the means of production in some branches. Mr. Shroff had no hesitation in saying that the scheme pre-supposed a National Government, which is free to fashion its affairs according to the best democratic ideals. The "perpetual policeman", he said, must be conspicuous by his absence. If the continued incarceration of our national leaders is a bar to the early attainment of a National Government, it cannot be an adequate reason for refusing to exercise our mental faculty in formulating our post-war needs and the possible or probable method however vague it may be of achieving the national ambitions.

The Bombay University Senate passed its verdict on the Principal of the Sophia College for Women by passing a resolution by a majority of 12 votes recommending disaffiliation of the College. It may be recalled that a Syndicate Committee was appointed to conduct an enquiry consequent on the Principal's action in enabling two Parsi students of the college to embrace Christianity, presumably without the consent of their parents. There has been a controversy over the rights of the Principal in her personal capacity on the question of proselytisation, and the Senate that met on Saturday especially for this purpose attracted record attendance. The importance of the issue and the fundamental points raised were reflected in the

number of speakers participating in the debate. That the majority holds strong views on the necessity for non-interference by Heads of educational institutions in students' religious susceptibilities was clear. In the opinion of some members disaffiliation was tantamount to capital punishment and the Senate should leave no place for doubt before passing judgment. The motion for disaffiliation was however passed by a majority vote. The Senate also passed a resolution, without prejudice to the disaffiliation motion according affiliation for another three years, subject to certain conditions.

The Bombay Government have chalked out an ambitious programme which aims at increasing the output of foodgrains in the Province by at least 150,000 tons during 1944-45. Apparently encouraged by the success of the "Grow More Food" campaign in the current year the Government have decided to attack the problem in a reverse direction, namely, by enhancing the yield per acre rather than by bringing into cultivation more land. Distribution of improved seeds, extension of irrigation facilities, and making available to the cultivator groundnut-cakes at concession rates will be undertaken by the Government. The construction of 800 new wells and 500 new tanks and the improvement of 13,000 existing wells and 600 existing tanks are naturally expected to help growers of food crops a great deal. Propaganda, especially, in villages is found useful and an intensification of the methods is expected to yield better results. It may be of interest to note that already there has been a gradual switching-over from cash crops to food crops in the short-staple cotton-growing areas in the Presidency and it is said that there is practically no cultivation now in this Province of short-staple cotton which constituted in the past a fair portion of former cotton produce. The actual reduction in cotton acreage from 1941-42 is believed to be nearly 40 percent.

A press note from the Director of Public Information, Bombay, makes it necessary for commission agents in the cotton cloth trade also to obtain licenses if they want to do business. Retail maximum prices must be displayed prominently by dealers and all transactions must be accompanied by cash memos and all licensees

must submit in the prescribed form by 10th of March, June, September and December every year quarterly stock return showing the stocks of cloth held by him on the last day of the preceding month, and every licensee except the hawker must maintain daily accounts of transactions. A hawker must carry a list showing the maximum retail price of the price-marked varieties sold by him.

There were numerous protests recently from upcountry dealers that dealers in the city were appropriating the major portion

of the difference in the ex-mill and retail prices. The Textile Commissioner consequently issued an order that the retailer must be given 10% of the 20% which was the difference allowed between ex-mill and retail prices. The fact that another order was passed within a month of the first means that the authorities have realised the difficulties experienced by consumers also in the matter of getting cotton cloth at the 'marked' price. The order now issued if strictly enforced is bound to make the original order effective. That the

Bombay Government are quite determined in bringing down prices of commodities in ordinary use was obvious from the statement of the newly appointed Deputy Director of Civil Supplies, who assured the large number of consumers, in the city that the Government are doing their best to see that the Anti-Hoarding and Anti-Profiteering Ordinance is respected. As Mr. Thakore said, if the consumer insisted on cash memos for every transaction he may enter into, half the difficulty would have been solved.

THIS IS THE JAPANESE CONTRIBUTION!

Every Nation in the world has its own characteristics. Among Asiatics, we Indians, for instance, are peace loving, industrious and tolerant; somewhat steeped in the past but tremendously aware of the future. And the Chinese—the Chinese are a great Nation awakening to the part which humour, kindness and solid courage entitles them to in the united community of mankind.

then think of
the Fascists
of Asia

WHAT A SORDID CONTRIBUTION! What a smirch on the good name of Asiatic peoples. Cruel, vain, lustful, treacherous—they ape everything and create nothing. And towering above all their other failings is their fantastic conceit. "We are, by divine right, world conquerors—we can do no wrongs." That is what they say, and believe.

There is only one way to deal with people like that. They must be stripped of all their power. They must be rendered completely innocuous. In a phrase—unconditional surrender. Nothing less is safe.

South India

(From Our Correspondent)

Madras, February 13, 1944.

The agitation for firewood rationing carried on for the past few months has now turned towards an active criticism of the irrational system of rationing to be introduced from tomorrow. Rationing of firewood is now based on the income of the family and the number of rice units allotted to it. People earning Rs. 30 or less per month can never hope to have more than 2 gundus per month (112 lbs.) for 125 rice units. This invidious distinction between the rich and poor has been strongly criticised. Nor is the quantity allotted to the poor enough to keep their pots boiling. It is indeed regrettable that a defective scheme of rationing should be introduced after long delay causing incalculable loss and hardships to the public. High prices, acute scarcity and black marketing had to be suffered in the hope that the wooden Government machinery would one day move in the right direction. It is a pity that at the end of an inordinately long period of waiting and suffering the people of Madras should be confronted with a half hearted measure with an anxiety to please the upper classes. At a meeting held last week the City Council condemned the scheme of rationing and passed a resolution stating that the basis of rationing should be reckoned on the numerical strength of the family and that not less than three gundus per family per month should be allotted. It also urged that ration card holders should have the option of registering their cards with any dealer who may be near to them. A plea for lowering down the price of firewood and charcoal has also been entered and the need for supplying split and dried firewood has also been stressed. Mr. R. W. Theobald, leader of the European Group, speaking at the City Council warned that the results of Government bungling would be serious. At least 15,000 tons of wood must be stocked in the Madras city before the month is out. Special trains must run for the purpose. If the intolerable situation continues further, he said, the Governor should intervene and if necessary change the forest policy and appoint a new Adviser to handle this portfolio.

The policy of the Reserve Bank in selling gold as a cure for inflation has been sharply criticised in several quarters as an unjust attempt to enable U.S.A. and Britain profit at the expense of India. Under arrangements made between the Reserve Bank and the Bank of England on accounts of the British Government and the U.S.'s Government gold provided by those two governments are sold in India much above the ruling international price of gold. Whether gold sales can really arrest the rising prices in this country or in any substantial measure operate as a deflationary move is not the point at issue at present. Commercial bodies suspect that the secrecy governing the gold sales policy actually marks an attempt by U.S.A. and U. K. to profit at India's expense. The South Indian Chamber of Commerce have addressed the Finance Department of the Government of India pointing out that the exemption of gold and silver from the operation of the Hoarding and Profiteering Ordinance is against the interests of consumers. Normally the profit margin of trade enjoyed by merchants never exceeded 1 per cent and the Ordinance has in fact allowed 20 per cent

The Reserve Bank makes a 40 per cent profit by its gold sales because the gold is bought in London at £8-8-0 per fine ounce and sold in India at Rs. 71-4. Transactions of this kind are obviously unjustified. If gold sales are pushed up without a substantial reduction in price it would actually be a case of dumping at high prices to facilitate the purchases by the U.S.A. and U. K. Governments in India. The argument that gold sales would reduce the sterling assets is irrelevant when a charge of profiteering is alleged. The public are quite justified in condemning the Reserve Bank policy particularly because the profits do not accrue to the Government of India. If the Government of India are anxious to avoid the charge that they are helping in the exploitation of Indian consumers of gold, they should at least earmark the profits gained out of the sales for postwar reconstruction purposes.

The livestock position in the province has been far from satisfactory. Before the war, about 100,000 working bulls worth about Re. 1 crore and more were annually imported from Mysore and other places. Owing to war not only have imports stopped but cattle have come to be slaughtered in large numbers. Thus the province is seriously short of cattle, a position to be rectified as early as possible. The prices of bulls have a direct effect on agricultural operations and if the cost of production of the ryots should be reduced to satisfactory levels a well-thought out plan for increasing the cattle wealth of this province is essential. This is an excellent problem for the authorities in charge of the postwar reconstruction of this province. It is now revealed that the Madras Government have included the livestock problem in their postwar reconstruction schemes. It appears that they have proposed to buy young calves and bulls and allow them to graze in hills and forests with a view to making them strong and healthy. Ongole, Kangayan and Sindhi cows will also be purchased for increasing the quality of the cows of this province.

The Budget Estimates of the Corporation of Madras for 1944-45 are expected to close with a deficit of Rs. 6,44,420. To make up the deficit the Commissioner has proposed the following measures:—(1) Exhancement of the cycle tax from eight annas to one rupee per half-year; (2) the rate of property tax for houses whose annual valuation is over Rs. 1,000 and below Rs. 5,000 be raised from 17½ per cent to 18 per cent and on houses over Rs. 5,000 from 18½ per cent to 20 per cent; (3) a general increase of 25 per cent in respect of license fees on offensive and dangerous trades, coffee hotels, etc.; (4) a licence fee on steps and drain coverings in front of the houses in the nature of encroachments. The above sources are estimated to yield Rs. 2,85,000 and the Commissioner expects a grant of Rs. 1½ lakhs as compensation for damage caused to roads by military vehicular traffic and another free grant of Rs. 2,21,050 for repairing the damages caused to road and water mains by the recent floods.

OFFICE OF THE STEEL IMPORT CONTROL, CALCUTTA.

PUBLIC NOTICE.

Holders of import licences for goods falling under Part I of the Schedule attached to Government of India, Commerce Department Notification No.23-ITC/43 dated the 1st July, 1943 are informed that in cases where the goods covered by such licence have been shipped but lost enroute to India, replacement consignments can be imported against the original licences.

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, February 11, 1944.

WHILE industrially Sind has not made much headway, the agricultural landscape of this province has been transformed considerably after the working of the Sukkur barrage, which has converted arid land into prosperous agricultural holdings. The agricultural advancement of Sind has been exercising the attention of both officials and non-officials. Unfortunately so far no concrete schemes have been suggested. Mr. V. Iswaran, I.C.S., the new Director of Agriculture has remedied this defect, and has suggested important measures of agricultural development. Among his schemes are establishment of cattle farms as a step prior to cattle improvement, a poultry breeding and training station, a rice breeding station for South Sind, a bajri breeding station for Mirpurkhas and seed distribution among the cultivators. These schemes will be considered at a meeting of the Provincial Agricultural Board which is now in session.

Though Mr. Iswaran's schemes have been subjected to some harsh criticism in some quarters as being unsound, there is no doubt that some of his suggestions are very welcome and would contribute substantially to the prosperity of the Province.

Owing to the imminence of food rationing in the Karachi urban areas and the consequent need for preventing imports of rationed foodgrains on private account, the Government have ordered that no consignment of rice, jowar or bajri or their products arriving in Karachi harbour by country crafts in the name of any consignee other than the Foodgrains Exporters' Syndicate, Limited, Karachi, who are the Government agents, shall be delivered by the Customs unless the Customs landing certificate is countersigned by the Chief Controller of Prices, Sind, or the Deputy Chief Controller of Prices, Sind.

The need for permitting futures trading in oil seeds—winter oil seeds have just been harvested—is being increasingly felt by the Karachi mercantile community. The crop being big, agents will have to sell it. In the absence of any arrangement for covering risks consequent upon buying large quantities merchants will not come forward to buy from agents, as usual in large quantities, with the result that the agent will be seriously prejudiced at the time of harvesting. Already the effect has been felt in the prices of foodgrains which are already sagging and the prices of some commodities, for example grain and barley, have touched normal prices in the Punjab. Grain, it is reported, is quoting at Rs. 5-8 as per maund and barley Rs. 4 per maund. The Karachi Indian Merchants' Association which control the futures trading in grain and oil seeds has already made a representation to the Government of India for permitting trading in oil seeds forthwith to help the marketing of cotton seeds, and rape seeds.

It is reported that the Government of Sind are opposed to the imposition of tax on agricultural incomes, as suggested sometime ago by the Central Government as an anti-inflation measure. The Punjab is also opposed to the move. In the case of the Punjab negotiations are reported to be already afoot. The situation in Sind is, however, different in view of the fact that the provincial budget is stated to be a surplus one. Whether the Cen-

tral Government will persuade the Sind Government to fall in line remains to be seen.

Sind's new bumper rice crop is now in the market and supplies are coming in so freely that all hopes for an increase in the current control prices have faded away. Zamindars and agriculturists are selling rice at less than controlled prices. The Government of Sind have also reduced all round their selling price of rice for outside produce by Rs. 2 per maund, it is learnt.

Sind Government have collected large stocks of foodgrains in the city through the Wheat and Foodgrains Syndicate for the purpose of meeting the needs of the city when rationing is introduced. It is estimated that Karachi, when rationing is introduced, will be consuming about 31,000 bags of foodgrains every week, though in the few initial weeks, the consumption may fall short of the full figure. Rationing will be introduced in Hyderabad (Sind) by the beginning of March.

(Continued from page 314).

The debate on the official bill to consolidate the law relating to excise duties met with unexpected opposition in the Assembly to-day for the Government had received absolutely no non-official criticism of the bill to form through it had been begun the public since last autumn. The opposition care was that the bill infringed the liberties of the people as it would result in greater harassment by excise officials. The opposi-

tion was however unable to carry through as amendment and 40 out of the 41 amendments were disposed of by the House to-day.

The almost unanimous opinion expressed throughout the country against the proposed increase in railway fares seems to have had no effect and the Government are reported to have definitely decided in favour of a 25 per cent increase in passenger fares. The railway budget is to be presented this Wednesday. It is expected that the increased fares would bring in an additional 10 crores and the surplus for the year 1944-45 will be over 50 crores. The Government care for the increased fares is that it would help in the anti-inflationary drive apart from somewhat reducing the immense strain on the railways at present. Moreover this would provide a handsome reserve for increasing the amenities of lower class travel in the post-war period. There is general regret here that the Government have not been able to find better alternative methods for achieving these ends. There is particular against the flat rate of increase for all classes for it will inevitably result in additional burden on the class which has already suffered grievously from the effects of inflation. Moreover it is difficult to square up this step with the parallel government drive to bring down the cost of living.

It is learnt that the delay so far experienced in engine and wagon delivery programmes is being made good and large deliveries and now being received from overseas to meet the growing transport demands.

HILL-BIRD.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Special To "Indian Finance"

Calcutta, February 17.

The total production of Jute Goods recorded by the Mills for January is 86,202 tons, an increase of 18,648 tons over the December figure, or an improvement of 27½ per cent. This brings the position back to practically the same level as November, which was the best month of the second half of last year, the average monthly production for which period was only 66,924 tons. It is to be feared unfortunately that the current month will see a substantial set-back again, for the coal supply has been far from satisfactory and shows no sign of improving yet. The result is that there has been much interruption in the working of coal-consuming mills, some of which have been able to work no more than three days in the course of two weeks. Of the total January production only just over 10,000 tons or 11.6 per cent was on Government account. Hessian take-off amounted to 1303 lakhs of yards or just over 35,000 tons, and Sacking to 1124 lakhs yards or just over 47,000 tons. Compared with previous Januaries, this year's figure is better than those of 1943 and 1941, but well below the off-take in 1942, when it was over 105,000 tons and in 1940 when it was over 121,000 tons.

The total recorded production from the beginning of the current jute season, that is from July to January, now aggregates 487,750 tons compared with 672,913 tons for the same period of the previous season and 715,576 for the season before that. The demand for jute Goods is undoubtedly there, though whether the shipping tonnage to take it all overseas is available is not so certain. In fact, with Stocks of goods in godown showing an increase of over 10,000 tons at the end of January, it is apparent that despatches of goods from mills during that month totalled little over 75,000 tons, which is well below the level attained in some recent months. Without sufficient overseas freight to handle the monthly production, stocks of goods might become embarrassing and from that point of view, but from no other, the shortage of coal may have proved a relief to the situation which might otherwise have arisen.

The July to January production of goods noted above represents a consumption of jute to the extent of 27,76,000 bales, obviously well below the corresponding consumption in the previous two years. In which connection it is perhaps of interest to recall that a member of the Assembly last week ventured to suggest that a crop of 27 lakhs of bales was sufficient for all purposes in the coming jute season. In a period of poor production, as we have shown above, mills have consumed over 27 lakhs of bales in seven months!

Incomplete information caused an error in the estimates of the Jute arrivals into Calcutta during the month of January. The corrected figure should be 4,01,000 bales and not 3,58,000 bales previously reported. Details show some improvement

both in steamer and rail arrivals as compared with the previously month, but in both cases the figures are less than recorded for the same month last year. The handling of jute by rail is causing no little anxiety for in many stations, when bookings are nominally open, no waggons are available, and in some sections there are very large accumulations of jute awaiting shipment, much of it for over three months. Moreover, the very selective bookings which the railway will accept in many places would appear to indicate that they would rather return waggons empty than load them with jute for any but their own selected destinations. It is difficult to believe that this helps towards the most economic working of the railway, while it certainly offers a definite handicap to business.

When the Jute Mills Committee some ago permitted the resumption of dealings in "X" mark, it was laid down that the mark was not to be dealt in separately but only to the extent of 7½ per cent deliverable along with contracts for Bottoms. It was strongly represented by trade interests before, and at that time, that 7½ per cent was insufficient to clear the accumulation of "X" grade jute in many stations. But the Mills declined to raise the authorised tender to 10 per cent which Dealers wanted. Since then further representations have been made and the Mills have now, admittedly with reluctance, agreed that on contracts entered into from 1st April 1944, the tenderable quantity of "X" with Bottoms will be 10 per cent. It is however specified that this applies only to jute of the current crop, and not to stocks of previous crops "X". Further it is laid down that this concession is granted only on the understanding that no further claims or concessions will be considered till the end of the season 1943-44.

No further pronouncement other than the Press communique mentioned last week, has been made with regard to controlled prices for jute and jute goods. Meanwhile the "Black Market" for all descriptions of Jute Goods is flourishing lustily, even the weaker brother, "B" Twills, having joined the great majority this past week and being no more seen in the legitimate market. It will be interesting to see what steps Government propose to take to control this aspect of the trade, which for the time being appears to be completely out of hand. The natural brake which selling by mills at the ceiling rates would afford, has been entirely removed, partly by the excessive speculative Bazar demand, and partly by the irregular and insufficient coal supply curtailing mill production. What remedy Government may devise, if any, remains to be seen, but the present position is farcical, as the ceiling rates fixed by the Mills themselves have no remotest relation to what a buyer has to pay for near at hand goods if he needs them. While the existence of the "Black Market" is common knowledge and its current quotations available from any Bazar dealer, any transaction of the sort is of course extremely difficult to prove. A contract at no more than the ceiling rate would be im-

mediately produced if the question were raised, but the cheque or the cash which had passed for the difference would not be easily traced, or even if traced, identified with the contract concerned. In spite of many protests, Government have, so far as can be learned, taken no steps to stamp out the Fatka markets which have sprung up again of late. The suppression of the Fatka markets would be a simple matter compared with the suppression of the "Black Market" in Jute Goods, and if Government cannot, or will not tackle the one evil, it is scarcely to be hoped that the other can be successfully dealt with. Yet to leave matters as they are, if any scheme of control is to be introduced, would amount to a policy of sheer negation.

Not a great deal falls to be reported in the Export Jute market this week. Daisee prices have hardened slightly, there being buyers over for Dundee Daisee for February shipment at Rs. 73 and for March at Rs. 74. Dundee First marks for Press House delivery are reported at Rs. 112 to Rs. 115, also Hearts at Rs. 67. Mills have shown little interest except in low grades such as Habi-jabi and Ropes. Nominal quotations for Mills are Rs. 82 for Firsts and Rs. 76 for Lightnings. Exports of pucca bales in January totalled 1,12,500 bales compared with 82,000 bales in December and 71,000 bales in January a year ago. This brings the total shipments since 1st July to 5,89,000 bales this season, as compared with 8,66,000 bales during the same period a year ago and 9,18,000 bales the year before that. In the last prewar season 1938/39, exports for that period were 24,74,000.

pledges are based on an over-confident expectation that the Indian dissensions will never disappear. The Cripps Offer, certainly, was. But the bluff has never been called. British propaganda in the U.S. has made the most of the terms of the Cripps Offer; and friends of India overseas have been dispirited by our failure to achieve common understanding. I recognise that I have no means of proving that Lord Wavell's speech, too, is of a piece with the other artful ways of the British Government. But I maintain that the risk of taking the Government at its word is far less than the risks of allowing the present attrition to continue indefinitely.

"EAVESDROPPER."

(Continued from previous page).

The Loose Jute market ruled easier and idle during the first part of the reporting period but latterly steadied in tone with more enquiry from mills. European packing sold as low as Rs. 15-12 and Rs. 12-12 for Middles and Bottoms; the price has again risen to Rs. 16 and Rs. 13 with business also reported done in Bots alone at Rs. 13. Supervised Jat sold at Rs. 15-8 and Rs. 12-8 in assortment with Rs. 12-12 paid for Bottoms alone. Indian District Bottoms alone sold at Rs. 12 and Jungli Tossa Bottoms at Rs. 12-8. Mofussil markets remain very steady and show no sign of giving way; in fact some stations report an advance in price. The ground for sowing is all prepared and it now remains to be seen how much will go down in jute and how much in paddy.

As noted above, all descriptions of Fabrics are now at, or over, maximum rates for any position up to June, while for most the price holds into July/September and July/December. In fact at the close business is reported in certain kinds of Heavy Goods at maximum rates up to Jan/March 1945. "B" Twills, the only laggards, which had been hovering around Rs. 67 and Rs. 67-4 even for near, this week have joined the "Ceiling Brigade" up to April/June shipment, at Rs. 67-12, though only a few days ago they sold at Rs. 67-6 for February. The consequence is that the legitimate market has ceased to function, for relief buyers in the far forward positions are not numerous.

DCM. 4.

JUTE

Calcutta, February 17. In the raw jute market rather quiet conditions have been noticeable and mills are not taking any interest in the market. With the continued difficulty regarding coal supplies they are inclined to await further developments. Certain sellers in the mofussil centres, however, have been eager to do business and have offered a slight discount in rates. This, however, did not tempt buyers. As mofussil markets continued firm, there could be no further decline in prices. Quotations are around the minimum prices fixed by the Bengal Government last week.

The outlook for jute is considered uncertain though it should be said that shipment demand seems satisfactory and reports from jute districts do not point to a large increase in the crop for the next season. Preparation of land for sowing is going on satisfactorily but it is not clear whether the ryot would choose to sow jute instead of paddy. The fears regarding further requisitioning of mills and the inadequate supplies of coal are the main discouraging factors at the present moment.

In the loose jute section business has been rather small. Indian Jat Middles and Bottoms were Rs. 15 and Rs. 12 respectively with Supervised Jat 8 annas higher. There is not much enquiry for higher grade jute though it would appear that there are still some buyers of Tossa varieties.

In the pucca bales section shippers have not been very active though it has been reported that a larger amount of business has been done for export, Dundee Tossa 2/3 being in good request at Rs. 89 with buyers over. A small amount of business was reported in Dundee Daisee 2/3 and Tossa 4's at Rs. 73 and Rs. 76 per bale. There is good demand for Cuttings and rates higher than the maxima fixed by the Indian Jute Mills Association have been paid by shippers. Mills experience great difficulty in regard to Cuttings as they cannot pay more than the maxima fixed by the Indian Jute Mills Association.

JUTE MANUFACTURES

Calcutta, February 17. The jute manufactures market has continued firm and quotations are at the maximum rates with not many sellers. Mills are keeping out of the market as they have no production to sell this side of June. There is also the fear of further Government orders which might place them in an awkward position. Bazar operators also are inclined to be reserved. The publication of encouraging production figures for January, therefore, has not had any effect on prices. There are not many buyers for positions beyond June as developments so far ahead cannot possibly be anticipated. 9 porters are quoting Rs. 21-10 and 11 porters Rs. 28-8 for all positions.

In the heavy goods section very steady conditions have been noticeable and quotations are nominally at maximum prices for Liverpool twills and Cornsacks. "B" twills, however, are still available at Rs. 67-4 for February delivery.

Production figures for the month of January 1944, published recently, show that there has been an increase in total production by 18,648 tons to 86,202 tons. Of the total output, 76,173 tons were on commercial account

and 10,029 tons on Government account. Production of hessian on commercial account was 28,926 tons and sacking 43,233 tons. There has been a significant increase in output on government account in respect of sacking. The figures are given below:

TOTAL REPORTED PRODUCTION OF MANUFACTURED GOODS.

by the mills in the membership of the Association and also by Gagabhai Mills.

GOLD

Calcutta, February 17.

The gold market has been rather uninteresting and quotations have fluctuated in narrow limits. With the continued selling by the Reserve Bank at Rs. 71-4 per tola and the extension of the facilities to other centres like Calcutta and Madras there is little speculative activity. Investors have no difficulty in getting their requirements. It is rather interesting to note that there is even a discount for ready over forward, the rates being Rs. 71-1 and Rs. 71-4 respectively. The close however has been level at Rs. 71.

In the Calcutta market, there is nothing of interest and quotations have been fluctuating around Rs. 71-8. Sovereigns are Rs. 49-8 against Rs. 49-2 in Bombay.

SILVER

Calcutta, February 17.

The silver market has continued steady and quotations have been well maintained. There was some selling in midweek but the difficulty in regard to ready supplies has resulted in fresh covering towards the close. Silver ready closed at Rs. 127 and forward at Rs. 124-10. In the Calcutta market the quotation for ready was Rs. 128-4. There has been no change in the quotations for silver in the London market, both Spot and Forward being unchanged at 23½d.

COTTON

Calcutta, February 17.

The Bombay raw cotton market has been fluctuating in narrow limits. There has been greater mill buying during the week. Reports from mofussil centres also have not been discouraging but an appreciable improvement in prices has not been possible owing to the continued weakness of the share market. The late recovery in share prices has resulted in greater buying. Closing quotations are Jharilla March Rs. 463-12, May Rs. 459-12 and July Rs. 462-4.

PIECEGOODS

Calcutta, February 17.

The piecegoods market has continued steady and it is reported that there has been an increase in demand from consuming centres. Dealers also have shown greater confidence and a larger amount of business has been reported by Bombay mills. It is said that Ahmedabad mills are not keen in doing business on account of the difficulty in respect of transport. Bengal mills have been very busy and have been able to conclude large contracts. It has been announced during the week that retail prices for yarn will be 15 per cent above ex-mill prices and retail prices of cloth 20 per cent above ex-mill prices. The promulgation of the Woolen Goods Control Order has led to a slight decline in prices for winter styles. It is expected that specified varieties will be available for sale by the end of this month at marked prices.

SATURDAY, FEBRUARY 19, 1944

Price Re. 1

Stock Markets to-day and to-morrow:

ALL ROUND DECLINE IN PRICES

TILL Thursday this week rather quiet conditions were noticeable in both the Calcutta and Bombay markets and transactions were on a considerably smaller scale. The lack of encouraging news from the Arakan Front and the fears about fresh taxation have been mainly responsible for the easier tone of the markets. The announcement of the Railway Budget for the next year has not in any way affected the stock markets as it is pointed out that the contemplated increase in passenger fares by 25 per cent will not be of any advantage to the Central Government, the whole of the proceeds as a result of the increase in fares being set aside to a fund for improving conditions of travel in the post-war period. The problem of bridging the gap between revenue and expenditure has, therefore, not been made easier.

It is being freely discussed that there might be an increase in the Corporation Tax and that E. P. T. too, may be increased with a corresponding increase in refunds. This nervousness on the part of operators and investors with the nearness of the budget is thus in contrast with their attitude some weeks back. Early in January it was generally felt that the budget proposals for the next financial year would not affect markets seriously and that, with the continued prosperity for Indian industries, share values would improve further. It is now pointed out that the market was, to a certain extent, overbought and that the recent rise in prices has not been fully followed up by investors. The selling that was in evidence during the week was mostly on professional account and the decline in prices of a precautionary nature.

In Friday's session, however, there has been a slight recovery in prices, coal shares especially being steadier. There is the feeling that the worst prospects have been discounted and that in the next one or two weeks quotations will be fluctuating in narrow limits. If there are no surprises, the upward trend might well be resumed.

The Chairman's remarks at the annual general meeting of the members of the Indian Jute Mills Association held on Friday are of very great importance. In view of the difficult conditions experienced by the jute industry at the present moment, the observations in regard to coal supplies and requisitioning have great significance for the

market. Our readers are well aware that the industry had to go through very difficult times in the latter half of 1943 and that the steam-driven units, especially, suffered to a great extent. The position in regard to coal has improved to a great extent though, the Chairman has very legitimately complained that the industry has not been accorded the treatment from the Government authorities it ought to receive in this respect. It is on the subject of requisitioning that fears are most pronounced. It is satisfactory to note that the Indian Jute Mills Association has placed before the Government counter proposals against the latter's scheme for requisitioning and it has emphasised the fact that it would not be possible to make up production by intensified working of other units owing to the problems connected with labour and other questions. As for future prospects, let the Chairman speak:

"You will no doubt expect to hear something from me regarding the future prospects of the industry. Much depends upon the availability of coal and transport. There is no doubt about the demand for our goods—there exists ample evidence of that—and if we can be kept in supplies of coal and jute, there should be little difficulty in attaining a full 54 hours working week throughout the year. I cannot, however, attempt to minimise the difficulties that lie before us—the coal position is still somewhat obscure although I have hopes that our just claims will be recognised; and transport of jute may become increasingly difficult. We are in the centre of a large war area and we cannot expect to escape without being heavily involved in all this means. I feel sure those who are in command, can count on the loyal co-operation of all of the members of this Association, no matter at what personal inconvenience and sacrifice. Of the outcome we have no doubts and this industry with its agreement made for the mutual benefit and co-operation of all its members will no doubt weather the storms that may lie before us."

Much depends upon the availability of coal and transport; there is ample demand and if only raw materials in adequate quantities are received so that mills can work 54 hours per week throughout the month, the shareholders can expect to receive the former dividends. The statement that mills will continue to work 54 hours per week throughout the month, in spite of the difficulties in regard to coal, is perhaps a great bullish factor for the market

for, till the end of December even the electrically-driven units had to be closed down for one week every month.

The results of the *Bowreah Cotton Mills Limited* for the half-year ended December, 1943, do not make satisfactory showing as working at the mills was seriously affected by frequent enforced stoppages owing to lack of coal. The net profit, before providing for taxation and depreciation, for the half-year is Rs. 7,24,579 against Rs. 14,99,838 for the previous half-year. The sum set aside to depreciation is Rs. 1 lakh (Rs. 1.5 lakhs) while the provision for taxation is lower at Rs. 5 lakhs (Rs. 10 lakhs). After paying Rs. 10 per share against Rs. 15 per share on the ordinary shares the amount carried forward is lower at Rs. 60,312 against Rs. 90,733 brought in.

Dunbar Mills Limited also report a decline in earnings and the dividend on ordinary shares has been reduced to Rs. 4 per share from Rs. 6 per share. There has naturally been a decline in the quotation for Dunbar from Rs. 320 to Rs. 289 on the publication of the accounts.

Kanknarrah and Kamarhatty Companies have been able to report only a lower level of earnings in the latter half of 1943 owing to the difficulty in regard to coal supplies. The net profit of the *Kamarhatty Company, Limited* before providing for taxation and depreciation, is the very small amount of Rs. 1,95,797 against Rs. 13,94,312 for the six months to June, 1943. No provision has been made for depreciation against Rs. 50,000 previously and nothing for taxation against Rs. 945 lakhs. Other funds received Rs. 75,000 on the last occasion. The dividend on ordinary shares has been maintained at Rs. 15 per share. The amount carried forward is lower at Rs. 60,989 against Rs. 1,26,192 brought in. *Kanknarrah Company, Limited* has for the same half-year earned a profit of Rs. 5,32,933 against Rs. 15,47,238. The reserve for taxation is the small sum of Rs. 94,000 (Rs. 10 lakhs) while the amount set aside to depreciation is unchanged at Rs. 50,000. There is no allocation to other funds against Rs. 75,000 formerly. The ordinary dividend has been maintained at Rs. 12-8 per share.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, February 18.

Very quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week and an all round decline in prices has been recorded. The volume of business passing has been on a smaller scale. The decline in prices in almost all the sections has been due to the anxiety regarding the budget proposals and selling by professional operators. The publication of the Railway Budget for 1944-45 has not, in any way, allayed the fears regarding fresh taxation and it is felt that there can be no improvement in prices on the stock exchange until the budget is out of the way. Closing quotations as such are at the lowest levels for the week.

Gilt-edged securities also are lower in sympathy with other sections and prices are easier by a few annas for both terminable and non-terminable loans. 3½ per cent Paper was quoted Rs. 98-13 and 3 per cent Paper Rs. 88-14. Among terminable loans, 3 per cent 1953-55 were Rs. 99-12, 3 per cent 1947-50 Rs. 103-4, 5 per cent 1945-55 Rs. 105-5, 3 per cent 1966-68 Rs. 98-2 and 3 per cent 1963-65 Rs. 98-1. There has been no appreciable change in money conditions but the average discount rate on treasury bills has improved further to 12 annas and 6 pies per cent annum from 12 annas last week.

Bank shares have remained steady with Calcutta National Bank at Rs. 13-14, Imperial Bank fully paid Rs. 1,988 and Hind Bank Rs. 57-8. There has been noticeable decline in the quotation of the Reserve Bank to Rs. 130-12 and United Commercial Bank to Rs. 27 premium.

Cotton shares have been relatively steadier on Cawnpore buying. Closing quotations, however, are lower on balance. Basanti were Rs. 14-2, Dhakeswari Rs. 31-5, Cawnpore Textiles Rs. 15-4, Kesoram Rs. 18 and New Victoria Rs. 10. Pravati Textiles were Rs. 11-14 and Sree Radheyshyam Rs. 23-6. On the publication of discouraging reports for the half-year ended December, 1943, Dunbar were lower at Rs. 285. The dividend on the ordinary shares for the half-year is Rs. 4 per share against Rs. 6 per share on the former occasion.

Coal shares also encountered some selling pressure. Quotations have been marked down for all counters though, Burrakur were the exception being quoted relatively higher at Rs. 31-2. No business in Bengal has been reported in the last 3 days. The quotation was lower at Rs. 581 earlier in the week, the same at the end of last week being Rs. 583. Bhalgora were Rs. 16-2 and Central Kurkend Rs. 23-12 against Rs. 25-4, Dhemo Main were Rs. 22-8, Equitable Rs. 51-10 against Rs. 52-8, Kuardi Rs. 15-2 against Rs. 15-12, New Beerbhoom Rs. 31-4 against Rs. 32-8, South Karanpura Rs. 10-12 against Rs. 11 and West Jamuria Rs. 47-12. There has been some buying at the lower levels. Closing quotations should thus be said to be higher than the lowest for the week.

Reports regarding further difficulty in respect of coal supplies and the threat of requisitioning of more mills have been responsible for the sharp decline in prices. Anglo-India recorded a decline of over 25 points to Rs. 324 while Auckland were Rs. 289 after the recent high level of Rs. 320. Bally were Rs. 353 against Rs. 375, Champdany Rs. 223 against Rs. 234 and Clive Rs. 32-11 against Rs. 34. Hukumchand were Rs. 35-10 against Rs. 36-4 and Howrah Rs. 67-3 against Rs. 69-3. National were 2 points lower at Rs. 29-4 and Nuddea 6 points lower at Rs. 114. Presidency were Rs. 7 and Northbrook Rs. 34. There has been heavy selling of India and the quotation has come down by 40 points to Rs. 547, Kaniknarrh were Rs. 480 against Rs. 529 and Kamarhaty Rs. 580 against Rs. 610.

In the Engineering section there is nothing of interest to be recorded. Indian Iron and Steel Corporation were more than a point lower at Rs. 36-4 and Rs. 27-8, the levels at the end of last week being Rs. 36-12 and Rs. 27-2 respectively. Burn & Co., have receded by 25 points to Rs. 386 while Bhartiya Electric Steel were more than a point lower at Rs. 17-4. Braithwaite were Rs. 10-3, Kumardhubi Engineering Rs. 9-5 against Rs. 9-14 and Marshalls Rs. 4-12 against Rs. 5. National Iron and Steel were Rs. 13-8 against Rs. 14.

In the Sugar section also easier conditions were noticeable. Balrampur were Rs. 17-12 and Belsund Rs. 11-12, Carew & Co., were 2 points lower at Rs. 21-10 while Darbhanga recorded a drop by as much as 5 points to Rs. 29-11. New Savan were Rs. 22-2 against Rs. 23-12 and Ramnugger Cane and Sugar Rs. 14-2 against Rs. 15. Samastipur Central were Rs. 21-14 and U. P. Sugar Rs. 32-2.

In the Tea section, no appreciable decline in prices is to be recorded though it is to be noted that quotations are lower on balance. Bishnauth were Rs. 41-4, Tezpor Rs. 18-6 Desai and Parbutia Rs. 410, Dimakusi Rs. 54, Hattikhira Rs. 31-12, Sapoi Rs. 22 and Lacka-toorah Rs. 27-8.

In the Miscellaneous section, Burma Corporation were lower at Rs. 3-9 while Indian Copper were Rs. 2-13, Karanpura Development improved earlier in the week to Rs. 31-3 but dropped again to Rs. 28-14. Assam Bengal Cement were Rs. 15-4 and Dalmia Cement Rs. 18-4. Aluminium Corporation were Rs. 19-10 while B. I. Corporation were lower by 8 annas at Rs. 6-4 and Bararee Coke by two points at Rs. 31-8. British Ceylon Corporation were not very much changed at Rs. 19-2. Indo-Burma Petroleum came in for attention at Rs. 68.

Among Paper shares, India Paper Pulp were weak at Rs. 22-15, Mysore Paper were uninteresting at Rs. 31-10 and Sree Gopal Rs. 24-2. Titaghar Paper were quiet at Rs. 28-4, Midnapore Zemindary have gone down to Rs. 137 and Assam Saw to Rs. 5-11. There were no transactions in Industrial debentures. The only business done was in 3¼ per cent Howrah Bridge Debenture at Rs. 99-12.

There has naturally been greater enquiry for preference shares with fears regarding

fresh taxation but there are not many sellers. First-class jute mill preferences were in good request with Auckland at Rs. 164, Calcutta Jute at Rs. 152 and Hastings Rs. 153. Aluminium Corporation old preference were crossed at Rs. 156, Associated Hotels Rs. 112-8 and Indo-Burma Petroleum Rs. 114. Midnapore Zemindary were Rs. 151, Indian Standard Wagon Rs. 167-8, Steel Corporation Rs. 131 and Alkali and Chemical Rs. 157. Dalmia Cement were Rs. 145 and Sree Radheyshyam Rs. 119.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, February 17.

The market was irregular. Rumours that the Budget may disclose some new taxation proposals have put the local stock exchange on a precautionary mood. Naturally prices have come down to an appreciable extent, but the undertone is quite steady. News from the Arakan front made the market a little buoyant earlier in the week, but profit-taking was quick in reducing the gains. The atmosphere of the market is rather tense with all kinds of rumours and speculations about the budget.

Though mill shares were in request there was not any improvement in prices. On the other hand Bombay Dyeing have lost 43 points during the period under review to quote at Rs. 2,102-8. The decline in the case of Century was more pronounced. They are quoting at Rs. 1,090 as against Rs. 1,170. Kohinoor were Rs. 711 (Rs. 731).

In the Steel section sellers predominated the market from the beginning of this week. From Rs. 2,165 (last Thursday's closing quotation), the price of Tata Deferreds came down to Rs. 2,077-8 (the latest quotation). On the whole there has been a loss of nearly 85 points. Tata Ordinary were also lower at Rs. 411 (Rs. 424-8). Indian Iron were weak at Rs. 36-2.

Among Hydro-Electrics, Andhra Valley were Rs. 1,840 (Rs. 1,842-8). Tata Power Rs. 1,882-8 (Rs. 1,855) and Tata Hydro Rs. 199 (Rs. 199-8).

In the Miscellaneous section prices ruled more or less steady and in one or two cases there has been some improvement also. Alcock Ashdown for instance, are better at Rs. 625-8 as against Rs. 618-12 last Thursday. Bombay Steam were steady at Rs. 685. Belapur Sugar were somewhat lower at Rs. 234-8 (Rs. 239). Premier Construction were also lower at Rs. 226.

Bank shares were very firm throughout the period under review. Imperial Bank (fully paid) were quoted up to Rs. 1,955 while the contributories were done up to Rs. 520. Bank of India were Rs. 231-8 and Reserve Bank Rs. 135.

Steady conditions prevailed in the gilt-edged market with 3½ per cent Government Paper quoting at Rs. 98-12-6. Among short dated loans 3 per cent (1949-52) were done at Rs. 100-13 while among medium dated 3 per cent (1953-55) came in for business at Rs. 99-13. 4 per cent (1960-70) were wanted up to Rs. 112-8.

*Including Bonus.

(Annual General Meeting on 26th Feb., 1944 at Cawnpore at 3 P.M.)
Audited Accounts for the year ended 31st December, 1943:—

After providing for a bonus to employees and setting aside Rs. 1,15,00,000 for estimated Taxation, Rs. 7,00,000 for Depreciation, Rs. 18,00,000 to Provision for Deferred Mill Renovations and Rs. 50,000 to Pension and Gratuity Fund, the result of the year's working is a profit of Rs. 12,42,888-14-0. Adding to this Rs. 3,90,792-3-4, being the balance brought forward from 1942, there is a sum of Rs. 16,33,679-1-4 available which the Directors have allotted as follows:—

	Rs.	A. P.
Ad-interim Dividend of Rs. 1-8-0 per share on the Preference Shares, and Rs. 5-0-0 per share on the Ordinary Shares to 30th June (both free of Income tax)	1,95,000	0 0
Leaving for disposal a sum of Rs. 14,38,679-1-4, which they propose to deal with as follows:—		
Final Dividend of Rs. 1-8-0 per share on the Preference Shares (free of Income tax)	45,000	0 0
Final Dividend of Rs. 5-0-0 per share on the Ordinary Shares making 20% for the year (free of Income tax)	1,50,000	0 0
Bonus of Rs. 25-0-0 per share on the Ordinary Shares (free of Income tax)	7,50,000	0 0
Bonus to Directors	10,000	0 0
To be carried forward	4,83,679	1 4
Total	16,33,679	1 4

A sum estimated at Rs. 18,00,000 will be due for payment, during 1944, as a Compulsory E.P.T. Deposit under Section 10 of the Finance Act 1942. The equivalent of this amount has, therefore, been set aside to Provision for Deferred Mill Renovations.

Managing Director.—Mr. K. J. D. Price.

Authorised, Issued and Subscribed Capital—Rs. 30,00,000 in 30,000 ordinary shares and 6 per cent Cum. Pref. shares of Rs. 50 each both fully paid up.

Synopsis of the Balance Sheet as at 31st December, 1943.

*For 5 half-years ended 30th June, 1942.

To Rehabilitation Fund being provision in respect of deposits under Section 10 of Finance Act, 1942.
(Half-yearly Meeting, 6th March, 1944 at 3 p.m.).

Audited Accounts of the Company for the half-year ended 31st December, 1943:—

	Rs.	A. P.
After writing off for Depreciation Rs. 1,00,000, show a profit of	6,24,578	14 1
To which has to be added the balance brought forward from the last account, namely	90,732	11 0

giving a total of 7,15,311 9 1
From this is deducted the amount set aside as a Reserve for Taxation Rs. 5,00,000 0 0 and as provision in respect of Deposits under Section 10 of the Finance Act 1942 " 50,000 0 0

leaving a balance for disposal of 1,65,311 9 1

The directors recommend that this should be dealt with as follows:—

	Rs.	A. P.
To paying the dividend on the 'A' Preference Shares for the half-year ended 31st December, 1943 at Rs. 3-8 per share (i.e. 7% per annum), without any deduction for Income-tax payable by the Company	21,000	0 0
To paying a dividend on the Ordinary Shares at Rs. 10 per share (i.e. 20% per annum), without any deduction for Income-tax payable by the Company	60,000	0 0
To carry forward	60,311	9 1
Total	1,65,311	9 1

During the period under review an important factor has been the tightening of Official control, which included the fixing of a limit in basic cotton as well as ceiling prices for all varieties of woven goods and yarn not covered by standard cloth or defence orders.

The results for the half-year have been seriously affected by frequent enforced stoppages at the mills owing to lack of coal and although the transport position has lately improved somewhat we are still experiencing difficulty in obtaining delivery of the rationed supplies through the Coal Distribution Controller. Compensation payments to workers during the closed periods in addition to the existing amenity allowance have increased manufacturing costs very considerably and the loss incurred by the Company in supplying foodstuffs at about normal prices is shown in Profit & Loss Account.

Managing Agent.—Messrs. Kettlewell Bullen & Co., Ltd.

Capital Authorised, Issued and Subscribed:—Rs. 18,00,000 in 6,000, 8 per cent Cumulative Preference 'A' shares of Rs. 100 each, 6,000 seven per cent non-Cumulative Preference 'B' shares of Rs. 100 each and 6,000 Ordinary shares of Rs. 100 each, all fully paid-up.

	Liabilities	Rs.	Assets	Rs.
Capital paid-up	18,00,000		Gross Block	64,82,154

(Continued from page 325).

The United Iron and Engineering Works is issuing fresh capital for Rs. 7½ lakhs in ordinary shares of Rs. 10 each at par to the public. The Company is at present occupied fully with the execution of Government orders. The average monthly production at the company's works is valued at Rs. 2 lakhs and it is expected that it will soon increase to Rs. 3 lakhs. The Company has a well-equipped factory at Belur under efficient management. A dividend of five per cent was paid for 1941-42.

The report and accounts for 1943 submitted by the Directors of Habib Bank Ltd., reflect the expansion in resources and profits that are associated with leading Indian banks, both old and new. The substantial increase in the carry forward to Rs. 2,36,564-6-3 as against Rs. 24,451-0-1 brought in is a measure of the growth of profits to which the Bank's receipts of Rs. 10.44 lakhs nearly point. The net profit of Rs. 6.19 lakhs is high in relation to the year's income and this may be taken as a very encouraging indication of the future. The increase in total Deposits to Rs. 307.7 lakhs supports the conclusions drawn from the previous report and the distribution of assets is noteworthy. Cash accounts for Rs. 117.88 lakhs out of the total of Rs. 3.17 crores. The Investments exceed the Advances totalling Rs. 96.47 lakhs in the balance-sheet as on December 31, 1943. Bills account for Rs. 22.5 lakhs nearly out of the total showing that the Habib Bank's connections with commerce strengthens its earning capacity directly. The proportion of gilt-edged securities (Rs. 127.37 lakhs) to the total is fairly high at 34½ per cent and the cash ratio is well above the average. Progress in the last two years has kept the shares (on which the yearly dividend cum bonus is Rs. 3-8 less tax) at a substantial premium in the Bombay market. And the auspicious beginning made as regards Reserve with the initial appropriation of Rs. 1 lakh follows the issue of preference shares last year.

WATCH-DOG.

THE UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY LTD.

NOTICE.

NOTICE is hereby given that the Twenty-seventh Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 7th March, 1944, at 11-5 A.M. for the purposes of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1943, and to transact any other ordinary business of the Company.*

By Order of the Board,

MARTIN & CO.,
Managing Agents.Dated, Calcutta,
17th February, 1944.

*The Dividend as recommended by the Board if passed at the General Meeting, will be paid to Registered Shareholders on and after 7th March, 1944.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, February 15.

Firm conditions prevailed on the market. Except for Textiles, other sections were lively with activity. Budget fears do not seem to have affected the market to any great extent. Even Mill shares met with moderate enquiry and there was a good demand for selected scrips. The most active section was banks while Plantings received a great deal of attention.

The gilt-edged market was steady with 3½ per cent Paper quoting at Rs. 99-3. 3 per cent (1963-65) Loan was Rs. 98-10. Among state Loans 3½ per cent (1965) Travancore Loan was Rs. 108-8 and 4 per cent 1953-63 Mysore Loan Rs. 123-6.

Among Banks, Indian Banks (F. P.) were in good request and were wanted up to Rs. 363. The 25 Rs. and 50 Rs. shares had buyers at Rs. 124-8 and Rs. 197 respectively. Imperial Bank fully paid are quoting at Rs. 1,952-8 while the contributories were Rs. 510. Indian Overseas Bank were in good demand at Rs. 106 c.d. Indo-Commercial Bank "C" were Rs. 63. Reserve Bank were Rs. 130-8.

Mill shares generally were somewhat quiet. But there was good enquiry for selected scrips. Mettur Industries were steady at Rs. 336; so also Maduras at Rs. 86. Buckingham Carnatics have shot up by nearly 15 points to quote at Rs. 352. Pankajas were slightly lower at Rs. 372, while SriSarada are down by 10 points at Rs. 280. Rajalaxmis were neglected at Rs. 291. Vasantas were

Rs. 382-8 c.d., Cambodias are a shade easier at Rs. 38-14.

There was a large turnover in the Planting section with good improvement in scrip values. Midland Rubbers are further higher at Rs. 17. Cochin Malabars are slightly better at Rs. 12-2. Chembra Peaks were 2 as higher at Rs. 12-10 and Thirumbadi were Rs. 5-2 c.d.

Among Miscellaneous shares, Mysore Paper were Rs. 32; Prithvi Insurance Rs. 13-15. Singareni Collieries were easier at Rs. 184. Spencer & Co., Rs. 13-6; Deccan Sugar Rs. 85-4 and Mettur Chemical (New Ordy.) Rs. 27.

millions who fancied our products in peace times.

MISRA
HOSIERY MILLS
CAWNPORE

A MISRA Knitted-wear will ALWAYS Satisfy

Calcutta, Friday Evening.

There is no change to report except for a slight stiffening in treasury bills discount. This higher rate paid for treasury bills is, however, in no accord with the conditions prevailing in the money market. Interbank call money continues to be as cheap as ever, the rate being $\frac{1}{2}$ per cent in Calcutta and $\frac{1}{4}$ per cent in Bombay. The offer of tender bills this week was Rs. 8 crores; and applications came to Rs. 10.46 crores which compares poorly with Rs. 14.74 crores received on February 15. The average rate of accepted tenders was 12 annas and 11 pies per cent per annum as compared with 12 annas and 6 pies per cent last week. In spite of the higher rate, the total of treasury bills sold this week came only to Rs. 89½ lakhs. The Reserve Bank has done well in rejecting unsuitable tenders, thus proffering an indication to the market that no unjustified increase in treasury bills rate will be countenanced. The offer of tender bills for next week has been reduced to Rs. 6 crores.

It is not surprising that, during the week in which the Central Treasury did not fare too well, the Bengal Government, which asked for Rs. 3 crores of three months' bills, had a worse experience. Applications came to Rs. 5 crores but the average rate of accepted tenders was as high as annas 14 and pies 6 per cent per annum. The Bengal Government will be again in the market next Thursday for Rs. 3 crores.

The returns of the Reserve Bank for the week ended February 18 show a reduction in active note circulation of Rs. 1.50 crores, though, as compared with a fortnight ago, there is an increase of Rs. 6.02 crores. Sterling securities and rupee securities are unchanged though, in this respect also, there is an increase of Rs. 11 crores in sterling securities as compared with February 4. The Central Government's deposits are higher by Rs. 73.80 lakhs and other government accounts by Rs. 151 crores. Deposits of member banks have risen by Rs. 2.89 crores to Rs. 59.73 crores. In recent returns, miscellaneous deposits have been going up by leaps and bounds;

and the latest figure shows an increase of Rs. 3.40 crores to Rs. 15.88 crores. On the assets side in the banking department, foreign balances are higher by Rs. 8.73 crores.

The return of the Imperial Bank for the week ended February 18 shows deposits at Rs. 215.25 crores. Investments are down by Rs. 2 crores to Rs. 147.93 crores. Advances have risen from Rs. 46.46 crores to Rs. 47.91 crores. As a result of these transactions, cash has increased from Rs. 28.31 crores to Rs. 29.10 crores.

All the markets are marking time, pending the announcement of the budget on the last day of this month. The general impression is that the main principles of the budget will be to utilise taxation less for additional revenue than for anti-inflationary measures. The budget speech of Sir Jeremy Raisman will be awaited with interest also from the point of view of his comments on various economic developments such as our sterling balances, gold sales and the drive against inflation. In view of the uncertainty associated with the eve of the budget, the government securities market has been quiet. There has been a decline of a few annas in the prices of most of the securities. If the budget should prove favourable from the point of view of the markets, the present hesitancy will yield place to considerable buoyancy. No information is available so far of the progress of Prize Bonds. We understand that the Reserve Bank is not prepared to sell Prize Bonds in a whole series. That is to say, if any investor chooses to look upon Prize Bonds not as a gamble but as an investment, he may like to take up a whole series as it would give him 2 per cent free of tax. To get 2 per cent free of tax on a five-year security, will appeal to quite a few bankers. But the intention of the Reserve Bank is not to make the Prize Bonds available to those who would in any case be investing in government securities. There is another aspect of the matter which deserves to be carefully considered. It is an admitted fact that there is quite a lot of money held in the form of cash, being the proceeds of tax evasion. We are of

the view that something must be done to immobilise all this cash. Bearer bonds like the present Prize Bonds are eminently suited for this purpose. But, then, the Government may ask why offer them so high a rate as 2 per cent free of tax. There is much force in this argument. Why not offer 1 per cent free of tax and initiate another type of Prize Bonds? If this suggestion is accepted, permission must be given to applicants to take up the whole series if they so choose.

The exchange market has been dull but steady.

Banks are sellers of T.T. at 1s. 531/32d. for London Ready to six months forward.

Banks are buyers of three months D.A. bills on London at 1s. 69/32d., and four months bills at 1s. 611/32d.

Finance Abroad

Thursday Morning.

A SMALL rise in old Consols was the direct result of the Prime Minister's war review. The gilt-edged market shows no substantial change as short-term borrowing from the Banks has increased of late. This week the Treasury intends to take £45 million in deposits in addition to £90 million in three months' bills. Rates, of course, are unchanged and the only question that interests is the market quota. The quota is not by any means large suggesting that Public Departments take up more bills than before and overseas assets of other countries seek employment as usual in the short-term market.

The Prime Minister's review of the military situation contained no indication of the present cost of war. All that was said as to the probable U. S. contribution for the invasion plan may point to an increase in the U.S.A.'s war bill. The bill according to the War Production Board increased in January 1944 as compared with December 1943. The increase has been without effect on Wall Street described as moderately active before the weekend. Markets have received no direct assurance as to the duration of war. Guarantees as to the outcome are certainly available in the Prime Minister's speech. But Home industrials especially Textiles whose postwar prospects created a larger following in recent months have been irregular since Tuesday owing to the Premier's references to the demands on shipping even while the Mediterranean is completely under Allied control.

The only market feature to which attention may be drawn is the considerable improvement in tea shares. This may have a corresponding effect on the Indian markets where the boom in tea shares was short-lived. Encouragement will certainly be given to holders of tea shares to look for higher prices in view of the Food Ministry's intention to pay higher prices for Empire Tea. In the near future a revival of interest is certainly to be expected though the question as to refund of tax to non-residents has not been disposed of by the Bengal legislature.

The oil share market has been featured by a sudden rise in Mexican Eagle impelled again by speculation as to likely compensation rather than any other factor. The strengthening of London Transport stock in spite of enemy air activity over London is a guide to the City's view of the last, desperate effort against London. The bombing has caused little change in prices and the fact deserves special notice in view of the sharp decline in prices that followed the daylight raid on Calcutta on December 4. The recovery in leading industries particularly tobacco shares suggests that trade will suffer very little on account of the raids and a noteworthy rise in Dunlop Rubber suggests that London's view of the company's overseas interests is more and more optimistic.

Since B.O.W. messages on the weekly receipts and expenditure of the Treasury do not appear, there is little or nothing to discuss about in connection with the next Vote of Credit. Though uncertainty as to increase in taxation and commercial policy remains in

Britain too markets have learnt to ignore anything except the developments in industry and the departures in management. British example in this connection has been described by reference to the development of Stewarts and Lloyds' works at Corby. Ten years ago in the middle of Northamptonshire a large steel and tube plant was put up so as to be near the ore and bring the coal. Workers were brought from the north to Corby but it meant building houses for them and watching over their communal efforts which include several new churches, a cinema, a large welfare club and technical institute, a women's club and an unusually fine boys' club.

The Premier's warning not to relax followed a beware notice as to the squanderbug. The emphasis is again on a direct increase in savings. Lord Kindersley said in November that the individual did not save enough and the Government's short-term borrowing increased on that account; and this led in turn to an increase in bank notes and bank deposits. Symptoms of inflation persist in Britain though the cost of living over a long period shows little or no change. The effects of pay-as-you-earn taxation on working-class savings are probably different from what was expected, and the appeal to save may take the form of another Wings for Victory campaign to which the R.A.F.'s success over Leipzig and Stuttgart should contribute in great measure. The outlook for savings generally is settled by the increase in production and income, though any reference to the former must be qualified by reference to the coal shortage. The main inference that war by restricting consumption increases savings does not at present stand in need of particular proof.

The informal beginning of the contest between Mr. Willkie and Mr. Dewey has not affected the Republicans' opposition to a Fourth Term, the party view being reflected in a Senator's dictum that he would oppose a Fourth Term even if it were his own father. The Administration's minor successes, with the Lower House accepting the President's veto of measures previously passed, do not seem to have brought about any large change of Congressional opinion as to the Tax Bill. Realistic taxation seems distant, and the Budget message certainly misfired. The upper limit to federal debt has been raised and borrowing seems easy when the money can be hired for 3 months at less than ¼ per cent. But the main U. S. problem is inflation, and cables as to voluntary war gifts and the reduction in the number of civilian workers when the armed forces have taken off 7.7 millions suggests

market revival and the commodity markets may draw real encouragement from the predictable failure of the Administration programme to hold down prices and wages.

A revival of Congress authority on the basis of the Constitution may conceivably limit labour unrest and the scale of U. S. aid to the Allies may be more definitely pres-

cribed by Congressional committees. The split in the Democratic party is certainly indicated by Senator Alben W. Barkley's resignation and the party's vote of confidence in one who argue that the vote has been improperly used. Amendment of the U. S. Constitution is obviously ruled out. The quarrel will certainly affect the plans for a world bank and a stabilisation fund. The Vice-

President is not likely to influence the Senate's views as to the President's powers and the use made of them. More note then will have to be taken of Republican intentions, and the views expressed by Mr. Eric Johnston during and after his visit to London should naturally attract more notice in coming months though Mr. Johnston's candidacy is off.

STRENGTH IS BORN

Silently a steady stream of glowing strength flows towards the harness designed by man.

Iron has been made.

Soon it will reach the more adolescent stage of steel, to form the basic strength of industrial growth.

The 15 year Plan—An Analysis and appreciation—III

In the last two articles of this series we indicated the broad aims and outlines of the 15-Year Plan propounded by eight prominent businessmen from Bombay. It was pointed out that the aim of the authors is to raise the standard of living to a level which will leave a reasonable margin over the minimum requirements of human life; that this rise in the standard of living requires a three fold increase in the national income by the end of 1960 which would mean a doubling of the per capita income of 1931-32; that such an increase would involve a change in the contribution to the total national income of agriculture, industry and the services from the present basis of 53, 17 and 22 to that of 40, 35, and 20 respectively. Obviously, the term "industry" includes both basic industries and consumption goods industries. The relative importance of these two kinds is the crux of economic planning in an undeveloped country; and what is more it is full of the most dangerous pitfalls both for the directors of planned economy and the general population. At this stage of the evolution of the plan, it is too much to ask for clarification of details. But the authors of the plan are only too keenly conscious of the dangers of "over emphasis on heavy industries and indifference to consumption goods industries" and of undertaking the building of huge industrial plants which take a long time to yield an output of current goods. They seek to provide against the danger of a shortage of consumer's goods such as Russia suffered from in the initial stages not only by avoiding the errors mentioned above, but also by the organisation of small scale and cottage industries. We feel confident that, if economic planning in India were to be carried out without the political and social disorganisation which Russia had to suffer, India may well realise tearless, even joyous, planning.

The danger of planning is over-planning, even more than underplanning. For over-planning tends to rigidity and the drying up of the natural springs of progress. In a country like India, where productive activity is so ill-organised and the general incentive to work is so weak, the aim in the initial stages of the plan should be to avoid such rigidity. All the measures adopted must be such as to provide this incentive to engage, each on his own accord, in the production of consumer's goods, so that the total output of goods will be very considerably increased before the more crucial stage of planning of heavy industries will have been reached. The Bombay plan not only provides for a splitting up of the 15 Year Plan into three five year plans, but also for a geometric progression in the expenditure in the three stages. "In the initial period the total amount to be spent has been deliberately kept low": the expenditure on basic industries rises from Rs. 480 crores in the first stage to Rs. 1,200 crores in the second and Rs. 1,800 crores in the last while the expenditure on consumption goods industries rises from Rs. 310 crores to Rs. 330 crores in the second and Rs. 360 crores in the last. It is noteworthy that the basic industries which will be developed in the first two stages can be expected to produce a substantial proportion, if not the whole, of the capital equipment needed for the basic and consumption goods industries to be developed in the third period.

It may be noted, therefore, at this stage that the tempo of progress has been well conceived and in so far as the soundness of the plan is dependent on this factor, it has not been sacrificed in an impatient rush towards the goal or in glamour for grandiose projects. The aim of the plan being to bring about by 1960 a trebling of the national income and a doubling of per capita

income, its authors calculate the outlay necessary to secure such increase and indicate the rate at which such outlay can be made without the fear that the cloth may not suffice for the coat at any stage.

We may now proceed to indicate in their rough demarcation the various sectors of this economic plan. As may be expected, agriculture comes first; and here the target is a 130 per cent increase in agricultural production. A readjustment of areas under different crops in accordance with the conditions of international trade and with the needs of internal industries during their planned development is naturally contemplated. Certain fundamental reforms, which are a necessary preliminary to increase in agricultural production, such as encouragement of co-operative farming, liquidation of agricultural indebtedness and soil conservation are specifically mentioned; and for the last mentioned the plan provides for an expenditure of Rs. 200 crores non-recurring and Rs. 10 crores recurring. For the actual increase in production the authors of the plan look, in the main to an increase in the yield per acre, for which in the light of yield in other countries the conditions in India afford indeed, great scope. This increase, they aim at securing by extension of irrigation in all its forms and by the provision of model farms which will bear the brunt of the executive work involved in revolutionising our agricultural methods. Next to agriculture come the services in which a 200 per cent increase is expected mainly through stimulating internal trade by the provision of better methods of communication. Not only roads and railways are to be extended and improved, but facilities for coastal shipping are to be vastly expanded; and the plan provides for an expenditure of Rs. 897 crores under capital and Rs. 49 crores for maintenance.

Though improvement of agricultural production is the basis of any increase in national income, the starting point is the improvement of the personnel of progress, by providing for the education of the masses and the regular output of the various kinds of ability which the nation will require. Much detailed work has been done already in the educational sphere; and enquiries into the requirements of public health are being made by expert bodies. The Bombay Plan puts the expenditure on education at 267 crores non-recurring and 237 crores recurring. The outlay on Housing is estimated at Rs. 2,200 crores. And the total bill of costs may be given as below:—

(Rs. Crores).	Non-recurring expenditure.	Recurring expenditure.
Industry	4,480	...
Agriculture	1,095	150
Communications	897	49
Education	267	237
Health	281	185
Housing	2,200	318
Miscellaneous	200	...
Total	9,420	939

* The first two articles in the series appeared in the issues of January 29 and February 5, 1944.

The authors of the Plan add, however,

"Throughout this section we have shown recurring and non-recurring expenditure separately. We have made this distinction with the object of indicating how the capital expenditure is distributed and how it has been arrived at. It will, however, be obvious that all recurring expenditure, except that for depreciation and replacement, is in effect working capital and for estimating the total amount of capital which the plan is likely to require, it should be combined with non-recurring expenditure. On this basis the total capital requirements of the plan we have outlined would amount to about Rs. 10,000 crores distributed as follows:

(Rs. crores).		
Industry	...	4,480
Agriculture	...	1,240
Communications	...	940
Education	...	490
Health	...	450
Housing	...	2,200
Miscellaneous	...	200
Total	...	10,000

It remains now to consider the financial aspect of the plan. That its authors have not the least vestige of doubt that the capital will be available is a fact which ought to put heart into the public and sustain confidence in the feasibility of a plan to treble the national income. The more informed sections of the public should, however, realise that at this stage we need to do no more than satisfy ourselves that in asking for such an increase in the national income we are not asking for the moon. The authors of the plan cannot do more now than indicate the main sources from which the country can expect to derive the capital required. This, they have done as below:

(Rs. crores)		
External Finance:		
Hoarded wealth	...	300
Sterling securities	...	1,000
Balance of trade	...	600
Foreign borrowing	...	700
		2,600

PAUSES AND CAUSES

An interval in which investment is stagnant owing to drooping market values seems appropriate for an examination of probable trends in relation to those which have been dominant for months. The drop in ordinary shares this month reflects, in the main, the usual fears rather than any decisive change of sentiment, for one of the most arresting symptoms of inflation in every country is the rise in the market value of all industrial shares. Physical damage to property does not apparently affect the main upward trend, established and duly sustained by the war. The rise in industrial shares is well-nigh universal and constant, and the only country in which the index moved downwards last year was Sweden where successful counter-inflation is known to have taken place. The main trend in the U.S.A. as well as Canada was certainly settled by the ascent of war production. The special measures adopted in Germany to restrain private investment in shares and secure all available funds for Government borrowing merely illustrates the argument that in a period of monetary instability, limited consumption, and stringent taxation private capital that cannot go abroad seeks logically the industrial market in spite of the steady rise in bank deposits. The main trend in 1942 was upward in respect of industrial shares; it continued into 1943 as the movements

Internal Finance:

Savings	...	4,000
'Created Money'	...	3,400
		7,400
Total	...	10,000

This estimate of capital resources has unfortunately proved an invitation to dangerous controversy. About the future of our sterling securities and the prospects of our balance of trade, it is easy for some to take a pessimistic view. It is also possible to suggest that the expenditure of created money and the maintenance of credit in foreign markets are quite incompatible. But the authors of the Plan have indicated, as well as they can within the limits of a short initial publication, that no invalid assumptions have been made. Out of hoarded wealth estimated at Rs. 1000 crores, they have taken only Rs. 300 crores into account. As regards balance of trade, they have shown themselves aware of the possibility of changes on both sides of the account. If sterling securities seem to some an undependable asset, that is no reason why it should be ignored altogether in all estimates of our future capital resources. The use of created money is enough of an innovation to horrify conventional minds. But as readers of this journal are aware, the expenditure of fiat money on nation-building was advocated in a series of articles on "the New Economics" which appeared in our issues months ago. Inflation loses its sting and stigma when it leads to an expansion of production of consumer's goods. And we may be sure that, in the conditions of the post-war period, the expenditure of large amounts of created money on education, public health and agricultural development will, unlike the inflation of the present war period, lead to such an increase in production as will keep prices stable over a period.

The way out of the deadlock in our economic life is through fiat money. The rest of the complex problem of capital production will then be seen to have been considerably simplified and lightened. The need is for a rally of public opinion round a plan, so clearly conceived in its outlines and so weightily sponsored. Premature controversies are an ill wind that blows no one good. But doubtless, the duty of responsible criticism must not be forsaken. Articles on particular aspects of the plan in the light of special studies may be expected in future issues.

in the index numbers for various countries demonstrate. The case of Japan seems exceptional since it is known that the yen's value at home weakened with the drop in the gold reserve and the rise in Japanese wholesale prices as well as the cost of living after 1942 pointed to severe inflation.

The same problems of investment in a period of low interest rates and limited opportunities appeared in countries where the return on first class government securities was as low as 1.8 per cent (the U.S.A.) and where the return was as high as 4.4 per cent (Denmark) and both reported a rise in equities in 1942-43. The identical increase in commercial deposits as well as savings deposits and bonds showed that the increase in the note circulation had a corresponding effect on the volume of investible funds as well as the values of investments. In recent months market circulars in India tend to emphasise the inordinately bullish effect of the additions to currency without any reference to the war stimulus still available for Indian industry. The latter in view of Mr. Churchill's refusal to predict the precise duration of the war appears to alter the outlook for most sections of industry. It is no longer possible to treat peace and war risks as distinct and disparate; they overlap and blend and, in any

case, the outline of India's possibilities as a Fourth Base for the Allies appears to make a real difference in regard to the security and profitability of private investments.

The gradual reduction in the yield of gilt-edged has been a determinate factor in the rise in preference shares. The same influence on ordinary shares has not been overlooked by those who note that dividends in the majority of cases are taxfree, and from the point of view of an individual's income alone, the spread between the yield on sound industrials and that on gilt-edged is still large. The spread is naturally reduced by the improvement in share prices recorded since 1942 but it seems, on the face of it, anomalous that there should be a difference of over 2 per cent in the net return on two distinct classes of investments, say bank shares and jute shares. The postwar prospects of one or both appear indistinguishable, and one may note in passing that the very substantial rise in the share values noted after the anti-inflationary measures including the E.P.T. ordinance of May, 1943 was based on the calculation that in the absence of other investments and markets, the real merits of ordinary shares would be more widely and readily understood. In regard to one industry namely coal-mining, the proposal for tax relief by way of exemption of bonuses paid from E.P.T. is regarded as less important than the calculations based on future adjustments in output and the rise in prices. It is unlikely that fuel costs as such would hamper the growth of profits outside the coal industry. For us the main lesson from a study of company results published last year is furnished by the growth of profits and the addition to reserves despite the increase in taxation. The legitimate conclusion drawn often last year was that the stability of profits was threatened not so much by the changes in taxation, as by the shortages in evidence. Those shortages, notably coal, are being dealt with and the Railway Budget speech certainly treated the coal question as a separate issue, for the Government even more than the mining industry. The advent of control while it may affect coal-mining companies' affairs indicates that for export trade and the industrial consumers the increase in coal output would be more important than the rise in prices.

In the last week of February when the yearly trough appears to be reached, and the upturn seems a matter for individual speculation, it is more than ever necessary to refer to the absolute increase in industrial profits in 1942-43 in order to assess the outlook. See-saw movements in recent weeks only point to the mixed sentiment of professionals rather than to any definite change in the long-term prospects for Indian industries. The peculiarity to which market attention is infrequently drawn is the unusual difference between the investment return on gilt-edged, semi-gilt-edged and industrial shares in India. The point which must claim increasing attention in the future is the optimal difference between the rates of return when the net yield for large experienced investors like insurance companies has been falling steadily. One thing seems certain in regard to the postwar period. Deflation and high rates of interest would never return, and the conversion problem for industry in India where much of the war production is really of a peace-time nature is so simple as to defeat questions. On the assumption that imports would revive to an astounding degree, many rate

the postwar prospects as moderate for the textile, paper, chemical and engineering industries without devoting any attention to the improved competitive capacity and the export connections secured in the war. If imports were to revive suddenly or substantially, export restrictions, too, would lapse, and forecasts as to foreign trade must inevitably direct attention as to the variations in costs and prices as between India and her probable rivals. The original advantages in regard to the tariff must survive the war in respect of both sugar and cotton textiles and the growth of secondary or ancillary industry must be more substantial if imports of materials and machinery are easier after the war. The postwar burden of taxation, too, may be lighter, the contribution of scientific research greater, and the home market's real possibilities may be revealed in ample measure. These considerations should receive even greater attention than usual. It must be recognised that domestic requirements of overseas suppliers may limit exporting capacity while the claims of postwar relief on India's textile industries, in any case, should be viewed as a factor making for the continuance of war prosperity. An abrupt change in corporate earnings and the reduction of the return to the Indian investor is to be hardly envisaged even on the basis of further changes in taxation while the funds for postwar expansion are obviously at the disposal of industry in the form of the refund of 20 per cent of E.P.T.

The temporary reactions to good news or bad news do not affect the view that the broad-based advance noted last year would continue into this year. The substantial margin between profits earned and the provision for taxation supports optimistic surmise as to the kind of markets to expect after the central budget is presented. If the fears voiced last week as to taxation being likely are still in evidence, many should note that the striking rise in the shares of investment trusts last year supports the familiar conclusion as to the appropriate difference between the return on Government securities and sound industrial equities. The far-reaching adjustment noticed last year is hardly complete, and depreciation, on the basis of quotations ruling for a week, must be ignored. Apart from the protection given to the investor by war risks insurance (due for renewal), there is the unusual circumstance that real property values in recent years have reflected the conditions of abundant demand and very limited supply. This has influenced the stock exchange to a very limited extent, but the reduction of agricultural debt, like the debt relief legislation of the past, has increased the volume and nature of disposable savings in India. The more important conclusion to which the last points is the increase of small savings in India seeking new outlets and, in this context, the easily shaken faith in gold and silver may appear to be more than a temporary market factor. The investment outlook may be summed up without difficulty by a reference to the striking observation of Mr. Churchill that he did not or would not predict the end of the war in 1944 but many other relevant factors have been described, and once again reference must be made to the fact that values in the future would be determined on a basis of 4 to 5 per cent which is more than what large investors with expert assistance are able to obtain at present.

FOR Quality TOOLS

The letters BATU, on tools is your guarantee of their excellence of quality.

Manufactured in a neat, well-equipped factory, housing the latest machinery under supervision of expert foreign engineers, B.T. Taps, Reamers, Dies, Milling Cutters, Slitting Saws etc. are unexcelled in quality and precision.

All B.T. Tools are treated by modern scientific thermal processes and their accuracy is guaranteed to conform to British Industrial Standard.

Editorial Notes**Burma and India**

Questions asked in the Assembly about the future of Indians in Burma and the revival of immigration after the war are directly concerned with the discussions arranged at Simla between Indian interests and the emigre government. What is however forgotten is that Burma will need both capital and labour from India after the war and for all her exports the natural market will be India. The fall in Burma's rice exports to Europe before the war enhanced greatly the importance of the Indian market. Since two-thirds of Burma's cultivated area is under rice, the export trade will regain its importance and the milling industry as well. For cotton, as well as oilseeds, the nearest and most secure market will be India, and Burma's imports too will have to be sought in India rather than the Orient which is regarded as a special field for U.S. enterprise. Given such conditions as obtained before the war, the Indian claim to an Open Door in Burma seems strong. There is, however, the question of European interests in Burma. Adjustment on the basis of Separation proceeded satisfactorily, but the political future of Burma is uncertain and indefinite. The war alone has made the Burma constitution unworkable for the future, and negotiations with the Secretary of State appear more essential than the formal definition of any minority's rights.

Since Burma will qualify for the aid dispensed by the U.N.R.R.A. the minority when it returns will presumably advance special claims for temporary assistance, but the more pressing question will be in regard to money wanted for post-war reconstruction. Borrowing in London may be ruled out. Borrowing in India would be difficult when the demands of planning are large and insistent. Financial weakness would prejudice for a fairly long period the attainment of Dominion Status, having regard to the lapse of self-government in Newfoundland. If Burma is not a Dominion after the war, whereas India will be, the question of Indian rights cannot be easily reconciled with Burmese aspirations. Whether pre-war legislation will be scrapped after reconquest has not been duly indicated. A plebiscite in Burma is out of the question. Without any promise as to what the War Cabinet wants at present, local discussions have very little value; so that the Government of India, in not sending an observer from the Overseas Department after it held its own consultations with evacuees, was more realistic than usual. The best plan that may be suggested is an International Mandate which would take as much note of Burma's requirements as of the Middle East during the war. The

offer of full partnership to the N.E.I. by the Queen of the Netherlands in 1942 may furnish a useful parallel, particularly in the light of experience. Burma's external relations may be settled by victory, but the economic hazards can be removed only by India. A treaty regulating the affairs of South-east Asia would make a very real difference in regard to Burma's future but that is largely dependent on the nature and degree of political advance which India will be able to make.

Paper & Coal Shortage

In India the story of shortages has no ending and the variations practised on the theme song of control orders are almost baffling in regard to ultimate results. The coal shortage has created a passion for coal rationing and fuel supply for a very important industry like paper has been limited by officers' order. Though the Government claims (and takes) 70 per cent of available supplies the practical difficulties of the manufacturers have been ignored. The most important paper company in India in its half-yearly report dwelt on the coal shortage and the non-use of one paper-making machine. The point has previously been elaborated in the trade press which has drawn attention to the fact that in the case of some paper mills, the fuel quota has been cut by 25 per cent. Just over a year ago, the cry was for more production and a paper commissioner to increase output was appointed as soon as the usual Control Order came forth. The reduction in coal supply has been ordered without reference to the circumstances of producers, without considering the quality of pulp produced, or the presence of bleach and caustic machinery and recovery units attached to the plants. Those who regarded paper as a war-fed industry have now reason to feel dissatisfied with interference especially as the industry submitted to price control in what may be called the free market.

The really important consequence of the coal economy measures is that the loss in paper production will outweigh the saving of coal and it seems a pity that the industry was not consulted before the decision was taken. The more important result for others is that the free market will get less than the 30 per cent it is entitled to because the Government would claim and take all it wants. Apart from coal supply compulsorily limited, the Indian paper maker has difficulties in regard to bamboo and other raw materials. The paper mills encounter competition from Army contractors who find many uses for bamboo and transport for the season (November to May) has to be

placed on a special footing. In regard to transport of paper to consumers from the mills, the position is not yet satisfactory and the fear, that shortage of wagons for taking Indian-made paper to the larger distributing centres would aggravate the difficulties in evidence, has been voiced by those who think that paper is an essential material for war, commerce and education alike. Though the measures adopted to stimulate coal-mining in India may yield results in the future, it is surprising that the extreme importance of paper mills for the war effort was not recognised in connection with the coal quota decision. Perhaps it is necessary to emphasise that the Government's new interest in coal is no more than that of any consumer though the State Railways as common carriers have a special interest in coal. But over and above all claims on behalf of any industry or trade is the fact that imports of paper, etc., today are negligible and India has to produce as much as she can. To go short of paper in order to save coal is an extravagant economy which the paper mills in India and a fortiori the public cannot approve.

Red Cross Achievements

The work of the Indian Red Cross in war evokes greater support than usual, and the part it has played in famine relief is known to have strengthened its claims. In a broadcast of February 4, Sir Feroze Khan Noon mentioned that the

Central Government made no grants and the most important relief organisation in India depended wholly on contributions from the public. The extension of work in wartime is reflected in the growth of expenditure from less than Rs. 5 lakhs in 1939 to Rs. 150 lakhs in 1943. Only 10 percent goes for administration, and the greater part of the money raised goes for the sick and wounded and for prisoners of war. Hospitals receive supplies of 400 different items from the Red Cross and prisoners of war in Europe have been helped directly by food parcels. Through the International Red Cross the Indian Comforts Fund sent 540,000 food parcels in 1942 some of the items being imported from India to satisfy the needs of Indian soldiers. In the year 1942-43 Mrs. Amery's organisation also sent 23,000 parcels of warm clothing for prisoners of war. Sir Feroze Khan Noon stated that in Europe Indian prisoners of war are about 10,000

whereas the number in Japanese hands is approximately 70,000 men. Work in Bengal during the famine accounts for the milk distribution at a total cost of Rs. 20 lakhs. To quote Sir Feroze Khan Noon, "we have spent about Rs. 6 lakhs on blankets for the poor in Bengal. To Orissa we have sent 25 tons of milk (all milk given is either condensed or powdered). We are sending 150 tons of milk to Cochin and Travancore to cover three months' requirements and of this 61 tons have been already despatched and it is planned to send a similar quantity later on." The voluntary nursing organisation under the Red Cross has grown in strength from 500 before the war to over 4,000. All the achievements and tasks described entail an increase in resources and Sir Feroze Khan announced that the target for the year 1944 is Rs. 3 crores as against the actual outlay of Rs. 144 lakhs in 1943. Should the Japanese modify their prison

regulations much more would be wanted for the prisoners of war in the East, in which case the annual expenditure would be Rs. 4 crores distributed between hospitals (Rs. 1 crore) prisoners of war in Europe (Rs. 50 lakhs) and prisoners in Japanese hands (Rs. 2½ crores). Mention of the great work already done led to a mention of tasks that await in Europe when the Red Cross as part of an international organisation should take up new responsibilities.

The War Years

Most books dealing with India's war economy deal with Supply activities to the exclusion of many other things but for those who want a balanced account Mr. P. C. Jain's 'India Builds her War Economy' (Kitabmahal, Allahabad Rs. 3-8) may be recommended though the accent here is less on 'Build' than on 'War Economy.' The account of the Stock Exchanges' behaviour in war may have limited significance but the boom of 1941 has been completely eclipsed by the rise in share values during the year that followed the revival recorded in November 1942. Mr. Jain's own conclusion as to the confidence of Indian investors in industrial enterprise is warranted by the most recent outline of India's possibilities and responsibilities as a base for the Allies. The limited progress of industry during the war years in spite of what has been referred to as excess capacity has been explained at some length, and many would argue that wartime depression in the coal-mining industry is the original cause of the fuel shortage for which a number of remedies are now being tried. Mr. Jain's careful account of industrial development does not take note of the transfer of the new Indian shipyard from Vizagapatam to the other side of India. The beneficiaries of the war include cottage industries but a question may be asked as to the place of what is called the tailoring industry. The manufacture of ready-made clothing may be an industry but tailoring is a skilled trade or an occupation that has always been independent of clothing factories turning out uniforms to order. Changes in taxation arising from the war fit into the account of industrial and economic changes of recent years.

The Jute Industry's Difficulties

In the course of his speech at the annual meeting of the I. J. M. A. on Friday Mr. W. A. M. Walker touched upon the critical events of the year and gave the industry's considered opinion on the acreage decision. Statutory fixation of prices is not unwelcome, and price schedule for manufactures as fixed in June 1943 is the principal prop of the Provincial Government's decision and the Central Government's guarantee to buy raw jute. The co-operation of mills in carrying out the price control scheme, which provides a fixed minimum price for jute, has been offered. As for the future, Mr. Walker invited consideration of the fact that the jute industry is dependent on export markets. The very careful review of the fuel shortage brings to the fore the damaging results of the transport shortage and the coal rationing scheme. There is, however, little risk of a fall in production, and Mr. Walker's account of mill production in 1943 suggests that in the first half enough was done to ensure a supply of jute

manufactures for Government and civil consumers alike.

Perhaps the most cheerful feature to which Mr. Walker drew attention is the improved labour situation. The mill industry eased the food problem for its workers and granted allowances for the enforced spells of idleness. Since the investor too is concerned directly with the problems of coal, requisitioning and labour the assurance that mills' interests will be protected is timely and necessary. Credit is due to the industry for having defeated the proposals for control by a Commissioner. Reference must also be made to Mr. Walker's own remarks on the virtues of being the largest, best organised and most compact industry. The experiment in voluntary control, as one must recognise, has yielded results over and above the stability of prices for a fairly long period. The enhanced importance of the Association is not due merely to the munitions work undertaken by the mills without any measure of profit, but to the success in providing during the war Rs. 54.67 crores' worth of goods to Government. This may support some confidence as to the outlook but Mr. Walker's optimism was tempered duly. Given coal and transport, the mills could run 54 hours a week but those who expect radical improvement must perhaps wait for the arrangements to be introduced in March. The year in which the biggest order ever came to the mills has been disappointing in more than one respect but two points mentioned by Mr. Walker as to there being no doubt about the demand for mills' goods, and the contribution made by organised research under the industry's auspices should be viewed in relation to the difficulties outlined. Awareness of post-war problems and concern with export trade distinguish the jute industry, and for those who can pick out the light in the shade there is in Mr. Walker's review of 1943 in the jute world much to encourage and much to uplift. To those who are apt to regard our foremost industry's fortunes as clouded by local developments rather than the war the speech provides proof that united and strong as never before the jute industry is more than equal to any situation.

Insurance Progress

Very substantial increase in new business is reported by many Indian life offices. The 1943 figures in the case of Bombay Mutual and Jupiter have been indicated in advertisements. It is clear that more than a dozen Indian life offices claim over Rs. 1 crore worth of new business. The inference that famine and the disruptive influence of air raids exerted very small influence on life insurance results in 1943 is fully justified by reference to the fact that a substantial increase in new business is reported by both Hindusthan and National. It is possible that a feeling of insecurity in Eastern India actually contributed to an increase in new business in 1942 as well as 1943. The loss of a part of overseas connections has not interfered with the growth of new life business and the further conclusion that addition to income has influenced personal savings in the form of life insurance premiums is certainly warranted by the notable increase in life business.

The full figures are likely to be provided in each company's report but there is reason to believe that 1943 totals will be records. The suspension of bonus pay-

ments has been without direct effect on life business while the cover offered to civilians against war risks has been a substantial inducement. Business is known to have revived substantially before the middle of last year, and the optimism was in every case supported by the 1942 reports and accounts. The greater security vouchsafed to policyholders by the new Act explains and conditions the increase. The increase in new premium income will certainly support optimism as to the renewed firmness of gildedged and the indirect draft on increased savings for war expenditure may prove larger than in the past. A large increase in new business

may have no specific effect on the expense ratio since the period of adjustments to the new Act ended in 1941 but it is quite likely that commissions will be a more considerable item in all revenue accounts. The comparable figures for non-Indian life offices with branches here will be available only in the Insurance Year Book next year but it may be found that the share of Indian offices in life business has increased further. The increase in life proposals, as distinct from business completed, generally marks a welcome development, but the main credit must naturally go to the companies which have increased their investments in approved

securities, reported a larger revenue surplus year by year and generally shown to the public that life insurance is the safest form of investment.

Woolen Goods Rationed

The relaxation of control in regard to the woollen industry so as to enlarge supplies for civilian consumption has been followed by a Control Order applicable to all woollen goods including yarn. A notification of February 12 empowers the Industries and Civil Supplies Department to lay down specifications and control the prices charged by recognised dealers. The maximum retail price in regard to uncontrolled goods is fixed by Order at not more than 25 per cent above the cost of production. Handwoven goods made from handspun yarn are exempt like goods manufactured for the Defence Services, and the Order is interesting for rationing a part of textile supplies. According to Clause 8 no person shall buy more than one pullover, jersey or sweater, one shawl or blanket or more than 4 yards of suiting of 54 in width or 8 yards of 29 in width but due provision is made for the purchase for members of a family. Returns from dealers as to sales and stocks are called for in the Order which insists that the purchaser is entitled to a cash memo for his purchases, apart from the protection given by a price list. The first schedule covers knitting wool as well as knitted goods so that Indian hosiery manufacturers have the same measure of protection as the public. The manufacturers in States which produce a considerable part of woollen goods are not subject to this Order. Since the individual consumer in British India is free to buy 2 lbs. of knitting wool in addition to the ration of woven and knitted goods the additional supply for Red Cross comforts etc will be available in any case. The textile marks prescribed for woollen goods are obviously not meant to encourage consumers to take only Indian goods since the woollen industry's main claim for protection was rejected about ten years ago. It must be assumed that the principal difference between the woollen and the cotton mill industry has been ignored in the extension of control under the Anti-Profiteering Ordinance. In effect, the control applied should bring home prices in line with the prices paid for imports and help natural wool against substitutes or rival fibres.

Planning in Egypt

While inflation in Egypt, like the malaria epidemic, has claimed much notice, the departure in economic planning has not received attention. The Wafd decided in favour of planning and the Egyptian Cabinet announced that it was ready with a five-year plan. Since Egypt is a non-belligerent at present, it is not a question of post-war reconstruction, but of altering the structure. During the war Egypt's food problem has been acute. Dependence on a single export crop led to various difficulties and the increase of food supply was connected with the reduction of cotton cultivation. Secondary industries favoured by local import control have made some progress but the main problem is to bring up supplies to the level of prices. Industrialisation is demanded because Lower Egypt is one of the most densely populated parts of the world and the fellahen rescued by indirect British rule require a higher standard of living. Since

irrigation in Egypt owes much to British Indian example, and the projected diversion of irrigation dams for power supply is certainly suggestive of imitation. Electricity is more important for a country with no coal and very little oil, and plans for using the Assuan dam for hydro-electric power have been under consideration since 1935. Less than a quarter of Egypt's cultivable area is available for reclamation. As Egypt is known to contain phosphate rock, as well as nitrate of soda, fertiliser production may make a fair start under the new five-year plan since the Government's main concern is with maintaining the great fertility of Egypt's soil in the future. The silt brought by the floods is not enough for a series of dams in Egypt, the Assuan, the Esna, the Nag Hammadi and the Zifta impound the Nile water, shared with the Sudan, and the alluvial deposits are reduced. The Assuan dam has been improved and enlarged in 1933. The backwardness of the peasantry in comparison with the middleclass is, perhaps, the principal reason for the new plan to produce electricity. The principal food crop in Egypt is maize but the population looks for more rice and wheat. Hence agriculture in Lower Egypt must progress on the basis of home production of fertilisers. The Egyptian Government besides emphasising hydroelectric development wants to develop aviation services. As Egypt remains the centre of the Middle and Near East there are great possibilities for the basis of airfields in the Eastern and Western deserts. Aviation would bring the ports of the coast within reach of the Nile Valley and links with East and Central Africa would be duly created in order to bring the new northern highway running from South Africa nearer. Egypt's external debt is almost extinguished but post-war plans would require foreign assistance and the Minister of Finance indicated that foreign capital would be welcomed by Egypt after the war. More recently there has been a note as to the Finance Minister's plans for welfare on the basis of increased budgetary provision apart from the initial appropriation for the plan referred to.

Leftward Swing

The Conservative electors of West Derbyshire who accepted a Duke's direction as to the right candidate were not helped by the electoral truce. The family seat has been lost to the Labourite in spite of the Prime Minister's support in a direct appeal to the voters of West Derbyshire. The vacancy created for the Duke's heir has not been of help to the Conservatives who have lost what looked like a safe seat, as safe as the railway seat of Derby which is always held by Labour. Enquiry into the causes of the reverse has been regarded as a matter for the Conservative central office, but many abroad would regard the West Derbyshire election as a setback for Mr. Churchill after the very narrow victory in Brighton. Though the Labour party has worked the truce loyally, and the annual conference decided against change, the unexpected gain in a rural constituency would provoke real doubts as to the value of sticking to the truce right up to the next general election. What is significant is the inadequacy of family influence as a factor in the choice of M.P.'s but Alderman White won only on the second time and the local Conservatives were left no choice in the

matter of a candidate by the Premier's intervention on behalf of Lord Hartington.

The success of two Common Wealth candidates like the loss of a safe seat points to electoral dissatisfaction. Meanwhile, there are complaints over registration because that part of the electorate which has grown up since 1935 is not on the rolls. A Speaker's conference to consider adjustments has been mentioned and such change as may follow would not help the Conservatives to preserve their majority in the Commons. Already conclusions as to the post-war general election are being drawn on the basis of straw votes conducted among serving soldiers. Labour's increasing importance is ascertainable though the promise of Socialism in our time has been given up and Mr. Morrison has diluted the Beveridge plan to the extent that Government's promise is regarded as one of jam tomorrow. It is not known if the Beveridge plan was an issue in the West Derbyshire election, but in view of the conflict between promises and performance, the voters' decision was not a great surprise. A swing of about ten thousand votes against the party which held the seat for ages is unusually important as though Mr. Churchill's special regard for reconstruction by the promotion of Lord Woolton to the War Cabinet was not enough for the electorate. The efficiency of the party organisation is not in doubt; what is in doubt is the Premier's influence on the unattached or the uncertain voter. Many regard the West Derbyshire election result as a sure sign of Labour revival, and the party conferences in May should reflect the weight of opinion against the truce.

In West Derbyshire Labour ran a candidate in 1938; it accepted the chance to put up again the same candidate as in 1938. What followed is more than a family affair, and both parties may review the system of nursing and nomination associated with elections. Certain factors like the coal strikes of 1943 may have influenced the voters of West Derbyshire but, in the main, it marks the revolt of the local voters against the imposition of candidates, merely on account of family connection. The defeated candidate, Lord Hartington is connected with the Cecils, and

his father was Under-Secretary of State for India for nearly three years. But that has not helped him any more than Mr. Churchill's letter to the electors. A part of the electorate is clearly tired of the eight-year old Parliament and another by-election with a defeat for the Government's supporter may bring about a general election. To anticipate Victory by an election may suit the Opposition which (to judge by press comments) objected to family influence as well as the Premier's intervention in the West Derbyshire contest.

Inflation in Other Lands

Statistical enquiry into the wartime changes in the price-level and the cost of living in many countries yields not only the conclusion that the movement is roughly parallel but that price control and rationing have a large effect on holding up the rise arising from the changes in supply and demand. The graphs appearing in the September issue of the League of Nations statistical bulletin make it clear that inflation is a general phenomenon and its effects are typical. But many would note that the rise has been more gradual and limited in Canada and Australia than in India or Iran while the countries at war do not show the same changes as neutral Egypt. Almost exceptional is the case of Costa Rica where prices fell in 1943 and the cost of living also fell. Very different was the experience of Mexico. In spite of the belief that Venezuela is a country in which everything except crude oil is scarce and all

things sell at incredibly high prices there is the very small rise in the price-level in 1942 which was actually followed by a fall in the first quarter of 1943. Since Mr. Willkie put together his notes on inflation in China during 1942 the curves of the previous year have little meaning. In view of measures adopted in Japan since September to intensify war effort the rise in the cost of living in 1943 is a symptom of inadequate control and very limited supplies of goods.

Countries which held prices down successfully during 1942-43 are Germany and the U.K. In the case of both, there has been very little change since 1941 although note circulation and bank deposits etc. are up. In regard to inflation or its results neutrals like Turkey and Argentina show broader swings than neutrals like Sweden or Switzerland where deflationary measures were resorted to. It is noteworthy that satellite countries which have big balances in the Berlin clearing experienced the unmitigated effects of inflation like the Occupied countries. Only in the U.S.A. and Canada was the effect of new money broken by a rise in general industrial production, but prices in both countries like the cost of living were influenced by the demands of war, the shortage of manpower, and the diminishing agricultural surplus. In retrospect the changes in world prices appear to be substantial and not limited to countries at war. The nature of remedies applied to check the rise in the cost of living is known but their value is not determined by the success of one or more countries. The additions to note issue in all countries since 1940 appear to be substantial and the fall in the value of all money including the rupee is proved by the rise in wholesale prices which was greater than the rise in the cost of living in the case of India. The increase in public expenditure and the public debt is the cause rather than the effect of the rise in prices recorded in available statistics. So far as can be seen the neutrals have not been immune and the 1942-43 budget in Chile was unbalanced like that of Turkey.

Blood and Research

Since appeals for the Blood Bank in Bombay and Calcutta have been supported by the medical profession frequently, there is no need to describe the usefulness of transfusion. The practice of transfusion, according to Dr. Bryan Brooks in an overseas broadcast, was described by Samuel Pepys who noted in his Diary that a man, hired for twenty shillings, took in twelve ounces of sheep's blood. The whole technique was developed after 1900 when Landsteiner, working in Vienna, separated the red cells of the blood from the fluid part, the serum. He tried mixing the red cells of an individual with the serum of others. Landsteiner established three blood groups, and a fourth was soon recognised. Blood groups being inherited characteristics like the colour of the eyes are of interest to the student of racial characteristics. Landsteiner discovered two other groups. While they have no bearing on agglutination they have helped courts in deciding paternity cases. The discovery of the Rhesus factor was mentioned by Dr. Brooks. If the red cells of the Rhesus monkey's blood pass into the veins of a guinea pig, the serum will react by clumping the red cells of the monkey. This serum will also agglutinate the red cells of 85 per cent of human beings be-

cause 85 per cent are now known as Rhesus positive. In certain circumstances, the minority of Rhesus negatives in the case of reproduction may account for congenital jaundice because the agglutinate passes into the child's serum, the red cells

are destroyed, and the Rhesus reaction takes place. Dr. Brooks, however, observed that jaundice of the new-born child is quite a rare disease, but the possibility mentioned is the fruit of ever-increasing knowledge of the blood.

"BIG FLEAS HAVE LITTLE FLEAS...."

.... upon their backs to bite 'em, and little fleas have lesser fleas, and so *ad infinitum*." The significance of this jingle should need no emphasis in war-time. Man is the recognised meat of blood-suckers like fleas, bugs, lice and mosquitoes, and his property and the crumbs that fall from his table feed an army of insect pests like houseflies, crickets, cockroaches and clothes moths. We are prone to dismiss them too lightly, especially at present. History shows plainly how parasitic insects have, for example, by spreading typhus and plague from rat to human being, caused death-rolls higher than the deadliest weapon of man's devising. We owe an immunity from such insect-borne diseases to cleanly habits, and the unremitting vigilance of health authorities, backed by the research of scientists and the products of chemical industry. Research has unravelled the mysteries of infection and the complex life histories of pests and parasites; the chemist has provided an extensive armoury of dusts, sprays, fumigants and disinfectants with which to attack them, either directly or by assisting man to keep his house, clothes and person clean and wholesome. War has intensified old problems and created new ones. Evacuation, congested camps, the dispersal of foodstuffs in store and warehouse, have all given pests better opportunities of contact and scattered them over wide areas. Air traffic has increased the danger of new pests and diseases. The health services are on their toes to protect the community.

At their back the chemical industry is constantly at work to maintain the output of essential insecticides and to discover new ones in order to uphold the nation's immunity from insect-borne disease.

GRAND HOTEL

FOR AN

UNRIVALLED STANDARD
OF COMFORT

STAY AT THE

GRAND HOTEL

The Leading Hotel of Calcutta

I spent New Year's day in the train 'en route' to Delhi. And, on my return, my little son said: "Father, you will spend much of this year travelling." I asked him how he came to such a conclusion. His answer contained simple logic: "Whatever you do on the New Year's day, you will continue to do in the following twelve months. If you are happy on the first of the year, you will be happy throughout the year. If you are worried on the first, you will be worried for the subsequent months. If you get money on the first of January, you will make a lot of money in the whole year. It follows that, if you are travelling on New Year's day, you will be travelling a great deal throughout the year." It is a common superstition to suppose that the happenings on the New Year's day play a determining part in your destiny for the next twelve months. This superstition accounted for my son blossoming into a prophet. And his prophecy looks like attaining fulfilment. Since the beginning of the year, I have already undertaken two trips to Delhi and another down south to Cape Comorin. In the near future, I see prospects of at least three more journeys. Not that I do not welcome these occasions for getting out of Calcutta. Let me make my point clear. It is not the thought of leaving Calcutta that opens up a pleasant prospect. For, this beloved City is still the one place where I feel myself most comfortable and find everything congenial. What is valuable to me is not the destination, but the journey itself. The longer the journey, the more am I pleased. The many hours I spend in the train provide for me the only complete rest that I have been able to get in the last few years. A pleasant aspect of this rest is that you are free and safe from telephone calls and visitors, and, above all, from the importunate and ubiquitous crowd of bill collectors. That you don't have to sign cheques or bother whether your bank account has sufficient funds, is a privilege highly prized by one in my state of finances.

I, therefore, make the most of the leisure furnished during the hours I spend in a train. I eat well and sleep well and read a great deal. I postpone all heavy reading as much as possible till such time as will give me opportunities for undisturbed study in the seclusion of a compartment. During my last trip to South India, I had occasion to read two remarkable books, "One World" by Wendell Wilkie and "Lest We Forget" by Douglas Reed. In the present war and in the years following the end of hostilities, much will depend on two important factors—(1) the policy of America, and the attitude of the American

**Clive Street
Gossip**

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."

—(As You Like It)

towards his own problem and world problems; and (2) the policy of Britain, and the attitude of the Briton towards the British problem as well as world problems. For an understanding of these two important factors, which are, in one sense, conflicting but, in the real sense, must be complementary, I commend to my readers a careful and understanding study of these two books, which, if I may say so, are written by a typical American and a typical Briton. I have to content myself with this brief introduction in this issue and hope to offer my detailed comments in a subsequent number. For, I have to give priority to an important question which was recurrently posed in my mind in my recent journeys.

The question which has been engaging my constant thought is this: What is the significance of the waste railway lands to the grow-more-food campaign? For making the railway tracks, land on either side had been utilised for securing the requisite mud. There are, thus, 15 to 20 ft. of waste land on both sides of all railway lines in India. Is it possible to bring all this land under food cultivation? If possible, will it be worth while? As it is, these waste lands are mostly low lying. As a consequence, they remain as pools of water for a good part of the year. It may be necessary, in the first instance, to raise the level of the land so that irrigation is made possible and stagnation of water is avoided. Agricultural reform is not my

AND SCOTCH WHISKY
ALWAYS AVAILABLE**

forte; so, I suggest, in all humility inspired by ignorance, that a kind of deep well should be sunk at regular intervals, so as firstly to provide the mud necessary for raising the level of the land and secondly, to serve as a source of irrigation. People owning land adjacent to the railway tracks may be induced to take up the waste lands and develop them on some such plan as I have suggested. It is also worth examining if a public body named, say, Land Reclamation Corporation could not be set up for dealing with the cultivation of waste land on an All-India basis. To the extent that railway land has remained fallow, it should yield good crops if properly cultivated. In one of the Southern districts, I was struck by the many-sided efforts that are being made for converting dry land into wet land. On enquiry, I learnt that the present price of paddy allows a good margin for the high cost involved in making lands suitable for paddy cultivation. Encouragement of every kind should be given to these efforts for increasing the land under paddy crop. The governments may even extend advances towards the cost of converting dry into wet land.

To return to the reclamation of railway waste land. I have since made detailed calculations about the area of land that will be covered by such a scheme. If the railway waste lands are diverted to cultivation, how many square miles will be actually available? The total route mileage

of railways in India is over 41,000 square miles. The area of waste land on either side of the railway track comes to approximately 290 square miles. To ascertain how much of these will lend itself to cultivation, we may use the perspective yielded by British India figures. The total area surveyed in British India in 1939-40 was 512 million acres. The net area under crops was only 210 million acres. The rest was divided between forests (68 million acres); land not available for cultivation (89 million acres); other uncultivated lands (97 million acres); fallow (47 million acres). That is to say, only 40 per cent of the surveyed area has been cultivated. On the basis of this percentage, out of 290 square miles of railway waste lands, 116 square miles can be put to cultivation of crops. This works out to 74,240 acres. This does not look an impressive figure; but I am not fully sure of the correctness of the methods or calculations I have employed. I feel that it is a matter which merits closer investigation by those in charge of the campaign to increase the production of food in this country.

The death of Kasturba Gandhi has stirred the public mind deeply. There is hardly any in this vast land who has not felt the profundity of a sense of loss, which is not personal as it is ordinarily understood, but which touches you, nonetheless, perhaps even nearer. Kasturba drew to herself the love which every Indian has for the Mahatma. But, in the case of the Mahatma, the feeling is one of awe, involving an involuntary preservation of respectful distance, though by the humour and by the artless commonality of his nature Gandhiji draws every one near to himself. John Gunther hit it when he said that when you see Gandhi, you think of your father. But one's feelings towards the father often cross the borderline of the emotional and pass into the intellectual plane. The attitude of the Indian people to Gandhiji is almost exactly the same; always love, but tinged by admiration, and disturbed at times by fear of severe reproof. But on Kasturba, people lavished their store of unalloyed love and affection. She was at once a flaming symbol of Indian nationalism and the venue of personal affection. The setting of her death accentuates the poignancy of feeling.

As Sir Radhakrishnan has said it so aptly, Kasturba rem'n's us of the great women of India, Anasuya and Arundhati. What sustained her through a life of suffering and sacrifice is the implicit acceptance of the Hindu ideal of womanhood. It is through her complete identification with the aims and ideals of her husband that she wrought for herself a permanent place in the history of India's struggle for freedom. She married greatness and, without waiting to have it thrust on her, she achieved it herself. But the process was not without travail. Wives of great men all remind us that, as husbands, great men are most uncompanionable. The Curries and the Webbs are the exception. Carlyle's wife could never get on with the great philosopher. "Who loves me must have a touch of earth," said Guinevere of King Arthur; and that blunts the edge of our resentment against her failings. True Hindu as she was in her devotion to the husband, Kasturba must have said something similar quite often in her early years. The demands that Gandhiji made on her in sacrifice of

possessions, comforts and even motherly affections must have been exorbitant, even heartless.

APOLLO STREET FORT.
BOMBAY

In my Bombay days when I jostled a great deal with close Gandhites, there was a story current, which should give one an idea of the trials Kasturba had to pass through. It would appear that Kasturba had put by a little money, may be, for a bangle for a grandchild or some such charmingly innocent purpose, where the austere ethics of the Mahatma are an insensate intrusion. But, no. The Mahatma had pledged the inmates of the Ashram to non-possession; and when Kasturba was luckless enough to lose it and too innocent not to complain of the theft, the Mahatma saw in the theft an opportunity of rubbing into her how she fell short of the Ashram's ideals. "Leave it to me," he told the wife. "I shall find out the thief." The next day he assembled the inmates and made a longish speech. "In this Ashram" he began, "we are all pledged to poverty and non-possession in order that we may serve our cause the better. But we have harboured a thief all along; and the Ashram has to deal with a case of petty theft." Continuing in this strain, taking care all the time to put every one off the scent, he announced that he had traced the culprit and, offering to produce the culprit, pushed Kasturba into the forefront. He accused her not only of stealing money—for possession of money was in the Ashram tantamount to theft—but also of producing another thief by keeping something worth stealing.

So the story goes. I cannot vouch for its truth. But it is illuminating. One can well see what severe trials Mrs. Gandhi must have undergone before she could align herself with the Mahatma. One can sympathise with a mother who cannot be as severe on an erring son as an austere father, who cannot forsake domestic joys and affections easily in order to please one whose love embraces the whole human race and who is, in fact, less and less of this world. But Kasturba so triumphed over these trials that in the eyes of all she was inseparable from the Mahatma. In detention, the Mahatma has lost his nearest and dearest. Mahadev then, Kasturba now. When you read that the Mahatma wiped a tear, you feel the lump rising in your throat.

Founder of more than one successful business the late Mr. Sarat Chandra Chakrabarty created a flourishing branch of the chemical industry because he had ample confidence in both his business and his employees. For "Indian Finance" the sudden demise is almost a personal matter since he was a loyal and discriminating reader, and death when it came suddenly in his Serampore study found him reading this journal which he took to his heart years ago. The customary ceremonies are over; the usual meeting of the loyal and zealous colleagues and employees has taken place, but this belated notice is meant to bear witness to the worth of one who practised the public and private virtues of the self-made industrialist. The career which began in Bihar was not limited to Serampore as will be proved by the restoration of efficiency and prosperity to the Lister Antiseptics and Dressings Company which he took over in 1928. As an inspired worker for progress and the good life (which he illustrated daily by personal example) he has real claims to permanent remembrance. His story of success from small beginnings has more than enduring value for those who

believe that small-scale enterprise in India has its advantages and opportunities.

From the report of the Central Meeting of the Federation of Electricity Undertakings of India, I gather that, in the deliberations now proceeding as regards post-war electrification, no representative of the interests represented by the Federation has been included. This is a grievous omission, especially as the choice of a member like Mr. D. Gladding would have meant the combining of financial know-

ledge and of working of electrical undertakings. I had recently occasion to have detailed talks with one who is associated with a similar enquiry for Burma; and I found that schemes were being considered without any proper attention being given to the varied financial aspects. May I suggest to Sir Jwala Prasad Srivastava that, even at this late hour, it is both necessary and useful to invite Mr. Gladding to participate in the discussions.

"EAVESDROPPER".

Consent of the Central Government has been obtained to this issue under Defence of India Rule 94A. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

AUTHORISED ... Rs. 2,00,00,000
ISSUED AND SUBSCRIBED ... " 1,00,00,000
CALLED AND PAID UP ... " 50,00,000

The Original Authorised Capital was Rs. 50,00,000 divided into 50,000 ordinary shares of Rs. 100 each; this has now been increased to Rs. 2,00,00,000 by the creation of 1,50,000 shares of Rs. 100 each; out of which the Directors have issued 75,000 shares at a premium of Rs. 5 per share payable on application. Rs. 50 only has been called per share as application and allotment money.

It is not intended to make any further calls for the present. The paid up capital will thus be Rs. 50,00,000 and the premium reserve will be Rs. 3,75,000 which will be carried into general reserve. The whole of the present issue has been fully subscribed.

The Company has been formed for transacting banking business of all kinds and generally for the several objects set out in the Memorandum of Association.

Olympus

(From Our Correspondent)

New Delhi, February 21.

ON Thursday the Central Legislature was treated to a rehash of all the platitudes of Amery and Linlithgow by the new Viceroy. The only new ingredient Lord Wavell introduced into this stale mixture was his determination to reward the war-effort groups politically. For he was resolved, he said, "to see that in the solution of the constitutional problem full account is taken of the interests of those who have loyally supported us in this war and at all other times, the soldiers who have served the common cause, the peoples who have worked with us". What this exactly means nobody knows, but it will be a surprise if the National War Front and the 'soldiers' are soon recognized as important political minorities. The Congress as usual had boycotted the function, but the "elders" managed to fill in the empty seats. So poor and dull was the performance that even the Treasury Benches did not know when to cheer it. Perpetuation of the deadlock for the duration is now the settled policy and only unforeseen developments (military or political) can force the Government to revise their attitude. The hostile reception of all political groups to the new Viceroy's political programme was a foregone conclusion. The League group was particularly incensed by Lord Wavell's references to the geographical unity, and one critic pointed out: 'Geography is not the main argument against division of the country'. The Viceroy's address was equally barren as regards the economic issues agitating the public mind. While admitting that 'we are not outside the wood yet', as regards the food situation, he failed to lay down the policy which will finally prevent a repetition of last year's disaster. As regards postwar economic developments, the brief reference to the industrialists' plan was too non-committal to mean much.

As expected the Government have flouted public opinion so strongly expressed against any further increase in railway fares. This was responsible for the paradox of a hostile reception for the biggest surplus budget in the history of India's railway finance—presented last week. Sir Edward Benthall's announcement of the proposed flat rate increase of 25 per cent in fares was greeted with cries of 'shame' from the non-official benches. Apart from the increase in fares the other big feature of the budget was the largest capital programme in railway history—further postponing the building up of an adequate locomotive industry in the country. All the political groups in the Assembly are determined to throw out the Government's proposals, though it is doubtful if the Government will abide by the decision of the House in regard to fares. As it is not possible for the House to deal with the fares issued directly—they can only condemn the proposal in an indirect way. This has taken the form of censure motions, six having been already tabled in this connection. Two others seek to reduce the Reserve Fund appropriation by Rs. ten crores, it being the amount expected to be netted by the proposed increase. The Opposition case has already been put forward by the Federation of Chambers of Commerce and Industry who

have stated that as there is absolutely no scope for any "reduction the use of railways by the civilian population", the increase in fares would amount to "a compulsory tax on the public." There is also universal regret that the Government, instead of expediting their plans to manufacture locomotives in this country, are arranging to import such a large number of railway engines. There is also the feeling that the capital programme also gives a foretaste of their post-war intentions. The other main ground of criticism against the railway budget proposals is the huge expenditure on strategic extensions on the eastern frontier (6½ crores for increasing the line capacity of the Bengal and Assam Railway), which it is felt ought to have been debited to the South-East Asia Command and not to the Indian Railways. The feeling in the country was summed up by Mr. Jamnadas Mehta in the Assembly today when he characterised the railway budget as "predatory in its purpose, oppressive in its results and contemptuous of public opinion."

Some interesting official information was doled out today regarding the financial settlement with Britain. It was revealed that out of the total expenditure incurred by India on defence and supply services during the five years 1939-40 to 1943-44, the amount charged finally to Indian revenue, under the terms of the financial settlement is now expected to be about Rs. 800 crores, leaving the balance for the same period of about Rs. 940 crores at the debit of the British Government. The latter amount consists for the most part of the cost of supplies and services rendered by India to or on behalf of the British Government. It was stated that no separate statistics have been maintained of the expenditure incurred by the British Government in completing the Chatfield recommendations; a large portion of the expenditure relates to equipment and vehicles supplied free by His Majesty's Government. Generally speaking, all the recommendations of the Chatfield Committee have been put into effect. The original estimate of the total capital outlay was Rs. 45.77 crores. Of this, India was liable for one-fourth, viz., Rs. 11.44 crores. The expenditure actually incurred by Britain however was in excess of Rs. 34.37 crores, due to the supply of more expensive types of equipment than formerly contemplated. The expenditure incurred in connection with Chatfield scheme is included in the total defence expenditure of Rs. 940 crores by Britain in India. The amount incurred by Britain on measures of industrial expansion in India (including those recommended by the Roger Mission) is estimated at Rs. 12 crores to the end of 1943-44. The total value of defence supplies to Indian Forces was not revealed.

The recent official revelation in U.S.A. that India along with other eastern Empire countries has spent 300 million dollars on U. S. forces has elicited no statement from official quarters in New Delhi as to India's share in this amount. It is stated that the Finance Member's budget statement will give the relevant details about the Lease-Lend arrangements and expenditure.

The Government have appointed a Development officer to speed up post-war planning of road developments. This officer is expected to visit all important provincial and

State centres to ensure that all preliminary programmes are prepared with the utmost expedition." The Government have also decided to appoint a 'Plant Committee' to deal with the details of road machinery to be imported after the war. A grant of Rs. one lakh has been made for building an experimental strip of soil stabilized road.

Sir Edward Benthall's detailed reply to all the points raised during the first day's debate did not give any indication of the Government's desire to meet the Opposition's demands. The feeling in the lobby today is that there is only a remote possibility that the Transport Member may reduce the percentage of increase in fares to 12½ per cent as regards third class passengers, though here too the Transport Member's reply did not raise any hopes. Sir Edward's case was that 83 per cent of the third class civilian passengers travel in the zone from 1 to 50 miles and so far have paid nothing extra for rail fares since the war began. "Even with the proposed increase in fares" he said, "passengers travelling upto 10 miles will not have to pay anything extra and since the average lead in this zone is only 17 miles, the number travelling for distances upto 10 miles must be a considerable proportion of the total in the zone". As regards the locomotive industry, Sir Edward pleaded, that locomotives could not be built up as a rush job. For even "if we have the plant on the site today it would still probably be 18 months on two years before we could get the first locomotive on the line". He gave the assurance that the Railway Board was anxious to get the necessary plant into the country at the earliest possible moment and were also considering the inauguration of boiler construction. As regards the strategic railway extensions, the Transport Member pointed out that the costs of these are covered by the assisted siding terms which are ordinarily brought into use for providing railway facilities to industry. That means that the cost of works and other expenditure which cannot be of any use to the Railways after the war is borne on Defence Expenditure. And the rails and the steelwork and anything else which is of permanent value to the railway is borne by the Railway. Sir Edward gave the assurance that he would look into the cases of hardship arising from the cancellation of certain trains in the Punjab and would endeavour to restore the services as soon as the coal position has been built up.

(FROM OUR CORRESPONDENT)

Bombay, Feb. 22.

The Railway Budget particularly that part of it which deals with the increase in fares and the disposal of the money that will accrue, has raised universal protest. Ever since the feeler was put out protests could be heard almost everywhere. The War Transport Member's statement as to the disposal of the amount collected as a result of this increase in passenger fares and the reasons he gave for the necessity of such a measure at this stage only provoked laughter and some bitter comments from responsible quarters. The Indian Merchant's Chamber regarded "the proposal to increase fares by 25 per cent" as a "grave scandal". Sir Purushotamdas Thakurdas asks whether there is any parallel in any country for such a policy of taxing railway passengers now on the ground of catering for their comforts after the war. In his opinion the Railway Budget showed proof of the completely chaotic lines on which the Government of India have been forced to work in the economic sphere.

The Bombay Plan was the subject of a talk by Rotarian J. R. D. Tata who is also one of the signatories to the pamphlet. After giving a summary of the Plan Mr. Tata answered some of the criticisms levelled against the Plan by responsible people in the country. Answering the criticism that it would be wrong for India to aim at rapid and extensive industrialisation, and that she should concentrate on developing her agricultural resources, he said that he rejected the view in toto. A proper development of the agricultural economy alone will not solve the problem of the millions and a high standard of living can be possible only with a high degree of industrialisation. Explaining why a National Government should precede the working of the Plan, Mr. Tata said that "the measures required are so comprehensive and in some cases so drastic, that only a government founded on the will of the people, enjoying their confidence, and imbued with the urge and determination to improve their lot, could carry them through".

Electrical engineers who attended the 22nd Annual Session of the Bombay Centre of the Institution of Engineers were told how they could help in the great task of securing for India a respectable place among the civilised countries of the world. Last decade saw the starting of new power schemes, in several provinces but the progress made was not at all flattering to the Government. According to Mr. V. R. Vaidya "only 17% of the towns of over 5,000 population had electricity", and the "present installed capacity per capita of electric power plant in India was among the lowest in the world."

As Electricity is the motive power for other industries, any plan for the industrial development of India should place the electricity enterprise first on the list. The task of chalking out an adequate plan and implementing it can be undertaken by the Institution of Engineers. A

Power Planning Committee must be set up under the auspices of the Central Government. A Central Electricity Board with Regional Boards with authority to develop electricity extensively coupled with proper university courses will go a long way in putting India on a proper footing with regard to power development.

What may be considered a first step towards increasing the milk supply of the city has been taken by the Government of Bombay. Mention may be made here of the steps taken by the Government to put a stop to the uneconomic practice of slaughtering milch cows, that is prevalent in the city and elsewhere. The scarcity of milk is one of the direct consequences of this blind action on the part of the community. But the entire blame cannot be laid at the doors of the cattle owners; for apart from the general poverty in the country, cattle owners in the city could not keep their milch cows with them and maintain them till they come to milk again. Lack of proper facilities is invariably one of the causes of the milch cattle finding themselves in a slaughter house. The Government of Bombay have provided an asylum for milch cows in the Thana District. But the monthly fee of Rs. 50 per animal will scare away many a cattle owner. But the higher initial costs and the experimental nature of the measure perhaps are a bar to lowering the fee. The Government propose also to buy milch cattle from Bombay City and

maintain them in the farm till such time as they calve, and then they will be sold in the city's markets. As at present proposed the farm can look after only 300 animals and the cost of this scheme which comes to nearly Rs. 2 lakhs will be entirely borne by the Government.

At an extraordinary general meeting of the shareholders of the Bank of India it was resolved to increase the capital of the Bank to Rs. 3 crores by issuing 100,000 shares of Rs. 100 each. A sum of Rs. 50 plus a premium of Rs. 50 would be payable before allotment. Sir Chunilal Mehta presiding over the annual general meeting announced that the policy of gradual development of branch banking would be continued. He drew the attention of shareholders to the rapid development of all banking business in India and said that the competition in the field had reduced the margin of profit considerably. The meeting then adopted the resolution approving the directors' recommendation to pay a final dividend of Rs. 3.4 per share tax-free.

Speaking at the first quarterly general meeting of the Maharashtra Chamber of Commerce, Mr. M. L. Dahanukar paid a tribute to Mr. A. D. Gorwale, I.C.S. who is responsible for the successful working of food rationing in Bombay. He was of the opinion that the percentage of subsidy proposed for Konkan to secure additional output of rice and pulses was rather inadequate as that part of the Bombay Province was almost barren. The need for increasing the subsidy becomes all the more greater in view of past neglect on the part of the Government. Ratnagiri District will be threatened with famine as it is a deficit area and does not produce enough food grains, if the Government do not speed up their supplies. He drew the attention of members to the need for moving with the times and appealed to people concerned in the production and distribution of cloth, to respect the control measures which were imposed in consultation with all interests concerned.

Importers of chemicals like hydro-sulphite of soda and zinc chloride are agitated over a report that the Government of India in the Commerce Department contemplate laying down a new procedure for grant of licences for importers of certain chemicals. It is stated that in future imports will be permitted only through particular dealers namely the manufacturers' representatives in this country. It is feared that the measure will have an adverse effect on 'bona fide' importers who are not the accredited representatives of the manufacturers, and will result in the import trade in those essential chemicals being concentrated in one or two importers. The Indian importers established in the trade would be deprived of their share in the trade and all consumers will be at the mercy of a few.

Cotton growers in the presidency are faced with the ugly prospect of accumulating stocks and low prices owing to the lack of transport facilities to move raw cotton to consuming centres. While the new crop continues to accumulate stocks on hand are not moving as continuously as usual. The food crisis has resulted in the government giving food grains priority over all other commodities. The railways are not anxious to run extra goods trains on account of the coal shortage even though they have a good number of wagons to spare. The use of country-boats as a means of transport is necessarily restricted as all important consuming centres are not served with ports. Under the circumstances one wonders whether it is at all possible to avert the crisis with which the trade in raw cotton is threatened without the Government of India's interference in the matter.

Hind Bank Ltd.

In an announcement appearing today the Hind Bank Limited reports an increase in its authorised capital and the approval given to the issue of 75,000 shares of Rs. 100 each, on which Rs. 50 has been called up. The impressive beginning made as regards deposits and banking business generally explains the issue at a premium, certainly in line with that established in market dealings in the new shares. The paid-up capital of the Hind Bank after the addition to the share capital is Rs. 50 lakhs and the premium reserve of Rs. 3.75 lakhs is to be carried to the General Reserve. The increase of capital should ensure the progress of an institution that has strong and permanent connexions with men, money and markets.

Palestine Problem

The recrudescence of bomb outrages in Palestine makes the future in regard to questions like immigration both delicate and difficult. At some stage or other, the influence of Syrian developments was bound to assert itself. The French mandate has almost lapsed; the basis for the British mandate in the absence of the League does not appear very strong. Since the White Paper of 1939 makes Palestine an Arab country with a minority problem its future under the Arab Union scheme becomes more important than the future of foreign capital in the small country. The question of Palestine is inevitably mixed with the question of refugees. At Bermuda last year no undertakings were sought or given. The Jewish problem has apparently gone into cold storage and this alone makes many believe that the British would let a deadlock stand over and retain control. On the other hand, the question of federal union in the Middle East would acquire real importance when the Three Powers have propounded definite claims in the Middle East. How Palestine should be developed is now as much the concern of America as Britain, and it may be recalled usefully that the U.S.A. exceptionally showed interest in the mandate's working in Palestine though the U.S.A. was unconnected with the League of Nations.

The emancipation of Muslim countries like Tripoli has led to a counter-claim on behalf of the Jews who argue that the promise of a National Home must be fulfilled. During the Syrian crisis certain Arab claims in Palestine were advanced peremptorily, and the progress of Arab Union talks has encouraged many to look

for a rough and ready settlement in Palestine. But the Arab countries which examined the Palestine problem in 1939 by invitation are not obviously agreed on the economic conditions of progress. Jewish settlement accounts for Palestine's progress since 1924 and the economic capacity of Palestine is proved by the growth of secondary industry. In the French territory to the north the same growth has not been reported, and the appeal to the old policy, approved by the League, has already been made. The continuance of the Arab Union talks and Saudi Arabia's strong interest in them naturally excite the feeling that Palestine's future would be settled without excessive regard for Jewish interests. The issue of Partition was disposed of by the Woodhead Commission which followed the Peel Commission; and the immediate problems for the Jew is one of dropping the land regulations. Reference to the new U.S. plans for oil development and a new 1,250 mile pipeline to the Mediterranean may be made to indicate the need to get the future of Palestine settled. The Jewish Agency does not loom large but the main question is whether the consent of the local Arabs would be deemed important for the Allies' settlement. The case can be argued for both Jew and Arab alike but the war has made the European Jews' position terribly difficult, and Tripoli (recommended readily) has no attractions as compared with Palestine for either Jewish capital or enterprise. The case for repatriation to the Jews has been stated directly in order to prove that the problem can be settled without going into past episodes.

South India

(From Our Correspondent)

Madras, February 13, 1944.

The industrial future of India is intimately linked with the development of power resources. While the production of coal is heavily concentrated in Bengal and Bihar the possibilities of developing hydroelectric power in different parts of India have offered a new hope to the erstwhile agricultural provinces. A study of the industrial history of Russia, Canada, Switzerland, and Japan reveals how cheap electric power would revolutionise modern industries, big and small, and offer unlimited possibilities for agriculture. In South India recent years have seen a rapid growth of hydro-electric schemes and extension of electric power. Though the electric supply undertakings are of recent growth in Travancore, they have greatly stimulated the productive activities in the State. Inaugurating the headworks of the Pallivasal Hydro-electric works at Munnar, Sir C. P. Ramaswami Iyer referred to the enormous importance of cheap electric power as a prime requisite for a planned industrial development of this country. He referred to the experts' estimate that India's potential resources would be as much as 27 million kilowatts, but actually only about half a million kilowatts have been developed. The scope for expansion is indeed promising but active co-operation amongst the provinces and the States of South India are essential if nature's power should be tapped for human progress. It is well known that in the past the disagreement between the States and the Government of Madras had resulted in protracted negotiations and the loss involved to the areas had been immense. The Tungabhadra project is a case in point. Even in areas where electric power has been developed the immediate beneficiary has been the industries and no systematic attempt has been made to divert power resources for agricultural improvement. Food scarcity has underlined the urgency of agricultural expansion and it is clear that any scheme of postwar development of India should have an agricultural bias. Hydro-electric works and thermal stations should grow to the maximum degree so that better distribution of India's large-scale industries can be achieved, new lines of production undertaken and scientific methods applied for greater production of foodgrains and cash crops.

The Provincial Indian Medical Conference held at Bezwada strongly criticised the step-motherly treatment meted out to indigenous systems of medicine in our medical colleges. The State is definitely partial in encouraging Allopathy against Ayurveda and Yunani system. Lack of Government sympathy has been a great stumbling block for rapid development of the indigenous methods and the economic prosperity of Vaidyas and Hakims. Dr. G. Srinivasamurthy, formerly Principal of the Government School of Indian medicine, cited several instances where Indian medicine succeeded in curing diseases while the western system failed. Indian medicine, it is to be remembered, still caters to the needs of 80 to 90 per cent of India's population. The agitation for better aid, fuller recognition and abolition of restrictions on indigenous systems deserves to be supported by the general public. The Government of Mysore have done well in extending facilities for the advancement of Indian medicine. With the help of generous donations from the

public they have sanctioned the opening of an Ayurvedic and Unani hospital in Bangalore city. In August 1942 a committee was appointed under the chairmanship of Raja Sivaprasakta Amble Subramanya Iyer to go into the question of encouraging indigenous medicine on a large scale. The recommendation of this committee to establish a research section to investigate the efficacy of herbs and drugs has been accepted. Steps are also to be taken to establish a central pharmacy for the manufacture of standard medicines according to a pharmacopoeia. A sum of Rs. 5,000 has been sanctioned for purchasing instruments, charts, models, books, etc. There is little doubt that unlimited scope exists for exploiting indigenous herbs and if the bright example of Mysore is emulated elsewhere in India the future would be full of hope for the Ayurvedic and Yunani doctors.

The achievement of the Grow More Campaign during the last official year is contained in the administration report of the Agricultural Department. There has been an increase of 50,000 acres under cultivation, i.e., from 10.33 million acres to 10.38 million acres. 85 lakhs of pounds of pure paddy seeds have been distributed to the ryots as against 55 lakhs of pounds in the previous year. It is gratifying to find that potato cultivation has extended from 17,400 acres to 18,000 acres in Nilgiris alone. The army demand has

stimulated the production of vegetables in Nilgiris, Vizagapatnam and Hosur.

The position of the coffee industry has been reviewed by Mr. E. V. Ganapathy Iyer, Government Director, Industrial Concerns, Mysore State, at the annual meeting of the Mysore Coffee Curing Works Limited. Throughout last year the prices continued to swing up, but the Indian Coffee Board took action to control them. But the crop raised during the last season was less than normal while want of chemicals, fertilisers, implements, gunnies, transport facilities, etc., worked towards increasing the cost of production. Labour shortage has often been a worry. Though the crop for the current season is expected to be satisfactory, the position of the industry as a whole deserves close examination. Measures should be taken to increase production, reduce prices, arrange for better distribution of coffee seeds to different centres and, above all, the planters should be saved from undue exploitation by the middlemen.

The public of Madras are deeply indebted to Dr. K. V. Al. Rm. Alagappa Chettiar for his donation of Rs. 3 lakhs to the University of Madras for financing its proposed Technological College at Coimbatore.

Airway Port

(FROM OUR CORRESPONDENT)

Karachi, February, 18.

SIND has the distinction of being the first surplus province in which rationing has been introduced. As expected, rationing scheme in Karachi came into force on Sunday, February 13. The scheme is applicable for both municipal and cantonment areas. Although it was once expected that rationing here would start as early as last November, it could not be put into operation until February. Contrary to anticipations, there was no rush at the ration shops. This is partly due to the fact that the authorities had allowed ration shops to secure supplies for four weeks at a time. The public are allowed to draw supplies on any day in the week.

Karachi citizens have taken to the new experiment peacefully, as a matter of routine. The authorities have not so far sealed or taken over the stocks already in the hands of the ration shops as was done in Bombay. Though at present ration cards are issued for families it is expected that the system would be changed to cards for every individual. Under the regulations framed for Karachi, a ration shop is not permitted to have more than five hundred cards on its register. The minimum number of cards has not however been fixed.

Fears are entertained whether the quality of rationed goods would be maintained or, as in some other areas in India, it is likely to show deterioration. Moreover, the present working hours of ration shops do not suit the labouring classes and it is likely that the hours would be revised. The position of grocers who are authorised to operate under the scheme and who number about a thousand seems to be that except for rationed goods such as rice, wheat, bajra, jowar and kerosene, they are free to sell commodities according to market conditions. The prices of some of the unrationed articles has registered a slight rise. This is partly due to the fact that enormous purchases for military personnel is taking place in the city.

The introduction of rationing has displaced a number of shopkeepers, brokers and wholesale merchants in the produce trade. About 1,600 provision merchants have gone out of business as a result of rationing. Out of 2,000 provision shops in the city, only 400 are licensed to distribute rationed articles.

The severity of rationing will have been mitigated by another alternative system, suggested by the President of the Karachi Indian Merchants' Association some time back. His proposal was that for the quantity rationed, coupons should be issued to each family unit which should obtain its quota from rationed retail provision dealers. These provision dealers in turn should obtain their supply from licensed wholesalers against such coupons. As both retailers and wholesalers have to maintain account of both purchase and sale, the government could have remained in touch with the stock position and prevented black marketing.

A five-year plan for the agricultural development of Sind formed the theme of the Governor's address to the Provincial Board of Agriculture. After making a passing reference to the recent Bombay 10,000-crore

plan for the advancement of India, Sir Hugh Dow said that what we wanted in our agriculture was a balanced and co-ordinated economy. He continued: "The successful carrying out of any plan in Sind postulates a great increase both in the numbers and the quality of your directing and research staff. I believe it to be true of India that one of the most important conditions of India's future prosperity must be an increase in agricultural production both by extending the area under cultivation and by improving the yield per acre. The poverty of Sind in mineral resources about which we know too little and its climate about which we know too much militate against its industrial development; on the other hand Sind's potential agriculture development is very great."

A five-year plan for increase and improvement in agricultural production in Sind was adopted by the Agricultural Board after a two-day sitting. The plan incorporates several schemes for research with a view to improve the quality of food grains and their yield, schemes for seed distribution, for increasing the number of good cattle, supply of poultry and the like costing an aggregate sum of about Rs. 60 lakhs spread over the period of five years. A note on planned economy, considered and approved by the Board said that the province missed an unique opportunity of planning its agriculture on the most advantageous lines when the Sukkur Barrage was constructed. Actually, two or three barrages should have been constructed

and would have proved economical. In lower Sind, production has gone down.

Mr. Iswaran, Director of Agriculture, explained these schemes in detail to the gathering which adopted them after offering some suggestions of its own.

A plea for greater imports of manufactured goods consistent with the need to safeguard Indian industries and a representation for quotas on a quantitative basis was made by the management committee and imports members of the Buyers and Shippers' Cham-

ber, Karachi, when they met Mr. Ramchandra, Controller of Imports. Mr. Jamshed Nusserwanjee, chairman of the Chamber represented to the Controller the numerous difficulties of the import trade owing to the Import Trade Control. Mr. Ramchandra in his reply stated that the government had no control over the supplies at the other end. The quotas of imports from U. K. and U. S. A. were being fixed according to the available supplies and they were valid for particular periods. With regard to the Chamber's suggestion that the quotas for imports from the U. K. and U.S.A. should be fixed on the basis of the normal imports from all countries, Mr. Ramchandra stated there being very limited goods available in U. K. and the U. S. A., the fixation of quotas on the basis of the Chamber's suggestion would not be practicable. For, most of the importers in that case would get very small quotas. He added that he would be quite willing to consider the case of other imports if there was any balance of quotas available from the U. K. and the U. S. A. after the grant of quotas to the dealers with the U. K. and the U. S. A. for distribution to the dealers who were in the past trading with other countries.

Due to accumulation of heavy stock and the absence of demand for gunny bags, the market here was unduly depressed when compared with the prices ruling at the source of supply, Calcutta. The position has now started correcting itself, although there is still wide disparity between prices at the source of supply and the local market. Recently, the Sind government has purchased 5,000 bags and it is likely that with the new crops coming in there will be greater demand.

Nearly nineteen months after the launching of the Indus water supply scheme, Indus water was released to Karachi on Monday last when 500,000 gallons of water from the new source of supply flowed down the pipes. The most interesting part of it was that people tasted the Indus water without having the least idea that it was from the Indus. The main part of what is known as the Haleji scheme having been completed, it is now proposed to construct a path along the whole length of 15 miles pipe line to facilitate the inspection of the work and also to build quarters to accommodate the inspection staff. The whole project machinery will be taken over by the Water Control Board.

Dr. Chellaram Shewaram, President of the Karachi Indian Merchants' Association has issued a statement, condemning the government decision to increase the railway fares by 25 per cent. To increase fares to the extent of rupees ten crores in spite of reduced travelling facilities and overcrowded and insanitary conditions and the reduced number of trains is, he says, nothing short of an imposition which will be highly resented by the travelling public.

Useful work has been done by the Hyderabad Scientific and Industrial Research Board for accelerating the industrial development of the State. Nine research committees had been set up to work on vegetable oils, drugs, heavy chemicals, ceramics, fuels, forest products, industrial fibres and ferments. Research work has been conducted in the labo-

ratories of the Government and the Osmania University. Valuable results have been obtained after investigations relating to oil-cloth, rexine and printing inks, manufacture of superphosphate and glue from bones, manufacture of alumina, ferric and aluminium sulphate from locally obtainable clays and the recovery of titania as a bye-product, the preparation of nicotine from tobacco waste and of oxalic acid from molasses, etc. Potentialities of local fibres and china clay have

been studied. Among the investigations on hand the most promising seem to be those relating to oils as fuel and lubricants for internal combustion engines. Manufacture of acetic acid (from alcohol), potassium salts and gelatine has also been taken up. Since special emphasis has been laid on exploiting local resources and helping Hyderabad industrialists the activities of the Board are conducive to the economic prosperity of the State.

Faced in 1939 with the production problem that he is today solving, the average Works Manager would have said 'Utterly impossible'. Everyday throughout India industrial concerns are achieving output far in excess of their normal capacity. Indian tea has played its part in this great achievement. Tea is known throughout the world as a harmless yet valuable stimulant and today, in hundreds of factories in India, it is being served to workers on the job, giving them new energy, greater concentration and thus helping to keep output at a steady high level.

Fight Fatigue with INDIAN TEA

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD

Resume of Commodity Markets

DEFINITELY firmer conditions have been noticeable in the raw jute and jute manufactures markets while the raw cotton market has been easier on discouraging advices from upcountry centres and reports regarding the arrangement for the import of foreign cotton on a large scale. The piecegoods market was not in any way affected by the fixation of maximum prices for yarn and the rumours of a further reduction in ceiling rates by the Textile Control Board. The gold market was inclined to be firm in the early days of the week on fears that the Reserve Bank might discontinue selling but the close is again easy. The silver market, on the other hand, was inclined to be lower on reports of government interference but with the continued scarcity of ready supplies, quotations are again steadier.

The raw jute market is passing through an interesting stage. There is speculation regarding the size of the crop for the next season in spite of the fixation of the quota at 8 annas of the basic acreage of 1940. After the confident pronouncement by the Chairman of the Indian Jute Mills Association at the general meeting held last week, there is a feeling that jute supplies may not be after all so plentiful as it was originally anticipated and that if there is an early end to the war in the west, there might even be a scarcity of the raw material. There is an inclination on the part of holders to keep back supplies until such time as they are able to take a clearer view. It is now the end of February and sowings in the early lowlands have not been satisfactory. There are reports that land intended for jute has been turned over to paddy. If this tendency continues to be pronounced as the weeks go by, there would naturally be greater unwillingness to part with existing stocks of jute.

While the hopes of a higher level of production has resulted in a firming up in prices in the jute market the hessian market has not been in any way affected and quotations are steady around the maximum rates. For deliveries before June no supplies are available. For contracts in the latter part of the year, mills have been not quite free sellers though it is said that certain mills have concluded large business. Transactions during the week have been as far ahead as March 1945. With the reports about the possibility of further large Government orders and the arrears of deliveries there is no tendency to discount rates. The difficulty is even greater in regard to heavy goods. The warning by the Chairman of the I.J.M.A. against black market transactions is well deserved but in the absence of large supplies the only way of penalising these transactions is by requisitioning at maximum rates and by punishing culprits. There is every case for increasing production as fast as possible. So far no announcement has been made regarding maximum prices for jute goods under statutory authority.

The cotton market was inclined to be firmer in the early days of the week with the short-lived rise in bullion prices but in the latter half of the week definitely easier conditions have been noticeable and the quotations are around the lowest levels for the week. The heavier movement of the crop and the close down of railway booking have resulted in a decline in rates in mofussil centres. Usually, in the Bombay and Karachi markets this posi-

tion would have been taken advantage of by bulls to push up rates and force bears to cover their open positions. It is now pointed out that the restrictions in regard to transport will not be for long and that the authorities would speed up supplies of cotton as early as possible.

The information that satisfactory arrangements have been concluded for the import of foreign cotton has had a sobering effect on the Bombay market. It is said that Egyptian and East African cotton will continue to be imported through normal trade channels, but the finer varieties of Egyptian cotton, which are very difficult to secure, will be imported on Government account and distributed to the mills. For this purpose, a controlled purchase scheme has been formulated to regulate India's purchases during the cotton year ending August 31, 1944. According to the scheme, allocations will be made from time to time to the various mills having regard to their requirements and the quantities available in Egypt. In addition to the provision for direct purchases, arrangements have been made for ensuring supplies to meet India's requirements of high quality cotton. Giza 7 type 38 and above, Karnak type 161 and above and Malaki, all types, are being purchased by the coordinating committee at Alexandria (with an Indian representative on the panel) in a pool, from which allocations will be made to India. As India's share is intimated the Deputy Chief Controller of Imports will make allocations to different mills and importing firms, stating the precise quantities they are entitled to and their prices. Allocations have been made at present for Ashmunt, Zagora, Maraad and Giza 7 type 41 and below. Unless otherwise advised, all allocations are for the new crop only.

In the wake of these new arrangements for Egyptian cotton, adequate supplies of East African and Sudan cotton have also been assured, and the total average annual imports during the war period from these three countries into Egypt are calculated at 550,000 bales of which E. Africa contributes 296,000, Sudan 144,000 and Egypt 117,000 bales. Imports of American cotton are practically nil.

Maximum prices for certain varieties of yarn was fixed by the Government of India last week. As these rates were considerably below market expectations, there was a sharp decline in values on heavy liquidation. In the Bombay market 40/2s came down to Rs. 5-8 per lb. from Rs. 8 per lb. after the announcement but there was a recovery later to Rs. 6-8 per lb. There is a feeling that maximum prices for yarn have been fixed without due consultation with the interests concerned and that there should be a revision of these rates if free trading is to be possible. A deputation of yarn dealers will proceed to Delhi for this purpose. The maximum prices fixed are under the Hoarding and Profiteering Prevention Ordinance 1943. Prices fixed are for bales of 200 lbs. which may be charged by a dealer in receipt of articles specified. Japanese staple fibre yarn 10/2s Rs. 400, 20/s Rs. 500, 40/2s Rs. 600, 60/2s Rs. 700 and 80/2s Rs. 800.

The arrangement in regard to unstamped varieties appears to be satisfactory though there are still complaints that owing to the delay in stamping goods, there is a shortage of goods in certain circles. 17.3 million yards of piecegoods, 6.3 lakhs pairs of dhoties and

sarees and 3.7 lakhs lbs. of yarn have to be stamped in Calcutta by the Textile Control Department of the Government of Bengal according to the returns of unstamped cotton cloth and yarn submitted by dealers in the city. 4 lakhs yards of piecegoods, 32,000 pairs dhoties and sarees and 2 lakhs lbs. of yarn have already been exempted from the ceiling and stamping order. The prices to be fixed for these varieties are under consideration of the committee appointed for the purpose.

It was announced last week that over 7,000,000 yards of unstamped cloth have been seized in Bombay city from the beginning of the year. The total stocks of undisposed cloth with dealers in the city at the end of 1943 amounted, it is believed, to about 35,000,000 yards. The total stock of unstamped cloth including dhoties and sarees with dealers in the country up to the middle of December, 1943 is stated to be over 180,000,000 yards but at the end of July, 1943 it was estimated at nearly 124,000,000. The cloth so far recovered is believed to be more than three-fourths of the total stocks left undisposed at the end of 1943. No exemptions have been granted in respect of remnants and small lots in the Madras centre as the information was received too late by the provincial government and it is felt that it is not administratively possible to grant the necessary exemptions.

It is reported that the scheme for handloom standard cloth has been dropped by the Madras Government as the mill variety appears to be popular and much cheaper. It is pointed out, however, that such quantities of standard cloth as have been produced by handloom weavers, will be taken up. Henceforth their attention would be diverted to the production of better varieties. A Handloom Board on the lines of the Textile Board is to be set up and these two organisations would work in close co-operation with each other. An announcement in this regard will be made at an early date.

Large sales by the Reserve Bank have continued uninterrupted in the last few weeks and bears have been vainly hoping that there would be an early end to the sales of gold. Far from there being a shortage in respect of gold supplies the present indications are that gold would continue to be offered at a fixed
